# SIR STEPHEN THEODORE JANSSEN, BARONET, 

CHAMBERLAIN OF THE CITY OF LONDON

SIR,

THE Performance before you being planhed upon Principles no Way incompatible with thofe you have always efpoufed, I am willing to hope that addreffing this Volume to a Gentleman of your diftinguifhed Character will not be unacceptable.

There being contained in this new Edition, and particularly in this Volume, feveral valuable Com: mercial Memoirs, with which you have been fo kind as to favour me, calls for a grateful public Acknowledgment of the Obligation.

Though this was not the Cafe; and though I' had not many Years had the Honour of your Friendhip and Confidence, on whom could I pitch upon with more Propriety to infcribe this commercial Work, than to fo zealous and confpicuous a Friend to Trade, and fo clofely connected with a Corporation the Author fo highly venerates?

Had not the worthy Citizens of London lately given you diftinguifhed Marks of their great Regard, and which has obrained the Sanction of public Approbation, your laudable Conduct, as a City Magiftrate, or a commercial Patriot, would have been only known to a few, who confidered its uncommon Merits.

When you became the happy Infrument of putting a Step to the general Wear of French Cambrics, and inftead of this Nation giving Employment to French Manufacturers, you promoted that of our Englifh Weavers; the Kingdom has ever fince been benefited no lefs than Half a Million per Annum: For before the Year 1744-5, when you procured an Act to prohibit the Wear of French Cambrics, which was inforced afterwards by feveral others, we paid at leaft $250,000 \mathrm{l}$. a Year to France for that Commodity : and having faved that Sum, and given Employment to our own Manufacturers of Gauzes and Blonds, and numerous other home-made Wares in their Stead, makes a Difference to the Nation between faving and fpending of double the Sum : and the national Gain of half a Million yearly from 1745 to 1765 , amounts to ten Millions cf principad Monety. Was not this an Object worthy the Patronage of a Britih Legillature? And is not this Advantage, under a wife Adminiftration, as likely to continue at leaft as many Years as it has done ?

The Confideration of the Difficulties you had to encounter by this Step of public Virtue adds to its Luftre. There was a Duty of Import on French Cambrics, and that was appropriated; and the Annihilation of any Part of the Revenue, generally meets with minifterial Oppofition, notwithftanding the national Emolument is demonftrable. This was your Cafe, Sir; yet your Reafons were urged with fuch irrefiftible Weight, that miniferial Authority concurred with your patriotic Defign. And had we another Janssen to arife, who would obtain the Prohibition of all foreign wrought Silks, though he fhould meet with the like Obftacles; would not the Nation in the like Number of Years be Gainers thereby many more Millions than it has already been by that of Cambrics? We do not pay for foreign wrought Silks fo little as a Million a Year, including all fmuggled into Great Britain and her Plantations.

Was this faved to the Nation, inftead of fpent out of it, would it not make a Difference of rwo Millions a Year? Is this Benefit to the Kingdom to be loft, for the Sake of a mortgaged Revenue? Is it not more politic to fupply the Revenue Deficiency by all other Ways poffible, than to fuffer the Nation longer to be deprived of fo interefting an Advantage it at prefent ftands in Need of ? Can it be proved, that an equivalent Benefit would accrue to the Kingdom, by permitting the Importation of foreign wrought Silk at all ? I am perfuaded it cannot. For in ten Years might not the Nation fave twenty Milimons by their abfolute Prohibition? I could wih this Point was duly confidered by the prefent Patriotic Adminiftration, and that you, Sir, would turn your Thoughts upon fupplying any Deficiency in the Revenue, fuch a wife Meafure might occafion. For as the Revenue is already highly indebted to you as a Financier; fo it may be in future.

You have been happily fuccefsful in the effential Article of greatly improving the Revenue on Tea: and yet by Means that were judged to have the contrary Effect, when you firft Itarted them. Few Minifters are inclined to liften to the lowering of Duties; yet upon this fingular Maxim, you propofed to augment the Revenue. Herein you met with no lefs Difcouragement than in the Cambric Affair. Yet you perfevered in maintaining that lowering the Excise Duty on Tea, would increafe the Revenue. So it has to a very confiderable Degree, notwithftanding the Oppofition your Sentiments met with at firft.

Before your Intentions, with regard to Tea, werk carried into an Act of Parliament, both the Duties of Excife and Cuftoms thereon, had not for feveral Years exceeded, Communibus Annis, 170,000l. and the Eaft India Company had not imported above 1,200,000 Pounds Weight of Tea, Communibus Annis: But fince paffing the Law, which you were inftrumental to procure, the Exchequer has received yearly from 4 to $500,000 \mathrm{l}$. and for fome Years paft above $600,000 \mathrm{l}$. and even above $700,000 \mathrm{l}$. and the Eaft India Company has fold from Three to Four Miex ions of Pounds Weight annually; whence it is that the Eaft India Company have imported and fold not lefs than Sixty Mileions of Pounds Weight of Tea more than they would have done, had it not been for the paffitg the faid Act. By which it appears, that if the Company have gained no more than One Shilling per Pound Weight, it amounts to Three Millions Sterling extraordinary clear Profit to That Company; of which the Proprietors and the Public Credit have reaped the Benefit : and the Public Revenue has been advantaged by You above Seven Miflions of Money: and, perhaps, if your Principles of lowering the Duties upon other Articles of general Confumption, were adopted, the Revenue might be fo advantaged, as to enable the prefent Adminiftration likewife to promote the Prohibition of foreign wrought Silks; thereby fave Millions upon Millions of Treafure to the Kingdom, and give full Employ to our induftrious Spitalfields Manufacturers. I could wifh, I could rejoice, as well for the Honour of the prefent wife and upright Britifh Miniftry, as the Intereft of the Kingdom in general, that this national Point could be happily accomplifhed, in a Manner perfeetly confiftent with the general Profperity. If thus reminding you, Sir, of the more extenfive Application of your own Principles to advance the Revenue Chould have fo good an Effect, I am perfuaded, that any Thing of the kind will be well received by the Miniftry, and if practicable, carried into Execution.

There is another Inftance of your public Conduct, that has not been lefs admired than other Parts of it: That I mean is, when you had the Honour to be Lord Mayor of this City in the Year 1755. At which Time, Hoftilities being expected to begin againf France at the Commencement of the late War, you wrote a Letter to his Grace the Duke of Newcantle and Lord Anfon, the former then one of his Majefty's principal Secretaries of State, and the other Firft Lord Commiffioner of the Admiralty, fignifying the then State of the French Trade to their Sugar Colonies; and informing them, from certain Intelligence you had received, "that the French Ships bound to America, "were doubly manned; which to you appeared an indubitable Proof, that France intended to be at " War with us before the Return of thofe Ships to Old France: wherefore you fubmitted to the Ad" miniftration this Propofition: Whether it might not be an eligible Meafure, by Way of Repa"ration for the many Murders and Incroachments made by the French upon his Majefty's Subjects " in North America, fince the Peace of Aix la Chapelle, to make Prizes of their homeward-bound "Weft India Ships, without a Formai Declaration of War; whereby You judged, that we could " not have at once lefs than Eight Thousand French Sailors Prisoners in England; which "would be crippling the French Navy during that whole War.-This was the Propofition you had the "Honour to fuggeft to his Grace the Duke of Newcaftle; and this very Meafure was foon after adopt"ed by the Court of Londion; and we actually had, as you prophetically declared before the Clofe "of the Year 1755, eight Thoufand French Sailors. Prifoners in this Nation."-And certain it is, that his Grace of Newcaftle did you the Juftice and Honour to fignify in Council, his Acknowledgement that he received the Information and Suggeftion from the Lord Mayor of London: nor is it lefs certain, that no Step of this Kind was taken, or even thought of by the Adminiftration, till this Intimation was given by You.

What Effect this Meafure had to render the laft War at Sea fo fuccefsful as it happily proved, is too well known to need expatiating on: and in what Light this Mafter-ftroke of Englifh Policy was then looked on in France by the wifeft Men in that Kingdom, is alfo notorious, and the Event fufficiently indicates their Difcernment.

The numerous other publick Services You did, during the two laft Wars, by a Series of judicious Intelligence you communicated to the Adminiftration during their whole Courfe, I am not unapprized of; and was the whole laid before the Public, it would make an acceptable Volume not lefs to your Honour than what I have already taken the Liberty to notice: which I have done to animate others to imitate your glorious Example for the public Emolument. And did your public Spirit more abound, Minifters would often bebetter informed than they are, and the Nation rendered more profperous ; it being impoffible for the ableft and beft intentioned Adminiftration at all Times to have all Requiftes before them for the Guidance of their Judgment occafionally. In your Intelligence of that

## D E D $\quad \mathrm{D}$ C A $\quad$ T $\quad \mathbf{I}$ O

Kind, and in your feveral public Plans, you appear to have been very happy and fortunate: and als though you have not been fo in your private Affairs, and fome have unknowingly and uncandidly attributed it to your Attention to thofe of the Public; yet I can take upon me to declare the contrary, having had the Examination of them, and am at prefent in Poffeffion of authentic Vouchers to teftify the Reveffe. However, your late exemplary Conduct, as a Merchant, is at prefent defervedly in the higheft Efteem; by all wife and good Men, as tending to render Commercial Credit sacred Among the trading World; and as fuch your Example is worthy of conftant Imitation, and therefore cannot be too much revered.

I ani;<br>With great Friendihip and Regard;

SIR,

Your moft Humble

And moft Obedient Servant,

Feb. io, if 6 万. Broad Street, London.

## LAB

ABOUR. The price of the produce of land, and all the commodities which depend upon the mechanical and manufactural arts affecting trade in gefieral, it becomes needful to make fome

Remarks on Labour in general, in relation to the natural price thereof.
A labourer's fon, from 7 and 12 years of age, becomes an affiftant to his father, either in keeping the focks, or manu ring the ground, or in other forts of country labour, which require no art or fkill.
But, if his father puts him to a trade, he is at fome expence for it, and lofes his affiftance befides, during the time of his apprenticelhip: and, as the life of a man is commonly calculated but at 10 or 12 years, his wages, as a fervant, mechanic, or manufacturer, muft exceed his wages as a labourer, in proportion to the expence he is at, and the rifque he may run in fuch fervitude. This fhews why fuch fervant ought to earn more than a common labourer.
to earn more than a common labourer.
Let it be fuppofed that two taglors make the cloaths of a village, and that, the one dying, the furvivor has more work than ufual: this may enhance his price, by giving fome preference in point of expedition to others, he may thus continue raifing his price, 'till the countryman thall find it more advantageous to go to fome taylor of another village, or market-town, or city, to have cloaths made, or 'till fome other taylor comes into his own village, to thare the bufinefs of making cloaths.
If, of two taylors in a village; the one works better than the other, he may have a better price for his work; or, if he cuts his cloaths more fahionably (that is to fay, if he pleafes better) he fhall have a better price.
The fame reafon will hold good in market-towns and cities; thofe trades which require more art and capacity to learn, and more time to arrive at perfection in, earn, ceteris paribus, a better price.
The arts and employments attended with danger, as failors, bell-founders, filver-mines, \&c. earn more in proportion; and, where there muft be capacity, danger, and confidence, they earn ftill more, as pilots, Akippers, \&c.
If every labourer in a village breeds up feveral children, there will be too many hands for the cultivation of the land belonging to the village; and fo feveral adult fons and daughters muft go to feek a livelihood elfewhere: and it will probably happen that the inhabitants of this village fhall not be more numerous in 500 years than they were at firft.
The fame may be faid of the tradefmen of the village. If a taylor, who makes the cloaths of the whole village, breeds up three fons to the fame trade, as there is but work enough up three fons to the fame trade, as there is but work enough
for one, he will bring up one of his fons to fucceed him, and for one, he will bring up one of his ions to fucceed
the other two muft feek their livelihood elfewhere.
vol. II.

LA B
If they cannot find employment any where in their trade, they will go to fea, or into the army, or into foreign countries, or turn highwaymen and be hanged. But the number of tradefmen in the village in queftion will always proportiont itfelf to the demand, or the work there is for them.
It is ealy to conceive, in like manner, that the number of labourers and tradefmen proportions itfelf to the demand for them in market-towns and cities: but this further explication may be added: that, if four taylors in a market-town be able to make all the cloaths of the inhabitants, a fifth taylor may neverthelefs find employment there, by the diminution of the work of the other four; and thus it happens that tradefmen often gain a livelihood, though they may not have full occupation.
One acre of land produces more wheat, or feeds more fheep than another acre, and the work of one man is dearer than that of another, according to the occurrences, as we have explained.
If two acres of land are of equal goodnefs, the wheat or wooll of one is of equal value to that of the other, provided the work be equal that is employed about them.
Let us fuppofe the wooll produced by one acre to be made into a coarfe fuit of cloaths, and the worll of the other to be made into a fuit of fine cloth, containing the fame quantity of wooll with the coarfe cloth: as the fine fuit of cloth requires more, and dearer workmanhhip, it will coft more in making than the courfe fuit, and, proportionably to the difference of the work, one fuit of fine cloth fhall fell for ten times the price of a coarfe fuit, containing an equal quantity of wooll.
Wherefore the price of any thing, intrinfically, feems to take in the quantity of land with regard to the goodnefs of the land, and the quantity of the labour, with regard to the dearnels of the labour.
A pound of flax wrought into Bruffels lace, according to the computation of the different parts of labour it may require, will employ the labour of one perfon for near 14 years; and thus the quantity of lace, manufactured out of a pound of flax, fells at a price which not only pays the maintenance of a woman for 34 years, or of 14 for one year, but alfo to yield a profic to the merchant, or principal undertaker of the lace-manufacture.
The fteel fpring which regulates a good watch, may fell at a price which makes the proportion of the value of the fteel to the workmanhip as I to $1,000,000$.
On the other hand, the apples of a tree require fo little tabour, that their price feems to be proportioned almoft to the 1 and only that enters into their production.
The price of a bucket of water at the river is nothing; but, carried at fome diftance into the ffreet, fhall fell for one penny, which feems to be the meafure of the labour of the water-carrier.

From thefe examples and explanations it fecms to appear, that the price of any thing intrinfically is the meafure of the land, and the labour that enters into it's production: but it may happen that things which have fuch an intrinfic value, may not fẹll accordingly, with regard to the fafhions and humours of men. For example: if a gentleman cuts canals, and erects terrafes in his garden, the price of them will be intrinsically proportionable to the land and labour thereon employed, becaufe they really cof the gentleman in that proportion ; neverthelefs it may happen that nobody elfe will give him one quarter part of that value for them.
Eand, which produces all commodities and goods, muft neceffarily maintain thofe who give thofe goods and commodities their form by labour; and the labour itfelf may be eftimated by the quantity of land required to maintain thofe who labour, as may be further clucidated from what follows :
It does not appear that providence has given the right of the poffeflion of land to one man preferably to another; fome of the moft ancient titles that wc have any knowledge of, came by. violence and conqueft, and by laws eftablifhed in confequence of fuch conquefts. The property of the lands in Mexico is vefted in Spaniards, and of thofe at Jerufalem in Turks; but, however people come by the property of land in a ftate, it naturally falls into the hands of a few *.

Which way foever a fociety of men is formed, the property of the lands mutt be in the hands of few men. If a prince at the head of an army conquered France, and diltributed the lands among his officers, or favourites, according to his pleafure, or their merit, he would then eftablifh laws for vefting the faid property in them, and their defcendants. Each proprietor manages his own eftate, or lets it to one or more farmers, as he thinks fit ; and the farmer and his afintants muft be maintained out of it, and he pays the proprietor the overplus of the produce of the eltate; the proprietor pays the prince what he requires, according to the aws of fociety enacted or agreed upon, for the maincenance of his foldiers, courtiers, armies, \&c. The ufe the land is put to depends upon the humour and falhion of living which the prince and the proprietors follow: if they delight in horles, a proportionable quantity of the land muft be turn ed to paffure and meadow; if they are fond of a grea number of fervants and dependants, a proportionable quantity of the land muft be applied to produce wherewithal to maintain them, \&c.
If, upon the firt conqueft, the lands are divided among all the inhabitants by equal portions, yet they will gradually fall into the hands of a few; one man thall die without iffue and leave his portion to whom he pleates; another fhal have feveral children, and not wherewithal to maintain them, and fothey muft become dependants on fuch as have too much land. One man fhall be fiekly, lazy, or extravagant, and be obliged to fell his portion of land to another, who is frugal and induftrious, and this latter fhall every year add to his eftate.
Of this we have an inftance in the firf fettement of the Roman fate : each citizen had two acres of land, and yet, foon after, the property of the land fell into few hands. The moft ancient accounts we have of the forming focieties and ftates, tell us, that they have been formed by conqueft; how they ftood in the day of the patriarchs is not queft; how

Let us fuppofe the proprietor of an eftate in land keeps it in his own hands, he will employ flaves, vaffals, or fervants, to work for him. If he employs laves in great numbers, he muft have overfecrs to keep them at work; he mult have as many labourers and tradefmen, and mechanics, as are neceffary to procure him all the conveniencies his fancy and inclination lead him to.
In this ceconomy, he muft allow thefe flaves not only what will maintain them, but alfo their children; he mult likewife allow the overfeers of the flaves fuch advantages and rewards as are proportionable to the authority which he gives them. Wherefore the labour of a llave is worth, at leaft, the quantity of land that ferves to maintain him, and about double the quantity of land which ferves to breed up a child 'till he is of age fit for labour; for half the children that are born die before 17; fo that two children muft be reared up, on an average, in order to have one fit for labour, and even then their lives can be calculated but at 10 to 12 years.
It is true, that the one half of the children who die before 17, die fafter in the firf years than in the following; but, as the time the mother lofes in producing and tending them, feems to make up for this computation, and the females are more chargeable, and lefs profitable when they grow up, than the males; it appears reafonable to think, that the labour of the meaneft fave is equal to double the produce of the land that is required to maintain him.
When the proprietor maintains llaves or his land, if he has more of them than his labour requires, he fells the fuperfluous hands, as he does his cattle; in which cale their value or price ought to anfwer (cateris paribus) to the quantity of land employed to breed up two flaves to maturity.
But, if the proprietor employs in his fervice free fervants, or vaffals, inftead of llaves, he may probably maintain them upon a better foot than flaves, according to the ufage and
cuftom of the place he lives in: yet, in this cafe alfo, the la bour of a day-labourer ought to correfpond to abriut double the quantity of land that is employed to maintain him. If he be married, the furplus goes to the breeding up of his children, his wife being fuppofed juft able to maintain herfelf by her labour : but, if he be a bachelor, he will probably employ his furplus to live more at his eafe: for example, the married labourer will live upon bread and cheefe, roots, \&c. eat meat, drink ftrong beer or wine feldom, change cloaths and linen feldom; whereas the unmarried labourer will eat and drink better, and wear better appare), and confequently (if we fuppore their wages equal) he will confume the produce of more land for the maintenance of his own perfor, than the married man, if he faves nothing.
For the better underftanding of this, it is to be obferved, that a poor labourer may maintain himfelf at the loweft compütation, upon the produce of an acre and an half of land; whereas, if he allows himeiff frong beer, meat, and all other conveniencies, he may, without gluttony or excefs, confume the produce of four to 10 acres of land, of ordinaty goodnefs.
From this may be inferred, that the labour of a working man correfponds to more or lefs land in different countries, accord ing to the different cuftoms of living ufed in the faid countries; and that, if the labour of a peafant in France be worth the produce of three acres, that of an Englifh countryman, who drinks beer, wears woollen cloth, eats meat pretty often, and confequently confumes the produce of more land, is worth in England from fix to eight acres.
It has been already obferved, that a mechanic tradefman earns more than a day labourer, and, confequenty, he is able to confume, in the maintenance of his perfon, the produce of more land, or he may fpare his overplus, if he pleafes.
The mafter-tradefmen, and fuperior undertakeis of bufinefs, upon the footing that things are managed in Europe, corsefpond fomething to the overfeers of llaves in other parts, and gain more than the journeymen-tradefmen; and thefe maftertradefmen know how much work a journcyman can do in a day, and often pay them by the work and piece: this makes them work, for their own intereft, as bard as they can without further infpection.
From what has been faid, it feems to be pretty clear, that the par and equation of land and labour ane known by the quantity of land, the produce whereof is given for wages' to the man who labours. That the Jabour of a man, who earns the produce of three acres, is equal to three acres; of a man who earns the produce of fix acres, to fix acres, \&ic. And it feems that the fame proportion allotted for labour differs in feveral parts of the world, according to the different ways of living.-That, in China, the labour of a peafant may be equal to half an acre of land, fince a quarter of an acre may probably maintain him after the Chinefe manner.-That, among the Iroquois Indians in America, the labour of a valfal, or flave, may be equal to 20 or 100 acres, fince the maintemance of a man may require half that quantity, in regard that they live mofly on wild beafts, which they hunt, and that the bcafts one man confumes in a year muft have many acres of pafture to feed them; efpecially fince people there have not the knowledge to cut down the woods, and make the land produce as much grafs for them as it might; and it feems in this as if nature had no regard to the multiplication of men in particular, but is indifferent whether the land produces grafs, corn, or trees, or whether it maintains a greac or fmall number of birds, beafts, or men.
The females commonly confume the produce of leis land than the males, or, in other words, fpend lefr; their infancy is not only indeed expence, but, even when they are grown up, they feldon earn more than what barely maintains them. Therefore it flould feem that the labour of a peafant ought to exceed twice the quantity of land neceflary to maintain himn with regard to the female children that are bred up in a flate: but, as mort of the day-labourers do not marry till they have faved fomething, fuch who are frugal are, by that means, enabled to breed up feveral childeren.
So that, if it be allowed realonable that the labour of a peafant is equal to twice the product of the land that ferves to maintain him, the mechanic and traderman, who earn more, may be faid to follow the fame proportion.
If we confider to what quantity of land an hundred buthels. of wheat correfpond ir value, we mut not only take into confideration the rumber of acres which produced it, but alfo the double of the number of acres neceffary to maintain the men whofe work and labour produced it in that form, during the time they wr re at work thereupon: and, if the faid wheat bas been brought from afar, we multalfo take into confideration the land neceffary to maintain the men and bealls employed in the carrize.
Thus, to judge of the intrinfic value of any thing, we muft connider the land, and the labour that enters into it's productions; and, fince we may pretty nearly determine the par of land and labour, we may look upon land alone, perhaps, to be the principal meafure of all values.
But as money is the modium, which finds out the proportion of all values, it is alfo the belt medium to fix the proportion
of land and labour, in relation to all goods and commodities. If a workman earns half an ounce of filver per diem, and another earns an ounce, it may be judged that the latter hd: twice the quantity of land to fpend, fince he earns twice the quantity of monequ:
Thes notion of the par of land and labour Sir William Petty looked upon to be one of the moft important confiderations in looked upon to be one of the molt important conniderations in
polisical ueconomics, as appears by a Ms. of his, written in the year 1635 ; but the method he has taken to enquire into it, feems to be but very indifferently grounded. But the principles which we have laid down feem to be very plain and natural, and may be applied to the eclairciffement of many political altercations.
Money, for the facility and convenience of commerce, being the medium of all values, the more hard money there is in circulation, the dearer the price of labour, and confequently all commodities in general, will be in a ftate. See the articles Barter, Cash, Circulation, Money.
That the quantity of the hard circulating money of this kingdom has increafed in the like proportion as the price of labour and commodities, no one, we prefume, will undertake to prove. in proportion to the increafe of our fpecie, the price of labour may have increafed; but, as there are other obvious and apparent caufes which have contributed to the increafe in the price of labour within this century, it may be neceffary to point out the fource of thofe caufes, that we may not afcribe certain effects to uncertain and inadequate caufes.
This we have done under our article Duries, to fhew how thofe Duties and Taxes, laid upon commodities in this nation, operated before the laft war, when our Public Debts and Taxes were not greatly above one-half of what they are at prefent; and confequently, what is reprefented under the article Duties, muft have much greater weight now, than it had in our former edition of this work, and may be found to deferve, one day, due public attention.
But nothing can be more indubitably apparent, than that the high price of Iabour, and of all the produce and manufactures of this kingdom, is owing ta the immenfe Weight of our Taxes: and are not thefe folely owing to the Weight and Incumbrance of our National Debts? And, if thofe taxes were taken off, in confequence of the redemption of the principal national debts, would not the price of labour, and of all our commodities, fall in proportion BY such Annihilation of our Taxes? I believe that no one would be hardy enough to attempt to prove, that, if our taxes were taken off, the price of labour and commodities would not be leffened in the like proportion, as it has been thereby augmented, making allowances for the different values of money now, and before they were impofed. If this be the true ftate of the cafe, nothing can more demonftrably prove the neceffity of paying off the debts of the nation, by meafures every way adequate thereunto. How that may be effectuated, fee the article Debts [Public Debts] and fuch other heads to which from thence we refer. There are other caufes likewife, which will contribute to the keeping of the price of labour low, and in proportion to that of other neighbouring commercial ftates, by improvements in the mechanic arts and inventions, as well as in agriculture. See Agriculture, Farming, Husbandry, Manure.
.In Ruffia, we are told, they had no other way of making planks, 'till near the end of the laft century, but by hewing or chipping away a whole tree to the neceflary thicknefs; notwithftanding which, they could afford to fell them cheaper than their neighbours. Two Ruffans mighe poffibly, with hard labour, finifh a plank in a day in this inartificial way, in the fame time two carpenters could with eafe faw out 20 good boards. Without troubling ourfelves with the lofs of timber, if both are fold at a neighbouring port for the fame money,' 'tis plain, the Ruffian muft work for a twentieth part of the carpenter's wages: if a fawyer in Sweden can get ten pence-a day, the Ruffian muft be paid with an halfpenny. This inftance may bear a further application; the carpenter, by the contrivance of the long faw, performs as much in a day, as twenty Ruffians with the axe; but, beyond this, there are in Sweden a kind of mills turned by water, and fo contrived, as to take in large trees at the upper fide the ftream, and deliver them out on the lower, fawed into planks, in a very few minutes. One of thefe mills will at leaft make 500 planks, whilf the poor Ruffians could hew out a fingle one; fo that it performs the bufinefs of a thouland Ruffians, or 50 common fawyers, in a day, with the attendance of a fingle perfon*.

* Reflections on various fubjects, relating to arts and commerce.
That nation which invents fuch-like compendious arts of workmanhhip, will certainly fland the beft chance to gain the trade of foreign markets; for, befides that machines generally do the work truer and better than the hand, the labour faved by them is fo very great, that, if the materials are equally plentiful, they who ufe the machine, muft underfel the others in a yaft difproportion. For, as in this inflance, both are fuppofed to work only to live, provifions can be in no part
of the world dearer than another, in the proportion of 500 to one. A larger quantity wrought in a more compendious manner may call for as many hands, as a lefs quantity in a way more laborious. Thefe confiderations tend to make up their numbers, which will be richer, more improved, and more ingenious, either to defend or acquire; for ingenuity is generally an over-match for ffrength.
States without conmerce regard chiefly the increafe of numbers of inhabitants, and their home markets; and commercial ftates confider wealth alone, and foreign markets, Without prejudice to either, engines may be allowed in the following cafes. (I.) When they do fuch bufinefs as cannot be performed by hand at all. Of this kind are pumps, fireengines, water-engines, looms, wine and oil-preffes, 'handmills for grain, and perhaps horfe-mills. (2.) Where the commodicies wrought by them are fuch as would not have been ufed at all, except they were done by the machine, either being not cheap enough, or not good enough for confumption, when prepared by hand. Under this head are the mills for paper, thofe for forging, drawing, fiitting of iron, copper, or leads fulling of cloths and leather, and making gunpowder.
A people without commerce may fafely refufe to admit fock-ing-looms, fawing-mills, throwing-engines, weaving or fpin-ning-engines, mills for ftriking files, cutting watch-wheels; making nails, and all the variety of inventions produced by a rivallhip amongtt nations concending for commerce, and private men for orders.
Commercial ftates mult have their eyes on their neighbours, and, if they defign to engrofs foreign markets, muft provide for the cheapnefs of labour at home. Goods muft be made cheap, to render them of general ufe abroad and at home: Engines for hortening bufinefs ought to be rejected, or not admitted in commercial flates; when the commodity is not at all fold abroad, when it affects not the price of labour; when the machines would leffen our home markets, more than increafe our foreign ones; which is, perhaps, the cafe with moft of the laft mentioned ones, many of which tend only to take the bread out of the hands of thoufands, and, by a Chameful monopoly, to enrich one or two. And, if they were not moft of them already admitted, one would not wifi to fee them in ufe here.

Of the natural caufes of the rife and decay of nations in wealth and power, with regard to the price of labour.
Let us fuppore France in a middling ftate, the land pretty well cultivated, and the, proprietors rents pretty well paid; if in thefe circumftances there happens a civil war, the proprietors will take party, fome on one fide and fome on the other; they will engage and mortgage their eftates, to lend money to the chief of their faction to fupport his quarrel, fince, If the oppofite chief prevails, their lands and eftates will be confifcated, the undertakers will be difheartened, the country rifled, the magazines and warehoufes plundered, and labour will be difcouraged ; fo the land will not produce wherewithal to maintain the inhabitants, and to fupply neceflaries for the armies: The chiefs of the parties will be obliged to get fores and other neceffaries from the neighbouring flates which are in peace, and confequently they will fend money out of France to pay for them.
This will gradually create a fcarcity of money in France ; befides that great fums will be buried, and that all barters in evaluation and credit will be diminifhed, the uncertainty of the event of war will hinder marriages and multiplication, and the mortality in the war will diminifh the inhabitants.
In this fituation France will be in a deplorable condition, and in danger of being oppreffed by a foreign power. A general plague in France will occafion much the fame mifchiefs.
Now let us fuppofe the civil war ended, the proprietors who received little or no rent during the troubles, and whofe lands lay wafte and uncultivated, will now farm them outat a fmall rent, as well becaufe the fcarcity of money, which makes all commodities cheap, as becaure they muft encourage the farmers, in regard to the decreafe of the inhabitants. As the rents are fmall, they will live without luxury, and confume little or no foreign commodities, which will be dear, fince more money circulates on this hypothefis in the neighbouring ftates, than in France. The labourers and peafants, by reafon of the thinnefs of the inhabitants, will be encouraged, and, as they will confeguently find it eary to fubfift, they will breed up a great number of children, and fo France will become again very populous. The fcarcity of money in France will make their commodities fo cheap, that they will export great quantities of them, particularly if valuable manufactures are fet up in France. So that France will in this cale get a yearly balance, and fall naturally into the channels of trade. This will gradually bring great fums of money into France, where it's plenty will begin to raife the price of all things, and where feveral undertakêrs will have amaffed good fums of money.
Now, fince the prices of all things are rifen infenfibly, the proprietors will raife the price of their eftates, the increafe of the inhabitants will make them offer to work for lefs fuftenance than at fift; and, as there is plenty of money in eirculation,

## LAB

LAB
circulatioh, foreign commodities will come at a cheap price, the exportation of commodities will flacken becaufe of their dearnefs, and the neigbbouring nations will be able to fet up號 France, feveral French tradefmen will go into foreign parts, where there is work for them, and improve the manufactures there. The quantities of money amaffed by the French undertakers in the courfe of their bufinefs, while France gained the balance of trade, will encourage to fpend more money, and confume more foreign commodities, than ufual, as the ne now cheaper; and the proprietors, with their additional ent, will do the fame, and fo luxury will come into fathion. In the beginning of this turn of affairs, the balance of trade will be pretty equal, France being not yet quite beaten out of the channels of trade, but only beginning to lofe fome branches of it. In this fituation France is in it's acmé, or higheft ftate of power, having more ready money than the neighbouring ftates, and confeguently the king can raife greater fums from his fubjects than at any time. But, as the increafe of expence and luxury bas taken root, 'tis remarkable thofe who begin it feldom lay it afde 'till they are undone; this will caufe a continuance of the expence of foreign commodities, and, the exportation flackening and decreafing in proportion, the balance of frade will turn againft France, and their money will be fent out annually in payment of the furplus of thofe foreign commodities they confume: and thus France will decline in it's wealth and power, by the decreafe of the quantity of actual money, and the thinning of it's inhabitants, which it's luxury and decay of trade and manufaftures will neceffarily occafion.
This example of France is hiftorical. After the compofing of the civil war there about 1652 , the prime minitter of the finances, Mr. Colbert, fet up and encouraged fine manufactures there, and France lived feveral years without luxury, and few coaches were feen at Paris.
They gained greatly in the balance of trade, and Lewis the XIV th grew very powerful: money grew very plenty, and, about 1680 , the balance of trade grew pretty equal, and luxury began; and then it would have naturally turned againft France, which mult have neceffarily dechined in proceis of time, if that operation had not been hattened by the expulfion of the Hugonots, which, by the money and inhabitants fent out of the kingdom, haftened the decline of France; which neverthelefs did not happen vifibly, 'till about the year 1715, when the was in peace.
The rife and decline of all other kingdoms, naturally and abftractedly from wars and conquelts, are owing to caules of the like nature ; and, when a nation gets a great plenty of money, and increafes exorbitantly in it's paper circulation, it naturally tends to decline, by the dearners that happens of land, labour, and commodities; and the greateft prudence of a legillator feems to be, when money and paper circulation are rifing to that plenty, to take methods to clog their circulation, and, if poffible, to lock great fums of money gradually and infenfibly, to encourage the ufe of plate, and take any other methods than thofe that naturally and commonly happen, which is to fend it again to foreign parts, in payment of jewels, pictures, and other ornaments of luxury. The next effential thing to be done, alfo, is the gradual annihilation of their paper debts, and the taxes thereby occafioned. If this could be effected, a flate would continue, by a reafonable price of it's commodities, to keep up the channels of trade and exportation; but, where things go on in their natural courfe, the too great plenty of money, or paper credit, 'by enhancing the price of things, gives other rival nations an opportunity to take the trade into their bands, and to get the money along with it.
There feems to be but a limited quantity of trade in Europe : Luppole that in the trade of the woollen manufacture, the quantity of fureign cloth confumed in Italy, Spain, Portugal, Germany, Turkey, and the North, may amount to $30,000,000$ ounces of filver, and that the cloth is chiefly fupplied by England, France, Flanders, Holland, 8ic. That England is in the channel of exporting and fupplying to the value of 15 millions; if it fhould in any year fupply 20 millions, it muft be at the expence and diminution of the fales of the others: and, if France fhould get into the channel of fupplying large quantities of woollen manufactures more than ufual, it would be probably fo much taken away from the Englifh trade.
Sir William Perty feems not to have had any thought of this limitation of coniumption, when he infinuated, that it would be beft for England to abandon the manure of the land, and make all the inhabitants turn tradefmen, weavers, \&c.
If we fuppofe there are 90 millions of inhabicants in Eurnpe, it will not, perhaps, be found that one in 50 of the whole number confumes yearly foreign manufactures: France and England principally confume their own; and even the greateft number of the inhabitants of all other countries are cloathed at home.
Let us fuppofe the circulating money of England to have been four millions fferling, and the lands to be farmed out at 12 millions, the yearly produce of the land, according to the method of calculation we have followed, will be 36 millions; if, in procefs of time, the circulating money of England comes
to feven or eight millions, the rents of the land will haturaily come to exceed 20 millions, without any other alteration than the increafe of the quantity of circulating money; and whereas the lands of England might have been worth, at 20 years purchafe, 240 mitilions, in the firft fuppofition, they will, in the fecond, be computed at 400 millions, for no other reafon than becaufe from three to four millions additional money was introduced into barter, though the faid fum hoould be due to foreigners, and pays them a yearly intereft, to the great difadvantage of the Englifh balance of trade.
Now if the faid fum, from three to four millions, fhould be fent back to the foreigners, the rents of the lands would fall to 12 millions, as before; and here would appear, on computation, a valt decreafe of the wealth of England, without any real decreafe in the intrinfic value of the land and labour, and the annual produce of the land.

The more commercial labour there is in a flate, the richer the ftate is efteemed.
It has been judged, by experience, that the labour of 25 perfons is nearly fufficient to provide meat, drink, apparel, houfing, and, generally, all the neceflaries of life for ico perfons: upon this fuppofition, the fare and cloathing are coarie, but ealy and plentiful : yet, as above one third of the inhabitants are either too old or too young to work, or fick, or infirm, and that full one half are neceffarily idle, or free from com mon labour: there would be ftill, on this fuppofition, 25 adult working perfons, or thofe capable of working, who would have nothing to do.
If the moft part of thefe 25 perfons in 100 are employed to draw metals our of the earth, or to work fine cloth and fine linen, and to refine, by greater labour, the houfes, the utenfils, and other conveniencies of life, though they add nothing to the quantity of food of themfelves, nor to the quantity and necellary ufes of the cloathing; yet the ftate will be efteemed the richer for their labour: labour adds to the relifh of food and drink, and to the ornament and conveniency of cloathing.
The more labour is employed in a fuit of cloaths, the dearer it fells, and the richer it is efteemed. A knife and fork that are nicely wrought, taking up more labour, are dearer, and efteemed richer, cateris paribus.
It is true, that, whether the inhabitants wear fine or coarfe cloath, if equally lafting, and eat or drink, and are lodged nicely or coarfely, it is, in one refpect, much the fame thing, fince coarfe and fine food and cloathing are equally confumed; but, in the general notion, the ftate that conlumes fine cloath ing is efteemed richer than that which confumes coarfe, \&e.
But when the additional labour of the 25 perfons, we mencioned, produces permanent wealth, as gold, filver, capper, \&c. to ferve for a corps of referve, whether by exchanging their labours with foreigners for thole metals, or digging them out of the ground, the fate is not only efteemed richer, but is in every refpect fo; and more particularly if fuch labour brings in gold or filver, for which, on any emergency, the ftate may have, even from it's enemies, any thing it may ftand in need of.
Wherefore the more labour there is in a flate, the richer it is efteemed; and, if that labour be well applied, the richer in reality, and the more powerful, a fate is. For,
The point, which feems to determine the comparative ftrength and riches of nations, is the corps de referve which they have; magazines of all things necellary for the ufe of man, exceeding the yearly confumption, to anfwer in bad years and wars; or, forafmuch as gold and filver anfwer all thefe things, the quantity of gold and filver feems to determine the comparative wealth and power of flates; for thofe are permanent and lafting riches.
It is very advifeable to encourage all forts of work and labour in a ftate, fince a ftate is efteemed the richer for it ; but the labour which anfwers beft, in cafe of war and difficulty, is the moft to be encouraged. Diogenes, at the fiege of Corinth, is faid to have fell a rolling his tub, that he might not be ide, when all others were at work. We would not recommend that fort of labour; but, rather than have a perion idle in the ftate, we would recommend the working of toys and trinkets, that have a fhew of ornament, though little of real ufe.
If all the proprietors of land had but juft as much of it as they could overfee, and manage by themielves, or as much as farmers commonly rent and overlee, without under officers to affift them; if the faid proprietors became the undertakers of fuch their fmatl eftates, they would keep few or no idle fervants, few pleafure-horfes; they would live without luxury, and, confequently, the inhabitants of the fate would be more numerous, and more laborious, cæteris paribus. This makes it fenfible, that a great inequality in eftates is prejudicial to a ftate, becaufe of the luxury and idlenefs which great effates commonly introduce. And whether a convent of 50 monks live on a large effate, or a lord with 50 fervants and horfes, who do nothing but attend him, it feems pretty much the fame thing in time of peace; but, in cafe of war, the lord, indeed, and his fervants and borfes, may be u\{fful, and is always an ornament; whereas the monks feem to be of no real ufe in peace or war, on this fide heaven.

But the convents of all Mendicants are banteful in a flate; they are not only idle themfelves, and live upon the induftry of others, but are an hindrance to labour in many refpects, by their holy devices : the number of holydays in Roman Catholic councries, and other inftitutions of devotion, feem to take off nearly one tenth part of the yearly labour of the ftate. Before we difmifs this head, it may not be improper to obferve, that the Freach always outdo us in the price of labour: their common people fubfift upon roots, cabbage, and other herbage; four of their large provinces live, as it were, intirely upon chefnuts; and the beft of them eat bread made of barley, millet, Turkey and black corn: fo that their wages ufed to be finall in comparifon with ours.
The price of meat and wheat doth little concern the poor manufacturers, as they generally drink nothing but water, and, at beft, a fort of liquor which they call beuverage (which is water paffed through the hurks of grapes, after the wine is drawn off) they fave a great deal upon that account, for it is well known that our people fpend half of their money in drink.
At Lyons, which next to Paris is the beft city in France, they do not pay much above five-pence Englifh money an ell for making luftrings; and the price paid here for making luftrings is above twelve-pence per ell.
In the paper-manufacture abundance of people are employed for forting rags in the mills, who can earn in France not twopence a day; and the price paid here for fuch work is from four-pence to fix-pence a day.
The French working thus cheap, it is no wonder if they afford their manufactures at lower rates than their neighbours.
As this nation is our great rival in foreign commerce, it therefore becomes the widdom of the nation to meditate all reafonable and practicable meafures to remove every caufe that tends to increafe the artificial price of labour, and keeps us upon an inequality in trade with our competitors.

The Laws of England in regard to Labourers.
Who may be compelled to work, and how punifhed on refufal.
He who hath no lands of his own, or is not of fome trade or myftery to get a livelihood. Fitz. N. B. 168. b.
The churchwardens and overfeers, \&cc. may fet fuch perfons to work; and, if they refufe, one juftice may fend them to the houfe of correction: fo he may thofe that refufe to work for reafonable wages
Perfons brought up in hurbandry, or in any of the arts of trades, and not able to get a livelihood, if under thirty years of age, and having no vifible means to maintain themfelves but by labour, may be warned by two juftices to get a fervice by a certain day; and, if they neglect or refufe to be hired for a year, they may be fent to the houfe of correction, or bound over to the next affizes or feffions, and to be of good behaviour in the mean time. Dalt. II6. 6 Eliz. c. 4
One juftice may put in' the flocks, for two days and one night, fuch as he in his difcretion thall think fit to work, and command fo to do, if they refufe in the time of harveft. 3 Eliz. c. 4.
Artificers mult likewife work in hay-time and harveft, and, if they refufe, the conftable fhall put them in the ftocks for the like time; and the conftable therein neglecting forfeits 40 s :
In hay-time and harvef, labourers may go into other counties to work, but then they muft have a teftimonial, under the hand and feal of one juftice, to fignify that they had not work where they lived the winter before.
2. How long they muft continue at work.

If they work by the day, or by the week, they muft continue working from five in the morning 'till after feven at night, from the middle of March to the middle of September, and all the reft of the year from twilight to twilight; only from March to September as aforefaid, they are to be allowed two hours for breakfaf, dinner, and drinking; and, from the middle of May to the middle of Auguft, half an hour more for fleep ing ; and all the reft of the year an hour and a half for break faft and dinner; and, for the abfence of every hour, the mafter may ftop one penny out of the wages. 4 Eliz. c. 4 .
3. Punifhment for departing when they do work by the great.
If they depart before it is finifhed (except for non-payment of wages agreed on, or with leave of the mafter, or being taken into the king's fervice, or for other lawful caufe) they are to be committed for a month, without bail, and to forfeit 51. to the party grieved, to be recovered by action of debt, \&ac. pver and above the cofts and damages as by law may be re. covered for fuch offences.

## 4. For what wages they fhall work.

The wages of artificers, labourers, and others, fhall yearly be affeffed by the Geriff of the county; this by 5 Eliz. c. 4 . But the jultices of the peace, or the greateft part of them refiderat in the county, have the like power by frat. Jac. I. cap. 6. in their feflions every Eafter, or within fix weeks
Vo L. II.
after. This affeffment, by ftat. Eliz. muft be certified under their hands and feals to the chancellor, \&ce. who thereupon fends a proclamation into every county and corporation, before the Ift of September following, which the Cheriff, or chief officer, mult caufe to be proclaimed and inrolled by the clerk of the peace, before Michaelmas enfuing ; but, if no alteration is made in the old rates, then there is no need of fuch proclamation.
Every juttice, \&cc. who thall be abfent at the taxing the wages, not being fick, or not having fome reafonable excufe, to be proved upon oath, and allowed by the reft of the juftices, thall forfeit rol. one moiety to the king, the other to the informer, to be recovered by action of debt, information, or otherwife.
5. The punifhment for giving greater wages than what is
allowed. He who gives more wages, forfeits 51 , and may be committed for 10 days without bail. He who takes more wages, and is convicted before two juftices, or a head officer, fhall be committed for 20 days; but a mafter may reward a fervant as he pleafeth, fo as it be not by way of contract on the retainer.
6. The wages of labourers in the woollen trade.

By the ftat, i Ann. all payments for work done in the woollen, linen, fuftian, cotton, and iron manufactures, muft be in current money, and not in cloth, victuals, or other commodities; and all the wooll, delivered to them to be wrought, fhall be firt weighed, and the true weight thereof declared. The offender, in either of thofe cafes, forfeits to the labourer double the value of what thall be due for his work.
But, if the labourer thall be guilty of any fraud or fault in his work, then he muft anfwer to the owner double the damages by him fuftained. Then as to determining the wages, demands, frauds, and deceits of labourers in woollen, \&c. it muft be by any two juftices of the peace where the controverfy doth arife, who may examine witneffes upon oath; but there lies an appeal from the order of the two juftices to the next feffions, after notice of the faid order, whofe judgment Thall be final ; and, if for the appellee, then they may give cofts and charges.

## Remarks.

In a dictionary of trade, we have judged it neceffary to introduce the article of Labour; in order to obferve how, and in what manner, our taxes, as they are at prefent laid, enhance its price, and thereby augment that of our product and manufactures in general. This was moft apparently the cafe, before the laft war; and fince we have accumulated, by that war, an additional debt, near equal to that we did, by the three preceeding great wars, our general taxes have multiplied, in proportion as our public debts have. To what degree this our additional weight of taxes affects the price of labour throughout the kingdom in general, and in confequence raifes the prices of all our produce and manufacture, as well for foreign as home confumption, is too fenfibly felt and experienced to need further proof, or whole commerce and navigation labouring under the oppreffion. See Duties.
LACE-MANUFACTURE, is a work compofed of many threads of gold or filver, fine or otherwife, or of filk or linen, interwoven the one with the other, which is worked upon a pillow with fpindles, or bones for bone-lace, according to the pattern defigned. This is performed by the means of feveral pins, which are placed and difplaced as the fpindle is moved, upon which the threads are divided.
The fabric of lace has divers varieties and qualities, as that of net-work-lace, or bone-lace; alfo fome with large, others with fmall flowers, fome in a loofe, others in a compact manner; fome high-raifed, others lower, and fome very lowraifed; one kind all of gold or filver-thread, or part of gold and part of filver; others of filk of divers colours, and others of linen-thread, extremely white.
The common ufe thereof is for the embellifhment of drefs, in regard to linens, Jadies head-dreffes, the altar ornament of churches.
In France, the fale of lace makes a part of the mercery bufinefs.- The milliners deal only in that of white linen. The manufacture of gold and filver-lace in France is carried on moftly at Paris, Lyons, and the adjacent villages belonging thereunto.
The fineft filk lace is made at Fontenay, Puiffieux, Morgas, and the Louvre; the ordinary fort is manufactured chiefly in France, at St Denis, Montmorency, Villiers le Bel, Carcelle, Ecouan, 'St Brice, Groflat, Gifors, St Pierre des Champs, Eftrepagny, Doumefnil, and in fome other places in the neighbourhood of thefe cities, bourgs, and villages.
At the Louvre they manufacture particularly the greateft part of the raifed black filk-lace for womens fcarves.
The principal places from whence the fine white lace comes, are Antwerp, Bruffels, Malines, Louvain, and Gand, all cities of Spanih Flanders; alfo Valenciennes, Lifle, and fome other places of French Flanders; Charleville, Sedan, Le

Comté

## LA C

Comté de Bourgogne, Loraine, Liege, Dieppe, Havre de Grace, Honfleur, Harfleur, Pont L'Evefque, Gifors, Fefcamp,' Caën, and other cities of the province of Normandy; Arras, Bapaume, and other places of the county of Artors; Le Puy in Velay, fome places of Auvergne and Picardy, the Louvre in Paris, St Denis in France, Montmorency, Villiers le Bel, \&cc.
The fineft and mont beautiful thread-laces are thofe of the Spanifh Flanders, next to which are thofe of French Flanders; among which are diftinguifhed the true Valenciennes, then thofe of Dieppe, and next thofe of Havre and Hondleur: for, with regard to thofe of other places, they are but ordinary, and of a middling price, although there is no inconfiderable vent for thens.
The greaceft part of the laces, as well of gold and filver as of filk and thead, which are made in France, are confumed in the kingdom. There is but little except thofe of filk, and particularly thofe of the black fpecies abovementioned, whereof they make any confiderable export into Spain and Portugal, and into the Spanifh Indies, Germany, and Holland. The French fabricate particularly a fort of white thread-lace, for the commerce of the Spaniif Weft-Indies. It is compofed only of large flowers, without net-work, or bars. Thiskind was formelly greatly in fathion ; but, at prefent, they wear none of it; in Flanders they manufacture the moft of this kind.

Of the principal Laws of France in regard to Lace.
The mark upon thread-laces which come from Flanders, the Low Countries, and England, as likewife that of point from Genoa and Venice, and other foreign countries, was efta blifhed in France in the year 1660, by royal ordonnance. In 1664, it was united to the leafe of the five grofs farms. In 1667, by a declaration of the king, a tariff took effect, conformably to which the duties of this mark fhould be paid; which tariff was afterwards confirmed, and it's execution ordered by the arret of the council of flate of 168 i , of which we fhall fpeak prefently.
To this year the mark upon lace had not been eftablifhed and practifed, except in the jurifdictions of the cuftom-houfe of Lyons, for the point, which was imported from divers parts of Italy, particularly from Venice and Genoa.
In 1680, the king's farmer of the revenues, Monf. Boutet, having paffed a leafe to the Sieurs Joly and Fariole, of the un-der-farm of the impoft-duties upon thread-laces of Flanders and the Low Countries, was obliged, in order to enable the leffees duly to enjoy it, to prefent a petition to the royal council, that the declarations, ordonnances, arrets of council, leafes of the farms, and tariffs of the king, Thould be executed according to the form and tenor thereof; to which the king having regard, his majefty ordered, by an arret of the 8th of April, 1681, that all merchants, carriers, and others who brought Flanders lace into the kingdom, fhould be obliged to pals through the juridaction of Peronne, and reprefent the fame to the faid jurifdiction, in order to have fuch lace duly marked, with the farmer of that revenue's mark, at both ends of each piece of the faid lace, and to pay the cuftoms due, according to the declaration of his majefty, and the tariff made by the council the 18th of Apri, 1667; which laces, and the acquittals of the payment of fuch duties, merchants and others were obliged to lay before the juridiction of the faid farms eftablifhed in the city of Paris, to be there viewed and examined, upon pain of confifcation, and a fine of 3000 livres, \&c. which was executed as well in the juriddiction of Peronne, for the laces which paffed through there from the time of the faid arret, as in * the ihops and merchants warehoules for laces, which were before entered into the kingdom.

This policy, in collefting the duties on foreign impofts, may deferve attention in other nations.

In 1682, the merchants complaining that their mercbandize was opened and handled, in the faid jurifdiction of Peronne, they having no correfpondence there to take the care of them, the merchants and farmers of the revenue unanimoully agreed, that the laces Chould pals only by Peronne, where fhould be taken fecurity for their paflage to Paris, where they fhall be marked, and the dutics paid, which has been practifed ever fince.
The duties on importation and exportation out of the kingdom, and the provinces reputed foreign, for all forts of lace, are paid by weight; and the duties are more or lefs, according to the different fpecies and qualities, and the places of their fabrication.

## Of the principal Laws of England with regard to Lace.

Gold or filver thread, lace, fringe, or other work made thereof, or any thread, lace, fringe, or other work made of copper, hrais, or ans other inferior metal, or gold or filver wire or plate, imported, to be forfeited and burnt, and iool. paid by the importer, for every parcel fo imported. io Ann. cap. 26. fect. 65. and 15 Geo. II. 20. 7.

## L A C

The allowance on gold and filver lace, thread, and fringe, exported.
By ro Ann. cap. 26. §. 62. from r July 1712, for 32 years. Bv 3 Geo. l. cap. 7. 8. I. thence continued for ever. Upon fufficient fecurity before fhipping, that the goods fhall not be relanded in Great-Britain, and oath before the cuftomer or collector of the port, that they were actually made after the firf of July 1712, of the plate-wire fpun upon filk, the exporter thereof to foreign parts is to have the following allowances, viz.
Gold lace, thread, or fringe, the pound avoirdupoife weight, 6s. 8 d .
Silver lace, thread, or fringe, the pound avoirdupoife weight,
${ }^{5 \mathrm{~s}}$ To be paid out of the duties on gilt and filver wire, by the collector, or the commiffioners, by a debenture from the collector of the cuftoms, expreffing the kinds and quantities, and the fhipping teftificd by the fearcher. 10 Ann. cap. 26. §. 62.
Foreign bone-lace, bànd.ftrings, cut work, embroidery, fringe needlework, made of thread or filk, and buttons of all forts imported, forfeited; the importer liable to rool. and the feller to 501.3 Ed. IV. cap. 3. §. 1 , - 1 Rich. IIL. cap. 10. §. т.-r9 Hen. VII. cap. 2I. §.r.-5 Eliz. cap. 7 . §. I.-1 3 and 14 Car. II, cap. 13. §. 2.-4 and 5 W. and M. cap. ro. §. 2.-9 and so Will. III. cap. g. §. r.-1I and 12 Will. III. cap. Iı. §. I.
Except thread bone-lace not made in the dominions of the French king, or the duke of Anjou. 5 Ann. cap. 17.
Of the form of the cuftom-houfe bufinefs relating hereunto.
$3^{\text {d of March } 1730-N o . ~} 35$.
In the Taviftock of London, Daniel Bright mafter, for Jamaica.

## Roger Granger.

Twenty-four pounds one ounce of filver lace, $\}$ value at Twenty-eight pounds ten ounces of gold thread, $\} 2001$. in Ten pounds five ounces of gold fringe, all.
William Brooks [the maker] maketh oath, That the twenty eight pounds ten ounces of gold thread, twenty-four pounds one ounce of filver lace, and ten pounds five ounces of gold fringe, avoirdupoife weight, above-mentioned, were ail made fince the firft day of July 1712, and were all made of plate-wire fpun upon filk

William Brooks.
Jurat 3 die Martii 1730, coram me $^{2}$

## A. B. Collector of the cuftoms

And, before the faid goods are fhipped off, fufficient fecurity muft be given to the collector of the cuftoms, for the due exportation, in the following manner:
A bond for the exportation of gold and filyer lace, thread, or fringe.
Noverint univerfi, \&c.
Whereas the aboye-bounden Roger Granger hath this day entered outwards in the port of Southampton, on board the Taviftock of London, Daniel Bright mafter, for Jamaica, twenty-eight pounds ten ounces of gold thread, twenty-four pounds one ounce of filver lace, ten pounds five ounces of gold fringe, avoirdupoife weight, all made fince the firf day of July 1712, and made of plate-wire fpun upon tilk: and, whereas the faid Roger Granger, upon the exportation of the faid gold thread, filver lace, and gold fringe, for foreign parts, is to have an allowance or drawback, according to an act of parliament of the tenth year of the reign of her late majefty queen Anne, on that behalf made :
Now the condition of this obligation is fuch, That if the faid gold thread, filver lace, and gold fringe, and every part thereof, thall be fhipped, and really and truly exported into parts beyond the feas, and that the fame, or any part thereof, fhall not be relanded, or unfhipped with intent to be relanded, or brougbt on fhore again in any port or ports of Great-Britain : then this obligation to be void, or elfe to remain and be in full force, effect,, and virtue.
Sealed and delivered in the prefence of
A. B. Collector.

Roger Granger.
B. C. Comptroller.

Daniel Bright.
A debenture for gold and filver lace, thread, and fringe.

* Roger Granger did enter with us the 3d day of March 1730, in the Taviftock of London, Daniel Bright mafter, for Jamaica, twenty-eight pounds ten ounces of gold thread, twenty-four pounds once ounce of filver lace, ten pounds five ounces of gold fringe, all made fince the firf of July 17 I2, and of plate-wire fpun upon filk, as appears by the oath of William Brooks.
A. B. Collector
B. C. Cuftomer.
C. D. Comptrolfer.
* 10 Ann. cap. 26. \$. 62

## LAC

Bond is taken in the penalty of 38 I . that the above-mentioned gold thread, filver-lace, and gold fringe, fhall be fhipped and exported, and that the fame, or any part thereof, fhall not be relanded, or brought again into any part or parts of Great-Britain.
A. B. Collector.
C. D. Comptroller.

The twenty-eight pounds ten ounces of gold thread, twentyfour pounds one ounce of filver lace, ten pounds five ounces of gold fringe above-mentioned, were chipped the 6 th of March prefent. Certified the 19 th of March.
D. E. Searcher.
E. F. Surveyor.
F. G. Land-waiter.

## Remarks.

${ }^{\text {s }}$ Tis but few years fince England expended, upon foreign lace and limen, not lefs than two millions yearly. As lace in particular is the manufacture of nuns, our Britifh ladies may as well endow monafteries as wear Flanders lace, for thus Popifh nuns are maintained by Proteftant contributions. This manufacture, in Flanders, not only employs the hands of nuns and other women, but of great numbers of the country peafantry, who alfo work at it. The number of people employed all over Flanders in making lace is almont incredible, nor can the value be eafily eftimated*." This is a branch of trade that we may either do without, or elfe bring to perfection in time among ourfelves, fo as, perhaps, to be able to export quantities of it $\dagger$.
*The mof celebrated places for this manufacture, are $\mathrm{An}_{-}$ vers, Bruffels, Malines, Louvain, and Ghent; in French Flanders, they make the beft at Valenciennes and Lifle, and in feveral places in the province of Normandy. Great quantities of black lace made of filk, are alfo wrought at thofe places, and vended in Germany, Spain, the Indies, \&c. by the induftrious inhabitants.
The manufacture of thread, in Flanders, has been alio brought to a moll furprizing degree of perfection: M. Savary informs us, that they have fpun thread, at Malines, fo fine as almoft to efcape the fight, and the action of the yery aireafily breaks it. Thus, in order to fpin it, the greatelt precaution is necelfary. It was in this town that fine threads were firlt manufactured for making of lace; but they have, at Lithe and other places, come up to thofe fpun at Malines. Thread kas been manufactured in thefe places, from 7 or 8 livres the pound weight; torabove 400 livres; fo that nothing can well thew the value of indufry to a greater degree.

+ At Bland, a town on the Stour, between Salifury and Dorchefter, they make the fineft lace in England. The author of the Tour through Great-Britain fays, they fhewed him fome fo exquifitely fine, that he never fa, better in Flanders, and which, they faid, was rated at above 301 . ferling per yard,
In Ireland, the Dublin fociety in particular, have already, by premiums and other attempts, done great fervice towards exciting a fpirit of improvement and induftry throughout that kingdom, and, from the encouragement lately given by his moft facred majefy for the fame ends, it is to be hoped, that, in a little time, this kingdom may be made happily inftrumental to Great-Britain, in vyeing with her rivals in trade, in many important branches, and, in conjunction with England, in this of lace among the reft. The Cork fociety alfo, to their great honour, follow the fame fteps, and have diftinguihed themfelves of late by the fame kind of proceeding: what may we not hope from fuch a fpirit? Several times and places have been famous for the advancement of the fieiences, fuch as that of Philip and/ Alexander in Greece, the firf Cæfars in Rome, the houfe of Medicis in Florence, and Lewis the XIVth in France. What thefe perfons and ages were to their refpective countries, it is to be hoped, the laudable endeavours of the above-mentioned focieties, added to the royal bounty, will be to this kingdom.
As all the improvements in the lace manufadure, as-well as in the linen in general, depend upon flax, too much care cannot be taken of the cultivation of this article to the laf perfection in Great Britain. See Flax,
The lace manufacture in England has greatly improved within thefe few years, and is likely to arrive at as high perfection in this kingdom, as it is in any part of Europe, by the means of the honourable and laudable fociety of Antigallicans, who have followed the example of the Dublin and Cork focieties, in refpect to lace; and, by their well-judged premiums, have been lately inftrumental to produce lace manufactured in Englind, to an extraordinary pitch of delicacy*.
- Auguf 7, 17;2, fix pieces of bone-lace for mens ruffes were produced, the premium of 101 . 10 s . adjudged to Mr. William Marriott of Newpart-Pagnel, Bucks, for the beft piece - For the fecond bent 1 1. 5 5. to Mrs Elizabeth Waterman of Salifbury.
May 8, 1753, 14 Fair of needle work ruffes, the premium

51. 5 s . adjudged to Mrs Maira Male of Stonecuiter. freeet,

Gold and Silver Lace. This manufacture depends on the 'art of Gilding and Wire-Drawing. And thofe arts depend on the ductility of gold and filver.
To give fome idea of this extraordinary property, to which we have occafion to refer.
Our gold-beaters and wire-drawers furnih us with abundant proof of this property : they every day reduce gold into lamellæ, or leaves inconceivably thin; yet without the leaft aperture difcoverable, even by the microfoope: a fingle grain of gold may be flretched under the hammer into a leaf that will cover a pretty large houfe, and yet the leaf remain fo compact, as not to tranfmit the rays of light, nor even to admit of the tranfudation of the fipit of wine.
Dr Halley took the following method to compute the duttility of gold: he learnt from the wire-drawers, that an ounce of gold is fufficient to gild a filver cylinder of 48 vunces weight; which cylinder may be drawn out into a wire fo very fine, that two yards thereof thall only weigh one grain, and confequently 98 yards of the fame wire only 49 grains. So that a fingle grain of gold here gilds 98 yards, and of courfe the $\frac{1}{1080}$ part of a grain is here above $\frac{x}{3}$ of an inch long. And, fince the $\frac{x}{3}$ of an inch is yet capable of being divided into 10 leffer parts, vifible to the naked eye, it is evident, that the Tor feen without the aid of a microfcope. Proceeding in his calculus, he found, that a cube of gold, whofe fide is the ${ }_{\tau} \frac{1}{0} \sigma$ part of an inch, contains $2,433,000,000$ vifible parts: yet, though the gold wherewith fuch wire is coated, be ffretched to fuch a degree, that there is not any appearance of the colour of the filver underneath.
Mr Boyle, examining fome leaf-gold, found that a grain and a quarter's weight took up an area of 50 fquare inches: fuppofing, therefore, the leaf divided by parallel lines 1 of an inch apart, a grain of gold will be divided into soo,000 minute fquares, all difcernible by a good eye. For the fame author fhews, that an ounce of gold, dtawn out into wire, would reach 155 miles and a half *.

- See Boyle's Abr. Vol. I. p. 405.

Monf Reaumur has carried the ductility of gold a greater length : a gold wire, every body knows, is only a filver one gilt. This cylinder of filver, covered with leaf-gold, they draw through the hole of an iron: and the gilding fill keeps pace with the wire, ftretch it to what length they can. Now M. Reaumur Gews, that, in the common way of drawing gold-wire, a cylinder of filver, 22 inches long and 15 lines diameter, is flretched to $1,163,520$ feet; or is 634,692 times longer than before, which amounts to above 97 leagues. To wind this thread on filk for ufe, they firf flaten it; in doing which it Atretches at leaft $\frac{1}{7}$ further, fo that the 22 inches are now in leagues: but, in the flattening, inftead of $\frac{x}{3}$ thy could ftretch it $\frac{x}{4}$, which would bring it to 120 leagues. This appears a prodigious extenfion, and yet it is little. The cylinder of filver might have been covered with one ounce of gold only, inftead of fix, as fuppofed: the gilding, indeed, in this latter cafe, will be but thin' ftill it will be gilding, and no point but will have it's coat of gold. On this foundation Reaumur computes, that the thicknefs of the
 as the leaf gold is not every-where the fame thicknefs, but at leaft twice as thick in fome parts as other, in the thinneft parts it will not be above $\frac{1}{52500}$ part of a line, or the $6,300,000$ th part of an inch. ${ }^{5}$
Yet this is not the furtheft the artift can go: in flatting the wire gently between two wheels, it may be extended to double the breadth hitherto fuppofed ; in which cafe the thicknefs of the leaf will be reduced to lefs than a millionth part, of a line, or a twelve millionth of an inch.
Yet after all, putting a piece of this gilt wire in aqua fortis [fee Aqua Fortis] the filver will be diffolved, and the gold left a perfect continuous tube *.

* Mem. de l'Acad. An. 1713.

This force of cohefion in the parts of gold, which appear farce lefs than infinite, depends on it's being freed from common fulphur: for mix but one fingle grain of fulphur with 1000 grains of gold, the mafs ceafes to be malleable, 'till the fulpher be evaporated. Hence we have a ftrong prefumption, that the lefs cohefive metals, tin, copper, and ironi, contain a large quantity of fulphur.
The immenfe divifibility of gold is learnt from another experiment. - Take a pound of filver, and fufe it with a fingle grain of gold; the gold will diffufe itfelf equally through every minute particle of the filver; fo that taking a grain of the mafs, and diffolving it in aqua fortis, you will find a quantity of gold fall to the bottom, which bears precifely the fame proportion to the grain of gold, as the gold in the mals had in the whole mafs.

The wire and thread we commonly call gold-thread, \&ic. which is only filver wire gilt, as before obferved, is drawn from a large ingot of filver, ufually about 30 pound weight. This they round into a cylinder, or roll about an inch and a half in diameter, and 22 inches long; and cover it over with the leaves prepared by the gold-beaters, laying one over another, 'till the cover is a good deal thicker than that in our ordinary gilding: and yet even then it is very thin, as will be eafily conceived from the quantity of gold that goes to gild the 30 pound weight. Two ounces ordinarily do the bufineff, and frequently little more than one. In effect, the full thicknefs of the gold on the ingot rarely exeeds or $x$, part, and fometimes not $\frac{1}{10}$ part of an inch.
But this thin coat of gold muft be yet much thinner: the ingot is fucceflively drawn through the holes of feveral irons, each fmaller than other, 'till it be as fine, or finer than a hair. Every new hole leffens it's diameter, but it gains in length what it lofes in thicknefs, and confequently increafes Guface. Yet the gold fill covers it, that following the Gluer in all ir's extention, and never leaving the minutelt part bare, not even to the microfcope. Yet, how inconceivably muft it be attenuated, while the ingot is drawninto a thread, mhofe diameter is gooo times lefs than that of the ingot.
M. Reaumur, by exactitude of weight and computation, found, that one ounce of the thread was 3232 feet long, and the whole ingot $1,163,520$ feet, Paris meafure, or 96 French leagues, equal to $1,264,400$ Englifh feet, or 240 miles Englin: an extent which far furpafles what Father Merfenne, Furetier, Dr Halley, \&xc. ever dreamt of.
Merfenne fays, that half an ounce of the thread is 100 toifes, or fathoms long; on which footing, an ounce would only be 1200 feet; whereas M. Reaumur finds it 3232, \&cc. according to what has been already obferved.
The method of drawing filver is the fame with that of gold, except that the latter is gilt or covered with gold, and the other is not.
There are alfo counterfeit gold or filver wires: the firft made of a cylinder of copper filvered over, then covered with gold; and the fecond of a like cylinder of copper filvered over, and drawn through the iron, after the manner of gold and filver wire, and this again is gilt.
And a great quantity of the French gold and filver lace is certainly made of this fort, which is too often paffed upon the world for other. This may deferve the regard of thofe, who are fo mighty fond of French lace, to the detriment of the Britifh gold and filver lace manufacture, which is in general of a far fuperior quality, wears far preferably, and will fetch more after it is worn out, from the intrinfic value of the gold and filver.
The Laws of England with regard to gold and filver Lace. No metal inferior to filver fhall be fpun on filk, under penalty of 5 I. an ounce. Silver wire for making filver thread Thali hold at leaft 11 oúnces 15 pennyweights of fine filver upon the pound Troy weight; and all filver gilt, and ufed in the wire-drawers trade, fhall hold at leatt II ounces 8 pennyweights of fine filver, for every pound Troy weight; and fhall not have lefs than four pennyweights four grains of fine gold, without allay, laid on each pound of filver, on penalty of five pornds per ounce. For gold and filver prepared as beforefaid, and reduced into plate, there fhall be allowed fix ounces of plate to five ounces of filk. A penalty of 2 s .6 d . per ounce for felling gold and filver lace mixed with any other metal, and 5 s . per ounce for felling by any other than, Troy weight: no gold or filver thread, \&c. made of copper or other inferior metal, or gold or filver wire or plate, fhall be imported, on pain of being forfeited and burnt, and $1 \infty 0$. on the importer for each parcel,
Lading. See Bills of Lading, Charter-Parties, Freicht.
LAGAN, or LAGON, in our ancient marine laws, fignifies goods flapwrecked, left by the fea, lying on the fand, either afhore, or out at fea. See Flotsam, Jetsam, and Wreck.
LA N CA SHIRE in England. This county has Yorkfhire on the eaft, and the Irifh Sea on the weft, Weftmoreland on the north, and Chefhire on the fouth, and is about 170 miles in circuit.
The air is ferene and healthy, and the foil for the moft part fruitful, yielding ftore of wheat, barley, and oats; and the palture fo nourihing, that their cattle are ufually of a larger fize than in other counties. Here is plenty of timber, coal and cannel coal-pits, with mines of lead, iron, and copper, amtimony, black-lead, lapis calaminaris, befides allum, brimftone, and green vitriol, found in fome of the coal-pits. It's chief rivers are the Merfey, Ribble, Wire, Lon, and Ken; all which abound with fing. Another river, called the Irke, is roted for cels, reckoned the fatteft in England, and ton lufcious for common digettion; which is afcribed to the greafe and oils fiom the woollen cloths milled in it.
Lancaster, the fhice town, flands near the mouth of the river Lon. It is a populous thriving corporation, with a tolerable harbour and a cultom-houfe. Veffels of 70 tons go
from hence to America, with hard-ware and woollen manufactures; but the country hereabouts is fo thinly peopled, by reafon of it's barremneis, that it cannot take off the fugars imported.
Prestron on the Ribble, may, for it's beauty and bignefs, compare with fome cities. It is plentifully fupplied with fim, coal, and other commodities.
Liverpool is a large and populous town, and the moft fouriming fea-port in thefe parts, pretending to rival, if not to excel Brifol, it's cuftoms being increafed eight or ten fold within thefe forty years paft. The inhabitants are univerfally merchants; and, notwithftanding their our-of-the-way fituation, drive an incredible trade, with great fuccefs, and very large ftocks, to all the northern parts of the world, as to Hamburg, Norway, and the Baltic, to the Britifh colonies in America, to Guinea and Ireland, and alfo to France, Spain, Portugal, and Italy; fo that there is no trade but that of Turkey, Greenland, and the Eaft-Indies, in which they are not concerned. As it imports almoft all kind of foreign goods, it has confequently a large inland trade, and fhares that to Ireland and Wales with Briftol, as follows: as Briftol trades chicfly to the fouth and weft parts of Ireland, from Dublin in the eaft to Gallway weft ; this town has all the trade of the eaft and north Chores, from Dublin to Londonderry: as Briftol has the trade of SouthWales, this has great parts of that of North Wales: as Briftol has the fouth weft counties of England, and fome north of it, as high as Bridgenorth, if not to Shrewfbury, Liverpool has all the north counties, befides what goods it fends to Chefhire and Staffordfire, by the new navigation of the rivers Meriey, Weaver, and Dane, even io near to the Trent, that it's goods are carried by land to Burton. The merchants of Liverpool are alfo concerned' with thofe of Londonderry, in the fifhery on the north coaft of Ireland. There is a navigation from hence farther up the Merfey, even for fhips of burden, as high almoft as W wrington; and alfo up the fouth channel, called the river Weaver; but it is chiefly for two things, I. For rock-falt, which is dug out of the earth, both in this county and Chefhire, and hipped off here in great quantities, not only to neighbouring parts, but to London, Colchefter, and feveral other places in the fouth of England, where it is diffolved in fea-water, and boiled again into a flronger and finer, as good as that fort called falt upon falt, made by the Dutch of the St Ube's falt, and with which they cure their herrings. 2. For great quantities of Chefhire checfe fhipped here.

## Remarks in 1764.

By an authentic account we have from Liverpool this year 1764, there were lying in that port the following veffels; viz. 81 thips, 27 fnows, 67 brigs, 6 fchooners, 3 doggers or ketches, 141 Iloops; and only one thip and four brigs failed; which reduced the number to 35 veffels lying in this harbour at the fame time: an inftance not to be equalled by any port belonging to Great-Britain, except the motherport of London; efpecially when we confider that none of the merchants thips were accidently forced into this harbour by contrary winds.
Warrington ftands on the Merfey, and is a populous and rich town, full of good country tradefmen, and has a particular market every week for linen, which is generally that called huckaback, the manufacture of it's neighbourhood; and it is faid that at leaft 500 l . worth, and fometimes much more, is fold every market-day.
Manchester, as an inland town, has perhaps the beft trade of any in thefe north parts. The fuftian manufactures, called Manchefter cottons, for which it hath been famous for almoft 150 years, have been very much improved of late, by fome inventions of dyeing and printing; which, with the great variety of other manufactures known by the name of Manchefter goods, as ticking, tapes, filletting, and linen cloth, inrich not only the town, but the whole parifh, and render the people induftrious. The weavers have looms here that work 24 laces at a time, an invention for which they are obliged to the Dutch *.

* How far it may be good policy for a commercial fate to make ufe of machines to leffen the price of labour, fee the article Labour, towards the conclufion, alfo the article Machine.

Rochdale is another town of good trade, being of late years much improved in the woollen manufacture.
Bury is a town alfo of good trade. It is the utmoft bound of the fuftian-manufacture, and drives a confiderable trade in coarfe goods, called halfthicks and kerfeys, for which here is a very great market, though the town lies fo much out of the way, and at the font of the mountains, that otherwife it would not be much frequented.
Bolton is a faple for fuftians of divers forts, efpecially thofe called Augtburg and Milan fuftians, which are brought to it's fairs and markets from all parts of the county.
Ormskirk is a hatidfome town, with a good inland trade.
Hawkstead has a good trade in cloth, in that part of the county called Fowrnefs, towards Cumberland and Weftmoreland.

LANDED

## LA N

## LANDED INTEREST.

-The reaton why the decline of foreign trade finks the value of Land.
Firf, By finking the markets at home.
For, the produce of land being rendered exceffively dear, from the caufes below enumerated *, foreigners will not take it's fuperfluities; and labour being by the fame caufes rendered exceffively dear too [fee the arcicle LABOUR] we cannot manufagure, or improve that produce, nations that can afford cheaper fupplying the markets abroad; fo that the produce of the lands, not being carried off as ufual, muit become a dead ftock on the farmers hands, and caule great quantities to be crowded into the markets, where being encouragement but for few buyers, the price naturally falls: as, for inflance, the declining demand for our woollen goods abroad falls the price of wool at home.

* The foreign trade of every country muft decline, that

1. Lays unequal taxes in general on it's people. See the articles Labour and Taxes.
2. That cramps it's commerce, the fountain of riches, by high duties, and impolitic prohibitions. See the articles Duties and Bondine of duties at the cuftom-houfe, and the article Customs.
3. That fuffers many monopolies. See the articles Companies and Monopolies.
4. That oppreffes it's people by prohibiting the importation of victuals, under the pretence of raifing the value of
it's lands. See Ireland, remarks thereon.
5. That encourages idlenefs by bad laws relating to it's 50or. See the article Poor.
6. That tempts foreigners to carry away it's coin for lefs than it's intrinfic value. See the articles Coin and Money. 7. That makes the obtaining juftice chargeable. See the articlesConsulsandMerchant[Court-Merchant.] 8. That fuffers a heavy national debt, contracted in time 8. That fuffers a heavy national debr, concrate to continue unpaid in time of peace. See Dests [NATionaldebts], Crediti[PublicCiedit], Funds.

## L.A N

For as the land, by the decay of foreign trade. receives nos the firft fum, and is, by the fame caufe, faduled with the Jatier, it makes an annual difference of the above fums to the landholders in this fungle branth of labour, and is the fame. in proportion for all other decayed branches of trade.
Thirdly, By decreafing the ftock of people.
For, as employment lefiens, the moft induftrious, rather than Atarve here, will fy to oiher countries, where trade can maintain them; fo, the conlumption of thefe being taken away, the demand at market muft grow lefs, and, of courfe, rents muft fall, yet the farmers charges muft grow greater; for, the fewer hands, the higher wages are; this muft break him in the end, and produce all the confequences following that miffortune, mentioned in the firft remark: befides, it is mien that trade, and bring in money, therefore, the fewer they are, the lefs money will be brought; and, the lefs money, the lefs rent can be given for land.
Fourthly, By decreafing our riches.
This is a confequence of the above three remarks; for having fewer goods capable of being exported, by reafon of their dear price, and our manufactures declining, muft in time be loft: therefore the importation of foreign goods muft naturally increafe, and more money go out to pay for them.
Nations that have no mines of gold and Giver, have no means to get them but by foreign trade, and, according to the degree of thefe metals they poffiefs, the prices of their commodides, and therewith the value of their lands, tife and fall in proportoon; which I flall now prove.
The Britannia Languens; pheqe 12, fays, If there were but 500 1. in England, an ox could hardly be worth a penny; therefore the rent muft bear it's proportion to the riches. This appears by Maitland's Hiftory of London ;: for he fays, that, in the year 961 , land fold at is. per acte، The reaton the land then bote folow a price, was, the low price the produce fold at; for he lays, that, in the year 1000, an ox fold for 2 s .6 d . a cow for 25 . a theep for 1 s . and a fwine for 8 d . This cond be only owing to the little foreign trade the nàtion then had, and, conlequently, to the little quantity of gold and filver, trade had then brought in.
But if it fhould be afked, What is the reafon that, at prefent, all things are naturally fo much advanced in price, to what they were in thofe days? The anfwer is, That the quanticies of gold and filver brought to Europe fince the progrefs made by the Spaniards and Portugueze in America, have made thofe metals more common, and of lefs value than formerly, fo that 20s. will hardly purchafe what is. would before the difcovery of the Weft-Indies *.

* Let there be added to this confideration, that alfo the great increafe of our national debts and taxes, in confequence thereof, together with the circulation of the intereft of the principal money of the public funds, and likewife that great circulation of paper credit in trade, occafioned by notes and bills, in the way of private credit, which is deftructive of our trade. See Credit [Private Credit.] Alfo the circulation of property by mortgages, and by means of the circulation of property by mortgages, and by means of che public fecurities in general; for, although one is obliged
to take annaities in payment, yer who would refufe them to take annuities in payment, yet who wold refuer them
on peculiar occafions? Thefe things all confpire co promore on peculiar occations There things all confpire co promote
an artificial circulation of property, which raifes the price an artificial circulation of property, which raises the price
of commodities, and has the appearance, with too many, of the riches of the nation; whereas thefe things are the characteriftics of a declining condition, and that we fland in need of a quantity of real hard money to circulate what trade we have, and are therefore obliged to make ufe of paper credit, which is only it's reprefentative, and proceeds
from our apparent neceffities, not from our increafe of folid treafure. This is certainly the cafe, unlefs it can be proved, that our national debts, and the taxes on labour and commodities occafioned thereby, are bleffings, and that, the more we increafe our debts, the richer the nation will be. Perhaps too fome will attempt to perfuade us, that the more mortgages of land there are in the kingdom, and the ofrener they are transferred, and the more privace papir credit paffes in trade, inftead of ready calh, the richer the aation is; but thefe are egregious miftakes, and ought to e vigilantly guarded gals, for, pron of labour and comthis hew of artincial wealth, the price of labour and commodities will fall to their natural value; which will be the means of fo increaing our trade, that our paper circulation will become realized by folid gold and filver ; and then the price of labour and commodities will be reduced to a nataral ftate, according to the real, and not the imaginary riches of the nation. For further confirmation of thefe principles, fee the articles Debts [National Debts], Credit [Public Credit], Duties, Funds, Lafour, Money.

The Spaniards and Portugueze do not throw away their gold The Spaniards and Portugueze do not throw away their gold
and filver for us to pick up; we have no mines of thefe metals, and filver could not get fuch quantities as we have, but by our trade to Spain and Portugal, or to thofe councries that had an overbalance upon them, and were overbalanced by us.
So that the prefent natural price of land, and it's produce, is the proportion of gold and filver that forejen trade hath brought into, and left in the nation. It the prefent quantity was to be doubled by foreign trade, the natural price of land, and it's produce, muft be fo ton; for, according to the price the
farmer can fell his commodity at market, he can pay for the rent of land, and no otherwife. If our foreign trade decays until the prefent money in the nation be half fwept away, the produce of land muft fell for half the natural price it does now, and land mult let at half the rent it naturally bears now: but if we Chould go on declining, until we have no more money left in the nation than thete was in 96I or 1000 , the prices of land, and its produce, can be no more than they bore in thofe days, taxes, \&cc. deducted.
Therefore, if the landed gentlemen have a mind to raife or fink the value of their lands, the encouraging or difcouraging our foreign trade is the only means to do either, fo clofely united are land and trade; their true interefts are the fame; they muft ftand or fall together.
The fum of all is this: that
What foreigners take from others, inftead of us,
What the poor have given them inftead of buy- Sinks the
 value of The fcarcity of people -- ————— lands. The fcarcity of money $\qquad$ lands.
Taxes, monopolies, ill-judged laws, and national debts, are the caufes of the decline of our foreign trade; the decline of foreign trade caufes the above calamities, and they fink the value of lands.
Before we conclude this point, we fhall obferve, that our chief intent, from what has been urged, is to remove that deftructive prejudice arifing from the falfe diftinction of landing and trading interefts, by thewing that there neither is, or can be any difference of intereft between them; for whatever clogs trade, muft fink the value of lands, and that any benefit to trade, how remote foever it may feem from land, will at laft terminate in the increafe of it's value; therefore we may dare to affirm, that the giving trade the utmoft encouragement is the greateft and moft folid improvement of the value of lands. - It muft be evident, fays the author of Britannia Languens, - page 290, that, were our trade eafed as our neighbour na-- tions, England would have the fuperiority, fince the fame - caufes muft produce greater effects in England, being invi-- gorated with thofe national advantages which no other na-- tion doth or can enjoy.' See Britain [Great-Britain.]

## Remarks.

## Of the effects of Land-Taxes, compared with thofe upon Commodities.

As the benefit of taxes to the public refults only from the nett income, and the evil to individuals extends not only to the grofs produce; but to every other expence and lofs incident and confequential, that tax is moft beneficial to the public, and leaft injurious to the fubject, which produces a large fum through a cheap collection, and which is exempt from every other eventual charge.
To ufe a familiar inftance: he who attends to his own affairs, lives upon his own land, employs but one fteward, at a fmall falary, to receive his rents, and buys at the firt hand, may, from a fmall and compact eftate, thus conducted, feend and fave more than the lord of an immenfe rental, widely difperfed, gathered by many hands profufely paid; he living at a diftance, and purchafing what he confumes from the fourth or fifth retailer. That a land-tax is attended with the leaft expence of any other whatfoever, that does produce not any thing near the nett fum annually, is matter of fact.-Quare, therefore, whether Land-Taxes are not far more beneficial to the public than Taxes on Commodities? How taxes upon commodities really affect the commerce of the nation, fee the article Labour. It becomes neceffary, however, to expatiate upon this important fubject in other lights. As the good of our country fhould be the only object of fuch difquifitions, and truth the only medium through which it ought to be attained, advantage thall not be taken of a maxim favourable to the opinion here profeffed, although it hath been long received, and is fupported by the greateft authorities.
The maxim in view is, That taxes, wherever laid, fall ultimately upon land; which with all due deference to thofe who firft eftablifhed it, and to thofe who have fince adopted, and argued from it, feems to go farther than reafon and experience will warrant.
The arguments, by which it has been maintained, feem rather calculated to puzzle than convince; for, although every man cannot anfwer the premiffes, yet fcarce any will affent to the conclufion, 'That in fact, and in reality, all the taxes in ' this nation are paid out of it's lands.'. And ftrange it were if many agreed in the propofition, for it is certainly falfe.
When a tax is laid upon any commodity, it becomes a circumftance of expence, of the fame nature with any other attending upon it. Therefore no reafon feems affignable, why the tax fhould neceffarily fall upon land, that will not equally conclude for every other circumftance, and for fettling the whole charge of national expence and confumption upon the fame bottom.
But this is impoffible: for it is agreed by the beft authors of political arithmetic, that the rents of lands, houfes, and mines,
are not more than ${ }^{2}$ part, and half of the annual expences of the nation.
In Sir William Petty's computation of 7 millions of penple in England, who, one with another, expended, for their lodging, feeding, and cloathing, 7h. a head, the annual expence and confumption of the whole people amounted to 49 millions: and Dr. Davenant's calculation of rents does not exceed fourteen.
The quantities are fince, no doubt, confiderably increafed: but, as, moft probably, the proportions remain very little waaltered, it is fair to argue upon them, as has been done by the beft writers upon thefe fubjects. But, Mr. Locke baving treated of a tax upon land, a few extracts may not be improper from that incomparable author, which, with fome reftrictions, fhall be applied to the prefent purpofe.

- A tax laid upon land, fays that great man, feems hard to
- the landholder, becaufe it is fo much money going vilibly
- out of his pocket: and, therefore, as an eafe to himfelf,
- the landholder is always forward to lay it upon commodities.
' But, if he will thoroughly confider it, and examine the
' effects, he will find, he buys this feeming eafe at a very ${ }^{6}$ dear rate; and, though he pays not this tax immediately ' out of his own purfe, yet his purfe will find it, by a greater - want of money there at the end of the year than that comes ' to, with the leffening of his rents to boot; which is a " fettled and a lafting evil, that will fick upon him beyond
6 the prefent payment.
- To make this clear, let us fuppofe in the prefent ftate of - affairs in England, that the rents of England are 12 mil-
- lions, and that the charge and neceffities of the govern-
- ment require a fupply of 3 millions from the parliament, ' which is laid on land.
- Here is $\frac{x}{4}$ part of his yearly income goes immediately out of - the landlord and landholder's pocket. This is a burden very - apt to be felt. The country gentleman, who aclually pays - the money out of his pocket, or finds it deducted out of his ' rent at quarter day for taxes, fees arid very fenfibly obferves, - what goes thus out of his effate: but, though this be a - quarter of his yearly income, and, out of an effate of 400 l . ' a year, the public tax now openly takes away one hun-- dred; yet this influences not at all the yearly rent of the ' land, which the rack-renter, or under-tenant, pays; it - being the fame thing to him, whether he pays all his rent
- to the king or his landlord; or half; or a quarter, or nene

6 at all, to the king: the cafe is all oric to him, what hand

- receives his rent when due: fo trade flourifhes, and his - commodities go off well, he will be able to pay his rent - on. This leffens not any more the value of his farm, than - an high or low chief rent does, paid out of it to the lord of
- the fee : the tenant's bargain and profit is the fame, whe-
- ther the Jand be charged or not charged, with an annuity
- payable to another man.

But fuppofe, to Mhift off the burden from the land, fome - country gentlemen fhould think fit to raife thefe 3 millions - upon commodities, to let the land go free. Firft, it is to be - confidered, that fince the public wants require 3 millions - (for that we fuppofe for argument fake, let it be 3 millions, 6 or a million, that's all one) and fo much muft go into the - king's coffers, or elfe the neceffities of the goverment will - not be fupplied; that for raifing thefe 3 millions on commo' dities, and bringing fo much into the Exchequer, there 6 muft go a great deal more than 3 millions out of the fub-- ject's pockets. For a tax of that nature cannot be levied by - officers, to watch every little rivulet of trade, without a - great charge, efpecially at firft trial. But, fuppofing no - more charge in raifing it than of a land-tax, and that there 6 are only 3 million's to be paid, 'tis evident, that, to do this - out of commodities, they muft to the confumer be raifed a - quarter in their price; fo that every thing, to him that ufes - it, muft be a quarter dearer.
= Let us fee now, who at long-run muft pay this quarter, - and where it will light. 'Tis plain, the merchant and bro-- ker neither will nor can; for, if he pays a quarter more - for commodities than he did, he will fell them at a price 'proportionably raifed ${ }^{*}$. The poor labourer and handi6 craftfman cannot, for be juift lives from hand to mouth al-- ready ; and, all his food, cloathing, and utenfils, cofting a - quarter more than they did before, either his wages muft - rife with the price of things to make him live, or elfe, not - being able to maintain himfelf and family by his labour,
' he comes to the parifl, and then the land bears the burden ' a heavier way. If the labourer's wages be raifed in pro6 portion to the increafed rates of things, the farmer, who 6 pays a quarter more for wages, as will as all oiher things, 6 whilf he fells his corn and wool, either at the fame rate, ' or lower, at the market (fince the tax laid upon it makes ( people lés forward to buy) muft either have his rent abated, ' or elle break and run away in his landiord's debr, and fo ' the yearly value of the land is brought down. And who ' then pays the tax at the year's end, but the landlord; when ' the tenant, not able to raife his rent by his commodities,

* See that charge, and the confequence of duties on commodities, proved under the articles Labour and Taxes.
- either runs away in his landlord's debt, or cannot be con-- tinued in the faim without abutement of rent? For, when - the yearly charge in his farm is greater by the increafe of ' the labourer's wâges, and yet his produce fells cheaper, by reafon of the tax laid un his commodities, how will the - farmer be able to make up his rent at quarter-day? For this - may be worth our notice, that any tax, laid on foreign - commodities in England, raifes their price, and makes the "importer get more for his commodities; but, on the con-- trary, a tax, laid on your native products and home-made - commodities, leffens their price, and makes them yield lefs - to the firft feller.
- If, therefore, the laying of taxes upon commodities does, - as it is evident, affect the land that is out at rack-rent, it - is plain it does equallv affect all the other land in England - too; and the gentlemen will, but the worft way, increafe - their own charges; that is, by leffening the yearly value of 6 their eftates, if they hope to eafe their land by charging - commodities. It is in vain, in a country whofe fund is - land, to hope to lay the public charge of the government - on any thing elfe: there at laft it will terminate. The - merchant (do what you can) will not bear it, the labourer - cannot, and therefore the landholder muft: and whether he < were beft to do it, by laying it directly where it will at laft - fettle, or by letting it come to him by the finking of his - rents, which, when they are once fallen, every one knows, ‘ are not eafily raifed again, let him confider.'
Some paffages in the foregoing abftracts feem to be too general, and, poffibly, not quite confiftent with one another. For it is not eafy to conceive, if ' taxes laid upon commodi-- ties raife the price proportionably to the confumer, why the - farmer muft fell his corn and wool either at the fame rate, - or lower at the market;' or, if the reafon affigned be a good one, that 'the tax, laid upon it, makes people lefs forward - to buy,' why that reafon thould not have the fame operation upon other commodities, not fo indifpenfably neceffary for the ufe of men; and, why 'a tax, laid upon our native product and home manufacture, may not make them yield lefs to - others befides the firft feller.'

And it certainly often hath this effect. For, as the demand for commodities is proportioned to the quantity of money fubfifting in the market, traders mult adapt their prices to that quantity; and, if additional taxes be laid, while the money, with which commodities are to be purchafed, remains unincreafed, they muft be contented with fmaller gains, or not trade at all. And the firlt part of the alternative will always be the cafe, where the profits of a flourifhing trade may well fupport fome diminution.
When Mr. Locke fays, ' that the merchant and broker nei© ther will nor can bear a tax; that, if he pays a quarter - more for commodities than he did, he will fell them at a ' price proportionably raifed,' thefe are propofitions which feem too general: and that great maffer of reafoning, in a fubfequent paffage, appears fenfible, that they required fome qualification; where, after an affertion, that, 'lay your tax 6 as you pleafe, the traders will fhift it off from their own 'gain,' he fubjoins thefe words, 'the merchants will bear - the lealt part of it, and grow poor the laft.' And a little farther he fays, a country may thrive, the country gentle' man grow rich, and his rents increafe (for fo it has been

- here) whilft the land is taxed: but I challenge any one to - thew me a country, wherein there is any confiderable pub-- lic charge raifed, where the land does not moft fenfibly - feel it, and, in proportion, bear much the greater part of ' it.'
Wherefore, although it be admitted, that Mr Locke's firft pofition, taken in it's full extent, and without any limitation, is generally controvertible, yet it is conclufive as to our prefent fituation; if it be confeffed, that the lands of England are, in general, lett at too high a rent, and that our trade is injured by the taxes already laid upon it. For then the inference will be plain, what the farmer and trader cannot pay out of their gains, the land-owner mult pay out of his lands, or the farmer will fail, and the trader become bankrupt. Whether, therefore, it is better to lay the taxes immediately on land, as Mr. Locke infinuates, fince the greateft part of them terminate there, may deferve confideration; becaufe the expence, in collecting of fuch taxes, bears no comparifon to thofe that are laid upon commodities. For, how greatly the expence of thefe is enhanced, is proved under the article Labour.
Certain it is, that no good to the nation can be produced by taxes upon commodities. They may ftarve the induftrious, but they never will induce the idle and extravagant to labour, and to fave for the benefit of his landlord; and the wifdom of fuch landlords, who, under fuch pretences, would lighten their own burdens, by laying infupportable weights on their tenants, is of a piece with that ceconomy, which, to fwell a large rental, beyond it's natural fize, lofes, by a rife of rents, much more in money than it gained upon paper. And it does not require much logic to demonftrate, that, where the tenant is undone, the land muft proportionably fuffer.
In order to prove the evils arifing to our trade from the heavy
taxes with which it is incumbered, it were, perthaps, bot ju? to confult the opinion of actual merchants, who, upon inis fubject, are prejudiced judges. But,
The teftimony of thofe who have long withdrawn themfelves out of trade, hath ever been deemed the beft authorit; and, as fuch, the Jate Sir Matthew Decker cannot berefuled.
He tells us in favour of his fcheme, that "it would fer the - merchant and thopkeeper free from a multitude of falfe and
- vexatious, or frivolous informations, which may now be ' lodged againft them: that the charge upon the revenue 6 is now computed at above one million : that, as the duty ' upon merchandize imported from abroad, as well as upon - our own excifeable goods, amounts, on an average, to ' about 50 per cent.'. (and, fince Sir Matthew wrote, ir bath been greatly increafed, by a very great additional duty on imports) 'it would, continues he, enable the merchant, as - well as the fhop and warehoufe-keeper, to trade with half ' the ftock, and make his profit the fame, or rather increafe ' it, in proportion tothe leffer fum for which he can purchafe 6 the fame commodity.
" It would alfo encourage the great merchants, when they - buy any goods upon feeculation, as they call it, to keep - the faid goods at home, and employ their own warehoufes; - whereas, as the cafe now flands, they are, in prudence, - obliged to bip off fuch goods, as are intitled to a draw-
' back of 30, 40, and even more per cent. for Holland, or ' other places; whereby Dutch Chips are not only benefited, - but we pay commiffion, warehoufe room, and other inci-- dental charges, which our own people might put in their ' own pockets, and have the goods in their own puffeffion.'
The ingenious Mr. Wood, befide much excellent reafoning upon the fame principle, refers us, for farther proof, to the cuftoms, which, fays be, 'fince the additional duties and ' impofitions on fome fpecies of goods, have not actually ' produced fo much as before.'
It is computed by the Britih Merchant, that, out of 49,000,000 l. expended and confumed by our people at home, not more than $4,000,000 \mathrm{l}$, are of foreign commodities.
There remains; therefore, $45,000,0001$. for an annual expence and confumption in home products and manufactures Of thefe the land-owner can expend and-confume no more than his rents, and they are computed at no more than 14,000,000 l. therefore, above two parts in three of home products and manufactures are experided and confumed by all other denominations of our people.
Whatever is expended and confumed at home, or exported into other countries, whether of home or foreign commodities, is the fruit of our lands, of the labourer and artificer, or is purchafed by thefe fruits.
In 1713, the Britifh Merchant computed our imports at $5,000,0001$. and our exports at $7,000,0001$. Of thefe one million he fuppofes to be of foreign commodities. Therefore, even at that time, our own confumption and foreign exportation amounted to $56,000,0001$.
But, whatever is produced by land, by the labourer and artificer, is paid for by thofe, who rent lands, and employ labourers and artificers. Therefore, the farmer and trader contribute three parts in four, more than the land-owner can, to the employment of our people, and to the wealth and expences of the nation.
Landed men are, quatenus fuch, of advantage to the public, only in what they fpend: traders are of advantage, by what they fpend and by what they gain; and the gains of traders exceed their expences. A rife of rents can only be through an increaie of employment, fincé lands can only rife by an increafe of products and manuficture, and thefe are the fruits of labour and art. But land-owners, as fuch, can give no increafe to employment, without a previous increafe of rents.
Therefore they muft be indebted for all fuch augmentations to trade, and to an increafe of trade. If Dr. Davenant fpeaks truth, the whole rental of England, in 1600, did not exceed fix millions, and the price of lands was 12 years purchafe. In 1688 , the rental was 14 millions, and the price of land was 18 years purchafe: fo that, within this period, the landed intereft rofe from $7^{2}$ to 252 millions. And, in fo much at that time, it food endebted to an increafe of trade. From the fame caufe, circulating by induftry through innumerable different channels, life, and ftrength, and firitit, were proportionably derived to the whole: neseflaries to the poor, eafe and comforts to the middle rank, afluence and magnificence to the wealthy and the great.
They who pay for the employment, expence, and confumption of others, pay, in like degree, all taxes laid upon thefe articles. Therefore, the farmer and crader pay three parts in four more than the land-owner, to the fupport of government; and mankind is indebted to them, in the fame proportion, for all natural and civil enjoyments.
To them, and to their profeerity it is owing, that, fince the Revolution, this nation hath been enabled to bear thofe drains of treafure, which mult long fince have exhaufted her vitale, had the no fupply to truft to, but the landlord's wafting tents, and the tenant's diminifhed gains, with fome fmall rivulets (f) foreign trade ftealing in upon her.

## L A N

Since that happy deliverance, commerce hath produced fums fufficient to maintain armies and fleets, in defence of our liberties, and of that eftablifhenent on which they are founded; while the tenant hath been enabled, under an increafing load of taxes, and of rents raited on him, to cultivate and improve the lands of this nation.
But a continuation of public expences in peace, which ought, in a great meafure, to have ceafed with war, fquandered the prov ifion which fhould have been laid up for the day of danger and trial. That day came, and found the nation incumbered, after aboye 20 years of peace, with near the fame load, that was heaped upon her by two fucceflive wars. And the fame bad policy, which lengthened out the expence beyond the occafion, rendered the burden more heavy, by the manner of collecting it. No wonder, if, in thefe circumftances, trade bleeding at every vein, had not ftrength, although her growth was miraculous, to fupport heavier loads, than ever were before laid upon the fhoulders of this nation; and that fome branches of commerce fhould droop and decay under the baleful influence of fuch weighty taxes, while our commercial competitors planted their interefts where ours once flourifhed, and gathered the fruits of wifer management. From the fame caufe, the tenant can no longer fupply an advance of taxes out of his declining fock; and, inftead of that good clafs of men, the ancient ftrength and glory of this country, the wealthy, induftrious, and fturdy yeomen, a race fucceeds, of puny, abject wretches, tamed by want and fervitude.
With the yeomen, the middling gentry of fmall eftates, feem haftening to annihilation. The few remaining (for they every day decreafe) are poffibly the moft miferable beings amongft us; with nothing left undiminuthed that belongs to their fathers, but pride and appetites beyond their fortunes. And thefe taxes, which have near devoured their little fubftance, have in no inconfiderable degree impaired the poffeffions of the greateft.
Thefe are the effects of taxes upon commodities; which had they, according to Mr Locke's intimation, been racher raifed wholly upon land, how many millions would have been faved to the nation, by the different manner of collection, and how would the landed intereft have profpered ?
Miftake us not, we are not pleading for land-taxes, but dhewing the comparative difference only between them and taxes upon commodities, which muft prove deftructive of the national trade. See the articles Duties, Labour, and Taxes. The inequality in laying the land-tax, a circumftance much complained of by fome, and juftified by others, does not regard the prefent fubject. It may be a proper matter of conteft between the owners of lands; and, if it be a grievance upon fome of them, fufficient to deferve the redrefs, the parliament ought to grant that redrefs, and alter the particular meafures by which they are rated.
But, however that matter may ftand between the individuals of the landed intereft, the propofition remains in full force, - that a tax upon land is more advantageous to the commu-- nity in general, and the landed intereft in particular, than ' that upon commodities, and more effectual for thofe pur' pofes, which render taxes neceflary.'
Nor is the inequality, in laying this particular tax, attended with any of thofe difadvantages to the public, which would arife from the fame caufe in taxes laid upon commodities; fince, in this inflance, they who pay more than their fhare to the land tax, are the only fufferers; whereas other inequalities fall more diffuively, and may finally center upon the whole landed intereft.
It has been objected to this, that through a land tax the monied men efcape, but this is totally devoid of foundation. For, Not to infift upon that fhare, which fome of them really pay in the form of a land-tax, in every tax that affects conlumption, they are taxed like other men, in proportion to what they confume. And, on the fuppofition, that commodities are already taxed as high as they can bear, thefe men cannot be taxed at more, through this medium.
Were mortgages or the funds to be taxed, matters would not be mended. For, as taxes, wherever placed, can have no tendency to lower the intereft of money, they who buy into the funds, would buy fo much cheaper as the tax would amount to, and the lender upon mortgages infift upon a higher rate of intereft.
Befides, they, who by lending their money upon lower terms, than would be done if the lender were taxed, or by giving a higher price for flocks, enable others the better to pay taxes, contribute, in reality and effect, their hhare, as much as thofe who pay them. And, in this fenfe alfo, the mortgagee and fockholder are equally taxed with the owners of land.
But, if it be ftill infifted on, that the actual poffeffors of the foil are the only payers to the land-tax; this diftinction will greatly reduce the importance of thofe, who are the fubject of our prefent confideration; fince a deduction muft be made from that landed intereft of their intereft in land, who, by mortgages, are the legal and abfolute proprietors; and alfo of that fhare abforbed out of land by every tax, which mediately or immediately affects it.

## L A N

Lafly, It hath been faid, that in diftant counties the quan tity of circulating money is not fufficient to fupply the tax. As in thefe diftant counties, for much the greater part. the land tax is lower rated than in a nearer neighbou hood to the metropolis; this objection contradicts that which hath been mentioned, and feems, if any thing will, to jultify the inequality of the meafure, by which the tax is raffed.
Yet no argument feems capable of juftifying fo extrandinary an inequality, in any kind of tax whatever; more efpesially of a land-tax, that being raifed at the leaft expence of any whatever ; and, if that tax is, more or lefs, to be concinuad to perpetuity, it ought to be equally railed, fince, in that cate, it would produce double what ifever has done; and, if the furplufage, from one fhilling in the pound to four, fhould, as thall be required, be applied to the finking fund, it would put che national debts once more into the parliamentary way of redemption, and thereby pave the way to the annihilation of taxes, upon our native produce and ma' nufacture.'
But taxes of all kinds cannot be too equally laid, nor too unexpenfively raifed. And therefore, that the land, as well as commodities, might be effectually ealed of their weighty incumbrances, it becomes the wildom of the legiflature to think ferioully of fome uninhanceable Taxes,' that will effectually anfwer that great end; either that propoied by the late Sir Matthew Decker, Bart. or one or more fomething fimilar thereunto; for taxes of that nature, col lected at a fmall expence, feem to be the grand fipecific to give fuccour to our land and our trade, by freeing them from thofe burthens, which, if multiplied, muft prove the inevitable ruin of both. See the articles Credir [Public Credit], Debts [National Debts], Funds, Taxies.
The landed gentleman being convinced that his intereft muft rife or fall with trade, and that taxes on native commodities mult, at length, prove the ruin thereof, it becomes his intereft to ftudy the national benefits of commerce. How this can be done to the purpofe, is the next confideration. To which end we fubmit the following queries.
r. Whether the country gentleman, unacquainted with practical trade, can be prefumed capable of making fo good a judgment of what may tend to it's national profperity, as one acquainted therewith ?
2. Whether the country gentleman, being equally knowing with the fkilful merchant in the ways of conducting trade, and the effential ufages among traders, and laws of nations relating thereto, may not be efteemed better qualified to promote the public intereft of trade, though not practically engaged therein, than the merchant, who, being interefted in any peculiar branch, may be fomehow biaffed in his judgment, in regard to his own peculiar trade?
3. Whether this Dietionary of Commerce may not be inftrumental fo to inform the country gentleman in the nature of trade, as to enable him to judge properly thercof, in any public capacity, for the benefit of the nation in general ?
4. Whether the country gentleman, in any public capacity, from the conful to the ambaffador, may not, by means hereof become ferviceable to the commercial interefts of his country abroad, as well as in any pof of honour at home, from the clerk in a public office to the fenator?
5. Whether a well grounded knowledge in the practical and political nature of commerce, and the money affairs of the kingdom, may not prove more generally inftumental to the rife and profperity of country gentlemen, and the male branches of their families, than any other kind of knowledge whatever?
6. Are not the capital debates in parliament moftly upon matters that have relation to commerce, and the money-affairs and public credit of the nation? And are not likewife our concerns and negociations with foreign courts principally with regard to affairs of trade and navigation?
7. Whether thofe ftudies do not require as regular a courf of erudition as any other whatever, to arrive at any diftinguifhed degree of difcernment therein?
8. Whether the proper eftablifhment of one or more colleges, for purpofes fo highly beneficial and honourable, would not as well become the wifdom of this nation as any other kind of literary inftitution whatever?

## REMARKS.

The late ingènious Mr. Carey of Briftol, in his Difcourfe on Trade, where he recommends to the parliament a ftanding committee of trade, conftituted of men well verfed therein, to fcrutinize into whatever comes before that moft honourable affermbly, fays, "That, in the management of things of much - lefs moment, we employ fuch who are fuppofed to under-- ftand what they undertake, and believe they cannot be carried ' on without them; whilf the general trade of the nation - (which is the fupport of all) lies neglected, as if the coggs that - direct it's wheels did not need fkill to keep them true: trade ' requires as much policy as matters of ftate, and can never - be kept in a regular motion by accident; when the frame of

## LAN

## LA N

- our trade is out of order, we know not where to begin to c mend it, for want of a fet of experienced builders, ready - to receive applications, and able to judge where the defect - lies.
c Such a committee as this will foon appear to be of great ufe * and fervice, both to the parliament in framing laws relating 6 to trade, and alfo to the government, in the treaties which - they make with foreign nations.
- As to the firf, it hath fometimes been thought, that, when - that great andglorious affembly [the parliament] hath med-
- dled with trade, they have left it worfe than they found it; - and the reafon is, becaufe the laws relating to trade require c more time to look into their diftant confequences than a ' feffion will admit; whereof we have had many inftances.'He proceeds to give a few inftances in his time.
- To begin with the French trade, fays he; in the 22d of - Car. Il. a new impoft was laid on wines, viz. 81 . per tun c on the French, and 121. per tun on Spanifh and Portuc gueze. This difference, with the low fubfidies put on their - Jinens by former acts, in refpect to thofe of other places, 6 was a great means of bringing the balance of that trade fo 6 much againt us, that the parliament, in the 7 th and 8 th * of Will. III. thought fit to make an act, which, in effect, c prohibited all trade with that nation for 21 years, by lay-
6 ing a great duty on the importation thence, in order to prec vent a correfpondence, 'till the trade fhould be better re-- gulated.
- In the 14th of Car. II. logwood was permitted, by act of - parliament, to be imported, paying 5 l. per ton duty; the - fame act repeals two ftatutes of queen Elizabeth, againft - importing and ufing it in dyeing here, and fets forth the
- ingenuity of our dyers in finding out ways to fix the colours c made with it; and yet, at the fame time, gave a drawback 4 of 3 l . 15 s . per ton on all that hould be exported; where-
4 by foreigners ufe it fo much cheaper in their manufacturea - than ours here; which proceeded from a too hafty making c that law, and being advifed, or rather abufed, by thofe c who regarded more their own intereft than that of the - nation.
- By an act made I Jac. II. an impoft of 2 s .4 d. per cent. 6 was laid on mufcovado fugars imported from the planta6 tions, to be drawn back at exportation: the traders to the c plantations ftirred in this matter, and fet forth, that fuch c a duty would difcourage the refining them here, by hin6 dering the exportation of refined fugars, which was then confiderable, and carry that manufacture to Holland and
* Flanders; but the commiffioners of the cuftoms prevailed c againft them, and the bill paffed; the fatal confequences c whereof foon appeared; for, the exporters of mufcovado 4 fugars drawing back 2 s. 4 d . per cent. by that act, and - 9 d. per cent. by the act of tonnage and poundage, foreign c markets were fupplied with refined fugars from other places
c cheaper by about 12 per cent. than we could farnifis them
- hence; by which means we were beat out of that trade : and - tho' the duty of 2 s .4 d . per cent, was not continued on the - expiration of that act, by the parliament 2 Will . and Mar

6 (as they did the 3 d. per pound on tobacco) the bad effects c thereof being then apparent, yet it is difficult to retrieve a - loft trade, commercial nations being like expert generals, 4 who make advantage of the miftakes of each other, and

- take care to hold what they get.
c By a ftatute of the 4 th and 5 th W. and M. 20 s. perton was - Jaid on lapis calaminaris dug here and exported, on an in6 formation given to the houfe of commons, thatit was not * to be bad any where elfe*; the merchants concerned in - exporting that commodity made application, and fer forth, "that fuch a duty would bring in nothing to the crown, but
- be a total bar to it's exportation; yet the act paffed, and we - were like to have made a fatal experiment; for, 'till the ftatute * of the 7 th and 8th of the fame king, which reduced the duty 6 to 2 s , per ton, the exportation ceafed; and, in the mean
c time, thofe places which had been difcouraged from digging c and calcining it, becaufe we underfold them, fet again t - work, and fupplied the markets where we vended ours.
* Does not this fhew the neceffity of the legiflature, as well as private traders, being well acquainted with trading commodities, and the places of their production or manufacture? This is the great reafon for our being fo particular in this work in the delcription of the chief commodities through out the world.
4 What injury was done by the act made in the 9 th and roth - Will. III. for the more effectual preventing the importation - of foreign bone-lace, \&c. doth fufficiently appear by the - preamble of that made in the inth and i2th of the fame * reign, for repealing it, three months after the prohibition - of our woollen manufactures in'Flanders (which was occa-- fioned by ip) : hould bethere taken off.
- I mention thefe things with great fubmifion to the judge-- ment of that glorious affembly, the wifdom and firength of the nation; to whom I only perfume, with all humility, - to offer my thoughts, that it would very much tend to the - putting matters of trade into a wue light before them, if - they were firft referred to a body of men, well verfed in the

Vob. II.
' true principles thereof, and able to fee through the fophifi - cal arguments of contending parties, to be by them con-- fidered, and well digefted; before they received the fanction 6 of a law.

