Proof Fenwick & West LLP did not disclose Leader as prior art to Facebook

After a three-day “battle of experts” and mounds of evidence in Leader v. Facebook, a jury determined that Facebook infringes 11 of 11 Leader patent claims. In other words, Leader’s expert witnesses proved that Facebook “literally infringes” U.S. Patent No. 7,139,761 owned by Leader Technologies. According to Leader this means that the engine running Facebook is their invention.

Another big part of the lawsuit that hasn’t garnered much attention until now is the subject of “prior art.” Bottom line, if an alleged infringer can prove that a patent should not have been issued because of the existence of a prior invention that the Patent Office didn’t know about, that patent can be invalidated.

1. Leader knocked down ALL of Facebook’s prior art attacks

Facebook put forward nearly 100 pieces of alleged prior art during the litigation. Leader’s experts succeeded in knocking down all 100 and proving that no prior art predated its invention. This means Leader proved that no published prior art to its invention exists.

Here’s where this law gets tricky, and I can certainly sympathize with the jury now in trying to keep all this straight (they clearly didn’t and Facebook’s attorneys made darn sure they would stay confused). The “on sale bar” accusation is a part of the prior art analysis. Essentially, if one offers one’s invention for sale too early, the concept is that one puts one’s own invention into play and it becomes prior art to itself!!! 😄 Score one for me! Soooo, this means that to prove “on sale bar” you have to have exactly the same kind of expert testimony as you have for prior art. Facebook provided no expert witness at all for “on sale bar.” See my Mr. Cricket illustration on the right. 😆

This also means that from the time of Leader’s invention was first made public (June 24, 2004), future patent filers of related technology MUST...
disclose Leader’s technology to the Patent Office as a reference once they become aware of it. If they don’t, their patent can be invalidated. The rationale here is that patent examiners cannot be expected to search the planet for prospective prior art on each application they evaluate. Instead, it is the patentee’s duty to do that; while the examiner often/usually finds additional references as well (as he did in the Andreessen patents below).

2. How is prior art identified?

How does an inventor determine if prior art exists? Patent lawyers use a handful of databases to search the planet for prospective prior art. They enter a selection of search words and then review each result for relevance. In addition, inventors comb through their personal research files and disclose anything relevant to the claimed invention.

During the course of the patent “prosecution” (the process of working on a patent application) both the Patent Office examiner and the patentee submit dozens of lists of references considered; these references are listed on any final issued patent. This process helps ensure that prior art that would otherwise invalidate a patent application cannot be found.

3. Here’s where Fenwick & West—former attorneys for Leader and current attorneys for Facebook for both stock sales and patent filings—made their crucial mistake:

There are at least two “social networking” patents I could find that list Leader Technologies’ U.S. Patent No. 7,139,761 as prospective prior art references considered. BOTH of them list Fenwick & West LLP as the attorney (“the Andreessen Patents”), and both were filed long before Facebook’s patents.

4. Patenting for Muppets

When a patent application is filed, a patent examiner is assigned to the case. This person determines if the application describes something that “invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof...” subject to the conditions and requirements of the law. See this link for more on the patent application process.

Part of the examination process is for the Patent Examiner to evaluate all relevant references of prior work in the field to help ensure that the claimed invention is truly “novel.” All these references get listed on patents awarded. Inadvertent omissions can invalidate a patent. Willful omissions are considered fraud against the Patent Office and certainly invalidate the patent.

In addition, “all business with the United States Patent and Trademark Office (USPTO or Office) should be transacted in writing. Other patent correspondence, including design, plant, and provisional application filings, as
5. Translation: There is a public record of ALL written correspondence between the USPTO and the applicant. (AHA! This is how I found the proverbial “smoking gun”).

5a. U.S. Patent No. 7,756,945 Andreessen et al

Filed August 2, 2005; Lists Yasin M. Barqadle as the examiner; Lists Marc Andreessen et al.

On April 2, 2008, Fenwick & West is named as attorneys for the patent.