* And, as to forcign treaties, I do not think our trade hath ' been fo much bettered by them as it might have been, for c want of fuch a committee; the reprefentations made by ${ }^{6}$ private merchants (who generally differ, according as their - interefts clalh with each other) tending rather to diftract, * than to inform the government; which would not be, if - their firf applications were made to an experienced com-- mittee, who had judgment enough to fubtract out of them what was proper to be offered; by which means, our de' mands might be rendered lhort and comprehenfive.'-So far Mr. Carey.
It was faid, fome time ago, by an honourable perfon in the Houfe of Commons [Sir $\int$, B-_d] efteemed to be very well acquainted both with the practical and political knowledgè of commerce, that s There cannot be brought before 6 that Houfe any queftions more difficult in themfelves, more c entangled with a multiplicity of relations, or more perplex6 ed with an endlefs diverfity of circumftances, than thofe - which relate to commercial affairs; affairs on which the - molt experienced often difagree, and on which the moft fa6 gacious may deceive themfelves with erroneous conjectures.
- There are no queftions which require fo much perfonal - knowledge of the fubject to which they relate, nor is there any fubject with which fo few gentlemen in that Houfe have c had opportunities of being acquainted: there are no quec ftions, which their variety of relations to different perfons - expofes to be fo eafily mifreprefented, without detection; - nor any in which the oppofition of particular interefts fo - mucb incites a falfe reprefentation. In all thefe cafes, de' ceit is eafy; and there is a ftrong temptation to deceive.' With more to the like effect.
It is certain that the chief knowledge which the gertry obtain of trade, is derived from the information they receive from traders themfelves; and that is not always to be depended upon, efpecially at thofe conjunctures when the legiflature may fcrutinize thoroughly into the nature of any particular branch. But, although traders themfelves may be extremely well acquainted with their own peculiar trades, fo far as it relates to their private intereft, yet they may not always have fuch a comprehenfive view thereof as to difcern how the nation is, in all relations, a gainer or lofer thereby. It is rare, therefore, that the country gentleman can obtain a fatisfactory knowledge from traders.
In order to make a right judgment of any branch of trade, when confidered in a national light, it is frequently neceffary to furvey it's conneetion with various others; and, if the landed gentleman is not duly informed of thefe cannections, how fhould he be capable of making fuitable enquiries?
Befides, nothing is more common than for traders to differ widely among themfelves, in regard to meafures proper to be taken by thie legiflature for the due encouragement or regulation of peculiar branches. Whence arife thofe oppofite and contradictory petitions to parliament from traders, which often tend to millead, and even confound, the legillature itfelf.
Thefe confiderations, without urging more, manifeft the neceffity of landed gentlemens being well informed in the natare of every branch of the national trade and commérce, if polible, in order to render them capable of judging of the beff public meafures requifite to be occafionally taken for the benefit of the whole, without regard to the private intereft of particulars
Of the country gentleman's advancement of his Landed Estate.

We will fuppofe, from what has been here faid, and alfo in divers other parts of this work, that the Britifh landed gentleman cannot avoid difcerning that his own private intereft is intimately connected with that of the national commerce; and, if fo, he is nearly concerned to promote it's benefit and advantage, in every thape pollible; and can any thing be more conduciye to this great end, befides what has been humbly fuggefted, than the due improvement of every inch of his land? For, as the profperity of land depends upon that of trade, fo that of trade equally depends upon the culture, and other beneficial management of the land. The more ufeful and eftimable productions the land affords, as articles of merchandizing, the more treafure will the trader be capable of bringing into the kingdom, by vending them in foreign markets.
It is not the cultivating of lands at random, that will beft promote the intereft of commerce, and of the landholder. Thefe interefts are beft promoted by cultivating fuch things as commerce points out to be the mof beneficial to tooth. And how are thefe fpecific particulars to be known, but from the knowledge of trade?
The increafe of new productions for commerce depends on the farther tranfplanting and communicating of the feveral natural commodities of all nations, to other airs and other

## LAN

## $\mathrm{L} A \mathrm{~N}$

foils, and nther ways of cultivation. That this is not yet hrouiht to the ulcimate perfection is evident, in that there in lud fo well furnifhed as to produce all the various forts of things which ir's ground and temperature is capable to receive; and alfo becaufe many of the moft fertile councries contain large fpaces that are utterly barren.
Thefe improvements depend chiefly upon three kinds of endearours.
Theacours. by tranflanting out of one land into another, of the fame filudtum in refpect of the heavens. This may be tried by conveying the eaftern fices, and other ufeful vegetables, into uur weftern plantations. Nor can it be imagined, why they hould thrive in one Indies, and not in the other; why the foil thould not be as good where the fun fets, as where it rifes: fecing there are parts of both, which lie under the fame influence of that, and the other celeftial bodies, to whofe kindly heat and neighbourhood the oriental nations are fuppofed to owe their advantages.
This alfo may be attempted in our northern climates. For inflance: the flax and hemp which we Itand fo much in need of, may profper far more than it does in Enigland, Ireland, and Scotiand, in many vaft tracts of ground, which lie barren and uncultivated.
Other improvements of this nature are accomplifhed by carryin and tranfiplanting living creatures, as well as vegetables, gome climate to unother. Sometimes the foil and the air ciny changed, will give a new force to the new guefts; as he Arabidn hare, by mingling with our breed, guefts; as解 ge. And fometimes the alteration will be for the worle, which mult be guarded againf; as the vine of France brought into Englaud, and the horfes and dogs of England into France, both which are found to degenerate exceedingly: their foil and their fun, it feems, being fitted to produce chings of pleafure and delight, and our air and our earth being more proper to beget valour and frength.
The third way of this kind of improvements to be tried, is by removing the plants and the productions of the fame country fromone part of ic into another, and by practiling every where frome parts of hulbandry, which are ufed in fome places wich all the forts. That this is not enough perfected in England, is mafuccefs. That this is not enough perfentilh orchards, and the nifeeft to every one that beholds the Kentilh orchards, and the Herefordhire hedges, which feem to upbraid the lazinefs of and briars, or, at the beft, with hazel; while theirs are beautified with apples, pears, and cherries.
In every one of thefe tranfplantations, the chief progrefs that has hitherto been made has been rather for the collection of curiofities, to adorn cabinets and gardens, than for the folidity of philofophical difcoveries : yet, chere may be a prodigious advantage made in them all, both for the one end and the other. And in this it will be found, as in many other things, that, if men only intend a little curiofity and delight, they will reap not much more by their pains: but, if they regard real ufe, not only the profit, but a greater delight will allo follow thereon.
And, for our encouragement, whatever attempts of this nature have fucceeded, they have redounded to the great advantage of the undertakers. The orange of China, being brought inco Portugal, has drawn a great revenue every year from London alone. The vine of the Rhine, taking root in the Canaries, has produced a far more delicious juice, and has made the rocks, and the fun-burnt afhes of thoie illands, one of the richeit fpots of ground in the world. And, if we can produce filk, hemp, flax, pitch and tar, timber and naval ftores of every fort, cocheneal, pot-afh and fices, in the Britifh American colonies, as may now be done fince our new acquifitions by the peace of 1763 , this kingdom might reap unipeakable behefits thereby. If the filk-worm fhould at length be brought to thrive there (of which there feems to be no doubt, if the affair was wifely, vigoroufly, and honeftly conducted) the profit on that article alone would be inexpreffible: we may happen, if that proves the cafe, to give hereatter cloaths to a great part of Europe: we may, in fome meafure, guef's at the extraordinary advantages, by confideting what number of caravans [fee Caravans] and how many great cities in Perfia are maintained by that manufacture alone, and what mighty income, it yearly brings into the fophi's revenue.
To which end, it will be requifite to confult fuch other diftinct articles of merchandizes in our Dictionary, as every climate will admit of under the Britifh dominion.
This being done, the next ftep is, to confult every art of cultivating thofe exotics to the beft advantage within our own dominions: for which fee the articles Manure, Farming, Huspanimy, Hops, Soll; fee alfo Cacao, Cocheneal, Incico, Hemp, Flax, Naval Stores, Silk.
Befide, there is fcarce any land but what affords fomething within i''s bowels, of a greater or leis depth, beneficial to the proprietor if he can make a jult judgment of the nature of Earthe, Bolis, Clays, Fossils of all kinds, Loams, Sands: fie thofe dutnit aticles, and fuch others to which . from them ws rufer.

Thefe points being duly confidered, it than becomes neceffary for the country gentlemen to be fo far fikilled in philofuphical chemiltry, as to be able to make fuch experiments upon bodies of all kinds, as may enable him to judge of their worth; ocherwife, a gentleman may have more treafure upon his land within the compals of a few acres, than others may have in fome thoulands. See the articles Chemistry, Earth, Phlosuphy Experimental, and Royal Society.
Were the particulars here intimated made an effential part of the education of the gentry of thefe kingdoms, they would be as capable of advancing the trade of their country, in thefe refpects, as practical traders do in others; they would be inftrumental to fupply traders with more valuable commodities, the produce of their lands, to difpole of in foreign countries, than we have at prefent: and 'to this purpofe I will venture ' to propofe, fays the learned bifhop Spratt, to the conifidera' tion of wife men, whether this way of Teaching, by - Practice and experiments, would not at leaft be as ' beneficial as the other, by Universal Rules; whether c it were not as profitable to apply the eyes and the hands of - children, to fee and to touch all the feveral kinds of fen-- fible things, as to oblige them to learn, and remember the ' difficult doctrines of general arts? In a word, whether a - mechanical education would nor excel the methodical?

- This certainly is no new device: for it was that which - Plato intended, when he injoined his fcholars to begin with - geometry; whereby, without queftion, he defigned that - his difciples hould firft handle Material Things, and - grow farniliar to vifible objects, before they entered on the - retired (peculations of other more abiftracted fciences.
- According to this counfel of the father of philofophers, it ' would not be amils, if, before young feholars be far en' gaged in the beaten tracks of the fcioools, the myftries of - manual arts, the names of their inftruments, the fecrets of - their operations, the effects of natural caufes, the feveral - kinds of beafts, of birds, of filhes, of plants, of ftones, of - minerals, of earths, of waters, and all their common vir-- tues and qualities, were propofed to be the fubjects of their - firft thoughts and obfervations.
- It may be here fuggefted, that the vaft number of fuch par' ticulars will foon overwhelm their tender minds, before - they are well eftablifhed by time and ufe. But, on the con-- trary, it is evident that the memories of youth are fitter to - retain fuck fenfible images, than thofe of a fuller age. It ' is memory that has moft vigour in children, and judgment - in men: which, if rightly confidered, will confirm what - I faid, that, perhaps, we take a prepofterous courfe in edu-- cation, by teaching General Rules before Particu-- lar Things; and that therein we have not a fufficient ${ }^{6}$ regard to the different advantages of youth and manhood. - We load the minds of children with doctrines and precepts,
' to apprehend which they are moft unfit, by reafon of the ' weaknefs of their underftandings: whereas they might, - with more profit, be exercifed in the confideration of vifible 6 and fenfible things, of whofe impreffion they are moft ca-- pable, becaufe of the ffrength of their memories, and the 'perfection of their fenfes.'
The country gentleman, thus trained up to know and purfue his own intereft, from experiments in regard to his lands, and every production thereof, both above ground and below, will be far more capable of promoting the commercial interefts of his country.
And, if ever the Englih will attain to the maftery of commerce, not only in difcourfe, but reality, they muft begin it by their labours, as well as by their fwords; they muft do it by awaking their minds, by rouzing themfelves from this lethargy by action, by trials, by working: unlefs this be done, they will in vain be victorious; at the end of their wars they will cool again, and lofe all the fruits of their valour. The arts of peace, and their improvemens, muft proceed in equal fteps with the fuccefs of their arms: the works of our citizens, our ploughmen, our gardeners, our wood-men, our fifhers, our diggers in mines, mult be equally advanced with the triumphs of our fleers, or elfe their blood will be thed in vain : they will foon return to the fame poverty, and want of trade, which they flrove to avoid.-And who are fo capable to infpire a national induftry like the country gentlemen of this kingdom?
LAND-CARRIAGE OUTWARDS. All foreign goods, fent by land-carriage from one part of this kingdom to another, as the law at prefent ftands, muft be accompanied with certificates under the hands of the collector, cuftomer, and comptroller of the port from whence they are fent * otherwife any officer of the cuftoms may ftop them, 'till due proof be made that the duties have been paid, \&c.
- 6 Geo. I. cap. 21. §. 39, 42.

And all brandy, arac, rum, fpirits, or ftrong waters, exceeding the quantity of one gallon, fo fent, mult be likewife'accompanied with a permit, or certificate from an officer of the excife, or cuftoms, expreffing the quantity and quality,

## LAN

and fiy niiying that the duties have been paid, or that the fame has been condemned. 6 Geo. I. cap. 21. 8. 18. And; with refpect to wool, wool-fells, mortings, fhortlings, yarn made of wooll, wooll-flocks, fuller's-earth, fulling-clay, or tobacco-pipe clay, it muft be obferved, that no packs, facks, bags, or calks thereof, may be loaden on any horfe, cart, or other carriage, or be conveyed by land, to or from any place in Great-Britain, within five miles of the fea-coalt, bur in the day-time, and at feafonable hours, that is, between fun-rifing and fun-fetting, upon forfeiture thereof, or the vaI4 Car. II. cap. 18. lue, with the horfes, carriages, \&c. 14 .
§. 9. and 7 and 8 Will. MII. cap. 28. 8.8 .
§. 9 . and 7 and 8 Will. 1II. cap. 28. §. 8 .
For all other regulations relating to wooll, and for the form of a certificate, or let-pafs, fee the directions hereafter given; but, for all other goods, it muft be as follows, viz.

A land-carriage certificate, or let-pafs, 'for any other goods than wooll.

## Port of Southampton.

Know ye, that Benjamin Shaw is permitted to pafs three cafks, containing four hundred weight and eighteen pounds

* L. S. Cuftomer.
${ }^{*}$ L. L. S. Comptroller of raifins folis, in the waggon [coach, cart, \&c.] of Benjamin Daws, for Briftol. To be in force fix days from the date hereof, and no longer.
Dated the 12th of January, I730:

## A. B. Collector, B. C. Cuftomer, C. D. Comptroller.

Note, The time thefe certificates are to be in force, mult be Note, limited, in proportion to the diftances of the places where the coods are to be fent.
goods are to be fent.
Before a land-carriage certificate is granted for foreign goods, oath muft be made on the back, that the duties of the goods therein mentioned have been paid, or that they were bought in a fair and lawful way of trade, \&c. or if the goods are to be exported from the port to which they are defigned to be fent, and receive the drawback, a particular certificate of the collector, \&c. muft be granted, as directed at the granting of fufferances for the fhipping of foreign goods; to be fent coaftways by water.
And, before the certificate be delivered to the merchant, it muft be entered in a book to be kept for that purpofe, thus:

For all goods (but efpecially wines) in order to fecure the London-duty, fent by land-carriage to London, a duplicate -of the certificate mult be tranfmitted to the commiffioners, the firft poft after granted, thus:-

## Port of Southamptoh.

An account of wines, \&c. fent by land carriage to London, $13^{\text {th }}$ of January, $173^{\circ}$. George White, 3 balkets; containing 18 gallons of French wine, paid duty by E. H. the 18 th of November laft.

## A. B. Collector, B. C. Comptroller.

The foregoing are inftructions for, and general rules to be obferved, by the officers of the cuftoms, in relation to goods fent from one port or part of Great-Britain to another, either by water or land: but, Britifh wooll being (to prevent exportatation) under very particular regulations, it may be proper here to thew the feveral requifites to be performed, from the time of fheering to the removal to the laft place where it is to be confumed or manufactured.

## Regulations relating to Britifh wooll,

* Britifh wooll, Morn or houfed, laid up or lodged within ten miles of the fea fide, within the counties of Kent and Suffex, mult be entered with the officers of the cuftoms, at the next adjoining port, within three days after the fheering, by a certificate under the hand of the proprietor, or owner. $\dagger$ And, in all other counties, Britilh wooll having been carried from the place of theering to the proprietor's own houle, within five miles, orlefs, of the feat, mult, within ten days after fheer-

[^0]
## $\mathrm{L} A \mathrm{~N}$

ing, be entered with the offcer of the cufloriss at the hext port, by a certificate under the proprietor's hand.
Which enteries, certificates, or notices, mult be in form following :
This is to certify, That I A. B. of C. have fhorn two hundred fleeces of fheeps-wooll, and the wooll of one hundred lambs, and have lodged the fame at my dwelling-houfe at C . Witnefs my hand this $14^{\text {th }}$ of July, 1730 .
A. B.

Note, if through ignorance the wooll be not eftered in time, and the proprietors will come and voluntarily enter the fame, making oath of their ignorance of the laws, and that the wool in queftion is numerically the fame, both for quantity and quality, that the owners fheered the laft fummer, and no part has been fince removed, or exported, it may then be regiftered, 8xc.
The proprietors having thus entered their wooll, it muft be regiftered in a book for that purpofe, by way of charge on fuch proprietors, and a certificate of the entry granted them in form following, viz.

Port of Southampton.
A. B. of C. hath entered two hundred fleeces of fheeps-wooll, and the wooll of one hundred lambs. Certified the itth day of July, 1730 .
B. C. Collector, C. D. Comptroller.

* And, with refpect to the buyers of wooll, it mult be obe ferved, that every perfon refiding within 15 mites of the fea in the counties of Kent and Suflex, who intends to become a buyer or dealer in wooll, before he prefumes fo to do, mult, with fufficient fureties, become bound to his majefty in the following manner, viz.
The condition of this obligation is fuch, That the abovebound B. C. who is a dealer in wooll, fhall not again fell any part of the wooll which he fhall at any time hereafter buy, to any perfon or perfons refiding within 15 miles of the fea in the counties of Kent or Suffex, and fhall not tranfport nor fell the fame to any other perfon, or perfons, to be tranfported, but fhall well and truly oblerve all the acts of parliament made againft the tranfportation of wooll: then this obligation fhall be void, or elfe to remain in full force and virtue.
A. B.
B. C. *
C. D.*

Sealed and delivered in the prefence of D. E. Collector,
E. F. Comptroller.

* And, when the proprietor has fold the wooll, at leaft three days before the removal he muft certify it to the officers of the cuftoms, upon the back of the aforementioned certificate of entry, mentioning the time when it is to be delivered, thus :
* 1 Will. and Mar. cap. 32, 5. 3. 9 and 10 Will. III. Cap. 40. §. 3 .
'This is to certify, that I have fold the wooll within-mentioned, weighing fifty tods eighteen pounds, to B. C. of E. to be delivered him there the fifteenth day of September, 1730.

Witnefs my hand this feventh of September, 1730.
A. B.

Then, if the intention of removal is regularly certified; a letpafs (to be in force no longer than the time appointed for the delivery) may be granted for the removal, thus:

## Port of Southampton.

Know ye, that B. C. is permitted to pafs by land-carriage *, in the day-time, as the law directs, from the houfe of A. B. of C , to his own houfe in E , with two hundred fleeces of fheeps-wooll, and the wooll of one hundred lambs, weighing fifty tods and eighteen pounds; it being the wooll of the faid A. B. entered here the 14th day of July laft, and now certified to be fold to B. C. aforefaid. To be in force four days, from the 7 th day of this prefent September; and no longer. Dated at the Cuftom-Houfe, the 8th day of September, 1730.
C. D. Colledor, D. E. Cuftomer, E.F. Comptroller.

* 14 Car. II. cap. 18. §. 9. 7 and 8 Will. III. cap. 28. §.8.

Land-Carriage Inwards. Though foreign goods, carried by land from one port of this kingdom to another, fhould be accompanied with a certificase, yet, that being only an authority for any officer of the cuftoms * not to itop them, there is no occafion to deliver in fuch certificate at the cuftomhoufe when the goodsarrive at the intended port, unlels they are intended to be exported from thence, and the duties intended to be drawn-back; or they are probibited Ealt-India goods, coffee, tea, cocoa-nits, or pepper fent from London in order to be exported.

* 6 Geo, I. cap. 21. \$. 39, 42.

## LAN

As to the form and general direction of thefe certificates inwards, and of the payment of duties for goods tobe exported, they are the fame as for the difpatches outwards, but, with refpect to the following goods, they are under thefe additional regulations, viz.

1. $\rightarrow$ Prohibited Eaft-India goods.- When intended to be fent by land-carriage to any out port, to be thence exported to forcign parts, fecurity for the due exportation is taken at London, belore they may be delivered out of the warehoufes in which they were firf lodged: and, on fuch fecurity, a cocket is granted for the delivery of the goods, and their conveyance to the intended port, in form following, viz.

- 11 and iz Will. III. cap. ro. §. z.

A cocket for prohibited Eaft-India goods fent by land-carriage from London.

## London.

Know ye that Andrew Bell ind' bath entered twenty taffaties, forty cufhtaes, ten phataes, fifteen darpafks, twelve pelongs, which paid duty out of time: late unladen, and now by landcarriage to Southampton, and fo for exportation.
Dated the 3d of March, 1730, anno quarto Georgii Secundi, \&ic.
C. D. Collector Outwards,
D. E. Comptroller (Surveyor, or Surveyor-General).

* Loc. Sig.

On the back are to be fecified the feveral packages, with the particular contents of each.
The fearcher in London having executed this cocket, it is to be returned to the commifioners, who fend it by the poft to the colleitor of the port; and, the goods being likewife directed to him, he is, by virtue of the cosket, to demand them of the carrier, \& xc . in order to have them lodged in the cu ftom-houfe warehoufe 'till exportation; obferving whether the package be agreeable to the indorfement on the cocket, and under the feal of the officers of London: and, if the goods do not arrive within 20 days of the date of the commighaners letter, they are to be acquainted thereof.
And, when the merchant declares his intention of exporting fuch goods, and has pafted an entry at the port, the London cocket is to be delivered to the proper officer, who, before hipping for exportation, is to open and examine the goods, to fee if they agree in quantity and quality; and, the next poit after the goods are flipped off, the commifioners, muft be acquainted with the proceedings.
II. * Coffee, tea, cocoa-nuts, and pepper.-When defigned to be fent by land-carriage to any out-port, after proper fecurity has been given for the due exportation, a cocket is granted for the delivery out of the warehoufe, and convey-
ance to the intended port, in form following, viz.

- 8 Ann. cap. 7. §. 20. 10 Geo. I. cap. 20. §. 26.

## A cocket for coffee, tea, or cocoa nuts, fent 申y land-carriage from London.

## London.

Know ye, that Andrew, Bell ind hath entered frve hundred Corty-four pounds weight of tea, by the united Eaft-India company, the 18 th of Auguft laft : late unladen, and now by land-carriage to Southampton, and fo for exportation.
Dated the $3^{\text {d }}$ of March, $173^{\circ}$, anna quarto Georgii Secundi, \&c.
C. D. Collector Outwards.
D. E. Comptroller (Surveyor, or Surveyor-General.)

* Loc. Sig.

For the form of a cocket for pepper, fee that for prohibited Eaft-India goods. And as to the whole proceedings of fending the coffee, tea, cocoa-nuts, and pepper, with the cockets, to the collector, and the mechod of fipping them off at the port, they are the fame as directed for prohibited Eatt-India goods, remembering, that, at the examination, they muft he carefully weighed.
And when any foreign goods intitied to a drawback, which came by land carriage from any other port, have been exported to foreign parts, a debenture muft be made out, to be fent to the *, port where the duties of fuch goods had been before paid, at the time of their importation, to intitle the exporter, or his agent to demand the drawback of the collector of fuch port. See the article Carriage,

- ${ }_{2 d}$ rule of the Book of Rates, P. 177, 178 .

LAND-WAITER, an officer of the Cuftom-Houfe, whofe duty is, upon landing any merchandize, to examine, tafte, weigh, meafure them, 8te. and to take an account thereof.In fome ports they alfu execute the office of a coall waiter.They are likewife occafionally filed fearchers, and are, to attend and join with the patent fearcliers, in the execution of all cockets for the fhipping of goods to be exported to foreign
parts : and, in cafes where drawbacks or bounties are to be paid to the merchant on the exportation of any goods, they, as well as the patent-fearchers, are to certify the Chipping thereof on the debentures.
In cafe of Sufferances granted for landing goods at an unlawful key, they are figned by the land-waiters and furveyor, collector, cuftomer, and comptroller; alfo for SuFFERANCES granted for the landing and examining of paflengers baggage and wearing apparel.
When the goods are entered, and the warrants, fufferances, \&c. granted for the landing and delivering of the fame, are produced to the land-waiters to whom they are directed (who are to be appointed by the collector, either by noting their names in the margin of the report-book, or in a particular book to be kept for that purpofe) they are to accept of the fame (provided the contents of the goods are found to be jufly reprefented, and the other requifites duly performed) as an authority for them to permit the landing and delivering; but they may not prefume to examine the goods on board, but muft order them to be brought on thore at the merchants charge: and, in order thereunto, upon receipt of the warrants, \&c. they are to certify the entry to the tidefmen on board the Thip, before the faid tidefmen may prefume to permit any goods to be unladen. The form of which certificate muft be as follows
In the Providence of London, James Bell mafter, from Rotterdam.

2 Ift of January, 1730.
$\left.\begin{array}{l}\text { A. B. } \\ \text { B. C. }\end{array}\right\}$ Land-waiters.
To the officers on board the aforefaid fhip.

And, if the Sufferance permits the landing of the goods at any other place than the lawful keys, the fame muft be mentioned on the aforefaid order, thus:

## Suffrzance for

By virtue of the aforefaid order, the tidefmen on board are. to fuffer the goods to be unladen, and brought on fhore, and are to deliver them into the charge of the proper land-waiters, who are to attend at the landing of the goadg, to examine, talte, weigh, meafure, gauge, number, \&q. the fame, according to the nature thereof, and to take an account of the quantities and qualities, in order to adjuft the duties which are to be paid for the fame.
That the land-waiter may be duly prepared to take an ac-count of the examination and delivery of the goods, as foon as every thip is reported, a blank book is to be directed and delivered to each of the Jand-waiters, whom the collector thall think fit to appoint, or direct to fee fuch fhip difcharged. The title of which book mult be as follows :

## Cuftom-Houfe, Southampton, 8th day of January, 1730.

This book contains 12 leaves, delivered to Mr. A. B. landwaiter, to take an account of the delivery of the lading of the Providence of London, James, Bell mafter, from Holland, reported the 8th day of January, 1730 .
B. C. Collector.

And as to fuch hips which do not report, \&ec. every land waiter muft bave a general pocket-book delivered to him, wherein he is to enter all warrants directed to him for the delivery of any goods our of fuch thips, with the particular execution thereof. The title of which book muft be as follows:
This book, containing one hundred leaves, delivered to Mr . A. B. land-waiter, to rake an account of the delivery of all goods landed out of fuch fhips as do not report.
B. C. Collector.

In the landing, examining, and delivering all goods, and merchandizes, it mult be carefully obferved, 1. That no goods may be landed or delivered without a proper warrant, and, if any goods are fo landed, they are liable to feizure,
2. That no mare goods may be delivered than what the landwaiters have perfect warrants for; and $i f$, upon examination of fuch dry goods as pay duty by tale or meafure, the importer appears to have entered fhort, the faid goods muft be feized, and fent immediately to his majefly s warehoufe, in order to be profecuted: but, in cafe of hort entries upon goods paying duties by weight or gauge, the land-waiters muft give the merchant an account thereof in writing, that he may make a polt-entry for the fame; before fuch goods

## LA N

## LAN

may be permitted to be taken of the keys, unlefs the quantity fhort-entered be very fmall ; and then if the furveyor thinks fic to permit the goods to be carried away before fuch poftentry be made, one of the land-waiters is to go immediately and enter the fame in a book to be kept for that purpofe, above-ftairs in the Cuftom-Houfe, that the collector may know the quantity and quality of the goods, in order to demand the duties of the merchant, which the land-waiters are to fee pofted the next day at the furtheft; though, in frictnefs, the land-waiters fhould not give any credit, of which
they are to be frequently admonifhed: and, in order to prevent their giving credit, the furveyor muft, within 14 days after the expiration of every month, deliver to the collector and comptroller a lift of all hips cleared in the preceding month, with an account of the poft-entries that were ftanding out fix days after the fhips were cleared; who are to enquire into the reafons thereof, and charge the officers concerned in giving fuch credit to tranfmit their anfwers to the commiffioners, with their obfervations thereon.
The form of the aforefaid poft-entry book may be as follows:

| When poited. |  |
| :---: | :---: |
| $\left.\begin{array}{c} \text { No. 47. Lady day } \\ \text { quarter, } 173 \mathrm{r} . \end{array}\right\}$ | Poft on No. 17 . |

|  |  |

3. That the account of all goods muft be taken in the proper books, at the time of examination, \&c. and not in any other books or loofe papers.
4. That the marks and numbers of all cafks, \&c. mult be carefully obferved, and placed to the proper merchant's account; and that each day's work muft be,compared with the account taken by the merchant, his fervant, cooper, \&c. 5. That goods are not to be brought to the warehoufe without a bill of fight, or other warrant, or the confent of the furveyor, under his hand, in the land-waiter's book.
5. That, upon any miftake in taking the account of any goods, the land-waiters are not to erafe their books, but, having ftruck the pen through the error, are to infert the truc figures, \&c. and to write the reafon thereof in their books. 7. That the land-furveyor muft duly attend at the water-fide, and frequently every day infpect the land-waiters in the difcharge of goods.
6. That after payment of the new duties, and before the delivery of any hides and fkins liable to thofe duties, the fame are to be ftamped with a proper mark (being an hammer) which, with fome printer's ink, and a little box, have been fent for that purpofe; and, when the faid hammer or ftamp is not in ufe, it is to be fecured under the feparate locks of the collector and comptroller; but, for ufing the faid ftamp, a block is to be prepared, which may be of elm, two feet and one half high, about ro inches diameter at the top, and bollowed one inch and a half, which is to be filled up with lead, about five inches fquare, in order to make it folid, and prevent the hammer's rebounding, and to keep the lead from fpreading and cracking.
7. That after the payment of new duties, and before the delivery of linens chequered, Atriped, printed, painted, ftained, or dyed, the fame are to be ftamped with the proper feal and ftamp, with printer's ink; which ftamp is to be lodged in the (joint) cuffody of the collector and comptroller, and not to be delivered thence but to the land-furveyor, and landwaiter appointed to the thip, wherein there are any fuch linens imported, as are liable to be ftamped; and, after entry and landing, fuch linens are to be ftamped in their prefence by a weisher or porter, who is under oath and fecurity; and the land-waiter is to keep an account thereof in bis book, which is to be marked by the land furveyor : and, when they leave off ftamping, the faid ftamp or feal is to be returned by the furveyor and land-waiter, into the joint cuftody of the collector and comptroller, to be locked up under two different Jocks 'till wanted again.
8. That if, upon examination of any goods at the delivery, the merchant appears to have over-entered, either in any particular goods, or upon the whole entry, the following regulations muft be obferved, in order to procure the repayment of the duties for the goods fo over-entered: and though he: Thould be over-entered on fome goods, and fhort-entered on others, yet fuch fhort-entry muft not be deducted from the over-entry, but a poftentry inult be made for what is fhort, and' the over-entry muft be obtained by the regulations before-mentioned, being as follows:
9. On the face of the warrant, at the bottom, mult be certified the quantity of goods over entered, thus:

Voi. II.

The merchant is over entered thirty-three pounds of thrown filk.

## B. C. $\}$ Land-waiters.

2. On the back of the warrant, the merchant, his fervant, or agent, mult make oath to the quantity of goods received, and the occafion of the over-entry, thus :
James Crofs maketh oath, That neither himfelf [and, if the goods were taken up by a fervant or agent, there muft be likewife added, nor A. B. the proprietor] nor any other perfon for him, or to his ufe, did to his knowledge or belief, receive any more than three hundred pounds of the filk within mentioned, nor had any more landed out of the within mentioned Thip, and that this over-entry was occafioned by a miftake * in cafting up the invoice.
Jurat' 16 die Martii, coram me
D. E. Collector.

Signed James Crofs.

* Or any other occafion, as may be the cafe.

Underneath which oath mult be certified as follows:
Upon examination, as alfo per affidavit above, we find the merchant is over-entered thirty- three pounds of thrown filk.
Certified the 16th of March 1730 .
$\left.\begin{array}{l}\text { B. C. } \\ \text { C. D. }\end{array}\right\}$ Land-waiters.

Whereupon a certificate mult be made out, in order to repay the duties for the goods fo over-entered, figned by the land-waiters. On the back whereof muft be inferted the particular duties to be repaid, with the merchant's receipt for the fame.
But, before the duties are repaid, the entry inwards, referred to in the fecond certificate, muft be difcharged for fo much goods as were over-entered, by writing off the fame in the margin of the book: and the whole mult be entered in particular books, to be kept by the collector and comptroller for that purpore.
in. That as all goods are to be entered as found, with regard to damage, \&c. therefore, if on examination of poundage goods *, except tobacco, they appear to have received damage by falt-water, \&c. whereby the merchant will be prejudiced; the collector, furveyor, and Iand-waiters, may make fuch allowance as they think proper, though no allowance muft be made in confideration of the meannefs of any goods : but, if the merchant is not fatisfied with the allowance made, then the collector, and any other principal officer, may appoint two indifferent merchants, experienced in fuch goods, on their oath, to adjuft the allowance.

* 1 ith Rule of the book of rates, at the end of letter $A$.

Whereupon the officers or other perfons who have adjulted the damages, are to certify the fame on the back of the warrant. -Which allowance for damage, \&cc. muft be made upon the keys, or in the king's warehoufe, immediately after landing the goods, and before taken into the merchant's poffedion: and, in making thefe allowances, the quantity allow-

## LA N

ed for damage muft not be deducted from the quantity moitentered (if any); but a poft-entry muft be made for fuch thors-cniry, and a certificate for the repayment of the duttes of the goods allowed for damage, figned by the land waiers. But, before the duties are repaid, the entry inwards, referred to in the faid certificate, mult be difcharged for fo much goods as were allowed for damage, by writing off the fame in the margin or the book: and the whole certificate muft be entered in particular books to be kept for that purpofe, by the collector and comptroller.
12. That although no allowance is made to the importers of tobacco, in confideration of any that is damaged or mean, yet, if on delivery, any part appears damayed, and the merchant is not willing to enter and pay, or fecure the duties, he may either refufe the whole, or feparate the damaged tobacco (but not the falk from the leaf) by cutting off from the hogitheads, \&c. fo much as he fhall refufe to enter, \&xc. and any three or more of the principal officers may caufe fuch tobacco to be burnt: whereupon a certificate for an allowance, in confideration of the tobacco fo deffroyed, muft be made vut, figned by the furveyor and land waiters.
On the back whereof, the merchant muft give a receipt for the payment of the aforefaid allowance. See WOOLt.
But, before this allowance is paid, the fame mula be entered, in particular books to be kept for that purpofe, by the collector and comptroller.
Land waiters are not to be paid their falaries, 'till a certificate be produced from the furveyor, that they have not any poft-enties ftanding out.-They are to affit at the fhipping of corn and other goods, and to certify on debentures-To examine the fhips contents, and compare them with the merchant's endoriements on the cocket-To examine the thips, and difcharge the tidefimen- To preferve and enter the warrants outwards-A book to be kept by them for the outward bufinefs-To affift the coaft-waiters in examining foreign goods.
LANERKSHIRE, in Scotland, is bounded on the fouth with Dumfrieshire ; on the fouth-weft with that of Aire; on the north-weft wits that of Renfrew ; on the north with that of Dumbarion; on the north-eaf with Sterlingthire; and on the eaft with that of Linlithgow and Mid-Lothian. It is a pleafant fruitful country, and, though mountainous in fome places, and woody in others, is very well inhabited, efpecially near the Clyde. It abounds with coal-pits and lime-fone, and has fone profitable lead-mines.
Glascow, in this fhire, for extent, buildings, trade, and riches, is the chief city of the kingdom, next to Edinburgh. Though the river Clyde, on whofe banks it ftands, is navigable up to the town for froll veffels, yet New Glafcow, at the mouth of the Clyde, is the harbour for thofe of great burden, where the city obliges the merchants to load and unload, there being a good wharf, and a cuftom-houle for all the coaft; and Chips are allo repaired, laid up, and fitted out here, or at Greenock. There is not only an appearance, but a reality of trade at this city, both as to foreign commerce and domeftic manufacture; which, though great before, is very much improved fance the union, which more fully anfwered it's end to this city, than to any other part of Scotland, fo that they now fend above 80 fail of fhips every year to Virginia, and other Englifh colonies in America. They have a very confiderable trade in the herring-fifhery, which they catch fooner, and cure fo much better than the Englifh, that they are reckoned equal to the Dutch. They have alfo the advantage of fixuation, lying fo convenient for the coafts of Spain and Portugal, that they are often at Cadiz, the Streights mouth, and even at the Canaries, in eight or nine days. Their fituation for the American trade is no lefs advantageous, efpecially in time of war. They lately purchafed a harbour on the Frith, near Alloway, to enable them to remhip their fugars and tobacco for Holland, Germany, and the Baltic, without failing round England or Scotland.
They have a manufacture of plaids and mulins, which lait are fo good and fine, that great quantities are fent to England, and the Britifh plantations, where they fetch a good price, being generally Atriped, and much uted for aprons by the ladies, and rometimes in head-cloths by the meaner fort.
LANGUEDOC in France. This province is bounded on the north by Quercy and Rovergne, on the eaft by Auvergne and Lyonncis, on the fouth it borders on the Mediterranean Sea, and on the weft the Garonne feparates it from Gafoony.
It is efteemed one of the moft pleafant and fruitful provinces in France: it's chief commodities are wine, oil, honey, wax, faffron, filk, and falt.
In this province is the famous canal, cut at an immenfe expence, to make a communication between the ocean and the Medizerranean. 'Twas begun in 1666, and completed in toen. It cof above thirteen millions of livres, and takes an immerie fum yearly to keep it in repair; and yet does not anfwer the defign fir which it was chiefly made, namely, to carry the French feets, which are ftll obliged to pafs through the itreights of Gibratar. Nor does it leem to be of great
ule for that inlunli urdde.
'Tis divided into the following difrias or divifons, $v i=$. I. Toulousain, lying between Gafcony on the welt, Albigeois on the eaft, and the county of Foix on the fouth. Iat it is
Toulouse, the capital of the whole province, feated on the river Garonne.
Though this city is very advantageoufly fituated for trade, it has hardly any, the genius of it's inhabitants not being turned that way; fo that, though this be one of the greateit citics in France, it is neither rich nor populous.
II. Almigeors is bounded by Roverghe on the north and weft, by Touloufain cn the fouth, and by Quercy on the eaft.
The foil about Gaillac is the only part of Albigeois, that produces wine proper to be exported bejond fea. They fend it by the river Tarn, which begins here to be navigable to Bourdeaux, where the merchants fell it to the Englifh, this wine being better after it has been traniported by tea.
Rabastens on the Tarn alfo, is an ancient city, but gone to decay; there is, however, fome trade here, particularly of wine, which is very good.
III. Lauragais lies on the eaft of Touloufain, between the rivers Aliege and Agout.
Castlenandari has a pretty good trade, the plains that furround it producing abundance of corn. It ftands on a hill, at the foot of which is a baton of the royal canal of Languedoc.
IV: The diftrict of Narbonne lies between Lauragais and the county of Foix on the weft, Roufillon on the fouth, the fea and the diftrict of Befiers on the eaft, and Touloulain on the north.
Narbofine is commodioufly feated in a low country, on a canal cut from the river Aude. It formerly had a good harbour, and drove a valt trade in the Mediterranean, but it has been long fince ftopt up, the fea having left the coalt.
Carcassonte is feated on"the river Aude. The country round it is much enriched by the manufacture of all forts of cloth eftablifhed here, and which afford a conftant employment for all the inhabitants.
Limoux, a fmall city on the fame river, has likewife a manufacture of cloths and other woollen ftuffs. 'Tis alio the flaple for all the iron that is worked in the neighbouring forges.
V. The diffrict of Besiers is extended between that of Nar bonne on the weft, Rouvergne on the north, the diftrict of Nifmes on the ealt, and the fea on the fouth.
The foil of this diocere is one of the moll fruitful of the whole province; it produces excellent wincs, and much more corn than the inhabitants can confume, and a great quantity of oil.
VI. The diftrict of Nismes lies between that of Befiers on the weft, the Mediterranean Sea on the fouth, Provence on the eaft, and Sevennes on the north.
Nifmes is a large town, well peopled, and has a very good trade, which confifts chiefly in waollen ftuffs made here.
Montpellier is the capital city of what is termed Lower Languedoc, and the largeft and moft confiderable of the whole province, except Touloufe.
The inbabitants are employed in making treacle, verdegreafe, white wax, dimities, filks, and woollen fuffs, and other forts of manufactures.
Beaucaire, fituated on the Rhône, is famous chiefly for the fair kept yearly about the time of St. Magdalen's feftival. It had formerly great privileges granted, but, in 1632, they laid a duty on all merchandizes, which amounts yearly to about 25,000 livres; befides another of twenty-pence on every bale that has not been opened, which brings in about 5000 livres more. They carry on in this fair a trade for above fix millions of livres. Merchants refort hither from Italy, Germany, Spain, Turkey, Armenia, Smyrne, \&ic.
Sommieres is confiderable for it's manufactures of ferges, which are fold in this and the adjacent provinces.
VII. Gevaudan is for the molt part a mountainous and barren country; but moft of the penple follow fome trade at home, making ferges and other ftuffs, which they fell very cheap; and yet thofe little manufactures bring in above two millions of livres yearly, being exported into Switzerland, Germany, Italy, and even into the Levant.
Marvejols is a pretty populous city, and drives a good trade. Vili. Vivarais lies between Languedoc, properly fo called, on the fouth, Gevaudan on the weft, Forez and Velay on the north, and the river Rhône on the eaft.
Viviers is it's capital, but is not a place of any trade.
1X. Velay is a fmall county or diffrict, and has Viyarais on the ealt, Forez on the north, Auvergne on the weft, and Gevaudan on the fouth.
The moft confiderable place in it is PuY, where they make a valt quantity of laces, by which they are much enriched.
LAPIDARY, an artificer who cuts preciou flones. The fame is faid of thofe who deal therein, and bave a perfect knowledge of gems in general, and of thofe alfo who have wrote thereon in French, as Boot, Berguen, Ruæus, Gefner, Durondel, \&c.
This art is of great antiquity. The French fell into it late, yet hawe carried this art to a very great perfection, but not luperior to that of the Englifh.

5
Divers

## L A Q

Divers machines are employed in the cutting of precivus fones, according to their quality. The diamond which is extremely hard, is cut on a wheel of foft fleel, tufned by a mill, with diamond-duft, tempered and polifhed with olive oil.
The oriental ruby, fapphire, and topaz, are cut on a copperwheel with diamond-duft, tempered with olive oil, and are polifhed on another copper-wheel with tripoli and water.
The hyacinth, emerald, amethyft, garnets, agates, and other ftones not of an equal degree of hardnefs with the other, are cut on a leaden-wheel with fmalt and water, and polifhed on a tin-wheel with tripoli.
The turguois, of the old and new rock, girafol, and opal, are cut and polidhed on a wooden-wheel with tripoli allo. The lapidaries of Paris have been a corporation fince the year 1290. It is governed by four jurats, who fuperintend their rights and privileges, vifit the mafter-workmen, take care of the mafter-piece of workmanhip, bind apprentices, and adminifter the freedom. There are two jurats chofen, every year, by a plurality of voices.
The apprenticeflip is for feven years; a mafter can have but one apprentice at a time; he is permited, however, to take fecond toward the end of the laft year of the time of the others.
Apprentices, after the expiration of their fervitude, muft Serve two years as journeymen with mafters, in order to perfect them in the art.
Every candidate for the freedom of the corporation, even by the royal recommendation, is obliged to perform a mafterpiece of workmanihip before admiffion.
Mafters may have no more than two wheels, nor more than three mills going.
Foreigners, or aliens, are not allowed to expofe to fale either rough or cut preciouswtones, or even pearls; nor are the mafters to purchafe any of them, that have not been vifited by the jurats
Thefe merchandizes can only be fold by the mafter-lapidaries, and the goldfmith-jewellers; all others are forbid to mend or repair them.
Some of thefe articles have been fince new modified and changed.
x. By an arret of the council of May 1613, regiftered the June following, all merchants, foreigners, ftrangers, and others, are forbid to carry and fell, in the kingdom, any precious ftones and diamonds, cut and fafhioned, unlefs in the fair time, who are then fubject to vifitation by the juratlapidaries.
2. By another arret of the council of Decernber 1614, the preceding is ratified ; and yet it is ordered, that the dealing in diamonds, and other rough and cut precious ftones, carried by merchant $f \times$ angers, thall remain free, as well to the goldfmith as the lapidaries, without the latter vifiting or dividing the ftones by lots among themfelves; being alfo forbid, bath the one and the other, to be factors or agents to merchants foreigners.
The parliament of Paris made a decree in February 1740, with regard to a law-fuit between the body of trading gold-fmith-jewellers, that of the mercers, and that of the other four corporations of merchants of the city of Paris of the one part, and the company of lapidaries on the other: the latter and the goldmith-jewellers were at law for above 100 years; and this decree of the parliament terminated their differences, and definitively regulated the fate of thefe corporations among themfelves; by which decree, the lapidaries are forbidden to vend any fort of precious fones fet and adorned by art, under the penalty of a fine and confifcation of the fame, and they are reftrained to the fale of rough ftones, and thefe cut and polifhed, but not fet and adorned. By an arret of the council of flate of January 1673, lapidaries were probibited, and all others except goldfmiths, lelling all precious ftones, on pain of 3000 livres penalty, and of all expence, damage, and intereft. The foregoing arret of parliament, in confequence thereof, forbids lapidaries from affuming the quality of merchant jewellers, and to give to their jurats the name of wardens, nor permits them to be called only mafter lapidaries, gravers, and artificers, in all fort of precious ftones, fine and natural.
LAPLAND. This country is divided into Danifh, Swedifh, and Mufcovian Lapland. See the articles Norway, SweDEN, and Russia.
LAQUE, or artificial LACC A, a name given to a coloured fubitance, drawn fromi feveral flowers; as the yellow from the flower of the juniper, the red from the poppy, and the blue from the iris or violet.

The method of preparing the vegetable colours callied laques. Take a pound of turmeric root, reduced to fine powder, three pints of fair water, and an ounce of falt of tartar; put them into a glazed earthen veffil, and let them boil together gently, over a clear fire, 'till the water appears richly impregnated with the turmeric, or will flain a piece of uhite paper beau tifully yellow; then filtre the liquor, and gradually add to it a frong aqueous folution of roch-allum, 'all the yellow

## L A Q

mattur is all curdled together, of precipitated: after this pour the whole into a filtre of paper, where the aquenus part will run off, and leave a yellow matter behind; which being edulcorated, or wathed in the filtre, by the repsated aftifion of frefh water, 'till the water comes away infipid, and afterwards dried, it becomes the laque of turmeric, or a beautiful yellow colour for painting.
This experiment fhews a gencral method of obtaining a laque from all the vegetable fubjects fitted to afford it: for in the fame manner may a red laque be made from madder, brazil, nicaragua, and many other dyeing woods, or tinging vegetables. But, where the colour of the fubject depends upon a very fubtle texture, mixture, or arrangement of the parts, this method deftroys, or at lealt impairs the colour; as particularly in violets, red rofes, carnations, \&s. So that it feems applicable only to the tinging vegetables of a fomewhat Arong and firm textare.
In fome cafes alio, a fimple procefs is fufficient to obtain rich laques; particularly that beautiful red one, emphatically called laque, and from which the name feems to be derived to the reft. This red laque is obtained, barely by boiling fticklac in water, then filtring the decoction, and evaporating the fuperfuous humidity: for the beautiful red colour adheres to the outfides of the flicks broke of the trees, along with the gum-lac, and readily communicates itfelf to boiling water*. Some of this tinging matter likewife fticking to the gum itfelf, it is proper to boil them both together: for the gum does not prejudice the colour, nor diflolve in boiling water: fo that, after the operation, the gum is as fit for the making of fealing wax, or other ufes that do not require the colour, as it was before.
*The tinging matter adhering to the flicks and gums is, perhaps, not a vegetable, but animal fubflance; fomewhat of the nature of cocheneal, and depofited in form of an ex crement, by a certain kind of bees in the Indies. See a paper upon this fubject in the French Memoirs; fee alio Mr. Boyle upon human blood, Abridgment, Vol.II. p.48r.
And, much after the fame manner, is that extremely rich and beautiful red colour called carmine, prepared from cocheneal, and a folution of tin; for carmine may be conceived as no more than the fcarlet, or Bow-dye liquor, concentrated or reduced to what the painters call a body.
How far the prefent experiment may be applicable to other parts of the materia tinctoria, feems not bitherto well confidered. Doubtlefs, it might afford a great vatiety of new colours, by a proper extenfion and diverfification in the menftruum and method. For example: if red faunders be digefted warm in firit of wine, the menftruum acquires a deep red colour; and, if drawn off by difillation, leaves behind it a red, taftelefs, and inodorous rofin, that affords no fmell even upon burning, nor diffolves in any expreffed or effential oil; yet, even in a fmall proportion, tinges fpirit of wine of a full red colour, to as to render it ufeful for anatomical injections, \&c.
In like manner, may a particular gummy red fubfance, or pigment, be obtained by fpirit of wine, from dried red wine jees; and, whether the tinging parts of the more cumberfome dyeing woods and ftuffs could not be advantageoully extracted at the places of their growth, fo as to leave their ponderous bulk behind, and bring away only their concentrated eflential colours, might deferve the confideration of the merchant, the dry-falter, the dyer, the callico-printer, $\& \mathrm{c}$. It might be tried on logwood, brazil; on madder, fafflore, and many other dyeing woods and ftuffs ${ }^{*}$, whole names we feldom meet with but in the bills of entry.

* This is well deferving the confideration of thofe traders, who are any way concerned in thefe things.
LAQUERED WARES are peculiar forts of cabinetwork, varnifhed, in the nature of japan-work, over with laquer. See Ladue.

## A white laquer, or varnifh.

Take ten ounces of rectified fpirits of wine, and fine pulverized gum- fandarac two ounces, clear $V$ enice turpentine two ounces; put them together into a glafs, and cover it clofe with waxed paper and a bladder; then take a pot with water, put it on a coal fire, and, when it begins to be warm, pur fome hay under the bottom of the por, whereon let your glafs; let it boil for two or three hours, and the fandarac and turpentine will diffolve and unite with the fpitits: then pour your laquer boiling hot through a cleai hair-cloth, and put it in a clean phial for ufe. This is an excellent laquer, fit to be ufed for light colours.
A:iother laquer to mix with red or dark colours, and to japan the work over with.
Take rectified fpirits, that is, fuch as, when poured on gunpowder, will fire it; or when a linen rag being dipped into it and lighted, it will confume it one pound; of clean gum lacca a quarter of a pound; wind them fine, and put them into a phial, then pour the fariss over it; let it fand for two
days, Thaking it oncevery hour: the third day, hang it over a gentle cool fire 'till it is well diflolved, then ftrain it through a hair-bag, and put it up for ufe.

## Another jaquer varnifh.

Take of the beft and ftrongeft brandy one quart, calcined tartar one pound; let the brandy fland upoin the cartar covered, forone day, in a gende warmth; pour off the brandy, and filtrate it through paper ; of this take one pound, white amber fix ounces, fandarac fix ounces, gum-lac two ounces, (the amber mult be picked out of clear pieces) grind all fine togecher, put them into a phial or matrafs, then pour on it three pound's of the filtrated brandy: your phial muft be but about half filled; then thake it for about an hour together, keep it in a matrafs for two days, fhaking it once every hour; when fettled, pour it through a bair-cloth, and it will, be fit for ufe.
What fediment remains in the phial, may be ufed in making another fuch quantity, adding to it but one half the quantity of frefh ingredients.

A fine laquer or varnifh, for blue, and other colours, which will make them bright like looking-glaffes,

If your table is to be of a blue colour, paint it firft with indico and white, ground with oil, with a little turpentine; when dry, you may give it another layer, and heighten it to your liking; and, when this is thoroughly dry, laquer it with the following matter.
Take cléar Cyprian turpentine half an ounce, fandarac one ounce, maftic two ounces; grind the fandarac and maftic very fine; then take oil of fike two ounces, oil of turpentine one ounce, put them into a glafs cucurbit, to difiolve over a gentle heat: add thereto the pulverized gum, fet the glafs or matrals in a pan with water; let it boil over a flow fire for an hour, and all will be diffolved and incorporated: let it cool, preferve it in a phial well fopped for ufe. When uled, firf wipe your painted table, and clean it from duft; then take fome fine and light frmalt in a cup, or upon a plate, according to what quantity your piece requires; temper it with the above laque, and, with a large hair-bruth pencil, glaze it as quick as you can all over; let it dry in a clean place that is free from duft, which will be in about three hours time, then glaze it over again: the oftener you repeat it, the brighter your table will be: if you chufe to have it of an exceeding fine luftre, glaze it over 12 or 15 times.

## A Chinefe laquer for all forts of colours.

Put into a matrafs a pint of fpirits of wine, one ounce of gum-animx, two ounces of maftic, two ounces of fandarac or juniper gum, powdered finely together in a mortar: put them together into a matrafs, clofe it up, and hang it in hot weather in the fun for 24 hours, or fo long over a fire, 'till the gum is diffolved, and the fpirits are tinctured therewith: then filtre it through a clean cloth, and keep it in a phial clofed up: you may mix therewith what colout you pleafe: for red, ufe vermillion; for black, ufe lamp-black, or ivoryblack; for blue, ufe indico and white, Pruffian blue or fmalt, and white lead, \&xc.
LATITUDE, in geography, the diftance of any place from the equator, meafured in degrees, minutes, and feconds, upon the meridian of that place; and is either north or fouth, according as the place is fituated, either on the north or fouth fide of the equator. It is found at fea, by having the fun's or any ftar's declination (by a proper table, and his meridian alcitude) and that is found by a quadrant or aftrolabe. From the horizon to the zenith being $90^{\circ}$, if from $90^{\circ}$ you take the fun's meridian altitude, the remainder will be the fun's diftance from the zenith. When, therefore, by obfervation, the fun's meridian altitude is found, you are to confider, whether the fun hath any dectination or not: if he hath none, but moves in the equinoctial that day, then the elevation of the equator will be equal to his peridian altitude; and, conrequently, his meridian altitude is the co latitude: fubduct, therefore, that from 90 , the remainder is the latitude of the place, which will be north; if the fun be on the fouth part of the meridian; and fouth, when the fun comes to the north of the meridian.
'Tis the fame thing with any far in the equator. When the fun or far hath any declination, the zenith diffance with that will give the latitude; for, if the meridian altitude and declination be both the fame way, i. e. both north, or both fouth, the difference between them will be the latitude of the place, or the pole's height: only obferve, that, if the zenith diftance exceeds the declination, the contrary pole will be elevated. If the declination be $23^{\circ} 30^{\prime} \mathrm{N}$. and the zenith diflance $8^{\circ} 30^{\prime} \mathrm{N}$. the latitude will be $15^{\circ} \mathrm{N}$. But, if the zenuth diftance be $71^{\circ} 30^{\prime} \mathrm{S}$. and the declination $20^{\circ} \mathrm{S}$. the difference will be $5 t^{\circ} 30^{\prime}=$ to the latitude, as before; only it will he north, becaufe the zenith diftance exceeds the decinatica.

If the declination be north, and the meridian alsitude fouth, or wice verfa, i . e. one contsary to the other, then the fum of the declination and the zenith is the latitude of the place. Indeed, fometimes the fun or ftar may have two meridian altitudes, as when the altitude and declination being the fame way; the latier exceeds the former, and then the fum of the co-declination and the meridian altitude is the height of the pole, towards which the declination is. And you muft obferve, that, whether the meridian altitude be north or fouth, if that and the co-declination together be lefs than $180^{\circ}$, the fun or ftar will have two meridian altitudes in 24 hours. Sec the article Longitude, with regard to navigation, and alfo the article Commanders of Ships.
LA W. Traders in general are the principal perfons who ought to keep out of litigious broils, yet they are the moft liable to be plunged into them, by reafon of their conftant dealings with great variety of people. We have, therefore, endeavoured, throughout this work, not only to give the ftatute law in miniature which has relation to the chief fpecies of merchandizes, but alfo the determination, in our courts of common law and equity, of the moft curious mercantile cafes which have come before them, in order to guard tratuers againft thofe evils to which they are too frequently liable. Belides the common and flatute laws of England, as alfo the lex non frripta; there are in feveral parts of England certain cuftoms and ufages, which have the force of common law among thofe people to whofe property they belong; as borough Englifh, a cuftom fo called, not being in ufe out of England, where the youngeft fon, or, for want of fons, the youngeit brother, is to inherit, the eldeft being fuppofed to have learned the father's trade, and the youngeft the leaft able to thift for himfelf.
Befides thefe, we make ufe of the civil and maritime law, in regard to divers commercial and naval occurrences; which law is exercifed in the high court of admiralty, as correfponding and agreeing with the laws of foreign nations, being fuitable to the nature and negociations of the people that are fubject to them. By this law, and the ancient cuftoms thereof, a mutual intercourfe of commerce is maintained between nations, and fhould, in trading ftates, be precifly and ftrietly upheld and preferved; yet the rights of the municipal laws of the kingdom hould, by no means, be infringed, but each jurifdiction reftrained within it's proper limits; which will be more advantageous to the trading interfts of this nation, than the fuffering either of them toincroach upon, and fwallow up and devour the other: and that law which is univerfally regarded in all trading nations, fhould feem the beft calculated to determine all mifunderftandings between the trading fubjects of thofe feveral nations which have relation to traffic, or maritime concerns. Yet, in the leagues that are eftablifhed between nation and nation, the laws of either kingdom are excepted; and as the Engliih merchants in France, or in any other nation in amity, are fubject to the laws of that country where they refide, fo muft the people of France, or any other country, be fubject to the laws of England, when refident here. 19 Hen. VII.
By the common law, merchants were always particularly regarded in this kingdom; but the municipal laws of England, or, indeed, of any realm, are not fufficient for the ordering and determining the affairs of traffic, and matters relating to commerce, merchandizing being fo univerfally extenfive, that it is impoffible: therefore there is another law, called the law-merchant, which is a kind of fpecial law, differing from the common law of England, proper to merchants, and is become a part of the law of the realm; and all nations take fperial knowledge of this law; and the common and ftatute laws of this kingdom leave the caufes of merchants, in many cafes, to their own peculiar law, which is founded on cuftoms and ufages immemorial. On this law, alfo, we have been pretty copious throughout our whole work.

## Remarks.

There can be nothing more perplexing and vexatious to traders than the being unhappily involved in law-fuits. To avoid which, or to prove fucceffful therein, nothing can be more conducive than method and regularity, which is the life of a trader's affairs in general. Thus the due arrangement and methodizing of the original vouchers which relate to a trader's tranfaction, for immediate reference, hould, by no means, be neglected: for, the grand baoks being of no authority in courts of judicature, without the original vouchers, thefe ought to be as regularly difpofed as the other, in the way they will admit of; neglects of this kind, either by mifplacing, or lofing thofe teftimonials of a trader's tranfactions, being productive of great coufufion in public buffincfs: order and regularity in all things cannot be too carly made habitual to the young trader.
And, indeed, if a trader has any mifundertanding or law-fuit with others, and has the beft caufe to defend, and employs the moft ikilful, as well as moft upright council, follicitor or attorney, yet, if he cannot produce authentic vouchers in his vindication, he will lole his caufe.

## LEA

With relation particulally to the laws, which concern the various branches of the public Revenue, traders in general fhould not be remifs in making themfelves acquainted with thote that may concern themlelves, left they fhould incur the penalties thereby inflicted, or injured by the officers who may exceed their authority. Thus the merchant thould be well informed in the laws, relative to the bufinefs of the Customs; variety of the effential whereof is given in this work, either under the refpective articles which they immediately concern; or at the end of every letter, wherein the general Business of the Customs is concerned. But they are fo numerous, that it cannot be expected we thould give the whole, and at large, which would be no more than to tranfcribe the Statutes at large: we have judged it fufficient to give the practical trader fuch an idea thereof, as may tend to induce him to look into thofe, wherein his own private intereft is concerned.
Thofe traders, who are liable to the excife laws in any peculiar branch, thould nor be neglectful to become familiar with thofe which concern their refpective branches of bufifinefs: as the falt or ftamp duties, \&x.
The neceffity of merchant importers and exporters informing themfelves well in the laws relative to the Customs in particular, will appear under the Business of the Cus-rom-House, at the conclufion of our letter $A$, and the end of the fublequent letters of the alphabet.
LEAD, is the heavieft of all metals, next to gold, quickfilver not being ranked in the clafs of metals. It is the fofteft of all, and very ductile, though much lefs fo than gold; is very little fubject to ruft, and the leaft fonorous, except gold ; the moft readily fufible of all except tin, and acquires this fluidity long before it changes colour; when melted, it readily cal cines into a grey powder, which, if the fire be increafed, becomes of a fine florid red, which is the minium of the fhops. If the fire be made yet more vehement, it runs into an olea ginous matter, which, as it cools, turns reddifh, which is li harge. Thefe feveral fubitances, by addition of iron-flings over the fire, or only fome pieces of charcoal, or any oily matter, become lead again.
The fcoriz of lead in a ftrong fire vitrify, and in that form efcape through all forts of veffels.
Lead 'readily amalgamates with mercury, and as readily fufes with all other metals, except iron. It's fpecific gravity is to that of water as 11,322 to 1000. Expofed to a burningglars, it in a few moments goes through all the changes already mentioned.
When kept in fufion over a common fire, it throws up all other bodies, except gold; it afterwards vitrifies with the bafer metals, carrying them off as fcoria.
The weakeft acids are it's beft folvents; it diffolves readily in aqua fortis, mixed with water, as alfo in vinegar, and is corroded with the fumes of the weakeft acids, becoming what is called ceruffe. It gives a fweetih tafte to liquors wherein it is diffolved. If heated 'till it fmoaks, and copper in thin plates be put in, it boils up, vehemently, and the copper breaks and blends with it. The mixed mafs, when cool, is very brittle, refembling caft iron where broken.
Lead is met with in the mines in various forms. The ore is ufually of colour eafily diftinguifhable to the reye, being a little darker than lead, bright and gloffy where frefh broken, and compofed either of cubic pieces, or of fmall granules, or of long ffriz. The firft is called potters lead ore, the fecond fteel-grained ore, and the third antimoniated lead ore. Thefe, though apparently different, are in reality very like, when compared with the help of glaffes.
There is, befides thefe ores, a very curious kind, which is green, and of cryftalline fubftance, ufually mixed with a kind of calamine : this has not the leaft appearance of lead, though it contains very much, and fome zink.
Lead is more eafily feparated from it's common ores than any other metal, requiring only a common wood-fire and bellows. Such ores as contain earth and flones are firft to be powdered and wafhed, and thofe which have pyrites, or marcafites, mult be roafted two or three times, to burn away the fulphur ; then powdered and wathed, and finally mixed with the common black flux, if very refractory. If there be occafion to reparate lead from copper in the regulus, it is readily done, as the lead will run off in a heat not ftrong enough to fufe the copper.
As to it's medicinal virtues, it feems to be a metal very cautioully to be given, and rather calculated for outward application. It's ore is poifonous: the fteam of the furnaces where it is worked infects the grafs around about, and kills the animals that feed on it ; and it's beft preparation, the faccharum faturni, is apt to bring on violent cholics, and fo many other diforders, that the remedy is often worfe than the difeafe.
The preparations moft in ufe are the following, viz.
Minium.
Melt lead in a broad, earthen, unglazed veffel, ftirring coninually 'till calcined to a grey powder; continue firring, and

## L E A

it will become yellow, and is the mafticot ufed in painting. Then calcine further in a reverberatory furnaze, and it wif be of a fine red, which is the common minium.

## ithatare.

This is of two kinds; but differing only in colour, called litharge of gold, and of filver. It is not prepared on purpore; but got from the filver fimelting furnaces, or from thole where gold and filver are purified with lead; but it is generaily rus into lead again, to freve for the fame ufes. The litharge of the hops is from the copper-works. The greateft quantities are brought from Sweden, Germany, and Denmark; Poland furnifhes fome, as alfo our own country, but the Danezic furnines fome, as ald our own country, but the Danizic
kind is moft efteemed. I he beft is the moft calcinid, and kind is moft etteemed. The beft is the moft calcined, and
of the livelieft colour. It is folubie in oil and unctuous fubftances, making the bafis of mof of the ointments arid planfiens of the fhops. The beft way of preparing it, is to grind it in a mortar with water, which pour off thick, adding fiech to the remainder, 'till all the litharge is waibed off, and the faces only remain. The litharge fubfiding from the fe liquors is to be kept for ufe, after carefully drying it.

## Burnt Lead.

Cut a quantity of the thinneft milled lead that can be got, into fmall plates, with which fill an sattien veflel that wi:i bear the fire, and, with powder of brimtione, laid layer upen layer; when the fulphur is burnt away, tnelead will be in a blackith powder: five ounces of brimitone fuffice for half a pound of lead. Stir the matier while oin the fire, and. when cold, wafh che powder in thiee or four waters. It is ufed externally as the litharge: mixed with lard alone, it makus a good unguent for the piles.

## WhiteLead, or Cerusse,

Is a calx of lead, made by the vapour of vinegar. The ufacl way of making it is by covering an earthen veffel, in which is fome fharp vinegar, with a plate of lead, and fering it in a place gently warm; in 10 or 14 days it converts it muftly into this white matter, which feparate for ufe.
But a much better: way is recommended by Boerhave. Cut a glafs cucurbit in fuch a manner as to leave a very large mouth, to which fit a glafs helin; put fome vinegar in the body, and a number of thin plates of lead in the hedd, fo as they may fand fomewhat erect. Set in a gentle fandheat for 12 hours, and, after letting cool 12 hours more, unlute the veffel; the receiver will contain a fweit and ftyptic liquor, naufeous and turbid, and the lead will be covered with ceruffe.
The famc procefs, ufed with iron or copper, converts them alfo into a calx, that of iron being red, and the copper green.
Ceruffe is of great ufe externally, either in unguents, or ufed dry, fprinkling it on old ulces, running fores, and many cutancous difeafes.
The finer part of this calx caufes, in thofe who grind and prepare it, violent and incurable althmas, palfies, and other nervous complaints.
Painters ufe it in great quantities; arid, to afford it themr cheap, it is generally adulterated with common whuting. The Englifh and Dutch ceruffe are very bad in this refpect ; the Venetian ought always to be ufed by the apothecaries.

## Saccharum Saturni.

Put into a large glafs cucurbit any quantity of true Venetian ceruffe, on which pour twenty times it's weight of diftilled vinegar; boil three or four hours in a fand heat; when fettled, pour off, the clear liquor, and add more vinegar to the remainder: repeat the operation with freih vinegar, 'till the cerufle is nearly all diffolved: Mix the liquors, and evaporate part, if to be kept under this form. If the falt of lead is to be propared, infpiflate in a fand-. heat, to the thicknefs of oil, and fet, it in a cool place for the falts to thoot. Pour off the liquor, and dry the cake of falt in a gentle heat.
The vinegar of lead is ufed by fome for pimples: an ointment may alfo be prepared from it, by mixing with oil of rofes, and working together fome hours in a leaden mortar. This is called butter of lead, and is an excellent medicine; by way of liniment, for almoft all kinds of eruptions.
The fugar of lead is greatly recommended by fome internally, in dyfenteries and hzemorrhages; but the generality condemn it, as containing all the poifonous qualities of lead in their higheft degree.
Externally it has been long famous for many virtues. It is good againft inflammations of all kinds, and in collyria for the eyes, and in the erifypelas: it deterges, dries, and cicatrifes ulcers, and in gonorrhæas is mixed in injections winh great fugcefs.

F
If

## LEA

If one nunce of it, and two of oil of turpentine, be fet in a fand-heat, 'till the falt is diffolved, the oil turns red, and is called balfam of lead. This is alfo an external medicine, of great note for it's effects in old and fharp ulcers.

## Remarke.

There are lead-mines in divers parts of England, Wales, Scotland, and Ireland, and the Britigh plantations, and in various other parts of Europe; but Great-Britain has larger plenty than moft countries, and exports great quanticies. Flinthire and Derbyhhire are the two counties in England, which have been long famed for their lead-works; and that of the latter is generally efteemed the beft, as being the fofteft : the reafon of which we afcribe to it's being finelted in North $W$ ales with pit coal fuel, and in Derbyfhire with wood fuel. For the method of affaying lead ores, fee the article Assay.

The method of fmelting lead ore at the great works, with pit-coal.
The fmelting-houfes have large air-furnaces, in the form of ovens, with a kind of hopper in the center at top, wherein to put the ore. At one end is an open fire-place, the breadth of the furnace, with large iron bars, wherein is put the pitcoal; and at the other end is a large chimney-flue, which draws the flame of the pit coal over the inward part of the furnace, and melts the ore.
To prepare the ore more eafily for fufion, they pound it, either with iron fampers, or by hand, and put it into the hopper before-mentioned: and, in order to feparate the fparry, or ftony and fulphureous matter from the lead, they, for cheapnefs fake, ufe burnt lime, in proportion to the quantity of ore to be fmelted at a time; for the fulphur of the lead bas a natural tendency to vitrify the lime, and the fony or fparry part of the ore, and to precipitate the lead: fo that quick lime is efteemed a proper flux [fee Flux] for the generality of lead ores; but, as lead itfelf hath a tendency to vitrification, there is commonly a quantity of the lead turned into glafs, as well as of the lime and fpar, 8xc.-To prevent which, nothing has a better effect than to throw in, after the ore is melted, a fmall quantity of billet-wood, or charcoal, the falts of whofe afhes the vitrified matter will.infantly lay hold of, and thereby the greater quantity of lead will be precipitated, than with the mere pit-coal alone; and the lead will alfo become' the purer and the fofter, for the addition of a fmall quantity of wood at the end of the fmelting.
When all is thoroughly fufed, and the lead as neatly precipitated as it can be in the great work, with thefe unexpenfive fluxes, there is a tap-hole, which is opened; out of which the lead runs, into the form of pigs, or bars, of fixed fizes. And if the lead, by the aflay, will yield filver fufficient to pay the expences of refining, and to leave any reafonable profit, the lead is then refined for it's filver, which is performed after the following manner.-A darge teft is made with bone or fern-athes, and fixed in an iron ring; which teft will contain feveral tons of lead in fufion: the lead is melted upon this teft, with a reverberatory fire, and, when melted, is blown off with a large pair of bellows, that go either by hand or water, into litharge, and, at the fame time, the filver is left or precipitated at the bottom of the teft ; and, if the refinement is carried on to the full extent, the filver will be as fine as filver can poffibly be. After the filver is thus extracted from the litharge, that is reduced again into a body of lead, by being put into another furnace for that purpofe, and melted down with pit-coal, and a fmall quantity of wood fuel put into the furnace per contactum with the fufed matter; for, the litharge being a kind of half-vitrified lead, the afhes of the fuel hath, as before oblerved, a natural tendency to unvitrification.
And here the reader will pleafe to obferve, that, after the lead is thus refined in the great works for it's filver, yet every particle of the litharge lead, when again reduced into a body of. lead, contains filver, in an equal proportion; and, indeed, there is farce any lead but what holds fome fmall proportion of filver, though the produce will not pay the expence of the extracting operation. But if, by any art, the whole quantity of filver, if fuch a thing is poffible, could be extratted in one fingle, eafy, and unexpenfive operation, as has been attempted by fome, it might probably be of fome additional advantage.

The method of fmelting lead ore with wood fuel
Is much the fame, in point of operation, as the preceding, with this difference, that the furnaces are open, and worked by bellows, inftead of mere air, which go by water or by hand, and the fuel is conjoined with, or laid ftratum fuper Atratum with the ore. After fufion, it is tapped in the like manner as before defribed, and the lead is refined alfo, as before reprefented, with wood alone intread of pit-coal.

## L E A

Lead ores, as well as all other kinds of ores, being of different qualities in point of their value, and more or lefs difficult of fufibility, and in the feparation of their, refpective metals; they require as different methods of treatment in a large way of working, as they do in the affay.
There are very few inftances of native lead exifting naturally pure and malleable among other metals *.

Some pure native malleable lead hath been found in New England. What is commonly taken for native lead, is really a very rich, fomewhat malleable, filver ore, of a lead colour. The vitrean filver ore is of an irregular, and al ogether unfertled figure: it is very ponderous, eafy to be latted with the hammer, and to be cleft, not mach harder han lead, and much of the fame colour; it melts prefently, and foon grows red-hot. This is what is often taken for native lead. It confifts of fulphur and of pure filver, which the regeneration of it, and the chemical analyfis fhew: it contains above three quarter parts of filver. See the article Silver.

Gallena teffulata, or the cubic dice-lead ore, is an ore very rich of lead, confifting of a quantity of fmall equilateral cubes, or of oblong parallelopipeds. But thefe cubes are, as it were, compofed of very thin, well polifhed lamina's, that fhine very bright, and are of a blackifh blue colour. However, this ore is very ponderous, foft, and brittle; it is more fufible than a great many other ores, though it requires a much greater fire to be melted than lead itfelf : the caufe of which is, the abundance of fulphur that lies hidden in the lead ore, and coniticutes almoft one quarter part of it. In a fufion well managed, one hundred pounds weight of pure and folid lead ore, will yield from 65 to 70 pounds weight of lead.
If the foregoing fort of lead ore confifts of fmall, thin, oblong cubes ${ }^{*}$, when broken, it appears finely ftriated,

- You will always fee this cubical figure in this Iead ore; nor was ever any orher figure obferved in it, excepe fuch as had been given it by fome external power or reffitance; for, even in this cafe, it has always the fame form within. But lead ores are called by different names, according to the various either segular or irregular application of the cubes to each other, agreeably to their magnitude, and their brightnefs thereon depending, and to their furfaces, wherhet fmooth or rough, and granulated. There is alfo a difference obferved in them as to their colour, fome being of a lighter and more bright colour, and others of a dark or blackinh dye.
Lazarus Erker, page 16r, mentions a red kind of lead ore, which he fays is ponderous, and like red clay. But it has been found that this red mineral, which has been miftaken for cinnabar, was nothing more than the lead ore, having here and there larger cubes, eafy to be diftinguifhed by the eye, without any help; and an infinite namber of very minute ones, not to be feen without a microfcope, and lying hidden in a red kind of marly earth : fo that is does not conflitute a particular \{pecies.
The fame author mentions another lead ore, refembling a white fandy fone. There are alfo fandy rocks now and then rich of lead, but, well examined, contain an ore not in the leat different from that laft defcribed. The rock which is commonly foft, and therefore does not deferve to be called a rock, bears a true lead ore, which is irregular on the outfide, looks globular, and is filled, throughout the fubfance of the rock, with fmall mafies, of various fizes, and not very bright; fo that, when the rock is broken, there appears the perfect fpecies of lead ore, the laft but one defribed. Abundance of thefe are digged out of the mines at Braybach.

The ftones that are of a lighter colour, efpecially the flints, and their like, when they are mixed with afh or black colour, or only marked here and there with veins and fpots of the like dye, thereby fhew, that they contain either iron or lead in them.

- Some of them will meltin the greatelt heat of a wind-fur nace, and are faid to be of the vitrifying kind, to which clafs they are referred.-All mmerals hitherto known may be referred to fix claffes, viz. metals, femi-metals, falts, falphurs, flones, and earths. See Minerals.

The green lead ore is very rare, of a yellowibh green colour, much varied, and half tranfparent. It varies it's figures, though it moft commonly has that of fpaad, lhooting in form of nitre, but lefs regular. It is likewife ponderous, not hard, and, at the fame time, very rapacious; neverthelefs, roo pounds weight of it yjelds from 70 to 80 pounds weight of lead. The white and afh-coloured lead ores are looked upon as being like this, and are as rare.
The lead ores, hitherto mentioned, are never rendered refractory by a mixture of iron ore, or of the fulphureous iron pyrites [fee Pyrites], as are the other ores [fee Ores]: for, unlefs the ore then contains iron, be naturally affociated to the lead ores, the major part of aflayers, in order to roalt them with greater care and benefit, commonly ufe an addition of iron, or of it's fufible fcoria's, that are ftill reducible. However, the white arfenical pyrites, if worthy to be claffed among
ores,

## LEA

## LEA

ores, ought, in this cale, to be excepted, on account of it's rapacioufnefs, and it's refractory quality of the abundant caput mortuum that remains of it, after the arfenic has been blown away.
Black Lead, is found in Ceveral parts of Europe and America; the wad-mines of Cumberland in England have it in heavy lumps, fome of which are hard, ftony, and of fimall worth; others very foft, and of a fine grain and texture.
This mineral hath none of the properties of metal ; it will not fule, but calcine in an intenfe fire; though there are fome fluxes, perhaps, that would melt it. The mechanics; who work in iron, fteel, and brafs, frequently ufeit, as well by way of polifh as to eafe the motion of the finer wheel-work; and quantities of it are wrought into pencils; though the confumption is not very great.
LEAKAGE. There is an allowance of 12 per cent. in the cuftoms, allowed to importers of wine, for the wafte and damage it is fuppofed to have received in the paffage : an allowance of two barrels in twenty-two is alio made to the brewers of ale and beer, by the excife officers. See the articjes Brewers and Wine, and the Business of the ticles Brewers and Wine, and
Customs, at the end of each letter.
LEASE, in law, a demife, or letting of lands, tenements, or hereditaments, unto another for life, term of years, or at will, for a rent referved.
The party who letts a leafe is called the leffor, the party to whom it is lett, the leffec.
The bufinefs of leafes taking into confideration the calculation of annuities upon lives, and the ufe of tables of intereft computed to anfwer the variety of cafes which may be required upon thefe occafions; we have been pretty full upon the articles of Annuities and lnterest. With regard to the former of thefe heads, we have built on the foundation laid by the great Dr.Halley in the Philofophical Tranfactions, No. 196. and the calculus made by the method laid down by the ingenious Mr. Abr. De Moivre, in his Annuities on Lives. In relation allo to the latter, we have given accurate tables of intereft, both fimple and compound, to feven decimal places, for $3,3 \frac{x}{2}, 4,4 \frac{x}{2}$, and 5 per cent. with examples of the divers cafes, to which they are generally applied : thefe are neceffary introductions to what we have to fay under this head.
The former of thefe being algebraically inveltigated, and therefore not intelligible by thofe who are unacquainted with that admirable analytic art of reafoning; we fhalh, on this article, endeavour to accommodate ourfelves to the 1kill of the arithmetician only; though what we have to fay is founded on the very fame principles, and will be more generally uuderftood.
About 20 years ago, the doctrine of leafes was warmly controverted by feveral ingenious gentlemen. The occafion was fome Tables calculated for renewing and purchafing of the leales of cathedral churches and colleges, \&c.-With the value of church and college leafes confidered, \&c. faid to be wrote by Sir laac Newton; but this, by fome writers at that time, was denied: how juftly I fhall not enter into.
From the beft judgment that I have been able to form of this delicate fubject, Ithall give the following ftate of it for general ufe, according to the principles whereon they haye been calculated, fince the time of the learned Dr. Halley.
Our defign being to reduce eftates of all kinds, as near as may be, to their true value in calh, by comparing them with annuities to continue a certain number of years, it will be neceffary to explain what an annuity is: by which we mean a fum of money to be paid yearly; and, if the fame is to be continued a determined number of years, then 'tis an annuity for years certain; if it is to be continued as long as one, two, or three perfons, or either of them, fhall continue in being, then it is an annuity for life, or lives.
As thefe yearly payments are frequently charged on eltates as a fecurity, fo they may be incumbered with a part of the affeffments on fuch eftates: an eftate of tool. per ann. may be bound for payment of 50 or 601 . a year : with the provifo, that the annuitant allows out of the faid annuity, a proportionable part of the taxes, tythes, \&x.--In fuch cafe, we would reduce thefe outgoings to a certainty, as near as may be, and deduct the fame out of the faid grofs annuity, calling the remainder only the nett annuity.
The next point to enquire is, whether, by rules certain, we can know how much ready money, at a given rate of intereft, will, in the time of the annuity's continuance, amount to an wil, in the time of the annuity'
equivalent for the faid annuity?
'Tis obvious, that, if a perfon advances a fum of money, to receive an equivalent for it at one year's end, he muft then receive, over and above the fum laid out, one year's intereft for the fame: now the fum to be received, and the intereft expected, being lettled, the money to be laid out will eafily be found. Again: for the next year, the purchafer muft lay out no more for this, than a fum which continued two years at compound intereft would amount to the fame annuity; and fo on for the $3 \mathrm{~d}, 4 \mathrm{th}, 5 \mathrm{th}$, \&c. years, as long as the annuity is to continue. Hence it is plain, that, where the yearly income, the rate of intereft, and the number of years are fixed, the value of the annuity in ready money may be eafily found; the method of doing which we flall fhew hereafter.

Though the method of computing the value of an annuitty, when the terms are thus fixed, is eafy; vet frequently the fixing of the term is difficult, and not always polfible; for in fome cafes, the yearly income of an eftate is hard to be found; in others, the rate of intereft that the purchafer ought to be allowed for the money'he lays out, is fomewhat uncertain: and the term that the purchaler fhall enjoy the income, is in fome kind of tenures unknown: one or more of thefe perplexities happen in almot every query of this kind, according to the nature of the tenure by which the purchalet is to hold the eftate.
It is \{carce poffible to give an account of all the tenures that are amongit us; fecundum confuetudinem manerii, inferted in the copies of court rolls, refer to cuftoms different in almoft every manor: we, therefore, fhall only remark thofe which are general. As i. Eftates in fee. Under this head we may range thofe held by leafe for a long term, under fmall rents; for, though the nature of the tenure be different, yet is the real value of them near the fame, as appears by comparing the prefent value of an annuity to continue 200 years, with the value of the fame in fee, at $4,5,6,8 \mathrm{c}$. per cent. intereft. The difficulty in valuing thefe eftates lies, firf, in afcertaining the yearly income likely to be produced by them, and the yearly outgoings in fates, taxes, repairs, \&c. (affefment on land only excepted, for that is alfo chargeable on money at intereft). And, fecondly, the rate of intereft that the purchrafer may expect for the money he lays out, as the lecurity for the eftate and income are better or worfe than the coms mon fecurity for money at intereft.
2. Another kind are fuch eftates as are held for terms abfolute, under divers conditions and refervations of rents, \&c.Thefe are alfo reduced to annuities as the former, only the referved rent muft be yalued as an annuity to be deducted, and at a lower rate of intereft than that of the rack-rent, in regard of the fecurity for payment being better than that of the other.
3. Another fort are copyhold lands; under which are included all church, college, dean, and chapter lands; fome held for term of years, renewable at certain periods, for ftated fums of money; others for life or lives abfolute, renewable in like, or different manner with the former.
It is the cuftom of fome manors, that the widow of him that was tenant for life, bath a right of dower during widowhood; fometimes of the whole, fometimes of a moiety, the other moiety of the eftate to the fon. Thefe and divers other cuftoms there are, which muft be well confidered, to find the real value of thefe tenures; and the income, rate of intereft, and, in fome cafes, time of continuance being dubious, muft be fixed with judgment, if we would, with any degree of certainty, arrive at the juft value.
4. Another kind of tenure is for a term of years, determinable on the death of one, two, or three perfons, with referivation of rents, \&c. Under this head may be included thofe that hold by life, or lives abfolute; for, though this laft be in the nature of a freebold, yet, as to the real value of fuch eftates, there is little difference betwixt that which is held for 99 years, if 1,2 , or 3 lives, or either of them live fo long, and that which is held for the fame lives abfolute : and the cautions, mentioned in copyhold eftates for fixing the term, are alfo to be obferved in thefe
Under thefe general heads may be comprized all, or the moft part of holdings, in ufe at prefent among us; all of which may, with due caution, be reduced to annuifies of a known equal value; fo may the reverfion of a term of years, or a life or lives, after an eftate in efle, be computed by the fame method.
Mr. De Moivre juftly oblerves, 'that the method of calcu-- lating the value of annuities upon lives, was never per-- fectly underftood before Dr. Halley's rules were made - public.'

As to eftates in fee fimple, the vulgar method ufed, before Dr. Halley's time, for finding their value, is thus: divide iool. by the rate of intereft per annum, and take the quotient for the number of years value of the purchafe in ready money: hence, after the yearly income is known (which with them is the rack-rent, exclufive of tythes, without any allowance for outgoings) there is no more to be done, but to multiply this yearly income by the faid quotient, and the product is efteemed to be the value in cafh.
The fallacy of this way of computation will be obvious, if we confider the confequence: for inftance, admit I were to purchafe an eftate of iool. per ann. intereft of money being at 5 per cent. Both parties can expect no other terms than thefe, by this method of reckoning: 100 divided by 5 , the quotient is 20 years value the fee, which in cafh is 2000 l . Now, admit that, out of this eftate, I mult pay 121 . per ann. parochial affeffments (exclufive of the king's tax) and 3 l. per ann. more for repairs; then it is plain, that I mall receive no more clear than 85 l. for the income of my 2000 l. To find what rate of intereft I have for my money, let the rate be $=r$; then $\frac{100}{r} \times 85=2000 ;$ confequently $r=\frac{8500}{2000}$ $=\frac{8,5}{2}=4,25$; that is, 4 and $\frac{7}{4}$ per cent.

## LEA

The common argument for this is, that a man would rather take $4 \frac{1}{2}$ per cenr. on landed fecurity, than 5 ou the common fecurity for money; this is plaufible, but it is a wiong waty of compuing: let us fuppofe again, that the eftate I would purchafe were of the fame yeally value ( 1001 ) as befure, and that the price at which I muft purchate be likewite 2000 l . aduit alfo, that, in this latter, the oungoings be no tnore than 41 . a year (as the cale may be in different parifles and cilcumitances): upon this fuppofition I have 96 l. per ann. income for my 2000. which is above 4 .. per cent, that is, 11 s. per cent. more than in the forme cafe. So that upon the whole, by this way of computation, a man may purchafe an annuity, in one place, of $\frac{-1}{8}$ yeally value more than he can in another, for the fame fum of money. Atd although the difference of theic outgoings be fometimes made'a ground for cavil in the treaty, yet all that is faid about it, amounts to nothing conclufive on either fide. But,
2. With refpect to fuch as hold for a certain number of years, the common method, if it be deficient in nothing elle, is fo in this refpect, that no difference is made in the fecurity for the rack-rent, and of that for the referved rent, rates, taxes, \&c. The beft of the ufual methods, for eftimating the value, being to deduct the outgoings, and value the remainder as an annuity, for the number of years that the eftate is to concinue at legal intereft: whereas a man may reafonably expect more incereft for laying out his money on fuch a tenure, becaufe he binds and incumbers the whole eftate for the payment of an annuity (for fuch are the outgoings) thereby taking all cafualties upon himfelf. 'Thus it a man, for want of opportunity, keeps his money by him, he pays nothing out of what it would bring in, if it were at intercft; it is different in this purchafe; here the outgoings muft be paid, whether the eftate brings in any thing or no.
3. The ordinary valuation of copyhold eftates was fill more fallacious than either of the former; thofe who held for lives, no regard was had to the probabilities of life (a matter very confiderable) neither was there any allowance made for the money paid out in a regular way: to inftance fome particulars: and, firf, in valuing three lives abfolute (or 99 years determinable on 3 lives, which is the fame to all intents, as to the value) the general rule was formerly, to reckon it as a leafe of 21 years certain; which, by the tables for that purpofe at 5 per cent. is worth, in ready money, 12,82 years value, and no more, for 3 lives; the firft of which they,efteemed worth 6 years, the recond 4 , and the third 2,82; fo that to renew 2 lives, in reverfion of one, would coft 7 years, or one in reverfion of 2, three years value: and this was the conftant expectation,' what age foever the life; or lives in effe were of, at the time of renewing.
This way of computing was correeted by another, which is likewife, in feveral refpects erroneous. For,
By this other method (which is ftill in practice) a leafe:for one life may be reckoned equivalent to one of $9,10,11$, or 12 years, \&c.
That for two lives, at 17, 19, 21 , or 23 years, \&c. : $x$ That for three lives, as a leafe of $24,27,30$, or 33 years, scc.
Though this latter method is a little more plaufible than the former, by reafon of the fteward's liberty of chufing which of thele proportions he pleafes, yet what analogy does this bear to the reafon of the thing? For, if the different numbers are to be chofen according to the age or goodnefs of the lives, or the different value of the outgoings, or both, bow do they bear any proportion to each other? At beft, it is but groping in the dark; no one can give fuch a reaton for his choice as will weigh with an unprejudiced perfon, that the value thereby attained is juft and reafonable.‘ By this method, at 6 per cent.
One life is worth 6,8 , or 7,4 , or $7,9,8,4$ years value.
Two lives are worth $10,5-11,2-11,8-12,3$ years value.
Three lives are worth $12,5-13,2-13,8-14,3$ years value.
This was always the rule, without any regard to the different ages of the lives, or the greater or lefs burden of the poor, \&c. Whence it appears, that, when three lives are valued at I4 years, they value one in reverfion of two, at two years, two in reverfion of one, at fix years, and the one life in poffeffion, at eight years purchafe: if ever thefe numbers agree with the real value, it is by chance; as will more evidenty appear, when we confider the probabilities of life, and the value of the chances relating thereto.
Another particular under this head, is that of renewing leafes for vears, of church or college lands; wherein the advantage of he leffees is very evidently made appear, by an anonymous au hor, who wrote in the year $173 \mathrm{I}^{*}$, in a letter publifhed tr that purpofe; at the end of which letter is a table $t$, for renewing any number of years lapfed in a leafe for 21 , sars.
*This tract is intitled, The Value of Church and College Leafes confidered: And the advantage of the Leffees made very apparent, dated July the Ift, 1718 .
$\dagger$ ATABLE for the renewing of any number of yearslapled in a leafe for zs years.

The cuftomary method of doing this, is, to deduct the rent referved out of the rack-rent; and then one year's value is the fine for renewing feven years, now this method, compared with that ufed by the laity in fuch cafes, will ftand thus:
A leafe for 7 years, in reverfion of another leafe 7 . year's $\forall$ for 14 years in church or college lands, is fold $\}$ value.
A leafe for the fame term, of other lands, at 6$\} 2 \frac{x}{2}$ years per cent. is fold for, and is really worth - $\}$ value.
Thus it appears, that the former leffors have not above $\frac{2}{5}$ of the value of what they fell. The before-mentioned author hath made it plainly appear, that the tenants in church lands have (when they renew their leafes) after the rate of II 1 . II s. $8 \mathrm{~d} . \frac{x}{4}$ per cent. intereft for the money they lay out; which is fucti a rate, as will fix on them the guilt of extortion in a high degree.
At the firft view of this prepofterous way of dealing, the public were much at a lofs to find what fhould induce clergymen, fellows of colleges, \&cc. to give away, what they had fo juft a title to, from themfelves and families. Bur it feems to be cleared up by what was then urged by Mr. Richards.

- The reading the aforementioned letter, fays he, confirmed
* the truth of the matter of fact, but then it gives no light - into the reafons of it's being fo. The author ingenioully - aggravates the guilt and lhame of the oppreffion, but how - the landlords thould be induced to grant fuch terms (if it be in their power to advance the fine) he is filent. It is - certain, that the keeping the eftates in hand would be more advantageous than to leafe them out for lefs than half ' the value; and as it is as certain, that the terants would 6 advance at leaft a part of what is under value, rather than - refufe a bargain that would ftll be better than any the laity would grant them.
- To.fay, that, by following the rules fixed by their prede' ceffurs of 180 years ago, they think they do themfelves and ' fucceflors juftice, is to brand them with a degree of igno' rance they cannot be poffeffed with. For the flatute of 6 37 Hen. VIII. was made to reduce intereft of money to - Io per cent. which fhews, that it was higher before that - time; and hence, if this was the cuftom of renewing thefe leafes at this time, it carried reafon with it: but why the ' cuftom fhould continue after the reafon of it ceafed, is fill ' to be accounted for.
' In order to explain this feeming paradox, the deans and - chapters, fellows of colleges, 8 xc . muft be confidered in a - double capacity: fift, as they are a fociety, and, as fuch, - have a right to divers lands, with power to make and re6 new leafes of thefe lands for a term of years: but then, e-- condly, in their private capacity, they have a right to the ' money brought in by thefe leales, to be difpofed of at their ' own will and pleafure.

And now, if it can be made appear, that it is for the worldy advantage of the members of thefe fociecies, in re-- gard to their private capacity, to keep the leafes filled at - this low rate, rather than let them run out, and theteby - hazard their never having an opportunty to make any ad-- vantage to themfelves; I fay, if this can be thewn, then - I doubt not but every one will fufpect, that it is this god ' of the world, that tempts them to do a thing to prejudicial to themfelves as'a fociery.'
That the value of renewing or filling up thefe leafes is different with refpect to thefe different circumflances, will appear by the folution of thefe following queries, viz.
Quere 1. What is the value of renewing 7 years lapfed in a lealc of 2i years, at 5 per cent.?
The antwer will be about three years value.
Quere 2. What is the value of renewing 7 years lapfed in a leafe of 22 , to continue, if one life fhould fo long happen to live, at 6 per cent.?
This to a man of about 50 years of age, by a rational computation deduced from the probabilities of life, is worth no more than one year's value.
Wherefore the man that receives one year's value for renewing fuch a lapfe, receives as much as itis worth on the chance of his own life; (and he can enjoy it no longer, if it falls into his hands): but, as the leafe is good for the term ablolute, the leffor grants away the right of his fucceffors; thefe fucceffors do the like by the next, and fo on, and have nothing for it. And this they chufe to do only, or chiefly, it feems, becaufe the tenants are obftinate, and will not break through a cuftom that is fo profitable to them, altho' the reafon for eftabliihing the cuftom is ceafed long ago.
We fhall now proceed to give fome farther account of the abfurdities in the common method of valuing copyholds; but the cuftoms of manors being fo various, it would be endlefs to run through them all; we fhall therefore proceed to the fourth fort of tenures before-mentioned.
4. In thefe, eftates for 99 years, determinable on the death of 1,2 , or 3 lives, the method of valuing is generally the fame with thofe on lives before-mentioned, and is confequently liable to the fame miftakes. As this kind of tenure is very common, at leaft in the weftern counties, fo the moft care ought to be taken in adjufting the value, and, if poffible, fuch rules laid down, as may include all the circumftances, viz. all the incumbrances of rates, taxes, repairs, high rents, \&e. and all the cafualties; which are different, according to the quality and fituation of the eftate. All thefe thould be duly confidèred, and a proper allowance made, before the value of the leafe can be determined.
That the common way of eftimation doth not provide for thefe differences in any regular manner is,evident, and therefore mult of neceffity be deficient on that account.
Previous to the afcertaining the value of Jeafes, it will be neceflary to have a right underftanding of the following particulars :

1. The nature of the tenure, and term of continuance (as near as may be) of the eftate to be purchaled; and whether the lord bath a full, or only a conditional power of granting it for fuch a term.
2. The cafualties, incumbrances, and impofitions that go along with the eftate, and how far the poffeffor of the eftate is liable to them.
3. The quality of the eftate, as to the prefent condition of repair; what it will coft to put the fame in good repair, and how much per ann. afterwards to keep it in that condition, during the term to be purchafed.
4. This rate of intereft for money, together with the analogy that the common fecurity for money lent bears to the fecu. xity for the income of the eftate to be purchafed.
5. The yearly value. Here great care muft be taken, that it be not fixed too high nor too low; for it is not always the rent that an eftate is lett for, that is the value of it. A landlord may lett , out an eftate for more or lefs than it is really worth, according to the neceffities or convenience of himfelf or tenant.
Befides thefe, there may be other accidental circumftances that attend particular tenures; but thefe being the principal, we fhall take notice of them, and leave the lefs material to be confidered by the parties concerned.
6. As to the nature of the tenure, enough hath been already faid: but the continuance of the term, which is often during 1,2 , or 3 lives, is a matter very precarious, becaufe nobody can tell how long thefe lives will continue in being: wherefore, fince the certain knowledge of this is out of our reach, the beft we can do is to inform ourfelves of the moft probable confequences in thofe refpects: and, though, in regard to thefe uncertainties, the buyer mult be faid to purchale a chance, yet the real value of chances, as fuch, may be found to a tolerable degree of certainty: to do which, let the following hypothefis be affumed, viz.
c The probability that a life of any given age will con' tinue in being, $1,2,3,4$, \&cc. years, is exhibited by - Dr. Halley's tables, publifhed in the Philof. Tranf. "No. 196, or may be deduced therefrom." See the article Annuities.

Vol. II.

Nobody will in lertake to prove, that this is mathematicm corain: for it is evident, that the vature of the thing wit not admit of that degree of certainy. The dificiency that the learned doctor feened to apprehend in it, wiss the want of a great number of years experience; but it wil, we ap prehend, caufe but a friall error in the refult, if the nurabers in the doctof's table flould, onf future criperience, be a lutie varied. To proceed :
If the lord, from whom you purchafe, has no more, or will grant no more that a conditional righs, then the value of the hazard of fuch conditions muat be computed, whether it depend on a chance, or otherwife, and that fum mult be deducted as prudence fhall direct.
2. By cafualties we underitand fuch unforefeen accidents which an eftate is expoled to; as fire and inundation, whereby houfes are liable to be confumed, wears, bank, \&cc. demolifhed, and cattle deftroyed, to which fome effates are more liable than others. Befide, is the eftate likely to be always tenanted? Will it not be often changing tenants, which always brings a charge? If, on a ferutiny, the hazards that a perfon runs by the purchafe be greater or lefs than the common hazard in lending money, a purchafer, muft be al lowed a proportionably greater or lefs intereft for the money he thus lays out.
By the incumbrances and impofitions that are infeparably annexed to an eftate, mult be underfood all tythes, rents, rates, taxes, harriots, fuits, fervices, $\& \mathrm{c}$. for the payment of which the eftate is generally bound , conlequently, theie muft be valued as a rent charge, or clear annuity to be pard out, when, fometimes at leaft, the income of the eftate, as being attended with fome uncertainties, \&xc. muft be reckoned at y or 2 per cent. nore than thefe eutgoings.
3. As to the quality of the eitate, in regard to repair : herein the greateft difficulty feems to lie; for the beft that can be done is but guefs-work, with refpect to thefe difburfements. If it be out of repair at the time you purchafe, the beft way will be, whether it be fields or houfes, or both, to procure men, well filled in thefe matters, to compute the charge of putting it into tenantabie condition: which charge oughit to be deducted out of the value, and reckoned as fo much money paid ; fo far the diffculty is furmounted.
But, as all eftates will coft money yearly to keep them in repair, thefe difburfements alfo muft be computed. Here again the judgment and experience of honeft inen muft be your guide: for repairs of houfes, \&c. are dearer in one place than another, fo are they more expofed to form, 8 cc . in one place than another. Moreover, old houfes, though at firft put into repair by the former fuppofition, are more chargeable in future repairs than thofe of later building; and houfes, at firft flightly built, are more chargeable than others of a more fubftantial flructure. Thus fometimes it may be neceffary, in eftates which confilt chiefly of houfes, to allow $\frac{1}{5}$, at other times not above ${ }_{T}^{1} \frac{1}{0}$ part of the annual income towards the repairs of thefe houfcs.
If the right to timber-trees, coppice-woods, corn, \&c, or the profits of mines, \&c. are to be alfo transferred to the purchafer, then, as to the former of thefe, they muft be eftimated at their prefent worth, and fo much money added to the fine. In regard to mines, the clear yearly profit like to arife thereby, and the probable time of their continuance muft be confidered; and, the chances herein being more hazardous than others, perhaps the perfon that purchales may reafonably expect a greater rate of intereft for the money be lays out in thefe; therefore they'muft be feparately valued, and this value added to that of the eftate before found.
4. We fhall now confider the rate of intereft and fecurity for money lent, and compare it with money laid out in lands, \&cic. The legal intereft is 5 per cent. per annum. Though a perfon can lawfully take no more, yet he may lay out his money for Iefs advantage: many who lend money by way of mortgage, or purchate Jand fecurity, accept of,4 and under.
But, if a man lays out his money on an eflate for life on'y, there is no reafon why he flould not expect the legal intereft, in regard of the uncertainty of the tenure, \&c: And, indced, he may a great deal more, if the eftate purchafed be houfes, or the like, where the calamities are many and great; fuch as fire, damage by form, bad tenants, or peihaps none at all: in thefe cafes 6,7 , or even 8 per cent. may be little enough.-Of this mere hereafter.
5. Becaule the value of eftates is to be computed from their yearly income, due care muft be taken to dfertain that. If the eltate has not been lett at a yearly rent. the judgment of fkilful honeft men in the neighbour hood will be a gaod gide, as well in that as in regard to the value of all advintaues ard deficiencies; if it has been lett at a yearly rent, thofe perfins can inform whether that was on much or toalittle, and why. By thefe means the value may be afcertained, by which the worth of the fee, or leafe for years or lives, may be conifuted. It is befide neceffary to be confidered, whether the leflee is bound to pay a harriot or farley, either abrolutely of each life, or conditionally, if the liver dies in courfe. In the firf cafe, the probability of life being known, i.e. how leng it is likey each life may continue in being, the alue of the mones, or
hantion,

## LEA

harriot, then to be paid, may, by the following tables, be found in ready money: and fo of each life. In the fecond cafe, the probability of the lives dying in courfe, together with the probability as to the number of years, as before, being found; by the rules.and tables hereafter lajd down, the value an ready money may theilce be found ; which fums, fo found, mult be deducted out of the purchafe-money.
Sometimes there is a condicion in a leafe for a certain fum to be paid for renewing a life, in cafe one fhould die within a time prefixed. Here the probability of all the lives living for that time heing found, the value of fuch a privilege to the leffor, or leffee, may be found. If there be any other conditions of this kind, we prefume, they may be reduced to fome or other of thefe and the following cares.-Before we proceed to the tables, it may be requifite to fay lomething in general of Reversion.
By which is meant that right to an eftate which is to take place after the determination of a term of years, or lives, during which it is held by fome tormer grant. - The queftions that arife, in relation to thefe eftates in poffe, are fuch as thefe: 1. What is the value of the fee, in reverfion of a certain number of years, or of a life or lives in being?
2. What is the value of a term of years, to commence after the expiration of another term of years certain?
3. What is the value of a term of years, or of one, two, or three lives, in reverfion for a life or lives in being, to be nominated euher now, or at the end of the term in being?
4. Three perfons being to enjoy an eftate by equal portions, during theur joint lives, the remainder to the furvivor and furvivors, and what is the value of each man's right?
Thefe, and the like, are the queries that will anfe about reverfions; and the folution of them will appear eafy enough, if we confider,

1. That the value of the eftate in effe, added to the reverfion, is equal to the value of the fee in poffeffion: whence it is plain, that, fubtracting the value of the prefent poffeffor's right out of the value of the fee fimple, the remainder is the value of the reverfion in the firt query.
2. Find the value of the term of years in effe, and then add the two terms together, and find the value of that whole term; the excefs in value of that whole term, above the value of the eftate in effe, is the value fought in the fecond query.
If in the third query, the life, or lives, in reverfion, be to be nominated at the time of taking, firft find the value of a leafe to continue during the term of all the lives, and from that value fubtract that of the lives in effe; the remainder is the anfwer to the firft part of the queftion: but, if the lives are to be nominated at the expiration of the right in effe, find the probable duration of the prefent eftate in years, and alfo the value of one, two, or three lives, in ready money; then (from the tables for that purpofe) find how much this laft fum, payable at the end of the years before found, is worth in ready money alfo, rebate at 5 per cent. for this is the value required.
3. For a folution to the fourth queftion, note, that each perfor has a right to one third of the value of their joint lives, and to half the value of the expectation, after the death of either of the other two, and alfo to the whole value of the expectation, att.r the death of both the others; which three fums, added together, give the value for each. The value of two or chrce joint lives is found by the tables for that purpofe, which follow.
Thefe tables, for the more eafy computing the value of annuities upon hives, are, as brfore oblerved, the refult of thofe oblervations publithed by Dr. Halley, and are calculated according to the neethod laid down by Mr. Abraham De Moivre, in his treat:fe intitled Annuilies upon Lives, \&xc.
But, before we proceed to thefe, it may be proper togive the reater here a table for finding the value of an, annuity for years certain, at $f, 5,6,7$, and 8 per cent.

## LEA

Though the following tables are calculated fome for every 5 th, and fome but for every 10 th year of age; yet, it is prefumed, that the common known method of equating will accommodate them, as well to any other year of age, as to any intermediate rate of intereft.

Table I.
Shewing the value of an annuity, in years and decimal parts, for any number of years not exceeding 100, at the rate of $4,5,6,7$, or 8 per cent.

| Years of continuance. | 4 percent. <br> Value in years. | 5 percent. <br> Value 1 n years. | $\left\lvert\, \frac{\text { Gper cent. }}{\text { Value in }}\right.$ years. | 7per cent. years. | $\left\lvert\, \begin{aligned} & \text { 8percent- } \\ & \begin{array}{l} \text { Value in } \\ \text { years. } \end{array} \end{aligned}\right.$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 0.98 | 0.95 | 0.94 | 0.93 | 0.92 |
| 2 | 1.88 | 1.86 | 1.83 | 1.81 | 1.78 |

| 4 | 3.61 | 3.55 | $3 \cdot 46$ | $3 \cdot 39$ | 3.31 |
| 5 | 4.44 | 4.33 | 4.21 | 4.10 | 3.99 |
| 6 | 5.23 | 5.07 | 4.92 | 4.77 | 4.62 |
| 7 | 5.99 | 5.79 | 5.58 | $5 \cdot 39$ | 5.21 |
| 8 | 6.57 | 6.46 | 6.21 | 5.97 | 5.75 |
| 9 | 7.42 | 7.11 | 6.80 | 6.51 | 6.25 |
| 10 | 8.09 | 7.72 | 7.36 | 7.02 | 6.71 |
| 11 | 8.75 | 8.35 | 7.89 | 7.50 | 7.14 |
| 12 | 9.37 | 8.86 | 8.38 | 7.94 | 7.54 |
| 13 | 9.97 | 9.39 | 8.85 | 8.36 | 7.90 |
| 14 | 10.55 | 9.90 | 9.29 | 8.74 | 8.24 |
| 15 | 11.10 | 10.38 | 9.71 | 9.11 | 8.56 |
| 16 | 11.60 | 10.84 | 10.15 | 9.45 | 8.85 |
| 17 | 12.15 | 11.27 | 10.47 | 9.76 | 9.12 |
| 18 | 12.64 | 1 1.69 | 10.83 | 10.06 | 9.37 |
| 19 | 13.12 | 12.08 | 11.16 | 10.33 | 9.60 |
| 20 | 13.57 | 12.46 | 11.47 | 10.59 | 9.82 |
| 21 | 14.01 | 12.82 | 11.76 | 10.83 | 10.02 |
| 22 | 14.43 | 13.16 | 12.04 | 11.06 | 10.20 |
| 23 | 14.84 | 13.49 | 12.30 | 11.27 | 10.37 |
| 24 | 15.25 | 13.80 | 12.55 | 11.47 | 10.53 |
| 25 | 15.60 | 14.09 | 12.78 | 11.65 | 10.67 |
| 26 | 15.96 | 14.37 | 13.00 | $\mathrm{II}_{1.8} \mathrm{~S}_{3}$ | . 81 |
| 27 | 16.31 | 14.64 | 13.21 | 11.99 | 10.93 |
| 28 | 16.64 | 14.90 | 13.40 | 12.14 | 11.05 |
| 29 | 16.97 | 15.14 | 13.59 | 12.28 | 11.10 |
| 30 | 17.27 | 15.37 | 13.76 | 12.41 | 11.26 |
| 3 I | 17.57 | 15.59 | 1393 | 12.55 | 11.35 |
| 40 | 19.78 | 17.08 | 15.03 | 13.39 | 11.91 |
| 50 | 21.47 | 18.25 | 15.67 | 13.83 | 12.17 |
| 60 | 22.61 | 18.93 | 16.17 | 14.00 | 12.34 |
| 70 | 23.39 | 19.34 | 16.34 | 14.11 | 12.42 |
| 80 | 23.90 | 19.58 | 16.50 | 14.15 | 12.46 |
| 90 | 24.26 | 19.75 | 16.59 | 14.18 | 12.47 |
| 100 | 24.50 | 19.85 | 16.64 | 20 | 12.48 |
| hefee fin | 25 | 20 | 16.66 | 14.29 | 12.50 |

In this, and the following tables, the numbers at the left-hand of the points are years, and the remaining figures are decimals of a year. I fuppofe there will be no difficulty to underfand the value of thefe decimal patts; but, if there fhould, it may be very ufeful, to fuch as are wholly unacquainted with decimals, only to take the half of the decimal, and reckon it for fo many weeks: thus, againft 40 years of continuance, you will find, under 4 per cent. 19.78; the 19 hhews fo many years, and the half of 78 , being 39 , fhews fo many weeks : therefore an annuity for 40 years is worth 19 years 39 weeks, or, rather, 19 years io months purchafe nearly. See the articles Arithmetic and Interest.

## LEA

| 70 | . 03 | .017 | . 008 | . 004 |
| 80 | . 02 | . 009 | . 004 | . 002 |
| 90 | . 012 | . 005 | . 002 | . 001 |
| 100 | . 008 | . 003 | . 001 | . 0004 |

I fuppofe that an example or two will render the finding the
value of thefe parts in money very eafy.
Thus: againft I5 years, and under 5 per ceint. is - .48
Multiply thefe parts by
In the parts given are two figures at the right-hand of
the point, therefore cut off two figures in the pro- 9.60
duct, and the remaining figure to the left-hand is 9.60 fhillings
Again: multiply thefe parts by
And cut off, as before, then the figures at the lefthand are pence
Hence the parts 48 is the fame with 9 s. $7 \mathrm{~d} . \frac{2}{10}$.
Again : oppofite to 70 years, under 7 per cent. is - .008
1.920

Hence the value in money is I d. $\frac{9}{10}$, \& cc

## Table III.

The way of finding the value of lives of any ages, howroever combined in the foregoing tables, cannot be difficult; for, if the age of any one of the lives be found at the top, then may the age of the other two be met with in the two left-hand columns; and the value of thofe three joint lives is given in years and decimal parts, in the column under the given rate of intereft. How ro reduce thole decimal parts to weeks or months, hath been already hewn : we fhall therefore proceed to the confideration

Of annuities for years abfolute, \&c.
We fhall apply the preceding tables to this purpole, by giving examples in the peculiar cales before-mentioned: in
vol. II.
which we Chall be particular in regard to the nature of the diburfements; and to fart all objections that may arife on account of the precariouinefs of the tenure.
Example I. There is an annuity of 401 . payable to A clear of all outgoings; to continuc for 30 years abfolute; for the payment of which he has fecurity on lands of a much greater value, what is this worth in ready money, legal intereft being 5 pet cent. ?
*For folution to this it muft be confidered, that in regard the fecurity for payment is better than the common fecurity on money lent, and alfo that the affelfment of 2,3 , or 4 s . in the pound on intereft money is hereby faved (the 40 l . per ann. being, by fuppofition, to be paid clear of all outgoings) the purchiafer ought to be conterited with lefs than legal intereft, and, perhaps, all tbings duly weighed, 4. per cent: may be fufficient intereft, and agreed on.
This premifed, in order to folve the quettion, look into Table I. for the number of years in the firt column, and right againft it, under the rate of intereft, viz. 4 per cent: you will find 17,27 decimals, which thews, that the annuity is worth fo many years value: wherefore, 17,27 being multiplied by 40 , the product is $1.690,8=16 \mathrm{~s}$. the value fought in ready money.
Suppofe the annuitant be to allow his proportion towards the rates and affelfments, and that thefe deductions; exclufive of the land-tax, amount to 21.10 s . a year: in this cafe, if the annuitant be to pay his thare of the land-tax, it is reafonable that he fhould be allowed $4!$. 10 s . per cent. and the reft of the outgoings being deducted out of the annuity 40 . the remainder, viz. 37 l . 10 s . muft be called the annuity.
Againft 30 years in Tab. I. and under 4 per cent. is 17,27 decimals; and in the fame table againft 30, and under 5 per cent. is 15,37 . The mean between the fe two numbers, viz. 16,32 , is the number of years anfwering to $4 \frac{1}{2}$ per cent.; and this number multiplied by 37,5 , or 37 l . 10 s. the product $6: 2$ is the value of the annuity required in the queftion. Example II. Admit the farm of --were to be leafed out for a term of 2 I years, at the end of which, the tenant to yield it up in as good condition as he finds it.
Suppore the yearl; value thereof, at a rack-rent, to be (the landlord paying tythes, and all outgoings, except the king's tax) 76 l . that can be made thereof: fuppofe alfo that thofe tythes, chief rents, rates, and repairs, amount to inl. yearly; and fuppofe further, that the leflor will referve to l . a year rent: now, granting that the cafualties, \&c. to which it is expofed, make it reafonable that the purchafer fhould be allowed 6 per cent. for the money he lays out, what fine ought he to pay for the 21 years?
In this cafe it thould be conlidered, that, though the purchafer may expect 6 per cent. for his money laid out on an eftate thus encumbered, and fubject to fuch calualies, yet as to the rates, tythes, chief rent and repairs, it being a tenure of the beft kind, and liable to no deductions at all, it may be reafonably reckoned at 4 per cent. and then the referved rent, being liable to the king's tax only, may be confidered as an annuity at $4 \frac{1}{2}$ per cent. Thefe things premifed, the matter will ftand thus:
The rack rent is an annuity of 761 . per ann. fubject to divers incumbrances, cafualties, \&c., and therefore, 6 per cent. intereft, being allowed 21 years continuance, is worth per Tab. I. II, 76 years value, which amounts to 8941 .
Out of this, the parion, the parifh, the chief lord, \&cc. have an annuity paid clear, which (on the beft computation that can be made of it) amounts to II l. y=arly: this at 4 per cent. is worth per Tab. I. 14,OI years value, which in calh amounts to 154 l.
The referved rent is an annuity of 101 . yearly, fubject to the king's tax only, and therefore to be valued at $4 \frac{1}{2}$ per cenc. which, per Tab.I. (due equation being made) is worth [3,4 y years value, which in cafh ameunts to 134 ).
Laftly, If thefe two mentioned fums of 154 1. and I 34 . l. be delucted out of the whole value, the remainder, or 5061 . is the fum that ought to be paid by the purchafer, for the grant of 2I years in the farm. Our being fo very particular in this example will excufe expatiating fo largely again.
Example III. An eftate in houfes containug divers tenements, to be lett for a term of 21 years; the whole yearly rent amounts to 501 . the charge of putting the houles in repairs is about 40 l. and of keeping them fo during the tern 7 l. per ann. the outgoings in rates, \&c. 4 l. a year, rent referved 3 l. a year. In iegard of the fituation, cafualties, hazard of bad tewants, or of none as all, \&c. the purchafer ought to be allowed 7 l. per cent. Quere, What fine ought he to pay?
An annuity of 501 . for 21 years at 7 per cent. 1. 541100 Out of which deduct
An annuity of in l. for the tame time, at 4 per $\} 154 \quad 00$ cent.
An annuity of 3 l. for 21 years, at $4 \frac{x}{2}$ per cent. 40 vo The charges of putting the fame into repair
$40 \quad 00$
$\left.\begin{array}{l}\text { The remainder, after thefe deductions, is the an } \\ \text { fwer to the query }\end{array}\right\} 307100$

## L E A

Note, If it be confidered that houfes are liable to accidents by fire, and that, where the effate (as in this inftance) confifts of divers tenements, the charge of tenants always brings a charge of repairs with it, and very often lofs of rent: there things confidered, 7 l. per cent. we apprehend, will be judged Jittle enough to the allowed the purchafer.
Example IV. Out of a leafe for 30 years in an eftate which is 6 per cent. cofts 7001 . there is lapfed 17 years: what muft be given at the fame rate of intereft, to renew the faid 17 years?
In Tab. I. againft 30, and under 6 per cent. you find ${ }^{3} 3,76$, by which dividing 700, the quotient is 50,85 : this is the annuity, which was at firft purchafed for 7001 .
The value of an annuity of 501.17 s . to continue
30 years at 6 per. cent. is
The value for 13 years at the fame rate, by the fame table, is
The remdinder, after fubtraction, is the fum to be paid for renewing the 17 years lapfed

1. 700

Example V. An eftate in fields, only worth 701 , per ann. out of which is iffued a chief rent of il. per ann. and the rates and tythes thereof amount (exclufive of the king's tax) to 12 I. a year: what is the fee in reverfion of a leale of 40 years worth in ready money, the accidents and cafualties very few, or none at all?
Here the nett produce of the effate is 57 J . a year:
And 571 . perann. to continue for ever, is equal to
a fee finple, if it were in poffeffion; which at $4 \frac{1}{2}$ per cent. is
The value of the leafe for 40 years, by the tables and multiplication, is at $4 \frac{1}{2}$ per cent.
This latt value, fubtracted from the former, leaves the value of the reverfion the rack-rent, is near as good as that the purchafer has for phe payment of the ags are firt ded ed from the yearly value, and the remainder is reckoned as an annuity: but, generally fpeaking, it ought to be done otherwife, viz. by reckoning the whole rent as an annuity, to be received at a proper rate of intereft, and then to compute the outgoings as near as poffible, and to value that fum as an annuity to be paid out ; for which, generally, the rate of intereft ought to be 10 s . and fometimes 1 1. per cent. lefs than the legal intereft on money.
Having given thefe cautions, we fhall, in all that follows, call this laft mentioned annuity, the fum paid out : which fhall include all rates, tythes, repairs, or the like difburfements, which go along with the tenure; and which muft be judicioully computed, before the juft value of the purchafe can be obtained.
In the preceding examples, a difference is made in the referved rent, and other outgoings; for this reafon, that, when the referved rent amounts to 20 s . or upwards, the landlord is to allow the tenant a proportion towards the king's tax, and therefore $\frac{x}{2}$ per cent. more fhould be reckoned for it, than for clear annuities, fuch as rates, tythes, repairs, 8 cc .

## Of Copyholds.

Method leads us next to fhew, how, by the foregoing tables, the value of eftates held from deans and cbapters, colleges, \&cc. for terms of years, or for life or lives, renewable at certain periods on fixed conditions, or otherwife, may be found; and, to this purpofe, the following examples may be acceptable.
Example I. A tenement of church lands of 301. per. ann. rent, to be leafed on the condition that the tenant pay at the end of every feven years 301 . or one year's value for ever; what ought to be paid for the firf purchafe, the fum paid out yeariy 41. and the rate of intereft to the purchafer 6 per cent.?
Note, Though, perhaps, no bithops, deans, or fellows of colleges, do or can grant their leafes on fuch abfolute conditions of renewing; yet, in effect, it is all one to the tenant; for they always think themfelves fure of thefe terms, and the common practice has confirined it : by this example, therefore, hall be fhewn, how much they ought to pay for the firf purchafe.
The value of the fee at 6 per cent. is, by the fore-
going tables, $16 \pm$ vears purchafe going tables, $16 \frac{3}{3}$ years purchafe
Deduct the value of the fum paid out at 4 per cent.
25 years

1. 500

100
Remainder is the value of the eftate in fee - - 400 For the value of the feptennial payment of 301 . per. Tab. I. an annuity of il. to continue 7 years at 4 per cent. is worth 5,99, and per Tab. II. the prefent value of il. to be paid at the end of 7 years, is (at 4 per cent.) 760 . Where fore, dividing. 760 by 5,99 , the quotient. 1269 , being mulciplied by 30 , produces $3,84=31.16 \mathrm{~s}$. Id. $\frac{5}{2}$. This is the fum that may be paid yearly as an equivalent for the 301 . that is to be paid at the end of every 7 years: confequently, an annuity of that value to continue for ever, mult be deducted out of the value of the fee before found..

## L E.A

Thus the value of that annuity at 4 per cent. is $\}$ worth 25 vears value, or
lence the remainder, after fubtragion, is the fum $\}$ $\qquad$
that Chould be paid for the firft purchafe, viz. $\}$
Example II. What is the fum to be paid for renewing of 7 or 14 years lapfed in a leafe of 25 , in an eftate of 40 . per ann. at 6 per cent. the fum paid out being 6l. per ann.?
The value of the yearly rent for 21 years, at
6 per cent. is
1., 47000

Deduct the value of the fum paid out, at 4 per $\}$
cent.
8400
Remainder is the value of the 21 years
38600
The value of 14 years at 6 per cent. - - 37112
The value of the fum paid out for that time
$\begin{array}{rr}371 & 12 \\ 63 & 6\end{array}$
Remains the value of the eftate of 14 years in $\}$ effe

Hence the fum to be paid for the renewing of $\}$ the 7 years fhould be

7714
7 years
The value of the 21 years, as above, is
The value of 7 years, the time in effe, at 6 per $\}$ 22300
cent. 3600

Remains the value of the 7 years in effe 18700
nefle
Hence the fum to be paid for the renewing of
14 years lapfed fhould be $\quad 19900$
14 years lapfed fhould be - $-\quad$ -
And by the like procefs, may the value of renewing any number of years be found, without any difiiculty, by the tables before-mentioned.
Example III. to find the value of a leafe of $7,10,14$, or 21 years, if a perfon of a given age thould fo long happen to live.
Let the yearly rent be 50l. the rate of intereft 6 per cent. the fum to be paid out 7 l. per ann. and the perfon's age 42 years, what is the value?
By Tab. III. the value of the annuity for 7 years $\}$
on the given age, at 6 per cent. is 5,10 years, or $\}$

1. 255

Deduct the value of the outgoing taken from the
fame table, at 4 per cent. 5,6 years value
39
Remaitider is the fum to be paid for 7 years, on a life of 42 years old

By the like method of proceeding, the value of roz years on the fame life is That for 34 years is worth $\begin{array}{llll}\text { That for } 34 \text { years is worth - } & - & 329 \\ \text { That for 21 years is worth }\end{array}$ Example IV. Admit there be 7 years lapfed in the former leafe of 21 years, what is the value of renewing the faid lapfe?
Firft, The value of a leafe of 21 years to a perfon $\}$ of 49 (for that will be now theage) is
I. 364
condly, the value of the leafe for 14 years on
the fame life of 49 to be deducted 14 years on $\}$
316
Remainder is the value for renewing 7 years 48

Let there be ro years lapfed in the fame leafe, then by the like procefs the value of a leafe of 21 years $\}$ 353
to a life of 52 , at 6 per cent. is 282
The remainder, after fubtraction, is the fum to be $\quad 71$ paid for renewing
By thefe examples it is apparent, that the value of renewing 7 years lapfed in the leafe of 21 , is, to the perfon that purchafes it, abfolutely worth almoft twice as-much, as it is to him that can enjoy it only conditionally, viz. if a perfon of 42 years of age live fo long.
Example $V$. What is a leafe for 7 years abfolute, in reverfion of a life of 52 years old, worth in ready money, on an eftate worth 601 . per anin. at 5 per cent. incereft, the fum paid out being 91. per ann. and to be valued at 4 per cent.?
The value of a life of that age, and at that rate of
intereft, as may be found by Tab.IV. is 9,65$\}$
years purchafe, or
This number 9,65 being found in Tab. I. under 5 per cent. againft it in the firft column (by making due equation) is 13,51 , which fhews that the life is reckoned tocontinue in being fo many years; to this add 7 , the term of the reverion, the fum is
20,51 ; againf which in Tab. I. under 5 percent. is 12,62 , for the year's value of the rent during both terms, which in money is
The remainder, after fubtraction, is the value of the? $\left.\begin{array}{l}\text { rent in reverfion, if it were to be paid clear of } \\ \text { outgoings, that is }\end{array}\right\}$
The value of the fum paid out at 4 per cent. during the life in effe, is 10,50 years value

## L E A

The number ro, 50 found in Tab. I. under 4 per 7 cent. aniwers to 13,96 years; this added to 7 , the years of the reverfion, makes 20,96 ; to which number of years in the fame table, anfwers under 4 per cent. 13.96: that is in money
The difference of thefe two fums is the value of the $\}$ fum paid out
This laft fum fubtracted from the fum before found, 7 viz. the value of the rent, Jeaves the value of $\}$ the reverfionary leafe required

Of leafes for one, two, or three lives.
It has been obferved before, that the value of a leafe for 99 years, determinable on the death of one, two, or three lives, is the fame with that of a leafe on thofe lives abrolute: fo that we fhall make no difference, but call them all leafes on life, or lives.
Example I. A man of 37 years of age is poffeffed of an eftate for his life of 651 . per ann, the yearly outgoings of which are as follow, viz.

To the lord's rent
To the church and poor's rates

1. s. 00 To tythes

00
To repairs (one year with another)
$-510$ How much is the leffee's right worth in ready money at 5 per cent. ?
In Tab'. IV. the value of a life of 37 years, at 5 per $\} 786$ io
cent. is 12 ; 10 years in cafh
The value of the fathe life at 4 per cent. by the farme)
table, is $13 ; 40$ years value, which, for the rates, $\} 14700$ tythes, and repairs; amounts to
The value of the fame life, at $4 \frac{1}{2}$ per cent. is $\mathbf{1 2 , 7 0}$ years, which for the high rent is

3800
The whole fum to be deducted is
18500
And hence the value required is . - - 60110 Example II. What is the value, in the fame eftate, of two joint lives, one of which is 12 , the other 32 years old, and the eftate to be extinct, when one of them dies?
Out of Tab. VI. take the value of the two joint? 1. s. lives at 5 per cent. for the rent which is 10,56$\} 68600$ years, this, multiplied by 65 , produces
From the fame table, the value of the joint lives at? 4 per cent. is $1 \mathrm{r}, 27$ years; which multiplied into in l. the yearly out goings in rates, tythes, ${ }^{12400}$ and repairs, produces
By the fame table, the value at $4 \frac{1}{2}$ per cent. is 10,92 years value, which multiplied by 31 . the yearly
$33^{\circ} 00$ rent to the lord, produces

52900
Hence the value of the eftate for two joint lives, that is, to continue 'till one of them dies, is

52900
Example III. To find the value of three joint lives, on the
fame eftate, one of which is 12 , another 22, and the third 42 years old.
${ }_{4}^{42}$ years old. VII. finding the age of the youngeft at 1 . s. the top, the next at the left-hand column, and the other in the fecond column to the left. hand; under 5 per cent. take out the value of the three 350900 joint lives, which is 7,83 years; this drawn into 65 , the yearly rent produces
At the fame place (under 4 per cent.) you find 8,15 , which multiplied by mil, the product is
Again: In the fame table, the number anfwering to $4 \frac{1}{2}$ per cent. is 8,00 ; this, for the high rent, 2400 31. per ann. is worth

Thefe two laft fums being fubtracted out of the former, the remainder is the value of a leafe to continue as long as all three of the lives remain 39500 in being
Example IV. An Eftate of bad houfes meanly fituated, containing divers fmall tenements, in all (when full of tenants) of the yearly value of 501 . to be leafed for the term of one, two, or three lives, and the longeft liver of them, the purchafer to have 6 per cent. for his money: the fum to be paid out in rates, repairs, and high rents (which laft is under 20 s . per ann. and therefore to be reckoned as a clear annuity, as well as the other difburfements) amounts to 61 . a year: what muft be paid for the purchafe?
Firft, for one life aged 67 years.
This, for the whole rent, by Tab. IV. is worth, at 1. s. 6 per cent. 5,90 years purchale; which, in cafh, 329500 at 501 . a year, amounts to
The value of the fum to be paid out at 4 per cent. is 6,53 years, or

3900
The value of a leafe for one life
25600 Secondly, For the value of two lives, one 67, the other 52, Mr. Abraham De Moivre has demonftrated, [fee the article Aninuities] that the value of an annuity upon the longeft of two lives is the remainder, after fubtraction of the' va-

Lue of thofe lives jointly taken, from the fum of their values fingly taken.
The yearly rent on the life of 67 years was found before to be worth
That for the life of 52 is worth
44500
The fum is 74000
The value of the fame for the joint lives is 4,39$\} 22000000$ years, or

Remainder after fubtraction is the value on the longeft liver of the two

52000
The value of the fum paid out on the firft life, at 4
per cent. is 6,53 years, or
3900
The value of the fecond life is 10,50 years, or
6300
'The fum - - 10200
On the two joint lives 4,67
2800
The remainder after fubtraction is the value of the outgoings on the longeft

7400
The fum being fubtracted from the 5201 . leaves $\} 44600$ the value required
$\} 44600$ Thirdly, Let a third life, aged 22 years; be joined with the two before mentioned, and let the value of the effate on the longeft liver of thefe three be required. $\left.\begin{array}{c}\text { For the } \\ \text { whole }\left\{\begin{array}{lr}\text { The life } 67 \text { years old } & 5.90 \\ \text { The life } 52 \text { years old } & 8,9 \mathrm{I}\end{array}\right\} \text { Years value. } . ~ \\ \text { The life } 22 \text { years old } \\ \text { I2,54 }\end{array}\right\}$

The before-mentioned ingenious author fhews; that the talues of the joint lives combined, two and two added together; and the fum fubtracted from the foregoing fum, leaves the value of the annuity upon the longeft liver of them. Thus for the purpofe:

Years.
The value of the firft and fecond jointly
The value of the firft and third jointly
The value of the fecond and third jointly
The fum is
This laft fum being fubtracted from the former fum, 7
7071.
the remainder is 14,13 years for the value of the
We are next to find the value of the fum to be paid out 4 per cent. in the fame manner as the former was found.
4 per cent. in the fame manner as the former was found.
The life of 67 years old value in years
The53
That of $5^{2}$ - -
That of $22-\quad-\quad-\quad-\quad-\quad 10,50$
The three joint lives - - $4, \times 5$

$$
\text { The fum of which is - - } 37,23
$$

The firft and fecond jointly - - 4,66
The firtt and third jointly
The fecond and third jointly - - $\quad 8,67$
8,42

The fuim of thefe three
Remainder after fubtraction
This drawn into 6 , the yearly outgoings, produces $\}$ III 1 . in money
This fum being fubtracted from the value before?
$\left.\begin{array}{l}\text { found (viz. 707) leaves the value of the leafe } \\ \text { on the longeft of the three lives, and at the rate }\end{array}\right\} 59^{6}$ of intereft propofed
The refult of the whole operation will appearto be as follows; viz.
One life of 67 years old is worth - - 1.256
Two lives, one 67, the other 52, worth - 446
Three lives, aged 67, 52, and 22, worth * 596 An objection, it may be prefumed, will be made to what has been faid, by reafon of the difference that there is, or feems to be, betwixt this refult, and the common way of eftimation: for, fays the gentleman's fleward, it is always reckoned, that one life in polfeffion is as good as two in reverfion; and a third life, in reverfion of two, is generally reckoned but in two years value: whereas, by this way of computing, the firf life amounts but to $5 \frac{1}{4}$ years value; and the other two are here worth above 7. And again: the third life in reverfion of 2 , in the above example, amounts to almoft 3 years and an half's value: and how can this be? In anfwer to which objection, it has been obferved, that, though this be true in the example alledged, yet it is no deviation from reafon, notwithftanding it be from the ordinary practice: and that it rather eftablifhes the truth and neceffity of this method, than is of real weight againt it, will appear by another example, wherein the value of th:

## LEA

reverfions, on account of different ages of the life or lives in poffelfion, will, when found by this method, be thought as much too little, as thofe are too great.
Example V. Admit the effate to be purchafed on lives be worth 40 l . per ann, and of fuch quality, that 6 per cenc. is a proper intereft for the purchafer: fuppofe that the rates, tyetes, and repairs, be 51 per ann. and the relerved rent 21. per ann. let 5 per cent. be allowed for the money to be paid out, and let the ages of the lives to be purchafed be,
The firft
The fecond $\left.{ }_{22}^{32}\right\}$ Years old.
The thind
12
What will be the value of one, two, or three of thofe lives, in the order that they are here placed?

| $\left\|\frac{5}{\text { Number of years value }}\right\| \begin{aligned} & \text { Nut. per ann. rent } \\ & \text { for } 401 . \text { per cent. } \end{aligned}$ | $\begin{aligned} & \text { No. of years value for the } \\ & 7 \text { l. per ann. paid out. } \\ & \hline \text { At } 51 . \text { per cent. } \end{aligned}$ | Value in cathafter fubtraction. |
| :---: | :---: | :---: |
| IH 11,47 years | 12,79 years | 370 |

| The value of the longeft liver of the three lives for the 401 . perann. | Jhe value of the long. eft liver for the 71 per ann. | $\left\{\begin{array}{l} \begin{array}{l} \text { alue of } \\ \text { the remain } \\ \text { a money. } \end{array} \end{array}\right.$ |
| 15,83 yea | 18,71 years. | 1. 502 |

By the above effimation it appears, that two lives of 22 and 12 years old, in reverfion of one of 32 , is worth but $\$ 321$. which is little more than $\frac{5}{3}$ of the value of the life in poffeffion; and that two of $3^{2}$ and 22, in reverfion of one of 12, is of much lefs value, viz. no more than 741 . Again: One of 12 in reverfion of two of 32, and 22 years of age, is worth but 361 . that is lefs than one year's value; and, for one life of 32 in reverfion of two of 12 and 22 years old, mult be given no more than 12 l.
Heace the great difference that arifes on account of the age of the lives appears (if this method holds good) to call for a particular regard, and that even when the difference of the age of the lives is not very great, as in this example; how much more then, if the tenant thould defer the renewing of his leafe, 'till the life or lives in effe arrive to a declining age? Thus we have endeavoured to clear up the affair, as to eftates in effe, and given fome light in regard to the valuation of reverfions; of which we fhall now fpeak more particu. laily, and fhew how to find the value of fuch in expectancy: to do which, we fhall lay down the following general rule. From the value of the fum of the terms in poffeffion and re verfion, fubtract the value of that in poffeffion, the remaindet is the fum to be paid for the reverfion.
We have before fhewn, how to find the value of the fee in reverfion of a term of years abfolute; and, from what we have laft faid, may be eafily deduced the value of the fee in reverfion of lives, or of one life in reverfion of two; of two in reverlion of one, by a due application of the above general rule. Something, however, may be requifite to be faid of the value of a life in reverfion of a term of years, to be nominated at the expiration of the faid term; and of a term of years in reverfion of another term of a life or lives, or of 2 or 3 joint lives; as alfo of the sight of fuch two or more, as hold by joint-tenancy and furvivorfhip.
Example I. Let it be required to find how much an eftate of 301 . per ann. is worth, during the continuance of a life of 22 years of age; the right to commence, and the life to be nominated, at the expiration of a term of 14 years, allowing the purchafer 6 per cent, and deducting the value of the fum paid out, viz. 4 I. a year at 5 per cent.
The value of fuch a lift in puffefion, for the whole
rent, is by Tab. IV.
The fum paid out is wort
56
Remains the value of the life, if it were to beentered upon immediately

320
The queftion then will be, What 320l. payable at the end of 14 years, is worth in ready money at the rate of legal interef, viz. 5 per cent.?
By Tab. II. we find the value of I . payable at the end of 14 years, is .505 decimal paits of a pound; which, being multiplied by 320 , gives the value of the reverfion, viz. 1621 . By this example may be feen, the method $t$ of find the worth of 2 or 3 lives in reverfion for a term of years, and alfo of a term of y ears in reverfion of a term in effe.
If it be required to thew the value of a term of years in reverfion of a life or lives; firlt find the number of years value of the effate in effe, and then, by Tab. I. fee how many years it mult continue to produce that value; and the value of the eftate in porfe, payable after the expiration of this
number of years, is the fum to be paid in hand for the expečtancy.
If a life is to be rominated at the death of another, the fum to be paid for it mav be found, by feeking, in the tables, the number of years of an annuity that is if equal value with each of the lives; and then find, in the table for that purpofe, the value of the money that the life in pulfe will be worth at the death of the other, and the prefent value offuch a fum is the fum required.
Example II. There is, at prefent, on an eftate of 501 . per ann. one life, aged 52 ; the tenant would purchafe another life, to be nominated at the death of the former, viz. one that fhall be then 22 years old, allowing the purchafer 6 per cent.; and for the fum paid out, which is 9 l . per ann. 5 per cent. what is the value of the life to be purchafed?
The life in poffeffion is worth, at 6 per cent. $\}$
(for any rate may be taken for this purpofe)
by Tab. IV.
This number found under the fame rate of in-7
$\left.\begin{array}{l}\text { tereft, in Tab. I. Thews in the firf column, } \\ \text { that the life is as valuable as an annuity }\end{array}\right\}$ 13,14 years.
that the life is as valuable as an annuity
. 4 years.
ceriain for the term of
Hence the life that is to fucceed, is to be named at the end of 13,14 years.
A life of 22 is worth, by Tab. IV. at 6 per cent. 12,54 years. And the fame at 5 per cent.

14, 14
Which being the number of years value that the rent and outgoings will be worth for the fecond life at the end of 13, 14 years, the value of each, in ready money, may be found, by taking out the numbers in Tab. II. anfwering to the times at 5 per cent. and multiplying that by thefe numbers of years refpectively, the two products will fhew the bers of years refpectively, the two products will hew the
number of years value for the rent, and for the fum paid out, Thus:
The number in Tab. II. under 5 per cent. and againft 13,14 , by duly equating; is, 527 . This, multiplied by 12,54 , produces 6,61 years; and, multiplied by 14,14, produces 7,45 years.
Hence the value of the rent in money is 1. 330

And that of the fum paid out
Confequently the fum to be paid is 263 By the like procefs may be found, the value of a third life in fucceffion of two to be named at the death of one or both of there; as of two lives to be named, one at the death of the firft, another at the death of the fecond, or in any other manner: this, doubtlefs, will be eafy enough to the perfons concerned, without adding more examples to that purpofe. Example III. A man dying leaves to his three daughters an annuity of 201. per ann. each, during their lives, payable out of lands of a much greater value; and he fo ordered it, that, when either of them fhould die, her annuity fhould fall to the other two in equal hares; and, at the death of another of them, the whole is to come to the furvivor for life: their ages at the father's death are 32,22 , and 12 , what is the right of each worth in ready money at 5 per cent.?

The value of the eldeft life is - 12,79 , or 2561.

## That of the next is

The youngeft worth
15,25, or 305
14,14 , or 283
of the firt and third is 10,1

The three joint lives are worth
Firft, 2ofl. per ann. during her life is worth
Secondly, iol. per ann. in reverfion of the young-
eft, to continue from thance during the joint
lives of the other two; found by fubtracting the $\}$
value of the three joint lives from the value of
the firt and fecond jointly
Thirdly, 101. per ann, in reverfion of the fecond, to continue during the joint lives of the firft and
third, found by fubtracting the value of the
three joint lives, from that of the firft and third jointly
Fourthly, 40 l. per ann. in reverfion of the two 7 youngeft lives during her own life, found by fubtracting the value of the longeft of the fecond and third, from that of the longeft of the three lives, is
The whole fum of thefe four values is the eldeft $\}$ daughrer's portion, viz.
By the like procefs, the fecond daughter's right in $\}$
the eftate will appear
And that of the third, or youngeft
The whole value is 1123
And the truth of the work will appear, by finding, according to the method laid down, the value of the whole eftate on the furvivor of the three lives; which, hy the tables, will be found 18,71 years purchafe; and this multiplied by 60 , the whole yearly value of the three annuities, the product is 1123 t. as before.

## LEA

Thus have we given examples in moft of the ufeful cates of this fubject ；by the help whereof，any of the queries that arife about the value of leafes in poffeffion or reverfion，may be folved．

## Remakis

We might very well have concluded this article here，but， confidering that this work might fall into hands，to whom what we have faid on this topic might be ufelefs，on account of the operations for finding the value of the furvivorhip；to do which，the numbers are required to be taken out of the feveral tables，and to be added，fubtracted，\＆c．which to fome perfons may feem fuch an intricacy，as probably to dif－ courage them from endeavouring to become mafters of the fubject：for the eafe and convenience of fuch，therefore，we fhall add tables of the value on the longeft liver of 2 or 3 lives；where the fame may be taken out at once for thefe purpofes，and for any ages，howfoever combined，to every tenth year．
We have likewife added two other chort tables，the one for finding the value of the decimal parts of a year in months； the other，Mhewing the value of the decimal parts of a pound in money；fo that it is but to find the numbers to the right－ hand of the peint in the firlt column of the tables，and，op－ pofite to it in another column，is the value thereof in months in one table，and in money in the other．

Table VIII．
Shewing the value of an annuity for two liyes，that is to con－ tinue＇till both are dead，at $4,5,6,7$ ，and 8 per cent．and to every tenth year of age．

## Further REMARKs on this article.

The reader will pleafe to obferve, that the foundation of thefe tables are the principles of the learned Dr. Halley and Mr. Abraham De Moivre; whofe reputations for this kind of ftudies have been efteemed fuperior to all others: and Mr. Richards, in the preceding calculations, has applied their principles to the feveral ufes before reprefented: but, notwithflanding the authority of great names, the principles, rules, and computations, laid down by thefe learned gentlemen, have been objected to; and, indeed, with no little colour of reafon and plaufibility; as appears from the objections made thereto, by that judicious gentleman Weyman Lee, Efq; in his Effay to afcertain the Value of Leafes and Annuities for Years and Lives, \&kc. and alfo by that ingenious gentleman Mr. Thomas Simpfon, in his Traft entitled, The Doctrine of Annuities and Reverfions, deduced from general and evident Principles, \&c. The lateft author, who has obliged the public with fomething new upon this fubject, is Mr. James Hardy, in his book printed in 1753, entitled, A Complete Syftem of Intereft and Annuities; tounded upon new, eafy, and rational principles, $\& x$. which feems to be a work of no lefs merit than either of them. Upon the whole, however, this fubject does not appear to be yet fettled upon fuch a bafis, as to obtain in univerfal practice, according to the ferrtiments of either of thefe learned and judicious gentlemen, who have fo laudably diftinguifhed themfelves therein. See the articles Annuities, Life, or Lives, Lotteries, Money, Mortality [Bills of Mortality]; uader which feveral heads, we fhall endeavour to give the fubftance of what has been faid moft pertionently upon this fubject.

LEATHER

## L E A

## LEA

1. EATHER, is the ikin of feveral forts of beafts, dreffed and reared for the ufe of the various manufacturers, whole bu it is to make them up, according to their different employments. The butcher, and others who flay them off the carcafes, difpofe of them raw or falted to the tanner and awyer, they to the fhamoy, moracco, and other kind of eather-dreflers, who prepare them according to their refpective arts, in order to vend them among the curriers, glovers, arnefs-makers, coach makers, faddlers, breeches-makers, gil , nd all in any way concerned in the article of leather.
Leather has divers names, according to the ftate wherein it s, and according to the different kinds of fkins whereof it is prepared, and it's peculiar qualities when fo prepared.
(1.) The fkin is raw as it comes off of the animal. (2.) Some fe falted with fea-falt and allum, or with natron, which is fecies of falt-petre, or white falt-wort, to prevent corruption in keeping, or fending to diftant tanneries during hot eafons.
Skins dried with the hair on, ate commonly thofe of oxen and cows, or buffaloes, either tame or wild.-Moft of thofe in France come from foreign countries. The places which furnih them with the largef quantity, are Peru, the ille of St Domingo, Barbary Cape Verd ifles, the river Senegal in Africa, Mufcovy, Ireland, the illand of Cuba. Thofe of this latter place are the moft efteemed; they are called Ha vannah frins, from the name of the capital city of that illand, whither they are carried, in order to be fent to Spain, and from thence into other parts of Europe.-After thefe fkins are ftript of their hair, they are fold to the tanner. See Tanner, and Sxins.
The three principal affortments of leather are tanned or tawed, and oil and allum leather, all which are dreffed in fome yards, as they are by Shipton and fons of Watford. If we reflect on the number of fkins of all forts which this kingdom produces, the prodigious quantity of many kinds that are imported from Spain, Portugal, Ireland, and from our own colonies * in general, under the various denominations of hides, deer-ikins, deer-pelts, half-dreffed ditto, \&c. if this be confidered, and alfo that moft, if not all of thefe are dreffed here, many manufactured into a variety of things for our own confumption, and very large quantities of the feveral forts of leather wrought and unwrought (tanned in particular) exported; it will be readily granted, that leather is a itaple commodity, that may very juftly be ranked in the firft clafs of thofe belonging to this kingdom.

* Our late accounts from South Carolina inform us, that they exported from thence, in about 12 months, no lefs than 303 hogheads of deer-Ikins, which, upon a modelt computation, is 10,000 dikins.

## Remarks.

It may be affirmed, with great truth, that the fkins of our own production, and thofe imported from our North American Colonies, when drefled in this kingdom, make the beft leather in the world, and therefore is an article of very great importance to the trade of the nation; but, unlers fome proper regulations are made in relation to this branch of trade, we are in a fair way foon to lofe no inconfiderable part of it, as will appear hereafter. For the king of Pruffia hath lately eftablifhed this manufacture in feveral parts of his dominions, which, with the conduct of France in regard to the fame, is likely to do this kingdom no fmall detriment in this particular.

## Remarks fince the laft war, and Definitive Treaty

 of 1763 .By the large territories ceded to the crown of Great-Britain in North America, by the Definitive Treaty, 'tis to be hoped we hall uie every meafure to obtain the ftrict friendigip and alliance of the Indian Nations inhabiting there; in which care, we fhall not want great plenty of kins to carry on this branch of traffic at the cheapest Rates, and thereby to improve in every part relative to the manufacture thereof, in the moft extenfive manner.
The various trades to which the epithet leather is annexed, are as follow, viz. leather breeches-maker, leather-cutter, leather-dreffer, leather-dyer, leather-parer and grounder, leather-feller. We fhall fpeak of thefe in the order wherein they are mentioned.
Leather Breeches Maker, is a bufinefs fprung from the glover, and is a trade, whofe number of artizans has greatly increafed within thefe few years, and employs a great many hands in all parts of the kingdom, there being fcarce a mar-ket-town or village of any note, but fome of this trade may be found therein: and it may be cruly obferved, that fome of the prefent mafters of this bulinefs, in the cities of London and Weftminfter, have brought it to fogreat perfection, that what was thought to be a garment fit to be worn only by the laborious, is become fathionable, and univerfally worn, from the tradefmen to thofe of the firft rank in the kingdom ; and may, with fuitable encouragement, become a very profitable mercantile commodity, when exported to proper markets, the beft London made leather breeches be-
ginning to be efteemed, and to be worn in many parts abroad, not excepting even fome very hot countries.
The forts of leather breeches are various; fome being made of deer, fheep, and goat-fkins; others of calf, lamb, and beaverfkins. The two firft forts are the prineipal, the confumption whereof is of more confequence than may at firft view appear. The deer-fkins being chiefly imported from our colonies, and the only commodities (the half dreffed ones in particular) the Indians have to exchange with our Indian traders in North America, for what they want of them: and as this commerce with the Indians may increafe, the import of deer-fkins will do fo in the like proportion; confequently the price muft fall, if a proper vent be not found; and, in that caie, a ftop may, in fome meafure, be put to that branch of our trade.
The confumption of the fecond fort, i. e. the fheep-fkin kind, is, in fome degree, an help to the woollen trade; for, if the fell-monger cannot find a market for the pelt, it's value will, of courfe, enhance the price of wooll.
This being the cafe, may it not be worth confideration to enquire how the confumption may be effectually fupported? In anfwer to which it may be faid, (II) By the makers taking due care to manufacture them in the beft manner, and felling them as low as poffible. (2.) By the merchants making trial of a fmall quantity of thofe forts, which are not perithable, nor too low priced; which has been done, and good returns made for them. And, in order to encourage the maker, the exporter, and the foreign markets, (3.) by the parliament's taking off the drawback on undreffed deer-fkins, and giving fuch a bounty, or allowing fuch a drawback on the exportation of buck, doe, and fheep-fikin breeches, as may appear nearly adequate to the duties, and the excife which the fkins and leather have paid. As the duties and excife are the great obitruction to the exportation of leather breeches, it may be conducive to the general good, if our fuperiors would pleafe to confider, that, as this article now ftands, our politic rivals, the French, have, and do actually buy our deer-fkins undreffed, taking the drawback on exportation, and drefs and manufacture them at home, and fend thern in breeches to a foreign market, where they have fold very well (though inferior in many refpects to thofe that are made in London) which feems to be owing 10 our ill-judged impofts, duties, and excifes on leather. See the article Labour.
Leather-Cutter and Currier, is a bufinefs in London of large extent, and is,generally carried on by thofe who were originally curriers; berween whom and the worbipful company of cordwainers in London, there was fome fcw years fince difpute at law, concerning the right of cutting leather; which, after expending fome thoufands of pounds, ended with each party's fitting down with their own cofts. To curry a kkin, is to finifh it after it comes from the tanner; the art confifteth in cutting them to a proper ground, waxing, colouring, and making them fit for the ufe of feveral manufactures. It is deemed a good employment for mafter and journeyman, efpecially as they now cut large quantities of bucks and buffs into foals for thoes and boots, and of calves leather for upper-leathers for fhoes and legs for boots; which they fell to many fhoemakers in town and country, wholefale and retail, and deal largely in all the forts of uncut, tanned, and other leather It is a bufinefs, that, in it's prefent fituation, requires a good capital; the tanner felling chiefly for ready money, and the returns generally confiderable, with fome * very large.

- There is one on Snow-Hill, London, faid to retura near 40,0001. per ann.

Leather-Dresser. We have before obferved, that leather might be divided into three affortments, i. e. tanned or tawed, oil and allum leather; and the dreffers into the like number. For the tanned or tawed leather, fee Tanner. Thofe who drefs in oil and allum come under this article, and are called leather-dreffers. The art of dreffing fkins in oil is a bufinefs of large extent, and very beneficial to this kingdom. To defcribe every procefs in this att is needlefs; it may be fufficieht to fay, that when the fkins are put into work, they are firt foaked, then thrown into the lime-pit, when taken thence are pulled and delivered to the friezer, then ftruck with the oil and fent to the mill; when they are milled fufficiently, they are thrown into the drench to be fcoured, (then by fome fcudded) which done, they are hung upon the hooks to dry; after which they are deemed leather, and when the proper officers have weighed and marked them, in order to effimate the excife duty thereon, they are fit for the market, or to be fent to the refpective proprictors. The forts of flins dreffed in oil, are deer, fhecp, and lamb (fome few goat, and others not worth mentioning) of which prodigious quantities tie confumed, when wrought into the different manufactures made thereof. It is a fourithing bufinefs in moft patts of the kingdom ; it's profeffors (thofe efpecially who drefs their own fkins) being men of large fortunes, and dealing for very confidetable fums: London, Briftol, and Exeter, are the principal markets for oil-leather *, al though there are others, and oil-mills fet up within thefe few years, in feveral part of the kingdom.

- The oil they ufe is Newfound!and, i. e. cod's liver oil, of which they confume a grear quantity.

## LEA

Some of this bufinefs make from their pieces a large quantity of glue, which is judged to be the beft that is; that made by Shipton and fons of Watford in particular.-It may, perhaps, be of fervice for the farmer to know, that the flefhings and fhavings, made by friezing the fkins, is a very rich manure.
The allum leather-dreffer is one, that underflandeth the manner of dreffing fkins in allum, of which there is a confiderable confumption; the att confifteth in properly foaking, limcing, wringing*, and friking them in a liquor compofed of water, falt, and allum, then drying them properly ; poied of water, which done, and the excife account taken, they are fit for which done, and the excife account taken, they are and lambs and a large quantity of kid.

* Some forts are not wrang, nor any by fome dreffers.

Leather-Dyer. This is an art of which there are but few in the trade ; their bufinets is to dye, colour, oil, and allum leather, for the manufacturers; which they do of all colours, fome of them to a very grear nicety. This profeffion hath fuf fered by black-ram-fkin breeches not being fo generally worn now, as they were before the death of her late majefty. The mourning for her occafioning a large demand for black ram lamb-fkins, obliged the manufacturers to dye fome fkins that were not quite proper; and the dyer being preffed to expedite them too faft, were the true caufes that many of them did not come up to the character they bore before that time: the confequence of this was (and ever will be in fuch caifes) a decline in their confumption; notwithfanding which, there is not fo good or ferviceable a commodity of the colour as black ram-ikin breeches are, when made as they ought to be. We take notice of this as a caution to all manufacturers, to be careful how they vend an indifferent commodity, for the fake of a prefent profit; for it will prove in the run of trade to be a future lofs, to all coricerned in that manufacture; therefore this hould never be done, on any confideration whatfoever.
Leather-Parer and Grounder is an art, by which it's profeffors give the finilhing ftroke to all forts of oil, allum, and fome tanned leathers. It confifteth in bringing the oil leather to it's proper face, by pareing off the furface left on it by the dreffer, and grounding it with a ftone, compofed or made of pieces of the pumice-ftone; and in wafhing and grounding the allum and tanned leather, and making all fit for the ufe of the feveral manufacturers. It is a laborious art, that affordeth a good maintenance to the mafter, and good wages to the journeyman.
Leather-Seller is a bufinefs that is followed by many in this city, and feveral other parts of the kingdom. They buy large quantities of undreffed deer fkins of the importers: oil, allum, and fome forts of tanned leather of the dreffers; all which they fell to the manufacturers.-It is a very genteel bufinefs, but their returns being large and flow, (they buying all their undreffed deer-fkins with ready money, and giving large credit) it requires a very large capital to carry it on. In the city of London they are an incorporated company, \&c. and generally have with an apprentice 1001 . frequently more.

## The chief laws of England relating to leather.

There fhall be paid for all fkins and hides, and pieces of fkins and hides imported, the duties following, over and above all other cuftoms.
For all deer--kins dreffed in oil or allum, or otherwife perfectly dreffed and imported, 6 d . per pound.
For all lofhee, buffalo, elke, or any other hides dreffed in oit, 4 d . per pound.
For Ruffia hides imported, 2 d . per pound.
For tanned hides and calf-fkins imported, 1 d. $\frac{1}{2}$ per pound. For horfe, mare, or gelding's hides, imported and dreffed in allum and falt, or meal, or otherwife tawed, is. per hide. For hides of fteers, cows, or any other hides imported, and dreffed in allum and falt, or meal, or otherwife tawed, 2 s . for every hide.
For calf-fkins and kipps imported, dreffed in allum, falt, or meal, or otherwife tawed, id. $\frac{1}{2}$ per pound.
For all flink calf's-fkins imported and dreffed in allum and falt, or otherwife, with the hair on, rd . per pound; if without the hair, $\frac{1}{2} \mathrm{~d}$. per pound, and the like $\frac{x}{2} \mathrm{~d}$, for dog's 1 kins. For cordivants, 4 s . per dozen imported.
For goat-ikins not ufually called cordivants, imported and dreffed in oil or altum, falt, meal, or otherwile, 6 d . per $l \mathrm{~b}$. For all kid-ikins imported, dreffed or undreffed, is. per dozen; and, if any of the kid-fkins fhall be dreffed after imported, no farther duty fhall be paid.
For all theep fkins imported and dreffed in oil, I s. per dozen; and upon all imported fheep. fkins and lamb-fkins dreffed in allum, falt, or meal, or tawed, 6 d . per dozen.
For all hides and Ik ins, and pieces imported, tanned, tawed, or drefled, and not before charged; and for all wares mare into manufacure of leather, or whercot the greareft part' s leather, a duty afier the rate of 151 . for every 1001, of the real alu', to be paid by the importer.

For hides tanned in England, is. per pound.
For calf's s-fkins, kipps, hog fkins, and dog.fkins, tanned in England, Id. per pound.
For goat-1kins tanned with fumac, or otherwife in refembling Spanith learher, 2 d . per pound.
For all fheep fkins, which thall be tanned for roanes in Eng land, ad per pound.
For all Gheep-1kins and lamb-fkins tanned in England for gloves and bazils, a half penny per pound.
For all other fkins and pieces of fkins (not before charged) and tanned in England, a duty after the rate of 15 l. for eveiy rool. of the true value, to be paid by the tanners.
For hides of horfes, mares, and geldings, drefied in allum, falt, meal, or tawed, in England, is. per hide.
For hides of fteers, cows, or any other hides dreffed in allum, falt, or meal, 2 s, per hide.
For calf-fkins and kipps dreffed in allum, falt, or meal in England, Id. per pound.
For all flink calf lkins dreffed with the hair on, is. 6 d . per dozen.
For all buck and doe. fkins dreffed in allum, falt, or meal in England, or tawed, 3 3d. per pound.
For all, kid-fkins, 6d. per dozen.
For goat-fkins, is. 6d. per dozen
For Cheep-fkins and lamb fkins, a halfpenny per pound.
And for all other 1 kins and parts of ikins, tawed in England, fifteen pounds in the hundred of the true value, and proportionably for greater or leffer quantities; all the duties to be paid by the tawers or makers thereof into leather.
For all hides and fkins dreffed in oil in England, 4 d . per pound.
For deer-fkins, beaver-fkins, goat-fkins, and calf's-fkins, dreffed in oil in England, 4d, per pound.
For theep-fkins drefled in oil, and for lamb-fkins, Id. per pound.
For all other fkins and parts of fkins dreffed In oil, fifteen pounds for every hundred pounds of the cuue value, and fo proportionably.
Tanned hides are fuch as are tanned in ooze, made of the bark of trees, of fymac. Hides drefled in oil, are fuch as are made into leather, in oil or any liquor, of which the chief ingredient is oil; tawed hides are fuch as are dreffed in allum, falt, or meal.
For all vellum and parchment made in England, or imported, after the rate of is. per dozen; for vellum imported, and for parchment imported, 6 d . per dozen; and the fame, if made in England, to be paid by the maker.
When the duty is paid on ikins imported, the officer of the cuftoms fhall mark them, to thew that the duty is paid.
If the raw hide of any ox, bull, fleer, or cow, or the fkin of a calf, fhall wilfully or negligently be gafled or cut in the flaying, or, being gafhed, Thall be offered to fale by any other butcher, then he who gaifheth it, or who offered it to fale, fhall forfeit 2s. 6 d . for every hide, and as. for every calf's-fkin, one moicty to the poor where the fame fhall be offered to fale or found, the other moiety to the informer.
A tanner thaving a hide or calf's-fkin before it it thorougbly tanned, fo that it is impaired and the duty diminifhed, the fame fhall be forfeited, or the value thereof, one moiety to the crown, and the other to the informer.
Tanners, \&c. fhall not ufe any place for drying hides on fkins, \&c. without giving notice to the proper officer of the places for drying and keeping their hides.
Collar-makers, glovers, bridle-cutters, and others who drefs fkins in allum, \&c. and who cut the fame into wares, fhall be accounted tawers, and fubject to the penalties and forfeitures aforefaid, and thall be charged with the duties before the fkins be cut and converted into wares.
Where hides or leather manufactures are exported, in fuch a cafe, upon fhipping them, and upon fufficient fecurity given to the cuftomer, that fuch hides or ware fhall not be relanded in England, the culfomer fhall give the exporter a certificate in titing of the kinds, qualities, and weight of the hides, calf-fkins, and wares exported; and, upon producing that certificate to the collector of the duties at the port where they fhall be exported, then he, or in his default the commiffioners of the duties, fhall repay two-thirds of the duties which were before charged for the faid hides, \&cc. and wares fo thipped to be exported.
Wares made of hides or flins, thall have now drawback, as made wares, in refpect of being dreffed, or curried by a currier.
All Theep fkins and lamb-fkins, tanned, tawed, or dreffed, which are chargeable with any duties by the act 9 Ann. Atall, upon exportation thereof, have a drawback or allowance of two thirds of the duties ufual, as upon exportion of hides and calf-fkins.

Some other of the laws and regulations in England in regard to leather tanned.

* As manufactures of tanned leather, fuch as boots, fhoes, gloves, or other goods and wares, are, ipon exportation,

## LEA

ntitled to a drawback or repayment of the excife duties; herefore, befides making an entry as for other goods, the enter muft on the bill of entry, give a certificate of the kind ands, as a foundation for making ont a debenture to obtain the drawback, the form of which certificate muft be as in the following example:
*9 Ann. cap. 11. §. 39. 10 Ann. cap. 26. §.4. 16th of February 1730.-No. 26.
In the Taviftock of London, Daniel Bright, malter, for Jamaica.

William Türner.
Four dozen and an half of mens leatherheel fhoes

Containing two hundred forty Three dozen of womens fhoes Fifteen dozen of boys and girls fhoes nine pounds.

Thefe are to certify, That the fhoes above-mentioned, weighing two hundred forty-nine pounds weight, were made of tanned hides and calf-kins, chargeable with a duty of one penny per pound weight, by an act of parliament of the. ninth year of her late majelty queen Anne; and an additional duty of one halfpenny per pound weight, by an act of the tenth year of her faid late majefty's reign.

William Turner.
And, before the faid manufactures of tanned leather are fhipped off, fufficient fecurity muft be given for the due exportation, in the following manner :

## A bond for the exportation of manufactures of tanned leather.

Know all Men by thefe prefents,
Whereas the above-bounden William Turner hath this day entered outwards in the port of Southampton, on board the Taviftock of Lorrdon, Daniel Bright, mafter, for Jamaica, four dozen and a half of mens leather-heel thoes, three dozen of womens hoos, and fifteen dozen of boys and girls fhoes, made of tanned hides and calf fkins, weighing two hundred and forty-nine pounds weight, chargeable with a duty of one penny per pound weight,' by an act of parliament of the ninth year of the reign of her late majefty queen Anne; and an additional duty of one halfpenny per pound weight, by an act of the tenth year of her faid late majefty queen Anne: And whereas the faid William Turner, upon the exportation of the faid hoes, is to have an allowance or drawback, according to the faid aets of parliament on that behalf made:
Now the condition of this obligation is fuch, That if the faid thoes and every part thereof, thall be really and truly cxported into parts beyond the feas, and no part thereof be relanded, or unilhipped with intent to be relanded, or brought on fhore again in any part or parts of Great-Britain ; then this obligation to be void, or elfe to remain and be in full force and virtue.
Sealed and delivered in
William Turner*. the prefence of

William Turner*.

Remarks on Leather-Dressing in general.
Although there is no litle difference between the dreffers cf Ahamoy, allum!teather, Hungary leather, Morocco leather, the tanner, andrparchment-maker"; yet the k ins which pa/s through the hands of feveral workmen, ought to have been, for the moft part at leatt, wafhed of the blood and impuriti s in a rumining water; fet to drain; worked with hands, $s$ pounded with wooden peftles in a vat; put into the pit (mace in the ground, and bordered with wood, or flone and mortar) filled with water in which quick lime is diflolved, in or-

## LEA

LEA
der to loofen the hair, that it may be caflily rubbed off with out injuring the Ikin; drawn out, and fet to drain on the edge of the pit; ftretched on the leg or horfe, in order to have the hair ficraped off with a blunt iron knife, or a wooden cylinder; pared off the membranes on the fethy fide, and of the fcabs or roughnefs on the grain fide with a charp knife, rubbed with a whetfone on the fame horfe, to take off any particles of the lime or other thing, which may occafion hardneffes; thickened by different forts of powder, whereby they become greater in bulk, and fo much lighter, as gradually to rife to the furface of the water; ftretched out green or half dried, and piled one over another; or put up feparate after dried to a cruft; hung out to air upon poles, lines, or any other way: which mult be repeatedly done in the dreffing of fmall ikins.
This alternate tranfition from the liquid of the air into that of water, and from water into the air, with the affiftance of the lime, falts, and oils, opens the inmolt fibres of the fkin fo effectually, as greatly to facilitate the introduction of fubfances proper for making them pliant without rendering them thinner.
Natural philofophy would be embarraffed to fettle the order and number of thefe operations, by dint of reafon à priori alone: but what the mof penetrating genius has never been able to invent, frequent handling of the fame thing brings a man to practife with eafe and fuccefs. Common workmen continue to do the fame thing fcrupuloully by habit. One of them, more expert than the reft, and whofe experience makes up all his philofophy, overfees the whole, judges of the degree of drynefs and moifture, hardnefs and foftnefs, determines juftly; and either repeats, lengthens, or fhortens the procefles.
-Thefe procefles, though really the fame in the four or five principal dreffings of leather, are fo different in regard to the manner of executing them, and the time required in them, that the knowledge of all the minute particulars is requifite for him who would underftand the trade to perfection.
The allum leather-drefferdreffes all forts of white leather, from the ox-hide to the lamb-fkin. He works chiefly for the faddler and glover. For dreffing the faddler's leather, he ufes bran, fea-falt and allum. For that which the glover ufes, after the common preparatives, he firf employs bran, and then with falt, allum, fine flour, and yolks of eggs mixed in hot water, he makes a fort of pap, with which the ikins are fmeared in a trough.
The thamoy drefler foaks in oil *, not only the fkins of the true thamoy, which is a wild goat, but likewrife thofe of all other goats, though much inferior to the true, and even fheep. fkins, which he dreffes like fhamoy.

- The fhamoy leather-drefler ufes $\mathfrak{f i h}$-oil.

The tanner ufes the bark of young oaks, from eighteen to thirty years old, ground in a tanning-mill; in which he foaks fkins more or lefs, according to the different fervices expected from them, and their chief ufe is to remain firm and keep out water.
Whereas the tanner's way of dreffing leather in lime and tan, takes up two or three years; the Hungary * leather-dreffer allows but three or four weeks to that which paffes through his hands. He fupplies the harnefs-makers, faddlers, belt-makers, and all other trades that ufe not only white and allum leather, or oiled and tanned leather, but alfo Ikins coloured grey with ink, and dreffed in tallow, which is the diftinetive work of the Hungarian leather-dreffer $\dagger$.

* The Hungary leather-dreffer employs fuet or tallow.
$t$ The leather.dreffers in England drefs this fort of leather to great perfection.
His name (Hongreyeur in French) and method came from Hungary, whither a French workman went, by order of Henry IV. to learn the trade by ftealth; and thereby to lower the price of harneffes, and feveral other things wanting in his armies, made of leather.
The tanner, in certain cafes, inftead of tan, ufes redon, which is a plant cultivated much in Gafoony, and very common in Polifh Ruffia.-It, ferves chiefly for tanning ram and fheep-ikins, which the French call bafanes: but it is alfo ufed in dreffing Ruffia leather, which the Polifh Ruffians make a great myftery of, though there is a very good manufature of that fort at St. Germain en Laye.
The confit and fumac are litttle in ufe but for Morocco leather. The confit, into which goat- kins are put after the common preparations, is a large tub of warm water, wherein they are thrown, after having diffolved therein a very cheap fubtance taken from the animal kingdom, viz. the fweepings of dog-kennels; for there is nothing in nature, but what the philofophic artift can ufefully apply.
The fumac is taken from the vegetable kingdom. It is a duft, which comes on the leaves and fmall branches of the plant called rhus, or fumac. It is fumac, with galls and allum, that the Morocco leather.dreffers chiefly ufe; whofe intention is to give a grain to goar-1kins, and thereby to render them furceptible of the moilt beautiful colours. They call grain thofe little wrinkles or furrows, which run all over

5
the fulface of Morocco leather, as alfo that of calves and cows- leather, which they bring to a refemblance of ir, by dint of wathing, pounding, wringing, and folding the ikins different ways. They ule allo water tinged with ruft of iron, which ferves to give a black colour; and laque [fee LaQUe] and other fubitances, which colour the fikins red, yellow, \&c.
The workmen, who give the grain and the mof likely colours to lkins of the fhamoy, or other goats, and who dref calves and fleeeps fkins in the fame manner to imitate Morocco, make a great fecret of certain parts of their art, which are the niceft; but the experimental philofopher is rarely at a lofs to difcover any, which he in earneft attempts.
As the grain and beautiful dyes of goat-fkins are the work of the Morocco leather dreffer, the laft preparations and dyes, given to certain tanned leather, are the bufinefs of the currier. So likewife, when fkins dreffed white by the fkinner, are deftined for writing or drawing, the parchmentmaker puts the finifhing hand to them.
Of fkins brought from the tan-yard, fome are fent in cruft to the thoemakers and other tradefmen who enploy hard leather, the reft are foftened, and fometimes coloured by the currier.
His chief bufinefs is to foften and fupple cows and calvesfkins, which make the upper leathers and quarters of hoes, coverings of coaches, harnefs, and other things; which muft keep out water, bear continual jolts, and yet be pliant, either for receiving a handfome fhape, or to facilitate motion by their giving way.
Firft, thefe fkins, after coming from the tanner's yard, having ftill many flefhy fibres on them, the currier fuaks them fome time in common water.
Secondly, he takes them out and ftretches them on a very even wooden horfe. Then with a patirr-knife he fcrapes off all the fuperfluous flefh, and puts them into foak again.
Thirdly, he puts them wet on a hurdle, and tramples them with his heels, 'till they begin to become foft and pliant.
Fourthly, he foaks them in train-oil, which, by it's unctuofity, is the beft liquor for this purpofe.
Fifthly, he fpreads them on large tables, and faftens them at the ends. Thefe, with the help of an inftrument called a pummel, which is a thick piece of wood; the underfide whereof is full of furrows croffing each other, he folds, fqueezes, and moves them forward and backward feveral times under the teeth of this inftrument, which breaks their too great ftifinefs. This is what is properly called currying. The order and number of thefe operations vary in different places, but the material part is always the fame.
Sixthly, after the fkins are curried, there may be occafion to make them white or black. In order to whiten them, they are rubbed with lumps of chalk or white lead, and afterwatds with a pumice-ftone. As calves-leather is generally required to be thin, inflead of ufing the fraping-knife to take off the flefh, the currier makes ufe of the round paring-knife, which carries a good edge on it's whole circumference, and has a round opening in the center, big enough to let both hands through, in order to manage it with ftrength. When a calf's-fkin is hung on the paring-horfe or frame, which has a crofs-bar at top and is open at bottom, the workman faftens it on tight, and pulls it down as he thinks fit, by means of a cord that fecures both ends of it, and goes round his own body. He then rubs it with chalk, and with the knife he pares off the fefh. He repeats this work as often as is neceflary, till the fkin is as thin and white as he defires. Seventhly, when a kkin is to be made black, after baving oiled and dried it, he dips a puff, which is a thick tuft of fringes or hair, in water impregnated with iron. The old iron, which he has let ftand fome time in this water, together with it's ruft, depofes a quantity of falts, and particles of iron, which are known to be the bafis of the blacknefs of ink. After this firft wetting, he gives the ikin another in a water prepared with foot, vinegar, and gum arabic. Thefe different dyes gradually rurn the Ikin black, and the operations are repeated 'till it is of a fhining black. The grain and wrinkles, which contribute to the fupplenefs of calves and cows-leather, are made by the reiterated folds given to the fkin in every direction, and by the care taken to fcrape of all hard parts on the coloured fide.
The parchment-makers bufinefs is more fimple. After the fkinner has dreffed the finins white which he wants, and put them on the paring horfe, pared, rubbed them with chalk feveral times, wetted, pumiced, wetted again, drained, rubbed them again with pumice ftone, dufted them with a piece of lamb's-fkin with the wool on; the parchment-maker takes thofe fame fkin's to fcrape them dry, and rub them thinner on both fides with an iron inftrument.
After he has gathered up the fcrapings, for making a thin glue or fize, which ferves particularly for fizing the warp of feveral forts of woollen ffuffs, and for making it move eaker through the reed; be finfnes his work by rubbing the fkin with the pumice-ftone, and carefully removing all foughnefs from the furface of it. If it be a fheep-fkin, it is called parchment, the principal ufe of which is to engrofs acts or deeds that are required to laft long.

If it be a fink calf or lamb's-fkin, it is named vellum; and is ufed by defigners for whatever requires a very fmooth ground and great propriety in the execution.
We fee the advantage of differently imbibing fkins with taiWe fee the advantage of differently imbibing ikins with
low, mutton-fuet, or fin -oil, and of feeding them with fome vegetable powders.
Inftead of thofe fubftances, many of which are brought from very remote places, and are expenfive to be got ; it is not impolfole but we may bave fome as good, or better at home, which are not taken notice of. We have a number of large feeds and thick barks, which might yield powders or oils fit to fupply the places above-mentioned. In coftly undertakings, it is prudent to adhere to what has already fucceeded: but a more noble concern ought to put our manufacturers upon making daily trials of improvement in little. The fame experimental philofophy, which bas merited our acknowledgements by it's firft difcoveries, may ftill gain more glory, by diminifhing the tedioufnefs and expence of feveral works, and, perhaps, even by fuppreffing fome unneceffary rules or operations in the mechanic as well as manufactural arts.
LEDGER, in regard to accountant/hip [fee Accountant$\mathrm{s}_{\mathrm{HIP}}$ ], is a large book, containing all the tranfactions of a trader's or gentleman's affairs, methodized in the form of debior or creditor. The ledger, indeed, is only the waftebook, or the journal fo digefted, as to exhibit, as it were, at one view, the ftate of a merchant's, or any other trader's concerns, though they be ever fo various and complicated. To methodize every diftinct account in a peculiar book, two pages are required, oppofite to each other; that on the left hand ferving for the debtor fide, the other for that of the creditor: and each article confifts of five parts, viz. the date, the perfon whom we credit, or are credited by, the thing for which we are indebted or credited, the page where fuch counterpart is found, and the fum or amount of the article, fo poited into the ledger.
The peculiar nature and form of this grand livre, or moft effential book, as the French call it, we have exemplified under the article of Banking; where at the fame time that we illuftrate the art of accountanthip by debtor and creditor, we likewife comprehend the principal bufinefs of domeftic banking. See Banking.
We fhall here take occafion alfo to illuftrate the utility and importance of this book, by tranfactions drawn from fome real foreign mercantile concerns, that happened fome years fince; which will give a lively idea, not only of foreign mercantile accounts; but of the nature of conducting the bufinefs of a trading voyage at the fame time.
Thofe mercantile tranfactions, as they fell out, are as follow; viz.
Thomas Dale of Leghorn, James Goodman of Barcelona, Peter Winberton of Smyrna, Peter Blaxland of New England, John King, John Kelly, Peter Bradbey of London, James Bradfon of Bilboa, James Dixon of Cadiz, and James Corman of Lifbon, correfpond and trade with each other : viz.
Thomas Dale of Leghorn buys the Anne galley, and fits her out to fea, to proceed on a voyage from Leghorn to Barcelona, and thence to Smyrna and the Arches, for a lading of wheat for Lifbon, to be configned to the care and difpofal of James Corman, who is $\frac{x}{3}$ part concerned therein, and Thomas Dale $\frac{2}{3}$, and who paid for the hull, mafts, \&c, according to inventory and contract 1600 dollars, and paid all charges of fitting out to fea, as per accompt, dollars 1589: 12 -Infured dollars 3600 on the hull from Leghorn for Barcelona, at 9 per cent. with more, $\frac{1}{2}$ per mill. palace charges -Alfo infured dollars 6000 on the hull and ftock, from Barcelona to Smyrna, the Arches, and to Lifbon, at 28 per cent. with mote $\frac{\pi}{2}$ per mill. palace charges, and reckons his provifion on both infurances $\frac{x}{2}$ per cent.- The galley arriving at Barcelona, James Goodman receives the freight of barley and wheat, made by faid galley, being dollars 1242: 10Buys 2000 pieces of eight Spanifh money, amounting for coft and charges to dollars 2068:12:6-Delivers them to Capt. Barnby commander of the galley, to difpofe of in Smyrna, in buying a cargo of wheat-Pavs alfo to faid captain dollars 280-Reckons for his cornmiftion on faid tranfactions dollars $30: 2: 6$, and 15 fols for poftage of let-ters-Draws the ballance of accompt on Thomas Dale of Leghorn, at lives $18 \frac{1}{4}$ per piftole-The galley arriving at Smyrna, Peter Winberton fells the 2000 pieces of eight, weighing 195 (moft pillar) one with the other, at 35 per cent.-Paid confulage 2 per cent. Ihroffage, or lofs on money, 4 per mill.-Reckons his provifion and brokerage at 2 per cent.- Buys a cargo of wheat at fundry prices, viz. 622 kellows at $\frac{22}{46}$, and at $\frac{1}{20}$ per kellow- 659 ditto at $\frac{22}{4 \frac{2}{5}}$ 505 kellows at $\frac{21}{4}$, and ${ }^{2} t t_{1}^{2} \frac{2}{2}-1800$ ditto at $\frac{23}{4}-1194$ ditto at $\frac{2 x}{\frac{1}{5}, \text { and at } \frac{1}{T} 50 \text {-Pays petty expences, and for boats, }}$ \&c. dollars 30: 2-For confulage 4 per cent.-Brokerage ${ }^{\frac{1}{3} 3}$ of a dollar per kellow-Reckons his provifion at 3 per ${ }^{36}$ cent.-Pays to Capt. Barnby dollars 235, and draws the ballance on Thomas Dale at 13 per cent.-Thomas Dale
draws on James Corman dollars $1506: 18: 7$, at $930-$

Dollars 400, at 925 -Dollars 300, at 930 , and the ballance of Corman'saccompt current at 930 -Having reckoned him $\frac{1}{2}$ per cent. brokerage, and expences of poftage of letters at Leghorn, Amfterdam, and London, amounting to dollars 24:5: I-The galley arriving at Lifoon, Corman fells the lading of wheat (that was purchafed by Winberton) as fol-lows- 360 Alquiers at 480 rees per alquier- 60 Ditto at 460-358 Dito at 450-10,494 Ditto at 440-488 Ditto at 430 - And, by felling the corn to feveral perfons, it full fhort 3 moys of what it firft meafured aboard--Corman paid meafuring aboard of 204 moys, 80 rees per moy-Boat-hire to Bellem on ditto 100 rees per moy-Porterage into the to Bellem on ditto 100 rees per moy-Porterage into the
warehoufe on ditto, 90 rees per moy-Boat-hire from Bellem to the market on 190 moys, at 120 rees per moy-Porters, landing, cartage, \&c. on 190 moys, 210 rees per moy -Meafuring into the market on 204 moys, 100 rees per moy-Porterage, cartage, \&c. to a private warehoufe for fale, on 38 moys, at 380 rees per moy-Hire of empty facks, 10,300 rees-Gave the health office at Lilbon 48 mil-rees-Ditto at Bellem, for affifting in unloading 10,300 rees -Guards to watch the boats, with fundry expences, 8500 rees-W arehoufe room, and turning, 22,700 rees-Selling in the markets 201 moys, at 600 rees per moy-Brokerage on 201 moys, at 100 rees per moy-His commiffion $2 \frac{x}{z}$ per cent. on fales.
Corman buys the fhip Jenny for his own accompt, for 960 milrees-Lades on board her 155 moys of falt, at 3500 recs per moy, and charges, amounting to 576,770 rees--Pajs fundry diburfements in fitting her out to fea for New England, Capt. John Walker, amounting to $58 \mathrm{r}, 572$ rees--He alfo pays fundries on the Anne galley for her voyage to Algier, to lade corn on freight; viz. ## LE E

## LE E

REMARKs.
From the face of the ledger-account of thefe mercantile neyrociations, there ariles a double advantage: (i.) The nature of carrving on foreign trade from one country to another, is iatelligibly illuftrated from facts and realities. (2.) The method of accountanthip, as praclifed by the feveral merchants thercin concerned, is, at the fame time, familiarly exemplified; alfo the nature of forcign accounts, as kept in the momies of diferent countries, is reprefenced; and thofe of My Account, His Account, and Company Accounts, or thofe of Factor and Merchant, as kept in their proper columns, are alfo fet in a clear light: frons whence is leen, likewife, in what manner the profit or lofs is ftated, that may happen by the rife or fall of the prices current of exchange. The conformity, alfo, amongft thefe feveral accounts is manifelt; and nothing can give a better idea of mercantile accountanthip, than the ftating of all the accounts refpectively of the feveral parties who may be concerned in foreign adventures.
By accounts of this kind, the nature of anonymous partnerhaps in foreign traffic may be judged of, and the reafonablenel's of what we have faid under the article anonymous, which is not incurious. See Anonymous.
Thefe accounts very plainly fhow the juftnefs and elegancy of the art of accountanthhip by debtor and creditor, according to the true merchant-like method, by double entry; for, if one merchant has dealings with ever fo many others in foreign countries, if they are all thoroughly filled in this admirable art, they can have no mifunderftanding in the itating of their accounts, as to the part of charge and difcharge; their ballances will be all in conformity to their vouchers; and, if there happen to be any miltakes in relation to the arithmetical part, thefe are eafily rectified: whence the reafon of the lignature of the ordinary phrafe of Errors Excepted, in the mutual tranfmifion of accounts from trader to trader, is apparent.
And when any errors happen to be committed in the fating of the accounts, as well with refpect to their debts and credits in the ledger, as in the journal, or any miftakes of a different kind occur, it is as inconfiftent with the character of the fair and honourable trader, as with that of an accountant, to fuffer any crafements ór obliterations in his books: his bufinefs is to acknowledge fuch miftakes by plain words, and rectify them by writing them off in the ledger, or properly explaining them, if they are of the arithmetical kind, \&zc.-It is, therefore, we have left here and there an error, as happened in ftating the accounts, with defign to fhow how they are wrote off, without razure or obliteration. For more matter in relation to this excellent method of account-keeping, fee the articles Banking, Debtor and Creditor, and Mercantile Accountantship.
LEEWARD.ISEANDS in AMERICA; chiefly thrfe iflands that were called the NEUTRAL-ISLANDS before the laft peace.
The French, after they flaft became mafters of Guadaloupe and. Martinico, as they made no fcruple of defrofing and expelling the inhabitants, fo when that was once done, they uider colour of a treaty ypretended themfelves to be defenders of them in Dominica and St. Vincent, that they might hinider England from extending her territories, 'till they fhould grow frong enough to occupy thefe as they had done the reft.
The negociation laft mentioned, was actually depending when the revolution happened. But notwithftanding this, the French thinking the opportunity favourable, broke without cermony the treaty of Neutrality, made November 5, 1686, at Whitehall, by attacking the Englifh quarters in the illand of St. Chriftopher's, which was infifted upon by king William and queen Mary, as the grounds of declaring war againft the French king in America. From this period, down to the treaty of Aix La-Chapelle in 1748, both nations have kept up their claims; and by the laft mentioned treaty, things were again reduced to their old fituation, by a pofitive declaration that St. Lucia, St. Vincens, and Dominica, fhould be efteemed Neutral; and confidered in that light, not to be fettled by other nations.
By that treaty likewife, a fourth inland was added, to which the French bad never laid any exprefs or direct claim before, and this was Tobago. Such were the regulations this treaty made, and fuch the ftate of things, or at leaft fuch the ftate of things ought to have been, at the opening of the late war. By the $9^{\text {th }}$ article of the peace figned at Paris, February 10, 1763 , all the three iflands of Dominica, St. Vincent, and Tobago, were yielded in full and perpetual fovereignty to Great-Britain, the ifland of St. Lucia being ceded by the king of Great-Britain to France, in exchange for the Island of Cranada, which by the before mentioned oth article, with the Granadines or Grenadillas, and all their DePENDENCIES, are abfolutely and for ever yielded to GreatBritain. We fhall defcribe the three formerly Neutral, which are now become British Islands, and thefe two Islands that were thus exchanged. Dominca lies, as it were, in the bofom of all the French

Isfrc, 8 leagues north-wef from Martinico; about the fame diftance, fouth-eaft from Guadaloupr; having the three fmall inands called the Saints, between them, and at the diftance of five leagues fouth-weft from Marigalante. Dominica lies flretched out from fouth to north-weft. It is a large ifland, at leaft twenty-eight Englifh miles in length, and about thirteen in breadth, in circumference about 30 leagues. It is not interfected by large inlets of the feas, as many others, both of the larger and leffer of our own, and the French Weft-Indian illands are, and of courfe contains the more land. Some have judged it near twice as large as Barbadoes, and the French efteem it near half the fize of Martinico. The climate in general is reputed wholfome. After this ille becomes thoroughly cleared, it will be more healthy and agreeable to European conflitutions. The face of the country is rough and mountainous towards the fea fide efpecially, and within land, there are many rich and fine vallies, and fome fpacious and fair plains. The declivities of the hills are commonly gentle, fo as to facilitate their cultivation, and the foil in general a deep black mould, and commended for it's fertility, by the Spanifh and French, as well as the Englifh. It is well watered, by at leaft 30 rivers, fome of which are fpacious and navigable for feveral miles, the reft commodious for planting, and variety of fifh. It abounds in all kinds of timber, that are cuftomary in the Weft-India illes. Their fruits are fuperior to thofe in Martinico and Guadaloupe. Hogs both wild and tame are in plenty, as well as moft forts of fowl. Ground provifions in general are here as good as in any of the other ifles; fuch as bananas, potatoes, maniac, from which the caffada is made, the common bread of the Indians, Negroes, and even Eurcpeans : their pine apples are reputed large and fine flavoured. The fettlements made by the French upon the coalt, were efteemed equal, if not fuperior in produce, to thofe in their own ines. The Spanif writers, particularly Oviedo, fay, there are feveral fafe ports and convenient creeks. On the north-weft end of the ifland, there is a deep, fandy, large bay, well defended by the adjacent mountains from mof winds, which from prince Rupert's anchoring in it, when in thole parts, has received his name, where our armament under the late lordCathcart, lay very commodioull, and which was of great fervice to our fquadron in the courfe of the late war. There is a good anchoring ground along all the Leeward Coast.-The French have acknowledged, that fugar, cotton coffee, cocoa, and indeed every thing, that either they or we have been able to raife, in any of the other iflands, ma be produced in large quantities as well as in great perfection here.
The Indians may, without prejudice to our people, have convenient diftricts of land allotted them; in which by godd management and mild treatment, they may be rendered very ufeful to our new colony, in raifing ftock, and other things, as they have been for a century, to the French in Martinico. It may be proper on our firf eftablifhment to allot fmall plantations to fuch foldiers, and larger to fuch officers as have families, and are inclined to fettle upon the inland, and to offer them every kind of encouragement that may increafe their number, as thofe people would then be able to defend their property. Numbers of cur countrymen fettled in St. Eqfatia, St. Croix, and Cape Ifaquepe, might be invited to return upon advantageous terms into the territories of their natural fovereign. A form of government upon thofe of our other iflands, guarded againft the acquifition by all grafping individuals, of large quantities of unfettled and uncultivated land, with the fereftrictions, that takeplace in Barbadoes, for the conftant maintenance of a numerous and well difciplined militia, \& $\dot{c}$. cannot fail of drawing thither a fufficient number of inhabitants, and with the help of regular fortifications, would render the ifland fecure, and they would make it flouriming. Thís would induce to the difcovery of that mine, for which this inland has been always famous, which the Englifh believe from tradition to be filper, but, what the French well know to be gold; and though it fhould not be judged expedient to open it, yet the certain knowledge of it could do us no anjury, and the very fame of it might invite numbers there, and prove of great benefit.
Nor need apprehenfion of infecurity intimidate the refort of people thither. Befides the immediate affiftance this inle might receive from Barbadoes, while we retain our maritime fuperiority, a refpectable fquadron on the firf appearance of a rupture might be fent to Prince Rupert's bay, with a force fufficient to quiet the fear of the inhabitants. But if fuch an event be at any diftance, the ifland in that time may be fully fettled, and from it's extent and fortifications, exempt from the danger of any fudden invafion; and in that ftate would ferve as a place of arms, and the rendezvous of our forces, from all parts of the West Indies; when from the nature of it's fituation the whole of the French commerce in thefe parts muft inftantly become precarious, and all their fettlements be at our mercy.
The ifland of St. Vincent lies between five and fix leagues fouth-weft from $\mathrm{S}_{\text {r. }}$ Lucia, 23 fouth-weft from Martinico 36 fouth from Dominica, 30 weft by fouth from Barbadoes, and $\mathbf{1}_{7}$ north-eaft from Granada, Being thus fituated di-

## L E E

## L E E

restly to the lecward of Barbadoes, it may in a few hours be reached fiom thence, and is at the fame time fo feated, as to cover and connect the fimall iflands that lie between it and Granada. It is from fouth to north, about 24 of our miles in length, and about half as many in breadth, fixty, or thereabouts in circumference.-It is rather bigger than Antigua, and if not larger, at leaft as large as Barbadoes, fomewhat fmaller than st, Lucia, and much about 2 thirds of the bignefs of Dominica. The warmth of the climate is fo tempered with fea breezes, that it is looked upon as very healthful and agrecable, and on the eminencies that are numerous, the air is rather cool.
The foil in general is, extraordinary fertile, tho' the country is billy, and in fome places mountainous. Amongft the former, there are plealant vallies; at the bottom of the latter, fome large and luxuriant plains. No ifland of the like extent is better watered; from the mountains there defcend rivers, and leffer ftreams tun on both fides from almoft every hill. There are feveral fine fiprings at a fmall diftance from the fea, and the flopes fo eafy and regular, that there are hardly any marfhes, and no ftanding waters on the ifle. There are here large quantities of valuable timber, as well as good fruit-trees, fome peculiar to this ille. It abounds with wild fugar-canes, from which the natives make a very pleafant liquor; corn, rice, and all forts of ground provifions, are raifed in plenty, and without great trouble. In the fouth part of the ifland, where the French have raifed fome large and flourihing fettlements, they have coffee, indigo, cocoa, anatto, and very fine tobacco.-They have plenty of cattle and poultry, and fend fome lignum vita, and fome timber to Martinico, where the latter is employed in building houfes, and in their fortifications. 'The rivers are ftored with divers forts of frefh fifh, and the fea contiguous to it's coafts abounds with thofe properto it's element, and the general nature of the climate. Both land and water fowl are in plenty.
From the fpecimens above given, we may collect, that when this country comes to be duly well cultivated, according to the invitation it gives, it would, in refpect to it's produce, be little, if at all inferior, to any for extent, of the iflands we have poffeffed; efpecially if we confider that it has many commodious bays, on the north-weft and fouth-welt fides, with abundance of convenient creeks, and good anchoring ground on every fide. At the fouthern extremity there is a deep, fpacious, fandy bay, called St. Antonio, where Chips of large fize may lie fafely and commodioully; and when the whole comes to be further known, there is little doubt, but other advantages will be experienced, notwithftanding the French have been folicitous to reprefent the ifland heretofore, as an infignificant difagreeable defert, when they had a view of engrofing it to themfelves.-The French have for feveral years gone on fettling, planting, cutting timber, and raifing every kind of Weft India commodities, except fugar, and carrying on a very lucrative trade to their other iflands; in which a number of floops have been employed.
In relation to the fecurity of this ifland, there is no doubt, that a competent military force muft be fent to protect our firft eftablifhments; and as affiftance may be derived from Barbadoes, at any time in the fpace of a few hours, the French can take no advantage of this ifland, provided care is taken to pacify all mifunderftandings between the native Indians and the Negroes, as they thall happen.
From the foregoing brief defcription of this ifle, it appears to be a fine fruitful one; all the ancient, and of courfe unbiaffed relations we have of it by authors of credit of every nation, Spanifh, French, and Dutch, as well as our own, concur in this reprefentation. By depriving the French of all the fettlements they had made at this ifland, of the produce thereof, and of the advantages arifing from the trade, which was regularly fettled between this and their other iflands, and throwing them into the Britifh fcale of general commerce, may be confidered as no defpicable acquifition to this nation. It fhould not be forgot that all our former difputes, too numerous to fpecify relative hereunto, are by the peace of 1763 , brought to a conclufion; this ifland is now become perpetually and incontefibly ours, we having given an equivalent for this and others, and the French have no colour or pretence for reviving any fort of claim thereto.
By this acquiftition of ST. Vincent, Great-Britain has likewife gained an additional check upon the French inland colonies in general, and particularly on that of St. Lucia, which is ceded to that nation. There can be no meafure taken there, of which we may not have immediate notice; and if we confider the fituation of this iffand in refpect to that and the reft of the French infands, now that Granada and all its depencies are become Britifh, it feems pretty apparent, we may from thence eftablift a cruize, by which they may be effectually blocked up, or at leaft deprived of all commerce, in cafe of a future war.
Should it be objected, that the bays in this ifland may not be convenient for a large fquadron, fince our fquadrons avoid as much as poffible coming into or continuing long in bays however commodious; nor does experience evince that our naval armament have hitherto fuffered much from the want of fuch conveniencies in the hurricane months, in which they
are chiefly neceffary; but from their dangerous norms, they will have now a conftant and fafe retreat in the port of $^{\text {of }}$ Granada. It may likewife ferve us for a place of arms, by which forces may be tranfplanted from the other iflands, and embarked very conveniently for our future expeditions in this part of the world. It alio contributes to cover and connect all our other poffffions, that twgether with it have been acquired by the peace; and from thence, reinforcements and fupplies may be fent with equal eafe and expedition to Dominica.
Tobago, the moft remote of all our new acquired iflands in America, lies near 40 leagues fouth by weft from Barbadors, about 35 leagues fouth-eaft from St. Vincent, 40 leagues eaft from Granada, 12 leagues north-eaff trom Trinidada, and between 30 and 40 leagues north-eaft from the Spanith main. It is 32 of our miles from fouth eaft to north weft, which is the greateft length; and where broadeft, may be about nine miles, from ealt to weft, fomewhat more than 70 miles in circumference. It differs not a great deal in bignefs from the ifland of St. Vincent, is rather larger than Barbadoes, and of confequence than any of our leeward iflands. Near the north-eaft extremity, there lies a fmall inand called Lattle Tobago, which is near two miles in length, and full half a mile broad. The rocks of St. Giles lie to the north, and there are many frall rocky iflets on the north-weft fuce of it, which though ufelefs, are not however dangerous. The climate, though it lies only 11 degrees and ten minutes north from the equator, is not near fo hot as migh $\xi$ be expected, the force of the fun's rays being happily tempered by the coolnefs of the fea breezes. Another favourable circumfance, which may ferve to recommend this climate, is, that this illand lies out of the track of the Hurricanes, to which our own iflands as well as thofe of the French are expofed, and from which their plantations and Chipping fuffer frequently very feverely.
There are many rifing grounds over all the illand, but it cannot be properly ftiled $m$ uncaindus, except, perhaps, in the north-weft extremity; and even there, they are far from being rugged or impaflable. The foil is well diverfified, being in fome places light and fandy, in others mixed with gravel and fmall fints, but in general it is a deep, rich, black mould. From the extraordinary fize of the fame fort of trees that grow in the other iflands, and from the trials made by the Courlanders and the Dutch, this ifland is efteemed to be luxuriantly fertile; well fuited to the different productions that are faifed in the West-Indies, and from the concurrence of various favourable circumftances, may be wrought with eare, and is not liable to the blaft, and other accidents, which are fo fatal to the moft promifing crops in fome of our Leeward Islands.
It is generally agreed, that hardly any country can be better watered than this is. Befides fprings that are found in plenty all over the ifland, there are not fewer than 88 rivulets, that run from the hills into the fea, fome on the eaft, forne on the weft fide. Some of thofe take a ferpentine courfe through the meadows; others pent up by rocky channels, roll with fuch rapidity, as renders them very fit for driving mills; but there are very few or no moraffes or marfhes, or lakes, porls, or collections of ftanding waters, which of courfe muit render it more healthy, and in all parts of it alike habitable; and from the happy difpofition of the running ftreams and numerous fprings, it is almoft every where habitable, with the like convenience.
Yet this diftribution of frefh water, is not more commodious, than the difpotition of the bays and creeks of the fea upon it's coalts. At the fouth end lies the bay of La Guira, and at a fmall diftance, the leffer and the great Rockley bays. The latter of thele, may, with propriety, be ftiled a harbour, for it is land-locked on every fide, and is very fecure. It was in this bay the Dutch and French fleets engaged in 1677, and in which engagement the count d'Eftree's hhip, called the Glorieux of 70 guns, was blown up; which hews that it is capable of receiving as confiderable fquadrons, and thofe of as large fhips, as are ufually fent into thofe feas. To the northward of thefe lies Cochon Gras, or Fat Hog bay, and beyond that Grand Rivier bay, Great Hog bay, little Hog bay, L'Ancre Batteau, covered by the ifland of Little Tobago ; and therefore in the Dutch maps called Iittle Tobago bay. Oppofite to this, on the other fide of the ifland, is what the Dutch called John Moore's bay, now Man of War bay, very deep and fpacious, with ten fathom water clofe to the More, with two fine rivulets running into the bay, where our fhips may therefore careen, with the utmoft conveniency, as well as with the greateft fafety; it being furrounded by high hills, that come down clofe to the fhore, by which the veflels lying there, will be effectually theltered from both wind and weather. There are alfo feveral little commodious bays, between this and Great Courland bay, and Sandy Point bas which brings us again to the fouthern extremity of the ifland Whence it appears, that it is in all refpects moft convenient for commerce; and though it be true, that having fo many places that admit of eafy landing, and lying in the neighbourhood of warlike Indians, it muft of neceffity reguire proper fortifications; and when this illand thall be once well fettled,

## L E E

## LE E

the many obvious and extroardinary advantages thereby af. forded ti, trade, will amply compenfate the expence, that may be firund neceffary to provide for, and to preferve it's lecurity.
This inland is covered with all that vaft variety of valuable Timber, that is to be found in moft countries in the Weerlndies, and many of thele as extraordinary in their fize, as excellent in their nature. The fame may be faid, with refpect to fruit trees, and amongit theie, there are fome that are peculiar to Tobago. Such for infance as the true NutmegPree, which the Dutch, who of all nations could not in that refpect be deceived, affirm to have found here. They indeed fay, it is a wild nutmeg, that the mace is lefs florid, and the tafte of the nut it felf more pungent, though larger and fuirer to the eye, than the fice of the fame kind brought from the Eaft-Indies by them. The Cinnamon-Tree grows likewife in this illand, though the bark is faid to have a tafte of cloves as well as cimnamon. Here alfo grows that tree which produces the true Gum Copal, refembling that b:ought from the continent of America, and very different from what goes by the fame name in the reft of the Weft-Indian iflands.
All ground provifions are produced here in great abundance, as well as perfection. Here likewife is plenty of wild hogs and other animals, together with great quantities of fowl, and an amazing variety both of fea and river fifh. In the time the Dutch were in polfeffion of this illand, which was not many years, they exported large quantities of Tobacco, Sugar, Cassia, Ginger, Cinnamon, Sassafras, Gum Copal, Cacao, Rocou, Indico, and Cotton; befides rich Woods, materials for Dyeing, Drugs of different kinds, and feveral forts of delicious fweetmeats. Thus, we have not only the probability, arifing from the climate, foil, and fituation; but likewife the certainty, that all the valuable commodities which the West-Indian lsLands produce have been actually, and may confequently be again unqueftionably raifed in Tobago.
We 'may add to what has been faid, that tho' the Dutch boafted much of their fettlements in, and the valuable cargoes they annually brought from them, yet Sir Jofiah Child, within that very period, mentions the defect in their improvement of Tobago, in fupport of his doctrine, that the Dutch, as a nation, were lefs fuccefful in Planting than Commerce; which is enough to convince us, that in his time, this was confidered as an ifland capable of being made at leaft as valuable, as any of it's fize in the poffeffion of Europeans.
As this illand in the ftate it now is, abounds, as before obferved, with a valt variety of different forts of Timber, all of them allowed to be excellent in their refpective kinds; it may deferve confideration in the firft fettling it, whether proper officers might not be appointed to fecure to the public thefe advantages. It is by no means intended, that the firft planters fhould be deprived of the neceffary ufe of all kinds of timber for buildings and utenfils, but that it thould be cut in a proper method, and with difcretion; becaufe nothing has been more loudly exclaimed againft by the fenfible men in all our other iflands, than the undiftinguifhing and deftructive havock made amongtt the Woods, without any regard to the general intereft, or the leaft refpect paid to pofterity.
By fuch a method, the country may be properly and regularly cleared and opened; and as from the nature of the foil and climate, vegetation is extremely quick, a fucceffion of ufeful trees may be conftantly maintained. By this means vaLuable cargnes will be furnifhed of fine Woods for the ufe of Joiners, Cabinet-makers, and Turners; the neceffary materials for dyeing cloth, silk, and linen, obtained in great perfection, and a prodigious variety of gums, balsams, and other coftly and efficacious medicinal meugs may be procured in their genuine fate. By this precaution, very large fums which we now pay to foreigners, will be faved to the nation ; the improvement of our manufactures facilitated, and the exportation of thefe bulky commodities prove a great benefit to our navigation. By putting the direction of thefe things into fkilful hands, new lights will continually arife from experience; and new acquifitions may be here made of valuable plants from the continent of South America, Africa, and even from the Eaft-Indies. The fubordinate care of thefe woods, might furnifh employment to the Indians; and the profits arifing from the exportation to Europe, might conftitute a public revenue for the fupport of the fortifications and other expences of government; which would be a greateafe to the induftrious planters, and thereby procure a conftant attention in their affemblies to promote a defign equaliy ferviceable to their mother-country and themfelves: and confidered in this light, it might become a ufeful precedent in the eftablifhment of fomething of the like kind in other colonies, and could be attended with no inconveniencies whatever
Nor is there any fort of improbability of our being able to produce a great part, if not all the variety of Spices of the East-Indies, in this very ifland. Cinnamon is faid to grow in fome of the other West-Indian Islands; and general Codrington had once an intention to try how much it might be improved, by a regular cultivation in the ifland of

Babbuda. It is univerfally allowed, that the bark of what is called the wild Cininamon-Tree in Tobago, is beyond comparion the beft in the West-lndies, and even in its prefent flate may be made a commercial article of value. The bark, when cured with care, differs from that in the Eait-Indies, by being ftronger and more acrid while it is frefh, and when kepe for fome time, it lofes that pungency, and acquires the flavour of Cloves. This is precitely the Spice which the Portuguefe call Crava de Maranahon, the French Canelle Gerofflef, and the Italians Canella Garofonata. There is a very confiderable fale of this at Lisbon, Paris, and over all Italy. This kind of fice, at prefent, is drawn chiefly from Brazils; and the Portuguefe believe that their cinnamon-trees were originally brought from Ceylon, while it was in their poffefion, but that through the alteration of foil and clime they are degenerated into this fort of fice, and this may probably be true. However, from their fize and number it feems to admit of no doubt, that the Cinnamon-Trees actually growing in Tobago, are the natural production of that ifland; and the point with us is, to know what improvements may be made with refpect to thefe.
It may feem a little new, but we hope to render it highly probable, that the fole difference in cinnamon arifes from culture. In the firt place it is allowed, both by the Dutch and Portuguefe, that there are no lefs than ten different kinds in the ifland of Ceylon; which is the cleareft evidence, that this tree is every where fubject to variation from the circumftances of foil and expofition. It is fecondly allowed, that even the beft, fineft, and firft fort of cinnamon-tree, does not preferve it's high qualities beyond 17,18 , or at moft 20 years. The reafon affigned for this by the Dutch, is that the Camphire, as the tree grows older, rifes in fuch quantties as to penetrate the bark, and thereby alter its flavour; which accounts very well for the different trade of the Brazil and Tobago cimnamons, as the trees muft be at leaft five times more than the proper age. It is thirdly allowed, that the faireft and fineft cinnamon grows upon young trees, planted in vallies near the fea fide, naturally covered with white fand, where they are perfectly unfhaded and expofed to the hotteff fun; that at five yearsold they begin to bark the branches; and, that the tree continues to produce fine-flavoured cinnamon for the number of years already mentioned. -They then cut it down to the root, from whence in a year or two it fpreads again, and in five or fix they begin to bark the young plants. There is one circumftance more neceffary to be obferved; the true cinnamon is in the inner bark of the branches grown to a proper fize, and when taken off and expofed to bedried is of a green colour and has no fmell, but as the watery particles are exhaled, and the bark curls in the manner we receive it, the colour changes, and the odour of the cinnamon gradually increafes. What then is there to hinder our attempting the cultivation of cinnamon, which nature feems to have produced in as much perfection in Tobago as in Ceylon?
We have mentioned, that the Nutmeg as well as the Cinnamon-Tree, is a native of Tobago; and as we have likewife obferved, is reported to be defective and inferior in its kind, to the fame fort of fpice in, or at leaft as it is brought us from the Eaft-Indies. That the Nutmeg naturally grows here, we cannot doubt of the fact; becaufe we find it afferted, in a book addreffed to Mr. de Beveren, then governor of Tobago. The nutmeg tree that naturally grows in Tobago is wild, and may by due care and pains be rendered as valuable a nutmeg as thofe that grow any where elfe; for the fact really is, that wherever there are nutmegs, they are wild nutmegs, or as fome file them mountain-nutmegs, which are longer and Jarger, but much inferior in flavour to the beft nutmeg, and are liable to be worm-eaten: the point is, to know how thefe defects may be remedied, or in other words, wherein the difference confifts, between the wild aftelefs nutmeg, and that which is the genuine aromatic, and of courfe a valuable fpice.
The nutmegs which the Dutch bring into Europe, grow in the inlands of Bande, which are fix in number; but the Dutch long ago confined the nutmeg plantations to three of them only, and took all the precautions imaginable, to hinder their being cultivated any where elfe, that they might the better confine the profits arifing from this fine fice to their own company. See our article Dutch East-India Company. The true nutmeg, is of the fize and height of a pear-tree ; the wild or mountain nutmeg is a large tree, not fo well furmilhed with branches, but the leaves are broader and longer The nutmegs are planted in Closes or Parks, in a regular order, and with much labour and induftry are carefully kept free from all weeds and. plants that may exhauft their nourifhment, and are attended with the fame diligence as a cacao walk. Befides this, they are defended on the outfide, by one or two rows of trees, taller in fize, which fecure them from fudden gufts of winds and from the fea air, by both of which they would be otherwife prejudiced.
They afford three harvefts in the year, the firft is towards the latter end of March and the beginning of April ; the product then is but fmall, confifting only of fueh as are full ripe or

## LE E

## L E E

fallen; but then thefe are the fincf, both with refpect to the true nut and to the mace. The fecond is the great harveft, in the later end of July and the beginning of Auguft, when all are gathered that are ripe. The third is in November, and is properly the gleaning, for then they take all that are left upon the tree. When they are thus gathered, they are $\{$ fripped with a knife of their outer hulks, which refemble thofe of walnuts; the inner coat, which is the MACE, is next taken off, with great care and as whole as it is pofible; it is then of a bright crimfon colour, but when caucioully dried, becomes of a yellow brown, thin, brittle, fhining, oily, and of a pleafing aromatic fragrance. The nut thus derpoiled of both coats is expofed to the fun for a day to dry, and this operation is finifhed in three or four days more, by expofing them though at a convenient diftance to the heat of fire. Then the Thell, which is thin, and has a very light pellicle adhering to it, is removed, and the kernel or nutmeg taken out. This is likewife very carefully dried, and when that is done, the nuts are put by fmall parcels into wicker balkets, in which they aredipped in a ftrong folution of lime, made with calcined Chells, mixed with fea water. The great fecret lies in thus curing of them, by which they are hindered from corrupting, from foftening by the warm, or lofing their virtue by the humidity of the fea air when tranfported to Europe.
We may reafonably conclude from this account, that the nutmeg.tree being a delicate plant, owes its high aromatic flavour, to its being induftrioully cultivated, with great caution, and all this in a proper foil. It mult be allo obferved, that even amongft the trees in the nutmeg parks, there are fome that produce long and ill fhaped nuts, with very little flavour, which are filled male nutmegs; whereas the round aromatic fruit, which is brought to Europe, is called the female nutmeg. The fmalleft of the nutmeg parks or clofes, does not contain above an Englifh rood of land, but the largeft contains three, four, or five times as much. The whole quantity collected in the three harvefts, and in a favourable feafon, feldom amounts to more than three hundred tons of nutmegs, and from feventy to eighty tons of mace.
From this fuccinct account of the nature and method of cultivating and curing this valuable fpice, it will appear, that it may prove fucceffful to make the experiment in our new ifland of Tobago, that we may judge, whether by the fame method, the wild nutmieg-tree, as it is called there, may not be reclaimed and improved as gradually to aequire all the virtue and odour of that true fpice. There may no doabt many difficulties occur, both with the cultivation and in the curing; but the vigour, the fagacity, the indefatigabte diligence of Britifh planters will very probably overcome all thefe.
We have no account of the tree that produces Cloves, growing either in this, or in any other illand in America. It is not, however, impoffible, that when the productions of ToBAGO fhall be more attentively examined, by capable perfons, we may poffibly find, that nature has produced this ficice here, as well as the reft. No weight, indeed, at all ought this fuppofition to have, which is mentioned only', that an enquiry may be made. But if we take it for granced, that the clove does not grow here, we may neverthelefs venture to affert, that the nature of the foil and climate confidered, together with the fize and fituation of the iffe, the natural production of other fpices, and the flavour of cloves, that is faid to predominate in thefe, make it not at all improbable, that if the clove was introduced, it would thrive here. That it may be introduced, and without much difficulty, will appear no unreaionable affertion, when we confider that this plant may be obtained from Borneo, Ceram, and MinDANAO, without the leave of the Dutch.
The Dutch are at prefent in the fole poffeffion of the SpiceTrade, and this they owe to a very commendable care, indefatigable induftry, and conftant circumfpection. For as on the one hand, they have taken inexpreffible pains, in procuring and preferving the perfection of thefe eftimable commodities, by a fkilful cultivation; fo on the other hand, they have not been lefs careful to extirpate them, where nature had produced them, where they found it extremely difficult if not impoffible to confine their production folely to their own profit. There feems to be no juft caufe thercfore, why we fhould not imitate them, as far as it is fit, if we are able to do it, for our own benefit.
Thofe who would have an ample account of this fpice, may have recourfe to botanical writers, particularly to a work lately publifhed in Holland, where they may meet with every thing they can defire, and be from thence more effectually convinced, that what has been afferted is ftrictly agreeable to truth.
The clove like the nutmeg-trees, are planted in fmall clofes, and there cultivated with all poffible care and attention. The foil and climate are chofen with great fkill, and all the ground is kept continually clear of weeds, plants, and buthes. There is no other vegetable fuffered to grow in the clofes deftined for the cloves, becaufe this would deprive them of their due nutriment, and diminifh the ftrength and perfection of the fice, which tho' it derives its form and texture from nature, owes much of its delicate fragrance and flavour, as

Val. II.
all other foices do, to cultivation and art ; and to that affidu: ous attention that is employed in the planting; preferving; gathering, and curing them, without which they would he:her have gained or preferved that deyree of excellence which has now fublifted for ages.
The harveft of this fruit is aniuually, notwithftanding what fume bave otherwife faid. They are fometines very plentiful, and at others not, according as the monfoons fet in wet or dry. In the beft years, they may produce abous 2000 bahars, which is about 550 tons. In a very bad year; not half fo much; but as the magazines are always kept well fupplied, there comes ufually the fame quantity to the Europe maiket, where the Dutch fales, and indeed over all India, the price of fpice very rarely alters. Thie clove retains its vigour, longer than either the cinnamion or the nutmeg, for it continues to bear plentifully, in a good feafon, for 50 or 60 years; and in the Moluccas they did not reckori a tree olda in lefs than a 100. The number of bearing trees, in ali clofes, are computed at 250,000 , exclufive of the young plants, that are intended to replace the old trees when they are become paft bearing.
We have dwelt a little on this point, by reafon of the probable importance that might attend it, though it is not entirely new, for the thought of raifing the fices of the Eaft in the Weft-Indies occurred to us and the French long ago, though it was never attempted, or indeed could be attempted with fo fair a profpect of fuccefs, as in this illand.
In this, if in any of our ifland colonies, a free port thay be opened, with as many apparant advantages, and perbaps fewes inconveniencies thian any where elfe in America. Hore is great choice of ports on both fides the ifland, fome that are by nature very fecure, others that may be fo at a fmall expence. The fertility of the ine is fuch, as that with benefit inftead of prejudice to its' inhabitants, they will always have it in their power, to relieve the wants of thofe on board fips, reforting thither for a fupply of frefh provifions. In one or more fettlements here might be erected fpacious magazines for the reception of Eaft-India, European, and North-Amefican commodities; all of which would not fail of finding a vent; and thereby producing an advantageous circulation of commerce and money.
The fituation of this ifland is an another advantage, whether we confider its nearnefs to the Spanifh main, or its convenient diftance from fome other illands, both of which ought to be regarded, in the choice of a Free Port. It may alfo be peculiarly advantageous upon the fettling of the illand, as by the hopes of immediate profit, it might attract people, create an inftantaneous intercourfe, and thereby a lucrative commerce with different parts of the world, which muft otherwife prove a work of tirhe. It might alfo open to us a correfpondence with the free Indians, who live upon the continent, and who would be glad of having accefs to a country fo near them, to which they thight go, and from which they might return at pleafure, without danger to their liberty. On the other hand, our people would be attentive enough to their own intereft ; and tho' at firft they might find it expedient to make them prefents of fuch things as they faw moft pleafing to them, yet in a little time they would make them fenfible, that in order to obtain a continuance of fupplies they muft be content to render them ufeful in return, either by finding goods to barter, or by undertaking themfelves fome eary kind of labour; which propoftion, if made with addrefs, asd profecuted with humanity and juftice, would hardly fail of making an impreffion upon them; and thereby open the means of having at leaft fome kind of cultivation carried on there, by freemen, which would be an acquifition of people, as well as of country. An acquifition not at all the more impracticable, becaufe that hitherto it has never been made. Our planters when they firft went to the WEST-INDIES, had as jittle idea of negroes flaves, as they now have of Indians. In time they may profit as much by the one as by the other. This point has been cautioully fpoken to, becaufe fome, not without reafon, have doubted, whether it might be expedient for us to follow the example of our neighbours in the opening, as they have done, Free Ports in America. Certain it is, that the Dutch are very great gainers by thofe of St. Euftacia and Curaçoa. Should we fucceed in the raifing of fpices, and making other improvernents in this ifland, hitherto unintroduced into any other; the trade of a Free Port therein may become very beneficial to its inhabitants, without detriment to the mother-country. On the contrary, great cargoes exported from hence, may be difpofed of there, and produce fuitable returns. At all events, a free port in this ifland might be eafily fettled, and as'eafly kept, under proper regulations, by which the experiment, which is of no little importance, might be effectually made. If when it is made, the inconveniencies fhould be found to out-weigh the advantages, or any unforefeen mifchief thould from thence arife, either to the trade of the other colonies, or that of GreatBritain; fuch a port might be with facility fuppreffed.
The definitive treaty of 1763 having alfo annexed the ifland of Granada to the crown of Grear-Britain; we thall now briefly confider what benefits may accrue to us from this poffeffion. It lies fouth weft from St. Vincent, 17 or : 8
leagues;
leagues; fouth-weft from Sr . Lucia, about 35 leagues; weit-fouth-welt from Birbadoes, 50 leagues; fouth-fouthwelt from Martinico, 50 leagues; fouch fouth-weft from Duminica, fomewhat more than 60 leagues; weft-northweft from Tobaco, 35 leapues, or according to fome charts, 40 leagues; fouth from ST. Christuphers, 100 leagues; and north from the Spacish Main, about 30 leagues.
It lies in the latitude of 1 degrees, 30 minutes north, the fartheft to the fouth of any of the Antilees. We are not able to give it's dimenfions with any degree of exactnefs, as not only authors but maps differ very much in regard thereto. We may, however, without fear of erring much, affert that it is upwards of 30 Englifh miles in length. De Life's map makes it near 40 ; and 15 or 16 in breadth, in fome places, though in others much lefs, and about 25 leagues in circumference.
It appears from hence to be twice as big as Barbadoes, larger than St. Lucia, St. Vincent, or Tobago; and if we may take the words of fome French memoir writers, contains of cultivarable land, near $\frac{x}{3}$ of what is to be found in MARtinico. Thefe are circumftances of fome confequence, though we cannot feak of them as yet with precifion.
The fituation of this illand leaves us no room to doubt, that the climate is very warm, which, however, the French writers affure us, is very much moderated by the regular returns of the fea breeze, by which the air is rendered cool and pleafant. We may from the fame authority affert, that it is wholfome; for though ftrangers efpecially are ftill liable to what is called the Granada fever, yet this is at prefent far from being fo terrible, as it formerly was; proves very rarely mortal, and as it chiefly proceeds from the humidity of the air, occafioned by the thicknefs of the woods, it will very probably be entirely removed, whenever the country is brought into a thorough ftate of cultivation; and this we may predict, as the fame thing has conftantly happened, in our own and in the French illands.
Befides, the climate has fome, and thofe too very peculiar advantages. The feafons, as they are ftiled in the WeitIndies, are remarkably regular, the blaft is not hitherto known in this illand; the inhabitants are not liable to many difeafes, that are epidemic in Martinico and Guadaloupe; and, which is the happieft circumftance of all, it lies out of the track of the hurricanes, which with refpect to the fafety of the fettlements on thore, and the fecurity of navigation is an ineftimable benefit in this part of the world.
There are in Granada fome very high mountains, but the number is fmall, and the eminencies fcattered through it are in general rather hills, or as the French writers ftile them Mornes, gentle in their afcent, of no great height, fertile, and very capable of cultivation, Exclufive of thele, there are on both fides the ifland, large tracts of level ground, very fit for improvement, the foil being almoft every where deep, rich, mellow, and fertile in the higheft degree, fo as to be equal in all refpects, if not fuperior to that of any of the iflands in the Weft-Indies, if the concurrent teftimony both of French and Britifh planters may be relied on. The former, indeed, have conflantly in their applications to the French miniftry infifted, that this might be very eafily made one of the moft valuable colonies belonging to France. This we find afferted at the very opening of the current century, in the memorials addreffed to the council of ftate, confirmed fome years afterwards by father Labat, and infifted upon with great zeal and vehemency, in reprefentations drawn up by very capable judges, the laft year that it continued to be a French ifland.
It is perfectly well watered by divers Atreams of different fizes, and running in different directions, flowing from a large lake on the fummit of a high mountain fituated very near the center of the ine. There are fmaller brooks, running from moft of the hills, and very fine Springs almoft every where, at a fmall diftance from the fhore. All thefe rivess abound with variety of good finh, and are reforted to by multitudes of water fowl. There are likewife in Granada feveral SaltPonds, which have their ufes and their value.
The great produce of this country, in its prefent condition, is a prodigious variety of moft forts of Timber that are to be met with in any of the Weft-India iflands; fo that whenever this illand comes to be tolerably cleared, confiderable profis will arife from the timber that may be cut down. There are likewife many rich fruits, valuable gums, dying woods, and feveral vegetable products, fuch as oils, refins, balfams, Sc. which have always borne a high price here. All the different kinds of ground provifions, which are fo requifite to the fubfiftence of $W$ eft-India plantations, are here in great quantities, and fome kinds of grain ripen very kindly in this, which are not raifed at all, or are raifed with difficulty in other illands. River and fea fifh in great abundance, and in refpect to the latter, turtle of the largeft fize and lamentins, which drew veffels from the other French inands for the fake of fifhing. They have plenty of all forts of fowl, and prodigious quantities of game, ortolans, and a kind of red partridges efpecially. Befides thefe, the woods are well furnifhed with many wild animals, that afford excellent food, zad are very rarely met with in the other inlands. They have
likewife much cattle, and as their hills yield excellent pafture, if the country was better peopled, might have many more.
But the diftinguining excellency of Granada, does not die fimply in its great fertility, or in its fitnefs for a valt variety of eftimable commodities, but in the peculiar quality of its foil, which gives a furprifing and inconteftible perfeciion to all its productions. The Sugar of Granada is of a fine grain, and of courfe more valuable, than that either of Martinico or Guadaloupe. The Indico is the fineft in all the West-Indies, While Tobacco remained the spaple commodity, as once it was, of thefe iflands, one pound of Granada tobacco was worth two or three that grew in any of the reft. The Cacao and Cotton have an equal degree of pre eminence; nor is this founded fimply in the opinion of the French, but is, equally known and allowed by the Englifh and Dutch; and in regard to the laft mentioned commodity, we may appeal to fome of the merchants of this city, on whofe authority we may more fafely rely,
If credit be due to the memorials of the French officers, who bave vifited Granada, true Cinnamon, and fome Nutmegs are found there; which, if future experience fhould verify, all that has been faid in refpect to TobAGO, may be as juftly applied to Granada; and the only reafon for infifting on the fubject there, was, becaufe we thought the fact better eftablifhed, from the authority of the Dutch, who, of all mations, are the beft acquainted with fpices. In refpect to fituation, and thofe expofitions that are effentially requifite, to the proper culture of thofe valuable productions, the illands are every way equal, or, if upon making the experiment, Granada fhould be found preferable in Tobago, which may probably prove the cafe, it ought no doubt to be preferred accordingly.
All the writers of our own, as well as of the French nation, have agreed, that there is in general good anchoring ground on all the coafts, and many commodious creeks and bays, both on the eaft and weft fides, which would be infinitely advantageous to commerce, if this country was fully peopled and completely cultivated. Butbefides thefe fmall, there are alfo two large ports of great excellence, and which deferve particular notice. The firlt of thefe is the harbour of Calivenie, at the fouth-eaft extremity of the ifland, and is fingularly fafe and fpacious. It confifts of an outward and inward port. The former is three quarters of a mile broad at its entrance, but widens as you advance, and becomes above a mile in extent within. As to the entrance of the interior port, it is above a quarter of a mile broad, but prefently expands itfelf on both fides, fo as to be very capacious, and has about feven fathom of water, with a foft muddy bottom, from whence feamen will eafily judge of its utility. Ships lying here in the utmoft fafety, may from warehoufes take in their lading very conveniently, and may then, with great eare be hauled into the outer port, which has this peculiar advantage, that fhips may either come into, or go out of it with the ordinary trade wind. This port, fuppofing there was no other, is in an ifland thus fituated, and fo very capable of being improved, would, in a trading nation, like ours, render it a valuable acquifition.
But the worth of Granada mult be highly enhanced, when we confider the other harbour, which lies at the north-weft end of the ifland, and is called the Carenage, the harbour of Port Royal, or the Oid Port, which has been always efteemed one of the beft harbours in the West-Indies, as poffeffing almoft every advantage that can be defired. It is a full quarter of a mile broad at its entrance, and, when once entered, it is fo capacious, as to hold with eafe a fquadron of twentyfive fhips of the line, where they may ride in perfect fafety, in refpect either to wind or weather. There lies alfo, at a fmall diftance from this port, a lake of a confiderable fize, very deep, the water brackifh, and which, by cutting through a fand-bank, might be eafily joined to the port, and would then be one of the fineft bafons in the world, and afford all the conveniencies that could well be wifhed, for careening the largeft fquadron of the largeft lhips, that are ever employed in this part of the world. The mouth of this port is fecurable by a tolerable fortrefs, called FORT Royal, where the governor refides, but the fituation of it has been cenfured; and indeed there is no doubt, that by the help of two good fortifications, erected on the promontories, which make the entrance of the harbour, it might be rendered inacceffible, fince in cafe of an attack, thips muft warp in, under the fire of both fortreffes. The benefits that may be juftly expected from fuch a port as this, in an inland fo well fituated, and producing fuch a diverfity of valuable commodities, are fo obvious, that it is needlefs to enter into a detail of them. In time of war it would give us inexpreffible advantages againft the Spaniards as well as the French; and if it fhould happen, that by a multiplicity of fervices, our naval force fhould be fo divided, as to leave us only an inferior fquadron in thefe ports, the Carenage would afford us a fafe retreat, without obliging our thips to quit that fation. A circumftance certainly worthy of being regarded; and of which, the French availed thernfelves often, folong as this inland remained in their poffegion.