On April 3, 2009, Examiner Barqadle filed a PTO-892 form entitled “Notice of References Cited” that lists four existing patents that are required to be listed as prior art. One of those is U.S. Patent No. 7,139,761 McKibben et al (Leader Technologies’ CEO). In other words, the Patent Examiner put Fenwick & West on public notice of the Leader social networking prior art.

Click here for USPTO documents re. U.S. Pat. No. 7,756,945 at p. 8.
On July 13, 2010, this patent is awarded. On the FIRST PAGE of the patent document, U.S. Patent No. 7,139,761 McKibben et al. is cited as a reference (prior art). See Fig. 2, p. 10. 

5b. U.S. Patent No. 7,603,352 Vassallo & Andreessen

Filed August 26, 2005; Lists Aleksandr Kerzhner as the examiner; Lists Steven Vassallo (& Marc Andreessen).

On April 2, 2008, Fenwick & West is named as attorneys for the patent. On July 24, 2009, Fenwick & West filed an “INFORMATION DISCLOSURE STATEMENT BY APPLICANT” which lists 17 items of prior art. One of those is U.S. Patent No. 7,139,761 McKibben et al (Leader Technologies’ CEO). In other words, Fenwick & West acknowledges Leader’s invention as social networking prior art.

Click here for USPTO documents re. U.S. Pat. No. 7,603,352 at p. 7.
Fenwick & West clearly knew of Leaders’ patent and recognized it as prior art in two other earlier dated patent applications—the Andreessen Patents. But, they don’t acknowledge it again later in ANY of the nearly 100 patents they have filed for Facebook since then.

6. “Christopher P. King”... or is it “Christopher-Charles King”? Mr. King appears to have hyphenated his first name just for Mark Zuckerberg! Isn’t that precious?

I couldn’t believe my luck in finding a common Fenwick & West attorney listed in the USPTO records in both the Andreessen Patents and the Facebook patents: Christopher King. Mr. King actually signed all the Andreessen filings as “Christopher P. King, Reg. No. 60,985.”

But (and this is a big but), he actually changed his first name to “Christopher-Charles King, Reg. No. 60,985.” His name at the Fenwick & West website is “Christopher P. King” as it is also at the State Bar of California. Why the name change? Will we discover that this name change occurred about the time Fenwick & West withdrew from the Andreessen Patents just eight weeks ago, on Feb. 1, 2012? Could this change be intended to thwart search attempts to link him to both Andreessen and Facebook? TRIPLE GOTCHA !!!

Click here for USPTO documents re. U.S. Pat. No. 7,669,123 at p. 2.
Facebook **DID NOT** disclose U.S. Patent No. 7,139,761 as a reference in **ANY** of its patents, including the one above. See Fig. 4, pp. 14-16.

7. Here’s how Mr. King was listed at Fenwick & West LLP on Mar. 24, 2012

Click here for "Christopher P. King" bio from Fenwick & West LLP website, Mar. 24, 2012.

8. Here’s how Mr. King represented himself to the U.S. Patent Office for the earlier Andreessen Patents

Click here for USPTO documents re. U.S. Pat. No. 7,756,945 at p. 9.
Click here for USPTO documents re. U.S. Pat. No. 7,756,945 at p. 9.

9. Mark Zuckerberg promised in an oath to the American public that he would tell the truth about his patenting activity and claims.

Click here for USPTO documents re. U.S. Pat. No. 7,669,123 at p. 11.
“I hereby declare that all statements made herein of my own knowledge are true . . . and that willful false statement and the like so made are punishable by fine and imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statement may jeopardize the validity of the application or any patent issued thereon.”

Mark Zuckerberg
Oath and Declaration to the US Patent Office
Sep. 28, 2006

10. Court records prove Facebook concealed its beliefs from the USPTO from Feb. 19, 2010

If all the evidence above were not enough. The trial court record in Leader v. Facebook reveals yet another smoking gun. The judge’s Jun. 24, 2004 Order said on page 2 (PDF below, p. 3):

“Facebook contends that it learned during the February 19, 2010 deposition of Jeffrey Lamb, one of the inventors of the ’761 patent, that the priority date of the ’761 patent is actually December 10, 2003, not December 10, 2002” (emphasis added).