## L E E

The ingenidus father Labat was here in 1705, and made fome curious and pertinent remaks. He fipaks of the planters as ealy in their circumftances, though not very polifhed in their mamers. He clearly difcerned, that great improvements might be made in fo pleafant and fruitful a country and regretted that the French refugees from their ruined colony of St. Chriltophers weie not fent hither, where they would quickly have repaired their own loffes, and have ren dered this colony much more ufeful to France. He made other judicious reflections. ' If, lays he, Barbadoes had a 'port, as fafe, as capacious, as commodious, and as eafy - to be fortified, it would be indeed an incomparable illand; - the Englifh know much better than we, how to turn every natural advantage in their iflands to the utmoft; and if Granada had belonged to them, it had before now chan-- ged it's appearance, it had been long ago a rich and powcrful colony; inftead of which, we have hicherto reaped litele, from thofe beneficial circumitances from which vat - profirs might have arifen, fince after fo many years poffef fion, the country is yet in a manner defert, thinly peopled, - without commodities, having little commerce, their ha-- bitations or rather cabins mean, ill built, worfe furnifhed; and to fay all in a word, in a very little better ftate, than when Mr. du Parquet bought it from the favages.'
We muft admit, that within the half century that has fince paffed, fomewhat more attention has been paid to this ifland, and it's productions have turned within this period much more to the account of France. They had fent thither for fome years before it came into our hands, 12,000 hogheads of Sugar annually, befides Coffer, Cacao, and a large quantity of excellent Cotron. Yet it is generally allowed, that never one half of the country was fettled, nor half the profit drawn from what was fettled, that might have been obtained, if the inhabitants had been better planters, and had been better fupplied with flaves. The reprefentations made to the French court treat all the improvements made there as very imperfect, as demonftrative rather of the fertility of the foil, and the excellence of the climate, than of the indultry of the inhabitants. Thefe reprefentations likewife fuggeft, that many improvements might have been introduced, and that fome lucrative branches of commerce might have been opened from thence. By the accounts of our own people, who have refided there, and the captains of men of war who have vifited it; the French have not been extravagant in their accounts, or vifionary in their fpeculations. An Englifh gentleman who had great opportunities of knowing, thinks a much greater quantity of fugar was raifed there than found a regular paffage to France. Exclufive of there productions, this ifland was of great utility to the French, during the courfe of the laft war, when the fingle fhips of force they fent to the Weft-Indies, with the tranfports under their care, came regularly hither, with little danger of falling into the hands of cruizers. Here they remained in fafety, and from hence they fent fupplies of men, ammunition, and provifions, in fmall veffels, which creeping along the Granadillos, St. Vincent, and St. Lucia, arrived generally feaking fafely in the harbour of St. Peter's in Martinico. In this refpect, as well as many others, the French will very fenfibly feel the lofs of this illand, as we fhall the advantage arifing from the poffeffion of it. A Britifh fquadron ftationed here will be, as before hinted, a fevere check upon the Spaniards as well as the French.
There runs from the fouthern extremity of the ifle of Gra. nada, in the direction of north by eaft, a long range of little Isle'ts, extending about 20 leagues. Thefe are of different fizes, but all of them, except the round ifland, very fmall. The number of thefe ifles is very uncertain; according to our beft information, there are about 23 of them, capable of cultivation. The toil being remarkably rich, the climate pleafant, and all the neceffaries of life, whenever they fhall be fettled, will be eafily obtained. According to the fentiments of the befl: judges, large quantities of Indigo, Coffee, and Cotron, may be raifed upon them, nor are they at all unfit for fugars. In their prefent fituation, they abound with excellent Timber. In former times, they were very fervicable to the planters of Barbadoes, who cut great quantities of Mill-Timber, which were a great conveniency. But for many years paft, the French have not only prevented this, as injurious to their property, but by ftationing guard-fhips upon the coaft, made prizes in time of full peace, of all Englifh vefiels they found at anchor there, and even of fuch as appeared in fight of them, which was a great detriment to our navigation. For, if veffels bound to Barbadoes, either through thick weather, or being difabled, miffed that illand, and ran down the fouth of it, which was the common rout, they come of courfe upon thefe iflands, and fell into the hands of the guard-fhips; the apprebenfion of which, made them fo cautious, as to render their voyages to that Britifh ifland longer and more tedious than in former times. But as all thefe difficulties will be removed for the future, and as the clearing of thefe illes in order to their cultivation, will be an immediate and confiderable advantage to the inhabitants of Barbadoes, thefe circumittances enhance the value of this acquiftion.

## L E E

There are befides thefe 5 larger inlands. The firt of there neareft the line of inets before-mentioned, retains the Indian name of Carrouacou, of a circular figure, about 6 or 7 leigues in compafs, lies 5 leagues eaft from Granada; 14 fouth wett from St. Vincent, and about 40 leagues weft-fouth-weft from Barbadoes. This little ine, is reprelented by the French, as one of the fineft and mott fruitful fpots in America; and from being pervaded by the fea breeze, the climate equally wholfome and pleafant. It is covered with valuable timber, interfetfed with rich fruit-trees, and when fettled and cultivated, is capable of more kinds of Weft-Indian improve ments.
But the circumftance by which it is moft diftinguified, is it's having as, deep, capacious, and commodious an harbour, as any in thefe Indies, and on this account has often been recommended to the French government, as a place capable of being made of much fuperior utiluy, to inlands of far greater extent; and even allowing theje to have equal merit, in regard to the value and the variety of their productions.
About a league north eaft from Carrouacou, lies l'Tsle de L'Union, though in truth there are two, the larger three leagues, the leffer two leagues in length. At the diffance of two leagues from thefe, lies Cannoen, fo called from the great refort thither of the kind of tortoifes, or fea-turtle, which bear that name. This ifle is 3 leagues in length, and $1 \frac{I}{2}$ broad, and has a fmall illet at the well of $i t$. At the dittance of 2 leagues from this, lies the Isle de Moustipues, or Moskiro Island; 3 leagues in breadth, and 1 in length. All thefe inlands, are allowed to be pleafant, wholfome, and exceeding fruifful. They are, at plefent, overgrown with different kinds of Timber; fome of which are become exceedingly farce in the other ifies, and fome alfo, which bear at prelent a very high price in Europe.
At the diffance of a league from Mofkito ifland, lies Becovya, Bequia, or Bekia, which is but two leagues fouth-weft from St. Vincent. This is the largeft of all the iflands dependent upon Granada, being about i2 leagues in circumference, and confequently fomewhat larger than MONseriat. The foil is equal if not fuperior to any of the reft; it has likewife a very fafe and convenient port, which is land-locked on every fide, eafy in its entrance, and very deep and capacious, and in which their fmall armaments frequently took fhelter, during the laft war, in proceeding as before intimated, from Granada to port St. Y'eter's in the ifland of Martinico; and this circumftance hereafter may poffibly merit for it more attention.
The confideration of thefe illands dependent upon that of Granada, led to the queftion, whether they might not be, all circumftances confidered, more proper for the introduction of Spices, than even that of Tobago? The 5 iflands of the Moluccas, which are Ternate, Tydor, Motier, MaQUIEN and Bacham, were fo many feparate kingdoms, rich and full of inhabitants, before they were known to the Europeans, lie all in a line like thefe, and are none of them larger than Carrouacou. They bave fmall ftraits of the fea between them like the Granadines, bear the fame Trees, Herbs, and Roots, are fome of them, like thefe, deficient in frefh water, and produced originally, Crnnamon and Nutmegs, as well as Cloves, the ufes as well as the method of cultivating and euring of what were taught them by the Chinese, as Dr. Angenfola, who wrote an excellent hiftory of the Molucca inands, informs us. Banda, where the Nutmegs originally grew, is not above half the fize of Bequia; and Amboyina, to which the Dutch feem at prefent inclined to confine both Nutmegs and Cloves, is rather inferior in point of extent to the ifland of Granada.
It fhould not be forgot that our illand of Granada, and it's Dependencies the Granadillos, are free from Hurricanes; to which alfo our ifland of St. Vincent is feldom expofed. To judge of the true value, and to afcertain the real importance of thefe iflands, that are altogether now become ours, we muft view and contemplate them in their dif: ferent lights, from which they may every one of them become more or lefs, immediately or remotely, directly or indirectly, affifting to the interefts, increafing the power and the commerce, extending the navigation, and thereby promoting the welfare of Great-Britain; or, in other words, conducing to the induftry, the inder endency, and the happinefs, of their fellow citizens, and fellow fubjects, who are the inhabitants of this their Mother-Cuuntry.
To judge to what degree our new acquifitions in the WEST Indies may be likely to anfwer thele defirable purpofes, it will be requifite to obferve that general arrangement of things, which has fince the peace of $1-63$, taken place in this part of the world. There is not now an inand fmall or great in the Weft-Indies, the right to as well as the poffefion of which, is not, pretty clearly afcertained, and this without introducing any new powers into America, which might have proved prejudicial to our interefts. By thus adjufting"the feitlements of different ftates, an end is put, at leaf as far as human forefight reaches, to their ambitious views.
In virtue of this adjuftment, many of our old plantations will avail themfelves of thofe fupplies of Timaer, from whicia
they have been for many years precluded. The run-away Negroes will not be able to fheiter themfelves any more in uninhabited iflands, and thofe impediments to, and embarraffments of our navigation, which have been often levercly felt, and in confequence of which fo many frequent and loud complaints have been made to almoft every government in our colonies, will be now removed, by the taking away of the caufes.
By this means, illicit commerce will be greatly leffened. It will be a great encouragement to induftry, by taking away thofe temptations to perfons of unfettled tempers of roving into illands of no fettled government, where of courfe men were at liberty to purfue their private advantage, at the ex pence of the public intereft. From the fame reafons, we may expect that Piracy, which has fo often afflicted the honeft planters, mainers, and fair traders in the Welt-Indies, will not eafily revive, as all the ports and places to which thefe lawlefs people were wont to refort, will no longer exift, at leaft in the manner they did; and this as it will be an advantage in common to the colonics of all nations; fo it will to our own in particular, from the value and extent of our commerce, which rendered it more frequently a prey to thofe eremies of mankind.
In virtue of this regulation, we fhall have a new and a very confiderable province in the Weft-lndies, compofed of iflands well fituated as well for their correfpondence with each other, as for their general intercourfe with Great Britain. Thofe in their infancy, will be fheltered by the force that there is at prefent in Barbadoes, and in proportion as they become better fettled, they will in their turns be enabled to fend affiftance to that ifland, or as that is the ufual rendezvous of our expeditions, will be in a condition to furnifh their refpective quotas, when neceflary in fucceeding times: thus thefe inlands will add mutual frength and benefit to each other. Our old fettlements alfo may gradually difburthen their fupernumerary inhabitants on territories belonging to their mother-country, inftead of reforting, as it is too notorious that great numbers have done, to Danish and Dutch fettlements.
By this new diftribution of property, we are brought much nearer to the Spanith main; and this in time of peace, may enable us to furnifh them with fupplies of Negroes and other neceflaries, which they have long received from the French and Dutch. In time of war again, we have from thefe illands, fuch evident and fuch effectual mears of keeping their fleets in awe', interrupting all correfpondence between their fettlements, and making defcents upon theifr coafts, as with the experience of their paft loffes, will very probably difcourage that very nation from breaking haftily again, with thofe who have fo much more in their power, and may eafily embarrafs and interrupt their commerce.
If we advert to the alteration this new diftribution has made, in regard to the French in thofe parts, it appears plain enough from what has been already faid, that they will lofe the conveniency of raifing vaft quantities of frefh provifions, as well as confiderable fupplies of valuable commodities, which they conftantly received from thofe that were then fitied neutral, but fo far as this went, were really French inlands. They will likewife lofe the advantage of felling Timber, and building Sloops, and even larger veffels in Dominica and St. Vincint, as they were accuftomed to do. Befides, they will be deprived of their communication with the Indians in the one, and with the Indians and free Negroes in the other of thefe iflands, from whence they derived by their own confeffion, fuch fervices as were productive of various advantages, exclufive of the check they kept upon us. They will no longer enjoy the turtle and lamentin fibing round the coafts of Tobago, which was their annual refort, but will for the future be confined within the bounds, and to the coafts of their own iflands.
Thefe confequences, when taken together, will bring very fenfible difficulties upon the French planters, by conftraining them to employ greater pains, and a larger, number of hands for procuring thofe neceflary fupplies, which they formenly received in great abundance, with little trouble and very fmall expence. It will alfo follow, as all who are acquainted with thefe countries muft know, that from being thus ffreightened, they will be compelled to the employing more Negroes; and yct even with this increafe of flaves, lefs will be done in their fugar plantations than formerly, when almoft all their wants with refpect to fubfiftence, and even with regard to buildings, were fupplied upon fuch eafy terms. In this fituation likewife as many veffels of different fizes were continually occupied in their intercourfe with thefe infes, with which they can now have no further connection, their navigation muft be diminifhed, and will of courfe decline.
By parting with Granada and it's Dependencies, they have not only lof the produce in fugar, coffee, cotton, \&c. of that illand, which was not inconfiderable; with all title to thofe improvements, which as appears from their own authors, they were fully convinced might be made therein; and the advantage of thofe fafe and commodious ports, which bave been defcribed, but likewife the facility which they derived from thence, of fuccouring all their illands, even when
we bad fuperior fquadrons in thofe feas; to which for the furure, they mult in cafe of war be inevitably expoled. By the fame ftep, they have deprived themfelves, on that lide at leaft, of the intercourie they had with the Spaniards, and mut bereafter run much greater bazards than formerly, in receiving, when their neceffities require them, fupplics of provifions and military fores from the Dutch.
The inand of St. Lucia left to France by the late definitive treaty, is fituated 24 leagues weft-north-weft from Barbadoes; 8 leagues fouth from Martinico; fomething more than 7 leagues, north-eaft from St , Vincent; 27 leagues; fouth from Dominica; 70 leagues, fouth ealt from St. Christophers; 45 north-weft from Tobago, and about 35 north from Granada. Thus we fee at one view, how this inand is difpofed, as well with regard to our own as to the French inlands, upon which it's importance is juftly fuppored to depend.
By the beft accounts we have, and particularly that of Captain Uring, who was very attentive in his examination of this ifland, when appointed by the late duke of Montague, if is 22 Englifh miles in length, 11 in breadth, and fomewhat more than 20 leagues in circumfereace. It appears, therefore, to be in point of fize, fomewhat larger than our fliand of St. Vincent ; but is inferior in that refpect to Dominica and to Granada. Captain Uring, whe landed a confiderable number of men, fays that the heat being tempered by the breeze from the fea, renders it equally wholfome and pleafant; but then he acknowledges, that in a fortnigttis time, his people grew fo weak and fickly, as to put it abfolutely out of his power to defend himfelf againft the French, even if they had rot invaded the ifland, as they did, with great fuperiority of numbers. It is alfo owned by us, as well as all the French writers, that it is as much, or more infelted with venomous ferpents than Martinico. The a'ppearance of this ifle is rugg'ed and mountainous; towards the fouth-weft extremity, there are two high fugar-loaf hills, by which the illand is eafily known. They are very fteep, and the air on their fummits very cold. There runs alfo a long range of mountains, fome of which are of great height, along the windward fide of the ifland, but at the bottom of thefe, there is a fine plain; near 15 miles long, and between 2 and 3 broad; the foil of which is very rich and fruifful. There are befides thefe already mentioned, feveral other mountains, with pleafant vallies between them. The foil in general, is much of the fame nature, and held to be very little, if at all inferior to that of Mattinico; fo that there is no doubt if it was equally cultivated, it would yield extraordjinary profit, more efpecially, when the country is effecturlly cleared, which, a few fpots excepted tiear the fea coaft, is at prefent overgrown with wood. The French have a tradition, which, however, is generally believed that there is a very rich filver mine upon this iland, which fome even of the inhabitants of our illes think has a foundation in truth, and others apperehend to have been thrown out on political motives.
There are few iflands in Amierica, better watered in all refpects than this. Many rivulers run from the mountains into the fea on both fides, and in all of them, there is plenty of different kinds of filh. There are others that take a ferpentine courfe through the meadows, and render them very luxurious. Springs of frefh water are common almoft every where, and towards the north-weft end of the ifland, there is a large pond or fmall lake. In fome of the vallies, the country is marthy; but, if once fully inhabited, thefe might be cafily drained, which would add to the falubriety of the air.
The produce of this illand in it's prefent condition, is chiefly Timber of all forts, in vaft plenty and great perfection. There are likewife all kinds of ground provifions, raifed wherever there are people. The country abounds with wild hogs, with fowl of all kinds, tame as well as wild; a valt variety of different forts of fifh, and of thefe alfo there are a furprifing quantity upon the coaff. The French many years ago reforted thither chiefly on that account; they then fell to the cutting of timber, for the ufe of the inhabitants of Martinico; after this they began to build boats, barks, and at length hhips, inviting and encouraging Englifh and Dutch carpenters to come hither for that purpofe; for in thofe times there were no regular fettlers, but the French from Martinico, fent hitherto occafionally fuch fort of people as were troublefome in that colony, and unwilling to bear the reftraint of laws. By degrces a better fort of people chofe to try their fortunes there, began to clear confiderable fpots of ground, on which they gradually raifed very profitable plantations. The chief commodities they raifed, were $\mathrm{C}_{\mathrm{A}}$ cao, Cotron and Indigo, in which they were very fucceffful. This naturally increafed their numbers, and the trade between St. Lucia and Martinico, has been for miany years, though now and then interrupted, of great value. The Britifh nation bad long entertained an earneft defire of adding St. Lucia to the reft of her poffeffions in the WeftIndies, for which fome juft, and many plaufible reafons were affigned; at the time more efpecially, when the duke of Montague obtained his grant. It was then alledged, that the ifland was wonderfully fertile, that it abounded in Tim-

## L E E

ber, which was much wanted in our iflands; that it was excellently watered, had many convenient bays, and at leaft one very fine port. The object then principally in view, was the planting of Cacao; and it was afferted that this ifland would produce enough of that commodity to furnilh all Europe. All thefe confiderations refpected its value; but there were befides thefe fome other, from which it was held to be of ftill greater confequence. It was judged an advantageous thing, to interpofe one of ours between Barbadoes and the French illands; it was thought from the known advantages of its bays and ports to be very commodious for our fquadrons, and it is believed that it might in many refpects, prove a great check upon the French. It may to the wind ward of Martinico, and fo near it, that nothing could be done there, without our having immediate intelligence. Defcents upon that, and upon the reft of the French iflands might have been facilitated thereby, and all their naval operations muft have been embarrafled at leaft, if not totally fruftrated, if we were once mafters of that ine. All theie ideas being placed in the ftrongeft point of light, heightened by the mof advantageous reprefentations, and nobody undertaking, what indeed would have been thought an invidious talk, to call them to a critical examination, a general opinion from thence prevailed, that among the neutral inlands', there was not one comparable to St. Lucia. Some objections, however, have fince frarted, and thofe too of a nature, that may poffibly render them worthy our notice. We now know from experience, that the country is very far from being healthy. It is fo full of venomous creatures of different fizes, that the French fettled there, were never able to ftir abroad but in boots. It is not only very mountainous, but even the flat country, is full of marfhes. It lies fo immediately within the view, and under the power of the well-fettled colony of Martinico, that without being at a great expence in fortifications, and keeping a conftans military force there for its defence, we could fcarce hope, that it would ever have been thoroughly fettled. If even with the affiftance of fortifications and a regular force, it had been fettled, it might have been found impracticable to fecure it, as there are fo many landing places in different ports of the ifland; and as incafe of a war, this fmall fettlement would have been immediately expofed to the whole ftrength of the French iflands, fo that the inhabitants might have been ruined, before any affiftance could have been fent them; and this, if the country had been. recovered, or quitted by the enemy, would certainly have difcouraged our people from fettling it again. As the cafe now ftands, the French are liable to all thefe inconvenieticies; and whoever confiders the fituation of this ifland, and of thofe belonging to us in it's neighbourhood, and reflects at the fame time, on the fuperiority of our maritime force, will fee, that in tikfe of war, it muft be a very precarious poffeffion; more efpecially, if fo thoroughly fettled, as to make the conqueft of it a matter of much confequence to us.
The French judged Martinico could not be fecure without St. Lucia; but they were ftrangely prepoffeffed with the notion of St. Lucia, not to difcern that we poffefs in DomiNICA, much more than we could poffibly have had, if we had kept St. Lucia. For Dominica lies in the very middle of the channel, between Martinico and Guadaloupe; to windward of the laft of there illands, and not fo much to leeward of the former; but the veffels can eafily fetch the road of $\mathrm{St}_{\text {. Peter, }}$ which is its principal town and port from Dominica. We have in that ifland alfo to leewatd Prince Rupert's Bay, and to windward, the Great Bay; fo that having Barbadoes to the windward of all, and Antigua to leeward of Guadaloupe, it is impoffible in time of war, that either trade or fupplies fhould get into thofe French illands. We have before remarked, that Dominica is an ifland of large extent, very fertile, and of great natural ffrength ; and being once effecually fettled, which ought to be, may be defended againit any force whatever. Whereas $S_{\text {t. Lucia is fo acceffible on every fide, that it muft of ne- }}$ ceffity fall to a fuperior maritime force. It was in this fenfe that it has been fuggefted, that the want of Ports, with which Dominica is reproached, is, its fituation in the midft of all the French iflands confidered, fo far from being a defect, that it is in reality a convenience; for two ports may be eafily fortified and defended; whereas it would be endlefs, to attempt the fecuring twenty.
Father Labat who was not only a very intelligent perfon, an inquifitive and ftrict obferver, and an eye-witnefs of all he wrote, but alfo an engineer, and in that capacity, relied on, for fortifying feveral places in the French iflands, in the firft year of the current century.
This ingenious perfon, after giving us an account of DomiNICA, which he very carefully examined; and according to the cuftom of the French, in refpect to all places not in their poffeffion, having done his utmoft to put it in as low and depreciating a light as poffible, proceeds thus: 'Though ' after all, this is an ine of very little importance; the Eng-- lifh have notwithftanding made many attempts to eftablifi - themfelves therein, founded upon certain pretenfions which ' the French have always oppofed, not only becaufe they Vol. II.

## L E E

? were in themfelves void of any reafonable foundation, biut the rather, because if this island should be once in their hands, it would serve to cut off the - communication between Martinico and Gua' daloupe, in a time of war, and reduce the in'' habitants of both isles to the last extremity.' The proportion between the property, and confequefitily between the power of Great-Britain and France in the WEsTIndies, is now extremely altered to what it was before and fince the conclufion of the laft peace of 1763 . Our property in the former period, compared to theirs, was no more than as ONE to FIVE; whereas it is now almoft as TEN to FIFTEEN, or nearly as Two to three. If therefore; when we were in fo much a weaker ftate, we were ftiil able to protect everi the fimalleft of our iflands, during all the late wais betweent the two crowns, and in a condition to conquer almoft all theirs; fhall we have any reafon to fear what may hereafter bappen; when in confequence of fettling our new acquifitions, we Thall have acquired, as we neceffarily muff; fo large an acceffion of force?
Moreover, the fituation and difpofition of our inands give us, in refpect to France, fill greater advantages. Our northen inlands will remain what they always have been, a perpetual check to them on that fide. Dominicalies, as fhewn, ir the very center of their poffeffions, fo as to command and diftrefs the navigation equally of Martinico and Guadacoupe. At the fouthern extremity again, we have Granada, and all the iflands belonging to it, conneged with St. Vincent; from whence we have an eafy correfpondence with Barbadoes, and a rumber of fafe and commodious ports; to which our Fleets may at all times refort; all which confiderations, taken with their united force, may banifh the apprehenfions of danger to our old or new colonles, in cale of a future rupture with France.
Relative to thofe benefits that will probably refult from thefe new acquifitions to the prefent and future ages, it will be neceffary to obferve, that upon the firft view an objection may arife from the fmallnefs of thofe iflatids, which are very diminitive, if put in ballance with the French; and fill more fo, if they fhould be compared with thofe that the Spaniards poffefs in the Weft-Indies. It does not however, follow from thence, that they are either infignificant or inconffderable. When we come to examine this matter more attentively, we fhall find, that this very circumftance which frrikes fuperficial obfervers in one light, will appear to competent judges in quite another:
In the firft place then, they enjoy a purer air, from the fea breeze paffing conftantly over them, and when cleared of fu-: perfluous wood, as they will be for cultivation, continually pervading them. This is a natural effect arifing from their fize, and mult render the climate at once more temperate and more wholfome. The foil too, in thefe fmall iflands, is more fertile, more capable of being manured, and in many refpects more eafily cultivated, than in larger inands; they are therefore, capable of being more eafily, more fpeedily, and more compleatly fettled, than if their extent was larger: all of which are inconteftible advantages.
Befides, from the vicinity of the fea on every fide, and the facility of fifhing round the coafts, the inhabitants of fuch iflands derive the means of conftantly fupplying themfelves with a confiderable part of their fubfiftence, wuth little labour and at an eafy expence; with this additional benefity that the advantages arifing from thence, which could not be the cafe in a large country, are alike common to all the inhabitants. This extent of coaft in proportion to that of ter ${ }^{2}$ ritory, is allo very favourable to commerce, as might be fhewn in variety of inflances, if it were not too obvious to need animadverfion. It is no lefs apparent, that fuch inand's for the fame reafon that makes them eafier fertled, are alfo eafier defended, which is another point of no little confequence to the colony and to the mother country.
The illands of which we are fpeaking, have befides thefe general advantages fome that are peculiar to themfelves, and which alfo are of no fmail importance. They are; as appears from the defcription of each of them; exceedingly well watered, and this by running freams; which will afford their inhabitants the conveniency of erecting water-mills, machines that are more ufeful and lefs expenfive, than either wind-mills, or thofe in which cattle are employed. The ridges of hills from which thefe rivulets run, render the feafons more regular in thefe iflands; and there is at leaft a ftrong probability, will exempt them, if not totally, yet in a great degree, from thort crops, the heavieft of all misfortunes to a planter, and to which the French as well as our iflands are very frequently fubject.
As thefe natural benefits of fmall inands are thus capable of being demonftrated by reafon, fo the effects that might be expected from them, are juftified likewife from experience. If we confider the larger iflands in the hands of the French; we fhall find that their produce bowever confiderathe, is not in proportion to the extent of country, as the French writers themfilves acknowledge, and as our counrrymen, who have been upon thofe iflands, and who have carefully attended to this particular, likewife admit. The fame thing is yet
more viible, in regard to the Spaniards, who poffers at once illands the largeft and the lealt profitable in the Weft-Indies. The Dutch on the other hand, have found means to render the fmallett, and in point of foil and climate, the worft ifland in the Weft Indies, by dint of k ill and of induttry, wonderful flourifhing, exceeding populous, and of courfe highly beneficial.
Yet in this refpect, the experience arifing from the Ikill and fuccefs of our own planters, goes beyond that of all other nations; and if we confider their early improvements, and the vaft extent to which they have been carried; and at the fame time reflect, that thefe have been owing to no one circumftance more than to the fmallnefs of their iflands, which for the reafons already given, enabled them to get the ftart and to keep it fo long from the French, will abundantly fatisfy every judicious and impartial enquirer, that what we have been laying down, is not more confiftent in fpeculation, than evident from the light of facts.
The new iflands taken all together, contain upon the moft moderate computation, twice the quantity of ground capable of cultivation, or at lealt very near it, that there is in Barbadoes, and the relt are all confiderably larger. In refpect to their foil and climate, they are indifputably to the full as capable of improvement, as any of thofe that have been improved by our induftrious countrymen in fo high a degree. Why therefore in a reafonable fpace of time, may not we, or our pofterity at leaft, expect to derive twice as much from them?
'Thefe new colonies', like our old ones in that part of the world, muft depend entirely upon us, and draw from hence every necellary, every conveniency that they want, either for their own !ubfiftence, or for carrying on their plantations; and how extremely beneficial this is, and fo confiderable an increafe will it be to the mother country, has been explained. It is requifite only to mark, that we fhall not be obliged to wait for all, or even the greater parts of the benefits of this commerce, till fuch time as thefe iflands are fully and compleatly fettled, fo as to vie in their productions with our old illands ; but on the contrary, our exports to them, and of confequence the profits upon thofe exports, will very foon commence, and of courfe we fhall immediately reap great advantages from them. The reafon of this is obvious; for tho' our old colonies require annually many things, our new ones will require all; and 'tis eafy to diftinguifh the differ ence that there mult be, in fupplying the vaft variety of things requifite for fettling new colonies, and the furnifhing the annual fubfiftence, together with the wear and tear in the old ones.
Nor is there any room to fear, that thefe new fettlers will not find wherewithal to make confiderable returns; for though this cannot be at firf done in Sugar, yet in Mahogany, Cotron, and a great variety of other articles it may; and the very balance remaining a DERT, will be a moft effectual fpur to induftry, and compel the new planters to work hard and to live frugally, as the original fettlers in our other iflands did, in order to procure new fupplies with that view, and to maintain and extend their credit.
The intercourfe between the new colonies and their mother country, as it muft from the caufes before-mentioned begin early, fo the advantages arifing from it will diffufe themfelves generally over the whole inland of Great-Britain; indeed thro' the whole fphere of the Britifh dominions in Europe, fince very large quantities of linens and falt provifions, will be exported for the ufe of the new fettlers and their fervants, from Ireland; and in procefs of time, as they fhall become more numerous, we may with great probability hope, their increafed demands will, in a great meafure, abforb thofe fupplies with which the inhabitants of that ifland have hitherto furnihed the French and Spanifh hips, and contributed thereby to their navigation much cheaper than otherwife they could have done.
But it is requifite farther to obferve, that exclufive of the benefits flowing from their direct trade with us, they will bring us likewife confiderable advantages, by the encouragement they will afford to other branches of our commerce. The African trade, more efpecially at the beginning, will receive a new fring from their demands, fince all that they can do either at prefent or in future, muft arife from the labour of negroes. The fupplying them with flaves, therefore, will be both an inftantaneous and a continual fource of wealth, to fuch as are employed in that lucrative trade ; more efpecially to thofe who have the largeft fhare therein, the merchants of London, Briftol, and Liverpool.
We have before feen, how this trade comes to be of fuch importance to Great-Britain, as it is carried on principally with our own manufactures, and more efpecially with woollen goods of different kinds, to a large amount; and in all the incidental profits, exclufive of what is produced by llaves, which arife from our correfpondence with Arrica, whether obtained by the purchafe of elephants teeth and gold duff, upon the coalts of that country, or from the fale of commodities to foreigners in the Weft-Indies, finds its way hither. On the winding up of the account, therefore, as the fale of the negroes centers in the Weft-Indies, the profits arifing
from them, and every other acceffion of gain, centers islitmately here, and becomes the property of the inhabitants of Britain.
This will appear with greater degree of evidence, when we reflect, that more than the moiety of that past of the cargo for the African trade, which is not made up of our own goods, confilts of the manufactures of the Eaft.Indies. Befides the quantity of India goods employed on the coalt of Africa, there is likewife no fmall demand for the fame commodities in our old Sugar Colonaes, and of courfe there will be the like demand in our new. We feefrom bence, how the comprehenfive chain of commerce is united, and how the different products of the moft diftant parts of the world, are carried to and broughe from thefe diflant countries in Britifh hipping; and that all the emoluments arifing from this extenfive navigation, is in the end the reward of the confurnmate fkill, the indefatigable induftry, and the perpetual application, of the traders in this happy inle, and how it is to be augmented and fupported by our new acceffion of territory. The prodigious compals of this commercial circulation, would after all be defectively reprefented, if we fhould omit mentioning the conftant correfpondence that fubfifts between the Sugar Islands and the Northern Colonies. A correfpondence equally neceflary, and reciprocally advantageous to thofe of our countrymen who are fettled in both; and a correfpondence, therefore, which will be always maintained, and by which the numerous fubjects of Britain who are feated on the continent of America, and thofe fettled in the West-Indian Islands, in purfuing their own immediate interefts, contribute effectually to each of their fupport.
This is a circumftance, that muft fill the breaft of every wellmeaning man with the higheft and moft rational pleafure; and engage him to $c=n t e m p l a t e ~ t h i s ~ f u b j e c t, ~ w i t h ~ a ~ f a t i s f a c-~-~$ tion which warms the heart of a parent, when he fees his children affiduous in their application to thele methods of providing for their welfare, which have a tendency to promote their common interefts, by which their commercial harmony doubles the effects of their mutual induftry.
The northern colonies fupply the Sugar-ISLands chiefly with lumber and provifions. Thefe are the fruits in a great meafure of their indefatigable induftry, to the rendering their labour fubfervient to their profperity. By this means, they difpofe of numerous bulky commodities, derive immenfe advantages from their fifheries, fupport an extenfive navigation; which is fo much the more profitable to them, as it is entirely carried on in thips of their own building; circumftances which, to the eye of a judicious reader, will place this trade, and all it's beneficial confequences that attend it, in a very confpicuous and interefting point of view ; and convince him, that nothing can be either more convenient for thefe people, or more to their profit.
On the other hand, the benefits that refult to the inhabitants of the Sugar Colonies, are not lefs confiderable. They draw all thefe neceffary fupplies from the neareft, and confequently from the cheapef markets; markets inexhaufible, and upon which they can always depend. Thefe are brought them by their countrymen to their own doors; which is a circumftance exceedingly fuitable to their fituation, as it fpares them the pains and labour requifite to provide them, which would otherwife be a great drawback on their induftry in their own plantations. Thefe fupplies they pay for in their own manufactures, which is another great advantage; from all which circumftances taken together, it clearly appears, that the convenience of this correfpondence, and the benefits refulting from it, are equally on both fides, and exactly fuited to the genius, temper, and fituation of the people, by whom it is thus carried on.
By confidering attentively this conjunction of interefts, we cannot but plainly difcern, that by thefe new Acpuisitions in the West-Indies, new markets are opened, to which our new Subjects on the continent may refort. Thefe iflands will certainly in time more than replace to the people of CANADA, the trade they formerly carried on to the FRENCH Colonies; and will at the fame time, enable our other fettlements upon the Continent, to find new cuftomers for all their commodities, without leaving them that colour of neceffity, which was the only excufe they had to plead, for fupplying our rivals with the materials cfientially requifite to their manufactures, and of courfe detrimental in the fame degree, to thofe of our fellow-fubjects. Befides, as the increafe of our Sugar Islands affords them the increale of commerce, fo from their fituation they will be a great bar to that illicit Trade with the French, which cannot for the future be carried on with the fame facility as before.
As the inhabitants of the Sugar Colonies are continual purchafers from fuch as are fettled upon the continent of America, the amount of their purchafes confitutes a ballance from them in the favour of all thofe who difpofe of them. But on the other hand, the inhabitants of the Northern Colonies, drawing large and conftant tupplies of commodities and manufactures from hence, we for the fame reafon have a like Ballance in our favour againft them. It is evident, therefore, from this deduction, that by their tranfferriag the Bablance due to them, in fatisfaction for that
which is due from them to us, the whole accumulated profits of thefe tranfactions ultimately centers with the inhabitants of Great-Britain. Such are the certain, the perpetual, the prodigious benefits that acctue to us from our Plantations.
There will be room in thefe new iflands, for attempting many things, and improving more. The planting Cacao walks cannot be confidered as impracticable, fince we fee the French have fucceeded in it; and fo no doubt might we, at leaft in a degree fufficient to furnih our own confumption. We have Coffee already in our iflands, but it would certainly turn to more account, if the culture of it was better underftood; in order to which, pains fhould be taken to be thoroughly informed of the manner in which it is managed in Arabia; fince it is not at all improbable, that the Flayour, in which only our coffee is deficient, depends upon the culture, and the method of curing it. Tea, if we may believe the French, is a native of the Weft as well as of the Eaft-Indies; in refpect to which it would be certainly right to make fome enquiries, and in confequence of them fome experiments; and if from thence it fhould, if it is not already there, it might eafily be carried thither, and a trial made whether it might not be cultivated to advantage.
It has been no difficult matter to introduce black Pepper. Rhubarb, Senna, and feveral other valuable Drugs, are faid to have been raifed by curious people in great perfection. If the culture of thefe and other medicinal plants, were once undertood, they might be rendered profitable articles in commerce. The laudable fociety for promoting arts and manufactures, have given feveral premiums with refpect to Sarsaparilla, and other things; and it is to be wifhed, that thefe endeavours, fo well intended, may have good effects; for the ancreafing the number of our commodities, appears to be a thing of confequence.
The fuccefs attending thefe, or any other experiments of the like kind, might become the means of improving many fpots of ground, that would otherwife prove ufelefs; as it is well known, that either lands worn out, or which are utterly unfit for either Sugar or Cotton, might be employed for Cochineal. The raifing a variety of commodities, would prevent the loffes that enfue from fhort crops; as feafons unfavourable for fome things, might be advantageous to others. Befides, in refpect to many things that have been mentioned, the cultivation of them might be carried on with fewer negroes, and yet afford a comfortable fubfiftence to white families, the increale of which in our colonies, is an object of great importance, and is a matter entirely and conftantly attended to by the French. Add to this, that though Tea, Coffee, and Chocolate, are at prefent notimproperly confidered as articles of luxury, they would be much lefs fo, if they only, or even if they principally, came from our own plantations; and the confumption of them, fhould it become greater than it now is, would likewile promote and increale the confumption of our great ftaple commodity, Sugar. In thefe, and in various other lights, fuch improvements would be found of gicat confequence, and are, therefore, extremely well worthy of confideration,
The fectlement of thefe new inlands, will be no detriment to our ald colonies. It has been generally allowed, that there was a want of more fugar land in the Weft-Indies; and this being admitted, it is certain that Britain is a great gainer by thofe acquifitions, which put fo large a quantity of land fit for the cultivation of SuGAR into our poffeffion. This was not only an opinion, in refpect to the truth of which the beft judges agreed, but it was a point alfo decided from matter of fact; becaufe it is known, that numbers of Britifh fubjects reforted to countries in the poffeffion of other powers. No one will deny, that many Englifh fubjects are fettled in the Danifh fettlement of $\mathrm{St}_{\mathrm{T}} \mathrm{CRUZ}$; that there are many refident in Eustatia, and that many more are interefted in the Dutch fettlements upon the continent of America. It became, therefore, highly neceffary to remove this evil, by giving fuch adventurers an opportunity of exercifing their induftry, in countries belonging to their mother country; and to thefe it is reafonable to prefume, this opportunity being given them, they will return. Befides, as from thele facts it appears, that our old colonies began to be over-ftocked, fo as to afford little encouragement to new planters, it was incumbent on us to have an eye to this circumftance, to prevent fuch enterprifing people, who were determined to feek their fortunes in thofe parts, from being driven into foreign ettlements; where their labour and indultry, inftead of benefitting us, would continue to turn to the advantage of our rivals; and foreign markets would have been fupplied, for the profit of foreigners, by commodities raifad by the fkill and pains of Britioh fubjects.
We cannot but obferve from what has already happened, that people who are indigent here, would go in fearch of fubiftence eliewhere; and we muft alfo be fenfible, that by providing countries for fuch people to refort to, their induftry, though not their perfons, will till be preferved to Britain. By that increafe of trade which their labours abroad will gradually produce at home, the number of our neceffitous people here will be greatly leffened. There will be
larget quatities of our commodities and manufactures wainted; that are requifike in our plantations; and to fupply thefe, numbers muft be fet to work, who are either now idle for want of it, and ale fubfifted by the poor's rate; or take mehods of fubfifting them, more injurious to the public, and much lefs to their own advantage and comfort, than if they betook themfelves to honeft labour here, or even went abroad to thefe new iflands. See Sugar Colonies.
LEICESTERSHIRE, is an inland county in England, having Lincolnfhire and Rutlandhire on the eaff ; Northamptonfhire on the fourh, Warwickfhire on the weft; and Derbyfhire and Nottinghamilare on the north; and is in circumference about 100 miles.
The air is very fweet and wholfome, but the foil is very different, according to the feveral parts, being in fome places very rich and fruitful, producing wheat, barley, and oats; in others barren and rocky. It's moft natural and plentiful crops are beans, which, in fome places, are fo luxuriant, that, towards harveft-time, they look like a foreft.
There are no manufactures in this county, except it be ftockings, which has been of late greatly encouraged.
The great want of fuel, in the inland counties efpecially, is fupplied by a very rich coal-mine, at a place called Cole-Orton, from whence it is fold at good rates to the neighbouring counties.
Leicester, the fhire-town, is a large and populous place. The inhabitants have greatly improved the manufacture of ftockings, vaft quantities of which are wove by frames, in this and many other neighbouring towns and villages; and in fome years it has returned 60, cool.
Ashby De La Zouch, a very pleafant town, has a plentiful market; and it's fairs, which are held on Whit-Tuefday, the 24th of Auguft, the 18th of October, and on St. Simon and Jude, are famous for being well ftocked with young hories of the large breed.
Melton Mowbray, a large well-built town, has a market the moft confiderable for cattle of any in this part of England. LEINSTER, a province in Ireland. This province is wafhed on the fouth and eaft by the fea; has Muniter and Connaught on the weft and fouth-weft; and Ulfer on the north; and is about 360 miles in circumference.
It has a temperate clear air, a foil fruitful in corn and pafture, and, though in fome parts woody, abounds in general with cattle, fowls, milk, butter, cheefe, fifh, \&xc.
It's principal rivers are, the Barrow, Boyne, Liffy, Neur, Slane, and May.
It is divided into the twelve following counties, viz.
I. Louth County, which has St. George's Channel on the eaft; Monaghan and Eaft Meath on the welt; Armagh and Carlingford Bay on the north; and Weit Meath on the foutheaft. It is the leatt county in the kingdom.
Carlingford is one of the beft harbours in Ireland, at the mouth of the Neur; but, the town being a little out of the way for bufinefs, the trade is not equal to the extent of the harbour. They ufe the coal trade to Whitehaven, as alfo the fifhing in the feafon, which is the life of trade on all this fide of Ireland, efpecially north.
Dundalk is the fhire-town, and has a good market, but little or no trade.
Drogheda, which fands on a bay of it's own name, has a good harbour, but of difficult entrance. The town is populous, and has fome trade to the north parts of England, and is fupplied with coals from Whitchaven, which chey fend to all the country round.
II. The county of East Meath has thofe of Cavan and Louth on the north and north-eaft; Kildare on the fouth weft; Weft Meath on the weft; with Dublin county and the ocean on the ealt.
Trim is it's chief, if not only town of note, but is not a place of any trade.
III. West Meath, fo called in refpect of it's fituation from the former, lies between King's county on the fouth, and Longford on the north and runs weft to the Shannon, which parts it from Rofcommon. It is well watered with rivers and lakes, but intermixed with bogs.
Molingar, which lies in the center, is the bead of the county by act of parliament, and a market-town of confiderable note and flrength.
IV. The county of Longford has' Weft Meath on the eaft and fouth; Cavan on the norrh; and Rofcommon on the weft.
V. Dublin County is wahed on the eaft by the Irim Sea; has the county of Kildare on the weft; Eaft Meath on the north; and Wicklow on the fouth.
Dublin, the metropolis of the whole kingdom, is pleafantly feated on the Liffy, and is the grand mart, and the center of commerce for Ireland, eípecially for the communication of trade with England; and though Cork is the chief port for trade to foreign parts, and for exportation of provifion to the Weft-Indies, a trade of great importance to lreland; ye: that of Dublin is greatly fuperior in this particular, viz. that, by it's great import of all kinds of merchandize from all pats, either directly, or by way of England, it has the chief part of the inland trade. The only misfortune of this city is, the
deficienc:
deficiency of it's harbour, occafioned by the bar, where fuch heaps of fand are brought in by the tides, that it is difficult of ntrance for loaden lhips, except at fpring-tides, and even then hips of great burchen dare not venture in; nor, when they are in the havin, can any thip come to the kay that draws above even or eight feet water.
The city is fupplied with coals from Whitehaven in Cumberland, and Swanzey in Wales, in fuch great fleets, that it is common to fee 200 fail of colliers in the road at a time.
VI. The county of Kildare has thofe of Dublin and Wicklow on the eaft; King's and Queen's counties on the weft; Catherlagh on the fouth; and Eaf Meath on the north.
Nass is the fhire-town, but Kildare the capital of the county.
VII. King's County bas a part of Tipperary on the weft; by which, and Queen's countr, it is bounded on the fouth; by Kildare on the ealt; and Weft Meath on the north.
Bally Bay, in this county, is a well-fituated thriving plantation, near the center of it.
VIII. Queen's County has King's county on the north and weft; part of Kildare and Catherlagh on the eaft; and Kilkenny and Catherlagh on the fouth.
Port-Arlington, a fmall town in the north part of the county, on the river Barrow, is reckoned a thriving plantation. But
Mountmellick, a well-improved town, is faid to be the beft market in the county.
IX. The county of WIcklow has St. George's Channel on the eaf; Kildare and Catherlagh counties on the weft; that of Dublin, and part of Kildare, on the north; and Wexford county on the fouth. A copper mine was difcovered here not many years ago, at the expence of Mr. Wayne, and other gentlemen of Briftol, which is like to bring them great profit for their undertaking.
The Gire-town is Wicklow, at the mouth of the river Letrim; but it has not any trade, except what is managed in fmall veffels, and chiefly to carry' provifions to Dublin, for the haven is good for nothing. It is famous for the beft ale in Ireland.
Dunlavin is a fine Englifh plantation, and a good market.
X. The county of Catherlagh has Wexford on the fouth; part of Queen's county and Kilkenny on the weft; part of Kildare and Wicklow on the north; and part of Wicklow and Wexford on the eaft.
XI. The county of Kilkenny, is bounded on the weft with Tipperary; on the eaft with Wexford and Catherlagh; on the fouth with Waterford; and, on the north, with Queen's county. This county is adorned with more towns and cafles than any other in the kingdom.
Kilkenny is a large, ftrong, populous, and wealthy city, with as good a trade as any inland town of that kingdom.
XII. The county of Wexford has St George's Channel on the fouth and fouth-weft; part of Catherlagh and Kilkenny on the weft; and Wicklow on the north.
Ross, on the borders of Kilkenny, is a town of good trade, by means of it's river, formed by the conjunction of the Neur and Barrow, which brings up thips of very confiderable burthen to it's kay.
Wexford ftands at the mouth of the river Slane: it is a large corporation, as well as the fhire town, and has a very good harbour.
LETTER of CREDIT, is where a merchant, or correfpondent, writes a letter to another, requefting him to credit the bearer with a certain fum of money.

## Form of a Letter of Credit.

## Mr. E. F.

S I R, London, May 10, 1753.
My laft to you was of the 15 th of March, wherein I wrote what was needful, in anfwer to your's of the roth of the fame month; and this ferves chiefly to defire you to furnifh and pay unto Mr. C. D. Englifh gentleman, to the value of two thoufand crowns, at one or more times, according as he fhall have occafion for it, and requeft the fame of you, taking his receipt, or bills of exchange, for the monies which you fhall fo furnifh him with, and put it to my account; and this my letter of credit thall be your fufficient warrant for fo doing.

To Mr. E. F. merchant
Your's, \&cc. A. B.
at Madrid.
Letter-Founder. He cafts types, or letters, for printers: there are but two in London ; 'till very lately we had types from Holland; but that excellent artift Mr. Caflon, having excelled all foreign founders, not only furnifhes us at home, but fends great quantities abroad.
Letter of Licence, is an inftrument, or writing, made by creditors to a man that hath failed in his trade, allowing him longer time for the payment of his debts, and protecting him from arrefts in going about his affairs. Thefe letters of 1 i cence give leave to the party to whom granted, to refort freely to his creditors, or any others, and to compound debts, $\& \mathrm{c}$. and the creditors covenant, that, if the debtor thill receive any moleftation or hindrance from any of them,
he Thall be acquitted and difcharged of his debt againit fuch créditor, \&c.

## The form of a Letter of Licence.

To all people to whom this prefent writing thall come, we whofe names are here underferibed, and feals affixed, creditors of A. B. of London, merchant, fend greeting : whereas the faid A. B. on the day of the date of thefe prefents, is indebted unto us, feverally, in divers confiderable fums of money, which at prefent he is not able to fatisfy unto us, without refpite and time to be given unto him for the payment thereof: know ye, thereforc, that we the faid creditors, for divers good caufes and confiderations us thereunto moving, have given and granted, and by thefe prefents do give and grant, unto the faid A. B. our fure and fafe conduct, and free licence, that he the faid A. B. Thall and may fafely come and go, and refort unto us, and every one of us, his faid creditors, to compound, and take order with us, and every one of us, for all and every of our faid debts, and to go about any other bufinefs to any other perfon or perfons whatfoever, without any trouble, fuit, arreft, attachment, or other moleftation to be offered or done unto him the faid A. B. his wares, goods, monies, or other merchandizes whattoever, by us, or any of us, or by the heirs, executors, adminiftraters, partners, or affigns, or by our, or any of our means ard procurement, to be fought or procured to be done, from the day of the date hereof, unto the full end or term of one whole year next enfuing: and we the faid creditors, whofe names are here underwritten, do hereby covenant and grant, and every one of us, for his own part, his executors and adminiftrators, covenanteth and granteth to and with the faid A. B. that if any trouble, wrong, damage, or injury, flall be done unto him the faid A. B. either in his body, goods, or chattels, or any of them, within the faid term of one year, next coming after the date hereof, by us, or any of us, his faid creditors, or by any other perfon or perfons, by or through the procurement, confent, or knowledge of us, or any of us, contrary, to the true intent and meaning of this our prefent writing of fafe conduct, that then the faid A. B. by virtue of thefe prefents, hall be ditcharged and acquitted for ever, towards and againft him and them, of us, his, and their heirs, executors, adminiftrators, partners, or affigns, and every one of them, by whom, and by whofe means, he fhall be arrefted, troubled, and attached, or damnified of all man,er of actions, fuits, quarrels, debts and demands, either in law or equity, from the beginning of the world to the day of the date hereof. In witnefs whereof we have hereunto fet our hands and feals, the, \&c.
Letters of Margeje, are extraordinary powers; or commiffions for reparation to merchants taken and defpoiled by ftrangers at fea, grantable by the fecretaries of ftate, with the approbation of the king and council, and ufually in time of war, $8 c \mathrm{c}$. Lex Mercat. Malin. 173 . If a letter of marque wilfully and knowingly take a fhip and goods belonging to another nation, not of that fate againft whom the commiffion is awarded, but of fome other in amity, this amounts to a downright piracy. Roll. Abr. 530.
The goods of others may be taken at fea by letters of marque, but not by any private authority, nor to be granted but where the party damaged bas juftice denied him, or illegally delayed. This law, or cuftom, was eftablifhed by confent of nations; and, without it, licence would be given to commit depredations, efpecially if only the goods of rulers were liable, who feldom podiefs any thing the injured can come at for fatisfaction.
But princes, by the laws of nations, are anfwerable for injuries public, and fhould, by the moft prudent ways, prevent thofe that are private, not fuffering even foreigners to receive wrongs; nor chould the prince, or perfon injured, value his misfortune fo low, as to deny him letters of requeft; and, if juftice be denied on fuch requeft, it is reaionable to arm him with power, to take fatisfaction by reprize. Ufually two or three letters of requeft are fent, before reprizal is awarded, and generally afign a time for reparation. King Charles I. after the maffacre at Amboyna, granted letters of requeft to the fates of Holland, for fatisfaction within eight months, or letters of reprizal were to follow. King Charles II. on petition of Meff. Goulor and Canham, granted one Lee, letters to the great duke of Tufcany, for redrefs againft the government of Leghorn. In the year 1674 , the fame prince, iffued Ietters of requeft to the king of Spain, for fatisfaction for the depredation committed on the fhip and goods of Mr. Stampe, who was robbed and murdered at the Havanna. He alfo publifhed a proclamation, promifing a reward for apprehending the offenders, dead or alive.
In the profecution of letters of requeft and reprizal, there mult be,
r. The oath of the party injured, or other good proof of the injury, and of the lofs thereby fuftained. 2. A proof of due follicitation for redrefs, in a legal way. 3. The deferring or denial of juftice. 4. A complaint to his own prince or ftate. 5. Requifition of juftice by him or them, to the fupreme ftate, where juftice in the ordinary courfe was denied. 6. Perfiftance in denial of juffice. And, after all, letters of re-

## L. E T

## LET

prizal, under legal reftrictions, and as the (pecial cafe requires, may iffue, both by the civil and by the ancient municipal laws of this kingdom: and the prince of the country muft repair the damage out of their effeets who caufed it, or, if that prove deficient, it fhould fall as a common debt on his country.
Legal reprizals are of two forts, ordinary and extraordinary: the firlt are either within or without the realm, and granted to Englifh merchants that have any wife fuffered in their.persons or goods, and upon fuit, or the king's demanding juftice by his ambaffadors, \&c. cannot obtain redrefs: who in fuch cafe fhall have a writ out of chancery to arreft the merchant fran sers of that nation, or their goods, here in England: and the lerd chancelior has always approbation of the king and council, or both, for fo doing.
Thofe without the realm are always by patent, and not ordinarily revokable, as, they'immediately veft a national debt in the grantee, to be fatisffied as the patents direct, out of the efferts of that prince's fubjects who refufed, or illegally delayed juffice. But, if, the peace of both fates reem to be endangered by attempting the execution of them, it may be refpited 'till a more convenient time; and princes, in granting fuch letters, are careful to have them made fo as they may not be reckoned a breach of the peace; but granting them for particular fatisfaction does not, in the ordinary way, amount to a breach.
As to the extyaordinary reprizals, they are by letters of marque, for reparation at fea, or out of the kingdom, granted by the fecretaries of fate, with like approbation of the king and council, but only during the king's pleafure, and ging and council, but
generally in war-time.
In king Henry the IVth's reign, on the grievous complaint of the commons for wrongs at fea, contrary to leagues, \&c. which were broken by the fubjects of other nations, a law was made, that, upon application to the keeper of the privyfeal, he fhall fign letters of requeft for reftitution; which, if not made in due time, the lord chancellor fhall grant letters of reprizal: and this confirmed by fat 4. Hen. V. cap. 7. and other ftatutes.
Butletters of reprizal were granted long before thefe flatutes, by the kings, nor was their prerogative diminifhed by them, but remained at common law, to judge when expedient to grant them; nor does the beforementioned act reftrain the king's prerogative therein.
The cafes where reprizals will or will not hie, are thus fated: on wrong judgment given in profecution abroad, in matters not doubtful, that might have been redreffed, and was perverted or denied, reprizal may be granted: if the matfer be doubtful, it is otherwife; for, in fuch, there is prefurmption juftice was duly adminiftered. "If an Englifhmän profecutes z perfon in any legal court beyond fea, and the military governor oppofes the fuit, and, by his means, the debtor and his goods are conveyed away, but a judgment is obtained, by his goods are conveyed away, but a judgment is obtained, by
this the execution is fruftrated, and letters of reprizal nall be had.
And yet if a merchant of England commence a fuit in the courts of law beyond fea, and judgment pafs againft him, and is confirmed by the fupreme court to which he appeals, though the complainant hath received a judgment contrary to the right of the caufe, here he fhall not have letters of reprizal ; but it may, according to the cafe, occafion letters of requeft, to have a rehearing.
If any perfon be killed, wounded, or any ways damaged in the territories of any potentate to whom letters of requeft are fent, and no redrefs be made, letters of reprizal may be iffued; but are not to be granted for damages to the goods or perfons of thofe refiding in foreign countries in time of war: in this cafe they mult fit down with the lofs, for they may relinquifh the place on the enemies approach.
It is not the place of any man's nativity, but of his habitation, that fubjects him to reprize : if, therefore, letters of reprizal be awarded againft the fubjects of the duke of Tufcany, and a native of Florence, but living in England, fhould have a flip on a voyage to Leghorn, it cannot lawfully be made a prize: and certain perfons, as well as chips and goods, are exempted, as ambafiadors, and their retinue, coming from him who awarded the prize, travellers, ecclefiaftical perfons, \&c. and a merchant of another place than againft which reprizals are granted, though his factor be of that place, is not fubject to reprizals. Molloy Jur. Mar. 21 .
Ships forced into port by ftrefs of weather, are exempted, by common right; but the laws of England fay otherwife, unlefs exprefsly provided for in the writ: and fuch flhip flying his own country for fome fault, and forced in by form, is lawful príze: but fhips may not be feized in any ports but of the prince who awarded the reprizals, or againft whom they are iffued.
If a Mhip, having letters of marque or reprizal, carry thofe fhe hath legally taken into a neuter port, the owners may there claim and feize her, or the admiral may reftore the fhip and goods to the owners, and fer the captives at liberty. Trin. 17 Car. I. in B. R. Marh's Rep.
If any frip that hath letters of reprize attack a veffel, and the refure to yield, the may be boarded; and, if any happen to

Vos. II.
be flain, the fault is their own, for hindering execution of a legal authority: but if it be thosic of another nation, ayamin whom commifion is not awarded, this is, downright piracy, and punifhable accordingly, Rol. Abr. 530 .
Though, if fuch letters o: marque be affiyned over to anothe perfon, who takes any fuch hip or goods, an a violent piefumption that it belonged to the right of him againt whom reprizals are granted, here, if the fufferers recover thip and goods, yet the captors are not to be punifhed criminaily, nor the grantees of the patents civilly; the captors are aniwerable for damages, but the grantees are entirely excutable, unit fs privy to the caption: it is like the cafe of an officer arreting a wrong perfon; he is anfwerable to the perfon arsefted, but not the perfon that employed him. Stat. 4. Hen. V. cap. 14. Sea Laws, $4 \%$ o.
A perfon who had letters of marque in the Dutch war, took, by miftake, an Oftender, and brought her into harbour, and was profecuted for damages, \&c. Anocher, having taken a French Thip, carried her into Africa, and the admiralty the re condemned her as prize: having fold her, and, coming in:o England, he was fued ia the admiralty, and fentence given againft him, though he appealed for a prohibition, but was denied. 1 Lev, 243 I Salk. 32.
A thip being lawfully taken, and brought into port, the captor mult exhibit all his fhip-papers, and captive mariners, to be examined; and, 'till the goods are legally condemned, bu'k ought not to be broken, nor may the captain permit embezzlement of the lading, or difpofe of any part, without comeniffion, for the king bath a thate in all prizes: and the common profits are to be equally divided among all the Chips prefent; fo that if letters are granted to two fhips, and both of them meet a prize, which one of them takes, although the other did nothing, he hath right to an equal thare, for the prefence of that veflel is a terror, and caufes a hip to ftrike fooner. 3 Eliz. cap. 5. 2 Leon. Rep. 182.
If the caption of any thip be by men of war, the property will be in the captors, except it be loft again, and recovered by the perfons from whom taken, or regained in battle. And, by the law of nations, the dominion of things taken with letters of marque becomes the captors, 'till the original damage, and fubfequent charges, are fatisfied; which done, the refidue is to be refored: and fo the Venetians ufed their equity, having taken the fhips of Genoa, they carefully preferved the lading, 'rill the deb't was paid, and then made intire reftitution. Molloy, 20.
If, düring a war between England and Holland, a Dutch man of war take an Englifh merchant-man, which is afterwards retaken; in fuch cafe, reftitution is commonly made, the owners paying falvage; fo where the prize is recovered by a friend, or comes into his ports: and the taking fhips and goods by force js fo odious, that reflitution, where poffible, is granted. Ibid. 6, 7.
Where for the fault, perhaps, of a few, a debt becomes tiational, the goods of the guilcleis become liable, if taken, tor fatisfaction; but fuch fhould have contribution, by the law of England. Though, when depredations have happened bere to foreign merchants, and complaint hath been made concerning them, our kings have often granted commiffions to inquire and award fatisfaction: and, on the petition of fome merchants of Genoa, againtt the inhabitants of Guernfey, for detaining goods to a confiderable value, out of a thip wrecked near the faid ille, a commiffion was granted to punifh the offenders, and make reftitution: for, as the Engliih fubjects may have their goods as reprize, for fatisfaction of a debt from foreigners, fo they may have benefit of thefe commif fions, to make themfelves whole out of the eftates of offender'. Pat. 26 Ed. III. See ftat. 3 i Hen. VI. cap. 4.
But he that will fue to have reftitution in England for goods taken at fea, muft prove that the fovereign of the party was in amity with England, \&cc. and letters of reprizal make no war between nations. 22 Ed. III.

A copy of letters patent for efpecial reprizals, from the kine of Great-Britain (under the great feal of England) againft the States of Holland, and their fubjects. Imolled in the high court of Chancery, 19 May, 15 Car. II.
CHARLES the Second, \&c. Whereas our loving fubje Cts Sir William Courteen, Knt. deceafed, and his partners, anno 1643 , by the depredation and hoftile act of one Galand, commander in chief of two hips belonging to the E.at-India company of the Netherlands, was, berween Gna and Maccas, in the Streights of Malacca, deprived, and moft injurioufly fpoiled, of a certain fhip called the Bona Eipcranza, and of her tackle, apparel, and furniture, and all the goods and lading in her, upon a very bopeful tradng voyase China, which were carried to Batavia, and there, without any legal procefs, confifcated: and alfo, in the fame vear, another laden fhip of our faid fubject, called the Henry Bonadventure, being come on ground near the inand of Mauritius, was there, both thip and goods, feized upon by fome of the officers and minifters, and others, under the command of the faid Eaft-India company, and utterly detained from the right owners: and whereas the id. Sir William Cour-

## LET

teen, and his aftigns, in his life-time, ufed all pomble entdeavours to recover the laid fhips and goods, and to procure further juftice againft the malefactors, and yet could obtain no reftitution or fatisfaction, whereby they came to be much diftreffed, and utterly undone in their eftate and credit: and thereupon, and upon the mon humble fupplication, and addreffes of Francis earl of Shrewibury, and William Courteen, Efg; grandion and beir of the faid Sir William deceafed, Sir John Ayton and Sir William Turner, Knts. and George Carew and Charles Whitaker, Efqrs. (on the behalf of themfelves, and divers others interefted in the faid two fhips, Bona Efperanza and Henry Bonadventure, and in the eftates of the faid Sir William Courteen deceafed) Sir Edward Littleton, Bart. and Sir Paul Pindar, Knt. that we would take their cale into princely confideration : we, out of a jult fenfe we then had, and ftill have of their unjuft fufterings in that bufinefs, both by our own letters, under our fign manual, to the States-General of the United Provinces, and by Sir George Downing, Knt. and Bart. our envoy extraordinary, to whom we gave fpecial command fo to do, required fatisfaction to be made, according to the rules of juftice, and the anity and good correfpondence which we then defired to conferve with them firm and inviolable: and whereas, after feveral addrefles made to the Statcs-General by our faid envoy, and nothing granted effectual for relief of our faid fubjects (whom we take ourfelves in honour and juftice concerned to fee fatisfied and repaid) we lately commanded the faid Sir George Downing to intimate and fignify to the faid ftates, that we expected their final anfwer concerning fatisfaction to be made for the faid fhips and goods, by a time then prefixed, and fince elapfed ; that we might fo govern ourfelves thereupon, that our aforefaid fubjects might be relieved according to right and juftice, and yet no fatisfactory anfwer hath been given; fo that we caunot but apprehend it to be not only a fruitlefs endeavour, but a proftituting our honour and dignity to make a farther application, after fo many denials and flightings. And whereas John Exton, doctor of Jaws, judge of our high admiralty court of England, upon our command to certify to us the value of the loffes and damages fuftained by the faid Sir William Courteen and partners, whofe intereft is now vefted in our loving fubjects Sir Edmund Turner Knt. and George Carew, Efq; and partners, hath, upon full examination and prcof thereof, made by witneffes in our high court of admiralty, reported and certified under his hand, that the fame do amount to the fum of one hundred fifty-one thoufand fix hundred and twelve pounds.
Now know ye, that, for a full reftitution to be made to them for their thips, goods, and merchandize, of which the faid Sir William Courteen, Knt. and partners, were fo defpoiled as aforefaid, with all fuch cofts and charges as they fhall be at for the recovery of the fame: we, by the advice of our privycouncil, have thought fit, and by thefe prefents do grant licence and authority, under our great feal of England, unto our fiaid fubjects, Sir Edmund Turner and George Carew, their executors, adminiftrators, and affigns, for and on the behalf of themedves, and other perfons interefted as aforefaid, to equip, victual, furnifh, and to fet to fea, from time to time, luch and fo many fhips and pinnaces as they fhall think fit ; provided always, that there be an entry made and recorded, in the admiralty courts, of the names of all hips and veffels, and of their burden and ammunition, and for how long time they are victualled, and alfo the names of the commanders, before the fame or any of them be fet forth to fea; and with the faid fhips and pinnaces by force of arms to fet upon, take, and apprehend any of the fhips, goods, money, and merchandizes belonging to the ftates-general, or any of the fubjects inhabiting within any of their dominions or territories, wherefoever the fame fhall be found, and not in any port or harbour in England or Ireland, unlefs it be the fhips and goods of the parties that did the wrong: and the faid 1hips, goods, money, and merchandizes being to taken, and brought into fome por of our realms and dominions, an inventory thereof thall be taken, by authority of our court of admiralty, by the judge or judges thereof for the time being, upon proofs made before him or them that the faid fhips, goods, wares, merchan dizes, and money, did belong to the ftates-general, or any of their fubjects as aforefaid, that they fhall be lawful prize to the faid Sir Edmund Turner and George Carew, their executors, adminiftrators, and afigns, as aforefaid, to retain and keep in their, or any of their poffeffions, and to make ale and difpofe thereof in open market, or howfoever elfe, to their and every of their beft advantage and benefit, in as ample manner as any time heretofore hath been accuftomed, by way of reprizal, and to have and enjoy the fame as lawful prize and as their own proper goods: fo that neither any captain, mafter, nor any of their company, that fhall ferve in perfon, or fhall promote and advance the faid enterprize, in manner and form aforefaid, thall, in any manner of wife, be reputed or challenged as an offender againft any of our laws : and that it fhall be lawful for all manner of perfons, as well our fubjects as any others, to buy the faid fhips, goods, and merchandizes, fo taken and apprehended by the faid caprains, mafters, and others, and adjudged as aforefaid, without any damage, lofs, hindrance, trouble, moleftation, or
ncumbrance, to befal the faid buyer, or any of them, in as ample and lawful manner as if the fhips, goods, wares, and merchandizes had been come and gotten by lawful traffic of merchants, or of juft prizes in time of war: provided always, that all hips, goods, and merchandize, taken by virtue of this our commiffion, fhall be kept in fafety, and no part of them wafted, fpoiled, or diminimed, or the bulk thereof broken, until judgment hath firft paffed as aforefaid, that they are the thips and merchandize of the ftates-general, or Come of their fubjects as aforefaid: and if, by colour of this our commiffion, there fhall be taken any fhips, goods, or merchandizes, of any of our loving fubjects, or the fubjects of any prince or ftate in good league or amity with us (except the ftates-general, or their fubjects, as aforefaid) and the goods therein laden fold and embezzled, or diminifhed, or the bulk thereof broken in any place, before they fhall be adjudged to belong to the ftates-general, or fome of their fubjects, as aforefaid : that then this commiffion thall not be of fufficient authority to take the faid hips, goods, and merchandizes, or to warrant or fave barmlefs fuch as thall receive, buy, or intermeddle therein, but that both the prizes' fo taken, and the faid fhips of war, fhall be confifcated to our ufe. And furrher we do hereby declare, that it is our will and pleafure, that this our commifion fhall remain in full force and power, to all intents and purpofes, until the faid Sir Edmund Turner and George Carew, their executors, adminiftrators, and affigns, as aforefaid, thall, by virtue thereof, have by force of arms apprchended, taken, feized, recovered, and received, from the faid flates-general, or their fubjects, one hundred and fifty-one thoufand fix hundred twelve pounds, according to the appraifement to be made by appraifers upon oath, nominated and authorized in our faid court of admiralty, of fuch ©hips, goods, wares, or merchandizes, 'as fhall be taken from the faid ftates general, or any of their fubjects, by virtue of this commiffion, or thall otherwife receive fatiffaction of the debt aforefaid, by compofition to be made between thofe of the Eaft-India company of the Netherlands and the faid Sir Edmund Turner and George Carew, their executors, adminiftrators, and affigns, as aforefaid: notwithftanding the prefent difference between us and the faid fatesgeneral, depending upon general reprizes, may be agreed and compofed; and that, in the interim, a good correfpondence may be renewed between us and the faid ftates-general, but only in cafe of refiffance; and that, after, in cold blood, the fubjects of the ftates-general, if hurt or wounded, fhall be ufed with all convenient offices of humanity and kindnefs, \&c.

A proclamation for revoking the foregoing letters of marque and reprizals, publifhed Auguft 3, 1680 .

Whereas George Carew, Efq; had formerly granted to him letters of marque againft the States-General of the United Provinces, for fatisfaction of a certain demand which Sir Wiljiam Courteen and others had againft the faid States, and to which the faid George Carew was intitled; which faid demand has fince, by treaty of peace between his Majefty and the faid States, been totally abolifhed and extinguifhed, and all letters of marque and reprizal by the fame treaty difcharged accordingly: and whereas his Majefty has fince recalled and fuperfeded the faid letters of marque: to the end that no perfon may be mifled, under pretence of any letters of marque and reprizal heretofore granted to the faid George Carew, and thereby incur the danger of the law, as pirates: his Majefty is pleafed, by this, his proclamation, to declare, That the faid George Carew has now no authority and commiffion, by.virtue of any fuch letters of marque, to equip or fet out any veffel whatfoever, and that all perfons that fhall prefume to be aiding to him in fetting forth any fuch chip, or ferve under him, by colour of any fuch pretended authority, fhall be proceeded againft as pirates, according to the utmoft feverity of the law.
Letters Patent, Literf Patentes, fometimes called Letters Overt, are writings of the King, fealed with the great feal of England, whereby a perfon is enabled to do or enjoy that which otherwife he could not, and fo called, becaufe they are open, with the feal affixed, and ready to be thewn for the confirmation of the authority thereby given. 19 Hen. VII. cap. 7. And we read of letters patent to make denizens, \&c. 32 Hen. VI. cap. 16. 9 Hen. III. cap. 18. Letters patent may be granted by common perfons; but, in fuch cafe, they are properly patents; yet, for diftinction, the king's letters patent have been called letters patent royal. Anno 2 Hen. VI. cap, 10 . Letters patent conclude with Tefte me ipfo, \&c. ${ }^{2}$ Inft, $7^{8}$. See Pa tents.

## LEVANTTRADE

Of the firfteftablifhment of the Chriftian nations in the ports of the Levant *, and of their convention and treaties with the Ottoman Port.

- Levant fignifies, in geography, any country fituated to the eaft of us, or on the eaftern fide of any continent or courr try, or that on which the fan ifies.-In matters of com-

## LEV

merce, it is generally reftrained to the Mediterranean Sea, or, rather, to the country on the eaftern part of it. - Hence our trade thither is called the Levant trade; and a wind hat blows from thence out of the Streights mouth, is called a Levant wind.

France was the firf nation that made treaties of commerce with the Port. The Sieur de la Foret figned them in 1535 , in the name of Francis I. and thereby obtained many privileges in favour of that kingdom, which they alone enjoyed, till the Venetians, the Englih, the Hollanders, and at length the Genoefe, likewife obtained particular privileges to themelves.
The chief privileges granted the French, by the conventions made by the Sieur de la Foret, were :

1. The eftablifhment of a court of juftice, under the appellation of the confulthip, in all the parts or places where the rench merchants fhould refide, in order to do juitice beFrent merchants, among themfelyes and between ween the French merchants, among theme the Turks, with regard both to civil and criminal matters; with prohibition to the officers of the Grand Seignior to take cognizance thereof, without confent being firf had and obtained from the French themfelves.
II. The privileges in refpect to the conful himfelf, and other fficers of the confulibip, were, that they might not be judged in criminal matters by the officers of the places where they hall refide, but be fent to the Port, or to the neareft lieutenant of the Grand Seignior.
III. That the liberty of their religion thall be granted to the French.
IV. That the permiffion of trade in all the Grand Seignior's dominions be granted to the French alone, and that all other nations be prohibited coming thither to trade, but under the French banner.
The Venetians were the firft in favour of whom the Port deviated from this laft article, which was, fays our author, as honourable as beneficial to the French ; and when Henry III, in $\mathbf{1 5 8 0}$, fent James de Germigny, baron de Germelles to renew the convention, the fubjects of the republic of Venice were exprefly excepted from the lift of thofe nations who were obliged to navigate under French colours.
In the treaties of 1604, obtained from the fultan Achmet by Monf. Savary de Breves, ambaffador from France to the Port, the Englifh were alfo excepted from the faid lift.
Thefe laft conventions of the French not being renewed 'till 1673, by reafon of the fuccours which his moft Chriftian majefty fent into Hungary and Candia, the Hollanders, and afterwards the Genoefe, availing themfelves by this mifunderftanding between France and the Port, obtained more favourable treaties; which although, fays our author, expreffed in terms lefs honourable than thofe were with regard to France; (wherein the king is always treated as an emperor, and as the moft ancientally of the Port) yet they contained the moft effential article in relation to their commerce; which confifts in the liberty of having confuls, and trading in all places of the Levant upon their own footing, independent of France. It may alfo be faid, that, in a very material point, other nations were more favourably treated than the French, becaufe the duties on importation, and exportation of thefe other nations were reduced to 3 per cent. while thofe, which regarded the commodities of the French merchants, continued to pay 5 per cent. as they had always done: but this difference was reduced by the capitulation of 1673 .
Of the regulations and polity of France with refpect to the trade of the Levant.
As long as the commerce of the Levant remained intirely in the hands of the French, it was fo confiderable, that the duties thereof, upon the importation and exportation of merchandizes, paid by the French at the cuftom-houfe of the Grand Seignior, amounted to feveral millions of livres per annum.
The face of things is much changed fince that time; the treaties of commerce made between the Port and feveral other nations, and the civil wars of France in the reigns of Henry II, and his fucceflors, which diverted the adminiftration from purfuing the commercial interefts of France, gave the Venetians, and afterwards the Englifh, a favourable occafion to fecure to themfelves this navigation, upon their own bottom. Certain it is, that the bad conduct of the nation in other refpects alfo reduced it's trade to a deplorable ftate, 'till the time of Lewis XIV, who refolved, in 1665 , to fupport and encourage it, and recommended to Monf. Colbert, his minifter and fecretary of ftate, to reftore the commerce of the Levant, in fome meafure, to it's former fplendor, if it was not pofible to oblige other nations to trade again under-the French banner.
The firft ftep this patriot minifter took to reftore this branch of commerce, was to eftablifh a company, connfituted of 20 of the moft opulent merchants of Paris, Lyons, and Marfeilles. Another point, which then appeared to be no lefs requifite, was, to put an effectual fop to the complaints of the Turks, relpecting the bad quality of the merchandices which the Marfeillians imported there, and to provide againt abufes
that had happened in the confulchip; and which had greatly difcredited the French nation.
In relation to manufactures, that minifter made various regulations concerning the fabric of woollen goods deftined for the Levant trade, which we hall fee under the articles France, and Woollen Matiufactures of France. The French pieces of money of five fols* being incroduced into the trade of the Levant, the T'urks were fo greatly taken with the beautiful appearance thereof, that they very earneftly coveted them, and gave their merchandizes in exchange for half the price, on condition that they were paid for them in this French (pecie; which, at length occafioned the Genoefe alfo to introduce them into the Levant trade : but, not fatisfied even with the great profit which they thereby experienced, they diminifhed the ftanidard, or intrinfic value of this coin more than one half, and carried fo great a quanity of this counterfeit money to the Levant (and the French also imitating their example, by having the like fabricated at Morgues) that the eyes of the Turks became, at length, opened, and they accufed the French of this roguery; againt whom they made great complaints, and laid that nati n defervedly under great difficulties in it's traffic. To put an end to thefe complaints, the French ambaffador had orders to frem the torrent of fuch difcredit at the Port, by endeavouring to throw a part of the lofs upon others, who alfo were the caufe of the deceit.

- This fmall filver money, whofe commerce made fo great noife in all parts of the Lovant, towards the middle of the feventeenth centary, was called by the Turks timmins, or temins.-The imprcffion was to beautiful and elegant, that the Turks would take no other money but chis. From the merchants, the infatuation foread iffelfeven among the la. dies, whofe head-drefles and habits were adorned with them. The French, taking advantage of this frenzy, paffed theie timmins at firft, for 10 fols, which was gaining cent. per cent. : afterwards they lowered them to 7 fols 6 deniers; and at laft, in 1670, they were abfolurely cried down.
The avarice of the European merchants (for the Hollanders, the Genoefe, and fome other Chriftian nations, had a haré in this traffic as well asthe Firench) was the caufe of this difgrace brought upon this fpecies of the French money. Not contented with the immenfe gain made by paling of good coin, they refolved to counterfeit the fame, and carried Louis of 5 fols to the Levant, that were only copper fivered over. Orange, Avignon, Monaco, Florence, and feveral caftles in the fates of Genoa, were the places where this infamous merchandize was fabricated, for the laft thirteenyears that this unjuft traffic continued.
To put a flop to this diforder, at leaft to prevent the French from taking further part therein, the parliament of Provence iffued an arrêt, the 22 d of December, 1667 , forbidding the Levant trade to be carried on orherwife than with the money of France, Spain, Morgues, and Dombes; and under pain of death to tranfport any Louis of 5 fols to Getioa or Leghorn, or any other places on that coalt.-This arrêt put a ftop to fuch deteftable traffic in Turkey, which had put the whole empire into great confufion.
The profperity of the French commerce depending, in a great meafure, on the good conduct of the confuls eftablifhed in the ports of the Levant, and his majefty being informed that the greateft part of thofe who then filled thefe places, were either foreigners or oblcure perfons, in whom it was not fafe for his fubjects to confide; it was ordained, by an arrêt of council of the 2gth of March, 3669 , that all the French confuls Should directly tranfmit to Monf. Colbert their letters of authority whereby they held their confulfhips.
In confequence of this arrêr it was, that frefh influctions and powers were delivered in the two fucceeding years to the ancient confuls, and a thumber of new ones created in divers other ports of the Levant, where there had been none before.
By a declaration of the fame year, regiftered in the parliament of Provence, it was ordained, that all the oppreffions which happened in the ports of the Levant, fhould be difcharged by the fhips that Mould be found in the ports and havens where fuch oppreffion had been made; for which purpofe there thould be an affeffiment upon the fhip's merchandizes.
The 12 th of June, in the following year 1670 , the execution of the declaration relative to the oppreffions was appointed by a new ordonnance; in confequence whereof, all confuls eftablifhed in the Levant were exprefsly forbidden to convoke, for the future, any affembly of the body of the nation, utwder any pretext whatfoever, and this under the penalty of lofing their place, and to anfwer the fame in their own perfons, the fums that the faid aflemblies hould have attempted to lay upon the whole nation; his majefty injoining his ambaffador at the Port to caufe thefe ordonnances to be duly put in execution.
At the fame time Monf. Colbert wrote a circular letter to all the confuls in the ports of the Levant, which comfiled of four principal articles of polity.
By the firft they were ordered to maintain a regular correfpondence with the Marquis of Nointel, the king's ambaliador at the Port, in relation to what regarded the commerce of their various ports. The fecond enjoined them to tranfmit to him conftantly a memorial of whatever they hould judge

## L E V

requifite to the advantage of commerce in their refpective places of refidence; as alfo another memorial, attefted by the principal merchants of the laid ports, containing all the oppreffions that the Turks made upon the French. 'The third article obliged them to fend, every fix months, to the court, as well as to the ambaffador, a lift of the French actually inhabiting their feveral ports; and likewife to give a faithful account of thofe perfons of credit, probity, and grod beha viour, as well as of thofe whofe conduct might give the Turks reafons for any contempt towards their nation*.

* Was not this laying a good foundation for conflant future efteem towards the French ?
The inftructions fent to the marquis of Nointel contained alfo feveral articles of regulations.
I. The fupprefion of all the impofts of the confulfhip, which had been made 'till then by his Catholic majefty's minifters at Conftantinople, as well as all thofe which were allutted to their fecretaries and interpreters.
II. That, under any pretence of oppreffion, no duties in future fhould be raifed, or any thing taken, by way of fee or bribe, upon the commerce of the nation in general.
III. To that end, every kind of afiembly that ufed to be held on thefe occafions was abolifhed; and that every one Thould avoid borrowing money of the Jews, and paying them monthly intereft.
IV. That the debts, as well thofe of the city of Marfeilles (for the payment whereof the duty of Cotrmo* had been eftablifhed) as thofe of the ports of the Levant, fhould be examined and liquidated, in order to be difcharged with the greater eafe to trade.
* A term in marine commerce, ufed in the ports of the Le-vant.-It is an impofition, or duty, which the confuls lay, either by order of the court, or the confent of the merchants, of fo much per cent. upon hipping, either for the payment of fome avanies (a), or for fome ather common affairs of the nation.
The arrêt of the council of, 1684 ordains, that a cotimo fhould be fettled, at the rate of 2 per cent. upon the firft fhips that returned from the port of Alexandria, for an in-- demnification adjudged to the Levant company.
(a) Avanie fignififes an infult, affront, impofition, iz quazrel bred with defiga, and without caule. This is particularty veled in the Lee prefents, or the fines, that the Turkifh haflaws, and the officerc of the couftom-houfe, unjufly extort from the Chritian merchants under falfe pretences, - When thefe avaniee relate to a particular nation, the ambafiador and confuls of the nation regulate them, and appbint the method of levying them smong the merchants, and others of fuch nation; which is commonly done with the advice of the chief perfons among them.

4. That no French Mould inhabit in the ports of the Levant 'without exprefs permiffion from the king's minifter at the - Port.

It was likewife ordained, by an arrêt of council of November 1669, that, in future, the interpreters in the ports of the Levaut, refiding at Conftantinople, Smyrna, and other places, Thould not act in that city, unlefs they were natives of France, and appointed by an affembly of the body of the nation in every port, and depofited their oath with the confuls.
In order to be fecure of the fidelity of thefe interpreters, the fame arrêt regulates, that there fhould be fent to the ports of Conftantinople and Smyrna, every three years, fix young. men, to be chere inftructed in the languages, and to act afterwards in the capacity of interpreters.- To add to the advantage which the nation might derive from this eftablifhment, his majefty ordained, by a fecond arrêt of October 1670, that fix young men thould be fent for the three firft years, for the purpofe of becotringinterpreters *.

* An interpretèr, or druggerìman, or drogman, as they are called in the Levant, is a perfon whom the ambaffadors of the Chriftian countries, refiding at the Port, have near their perfons, to aflift them in point of language intreating of pubmen, as well for their private ufe, as for that of the merchants of their country who traffic in the ports of the Levant, or foreigners who come to trade under the banner of their princes. The affitance of thefe interpreters being abrolutely neceflary in the commerce of the Levant, and the good fuccefs therein in the commerce of the Levant, and the good fuccefs therein
partly depending on their fidelity and ingenuity, induced partly depending on their ficelity and ingenuity, induced
Lewis the XIVth of France to iffue an arret of council to Lewis the XIVth of France to ifae an arret of council to
provide a number of the natives of France, who were well provide a number of the natives of France, who were well
edueated in the language, to officiate in that ufful c apacity, that the ambaffadors and confuls of France fhould never be liable to impoftion by frangers, who might have no attachment to their country.-A A wife meafure certainly!
The ambaffador of France, predeceffor to the marquis de Nointel, having greatly loaded commerce with unwarrantable impoftions; his majefty, in order to prevent thefe abufes, ftrictly forbid the marquis from following their example, under any pretext whatfoever; without firf communicating the matter to the merchants and captains who thould be in the fcveral ports, for their votes, with all imaginable freedom. The convoys which the king granted for the fafety of the commerce of his fubjects, more particularly of thofe wha traded to the Levant, not having the fuccels expected, by the
mifconduct of thofe who commanded them, in not joining the merchants in due time, or leaving them before arrival in their intended ports: his majefty iffued anordonnance in May 167 r , whereby he commands all chiefs of the fquadron, captains, and other officers of the marine, ordered to convoy merchants fhips, either in meeting them on the high ieas, or departing from the ports of the kingdom, to convoy them fafe to the ports whither they were bound, and on their return into the ports of the kingdom; exprefsly forbidding them, at the peril of their lives, to abandon them, under any pretence whatever, if not prevented by the violence of the winds; upon condition, notwithftanding, that the mafters of fuch merchantmen fhall be ready to fail upon the day appointed by the captains, confuls, and principal merchants interefted in the trade.
Before the court had obliged the confuls to lay before them the powers whereby they enjoyed their pofts, they were granted during life : fome had even obtained the fucceffion for their children, or relations, and there were fome made hereditary, and reckoned amongit the patrimonial effecis of families. In the new reform of confuls, they were, for the moft part, reduced to fix years continuance, but they might be continued, and are fo in effect.
The rights of confulhip are not equal in all the Levant ports, they being in fome places 2 per cent. in others 3 .
It was by thefe firft regulations that Monf. Colbert beganto give another face to the French commerce in the Levant, by thus providing at once for the correction of the chief abuifes which were therein committed.
There was after wards prepared a general regulation of the polity of the confulthip, in regard to whatever conderas the affermblies and the trade of the kingdom; to which, from time to time, and almoft to the death of Lewis XIV, there were added new articles, as the circumftances of things isequired. See the article Consuls.
That the reader may make a right judgment of the polity of the French in regard to the regulation of this branch of trade, we thall give the fubftance of the principal royal ordonnances and arrêts relating thereunto: we fhall begin with that of the 18 th of March, 16.93 , which follows, viz.
- His majefty judged it requifite to fupprefs the duties of confulfhip in the ports of the Levant, for the benefit of his fubjects, and having excepted therefrom foreigners who trade under the banner of France, and ordained that thofe duties in regard to their merehandizes fhould continue in the accuftomed manner, and be appropriated to the chamber of commerce at Marfeilles [fee the article Chamber: of Commerce] his majefly being informed that the greateft part of the foreigners, and particularly the Jews, daily make falfe declarations of the merchandizes which they embark in French bottoms, and oftentimes do not embark any at all, and that the captains and cap-merchants [fee CAP-Merchants] of hips, favour foreigners by night in hipping their merchandizes on' Turkifh bottoms, or even in French veffels, to the prejudice of the French merchants, who lade goods in the fame veffels, and who are thereby obliged to bear a more confiderable duty than they ought, if the merchandizes of foreigners were faithfully declared: againft which grievance it being neceffary to provide, his majefty has ordained, that the merchandizes of foreigners, laden on French bottoms, which thall not be jufly and truly reported in the Chancery of the faid ports of the Levant, with refpect both to the quality and quantity thereof, fhall be confifcated: that is to fay, one half fhall go to the benefit of the informer, and the other to the chamber of commerce; which neverthelefs fhall be appropriated to the public fervice, with the confent of the intendant charged with the care of the trade. His majefty exprefsly forbids all captains, mafters, and cap-merchants of French fhips, to receive by night any merchandizes from any place from whence they may be tranforted on the penalty of 1500 livers fine, nor to receive any declarations, nor fign any bills of lading of foreigners, which are not conformable to the reports made in the faid Chanceries, on pain of the like fine of 1500 livres. His majefty further ordains, that all cap-merchants thall fign a manifefto, conformable to that depofited in the Chancery, and to fend a copy thereof to the confuls of thofe places whither the veffel is bound, that they may teftify to the unlading, whether all the merchandizes of foreigners have been faithfully declared. His majefty injoins all confuls and vice-confuls of the French nation in the ports of the Levant, to fee that the prefent ordonnance be duly executed, \&c.

French Chipping which navigate in the ports of the Levant, for the payment of the debrs, and other charges of the nation, is made, at prefent, with relation to the ffrength and kind of the fhipping only; which has occafioned a great prejudice to thofe whole loadings are not judged of by the value of the merchandizes, whereby thofe whofe cargoes pay as much as others of fmaller value, whofe freight and profits are widely different: which inequality may, in it's confequences, leffen the navigation of fhipping in the Levant commerce: his majefty, defirous to prevent thefe evils, and to procure every advantage to his fubjects, by extending and rendering this traffic more confiderable; and his majefty, being now in council, hath ordained, and doth ordain, that, for the future, all French Thips trading to the ports of the Levant, fhall not be liable to any average that may be neceffary to be impofed for the payment of the debts, and other charges of the nation, but in proportion to the value of the cargoes therein contained, according to the bills of lading, and manifeftoes of the loading; which thall be fent to the confuls and vice-confuls of the kingdom in the faid ports, by the captains and cap merchants of the faid veffels, \&c.-Done at the royal council of ftate, the 6th of OEtober, 1698.

## Signed Phelypeaux.

Then follows a proclamation, of the fame date; to inforce the faid arrêt,

## Signed LEWIS.

The next arrêt of the royal council, of any confequence, was of March 1705, in the time of the waf, which ordains, That, upon the merchandizes of the Levant arifing by the prizes made during the prefent war, and carried into the port of Toulon, there thall be levied 10 per cent. on the value of the faid merchandizes, over and above the ordinary duties paid on importation.-Extracted from the regifters of the royal council.

- By reafon of the reprefentations made by the maybr, theriffs, and deputies of the commerce of the city of Marfeilles, that the king's lbips appointed to cruize from the port of Toulon, on the merchantmen belonging to the enemy, and alfo the privateers from the fame port, frequently bring in prizes, whereby the magazines of the faid city are filled with the merchandizes of all ports of the Levant; which hinders the fale of thole goods brought in by the trade of the merchants: in order to put all merchandizes of the fame fort upon an equality with each other, it would be neceffary to impofe a duty of 20 per cent. upon the merchandizes of the Levant taken as prize, as well as upon merchandizes which do not come into the kingdom by a direct commerce carried on in the Levant by his majefty's fubjects ; or at leaft a duty of 10 per cent. ad valorem of the faid merchandizes taken as prize, as was practifed in the preceding war: to which his majefy giving attention, and confidering the report of the Sieur Chamillart, counfellor in ordinary to the roval council, and comptroller-general of the finances, and being prefent in council, hath ordained, and dorh hereby ordain, that, upon the merchandizes of the Levant taken as prizes during the prefent war, and brought into the port of Toulon, there fhall be raifed to per cent. ad valorem thereupon, over and above the ordinary duties of importation.-Done at the royal council of ftate, his majefty being prefent, held at Verfailles the roth day of March, 1705.

See the article Prizes.
A royal ordonnance, permitting the theriffs and deputies of the chamber of commerce at Marfeilles, to deliver certificates of refidence to the children and relations of the merchants of the province, who chufe to fettle in the Levant, provided they were 18 years of age; and allo to fuch women and girls whofe hufbands or fathers are eftablifhed in the faid ports, to live there with them. Of March 1716. - By the king.

- Upon being reprefented to the king, that the families of merchants trading to the Levant are greatly prejudiced by the ordonnance of November 3, 1700, which forbids the fheriffs and deputies of the chamber of commerce effablifhed at Marfeilles, to deliver cercificates of embarkation, or of refidence, to the children or reiations of the faid merchants, nor to others who would willingly fettle themfelves in the Levant, before 25 years of age; that, on the contrary, it feemeth necelfary that thefe young people go thither betimes in order to learn the language, cuitoms, and ufages of the Turks, and to form themfelyes to thofe rules and maxims neceflary to the benehit and advantage of commerce; otherwife, thofe men from the age of 18 to 20 are compelled to apply themfelves to profeffions other than thole to which they feem to be born, and bred up by their parents: his majefty being informed, that as well the chamber of commerce at Marfeilles, as the French
Val. II.
confuls in the poits of the Leviant and Barbary, make a dif. ficulty in conlenting to the paffage and refidence in Turket bf the wives and daughters whofe hubbands and fathers are eftablifhed there, no ordonnance or regulation being tmade for that purpofe: his majefty having confidered the deliberations of the fheriffs and deputies of commerce of Marfeillés, of the 5 th of this month, held in the prefence of the Sleur Arnoul, infpector of the faid commerce : his majefty, with the advice of Monf. the duke of Orleans, regent, hath ordained, and doth hereby ordain, that, from the day of the publication of the prefent ordonnance, it thall be permitted to the faid theriffs and deputies of the chamber of commerce at Marfeilles. to grant certificates of refidence to the children or relations of fuch merchants of the province, and others, who would fettle in the ports of the Levant; it appearing, by a certificate of their baptilm, that they are full i 8 years of age; it being underftood, neverthelefs, that they fhall not be admitted into the affembly of the French nation in Turkey, 'till they are 24. years old, nor to have a vote therein'till 25 years of age: his majefty defiring, that, if any of thefe young people; fo admitted to refide in Turkey for the benefit of trade, fhall commit any acts of libertinifm, or acts of reproach and fcandal, that may bring any difhonour upon the French nation, or draw upon it's fubjects any oppreffion 'on the patt of the Turks: if there are any fuch, they are hereby ordered to be fent back into France, by the firft Mipping that thatl depart from the port, provided it fhall be fo refolved by the deliberation of the body of merchants, which fhall be affembled on thefe occafions by the conful; to whom his majefty injoins the due execution of the refolutionstaken in thefe cafes. His majefty permits the wives and daughters whofe hufbands and fathers are eftablifhed in the ports of the Levant, to go thither and refide in taking leave of the deputies of the chamber of commerce, \&xc. notwithftanding the prohibitions heretofore iffued to the contrary, \&cc.-Given at Paris the 17 th of March, 1716.

## Signed LEWIS, <br> And underneath Phelypeaux.

The next royal ordonance that took place was that of Auguft 1716, which excludes from all public truft of adminifration, and from the affemblies of the body of the French nation in the ports of the Levarit, fuch French merchants who fhall there marry maids or widows born in the dominions of the Grand Seignior; and excludes, Jikewife, all thofe who are under 30 years of age, from all public trufts of adminiftration, who fhall marry, without the confent of the parents, even any French young woman.
His majefty being informed that the childten of therchants who are permitted to refide in the Levant, in order to train them betimes to the arts of commerce, generally contraia improper marriages, either with maids or widows born fubjects of the Grand Seignior, or even with the French, the confequence whereof commonly proves difadvantageous to the families of thefe young people, as well as to the difhonour of the French nation: which his majefty being defirous to prevent, and confidering the deliberation of the theriffs and deputies of the chamber of commerce of Marieilles, of July laft, approved by the Sieur Arnoul, infpector of the faid commerce : his majefty, with the advice of Monf. the duke of Orleans, regent, hath ordained, and doth hereby ordain, that, from the day of the publication of this prefent ordannance, the French merchants eftablifhed in the ports of the Levant, who Shall contract marriage with maidens or widows born in the dominions of the Grand Seignior, Thall be rendered incapable of every public truft and adminiffration of the body of the French nation, even from the privilege of admiffion into their affemblies. His majefty ordains, alfo, that thofe of the faid merchants who are not 30 years of age, and thall marry, without the confent of their parents, even any French maiden, fhall likewife be excluded from all public trufts. His majefty commands the Sieur marquis de Bonnac. his ambaffador extraordinary at the Ottoman Port, and the French confuls and vice-confuls in the port of the Levant, duly to obferve the execution of the prefent ordonnance, and that it may be wade public, and regiftered among the archives of the chamber of commerce at Marfeilles, and in the Chancery of the feveral ports of the Levant and Barbary, that no one may be ignorant thereof. Given at Paris the inth of Auguft, 1716.

## Signed LEWIS, <br> And underneath Phelypeaux.

A royal ordonnance, forbidding all the fuhjects of Franse, and others, trading in Turkey under their protection, to purchafe any thing taken from the Turks by the Maltefe corfairs, or by any other. March ${ }_{7} 718$.

- His majefty being informed that the Maltefe corfairs, and others who are at war with the Grand Seignior, frequently fell the prizes which they have taken from the Turks to Freneh traders and navigators in the ports of the Levant, and to the end that this kind of traffic may not prove highly injurious in it's confequences, by bringing opprefions upon the body of treichagis

## L E V

merchants of the French nation fettled in the Turkifh ports: all which his majefty being defirous to prevent, doth thereby, with the advice of the duke of Orleans, his uncle regent exprefsly forbid all his fubjects, and all other merchants in Türkey under his protection, from buying of the faid corfairs, directly or indirefty, any of the effects taken by them from the Turks, on pain of conffication of the faid effects, and a fine of 3000 livres: his majefty commands the Sieur marquis de Bonnac, his ambaffador extraordinary at the Ottoman Port, and all confuls of the French nation in the Levant, to make public the prefent ordonnance, that no one may be ignorant thereof, atid to have all due regard to it's execution. Given at Paris the 22d of March, 1718.

## Signed LEWIS, <br> And underneath Phelypeaux.'

A royal ordonnance, forbidding all captains of French fhips and veffels to embark in the Levant any Frenchman or foreigner, without permiffion firft had and obtained in writing, from the king's ambaffador at Conftantinople, or the confuls of the ports.-October 24, 1719 .

* His Majefty being informed that the captains of French fhips and veffels which navigate in the ports of the Levant and Barbary, receive on board Frenchmen and foreigners, who fometimes embark, to avoid the confequences of bankruptcy, or other mifconduct of which they may have been guilty in the faid ports, which might draw grievancés on the French nation, and moleft it's commerce : his majefty, judging proper to provide againft fuch-like inconveniencies, doth, by and with the advice.of the duke of Orleans, regent, exprefsly forbid all captains, atd mafters of French hhips and veffels, which navigate to the ports of the Levant and Barbary, to embark on board any perfons, under pretence of paflage, be they either Frenchmen, or of any other nation, without the conrent firft had and obtained in writing, from his ambaffador at Conftantinople, or the confuls of the ports from whence they fhall embark, on the penalty of a fine of 500 livres, and allo to anfwer perfonally for the confequences of fuch embarkation; defiring that, if any one unknown to them, and without their privity, fhould get on board while they are under fail, they fhould be obliged, under the fame penalties, to put fuch perfon on hore, and fend him to the conful of the place where he might the fooneft land; and fuch conful Chall be obliged to apprize him at the port where the efcape fhall have been made.-His majefty orders his faid ambaliador and confuls not to grant thofe permiffions except to perfons not fufpected of the circumftances beforementioned, but not to refufe the fame to the French, nor foreigners, without good reafons, whereof they fhall inform the council of the marine, and deliver difpatches with charges.-His majeity injoins and commands the Sieur Bonnac, his ambaffador at the Ottoman Port, and the confuls at the ports of the Levant and Barbary, to publih and regifter the prefent ordonnance wherever needful, 8 zc . Given at Paris the $24^{\text {th }}$ of October, 1719.

An arrêt of the royal council of fate, in relation to the eftablifhment of a duty in favour of the chamber of commerce at Marfeilles, laid upon merchandizes coming from the Levant, charged with the payment of the appointments of the confuls.-September 2, I72r.

- The king, being in council, ordains, that the confuls of the ports of the Levant and of Barbary fhould receive the duties granted to them by the arrets of the roth of January, 1718 , in the fame manner, and as they had enjoyed them before the arrêts of the 2 Ift and 24th of April, 1720; by means of which duties the confuls hould be charged with the fame expences wherewith they were charged before the faid arrêts: his majefty having confidered the deliberations of the fheriffs and deputies of the chamber of commerce of Marfeilles, in their affembly of the gth of April, 1721, by which they agreed to petition his majefly to permit them to take upon themfelves the government of the confulfhips, upon the following conditions: That the merchandizes which fhall be laden in the ports of the Levant, Morea, and Barbary, for France, and which paid 3 per cent. in fome ports, and 2 per cent. in others, fhall pay no more after the Ift of May; viz. the firft 2 per cent. and the others $I \frac{1}{2}$ per cent. which duties of 2 per cent. and $I \frac{x}{2}$ per cent. Thall be paid in Marfeilles, at the chamber of commerce, by the fhips and veffels which fhall arrive there, according to the value of the faid merchandizes, at the time of their arri-val.-That the merchandizes for the account of foreigners defigned for Italy, and other countries, fhall pay the ancient duties of confulage.-That the value thall be afcertained of the merchandizes, by the deputies and French merchants, in prefence of the confuls and vice-confuls of every port in the Levant, which thall be loaded there for the account of foreigners defigned for the ports of Italy, and other countries, in order to fettle the faid duty of confulage, paid in the port of departure, into the hands of the proper officers, according to

## LEV

the form prefcribed by the arrêts of the council of the $\dot{2}_{4}$ tit of November, 1691, the 27th of January, and 8th of September, 1694.-The chamber of commerce in every port of the Levant hall keep neceflary funds, for the payment of the appointments of the confuls, and other officers, from the it of May 1721, and alfo for the other expences of the confulfhip; which funds fhall be fent to the deputies of each port, and by them converted into current money in the faid ports; in which money the appointments fhall be paid to the faid confuls, and other officers, upon the footing of 156,463 livres per annum.-And, in order to raife the funds requifite for the current expences of the confulfhips, his majefty permits the chamber of commerce to borrow at Marfeilles to the amount of 100,000 livres, at the rate of 5 or 6 per cent. intereft at moft, with intent to avoid the engagements which might be made in the Levant at a higher rate, the leaft of which are commonly at I per cent. per month: his majelty, judging the faid demands and offers of the chamber of commetce of Marfeilles confiftent with thee benefit and profperity of commerce, and defiring to procure whatever might contribute thereunto; and, being in council, hath ordained, and doch ordain, the following articles, with the advice of Monf. the duke of Orleans, regent, without any regard to the arrêt of the 2 Ift of January, 1721 , or to the demands and offers of the chamber of commerce of Marfeilles, refolved on in their deliberations of the gth of April following:

## ARTICLE I.

That the merchandizes which hall be laden for France in the ports of the Levant, Morea, and Barbary, and which paid 3 per cent. in fome places, and 2 per cent. in others, fhall pay no more for the time to come, after the 1 ft day of January, 1722 , than the duties of 2 per cent. in the ports where they paid 3 per cent. and $I \frac{7}{2}$ per cent. in thofe where they paid 2 per cent. which duties fhall be paid in Marfeilles, at the chamber of commerce, by the veffels which fhall arrive there, according to the value of the merchandizes at the time the veffels arrive.

## II.

That the fame duties mall be paid upon all the merchandizes of the veffels which Chall finifh their voyages in Italy, or elfewhere, into the hands of the deputies of the nation refiding in the ports of the Levant, and according to the value of the merchandize, at the time of their departure
III.

That the merchandize for the account of foreigners, defigned for Italy and other countries, fhall pay the ancient duty of confulage.

## IV.

That there fhall be made, by the deputies and French merchants, in the prefence of the conful or vice-conful of each port, an effimation of the merchandizes which fhall be laden for the account of foreigners, and defigned for the ports of Italy, and other countries, in order to lay the duties of confulage paid in the port at the departure of the veffel, as prefcribed by the arrêts of council of the 24th of November 1691, 27th of January, and 8th of September, 1694.

## V.

That the chamber of commerce fhall always have in each port competent funds, for the payment of the appointments of confuls, and other officers, from the faid Ift of January, 1722 , as well as for other expenzes of the confulage; which funds Thall be fent to the deputies of each port, and by them converted into the current money of the faid port; in which money they fhall pay the faid appointments to the confuls, and other officers, by making the computation according to ivres Tournois of France: fo that, by reafon of the equality of the monies, they may receive neither more or Jefs than what is appropriated to them: to which end his majefty revoketh the arrêt of his council, of the 2 Ift of January laft. VI.

His majefty ordains, that, on the faid firf day of January, 1722, the confuls of the Levant, Morea, and Barbary, hall ceafe to receive the duties of confulage, as they did from the Ift of May, 1721, and forbids them to demand any 'till after the faid day, on penalty of reftoring the fums fo received, and of lofing their places.
VII.

And, to the end that the faid chamber of commerce at Marfeilles may be enabled to raife the funds neceffary for the expences of the confulfhip, his majefty permits them to borrow, in the faid city of Marfeilles, to the amount of 100,000 livres, at the rate of 5 per cent. intereft at moft, deviating, in this refpect, from the former regulation : and all bills neceffary to this purpofe fhall be expedited, in order to avoid engagements in the Levant at a greater rate.-Given at the royal council, his majefty being prefent, held at Paris the 2d of September, 1721.

Signed Fieuriau.
The due execution of this arrêt was inforced the fame day, by a proclamation figned by the king.

## LE V

An arrêt of the royal council of fate, of May 1722 , laying a penalty upon the captains and owners of fhips coming from the Levant to Marfeiles, who fhould mifreprefent the weight and quality of the merchandizes wherewith they are loaded, or fhould not reprefent them at adl.

- It being repreferited to the king, that the arrêts of council of the 2 d of September, and the 28 th of April, 1721 , by the former of which, to commence the rft of January laft, it is ordained, that the merchandizes which thall be laden in the ports of the Levant, Morca, and Barbary, for France, on the veffels that may arrive at Marfeilles, fhould pay to the chamber of commurce 2 per cent. for thofe coming from fome of the faid ports of the Levant, and I $\frac{x}{2}$ per cent for thofe coming from others, \&c.-And by the other arrêt, to commence the Ift of June next, his majefty hath alfo ordained, that the faid merchandizes fhould pay 3 per cent. for thofe coming from the faid ports, which oughe to pay 2 only, and 2 per cent. for thofe coming from the other ports, that ought to pay but $\mathrm{I} \frac{1}{2}$; and his majefty underftanding that the receipt of the firf duties were infufficient to fupport the expence of the commerce, that the chamber of Marfeilles had obliged themfelves to pay: his majefty obferving, alfo, that by the faid arrêts, there are no penalcies inflicted againft the captains and owners of the faid merchandizes, who thall conceal the quality or the weight, or who thould not report them, hath judged it neceffary, to prevent the like abufes, to ordain, and doth hereby ordain, that the captains and owners of the merchandize fhipped in thofe veffels coming from the ports of the Levant to Marfeilles, who thall have difguifed the quality or quantity of their merchandizes, or not reported them, thall pay to the chamber of commerce at Marfeilles, initead of the duty of 3 per cent. or 2 per cent. as fhall be due, 20 per cent. on the merchandize fo mifreprefented, and not reported, upon the foot of the valuation that the duty of 3 or 2 per cent. fhould have been paid, \&rc.-Given in the council of ftate, his majefty being prefent, the 3 d of May, 1722, and

A royal ordoinhanice, regulating what thould be regarded in the ports of the Levant and Barbary, on the part of the Jews, and other foreigners, who fhall enjoy there the protection of France- February 4, 1727.

* His majelty being informed of the abufes committed in the ports of the Levant and Barbary, to the prejudice of his fubjects, by the different manher in which the confuls grant the Jews, and other foreighers, his protection, judges it neceffiary to make certain and plain regulation for fuch protection; and, to that end, ordaineth as follows:

## ARTICLEI.

That ino Jew, or other foreigner, a fubject of the Grand Seignior, or refident in his dominions, fhall be received under the protection of France, until he hath requefted and obtained the fame from the conful, and the body of the French nation aflembled with him; which conful fhall not deliver his letter of protection to the petitioners, but in confequence of the refolutions taken for that intent.
II.

Thofe wha fhall follicir fuch protection, fhall give refponfible fecurity to anfwer for their conduet; and the fecurity received by the conful of the nation thall be recorded in the Chancery of the confulfhip.
III.

The Jews, and other foreigners, fo protected, fhall carry on no commerce whatfoever of the Levant into France, either direaly or indirectly, on pain of confifcation of their fhips and merchandize, and a fine of 3000 livres againft the captain. IV.

His majefty forbids all traders, paflengers; captains, and mafters of French fhips and veffels, to lend their names to the protected and other foreigners, in order to carry on the commerce of the Levant and Barbary in France, under the like pains and penalties, and a fine of 3000 livres.

V,
His majefty likewife forbids all Frenchmen and forëigdiers tefiding in the kingdom to receive any merchandize, provifions; or other effects belonging to foreigners refiding in the Levant and Barbary, and coming from the faid countries, under the penalties before inflicted.
VI.

His majefty alfo forbids ali perfons refiding in Fratice to fend any effects or merchandize to foreigners protected, who refide in the Levant and Barbary, either for theif own account or for that of the protected, under the fame penalties above infiited.

## VII.

No Jew, or other foreigner, refident in the Levant and Barbary under the protection of France, fhall receive the confignments nor commifions of fhips and merchandizes coming from France into the Levant, or into Barbary, on pain to fuch who are not fubjects of the Grand Seignior, but protected by France, of being fent back into their own countries by the conful of France, in virtue of the refolutions of the nation affembled; and in relation to the rajas, or fubjects of the Grand Seignior, of being for ever excluded protection; and, in both cafes, the penalty is confifcation of the merchandizes that fhall be proved to be fo fent and configned, as aforefaid.

## VIII.

The captains, mafters, officers, and paffengers of marine fhipping fent from France to the Levant, or Barbary, fhall not be addreffed or configned to the perfon fo protected as aforefaid, refident in the faid ports of the Levant, for the commifion, barter, or exchange of their merchandize and effects, under a fine of 1500 livres penalty for every fuchlike contravention.

## IX.

His majefty, neverthelefs, permits the eaptains; officers, and paffengers of fhipping fent from France, to fell to the faid protected perfons the merchandizes which they have carried for their account, and to purchafe or take, in batter or exchange, fuch other merchandizes as they fhall judge proper; on condition, however, that for thefe fales, barters, or purchafes, the faid captains, officers, and paffengers, fhall be obliged to make ufe of, at their own option, the mediation of a

French

## L E V

## L E V

French merchant, as their factor, which fagtor cannot act For them before he has duly informed the conful and the deputies of the nation, nor pretend but to one half of the ordinary commiffion.

## X .

All captains, and matters of thips, who thall go to the Leo vant or Barbary, and fhall not have the commiffion of the cargo of imports or exports, nor any peculiar addrefs, fhall be obliged to apply to a French merchant, who is of the body of the nation, and who Thall regard what is prefcribed by the preceding article.

## XI.

His majefty wills and ordains, that all the confifcations and fines which may happen fhall be applied as follow, viz. thofe incurred in the ports of the Levant and Barbary, one-third to the informer, another third to the redemption of French llaves, and the remaining third to the national expences of the Levant port; and, as to thofe fines and confifcations which happen in France, one-third thall go to the informer, one-third to the hofpital of St. Efprit of Marfeilles, and the other to the profit of the chamber of commerce of the faid city.

## XII.

His majelty permits Jews and foreigners in the Levant and Barbary to continue, as ufual, to fend and confign their merchandizes into Italy, and other foreign countries, either in their own name, for their own proper account, to their French or foreign friends refiding in the faid countries, and to make ufe of the fhips carrying his majefty's colours; whereon the neutral ftates of ltaly, and other foreigners, may alio load, in their refpective countries, fuch merchandizes as they think proper, and addrefs them to their correfpondents, be they either French, Jews, or other foreigners, eftablifhed in the Levant or Barbary, under the protection of France.

## XIII.

His majefty further wills and ordains, that there fhall be no alteration in the peculiar cuftoms and ufages which have been obferved in certain ports, with refpect to the ceremonial, the police, and method of paying the duties to the Grand Seignior, by the foreigners protected by France. His majefly injoins and commands the Sieur le Bret, counfellor in his councils, firft prefident and intendant of juftice, police, and of the finances in Provence, and of the commerce of the Levant; and alfo the Sicur vifcount D'Andrezel, his ambaifador at the Ottoman Port, and all the confuls of the ports of the Levant and Barbary, to caufe the prefent ordonnance to be publithed and regiftered, wherever needful, and to have due regard to the due execution thereof.-Done at Marly the 4th of February, 1727 .

## Signed LEWIS,

A royal ordonnance, excluding from the liberty of trading in France, and from the privilege of the body of the nation, fuch French who fhall marry in the ports of the Levant, and the fons of Frenchmen born in the faid ports, whofe mothers are foreigners.-Auguft 1728.
c His majefty caufing to be laid before him his ordonnances of the rith of Auguft, 1716, and the 20th of July, 1726, by the former of which it is ordained, that the French merchants eftablifhed in the ports of the Levant, who hould marry with the girls or widows born in the dominions of the Grand Seignior, fhall be excluded from all public truft and adminiftration of the body of the nation; and, by the fecond, they are prohibited from marrying, without his majefty's permiffion, with foreigners, fubjects or not fubjects of the Grand Seignior, or the ftates of Barbary, not even with French by extraction, or thofe born in the faid ports, on pain of being fent back to France, with their faid wives: it having been found that the penalties inflicted by the faid ordonnances have not been fufficient to prevent fuch marriages of the French in the Levant, nor to remedy thofe inconveniencies which arife therefrom, to the prejudice of the nation and it's commerce: his majefty being informed that thofe in particular who are born of Frenchmen and the women of the country, continue to marry, without fubmitting to the regulations which forbid the fame; that thefe fame Frenchmen, knowing no other parents than thofe which they have in that country, take their advice, affociate with the protected foreigners, and others, when their fathers are dead; lend their names frequently to the faid foreigners to trade in France, and thereby furnith them with the means of evading the prohibitions made by divers regulations, and efpecially by that of the 4 th of February, 1727, of carrying on trade, either directly or indirectly, from the ports of the Levant, into the ports of the kingdom: againft which his majefty judging, neceffary to provide, after having feen the refolution of the chamber of commerce of Marfcilles, and the fentiments of the Sieur Le Bret, infpector of the commerce of the Levant, his majefty hath ordained, and doth will, and ordain as follows:

ARTICLEI.
His majefty exprefsly forbids all Frenchmen, of what quality or condition foever, who thall contract marriage for the future
in the ports of the Levant and Barbary, in violation of his ordonnances, to carry on any commerce in France, either directly or indirectly, on pain of confifation of their merchandize, and a fine of 3000 livres for every fuch violation, in cale of repetition of the fame.
II.

His majefty injoins the fame prohibitions and penalties on the fons of Frenchmen born in the faid ports of the Levant or Barbary, whofe fathers are deceafed, and whofe mothers are foreigners, not to trade, directly or indirectly, in France, unlefs they have refided forn thence fix years; after which they may return to the ports of the Levant, and refide there on the fame conditions as the French born in the kingdom.
III.

His majefty ordains that the faid French who fhould marry in future in the faid ports of the Levant, in violation of the faid ordonnances, and the fons of Frenchmen whofe fathers are dead, and mothers are foreigners, and who thall not have refided fix years in the kingdom of France, thall be excluded the liberty of affifting at the national affemblies, and fhall not enjoy any privilege belonging to the body of the nation.His majefty injoins and commands that the Sieur marquis De Villeneufe, his ambaffador extraordinary at the Ottoman Port, alfo the French confuls, and vice-confuls in the faid ports of the Levant and Barbary, and the fheiffs and deputies of the commerce of Marfeilles, have due regard, every one in his peculiar province, to the execution of the prefent ordonnance: and that the fame may be made public, and regiftered in the Chanceries of the faid ports, and among the archives of the chamber of commerce at Marfeiller, that no one may be unacquainted therewith.-Done at Fointainbleau, the 25 th of Auguft, 1728.

## Signed LEWIS, <br> And underneath Phelypeaux

A royal ordonnance, concerning the patent of health that the captains and mafters of Thips fhould take, who traffic in the ports of the Levant and Barbary.-September $173^{\circ}$.
© His majefty being informed that the captains and owners of thips who traffic in the porrs of the Levani and Barbary, inftead of having duly infpected, in evety pott where they arrive, the patent of health, which they Ihould take in the firft of the faid ports where they began their loading, conformably to the ordonnance of the 26th of February, 1702, take feveral patents of health in the different ports into which they put, and do not prefent to the intendant of health at Marfeilles and Toulon, when they return, only thofe patents which occafion them to be treated more favourably with refpect to their quarantine; which prevents the faid intendants from having knowledge of the true fate of health in the ports wherein the faid fhips have had communication, and may thereby bring the plague into the kingdom: to prevent which calamity, his majefty, judging it necefliry to extend the regulations of the ordonnance of the 26th of February, 1702, hath ordained, and doth ordain as follows

ARTICLE I.
All captains and mafters of hips, who fhall depart from one port of the Levant and Barbary, wherein they have began to take in their loading of merchandize or provifions, embark paffengers, or receive their ballaft, in order to load elfewhere, fhall take their patent of health from the conful or vice-conful, who hall fignify the true ftate and condition of the faid port, with refpect to it's healthfulnefs.
II.

The faid captains and mafters of thips thall not part with the firft patent 'till their arrival in the ports of Marfeilles or Toulon, where they fhall be obliged to reprefent the fame to the intendants of health, on pain of fix months imprifonment, and being deprived for ever of their freedom and privileges: to which end they hall be blotted out of the regifters of captains and mafters, and fhall not, for the future, ferve again in the faid capacity, under any pretence whatever.
III.

If, in the courfe of their voyage, they touch at one or more ports in the Levant, or others of the Mediterranean, they hall return this firft patent to the confuls or vice-confuls in the faid ports, to be examined, and afterwards given to the faid captains and mafters, without the faid confuls and viceconfuls retaining the fame, and oblige them to take out a new one, under any pretence whatever, on pain of their being recalled.
IV.

The patents of health fhall be examined by the faid confuls and vice-confuls, as foon as ever required by the captains and mafters of flips, that their voyage may not be retarded.
The confuls and vice-confuls fhall declare, in their vifa, the real ftate and condition of health in the places of their refidence, and fhall infert therein the intelligence which they have of the diflempers that prevail in the other neighbouring places, on pain of being deprived of their poft of cruft.
VI.

His majefty forbids, under the fame penalty, the faid confuls and vice-confuls, and their Chanceries, to demand any du-

## L E V

ties, or fees, for the vifa of the patents of health of thofe fhips which thall be involuntarily obliged to touch at the ports of the Levant and Barbary; without loading there: and with refpect to thofe who, having made a part of their loading in one port, fhall touch at other ports, to take in merchandize, provilion, or paffengers, the captains and matters of fhips fhall be obliged, in that cafe only, to pay 30 fols for the vifa of their patent of health.
VII.

If after a captain or matter of fhip, having his patent examined in one port, thall be necefited to ftay there, either by being wind-bound, or from other unforefeen caufe, he fhall be obliged before his departure, to prefent his patent of health again to the conful or vice-conful, of the faid port, to fignify upon the fpot, and without expence, the accidents which have happened in the interval with regard to heallh.
VIII.

His majefty exprefsly forbids the faid captains and mafters of fhips to prefent, on their arrival in the ports of Provence, any other patent than that which has been delivered to them at the place of their firf departure; on the back of which hall be the vifa, which has been endorfed at the places where they have touched during their voyage, under the fame penalty of degradation, and fix months imprifonment befide. His majefty enjoins and commands Monf, the count of Touloufe, admiral of France, to have a ftrict regard to the execution of the prefent ordonnance, to caufe it to be read, publifhed, and regiftered, wherever needful! and likewile the Sieur le Bret, counfellor of fate, intendants of juftice, poce, and of the finances, in Provence, and of the commerce of the Levant, and alfo the fheriffs and deputies of the chamber of commerce at Marfeilles, and the intendant of health, to pay due regard hereunto. - The confuls and vice-confuls of the Levant and Barbary are alfo enjoined to conform to the fame.-Done at Verfailles, the 6th of September, 1730.

## Signed LEWIS,

And underneath Phelypeaux.'

- The count of Touloufe, admiral of France, having duly attended to the king's ordonnance above addrefled to us, with orders to fee the fame duly executed: we order and command under our authority to conform thereunto, every one ac cording to his ftation; and alfo the officers of the admiralty of Provence to regifter them among theirecords.- Done at Rambouillet, the 8 th of September, 1730.

Signed L. A. De Bourbon, And underneath by his royal highnefs L'Enfant.

The king's declaration, fignifying that no cabbin-boy * fhall be left in the ports of the Levant and Barbary.-OCtober the 12 th, $173^{\circ}$
\& LEWIS, by the grace of God, king of France, to all whom theie prefents concern, \&c. We having been informed that many cabbin-boys, employed in the commerce of the Mediterranean, remain in the Levant and Barbary, by reafon of the bad treatment which they have received on board thofe thips wherein they have been embarked, and that the Muffelmen, having found it very ealy to feduce them, by reafon of their infancy, and to influence them to the religion of the country: his majefty defiring to remedy a grievance that our zeal for religion, and regard to our fubjects, do not permit us to fuffer: for thefe and other caufes us hereunto moving, of our certain knowledge, full power, and royal authority, we have made, and do make by thefe prefents, figned by our hand, exprefs prohibition to all captains and mafters of fhips, to maltreat, or fuffer to be maltreated by the hip's crew, the cabbin-boys who fhall have embarked on board the fhips which they command, on pain of being punidhed, according to the exigency of the cafe: we allow only that thefe cabbinboys thall fubmit to the ordinary and ufual punifhment: we alfo forbid the faid captains and mafters to fuffer any of the faid boys, when in the ports of the Levant, to go on fhore, without the guard of an officer or failor, in whom confidence may be repored, on the penalty of 300 livres fine for every fuch boy, who, for want of this precaution, fhall be ftopped in the faid ports. We enjoin and command the confuls, viceconfuls, and other perfons charged with our affairs in the faid ports of the Levant and Barbary, to fignify, among the lift of the flip's crew, the cabbin-boys who thall be there detained, and what occafioned the fame, and whether they have been demanded by the faid captains and mafters, and whether, by the neglect of the faid captains and matters in reporting the fame in the lift of the fhip's crew, any have been detained: we will and ordain, that fuch fhall be cenfured and reputed as having fuffered the faid boys to go on fhore without a perion of truit to attend them; and therefore they fhall be liable to the faid fine of 300 livres penalty: we ordain, likewife, that violations againft the prefent declaration thall be profecuted at the requeft of our follicitor of the admiralty, \&c.'

* Our reafon for taking notice of this declaration is, to give an idea how minutely this rival nation watches the meaneat Vol. 11.

A royal ordonnance, concerning the depofits in the Chanceries of the confulfhips of the Levant and Barbary.-September 11, 173 I .
< His majefly being informed that there are depofits in trult in the Chancerics of the confulhips of the Levant and Barbary, of different natures, which are not always reclaimed, either by thofe who have made them, or by their creditors or their heirs; and that fome confuls have difpofed of their $f_{\text {did }}$ depofits, inftead of keeping them in the manner required by the ordonnance of the $4^{\text {th }}$ of December, 169 r .-His majefty, refolving to eftablifh a better order in regard hereunto, ordains as follows:

## ARTICLE I.

All fums of money, merchandize, or other effects, which fhall be depofited in the Chanceries of the confulihips of the Levant and Barbary, fhall, conformably to their ordonnance of the 4 th of December, I69I, be kept in a place of the confular houfe, appointed for that purpofe, locked up with three different keys, one of which fhall remain in the hands of the chancellor, another with the conful, and a third with the principal deputy of the nation, to the end that the faid effects hall not be drawn out from the place of depofit, excepting in their prefence.
II.

The confuls thall fignify, at the end of every year, to the fecretary of ttate for the department of their marine, a ftate of the depofits which thall remain in their Chanceries, mentioning, in the faid ftate, the day and year when they were fo depofited.
III.

His majefty ordains, that all the depofits that thall be found in the chancerics of the confulfhips of the Levant and Barbary, and which have been there depofited for 10 years, fhall be drawn out in one year, reckoning from the day of the publication of the prefent ordonnance in the feveral ports of the Levant.
IV.

His majefty alfo ordains, that thofe of the faid depofits made lefs than Io years, and thofe that thall be afterwards made, Shall be alfo drawn out in 10 years, reckoning from the day that they were depofited.
V.

His majelty ordains that the depofits which fhall not have been reclaimed, according to the 3 d and 4 th articles of the prefent ordonance, thall be fent by the confuls of the chamber of commerce at Marfeilles, in order to be remitted and divided by the faid chamber, one half to the hofpitals of sc. Efprit and Dc La Charité, of the city, for the benefit of the poor, upon condition,' neverthelefs, to deliver up the value thereof to fuch perfons who have a right to reclaim them.
His majefty commands the Sieur Bret, counfellor of fate, firft prelident of the parliament of Aix, intendant of juffice, of the police, and the finances of Provence, and of the commerce of the Levant, to have ftrict regard to the execution of the prefent ordonnance, which fhall be read, publifhed, and fixed up wherever needful, that no one may pretend ignorance thereof.-His majefty alfo commands the Sieur marquis De Villeneufe, counlellor of flate, his ambaflador at the Ottoman Port, to have ftrict regard alfo to the execution of the fatie.-He enjoins the chamber of commerce at ${ }^{-M r-}$ feilles, and the confuls of the feveral ports of the Levant, to conform hereunto.-Done at Marfeilles, the 11 th of Septemaber, 1734.

## Signed LEWIS,

And underneath Phelypeaux.
Regulations for the impofts of confuls and vice-confuls of the ports of Negropont, Cavaile, Rhodes, Meteline, Scio, Milo, Tine, and Micone.-Of February the 28th, 1732.

- His majefty being informed of the different impoits of the confuls and vice-confuls of the French nation, eftablifhed in the ports of Negropont, Cavalle, Rhodes, Metelinc, Scio, Milo, Tine, and Micone, laid upon the fhipping which traffic under his flag; and having been informed that this revenue has not only little proportion to the attendants and expences of the faid confuls and vice confuls (fome having therely too great an advantage, and others not fufficiently indeminifid) but alio that the power of the faid confuls and vice confuls to receive fuch revenue is not fufficient to auth rize them, nor intelligible enough for their direction, whereby differences frequently arife from the confuls and vice-confuls, and the captains and merchants of htips liable to fuch impofls: his majeity, judging neceflary to provide ayainf the fame, ordains as follows:

Negropont.
The confuls of the French nation effablifhed at Negropons fhall be intitled to a duty, of 2 per cent. con : lage on all merchandiz:
chandizes and provifions of the growth of the faid country, which fhall be laden for the account of Frenchmen, or for that of foreigners, upon all fhips carrying French colours, let the faid merchandize and provifions be deftined either for $\ddagger$ rance or any foreign country in Chriftendom.
All French fhips going on any expedition freighted by the fubjeats of the Grand Seignior, or other forcigners, if they be laden for the account of the captain or mafter, inall pay to the faid conful a duty of two piaftres for anchorage, when they embark or debark merchandizes, provifions, or paffengers in the ports depending on the faid confulfhip; or when they bring provifion of any kind whatfoever, his majefty, forbidding the xaction of the faid duty in any other cafe whatfoever.
His majefty intends that all the ports, roads, and coalts fituated within the extent of the government of the pacha of Negropont, thall be reckoned to belong to the department of the faid conful, and that all French thips which fhall traffic there fiall pay the duties before mentioned.

Cavalle.
The couful of the French nation eftablifhed at Cavalle fhall alfo be intitied to a confulage duty of 2 per cent. upon all merchandizes and provifions of the product of the country which fhall be laden there for the French account, or for that of foreigners upon thips carrying his majefty's colours, let the faid merchandizes and provifions be intended for France, or any foreign country in Chriftendom.
All fhips going on an expedition, which fhall embark or debark, in the ports dependent on the faid confullhip, merchandizes, provifions, or paffengers, fhall pay alfo two piaftres to the conful as a duty for anchorage, whether they are freighted by the fubjects of the Grand Seignior, or other foreigners, or laden for the account of captains or mafters.

Rhodes.
Ships carrying French colours, which thall go directly from the ports of France to Rhodes, and which hall unlade their merchandizes, or provifions, ro which fhall embark to carry them to France, or any foreign country of Cbriftendom, fhall pay to the conful of the faid port a duty of anchorage only; which fhall be of feven piaftres and one half for the fhips and veffels with fquare fails and of five piaftres for barks, and all other veffels with fmack or triangular fails.
The cruizers which hall load or unload in the ports dependent on the faid confulfhip, as before reprefented, and thofe which thall carry provifions thither, thall pay to the faid conful five piaftres, without diftinction of veffels.
His majeity intends that the faid confuls fhall receive the fame duties on all hips that fhall traffic at Stanchio and other ports dependent on the confulhips.

Meteline.
French fhips which fhall load in the ine of Meteline, and it's dependencies, merchandizes and provifions, to carry either into France, or into the foreign countries of Chriftendom, fhall pay to the vice-conful of the faid port, viz. for the veffels 12 piaftres, and barks 8 piaftres.
Cruizers freighted by the fubjects of the Grand Seigrior, and other foreigners, or loaded for the account of the captain or mafter, fhall pay to the faid vice-conful four piaftres, without diftinction of veffel, when they embark or debark merchandizes, provifions, or paffengers in the ports dependent on the faid vice-confulhip, and when they carry provifions thither. Scio.
The duty of anchorage for the thips which, going from the ports of France to Scio, fhall uniade there, and thofe which fhall load in their return to France, or the foreign countries of Chriftendom, thall be paid to the vice-conful of the faid port, at the rate of feven piaftres and a half per veffel, and five piaftres per bark.
Cruizers freighted by foreigners, or laden at the rifque of the captains and mafters, as before fhewn, fhall pay to the faid vice-conful five piaftres, all without diftinction of velfel, when they load or unload merchandizes, paffengers, or provifions, and not otherwife.
The vice-conful thall continue to have 400 piaftres paid him annually, by the French nation at the port of Smyrna, to bear thofe expences with which he is charged.

Miro.
Veffels coming from France, which thall unlade in the ports dependent on the faid confullhip, and thofe which Mall load there for the ports of France, or others of Chriftendom; and thofe aruizers which hall load or unload merchandizes, paffengers, or provifions, thall pay to the conful of the faid port three piaftres for all dutics, without diftinction of veffel.

Tine and Micone.
The conful of Tine and Micone thall receive alfo three piaftres for the whole duty, as well of thips which, coming from France, fhall unload in the ports of the department, and thofe which fhall load to return to France, or other countries of Chriftendom, as of cruizers, which fhall take in merchandizes, pafengers, or provifions.

## General Regulations for all the faid ports.

All the duties before regulated in favour of the confuls and vice-confuls, named in the prefent regulation, fhall be paid once only in the fame voyage, even when the veffel phall
load in feveral ports, in the department of the fame conful or vice-conful.
The faid confuls and vice-confuls fhall enjoy moreover the duties of Chancery, on the foot whereon they have been regulated in July 1692, on condition of providing thofe with reafonable falaries who fhall devote themfelves to the bufinefs of the Chancery, 8xc.
In confequence whereof, his majelty forbids the faid confuis and vice-confuls, under pain of extortion, and of being deprived of their office, to demand any duty of anchorage, or other, of fhips which do not arrive at the ports and roads of their department but by force, and only to touch there, and do not lade or unlade any merchandize or paffengers, nor carry thither provifions.
In like manner, and under the fame penalties, he forbids the faid confuls and vice-confuls to demand any other duties whatever.
His majefty alfo forbids all captains and mafters of French fhips, their traders and freighters, to deprive the faid confuls and vice-confuls of the duties appropriated by the prefent regulation; enjoining them to bring with them their accuittal for the fame, under pain of four times the fum, and three months imprifonment.
The captains and mafters of fips fhall continue to pay the Turks the duties eftablifhed by cuftom in favour of the officers, and others of the country; of which duties the faid confuls and vice-confuls fhall keep a table in the faid Ctanceries. His majcity enjoins and commands Monf. the count of Touloufe, admiral of France, to have ftrif regard to the execution of the prefent regulation, and caufe the fame to be read, publifhed, and regiftered, wherever needful, \&c.Done at Marly, the 28 ih of February, 1732.

Signed LEWIS,
And underneath Phelypeaux.'
The ordonnance of December, 1732, regulates the rank and place that the chancellors of the confulihip of the ports of the Levant fhall have in the public ceremonies; which wo fhall pafs over.
An arrêt of the council of fate, relating to the merchandizes in pacotilles *, as the French term them, which the captains, fupercargoes, and paffengers carry into the Levant, as well for their own account as for that of the freighters, \&c. March 1733.

- It having been reprefented to the king in council, that the French merchants eftablifhed in the ports of the Levant continue to complain of the infinite prejudice done to the trade of the nation in the ports of the Levant, for the cuftom of the captains, fupercargoes, and pafiengers carrying merchandizes in pacotilles, either for their account, or that of their freighters to their addrefs: his majefty has judged neceffary to caufe thofe memorials to be laid before him that have been fent on this matter, as well by the Sieur marquis de Villeneufe, his ambaffador at the Ottoman Port, as by the confuls of the faid ports, and the chamber of commerce at Marfeilles: among the various methods that have been propofed to his majefy, nothing has appeared more realonable than to take for the future fuch precautions, which, without depriving the faid captains, fupercargoes, and paffengers, of the liberty they have of carrying merchandizes in pacotilles into the Levant, may neverthelefs prevent the abufes arifing therefrom, and put a ftop to thofe complaints that have been long made, and, being willing to explain his intentions upon this occafion, the king being in council hath ordained as follows :
*This is a term in the French marine commerce, fignifying a certain weight, or quantity of merchandizes, which the officers and failors are permitted to carry in their chefts, to trade in for their own account.-It pays no freight, either in carrying out or in the returns made. It is rarely mentioned in the. contract, it being a particular and verbal agreement, made between the failors and owners of merchantmen, particularly thofe defigned for foreign trade in long voyages.

## A R T I CLE I.

The captains, mafters, fupercargoes, and paffengers of French fhips, carrying into the ports of the Levant merchandizes, either for their own account, or that of their freighters, fhall be obliged for the future, from the day of the publication of the prefent arrett, to fell them to the French nation eftablifhed in the faid ports, and to purchafe of them the merchandizes which they fhall want in return; his majefty exprefsly prohibits them from buying or felling any kind of merchandizes in the faid ports where there are French merchants eftablifhed, making a body of the nation, on pain of confifcation of the faid merchandizes, and a fine of 500 livres, for every one who thall violate this arrêt : the faid captains and mafters fhall alfo be difqualified for ever acting in the faid capacity again.

## II.

The French nation of the feveral faid ports thall be obliged to take for their account, at ro per cent. under the current price, merchandizes of the faid captains and mafters, fupercargoes, and paffengers, and to fupply them with the value thereof, either in moncy or fuch merchandizes, as they fhall require in return, at 4 per cent. above the curient price in the faid port: his majefty wills and ordains that the profit arifing
as well from the diminution of the ro per cent. on the price of goods imporged, as on the augmentation of 4 per cent. fon thole merchandizes exported, fhall be added to the national carh, to difcharge the expences of the port.

$$
\begin{aligned}
& \text { re.exp } \\
& \text { III. }
\end{aligned}
$$

Since the merchandizes carried by the faid captains, mafters, fupercargoes, and paffengers, fhall be paid for by the nation charged therewith, either in money or merchandize, and that, among the faid imported merchandizes, there are fome who fell them at a diftant time, a difcount being allowed for prompt payment: his majefty ordains, that, upon the merchandizes imported and fo fold, the nation fhall retain the ufual difcount, independent of the 10 per cent. mentioned in the preceding article:

## IV.

His majefty alfo wills and ordains, that, if any one of the faid captains, mafters, fupercargoes, and paffengers, buys or fells merchandizes, in violating of the prefent regulation, confuls and vice-confuls of the faid ports thall caule the faid merchandizes to be feized, and order the confifcation thereof, togerber with the fines to be placed to the national cafh, for the ufe of the port.
His majefty neverthelefs ordains, that the faid captains, mafters, fupercargoes, and paffengers, fhall buy and fell themfelves merchandizes, in thofe ports where there are no French merchants eftablifhed, making a body of the nation.
VI.

His majefty moreover wills that the chamber of commerce at Marfeilles doth continue to take cognizance of all the merchandizes which thall come from the Levant for the account of the captains, mafters, fupercargoes, and paffengers, alfo of the ordinary duties; even thofe of the averages of the port, if they have not been difcharged, as likewife in the cafe where the faid captains, mafters, fupercargoes, and paffengers, fhall carry the merchandizes which they have brought in violation thereof, and unknown to the confuls in the faid ports; and where there are French merchants eftablifhed as a body of the nation, the faid chamber of commerce thall have a ftrict eye upon the violators, to caule them to be condemned in the pains and penalties hereby enacted.
His majefty orders and commands that all officers any way concerned herein have due regard to the execution of this arret, \&c.-Done at the king's council of ftate, his majefty being prefent, heid at Verfailles the 17 th of March, 1733 .

Signed Phelypeaux.'
A royal ordonnance, concerning the duties of the confuls and vice-confuls of the ports of Negropont, Cavalle, Rhodes, Meteline, Scio,' Milo, Tine, and Micone.Of May 1733.
c The regulations of the 28 th of February, 1732 , being reprefented to his majefty, whereby the duties of the confuls and vice-confuls are fettled in the ports of Negropont, Cavalle, Rhodes, Meteline, Scio, Milo, Tine, and Micone, without mentioning that which the confuls and vice-confuls ufually require at the rate of 4 per cent. on the price of the freight whick the captains and mafters of French fhips make in their ports: and judging that the reduction of this duty, the foundation whereof is the care of the confuls and vice-confuls have with regard to the faid freights, and the advantage thercby reaped by the faid captains and maters, the receipt thereof fhall be made for the mutual adyantage of the feveral parties: his majelty ordains that the confuls and vice-confuls of the faid ports, who have not appointments paid them by the chamber of commerce at Marfeilles, thall receive for the future 2 per cent. only upon the price of the freights which the captains and mafters of the French fhips fhall make in their refpective ports; forbidding the faid confuls and vice-confuls to exact the faid duty to a bigher rate, and the faid captains and mafters not to defraud the faid confuls and vice-confuls thereof, under the pains and penalties enacted in the regulation of the 28th of February, 1732, which his majefty requires thall be executed according to the form and tenor thereof.--His majefty commands all officers concerrred herein to fee to the due exccution hereof.-Done at Verfailles, the 27th of May 1733.

## Signed LEWIS, <br> And underneath Phelypeaux.'

A royal ordonnance, forbidding the French merchants to confign, directly or indirectly, merchandizes, fruits, or provifions, to foreigners eftablifhed in the ports of the Le-vant.-Of February 1735.

- His majefty being informed that the French merchants trading to the Levant make ufe of the names of ftrangers eftablifhed at Marfeilles, or in other ports of the kingdom, to caufe their merchandizes to be configned to other ftrangers fertled in the ports of the Levant, who fhall be ordered to fell them for the account of the faid French merchants, and make the returns to them: his majelty, defirous to prevent an abufe equally prejudicial to the interefts of his fubjects and to the advantage of the commerce of the Levant, his majefty ex-
prefsly forbids all French merchants, and other his fubjests trading there, to confign, either directly or indireatly, either by themfelves or others, any fort of merchandizes, fuits, or provifions, even in pacotilles, to the commifioners, or foreign merchants, effablifhed in the faid ports of the Levant, on pain of confifcation of the fame, and a fine of 10,000 lifres, one half to go to the informer; and, even for the firft default, the faid French merchants fhall be for ever after rendered incapable of following the faid commerce of the Levant, and punifhed alfo according to the exigencies of the cafe.
His majefty commands all perfons in office to have due regard to the execution hereof.-Done at Verfailles, the 2d of February; 1735.

Phelypeaux.
An arrêt of the council of fate, concerning the impofition of a duty of average of 1 per cent. for three years, upon the merchandizes which thall be carried to the ports of the Levant.-Of February, 7736 .
" The king having permitted the fheriffs and deputies of the chamber of the commerce at Marfeilles to borrow, for the term of three years, the fum of 180,000 hivres, with fipulations of intereft at 5 per cent. to difcharge all the debts contracted by the nation at the ports of the Levant, for which the faid nation pays a confiderable intereft, which is a burthen upon commerce: and his majefty defiring to put the faid chamber in a condition to reimburfe the faid fum of 180,000 livres, in the fame term of three years, by means of a moderate average-duty on importation, which has been propofed to be laid upon merchandizes which are carried into the ports of the Levant: his majefty having feen the refolution of the affembly held upon that fubject by the faid chamber, the 23 d of January laft, and the fentiments of the Sieur Icard, infpector of that commerce; having heard the report, and confidered the whole, his majefty, being in council, has ordained as follows:

ARTICLE I.
There fhall be raifed in every port of the Levant, during the fpace of three years, reckoning from the day of publication of the prefent arrêt, I per cent. average at importation upon all the merchandizes which fhall be carried thither from France and foreign countries, by French fhips, or others that carry on that trade under the protection of France.

## II.

The ports of Morea and Barbary, and thofe of the Archipe-lago.-[fee Archipelago] of Satalia, and others where there are no French merchants eftablifhed, making a body of the gation, fhall be excepted from the faid impofition. III.

His majefty wills and ordains, that the piaffres, fequins, and other foreign fpecies, thall not be liable to the fame duty of average at importation; which fhall be received on our merchandizes, in conformity to the tariff of the fettlement of the price thereof, which fhall be raifed by the chamber of commerce at Marfeilles, and fent by the deputies of the nation for this purpofe into the faid ports.
IV.

His majefty ordains that the faid deputies fhall receive the faid duty of average at importation, in the fame manner as the duty of average is at exportation, and appropriated to the chamber of commerce; and they fhall keep a feparate account of the product of the faid duty, which fhall be balanced every fix months, in the prefence of the conful.
V.

His majefty enjoins all captains and mafters of French fhips, or foreigners which fhall be undef the protection of France in the ports of the Levant, to prefent, within 24 hours after arrival, the policies and manifeftoes of their loading, to the confuls and deputies of the nation; and juftly and faithfully to declare the quantity of merchandizes with which their veffels are laden, under pain of confifcation of thofe nor fo declared, and a fine of 1000 livres.
VI.

If any merchant is found to evade the faid duty, be it either in fupplying counterfeit manifeftoes, or otherwife, his majefty wills and ordains, that, befides the confifcation of the merchandizes, he fhall be compelled to pay a fine of 3000 liveres; and, if he is a trader refident in the Levant, he fhall be fent back into France: the whole to be applied, viz. one-third to the informer, one-third to the chamber of commerce at Marfeilles, and the remainder to the hofpital of the faid city of Marfeilles.
VII.

His majefty means and intends that the faid duty fhall ceare before the expiration of the term of three years, for which it is eftablifhed, if it produce, before that time, wherewith to dicharge the fum of 180,000 livres, borrowed by the faid chamber of commerce, and the intereft of the tame, which likewife muft be difcharged out of the faid duty : for which purpofe it is ordained, that the faid chamber and the confu's

## L E V

## LE V

Thall render an exact account of the receipt which thall be made in the ports of the Levant.
VIII.

His majefly wills and ordains, that the faid chamber of commerce lhall keep a feparate account of the product and application of the fald duty; which account fhall be annually balafced by the Sicur Jcard, infpector of this commerce, whom his majefty enjoins to have due regard to the execution of the prefent arrèt.-Done at the council of fate, his majefty be ing prefent, held at Verfeilles the 25 th of February, 1736.

Signed Phelypeaux.
A royal ordonnance, permitting French hips to be configned to merchant-Atrangers eftablifhed in the ports of the Levant, in cafe they are entirely freighted by foreigners.Of April 1737.

- His majefty being informed that the merchants of different nations who are fettled in the ports of the Levant, would be more induced, than they really are, to freight French fhips, by their correfpondents in the ports of Italy and other foreign countries, where they find them, if the faid fhips might be dirccted and configned to them: and his majefty's ambaffador at Conftantinople having alfoinformed him, that fuch confignment made to foreign merchants, of French fhips freighted by foreigners, would not be detrimental to the French merchants eftablighed in the faid parts of the Levant: his majefty, confidering the 3 rit article of the declaration of the 21 ift of October, 1727, bath permitted, and doth permit, that the fhips of his fubjects may be addreffed and configned to foreign merchants eftablifhed in the ports of the Levant, in the cafe only when the faid fhips thali be wholly freighted by foreigners.-His majeity orders and commands Monf. the count of Touloufe, admiral of France, and the Sieur marquis De Villeneufe, ambaffador at Conftantinople, to have due regard to the execution of the prefent ordonnance, which hall be regiftered in thersolls of the admiralty of Provence and Languedoc, and read, publifhed, and fixed up. wherever needful.- Done at Verfailles, the 23 d of April, 1737.

LEWIS,
And underneath Phelypeaux.'
An arrêt of the council of fate, eftablifhing, to commence the uft of April, $\mathbf{1 7 3 9}$, that the duty of average at impor-
tation, the raifing of which was ordained by the arret of the 25 th of February, 1736 , thall be fuppreffed in all the ports of the Levant.-Of December $173^{8}$.
6 The arrêt of council of the 25 th of February, $173^{6}$, being laid before the king in his council of ftate, by which his majefty ordained that there fhould be raifed, in each of the ports of the Levant, during the term of three years, reckoning from the day that the faid arrett fhould be received and made public, a duty of r per cent. average of importation upon all merchandizes which hall be carried thither from France and foreign countries, by French Chips, or others carrying on trade under the protection of France: and his majefty having caufed the accounts to be examined, which, fince the effablifhment of the faid duty, have been given in by the deputies of the nation in the ports of the Levant, and by the chamber of commerce, and fettled by the Sieur Icard, inEpector of the commerce of'the Levant, in conformity to the $7^{\text {th }}$ and 8 th'articles of the faid arrêt: and having found that, the faid duty being received 'till the 3If of March, 1739 , enfuing, the product thereof will be fifficient to reimburfe the fum of 180,000 livres, which his majefty had permitted the fheriffs and deputies of the chamber of commerce at Marieilles to borrow, for the faid term of three years, in order to difcharge all the debts contracted by the nation in the ports of the Levant: his majefty, conformable to the 7 th article of the faid arrêt, ordaining that the faid duty fhould ceafe, for the ealement of his fubjects trading to the Levant, although the faid three years,' reckoning from the day fuch receipt of duty commenced, fhould not be abfolutely ex-pired:-HAving feen the reprefentation of the Sieur Icard, the king, being in council, hath ordained, and doth ordain, that, on the firft day of April, in the year enfuing, 1739 , the duty of average on importation fhall be fuppreffed in all the ports of the Levant; that the merchandizes which thall be exported thither from France and foreign countries, fhall be difencumbered from the payment of the faid impoftion: his majelty prohibits the confuls and deputies of the nation in the faid ports, and all others, from demanding the faid duty; and ordains, that the total of the amount of the receipt of the fiid duty, which Glall be made during the fix laft months of the prefent year, and 'ill the faid 31 it day of the month of March next, there fhall be delivered, by the fheriffs and deputies of the chamber of commerce at Marfeilles, a definitive account of the produce and appropriation of the faid ducv, which fhall be balanced by the faid Sieur Icard-His inajefty commands the Sieur marquis de Villeneufe; counfellor inajecty commands the sieur marquis de Villeneufe; counfellor
of tate. his ambaffador at the Port, alfo the Sieur Icard, infeetor of the commerce of the Levant, and the fheriffs and deputies of the chamber of commerce at Marfeilles, to have a frict regard to the execution of the prefent arret: he alf enjoins the confuls of the nation, in the ports of the

Levant, to caufe the fame to be made public, and regiftered in their Cbanceries, and to fee the fame executed.-Done at the king's council of fate, his majefty bcing prefent, held at Verfailles the 12 th of December, $173^{8 .}$

Signed Phelypeaux.'
On the 18th of January, 1749, an arrét was iffued for the regulation of policies of aflurance pafied before the figning the preliminaries of peace, with regard to Chips employed in the comnerce of the ports of the Levant, and regulating the premiums to be allowed to the infurers, in thofe cafes mentioned in the arrêt of the 12th of July, 1748.-But, this* being too long to infert here, we fhall defer it to the article Policy of Assurance.

* This arrêt alfo fhews what extraordinary care the French have taken of this branch of trade, in the moft minute circumftance.

A royal ordonnance, forbidding all fubjects who refide in the ports of the Levant and Barbary to poffefs themfelves of any real eftates.-July $\mathbf{1} 749$.

- His majefty being informed that, notwithftanding the prohibitions made, none of his fubjects refident in the ports of the Levant and Barbary fhould poffefs themfelves of real eftates, many of them are actually in poffiffion of houles, lands, and gardens, which they pretend to have been obliged to accept in payment for debts due to them by the fubjects of the Grand Seignior: and experience having manifefted that this kind of property influences their refidence in Turkey, prolongs their return into the kingdom at the term fixed for their refidence, and gives room-to litigations dangerous to the fafety and tranquility of the nation: his majefty judges neceflary to declare more precifely his intentions upon this fubject, and, in confequence thereof, hath ordained, and doth ordain, as follows, viz.

## ARTICLEI.

The confuls, chancellors, interpreters, merchants, artizans, and all other fubjects of the king refiding in Turkey and Barbary, fhall be incapable, for the future, under any pretence whatfoever, to acquire real eftate, by the way of purchafe, ceffion, gift, or legacy, either lands, houfes, gardens, rents, and other immoveables, under pain of being fent back without delay into France, and the lofs of the faid properties; which fhall be appropriated to the body of the nation, in order to be fold, according to the laws of the country, and the amount to be remitted to the national cafh of the port, to be applied to their expences ordinary and extraordinary.
II.

His majefty orders thofe of hiss fubjects who poffefs real eftates, to get rid of them as foon as poffible; and, in order to prevent lofs in the fale thereof, his majefty grants them 'till the Ift of January, 1751, after which term the faid proprietors, or poffeffors, fhall be liable to the penalties inficted in the preceding article.

## III.

His majefty declares that, in the prefent prohibition, the dwelling-houfe of his ambaffador refiding at Conftantinople fhall not be included, nor the dwelling-houles of the confuls, the chapels, church-yards, nor the hofpital for miffionaries; which the nation and the faid miffionaries fhall continue to enjoy as heretofore, in conforming themfelves, neverthelefs, to what is prefcribed, in refpect hereunto, by the capitulations made with the Ottoman Port, and the particular orders tions made with
of his majefty.

## IV.

His majefty, notwithftanding, permits the French refiding in Turkey and Barbary, in cafe of death, flight, bankruptcy of their debtors, and in default of payment, to enter their action againft the immoveables, and to purfue the fale thereof 'till the abfolute payment of their debts; exprefsly forbidding them to accept and keep fuch effects by way of mort gage, in order to enjoy their revenues.

V
His majefty, in like manner, forbids all his fubjects from taking a farm, or the adminiftration of lands, houlies, or duties of cultom belonging to the Grand Seignior, or his fubjects, under any pretext whatfoever: ordaining that thofe who are encumbered therewith, may rather recede from their agreement, under pain' of being fent back, and rigorouify punithed in France.
VI.

His majefty, however, permits his fubjects, but only in cafe of abfolute neceflity, to take in payment the barveft, or the produce of one or feveral years, provided that they do not exceed the number of thole fixed for the time of their refidence in the Levant.
VII.

His majefty moft exprefsly forbids all religious miffionaries, French or foreigners, refiding in Turkey under his protection, from making any acquifition or augmentation of houfe or chapel, without having firlt obtained the confent of his
majefty,
majeity, and the approbation of the Ottoman Port, whech fhall not be follicited but through the interpofition of his ambaffador at Conftantinople.
His majefty enjoins the sieur Defalleurs, his ambaffador at the Ottoman Port, the Sieur Pignon, inipector of the commerce of the Levant, the theriffs and deputies of the chamber of commerce at Marfeilles, and all the confu's of the French nation refiding in Turkey and Barbary, to have all due regard to the execution of the prefent ordonnance, which fhall be read, publifhed, fixed up, and regiftered wherever needful. -Done at Compeigne, the 6th of July, 1749.

Signed LEWIS,
And underneath Roüncle.'

## Remarks.

Thefe are the principal royal arrêts, edicts, ordonnances, and declarations, iffued from the year 1665, by authority, for the regulation of the Levant trade belonging to the kingdom of France: whence a good judgment may be made from Facts, to what caufes the prefent flourifhing fate and condition of that trade may be juflly attributed: and, without a diftinct and minute knowledge of thefe meafures, it is not poffible for any one to have a true idea of the policy of that nation in this refpect. A general fuperficial knowledge that the French take this or that meafure alone for the regulation of their Turkey trade, will give no fatisfachory idea of that feries of policy which they have oblerved for near this century paft ; and, without that, we can, perhaps, make no right judgment of the regulations neceffary for our own Turkey trade, for want of a true knowledge of the wifdom of France and other nations in managing theirs.
From the tenor of theie regulations, the judicious reader will eafily difcern the neceffity of confulting the articles Consul, Chamber of Commerce, and Marseilles; to which Iater place we more particularly refer under the article Provence in France, that being the capital city, where the French Levant trade is carried on, and where the regulations are made of the feveral fpecies of merchandizes for that commerce.
Of the regulations of the Dutch, in regard to their commerce of the Levant.
Smyrna is the principal factory of the Hollanders in the dominions of the Grand Seignior.
The Hollanders have at Smyrna a conful, a treafurer, three affiftant judges, and a chancellor. The conful and treafurer may not continue in place above three years; they are, neverthelefs, very often continued, when their adminiftration gives content ; but they muft obtain their confirmation by a new patent.
With refpect to the affiftant judges, their employ is annual ; they are propofed by the three affiftants in office, the conful and the treafurer, to the directors of the commerce of the Levant eftablifhed at Amfterdam, which commonly approve of them, and make choice of one of the three ancients to continue for the following year : he is called the firt affithant, and the other two the new affiftants.
The ordonnances, regulations, and the inftructions of the direction of Amfterdam, which are fent to the Levant, as well as the difpatches of the ambaffador of the republic refiding at the Port, are always directed to the conful, treafurer, and affiftants, but cannot be opened but by the conful in full affembly, and in'prefence of the other officers, or at leaft of two affiftants, if the third and the treafurer happen to be abfent : the fame is obferved alfo when any public expence becomes neceffary for deliberation, or to fubfribe other refolutions taken in relation to commerce, which are thereby authenticated and executed, when they are figned by the conful and two of the faid five officers.
When it is requifite to have an affembly of the body of the nation, the chancellor and a druggerman [fee Drugger MAN] apprize the merchants of it: when affembled, the conful communicates the occafion of their meeting, and the chancellor reads, with a loud voice, the memoriats concerning the fame; after which, the matter is decided by the plurality of votes; but the execution is referred to the conful and the affiftants.
The treafurer fhould always be prefent at the affemblies when any difburfements of money are required; and whatever is refolved on this head without him, may not be executed, but is declared null and void.
The differences between merchants are laid before the conful, and are judged of by the plurality of voices, as well by him as by his affiftants. Appeals from their judgment are carried before the ambafiador refiding at Conftantinople, from the ambalfador to the directors of the commerce of the Levant eftablifhed at Amfterdam, and from the directors to the ftatesgeneral; fo that there are four degrees of juriddiction in regard to thefe commercial decifions.
Ordonnances made by the conful, without the interpofition of the affiftants, are invalid.
When the conful is called befure the cadi, the officers of the cuftoms, the siptain-pacha, or other Turkih minifters, be-

Fore they go, they muft affemble the nation to deliberate fip= on the matter in agitation, and take fuitable refolutions: a $f *$ terwards the conful negociates the affair, 'till it's conclufion. If the conful is cited before the adjudicatory of the country; he goes accompanied with his whole nation; and tequires a copy of the demands, in order previoufly to deliberate thereupon in their alfembly.
In cafe of the conful's death, the ambaflador nominates one, but only provifionally. With refpect to the employs of the Treafury and Chancery, it is left to the conful and his affiftants, to appoint others; but this is in like manner, according to the pleafure of the directors at Amfferdam.
The duty of confulage is due for whatever is ladenor unladen, either in merchandizes or ready money; the latter at the rate of I per cent. at importation or exportation, the other upon the footing of 2 per cent.
When there is a great deal of money in cafh, the duty of cenfulage is reduced to one half, that is to fay, to $\frac{1}{2}$ per cent. for the money, and i per cent. for the merchandizes, but that can be doneonly with the permifion of the directors of Amfterdam, according to the reprefentation of the conful, the Treafury, and the affiftants, in the name of the whole nation, certify ing that the demand of the merchants, in fuch cafe, is juft. If, on the contrary, the cafh is exhaufted by the avanies of the Turks [fee the beginning of this article] or by extranedinary expences, which fometimes happen, the duties of confulage are doubled; whereby ready money pays 2 per cent. and the merchandizes 4 per cent.
Foreigners who trade under the banner of Holland, never pay more or lefs than 2 per cent.
The treafurer, or his deputy, are charged with the recovery of the dury of confulage, which is required in the following manner :
Foreigners pay in white money, viz. in lion-piaftres, the duty on merchandizes imported : in relation to ready money, the duty is taken in the fame fpecie.
The quantity of ready money is verified on board the fhips, before unladen. The conful, treafurer, and affiftants examine the fame, bag by bag, whence they take fome of the fpecie, which being found of good ftandard, they are again put into the bags, that are fealed with the feal of the chancery, and afterwards the debarkation is allowed, which for the money, muft be done all at one time. If there is aty counterfeit fpecies, it is fequeftered in the chancery.
Foreigners, after the departure of convoy, pay the duty of confulage according to the tariff and bills of lading; copies whereof, after being figned by the captain, muft be carried to the Treafury.
The Dutch merchants are obliged, eight days after the departure of the convoy, to give a declaration of the quantity and quality of the merchandizes which they have received and loaded, and pay the confulage-duty thereof in white money. They are generally allowed a dicount of 6 per cent. by which they pay 94 only for 100 ; but, if they do not pay at the time when it is due, that is, in the month, or larer, there is added to the 94 one per cent. for as many months as they poftpone the paymers: they are, however, not permitted to defer payment longer than fix months, after which the conful may profecute, and oblige them to pay, or imprifon their perfons.
When the duties of confulage are paid at Conftantinople, Smyrna, and Chio, there is liberty to fend the merchandizes where you will; but, when they go to other places, or come from them, the confulage is due.
The Hollanders, and thofe under their proteftion muft pay the confulage according to the money there is in cafh, as before oblerved; but they do not pay double, either for exports or imports, on thofe fhips which trade under the protection of other countries, which is called the foreign confulage: they are, neverthelefs, obliged to pay, in the fame mamer, and under the fame penalties, as for the merchandizes which are laden upon Dutch mips.
Once a year, the treafurer, his deputy, and the whole nation, go in ceremony to church, where, after fermon and plamfinging, they all take an oath, according to the formulary, read aloud in the congregation by the chancellor, which is, not to defraud the confular power, either directly or indirectly, of any of the duties of confulage, nor of any thing relating thereunto, on pain of a fine of 1000 crowns, and to be fent away, if furnd perjured, and even to fuffer other pains and penalties, if the ftates judge proper.
Thofe who reveal the fecrets of the national affembly, are fubject to a like chaftifement.
Captains, pilots, and cap-merchants, on their arrival at Smyroa, and beforc their departure, and before they have delivered their manifeftoes and declarations to the conful, are obliged to take the fame oath, under the fame penaties: and, moreover, the captains, found violating, are difqualified for commanding any veflel for tix years.
The treafurer keeps poffeffion, in the chancery, of all the money with which he is charged, referving fome for common expences. The cheft wherein the call is kcpt is of iron, with three keys, one of which is kept by the conful, another by the affinants, and the third by the treafurer.

No

No one but the treafurer knows what money there is, for which he is not obliged to give account but to the directors of the Levant eftablified at Amficrdam. The affiftants of Smyrna examine, neverthelefs, all the receipts and expences made, and afertain the fame according to the deciarations of the merchants, the manifeifoes of captains, and by what has been received or charged by foreigners by every convoy, or otherwile.
The treafurer pays every three months, in money of due weight, with an agio of 10 per cent. viz.

Piaftres.
To the ambaffador per annum, for his maintenance To the conful, ditto

The treafurer pays all the expences made at the port and at Conftantinople, as well for prefents as for the voyages of Adrianople and others, which he reimburfes to the ambalfador, and at Smyria to the conful.
The vice-treafurer, who refides at Confantinople, fends to the treafurer at Smyrna an account of expences that he has made, which he reimburfes, after having the fame examined and approved by the affitants and the nation allembled: this affembly is called the affembly of the affiftants.
The ambafiador is obliged to pay the rent of his houfe, where he gives a room to hold the national cafh. He is alfo obliged to pay the chancelior, the druggermen, and the janiflaries of Conftantinople, and all other expences that regard the maintenance of his houfe and domeftics.
The conful of Smyrna is obliged to the fame things, with referve to the appointments of the chancellor, the minitter, the druggermen, and janillaries, who are paid by the treafurer, out of the money in cafh.
The direcoors of the Levant trade arifing at Amfterdam are to the number of 17. According to their inftitution, there fhould be three from every province; but cuftom has made it common for fome to have only two, and others but one. They hold the quality of minifters, or counfellors, to the States-General, in regard to the commercial affairs of the Levant; and their power is next of kin to fovereign in that cafe, and yet under the authority of the States. It is a place of honour, but of no profit; and the States-General chufe only the moft filiful and honourable merchants into it.
The treafurer of Smyrna fends every year, to the directors, an account of all expences incurred, and another of the receipt of the duties of confulage. with the balan'e of the cafhaccount. The firf account contains the appoistments, the avanies, the prefents, the expence of meffengers; in fine, generally fpeaking, it contains whatever has been expended for the fervice of the nation, and utility of it's commerce. They fend alfo, to the directors, the copy of the manifeftoes, or declarations of all the fhips, and accounts in particular of the duties of confulage, the whole being examined, and certified by the affiftant; and, if they find any error to the difadvantage of the cafh-account, the treafurer is refponfible for the lame.
All the money in cafh, the expences firf acquitted, remains in the hands of the treafurer. The directors have fometimes cauled the money to be fent to Amfterdam, and would have eftablifhed this cuftom for a conftancy; but the body of the merchants in the Levant complaining to the States-General, and remonftrating that the furplufage of the cafh ought to be appropriated to their advantage, in leffening the duty of confulage, fince they were to make the augmentation, when it fell thort: the States ordered, that, for the future, the furplufage of the funds fhould remain in the Levant, to be applied to eare the national expence.
There are at Smyrna eight or ten confiderable houfes of trade, of which the Dutch factory is conftituted, and who uphold of which thaffic.
All the fubjects of the United Provinces are permitted to export merchandizes for the Levant, whether the armateurs put themfelves under the protection of convoy, or chufe to purfue the voyage alone. The chief thing which they are obliged to obferve is, th-i the fhips carry 28 pieces of cannon, and 50 men , as well in time of peace as war.
For the due execution of this regulation, there is a commiffary eftablifhed in the Texel, to vifitall fhips intended for the Le-
vant trade ; and, if their armament is not agreeable to the abovefaid regulation, the captain, who commands the fhip, is muldt in the penalty of 2000 crowns for the firtt time; and, in cafe of repetition of the like violation, befides the faid fing, the captain is cafbiered, and the ibip is fequeftered 'till a new captain is provided.
When a convoy departs, the directors of the Levant trade require of the commiffieners of the admiralty the number of men of war neceffary to convoy the merchantmen, which is always granted, the armament being at the expence of the admiralty, by reafon of the duty of I per cent. on the value of the loading of the veffels, that they receive from all thofe who enter into the ports of the State, either under convoy or otherwife.
The convoys that go to the Levant, commonly touch in all the ports of Spain, Genoa, Leghorn, Naples, and Meflina, and ftay as many days as are neceffary to load and unload, which is alfo regulated.
They follow the fame orders when they are at Smyrna; but, if it happens that the merchantmen cannot be ready by the time appointed, which is gencrally of 90 days in time of peace, in this cafe the merchants of Smyrna, and the captains of their fhips, prefent a petition to the conful, the treafurer, and the afiflants, to prevail on the commandant of the convoy to ftay till they are ready; to which he agrees if he thinks proper ; though he is fometimes permitted to fail, if he has reafons for fo doing.
When the commanding officer of the convoy makes a difficulty of ftaying for the merchantmen, by reafon of the precife orders which he has received from the admiralty, all the nation oblige themfelves to indemnify the expence of his extraordinary flay; which otherwife may be thrown upon him, befides the reproach that he may be liable to, on his return to Holland, for difobeying his orders.
At the return of the convoys to Holland, the commandants give the journal of their voyage to the follicitor-general of the admiralty; who, difapproving the days extraordinary of his ftay, throws all the expence upon that officer, who is obliged to pay it, provided, as before hinted; he is not indemnified by the body of the nation in the Levant.
It is likewile the bufinefs of the follicitor-general of the admiralty to inform againft the captains of men of war who have carried on contraband trade; and it is at his requifition that they are condemned in a fine for the violation of the regulations in this refpect; which ftrietly forbid and punifh a conduct of this kind. They are, indeed, allowed to lade money, either in fpecie or bars, becaufe that does not encumber the flip in cafe of an engagement.
As it may happen'that the men of war may be feparated from the merchantmen, the aümirally have a cuftom of chuling, among the captains who command the latter, firf and fecond commandants, whom the others are obliged to obey.
Ships of convoy, and generally all thofe that come to Smyrria under the banner of Holland, pay 80 aflani dollars anchorage, which are diftributed partly to the cadi and governor of the cafte, and partly among the druggermen and janiflaries of the nation. There are alfo fome referved for the flaves, and fupport of a fermon and church-yard. This diftribution is made according to the pleafure of the conful.
The body of the nation forbid the lending of hlips to the Turks; and, when they demand ihem, the captains excufe themfelves under fome pretext, which frequently difgufts the Turks. It neverthelefs fometimes happens, that they take them by force; which muft be fubmitted to, left greater avanies fhould follow.
Of the general nature of the Turkey trade in the Leviant.
Though the Turks are no traders, but rather dilcouragers and deftroyers of trade, yet, as they poffefs fo great a'part of the world, and fome of the moft fruitful, and productive of the beft and choicent merchandizes, it will always induce the European parts of the world to fend their merchants amongft the Turks, to traffic wich them.
The Turks themfelves, by their indolence and haughtinefs, defpifing manufacturing, and notimproving the product which they enjoy, in many places, muft neceflarily be abliged to purchale of other nations the things that they ftand in need of ; which naturally encourages the merchants of other niations to come annoing them.
Thofe that fettic amiong them from the eaftern part of the world, are' generally Grceks; Jews, Armenians, and Georgians thofe from the weftern parts are chiefly Venetians, Englifh, French, and Dutch, with fome Jews alfo, chiefly Italian.
The principal places of trade, on this fide the Turkifh dominions, refpecting Europe, where the faid merchants refide, are Conftantinop'e, Smyrna, Aleppo, Alexandretta, or Scanderoon, Alexandra, Ti ipoli, Antioch, and the inlands on the coaft.
There are fome Chrifian merchants in moft of the iffands belonging to the Tuiks, viz. at Cyprus, Candia, Rhodes, Zant, Cephalonita, and in molt of the inhabited iffands of the Ægean Sea, or Archipelago. [See Archipelago]Thefe merchants are genefilly French, though there are fome Jews.

## L E V

This commercial eftablifhiment, by the way of factories, atnong the Turks, take the fame altogether, is, in one geneald acceptation, called with us the Turkey trade : the manner of which trade is this, viz.
The merchants of England, France, and Holland, chiefly furnifh the Turks with fine woollen cloths, dyed fcarlet, crimfon, purple, blue, and green; the firf three in grain, and as rich in colour as poffible, which raifes their value. The Englifh, befides their cloth, fend block-tin, lead, clockwork and watch-work, both in gold and filver; and, all put together, the value was formerly for upwards of $300,000 \mathrm{l}$. fterling, one year with another.
The ruturns which the Franks (for fo the European Chriffian merchants are called in Turkey) make from the Turks, and which are the product of the Turkifh and Perfian dominions, are as follow, viz.
Raw lilk: this, though the chief return of the whole trade, is not all the immediate produce of the Grand Seignior's dominions, but of the Perfians alfo. [See Persia.] It is brouglt from the country where it is produced to Aleppo, and from thence to Scanderoon, where the merchants trade for it.
The filk, thus brought raw in bales from Perfia, is Cherbaff, the Perfian word for raw filk, or, perhaps, for filk in general. When this herbaff filk is landed here, and comes into the hands of manufarers, it is called by a name of their own, legee. Befides this, the Levant or Turkey merchants import another fort of raw filk, which they call white filk, and our workmen belladine: This is fhipped either at Cyprus or Scanderoon, on board the fame Turkey fhips that bring the other fort of filk, but is produced in feveral diftant parts of the Turkifh dominions, as at Cyprus, at Antioch, and at Tripoli, that is, in the country adjacent to the ancient Syria, and in feveral of the illands of the Arches. The fame fort of filk is alfo fhipped off at Smyrna.
This illand filk is generally the product of the iflands of Andros, Naxos, Zea, Thermia, Syra, Santorini, \&c. The quantity of filk imported formerly from thefe places, and as comprehended under the denomination of the Turkey trade, has been calculated at between 3 and $400,000 \mathrm{lb}$. weight, one year with another. That we may not fpeak without book, the reader may take the following account, drawn from our Cuftom-Houfe books.
Turkey filk imported in the port of London, in the feveral years' $17^{20}, r^{\prime} 722$, and 1723 .
Anno 1720 None imported, the plague being $399,688 \mathrm{lb}$.
Anno 1721 $\left\{\begin{array}{l}\text { None imported, the plague being } \\ \text { that year in Turkey and France. Ib. }\end{array}\right.$

| 1722 | - | - | - | - | - |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 1723 | - | - | - | 374,401 |  |
|  |  | - | 329,983 |  |  |

Note, Every pound weight in this account contains 24 ounces. The importations for fome years' after correlponded pretty much with this proportion, except that, upon fome occafion, the trade met with an interruption, as in the time of the plague, and on occafion of war. What is the ftate of the Turkey trade at prefent, compared with what it has been, we have not room to fhew under this head; and, therefore, fhall be obliged to refer to the articles Oriental. Trade, and Turkey Trade; under which two heads, with what we have here faid, will be comprëhended, whatever is needful, if order to form a right judgment of this commerce; and of what may be further requifite to render it more beneficial to this nation in patticular. To proceed.
The other importations are,
Carmania wool, and wool of the illands,

## L E V

Thefe are the principal productions with which the rerchants of Europe trade among the Turks in this part of Afia: the number of drugs may, perhaps, be greater than what are here mentioned; but theie are the moft confiderable.
The chief articles are the filk, which comes from Georgia and Perfia, the wool, the hair, and the galls.
The cotton, as well in wool as in yarn, and alfo moft of the goat's hair, is the product of the illands on the Afian fide of the Archipelago; and thofe affo of the European fide. Some of the filk likewife comes that way to us, from Zea, Andros, Timon, Paros, A'rgenter, Naxos, Santorini, Syra, Thermia; and many others. Alfo from the ifland of Mycone come fome goat's-hair and cordevans.
Thefe ferve for the bulk of the trade; the others, perhaps, are equally ufeful in their kind, but not of equal value in general commerce.
As the Turks have little or no trade but what is, as it were, forced by the Europeans and others; fo they have but few fhips, compared to the extent of their naval dominions: the chiefeft of their fhipping is among the Grecian illands, and thefe are fuch as belong to the Greeks of thofe illands, not to the Turks. Alfo in the Morea and in the Black Sea they have fome fhipping: but, for the traffic between Egypt and the Port, they generally hire Englih, Dutch, or Venetian thips upon freight.
The Venetians, indeed, trade with the Turks in Morea, and in the gulph of Theffalonica, and to fome of the illands; and, as thofe countries are full of Greeks, and other Chriftian inhabitants, they carry them proper manufactures, fuch as wrought filks, fine linen, bone lace, and all forts of haberdafhery for the women, who delight to go gay, efpecially in the ifles. They carry back in return according to the productions of the place, fuch as currants, raifins, figs, drugs, rice, corn, oil, wine, cotton, filk, \&c.-This is the reaton, perhaps, why Venice is the magazine for the fcarlet drugs, from whence they are fent over the whole Chriftian world
The produce of the iflands is exceeding great, and affits the Turks in making returns for the goods they buy of the European merchants: for the Turks are either fuch frangers to correfpondence, or fuch enemies to all the world but themfelves, that they have no fuch things as exchange; fo that, to balance their trate, they are frequently at a great lofs, if the balance runs againgt them. It is true, it may be in their favour in one place, and the contrary in another; whereby they may fometimes bring one part to make good another; but they cultivate no epiftolary correfpondence, no regular poits going from one place to another, to adjuft thefe things; fo that moft trade and bufinefs is executed by meffages and exprefles, fuch as charoux for the government, or by hipping; and, as for money returned from place to place, it mult be carried all in feecie.

Much lefs have they any aflurances for the rifque of trade, or any of the ufual conveniencies of commerce that other nations have. But, as we thall have occafion to fpeak more largely to this hereafter, we are under the necelfity of referriog to the articles Oriental Trade, Provence for the trade of Marfeilles, and Torkey Trade, in order to confider the Rate of our own branch in particular. See allo the article Archipelago.

## REMARK

From what we have here laid before the reader, in relation to this brancl of trede, and what we fhall further add, we thall be enabled to make a right judgment, whether our Turkey trade is at prefent put upon a right footing, and whatever elle it may ftand in need of further than the late act of parliament, in order to render it of greater emolument to the kingdom in general.
LIEGE, the principality and bifhopric thereof. This country is bourded on the weft by Brabant; Namur, and part of Hainault on the fouth; by the foreft of Ardennes, and part of Luxemburg, on the eaft; by Luxemburg alfo, by Limburg, part of the duchy of Juliers, and by Pruffian Guelderland ; and, on the north, by Dutch Brabant and part of Guelderland. The air is very temperate, and the country fruitful; and it's mountains have quarries of marble, and mines of lead, iron, and brimfone, befides pit coal in abundance. It's chief rivers are the Maes, Demer, Jecker, and Wefier.
Dinant is feated between a fteep rock and the Maes, which makes it enjoy a pretty good trade, particularly in manufactures of brafs and iron.
Malmedi is a fmall town, moftly inhabited by leather-drefters or woollen-drapers.
Stavelo is another fmall town, the inhabitants of which drive a pretty good trade in woollen cloth, and other ftuffs, and chiefly in a great quantity of leather curried here.
SPAW, or $S_{P A}$, is fituated on the little river Wefe, fo furrounded with mountains that you cannot fee it 'till you are almoft in it. It is from the Pouxhon, or Pohon fpring, in the market-place here, that they draw that prodigious quantity of water that is tranfported into foreign countries, efpecially into England and Holland, fealed up in bottles with the town feal. The people of the town employ themfelves in making boxes for ladies toilets, fnuff and other boxes, varnifhed after the manner of China wares, which they fell to the company, as they go from the wells.
Verviers, on the fame river, has a very flourifhing manufactory of woollen cloths, faid to be nothing inferior to thofe made in England or Holland; fo that their trade extends all over Germany, and even into the north of Europe, Italy, and Turkey.
Near this town fands the borough of Hodimont, where they alfo make a great quantity of woollen cloths.
LIGH T-HOUSES and SEA-MARKS. A light-houfe, or beacon by fea; erected in any place where required, is of great ufe to direct and keep mariners in the right courfe they ought to take to avoid danger: and thefe are very neceffary in thofe parts where there are bars, or entrances into harbours, that there muft be high tide to carry fhips over them.
Light-houfes and fea-marks of various kinds, as fometimes large trees, or buoys, muit be allowed to be proper cautions to ftrangers and others, that they may not precipitately run on rocks or fands, to their ruin and deftruction : and, in the reign of king Charles II, care was taken for erecting lighthoufes and lanthorns, and other fecial fea-marks; but more efpecially for the building that moft excellent light-houfe near Goldfon by Yarmouth, which, for it's height, curiofity, and form, was then reckoned not inferior to any, but rather excelling all or moft in any country whatfoever.
In the fourth and fifth years of qqueen Anne an act paffed for the rebuilding of a light-houfe on the Ediftone, by the maffer, wardens, and affiftants of the Trinity-houfe of Deptford Strond; and, after the fame is rebuilt, and a ufeful light put therein, there fhall be paid to them, by the matters and owners of Englifh fhips and barks paffing by the faid light-houfe, except coafting veffels, one penny per ton inward, and one penny a ton ifoutward bound; of which the merchant is to pay a moiety, and the owner of any fhip the other moiety: and, by ftrangers, two-pence per ton of the burden of the fhip or veffel; and every coafter two fhillings only, for each time they pafs by the faid light-houfe.
The faid duties to be received by fuch perfon or perfons as the faid mafter, wardens, and affiftants of the Trinity Houfe fhall appoint, and where fuch thips, barks, or other veffels thall arrive, load, or unload; and on non-payment, to be recovered in any of the courts at Weftminfter. Stat. 4 and 5 Ann. cap. 20.
By 3 Geo. II. cap. $3^{5}$. all the powers, liberties, privileges, and authorities granted in letters patent of her majefty queen Anne, bearing date the 13 th day of July, in the 13 th year of her reign, to William French, Efq; for erecting a light-houfe on the iland or rock called Skerries, lying in the fea near Holyhead, in the county of Anglefea; and the faid light-houfe, with it's rights, members, and appurtenances, fhall be valid and effectual, and continue for ever veited in Sutton Morgan,
his heirs and affigns: to the intent that he and they hall kerp the light-houfe in good repair, and, in the night. feafon, maintain a proper fire therein, fo as the trade and navigation in the Channel may be effectually prelerved.
And the faid Sucton Morgan may demand and receive from the mafters and owners of every hip, hoy, bark, catch, veffel, or bottom, paffing, croffing, or failing in or through St. George's Channel, by Holyhead or Wicklow, to or from any foreign port or place, or which fhall pafs or crofs the fand Channel, to or from any port, creek, or place in GreatBritain fouthward of Holyhead from or to Wicklow, or any ports or place northward thereof in the kingdom of Ircland, or that thall pafs, crofs, or fail from any port, creek, or place northward of Holyhead, either from any foreign or other port, and fail between Holyhead and the Calf of Man, or any way in St. George's Channel, to the fouthward of Dublin; and likewife from all coafters paffing to and from any port, creek, or place in Great-Britain, north of Holyhead, from or to any port, \&uc. Couth thereof; one penny per ton coming into, and the like fum going out of the faid ports, places, creeks, or harbours, in Great-Britain or Ireland; and double fuch duties for any foreign fhip or veffel, \&c. paffing, croffing, or failing in like manner, according to their burthens. But fhips loaded with coals, or the greateft part of their loading, being coals, paffing from England to Ireland, fhall only pay one voyage in every year.
And if any mafter, or other perfons, having the command of any fhip, \&c. fhall refufe to pay the duties, the faid Sutton Morgan, his heirs, \&c. may feize any of the goods, guns, tackle, \&c. of any fuch fhip or veffel, and keep the fame 'till the duties aforefaid are paid; and, in cafe of any delay in payment, for the face of three days after fuch feizing, he may caufe the fame to be appraifed by two fworn apprailers, and afterwards fell the goods, and therewith fatisfy himfelf for the duties, together with the charge of feizure, \&c. rendering the overplus to the owner.
And, in confideration of the frequent and conftant benefit the packet-boats failing between Holyhead and Dublin receive by this light-houfe, the poftmafter-general, or the commiffroners for executing that office, fhall pay to the faid Sutton Morgan the annual fum of 501 . by quarterly payment, without any office fees, or deductions. This ftatute extend eth not to charge any Ghips of war with the duties beforemeritioned.
There are large lanthorns ordered by the flatute, with duties payable for maintaining them, to be erected at the headiof fome keys, fuch as at the harbour of Minehèad in Somerfetthire, on the river Severn, \&rc. See io Anp. cap. 24.
LIMBURG, in the Auftrian Netherlands. This province is bounded on the north and eaft by the duchy of Juliers; on the fouth by a fmall part of the duchy of Luxemburg, and by the country aud bihopric of Liege, which furrounds it alfo on the weft.
It has excellent mines of iron, and one of copper; the foil is very fruitful in wheat, fruits and fuel.
The chief rivers are the Maes, Gueule, Wele, and Bowine. Neau, called Eupin by the inhabitants, though but a borough, is more confiderable than many cities, both for the number of it's inhabitants, which amount to about 4000 , and for it's trade. They make here woollen cloths, which are faid to be as good and fine as thofe made in England, efpecially the fcarlet, blue, and black. They have a confiderable trade of them throughout the country, and efpecially in Germany.
LINCOLNSHIRE, is a maritiue country, and one of the largeft in England, and is bounded on the fouth by Northamptonfhire; on the north by Yorkfhire; has the German Ocean on the eaft; and is bounded on the weat with fome parts of Yorkfhire, Nottinghamfhire, Leicefterfhire, and Rutlandfire ; and is computed to be about 180 miles in compals. It is ufually divided into three parts, viz. Holland, Kefteven, and Lindfey.
I. Holland is bounded on the fouth with part of Cambridgefhire; and on the eaft with the wathes, which are paffable at ebb, but overflowed by every tide. The foil of this divifion produces much more grafs than corn.
Boston fands on the river Witham, which is navigable to Lincoln, and inclofed here with artificial banks. It is, and Jong has been, a famous and flourifhing town: it is now in a thriving ftate, with confiderable merchants for foreign trade, befides a good inland trade; and others of the inhabitants apply much to grazing.
Dunnington has a port for barges, and is remarkable for large quantities of hemp and hemp-feed bought here, but for nothing elfe, though it is reckoned a good market-town.
Crowland is fituated among fens. The people of this place, which is pretty well inhabited, fubfif chiely upon the proft of their filh and wild ducks, which in the month of Auguft are fo numerous, being brought hither by decoy-ducks, that they drive 3000 into a net at a time, by dogs trained up to the bulinefs.
Spalding is a neater town, and more populous than would be expected in a place encompaffed with lakes, cansles, and rivers; for the drains of Bolton and Langtoft center, as it

## LI N

were, upon it, and the Welland almoft inclofes it. Veltels of 50 or 60 tons may come up to it.
II. Kesteven is bounded on the fouth-eaft with Holland divifion, and on the north with that of Lindfey.
STAMFORD ftands upon the river Welland, which is navigable to it by barges: the chief trade of this town is in malt, feacoal, and free-ftone.
Sleaford, in a pleafant valley, near the head of a river of it's own name, has a confiderable trade in cort and cattle, a large market-place, and the markets on the Monday after Epiphany, Eafter, and Whitfuntide, are equal to great fairs.
III. Lindsey. This, which is the third and largeft divifion of the county, runs out with a large front into the fea, which wafhes it's fhores on the eaft and north; it is feparated from Yorkfhire and Nottinghamfhire, on the weft, by the rivers Trent and Dun, and, on the fouth, is bounded by Kefteven and the Foffe-Dyke, cut between the Witham and Trent, for the conveniency of carriage to and from Lincoln; and is parted from the Holland divifion by Horncafte wapentake.
Limpoln City is in this divifion; it is built on the fide of a hill, at the bottom of which runs the river Witham. It was fornerly a very large and flourifhing place, and made a ftaple or mart for wooll, leather, lead, \&xe, but it's trade is gone to decay.
Great Grimbsy, half a mile from the Humber, was alfo a place of very great trade, before it's harbour was choaked up: it's chief trade now is in coals and falt', brought by the Humber.
Gainsborovgh is a well-built town, of good trade upon the Trent.
LINLITHGOWSHIRE, in Scotland, is bounded on the north with the Forth; with part of Clydefdale on the weft; and it is divided from Mid-Lothian on the fouth and weft; and by the waters of Almond and Brick-Water on the eaft. It abounds with coal, lime-ftone, and white falt, befides corn and pafturage.
Linlithgow is the chief or fhire-town, and is fo named from it's fituation on the fide of a lake, which is a mile in length, and a quarter of a mile over, and abounds with perch, and other forts of fifh.
This town has a face of great bufiners, with a good harbour, where there is a large Cuftom-Houfe built; with other houfes for the ufe of merchants.
Here is a great manufacture for linen, which the water of the lake is reckoned fo extraordinary for bleaching, that great quantities are brought hither from other parts of the country for the purpofe.
Burrowstowness, on the coaft, had the greateft trade with Holland of any in Scotland, before the Union, which is now much decayed, though it has ftill a good export of coals and falt, and the greateft traffic both to Holland and France, except Leith. It is faid they have the moft fhipping, and the beft feamen in the Firth, who are very good pilots for the coalts of Norway and the Baltic, as well as Holland.
Queen's-Ferry, at the point of St. Margaret's Bay, is the common paffage at all times of tide from Lothian to Fife, to which it is about two miles over, and it is the furefl way from all parts of the north to Edinburgh.
LINEN. What linen is needs no definition, it being fo well known. There are variety of forts, the chief materials of which are cotton, flax, and hemp.
It is difficult to fay with certainty to whom the invention of this manufacture is owing; perhaps the original idea proceeded from that admiral phænomenon of the fpider's-web. To difcribe the divers forts, would be as needlefs as tedious, and would oblige us to leave out matter, which, we apprehend, may be more ufeful and acceptable.
As introductory to what we would offer in regard to this article, we defire the reader would confult what is faid under the articles Bleaching, Cambrics, CottonTree, Flax, Hemp, Lint, Yarn, Ireland, and Scotrand, all which heads contain fomething tendering to the national advancement of this manufacture.

REMARKs.
We fhall now confider this matter in fome other lights, not lefs interefting to Great-Britain than what has been faid under thofe heads beforementioned.
Linen is a commodity of univerfal ufe, from the prince to the meaneft fibject, and a commodity that cannot be fupplanted by any thing elfe near fo commodious and agreeable for thofe ufes to which it is applied. The ufe of the Indian cotton-cloth has been often attempted for thirting, but to no purpole; and mullins for women's head-cloths and ruffles; \&c. in place of cambric, but without fuccefs. Some afcribe this to a fondnefs of the Englifh nation for French fafhions; a conceit which, in too many inftances, is moft highly detrimental to the trading profperity of this nation, and which ought, by all poffible means, to be difcouraged; but there is found, by long experience, to be a fubitance and firmnefs in cambric which gives it a preference to mullins, for variety of ufes.
The linen trade of Eurone is chiefly in the hands of the Ruffians, Germans, Swifs, Flemings, Hollanders, and French. Vol. II.

## LIN

A nation may be drained of it's wealth, and undone by fo reign trade, if it takes more goods from other nations for bomeconfumption than it fends out, and pays balances in goid and filver [fee Balance of Trade; ] and therefore every wife adminiftration will watch carefully over thofe branches of commerce where the balance is againft them, and encourage thole where the balance is on their fide.
The balance of trade and money tranfations between England and thofe foreign linen countries is againft England; and, by reafon of the high duties impofed by them upon Englith woollen goods, and other incumbrancs on the importation and fale of them, the balance of trade is greatly in their favour, more efpecially if the total balances of thofe linen countries be confidered in a conjunctive and aggregate light; becaufe we have not diminifhed in our imports of foreign linens in the like proportion as thofe nations have diminifined in' their imports of our woollen and other merchandzes; and the attempts to eftablifh more and more new manufactues of their own, among the European powers, mult inevitatly increafe the evil upon us, provided we do not take every meafure to promote an adequate compenfation for the loffes in trade with which we are daily threatened, by almoft every power of Europe in their turn, as demonftrably appears throughout this work.
It is high time to lock into our ftate of the trade to the North; for it is certain in our own power, by the effectual affiftance of our fellow-fubjects in our fettlements in America, and by the induftry of our own people at home (if both were properly employed) to bring the balance of trade with all thofe coum* tries on our fide; not only thofe linen countries, but alfo with thofe which ferve us with the bulky trade and naval ftores.-See Naval Stores.
The foil of many parts of Virginia and Maryland is exceeding rich, and fit for raifing of hemp and flax. The fame hands which hough and drefs their tobacco-grounds, and cut and cure their plants, may be employed all the winter in breaking and dreffing hemp and flax. Thefe commodities, being imported rough, may be manufactured at home, into cordage, fail-duck, and linen of feveral forts, and will ferve fo far to leffen our demands from Ruffia and Germany of thefe goods. Great quantities of hemp and flax, to fupply what we cannot produce at home, may alfo be raffed in Penfylvania, North Carolina, and in feveral other of our own plantations; and all fo near navigable rivers, that, by faving the expence of a long carriage by land, to which thofe commodities are liable in Mufcovy, they mày be imported cheaper than they can be had from thence, and poffibly too, of a better quality, if once a becoming emulation for that purpofe is raifed between ourfelves and them.
Several parts of thefe colonies lie in the latitude of Egypt; and as their foil, in fome places, is equally fine and rich with the foil of Egypt, where the fineft fax in the world is produced, what hinders but our Britifh plantations may be brought to produce fuch that is no way inferior in quality?
With regard to watering the flax, the dews in thofe parts are exceedingly rich, and, when the flax is lying on the grafs, it is thereby brought to an excellent colour, without impairing it's ftrength in the leaft, wherein the great art of bleaching confifts. Sée Bleaciing.
Effectual meafures of this kind would fecure the dependence of our plantations upon their mother-country, when they fhall be thus clofely united to us, by the irrefragable tie of their own intereft, and their friendfhip and affection for their mo-ther-country, cherifhed by this profitable intercourfe, when we thus work, as it were, to each other's hands, and mutually fupport and inrich one another : for, wherever obligations are reciprocal, the confequences will be folikewife.
We are at prefent enabled to ferve our plantations with all the manufactured goods they ule, except linen; and the prefent fituation of our trade with the foreinn linen countries calls loudly upon us to improve and extend the manufacture of home made linen.
Every county, and almoft every town in England, is fupported, and their poor employed, by fome one particular branch of trade. This greatly contributes to bring every article of manufacture to it's utmoft perfection, to increafe the inland commerce, and the dependency of one part of the country on another, and thereby to advance the common intereft and wealth of the whole. The coal-trade is the chief bufnefs of Northumberland, Cumberland, and Weilmorland; and, as this employs their men only, the linen-itade might alfo be fet on foot in thole countries, to employ their women and children.
At Darlington fome linen is made for inland fale; but it lies too near Leeds, and the other cloth making towns of Yorkfhire. Many inconveniencies attend the interfering of manufactures: if the fame hands come to be employed in linen and woollen, or in any part of both, both muft inevirably fuffer, by being in danger of falling into diferedit, and becoming ruined thereby: wherefore all regard hould be had to prevent fuch interfering.
to prevent fuch interfering.
In Lancahire the linen-trade may be fafely carried on, beIn Lancafhire the linen-trade may be fafely carried on, be-
caufe it docs not interfere with the cotton, and that tbe watp
$Y$
of all their fuftians, and feveral other cotton goods, is made of linen-yarn.
Linen is the ftaple of Scotland; but it was long neglected. The Scots at prefent are not, however, in fo bad a fituation in refpect to this trade, as the French were in the reign of king Henry IV, or the Irifh at the Revolution, where, by the force of public encouragement, it has arrived to an extraordinary pitch, and, it is to be hoped, will daily advance; the Scots have it not to begin, they want only to improve and extend it to the height it will admit.
The linen manufacture may be brought to as great an extent in value as any other bufinefs now carried on in Britain, except the woolien; it may employ near as many hands as the woollen does; and the linen-trade of North Britain is of as great confequence to the nation in general, as the woollen in the fouth, and equally deferves the fame care, countenance, and encouragement from the public.
The parliament has, fiom time to time, upon proper application, paffed ats, and given fuitable encouragement for the advancing, and preventing the decay of the manufactures of wooll, ililk, cotton, mohair, \&c. all which have been attended with fome good effects.
The aft of parliament made in the year 1727 , for regulating the linen manufacture of Scotland, and even the fmall funds then appropriated by parliament for it's encouragement, did that nation very important fervice in this refpect : the linentrade was, in fome'meafure, thereby retrieved, and improved beyond expectation. This enabled the Scots to conquer one of their greateft difficulties; and, when they came to underftand the defects, faults, and imperfections under which this manufacture laboured, and the ways and means to cure, correct, and amend them, they have brought this manufacture to a very great excellency and perfection.
In a nation fo populous and, extenfive as this illand of Britain is, branches of bufinefs might be carried on in different parts, which might lay a foundation for divifion and ftrife, through an interfering of different interefts.' But it is happily otherwife with us; it is no lefs the intereft of England to promote and advance the linen manufacture of Scotland, than it is the intereft of Scotland to encourage, by their confumption, \&cc. the woollen manufacture of England.
England is ferved with fine linen from Holland, and countries adjacent to it, and with cambrics, and other forts of linen from Holland and France; and the balance of trade and money tranfactions with both thofe countries is againft England. England and the Britifh plantations, are ferved with great quantities of middling and low-priced linens of divers forts, from Silefia, and other parts in the upper and lower circle of Saxony. Formerly thofe countries took large quantities of woollen goods from England, and then that trade was profitable to England; but now they have manufactures of woollen in feveral places of their own, as before intimated, which ferves a great part of their confumption of low-priced cloths, and leffens their demands for woollen goods from England, whereby the balance of trade with them is now againft us.
The balance of trade betwixt England and Scotland, and England and Ireland, is on the Englih fide; and, fo far as England and the plantations can be ferved with linen from Scotland and Ireland, inftead of Holland, France, Germany, and Ruffia, fo far will England be a gainer by this change in the courfe of trade. The more linen the Scots and Irih can fell in England, the more of the Englifh commodities will they be enabled to purchafe; and it may be reafonably fuppofed, that their demands from England will always increafe in proportion to the increafe of their people and linen manufactures. It is then evidently the intereft of Etgland to promote and advance the manufacture of linen in Scotland and Ireland, and to give them all reafonable advantages in the trade, in preference to foreigners, where the balance of trade is againftus; and this feems to be the fenfe of the nation, fince all foreign linen for home confumption pays a duty.
Foreign linen, indeed, exported to the Britih plantations, draws back the whole duty to a trifle; and this was a neceffary meafure, when our linen trade was reduced to fo low an ebb, and the Irifh manufacture but in it's infancy; fo that neither Scotch nor Irifh were able to furnifh them with any large quantity: but now that thofe countries have, in fome mealure, retrieved that branch, and that the Irih, as well as the Scotçh, are daily increafing our quantities of linen goods, they both ought to have all the advantages in the trade, that the intereft of England, as well as the intereft of Scotland and of Ireland, plainly requires. This may in a great meafure be effected, if all foreign linen, when exported to the plantations, fhould not be allowed to drawback the duty it pays on importation, or fuch a proportion of'it, as may be thought reafonable, to give us a preference in the trade.
When the foreign linen countries took off our woollen and other manufactures, fomething proportionate in value to the linens we had from them, it might not avail us to think of fupplying our own plantations with Britilh-made linen : good policy then diftated the advancing no further in this
manufacture, than an endeavour to fupply our own European domeftic confumption: but, as the fcene is now changtd, as thofe linen countries have eftablifhed woollen, and other manufactures of their own, and are daily eftablifhing more, that will interfere with the manufactures of thefe kingdoms, is it not time to retaliate upon them by a fimilar policy? Had we taken off the drawback on foreign linens upon their exportation to the Britilh plantations, before we were capable, or even likely to fupply ourfelves and plantations with our home-made linens, and before the foreign linen countries had fent up woollen and other manufactures which interfere with ours, it might and would have been impolitic; and all thefe apprehenfions of the confequences attending fuch meafure, that we had twenty years ago, might be jufty grounded. Among other things, it was then urged, ' That, if we thould be capable of producing and manufacturing - every thing, fo'that we had no occafion to import any one ' thing, what fhould we be gainers of? This would deftroy - the great band and ligament of all foreign commerce, and ' int the end the whole nation.'- But this is arguing upon the extreme, and I may'as well afk, if we took all our produce and 'manufacturess from foreign nations, how long fhould we be able'to'trade at all?
By the induftry of England, Scotland, and Ireland, we are now in a condition to fupply ourfelves and our plantations with linens of our own manufacture; and, if I am rightly informed', feveral fpecies' of them as cheap as we can have foreign linens.--But fuppofing, not granting, that, as yet, our linen manufacturers have not arrived at every art in making linens fo cheap as foreigners, or fo good in quality, what then? Are we to give them no encouragement, 'till they are capable of fo doing? Is that the way to rouze and animate them to emulate the foreign linen countries? Is difcouragement the beft policy to enable them to vie with other nations in this univerfal manufacture? When Lewis the. XIV th was informed by his great minifter Colbert, that his fubjects would eat herrings, and expended great fums annualiy therein-Then anfwered that monarch, They fhall catch them themfelves or go without; and they have ever fince fupplied themfelves.- So if Britons, either in Europe or America, will wear linens, or ufe them in any fhape, let it be the voice of Great-Britain, that we may manufacture them ourfelves or go withoat.
But, fay fome, if the drawback is taken off on the exportation of foreign linens to our plantations, will not the foreign linen countries fome how avail themfelves of fuch a meafure? They have already anticipated us in this refpect, by fettling woollen and other manufactures of their own, and confequently taking lefs from us than heretofore; and is it not politic in our turn to retaliate upon them in manner fomething fimilar to their own policy? Let us then make our own linens, as the linen countries have began to make their own woollens, $\& c$. and take off the drawback allowed on the exportation of foreign linens to the plantations, that our's may come as cheap to our own plantations as foreign linens there will. Ah ? but, fays fomebody, that cannot relifh this policy, Will not the Britifh plantations, in fuch cafe, make their own linens? What inducement can they have to do this, when the linens we hall fell them, may be made of the very materials [Hemp and Flax] that we Chall purchafe from thefe plantations? for that is the footing whereon I have put the matter, to which the reader will pleare to attend. That trifing attempts have been made in fome of our northern colonies upon the linen manufacture, we are no ftrangers to; but, if our plantations were effectually encouraged in the raifing of all raw materials for this manufacture to be carried on in thei mother-country, they would ceafe to go greater lengths in a manufacture, which requires fo long time to bring to tolerable perfection; nor would they then fcruple to give the preference to Britifh linens, though they came fomething dearer at firft than foreign linens, when they knew fuch Britifh linens were made of the produce of their own plantations.
Nothing is more common than for us to complain, that our northern colonies begin to interfere with us in out Britifh manufactures, and may in time fupply our fugar illands therewith. If this fhould ever come to pafs, may we not thank ourfelves? For, if we in time give them fuch effectual encouragement in planting as we may, and as the ftate of our commerce apparently requires, they will not eafily turn from planting to manufacturing. Planting and agriculture are beft underfood there, and, if any thing ftimulates our colonies to lay this afide for what they do not yet underftand to any degree of perfection, it will be the fupinenefs and difcouragement of the mother-country to rouze them to the former.
Is it more politic to encourage the importation of foreign linens into our plantations, than to encourage thofe plantations in the production of fuch materials, as will enable Great-Britain and Ireland to fupply them with home-made linens, as cheap as they can bave foreign now? And why fhould not that be the cafe, when our plantations can fupply us cheaply and plentifully with the materials for that purpofe?

Would not due encouragement given to our plantations, in this refpect, take away the tempration from our colonies to fupply themrelves by frimggling foreign linens *? When the mother-country took of immenfe quantities of their planting productions for the linen manufactures, would it not prove unfpeakably more for their intereft to difcourage all fmuggling trade of this kind, than to facrifice their planting intereft? in fach cafe, can we intagine them to be fo little acquainted with their own happinefis and profperity, as not to make laws every way adequate to the prevention of fo deftructive an evil, and alfo vigilantly fee to their execution?

- It has been faid, in oppofition to the taking off the bounty on foreign linen, on their being exporred to our Britifh plantations, "That the harbour of Curafoa, the illand of St. Eiflatia, the ports of Surinam; and the Berbices, beJonging to the Dutch, are always open and free for the Englifh to trade to. The duties on what the Englifh import and feil there, feldom amount to above 5 per cent. I emember but one inftance when they exceeded, and thas was juft upon the peace of Utrecht, when Monf. Cariar, after having plundered Nevis and Montferrat, made the garrifon of Curafoa ranfom themielves for $1,200,000$ pieces of eight or Spanifh dollars, as I have been informed the fum was: and, indeed, for two or three years, they made all foreigners pay 10 per cent. on all the goods they imported and fold there : but, during that time and occafion, which might have, in fome mearuie, excufed a tax on their merchandize at exportation, they were not fo weak as to do jt , well knowing, that nobody would buy goods and merchandize of them that knew where to buy cheaper; nor did they ever, in any inflance that I know of, demand any duties on any goods that any one purchafed in their harbours, but let him carry them where he would or could, well knowing whatever draws fhipping, draws trade, and that draws profit or money, which all trading people want. There is not a port in the world out of Europe, where all forts of European goods are to be feen in greater plenty than there, in Curaloa; and, I believe, there has not been day thefe twenty years, when there were no Englifh fhips to be feen in that harbour, but this is only one port : Surinam and the Berbices lie to windward of Barbadoes, and not above three days fail from it; fo that the people of Barbadoes might be fupplied from thence very convenient $y$, and with fmall rifque.
St. Euftatia lies in fight of our Leeward iflands; and, as I will not putall on my own fingle authority on this occarion, will tranfcribe a paflage out of a book publifhed fome years ago, intitled, The Importance of the Britifh Plantations in America to this kingdom, printed for J. Peele, p. 32, 33. where the author rays,

1 hall take leave, in this place, to mention an affair for which, if a remedy could be found, it would be of - fome advantage to us. The ifland of St. Euftace, which is inhabited by the Dutch, is not above three leagues diftant from St. Chriftopher's; and, with regard to it's exient and produce, very confiderable: but its road is the place where Dutch interlopers from the coalt of Africa feidom fail to call at. In a few days all our Lee-- ward iflands are informed of this. In places, fach as - our illands are, it is not much to be wondered at, if there are perfons who run fome hazard for the hope of a a confiderable gain; fo that all the ready money which they can advance at any rate, is carried by them on board thefe ihips, where negroes are-fold to them frequently 20 per cent. cheaper than our own thips do afford them. This ready money is a great temptation to fone planters, who fell their fugars to them at lefs than the current price ; and, under pretence of fending it in floops to our own thipping, it is fent on board there in terlopers, who, by there means get loaden at lefs ex pence than our own hips, and carry off more money than a great number of our own hips which tride for three ames nume By this it is which trade for - really employed a Dutch hip, and have paid her whole - freight, out and home, in money, which is juft fo much - freight, out and home, in money, which is juft io much

- loft to the nation: nor is that the only damage; for on - board thefe hips are often greas quantities of fine and - board thefe thips are often great quantities of fine and coarfe LINENs, which are fold for ready money only.
See Refections and Confiderations, occafioned by the peSee Refections and Confiderations, occafioned by the pe-
tition prefented to the honourable Houfe of Commons, for tition prefented to the honourable Houfe of Commons, for
taking off the drawback on foreign linens, printed for $T$. Cooper, ${ }^{7} 73$.

So far, then, it feems pretty clear, 'till I hear reafons to change fentiments, that it is for the mutual intereft of GreatBritain and her plantations, to promote the manufacture of inens in general; the former in the making them, and the atter in producing the requifites of nature for that purpole. It has been fuggetted allo, ' That, if we take the drawback off forcign linen, to make them dearer to our plantations, in order to introduce our own linens, we mutt be obliged to take off the fame on the exportation of all foreign linens; which will bring them fo dear to foreign markets, efpecially to thofe of the Spanifh. Weft-Indies, that we fhall thereby run the hazard of lofing that trade, becaule that thofe foreign linens make one of the effential affortments of a faleable cargo for Spanifh America.-That the productions of many nations and countries are become abfolutely neceflary to this
end; and that often much more gain and advantage will accrue to the merchant, and confequently to this kingdom, by trading in goods of foreign manufacture than in thofe of our own.- Toat in fuch cafe, if the Britifh merchant is not at liberty to fort his cargo with fuch wares as the markets he fends to require, and at as low a rate as others can, who trade to the fame market, he mult be beaten out by the others, and leave the trade wholly to them,' \&c.
This argument, like all of the extreme and general kind, has the tate to prove too much; for, if this is allowed conclufive, it will follow, that we mult never prefume to think of fuch an advancernent to our linen manufacture, as to come in for any fhare whatever in the fupply fur foreign markets.-Had fuch-like policy prevailed in France, would they ever have had refolution to have attempted to fupplant us in the woollen, or any 'other manufacture, wherein we had the ftart of them, as they have done? But they would not be lulled to a lethargy by fuch fpecious reafoning; that it is in vain for us to think of fupplying the Spanifh Weft-Indies, or any other foreign country, with any of our home-made woollen, or linen manufactures; we cannot make up faleable affortments, without the woollen manufactures of England, and the linens of Germany; and therefore, if we prefumptuouily attempt to make woollens or linens of our own to the tafte of the Spaniards, we Chall, inftead of increafing, lofe that hare of the Spanifh Weft-India trade we have already obtained! With what contempt would a Colbert have treated fuch argument? Had he been influenced by it, would it not have prevented every wife meafure that he fo fuccefsfully took for the advancement of manufactures of every kind, in order to force a trade with foreign countries? Hath not the lucrative experience of France, to the unfpeakable detriment of England, proved fuch reafoning frivolous and delufory? Yet this was the principal, if not the only colourable argument urged, fome years fince, againt a petition prefented to the honourable Houfe of Commons, fetting forth, 'That the manufactures of linen now labour - under feveral difcouragements, but more particularly on ' account of the drawbacks allowed on exportation of foreign - linens, threads, and tapes; by means whereof, confiderable - quantities have been, and fill are fent from hence to parts ' Beyond the feas, to the great hindrance of the cor-- fumption of our own produce and manufactures.; and there' fore praying the Houfe to give fuch relief,' as to the Houfe c ihall feem meet.
When Franke firft attempted the eftablifhment of the woodlen manufacłures, they had every difficuity to. Atruggle with, having neither the material, nor the manufactures; yet, a refolute 'perfeverance and found policy diffipated every difficulty and difcouragement [fce the article France]. The firft ftep they took was to fupply themfelves with woollen goods of their own fabrication, and to ftop the importation of the Englifh woollen manufacture, in proportion as they advanced in their own: and although, at their firt enterprize, their manufacture was but very indifferent, yet, as the king himfelf encouraged the wear, the whole nation followed the example. This laid the firft foundation for their prof perity in this great manufacture. After which, they exerted every politic art, in the power of human nature to fuggeft, in order to imitate the Englifh in that perfection to which they had long before arrived.-Thus the moft fkilful and experienced manufactures in England and Holland were allured by honours and rewards irrefiftible; and thus the grounds work was laid to vie with the Englifh at foreign markets, in the ftaple manufacture of the kingdom. But, as the reputation of the Englifh woollen goods was eftabiified throughout the whole world, the difficulty lay in convincing foreigners, that they had arrived at as great a perfection in this art as the Englifh; which they did, by propagating that they had the Englifh and Irifh wool to work with, and Englifh manufacturers to fabricate it ; and what hindered, raid the French, but we may make goods in France, equal in quality with thofe made in England? Whether they have even yet arrived to the perfection of the Englifh, is greatly to be doubted. However, they made their clochs façon d'Angleterre; they imitated their lengths, breadths, and thicknefs, and counterfeited the Englifh feals affixed to the fame, and thereby craftily infinuated their woollen fabric among foreign nations; and, as they have been able to afford them cheaper, they have gra dually made their way, and now flase the woollen trade with us in all parts of the world. And, while this was accom plifhing, they found ways and means to make up their faleable affortments for the Spanifh Welt-Indies, as well as other foreign markets; whereby the merchant and nation both gained, though not at firft to the degree they have been able to do fince they have arrived at a greater perfection in thefe fabrics.
And what hinders that Great-Britain and Ireland Ghould not be able, to imitate the perfection of foreign linens, to as great a degree as the French have the Englifh woullen goods? That our people want ingenuity to carry any manufadural art to the laft perfection, will not be faid; that they wonderfully excel in the linen manufacture in particular, is indifputably true; and that to fuch a degree, it bas been at-

## LIN

## LIN

firmed, that foreign linen manufacturers have been themfelves deceived, by taking the Britifh and Irifh linens for fome of their own. Certain it is, that a very extraordinary progrefs is now made in this univerfal manufacture; and, if we purfue the like meafure that France has done, in relation to the eftablifhment of their woollen manufactories, why may we not firft be able amply to fupply ourfelves with homemade linen, and then attempt a competition herein with foreigr nations? If we cannot raife heinp and flax fufficient for our demands in Great-Britain and Ireland, will not our plantations molt amply fupply us, with effectual encourage + ment?
Neither the banks of the Nile, nor the moft fruitful plains of Egypt, were ever more capable of producing fine flax (though formerly efteemed the beft in the world) than the banks of the Sufquehamah, Delawar, Hudfon's river', and the rich and fat vallies of the Englifh North America are.The climate of North America, with regard to the production of mof vegetables, particularly as to Hemp and Flax, is inferior to none in quality in the known world: they have fo many forts of foil, that no place in any climate can fhew more than may be feen there in one day's riding.
Notwithftanding thofe apparent advantages, which may accrue to the public weal from the advancement of this manufacture to it's laft perfection; and notwithftanding the reafonablenefs of taking off the drawback upon foreign linen; yet we well know, that courts cannot at every point of time, at every crifis, do what is right and juft for their own country, and what they would wilh to do. The circumftances of public affairs muft be attended to; there is, in the concerns of ftate, as well as in thofe of private perfons, a feafon for all things, as the wife man has long fince reminded us of; and the wife and upright Itatefman will watch thofe feafons, and take the advantage of favourable opportunities.
When we, therefore, occafionally in this work, take the liberty humbly to fuggett any meafure, which we apprehend may turn to the commercial emolument of the ftate, we would, by no means, prefiume to dictate to our fuperiors the PROPER TIME for the execution of any thing, becaufe that depends upon the real ftate of public affairs both at home and abroad; and what may be wife and prudent to be done at one time, and may be attended with great national honour and advantage, may be the reverfe at other times.Thefe reflections fhould make the bulk of the people modeft, and lefs cenforious of the public meafures in all nations, becaufe in moft they cannot know the great wheels and frings of government.-In this happy land of liberty, indeed, we can as litde bear with the myfteries of fate as of religion; and yet fome politicians have told us, that there is a neceffity for them in both.--But thefe things we leave to the divine and the fatefman; while we fubmit to confideration fuch general principles only, as are deducible from facts; leaving their application to be made, as the exigencies of ftate may occafionally require.
That nothing may difcourage and intimidate Great-Britain and Ireland from carrying the linen manufacture to the perfection that England has done the woollen *, it may be ufeful to give fome calculations relating to the quantity of linen manufactured in Ireland, and of the proportion that the material of flax bears to the manufactured merchandize, by Thomas Prior, Efq; of Dublin: which calculations may in fome meafure be applied to England and Scotland.

* The reader will pleafe to obferve, that, at the beginning of this article, the utmof national care is recommended to prevent any injurious interfering between thofe flaple manufactures, the woollen and the linen; that is to fay, our manufacturers engaged in the former muft not be drawn off to the latter; nor hhould the fituation of the one be in places too near that of the other, left the workmen, engaged expert and hould be diverted to the other, and gow lefs flaple the woollen branch, and to the obftruction of the promotion of that of the linen. For, although we have powerful competitors in the woollen, yet we hould by no powerfal competitors in the woollen, yet we thould by no
means abate that ardor and zeal, neceffary to fuppor that flare of this ineftimable branch which we fill preferve. Times may change; Great- Britain ftill maintains her weight and dignity at foreign courts; and if her manufactural arand dignity at foreign courts; and if her manafactural ar-
tifts maintain their ipirit of induftry and ingenuity, and if once the fudies of commerce and it's dependent arts, confidered in all relations become as fafhionable as thofe of the belles leetres and polemical and phyfiological fudies, we may have opportunities of making fuch treaties of commerce with other nations, as may one day give us full employment in both thefe general manufactures: new channels of trade may likewife offer themfelves to us, which at prefent, perhaps, can be as little forefeen, as the difcovery of the new world was before it happened. See the articles Artificers, Manufacturers, and Mechanics.
It is computed, fays this judicious gentleman, that the value of linen, made in Iretand yearly, amounts to a million fterling; and that half thereof is yearly exported, and that the remaining half is confumed at home; reckoning five hillings a head for two millions of people one with another, for all their confumptions in linen.

It is alfo computed, that the following quantitics of rough flax, fuch as we have from Riga, worth forty fhillings the hundred weight, will give employment for a whole year to the following number of perfons, one with another, including fpinners, hecklers, weavers, bleachers, \&c. viz. a hunt dred weight of flax will employ for a year two hands. A ton, or twenty hundred weight, will employ forty hands. A hundred tons, will employ four thoufand hands. A thoufand tons will employ forty thoufand hands. And three thoufand one hundred and twenty-five tons will employ one hundied and twenty- five thoufand hands.
It is alfo computed that the following quantities of rough flax, worth forty fhillings the hundred weight, when fully manufactured into linen, will, at a medium of coarle and fine, be worth the following fums annexed to them, viz. A. hundred weight of flax, when manufactured into linen, will be worth fixteen pounds. A ton, or twenty hundred weight, will be worth three hundred and twenty pounds. A hundred tons will yield thirty-two thoufand pounds. And three thoufand one hundred and twenty-five tons weight will yield a million fterling.
It is alfo eftimated, that a good acre of flax will produce three, four, five, or fix hundred weight of flax; and if we allow four hundred weight, or thirty-two ftone, to be raifed from every acre one with another in a year, which is a reafonable allowance; on that fuppofition, the aforefaid three thoufand one hundred and twenty-five tons of flax, which are all that are at prefent fuppofed to be made ufe of in our linen manufacture, before eftimated to be of the value of a million fterling yearly, may be raifed from fifteen thoufarld fix hundred and twenty-five acres only; and if we allow but three hundred weight or twenty-four ftone to be raifed from every acre one with another, which is a low computation, then it will require about twenty thoufand eight hundred and tbirty-two acres, to raife the aforefaid quantity of three thoufand one hundred and twenty-five tons of fax.
If thefe computations and eftimates are true, or near the truth, as we may reafonably fuppofe them to be, fince they come from perions well Nkilled in the linen manufacture, they will afford grounds for making the following obfervations.
It appears from thefe computations, that we have two millions of people in Ireland, yet no more than a fixteenth part of them, viz. a hundred and twenty-five thoufand, are fully employed in the linen manufacture, our ftaple commodity; that number being fufficient, if employed the whole year round, to make linens to the value of a million fterling, which is computed to be the value of all the linen yearly made at prefent, allowing eight pounds-terling to each perfon one with another yearly for their work.
Though Ireland, which contains eleven millions of acres, hath feveral millions in it fit for the growth of flax, yet we fee that there are not above thirteen thoufand acres in it employed that way: for, though fixteen thoufand acres may be fufficient to fupply the three thoufand one hundred and twen-ty-five tons of flat employed in our manufactures, yet, as we import yearly from foreign countries five hundred tons of flax, a deduction ought to be made; and, as it will be found, that we, do not raife above two thoufand fix hundred toris of flax of our own growth yearly, the reft being imported, therefore thirteen thoufand acres will be fufficient to produce that quantity; allowing four hundred weight of flax to be raifed from each acre.
From hence it evidently follows, that, as we neither want hands nor lands, and may command and employ what number and quantity we pleafe, and yet have a great deal ftill to fpare, it is in our power to double the quantity and value of our linen manufactures, by employing double the quantity of land in railing flax, and double the number of hands in working it up into linen, which would yield a million fterling yearly profit to the nation, more than we make at prefent; with a great profpect of it's continuing fill to increafe, fince we have no reafon to apprehend that we fhall ever want a vent for all the linens we can make.
It appears from the foregoing calculations, that the nation would receive an additional profit of fixty-four thoufand pounds yearly for every thourand acres that fhould be employed, more thàn are at prefent, in raifing of flax and working up the fame into linen, and thereby employ eight thoufand hands more.
This is a motive fufficient to engage our attention, to pufh forward this improvement as far as it will go, and to lofe no time in accomplifhing it. And, though it may be practicable to enlarge our linen manufacture to the extent and value before-mentioned, yet will it take a confiderable time before we can make any progrefs, unlefs we can, by proper encouragements and premiums, give a new and greater fpirit to our induftry and endeavours.'

Observations on the raifing of flax, for the effectual eftablifhment of the linen manufacture in Great-Britain and Ireland.

## L. I N

LIN
Wve find, by experience, that all our flax, either of our otwh grow th or imported from abroad, is fpun into yarn; that all our yarn is either exported or worked up into cloth at home, and that all our cloth is either confumed at home, or fold at a good market abroad.
It is more adyantage to the kingdom to raife the flax ourfekes * which we make ufe of, than to import it from abroad: for thereby we fave the price of the material imported, and do not depend on other countries for the primum of our ftaple commodity.

- Herein we include the Britith plantations as a part of ourfelves, and what is faid in telation to the raifing of good flax may be applied to that of hermip; fo that we may fand in need of importing tho material from any foreign country, in order to carry this extenfive and important manufature to the height it will admit of.

No manufacture can be increafed, beyond what the material of which it is made will allow; but muftincreafe or decreafe, in proportion to the plenty or fcarcity of the material. There can be no increafe of the linen manufacture, without an increafe of yarn, nor of yarn without an increafe of fpinners, nor of fpinners without an increafe of flax.
W.e inport great quantities of flax yearly from foreign countries, which thews that we do not raife flax enough of our own growth to fupply our manufactures. Our chief attention, therefore, fhould be to increafe the number of fpinners, and the quantity of flax.
There are as many women and children in this kingdom that do not finin flax, as there are that do ; and many of thofe that are now unemployed, would work, if they could procure the materials.
If we fhould double the number of our fipinners, as it is certainly in our power, and fupply them with flax and wheels, we might then make double the value in linen: it is, therefore, our intereft to provide fufficient fores of flax to keep our (pinners at work.
We find, by experience, that in the beft feafons we never raife flax enough for our manufatures, and that, in bad feafons, we greatly fall fhort of the requifite quantity; we fhould, therefore, until we can raife flax enough ourfelves, import large quantities of foreign flax, that our finners may be ftill kept at work, who mult otherwife be idle for want of the material.
Though by bad feafons, or other accidents, we fhould happen to raife but little flax of our own growth, yet in fuch a cafe, if we take proper meafures to import large quantities of flax from abroad, we fhould ftill be able to make great profit by our manufacture, by gaining feven parts in eight of the value of the linen, by the labour employed on the fax. Good flax-feed fowed on poor, ill-cultivated ground, and bad feed 反owed on good, well-prepared ground, feldom yield good flax. A due cultivation of proper foil, and good feed, muft concur to produce good flax.
One acre of rich, well cultivated, land, fowed with good feed, will produce more and better flax, than two, three, or four acres of poor land, ill cultivated, fowed with bad feed, though the expence by the acre, to the fower, may be nearly equal to both.
Since flax-feed of our own growth fometimes degenerates, by reafon of bad feafons and bad hufbandry, it would be highly proper, in order to be furnifhed with good feed, to give fome premiums [fee the articles Manufactures and Premiums] to merchants who fhall, for one or two years to come, import large quantities of flax-feed from the Baltic, or North America.
By this expedient, every perfon who fhould be willing to fow good feed, in order to raife good flax and feed, may have it in his choice to make ufe of the beft foreign or home feed he can meet with.
It is found, by experience, that, in all manufactures confifting of different parts, they fucceed beft, who have particular workmen for every part : each operator, being confined to his own branch, can afford his work cheaper and in greater perfection; by this method, watches and Birmingham ware are offered fo cheap, every part being a feparate and diftinct trade, and confined to a particular fett of workmen; and the mafter who employs them, puts all their work together, and finimes the whole; whereas one who undertakes feveral diftinct branches at once, will hardly fucceed in any to perfection.
In like manner, to fueceed in the linen manufacture, one fett of people fhould be employed, either at home or in our plantations, and confiped to the plawing and preparing of the foil, fowing and covering-the feed, to the weeding, pulling, rippling, taking care of the new feed, and watering and grafing the fax, until it is lodged at home; others Mould be concerned in the drying, breaking, fcutching, and heckling the flax, to fit it for the fpinners; and others at home, in fpinning and reeling the fame to fit it for the weaver; others thould be concerned in taking due care of the weavinf, bleaching, beetling, and finifhing the cloth for the market. It is reafonable to believe, that, if thefe feveral branches -of the manufacture were carried on by diftinct dealers, the

Vo 1. II.
feveral parts would be better executed, and the whole could be afforded cheaper and with greater prolit.
Since we find, by experience, that all our flax, yarn, and linen, find a vent, to thoeld worefore be our chief endeavour to increafe the quantity of our flax, not cnly as it is neceflary to keep our prefent foinners fully employed, but as it will be a means of ernpioying many hands, that are now ufelefs for want of it.
We find a general difpoftion ard readinefs in all our poor womeri to get a livelihood by finning, if they could get Hax and wheels to work with.
It would be a great benefit to the whole kingdom, and to every gentleman poffeffed of lands in particular, if all the labouring women and children on his eftate were furnifhed wich flax and wheels; and, though this hould be attended with fome fmall expence at firt, yet this would be foon made good, by the profit thofe women and children would make by their yarn, which never fails of a market; and which would enable them to repay, with gratitude, the firf expence their kind landlords were at, in putting them in a way of getting an honeft livelihood.
Befides the feveral other articles referred to at the beginning of this, we allo refer to thofe of Scotland and Ireland.

ASUMmary of the chief Laws of England, relating to Linens in general.

1. Stat. 28 Hen. VIII. cap. 4. §. 2. No perfon, Englifh nor ftranger, fhall put to fale any whole piece or half piece of dowlas and lockeram, unlefs there be expreffed upon the piece the number of yards or ells contained in fuch piece, upon pain of forfeiture of the fame, not containing the number of yards or ells mentioned upon the piece; one half of fuch forfeiture to be to the king, and the other half to him that fhall feize and-will fue for the fame by action of debt, \&c.
II. Stat. I Eliz. cap. 12. §. I. If any perfon thall willingly ufe any means with linen cloth, whereby the fame fhall be deceitful or worfe for ufe, the cloth hall be forfeited, and the offender punifhed by one month's imprifonment, and fhall pay fuch fines as thall be affeffed for his offence, by the juftices before whom he fhall be condemned.
III. §r.2. The juftices of oyer and terminer, and juftices of affizes, and juftices, of peace, or three of them, whereef one to be of the quorum, hall have power to enquire, hear, and determine, the offences aforefaid in their fefions, by information or indictment.
IV. §. 3. If any perion thall feize any fuch deceitful Jinen cloth, he fhall at the next feffions of the peace, or before two juftices of the peace, whereof one to be of the quorum, make information of the offence, and of the feizure of the cloth, or procure the offenders to be indiaed; and fhall be bound before the juftices, to the ufe of the queen, in fueh form as the jufices thall think meet, to purfue the fame matter with effect, and to give evidence, and alfo to pay the moiety of all that he fhall recover, to the fherif, or other accountant, to the ufe of the queen; the one half of all the forfeitures and fines to be to the queen, and the other moiety to him that fhall make information, or procure indictments of the premifes, and follow the fame with effect.
V. §.4. The juffices before whom any fuch offence thall be tried, fhall certify the laine by their efreat into the Exchequer, yearly, at Michaelmas, and the barons of the Exchequer fhall bave power to make procefs for fo much as-hall appertain to the queen
VI. Stat. I Ann. ftat. e. cap. 8. §. 2. All forts of hemp or flax, and the production thereof, as thread, yarn, and linen, imported into England directly from Ireland, by any natives of England or Ireland, being of the growth and manufacture of lreland, upon producing fuch cerificates, and making fuch oath, as in the act 7 Will. III. cap. 39 . is required, hhall be free from the addtional fublidy of poundage, and all cuftoms whatfoever.
VII. Stat. 3 Ann. cap. 8. §. I. It fhall be lawful for any natives of England or Ireiand to fhip in any port of Ireland an Englifh built fhipping, whereof the mafter and chree fourths of the mariners to be Englifh or Irifh, any white or bown linen cloth of the manufacture of Ireland, and the fame so tranfport into any of the plantations, the act 15 Car. II. cap. 7. notwithftanding.
$V$ III. §. 2. Provided that no thip coming to the plantations from Ireland fhall break bulk, until the mafter hall have made known to the governor, or to fuch officer as thall he by him appointed, the arrival of the faid fhip, with ber name and the name of the mafter, and fall have delivered a true inventory or invoice of the lading, together with a certificate from the chief officer of the port in Ireland, where fuch fhip fhall be laden, expreffing the particulars of fuch lading, with the names and abodes of the exporters, and of two perfons, who fhall bave made oath before fuch chief officer, that the faid goods and linen are, bona fide, of the manufacture of Ireland; and, until the mafter flant have made oath before fuch governor or officer, that the taid govds are the fame that he took on board by virtue of fuch
certific..st,
certificate, nor until fuch fhip fhall have been fearched by an officer ; and, in cafe the commander of fuch thip fhall break bulk before fuch notice given and certificate produced, and fuch oath made, or before fuch fearch, or if any goods of woollien manufacture not laden in England (necellary apparel of the commander and mariners excepted) or any linen goods not laden in England, nor of the manufacture of Jreland, thall be found, luch flaip thall be forfeited, together with all goods imported or found in fuch hip; one third part to her majelty, onc third part to the governor of fuch plantation, if the hlip be there feized or fued for (or otherwife that third part alfo to her majefty) and the other third part to him who thatl fue for the fame in her majefty's court in the plantations where the offence fhall be committed, or in any of her majefty's courts at Weitminfter.
IX. \$. 3. All hips coming from Ireland to any fach plantation, thall be fubject to the fame rules to which flhips coming from England are fuhiect.
X. §. 8. Any perfon for any feizure made in purfuance of this act may plead the general iffue, and fhall have double cofts.
XI. S. 9. All informations and fuits for any offence againft this act fhall be commenced within twelve months after the difcovery of fuch offence.
XII. §. ro. If any, fhip laden with goods in England, Wales, or Berwick, for any of the plantations, fhall put into any port in Ireland, and thall there take in any white or brown Irifh linen, the like certificate and oaths fhall be made, that the faid linen is of the manufacture of Ireland, as is before directed; and if upon the arrival of fuch fhip in the plantations fuch certificate be produced, and oaths made, fuch fhip, \&c. fhall be fubject to fuch rules as they were fubject to before the paffing of this act, and no other.
XIII. §. 1r. This act fhall continue eleven years.