11. Here’s Judge Leonard Stark’s Order allowing Facebook to amend its complaint to add on sale bar

Facebook’s argument about Leader’s priority date is *prima facie* evidence that they *believed* that the Leader invention was novel at least by Feb. 19, 2010. Click here to read USPTO documents about on sale bar. However, Facebook did not disclose this belief to the Patent Office in its patent application that was granted as U.S. Patent No. 7,669,123 Zuckerberg et al five days later on Feb. 23, 2010!!! He He He He! Attorneys couldn’t keep their stories straight?

**QUADRUPLE GOTCHA !!!!**

12. **Hey Facebook, Feb. 19, 2010 is BEFORE Feb. 23, 2010**

Does not Facebook’s own *Leader v. Facebook* testimony prove that they wilfully withheld material information about Leader’s U.S. Patent No. 7,139,761 McKibben et al from the Patent Office, thus *inducing* the Patent Office to grant Facebook’s patent(s) inequitably?

Facebook’s Cooley Godward attorney Michael Rhodes accused Leader inventor Michael McKibben of “threading the needle” regarding his testimony about when Leader’s invention was ready for patenting. Now who is threading the needle Mr. Rhodes? Do all of your 700+ patents and patent applications have these potentially fatal problems? Oh, but I suppose you don’t considered these risks material do you? We’re just muppets. HaHaHa.

**Meep Meep!**

**Footnotes:**

[^Back][1] MORE PATENT LAW FOR MUPPETS (See, it’s not that hard! I figured it out!) See "Expert witness practiced ‘dark arts’" for an analysis of another segment of the *Leader v. Facebook* trial where Facebook attorneys further confused the jury with Dr. Saul Greenberg’s bad science testimony. Such testimony is supposed to
be discarded under the theory that a lay jury (the “trier of fact”) must be able to rely upon the truthfulness of the facts presented by experts.

Mathematically speaking, Dr. Greenberg violated the principle of bivalence—stating two contradictory truth values when only one can be true. He first said in early hand waiving that he couldn’t decipher the source code in Leader’s provisional patent, then later waxed eloquent about certain elements. See Fig. 9. An expert is not permitted to first say a box is empty, and then proceed to describe its contents. That is like saying the lake is empty, but my swim in it was refreshing. A reasonable person knows that one cannot swim in an empty lake. Dr. Greenberg did just that. Here’s a link to the actual trial transcript. (Note that Dr. Greenberg used “wild guess,” “guess” and “guessing” six times! “The lady doth protest too much, methinks?” — Hamlet, Act III, scene II; start at about Trial Tr. 10903:10.) See Fig. 9.

Leader v. Facebook – Trial Transcript, Fri. Jul. 23, 2010

Jan. 2004 (if you can believe Mark Zuckerberg). See Trial Tr. 10903:9. This testimony was used by Facebook to convince the jury that Leader should not be given the benefit of its earlier provisional patent filing date of Dec. 11, 2002. This opened the door for Facebook's "on sale bar" attack. Tellingly, Facebook DID NOT DEPOSE A SINGLE RECIPIENT OF THESE ALLEGED OFFERS which they had vociferously argued and the judge described in Fig. 8 above as the justification for adding the "on sale bar." Remarkably, not even Dr. Greenberg offered testimony about on sale bar—which in every other court would've been a hard evidence requirement to prove the technical contents of the alleged offers. "In confusion there is profit?" Hmmmm.

My GOTCHA meter is overloading!

A well-known lawyer "dark arts" tactic in patent infringement trials is for the infringer to find an expert witness willing to mislead the jury. Since a lay jury cannot assess the reliability of the science presented, it is the duty of the trial court judge to disqualify unreliable expert testimony. This new judge did not do that (it was his first federal trial). Daubert v. Merrell Dow Pharmaceuticals, Inc., 509 US 579 (Supreme Court 1993) at 595-597 (the trial judge must ensure the reliability of scientific testimony).

Meep, meep.