## Continued by 3 Geo. 1. cap. 2r.

XIV. Stat. 7 Ann. cap. 7. §. 24. European linens, fifters threads, and tapes or incle, linfeed and Rax, hall be exempted from the duties called the two third Tubfidies.
XV. Stat. io Ann. cap. 19. §. 66. There fhall be paid to her majefty upon all chequered and ftriped linens, and upon -all linens printed, painted, ftained, or dyed, after the manufacture, or in the thread or yarn before the manufacture, in foreign parts, which during 32 years fhall be imported into Great-Britain, and may lawfully be ufed there (over and above all other cuftoms) a duty of 151. for every 1001. value.
XVI. §. 67 . The faid duty fall be managed and brought into the Exchequer, in the fame manner as the duties upon
XVIII. §. 68. After the faid duties upon chequered, 8 cc . linens imported hall be paid, the commiffioners and officers of the cuftoms fhall caufe every piece to be flamped with a feal, to denote the payment of the duties.
XVIII. §. 69. There fhall be paid to her majefty upon all filks, callicoes, linens, and ftuffs, which during 32 years fhall be printed, ftained, painted, or dyed, in Great-Britain (fuch callicoes, linens, and fuftians, as thall be dyed throughout of one colour only, and ftuffs made of woollen, -or whereof the greatelt part in value fhall be woollen, excepted) the duties herein after expreffed (over and above the duties payable upon importation) viz. For all filks fo printed, ftained. or painted, in Great-Britain (filk handkerchiefs excepted) 6 d . for every yard in length, reckoning half a yard for the breadth ; and for all filk handkerchiefs fo printed, \&c. in Great-Britain, 3d. for every yard fquare ; upon all callicoes fo printed, fained, painted, or dyed, in Great-Britain, 3 d. for every yard in length, one yard wide; and upon all linen and fuffs printed, \&c. in Great-Britain, three balfpence for every yard in length yard wide.
XIX. §. 70 . Such commifioners, as her majefly or the commiffioners of the treafury appoint, fhall be her majefty's commifioners for the receipt and management of the faid duties, who thall have power to appoint receivers-general, collectors, comptrollers, furveyors, and other officers; and the commifficners fhall caufe all the monies to arife by the fame duties to be paid into the receipt of Exchequer in England.
XX. § 7r. Every perfon who thall print, paint, ftain, or dye, any fuch goods, 化靘 give notice of their names and places of abode, and the rooms where they thall work or dry any fuch goods, upon pain to forfeit 301 .
XXI. §. 77. All perfons who fhall print, \&c. any filks, \&c. fhall once in fix weeks make entry at the next office of all fuch filks, \&c. printed, \&cc. within fuch fix weeks; and, if fuch printer, Sxc. be not the owner of fuch goods, he fhall fpecify the names and places of abode of the owners, on pain to forfeit 50 . which entry fhall be made upon the oath of the printer, \&c. or of his chief workman, to the beft of his knowledge or belief, unlefs a Quaker, and then on his folemn affirmation; and the faid oaths and affirmations may be adminiftered by the collector or fupervifor, without fee.
XXII. §. 73 . Provided that no pcrfor, for the making of fuch entries, be obliged to fend further than the next mar-
ket-town.

XXXHI. §. 74. Every perfen who thall print, \&ic. any filks, \&c. fhall, within fix weeks after he ought to have made fuct entry, clear off all the duties, upon pain of forfeiting double the duties; and no fuch perfon, after fuch default in paymeat, thall deliver or carry out any fuch printed, \&c. goods, until he hath paid his duty, on pain to forfeit double the value of the goads.
XXIV. $\S .75$. The officers of the faid duties hall at all times, by day or by night, and, if in the night, in prefence of a conftable or other officer of the peace, be permitted, upon requeft, to enter into the houfe, or other place belonging to, or ufed by, any perfon who hall print, \&c. any filks, \&c. and to take account thereof, and hall thereof make return in writing to the commifioners, leaving a copy (if demanded) with the printer, \&cc. and fuch return fhall be a charge upon fuch printer, \&c. and, if the officer neglect to leave a copy of his report, being demanded, he fhall forfeit 40 s . to fuch printer, \&c.
XXV. $\S .76$. Every officer, impowered to make fuch charge, Thall firt be fworn for the due and faithful execution of his office; and the oath may be adminiftered by the commiffioners for the duties, or by any of her majefty's juftices of the peace, who fhall give fuch officer a certificate thereof.
XXVI. §. 77. The officers fhall be permitted to take account of the quantites of filks, \&c. in the cuftody of any printer, \&c. to be printed, \&c. and in cafe fuch officer fhall mifs any quantity of fuch filk, \&c. and fhall not upon demand reccive fatisfaction for what is become of the fame, it fhall be lawful for fuch officer to charge fuch printer, \&c. with the duties of fuch filks, \&c. as if the fame were printed, \&sc.
XXVII. §. 78. If any perfon who fhall print, \&c. any the goods aforefaid, Thall obftruct the officers, the offenders thall torfeit 201.
XXVIII. §. 79. No perfon fhall remove any the filks, 8 cc . by him printed, 8 cc . until the officer fhall have taken account of every quantity of fuch goods, and until every piece be marked with a flamp, denoting the charging of the duty, upon pain of forfeiting 201. and all the printed, \&c. filks, \&c. carried away without being marked, and found in the poffeffion of any draper or other trader therein for fale, may be feized, or the value thereof recovered, one moiety for the ufe of her majefty, and the other moiety to the feizer or informer.
XXIX. §. 80. Upon payment of the duties for any quantity of the faid goods, the collector thall give a receipt gratis.
XXX. §.81. The faid printers, \&cc. fhall keep the goods not furveyed by the officers apart from all others of the fame kinds, which fhall have been furveyed, on pain to forfeit 5 I. XXXI. §. 82, If any of the faid printers, \&cc. fhall fraudulently conceal any filk, \&xc. with intent to deceive her majefty of her duties, the party offending thall forfeit 201. and all the filks, \&c. found in any private place, whereof no notice fhall have been given, or the value thereof may be feized and recovered, one moiety to the ufe of her majefty, and the other moiety to the ufe of the feizer or informer.
XXXII. §. 83. All utenfils and inftruments for printing 8 cc . of fuch goods, in cuftody of any fuch printer, \&cc. fhall be liable to the debts and duties, and alfo to all penalties incurred by fuch perion, as if the debtor or offender were the true owner.
XXXIII. §. 90. No fee fhall be taken by the officers from the faid printers or others, for any entries, receipts, or marks, in this act mentioned, under the penalty of 5 l. to the party grieved.
XXXIV. §. 9r. The powers in 12 Car. II. cap. 24. or any other law of excife, fhall be ufed in levying the duties hereby granted.
XXXV. §. 92. All penalties in relation to the faid duties upon filks, \&cc. printed, \&c. in Great-Britain, fhall be levied or mitigated, as any penalty by any law of excife, or by action of debt, \&c. in her majelty's courts at Weftminfter, or in the court of felfion, jufticiary, or exchequer, in Scotland; and one moiety of every fuch penalty (not otherwife appointed by this act) thall be to her majefty, and the other moiety to bim that fhall fue for the fame.
XXXVI. §. 93. The commiffioners for the faid duties on filks, \&c. printed, \&c. in England, Wales, and Berwick; fhall have the fame power as the commiffioners of excife. XXXVII. §. 94. It thall be lawful for any perfon who fhall have paid her majefty's duties for any the faid imported linens, or for any filks,' \&c. printed, \&cc. in GreatBritain, and any other perion who ihall be intitled to any fuch goods from the perfon who paid her majefty's duties, to export fuch goods for any foreign parts, giving fecurity that the quantities to be exported fhall not be relanded in Great-Britain; which fecurity the cuftomer or collector of the port of exportation fhall take in her majefty's name.
XXXVIII. §. 95. If, after the flipping of any fuch goods and the giving fuch fecurity, the fame thall be relanded in Great-Britain, the faid goods, or the value thereof, thall be forfeited.
XXXIX. §. 96. Any perfon who fhall export fuch chequered, Atriped, printed, painted, ftained, or dyed goods, may make proof upon oath, that the duties have been paid or fecured (which oath the cultomer or collector is to adminifter) and thereupon the cuftomer or collector hall give to the exporter a debenture, expreffing the kinds and quanrities of the chequered and ftriped linens, and of the print ed, painted, ftained, and dyed goods, fo exported; and, the exportation thereof being certified by the fearcher upon the debenture, the collector of the duties upon fuch goods, in the place where fuch exportation was, fhall pay the duties reccived to the perfons or agents exporting the fame; and, if fuch collector fhall not have money in his hands, the commiffoners fhall pay the faid debenture out of any duties upon chequered and ftriped linens, printed, painted, ftained, and dyed goods; or, if the duty of the goods exported were only ecured, the lame thall be dircharged.
XL. §. 97. The commiffioners of the cuftoms thall provide feals, with which the imported linens fhall be marked, and the commiffioners for the faid duties fhall provide feals (of another kind) for marking the faid filks, \&xc. printed, \&cc. in Great Britain; and the officers are required in ufing the fame to do no damage to the goods; and, if any perfon thall counterfeit any leal provided in purfuance of this act, or the impreffion of the fame, to defraud her majefty of the duties, fuch perfon, being thereof convicted, thall be judged a felon without benefit of clergy; and, if any perfon thall fell any printed, \&c. filks, \&c. with a counterfeit ftamp, knowing the fame to be counterfeited, and with an intent to defraud her majefty, fuch offenders, their aiders, abettors, and affiltants (being convicted) fhall forfeit to her majefty 1001. and ftand in the pillory two hours.
XLI. §. 98. Upon oath made by any credible perfons, that they have reafon to fufpect that any printed, \& cif. filks, \&c. are in the cuftady of any draper, or other perfon dealing therein, for fale, without baving fuch marks as are required, it thall be lawful for the commiffioners within the bills of mortality, or any two juftices of peace in other parts of the kingdom, to iffue their warrants, requiring any officer for the fame duties (with the affiltance of a conftable or other efficers of the peace) in the day time, to fearch for the fame, and to open doors, chefts, and package, and to feize fuch goods, and bring them to the office next the place where they fhall be feized.
XLII. §. 99. All callicoes printed, painted, or ftained, which Thall be within one eighth of a yard of yard broad, or not exceeding one eighth of a yard of yard broad, fhall pay as yard broad.
XLIII. Stat. 12 Ann. ftat 2. cap. 9. §.6. There thall be paid to her majefty upon all chequered and ftriped linens, and upon all linens printed, painted, flained, or dyed, after the manufacture, or in the thread and yarn before the manufacture, in any foreign parts (except buckrams, lawns, cannvas, barras and Silefia neckcloths) which during 32 years fhall be imported into Great-Britain, and may lawfully be ufed there (over and above all other duties) 151 . for every 100 I. value, to be paid by the importers.
XLIV. $\$$. There ihall be paid to her majefty upon all fiks, callicoes, linens, and ftuffs, which during $3^{2}$ years fhall be printed, ftained, painted, or dyed in Great-Britain (fuch callicoes, linens, and fuftians, as fhall be dyed throughout of one colour, and ftuffs made of woollen, or whereof the greateft part in value fhall be woollen, excepted) the duties herein after exprefled (over and above 11 other duties) viz. upon all filks fo printed, ftained, or painted (fik bandkerchiefs excepted) 6d. for every yard in length, reckoning half a yard for the breadth; and for all filk handkerchiefs fo printed, 8 cc . I d. for every yard fquare; upon all callicoes fo printed, ftained, painted, or dyed, 3 d. for every yard in length, one yard wide; and upon all linen and Afuffs printed, flained, painted, or dyed in Great-Britain, Id. $\frac{1}{2}$ for every yard in length, yard wide, as by 10 Ann. c. 19 . The duties upon imported goods to be under the management of the commiffioners of the cuftoms.
Thefe duties are made perpetual by 6 Geo. I. cap. 4. and great part of them are fubferibed into the South-Seatock, and the refidue is mortgaged to the Bank, by 2 Geo. II. cap. 3 .
XLV. §. 15. Every perfon that thall export any filks, callicoes, or linens, that are printed, painted, Ptained, or dyed, for which a drawback is to be allowed, fhall give notice to the officer, appointed by the commiffioners of the cuftoms, when and where he will pack up the goods to be exported; and the commiffioners of the cuftoms are directed to caufe fuch officer to fee that the feals be taken off from every piece to be exported, and the officer fhall rake account of the kinds and quantities of the goods to be exported, and make a return thereof to the officer appointed to receive the fame without fee.
XLVI. Stat. 12 Ann. ftat. 2. cap. 19. Lawns, and ffriped or chequered linens, being all white, and neckloths ftriped at the end only, and alfo barras and packing canvas or buckrams, were not intended to be charged by the aet 10 Ann. cap. 19 upon importation, with the duties by the fame act granted.

XLVIT. Stat. i2 Ann. ftat. 2: cap. 21. The exception in the act 7 Ann. cap 7 . in relation to tapes or incles, fhall extend o exempt European unwrought incle calied flort \{pinnal, as well as wrought incle, from the payment of the two third fubfidies.
XLVIII. Stat. I Gen I. cap. 36. §. 2r. All perfons who Thall print, paint, fain, or dye any filks, callicoes, linens, or fluffs, at any other place than the ufual place of their refidence or exercife of their trade, thall firf make a particul. 5 entry thereof with the proper officer, and pay down the duties, on forfeiture of 50 l. to be recovered as by the laws of excife or action of debt, \&c. and fuch filks, \&c. fo printed, \&c. without entry and payment of the duty, may be feized immediately by fuch officer; one moiety of fuch forfeitures to the crown, the other to the profecutor or informer.
XLIX. Stat. 3 Geo. I. cap. $7 \cdot \S \cdot 3^{8}$. It hall be lawful to import linfeed without paying any duty.
L. §. 39. It fhall be lawful to export all forts of linen cloth of the manufacture of this kingdom, made of flax or hemp, free from all duties.
LI. Stat. 3 Geo. I. cap. 21. §. I. The act 3 and 4 Ann cap. 8. to permit the exportation of Irifh linen cloth to the plantations, \&c. fo far as the fame relates to the exportation of Irifh linen cloths to the Britifh plantations, fhall continue in force fo long as the merchants, \& zc . of Great-Britain are permitted to import into Ireland, free of duties, white and brown Britifh linen cloth made in Great-Britain.
LII. §. 2. All linens made in Irelant, and imported into this kingdom, may be fhipped off again for any of his majefty's plantations in America, without paying any duty. LIII. Stat. 4 Geo. II. cap. 16. §. I. All perfons who thall felonioully fteal, or hire any other felonioully to fteal, out of any whitening or bleaching croft, or place made ufe of by any whitfer, crofter, bowker, or bleacher, for whitening, bowking, bleaching, or drying any linen, futtian, or cotton cloth, or any thread, linen, or cotton yarn, tape, incle, filleting, laces or goods, expofed to be whitened, bowked, bleached, or dried, to the value of ros. or who thall buy or receive any fuch goods, knowing the fatne to be ftolen, fhall be adjudged felons without beneft of clergy, unlefs the court fhall think it reafonable that the party offending, inftead of fuffering death, thould be tranfported to fome of his majefy's plantations for feven years.
LIV. §. 2. If any perfon, ordered to be tranfported in purfuance of this act, fhall refufe fo to be, or thali break prifon, efcape, come on thore, or return into this realm, before the term expired, he fhall, being convicted, fuffer death.

## REMARKs.

The following authentic papers being annexed to the report from the committee appointed to examine and flate to the houle of commons the matters of fact in the feveral petitions of the manufacturers of, and traders and dealers in, the Linen Manufactory; we have thought them ufeful, to give the reader an infight into the real flate and progrefs of this manufacture in Ireland and Scotland.

Premiums given by the linen-board of Ireland, for the encouragement of that manufactory.

## LINEN-BOARD

The truftees of the linen manufacture are refolved to continue premiums on coarfe linens, with fome alterations fuited tothe prefent flate of that growing manufacture.
They therefore propofe to give to fuch perfon or perfons as Shall, after the ift day of November next, manufacture, or caufe to be manufactured, the greateft quantities of found merchantable linen cloth, of the breadth of 26 inches or upwards, made of cleanfed yarn, and not lefs in vatue than 6 d . by the yard, being fuch as is fir firs the ufe of the fervants and negroes in the Britifl colonies and plantations, and thall caufe the fame to be exported to Gieat-Britain, or to any other part of his majefty's dominion in Europe or America, on or before the 25 th day of December in the year 1750, the following premiums, on the following conditions; provided that the quantities, fo manufactured and exported, be not lefs than thofe which correfpond to each premium, according to the following table:

| One premiom |  | $\begin{aligned} & \text { Sums. } \\ & \text { 1. } 300 \end{aligned}$ | No | $\begin{aligned} & \text { of yard. } \\ & 60,0 c 0 \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
| One premium |  |  | - | 50,000 |
| One premium | - |  |  | 40,000 |
| One premium |  |  | - | 30,000 |
| Two premiums, each | - |  | --- | 20,000 |
| Four premiums, each |  |  |  | 10,000 |
| Eight premiums, each |  |  | - | 5,000 |
| Ten premiums, each |  |  | - | 4,000 |
| Twenty premiums, each |  |  | -- | 2,0c9 |
| Twenty premiums, each |  |  | - | 1,000 |

## CONDITIONs.

I. All cloths for thefe premiums muft be provet, upon oath, to have been made entirely of yaro floun in this kngdom,
and, ail other things being equal, the preference thall bc' given to cloths, the yarn of which fhall be foun from flax growing in this kingdom.
II. Strong well wroughi cloths fhall have a preference before a greater quantity of llighter, and not fo well wrought cloths, provided that the lefer quantity of better cloths be fufficient to entitle the manufakurers to the premium applied for, according to the above table.
III. All cloths, manufactured, in order to obtain any of the above premiums, fhall be viewed, examined, and itamped, by an officer appointed by the board, publickly in the LinenHall in Dublin, or in tome public place in the port towns from whence they are to be exported; and they fhall be prefented to the faid officer, not lapped, but in folds.
IV. All perfons who have large quantities of linen to be viewed, fhall give 15 days notice to the truftees, or their fecretary, of their intention to export any quantity of fuch linen, not lefs than 4000 yards, to the end that an officer may be fent to view, examine, and ftamp the fame, as aforefaid, at that port from whence fuch linens are to be exported, as aforefaid ; and they who have fmaller guantities muft give the like notice, to the end that their cloths may be viewed, examined, and famped, at the fame time, otherwife they mult bring their cloths to the Linen-Hall in Dublin
V. Indented patterns fhall be fent up to the fecretary of tha linen-board of each piece, and the full breadch of the cloth, marked and numbered in the picce and pattern alike, before any officer be fent to any port whatfoever, to view, examine, and famp linens.
VI. No perfon fhall be entitled to more than one premium on thofe coarfe linens; and, therefore,
N. B. A! candidates fhall be ftrictly examined upon oath, as to their having really ànd bona fide manufactured, or caufed to be manufactured, the linens by them entered and exported, as aforefaid; particularly, whether any other perfon be at all concerned or interefted in the faid cloths; and if, upon fuch examination, it thall appear, that the faid cloths, or any part of them, were manufactured covertly, by or for the ufe of fuch perfon or perfons as in their own, or in any other name, have applied for any other premium, all fuch perfons, as well they to whom fuch cloths are found to belong, as they in whofe names they are entered, fhall be for that time abfolutely incapable of any premium, although, before the difcovery of fuch fraud, they may have appeared or be entitled to it.
VII. Any number of manufacturers, joined in fair partnerfhip previous to the manufacturing thefe linens, are to be taken as one perfon.
VIII. Authentic certificates of the exportation muft be produced from the collectors of the refpective ports, at which the feveral cloths have been exported.
IX. No perfon is to be admitted a candidate for any of thefe premiums, who is under a contract with the linen board, ro make and export any quantity of thofe cloths, for which thefe premiums are defigned.
All perfons may be furnifhed with famples of cloths which are'fit'for the ufe of negroes, \&c. at the Linen-Office in the cafte of Dublin.

## Dublin Caftle, the Signed by order, <br> 7 th of April, 1749 Artaur Newburgh.

## LINEN-BOARD.

The truftees of the linen manufacture, to encourage the raifing and manufacturing of fax, the produce of this kingdon, have agreed to give the following premiums, viz.

1. That all perfons who fhall, from the date hereof to the ift of OCtober, 1752, lodge, in the ftores of the truftees of the linen manufacture, any quantity of fcutched flax, not lefs than 800 weight, fhall receive' ios. for every 100 of flax fo lodged, provided the officers appointed by the truftees fhall eftimate the faid flax to be worth not lefs than 35 s . per 100 , and provided the faid perfon produce proper certificates, that he bad, under the culture of glax, a quantity of ground, not lefs than two acres, and provided he makes oath, that the faid flax is the produce of the land focertified, and that he has never received the premium for it.
1I. That all perfons wha fhall, from and to the time aforefaid, lodge in the flores any quantity not lefs than the weight aforefaid, fhall reccive 8 s . for every 100 weight fo lodged, provided the officers hall eftimate the faid flax to be worth not Jefs than 30s. per 100, and provided the certificate and oath above-mentioned be alfo complied with.
III. That all perfons who fhall, from and to the time aforefaid, lodge, in the ftores aforefaid, any quantity not lefs than the weight aforefaid, fhall receive 6 s . for every 100 fo lodged, provided the officers fhall eftimate the faid flax to be worth not lefs than 25 s . per 800, and provided the certificate and oath above-mentioned be alfo complied with.
Note, It is required that the quantity of ground on which
the flax grew, fhall be certified by two credible perfons
in the neighbourhood, who have viewed the fame whilf
the flax was growing thereon; and that the name of the townland, barony, and county, in which the faid land lies, Ahall be fpecified in the certificate; which certificate inall be figned in the prefence of fome neighbouring juftice of the peace.
That the owner of the fax fhall make oath, before two neigh bouring juftices of the peace, that the faid flax is his own property, and is the produce of the land certified and defcribed as above; and that the land was in his own occupation at the time of fowing the flax.
That the perfon who delivers the flax at the ftores fhall make oath, that he received the fame from the perfon who has made the above-mentioned oath.
N. B. Such perfons who intend to apply for the above premiums, may be fupplied with the proper form of the oath and certificate by addreffing for the fame to Arthur Newburgh, Efq; in the caftle of Dublin.
Dublin Caftle, the
Signed by order,
7 th of April, 1749.
Arth. Newburgh.

## LINEN-BOARD.

The truftees of the linen manufacture, finding the good effects of the premiumsgranted upon coarfe linens, have refolved to extend them further : they therefore propofe to give fuch perfons as fhall, after the ift day of May next, manufacture, or caufe to be manufactured, the greateft quantity of found, ftrong, thick linen cloth, of both, or either of the kinds, hereen after defcribed, made of high white flaxen yarn, without any mixture of tow-yarn, and thoroughly well bleached, and Thall caufe the fame to be exported to GreatBritain, or any part of his majefty's dominions in Europe or America, between the. Ift day of May aforefaid, and the If day of November, 1750 , the following premiums, on the following conditions, proyided that the quantities of each kind, fo exported by the refpective candidates, be not lefs than the number of yards correfponding to each premium in the following tables :

Premiums on coare gheeting, which muft be a cioth of 8 co , or upwards, and of the full breadth of 40 inches and an half, or upwards when bleached.

|  |  |  |  | Sums. |  | No. of yards, |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| One premium |  | $\because$ |  | l. 300 |  | 30,000 |
| One premium | - | - |  | 250 |  | 25,000 |
| One premium | - | - | - | 200 |  | 20,000 |
| Two premiums | each |  |  | 1. 50 |  | 15,000 |
| Two premiums | each |  |  | 100 |  | 10,000 |
| Five premiums, | each |  |  | 50 |  | 5,000 |

Premiums on finer theeting, which mult be a cloth of 1200 or upwards, and of the full breadth of one ell, or upwards, when bleached.

## Conditions

I. All cloths entered and exported, in order to entitle the perfons entering and exporting to any of the above premiums, muft be thoroughly bleached, without ufing rubbing-boards or rubbing-milns: and, to this and every other point that fhall be thought neceffary, the refpective candidates fhall be examined frictly upon oath.
II. All cloths, as aforefaid, muft be brought to the LinenHall in Dublin (not lapped, but in the folds) to be there viewed, examined, and flamped, by an officer appointed by the truftees for that purpofe ; and "this view, examination, and ftamping, fhall be public in the Linen-Hall.
III. All thin, ill woven, or ill bleached goods, and all that Chall be found deficient in breadth, or to have the leaft mixture of tow-yarn, fhall be ablolutely rejected.
IV. Thick, ftrong, clofe, well-wrought cloths, fhall entitle the candidate to a premium preferably to a greater quantity of cloth, lefs thick and frong, and not fo well woven, provided the fmaller quantity of better cloth be fuch as intitles the candidate to the premium applied for, according to the above tables.
V . The fame perfon may entitle himfelf to one premium on the coarfer fheeting, and to another on the finer: but no perfon thall be qualified to demand or receive more than one premium on a manufacture of the fame kind: and therefore
N. B. All candidates fhall be frictly examined upon oath, as to their having, really and bona fide, manufactured, or caufed to be manufactured, the linens by them entered and exported, as above, particularly whether any other perion be at all concerned or interefted in the faid cloths; and if, upon examination, it fhall appear that the faid cloths, or any part of them, were manufactured covertly, by or for the ufe of fuch perfon or perfons, as

## $\mathrm{L} I \mathrm{~N}$

in their own or any other name have applied for any other premium, all fuch perfons, as well they to whom fuch cloths are found to belong, as they in whofe names they are entered, fhall be, for that time, abfolutely incapable of any premium; although, before the difcovery of fuch fraud, they may have appeared entitled to it.
VI. Any number of manufacturers joined in fair partherfhip previous to the manufacturing thefe linens, are to be taken as one perfon.
VII. It is expected that all candidates fhall mark, in the weaving, the hundreds and beares in each piece.
VIII. Authentic certificates of the exportation muft be produced from the collectors of the refpective ports, at which the feveral cloths have been exported. Such perfons as intend to several cor any of the above premiums, may be furnifhed at the Linen-Office, in the caftle of Dublin, with famples of the feveral forts of cloths which are fit for theeting of either kind, and for which forts only the above premiums are intended.

Dublin Caftle, the
7 th of April, 1749 .
Signed by order,
Arth. Newburgh.
An account of the quantity and duty of ftatutable and unftatutable linen-yarn, exported out of Ireland to Great-Britain, for twenty years, ending the 25th of March, 1750, each year diftinguifhed.

The value chargeable by the Book of Rates is, 51. for flatutable, and iol. a hundred for unftatutable, at 120 lb . to the hundred weight.
The ports from whence linen-yarn is chiefy exported, are, Londonderry, Belfaft, Newry, Drogheda, and, in a lefs degree, Dublin, Dundalk, and Colerain.-The port to which fuch yarn is exported is Liverpool.
The 5l. per cent. is by the act of cuftoms, anno 166 r .The additional 51. per cent. by an aft of 2 George I. 1717. T. Lill. Ex ${ }^{\text {r }}$. Cuft.

An account of the nett quantities of cotton-wool imported into Great-Britain for feven years, after a deduction of the quantities exported; drawn from the accounts produced before the committee.

Which, on a medium of thefe latt four years, amounts to 2,568,8941. per annum.

The report for the year 1734.
It cannot efcape your majefty's oblervation, that the increafe in the number of yards is not in this laft year fo confiderable as in the former :: but then your truftees apprehend, that is, in a great meafure, to be imputed to a very large exportation of linen-yarn, which bears hard upon the weavers: but as, according to your truftees information, 40 or 50,0001 . worth of the yarn, fo carried from this part of the kingdom, is brought into England, and employed in the manufactures that are carried on there, they cannot fuffer themfelves to think of any expedient for preventing it, efpecially fince the demand for their yarn increafes the fpinning, though it is fome mortification to them, that parcels of their yarn are bought up, and exported beyond the feas.

## Report fór 1736.

The chief caufe of the decreafe they impute to the great export of their linen-yarn to Manchefter, and other parts of the north of England, to be wrought up with cottons there; which they can hardly complain of, becaufe it encourages their fpinning, and is a benefit to the united kingdom, by preventing the purchafing of linen-yarn from abroad.

## Report for $\mathrm{I}_{73} 8$.

One, and indeed the principal caufe why the making of linencloth for fale is not more rapidly extended, is, that very great quantities of linen yarn are bought up every year in Scotland, to be wrought up with cotton, and other ways in England, which produces a fcarcity of the very materials out of which lineh is made in this country ; infomuch that the quantity of yarn, which was ufually purchafed in Scotland for about 2 s .4 d . two or three years ago, cannot be now bought under 2 s .7 d . or 2 s .8 d . and this proves fo great a drawback on the manufacture of cloth in this country, that, did not the benefit of it redound to the other part of this your majefty's kingdom, your truftees would find themfelves under a neceffity of applying to your majefty for a remedy, by adt of parliainent, to this inconveniency. But, as the finding yarn fit for their purpore in this part of the ifland, may be a convenience to your majefty's fubjects in the other, and as the demand for yarn from hence muft tend to propagate finning here, your truftees have laid afide all thought of alking for any fuch remedy.
Another caufe why the manufacturing yarn into linen does not make fuch progrefs as were to be wifhed, is, that grear quantities of yarn, elpecially of the finer fort, are converted into thread for foreign, as well as for our own mercats: and, as the thread-manufacture of this country gains confiderable reputation, your truftees humbly think it oughe rather to be promoted than difcouraged.

## LIN

It being therefore, in your truftees apprehenfion, improper to attempt to remove any of thofe caufes which drain our mercats of yarn, and raife the price of it, whereby the working up larger quantities of linen is prevented, the only thing remains for them to do, is, to try to increafe the quantity of yarn, fo as, if polfible, to anfwer all demands, by encouraging the fpinning of flax, where that art is leaft known, and conrequently mort neglected.

## Royal Sign Manual.

GEORGER.
Trufty and well-beloved, we greet you well. Having taken under our royal confideration your report made to us lakt Chriftmas, and the propofition therein contained of publifhing and eftablifing for three years, from the faid Chrifmas, a plan for diftributing the monies applicable to improvements, in manner following, viz.
Item, For premiums, after the rate of 15 s . per acre, for 2000 acres of ground to be fown with lint feed and hemp-feed, according to rules and conditions to be effablifhed
For a falary to a foreign-flax raifer, at 3 ol. per annum
For defraying the maintenance of four young men, inftructing to raife and break flax, at $\}$ Mr. Hope of Rankeiller's lint-mill
For falaries to 12 young men inftructed, or to be inftructed in raifing flax, to be ftationed in different parts of the country, at 7l. 10s. per annum
For erecting two heckleries, for heckling flax, at 20 l . per annum each
For inftructing four young men in the art of heckling, at 4 l . per annum each

1. s. d. hecking, archafing four fetts of heckles, to be? given to thefeyoung men when inftructed, $\}$ at 61. ios. each fett
For a falary to a perfon fikilled in the raifing, dreffing, and heckling of flax, for furveying and examining the raifers, dreffers, and hecklers, at the places where they fall be flationed
For encouraging finning-fchools, for teaching the fpinning of tax
For prizes to thofe that fhall fin the beft yarn
For encouraging four Dutch weavers, to per- $\}$ fect journeymen-weavers, at 401. per an- $\}$ num each
For purchafing Dutch looms, with complete? tackle, to be given to fuch journeymen completed
For falaries to 55 lappers and ftamp-mafters, at fo many ftations, at 101. per annum each
For prizes to be given at fuch flations as the truftees thall appoint, to fuch perfons as fhall work the beft webs of coarfe linencloth, of the qualities and fizes by the truftees to be limited
For falaries to two general riding-officers, at 1251. per annum each
$250 \circ 0$
For a falary to a Ikilful perfon, who thall vifit the feveral manufacturing counties, and there influct the ftamp-mafters, as well as the weavers, in the beft method of wafling, forting, flaying, and weaving of their yarn
For a falary to the warehoufe-keeper of the cambric.

130
$100: 0$
For defraying the expence of carrying on profecutions againft fuch as tranfgrefs the laws concerning the linen and hempen manufactures
For procuring models of the beft looms, and other:inftruments, for improving the linen and hempen manufactures

5000

Making, in the whole, for the linen and hempen manufacture

We are gracioully pleafed to approve of your purpofe of publifhing the aforefaid plan for diftribution of the monies intended for improvements, to continue and endure for three years from Chriftmas laft: and we are alfo gracioufly pleafed to approve of the propofitions aforefaid, for employing 12051. part of the favings in your cafhier's hands: and do hereby authorize and impower you to iffue your precepts to your cafhier, to pay, out of the monies in his hands, the fereral fums above-mentioned, to the feveral ufes and purpofes aforefaid: and this, together with your precepts to follow there

upon, and the receipts of the perfons to whom the precepts flatl feverally be made paffable, fhall be to you, and your cafhier, a fufficient authority and exoneration. And we do further will and direst, that, in your next annual report, you do lay before us a particular account of the monies that Thall , be fo iffued by you for thefe fervices. Severally given at our court at St . James's the 12th day of May, $\mathbf{5 7 4}$, in the $13^{\text {th }}$ year of our reign.

By his Majesty's Command.
So figned, R. Walpole,
Gro. Doddington,
Sundon.
Prices of raw linen-yarn in Germany, as imported by De Ponthieu and Egerton, for twelve years laft paft, exclufive of charges and duty here.

The duty upon yarn here, from 1739 to 1747 , was 2 d . $\frac{1}{\mp}$ per pound weight: and, from 1748 to $1750,2 \mathrm{~d}$. $\frac{7}{8}$, befides charges and freight, which, on coarfe linen-yarn, comes to near $\frac{1}{4}$ per pound.

Irih premiums, as publithed in the Daily Gazetteer of Tuefday, February 25, 1746.

## I R E L A N D.

A bounty of $1 \mathrm{~d} . \frac{2}{2}$ per yard being granted by the Britifh parliament on all Britith or Irifh linens, made of flax or hemp of the value of 6 d . per yard, and not exceeding i2d. per yard, that fhall be exported out of Great-Britain to the plantations, \&c.- The Isinen Board have agreed to give the following premiums, viz.
1ft. 5001 . To fuch perfon or perfons as fhall manufatiure, or caule to be manufactured, the greateft quan-

tity of found merchantable linen-cloth, of 26 inches breadth, or upwards, made of cleanfed yarn, not lefs in value than 6 d . per yard, nor more than rod, being fuch as is fit for the ufe of the fervants and negroes in the Britifh colonies and plantations; and chall caufe the fame to be exported to Great-Britain between the ift of May, 1746 , and the xft of May, 1747, provided the quantity fo exported be not lefs than 50,000 yards.
2d. 4001. On the like conditions, to fuch as have not obtained the firt premium, and to export not lefs than 40,000 yards.
3d. 3001 . On the like conditions, to fuch as have not obtained the firf or fecond premiums, and to export not lefs than 30,000 yards.
4th. 200J. To fuch as have not obtained the firt, fecond, or third premiums, and to export not lefs than 20,000 yards.
5th, 1001 . To fuch as have not obtained the firff, fecond, third, and fourth premiums, and to export not 1,500 l. Jefs than 10,000 yards
For exporting 150,000 yards is 2 d . $\frac{4}{35}$ of a penny each yard, over-and-above id. $\frac{1}{8}$ per yard, given by the Englifh parliament.
N. B. The Irih give all utenfils for the linen manufactory, as looms, reeds, hatchels, wheels, reels, and falacties to a foreman and a whitfer, befides feed to fow hemp and flax.

Remarks on the Linen Manufacture in general.
From the ftate of the cale of the linen manufacture, as before given, the neceffity of it's utmoft advancement manifefly appears; and that not only amply to fupply ourfelves and our plantations, but to put ourfelves in a condition to participate in the fupply of foreign countrics. And what weighty and conclufive objections can be made againf the probability of fo doing? Is not Great-Britain, in conjunction with Ireland, and the aid of her plantations, as capable of fupplying themfelves with all faxes and hempen linens, as France beretofore was to fupply themfelves with the woollen manufactures? Do we not labour under far lefs difficulties and difcouragements in the one refpect, than that nation did in the other? If we are once arrived to the pitch of being able fully to furnifh ourfelves, what hinders that we cannot exclude the wear of foreign linens, as France has that of foreign woollen goods?. There was a time,' when it might, perhaps, be our intereft, in fome degree, to import foreign linen; it was fo when thofe foreign linen countries tonk an equal value, or more, of our woollen, or any s ther manufactures, than we did of their linens: but no one, I believe, will undertake to demonftrate that the cafe is fo at prefent.
On the contrary, the balance of trade is greatly in our diffavour with the foreign linen countries in general ; and, before the evil further increafes, is it not prudential to think of a remedy ? When difadvantages of this kind grow to a certain height, they frequently become irremediable, without coming to an open rupture with fuch foreign countries wherewith we are fo circumftanced: but, if we are wife enough gradually to decline purchafing of their produce and manufacture, in the like proportion as they do ours, we hall not only fave the national treafure, but preferve peace and tranquillity with thofe very nations.-And, when this genetal manufacture thall be brought to a height fufficient to fupply ourfelves and plantations with a commodity as cheap and good in quality as foreign linens, what hinders but we may caft about for foreign markets for the vent of our linens, as the French have done for their woollens? But, if we never put ourfelves into a condition of fupplying ourfelves, how can we ever expect to have any thare in the fupply of other nation?
Should it be faid, as has been, that the ineffectuality of the late cambric act thews the improbability, if not the impoffibillty of preventing the fruggling importation of foreign linens, and, therefore, it is in vain to attempt the advancement of our linen trade.-That the refemblance between cambrics and other fine linens, both foreign and Britifh, is fuch, that very few, and thofe only of the greateft experience, can pretend to diftinguifh them.-That, this diftinction being principally grounded on circumftances capable of being eafily varied or difguifed, fuch as length, breadth, bleach, drefs, and package, the moft experienced dealer cannot determine with any degree of certainty, becaufe he can never be fure that he fees the goods in their original or cuftomary form: and upor this principle it is, that the moft ikilfui give up all remnants and wafhed linens, as utterly undiftinguifh-able.-Whence it f.Jlows, fay thefe objectors to the prohibition of foreign linens, that it can never be made to affect the wearer thereof; and, if fo, it may from experience in other inftances be concluded, that no penalties will be found fufficient to deter the feller, though it fhould be much eafier to detect and convict him than from the nature of the thing is poffible. -Should this, and much more, be urged in the like ftrain, ought this to difcourage us from attempting to go greater lengths in this lucrative manufacture? Does not the fuccefsful example of France in the woullen manufagture thew the experimental invalidity of all arguments of this kind? In relation to the refemblance between foreign linens imported into this kingdom of the favoured nations, and that whofe, linens are intended to be excluded, it is to be feared that the latter can never be effected without the former is fo too; and fince our Britifh and Irifh linens do, in many refpects, nearly refemble the foreign linens at prefent, and are fo daily improving, that no doubt can be made of their arriving at the like degree of perfection, if due encouragement is not wanting among ourlelves: fince this is the cafe, our own linens can never take general place in the kingdom, till all foreign linens whatever are abfolutely excluded, becaule thofe of the favoured foreign nations cover, conceal, and increafe the fmuggling of the other. To lay the axe to the root of the evil, therefore, what expedient can be more natural and effectual than to prevent the importation of either, as we become capable to fupply curfelves? Thefe were the meafures which the French fuccefffully took with regard to the eftablifhment of their woolien manufagory; for, when they ceafed to
take the Englith woollen goods, Holland attempted to fupply them, but they were refolute, and excluded all foreign woollen manufacture, and contented themfelves with the wear of their own, though very coarle and indifferent at their firft attempt, rather than not gain the victory in trade which they fo wifely aimed at.
If this, on impartial examination, fhould be found the beft policy that Great-Britain arid Ireland can purfue, in order to the fucceffful eftablifment of the linen manufacture in general, what can be a more natural introduction to this defireable end, than to take off the drawback upon foreign linens, and to encourage the production of flax and hemp in our own plantations to the utmolt? And, when once thefe general manufactories, by our own confumption and that of our plantations, are brought to a pitch of perfection no way inferior to thofe of the foreign linen countries, have we not as good chance to partake of the fupply of fuch foreign nations as want them, as the French had in the woollen manufactory? Cannot the Britifh and Irifh linen manufactures imitate the lengths, breadths, bleach, drefs, and package of foreign linens, as well as the French did with refpect to the Englifh woollen goods? See the article France.
If then, upon the whole, it thall appear to be right commercial policy to advance our linen manufactories to their full extent, upon thofe principles which we have humbly fuggefted, can it be wrong policy to ufe every endeavour to prevent the importation of French cambrics, which fweptaway 200,0001 . a year of our ready * cafh? If the end has not hitherto been fo effectually anfwered as could be wifhed by every truc friend to his country, is it prudential to flacken in our endeavours? Does it not more become the wifdom of the nation to try every expedient, 'till the great end thall be anfwered, than to give up a point of fuch national importance? Can any thing be infuperable to the fuperlative wifdom and refolution of a Britith parliament? The unfpeakable advantage which Scotland and Ireland have already received from the linen manufacture, fhould fill every Briton with the warmeft zeal for it's utmont encouragement in thefe kingdoms.-What immortal honour is defervedly due to the great earl of Strafford, who firft introduced the linen manufacture into Ireland, by fowing great quantities of flax-feed, and fetting up feveral looms at his own expence, to invite the Irifh to follow that trade, without prejudice to England, which has proved, and is, at this day, their greateft benefit and fupport $\ddagger$ ? Is there not infinitely more glory in being the founder of a manufacture which has given bread to millions, than to have been the greateft conqueror upon earth? See Scotland and Ireland, and the feveral other articles before referred to under this.
*While the French, at the beginning of the war, in 1742, were fecretly affifing the Spaniards, before hoftilities commenced between the Englifh and French, alderman Janfien mof zealoufly endeavoured to pur the nation upon diftreffing the latter, by preventing the importation of their cambrics.-Among other meafures taken by this gentleman, he was, as 1 am informed, at the expence of inferting. for Several months together, in the Daily Advertifer, which contributed not a little to open the eyes of the king. dom, That wo hundred thoufand pounds Iterling paid dom, That two hundred hournd pounds lering, paid
 time of the peace of Utrecht) to above SIX MILLions. natural query,--" Whether our having furnithed the French natural query,-- Whether our having furnithed the French with so immenfe a fum may not have greatly forwarded their deffructive fchemes, and partly have been the occafion of this expenfive war, which we, confequently, are - the lefs able (by the above-mentioned fum of fix millions) - to carry on, \&c.'- Though the judicious efforts of this worthy gentleman have not hichertho anfwered the national expectation, yet it may prove a good ltep towards it, if meafures adequate to the evil are taken by the parliament. -If one expedient will not do, fhould we ever ceafe trying till we fall upon what will?
Though this-gentleman's goodintentions to ferve his coun. try, in this refpect, have nor hitherto fo effectually anfwered as could be wifhed, yet many of his endeavours have been fuccelsful.-He attacked fmuggling in general, and parti. cularly that of teas and French brandies, as being the chief bafis of this deteltable practice. He publi hed feveral ju. dicious pieces on this occafion, and particularly a $P_{\text {Lan }}$ for reducing the excife on teas; which being afterwards adopted by thehonourable Houre of Commons, an act paffed in 1745 , which took place at Midfummer the fame year; whereby the excife upon tea was reduced from 4 s. to 2 s . per pound, to prevent finuggling: by which wife meafure the revenue was immediately doubled, and lifas continued to encreafe ever fince.-See our article $\mathrm{T}_{\mathrm{La}}$. In confequence of the eyes of the nation being opened, an act paffed in the year 1743-4 for prohibiting the wear of French Cambrics, which not proving effectual, feveral other acts paffed afterwards to enforce this prohibition, which at length, had the defired effect ; infomuch that at this day 1754, the manufacture of cambric in France is almoft entirely broke up; and the ladies here wear nothing but plain flowered, and friped Muslins, from the East-Indies, with Gauses, Bronds, \&c. \&c. of British Fabric. He was elected member of parliament for the city of London in the year 1747 ; and this worthy reprefentative has alfo been fuccefs.

Ful in various other of his public- fpirited attempts. At the breaking out of the late war, a memorial was drawn up, in order for jo's being prefented to the duke of Newcalle, fetting forth realons for the packets being continued beeween Dover and Calais; which memorial was begun to be figned by fome merchants. Of this the alderman getting early intellizence, he drew up a counter memorial to his grace, to which, in three days time, he obtained the fignature of near 300 of the principal merchants of the city of London. This bad fo good an effeet, that the injurious correfpondence by that channel was interrupted during the whole war.-Mr. Janflen was likewife principally conce:nwhate warloritical point of time (chat of the rebellion 1745 ) ed ata mott critical point of time (hat of the rebelion 1745 ) in that capital meature for preferving the pubac credir of the kingdom, by obtaining a fubfription of the principal
merchants and traders of the city of Loudon, to täke bankmerchants and traders of the city of London, to take bank-
notes in payment ; for which the alderman had the thanks notes in payment; for which the alderman had the thanks
of his late royal highnefs the prince of Wales, together with of his late royal highners the prince of Wales, together with his picture, and thofe likewife of the then prime minifter.He firt fet on foot, at a great expence, the revival of the herring. fifhery in thefy kingdoms, in the year a 750 , by which 20,000 perfons, at one time, have been employed in it's different branches; and it is to be hoped, that it will prove as inexhauflible a mine of treafure to Britain as it mention in ans to the end that fuch virtues may never be forgot, but to in fpire others with the like puolic firited pronciples; for, ipire others with the commercial profperity be advanced. - This is my only motive, having never exchanged a fingle exprefion with that gentleman in my life.
$\ddagger$ See the earl of Strafford's Letters and Dirpatches, \&-c -By the Rev.Mr. Knowler.-Dedication to the earl of Malton.
LIN T, in regard to the linen manufacture. This manufactory can never arrive in England, Scotland, and Ireland, to that perfection it has done in foreign countries, unlefs every part of the whole operation, from the raifing the flax to the completion of the intire manufacture, be vigilantly attended to.- The beft flax-dreffer [fee Flax] when he does his utmoft, cannot finifh of the beft lint for bad and unripe lint, or lint not fully watered, or fpoiled in the watering, will not bear the expence of dreffing, and is indeed not worth drefing, nor ought it to be dreffed) above, 12 pounds weight in a day; and a weil-contrived lint-mill will drefs, at the rate of ever handemployed in it, 16 pounds in a day. The cheapeft that good lint can be dreffed by the hand, is at leaft one third more than it cofts by the mill.-A farmer where our linen manufactures are eftablifhed, and who is in the practice of fummerfallowing his ground, cannot, perhaps, do a thing more for his advantage than to fend in an able-bodied young man to be bred to the Flanders way of flax-dreffing, and to fow annually an acre or more, of the richeft fallow ground with lint, to keep this fervant conftantly employed in managing and dreffing it; if his farm lies within a few miles of a lintmill, he may raife as much flax as can be dreffed by this fervant, and the help of the mill, and fend it, from time to time, to the market in friall parcels for fale, fo foon as it is ready for the firft heckle.
There muft be at every fuch lint-mill, befides the boys that attend the breaking and the fcutching of the mill, at leaft two or three fkilful flax-dreffers, to finifh the flax by the hand, and to pull and draw it in, in which they are careful never to put the root and feed-end together, as is too often done, through inadvertency, in Scotland and Ireland, but keep it always carefully in the fame way it grew, to the very laft operation, whether it be heckled or dreffed for fpinning by brufhes, was the fine lint is; and, in fpinning, the thread is always drawn from the root-end, and not by the bucht from the middle, according to the practice of fome ordinary fpinners. There is a lint-mill in Scatland, upon the water of Eden, a little above Cowpar in Fife, which is faid to be brought to the greateft perfection, and is a compleat pattern to be followed by all who intend to erect lint-mills, and to follow this ufeful and beneficial trade.-At the fane mill the proprietor carries on another branch alfo, viz. the keeping heckles and Ikilful hecklers, for dreffing the lint for fipinning.

## REMARKs

The woollen manufacture of England never came to it's perfection'till the bufinefs of the woollftapler came to be a trade; and it muft be the fame with the linen.- Here is a fine branch of bufinefs for any gentleman who has the conveniency of water for erecting a lint-mill; he may either raife lint himfelf, of buy it in the boon from others, and drefis it by his mill for the heckle; he may have his heckles in a convenient houfe near to it, for dreffing and itapling the lint by proper heckles, into fine dreffed flax, fine dreffed tow, common tow, backings and beards, for the fervice of the country finners.
LITHUANIA, the great duchy, in Poland. This large country has Greater Poland and Pruffia on the weft ; part of Mufcovy on the eaft ; Livonia, the Batic Sea, and part of Mufcovy, on the north; Red Kuffia, Volhinia. and Podolia, on the fouth; and the Ukrain on the fouth-eaft.
It's chief rivers are the Boryfthenes, or Nieper, Dwina, and Niemen.

The air is renerally thick and foggy, becaufe of it's meny woods and lakes; that it is not near fo fruitful as !'oland, yet has plenty of wax, honey, mead, pitch, tar, and timber, and abounds with black cattle, fheep, ermins, fables, and all manner of furrs. But their greateft trade of export is to Holland, \&cc. with their pitch, tar, and timber, for which they receive woollen cloth, falt, and wines.
Vilna, the capital of a palatinate fo called, is a large populous town, with a good trade, but chiefly carricd on by foreigners, the natives being poor and lazy.
Grodno ftands partly on a hill, by the river Niemen. Some reckon it the merropolis of Lithuania. The houfes are generally of wood and very mean; but it has a good trade, the merchandizes of feveral parts of Lithuania being tranfported from hence to Dantzic.
Kowno, near the influx of the river Niemen into the Wilna, is a well-built town, and much frequented by German merchants.
Mohisow, feated on the Nieper, is a large, well-built, and populous city: it's market is much frequented by the Mufcovites, who tranfmit their furrs from hence into Poland and Germany.
LIVES[ANNUITIES upon LIVES.] Under the article Leases we were obliged to enter into the doctrine of annuities upon lives, which are computed upon the principles of the learned Dr. Halley and Mr. Abraham De Moivre, and tables formed therefrom by Mr. Richards, applicable to great variety of cafes. But, fince the time that thefe great men wrote, there have been other ingenious gentlemen, who have entered into the rationale of their principles, and have made fuch objections thereto that deferve attention; for, when the intelligent reader has the fubftance impartially laid before him that has been urged on all fides, he will be the better able to difcern where the truth lies. This I fhall do with all the brevity and perfpicuity that I can. See the article Annuifies. The principal gentleman that diffented from thofe eminent mathematicians, with any fort of reputation, is Weyman Lee, Efq;-'I am fenfible, fays this ingenious author, that a man ought to go on good grounds when he prefumes to attack calculations made by fo great a mafter of thofe things as Dr. Halley, \&c.'-With much more in the gentleman-like ftrain, which becomes all men of fcience. 'The chief exception, continues he, which I take to the doctor's table, is, that, where the value of ath annuity for a life in one period of it is computed with the value of an annuity for a life in another period of it, the term to which fuch value in one petiod is equal, does not vary by a proportional degree of decreafe from the term to which fuch value in another period is equal.-In confequence whereof, the chance of the duration of the annuity does not fink by the fame degrees as the chanice of vitality decteafes : nor does the value of the annuity itfelf, could it be confidered even abftractedly from the dependent life, decreafe, from one period of life to another, in a jult proportion.
The meaning, hereof will beft appear by the following tables. An example, however, may be ufeful.-An annuity for the Jife of a perfon between the age of 15 and 20 , is in value 13-33, which is equal to a term of $26-2-61$; and an annuity for the life of a perfon between the age of 20 and 25 , is in value $12-78$, which is equal to a term of $25-0-00$ according to the doctor's table; and, if we deduct $12-78$ out of $13-33$, the remainder will be oo- 55 , and this is the decreafe in the value; and, if we deduct $25-0-\infty$ out of $27-2-6 \mathrm{I}$, the remainder will be $2-2-6 \mathrm{I}$, and this is the difference in the term in thofe two periods.
This will be more obvious if expreffed thus: a perfon of the age between 15 and 20 has a chance to live 27 years, 2 quarters and 61 days; and one of the age between 20 and 25 has a chance to live 25 years; that is, lefs than a perfon of the precedent age 2 years, 2 quarters, and $6 I$ days: this is what is called the difference of the term of years from one period oflife to another: and, fince the decreafe in value will always correfpond to the difference in the term, the value of the annuity in the fecond period is lefs than that in the firft period by $00-15$ in decimals, which is equal to a term of 2-2-61 in reverfion, after a term of 25-0-00. -So that the doctor's table does not preferve a juft proportion in this inftance; that is, fuch a proportion as can be juftified by any bills of mortality, or be accounted for by any Facts that ever happen in nature.
'To fhew this defect the clearer, I have inferted the doctor's tablc in No. III. following; and, fince the fame exception lies againft Mr. Hayes's, Mr. Richards's, and Mr. Morris's tables for the value of annuities on a life, I have inferted a part of them likewife, in the tables No. IV, V, and VI; and to each of them I have added three calculations of my own: the firt column of which contains an account of the term of years, and parts of a year, to which every life is equal, as it correfponds to the value on the tables refpectively: the fecond gives the feveral differences in the term of yeats, and the third the decreafes in the value of the annuity, from one period of life to another, as they come out on the feveral tables refpective-ly.-In my own table, No. II. I have inferted folely the term to which a life is equal, becaufe the value of the annuity will
Voe. If.
of courfe attend on, and be equal to the term ; and to this a third column is added, which gives this difference in the tern, according to fuch tables, and the decreafe in the value will be in the very fame proportion: from whence, and by an infpection into the feveral tables, and a compation of them together, we may difcern which of them beft preferves that proportional difference in the term and decreafe in the value which ought to be obferved in this cafe.
Since then thefe tables are all of them more or lefs defective in this material point, I flall confine my reflections folely to Dr. Halley's tables, though my reafoning in genetal is appllcable to all of them equally.
The particular periods of life, which are defective in this refpect, are 20 and 40 : in the firft of which the difference in the term is much too great, and in the latter too fmall. In the firft column of this table, which contains the ages of perfons, we have 20 , which is the period including the lives from 20 to 25 ; and againft it, in the fourth colurn, which gives the difference between the term in that period, and the terni in the preceding, we find the difference to be 2-2-61: and, in the fame fourth column, we fee the difference for the preceding period to be $00-2-30$, and that of the fubfequent one to be 2-0-46: and this difference 2-2-6I, compared with fuch the precedent and fubfequent difference, is fuch a proportion as cannot be thaintained by any bills of mortality, at leaft any that ever I faw, or by ariy reafon in the nature of the thing.
If we confult the modern bills of mortality for London, where the ages of perfons dying are diftinguilhed in periods from io years to 10 years; and, in the extract added in the following tables, it appears that the number of perfons dying in the period between 20 and 30 is lefs than the number dying betweeti 30 and 40 ; and, if we fhould fuppofe, of thofedying berweeh 20 and 30 , one half were of the age between 20 and 25 , and the other half between 25 and 30 , which is a more favourable fuppofition than there are juft grounds to make, yet, fince the difference in the intermediate period,' viz. between 20 and 25 , ought to bear a proportion to the precedent and fublequent one, it thould therefore be fomething greater than the precedent; and fomething lefs than the fubfequent one: whereas, in this intermediate period, the difference is $2-0-3 \mathrm{I}$ more than in the precedent one, which is an extravagant decreafe; and it is alfo more than the fubfequent one by $00-2-15$, when the fubfequent difference, if there were any variation, ought undoubtedly to be the greater, for that fewer perfons, out of an equal number, die between 20 and 25 , than between 25 and 30 ; and if we hould fuppofe, as before, that the number of perfons dying of the age between 20 and 25 , and between 25 and 30 , was the fame; yet the number co-exinting in the firft of the two periods mult be greater than in the fecond, apld, confequently, the chance of mortality inthe latter period muft be greater than in the former, the fame number dying out of a lefs number living: and, therefore, the difference in the latter ought to be greater.
At the time, indeed, when the doctor compofed this table, the bills of mortality for London were not publifhed with the diftinction of the ages of the feveral perforis dying, fo that thefe bills could be no guide to him. Put then the Breflaw table was before him when he wrote; and if this be the ftandard, whereby to try this table for the value of annuities for life, my objection of the want of a proportionable difference in the term and decreafe in the value is ffronger upoh an infpection into that table, than in any other light whatever. If then we confult the Breflaw table, which we have inferted among the following, it will appear that the number of perfons dying in a year between 15 and 20 is 30 , the number between 20 and 25 is 31 , and between 25 and 30 is 36 . Upon which it may be oblerved, though the number co exifting in the firt of there periods is greater than that in the fecond; yet that the number dying in the firft is lefs than the number in the fecond, and the fame obfervation holds good in comparing the fecond with the third period: whence it follows, that the difference in the term ought to be in proportion correfpondent, or, in other words, fuch difference in the term ought to bear a proportion anfwering to the increafe in the chance of mortality: and, if the Breflaw table be a rule for the increafe of the chance of mortality, it mult be a rule for the difference in the term, and yet, for this difference in the term, we fee that the proper proportion is directly contradieted, or unpreferved.
Many have a notion, that the age of 30 is the beft age on which to have an annuity depending, for that thofe under this age are expofed to more calualties than thofe arrived to fome maturity of age and difcretion; and, therefore, that the chance of vitality in the younger pare of life is more uncertain than at the age of 30, or thereabouts. But Dr. Halley difcovered no fuch thing in the bills of mortality for Breflaw, nor can any one difcover it in the Breflaw tables, which he formed from thence; for there the number of perfons dying in the period from so to 20 is 63 , from 20 to 30 is 67 , and from 30 to 40 is 86 . If we look into the modern bills of mortality for London, and my extract from thence, there we find the cafe to be the fame in the main, though not in the fame proportion, and that the number of thore ding in
the older period of life greatly exceeds the number in the younger : and the account there ftands thus. Out of every roos perfons dying, there die of the age between to and 20,30 ; of the age between 20 and 30,72 : and, of the age between 30 and 40, 93: and from hence it appears evi dently, that this notion of the beft age of life is not a jult one.
But, if there was a better foundation for the notion than there Uppears to be, and if there was room for a latitude in the calculation of the chances of mortality for the age between 10 and 30 , this can avail nothing in the age of 40 or thereabouts; and yet in the period of 40 we have an improper proportion in the difference of the term, for that it is too fmall, when compared with the difference in the periods on both fides of it. In this inftance, indeed, the deviation is not great; but, if any difference were made, it thould have been greater in this than in the precedent, and lefs than in the fubfequent period; that is, it fhould grow greater and greater gradually, as the age of life advances: whereas the difference is lefs in this period, than in the periods on either fide. And, fince all that has been urged againft the wan of proportion by an over-diference, is equally applicable to this cafe of an under-difference; I thall only add, that I believe no bills of mortality whatever or any thing in nature do, and that I am very fure the bills of mortality for Brellaw or for London do not, warrant the one or the other.
Thefe are the fingle articles in this table which are moft exceptionable; but, in truth, this defect goes through the whole performance, which I will thew by an inftance that demonitrates the defect. The doctor, on the bills of mortality for Brellaw, oblerves, and I believe all mankind will agree it to be true in the reft of the world as well as there, that, out of a certain number of perfons in the decline of life, more die in a year, or any determinate number of years, than thofe do out of an equal number of perfons in the youth and vigour of life: and he has himfelf given us the Breflaw table, as a fcheme of the increafe of mortality, according to the advance in age. Now, if the chance of mortality increafes, and the chance of vitality decreafes, in proportion to the advance in age; and, if the value of an annuity for a life, or the number of years to which a life is equal, which differs in nothing but the manner of expreffion, does depend on the chance of the vitality of the life, and on nothing elfe, as moft certainly it does, it evidently follows, that the value of an annuity for a life, or the number of years to which a life is equal, muft decreafe fafter, and by greater degrees in the older than in the younger ftages of life, and in the fame proportion as the chance of vitality decreafes
Let us fee now how this difference or decreafe in the term will ftand, if we put together the whole of the decreafes for the-four periods of younger life, of middle life, and of the oldeft life. The whole then for the firft fet is a term of $7-1-46$, for the fecond 7-0-15, and for the third - r-00: which, we fee, is directly contrary to the rule faid down, and almoft inverts the proportion. If we would know what is the right and juft proportion to be obferved, and might depend on the Breflaw tables as giving us fuch proportion, and this author's table for the value of annuites was framed from thofe tables; on a computation from thence, the cafe, as between the perions of the youngeft and the oldeft period of life, itands thus. The number of perfons co-exifting above the age of 10 , and under 30 , which centains the four periods of younger life, confitting of 20 years, is in all 11875; and the number of perfons dying out of them in one year is $133^{\circ}$; that is, one in 91 , or thereabouts. The number of perfons exifting above the age of 55 , and under 75, which contains the four periods of older life, confifting likewife of 20 years, in all 3726 ; and the number of perfons dying out of them is 204, that is one in 18, or thereabouts. The proportion here thin is plainly five to one : that is, of an equal number of perfons of each ftage of life, the number of the older ftage of life dying a year will be five, and of the younger ftage one only: or, if one perfon only be nominated of each ftage of life, the chance of mortality on the fide of the perfon of the older Itage of life againft the perfon of the younger ftage is five to one.
Whether this proportion of the increafe of mortality, as it arifes from a computation on the Breflaw table, be a jult one, I neither affirm nor deny; but, be it right or wrong, this author's table for the value of annuities for a life was framed from thence; and, therefore, the difference or decreafe in the term, from one period of life to another, and between the periods of younger and elder life, thould bear fuch a proportion to one another on the table for the value of annuites, as the increafe of the chance of vitality in one period of life bears to that increafe in another period, according to the Breflaw table: and I may appeal to the doctor's own calculation, whether the decreafes given in one table are conformable to the decreafes in the other table, or are agreeable to any rule, which arifes from the nature of the life of man.
I might reft the matter here; but fince it may be urged, although the proportional decreafe contended for is not pre-
ferved, whan we compare it, as we have hitherto done, with the feheme of the difference of the term; yet if we compare it with a fcheme of the decreafe of the value, and the table of annuities is framed by a computation from the value and not from the term, there poffibly the proper proportion may be well enough preferved. For this reafon 1 made the calculation inferted in the fifth column of the table No. III. which contains an account of the decreafe of the value of an annuity from one period of life to another, computed by the values only; and we find the very fame defects here as we had before, and in the very fame inftances: and, indeed, it muft of neceffity fo come out, fince the value and the term do always reciprocally correfpord.
The fingle periods of life which we found fault with, according to the fcheme in the terms, were 20 and 40 ; and in thefe two articles the fame error occurs upon this fcheme as we met with on the former. On the period zo we objected, that the decreafe, when compared with the precedent and fubfequent one, was too great; and here the feveral decreafes of thefe three periods being, as ftated decimally, $1 \mathrm{x}, 55,5 \mathrm{I}$, it appears plainly on the face of them that the middle one, viz. that for the period 20 , is greater than the precedent one by a difference much too large, and alfo greater than the fubfequent one, when undoubtedly it ought to be fomething lefs. And as for the period 40 , to avoid repetitions, I would refer you to the fcheme itfelf; an infpection into which does plainly enough difcover the defeet; for the decreafe in that period is lefs than in either of thofe on each fide, and therefore cannot poffibly be in a proper proportion to both of them.
Thefe, indeed, are not very great miftakes, or however, by a fmall variation might be rectified; but, if they were fet right, yet the grand error will fill remain, viz. want of proportion through the whole fcheme. The decreafe in the four firft ftages of life is, indeed, in value, computed by way of decimals, $\mathrm{I}-7$; and in the latter ftages is $3-\mathrm{g}$; notwithftanding which, in reality, there is no great difference in thefe two decreafes, and what difference there is lie3 on the wrong fide, viz. on the fide of $i=72$, that being the greater decreafe of the two. To fay that $I-72$, value in decimals, is fomething greater than 3-9I value in decimals, feems to be a paradox, and, if faid of them fimply and fingly taken, is manifeftly a contradiction: but then they may be fo placed with reference to fomething elfe, or may be confidered as part of, or taken out of, fomething elfe in fuch a manner, as that the firft fhall be a value greater than the fecond. For inftance, I, fimply taken and by itfelf is certainly not fo much as 2 fo taken, but I confidered as part of IO, or as drawn out of IO, is fomething greater than 2, confidered as part of 40 , or as drawn out of 40 ; for the one is a tenth, and the other a twentieth part only of the thing to which is ftands related: and that this is the cafe here will appear from bence.
A term for 90 years, intereft computed at 6 per cent. is in value $16-58$; and the proportion inverted is a true one; 16-58 in value is equal to a term of go years: now, if out of $16-58$ we draw 41 decimals, the remainder will be 16-1 7 , and $16-17$ is equal to a term of 60 years, and no more; fo that a fubtraction of 41 decimals only leffens the term here 30 years. A term for 21 years, at the fame rate of intereft, is in value $11-76$; and, if we draw out of this 4 I decimals, the remainder will be $11-35$, and $11-35$ is equal to a term of $12-2-30$ : fo that the fubtraction of 41 decimals out of the fhorter term leffens that term only one year and an half, or little more; whereas a fubtraction of 4 I decimals out of the longer term leffens that term 30 years. From hence it is plainly feen, that one and the fame value in decimals, drawnout of a greater given value in decimals, and out of the longer term to which fuch given value is equal, leffens the term out of which it is fubtracted in a much greater degree, than the fame value in decimals, drawn out of a lefs given value in decimals, and out of the fhorter term to which fuch given value is equal, leffens the term out of which that is fubtracted. Therefore it may be true, that $1-72$ value in decimals, though not half fo great a value as $3-91$, drawn out of one value, fhall leffen the term out of which it is fubtraded as much, or more, than $3-9$ r value in decimals, though more than double the value of the orher, drawn out of another value, fhall lefien the term out of which that is fubtracted.
If we examine out of what thefe two values $1-j 2$, and 3-9I, are refpectively drawn, it appears that $1-72$ is drawn out of the value 13-44, which is equal to a term of $28-\mathrm{I}-\mathrm{O}$; that is, out of the greater given value, and the longer term correfponding : and 3-9I is drawn out of the value 9-2 1 , which is equal to a term of 13-3-30, that is, out of the lefs given value and the fhorter term correfponding. If we proceed in the computation, and apply this, it ftands thus. The value $1-72$, fubtracted from 13-44, leaves a value $11-72$ : the value $1 r-72$ is equal to a term of 20-3-45: a term of 20-3-45 fubtracted from a term of $28-\mathrm{I}-00$ leaves a term of $7-\mathrm{I}-46$; and this is the decreafe in the term for the four periods of younger life, The value 3-9 $I_{2}$ fubtracted from $9-27$, leaves a va-

Jue $5-30$; the value $5-30$ is equal to a term of $6-2-30$, a term of $6-2-30$, fubtracted from a term of $13-3-30$, leaves a term of $7-1-\infty 0$; and this is the decreafe in the term for the four periods of older life. Therefore, upor the whole, whether the decreafe here be taken immediately from the term, or be computed from the value, and fo to the term, this decreafe in the term comes out to be one and the fame; that is, the decreafe of the term in the ftages of younger life isgreater than in the ftages of older life: and, confequently, the gradual decreafe of the chance of vitality, in proportion to the increafe of age, is not preferved: which was the thing to be demonitrated, and I think is fully done. Again: By Dr. Halley's table for the value of annuities for lives, the life of a perfon aged 10 is equal to a term of $28-1-00$; the life of the fame perfon, when aged 30 , is equal to a term of 20-3-45: the difference between thefe two terms is evidently $7-\mathrm{I}-46$ : that is, in 20 years time the life of this perfon, whillt in the younger perieds of life, is decreafed or grown lefs in computation a term of 7 -1-46. The life of this perfon, when aged 30, is equal, as noted before, to a term of $20-3-45$ : the life of the fame perfon, when aged 50 , is equal to a term of $13-3-30$; the difference between thefe two terms is $7-0-15$; that is, in thefe 20 years time the life of this perfon, in thefe middle periods of life, is impaired or grown lefs, upon an eftimate, a term of $7-0-15$. The life of this perfon, when aged 50 , is equal, as noted before, to a term 13-3-30; the life of the fame perfon, when aged 70 , is equal to a term of $6-2-30$; the difference between thefe two terms is $7-1-\infty$; that is, in 20 years time in the oldeft periods of life, the life of this perfon is grown worfe and diminifhed, upon the chance, a term of $7-\mathrm{I}-\infty$ : fo that the difference or decreafes in the term will fand thus; for the 20 years in youngeft life 7-I-46, for the 20 years in middle life $7-0-15$, and in the oldeft of all 7-1-00.
Now, fince this table for the value of annuities is conftructed on the foundation of the table of mortality for Breflaw, it ought to agree with, and be conformable to that table, or there is a defect in the ftructurc; but, on looking into this Jatter table, it appears that the number of perfons dying in the firft period, that is, between 10 and 3 I , is $13^{8}$; in the fecond period, between 30 and 51 , the number is 196 ; and in the laft period, between 50 and 71 , the number is 215 ; and yet the number of perfons co-exifting is greater in the younger than in the older period of life, and gradually decreafes as age increafes: from whence it is plainly feen in this calculation, as well as in the former, that the table of annuities has no fort of conformity with the table of mortality, though the one be built, in the main, on the foundation of the other. And, as this want of conformity between thefe two tables, in a proportionable decreafe, runs through the whole, fo I cannot forbear obferving the foul error that it makes in one particular inftance, fuch'as moft certainly overthrows the juftice of this table for annuities, and of the rule too by which it was framed.
The value of an annuity for a life of 10 years of age is by this table 13-44, which is equal to a term of 28-1-00: and the value of an annuity for a life of 70 is $5-32$, which is equal to a term of fix years and two thirds. If we confult the Breflaw table, the even chance of the duration of the life of 10 years of age is 48 years and over, and the chance of the duration of the life of 70 is fix years, and about two-thirds of a year. Now, that an annuity for the life of a perion aged ro years hould be in value 13-44, that is, thould be equal only to a term of $28-\mathrm{I}-00$, when his life, on the even chance, is equal only to fix years and two thirds: I fay, that the chance of the duration of the annuity in one cafe flhould fall hort of the chance of the duration of the life, and fo much as thirteen years; and in the other cafe, that the chance of the duration of the annuity and of the life thould be fo near an equality, or the very fame, has fomething in it fo much of the abfurd, that I cannot reconcile it to my underftanding. And yet, if we compute the valuc of an annuity for a life of 80 , and make ufe of the rule which the doctor prefcribes and made ufe of in framing his table for fuch value, we fhall difcover fomething ftill more extraordinary, viz. that an annuity for fuch a life will be in value $3-84$, which is equal to a term of four years and an half, when on the Brellaw table, the even chance of the duration of fuch a life is not, full four years; which I think is fo palpable a contradiction to common fenfe, that nothing can maintain the rule by which it was produced. A fecond objection lies againft Mr. Hayes's and Mr. Richards's tables, viz. that, being computed for the feveral rates of 4,5 , 6,7, and 8 per cent. they give us fuch a value of an annuity for a life, as that one and the fame life is equal to different terms for each rate of intereft. There is no room for this defect in Dr. Halley's or Mr. Morris's tables, they being computed for a fingle rate of intereft only; but, in tructh, the objection does lie againf the doctor's rule for forming thefe tables; for that any table drawn by this rule, and for more rates of intereft than one, will have the fame defect. This appears plainly enough by Mr. Ricbards's tables, which were conitructed by this rule; and that this of neceffiry muat be

The cafe in all tables for variety of interefts drawn by the rule, will appear, when I come to fpeak to the rule itfelf. As to Mr. Hayes's and Mr. Richards's tables, that thefe two tables for every rate of intereft gives us fuch a value of an annuity for a life, as does in fact make one and the fame life equal to a different term of years, and what that variance is on each of them, may be beft and moft plainly feen by the Chort fchemes in tables No. VII. and No. VIII. I he firft of there gives us the value of an amuity for a life of 30 years of age, and the term to which fuch value is equal at the feveral rates of interef, as ftated by Mr. Hayes himfelf; and it is marvellous to me how he could make the computation, and not fee the abfurdity of the fuppofition on which it muft be grounded : and the other gives the value of an annuity for a life of 12 years of age, at the like feveral rates of intereft, as fated by Mr. Richards, and the term to which fuch value is equal, as I compute the fame.
Now I fay, that the values ftated in thefe two tables, thus correfponding to, and producing a different term of years to which one and the fame life is equal, according to the feveral rates of intereft at which the calculation are made, what doubtedly are, and neceffarily muft be wrong for that reafon, becaufe they produce fuch different terms. This being the cafe on both thefe tables, and fince Mr. Hayes has not acquainted us what rule he made ufe of in forming his table, and Mr. Richards informs us that he built on Dr. Halley's hypothefis, and it is evident he did fo: and, fince one and the potheris, and it is evident he did 10 : and, fince one and the
fame defect goes through both tables, I fhall apply my/elf chiefly to Mr. Richards's table, and the rule by which that was conftructed: only I take notice here, that my obfervations on one of them, in moft inftances, and efpecially in that which I have before-mentioned, will equally affect and be applicable to the other, whatever was the rule by which it was framed.
I fuppofe no one will controvert thofe points: that he who has an annuity for the life of a perfon, has an annuity for fuch a term of years as fuch a perfon in fact fhall live; and when he buys it, the term of years to which any perfon's life fhall be prolonged being uncertain, that he buys it for fuch a time as there is a chance or reafonable probability that the perfon may live whofe life is nominated: and 1 am fure it is poffible, that five feveral annuities, at the five feveral rates of intereft in there tables, may be granted on one and the fame life, as well as on different ones. To fay then, that in cafe of one annuity there is a chance or probability that the perfon on whofe life the annuity depends may live for 30 years, or near it ; in cafe of a fecond annuity, that he may Jive for 29 years, or thereabouts; and on a third, on a fourth, and on a fifth annuity, or each of them, that he can, and probably may, live for a differcnt term of years, is Ridiculotis and absurd to the last degree *.

* Nor does the learned Mr. Lee ftand alone in judgment upon this occafion; the ingenious Mr. Hardy, who very lately wrote a tract, entitided, A complete Syftem of Intereft and Annuities; founded upon new, eafy; and rational prinAnnuities; found in his preface, ' That having occafion, ciples, \&c. fays in his preface,
fome years ago, to compate the value of annuities on lives, Iome years ago, to compate the value of annuities on lives, Mr. De Moivre; when obferving, that the purchafeab'e term to be paid for, or the probable time that the fame perfon thould live, was made to depend upon, and varied according to the Rate of interest, which, having no conncetion with the probabilty of living, pur me upon confidering thofe purchafes in an intire new light, and upon confidering to find eafy and univerfal rules for approximating their values.'-What this gentleman's sulesare, and the foundation of them, we cannot enter into under this head, but refer what he and the judicious Mr. Simpron have faid upon this occafion, to the article Mortality [Bills of Mortality], and fuch other articles to which we have referred.
And, if we take a particular inftance, and fuppofe two annuities only, at the two different rates of 4 and 81 . per cent. to be granted to two diftinef perfons on the life of one and the fame nominee; to fay, with regard to the annuitant who purchafes at 8 per cent. that the nominee, on whofe life the annuity depends, may or has an even chance to die in 25 years; but, with regard to the annuitant who purchates at 4 per cent. that the fame individual perion may probably live, or has a chance to live 30 years, is a flat contradiction; and is, in effect, to affert, either that one of the annuities will continue after the nominee is dead on whofe life it depends, or that the other will ceafe whilt the nominee is living for whofe life it is to continue; when the annuities muft both determine at one and the fame time, on the death of the nominee.
Now, if Mr. Richards's tables were the refult of Dr. Halley's obfervations, and were calculated by the method preferind by him, or by Mr. De Moivre, as I believe they were; yet if the error I bave mentioned proceds from the foundaun or the method, as moft certainly it does, I apprchend it will prove, that the one or the other of them is wrong, much more ftrongly, than the foundation or the method will prove that the calculations are right, notwitintanding the great authority of the inventors of them : and, ther-ive, fince
the operations upon them have produced fuch abfurd effects, I don't ree they are of any fignificance, except to have demonftrated that the inftructions are wrong, I mult confefs I do not know any method, and very much queftion wherher there be any, to adjuft the value of an annuity for a life, but by computing for what term there is a chance or proba bility fuch life fhall continue; and, when that is done, the common tables, which give us the value of any term of years at a ftated intereft, give us at the fame time the value of an annuity for the life fought after at that rate of intereft. But, fince Dr. Halley has found out and publifhed another rule for this purpofe, we will confider it.
The rule then which he preferibes, and which he and Mr . Richards made ufe of, to form thefe their tables for the value of annuities on a fingle life, is grounded on the Breflaw ta ble, and fome propofitions deduced from thence. The Breflaw table exhibits the whole number of people fuppofed to be living in that city at a certain time, and the fuppofed current age of them all, from the birth to the age of 84 : and at prefent I will fuppofe, though I do by no means grant, that this table gives a true account of the perfons living there, and their feveral ages. To afcertain the different degrees of vitality in all ages of life, this author advances this propofition: 6 If the number of perfons of any age remaining - after one year, be divided by the difference between that c and the number of the age propoled, it fhows the odds that - there is, that a perfon of that age does not die in one - year. For inftance, a perfon of 25 years of age has the 6 odds of 560 to 7 , or 80 to 1 , that he does not die in a - year: becaufe that of 567 living, of 25 years of age, there - do die no more than 7 in a year, leaving 560 of 26 years - old.'

Here I have given the author's propofition and inftance in his own words; but, if I may beg leave to exprefs my meaning of them in my way, which, perhaps, may tend to explain and illuftrate them, I hould fay: That the number of perfons living of any age propofed was the number of chances belonging to a perfon of that age; that the number of perfons living of any fubrequent age, fuppofe at one year's, at ten years, or at twenty years diftance, was the number of chances with him, or the number of chances that he had to live to fuch fubfequent age; and that the difference between the number of perfons living of the age propofed, and the number of perfons living of the fublequent age, that is, the number of perfons dying in that time was the number of chances againft him, as the chances that he would die within that time, or before he arrived at fuch fubfequent age. In the inftance here given, a perfon of the age of 25 has 567 chances, fo many perfons being living of that age; of the age of 26 , which is the next year, there are 560 perfons living, and within the compafs of that year, there have died feven perfons, fo that, on the life of a perfon of 25 , there are 560 chances with him that he lives to the end of one year, fo many being living at the end of that year, and there are feven chances againft him that he dies within that time, fo many being dead in that time.-This method, if purfued, gives the chances for him and againft him in like manner, for any other fublequent year. For inftance; the number of perfons living of the faid age of 25 is 567 , the number of perfons living at ten years end, or of the age of 35 , is 490 ; the difference between thefe two numbers, or the number of perfons dying in that time, is 77; therefore the chances with him, or the chances that the perfon lives to ten years end, are 490; and the chances againft him, or the chances that he dies within that time, are 77.
I have here avoided the ufe of the word odds, becaule it is an equivocal term, and may mean the odds in the number of chances, or the odds in the value of thefe chances; and inftead thereof I make ufe of the expreffion, chances with him, or chances againft him, and hall do to hereafter. And, I am afraid, we fhall find that the doctor, or Mr. de Moivre, or both, in the computation of the value of annuities for lives, have, in fome inftances, brought to account more chances of vitality on lives than belong to them; in other inftances, have inferted fuch chances as do not and cannot belong to them; and in fome cales have affigned wrong values to right chances: and, where any of thele miftakes are committed, all the algebra in the univerfe will never prove that the fum total of the values arifing on fuch computations will be the true value of the annuities enquired after.
The doctor having deduced his propolition from the Breflaw table, and afferted, that the valuation of annuities for lives depends on it; and having laid it down for a maxim, that a purchaler of an annuity on a life ought to pay for fuch parts only of the value of the annuity as he has chances that his nominee is living, which is undoubtedly true; and having told us how the prefent value of a fum of money, payable at any future time, and at any rate of intereft, may be known: and given us a fcheme for that purpofe, at the rate of 6 per cent. intereft; he afiumes, from the foregoing propofition, - That, as the number of perfons living after a year, or 6 after any number of years, are to the number of perfons 6 dead within that time, fo are the number of chances with ' him to the number of chances againit him, that the per-

- Son nominated is then living:' in confequence of a hish the rule tor afcertaining the value of an amuity for a wet life will be thas: 'As a number of perfons living of an a *propofed is co the number living after one year, or afres - any number of years; fo the prefent value of the furn - payable at the end of one year, or at the end of the given 6 number of years, is to the fum which ought to be foud - for the chance which the perfon has to enjoy his antuity ' for that one year, or the given number of years.' And, in the conclufion he adds: 'If this operation be repectid - for every year of the perion's life, that the fum of all the " prefent values of thefe chances is the true value of an an' nuity for Cuch perfon's life:' and that by this rule he framed the talle he gives us, which is for the value of annuities on a fingle life at 6 per cent. intereft.
I will not politively fay; that the author, in forming his table, did not himfelf oblerve his own rule, becaufe he fags he ufed fome compendia in forming it; and in freking a fhorter way he might pofibly mif the right way. - The rule, in fhort, is this: we are, in the firft place, to compute what is the value of an annuity for one year of the Jife, beginning at the age of the perion nominated, looking upon it is an abfolute annuity for one year, allowing out of it a value proportionate to the chance of mortality arifing in that year, and this is done by the firft part of the rule : and then we are to proceed in the fame manner for every year of fuch nominee's life; and it is aflerted, that all thefe values, pur tigether, are the value of the annuity on fuch a lite. But then the latter part of the rule, where it direds that this operan tion mult be repcated for every year of the nominee's life, does not exprefsly fay for what number of years this compat tation muft be made: but I cannot find out that it is capable of any other meaning than one of thefe two; eirher that it muft be made for fo many years as the nominee has an even chance to live, or for fo many years as he has any chance at all, or a poffibility to live. However, let the compuration be made, in which way of the two he pleales, it produces a value different from what this table gives; one of them a $v_{a}$ lue much under, and the other a value little over, the talue exhibited in the table, and this is the cafe in more inftances than one.
The value exhibited in the table for an annuity on a life of ten years old, intereft computed at 6 per cent. is 13-443 and, if an annuity be granted for 10,0001. per ann. fuppofe on the life of $A$ of ten years old, the total value of it pole on the life of A of ten years old, the total value of it
will be 300 l . To fhow that this is not the true value of fuch an annuity, even on a computation made according to the rule here laid down, I have made a calculation purfuant to that rule, for every year of fuch a perfon's life, from the age of his life when nominated, that is, from ten years old, to the extremity of old age, that is, to 100 years old, and have fet it forth in table No. IX. following. In this table, and in the fecond column, we have the prefent value of fuch an annuity, payable at the end of each year fur 90 years on an abfolute term, tranferibed from this author; and in the fixth and laft column, we have the prefent value of fuch an annuity, payable at the end of each year for 90 years, on the chance of mortality on the life of a perfon of ten years of age, formed exactly, I think, by the whle given. And, becaule the chance of mortality is calculated by the Breflaw table, I have inferted that likewife in table No. $X$. with an additional computation for 16 years, from the age eighty-four to the age of an hundred, omitted in the former table.'

## REMARK

We have judged it neceffary to enter fo far into this delicate fubject, and the objections made to the long embraced hypothefis of the learned Dr. Halley, and the foundation buitt thereupon by Mr. De Moivre and others (for the objections againft the latter are not lefs weighty than thofe againft the former, though we have not room fully to confider them here) in order to fhew the reader, who is defircus to en to the root of this matter, that the works of the learned Wey. man Lee, Efq; are well deferving his attentive perulat. There have, indeed, been fome objections made to Mr. Lee's effay, but whoever compares them candidly and impartially with the reply that he has made to them, will hardly think, I am at prelent inclined to believe, that the fundamentals of his realoning are at all invalidated. However, thofe who may ftill be of opinion, that what Dr. Halley, Mr. De Moivre, and Mr. Richards have faid, will fand the teft, will find the fubfance thereof in this work, under the articles Annurtifs and Lr.ases; and the chief objections that have been made againf them, under the articles Lives, and Mortality [Bills of Mortality.]
For the reader's further latisfaction, the following is the ennneeted fubfance that Mr. Lee endeavours to prove, in oppoficion to Dr. Halley, Mr. De Moivre, Mr. Richards, and others, on Leases and Life-Annuities.

PARTI.
That there is no fure rule extant before his for valuing leafe: -The method of valuing leales for lives by much the moft erroneous

## L I V

erronenus.-A variety in the value of thefe eftates arifes from the difference of the land-tax, and in the quantity and quality of the buildings on them. - To afcertain the value of leafes, that they be reduced to annuinies free fromi all reprizes, and that money be computed at 1 per cent. above the legal rate. - To do this, the rent, and all payments certain, to be deducted.-As alfo the land-tax, repairs, and incidental charges.-The author of a treatife called, The Value of Church and Coll ge Leafes confidered, charges thefe articles to the leffee's account.-His reafon for this affertion invalid. -His infinuations that leafeholders, in purchafing and renewing their eftates, make 6 per cent. of their money, not true.-Of the great difference between the value of lands of inheritance and leafeholds, in the purchafe, on any variation of the intereft of money.-A rife in the purchafe of lands, of nofervice to owiers of leales, or of fee-fimple lands, any farther than they have power to fell their eftates. - The reverend author, in itating his cafe, kept a referve of fome money, to raife his tenant's fine for renewing; and therein acted cunningly, but not very fairly.-This fund will do very little, if any thing, more than raife the fine, and make the income of each purchafer the fame. -If intereft of money finks, and fines are railed, the income of the leafeholder muft fink in proportion to both of them. - The true fate of the comparion between the purchafers of one eftate and the other, is, What is the natural produce of each, and how it will arife?-If the land-tax, repairs, and incidental charges, are to come out of the leffee's eftate ; the owner, though the intereft of his money referved comes in aid, will have only 31. ros. per cent. for his money.-Mr. Richards, in his treatife on this fubject, admits a tenant to be confidered for the two laft articles ; but not for the land-tax, for a reafon very fingular.- The author contends, that he ought to be confidered on all the articles.--This affertion proved, from the cafe given by the reverend author, otherwife fuch a purchafer will not have 3 per cent. for his money fo laid out. -The fame proved from the reafon and the juftice of the thing. -The way to adjuft the quantum of the land-tax for a term, flated at 10 per cent. per ann. at a medium.-The fame on repairs, and ftated at the fame fum in common cares. -On this article, many exceptions to be made out of the general rule.-On houfes in particular, 20 per cent. might be little enough.- The common method, in cafe of houfes, viz. to compute the money laid out at a higher rate of intereft, not a fafe one, and compared with the author's in an in-flance.-The article for charges and accidental loffes the author divides into two ; one for managing the effate, the other for afluring it, and paying the rent in all events; and ftates each at 5 per cent.-The deductions, the fame as fuppofed by the reverend author, to be going out of a fee-fimple eflate, viz. 30 per cent.-Inftead of thefe two allowances of 5 per cent, Mr. Richards, in flating the value of leafes, computes the tenant's annuity at one rate of intereft, and the outgoings in rent at another. - The method not right; the reafons why not, and the abfurd confequences hewn.-The objections of no weight, that tenants, efpecially in public leafes, covenant to pay their rents free from taxes and re-prizes.-Money, laid out in thefe eftate, to be computed at 6 per cent.-That a purchafer, fo valuing his money, will make 6 per cent. a vulgar error.-Shown, how money laid out in fuch purchafes is to be reimburfed; and computed what part is to arife from the furplulage of the rents, what from the fimple, and what from the compound intereft of fuch furplufage.- This computation demonftrates, that the leffee is not to be charged with the land-tax, \&c.-Though thefe eftates are reduced to abfolute annuities, yet not fo valuable as fuch.-The author's method of computing the fine to be paid on renewals. - This compared with the common one, and a new one by Mr. Richards, and the difference Ghewn by inftances.-A particular abfurdity following from Mr. Richards's meshod.-Where one year's rent only may be a juft fine for renewing feven.-Mr. Richards fates the fine on fuch renewal higher than his own rule admits.-He profefles here to have no confideration of the land tax; and yet in fome cafes, in effect, he does, or muft confider it.-The author doubts the truth of the fact alledged, that the laity, in renewing 7 years, generally take $2 \frac{3}{2}$ years value. The reafon for raifing fines above the old price of one year's value, confidered; with obfervations on Æcroid's tables. The cenfure of tenants as impofing on landlords in their fines, and landlords as fubmitting to them, not well ground-ed.-Where churchmen and colleges can't get fines to the value of their eftates, the remedy propofed, by letting the leales expired, confidered, and the fuccefs of it doubted.Such a procedure not an act of prudence, and a law to oblige them to it unreafonable.-That they are not obliged to do it, either as a point of duty or juftice to their fucceffors, as the law now ftands.- Churchmen and colleges, now and then, to fink a fine and augment the fomall livings in their gift; a better project for promering the intereft of the Church of England and the univeritites, than taking their eftates into their own hands. What influence the decreafe in the value of money, and the increafe in the price of the
neceffaries of life, have in this matter, confidered.--Of the nature and ufe of the tables for purchafing annusities or leafes, for years, or in renewing them.

## PARTII.

To eflimate the chance of the duration of a life, and to as certain the value of leafes and annuities for life, \&cc.-Leafes forlife, as well as for years, nuft be reduced to abfolute an-nuities,- The neceffity of making fuch computation, to put a right value on fuch interefts.-. The author's table exhibits the term to which any fingle life, therein mentioned, is equal.- Dr. Halley's table, for the value of annuities for a life, which were conftructed by a different rule, not 2 right one.-The author's exception to it, viz. that it does not preferve a proper decteafe in the value of an annuity, or in the terms to which fuch value is equal, from one period of life to another.--The fame exception lies againf Mr. Hayes's, Mr. Richards's, and Mr. Morris's tables; for the like annui ties. - The author confines himfelf to Dr. Halley's table, and fhows the defect in two remarkable inftances, quoad the decreafe in the term. - The age of 30 not the beft age of life whereon to have an annuity, occafionally thown.-This defect goes through the whole table.-This fhown to be the cafe in the decreafe of the value of the annuity, as well as in the term, in fingle inftances, and through the whole table -The table, in this particular, in no fort conformable to the Breflaw table, though faid to be conftructed from thence.—Objections to Mr. Hayes's and Mr. Richards's tables, that the value of the annuities there given is fuch, that one and the fame life is equial to a differeut term as the Rate of Interest varies.-Dr. Halley's rule for valuing thefe annuities confidered.-The value of an annuity for a life of 10 years of age, given in his table, not the true value, as it arifes on a calculation made by this rule, and the calculus fet forth.-That the value of fuch an annuity, where rightly computed by the rule, is not the true one, proved by pofitions of the doctor's. - The falfity of the rule fhown from hence, for that it produces fuch fums as cannot be the value of fuch annuities, proved by inftances.-Shown wherein the error of the rule lies.- Thefe proofs deftroy the foundations of Dr. Halley's and Mr.'De Moivre's rule. - The chance of the duration of a life, the fole meafure of the vaue of the annuity depending thereon. -The author's method of forming his tables of the chances of vitality.-Th:s table drawn chiefly from the bills of mortality of London.Obfervations on a treatife, called, A true Eftimate of the Value of Leafehold Eftates; in which a life of 30 years of age is ftated as the beft, and equal only to a term of 14 years, and other lives in proportion.-Obfervations on the bills of mortality for London ; alfo on a certain fociety known to the author, and on the nominees in the government annuities on furvivorlhip.

## PARTIII,

To eftimate the chance of the duration of two or more lives, and to afcertain the value of anpuities and leafes for fuch lives, \&c.-This the molt difficult part of the work, and moft weakly performed by all writers on this fubject.- The method of computing the value of there annuities prefcribed by the author, to whofe tables Sir Ifaac Newton's name is prefixed, a very bad one.-Mr. Hayes's method worfe than the former.-Mr. Moris's the fame with Mr. De Moivre's, and confidered with it.-Mr. Richards's tables, formed by Mr. de Moivre's rule, do not give the true value of thefe annuities. - Thefe tables wrong, becaufe his tables for the value of annuities for a fingle life are wrong. - A cafe ftated by the author, which fhews thefe tables to be falfe throughout. -Mr. de Moivre's rule for valuing thefe annuities confidered, and thown to be falfe.- The doctor's and Mr. de Moivre's method, for afcertaining the value of annuities for two or for three lives and the furvivor, not the fame. -The doctor's hypothefis, for adjufting the chance of the duration of two lives, not right, fhown by lines and figures.- The error of this hypothefis, and Mr. De Moivre's method, fhown by Mr . Richards's tables conftructed from thence.-Mr. Ri chards's tables for the value of annuities for three lives, proved erroneous.-That the term, to which the value of annuities for one or more lives is equal; thould vary as the Rate of Interest varies, which is a neceffary confequence of the bypothefis, greatly abfurd:-Mr. De Moivre's rule for valuing thefe annuities hown to be falfe. - That his rule does not agree with the doctor's rule for calculating the value of annuities either for two or three lives.- The author's rule for valuing annuities for two or more lives, by computing the chance of the duration of the given lives. Compared with Mr. De Moivre's rule.-The juftice of the author's method hhown, aud proved from Dr. Halley's own way of reafoning.-A comparifon of the chance of the duration of two or three lives, where the computation is made in Dr. Halley's or Mr. De Worre's method, and when in the author's.- The author's tables,
$\begin{array}{lllll}\mathbf{T} & \text { a } & \text { b } & \text { I }\end{array}$
Shewing the value of annuities for the term, and at the intereft in the table, in years, quarters, and days, and the centefimal parts of a year, correlponding to the quarters and days.

| $70-75$ |  | 4 |
| ${ }_{85}^{75}$ - | 2 - | - - |
| 8o, \&c. |  |  |

From this, and the precedent table, is readily feen the value of an annuity for any life, given at any rate of intereft: for this table gives the term to which the life is equal, and the
precedent table gives the value, or years purchafe, to which fuch term is equal, that is the value of the annuity.

Table III,
Shewing, in the firft column, the age of perfons; in the fecond, the value of annuities for every fifth year of age, from the 1 oth to the goth year of man's life, as flated by Dr. Halley, intereft computed at 6 per cent.: to which I have added, in the third column, the years, quarters, and days, to which fuch value correfponds; in the fourth column the difference, or decreafe in the term, from one period to another ; and, in the fifth, the difference or decreafe in the value, in the fame manner.

| Ages of perfons. | Years value, or parchafe. | Term to which fach value is e qual. | $\begin{aligned} & \text { Decreafe } \\ & \text { in the } \\ & \text { term. } \end{aligned}$ | Decreafe in the value. |

## LIV

From whence it is apparent, where the value of fuch an annuity is fated at $13-44$ only, as in Dr. Halley's table, tha there is an omiffion of $3^{2}$ years in making the calculation.

## TABLE $X$.

Shewing the number of perfons living in the city of Brellau in Silefia, and their ages current refpectively, from I to 84 years of age.

| Age cur- <br> rent. | Perfons <br> living | Age cur- <br> rent. | Perfons <br> living. |
| :---: | :---: | ---: | ---: |
| $\mathbf{1 0 0 0}$ | 6 | 710 |  |
| 3 | 855 | 7 | 692 |
| 3 | 798 | 8 | 680 |
| 4 | 760 | 9 | 670 |
| 5 | 732 | 10 | 661 |

The reft of this table is inferted in the third column of the precedent table, and need not be here repeated: and I have there added the age current, and perfons living from 84 , where Dr. Hatley breaks off, to age an hundred; and the table, with thefe additions, makes the total number of perfons there living to be the fame as fuppofed by the doctor, viz. 34,000.

Table XI.
An extract of, and fome calculations on, the Bills of Mortality for London, including only thofe born aliva.

LIVONIA, in Sweden, has the gulph of Finland on the north, that of Riga on the weft, Mufcovy and Ingria on the eaft, and part of Lithuania on the fouth. Though in fome parts it is marihy, yet it is very fruitful, generally fpeaking, yielding com, pafture, and honey in abundance. It is divided into two parts, viz.
J. Estonia, the moft northern part of this country, bounded on the fouth by Letten, on the eaft by Mufcovy; on the north it has the gulph of Finland, and on the weft the gulph Riga, or of Livonia.
Revel, the capital of this divifion, fands on the coaft of the gulph of Finland, 2.25 miles eaft from Stockholm.
It was not reckoned a town of great trade till about r $_{477}$, when it could eafily preferve it's commerce with Mufcovy, and other places, on account of its advantageous fituation and commodious harbour. It broke off it's union with the Hanfe towns in 1550, and it's trade was removed to Narva by the Czar: but the Mufcovites, having taken it in 1711, have reftored it's trade, which they now are very careful to preferve. See Hanse-Towns.
Nurva, ffands on a river of the fame. This city enjoyed for a long time the privilege of the Hanfe-Towns; but the wars between Sweden and Mufcovy had fo ruined it's trade, that it could not recover it in many years, nor did it loft, but at the expence of Revel. The warbetween the Englifh and Dutch proved advantageous to it, the Archangel trade being then interrupted.
Parnaw, on the gulph of Riga, is a fmall city, but a place of good trade, a great quantity of corn, efpecially, being hipped hence for the Netherlands.
II. Letren, has the Baltic on the weft, Eftonia on the north, Mufcovy on the eaft, and the river Dwina on the fouth and fouth-weft.

Riga, the capital, not only of Letten, but of all Livonia, is fituated in a large plain on the weftern bank of the river Dwina, 6 miles from the mouth of it, which makes a commodious harbour called the gulph of Riga.
The trade which this city drives with England, Holland, Mufcovy, and the towns of the Baltic, renders it extremely populous and very confiderable. There are in the town almoft as many fhops as houfes. Above a thoufand veffels arrive bere yearly laden with corn, hemp, flax, pitch, tar, planks, furrs, and fkins of all forts. Ruffian leather, afhes to make foap and glafs, \&c. all which are tranfported to England, France, Germany, Holland, and other countries, and exchanged for the commodities of the more fouthern climates. They reckon that above 200 merchantmen arrive every year in the port of Riga.
LOADMANAGE, is the hire, fometimes fo called, which the pilot of a hip receives of the mafter, for conducting the hip up the river, or into port.
Petty-Loadmanage, and primage is due; to the mafter and mariners for the ufe of his cables and ropes to difcharge the goods, and to the mariners for loading and unloading of the fhip or veffel; it is commonly about i2d. per ton. $3^{2}$ Hen. VIII. 14.
If the ropes break in hoifting of goods out of the thip into the lighter or boat, the mafter muft anfwer if the goods be damnified or loft. Leg. Oleron, cap. io. See Oleron's Laws.
But, if the ropes break at the crane in taking them out of the lighter (although, till they are landed, they are not out of the mafter's cuftody) yet the wharfinger ihall anfwer.
LODESMAN, a kind of pilot eftablifhed for the fafe-conduct of veffels in and out of harbour, or up and down navigable rivers.

With

## LOG

With regard to France, in places where it is found neceflary to eftablith pilots and lodefmen to conduct veffels into, and out of the entries of ports and navigable rivers, their number fhall be regulated by the officers of the adninalty, with the advice of the aldermen and moft eminent merchants of the place.
1I. No perfon fhall exercife that function 'till he is arrived to the age of 25 , and received before the officers of the admiralty, after having been examined in their prefence, and in that of two aldermen, or eminent merchants, and two in that of two alders, with the like number of ancient mafters of thips.
III. The pilots, lodefmen, fhall be examined in the knowledge and experience they ought to have of the fabric and working of fhips, and of the courfes of the tide, of the fand banks, currents, fhelves, rocks, and other impediments, that may render difficult the entry of the rivers, ports, and harbours, in which they are eftablifhed.
harbours, in which they are eftabe their fhallops always provided with anchors and oars, and to be in a condition to go to fuccour flaps upon the firft order or fignal, under pain of ten livres, and a greater penalty, according to the exigency of the cafe.
V . We forbid, under pain of corporal punifhment, all mariners, not being received pilots, lodefmen, to offer themfelves to conduct hips into, or out of ports or rivers.
VI. However, the mafters of chips, for want of pilots, may make ufe of fifthermen to conduct them.
$V_{\text {II }}$. If a pilot comes aboard a fhip, where there is already a filherman, before fhe be paft the dangerous places, the pilot fhall be received, but the filherman's hire fhall be deducted from his.
VIII. A pilot, undertaking to conduct a veffel while he is VII. A pilot, undertaking to conduct a venel while he is
drunk, fhall be fined in five livres, and fhall not exert the function of pilot during one month.
IX. We enjoin the pilats to conduct firf the fhips that firft require their fervice; and we forbid them to prefer the moft remote to the neareft, under pain of 25 livres.
X . We likewife forbid them to go farther than to the roads, to meet veffels coming into ports or harbours, to go aboard of fhips without the mafter's confent, and to leave the fhips they bring in, 'till they are come to an anchor and moored in the port; and thofe they carry out, 'till they are in the high fea, under pain of the lofs of their wages, and a fine of 30 liveres.
XI. The mafter of the fhip fhall be obliged, as foon as the pilot gets aboard, to tell him how much his veffel draws, under pain of 25 livres fine, to the benefit of the pilot, for every foot concealed.
XII. In every port thall be made, at the fuit of our attorney, with the advice of the magiftrates or two eminent merchants, a regulation for the wages of pilots; which fhall be inferted in a public writing, and a copy of which fhall be left in the admiralty-office, and another affixed upon the key.
XIII. The pilots and mariners fhall not exact greater fums than thofe fpecified by the regulation, under pain of corporal punifhment, except in time of a ftorm and imminent danger; in which cafe the officers of the admiralty, with the advice of two merchants, may tax their wages higher, having regard to the work they have done, and the danger having regard to
they have run.
they have run. riners while in danger of hipwreck.
XV. We enjoin the pilots daily to view the roads of the places where they are effablifhed, to hoift the anchors left there, and, within 24 hours afterwards, to make their declarations to the officers of the admiralty.
XVI. If they difcover any alteration in the channel, and ordinary paffage of ihips, or that the buoys and fea-marks are not right placed, they fhall be obliged, under pain of ten lives, to acquaint the officers of the admiralty, and the mafter of the key therewith.
XVII. It fhall be free for the mafters and captains of French or foreign fhips to take fuch pilots as they pleafe to conduct them into the ports and harbours, without being obliged to make ufe of the fame to conduct them out again.
XVIII. A pilot that ignorantly runs a fhip aground, fhall be whipped by the hand of the hangman, and for ever deprived of his employment; and as for fuch as malicioully and defignedly run a thip upon a rock, bank, or thore, he fhall be punifhed with death, and his body hung up upon a maft planced near the place of the fhipwreck.
For the laws by which pilots are regulated, fee the article Pilots.
LOGWOOD, or CAMPEACHY-WOOD, as fome call it, is called alfo BRASILETTO, or JAMAICAWOOD; and is, fays Pomet, the heart of the trunk of a large tree, which grows plentifully in Campeachy and Jamaica, and in Santa Cruz in America, where there are whole forefts of it. And, according to Lemery, it grows in feveral other parts of the Weft-Indies.
The rree is bigger or leis, according to the foil that produces it; it rifes with a trunk thick and Itrait, covered with a thin vol. II.
bark plain and fmooth, of a filver grey or yellowifin colotir ; the leaves are like thofe of the bay, and, held in the moutl, afford a fcent like the clove, which has made it to be oftente: taken for the clove-tree than any other, by reafon of the dc-licate flavour, which has given it the name of the Indian aromatic laurel. Among the leaves comes a fmall fruit, adhering to the branches by a little ftalk like the cubeb, and has at the other end a Imall crown; the fruit is of a dun colour, the tafte fharp and piquant, but agreeable enough, tafting like a clove, and therefore called mofly clove-berry; it contains three fmall kernels like mufl.-feed.
We may obferve here, that it affords three forts of commodities very good and faleable; the firft is the wood, which fhould be chofen firm and undecayed; and cut, not fawed at the ends. This wood chiefly entloys the dyers, who ufe it to dye blue and black. The fecond commodity is the leaf, which may be ufed inftead of malabathrum, where that is,ordered, as this leaf has more virtues than that; the Americans ufe them for fomentations, to cure the palfy, and other difeafes proceeding from cold caules. The third is the fruit, which the French ufe in imitation of the Englifh, as being a very ftrong aromatic, and proper on feveral occafions: as this has been known but of late years, the French have had but little commerce therein, befides what their privateers of St . Maloes in time of war have taken from England. The grocers in France call it clove-berry, from it's likenefs to that fice in fmell and tafte, and it is called with us all-fpice, as having analogy to cinnamon, cloves, mace, and nutmegs, and is very much ufed in all fauces. Lemery thinks it poffeffes all the feveral properties, qualities, and virtues of thofe fpices, though poffibly not in fo large a meafure, in refpect to it's body; for that it confills of more earthy parts than any of them, except cinnamon; but the tincture, or oil of it, extrakted from it's feculent part, are not much inferior to what may be extracted from thofe: fo that we muft allow this drug to be ftomachic, cephalic, cardiac, uterine, nephritic, and arthritic; it is alexipharmic and diuretic, comforts the brain and nervous parts, refrefhes and ftrengthens the whole animal øconomy, and reftores the natural functions of life where weakened.
It has been long known among the dyers, for the dyeing of blacks and blues, as intimated, but it is only of late that it has been introduced into medicine: it is found to be chiefly an excellent aftringent, and is given in form of an extract in diarrhoeas with great fuccefs.

A reprefentation from the honourable board of trade to his late majefty king George I. afferting and proving the right of the fubjects of Great-Britain to cut logwood in the bay of Campeachy, September 25, 1717.

## To the king's moit excellent majefty.

## May it pleafe your majefty,

The right honourable Paul Methuen, Efq; one of your thajefty's principal fecretaries of itate, having tranfmitted to us on the 15 th of November laft, by order of his royal highnefs, a letter or memorial he had received from the marquis de Monteleone, ambaffador extraordinary from his Catholic majefty, relating to the trade carrying on in the Weft-Indies, and to the fettlement made by your majefty's fubjects on the illand of Trift, and on or near the lake or marih de Terminos, in the province of Jucatan: in which parts he reprefents, 'That they employ themfelves in cutting of $\log$ -- wood, or (as the Spaniards call it) Campeachy-wood; and - that the Spanilh viceroy and governor had propofed to - diflodge them from thence, but that his faid Catholic ma' jefty would not fend his orders before he had given your - majefty notice of it, not doubting, but that according to - all the treaties of peace, and particularly that made at - Utrecht, your majefty would oblige your faid fubjects to - leave the aforefaid lake de Terminos, and give pofitive or-- ders to your governors at Jamaica, and of the other inlands, - not to fuffer the leaft trade to be carried on for Campeachy-- wood, and to declare, that if, in the fpace of eighe months, - they do not leave the faid place, they fhall be looked upon ' and deemed as pirates.'.
We beg leave to reprefent to your majefty, that, although we did humbly propofe fuch methods as we efteemed proper and neceffary to fupport the cutting of logwood in the WeftIndies, when the faid Mr. Metheen was on his departure for Madrid ; yet on this occafion, when a trade of fo great im.portance to our navigation and the American colonies is in danger of being lof, we have again carefully peruled the books and papers in our cffice, and received from the merchants and others the fulleft information we can hope to obtain, which hath taken up much time: and we do now humbly crave leave to lay before your majefty the paft and prefent ftate of this trade, with the arguments that formerly engaged your majefty's royal predeceffors to protect and fupport the fume; to which we fhall add fome oblervations, and the reafons that induce us to conclude your majefy's fubjects have now as f.ll and ample right to this trade, as to any other liberty or privilege that has been allowed by the crown of

D $\$$
Spain,

Spain, and cujgyed by them, by virtue of any treaty whatfoever.
In the firft place, therefore, it muft be obferved, that logwood is one of the products of the province of Jucatan, which extends itfelf into the north fca in form of a peninfula, about 100 leagues in length. The Spaniards are poffeffed of San Francifo de Campeachy, it's capital town and port, which has been thrice taken by the Englifh; and, befides, they have two other inland towns, Merida and Valladolid, of no great importance, having few inhabitants; but the reft of the province, before the logwood cutters were fettled, was in a manner wholly defolate and uninhabited.
Neverthelefs, it muft be allowed, that the Spaniards had, from time to time, cut wood in feveral places near their own fettlements; but, during the hoftilities that were committed in the Weft-Indies before the year 1667, they deferted that employment, being frequently interrupted by the privateers, both by fea and land, who by degrees became acquainted with the coaft, and with thofe parts where the wood grew, that were moft remote from the Spaniards, they at laft fell into the trade, and laid the foundation of their future eftablifhment.
Their firft fettlements were near to Cape Catoche: but upon (if not before) the publication of the treaty concluded at Madrid in 1667, by the eanl of Sandwich, they likewife fettled near Suma Sunta, adjacent to the Laguna de Terminos, and to Trift and Beef Iflands, which being the moft convenient place for cutting of wood, and a tolerable harbour for their fhips and veffels, the whole trade foon centered there. For, notwithftanding the aforefaid treaty was principally intended to fettle and adjuft our commerce with his Catholic majefty's dominions in Europe, yet, ' a general, firm, and perfect amity, confederation, and peace, being © thereby agreed and concluded (as in the firft article) between the two crowns, to be obferved inviolably, as well by land as by fea and frefh waters, and between the countries, king-- doms, dominions, and territories belonging unto, or under ' the obedience of either of them, \&c.' It was concluded, that the peace extended to America as well as Europe; whereupon many of the Britifh privateers that had before ufed thofe feas, to the great interruption of commerce, were then induced to quit their former courfe, and to fettle with, the logwood-cutters in the Laguna de Terminos; fo that, in the year 1669, their numbers were confiderably increafed, and great quantities of wood were tranfported both to Jamaica and New England.
The American treaty for reftraining depredations in thofe parts, being afterwards concluded by Sir William Godolphin in July 1670, added to their ftrength, by encouraging feveral others of the privateers, or feamen, to fall in with this employment of cutting wood, to which it was now generally fuppofed they had a right by the faid treaty.
And, as the logwood-trade was of the greateft importance to Jamaica, on the 1oth of March 1671, Sir Thomas Lynch, then governor of that ifland, not having received any orders how to govern himfelf in this affair, tranfmitted to the lords of the council the reafons that induced him to encourage the lame under proper regulations.
Ift, That the Englifh had done fo divers years.
$2 d y$, It was in defolate and uninhabited places.
$3^{d} \mathrm{~d} y$, That this feems a poffeffion granted by the American treaty.
4thly, It might give a right to feclude the Dutch and the French, if we fhould break with Spain.
5thly, The Spaniards had not, to that time, made any complaints of it.
6thly, This employ makes the reducing of the privateers more eafy. And,
7 thly, That it will employ 100 fail annually, and bring in more to his majefty's cuftoms and the nation's trade, than any colony the king hath.
While thefe arguments were under confideration, the earl of Arlington laid, before the lords of the committee, a letter from Sir Thomas Modyford, the late governor of Jamaica, dated the 16 th of May 1672 , wherein, after he had given an account of the great extent or compals of the country, in which the logwood grows; how meanly the Spanifh towns on the forefaid tract of land were peopled, and of the places frequented by the Englifh; he adds,
That they have ufed this trade for three years paft, at firft finding it by the fea fide, but afterwards, being forced to go four or five miles up into the country for their refrefhment, they had planted Indian provifions, and built houfes there to keep themfelves'and their provifions from the fun and rain: that, in general, they had affirmed to him, never to have Ieen any Spaniards or other perfon, in all the time of their working, although they had gone fix or feven miles farther into the country to kill deer, "\&c. This poffeffion, he fays, in the Weft Indies, is held the ftrongeft that can be, viz. felling of wood, building of houfes, and clearing and planting the ground.
Sir Thomas Lynch, to confirm what he had before afferted, and to juftify his proceedings, in November 1672, fends home the capies of feveral depofitions he lad taken from the
mafers of thips, and others concerned in the logwood-trade, and a proclamation he had iflued out for the better regulation and fecurity thereof, importing,
That whereas he was informed, by the oaths of many credible winefles, that his majefly's fubjects have ufed to hunt, fifh, and cut wood in divers bays, iflands, and parts of the continent, not frequented or poflefled by any of the fubjects of his Catholic majefty, and had, for fome years, peaceably done the fame without any molcftation; neverthelefs, divers veffels having been feized at anchor and under fail, by fome pirates and fugitives of this ifland, and being in danger of being fo furprized again, therefore he orders and appoints all veffels failing out of Port Royal, for the aforefaid lawful employments, to go out together in fmall fquadrons, four at leaft in company, and to give bond to keep company with, and to obey him, whom he fhould make commander for the voyage, and their mutual defence, and what they fhould luwfully do in their own defence, and for the prefervation of his majefty's fubjects, their hips and goods, be authorized and warranted, \&c
In January following, the fecretary to the lords of the committee, by their order, advifes the faid SirThomas Lynch, that he had acquainted him with their lordfhip's pleature fully, concerning cutting of logwood, and that they did altogether allow of the fame, provided thofe rules were obferved, which they had formerly directed, and which were agrecable to what the faid governor himfelf had already mentioned.
This allowance of carrying on the trade, as aforefaid, gave frefh vigour to thofe engaged in it, though about this time the Spaniards began to interrupt them in the profecution thereof, and to difpute their right to that liberty they had fo long quietly enjoyed.
For we muft infift on it, as an undoubted and uncontefted fact, that from the publication of the treaty of 1667 , until about two years after the conclufion of the American treaty, the logwood-cutters had never been in the leaft difturbed or molefted in their employment, either directly or indirectly; nor does it appear that the Spanifh governors took any umbrage at it, or'made any complaint about it ; much lefs did they pretend to an exclufive right, or that it was contrary to the laws of their commerce.
Nay, fo far were they from expreffing any refentment on this account, or making it a pretence to juftify the firt hoflilities they committed, in violation of the treaties both of 1667 and 1670 ; that when Sir Thomas Lynch fent to Don Fernando Francifco Defcavedo, the governor of St. Francifcode Campeachy, to demand fatisfaction for two Englifh Rhips, which had logwood on board; and were taken by fome Spanifh men of war; in his anfwer to that charge on the 6th of April 1672, he takes no notice of our cutting logwood, or that thofe fhips had any on board, or that we had fettled on the Laguna de Terminos; nor had he any other complaint to make by way of retaliation, fave that an Englifh veffel had taken a Spanifh bark at the Laguna de Términos bound to Tobafco; which is the more remarkable, becaufe the faid Laguna was, at that time, and had been feveral years actually in our poffeffion.
It mult likewife be farther urged, that before the queen-regent of Spain had publifhed a royal cedula, bearing date the 22d of June 1672, which orders, 'That fuch as fhould - make invafion, or trade without licence in the ports of the ' Indies, fhould be proceeded againft as pirates, 8cc.' It does not appear that cutting of logwood was efteemed by the Spaniards to be an invafion, and trading without licence; but, by virtue of this cedula, it was at length carried to that height, that, if our fhips had but any logwood on board, they were confifcated without remedy.
Upon this fubject, the earl of Arlington, on the 19th of March 1674, wrote to Sir William Godolphin, then ambaffador at Madrid, as follows:

- In a word, his majefty is fo renfible of the fufferings of his ' fubjects in this particular, that you muft endeavour, by all ' the fkill you have, to procure fome liberty for the cutting of ' logwood, in thofe remote parts, where the Spaniards have ' none, and his majefty's fubjects have had long abode and ' refidence; and the rather, for that we find, by all the re' plies we have feen, they juftify themfelves by that fingle - point of cutting logwood, nay, even of finding it on board, ' our veffels, which to us appears very unreafonable.'
And Sir Lionel Jenkins, the judge of the admiralty, in his report to his late majefty king Charles II. of the 8 th of October 1675, intimated,' That the American treaty does re' quire a farther elucidation and adjuftment between your - majefly and the crown of Spain; for it appears by the judg-- ment of the queen in the matter of Campeachy, and by their ' cedulas reales, that they affix a new interpretation upon ' that treaty, in declaring what fhall be private or not pri' vate, prize or not prize, without communicating, it feems, ' with your majefty, and without publication, that may ' reach your majctly's fubjects.'
Thus by a Spanifh auto, or a decree of that court, which was inconfiftent with, and made (ex poft facto) after the ratifications of a public and folemn treaty, it was manifefly intended, not only to debar the Britih fubjects of that li-

## L O G

berty they enjoyed before the fail treaty was made, but, in fome meafure, to deprive them of their common right of all nations; whereas, if your majefty's fubjects did actually hold and poffefs the Laguna de Terminos, aind the parts adjacent, at the time of the conclufion of the American treaty, as hath been already proved, the laft claufe of the 7 th article will determine to whom the fame belongs, viz.