3. Photos of Leader v Facebook expert witnesses were obtained from their public websites.
How can Facebook file for patents and say they are about their core technology, social media, when they don’t even have a patent on their core technology? Examples, Microsoft, Adobe, and etc. all have their own core technology. In fact the “core” technology that drives Facebook is not even Zuckerberg’s invention! It has already been proven in court that it is Leader Technologies Inc. software. It is evident that the SEC by there silence in this matter would rather have to cleanup a financial disaster for potential investors than try and prevent it. Even the new articles out about Facebook’s amended S-1, proves these statements to be true!

Facebook pretends to comply with “materiality” disclosures, and the SEC pretends to oversee them. It is a shell game. This is more proof that we could fire half the bureaucrats in this country, and we would have no worse services than we’re getting now.

I hope the SEC is receiving copies of this blog, so that when Facebook’s games catch up to them, we’ll have the proof that the SEC was warned and chose to turn a blind eye. Call me cynical, but no doubt these same SEC regulators will most likely have matriculated to Goldman Sachs or JP Morgan. They’ll be easy to find.

Have no fear! Once the circuit court of appeals throws this whole case in Leaders direction, the “SEC and allllll corrupt individuals within” will have no choice but to acquiesce. In this age of serfdom, beware, oh King, for thine head is not impervious to being lopped off! Corruption only hides in dark spaces, and the light of justice shall find you wanting.

My thoughts and prayers go out to federal appeals judges Lourie, Moore and Wallach—that they will do the right thing and expose Facebook’s conduct for the fraud that it is. Mr. Zuckerberg promised to tell the truth, in writing,

“Steve Williams” comment, I couldn’t have said it better myself! Thanks Steve you hit the nail on the head!!

6. Tex | March 31, 2012 at 7:55 am | Permalink

There are too many mistakes by the Facebook folks for this to be an accident. Sadly, part of the decision at the Appeals court has be the fallout and its ramifications if Leader prevails. The facts are obvious as to the verdict but the damages will be staggering if “fair” to Leader. Without question in my mind, some form of “triple” damages may also be involved. The media has seen bits and pieces of this lawsuit but are fearful of tackling Facebook. They are fearful that no matter which party prevails, they can not win the public love by reporting the fraud that is Facebook.

7. Jules | March 31, 2012 at 10:13 am | Permalink

The whole point of patent law is to incentivize inventors to invent by protecting them from thieves and thugs. Our current legal process clearly favors the big infringer. Steal it. Sell it. Use the ill-gotten gain to fend off legal attacks. Hire unscrupulous attorneys to fool unsuspecting jurors with doctored evidence and court room parlor tricks. Settle with the inventor with his/her own money for pennies. Retire to the Bahamas. Laughing all the way.

C’mon people. This is America. We gotta do better than this legal extortion we put our inventors through currently. If we hope to reinvigorate our economy, this must change!!! What Facebook, Accel Partners, Goldman Sachs, and Fenwick & West have done is nothing but thuggery in my opinion. Gimme a break. Now they’re doctoring their first names at the USPTO to avoid detection!!! Nobody is too big to fail when they are corrupt.

8. Steve Williams | March 31, 2012 at 12:40 pm | Permalink

Amen to all the above! We all know corruption when we see it, and this is obviously no exception to the rule. After reading over the courtroom briefs, and especially listening to the audio transcripts, there is nothing that I have seen or heard that would even remotely convince myself that the courts can justify not overturning this case. This patent has been Mike McKibben’s (CEO of Leader Technologies) all along; even the USPTO office recognizes him as such. And now for Facebook to knowingly and fraudulently, try to patent something that they know isn’t even THEIRS, definitely shows arrogance on their part, let alone legal-stupidity. I only hope the SEC, and
especially the presiding justices, are keeping their eyes open to all of these posts and comments. It’s the little guys that built this nation of laws, so how about some legal cover for us for a change? Lord knows we deserve something these days!!

I have been following this case for some time now. Frankly, it was bewildering to have learned of the injustices that were allowed in the initial court hearing. Very sad, Judge Stark! You need to go back to law school. All other legal personnel should have done their homework as well, and not let so much fall through the cracks. Is there anyone out there that does the right thing anymore? Judge Stark and all that had participated with the initial ruling, should be BARRED. Let’s all take a breath...Think real hard and long of how would it be if you put all your hard earned money, time...and sweat into something only to have it torn from you (HACKED, I MEAN) from a Thief and a Liar...And then watch your idea make billions, for that thief/liar.. How would you like that?? Let’s make this wrong a right for all of us seeking a hard earned, justified, honest living!

Hi Winston, While I share your frustration, allow me to suggest another view about Judge Stark. This was Judge Stark’s first federal trial. Perhaps we should give him some slack and point the finger at Facebook’s attorney misconduct instead. They threw in everything but the kitchen sink to try and obscure their misdeeds. While I too think his appoint by Pres. Obama during this case and the President’s 25 million “Likes” on Facebook raises an eyebrow, the record also shows he was blasted with a fire hose with every obfuscation in the “dark arts” book. This is why we have an appeals process. Hindsight is 20-20. I hear that he puts up with less attorney shenanigans these days. Too bad he had to learn these lessons on Leader’s dime.

My concerns too were raised when I learned that after the verdicts the jurors told the judge and the attorneys that they made the on sale bar decision without any evidence. That’s right. They did. I don’t get how the judge could have heard that and NOT have decided to set it aside. Doesn’t that take the concept of “the jury heard the facts” too far? The only “evidence” he could find to support his decision was a doctored Interrogatory No. 9, an interpretation of Michael McKibben’s testimony that was obviously wrong, and an 1800’s ruling against a murderer for legal support.

I heard the following in person at the appeals hearing: When Federal Circuit Judge Kimberly Moore, in her incredulous “does it have a coffee stain on it?” remark, asked Facebook’s attorney why they didn’t produce Leader’s source code as evidence, his best argument was
Like I said, I understand the frustration, but more experienced Federal Circuit judges should fix these judicial errors. Thanks for sharing your concerns and perspectives. Keep posting!

Sweet Sassy Molassay!! What is it with Christopher P. King hyphenating his name in midlife? To be cool, or to escape searches? If he has some garbage to hide (as I opine he most certainly does), would it not have been easier for him to have just purchased a one way ticket to Honduras, or Nauru? What are the partners at Fenwick & West LLP doing? I wonder if a single one of them ever thinks of the altruism of Greg Smith. Destined for less income forever, but taking the higher road, as he no longer believed was offered by Goldman Sachs.

With our dead regulators, the lack of self policing by even those sworn to uphold the Constitution, we are screwed.

As for Wall Street, as for the cowardly, silent partners at the law firms who so easily abrogate laws, I hope your offspring thank you for the roles you played! How sad those roles will have played a part in our not being able to compete with Cambodia someday!

As an ex chieftain of companies, large and small, private and public, and trained well in the vagaries of taking patents to the market, I have never seen activities such as Ms Kline has uncovered. I am proud that I have had the skills that may have afforded me far greater wealth than the players in this egregious play happily accepted. I avoided these temptations as so many others did. Sad that today, we seem to be a vanishing breed. To say that the players in this Greek (er, “Greed”) tragedy were “forgetful” of their lines would be a compliment! The word “vile”, or “accomplice” would better befit!

Ms. Kline, I had hoped you were misinformed, or unaware of all the details on this case. Per my own further research, I now salute you!

I hope that your findings aren’t ignored by others. To all who may be reading my words, whether patent thief, lawyer, banker, or judge presiding, I hope you all begin to protect a species endangered by the lure of money: Conscience.

Darren Mitchell | April 3, 2012 at 11:33 pm | Permalink
When have attorneys been allowed to pass their Reg. # to another attorney? Especially when involved in Patent applications!! Or do you just change your middle name and add a “hyphen” so that the odds of not being discovered with a search engine are increased astronomically!!!!!! The majority of people that do this have something to hide. Does Mr. King have something to hide other than the fact that he apparently omitted important disclosure information to the USPTO when
applying for Facebook patents but included the Leader patent “7,193,761” in the application for Marc Andreessen (founder of Netscape) patents! Why haven’t the SEC, FTC and the U.S. Patent Office looked into this? How many “coincidences” will it take to get the mainstream media involved?