- Moreover it is agreed, that the molt ferene king of Great-- Britain, his heirs and fucceffors, fhall have, hold, and * keep, and always poffers, in full right of fovereignty, feignic ority, poffeffion, and propriety, all the lands, countries, - inands, colonies, and other places, be they what they will, - lying and fituate in the Weft-Indies, or in any part of Ame-- rica, which the faid king of Great-Britain and his fubjects - now hold and poffef, infomuch that they neither can nor - ought hereafter to be contefted or called inqueftion for them, s upon any account; or under any pretence whatfoever.' And, as long as the 8th articie of the fame treaty fubfifts, it will appearvery extraordinary, that the Spaniards fhould pretend to any dominion or power in the ports or havens where they neither had fortifications nor magazines, or in thofe places which were not poffeffed by them, becaufe thefe defcriptions are undoubtedly laid down by the treaty, as the fole and diftinguifhing marks of the fovereignty of the crown of Spain in thofe parts and places, which only we were to forbear failing to and trafficking in, while all other ports and places were left open and free.
But, notwithftanding the faid treaty was fo frong in our favour, the Spaniards having thereby compaffed the two main ends they propofed to themelves, viz.
nf , The fecuring their Weft-India trade to themelves, by excluding us, and confequently all other nations, from trafficking with them: a point which could never be before obrained, though it was frenuoufly infifted on in the reign of king James I. and afterwards in 1630.
$2 \mathrm{~d} \mid \mathrm{y}$, The difperfion of the privateers, who had long mifer ably harraffed and diftreffed the Spaniard's fettlements, and notably checked the increafe both of their power and trade in thofe parts, but are now entirely reduced, by the great care of the Englifh governors, and by their entering into the logwood-trade.
Yet the only advantages Great-Britain aimed at by the treaty, viz. that her fubjects might carry on their trade without interruption, and peaceably enjoy thofe places they then held and poffeffed, were, in a great meafure, ablolutely defeated.
For, after the publication of the aforefaid royal cedula, manyof our fhips were made prizes under that pretence, fometimes by Spanifh men of war, at other times by Englifh pirates, feduced by the governors into the fervice of Spain, and afterwards by the Bifcaynecrs, that were fent to cruize on thofe feas.
And, upon the fame pretence, in April 1680 , feveral hips under the command of Don Philippo de Varedda Villegas, arrived at the illand of Trift and the Laguna de Terminos, attacked our logwood-cutters, while feparated from one an-" other, and diflodged them from thence.
Moreover, the Spanifh governors encouraged by this fuccefs, and little regarding the juft right of your majefty, or your fubjects, even to plantations ftill more diftant from their dominions, did foon refolve upon another expedition, and, in 1682, furprized New Providence, one of the Bahama Iflands.
But thefe places were again foon re-peopled, and the trade from Trift and the Laguna, in 1682, was greater than ever. The rife and progress of the logwood-trade, from about the year 1667 to the year 1682 , being thus ftated, and laid before your majefty, we prefume it would be too tedious, and not very material to the point in queftion, to enter into the particulars, how, and in what manner, it was afterwards conftantly carried on; and how it has been from time to time interrupted and fupported until the year 1713 , when the adjuftrment and fettlement thereof was again under confideration, both at Madrid and Utrecht.
But fince the Spanifh ambaffador infits on it, that by the treaty of peace made at Utrecht, in which (he fays) it is ftipulated, ' That the lands or other places, which had been " taken in the Indies during the war, Chould be evacuated; - your majefty is engaged to oblige your fubjects who are ' Come to the lake de Terminos, toleave it immediately.'
We moft humbly take leave to reprefent farther to your majefty:-
That if his excellency would hereby infinuate, that your majefty's fubjects are but lately, and during the war, come to the Laguna de Terminos, that is a miftake in fact; for it appears by the aforementioned depofitions, fent by Sir Thomas Lynch and Sir Thomas Modyford, that they were there in 1669, and for fome time, or years before; and it is well known to the Spaniards, that they bave been ever fince poffeffed of that part of the country, except for two or three months after the aforefaid aflault in 1680 .
Neither will what the faid ambaffidor afferts from the treaty, aniwer the end for which it was produced.
By the eth article it is, indeed, agreed by his Catholic ma-
jefty, "not to alienate any of his territoriss in the Weft-- Indies, to the French or any other nation; and upon this ' condition her late majelty engages, that the will endeavour ' and give affiftance to the Spaniards, that the ancient limits - of their dominions in America be reftored, \&cc. if it fhall - appear that they have in any manner been brokeninto, and ' leffened in any part, fince the death of king Charles II.'
But to argue from hence, that the Laguna de Terminos, in poffefion of the Englifh before the year 1670, muft be evicuated, when this treaty has only reference to what has paffed fince the demife of the faid king Charles II. is very extraordinary.
But, if the ambaliador refers to the memorial on the affains of commerce, that was figned at Madrid the I 3 th of July 1713 , by the lord Lexington and the marquis de Bedmar, we muft confers, that the article relating to the logwoodtrade, propofed therein by his lordhip, had not then it's effect: but we are affured it was from thence, among other things, referred to the difcuffion of the plenipotentiaries at Utrecht.
What pafled particularly on this affair at Utrecht, doth not appear to us; but by the treaty of commerce concluded the 28th of November following (of which the faid ambafiador takes no notice in this memorial) and wherein the feveral interefts of the two crowns and their fubjects, with refpect to commerce, were more particularly under confideration, it is manifeft, that the rights and liberties, infifted on by the Britilh fubjects in the Weft-Indies, were adjufted by the lords plenipotentiaries; and that a claufe in the treaty, which determines this conteft relating to the cutting of logwood, beyond all poffibility of difpute for the future, was then agreed upon and concluded; it being exprefsly ftipulated in the firft article after the confirmation and ratification of the American treaty in 1670 , as follows: ' Without any prejudice, how-- ever, to any Liberty, or Power, which the fubjects ' of Great-Britain enjoyed before, either through Right, ‘ Sufferance, or Indulgence.'
If therefore this comprehenfive claufe (which relates only to the Weft-Indies) confirms, fecures, and re-eftablifhes thofe liberties, which the fubjects of Great-Britain enjoyed in America before the treaty in 1670 , it neceffarily follows:
That they having then enjoyed the liberty of cutting logwood, without any interruption (as hath been fully proved) either through Right, Sufferance, or Indulgence, they are again entitled by this treaty, to the fame liberty, in as plain and exprefs words as can be ufed or imagined. And, that your majefty may be more fully apprized of the importance of this trade, the fame will be effectually demonftrated by the following account of the quantities of logwood imported fince the war, viz.

That is, communibus annis, tons 374 I , which cafinot be computed at lefs than 60,0001 . per ann. though the price is at prefent reduced from 401 . to 161 . per ton, whereas, ber fore your majefty's fubject were fettled there, it was worth 1001. the ton.

Nor is this trade lefs neceffary than bencficial to your majelty's dominions, by reaforn of the great encouragement it gives to our feamen and fhipping, which at all times require a particular attention, but now efpecially, when it is daily obferved, that very many Britifh mariners, either through defect of the laws, for want of employment at home, or in hopes of greater advantage abroad, enter themfelves into foreign fervice.
Upon the whole, therefore, we are humbly of opinion,
That the fubjects of this your majefty's kingdom, for fome years before, as well as after the conclufion of the American treaty in 1670 , did enjoy an uninterrupted liberty of cutting logwood in the Laguna de Terminos, and in other places not inhabited by the Spaniards in the province of Jucatan, either through right, fufferance, or indulgence.
That the faid American treaty did eftablifh a right in the crown of Great-Britain to the Laguna de Terminos and the parts adjacent, thofe places at the time of the treaty, and for fome years before, being actually in the poffefion of the Britifb fubjects.
That the royal cedula, iffued out by the court of Spain, was a violation of the aforefaid treaty, forafmuch as the carrying on the trade to the Laguna de Terminos was thereby interpreted an invafion, and the logwood-cuttery accounted pirates.
And that your majefty's fubjects having been (at leaft) fuffered to enjoy the liberty of cutting logwood as aforefaid, before the conclufion of the American treaty (although your majefty fhould not infift on your faid right to the Laguna de Terminos) yet that the fame liberty is abrolutely grantes and confirmed by the treaty of commerce mads at Utreche.

And we do farther think it our duty to reprefent to your majefty, that, although the faid Spaniih ambaflador feems to declare, in his memorial, that no attempt fhould be made to difodge your fubjects fettled on the Laguna de Terminos, in dinlodge your fubjeis months from the date of his faid mea lefs time than eight months from ne taken prifoners in the morial ; yet they were diflodged and taken prifoners in the fame month the memorial was delivered, as appears by feveral affidavits fent to this board by general Hamilton, your majefty's governor of the Leeward Ihands.
All which is moft humbly fubmitted.
Suffolk,
J. Chetwynd,
Chares Cooke,
f. Molesworth,
D. Pulteney,
M. Bladen.

Whitehall, Sept
25, 1717.

## Remarks.

We find, by the foregoing reprefentation, that the logwoodtrade, as carried on by us in the bay of Campeachy, came to be confidered with the utmoft care and circumfpection by the Board of Trade and Plantations, in the year 1717, who folemnly reported to his late majefty George 1. that we had an undoubted right to that trade, in which the fubjects of the crown of England had been maintained and fupported by former kings, his majefty's predeceffors.
This logwood-trade having been a bone of contention between England and Spain, ever fince the American treaty of 1670, and the principal, if not the only caufe of the late war with Spain, which hath coft the two nations fo much blood and treafure, and being not yet fettled, may poffibly be the caufe of another war between us and Spain, wherein all Europe may be involved; I thall take leave, with all humble fubmifiron, to fuggeft an expedient, in the fequel, to public confideration, which may probably prove happily inftrumental to prevent the calamities and miferies of war, in future, upon the like occation. Previous to which, I fhall briefly fate the origin and nature of this commerce, as it has been catried on by the Englifh in the bay of Campeachy; which may ferve to elucidate fome parts of the foregoing reprefentation made by the lords of trade to the late king.
Campeachy is fituated within the great bay of Mexico; yet the bay of Campeachy itfelf is a pretty large bay: it extends from Cape Condefedo, on the ealt point, to St. Martin's, on the weft, which is about 120 leagues : it bends into the fouthward fomething in the form of an half-moon. The eaft part of this bay is in the province of Yucatan. Compeachy is the only fea-port of this province, and is fituate on the fouth-eaft of the bay; Merida is the capital, and many other towns lie further up the country. The land hereabouts is fandy, and not very fruitful; the inhabitants make a coarfe fort of cotton cloth, and gather falt-petre and falt, with which they fupply the neighbouring places.
Near the bottom of this bay is a tract of land that was long in poffeffion of the fubjects of the crown of England, who carried on the logwood trade from thence to Jamaica, and our northern colonies. This tract of land includes the iflands called Port-Royal, Trift, and Beef-Iland; which form a found between them and the main land, about three or four leagues wide. Into this found ftream various rivers and creeks, which run far into the country; and, upon the banks of thefe rivers and creeks, are produced groves of $\log$ woodtrees. Thefe three inlands, and the land within them, comprehend all that the Englifh poffeffed after the conqueft of Jamaica, and are in length no more than about 20 leagues, but not quite fo much in breadth, including the fpace of water in the harbouts and found. The chief town and harbour where the Englifh refided, was Trift, in latitude $8^{\circ}$ north, and longitude $\mathrm{IO} 1^{\circ}$ weft of London.
The origin of this lagwood-fettlement was tbus: after the conqueft of Jamaica, the privateers frequently cruized in the bay of Campeachy for prizes, which they often met with: and fome of thefe, having logwood only on board, the privateers deftroyed, as being ignorant of it's value at that time of day. At length one Capt. James brought a Spanifh capture laden with this wood to England; which, proving a good prize, firf taught the worth of this commodity; and, before the war was over, the privateer's men, having learned where this wood grew, feteled themfelves in the beforefaid places, and employed their time in cutting of this waod honeftly, and preparing it for fale, and carrying the fame to Jamaica and New England; from whence the logwood- traders imported fupplies of what they wanted. At length the knowledge of this trade reaching England, upwards of 200 fail of fhips were employed in it in a feafon: fo confiderable a trade was once carried on by the Englifh in the bay of Campeachy; and the fame might have been continued uninterruptedly to this day, had it not been for an unpardonable neglect in the government of England at that time. For had advantage been taken to have eftablifhed the Englifh government at this fettlement, when there were above 1700 of the fubjects of the crown of Eniland then; and had proper fortifications been raifed for
the fecurity of this trade and fettlers, we fhould have had no difputes, perhaps, at this time of day with Spain, about our right of trade and poffelfion.
At the time we are fpeaking of, others of the Britinh logwoodcutters and traders had fettled themfelves within the bay of Honduras, upon a large river, called the river Bellefe, which abounds alfo with logwood, and where the bulk of the logwood that has come to England for feveral years palt has been cut : and this river has been uninterruptedly, to this day, in the poffeffion of the Britifh logwood-cutters and traders, and their flaves. And, about 42 miles up this river, the fubjects of the crown of England have built a large town, with palmeta and ofnabrigs, and hoifted Englifh colours, as a teftimony of their dependency on thefe kingdoms, and of their trading under the banner of Great-Britain.
During the poffeffion of this fettlement by the fubjects of the crown of England, they have cut and exported large quantities of logwood to Europe, and imported whatever they had occafion for; and this fometimes in Britifh bottoms, and fometimes infhips belonging to the inhabitanis, many of whom have been men of worth, even from 10 to 30,000 . Rerling. By a letter which I received, dated March 20, 1740-1, f:om a merchant of South Carolina, a man of known veracity, who had himielf, as a captain of a merchantman, ufed the log-wood-trade to this river for above twenty years, and thereby acquired a fortune competent to commence merchant; I was informed that the logwoud-traders had, at their own expence, fortified, in fome meafure, the mouth of this river; and, as the Britifh government had not been plaafed to take fuch notice of them as they judged the importance of the trade required, they had alfo conftituted a kind of government among themfelves, and eftablifhed a governor to their fort, whofe name was - Sharpe, and him alfo they made the factorgeneral for their logwood, allowing him good commifion for acting in this capacity, as alfo a bandfome falary as governor of the fortrefs: all which, I have good reafon to believe, was done at the inftigation, and by the advice and direction of my correfpondent, who was not a little beloved by the logwoodtraders at this river.
At the firft fettlement of this logwood colony in the river Bellefe, which was at the time when that of Campeachy was, the Englifh were affifted by the Mofketoe Indians, who acknowledge the fovereignty of the crown of Great-Britain, and pay homage, and take the oaths to every new governor of Jamaica, on his firft arrival: and thefe Indians have ever fince been fteady and faithful friends and allies to thofe traders, in the fupport and prefervation of this colony. In 1718, the Spaniards of Patent attempted to difpoffiers the Britifh logwood traders from the town and river of Bellefe; but his excellency' governor Shute, of the province of Maffachufets, having commiffioned to their protection Capt. William Wier, of the fhip King George, together with the affiftance of their old friends and allies, the Mofketoe Indians, they repulfed the Spaniards; and the Englinh have remained in poffeffion of this logwood fettlement ever fince; and, from a poffeffion equal in time to that of the bay of Campeachy, from the felling of wood, clearing and planting the ground, and building of houfes where no spaniards were ever known to inhabit, they judge they have as good a right to this colony as any of the Britifh planters have to their eftates in America; fuch acts as thefe being deemed, in the Weft-Indies, to give the ftrongeft right and title to fuch plantations. Moreover, this river, and the land circumadjacent thereto, has been claimed, from time immemorial, by the Moiketoe Indians, who being the original natives of this place, and of the lands hereabouts, and having never been conquered by the Spaniards, nor fubmitted to their dominion, but have long been faithful friends and allies to the Englifh nation; they have, by virtue of fubmitting to the fovereignty of the crown of England, and that crown's acceptance of fuch their fubmiffion, put themfelves and all their lands and territories under the dominion of the Britifh government; and, therefore, in confequence hereof, this river, and land adjoining thereto, claimed by the Britifh logwood-cutters and traders, became annexed to the crown of England, from our firft poffeffion of the fame. This gives England even a much fronger right and title to this $\log$ wood colony, than the lords commifioners of Trade and Plantations affert, in the preceding reprefentation to his late majefty, we have to that of Campeachy. And although this identical river, and lands adjoining thereto, are not exprefsly mentioned by the lords of Trade and Plantations, yet they are neceffary implied in the UTI Possidetis, and alfo under thefe exprefs terms, where their lordhips fay, ' Whereas, if - your majefty's fubjecis did actually hold and poffers the La' guna de Terminos, and the Parts Adjacent, at the - time of the conclufion of the American treaty, as hath been - already proved, the laft claufe of the feventh article will ' determine to whom the fame belongs, \&c.'-For this rives Bellefe, and the lands adjoining thercto, inhabited by the Britifh logwood-traders, are the parts adjacent to the Laguna de Terminos, this river, though in the bay of Honduras: ftretching iufelf to the Laguna de Terminos within a few leagues, through morafs and impaffable land, and there fore, may as jufly be faid to be Parts Adjacent to the
faid Laguna de Terminos, as Trift and Beef-land in the bay of Campeachy may. And, when the Spaniards difpolfeffed the fubjects of the crown of England from the Laguna de Terminos, and Trift and Beef. Inand in the bay of Campeachy, many of thofe logwood-traders joined their brethren on this river Bellefe, by the way of Honduras Bay, they not being able to come at the fame by the way of the Laguna de Terminos in the bay of Campeachy.
When we hear of fhips beng taken in the bay of Honduras with logwood, I do not ever remember to have heard, in any of our public accounts, the particular place [pecified from whence the fubjects of the crown of England got their logwond; which has occafioned an egregious miftake, many imagining that no Britifh veffiel has any right to go intothe bay of foonduras at all, and, therefore, that whatever ihips are found there muft certainly have beenengaged in the illicit trade, and, confequently, fuch fhips are legal captures to the Spaniards : whereas the cafe may be, and generally is, quite otherwile; for thofe veffels go from Jamaica to this Britifh logwood colony that has been fo long fettled on the river Bellefe, and which, to the beft of my recollection, lies near to Afcenfion Bay *; about two degrees and a quarter to the northward of the gulph of Honduras; for I never yet faw it in any map whatever.

- From the minute intelligence which I received from the beforementioned captain of a merchantman, who had ured the logwood- trade to this river above twenty years, I drew two maps of this river, upon a large theet of veliom; the one 1 prefented to Sir Robert Walpole, late lord Orford, in the year 1738, and the other I have fomehow loft; but, as that which I prefented to the late Orford, may very probably be flill in the hands of fome body belonging to that noble family; [ Hall be greatly obliged if they would be pleared to favour me with the fame, in order to have it engraved for this work, and the original hhall be returned. If they fhould be fo kind, let them pleafe to fend the map to Meff. John and Paul Knapton, bookfellers in Ludgate-Streer, or to my houfe at Brompton, near Kenfigton.
The illand of Ratan, in the bay of Honduras, was taken poffeffion of in order to fecure the logwood-trade of the river Bellefe; and I have fome reafon to believe, in confequence of what I did myfelf the honout to lay before Sir Robert Walpole, in relation thereto; for the poffefion of this inand, and the aid of the Moiketoe Indians, would have always protected the logwood-trade of this part.
But as this logwood colony, as well as that in the bay of Campeachy, gives fuch umbrage and jealoufy to the spaniards, that this trade is carried on chiefly to cover and promote an illicit commerce with their colonies, where we have no more right to trade directly to, than other nations have to the Britifh colonies: as the fituation of thefe colonies are likely ever to create mifunderfandings and heart-burnings between the crowns of England and Spain, it would be happy for both nations if fome reafonable and moderate expedient could be thought of, to prevent any future rupture, upon this occafion, between the two kingdoms. To which end I crave leave, with all humble fubmiffion, to fuggeft the following meafures, viz.

1. That although it is apparent we have an undoubted right to the logwood-trade in the bay of Campeachy, as reprefented by the honourable the lords of Trade and Plantations; and alfo the fame right to this trade in the aforefaid river Bellefe, in the bay of Honduras; yet, in order to convince his Ca tholic majefty, and the whole world, that the Britifh nation is defirous to maintain a ftrict and inviolable amity with Spain, let the crown of Great- Britain ablolutely give up and renounce their right to the logwood-trade in the one or the other of thefe places; and let the renunciation of the one, and the right of the other, be ratified and confirmed by a new and explicit convention, as thall be agreed upon between the two crowns.-And as the abfolute right to the whole of the Cam peachy fettlement may be judged by the court of Spain to be of more confequence to them, and the logwood-trade carried on there by the Britifh nation more likely to cover an illicit trade thau the fettlement on the river Bellefe, in the bay of Honduras; let Great-Britain abfolutely give up and renounce, by fuch convention, her right to the logwood-trade in the bay of Campeachy, upon exprefs condition only, that her abiolute right to the logwood-trade upon the faid river Bellefe be alfo ratified and confirmed by the faid logwood convention.
2. That all the logwood, cut by the Spaniards in the bay of Campeachy, thall be carried in Spanifh bottoms to Jarnaica, and there fold to the Britifh fubjects, at fuch a fixed price as fhall be fripulated in the faid new convention.
3. That the fubjects of all other powers whatfoever hall be excluded from the cutting of logwood in the bay of Campeachy, or the purchafe of logwood at firft hand of the Spaniards, in anv part of the faid bay of Campeachy.
4. That the fubjects of the crown of England hall have the freé and uninterrupted liberty of trade and navigation to the faid river Bellece, in the bay of Honduras, and to fortify the fame in fuch a manerer as they thall judge proper for their fecurity. 5: That logwood on board of any Britifh fhip thall not be deemed consrahand goods, nor thall any Britifh fhip whatever be fearched by the Spaniards upon the high feas.
5. That all Britioh thips catched in the ports of New Spains fave in the logwood port at Bellefe river, and except drove thither by ftreis of weather, \&c. as agreed by fubfifting treaties, thall be ltable to be taken, with their cargoes, and confifcated by the Spaniards to their fole ufe.
Thefe are the outlines of what I would humbly fubmit to public confideration, in order to prevent any future broils between the crowns of Great-Britain and Spain, in regard to this branch of comrierce; leaving fuch additions and altetations to be made as fhall be judged requifite to anfwet the end propofed.-If the Spaniards fhould not acquiefce to fome meafures of this, or fome other kind, in order to regulate the logwood-trade, it is apparent that they have no intention to keep friendhip with this nation.

Further Remarks, on the unreafonablenefs of the Spaniards to infift updn the featch of Britifh fhips upon thehigh feas of America.

That Great-Britain does riot infilt upon this point of No Search of their fhips upon the open feas, from any chicaning motive or view, to cover an illicit trade to the Spanifh colonies in America, but from an upright and honourable intention, to fecure and maintain an uninterrupted freedom of navigation to and from her own colonies in America; will appear, it is humbly prefumed, from the cleateft evidence and conviction, that the court of Spain can reafonably defire or expect. For

1. The courfe of the winds in thofe feas between the tropics, it muft be obferved, is generally between the eaft and northeaft, which are diftinguihed commonly by the name of trade-winds; and, clofe to the coafts of the great inands of Cuba, Hifpaniola, Jamaica, and Porto-Rico, there are alfo alternate land and fea-winds. The land-winds blow right off from the iflands, on which fide foever you are; they begin about fun-fet, and blow fometimes 'till eight or nine o'clock in the morning, and are fucceeded by fea-breezes: 2. There is likewife a ftrong rapid current to the weftward, along the fouth fide of all thefe beforementioned iflands; and this is occafioned by the trade-winds blowing from the Canary iflands over all the Atlantic Ocean. This currene forces the fea very violently upon the coaft of Guaiana, which turns it through between the illands of Trinidada and Barbadoes: this rapid current is confined between the continent and the, inlarts of Porto-Rico, Hifpaniola, Jamaica, and Cuba, and continues it's force to Cape Gratias Dios, being all the way accelerated in it's violent rapidity by the wind that fill follows it.
2. At Cape Gratias Dios the farre current berids it's courfe to the northward; and, as it paffes between Cape Catoche, on the ifthmus of Jucatan and the weft end of Cuba, becomes fill far more rapid and violent than any where elfe. Thefe things premifed, the neceffity, the abfolute and indifpenfible neceffity Britilh fhips are under, for fécurity of their navigation only, of keeping as clofe as they pofibly can to the Spanifh coaft, will appear obvious and indifputable. For,
The neareft courfe of our fhips from Great-Britain, or from our northern colonies to Jarmaica, is, either along the fouth fide of Porto-Rico and Hirpaniola, or directly between thofe two inlands, or between Hifpaniola and the illand of Cuba. It is very true, indeed, upori a bare furvey of the map, it does not appear, to the theorift and unexperienced land-man, that Britifh fhips are under the ablolute heceffity of approaching very near to the Spanifh coafts; but thofe who have been experienced in the niavigation of thofe feas, well know, that, even in the greateft calms, they are continually forced extremely near; nay, fo near as within piftol-fhot of the Spanilh coafts, and are fornetimes forced full upor the Spanilh thore, to the immediate deftruction of their veffels: and this is occafioned by the inceffant rapidity of the beforementioned current, and the chopping feas our thips meet with between thefe iflands, eveh after a calm; for it muft be obferved, that the dying winds, after any thing of tempeftuous weather, always leave a ffrong fea running to the weftward: fo that our outward-bound Ships, not from any view to an illicit trade, are neceffitated, for the fecurity of their navigation only, to keep as near to the Spanifh chore as they poffibly can, with fafety from the fhore itfelf, for the benefit of the land-winds, and to avoid the dangerous and often fatal effects of the rapid current; and the chopping feas:
And, with regard to thole thips which are homeward-hound from Jamaica, there is ftill a far greater neceffity for their failing as clofe to the Spanifh coaft as, with fafery, they poffibly can. For thofe fhips which load at King's-Town or Spanifh-Town in Jamaica, or any where to the eaftward thereof, frequently, attempt to return to England and our northern colonies thro ${ }^{*}$ the Windward Paffage, between Cuba and Hifpaniola, where they are always certain of meeting with the wind and current againft them from the eaftward, except they haul clofe over upon the coaft of Cuba, for the benefit of a land-wind, as before obferved, and to avoid the violence of the current, which runs againft them.
Without our fhips keeping thus clofe to the Spanifh coaft, is is abfolutely impolible to fait to the eaftward at all, through
the Windward Paffage : and, notwithftanding they do keep as clofe to the fhore as they can, and take all imaginable advantage of the fhelter of the land, and of the land-winds; yet, in fpite of all the affiftance they can thus receive, they frequently lie beating there for feveral weeks together; and, after all their endeavours, are at laft too frequently compelled to bear away round cape St. Anthony, at the weft end of the ifland of Cuba, from whence they fteer their courfe through the gulph of Florida: and this courfe moft of our fhips which load to the weftward of King's-Town, or Port-Royal, chufe, as being the quickeft paffage. And, in the palfage of Britifh fhips from Jamaica, through the guiph ${ }_{3}$ we are alfo under the fame neceffity of kecping as clofe to the fouth-weft part of Cuba, and as clofe to the wefl and north-weft part, as the fhoal of the Collarado will, with fecurity, admit: for, if our fhips do not keep clofe to the land in this critical place, the north-weft current is here fo exceffively ftrong, violent, and rapid, that it forces our thips often 50 or 60 leagues, or more, to the weftward; and, when they are at fuch a diftance from the land in this place, it is with the greateft difficulty they are able to recover it again; but, if they do, it may be feveral months firt, which is certainly no little injury to our trade and navigation.
We have a memorable inftance of the danger of this northweft current, in the late confederate war of queen Anne. A confiderable fleet of merchantmen, under the convoy of a large fquadron of men of war, made this miltake of keeping too wide of the land, upon doubling the weft end of Cuba, and ftretched fo far to the north that they judged themfelves out of the fight of Cuba, and plied the wind in that latitude 'till they thought themfelves the height of the gulph of Florida; then ftood to the northward accordingly, 'till they imagined themfelves quite clear of the gulph, and congratulated the admiral upon the occafion, whofe name at prefent I do not fecollect, but I think it was admiral Benbow. After which, crowding full fail with a brifk gale of wind in the night, to their great aftonifhment, faw the land right a-head, which proted to be in the very bottom of the bay of Apalache. This was occafioned by the rapidity of the north-welt current; and, had not the whole fleet immediately changed their courfe, this miftake would certainly have proved fatal to them. There are numberlefs inftances of merchantmen, which, by not keeping as clofe to the Spanih coaft as they poffibly could, with rafety from the fhore, in this place have met with this current; which has either proved the lofs of their veffels, or feveral months retarded their voyage.
Should it be objected, by the Spanifh miniftry, that the current, all the way taken notice of, does not always fet ftrong to the weftward, but that it fometimes changes, and fets to the eaftward. To this it is anfwered, That, although, it is certain the main current does fometimes fet to the eaftward; yet this is but very feldom, and never of any long continuance on that point : befides, the time of fuch changes is altogether uncertain, and, therefore, our hips cannot take the advantage of fetting out when the current fhould happen to favour them.
Unlefs, therefore, the Englifh nation can make the winds and the currents to obey them in the feas of America, they cannot, confiftent with their natural rights of navigation, fubmit to have their fhips fearched, under any colour or pretence whatfoever; nor can they fubmit to any limitation of courfe or diftance whatever, in failing by the Spanifh coafts, fo as to preferve and maintain a freedom and fafety of navigation to and from their own plantations.
I have dwelt the longer upon this point, judging it of the laft importence to our navigation in America; and never having heard this point, in all the debates that have been, for above thefe 20 years about it, ftated in it's clear and full light, I hope it will not prove an unacceptable fervice to my country to make this public, having had the fame confirmed to me for feveral years paft, by a great number of fkilful and experienced captains of merchantmen, who, I am perfuaded, could have no view to deceive me in my enquiries.

Of the illicit, or contraband trade, faid by the Spaniards to be carried on by the Englifh, and other nations, in Spanih America.
The fubject on which I am at prefent engaged, naturally leading to the confideration of that part of the trade of the Spanifh Weft-Indies which is commonly called illicit, or contraband, it may not be ufelefs to take fome notice of it, in this place; and, firft, it may be neceflary to be informed of the fentiments of the Spaniards themfelves in relation to this matter ; which we find in the works of the learned Spaniard Don Geronymo de Uztariz *.

## * See vol. 1. cap. 29.

- In a treatife already mentioned, fays this great ftatefman, ' entitled, The Intereft of England ill undertood; in the war 6 which was carried on in the year 1704, we have a detail of - the various forts of merchandize brought from England to - Spain and Portugal, of which the principal is fim, with a re-- mark that three parts are for Spain, and the fourth for Portu* gal; but that the profits are very different. The returns from
* Portugal are made in commodities and fruits exported, fuch ' as tobacco, wine, fugar, fpices, and falt; while thofe of Spaint are much more advantageous to the Englifh, as they principally confift of bullion, and bars of filver: for the wine, wooll, and other commodities they take back, are far from being a balance for the goods brought into Spain.
- In the fame book it is alfo faid, That one of the principal - branches of commerce which the Englifh poffefs in America, - confifts of an illicit traffic with his majefty's provinces,' by ' introducing their merchandize by way of Jamaica; and the 6 return is ufually in bullion, wood, and cocheneal ; and they - effimate their gain by this fingle traffic at fix millions of - dollars yearly, and draw even more money from the Spanifh - dominions by way of Jamaica than Cadiz: nor ought this - to be ftrange, fince, in the month of Auguft 1722, there 6 arrived in England 30 veffels freighted from Jamaica; and; G if we confider the barrennefs of that illand, one muft be - convinced that a principal part of their loading had been
'drawn from Spanifh America: and the cafe is the fame with
- the other numerous and frequent convoys that pars back-
- wards and forwards from England to Jamaica, where, for - the reafon given above, and the few inhabitants of that - inland, a fmall part of the numerous goods carried over will be confumed there ; and, therefore, they difpofe of the reft to the Spaniards, as the Englifh themfelves confefs. More6 over, the fame book mentions the danger this branch of ' their commerce will be expofed to in the courfe of a war *,
- they had unjuftly declared againft us, fince we could put a
- ftop to it with fix frigates, flationed to fcour thofe feas.'
*However good an opinion the learned Spaniard may entertain of this Englifh writer, yet the advantage reaped in the late war, as well as in that of queen Anne, in Jamaica, by means of the Spanifh Wefl-India trade carried on fiom thence, fhews that this author was much out in that forefight to which he pretended. Some years fince I met with this author, tranflated into French; and, if I remember right, the original was reputed to have been wrote by a noted Englifh Jefuit, who refided in the city of London, and who, of courfe, was no friend to the Proteftant intereft; and, therefore, wih. ed fuccefs to the Popift confederacy at that time, and wrote that treatife then to fpiritup the Spaniards and French againlt England and her allies. Bur if foreigners form their judgment of the commerce and power of this kingdom, rom the party writings of either fide, with which we abound, it is not to be admired that they are frequently mifled in regard to fome very effential points.-And fome of hole writers, who would be thought very zealous in their country's intereft, have been the inftruments of doing her the greatelt mitchief. We would by no means be underftood to refrain the liberty of the prefs in any degree, while a becoming decency, and the charater of the gentleman is preferved, that privilege being the great palladium of all our liberties: but I would obrerve, that our own people at home, as well as foreigners abroad, are too often egregioufy impored upon by the party writings of all fides. This many wife and good men have lamented; and, I am wil ling to flatter myfelf, that this work wherein I am engaged will, in relation to commercial affairs, prevent evils of thi nature ; for party artifice has too ofren a great fhare in thofe concerns; having endeavoured, to the utmoft of my ability to guard againt every thing of that kind; for the gyand pole- Atar by which I have endeavoured to conduct myfelf, is the general profperity and happinefs of Great-Britain in particular ; and that without any intention whatever to injure any other nation, unlefs the roufing of my countrymen to beat them in honeft induftry, art, and ingenuity, will be faid to be fo.
That an illicit and contraband trade hath fometimes been carried on by the fubjects of the crown of England, from Jamaica to the Spaniif Weft-Indies, will hardly be denied; and fo it hath been, and daily is, by the fubjects of other nations. This, however, is no palliation of what is wrong in itfelf. Such is the ineffectuality both of divine and human laws, that no trading nation can abfolutely prevent the fmuggling and contraband trade, even within their own domini ons, much lefs are they able to prevent their fubjects from practifing the like in foreign countries. No nation is more fenfible of thefe things than that of Spain; for, although their laws are very rigorous and fevere againft fmuggling in Spanifh America: though they erected a gallows at Panama, to put a ftop to it : yet they have not hitherto been able to do it. And, while their own fubjects will carry on an illicit trade with foreigners, it is no wonder that the latter will rún the hazard likewife.
Every nation has a right to enact what laws they judge proper for the regulation, as well of the trade and navigation of their refpective colonies and plantations, as of the motherftate. But thefe laws and regulations fhould never interfere with fubfifting public treaties, nor with the laws of nations, which give every ftate a right and freedom of navigation to and from their feveral colonies and plantations: for fuch laws and regulations which interfere with public treaties, and the laws of nations, mult tend to deftroy all amity with fuch nations who make them.
If the Thips of Spain, in their navigation to and from their American colonies, fail near to any of the Englifh or French colonies, would not the Spaniards bighly refent it, if the Eng-

## $\mathrm{L} O \mathrm{G}$

lifh or French mould detain and fearch their Chips on the high feas, upon the pretence of their having been concerned in an illicit and contraband trade? But if the Englifh or the French, or any other nation, catched the fhips of Spain in the ports of any of their colonies and plantations, carrying on an illicit and contraband trade, Spain neither could or would complain, if fuch of their hhips and cargoes were feized and confifcated: Spain would not think this any infraction of treaties, or any violation of the law of nations; it would be ufiug fmugglers as they deferve.-So whenever the $S_{\text {panilh }}$ officers in America have really catched either the Englifh, French, or Dutch Mips or veffels, in any of the Spanifh ports, carrying on an illicit and contraband traffic, thoie courts never have, or ever will complain, if the Spaniards feize and confifcate fuch thips and veffels; nor will the captures themfelves ever have the confidence to complain, whenever this is the cafe: all ftates, on thefe occafions, muft fubmit to the laws of nations for the reciprocal fecurity of their commerce and their revenues.
This feems to be the natural and right light wherein the Spaniards, if unbiaffed by felf-partiality, fhould confider this matter; they fhould, as England, and every wife trading nation muft and will, enact the moft falutary laws for the government of their colonies and plantations, to prevent evils of this nature; and have fuch upright governors and active and vigilant officers, as will fupprefs, inftead of promote and encourage, for private intereft, this infamous traffic. What difficulties has not the government of England had to fupprefs fmuggling, and yet has not been able to eradicate it ; though it is certain, that, from the vigilance, vigour, and refolution of the adminiftration, the knot is broke of the moft notorious and enormous villains of this ftamp; whereby this deteftable commerce is greatly decreafed. But every trading nation has thefe mal-practices to bear with more or lefs : and, would the court of Spain take the like meafures that kngland has been obliged to do, and hang up thofe of their own fubjects, whom they find any way concerned in, and in any refpect encouraging a contraband trade, they might foon, perhaps, put a fop to it, notwithftanding the great extent of their coafts; and, in fuch cafe, the fubjects of England, France, and Holland, muft of courfe ceafe to be concetned therein.
But, if the Spaniards are really in earneft to fupprefs this ilhicit traffic in their American dominions, and do not fuffer the fame to be countenanced with a view to make a handle of; thould they not let their fubjects in thofe parts have a conftant and full fupply of fuch affortments of merchandizes, by the legal way of Old Spain, wherein they know they ftand in need? If this is not regularly and effectually done, how can it be expected that the fubjects of the crown of Spain, in any part of America, will want fuch merchandizes wherein they ftand in need, if there is a poffibility of coming at them in any fhape? If then the principal caufe of the illicit and contraband trade carried on in Spanifh America by the fubjects of the feveral other ftates of Europe, as well as by the fubjects of the crown of Great-Britain, may be afcribed to the deficiency of the laws of Spain, or to the bad execution of their laws in New Spain ; if the commerce from Old Spain to New is nut fo wifely regulated by the due failing of their galloons and regifter-hips, \&c. as it might be, to afford their fubjects in America fuch a conftant fupply of merchandize as they mult and will have, does not the fault in this refpect lie in the court of Spain itfelf?
When the South Sea company poffeffed and exercifed the Affrento contract, Spain was inceffantly complaining of the illicit commerce carried on by the means, and under the cover of the exercife of that contract : that is nowat an end; and, if there was any truth in thefe fuggeftions of the crown of .Spain, all illicit trade occafioned thercby has ceafed with the Affiento itfelf.
There may be probably enough ftill fome degree of illicit trade carried on as well by the fubjects of the crown of England in Spanih America, as by the fubjects of other powers : but, will a mere fufpicion of this in the crown of Spain juflify their detention and fearch of Britifh or any other Chips, indeed, upon the high feas? We have feen the apparent and inevitable neceffity under which our Britifh fhips in particular lie, to fail as near as poffibly they can, with fafety, to the Spanifh coafts, in their lawful navigation to and from the Britih colonies and plantations; without which, our people are frequently liable either to lofe their lives and fhips, by reafon of the winds and currents, or to have their voyage fome months retarded: we have feen likewife the foundation of our right, by treaties, to the logwood-trade in the bays of Campeachy and Honduras; and the unreafonablenefs of the Spaniards, in prefuming to detain and fearch our fhips upon the high feas, in their navigation to and from our log. wood or other colonies, under the pretext of having been engaged in illicit trade: we have alfo fcen, that logwood, the produce of thofe places which have been particularized in the bays.of Campeachy and Honduras, is as much a Britifh commodity, as fugar, rice, and tobacco are Britifh commodities, in any of our other colonies; and that the Spaniards bave not the leaff foundation to condemn any Britih
veffel for having logwood on boatd; for that fuch condact is an apparent violation of fubfifting treaties.
With refpect to the article of cacao-nuts, that may be on board Britimh fhips, it is well known that they likewife are the product of our own fettlements in America; fo that all the difpute between Great-Britain and Spain is reduced to the fimple point of pieces of eight, which is the current coin of the Spanifh Weft-lndies. To which we would obferve, this is a fpecie, that all the European nations which trade in a lawful manner by way of Old Spain to New, have in return together with other commodities from Spanifh America, for the merchandizes which they fend thither; and it is well known, that Spanifh pieces of eight are looked upon in the light of a commodity, by all thofe nations who traffic, with Spain, and is accordingly bought and fold among them; and, indeed, fo are the foreign coins, more or lefs, of the principal trading nations of Europe: nay, the chief current coins of Europe are, in fome degree, in a perpetual circulation over the whole traffickable world. And thefe pieces of eight, which the other European nations receive from Old Spain, are again carried back to America, and diffeminated among all the colonies and plantations belonging to the feveral potenfates therein interefted : in the French, Dutch, and Portugueze colonies, there are Spanifh pieces of eight to be feen in the way of traffic, and fo there are guineas and louis d'ors, \&c. Our northern colonies trade with the French iflands, and our iflands frequently trade with the Dutch in America, whereby, in the currency of trade, Spanifh pieces of eight, as well as divers other foreign coins, are conftantly paffing from colony to colony; but this will not prove that, when fuch Spanifh pieces of eight are found on board Britifh, or any other veffels belonging to thefe European nations who have fettlements in America, thefe veffels have been carrying on an illicit and contraband trade with the Spaniards in the Spanifh Weft-Indies ; thefe identical pieces of eight might come into their hands, in confequence of the legal commerce of Old Spain; and, if they are afterwards carried to circulate among all the colonies in America, which is frequently the cafe; will this juftify the Spaniards in fearching, much lefs in taking or condemning the Thips of any European power, for having fuch fpecie on board, who have any right to trade in America? This will juftify them the leaft of any, in taking Britifh fhips on the high feas of Amderica; becaufe thefe fhips often take out this fecie with them, wherewith to facilitate their commerce among the Britif colonies in general ; and are obliged, as we bave feen, to navigate even within gun-thot of the Spanifh coaft, merely for fecurity of their lives, their fhips, and their cargoes.
Such was the fituation of the Englifh and Spanifh Interefts in, America, before the year 1667, that the latter attempted an exprefs prohibition of trade to all other nations, to the Spanifh Weft-Indies; this they laboured long but ineffectually to procure ; they met with conftant oppofition to any ftipulation of this kind in their favour, in the reigns both of queen Elizabeth and king James; and this was thought ta be one of the principal caufes that brought the brave Sir Walter Ralegh to the block
In the reign of Charles the Ift, the Spaniards renewed their follicitations for a claufe of this nature in the treaty, then concluded between Spain and England, and offered a confiderable fum of money to procure it, but they were fill unfucceffful; nor could all the honours and favour they, heaped upon Charles II. during his exile, prevail with him to grant them any promife for that purpofe, in cafe he was reftored to the crown. In confequence of this being the flate of the cafe, at the time we are feaking of, between England and Spain, the Spanifh governors were abfolutely reftrained, by orders from the court of Madrid, from permitting any other nation to trade with the Spanilh Weft-Indies. Nay, we endeavoured to have this liberty explicitly confirmed by treaty to us; but this being contrary to maxims, which, by long ufage, had acquired the ftrength of fundamental laws in that monarchy, we could never obtain it. This was the intent of the embaffy of Sir Richard Fanfhaw in the year 1664. However, in later days we have been more moderate : Great-Britain feems, at prefent, to require nothing of the crown of Spain, in order to preferve an inviolable fiendflip with that nation, but what is her indifputable right; and that the certainly has to the cutting of logwood in fuch parts of the bays of Campeachy and Honduras, as have been before reprefented. She alio has an indifputable right to a free and uninterrupted navigation to and from her own colonies in America, as well as the Spaniards have to theirs; and that without any detention or fearch of their fhips whatfoever upon the high feas, by Spanifh guarda coftas or others, under pretence of fufpecting them to have contraband goods on board.
REMARKS upon the whole of this article of LOGWOOD, before the laft war.
It is too notorious to need proof, that the late war was occafioned by the depredations, which were committed by the Spaniards upon Britifh fhips trading to and from our $\log$ wood and other Britifh colonies in America; and it is well
though known to the whole world, that the long forbearance of the court of Great-Britain to come to an open rupture with the erown of Spain, upon this occafion, is fcarce to be paralleled in hiftory : and, if the accounts we have of late received from Jamaica and the northern colonies be true, there is too much reafon to believe, that the Spaniards are about to act the like fcene over again, that occafioned the war. If this fhould be the cafe, as I hope it will not, I have humbly fubmitted an expedient to public confideration, to prevent thole evils with regard to the logwoud-trade, that is as much calculated for the intereft of Spain as that of Great-Britain. In what has been urged in relation to that point, and the rearch of Britifh fhips upon the high feas of America, I have not flewed the leaft partiality towards my own country; I have ftated only the naked facts without exaggeration, which generally eclipfes the truth.
It is to be wifhed, that our logwood fettlements were fituated elfewhere, that might give no umbrage or jealoufy to the Spaniards; it is therefore I have propofed the afcertaining our right to that colony in the river Bellese; in failing to and from which, our Britifh traders can give no caule of fufpicion that they intend an illicit and contraband trade, under colour of the logwood-trade: and every impartial Spaniard muft allow, that it is condefcenfion enough in the crown of England to give up their right to the logwood trade, in Campeachy, upon the conditions fuggefted, in cafe the BritiOh right is explicitly afcerrained, by treaty, to that fmall river Bellefe. But, if the court of Spain hould not acquiefce in fo fair and equitable a propofition, which 1 have done myfelf the honour humbly to fubmit to confideration; it will demonftrate that the crown of Spain is determined to break with Great Britain at all events, if they fhould continue to take our fhips in the manner they did before the late war, in 174 r . And, if this fhould prove to be the real difpolition of that court, if we were even to give up the whole $\log$ wood-trade, they would neverthelefs take our thips in failing to and from our other colonics; fo that there would be no end of conceffion upon conceffion.
If this hould ever come to be the cafe, the regulations of the logwood-trade, propofed by Sir Thomas Lynch governor of Jamaica, may, perbaps, be firft naceffary to be fettled, viz, that all hips trading to our logwood colonies fhould fail together in fmall fquadrons, as is taken notice of in the reprefentation of the lords commiffioners of trade before quoted. In a word, every prudential meafure fhould be tried to fettle this point in an amicable manner between the two crowns, if there is a poffibility of fo doing.-But the moft effectual pacific meafures to be taken, we humbly apprehend, thould be in fuch a commercial way, as would pinch the Spaniard in the moft tender point.-Whatever could be thought of in this thape thould be effayed, before the fword is again drawn upon the like occafion; and, if every endeavour of this kind in the court of Great Britain proves fruitlefs, then all imaginable weight and dignity fhould be given to the adminiffration by unanimity at home, that fuch alliances with foreign powers might be made, and fuch effectual meafures taken by the parliament, as would bring the Spaniards to terms of reafon and juftice with a nation, by which they gain more than by any other whatfoever, and in whofe power it may one day be to do them more mifchief than another ftate whatever *.- But nothing can be a greater folly, we conceive, than for a trading nation to go to war, tiil every meafure, poffible to be thought of, is tried to prevent it; and yet every wife meafure taken previoully to prepare for it, before we ever attempt to ftrike the blow again, that, when do ftrike, we may do it with fuch fecrecy and effectuality, as may make the Spaniards repent their maltreatment of a nation that has bore fo much to preferve peace with them: and, if once, as I heard a great man fay, previoully to a declaration of war with Spain, it was the fenfe of a Britifh parliament to addrefs the throne, that they would grant fupplies to carry on a war againft Spain, upon condition only that Great-Britain mould hold what Possessions they got in the War, this would be no ill-judged ftep to prevent one; but, if we had one, it would occafion our whole ftrength to be levelled, where it would be molt fenfibly felt.

* Did not the Spaniards experience this, by our taking the Havannah in the laft war?

## REMARKS.

The foregoing was the fate of our Logwnod article, before the laft war; but by the Definitive Treaty of 1763 , that point is fetuled as follows, in the XVIIth article of the faid treaty, "His Britannic majefty fhall caufe to be de" molithed all the Fortifications which his fubjects fhall " have erected in the Bay of Honduras, and other "Places of the territory of Spain in that part of the world, " four months after the ratification of the prefent treaty: "And his Catholic majefty fhall not permit his Britannic " majefty's fubjects, or their workmen, to be difturbed, or " molefted, under any pretence whatfoever, in the SAID " Places, in their occupation of cuttinc, loading, and "garrying away Logwood. And for this purpofe,
" they may build without findrance, and occupy without " interruption, the houles and magazines which are necef"f fary for them, for their families, and for their effects: "A And his Catbolic majefty aflures to them, by this arti" cle, the full enjoyment of thofe advantages and powers on " the Spanifh coafts and territories, as above ftipulated, im" mediately after the ratifications of the prefent treaty."
We find that, at length, this long contefted point, refpecting the Logwood Trade, is fettled by treaty, which it never was explicitly before. For the Spaniards would never before acknowledge, that we had any right to cut logwood in the Bay of Honduras; but by the faid article, the fubjeets of his Britannic majefty are permitted to cut, load, and carry away logwood from the faid bay, and wherever elfe they had erected fortifications, upon condition only of their demolifhing fuch fortifications.
But fince the faid Definitive Treaty has been made between the crowns of Great-Britain and Spain, the following accounts having been reported to be tranfimitted to the court of London, it will be neceffary to record the fame in this work; though we are willing to hope, that the court of Spain will difavow what follows, or it may poffibly be attended with a frefh war; for the confequences of which, fee our article New Mexico.
Philadelphia, May 10. By the Olive Branch, captaint Robinfon, from Honduras bay, we have advice, that the Spaniads had forbad the Englifh from cutting wood in the bay; upon which they had fent an exprefs to Jamaica for alfiftance. The following is a tranflatton of a letter from the Spanifh general to the commanding officer in the bay.

SIR,
The king, my mafter, having appointed me to the employment of governor and captain-general of this province, with efpecial order to comply entirely with what his majefty granted to the crown of England, and ftipulated in the 17th article of the definitive treaty of peace, figned at Paris the roth day of February, this year, commanding me likewife that with all poffible difpatch, I fhould proceed on my voyage, which I could not do fo foon as I defired, for various difappointments which happened. I arrived at Campeachy the 7 th inflant, and having taken poffeflion the 24th, I was informed of your arrival at Balis in the month of April, alfo five veffels, and that immediately the people were difperfed as far as Rio Hondo, practifing from that time the cutting of logwrod, by virtne of the treaty of peace. You did not prefent the royal fchedule that my fovereign expedited for this end, nor the licence of the king of England for the aforefaid effect.
This being granted, I am obliged by the king, my lord, in his royal confidence of the government of this province, and to comply entirely with the faid 17 th article of the definitive treaty of peace, as I faid before, to difpatch the commandant of the fort of Bacalar, don Jofeph Rofado, with this, requiring you, that in confideration of the want of inftruments for your introduction, and having extended yourfelves, gathering fruits as in your own country, without waiting to fettle the limits with the neceffary folemnity that fhould have fecured your eftablifhment, you will be pleafed, with all fpeed, to give the neceffary advice to all your community that are in Rio Hondo, to retire to Balis; and I expect you will prefent me with the royal fchedule, that the king, my mafter, difpatched to this end, or with orders from the king of Great-Britain for this effect ; and there is no doubt but 1 fhall then attend to it with that care and equity I am commanded; iffuing for that purpofe the neceffary orders to all the commandants, cabos, military and julticiary of all the diftricts in their jurifdiftion; by which means the fufpicion of the fatal confequences will ceare, which will be inevitable if fuch conduct is continued, fufficient to deftroy the good harmony between the two nations, and happy tranquillity we enjoy, if the remedy is not occurred to in time, and our fovereign will manifefty fee how we intereft ourfelves, that their juft and laudable intentions take effect, for which I am fo ready on my part, as is manifeft by my toleration, that you and all your nation remain at Balis, and I promife myfelf the fame on your parts, protefling always that for the refult of what may bappen by fuch irregular introduction and excefs of cutting logwood, thofe who commit, or do not remedy them, will be refponfible after all. I hope you will favour me with an anfwer by hand of the faid commandant of Bacalar, and other commands moft to your fatisfaction, to mantfeft to you the defire 1 have to ferve you. God guard you many years, as he can, and 1 defire. Your molt humble fervant, kiffes your hands,

Philife Rfmires de Ebtinos.
Marida, in Jucatan, 2gth of December, 1763 . Seir Don Joseph Maud.
Don Jofeph Rofado, licutenant of infantry in the batallion of Cantillia, and commandant of this garition and royal fort of St Philip, of Bacalar, and it's jurifdictions.
Notwithftanding that the ferjeant Dionifus Chavaria, who is detachedro the look-cut of St. Anthony, has the necef-
fary orders, that the Englifh logwood cutters of Rio Hondo, do retreat to Balis, without permitting them to make any demur, becaufe that fince the 4th inftant, when the order of the governor and captain-general was by fie intimated to them, they bave had competent time to evacuate the river, carrying away the utenfils of their houfes. I order and command the faid ferjeant; that he receive eleven foldiers of this garrifon, well armed, which, with four there before, completes the number of fifteen, to remain at the faid look-out; that with them he is not to permit any Englifh veffel, under any pretext to enter the mouth of this river; on the contrary, if any flats remain in the river, they are to go out, with the utenfils of their houles, with fo much brevity, as not to permit them to fop any where; but retire totally; as likewife thofe from the New River; becaufe in the order intimated to them, it is expreffed, that the retreat fhall be to Balis, and no other part; and to act on the contrary, they expofe themfelves to evident danger, as by their difobedience they lofe their negroes, and find themfelves under a violent arreft. This order he fhall manifeft to as many as are not yet gone out, that by this means it arrive at the notice of all the baymen, and at no time they may plead ignorance. And all that is done on the fubject by the faid ferjeant, he fhall give me punetual advice; as alro of what may occur, to advife his. excellency the governor and captain-genetal, from whom Thave orders to execute what may be needful; in cafe of contumacy, difobedience, or rebellion, laying to the charge of the baymen, all the refults that may happen between the fovereigns, for not executing what they are ordered, and that it appear to the faid ferjeant what is hereby ordered; and that he fulfil bis obligation with that zeal, love and conduct he ought. This order is given in this garrifon and royal fort of St. Philip, Bacalar, this 22d of February, 1764 .

## Joseph Rosado.

I, the ferjeant Dionifius Chavaria, certify, that the above is a true copy of the order I received this day from the commandant don Jofeph Rofada,

## Jo. Maud, <br> Ja. Grant,

Dionisius Chavaria.
Stephen Archiold.
To his excellency William Henry Littleton, Efq; governor and captain-general of the ifland of Jamaica, and other the territories thereunto belonging, chancellor and vice-admiral of the fame, \&c. the humble petition of the principal fettlèrs on the Bay of Honduras, for cutting of logwood, and the commanders of veffels now lying there to load,

Humbly fheweth,
That your petitoners by virtue of the preliminary treaty of peace (in the 17 th article whereof it is fipulated, that the fabjects of his Britannic majefty thall have the privilege of cutting and carrying away logwood in the Bay of Honduras; with liberty to build houfes and magazines, neceffary for themfelves and families) in the month of April 17763, came down here for the aforefaid purpofe of cutting logwood ; and on their firft arrival, difpatched a letter to the commandant of Bacalar, being the neareft Spanifh fettlement; who returned for anfiver, that he would tranfmit it to the governor and captain-general of the province of Jucatan ; whofe orders on the fubject, he, the faid commandant, communicated to your petitioners, which was to comply entirely with the 16 th article of the preliminary treaty of peace.
That afterwards, by virtue of a letter from the faid governor of Jucatan, No. I, in the aniwer to a letter from Jofeph Maud, one of your petitioners, a copy of which is No. ${ }^{2}$, feveral of your petitioners went into Rio Hondo, to cut logwood; and from that time unmolefted followed their occupations, till the 4 th of this inftant February, in good harmony and correfpondence with the Spaniards, by frequent letters from the governor of Jucatan, and anfwers by Jofeph Maud, one of your petitioners, all hereunto annexed, at which time don Jofeph Rofado, commandant of Bacalar, delivered the faid Jofeph Maud, one of your petitioners, the letter from the governor of Jucatan aforefaid, No. 3, ordering your petitioners to retreat to Balis, 'till they produce either a fchedule from his Catholic majefty, or orders from the king of Great-Britain, to authorize them to cut logwood. In confequence whereof, your petitioners, with. all poffible difpatch, endeavoured to withdraw their effects to the New River and Balis, in both which rivers your petitioners had formerly fettlements. But on the 23 d inftant they were again difturbed, by an order from the commandant of Bacalar, directed to the ferjeant of the guard at the mouth of Rio Hondo, an authentic copy of which is likewife annexed, No. 4, by which your petitioners are ordered to evacuate every river except Balis, where it is admitted them to ftay a little while, but; as your petitioners believe, not to have the privilege of cutting logwood even there; that your petitioners are hereby driven to the greateft dittrefs, not having any plantations to maintain themfelves and families ; that by means of fo total a fagnation of bufinefs,
many of your petitioners, and commanders of veffels, that have lain for fome time here, are in the greateft danger of wanting provifions ; that they have difpofed of their cargoes to your petitioners, the fettlers, who, by reafon of being driven from their occupations, are incapable of paying for them; and that the veffels lately arrived, not feeing any profpect of immediate payment, refufe to fell their provifions. Thefe are the miferies your petitioners experience from the inhumanity of the Spaniards.
And your petitioners likewife humbly reprefent to your excellency, that not having any legal authority for fettling difputes with each other, they find themfelves reduced to a fate of anarchy and confufion, nor have the injured any method to feek redrefs; that your petitioners humbly apprehend, that without order it is impofible for any community long to fubfift.
Your petitioners therefore humbly pray, that your excellency will be pleaied to grant them fuch relief as their own diftreffed circumftances require, and your great widom thall direct; and your petitioners fhall ever pray.

## Further Remarks.

In anfwer to the faid petition of the logwood-cutters to governor Littleton, it has been obferved, that it is evident, from the faid petition, that from the month of April 1763 , to the 4th day of February 1764, the logwood-cutters had remained undifturbed in the occupation and poffeffion of all that had been ftipulated by the treaty of peace; and that the fufpenfion of their logwood cutting, had been in confequence of a letter of the 2gth of December $1 \% 63$, written to Jofeph Maud, by Philipe Remires de Eftinos, cap-tain-general of Jucatan, who had arrived at Campeachy the 7 th of the farne month. Before the arrival of this Spaniard, the letter of the 17 th article had been Ifrictly obferved on the part of his countrymen in America: but as fomething relative to fecuring this trade to the Englifh, and preventing the Spaniards from being impofed on by PRETENDERS. To THE rights of British Subjects, had been forefeen to be abfolutely neceffary to be eftablifhed, that ftipulation had been agreed on between the crowns of Great-Britain and Spain, and, according to don Remires's words, it confifted in obliging the logwood-cutters, either to be furnifhed with the royal schedulb which Spain had expedited to this end' or with the licence of the kine of England, for the aforesaid effect, and which was unknown before his arrival.
It appears, that it had been forefeen by the contracting parties, that the merchants of Holland, France, and of all the maritime powers, would difcern the advantages that might be derived from the above article of the treaty of peace; and from fuch view, that fhips would be fitted out in thore countries, and navigated by Englifh feamen, would undoubtedly be fent to the Bay of Hondur'as, to polfefs themfelves of thofe adwartageous flipulations, which were intended for Great-Britain only.
And the late war having deftined fuch numbers of the Englifh to the fea-fervice, more than peace can employ, and by that means forced the Englifh failors into foreign fervice, failors for the above purpofe could not be wanting. Whence it fhould feem, it became abfolutely neceffary, that either the above-mentioned schedule or licence fhould be found in the hands of thofe who were cutting logwood, as the beft prefervative both of the English and Spanish rigets, from the invafion of others by fallacious means, and a mutual benefit to both nations.
That the want of thofe authorities is the chief reafon for the fufpenfion of the logwood-cutting, feems evident from the words of don Philip Remires, that in confideration of the want of inftruments for your introduction, \&cc. "A And I - expect you will prefent me with the royal fchedule that - the king my mafter difpatched to this end, or orders from ' the king of Great-Britain for this effect ; and there is no ' doubt but I hall then attend to it with the care and - equity I am commanded, iffuing for that purppfe the ne"ceflary orders to all the commanders, cabos, military and "jufticiary of all the diftricts of their juridiction, \&c."
By the 17th article of the treaty, the Englinh are entitled to the cutting of logwood only : but it feems by the words of Remires, uncontradicted by the petitioners to governor Littleton, "that they had extended themfelves, gathering fruts ' as in their own country, and without waiting to fetrle - the limits with the neceffary folemnity that fhould have - fecured their eftablifhment.'

That fome proper meafures are neceffary to reftrain the privilege of cutting, loading, and carrying away logwood from the Bay of Honduras, to the fubjects of Great-Britain only, and to preclude the fubjects of all other ftates and empires from the like privileges, was certainly what was intended by their Britannic and Catholic, majefties: but if foreign merchants, by the means of Englifh tailors in their fervice, Ghall invade the rights of Britifh fubjects, and reap in part, or in whole, thofe advantages that were intended for the fubjects of Great-Britain only, this is an injury to the mercantite fubjects of England, as well as detrimental to Spain; and ought to be prevented for their mutual benefit.

## $\mathrm{L} O \mathrm{~N}$

And it feeming by Don Remires's conduct, that a Schedule or a LICENCE is to be the touchitone fignifying fuch Bratifh right and privilege, by both courts, it fhould be complied with: and it is a pity that this point was not explicitly ftipulated by the treaty; but if the difadvantages on both fides were not forefeen till experienced, and the matter has fince the treaty took effect, been agreed on by both crowns as Don Remires has reprefented, it thews that a good harmony fubfifts between them, and that the expedient intimated is to be exerciled in future to ftrengthen that defirable harmony, And certain it is, that the indifcriminate permifion of ail who fhall call themfelves Engliflomen, to this beneficial right of cutting logwood, would, in a great meafure, defeat the advantages which are fixed by treaty to the fubjects and merchants of this ifland: and if the refident logwood-cutters at Honduras, and the Britim merchants who lend lhips thither to trade with Britifh logwood-cutters, are both duly authorized by fchedule or royal licence, it will prevent foreign interlopers from partaking of thofe Britifh rights, under the mark of being Englifh merchants, becaufe they have a few Englidh failors on fhip-board to countenance them in their unjuftifiable logwood traffic.-And if the meafures mentioned, or any other that may prove ftill more effectual to anfwer the end propofed fhould do fo, then England will enjoy the exclufive right and privilege of cutting, loading, and carrying away logwood, which may prove a greater benefit to us, than was perhaps apprehended to arife from the logwood article in the Definitive Treaty.
Tothis it has been obferved, that if a ichedule from the court of Spain, or a licence from the court of England had been agreed on, or known to be necefliary for our logwoodcutters to have carried with them to the coart of Honduras, why has this nation been kept fo long in ignorance thereof? Why were not the governors of our colonies, and particularly of Jamaica, duly furnifhed with them, in order to give the requilite authority to thofe who engaged in that bufinefs ? But it appears, our governors were no way apprized that fuch authorities were needful, and therefore were furnithed with no fuch to diftribute, nor knew how to act upon difcovery of the conduct of, Spain towards the logwood-cutters; they could only tranfmit accounts thereof to the court of England, while the poor people were ruining, by expences and lofs of time, occafioned by Spanifh chicanery.
But if the care of our logwood-trade might not have been entrufted to our felf-interefted traders, who would hardly fail to difcover all illicit intruders, for the fake of not being interfered with in what fo nearly concerns themfelves; it was certainly neceflary to prevent any mifunderftanding between the contracting crowns, to have had it expressly stipulated in the Definitive Treaty, that fuch royal fchedules and licences were the authorities required by treaty to entitle Britifh fubjects to their right in the logwood-trade in the Bay of Honduras ; and then none, we may prefume, would have attempted the trade, without being furnifhed with fuch and if this has been an overfight in the treaty, it may eafily be fupplied, without drawing the fword again upon this account, provided the Spaniards are not infincere; if they are, they may foon rue it, perhaps. See our article Mexrco, our laft Remarks thereon.
While this work is printing, we find the following paragraph in the London Gazette. St. James's, July 2i, 1764.- In anfwer to the reprefentations made by his ma-- jefty's ambaffador at the court of Madrid, upon the late - tranfactions of the governor of Jucatan, and his proceed6 ings towards the Britifh fubjeCts employed in cutting Log-- wood in the Bay of Honduras, the Spanifh miniftry - have replied, That they have not received any advices from - that governor relative to this affair; but that it is certain - the Catholic king has given pofitive orders to the gover-- nor of Jucatan to abide by, and obferve the XVIIth arti cle of the laft treaty of peace, and that he will not approve - of the conduct of his fubjects who act in contravention to - it. That it is the intention of his Catholic majerty, that ' no one fhall impede the Englifh in their cutting Logwood 6 in the ftipulated places; and he will difapprove of the go6 vernors and minifters whenever they act to the contrary 6 and renew the moft flrict orders to that effect.'
LONGITUDE, as it regards navigation, to which our work has an affinity, is the diftance of a thip or place, eaft or weft from another, computed in degrees of the equator. This diftance being reckoned in leagues or miles, or in degrees of the meridian, and not in thofe proper to the parallel of latitude, is ufually called departure *.

* Departure, in navigation, fignifies the eafting or wenting of a fhip, with relpect to the meridian (a) it departed or failed from. Or, it is the difference of longitude, either eaft or wett, between the prefent meridian the fhip is under, and that where the latt reckoning or oblervation was made This departure any where, but under the equator, mult be accounted according to the number of miles in a degree, proper to the parallel the fhip is under.
(a) The meridian is an imaginary circle fuppored to pafs through the terreftrid meridian is in the plane of the celeftal pane of th

1. As the meisdian inverts the whole eath, there are feveral places hiuated under the fame meridian. 2. As it is noon-tide whenever mendian of the carth is in the plane of the former, it fellows, that it is noon at the fame time, in atl places fituate under the fame meridian. 3. There are as many meridians on the earch, as there are points conceived in the equator. In effect, the meridians always change, as you change the longitude of the place; and may be faid to be infinite, each place from eaft to weft baving it's feveral me.

To difcover the longitude at fea is a problem that has hitherto perplexed all mathematicians; although, for the folution thereof, great rewards have been publickly offered by the Englifh, French, Dutch, Spaniards, and other nations: this being the only thing wanting to render navigation perfect. Various are the attempts that authors have made for this purpofe, and various the methods they have propofed, but without fuccefs, fo that the palm is fill unafcertained. The methods taken to arrive at this point are different. What mof of them aim at, is a method of determining the difference of time between any two points on the earth: for every ${ }_{5}$ degrees of the equator anfwering to an hour, i. e. one degree to 4 minutes of time, and one minute of a degree to 15 feconds of time; the difference of time being known, and turned into degrees, will give the longitude, and vice verfa. This fome have pretended to effect, by chronometers and automata of various kinds, but always in vain; no timekeeper, excepting a pendulum (which cannot be applied at fea) being fufficiently exact for the purpofe.
Others fearch for a means to find the longitude in the heavens: for, if the exact tumes of any celeltial appearance be known for two places, the difference for thofe times gives hat of the longitude of thofe places. Now, in the ephemerides *, we have the motions of the planets, and the times of the celeftial phænomena; as the beginning and ending of eclipes, conjunctions of the moon with other planets, it's entrance into the ecliptic, 8 xc . accurately calculated for fome one place. Therefore, if the hour and minute be known, wherein any of the fame phænomena are obferved in an unknown place, the difference between the hour and minute of that place, and that other to which the tables are computed, and confequently the difference of their meridians and their longitude from each other, are known alfo.

Ephemerides in aftronomy, fignifies tables calculated by altronomers, fhewing the prefent flate of the heavens for every day at noon; that is, the place wherein all che planets are found at that time.-It is from thefe tables, that the eclipfes, conjunctions, and afpeets of the planets are de termined, and horocopes, or celeftial chemes conftructed sc.

The difficulty here, does not confift in the exact finding of the time, which is eafily had from the fun's altitude or azimuth, but the defect lies in the fewnefs of proper celeftial appearances capable of being thus observed: for all flow motions (v. gr. that of Saturn) are excluded, as Thewing but a little difference in a confiderable face of time; and it being required in this cafe, that the phenomenon be fenfibly varied in two minutes time, an error of two minutes in time produces another of thirty miles in the longitude.-Now there are no phænomena in the heavens that have thefe requifites, excepting the feveral ftages of an eclipfe of the moon, her longitude, or place in the zodiac; her diftance from the fixed ftars, or appulfe to them; her ingrefs into the ecliptic, or the points of her orbit, where that cuts the ecliptic ; and the conjunction, diftance, and eclipfes of Jupiter's fatellites. 1. The method by the eclipfes of the moon is eafy, and fufficiently accurate, were thefe eclipfes every night. At the moment wherein we fee the beginning or middle of a lunar eclipfe by a telefcope, we have nothing to do but take the altitude or azimuth of fome fixed ftar, from which the hour and minute are eafily found; or without the altitude, if the ffar be in the meridian. - This hour and minute, therefore, thus found, and compared with that expreffed in the tables, gives the longitude
2. The moon's place in the zodiac is a phomomenon more frequent than that of her eclipfes; but then the obfervation thereof is difficult, the calculus complicated, by reafon of two parallaxes, fo that it is icarce practicable at fea, in general, to any tolerable degree of accuracy.-Indeed, by waiting 'till the moon comes into the meridian of the place, and then taking the altitude of fome remarkable flar (the altitude being fuppofed to be firft known) from this altitude and the latitude, we fhall be able to find the time pretty accurately, though it will be better to do it by fome ftar in the meridian. -Now, the time being found, it will be eafy to find what point of the ecliptic is then in the meridians or mid heaven. -Thus we fhall have the moon's place in the zodiac, correfponding to the time of our place.-Then, in the ephemeris, we find what hour it is in the meridian of the ephemeris, when the moon is in that part of the zodiac: thus we fhall have the hour and minute of the two places for the fame time, the difference of which will give the difference of longitude. 3. In regard there are many times when the moon cannot be obferved in the meridian, there is therefore another ftill more
frequent phenomenon, from which the longitude is fought, viz. the moon's appulfe and recefs from the fixed ftars : for from thence the moon's true place may be inveftigated for the given time of obfervation.- But this method, by reafon of the parallaxes, and the folution of oblique fpherical triangles, and the various cales, is fo difficult and perplexed, that mariners will fcarce ever be able to make ufe of it.
4. To find the longitude by the moon's ingrefs into the ecliptic, obferve the moment of that ingrefs: then, in the ephemeris, fee what hour it is in the meridian of the ephemeris, when that ingrefs happens.-The difference between thefe times gives the difference of longitude.
5. The phenomena of Jupiter's fatellites are generally preferred to thofe of the moon, for finding the longitude; by reafon the former are lefs liable to parallaxes, and do further afford a very commodious obfervation, in every fituation of that planet above the horizon.- Their motion is very fwift, and mult be calculated for every hour, and for that reafon are not found in the common ephemerides.-Now, to find the longitude by means of thefe fatellites, with a good telefcope, obferve a conjunction of two of them, or of one of them with Jupiter, or any other the like appearance: and, at the fame time find the hour and minute from the meridian altitude of fome ftar; then, confulting tables of the fatellites, obferve the hour and minute wherein fuch appearance happens in the meridian of the place to which the tables are calculated.-This difference of time, as before, will give the longitude.
All methods, which depend on the phænomena of the heavens having this one defect, that they cannot be obferved at all times; and being, befides, difficult of application at fea, by reafon of the motion of the fhip; there are fome, who leaving the moon and the fatellites, have recourfe to clocks, and other automata; which, could they be made perfectly juft and'regular, fo as to move with the fun, without either gaining or loling, and without being affected with the change of air and of climates, the longitude would be had with all the eare and accuracy imaginable: nothing more being required, but to fet the machine by the fun at the time of departure, and when the Iongitude of any place is defired, to find the hour and minute from the heavens (which is done at night by the ftars, and in the day by the fun;) for the difference between the time thus oblerved', and that of the machine, gives the longitude.- But no fuch machine has been yet difcovered, wherefore recourfe has been ftill further had to other methods.
Mr. Whifton and Mr. Ditton have propofed a method of determining the langitude by the flafh and report of great guns. -Sounds, it is known, move pretty equably in all their ftages: if then a mortar or great gun be exploded at a place whofe longitude is known, the difference, it was judged, between the time wherein the flafh (which moves, as it were, inftantaneoufly) is feen, and the found, which moves at the sate of four feconds in a mile, is heard, will give the diftance of thofe places from each other; whence, if their latitudes be known, the difference of longitude will be likewife known. Moreover,
If the hour and minute of the explofion be known, fay they, (for the place where it is made) by obferving the hour and minute from the fun and ftars, at the place whofe longitude is required; the difference between thofe times will give the difference of longitude. And,
If the faid mortar be loaded with an iron-fhell full of combuftible matter, and hoifted perpendicularly, it will carry the fame a mile high, which will be feen near an hundred miles; if therefore neither the found fhould be heard, nor the flafh feen, the diftance of any remote place from that of the mortar may be determined from the altitude of the fhell above the horizon of the place unknown: and, the diftance and latitude known, the longitude is eafily found.
According to this fcheme, it was propofed to have fuch mortars fixed at proper diftances and at known fations, on all the frequented coafts, iflands, capes, \&c. and to be exploded at certain hours, for the obfervation of mariners.
This method, however, plaufible in theory, has the fate of all the reft, and is found ufelefs in the practice, as being extremely troublefome, and yet precarious.-It fuppofes that founds may be heard 40, 50 , or 60 miles: of which, it is true, we have inftances, but they are very rare: and, ordinarily, the report of a cannon is not heard above half fo far, and fometimes much lefs. -It fuppofes found to movealways with equal velocity; whereas, in fact, it's velocity is increafed or diminifhed as it moves with or againft the wind. -It fuppofes alfo, the frength of powder uniform, and that the fame quantity carries the fame range: the contrary whereof is known to every gunner.-We fay nothing of thick cloudy nights, when no lights can be feen; nor of formy nights, when no Gound can be heard, even at inconfiderable diffances. We have another method of finding the longitude, propofed by the fame Mi. Whifton, viz. by the inclinatory, or Dipping Needle. This dipping, or inclinatory-needle, is a magnetical needle fo hung, as that, inftead of playing borizontally, and pointing out north and fouth, one end dips, or inclines to the horizon, and the other points to a certain digree of elevation above it. Or,

A dipping-riecdle may be defined to be a long ftraight piec $\hat{\varepsilon}$ ffeel, every way equally poifed on it's center, and afterwards touched with a load-ftone, but fo contrived, as no o play on the point of a pin, as does the common horizon tal needte, but to fwing in a vertical plane, about an axis parallel to the horizon: and this in order to difcover the exact tendency of the power of magnetifm.
The inventor of the dipping-needle was an Englifhman, Robert Norman, a compals maker for mariners, in Wapping; near the city of London, about the year 1576 . The occafion of the difcovery he himfelf relates, viz. that it being his cuftom to finifh and hang the needles of his compafles, before he touched them, he always found that, immediately after the touch; the north point would bend, or decline downwards; under the horizon: infomuch that, to balance the needle again, he was always forced to put a piece of wax on the fouth end, as a counterpoife.
The conftancy of this effect led him, at length, to oblerve the precife quantity of the Drps, or to mealure the greateft angle which the needle would make with the horizon. This, in the gear 1576, he found at London to be $7 \mathrm{I}^{\circ} 50^{\prime}$; but the dip varies, as well as the horizontal direction
Burrows, Gilbert, Ridley, Bond, \&c. endeavoured to apply this difcovery to the finding of the latitude; and the laft author, going farther, propofed likewife the finding of the longitude thereby: but, for want of obfervations and experiments, he could go no length.
Mr. Whifton, being furnifhed with the further obfervations of Col. Windham, Dr. Halley, Mr. Pound, Mr. Cunningham; Pere Noel, Pere Feuillee, and his own, has improved greatly on the doctrine and ufe of this needle, brought it to more certain rules, and endeavoured to find the longitude thereby. In order to this he obferves, ift, That the true tendency of the north or fouth ends of every magnetic needle is not to that point in the horizon to which the horizontal needle points; but towards another directly under it, in the fame vertical, and in different degrees under it, in different ages, and at different places.
2 dly, That the power by which a horizontal needle is governed, and all our navigation ordinarily directed, is proved to be but one quarter of the power, by which the dippingneedle is moved; which fliould render the latter far the more effectual and accurate inftrument.
3dly, That a dipping-needle, a foot long, will plainly fhew an alteration of the angle of inclination, in thefe parts of the world, in half a quarter of a degree, or $; \frac{1}{2}$ geographical miles; i. e. fuppofing that diftance taken along, or near a meridian ; and a needle of four feet, in two or three miles.
4 thly, A dipping-needle, four feet long, in thefe parts of the world, will fhew an equal alteration along a parallel; as one of a foot long will fhew along a meridian, i. e. this will, with equal exactnefs, thew the longitude, as that the latitude.
This depends on the pofition of the lines of equal dip, in thefe parts of the world, which are found to lie about 14 or ${ }^{5} 5$ degrees from the parallels.
Hence he argues, that, as we can have needles of $5,6,7$, 8 , or more feet long, which will move with ftrength fufficient for exact obfervation; and fince microfcopes may be applied to the viewing of the fmalleft divifions of degrees on the limb of the inftrument; it is evident the longitude at land may be found thereby, to lefs than four miles.
And, as there have been many obfervations made at fea with the fame inftrument, by Noel, Feuillee, \&c. which have determined the dip ufually within a degree, fometimes within half, or a third of a degree, and this with fmall needles of five or fix, or, at the moft, nine inches long; it is evident, the longitude may be found even at fea, to lefs than half a quarter of a degree. Thus much premifed, the obfervation itiolf follows:
To find the longitude or latitude by the dipping-needle.-If the lines of equal dip below the horizon be drawn on maps, or fea-charts, for good obfervations, it will be eafy, from the longitude known, to find the latitude; and, from the latitude known to find the longitude, either at fea or land.
Suppofe, e. gr. you were travelling, or failing, along the meridian of London, and found the angle of dip, with a needie of one foot, to be $75^{\circ}$; the chart will fhew, that this meridian, and the time of dip, meet in the latitude of $50^{\circ} \mathrm{n}^{\prime}$; which, therefore, is the latitude fought. Or,
Suppofe you was travelling, or failing, along the parallel of London, i. e. in $51^{\circ} 32^{\prime}$ north latitude, and you found the angle of the dip to be $74^{\circ}$; this parallel, and the line of angle of the dip to be $74^{\circ}$; this paralle, and the line of
this dip, will meet in the map in $1^{\circ} 46^{\prime}$ of eall longitude from this dip, will meet in the map in 1 , 46 of eall longitude from
London; which is, therefore, the longitude fought : yet this fcheme alfo, has proved impracticable and unfucceffful in it's application.
Since every method which hath been bitherto attempted, hath proved abortive, and the difcovery of the longitude at fea remains fill the great defideratum in navigation; it is imprudent to depend longer upon any one of thofe methods which have been yet tricd; the difficulties in each being palpable; and, perhaps, abfolutely inluperable.

## L O N

Another method, lately ftarted, whereby this important difcovery has been attemped, is, by A New and Universal Problem, by which the Longitude at Sea, in the DEAD-RECKONING, and the Distance of the Ship's Run, are said to be corrected by the s.ame Observation that the Latitude is, and to the same Certainty, without any Regard to LeeWay, Currfnt of the Sea, or Variation of the Cumpass. By the Rev. Richard Locke, an Englifhman. Asthis is aproblem, faid by the reverend auchor to be entirely new, and the truth thereof to be not only founded upon geometrical demonitration, but experimental practice at fea, where be affirms he has tried the fame; it feems to deferve due public notice and attention.
That the public might be informed of this difcovery, the author firt printed and publifhed the fact, as he declares, the 24th of January, 1751, in the London Evening-Poit, After which he was advifed to publifh the problem, and the demonfration thereof, in a pamphlet; which he has done, within the compafs of 14 pages, addreffed to the honourable the Commissioners appointed to infpect the longitude, and to the Public in general. Which being fent to me the laft year, and recommended by feveral worthy gentlemen, as a matter confiftent with a Dictionary of Commerce, and neceffary to be publifhed therein; I was prevailed upon to give the fame a place in this work, under the firf head that occurred, where I could do it with any fort of propricty: and the reader will find the whole under the article Commanders of Ships; with an addrefs to them, as requefted to try the fame experimentally at fea. But,
As thofe gentlemen, without difparagement to their high importance and utility to the ffate, are, in the general, better acquainted with the ordinary practical rules of navigation*, as they are commonly taught them by rote, and not by reafon and demonftration, they may be prefumed not to be competent judges of the demonffrative part, which, Mr. Locke fays, he has given, and, therefore, may not as yet be attentive to the experimental trial and practice of what that gentleman has offered for their fervice: wherefore, the author has thought proper to reduce his difcovery, for the benefit of all practical navigators, to the few following plain rules and precepts; which, he fays, are the refult of his demonftration. See the article Commanders of Ships, for the whole of what he has communicated.

* An objection that fome have made againft the fludy of mathematical learning is, that we fee, in the ordinary bufiners of life, thefe affairs are carried on and managed by fuch as are no great mathematicians, as fea men, fhip-wrights, engineers, mill-wrighrs, furveyors, gaugers, clock-makers, glarsgrinders, \&c. and that che mathematicians are commonly rpeculative, retired, fudious men, thatare not or an active
life and bufinefs, but content themelves to fit in their ftudies, and pore over a fcheme or a calculation. To which ftudies, and pore over a ccheme or a calculation. To which
there is this plain and eafy anfiver: The mathematicians there is this plain and ealy anfiver: The mathematicians
bave not only invented and ordered all the arts above-mentioned, and moft others by which thefe grand affairs are managed, but have laid down precepts, contrived infruments and abridgments fo plainly, that common artificers are capable of practifing by them, though they underfand not a tittle of the grounds on which the precepts are built: and in this they have confulted the good and neceflities of mankind.
Thofe affairs demand fo great a number of people to manage them, that it is impoffible to breed fo many good, or even tolerable mathematicians. The only thing then to be done was, to make their precepts fo plain, that they might be undertood and practifed by a multitude of men. This will beft appear by examples. Nothing is more ordinary than difpatch of bufiuefs by common arithmetic, by the tables of fimple and compound intereft, annuities, \&c. yet how few men of bulinefs underftand the realions of the rules given in common arithmetic, or the confruction of thofe tables that are made, but fecurely rely on them as true. They were the good and the thorough mathematicians, that gave thefe precepts fo plain, and calculated thefe tables, that facilitate the pratice fo much. Nothing is more uni verfally neceflary than the meafuring of planes and folids: and it is impoffible to breed fo many good mathematicians, as that there may be one that underflands all the geometry requifite for furveying, and meafuring of prifms and pyra-
mids, and their parts, and mids, and their parts, and meafuring fruflums of conoids 2nd fpheroids, in every market-town, where fuch work is neceffary
The mathematicians, therefore, have infcribed fuch lines on their common rulers, and fiding rules, and adapted fo plain precepts to them, that every country carpenter and gauger can do the bulinefs accurately enough, though he knows no more of the ratiunale of thofe inffruments, tables, and precepts he makes ufe of, than a hobby-horfe. So, in navigation, it is impolible to breed fo many good mathe. maticians as would be neceffary to fail the hundredth part of the fhips of the nation. But the mathematicians have laid down fo plain and diftinet precepts, calculated necelfary tables, and contrived convenient inftruments, fo that a fea; man, that knows not the truths on which his precepts and tables tepend, may practife fafely by them. They refolve triangles evcry day, that know not the reafon of any one of this operations. Seamen, in their calculations, make

## L O N

ufe of artificial numbers, or logarithms, that know nothing of their concrivance: and, indeed, all thofe great inverttions of the moft famous mathematicians had been almon ufelefs for thofe common and great affairs, had not the practice of them been made cafy to thofe who cannor underftand them. From hence it is plain, that it is to thofe fpeculative retired men we owe the rules, the inftruments, the precepts for uning then, and the tables which faciutate the difpatch of fo many great affairs, and fupply mankind with to many coaveniencies of life. They were the men that taught the world to apply arithmetic, aftronomy, and geometry to failing, without which the needle would be itill ufelefs. Joft the fame way, in the other parts of mathematics, the precepts that are practifed by multitudes, without being underftood, were contrived by fome few great mathematicians.
The rules as given by Mr. Locke, for the ufe of practical navigators, are as follow: which I am requefted to add to what has been faid under the preceding article of COMMANDERs of Ships; and, if they fhould prove to be true, it will be very extraordinary that the moft effential part of the practical art of navigation fhould be reducible to a quarter of a fheet of paper.
To all Gentlemen Seamen, Mariners, and others, of all Nations, who are any way concerned in Practical Navication:
A plain, eafy, and practical method to difcover the Longrtude at Sea, for the lafety and prefervation of hipping. By Richard Locke, an Englishman.
The two principal things to be regarded, to obtain the true longitude at fea, are, to meafure as correct a diltance of the fhip's run as can be, by the half-minute glafs and log-line, and to make a true obfervation of latitude.
And, when you caft up the day's work, or traverfe, to find the longitude and latitude in the common way, take their courfes as entered on the log-board, without making any allowance for lee-way, variation, or currents; and, if you find the latitude in the traverfe to be more than the latitude in the obfervation, take, or fubtract, the difference from the latitude in the traverfe, and add it to the longitude - But, if you find it lefs in the traverle than in the oblervation, take the difference from the longitude, and add it to the latitude; always remembering, that the latitude in the traverfe muft be made equal to the latitude in the obfervation; and, what is more or lefs, to add to, or fubtract from the longitude. This is to be done every time you make an obfervation; and when you have got the miles of eafting or wefling, if they are in the fame latitude, divide them by the miles of one degree in that latitude.-If of different latitudes, divide them by the miles of the middle latitude, between the two obfervations:And this will give the longitude in degrees, as mentioned in my book, or it may be found by the following eafy table. By thefe inftructions, carefully obferved, any ifland or place, whofe longitude and latitude are known, may be hit upon a meridian, as near as you can make your obfervation of latitude.
A Table of the geometrical miles of one degree of Longitude for every degree of latitude.

| Lat. | Miles. | Lat. | Miles. | Lat. | Mijes. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 59,8 | 31 | 51,0 | 6 x | 29 |
| 2 | 59,6 | 32 | 50,5 | 62 | 28 |
| 3 | 59,4 | 33 | 50,0 | 63 | 27 |
| 4 | 59,2 | 34 | 49,5 | 64 | 26 |
| 5 | 59,0 | 35 | 49,0 | 65 | 25 |
| 6 | 58,8 | 36 | 48,5 | 66 | 24 |
| 7 | 58,6 | 37 | 4.8,0 | 67 | 23 |
| 8 | 58,4 | 38 | 47,5 | 68 | 22 |
| 9 | 58,2 | 39 | 47,0 | 69 | 21 |
| 10 | 58,0 | 40 | 46,5 | 70 | 20 |
| 11 | 57,8 | 41 | 46,0 | 71 | 19 |
| 12 | 57,6 | 42 | 45,5 | 72 | 18 |
| 13 | 57,4 | 43 | 45,0 | 73 | 17 |
| 14 | 57,2 | 44 | 44,5 | 74 | 16 |
| 15 | 57,0 | 45 | 44,0 | 75 | 15 |
| 16 | 56,6 | 46 | 43,5 | 76 | 14 |
| 17 | 56,3 | 47 | 43,0 | 77 | 13 |
| 18 | 56,0 | 48 | 42 | 78 | 12 |
| 19 | 55,6 | 49 | 4 I | 79 | 11 |
| $20^{\circ}$ | 55,3 | 50 | 40 | 80 | 10 |
| 21 | 55, | 51 | 39 | 81 | 9 |
| 22 | 54,6 | 52 | $3^{8}$ | 82 | 8 |
| 23 | 54,3 | 53 | 37 | 83 | 7 |
| 24 | 54,0 | 54 | 36 | 84 | 6 |
| 25 | 53,6 | 55 | 35 | 85 | 5 |
| 26 | 53,3 | 56 | 34 | 85 | 4 |
| 27 | 53,0 | 57 | 33 | 87 | 3 |
| 28 | 52,5 | 58 | 32 | 88 | 2 |
| 29 | 52,0 | 59 | $3{ }^{1}$ | 89 | 1 |
| 30 | 51,5 | 60 | 30 | 90 | 0 |

N. B. To find the middle latititude by this table, add the miles of the two obferved latitudes together, and divide the fum by 2 , which gives the middle latitude.

Richard Locke.

## LON

$\mathrm{L} O \mathrm{~N}$

## REMARKS.

Thils gentleman, Mr. Locke, appears to be very fanguine with regard to the truth of his difcovery; and therefore has, in his before-mentioned book, given a general challenge to all the mathematicians in the world to confute it, or fhew any other method of difcovering the longitude at fea, that may be depended upon. - The caufe of this challenge, it feems, was, if I am righely informed, by, reafon of fome perfonal maltreatment that the author thinks he met with, from fome mathematicians in England, upon the publication of the firft edition of his pamphlet. -How this matter ftands between thofe gentlemen, I am no otherwife acquainted than by hear-fay.-It is pity that men of fcience fhould have any rancour fay.-It is pity that men of fcience thould have any rancour
towards each other - Time and experience will fhew whether towards each other - Time and experience will thew whether
the problem is true or falfe, in the application made of it to the problem is true or falfe, in the ap
the dificovery of the longitude at fea.
There is one thing I would beg leave to 'obferve, before I difmifs this matter; that, as Mr. Locke has generou'fy communicated his problem to the public, fo that every body now may be mafters of it, and put the fame in practice at fea, without any difficulty or expence; it is neceffaty that the public thould be put upon their guard, and not be impored upon by granting rewards to fuch who may pretend to difcover the longitude at fea, by other ways and means, when they really make ufe of Mr. Locke's difcovery for that purpofe.

Obsarvations, fince the above, upon the article Longitude.
Under the article of Commanders of Merchants Ships, is contained the whole of Mr. Locke's new problem for the difcovery of the Longitude at Sea; which the author was requefted to infert feveral years ago, in the firf edition of this work, as a record, (if the demonitration therein faid to be given, fhould be found to be true, as well from experience as theory) to afcertain Mr. Locke's sight to the reward promifed, to the difcoverer of a matter of fuch importance. The fame was alfo inferted in the fecond edition of this work; and the fame is requefted to be continued in this the third edition of this work, made in the prefent year $\mathbf{1 7 6 5}$, by the executors of Mr. Locke, who has feveral years fince been dead, in going to America, to make a further trial of the truth of his new problem; of which he had often declared he was thoroughly convinced, by what he had experienced at fea : but, he was defirous to have repeated and inconteflible evidence and conviction thereof, before he made proper application to the Britifh parliament, as was his intention In confequence of the death of Mr. Locke, it is requefted that All Gentlemin, who are thorough judges of the faid new problem, and are of opinion that the fame is demonffrably true, and is actually the difcovery of the Longitude at Sea; or has been any way conducive to the difcovery thereof; ind any Commanders or Masters of Ships, who Hall have tried and experienced the truch of Mr. Locke's difcovery, would apply to Mr. Postlethwayt, the author of this Dictionary, at his House in Pinners-Court near the Pay-Office, in Broad-Street, near the Royal-Exchange, London; and if they prove any way infrumental to obtain any public reward for Mr. Locke's difévery, Mr. Poflethwayt is authorized by the executors of Mr. Lacke, to treat with them upon the occafion.

## The Acts of Parliament relating to the difcovery of the Longitude at Sea.

An act for providing a public reward for fuch perfon or perfons as fhall difcover the.longitude at fea, in the 12 th of queen Anne.
Whereas it is well known, by all that are acquainted with the art of navigation, that nothing is fo much wanted and defired at fea, as the difcovery of the longitude, for the fafety and quicknefs of voyages, the prefervation of fhips, and thie lives of men : and whereas, in the judgment of able mathematicians and navigators, feveral methods have already been difcovered. true in theory, though very difficult in practice, fome of which (there is reafon to expect) may be capable of improvement, fome already difcovered may be propoled to the public, and others may be invented hereafter: and whereas fuch a difcovery would be of particular advantage to the trade of Great-Britain, and very much for the honour of this kingdoin; but, befides the great difficulty of the thing itfelf, partly for the want of fome public reward, to be fettled as an encouragement for fo ufeful and beneficial a work, and partly for want of money for trials and experiments neceflary thereto, no fuch inventions or propofals, hitherto made, have been brought to perfection: be it therefore enacted, by the queen's molt excellent majefty, by and with the advice and confent of the lords firitual and temporal, and commons, in parliament affermbled, and by the authority of the fame, That the lord high admiral of Great Britain, or the firft commiffioner of the admiralty, the feeaker of the honourable houfe of commons, the firft commiffioner of the navy, the firft
VBL. II.
commiffioner of trade, the adriirals of the red, white, aind blue fquadrons, the mafter of the Trinity-Houfe, the prefident of the Royal Society, the royal aftronomer of Greenwich, the Savilian, Lucafian, and Plumian profeffors of the mathematics in Oxford and Cambridge, all for the time being; the right honourable Thomas earl of Pembroke and Montgomery, Philip lord bihhop of Hereford, George lord bifhop of Briftol, Thomas lord Trevor, the honourable Sir Thomas Hanmer, Bart. fpeaker of the honourable houfe of commons, the honourable Francis Robarts, Efq; James Stanhope; Efq; William Clayton, Efq; and William Lowndes, Efq; be conftituted, and they are hereby conflituted commiffioners for the difcovery of the longitude at fea, and for examining, trying, and judging of all propofals, experiments, and improvements relating to the fame; and that the faid commiffioners, or any five or more of them, have full power to hear atid receive any propofal or propofals that thall be made to them for difcovering the faid longitude; and in cafe the faid commilfioners, or any five or more of thern, thall be fo far fatisfied of the probability of any fuch difcovery, as to think it proper to make experiments thereof, they fhall certify the fame, under their hands and feals, to the commifioners of the navy for the time being, together with the perfons names who are the authors of fuch propofals; and, upon producing fuch certificate, the faid commiffoiners are hereby authorized and required to make out a bill or bills for aniy fuch fum or fums of money, not exceeding two thoufand pounds; as the faid commiffoners for the difcovery of the faid longitude, or any five or more of them, thall think neceffary for making the experiments, payable by the treafurer of the navy: which fum or fums the treafurer of the navy is hereby required to pay immediately to fuch perfon or perfons as hall be appointed by the commiffioners for the difcovery of the faid longitude, to make thofe experiments, out of any money that fhall be in his hands, unapplied for the ufe of the navy.
And be it further enacted, by the authority aforefaid, That after experiments made of any prapofal or propofals for the difcovery of the faid longitude, the commiffoners appointed by this ach, or the major part of them, fhall declare and determine how far the fame is found practicable, and to what degree of exactnefs.
And, for a due and fufficient encouragement to any fuch perfon or perfons as thall difcover a proper method for finding the faid longitude, be it enacted, by the authority aforefaid, That the firt author or authors, difcoverer or difcoverers, of any fuch method, his or their executors, adminiftrators, or affigns, fhall be intitled to, and have fuch reward as herein after is mentioned; that is to fay, to a reward, or fum of ten thoufand pounds, if it determines the faid longitude to one degree of a great circle, or fixty geographical miles; to fif teen thoufand pounds, if it determines the fame to two thirds of that diftance; and to twenty thouland pounds, if it determines the fame to one half of the fame diftance; and that one moiety, or half-part of fuch reward, or fum, fhall be due and paid, when the faid commiffioners, or the, major part of them, do agree that any fuch method extends to the fecurity of thips within eighty geographical miles of the fhores, which are places of the greateft danger ; and the other moiety; or half. part, when a fhip, by the appointment of the faid commiffioners, or the major part of them, Thall thereby actually fail over the ocean, from Great- Britain to any fuch port of the Weft-Indies, as thofe commiffioners, or the riajor part of them, Shall chufe or nominate for the experiment, without lofing their longitude beyond the limits before mentioned. And be it further enacted, by the authority aforefaid, That, as foon as fuch method for the difcovery of the faid longitude thall have been tried and found practicable and ufeful at fea, within any of the degrees aforefaid, that the faid commifioners; or the major part of them, fhall certify the fame accordingly, under their hands and feals, to the commifioners of the navy for the time being, together with the perfon or perfons names who are the authors of furh propofal; and, upon fuch certificate, the faid commiffioners are hereby auchorized and required to make out a bill or bills for the refpective fum or fums of money, to which the author or authors of fuch propofal', their executors, adminiftrators, or affigns, thall be intitled, by virtue of this att; which fum or fums the treafurer of the navy is hereby required to pay to the faid author or authors, their executors, adminiftrators, or affigns, out of any money that flall be in his bands, unapplied to the ufe of the navy, according to the true intent and meaning of this act.
And it is hereby further enached, by the authority aforefaid, That if any fuch propofal thall not, on trial, be found of fo great ufe as afore-mentioner, yet if the fame, on trial, in the judgment of the faid commifioners, or the major part of them, be found of confiderable ufe to the public, that then, in fuch cafe, the faid author or authors, their executors, adminiftrators, or affigns, hall have and receive fuch lefs reward therefore, as the faid commiflioners, or the major part of them, thall think reafonable, to be paid by the treafurer of the navy on fuch certificate, as aforefaid.

An act to render more effectual an act made in the twelfth year of the reign of her late majefty queen Anne, intitled, An act for providing a public reward for fuch perfon or perfons as hall difcover the longitude at fea; with regard to the making experiments of propofals made for difcovering the longitude; and to enlarge the number of commiffoners for putting in execution the faid aft, in the 26th of Gearge II.
Whereas by an act of parliament made in the twelfth year of the reign of her late majefty queen Anne, intitled, An act for providing a public reward for fuch perfon or perfons as fhall difcover the longitude at fea; the commiffioners therein and thereby named and conflituted, or any five or" more of them, have full power to hear and receive any propofal or propofals that thall be made to them for difcovering the faid longitude; and, in cafe the faid commiffiomers, or any five or more of them, fhall be fo far fatisfied of the probability of any fuch difcovery, as to think it proper to make experiment thereof, they fhall certify the fame, under their hands and feals, to the commiffioners of the navy for the time being, together with the perfons names who are authors of fuch proporals; and, upon producing fuch certificate, the faid commiffioners are thereby authorized and required to make out a bill or bills for any fuch fum or fums of money not exceeding two thoufand pounds, as the faid comminfioners for the difcovery of the faid longitude, or any five or more of them, fhall think neceffary for making the experiments, payable by the treafurer of the navy; which fum or fums the treafurer of the navy is, by the faid act, required to pay immediately to fuch perfon or perfons as fhall be appointed by the commiffoners for difcovery of the faid longitude to make thofe experiments, out of any money that fhall be in his hands unapplied for the ufe of the navy: and whereas, for a due and fufficient encouragement to any fuch perfon or perfons as fhall difcover a proper method for finding the faid longitude, it is likewife enacted by the faid act, That the firft author or authors, difcoverer or difcoverers, of any fuch method, his or their executors, adminiftrators, or affigns, fhall be intitled to and have fuch reward, as in the faid aet is particularly mentioned: and whereas, by another act of parliament made in the fourteenth year of the reign of his prefent majefty, intitled, An act for furveying the chief ports and head-lands on the coafts of Great-Britain and Ireland, and the iflands and plantations thereto belonging, in order to the more exact determination of the longitude and latitude thereof; reciting in part of the faid act of parliament, made in the twelfth year of the reign of her faid late majefty queen Anne; and alfo reciting that it was abfolutely neceffary, for making the difcovery uleful at fea, and for the fecurity of thips approaching near the fhores, that the chief ports and head-lands on the coafts of Great-Britain and Ireland, and the iflands and plantations thereto belonging, fhould be firft furveyed, and the longitude and latitude of fuch places determined more exactly than bad then been done; and likewife reciting that fome doubts had arifen, whether, by the words of the faid act of parliament made in the twelfth year of queen Anne, the faid fum of two thoufand pourds appointed for making fuch experiments, or any part thereof, could be applied for fuch furvey, or fixing the longitude or latitude of fuch places, it was enacted by the faid act made in the fourteenth year of the reign of his prefent majefty, That the faid commiffioners for difcovering the longitude, or any five or more of them, Should have full power to apply fuch part of the faid fum of two thoufand pounds, mentioned in the faid firft recited act, as had not then been laid out in experiments, as they fhall think neceffary for the making fuch furvey, and determining the longitude and Jatitude of the chief ports and head-lands, on the coafts of GreatBritain and Ireland, and the iflands and plantations thereto belonging; and that fuch fum or fums, part of the faid two thoufand pounds, which the faid commiffioners, or any five or more of them, fhould think neceffary, hould be paid immediately by the treafurer of the navy, to fuch perfon or perfons as fhould be appointed by the faid commiffioners for the difcovery of the longitude, to make fuch furvey, and determine fuch longitude and latitude, out of the money that fhould be in the hands of fuch treafurer unapplied for the ufe of the navy; and whereas a competent number of the faid commiffioners for the difcovery of the faid longitude, have (by virtue of the powers vefted in them, by the faid act mate in the twelfth year of the reign of queen Anne) heard and received feveral propofals made to them at different times, for difcovering the faid longitude, and were fo far fatiffied of the probabilities of fuch difcoveries, that they thought it proper to make experiments thereof, and accordingly certified the fame, from time to time, to the commiffioners of the navy for the time being, together with the name of matter Juhn Harrifon, who was author of the faid propofals; whereupon bills were made out for feveral fums of money, amounting in the whole to one thoufand two hundred and fifty pounds, all which refpective fums were paid to the faid John Harrifon by the treafurer of the navy, purfuant to the directions of the faid laft mentioned act of parliament, as parts of the faid two thoufand pounds therein mentioned; which the faid commiffioners for difcovering
the faid longitude thought neceffary for making the faid ex: periment: and whereas a like competent number of the fand commiffioners for the difcovery of the faid longitude did (by virtue and in purfuance of the powers vefted in them by the faid feveral above-mentioned acts of parlament) appoint mafter William Whifton to farvey and determinc the longitude and latitude of the chief ports and head-lands on the coafts of Great-Britain and Ireland, and the illands and plantations thereto belonging; and did alfo apply the further fum of five hundred pounds (other part of the faid fum of two thoufand pounds mentioned in the faid act made in the twelfth year of the reign of queen Anne (which they thought neceflary for the making fuch furvey, and determining the faid laft mentioned longitude and latitude, and which faid fum of five hundred pounds was paid to the faid William Whifton accordingly by the treafurer of the navy: and whereas by reaton of the feveral payments made by the treafurer of the navy to the faid John Harrifon and William Whifton refpectively, as aforefaid, amounting in the whole to one thoufand leven hundred and fifty pounds, the faid commiffoners for difcovering the faid longitude have at prefent, by virtue of the faid acts of parliament, power only to apply the fum of two hundred and fify pounds and no more (being the remainder of the faid two thoufand pounds) towards making any further experiments which they may think proper and neceffary to be made, in order to difcover the longitude: and whereas, from the experiments which have already been made in purfuance of the powers vefted in the faid commiffioners as aforefaid, there is great reaton to expect, that by continuing to encourage ingenious perfons to invent and make further improvements and experiments, in order to difcover the faid longitude, fuch difcoveries may at length be produced as will effectually anfwer that end, and thereby contribute very much to the advantage of the trade and honour of this kingdom !' therefore, for enabling the faid commiffioners to caufe fuch further experiments to be made as they thall think proper for the purpofes aforefaid, be it enacted by the king's moft excellent majefy, by and with the advice and confent of the lords fpiritual and temporal, and commons, in this prefent parliament affembled, and by the authority of the fame, That the faid commiffioners conflituted by the faid act of parliament made in the twelfth year of the reign of the late queen Anne; for the difcovery of the longitude at fea, and for examining, trying, and judging of all proporals, experiments, and improvements, relating to the fame, or any five or more of them, have full power to hear and receive any propofal or propofals that have been or fhall hereafter be made to them for difcovering the longitude at fea; and in cafe the faid commiffioners, or any five or more of them, fhall be fo far fatisfied of the probability of any fuch propofal or difcovery, as to think it proper to make experiment thereof, they fhall certify the fame under their hands and feals to the commifiioners of the navy for the time being, together with the perfons names who flall be the authors of fuch propofals; and, upon producing fuch certificate, the faid commiffioners of the navy are hereby authorized and required to make out a bill or bills for any fuch fum or fums of money, not exceeding two thoufand pounds, over and above the aforefaid fum of two hundred and fifty pounds, being the remainder of the two thoufand pounds mentioned in the faid act made in the twelfth year of the reign of the late queen Anne, as the faid commiffioners for the difcovery of the faid longitude, or any five or more of them, fhall think neceffary for making any experiments in purfuance of this act, or cither of the faid former acts above-mentioned, payable by the treafurer of the navy; which fum or fums the treafurer of the navy for the time being is hereby required to pay immediately to fuch perfon or perfons as fhall be appointed by the commiffioners for the difcovery of the faid longitude to make thofe experiments, out of any moncy that Ohall be in his the faid treafurer's hands unapplied for the ufe of the navy.
And whereas many of the commifioners, appointed by the faid act made in the twelfth year of the reign of her late majefty queen Anne, are decieafed; be it therefore enacted by the authority aforefaid, That the governor of the royal hofpital for feamen at Greenwich for the time being, the judge of the high court of admiralty for the time being, the fecretaries of the treafury for the time being, the fecretary of the admiralty for the time being, and the comptroller of the navy for the time being, fhall be, and they are hereby added to, and joined with, fuch of the commifioners appointed by the faid act for difcovering the longitude, as are furviving; and the faid perfons, hereby appointed commitioners, fhall and may act, to all intents and purpofes, for putting in execution the faid former acts, and this prefent act, as fully and effectually, as if they had been appointed commifioners by the faid act made in the twelfth year of the reign of her late majefty queen Anne.

Anno Secundo Georgii III. Regis, C A p. XVIII.
An act for rendering more effectual an act made in the twelfth year of the reign of ber late majefty queer Anne,

## LON

LOT
intided, An act for providing a public reward for fuch perfon or perfons as fhall difcover the longitude at fea, with regard to the making experiments of propofals made for difcovering the longitude.

Whereas by an act of parliament made in the twelfth year of the reign of her late majefty queen Anne, intitled, An act for providng a public reward for fuch perfon or perions as fhall difcover the longitude at fea, the commiffioners therein named, or any five or more of them, have full power to hear and receive any propofal or propofals that thall be made to them for difcovering the faid longitude; and in cafe the faid commiffioners, or any five or more of them, fhall be fo far fatisfied of the probability of any fuch difcovery, as to think it proper to make experiment thereof, they fhall certify the fame, under their hands and feals, to the commifioners of the navy for the time being, together with the perfons names who are authors of fuch propofals; and upon producing fuch certificate, the faid commiffioners are thereby authorized and required ro make out a bill or bills for any fuch fum or fums of money, not exceeding two thoufand pounds, as the faid commiffioners for the difcovery of the faid longitude, or any five or more of them, fhall think neceflary, for making the experiments, payable by the treafurer of the navy; which fum or fums the treafurer of the navy is, by the faid act, re-quired to pay immediately to fuch perfon or perfons as thall be appointed by the faid commiffioners to make thofe experiments, out of any money that fhall be in his hands unapplied, for the ufe of the navy. And whereas, for a due and fufficient encouragement to any fuch perfon or perfons as ihall difcover a proper method for finding the faid longitude, it is likewife enacted by the faid act, That the firf author or authors, difcoverer or difcoverers, of any fuch method, his or their executors, adminiftrators, or affigns, fhall be intitled to, and have, fuch reward as in the faid act is particularly mentioned: and whereas by another act of parliament made in the fourteenth year of the reign of his late majefty king George the fecond, intitled, An act for furveying the chief ports and head-lands on the coaifs of Great-Britain and Ireland, and the iflands and plantations thereto belonging, in order to the more exact determination of the longitude and latitude thereof, it was enacted, That the faid commifioners for difcovering the faid longitude, or any five or more of them, fhould have full power to apply fuch part of the faid fum of two thoufand pounds, mentioned in the faid firf recited act, as had not then been laid out in experiments, as they fhould think neceffary for the making fuch furvey, and determining the longitude and latitude of the chief ports and head-lands on the coafts of Great-Britain and Ireland, and the inlands and plantations thereto belonging; and that fuch fum or fums, part of the faid two thoufand pounds, which the faid commifioners, or any five, or more of them, thould think neceffary, fhould be paid immediately by the treafurer of the navy, to fuch perfon or perfons as fhould be appointed by the faid commiffioners to make fuch furvey, and decermine fuch longitude and latitude, out of the money that fhould be in the hands of fuch treafurer unapplied, for the ufe of the navy: and whereas by an act made in the twenty-fixth year of the reign of his late majeity king George the fecond, intitled, $A_{n}$ att to render more effectual an act made in the twelffh year of the reign of her late majefty queen Anne, intitled, An act for providing a public reward for fuch perfon or perfons as thall difcover the longitude at fea, with regard to the making experiments of propofals made for difcovering the longitude, and to enlarge the number of commiffioners for putting in execution the faid act, the further fum of two thoufand pounds was directed to be applied in fuch manne as the commiffioners for the difcovery of the longitude Chould think neceffary, for making further experiments: and whereas the faid commiffoners have, by virtue of the powers vefted in them by the faid feveral acts before-mentioned, heard and received reveral propofals made to them, at different times, for difcovering the faid Jongitude, and have, accordingly, certified the fame, from time to time, to the commiffioners of the navy for the time being, whereupon, bills have been made out for feveral fums of money, amounting in the whole to four thoufand pounds: all which refpective fums have been paid to feveral perforis, by the treafurer of the navy, purfuant to the directions of the faid acts of parliament; which the faid commiflioners, for difcovering the longitude, thought neceffary for making the faid experiments: and whereas, by reafon of the feveral payments made by the treafurer of the navy to the feveral perions as aforelaid, the faid commifioners have, by virtue of the faid acts of parliament, expended the whole of the fums thereby granted for the purpofes aforefaid: and whereas; from the experiments which have already been made in purfuance of the powers vefted in the faid commiffioners as aforefaid, there is great reafon to expect that, by eontinuing to encourage ingenious perfors to invent and make further improvements and experiments, in order to difcover the faid longitude, fuch difcoveries may at length pe produced as will effectualiy anfwer that end, and thereby contribute very much to the advantage of the trade and honour of this kingdom: there
fore, for enabling the faid commiffoners to caufe fuch further experiments to be made as they fhallthink proper for the purpofes aforefaid, be it enacted by the king's moft excellent majefty, by and with the adviceand confent of thelords fpiritual and temporal, and commons, in this prefent parliament affeinbled; and by the authority of the fame, That the faid commiffioners, conftituted by the faid feveral acts of parliament before-mentioned, for the difcovery of the longitude at fea, and for examining, trying, and judging, of all propofals, experiments, and improvements, relating to the fame; or any five or more of them, Ghall have full power to hear and receive any propofal or propofals that have been, or fhall hereafter be, made to them for difcovering the faid longitude at fea; and in cafe the faid commiffioners, or any five; or more of them, fhall be fo far fatisfied of the probability of any fuch propofal or difcovery; as to think it proper to make experimont thereof, they fhall certify the fame, under their hands and feals, to the commiffioners of the navy for the time being, together with the perfons names -who fhall be the authors of fuch propolals; and, upon producing fuch certificate, the faid commiffioners of the navy are hereby authorized and required to make out a bill or bills for any fuch fum or fums of money, not exceeding two thoufand pounds, as the faid commiffoners for the difcovery of the faid longitude, or any five, or more of them, fhall think neceffary for making any experiments in purfuance of this act, or any of the faid former acts above-mentioned, payable by the treafurer of the navy; which fum, or fums; the treafurer of the navy, for the time being, is hereby required to pay immediately to fuch perfon or perfons as fhali be appointed by the commiffioners for the difcovery of the faid longitude, to make thofe experiments, out of any money that fhall be in his the faid treafurer's hands, unapplied for the ufe of the navy.
LORINERS, bridle-fmiths, or bit-makers. They make all the metallic appurtenances belonging to bridles, hariefs, \&c. LORRAIN and BAR, belonging to France, is bounded on the north by Luxemburgh and the palatinate of the Rbine; on the eaft by Alface, on the fouth by Franche Comté, and on the weft by Champagne. It's length from north to fouth is about tro Englih miles, and it's greateft breadth from eaft to weft about 100 .
This country is divided into three parts, viz. I. The dutchy of Lorrain. II. The dutchy of Bar. And III. The three bifhopricks.
The air in general is very temperate and wholefome, and the foil fruifful in cornt, wine, hemp, and paftures: there are a great many mines of iron, lead, and fome of filver and copper.
Their falt-fprings are fo numerous, that they yield 200,000l. per ann. The chief rivers are the Maefe, the Mofelle, and the Sarre, which rife in the fouth of Lorrain, and run north through this country. In the laft war between France and the emperor Charles VI. which ended in a peace concluded in the year 1735,-one of the articles was, That the duke of Lorrain fhould yield his country to France; at leaft that king Stanillaus, father of the prefent queen of France, thould have the dominion of Lorrain, with the title of duke during his life; and that, after his deceare, Lorrain hhould be united to the crown of France; and that the duke of Lorrain, in confequence thereof, fhould be confituted grand duke of Tufcany in Italy, after the death of the then reigning grand duke; which happening anno 1737, the duke of Lorrain took poffeffion of Tufcany, and yet remains fovereign of it, and is fince elected emperor. See France, in regard to Lorrain.
LOT TERY, a kind of public game at hazard, frequent in England, France, and Holland, in order to raife money for the fervice of the fate, which is appointed with us by the authority of parliament, and managed by commiffioners appointed by the lords of the treafury for that purpofe.
It confilts of a certain number of blanks and prizes, which are drawn out of wheels, one of which contains the numbers, and the other the correfponding blanks or prizes.

The Laws of England relating thereto.
I. Stat. 10 and II Will. III. cap. 17. §. I. All lotteries are public nuifances, and all patents for lotteries are void and againf the law.
II. §. 2. No perfon fhall keep open or draw, or throw at, any lottery, either by dice, lots, cards, balls, numbers, figures, or any other way whatloever; and every perfon that hhall open or fhew, to be played or drawn at, any lottery, fhall farfeit 500 l . one third part to his majety, one other third part to the poor of the parifn; and the other third, with double cofts, to the party that fhall fue for the fame; and the parties offending thall likewife be profecuted as common rogues.
III. §. 3. Every pelfon that thall play, throw, or draw at, any lotrery, fhall forfeit 2001 . one third part to his majefty, one third to the poor of the paifh, and che other third with double cofts, to the perfon that fhall fue for the fame. IV. Stat. 9 Ann. cap. 6. §. 56. Juftices of peace, mayors, bailifs, head officers, conftables, avd other her majefty's civil
officers,
officers, are required to ufe their utmoft endeavours to prevent the drawing of any fuch unlawful lotery; and every perfon who fhall fet up, or publifh the fetting up, any unlawful lottery, with intent to have fuch lottery drawn, hall forfeit tool. one third part to her majefty, one other third to the poor of the parim, and the other third with coffs, 'to the party who fhall fue for the farne.
V. Stat. 10 Ann. cap. 26. §. 109. Every perfon who fhall keep any office for making infurances on marriages, births, chriftenings or fervice, or any office under the denominations of fales of gloves, of fans, of cards, of numbers, of the queen's picture; for the improvement of fmall fums, or the like offices, under the pretence of improving fmall fums, fhall forfeit 500 l . one third part to ber majelty, one other third to the poor of the parifh, and the orther third, with cofts, to the perfon who hall fue for the fame; and every printer or other perfon, who fhall publiih the keeping any fuch office, fhall forfeit iool. to be diftributed as the penalty laft mentioned; and every perfon who in any office, before the 24 th of June 1712, fet up for making infurances on marriages, \&c. or under any other the denominations aforefaid, or any like denominations, for improvement of fmall fums, fhall make, or fuffer to be made, any new infurances on marriages, births, chriftenings, or fervice, or receive any payments for improvement of fmall fums, fhall forfeit 100 l . to be diffributed in like manner.
V1. Stat. 5 Geo. I. cap. 9. §. 43. All fubfrctiptions for fale of the chances, or part of the chances, to arife on the tickets iffued by virtue of the act of this feffion; and all fuch kind of undertaking, fhall be within the meaning of the acts againft private lotteries, and the perfons buying, felling, fubfcribing, or taking fubferiptions for the purchale of fuch chances of any tickets made out in purfuance of any act for a public lottery, or on the numbers of fuch tickets, without having the original tickets in their cuftody and right, thall be liable to the penalties inflicted on fuch as thall be concerned in private lotteries; and every fuch offender hall for every chance, fo fold or fubfribed for, forfeit 1001 . over and above any former penalties; one moicty to the crown, the other to fuch perion as in his own right thall, at the commencement of the drawing of fuch lottery, be poffeffed of the ticket on which fuch chance fhall be fold or fubfcribed for.
VII. Stat. 8 Geo. I. cap. $\%$ \&. 36 . Every perfon who thall fet up or keep any office or place under the denomination of fales of houfes, lands, advowfons, prefentations to livings, plate, jewels, fhips, goods, or other things, for the improvement of fmall fums of money; or fhall fell or expofe to fale any houfes, \&c. by way of lottery, or by lots, tickets; numbers, or figures ; or thall make, print, advertife, or publifh, propofals or fchemes for advancing fimall fums of money by feveral perfons, amounting in the whole to large fums, to be divided amongft them by the chances of the prizes in any public lottery; or hall deliver out tickets to perfons advancing fuch fums, to intitle them to a fhare of the money, according to fuch propofals or fchemes; or fhall make, print, or publifh any propofal or fcheme of the like kind, and fhall be thereof conviged on the oath of one witnefs by two juftices of peace where fuch offence fhall be committed or the offender found, the perfon fo convicted thall (over and above any former penalties) forfeit 5001 . one third to the crown, one other third to the informer, and the remaining third to the poor of the parifh where the offence fhall be committed, to be levied by diffrefs and fale of goods by warrant of the juftices, and thall alfo be committed to the county gaol for one year, and till the 5001 . be paid; perfons aggrieved may appeal to the next quarter feffions.
VIII. §. 37. All perfons who fhall be adventures in fuch fales or locteries, or fhall contribute to fuch fales or lotteries, thall forfeit doubie the fum contributed, to be recovered with cofts; one moiety to the crown, the other to the informer. IX. Stat. 9 Geo. I. cap. I6. §. 4. If any perfons fhall, by colour of any authority from any foreign prince or ftate, fot up or keep any lottery, or undertaking in the nature of a lottery, or Ohall make, print, or publifh, any propofals or fcheme for fuch lottery, and fhall within this kingdom fell or difpofe of any tickets in any foreign lottery, and fhall be convicted on the oath of one witnefs before two juftices, \&c. where fuch offence fhall be committed, or the offender found, fuch offender thall (over and above any former penaltics) forfeit 2001 . one third to the crown, one other third to the informer, and the remaining third to the poor of the parifh, to be levied by diftrefs and fale of goods by warrant of the juftices, and fhall alfo be committed to the county gaol for one year, and 'till the faid fum be fatisfied.
X. §.5- Perfons, aggrieved by the judgment of the juftices may appeal to the next quarter felfions
XI. Stat. \& Geo. II. cap. 9. §. 12." A yearly fum of 24,0001 . out of the additional duties on ftamped vellum, parchment, and paper (granted by 9 and ro Will. III. cap. 25.) fhall be a fund for annuities of three per cenr. to contributors in a lottery, until redemption by parliament, and thall be paid half-yearly at Chriftmas and Midfummer to the cafhier of the bank.
XII. §. 13. It fhall be lawful for a:y perions to contribute
fums of rol. and for every fuch fum of rol, they fhall be ifi= terefted in fuch lot in the faid yearly fund, as is herein direged. XIII. §. 3x. The faid annuities of three per cent. íhall be free from taxes.
XIV.§. 32. The bank of England Thall employ one to be their chief cafhier, and one other to be their accountancgeneral ; and the faid cafbier, to whom the faid monies thall be iffued for payment of the faid annuities, fhall without delay apply the fame accordingly, and render his account thereof according to the courfe of the Exchequer; and the faid accountant-general thall infect all receipts and payments of the faid calhier, and the vouchers relating thercunto; and all perfons who thall be intitled to any of the fame annuities fhall be pofiefled thereof as a perfonal effate, and the fame thall not be defcendable to the heir, and haill not be liable to foreign attachment.
XV. §. 33. The faid annuities of three per cent. fhall be of one capital or joint fock, on which the fame annuities fhall be attending, and hall be called the joint fock of lottery annuities for the year 1731; and all perfons, in proportion to their refpective annuities, thall have a thare in fuch ftock; and fuch fhares fhall be transferrable and devifeable in the fame manner as is preferibed by act of parliament in the firf year of his late majefty's reign, touching the annuities after the rate of 5 per cent. and no Itamp duties fhall be chargeable on fuch transfers, and the governor and company of the bank of England fhall continue a corporation 'till the fame fhall be redeemed
XVI. §. 34. No fee fhall be taken for paying the faid annuities of three per cent. by the faid calhier ; and no fee fhall be taken for any transfer, upon pain that any officer offending thall forfeit 201, to the party aggrieved.
XVII. §. 35 . Thefe additional duties upon ftamped vellum, \&c. Thall be applied (charges excepted) to pay the annuities of 3 l. 10s. per cent. and then to pay the laid annuities of three per cent.
XVIII. $\$ .3^{6}$. Deficiencies thall be made grod out of fupplies to be granted by parliament, or out of the finking fund. XIX. §. 37. Monies iffued out of the finking fund fhall be replaced out of the firft fupplies to be granted in parliament. XX. §. 38. The furplus of the additional ftamp duties shall be referved for the difpofition of parliament.
XXI. §. 39. Upon one year's notice in the London Gazette, and upon the Royal Exchange, by authority of parliament, at any of the half-yearly days for payment, and upon repayment of the principal fum and all arrearages, the faid annuities hall ceafe; and the faid additional duties upon ftamped vellum, \&c. Thall be redeemed. And any vote of the houle of commons to be flignified by the fipeaker in writing fhall be fufficient notice.
XXII. Stat. 6. Geo. II, cap. 35. If any perfon fhall fell or deliver any ticket in any foreign lottery, and thall be convicted upon action or information, or upon oalh or affirmation of one witnefs before two juflices of peace where fuch offence fhall be committed or the offender found, the perfor fo convicted fhall forfeit 2001. one third to his majefty, one third to him who fhall make information of the offence, and the remaining third to the poor of the parifh, to be levied by diftrefs and fale of goods, and alfo fhall be committed to the county goal for one year, and from thence 'till the fum of 2001. be paid.
XXIII. §. 30. Any perfans aggrieved by the judgment of fuch juftices, ihall have liberty to appeal to the next quarter feffions.

## REMARKs,

In France there have been feveral lotteries, in favour of hofpitals.
M. Le Clerc has compoled a treatife of lotteries, wherein is fhewn what is laudable, and what blameable in them.-Gregory Leti has alfo a book on the fubject of lotteries.- Father Meneftrier has a treatife on the fame, publifhed in 1700, where he fhews their origin and ufe among the Romans.-He diftinguifhes feveral kinds of lotteries, and fpeaks of chances, and refolves feveral cafes of confcience relating thereto.
The prefent lottery in England, eftablifhed by authority, may be judged very ufeful; the motive thereto being for the purchafe of the Misseum, or callection of Sir Hans Sloane, and of the Harleian collection of manufcripts; and for providing one general repofitory for the better reception and more convenient ufe of the faid collection, and alfo of the Cottonian library, and of the additions thereto. See the asticle Museum.
Among the feveral miffakes that are committed about chance, fays the ingenious Mr. de Moivre, one of the moft common, and leaft furpected, is that which relares to lotterics. Thus, fuppofing a lottery, wherein the propottion of the blanks to the prizes is as five to one, it is very natural to conclude, that therefore five tickets are requifite for the chance of a prize; and yet it may be proved demonftratively, that four tickets are more than fufficient for that purpofe, which will be confirmed by often repeated experieace.
In the like manncr fuppofing a lotrery, wherein the proportion of the blanks to the prizes is as 39 to (fuch as was the lottery in England of 1710 ), it may be proved, that, in 28

7
cickets,

## LOT

rickets, a prize is as likely to be taken as not; which, though it may feem to contradiet the common notions, is neverthelefs grounded upon infallible demonftration.
When the play of the rbyad oak was in ufe, fome perrons Who tof eonfiderably by it, had their loffes chiefly occafioned by an argument of which they could not perceive the fallacy. The odds againift any particular'point of the ball were 31 to 1 , which intitled the adventurers, in cafe they were winners, to nave 32 ftakes returned, including their own; inftead of which they having but 28, it was very plain, that, on the fingle'account of the difadvaritage of the play, they loit $\frac{t}{8}$ of all the money they played for. But the matter of the ball mainained that they had no reafon to complain, fince he would undertake that any particular point of the ball fhould come un in 22 throws; of this he would offer to lay a wager, and actually laid it when required. The feeming contradiction between the odds of $31^{\circ}$ to 1 , and 22 throws for any chance to come up, fo perplexed the adventurers; that they begun oo think the advantage was on their hde, for which reaion they piayed on and continued to lofe.
The principleg whereon a kndwledge in the doctrine of chances is founded, are as foltow, viz.

1. I be probability of an event is greater or lefs, according to the number of chances by which it may happen, compared with the whole number of chances by which it may either happen or fail.
2. Wherefore if we conftitute a fraction whereof the numerator is the number of chances: whereby an event may Happen, and the denominator and number of all the chances whereby it may either happen or fail, that fraction will be a proper defignation of the probability of happening. Thus, if an event has 3 chances to happen and 2 to fail, the fraction $\frac{3}{5}$ will fitly reprefent the probability of it's pappening, and may be taken to be the meafure of it.
The fame thing may be faid of the probability of failing, which will likewife be meafured by a fraction; whofe numerator is the number of chances whereby it may fail, and the denominator the whole number of chances, both for it's happening and failing : thus the probability of the failing of that event, which has 2 chatices to fail and 3 to happen, will be mealured by the fraction $\frac{2}{5}$.
3. The fractions, which reprefent the probabilities of happening and failing, being added together, their fum will always be equal to unity, fince the fum of their numerators will be equal to their common denominator: now, it being. a certainty that an event will either happen or fail, it follows, that certainty, which may be conceived under the notion of an infintitely great degree of probability, is futly reprefented by unity.
Thefe things will eafily be apprehended, if it be confidered that the word probability includes a double idea; firft, of the number of chances whereby an event may happen; fecondly, of the number of chances whereby it may either happen or fail.
If I fay that I have three chances to win any fum of money, it is impofible from that bare affertion; to judge whether I am like to obtain it ; but if I add-that the number of chances either to obtain it'or to mifs it, is 5 in all, from hence will enfue' a comparifon between the chances that favour me, and the whole number of chances that are for or againf me, whereby a true judgment will be formed of my probability of fuccefs: whence it neceffarily follows, that it is the comparative magnitude of the number of chances to happen, in refpect to the whole number of chances either to happen or to fail, which is the true meafure of probability.
4: If, upon the happening of an event, I be intitled to a fum of money, my expectation of obtaining that fum has a determinate value before the happening of the event.
Thus, if I am to have rol. in cafe of the happening of an event which has an equal probability of happening and failing, my expectation before the happening of the event is worth 51 . For I am precifely in the fame circumftances as he who at equal play ventures 51 . either to have 101. or to lofe his 5 1. Now he who ventures 51 . in an equal play, is poffeffor of 5 . before the decilion of the play; therefore my expectation, in the cafe above-mentioned, muft alfo be worth 5 .
4. In all cafes, the expectation of obtaining any fum is cftimated by multiplying the value of the fum expected by the fraction which reprefencs the probability of obtaining it.
Thus, if I have 3 chances in 5 to obtain 1001 . I lay that the prefent value of my expectation is the product of 1001. by the fraction $\frac{3}{5}$, and confequently that my expectation is worth 6ol.. For,
Suppofing that an event may equally happen to any one of 5 different perfons, and that the perfon to whom it happens, fhould; in confequence of it, obtain the fum of rool. it is plain, that the right which each of them in particular has upon the fum expected is $\frac{x}{5}$ of 1001 . which right is founded in this; that if the 5 perfons, concerned in the happening of the event, fhould agree not to fland the chance of it, buc to divide the fum expected among themfelves, then each of them muft have $\frac{-\pi}{3}$ of 100 l . for his pretenfion.
Vol. II.

Now, whether they agree to divide that fum equally amorg themfelves, or rather chule to fand the chiance of the elent, no one has thereby any advantage or difadvantage, fince they are all upon an equal foot, and confequently each perion's expectation is worth $\frac{3}{5}$ of 1001 . Let us fuppofe farther, thit 2 of the 5 perfons coficerned in the happering of the event thould be willing to refigt their chanee to one of the other three, then the perfon to whom thefe two chances are thi refigned, has now three chances that favour him, and confequently has now a right triple of that which be had befote, and therefore his expectation is now worth $\frac{3}{5}$ of iont.
Now; if we confider that the fraction $\frac{3}{5}$ cxpreffes the proba bility of obtaining the futm of tool: ${ }^{5}$ and that $\frac{3}{5}$ of 100 is the fame thing as $\frac{3}{5}$ multiplied by 100 , we muft naturally fall into this conclufion, which has been laid down as a principle, that the value of the expectation of any futn is deter mined by multiplying the fum expected by the probability of obtaining it.
This maniner of reäfoning, though dedüced from a particular cafe, will eafily be perceived to be general, and appllicable to any other cafe.

## 

From what precedes it neceffarily follows, that if the value of an expectation be given, as allo the value of the thing expected, then dividing the firf value by the fecond, the quotient will exprefs the probability of obtaining the fum expected; thus if I have an expectation worth 601 . and that the fum which I may obtain be worth rool, the probability of obtaining it will be expreffed by the quotient of 60 divided by 100 , that is, by the fraction $\frac{60}{100}$, or $\frac{3}{5}$ :
6. The rifk of lofing any fum is the teverfe of expectation; and the true meafure of it is the product of the fum adventufed; multiplied by the ptobability of the lofs.
7. Advantage or difadvantage, in play, refults from the combination of the feveral expectations of the gamiefters, and of their feveral rifks.
Thus fuppofing that $A$ and $B$ play together, that $A$ has de: pofted 5 l. and B 3 1. that the number of chances which $A$ has to win is 4 , and the number of chances which $B$ has to win is 2 , and that it were required in this circumitance to determine the advantage or difadvantage of the adveriturers, we may reafon in this manner : fince the whole fum depofited is 8, and that the probability which $A$ has of getcing it is $\frac{4}{6}$, it follows, that the expectation of $A$, upon the whole fum depofited, is $8 \times \frac{4}{6}=5 \frac{1}{3}$, and for the fame reafon the expectation of $B$, upon that whole fum depofited, is $8 \times \frac{2}{6}=2$ $\frac{2}{3}$.
Now, if, from the refpective expectations which the adventurers have upon the whole fum depofited, be fubtracted the particular fums which they depofit; that is, theit ow ftakes; there will remain the advantage or difadvantage of either, according as the difference is pofitive or negative.
And therefore, if from $5^{\frac{5}{3}}$, which is the expectation of $A$ upon the whole fum depofited, 5 , which is his own ftake, be fubtracted; there will remain $\frac{1}{3}$ for his advantage; likewife, if from $2 \frac{2}{3}$, which is the expectation of $B, 3$, which is his own ftake, be fubtracted, there will remain $\frac{7}{3}$, which, being negative, thews that his difadvantage is $\frac{1}{5}$.
Thefe conclufions may alfo be derived from another confideration; for if from the expectation, which either adventurer has upon the fum depofited by his adverfary, be fubtracted the rifk of what he himfelf depofits, there will llkewife remain his advantage or difadvantage, according as the difference is pofitive or negative.
Thus in the preceding cafe, the flake of B being 3 , and the probability which A has of winning it, being $\frac{4}{6}$ : the expectation of A upon that ftake is $3 \times \frac{4}{6}=2$; moreover, the ftake of A being 5, and the probability of lofing it being $\frac{2}{6}$, his rifkought to be eftimated by $5 \times \frac{2}{6}=1 \frac{2}{3}$; wherefore, if from the expectation 2 the rik $1 \cdot \frac{2}{3}$ be fubtracted, there will remain $\frac{x}{3}$ as before for the advantage of $A$; and, by the famc way of proceeding, the difadvantage of $B$ will be found to be $\frac{t}{3}$ It is very carefully to be oblerved, that what is here called advantage or difadvantage, and which may pri perly be called gain or lofs, is always eftimated before the event is come to pars; and, although it be not cuftomary to call that gain or lofs, which is to be derived from an event not yet determined, neverthelefs, in the doctrine of charices; that appellation is equivalent to what in common difcourle is called ginn or lofs. For in the fame manner as that he who ventures a guinea in an equal game, may, before the determination of the play, be faid to be poffeflor of that guinea, and may, in confideration of that fum, relign his place to another; fo be may be faid to be a gainer or lofer who would get fome preht, or fuffer fome lofs, if he would rell his expectation upon equ-
table terms, and fecure his own ftake for a fum equal to the rikk of lofing it.
8. If the obtaining of any fum requires the happening of feveral events that are independent on each other, then the value of the expectation of that fum is found, by multiplying together the feveral probabilities of happening, and again multiplying the product by the value of the fum expected. Thus fuppofing, that in order to obtain 90 l . two events muft happen, the firft whereof has 3 chances to happen and 2 to fail, the fecond has 4 chances to happen and 5 to fail, and I would know the value of that expectation; I fay,
The probability of the firf's happening is $\frac{3}{3}$, the probability of the fecond's happening is $\frac{4}{9}$; now, multiplying thefe two probabilities together, the product will be $\frac{12}{45}$, or $\frac{-4}{5}$, and this product being again multiplied by 90 , the new product will be ${ }_{T 3}^{380}$ or 24 , therefore that expectation is worth 241 . The demonftration of this will be very eafy, if it be confidered, that, fuppofing the firft event had happened, then that expectation, depending now entirely upon the fecond, would, before the determination of the fecond, be found to be exactly worth $\frac{4}{9} \times 901$. or 401 . (by art. 5.) We may therefore look upon the happening of the firft, as a condition of obtaining an expectation worth 401 . but the probability of the firft happening has been fuppofed $\frac{3}{5}$, wherefore the expectation fought for is to be eftimated by $\frac{3}{5} \times 40$ or by $\frac{3}{5}$. $\times \frac{4}{9} \times 90$, that is, by the product of the two probabilities of happening multiplied by the fum expected.
And likewife, if an expectation depends on the happening of one event, and the failing of another, then it's value will be the product of the probability of the firft happening, by the probability of the fecond's failing, and of that again by the value of the fum expected.
And again, if an expectation depends on the failing of two events, the rule will be the fame, for that expectation will be found by multiplying together the two probabilities of failing, and multiplying that again by the value of the fum expected.
And the fame rule is applicable to the happening or failing of as many events as may be affigned.

## Corollary.

If we make abftraction of the value of the fum to be obtained, the bare probability of obtaining it will be the product of the feveral probabilities of happening, which evidently appears from this 8 th article, and from the corollary to the 4 th. Hitherto I have confined myfelf to the confideration of events independent; but for fear that, in what is to be faid afterwards, the terms independent or dependent might occafion fome obfcurity, it will be neceffary, before I proceed any farther, to fettle entirely the notion of thefe terms.
Two events are independent, when they have no connection one with the other, and that the happening of one neither forwards nor obftructs the bappening of the other.
Two events are dependent, when they are fo connected toyether, as that the probability of either's happening is altered by the happening of the other.
In order to illuftrate this, it will not be amifs to propofe the two following eafy problems.

1. Suppofe there is "a heap of 13 cards of one colour, and another heap of 13 cards of another colour, what is the probability of taking two cards at a venture out of each heap, I fhall take the two aces?
The probability of taking the ace out of the firft heap is $\frac{x}{\frac{2}{3}}$; now it being very plain, that the taking or not taking the ace out of the firft heap has no influence in the taking or not taking the ace out of the fecond, it follows, that, fuppofing that ace taken out, the probability of taking the ace out of the fecond will alfo be $\frac{1}{T_{3}}$; and therefore thofe two events being independent, the probability of thefe both hap-
pening will be $\frac{1}{13} \times \frac{1}{13}=\frac{1}{169}$.
2. Suppofe that, out of one fingle heap of 13 cards of one colour, it thould be defigned to take out the ace in the firft place, and then the deux; and that it were required to affign the probabiluty of doing it; we are to confider, that although the probability of the ace's being in the firft place be $\frac{1}{T 3}$, and that the probability of the deux's being in the fecond place would alfo be ${ }_{\mathrm{T}}^{1}$, , if that fecond event were confidered in itfelf without any relation to the firft; yet that, the ace being fuppofed as taken out at firft, there will remain but 12 cards in the heap, and therefore that, upon the fuppofition of the ace being taken out at firft, the probability of the deux's being next taken will be altered, and become $\frac{1}{12}$; and therefore we may conclude, that thofe two events are dependent, and that the probability of their both happening will be $\frac{1}{13} \times \frac{1}{12}=\frac{1}{156}$.
From whence it may be inferred, that the probability of the bappening of two events dependent is the product of the
probability of the happening of one of them, by the probability which the other will have of happening, when the firf thall have been confidered as having happened; and the fame rule will extend to the happening of as many events as may be affigned.
3. But to determine in the eafieft manner poffible, the probability of the happening of feveral events dependent, it will be convenient to diftinguifh, by thought, the order of thofe events, and to fuppofe one of them to be the firlt, another to be the fecond, and fo on: which being done, the probability of the happening of the firft may be looked upon as independent; the probability of the happening of the fecond is to be determined from the fuppofition of the firft's having happened; the probability of the third's happening is to be determined from the fuppofition of the firft's and fecond's having happened, and fo on: then the probability of the happening of them all will be the product of the multiplication of the feveral probabilities, which have been determined in the manner prefcribed.
We have feen before how to determine the probability of the happening or failing of as many events independent, as may be affigned; 'we have feen, likewife, in the preceding article, how to determine the probability of the happening of as many events dependent, as may be affigned; but, in the cafe of events dependent, how to determine the probability of the happening of fome of them, and, at the fame time, the probability of the failing of fome others, is a difquifution of a greater degree of difficulty; which, for that reafon, will be more conveniently transferred to another place.
4. If I have feveral expectations upon feveral fums, it is wery evident that my expectation upon the whole is the fum of the expectations I have upon the particulars.
Thus fuppofe two events fuch, that the firft may have three chances to happen, and two to fail; and the fecond four chances to happen, and five to fail ; and that I be intitled to gol. in cafe the firf happens, and to another like fum of 901 . in cafe the fecond happens alfo; and that I would know the value of my expectation upon the whole: I fay, the fum expected in the firf cafe being 901 . and the probability of obtaining it being $\frac{3}{5}$, it follows that my expectation, on that account is worth $90 \times \frac{3}{5}=54$; and again, the fum expected in the fecond cafe being 90 , and the probability of obtaining it being $\frac{4}{9}$, it follows that my expectation of that fecond fum is worth $90 \times \frac{4}{9}=40$; and, therefore, my expectation upon the whole is worth $541 .+401 .=941$.
But if I am to have gol. once for all, for the happening of one or the other of the two aforementioned events, the method of procels, in determining the value of my expectation, will be fomewhat altered; for, although my expectation of the firft event be worth 541 . as it was in the preceding example, yet I confider that my expectation of the fecond will ceafe upon the happening of the firt, and that, therefore, this expectation takes place only in cafe the firft does happen to fail. Now the probability of the frff's failing is $\frac{2}{5}$; and, fuppofing it has failed, then my expectation will be 40 ; wherefore $\frac{2}{5}$ being the meafure of the prebability of $m y$ obtaining an expectation worth 40 l . it follows, that this expectation (to eftimate it before the time of the firft's being determined) will be worth $40 \times \frac{2}{5}=16$, and, therefore, my expectation upon the whole is worth $541 .+161 .=701$.
If that which was called the fecond event, be now confidered as the firft, and that which was called the firft, be now confidered as the fecond, the conclufion will be the fame as before.
For the application of thefe principles to the doctrine of chances in general, and, among the reft, to the article of lotteries. But, to underftand the rationale of the theorems raifed by Mr. De Moivre, for this and other purpofes of play, I would refer the reader to that ingenious writer himfelf; but the reader thould be prepared with a competent knowledge of alr gebra, and then the feps which that gentleman has raken to come at the folution of the various problems he gives, will be eafily followed.

In a lottery, whereof the number of blanks is to the number of prizes as 39 to 1 ( (fuch as was the lottery in 1710) to find bow many tickets one muft take to make it an equal cbance for prizes.

Multiply 39 by 0,7 , and the product, 27,3 , will thew that the number of tickets requifite to that effect will be 27 , or 28 at molt. Likewife in a lottery, whereof the number of blanks is to the number of prizes as 5 to 1 , multiply 5 by $\mathrm{O}_{9} 7$, and the product, 3,5 , will hew that there is more than

## LOT

equality of chance in four tickets, for one or more prizes, but lefs than equality in three.
*For the reafon of this and the following rules, as applied to lotteries, fee De Moivre's Introduction to the Doftrine of Chances.

## Remark.

In a lottery, whereof the blanks are to the prizes as 39 to 1 , if the number of rickets in all were but 40 , the proportion abovementioned would be altered, for 20 tickets would be a fufficient number for the juit expectation of the fingle prize, it being evident that the prize may be as well among the tickets it beich aren, as among thofe that are left behind.
which are taken, as among thote in all were 80 , fill prefervAgain : if the number of tickets in all were 80 , till prelerv-
ing the proportion of 39 blanks to one prize, and, confequently, fuppofing 78 blanks to two prizes, this proportion would ftill be altered; for, by the doctrine of combinations, it will appear that the probability of taking one prize or both, in 20 tickets, would be but $\frac{139}{361}$, and the probability of taking none would be $\frac{177}{316}$; wherefore the odds a gainft taking any prize would be as 177 to 139 , or very near as 9 to 7
And, by the fame doctrine of combinations, it will be found that 23 tickets would not be quite fufficient for the expecta: tion of a prize in this lottery, but that 24 would rather be too many; fo that one might with advantage lay an even wager of taking a prize in 24 tickets.
If the proportion of 39 to x be oftener repeated, the number of tickets requifite for the equal chance of a prize will ftill increafe with that repetition; yet let the proportion of 39 to I be repeated never fo many times, nay an infinite number of times, the number of tickets requifite for the equal chance of a prize would never exceed $\frac{7}{10}$ of 39 , that is, about 27 or 28 .
Wherefore, if the proportion of the blanks to the prizes is often repeated, as it ufually is in lotteries, the number of tickets requifite for a prize will always be found, by taking $\frac{7}{10}$ of the proportion of the blanks to the prizes.

In a lottery, conffing of 40,000 tickets, amon'g which are three particular benefits, what is the probability that, taking 8000 of them, one or more of the particular benefits foall be:among $/ \lambda$ them?

## Solution.

Firft, In the theorem belonging to the remark in Mr. De Moiyre's Doctrine of Chances, page 76 , fecond edition, there being fubfituted refpectively $8,000,40,000,32,0003$, and $I$, in the room of $c, n, d, c$, and $p$, it will appear that the probability of taking one precifely of the three particular benefits, will be $\frac{8000 \cdot 32000.3 \text { 3999. } 3}{40000.39999 \cdot 39998 .}=\frac{48}{125}$ nearly.
Secondly, $c, n, d, a$, being interpreted as before; let us fuppofe $p=2$, hence the probability of taking precifely two of the particular benefits will be found to be $\frac{8000 .-7999 \cdot 32000.3}{40000 \cdot 39999 \cdot 39998 .}=\frac{12}{125}$ nearly.
Thirdly, Making $p=3$, the probability of taking all the three particular benefits will be found to be $\frac{8000.7000 .}{40000.39999}$. $\frac{7008}{39998}=\frac{1}{125^{2}}$, very near. Wherefore, the probability of taking one or more of the three particular benefits will be $\frac{48+12+1}{125}$, or $\frac{6 x}{125}$, very near.
It is to be obferved, that thofe three operations might have been contracted into one, by inquiring the probability of not taking any of three particular benefits, which will be found to be $\frac{32000.31 .999 .31908}{40000.39999 \cdot 3990^{8}}=\frac{64}{125}$, nearly; which being fubtracted from unity, the remainder, $1-\frac{64}{125}$, or $\frac{61}{125}$, will thew the probability required, and, therefore, the odds againft taking any of three particular benefits will be 64 to 6I nearly.

To find bow many tickets ought to be taken, in a lottery confift ing of 40,000 , among wwich are three particular benefits, to make it as probable that one or more of thofe three may be taken as not.

## Solution.

Let the number of tickets requifite to be taken be $=x$, it will follow, therefore, from the remark belonging to the XXth problem in De Moivre, page 76 , that the probability

## LOT

of not taking any of the pidrticular benefits will bt $\frac{n-x}{n} \times$ $\frac{n-x-1}{n-1} \times \frac{n-x-2}{n-2}$; but this probability is equal to $\frac{1}{2}$; fince, by bypothefis; the probability of taking one or more of them is equal to $\frac{1}{2}$, frum whence we thall have the equation $\frac{n-x}{n} \times \frac{n-x-1}{n-1} \times \frac{n-x-2}{n-2}=\frac{1}{2}$; which equation being folved, the value of $x$ will be found to be nearly 8252 .
N. B. The factors whereof both the numerator and denominator are compofed, being but few; and in arithmetic progreffion, and befides, the diffetence being very fimall in refpect of $n$, thofe terms may be confidered as being in geometric progrefion: wherefore, the cube of the middle term; $\frac{n-x-1}{n-1}$, may be fuppofed equal to the product of the multiplication of thofe terms ; from whiehce will arife the equation $\frac{n-x-\mathrm{I}}{n-\mathrm{I}}=\frac{\mathrm{I}}{2}$, or, neglecting unity in both numerator and denominator, $\frac{n-x)^{3}}{n^{3}}=\frac{1}{2}$, and, corifequently; $x$ will be found to be $=n \times I-\sqrt{3} \frac{I}{2}$, or $n \times$ $I-\frac{I}{2} V^{3} 4$, but $n=40,000$; atid $-I \frac{I}{2} V^{3} 4=0.2063$; wherefore $\alpha=8252$.
In the remark belonging to the fecond probliem, a rule was given for finding the number of tickets that were to be taken to make it as probabie that one or more of the benefits would be taken as not; but in that rule it was fuppofed, that the proportion of the blanks to the prizes was often repeated, as it ufually is in lotteries: now, in the cale of the prefent.problem, the particular behefits being but three in all, the remaining tickets are to be confidered as blanks in refpect of them; from whence it follows, that the proportion of the number of blanks to one prize being very near as 13332 to 1 , and that proportion being repeated but three times in the whole number of tickets, the rule there given would not have been fufficiently exact ; for which reafon lt was thiought neceffary ta give another rule in this place.

Suppofing a lottery of 100,000 tickets, whereof 90,000 are blanks, and ro,000 are benefits; to determine accurately robai the odds are of taking or not taking a benefit in any niumber of tickets affigned.

## Soさytion.

Suppofe the Humber of tickets to be fix; then let us inquire into the probability of taking no prize in fix tickets: which to, find, let us make ufe of the theorem fet down in the cotoflary of the XIXth problem [fee De Moivre, page 75 and 76] wherein it will appear that the number of chances for taking no prize in 6 tickets, making $a=10,000 ; b=90,000, c=6, p=0, n=100,000$, will be $\frac{90000}{1} \times \frac{89999}{2} \times \frac{89998}{3} \times \frac{89997}{4} \times \frac{89996}{5} \times \frac{89005}{6}$, and that the whole number of chances will be $100000 \times$ $\frac{99999}{2} \times \frac{99998}{3} \times \frac{99997}{4} \times \frac{99996}{5} \times \frac{99995}{6}$; then dividing the firft number of chances by the fecond, which may eafily be done by logarithms, the quotient will be 0.53143 ; and this thews the probability of taking no prize in 6 tickets; and, this decimal fraction being fubtracted from unity, the remainder, 0.46857 , flews the probability of taking one or more prize in 6 tickets; wherefore the odds againit taking any prize in 6 tickets will be 53143 to 46857 .
If we fuppofe now, that the number of tickets taken is 7 ; then carrying each number of chatices above written one flep fatther, we flall find that the probability of taking no prize in 7 tickets is 0.47828 , which fration being fubtracted from unity, the remainder will be 0.52172 ; which thews the odds of taking one prize, or more, in 7 tickets, to be $5217^{2}$ to 47828 .

## Remark.

When the number of tickets taken bear a very inconfiderable proportion to the whole number of tickets, as it happens in the cale of tfis problem, the queftion may be refolved as a problem depending on the caft of a die; we may, therefore, fuppofe a die of io faces, having one of it's faces fuch as the ace, reprefenting a benefit, and all the other nine reprefenting blanks, and inquire into the probabiliy of mifing the ace fix

## $\mathrm{L} O \mathrm{~T}$

## LOT

times together, which, by the rules given in the Introduction *, will be found to be $\frac{9^{5}}{10^{6}}=0.53144$, differing from what we had found before but one unit in the fifth place of decimals : now, if we inquire into the probabidity of milfing the ace feven times, we fhall find it 0.47829 , differing alfo but orre unit in the fifth of decimals, from what had been found before ; and, therefore, in fuch cafes as this, we may be methods indifferently, but the firf will be exact, we actually multiply the numbers together; the fecond is only an approximation.

* See De Moivre's Introduction to the Doctrine of Chances, page $9,10,11$, \&c.
But both methods confirm the truth of the practical rule given in the third problem [in De Moivre's Introduction] about finding what number of tickets is neceflary for the equai chance of a prize; for multiplying as it is there directed, the number 9 reprefenting the blanks, by 0.7 , the product, 6.3 , will fhew that the number requifite is between 6 and 7 . The fame things being given as in the before-mentioned problem, fuppofe the price of each ticket to be rol. and that, fter the lottery is drawn, 7 l . 10s. be returned to the blanks, to find in this lottery the value of the chance of a prize.

## O.LU.TION.

There being 90,000 blanks; to every one of which 71.10 s . is returned, the total value of the blanks is 675,0001 . and, confequently, the total value of the benefits is 325,0001 . which being divided by 10,000 , the number of the benefits, the quotient is 32 I . Io s. and therefore one might, for the fum of 32 l . 10 s . be intitled to have a benefit certain, taken random, out of the whole number of benefits: the purhafer of a chance has, therefore, one chance in ten for the fum of 32 l . 10 s . and nine chances in ten for-lofing his money; from whence it follows, that the value of his chance is the tenth part of 321.10 s . that is, 31.5 s . and, therefore, the purchafer of a chance, by giving the feller 31.5 s . is intited to the chance of a beneft, and ought not to return any thing to the feller, although he fhould have a prize; for the feller having 3 l. 5 s. fure, and nine chances in ten for 71 . ros. the value of which chances is 61.15 s . it follows that he has his rol.
Suppofing fill the fame lottery as has been mentioned in the two preceding problems of De Moivre, let A engage to furnifh B with a chance, on condition that, whenever the ticket on which the chance depends, thall happen to be drawn, whether it proves a blank or a prize, A hall furnifh B with a new chance, and fo on, as often as there is occafion, 'till the whole lottery be drawn; to find what confideration $B$ ought to give A, before the lottery begins to be drawn, for the chance or chances of one or more prizes, admitting that the lottery will be 40 days in drawing.

## SOLyTMON.

Let 31.5 s. which is the abfolute value of a chance, be called.
. A who is the feller, ought to confider, that the firft day he furnihhes neceflarily-a chance, whofe value is $s$.
2. Thar the fecond day he does not neceffarily furnifh a chance, but conditionally, viz. if it fo happen that the ticket on which the chance depends, fhould be drawn on the firft day ; but the probability of it's being drawn on the firft day is $\frac{1}{48}$; and, therefore, he oucht to take $\frac{T}{s} s$ for the conaderation of the fecond day.
fecond day. That, in the fame manner, he does not neceffarily fur3. That, in the fame manner, he does not neceflarily fur-
nifh a chance on the third day, but conditionally, in cafe the only ticket depending (for there can be but one) fhould happen to be drawn on the fecond day, of which the probability being $\frac{1}{39}$, by reafon of the remaining 39 days, from the fecond inclufive to the laft, it follows, that the value of that chance is $\frac{1}{34}$ s.
4. And, for the fame reafon, the value of the next is $\frac{1}{38} s$, and foon.
The purchafer ought therefore to give the feller $\mathrm{I}+\frac{\mathrm{x}}{40}+$ $\frac{1}{39}+\frac{1}{3^{8}}+\frac{1}{37} \cdots+\frac{1}{2}$, the whole multiplied by $i$, or $1+\frac{1}{2}+\frac{1}{3}+\frac{1}{4}+\frac{1}{5}+\frac{1}{6} \cdots+\frac{1}{40}$, the whole multiplied bys. Now, it being pretty laborious to fum up thofe 40 terms, we have here made ufe of a rule which Mr . De Moivre has given in the fupplement to his Mifcellanea Analytica, whereby may be fummed up, in a very thort time, as many of thofe terms as one pleafes, though they were 10,000 or more; and, by that rule, the fum of thote 40 terms will be found to be 4.2785 very near, which being multiplied by $s$, which in this cafe is 3.25 , the product is 13.9. will fhew that the purchafer ought to give the feller about 13 l. 18 s .

## Corollary

The value of the chance sfor one fingle day that thall be fixed upon, is the value of that chance divided by the number of days intercepted between that day inclufive, and the number of days remaining to the end of the lottery: which, however, muft be underftood with that reftriction, that the day fixed upon muft be chofe before the lottery begins, or that, if it be done on any other day, the fate of the lottery muft be known, and a new calculation made accordingly for the value of $s$.

## Remarks.

A knowledge in the doctrine of chances, is not only applicable to all kinds of hazards of this nature, but may likewife be a help to cure a kind of fuperftition, which has been of long ftanding in the world, viz, that there is in play fuch a thing as luck, good or bad. I ow's there are a great many judicious people, who, without any other affiftance than that of their own reafon, are fatisfied, that the notion of luck is merely chimerical; yet I conceive, that the ground they have to look upon it as fuch, may fill be farther inforced from fome of the following confiderations.
If, by faying that a man has good luck, nothing more was meant, than that he has been generally a gainer at play, the expreffion might be allowed as very proper in a thort way of fpeaking: but, if the word good luck be underftood to fignify a certain predominant quality, to inherent in a man, that he muft win whenever he plays, or at leaft win oftener thati lofe, it may be denied; that there is any fuch thing in nature.
The affertors of luck are very fure, from their own experience, that at fome times they have been very lucky, and that at other times they have had a prodigious run of ill luck againft them, which, whilft it continued, obliged them to be very cautious in engaging with the fortunate; but how chance fhould produce thefe extraordinary events, is what they cannot conceive: they would be glad, for inftance, to be fatisfied, how they could lofe fifteen games together at piquet, if ill luck had not ftrangely prevailed againft them. But, if they will be pleafed to confider the rules given by Mr. De Moivre, they will fee, that though the odds againf their lofing fo many times together be very great, viz. 32767 to 1 , yet that the poffibility of it is not deftroyed by the greatnefs of the odds, there being one chance in 32768 that it may fo happen; from whence it follows, that it was fill poffible to come to pafs, without the intervention of what they call ill luck.
Befides, this accident of lofing fifteen times together at piquet is no more to be imputed to ill luck, than the winning with one fingle ticket the higheft prize in a lottery of 32768 tickets is to be imputed to good luck, fince the chances in both cafes are perfectly equal. But if it be faid, that luck has been concerned in this latter cafe, the anfwer will be eafy; for let us fuppofe luck not exifting, or, at leaft, let us fuppofe it's influence to be fufpended, yet the higheft prize muft fall into fome hand or other, not by luck (for by the hypothefis that has been laid afide) but from the mere neceffity of it's falling fomewhere.
Thofe who contend for luck, may, if they pleafe, alledge other cafes at play, mnch more unlikely to happen than the winning or lofing fifteen games together, yet ftill their opinion will never receive any addition of frength from fuch fuppofition. For, by the rules of chance, a time may be computed, in which thofe cales may as probably happen as not; nay, not only fo, but a time may be computed in which there may be any proportion of odds for their fo happening. But fuppofing that gain and lofs were fo fluctuating, as always to be diffributed equally, whereby luck would certainly be annihilated, would it be reafonable in this cafe to attribute the events of play to chance alone? I think, on the contrary, it would be quite ocherwife, for then there would be more reafon to furpect that fome unaccountable fatality did rule in it: thus, if two perfons play at crol's and pile, and chance alone be fuppofed to be concerned in regulating the fall of the piece, is it probable that there fhould be an equality of heads and croffcs?
It is 5 to 3 that in 4 times there will be an inequality; it is II to 5 in 6,93 to 35 in 8 , and about 12 to 1 in 100 times : wherefore, chance alone by it's nature conflitutes the inequalities of play, and there is no need to have recourfe to luck to explain them.
Further, the fame arguments which explode the notion of luck, may, on the other fide, be ufeful in fome cales to eftablifh a due comparifon between chance and defign: we may imagine chance and defign to be, as it were, in competition with each other, for the production of fome forts of events, and may calculate what probability there is, that thofe events fhould be rather owing to one than to the other. To give a familiar inftance of this; let us fuppofe thet, two packs of piquet cards being fent for, it thould be perceived that there is, from top to bottom, the fame difpolition of the cards in both packs; let us likewife fuppofe that, fome doubs arifing about this difpofition of the cards, it fhould be quef-
tioned,

## L O U

## L O U

tioned, whether it ought to be attributed to clance, or to the maker's defign : in this cafe, the docirine of combinations decides the queftion, fince it may be proved by it's rules, tha there are the odds of above $26,313,083$ millions of millions, of millions of millions, to one, that the cards were defignedly fet in the order in which they were found.
From this laft confideration we may learn, in many cafes, how to diffinguif the events, which are the effect of chance, from thofe which are produced by defign: the very doctrine, that finds chance where it really is, being able to prove by a gradual increafe of probability, 'till it arrive at demonftration; that where uniformity, order, and conftancy refide, there alfo refide choice and defign.
Laftly, one of the principal ufes to which this doctrine of chances may be applied, is the difcovering of fome truths, which cannot fail of pleafing the mind, by their generality and fimplicity; the admirable connection of it's confequences will increafe the pleafure of the difcovery; and the feeming paradoxes wherewith it abounds, will afford very great matter of furprize and entertainment to the inquifitive. A very remarkable inftance of this nature may be feen in the prodigious advantage which the repetition of odds will amount to; thus, fuppofing I play with an adverfary who allows me the odds of 43 to 40 , and agrees with me to play 'till 100 ftakes are won or loft on either fide, on condition that I gave him an equivalent for the gain I am intitled to by the advantage of my odds; the queition is, what I am to give him, on fuppofing we play a guinea a ftake? The anfwer is 99 guineas, and above eighteen fhillings ${ }^{*}$, which will feem almoft incredible, confidering the fmallnefs of the odds of 43 to 40 . Now, let the odds be in any proportion given, and let the number of ftakes played for be never fo great, yet one general conclufion will include all the poffible cafes, and the application of it to numbers may be wrought in lefs than a minute's time.

## * Guineas were then at 21 s .6 d .

I have explained, in my introduction to the Doctrine of Chances, Cays Mr. De Moivre, the chief rules on which the whole art of chances depends; I have done it in the plaineft manner that I could think of, to the end it might be (as much as poffible) of general ufe. I flatter myfelf that thofe who are acquainted with arithmetical operations, will, by the help of the introduction alone, be able to folve a great variety of queftions depending on chance; I wifh, for the fake of fome gentlemen who have been pleafed to fubfcribe to the printing of my book, that I could every where have been as plain as in the introduction; but this was hardly practicable, the invention of the greateft part of the rules being entirely owing to algebra; yet I have, as much as poffible, endeavoured to deduce from the algebraical calculation feveral practical rules, the truth of which may be depended upon, and which may be very ufeful to thofe who have contented themfelves to learn only common arithmetic.
On this occafion, I muft take notice to fuch of my readers as are well verfed in vulgar arithmetic, that it would not be difficult for them to make themielves mafters, not only of all the practical rules in this book, but alfo of more ufeful difcoveries, if they would take the fmall pains of being acquainted with the bare notation of algebra, that might be done in the hundreth part of the time that is fpent in learning to write fhort-hand.

## On the abule of Lotteries.

At the beginning of this article we bave touched upon the ordinary ufe that is made of lotteries; it may be likewife neceffary to take notice of the ill confequences that attend them; Which will be more briefly done from the few following querics.

1. Whether public or ftate lotteries have not la tendency to uphold the fpirit of gaming among the people in general; and whether this does not fo corrupt and vitiate the minds of the mafs of the people, as to draw them from honeft labour and induftry in their trading employments, thereby render them poor and indigent, and occafion a general depravity of morals.
2. Whether experience has not fhewn, that even the fortunate who become fuddenly rich by this means, are more generally unhappy than otherwife they would be?
3. Whether the wifeft and beft intentioned acts of parliament, in relation to lotteries, are not too often Chamefully and fcandaloully evaded, and give room to lottery jobbing and public impofition; and whether there have not been fome late inftances of this, in open defiance and violation of the beft laws for the regulation of a lottery, which has given a general difgut to the nation?
4. Whether ways and means, far more eligible than thofe of lotteries, may not always be fell upon, to raife money for any public exigency; and whether loteries ought not to be the laft refource upon thefe occalions?
LOUISIANA, the extent, as well as the natural hiftory of this country has been varioully reprefented. In relation to the former, father Hennipin and Mr. Sale have extended is at Vol. II.
an extravagant rate; nor bave the French, who have of fumed a right to this part of America, thou:tht proper y to aicertain it's boundaries at all, for by their accuunts it remains boundlefs. See our firf map of North America, in oppofition to that of the Sieur D'Anville, which was txecuted under the patronage of Louis duke of Orleans, firt prince of the blood. See alfo our article Maps.
The more modeft of their geographers, who are afhamed tot affert that this province is without any limitation at all, fay it is bounded on the fouth by the gulph of Mexico, un the north by the Ilhnois, and by the terrtories of the Panialfus, Paoducas, Ofages, Tionontetecagas, Chavanons, and other, wild nations, on the eaft by the part of Florida, Georgia, and Carolina, and on the welt by New Mexico and New Spain. They fay further, it extends itfelf from north to fouth about 15 degrees, that is, from 25 to the 4orh of north latitude, and from eaft to weft about ro or II, that is, from 86 to 96 , or 97 , for the boundaries are nothing lef3 than certain, according to father Charlevoix. And,
The maps of Mr. De Lifle give thofe boundaries at a much greater extent, efpecially on the north fide, where they make it contiguous to Canada, fo that part of it is bounded, according to him, by New York, Penfylvania, Virginia, \&ec. and on the weft by the rivers called Rio Bravo and Salado. Other French maps publifhed at Amfterdam, anno 1720, extend it's northern boundaries ftill farther on the authority of Monf. Le Sueur, who failed up the river of St. Lewis or Mifixifippi above 706 leagues from it's mouth, and adds, that the river is known to flow 100 leagues ftill higher; fo that, according to him, the northern boundaries of Louifiana may reach as far as the northern pole.
Neither are thofe on the north-weft lefs uncertain, the Miffouri, a great river, which gives name to a valt tract of land, flowing from that point into the Miffiffippi, more than 400 leagues above it's mouth; fo that if we except the fouth, where the fea bounds it, all the reft muft be left to uncertainty, and fo it is like to remain 'till thefe boundaries are fettled on the eaft with the Englifh, and on the weft with Spain: 'till then, they will be fill liable to difputes, and,'perhaps, to a continual fluctuation, according as either of the three nations fhall have opportunity to enlarge their conquefts in this part of America.
Certain, however, it is, that Louifiana contains the greateft part of thofe new difcovered lands eaft and weft of the Miflifippi river, which, at firft, had the name of Florida given to them by Sebaftian Cabot, a Portugueze, who was fent upon this defign by our Henry VII. See the article Florida.
The Spaniards, indeed, lay claim, if not to the firft difcovery, at leaft to the firt fettlement on this continent, anno 1512, when John Pontio de Leon firf unfuccefsfully landed and built a fort there. The Spaniards, fince then, made fee veral attempts upon this country, but the adventurers were maflacred by the Indians, fo that it was not 'till the reign of Charles X. of France, that his fubjects attempted a fertlement on this coalt, yet they were defea ed by the Spaniards. Thefe laft, however, were foon after punifhed in the fame kind by the French, but neverthelefs thefe could not obtain fufficient help to fettle a colony there, 'till anno 1684, when Monf, de la Sale difcovered, with great difficulty, the mouth of the Miffiffippi, and built fort St. Lewis on that bay; and, he being affaffinated, the place was again abandoned 'till anno i698, when Capt. Iberville difcovered the river Miffiflippi, and chriftened the whole country Louiliana, land made feveral fettlements, which have been fince very much improved, efpecially from the year 1720 .
For 'till that time the Spaniards had fome forts on the coalt, particularly that of Penfacola, about I4 leagues eaft of the ifle of Dauphin, the moft confiderable fettlement belonging to the French, where they were ever oppofing the French from fettling in that country, and difpuing their title to it; fo that they cannot be properly faid to have been rightly fixed in thofe poffeffions 'till then : of fo late date is their eftablifhment there.
Authors and travellers give variety of accounts in relation to the natural hiftory of Louifiana. With refpect to it's being extravagantly extolled about the year 1720, as the Frenchmen's paradife, great allowances muft be made for all that was faid at that time, by reafon of the ufe that was intended to be made thereof, in order to countenance the fyftem, as it was called in France, which was partly bottomed on the Mifififippi icherne. See Mississippí Company.
Certain it is, that feveral of their rivers, which overflow at certain feafons, render the country very fertile and pleafans. Nothing is faid to be more delightful than their meadows, which are fit for the reception of any feed. In fome parts, the foil yields three or four crops in a year, for the winter confifts of heavy rains, without n'pping frofts. We find there not only all the variety of trees, in great quantities, which Europe affords, but divers others unknown to the Europeans, fome of them very valuable, fuch as their tall and excellent cedars, a tree which difilis a gum, faid to exceed our nobly? parfumes; and the co:ton-trees, which are bere of a prodigious height. I he whole country abounds with no litite

1 i
yariey
variety of game, fowl, cattle, and every thing that life can defire.
The chief rivers wherewith Louifiana abounds, befides thofe before-mentioned, are the St. Francis, St. Anthony, Tombeau, River of Oxen, the Black River, the Ovifooufing, Illinois, Sabioniere, and many more; but the moft confiderable is the Mobile, by reafon of the fine country it waters on both fides, and the fettlement of the Chicachas, Cattas, Nanibas, Mobilans, and other nations that inhabit on each fide of it, but more efpecially for it's fine bay, and the French feitlement upon it. It defcends from the mountains in the country of the Illinois, about 20 learues, or more, north of the Chicachas, and, after a courfe of abave 200 lcagues fouthward, through fome fine fertile plains and rich meadows, empties itfelf into the gulph of Mexico. The bay of this river is reckoned 3 oleagues broad, and receives two ohers, viz. that of the Alibamons, which comes from the eaft, and that of the Chicachas, which flows from the north. It is on the weft coatt of this bay that the French have fetled the mont confiderable colony they have in all Louifana, which is likewife inhabited by feveral nations, fuch as the Tomez, Apachi, Mobilans, Chattas, \&c. who traffic with them at Fort Lewis, on the fame bay. They are none of them confiderable, except that their vicinity to Georgia, Carolina, and Florida, makes their friendithip fo valuable, that they are much courted on all fides, efpecially by the Englifh, wholeave no means untried to gain them over to their intereft. In regard to the other rivers of Louifiana, their names, courfes, lengths, mourhs, \&c. we refer the reader to our map of North America, they being too many in number to admit of a particular defcription in a work of this nature.
The chief bays of this country, befides thofe of the Miffiffippi and that of the Mobile, are thofe of St. Rofe, Penfacola, St. Andrew, or Sandy Bay, St. Jofeph and St. Bernard, or St. Lewis. That of St. Rofe is guarded by an ifland of the fame name, which is very long, and extends itfelf quire to the bay of Penfacola. The channel between it and the land is wide and deep enough for any fhips to fail from one to the other of thofe bays. The ifland is well wooded, and abounds with variety of game. The tides here are more regular, according to Charlevoix, than in other parts of the Mexican gulph; and the tide flows in 12 hours regularly. Penfacola hath often paffed from the Spaniards to the French, and been fortified and difmantled by turns, but was, at length, yielded by the latter to the former, and is now part of Florida. The bay of St. Lewis, called by the Spaniards St. Bernard, is moft weftern on all this coaft, is large and commodious. It was difcovered, according to the French, by Moni. deda Salle, a French gentieman, anno 1685 , who landed and made a fettlement, and built a fort there, and called it St. Lewis. This bay, however, muft not be confounded with another fmall 'one of the fame name, which lies more eaftward of this, overagainft Pont-Chartrain. This fettlement proved but of fhort duration.
The places of note in Louifiana, befides thofe we have already had occafion to mention, are New Orleans, PontChartrain, and Maurepas, about 10 or 12 leagues above the country of the Oumas, and 18 from the fea, which yet may be failed, with a good wind, in 20 hours. The foil about it iss rich and fertile, and the climate, in general, excellent. Pont-Chartrain is chiefly noted for the lake of it's name, by which the French have found out a more fafe and expeditious communication with the river Miffiffippi, to avoid the danger and difficulty of failing up that river by it's principal mouth. From this lake they enter into that of Maurepas, from which they go on, by means of the canal or river lberville, into that of Miffiffippi. When that cannot be eafily done, they carry their merchandizes by land from the bay, into the lake Pont-Chartrain, which difcharges itfelf quite to the country of the Oumas, who are feated on the banks of the Miffiffppi, a little above New Orleans, and thence purfue thcir journey up that river, according to La Martiniere. If this be the cafe, it fhews that this mouth and bay is not of fo eafy and quick paffage to that town as father Charlevoix would infinuate.

## Remarks on Louisinna before the laft war.

Under the articles British America, Canada, and FloRIDA, we have fhewed the nature and extent of thofe colonies, and alfo of the dangers that may one day attend the vicinity of the two latter to the Britifh colonies in North America.
That the boundaries of Louifiana and Canada are very great, and yet very uncertain, is manifeft frum all the accounts the French have given of them. To what end can the limits of fo extenfive a country, clofe upon the back of all our colonics in North America, be left in fuch a ttate of uncertainty by the French, but witb a view that, when the accafion of fers, they may become as near neighbours as they pleafe to the Bricim coloni=s, in order to take fuch advantage therefoom as may beit quadrate with their grand 5 y ftem of commercial dominion in America? See British America. Is it not neceffary, therefore, that the boundaries of the Erench, as well as thufe of the Spaniards at. lorida, thould
be fo jufty fettled and afcertained, that no mifunderffandings may thereby be occafioned between the faid crowns? Have not the Spaniards, as well as the Englifh, experienced what unjuftifiable incroachments have been made by the other power in this part of America? Should not the late accounts which we have had from America, in relation to a very confiderable illicit commerce faid to be carried on by the French, from the Mifinfippi to Mexico, alarm the Spaniards infinitely more than a little logwood-trade being carried on by the Englifh in the bays of Campeachy aed Honduras, where the Englin have fo apparent a right of trade? Sce the article Logwood. Will not a large contraband trade, carried on by the French from hence to Spanith America, proportionably injure the lawful trade carried on by the Englifh and Dutch, by the way of Old Spain to New Spain? Is the neighbourhood of the French to the Spaniards upon the Miffiffippi lefs dange, rous to the latter than to the Britifh colonies? If the beforementioned accounts from America fhould prove true, does not an opportunity offer itfelf to the Englifh and Dutch, to make fome advantage of with the court of Madrid?
Is it net notorious, that the French, by virtue of their Louifiani in and Canadian fettlements, have gained, and are fill endeavouring more and more to gain, fuch an afcendancy over the Indian nations in general, that may one day prove unfpeakably injurious, if not abfulutely deffructive of the very being of the Britifh colonies; provided the Indian affiars are not made as much the ftudy of the Englifh as of their politic competitors?
Norhing more manifefts the wifdom of the French meafures purfued in North America than that, although there is hardly any fingle neighbouring colony but what might foon become a match for all CANADA alone, yet the French, by a proper management of their Indian Allies, keep all the Britifh northern colonies, both in time of peace and war, in a conftant alarm, dread, and apprebenfion of danger. But it is to be feared, that thofe affairs have not been fo clearly and faithfully reprefented in England as could be defired by every true friend to the interefts of this kingdom; for, had that been the cafe, it is not to be doubted but the molt effectual meafures would have been taken by the crown of Great-Britain, to prevent every kind of danger that might be reafonably apprehended to attend thofe colonies, which England has nurfed with fo much tendernefs, and with fo great profperity to thofe colonies themfelves, as well as emolument to herfelf. And that the reciprocal ties of interefts may be the more and more cemented between this kingdom and her American colonies in general, is a point which I have fincerely laboured throughout this work; and, as the article before us affords me a freth opportunity to purfue the fame principles; If thall, with what brevity I can, fubmit a fummary of the beft intelligence I bave been able to collect in relation to the further fecure poffeffion and the commercialprofperity of thofe colonies. The crown of England, it is certain, has not hitherto been fparing in expence to cherifh thofe important plantations, in order to raife them to the pitch of fplendor wherein we at prefent behold them; and, therefore, thofe plantationsthemfelves fhould not, nor do I believe they will, be at all lukewarm, now it is in their power, in regard to their own maintenance, fafety, and felicity: they have, indeed, given teftimony to the contrary, and the crown and parliament have not fhewed any infenfibility to their late laudable zeal; nor will they ever thew, we may prefume, any indifference towards their trading interefts, when they are not repugnant to thofe of their mo-ther-ftate.
The people of England are already fufficiently incumbered with taxes, though it muft be allowed that many wife meafures have been taken to render the burden light and eafy; and it is to be hoped, that the like confiffency of public meafures will prevail, to render it lighter and lighter. The colonies themfelves, therefore, jointly; thould chearfully contribute towards whatever expence may attend the more effequal regulation of their trade and frontiers; for it is full time that they thould look to their fecurity, and moft unnatural to expect ever to hang on the breaft of their mothercountry.
Whatever pretences may be made, it is moft certainly true, that the prefervation of the whole range of Britifh colonies upon the continent of America depends in a great meafure upon a proper regulation of the Six Indian Nations, and the fecurity of the frontiers of NEW York, both to the northward and fouthward. It has been, therefore, propofed by thofe who feem to be well acquainted with the intereft of thofe colonies, and to have their welfare and profperity at heart, 1. That a good ftrong regular fortification is abfolutely neceffary to be erected, without delay, at Wood Creek, or near it, becaufe it, is not impolible to bring great guns to bear againft it from Crown-Ponnt; from whence the French always pour in their parties upon our more northern colonies, in time of war. Here, alfo, it will be neceffary to have a magazine of all kinds of warlike ftores, both for the offenfive and defenfive, with foow fooes, fmall hatchets, \&c.- This will, in a great meafure, protect the Britifh poffeffions; and from thence a defcent upon Canada, when occafion hall require, may not be impracticable.
2. That

## L. O U

$\mathrm{L} O \mathrm{U}$
2. That fuch fort be able to contain 500 men in time of war, and never lefs than 100 in time of peace.
3. That there be an addition of 200 independent companies, to the four already eftablihhed here, from the Highlands of Scothand; the wilder the better for a common garrifon there. 4. That all the lands from Fort Nicholson to Fort Anne, that is, all the lands upon the Carrying-Peace, and thole adjacent, be fet apart for the ufe of fuch Highlanders only as will fettle there, and to be properly affifted in their fertling for the firf two or three years: to each man and his wife 100 acres, and to each fingle perfon 50 acres, without fee or reward, to them and their heirs for ever.
5. That near this fort, at a proper diftance, there be erected a fmail Block-House, fufficient for 30 Indians, to be maintained there on conftant pay, during a war, viz. five from each of the Six Nations, to be relieved and regulated in fuch manner as the Six Nations themfelves think moff proper. 6. That commiffioners from all the colonies be appointed to meet annually at New York, or Albany, in order to fettle their refpective quota's towards the general expence, and for the erecting fuch other forts and block-houfes as may be thought neceffary.
7. That thofe commiffioners jointly be impowered to lay out lands (not already granted) moft conveniently fituated for a good frontier; and that thefe lands be laid out in townfhips, after the New England manner, for a competent number of families, to be granted to them and their heirs, ten years at lealt, clear of all taxes and quit-rents.
8. That in each townfhip there be erected a good ftrong church, with loop holes, and a few field pieces, which may ferve for a retreat upon occafion.- That thefe townfhips fhould not confift whally of Germans, or ©ther foreigners*.

* " Philadelphia may one day repent,' fays our author, who feems to be a worthy, honeft, old Britifh foldier, ' the valt - importation of thole people among them; they are moft - of them old foldiers. I have reafon to know fomething * of their fpirit, having had fome hand in difarming 600 - of them, upon account of a mutiny in this province; and
- it was my fortune to command fome of them upon the - expedition againft Canada, in 1711. A fociety of free-- men, as the Philadelphians are, abfolutely difclaiming - the ufe of arms, and, at the fame time, encouraging the introduction of great numbers of old foreign foldiers, who
* hardly know what the word Liberty means, is a contraft - which they only can account for.' See the Importance of gaining and preferving the Friendhip of the Indians to the Britih intereft confidered.

9. That a ftring of block-houfes be erected, fo as to make the communication, or an alarm, from one garrifon, or block houfe, to another, eafy, by fmoaks, properly difpofed, in the day-time; or by throwing up a number of rockets, or firing great guns in the night-time *.- Such an expedient would be of great ufe during the war, as the Indians never attack but by furprize, and would greatly difcourage the paries of the Indian enemies, as it would keep our own garrifons upon the watch, and our out-fcouts ftrictly to their duty.

- I do not think it at all imprafticable to convey an alarm from Albany to New York in one night, if rockets or great guns were properly difpofed and attended. Let us fuppofe, for example, a party of French and Indians abroad, which feldom happens without being difcovered by fome outcout or other: upon difcovery, if in the day-time, let there be one great imoak, and one great gun fired; which, if taken up by the other garrions, 1 am confident that pary would hardly proceed. In order to dicover what courfe he party may take, let there be three fmoaks, two pretty near to one another, and the third at a profer diftance either to the eaftward or weftward, \&c. which will point out the courfe taken.-This may be improved.

10. That in each of the Six Nations there be built a fort of fome kind or other, where, and in what manner, that particular nation thall beft approve.
II. That in the Onondago country, where their general councils are held, and the archives of the Six Nations are preferved, fomething more than common be erected: this will do honour to the Britifh nation, and grearly encourage the Indians, efpecially in time of war; and while their old men, women, and chuldren, are fecure in a fort, with a fmall party of Chriftians, their excurfions will be more free and frequat: but this fecurity ought to be left altogether to their own choice; whether by erecting one fingle fortification for the retreat of the whole (the Senecas I hould chufe, being fine country, where great encouragement ought to be given to Retlers, and where the lndians are lefs tainted with Chultian vices) or whether each nation thould have their proper retreat, or fecurity.
What has hitherto prevented our Indians in their excurfions gainf the enemy is, in my humble opinion, in a great mea fure owing to the apprehenfions of having their caltles cut off in their ablence; they have been often threatened, and, in deed, at prelent, they have nothing to trull to but their heely. And nothing has prevented the attempt, but the refutions of the Cachnawages, their principal fighters (but deterters from our Muhawks) not to fill the blood of their relations and countrymen.

And the fame natural affection has prevented our Indians from doing, what I am confident they would have done, had the $y$ been fure not to have met with their friends and countrymen, the Cachnawages. Proper methods, therefore, ought to be taken to recover thofe Indians; which, I conceive, is very far from impracticable.
The villainous treatment thore people have met with at Atbany, from the handlers, was the original caufe of that defertion: and undoubtedly, for the fame reafons, many more do, and will defert, if proper remedies are not fpeedily applied. For this purpole it is requifite to obferve, that, without a proper Requlation of the Trade between the Indian's and the English, all other Endeayours on the Side of the latter, to gain and preserte the FriendSHIP of the former, will avail but littie. I thall not, at prefent, enter into a detail of the great Injurifs done by the English to the Indians, in their Í tercourse of Commerce: certain it is, that thefe poot people have, for many years, been under the direction of the people of Albany, whofe intereft it was to deceive and DEFRAUD THEM; and, that they have been deceived and defrauded, is too notorious to be gainfaid: inftances in abund unce might be produced, but they are really too fhocking to relate. Nor is this any new thing, as appears fromithe following preamble to an act of parliament of the 13 th of queen Anne. But I have not heard of any act of the like kind fince, though the mifchief has been daily increafing.

- Whereas great endeavours have, from time to tlme, been c ufed by her majefty's governors and commanders in chief of - this colony, to fettle a trade, and to have commerce with G fuch Indian nations as live beyond our five confederated na+ - tions; which, in procefs of time, might not only be very - advantageous, but alfo of great fecurity to the frontiers of this colony, at or near Albany, in time of war; and feve-- ral of the faid Indians being lately come to the city of Albany, in order to trade with the inhabitants thereof; but - leveral private perfons, not regarding the fafety of this colo: ' ny, but only defigning their own private lucre, have, and - do daily, ufe many indirect means to engross the Trade - Into their hands, by their contrivance with thofe who 6 are employed by the faid Indians to carry them in their wag-
6 gons to Albany; and, having once gotten the peltry, bea-
6 vers, or other furrs of the faid Indians, in their poffefion,
hinder them to make the belt of their market, to the ruin 6 of the faid trade, and the alienation of the affec ' rrons of the said Indians from this Colony; and", - inftead of fecuring the friendfhip of the faid Indians, will, ' if not prevented, caufe them to be our enemies, \&c.' This act to continue for two years.
The chief principles to be laid down in the management of our Indians are, firft, by all means to endeavour to underfell the French: and the next is to do juftice tothe Indians in thofe fales. For which reafon, I fhould advife that this trade, inftead of being wholly under the direction of the people of Albany, who are moft of them, if not altogether, traders or handlers, and whofe intereft it is to take all advantages of thofe poor people, and that with impunity, as they have no body to complain to, the principal directors being all traders themfelves, and, of courfe, Socii criminis

2. That it be put under the direction of one fingle perfon of capacity and integrity, of his majefly's appointment, during good behaviour, with a handfome allowance, in the nature of a Superintendent of 'Indian Affairs, with full powers to do fummary juftice upon all occafions.
3. That he be debarred trading directly or indirectly, upon the fevereft penalties.
4. That he take his inftructions from the governor and council; and report to them, at leaft twice a year, a ftate of our Indian affairs, in order to be laid before his majefty or the board of trade.
5. That be be obliged to make a tour through the Six NAtrons, once a year at leaft, with a proper equipage, and fome fmall prefents for the chief men; when and where he may receive complaints, and redrefs grievances.
6. In order to fave the crown the expence of fuch an officer, it may be advifeable, that, as there are two furveyors-general of the cuftoms upon this continent, at an allowance of $a$ guinea a day, and 601 . fterling yearly, each of them, for a clerk, upon the demife of either, that officer be fet apart for this ufe: one furveyor-general being fufficient here for all the purpoles of the cuitoms, thole officers being rathe in the nature of preventive officers, that is, their chicf buffnefs is to prevent any European goods being imported from any part but from Great-Britain and Ireland, and to prevent the exportation of any of the enumerated commodities to any parts but to Great-Britain, \&c. There are no revenues colleeted by the officers here, nor no accounts worth mentioning to comptroll : fo that it feems, that one of thofe officers at leaft, may be very well fpared for the above purpoles, and much better employed.
7. That there be a handiome allowance made for two inter preters ai leaft ; one, indeed, for each nation, I thould not think too much, and one of them always to attend the principal officer.
8. Thaq
9. That there be a fmith * appointed by the principal officer, with a proper allowance, in tach nation, wath two apprentices, in order to multiply interpreters; for want of which, 1 doubr, we have often been milled and impofed on; and, if thofe fmiths were obliged to teach one or two Indian youths of the bett capacities to read and write Englifh, it might be of no fmall fervice, as nothing is more wanted than honeft interpreters.
*This is the mot ufeful mechanic than can be among the Indians, efpecially a gunfaith to keep their arms conflantly in good order, their whole fubfittence and traffic depend. ingon hun:ing and hoocing.
10. That every perfon, employed thy the public in this fervice be prohibited trading, directly or indirectly, under fevere penalties, and give fecurity for the due execution of his duty ; and to be on oach obliged to reprefent faishfully, every grievance which, he conceives, the Indians meet with from the traders. As monopohes in general are the bane of trade, this commerce fhould be open and free for all his majetty's fubjects; by which means a number of bulh-lopers, as the Dutch call them, and the French, who are indefatigable in this point, coureurs de bois, are created; a fet of men, who, from their acquaintance with the woods and Indians, are imiportantly uleful upon many occafions, efpecially, in time of war.
11. That there be lodged in the hands of every fmith, or agent for that purpofe, Indian goods, to the value of 1 . always by them, which they are to difpofe of for the ufe of the public, according to invoices from New York, fixing the prices of the goods, as well as of the furrs and kins, and by no means to exact furcher upon the Indians. This is the method, and the only method, I humbly conceive, by which we can underfell the French, and will prove a means to regulate the whole Indian trade: and this is the method taken in the government of New-England, which is in the following manner, viz.
By an act of 12 Geo. I. it is enacted, 'That provifions, - cloathing, \&c. fuitable for carrying on a trade with the - Indians, not exceeding the value of 40001 . be procured - at the coft and charge of the province, and the produce ap-- plied for fupplying the Indians, by fuch perfons as thall be ' annually chofen, \&c. and likewife annually produce fair ac' counts of their proceedings; which fupplies fhall be lodged ' to the eaftward, at, \&c.

- That a fuitable perfon be chofen annually at each of the - places where any of the goods, \&c. are lodged, which - truck-mafters fhall be under oath, and give fufficient fecuc rity for the faithful difcharge of that truft, and fuch in-- ftructions'as they fhall receive from time to time: and - fhall keep fair accounts of their trade, and dealings with 6 the Indians, and fhall return the fame, together with the ' produce, to the perfon or perfons who hall be appointed to c fupply them with goods. And they hall not trade with © the lndians, directly or indirectly. That the truck-maf6 ters fell to the Indians at the price fet in the invoices fent - them from time to time, without any advance thereon; ${ }^{6}$ and thall allow the Indians for their furrs, and other goods, - as the markets fhall be at Boflon, according to the lateft - advices from the perfon or perfons that hall fupply them - for the fame commodities of equal goodnefs.
- Rum to be given to the Indians in moderate quantities, by - the truck-mafters only.
- No perfon whatfoever, other than the truck-mafters, and - they. only as fuch, fhall or may prefume by themielves, or - any other for them, directly or indirectly, to fell, truck, ' barter, or exchange, with any Indian or Indians, any wares, - merchandizes, or provifions, within fix miles of any truck-houfe, \&cc. on penaity of forfeiting 501 . or fix ' months imprifonment.'
From hence I have only to obferve, that, had our Indian trade been under fuch a regulation, or indeed any regulation at ail, we fhould have lefs to apprehend at this time of day; and it is certainly high time to make a beginning.

11. A grand fair yearly eftablifhed in the Six Nations, to be keptaltemately, would be excremcly ufeful; to begin firft in the Onondago country, the next year in the Seneca country, isc. of which all the nations, far and near, may have due norice; and where the fuperintendant, or infpec-tor-general before humbly propofed, fhould always attend : and, the prices of goods being fixed from the lareft invoices from New York, it would be a great inducement to the diftant nations of Indians, as well as our own, to purchafe, and would at the fame time be a check upon the handlers at Oswego, as well as elfewhere.
One effential article in our trade with the Indians, and upon which, in a great meafure, the whole depends, has been hithcrtw much neglected on nur part; and that is, from us they have the cheapeft Englifh arms and ammunition, and of courfe the woilt upon the face of the earth: the French take the utmoft care to fupply them with what is really good, ald at a cheaper rate than we can afford the beft of ours: by which mean, I doubt, they will ever be able to underfell us in that eficintal auticle, unlefs fome effectual methods are
fallen upon to prevent it. The French purchafe Indiati goats both in Holland and in England for thofe very Indians. Or, why might not thofe colonies manufacture their own powder in the Mohawk's country, where faltpetre may be had in abundance, from thole vaft beds of pigeon's-dung? In fhort, the Indians muft have good powder and arms; and, where the beft is, there they will go; and, according to the prefent fituation of things, they will depend upon the French for it. Could we get the better of this one article, all that attachment and intercourfe our Indians tave at pretent with Canada, would, Iam confident, foon be at an end. This is a matter well deferving confideration.
12. That inftead of fupporting this trade by way of licence, which has hitherto been but oddly managed, there be a duty, applicable only to Indian affiairs, and thrown into the joint ftock, upon all Indian goods exported hither by land or water; and likewife upon all furrs and $\mathfrak{k}$ ins imported, under the direction of the officers of his majefty's cuftoms; thofe, appointed by the country, have generally more regard to their friends than their duty. This has been formerly practifed, and, it is humbly conceived, will anfwer every purpofe much better.
As this affair will create a yearly expence, fuch as no one colony can well bear, let there be a tcheme prepared for each colony's paying their proportion. Moft certain it is, as before obferved, that, if ever New York, Albany, and Hubson's river, fhould get into other hands, every other colony would foon follow; and, while that is fecure, all the more northern colonies will be fo too. If what has been faid fhould appear true, is it poffible to doubs but that they will readily comply? In anfwer to that trite objection, viz. as we have all the trade to this part [meaning New York and Albany] we ought to be at all the expence: in God's name, let each contributing colony have it's townihip upon the frontiers, with proper magazines, and one or more trading houfes, and a floop, and make the moft of it.
The names of the provinces that form the republic of Holland, with their feveral rates towards the yearly expence of the government, according to the proportion of roo guilders, and the order in which their deputies to the fates general vote, are as follows:
Guelderland, with the county of Zutphen $\int_{5} \quad 12$
$\left.\begin{array}{l}\text { Holland, with Weft Erienand or North Hol- } \\ \text { land }\end{array}\right\} \begin{array}{lll}58 & 6 & 2 \frac{t}{2}\end{array}$
Zealand
8
5
Friefland
Overyffel
Groningen, with the Omlands
$\begin{array}{rrr}5 & 16 & 5 \\ 11 & 13 & 2 \\ 3 & 11 & 5 \\ 5 & 16 & 7 \frac{x}{2}\end{array}$
$10000 \quad 0$
(This may ferve for fomething of a model.)
The people of New York have been at an infinite expence upon the whole, from the beginning, in fortifying, and in prefents to the Indians, with very little affiftance from their neighbour colonies; a charge which that province is hardly able to bear, and moft unreafonable, as every other colony upon the continent is, in fome degree or orher, concerned in the prefervation of the friendithip of the Indians, and the fecurity of our frontiers. This, however, has been but palliating matters, and doing things by halves: whenever the colonies think fit to join, the Indian affairs will wear quite another afpect. The very name of fuch an happy confederacy will greatly encourage our Indians, ftrike terror into the French, and be a means to prevent their infupportable infults and incroachments, which they daily make with impunity.
A long feries of ill ufage from the traders has given the Indians but a very indifferent opinion of our morals; and of late, from feveral abortive expeditions, they begin, I doubt, to fufpect our courage; than which, nothing can more affect our intereft with them. They of themfelves are honeft, fuch at leaft as have not been debauched by the Chriftians, and brave in their way, and defpife knaves and cowards. It will, therefore, require fome addrefs, and not a little expence to recover our character.
If all this is to no purpofe, and that they will fand out, let us not defpair, but that, upon a proper reprefentation to his majefty, of the abfolute impoffility for this colony alone to bcar the expence of fettling and preferving our Indian affairs upon fuch a footing as they really ought to be, his majefty, from his wonted gnodnefs, will undoubtedly, not only aflit them himfelf, but oblige the other colonies to affift them; in pronf of which paternal care, give meleave here to infert fome of his inftructions to the late governor Montgomerie in 1727 , upon this very occafion.
Infruction 83. ' Whereas it has been thought requifite, that ' the general fecurity of our plantations upon the continent - of America be provided for by a contribution, in proportion ' to the refpective abilities of each plantation: and whereas ' the northern frontiers of the province of New York, being ' moft expofed to an enemy, do require an extraordinary

- charge
- charge for the erecting and maintaining of forts neceflary - for the defence thereof: and whereas orders were given by - king William III. for the advancing 5001 . Aterling, to-- wards a fort in the Onondago country, and of 20001 . - fterling, towards building the forts at Albany and Sche-- NECTADY; and likewife by letters under his royal fign - manual, directed to the governors of divers of the planta-
- tions, to recommend to the councils and general affemblies - of the faid plantations, that they refpectively furnifh a pro-- portionable fum towards the fortifications on the northern
' frontiers of our faid province of New York, viz.
Rhode Island and Providence.

- Purfuant whereunto you are, as occafion requires, to call - for the fame; and, in cafe of any invafion upon the - neighbouring plantations, you are, upon application of the - refpective governors thereof, to be aiding and aflifting to - them in the beft manner you, and as the condition of your ' government will permit.'
As to this inftruction, his majefty, I doubt, has not been thoroughly informed, becaufe, upon an invafion, confidering the diftance and dilatorinefs of affemblies, the mifchief, in all probability, would be over before we could have any affiftance. I fhould, therefore, think it advifeable, that thofe proportions be immediately detached to the frontiers, upon the firft news of a war; there to remain, and to be recruited during the war, at the expence of the faid colonies. 1 thudder, continues the author, to think what would have been the fate of Albany, had not thefe troops, defigned againf Canada, been accidentally there; more efpecially as the people of Albany, at that time, where afficied with an epidemical diftemper, which carried off great numbers.
From hence his majefty's care is apparent; and why thore inftructions have not been hitherto duly obferved, is what I fhall not take upon me to determine: I cannot, however, help thinking, that, from upwards of forty years obfervations upon the conduct of our colony affermblies, and the little regard paid by them to the royal inftructions; if it is left alcogether to them, the whole will end in words and altercation only. By the above inftructions it appears, that his majefty has been fully apprized of the confequences of leaving this colony unguarded, as well as of it's inability to anfwer his moft gracious intentions.

Vol. II.

I thould therefore advife, that the quota's be doubled, whith theycan now very well bear, and toih the Carolina's adied, and the whole inforced by an act of the britifh lenifature In that cafe, if this fuheme, or fomething furnsi to it (as am very far from thinking but that it win panat of namy improvements, and for that purpofe it is offeeci) is duly executed; I will venture to prophefy, thar, it a few ears, the whole furr-trade will be in Britifh hards, and that the fürtrade company in Canada will riak, upon which tee very being of that company depends.
I have only further, adds this honef gentleman, with great fubmifion to advife, that the meeting of the Indians bealternate, one year at New York, which will add but iery lityle to the expence, and where the commifioners fiom thote contributing colonies may more conveniently attend; and where, it is to be hoped, the Indians may receive fone better impreffions of our people than they have hitherto dene at ALbany; the next year any where but at A!bany or Scimenectady: that the prefents made to the Indians upon thofe occifions, a, foon as viewed, and divided by the particular nations, be packed up again, in fuch manner as may make the carriage the eafieft, of which they themfelves will be the beft judges, and locked up, and the keys to be delivered to the principal Sachem of each nation, and not to be opened 'till they arrive in their own country: for I believe I may
 made them upon thefe folemn occafions, feldom go further than Albany or Schenecrady, but are bought up by the handers for rum, and afterwards fold to the Indians; when drunk, at an exorbitant rate: I would propofe this method, being well affured there is no law can be contrived, or oath framed, to bind a bandler.
As to our fouthern frontiers, the city, \&c. I mean of $\mathrm{N}_{\mathrm{EW}}$ York, let thofe be altogether under the direction, and at the expence of the colony of NEw YORK, hoping withal, his majefty will be gracioully pleafed to favour them with a fmall detachment of gunniers, and one engineer, for a time at leaft, toyether with fome artillery and ammunition. Large furns have been expended; or rather fquandered away, on this account, by the country, to very little purpofe. Let there be two batteries erected at the Narrows, one on each fide, in proper places, and with breaft-works only; any fortifications there may fall into the enemy's hands, and have bad confequences. Thefe batteries fhould be under the care of the adjoining counties; that on the eaft fide under the care of the regiment of King's County, and that on the weft fide under the care of the regiment of Richmond County. Our utmoft endeavours muft be, in the firf place, to prevent the enemy's landing; and alfo, in the next place, to prevent a bombardment. For this purpofe it may be neceflary to view the coaft below the two firf batterics. Should an ene'my land at or near New Urrecht, the march is eafy, even with cannon, from thence to the ferry, of which we flould foon feel the effects. Low batteries, as I would have all thofe to be, even with the water, if poffible, at Red ot Yellow Huok, will be a means to prevent a bombard ment, and the enemy's landing upon Long Island. A fmall battery upon Kenedy's IsLaind may be of ufe. I et there be feveral fmall batteries fixed round Nutten Island, of heavy cannon, and it were to be wifhed they were all fuch; and one ftrong intrenchment in the mildle, for a number of troops.
At the eaft end of the town a good battery will be neceffary, as well as feveral along Hudson's River.
I would not have any of thofe batteries exceed five guns, but to be placed the thicker: fhips generally aim at one battery at a time; befides, it is impofible to know where a fhip may lie: in this cafe, it is odds but fome of our batteries may take her up. Breaft-works, with block-houfes, inftead of fockadoes, wculd anfwer all purpofes much better, be of much lefs expence, and laft longer.
As to the fort, and the lower batteries, they are altogether ill defigned, and as badly executed; but as our late engineer has repuried, to his excellency the governor, the failures, and the improvements that may be niade, fo as to refift any fudden attack, we hope a matter of this confequence will be no longer difregarded.
It is a conftant rule, that every detached work, however infignificant in itfelf, fhould have it's ammunition at hand, to be come at without difficulty or danger; one hundred weight at leaft of powder to each gun.
The regiments of Suffolk, Queen's, and King's Counties, Richmond, and Weftcheiter, wull be force fueficient to defend the city, if they can be brought together with regularity and cercainty: to which, however, may be added the militia of Connecticut and Effex County. Let all the other counties bend their force towards the frontiers.
Beacons, or rather fmokes, in the day-time, and rockets, or great guns, in the nighi, for this purpofe, will be abfolutely neceflary. It will. be no great difficulty to carry an alarm to the eaft end of Long Ifland, to Richmond County, and Weftchefter, at the fame time, in a very few hours, upos. which, every man that keepha horfe oughi to tnake the heit of his way to the city, and not to wait the forming into
companies, 'till they arrive at the city; where I will fuppofe the colonel, or lieutenant colonel, to be executing, while the other, who may have full power to prefs horfes, is bringing up the rear ; where tranfportation is neceffary, the city to take care to have boats at the proper landings. During a war, let there be one ftout floop of war provided, at the expence of the governments of Rhode Ifland, ConneAticut, New York, New Jerfey, and Penfylvania; one other at the expence of North and South Carolina's, Virginia, and Maryland; and one at the expence of the Maffachuffets, New Hampfhire, Hallifax, and Nova Scotia; which, if under proper regulations, together with the fta-tion-fhips, will be fufficient to protect our trade.
Give me leave to prophefy again, that, in cafe of a war, we fhall forely repent it, if timely provifion is not made againft the efforts of the people of Cape Breton, and upon our fettlements from Crown Point.
If thefe things, or fomething of this kind, perhaps, from an abler hand, be duly confidered and executed, during the calm of a peace, we fhall have little to apprehend from an enemy.
Wherefore let our general affemblies, with whom we have intrufted the care of our lives and liberties, anfwer, if they can, either to God or man, a neglect of their duty, in a matter of fo high concernment to themfelves, their fellowfubjects, and their pofterity. Dulce eft pro patria mori, is an old Roman maxim: and, though I bave not at prefent any thoughts of dying for my country, yet I have a real fatisfaction in imagining, whether in reality or not I cannot fay, that I have pointed out fome things, which, if obferved, may prevent a great deal of blood. fhed, \&cc of which I wafh my hands, and leave it at the door of thofe whofe proper bufinefs it is to look out in time.'

Remarks on the whole of Louisiana, as they food before the laft war.
We have feen the fentiments of a worthy, well-intentioned, Britifh old foldier, not only in regard to the proper military meafures which he judges requifite to be taken for the fafety and prefervation of our northern colonies, but alfo for their trading profperity in general: and having been informed that what this wortby officer has fuggefted, in his plain honeft way, has really met with the approbation of thofe abroad who are good judges of what he has fubmitted, I thought it might prove ufeful to take due notice of it; for many a good defign bas been overlooked or neglected, for want of being properly reprefented and patronized. Whether what has been propofed, in refpect to the point of fecurity, cannot be fo well judged of but by thofe who are on the fpot, and fkilled in the principles of engineering; it looks with a very rational afpeat, and may deferve attention, in order to be rectified, if it fhould, in any refpect, be defective.
Our reafons for taking notice of this matter under the article Louisiana are, (i.) Becaufe this French province, together with that of Canada, and the alliances and great influence which the French have with various Indian nations, by virtue of thefe extenfive fettlements, upon the back of the Britifh colonies, even from Georgia to Hudfon's-bay, may one day put it in the power of France to furprize thofe colonies; unlefs they are well fecured by proper fortifications, and by an inviolable friendfhip cemented with our Indians, by means of a fair and honourable commerce, and good creatment from the Englifh. (2.) Becaufe what we have here urged is confonant to, and proper to be confidered conjunctively with what we have faid under the articles British America, Canada, and Florida. See allo the articles Mississippi and France.

Remarks on this article Louisiana, fince the laft war, and the Definitive Treaty of Peace of 1763 ; wherein a fuccinct fketch of the difadvantages we laboured under before the war, and the benefits we may receive by the laft peace, are confidered.
It has been generally furpected, that this nation has fuffered much from the want of a due knowledge of her dominions in America, which we fhould endeavour to prevent for the future. If that may be faid of any part of America, it certainly may of thofe countries, which have been calied by the French Louisiana. They have not only included under that name all the weftern parts of Virginia and Carolina, and thereby imagined, that they had, from this nominal title, a juft right to thofe ancient dominions of the crown of England: but what is of worfe confequence, perbaps, they have equally deceived and impofed upon many, by the extravagant hopes and unreafonable expectations they had formed to themfelves, of the valt advantages they were to reap from thofe countries, as foon as they had ufurped them. See our article Mississippi, But when they came to be difappointed, they ran from one extreme to the other, and condemned the country as good for nothing, becaufe it did not anfwer the chimerical hopes they conceived of it; and indeed, we feem to be milled by
their prejudices, and be drawn into mifakes by their artitheir prejudices, and be drawn into mintakes by their arti-
fice, not their folly, they knowing better. Becaufe their fice, not their folly, they knowing better. Becaufe their
bubbling Mississippr Scheme failed in 1,19, fome people would perfuade us, that every other reafonable defign of im. proving that country, and of reaping any advantage from it, muit do the fame, efpecially now fince all parts eaft of the Miffiffippi are ceded to Great-Britain by the Definicive Treaty. To remove thofe prepoffeffions, the following account of thefe countries may contribute; they appearing both juft and reafonable, and agrecable to every thing we know of America.
We have been long told by J. Charlevoix, from whence it is, that many people have formed a contemptible opinion of this country, that lies on and about the Miffiflippi. They are mifled, fays he, by the relations of fome feafaring people, and others, who are no manner of judges of fuch things, and have never feen any part of the country, but the coaft-fide, about Mobile and the mouths of the Miffifippi; which they tell is as difmal to the appearance, the only thing thofe people judge by, as the interior parts of the country, which they never faw, are delightful, fruitful, and inviting. They tell us befides, that the country is unhealthful; becaufe there happens to be a marfh at the mouth of the Minfifirpi, (and what river is there without one?) which they inagine muft be unhealthful, rather than that they know it to be fo; not confidering, that all the coaft, both of North and South America is the fame; and not knowing, that the whole continent, above this fingle part of the coaft, is the moft likely, from it's fituation, and has been found, by all the experience that has been had of it, to be the moft healthy part of North America in the fame climates, as will abundantly appear from the following and other accounts. That a fair general view of thofe countries may be taken, we fhould confider thern as they are naturally divided into four parts; (1.) The fea-coaft ; (2.) The Lower Loulfiania, or weftern part of Carolina; (3.) The Upper Louifiana, or weftern part of Virginia; and, (4.) The tiver Miffiffippi. The fea-coaft is the fame with the reft of the coaft of North America to the fouthward of New York, and indeed from thence to Mexico, as far as we are acquainted with. The foil for twenty or thirty miles diftant from the fhore, more or lefs, is a fandy defert, with few good ports or harboürs on the coaft, efpecially from Chefapeek-bay to Mexico. However barren this coaft is in other refpects, it is covered with tall pines, which afford a great flore of pitch, tar, and turpentine. Thefe pines make good mafts for fhips, which have lafted for upwards of twenty years; when 'tis weell known, that our common mafts of the New England white pine will often decay in three or four years. There is great plenty of cyprefs in the fwamps on this coalt, which is not lefsifferviceable, both for mafts, of which it would afford the largeft of any tree that we know, and for fhip-building. And fhips might be built of both thefe timbers for half the price, perhaps, of any other, as well on account of their vaft plenty, as being fo eafily worked.
In moft parts of thefe coafts, efpecially about the Miffiffippi, there is great plenty of cedars, and ever-green oaks, which make the beft fhips of any that are built in North-America; and we have reafon to believe, that the Spaniard's built their thips of war at the Havannah of thefe cedars. Of thefe there is very great plenty, immediately to the weftward of the mouth of the Miffiffippi; ' where large veffels can go to the ' lake of the Chetmias, and nothing hinders them to go and ' cut the fineft oaks in the world, with which all that coaft ' is covered,' fays Charlevoix, Tom. iii. p. 444. Which moreover, is a fure fign of a very good, inftead of a bad foil; and accordingly we fee the French have fettled their tobacco plantations thereabouts. It is not then without reafon that Monf. Le Page Du Pratz affures us, that the largest Navies might be bulet in that Country, at a very small Expence.
From this it appears, that even the fea-coaft, barren as it is, from which the whole country has been fo much depreciated, is not without it's advantages, and thofe peculiarly adapted to a trading and maritime nation.
And all along the Miffifippi on both fides, Dumont *, fays, ' the lands, which are all free from inundations, are excedtent - for culture, particularly thofe about Baton-Rouge, Cut' Point, Arkanfes, Natches, and Yafons, which produce - Indian corn, tobacco, indigo, \&cc. and all kinds of pro-- vifions and efculent plants, with little or no care or labour, ' and almoft without culture, the foil being in all thofe ' places a black mould of an excellent quality.'

## * Memoires, l. 16.

Thefe accounts are confirmed by our own people, who were fent by the government of Virginia in 1742 , to view the weftern parts of that province; and although they only went down the Ohio and Mississipei to New Orleans, 'they reported, that they faw more good land on the Mis' st SSIPPI, and it's many large branches, than they judge ' is in all the Englifh colonies, as far as they are inhabited; as appears from the report of that government to the board of trade.

What makes this fertile country more eligible and valuable, is, that it appears, both from it's fituation and from the experience the Ftench have had of it, to be far the moft healthful, fays Du Pratz, of any in all thefe fouthern parts of North America; a thing of the laft confequence in fetting colonies, efpecially in thofe fouthern parts of America. All the fea-coafts of our colonies, to the fouth ward of Chefapeak bay, or even of New York, are low and flat, marthy and fwampy, and very unhealthful on that account: and thofe on and about the bay of Mexico, and in Florida, are very hot; but thofe lands on the Miffiffippi are, on the contrary, high, dry, hilly, no great diftance from the river, befides the ridges of the Apalachean mountains, that lie to the northward of them ; which muft greatly refreth and cool the air over all the country, efpecially in comparifon of what it is on the low and flat, fandy and parched, fea-coafts of our old colonies. Theie high lands begin immediately above the Delta, or drowned lands, at the mouth of the Miffifippi; above which the banks of that river are from roo to 200 feet high, without any marthes abour them; and continue fuch for 900 miles to the river Оhio, efpecially on the eafl fide of the river. See Du Pratz, vol. i. chap. iv. p. 262
Such a fituation on rich fertile lands in that climate, and on a navigable river, muft appear to be of the utmolt confequence. It is only from the rich lands on river-fides (which are, indeed, the only lands that can, generally be called rich in all countries, and efpecially in North America) that Great-Britain can reap any thing of value from all the colonies fhe has in that part of the world. How ought we then to efteem fuch rich and healthful lands on the Miffifippi? As much furely as fome would depreciate them.
It may be obferved, that all the countries in America, are only populous in the inland parts, and generally at a dif. tance from navigation; as the fea-coafts both of North and South America are generally low, damp, and exceffively hot ; at leaft all the fouthern parts, from which we can expect any confiderable returns. Inftances of this may be feen in the adjacent provinces of Mexico, New Mexico, Terra Firma, Peru, Quito, \&c. and far more in our fouthern colonies, which never became populous, 'till the people removed to the inland parts, at a diftance from the fea. This we are in a manner prevented to do in our ancient colonies, by the mountains which furround them, and confine our people to the coalt; whereas on the Mississippi the whole continent is open to them, and they have, befides, this healthy fituation on the lower parts of that river, at a fmall diftance from the fea.
Thofe things being duly confidered, it will appear, that they who are poffeffed of the navigation of the MississippI, and have a competent maritime power to defend that liberty, will, in time, command that whole continent.
The low and drowned lands, indeed, about the mouth of the Mrssissippi muft, no doubt, be more or lefs unhealthful; but they are far from being fo pernicious as many would reprefent them. The waters there are frefh, we know by long experience in America, are much lefs prejudicial to health than the offenfive fetid marfies, that are to be found every where elfe on the falt waters.
The Upper Louisiana we call that part of the continent, which lies to the northward of the mountains above-mentioned, in latitude $35^{\circ}$. This country is in many places hilly and mountainous, for which reafon we cannot expect it to be fo fertile as the plains below, which will breed and maintain the moft people confiderably.
One of the moft important places in North America, is at the Forks of the Mississippi, where the Ohro falls into that river; which, like another ocean, is the general receptacle of all the rivers that water the interior parts of that valt continent. Here thofe large and navigable rivers the OHIO, river of the Cherokees, Webache, Illinois, Missouri, and Mrssissippr, befides many others, which fpread over that whole continent, from the Apalachean mountains, even to the mountains of New Mexico, upwards of 1000 miles, both north, fouth, eaft, and weft, all meet together at this fpot ; and that in the beft climate, and one of the moft fruitful countries, of any in all that part of the world, in the latitude $37^{\circ}$, the latitude of the capes of Virginia, and of Santa Fe , the capital of New Mexico. By that means there is a convenient navigation to this place from our prefent fettlements to Nfw Mexico, and from all the inland parts of North America, farther than we are acquainted with : and all the natives of that continent, thofe old friends of the French, have by that means a free accefs to this place; nigh to which the French formed a fettlement, to lecure their interett on the frontiers of all our fouthern coJonics: in fhort, this place is the Centre of that prodigious Continent, and of all the Indian nations on it, and feems to be intended by nature to command them both; for which reaton it ought not longer to be neglected by Britain. And if the fittements at this place had been made, as they were propofed, about twenty years ago, they might have prevented or fruftrated the late attempts to wrelt that
country, and the territories of the $\mathrm{O}_{\mathrm{HIO}}$, out of the hands of the English; and they may do the fame again.
For thefe realons, the firft fettlements we make beyond the mountains we are now poffeffed of, fhould be upon the Mis sissippi, convenient to the navigation of that river; and in time, thofe new fettlements may come to join to our prefent plantations; and we may by that means reap the benefit of all thofe inland parts of North America, by means of the navigation of the Mississippi, which will be fecured by the port at the Forks. If that is not done, we cannot fee how any of thofe iniand Parts of America, and the Territories of the Ohio, which were the great objefts of the laft war, can ever be of any lafting ufe to Britain, as the inhabitants of all thofe countries can otherwife have very little correfpondence with it.
This famous river, the Mississippr, is navigable upwards of 2000 miles, to the fall of St. Anthoriy, in latitude $45^{\circ}$, the only fall we know in it, which is 16 degrees of latitude above it's mouth; and even above that fall, Du Pratz tells us, there is thirty fathom of water in the river, with a proportionable breadth. About 1000 miles from it's mouth, it receives the river OHro, which is navigable 1000 miles far ther, fome fay 1500 , nigh to it's fource, not far from Lake Ontario in New York; in all which fpace there is but one fall or rapid in the OHio; and that navigable both up and down, at leaft in canoes. The other large branches of the Ohro, the river of the Cherokees and Webache, afford a like navigation from Lake Erie in the north, to the Cherokees in the fouth, and from thence to the bay of Mexico by the Mississippi; not to mention the great river Missourr, which runs to the north weft parts of New Mexicu, much farther than we have any good accounts of that cominent.
From hence it evidently appears, that the Mississippr affords the moft extenfive navigation of any river we know ; fo that it may be jufly compared to an Inland Sea, which fpreads over nine tenths of all the continent of North America; all which the French pretended to lay claim to, for no other reafon, but becaufe they were poffefled of a paultry fettlement at the mouth of this river.
If thofe things are confidered, the real importance of the navigation of the MrssissIPPI, and of a port at the mouth of it, will ábundantly appear. And this is the only navigation for all the Interior Parts of North America, which are as large as a great part of Europe; nor could any of thofe interior parts of North America be of any fervice to Britain; with the navigation of the Mississippi, and the fettlements upon it. It is not without reafon then, that we fay, whoever are poffeffed of this river, and are mafters of a competent maritime power to maintain that navigation, and of the vaft tracts of fertile lands upon it, muft in time command that continent, and the trade of it, as well as all the natives in it, by the fupplies which this navigation will enable them to furnifh thofe pcople, as well as to awe them upon emergencies.-- By thofe means, if the French, or any other maritime power, had been left in poffeffion of the Mississippr, while we neglected it, they muft have commanded all that continent bejond the Apalachean mountains, and bad it in their power to have difturbed our fettlements much more than they ever did; or were able to do; the very thing the French engaged in the laft war to accomplifh, and we to prevent.
The Mississirpr, indeed, is rapid for $\mathbf{1} 200$ miles, as far as to the Missouri, which makes it difficult to go up the river by water. For that reafon, the French have been ufed to quit the Miffiffippi at the river St. Francis, from which they have a nigher way to the Forks of the Miffifippi by land. But however difficult it may be to afcend the river, it is, hotwithfanding, often done; and it's rapidity facilitates a defecnt upon it, and a ready conveyarice for thofe grofs commodities, which are the chief ftaple of North Ainerica, from the moft remote places of the continent: and as for lighter European goods, they are more cafily carried by land, as our Indian traders do, over great part of the continent, on their horles, of which this country abounds with great plenty.
The worft part of the navigation, as well as of the country, is reckoned to be at the mouth of the river; which, however, Du Pratz tells us, is from 17 to 18 feet deep; and will admit of fhips of 5 co tons, the largeft generally ufed in the plantation trade. And even this navigation might be ealily mended, not only by clearing the river of a narrow bar in the palfes, which Charlevoix, and others; think might be eafily done; but likewife by means of a bay, deffribed by Mr. Coxe, from the actual furvey of his people, lying to the weflward of the fouth pafs of the river; which he fays, has from 25 to 26 fachom water in it, clofe to the fhore, and not above a mille from the Miffifippi, above a! the fhoals änd difficult paffes in it, and where the river has ioo feet of water. By cutting through that one Mile thene it would appear, that a Port might be made there for hips of any burden; the importance of which is evident, from it's commanding all the Inifad Parts of Norte America on cine fide, and the pafs from Mexico on the other.

## LOU

## LOU

Our ancient poffeffions in North America, between the rea and mountains, appear from many furveys, as well as from all the maps and other accounts we have of them, to be, at a medium, about three degrees of longitude, or 140 miles broad, in a frait line: and they extend from Grorgia, in latitude $32^{\circ}$, to the Bay of Fundy, in latitude $45^{\circ}$, (which is much farther, both north and fouth, than the lands appear to be of any great value) which makes 13 degrees difference of laticude, or 780 miles: this length, mulciplied by the breadth 140 , makes 109,200 fquare miles. This is not above as much land as is contained in Britain and Ireland, which, by Templeman's furvey, make 105,634 fquare miles. Intead of being as large as a great part of Europe, as we are commonly told, all the lands we poffers in North America, between the fea and mountains, do not amount to much more than thefe two iflands. This appears farther, from the particular furveys of each of our colonies, as well as from this general eftimate of the whole.
Of the extremity of thefe lands, both north and fouth, which we poffefs, are very poor and barren, and produce little or nothing, at leaft for Britain. It is only in our middle plantations, Virginis, Maryland, and Carolina, chiefly, where the lands produce any flaple commodities for this kingdom. In fhort, it is only the more rich and fertile lands on and about Chełapeak bay, with the fwamps in the Carolina's, \&c. like the lands on the Miffiffippi, that turn to any great account to this nation, in all North America.
This makes the quantity of lands, that produce any ftaple commodity for Britain in North America, incredibly fmall, and vaftly lefs than what is commonly imagined. It is reckoned, that there are more fuch lands, in Virginia, than in all the reft of our colonies; and yet it appeared from the public records, about 26 years ago, that there was not more land patented in that colony, which is the oldeft of any in all North America, than is in the county of YorkMire in Eng. land, to wit, 4684 fquare miles; although the country. was then fettled to the mountains.
If we examine all our other colonies, there will appear to be as great a fcarcity and want of good lands in them, at leaft to anfwer the great end of colonies, the making of ftaple commodities for Britain, and exportation. In a word, our colonies are already fetted to the mountains, and have no lands, either'to extend their fettlements, as they increafe and multiply, to keep up their plantations of faple commodities, or to enlarge the Britifh dominions, by the number of foreigners that remove to them, 'till they pals thofe mountains and fettle on the Mississippi.
This fcarcity of land in our colonies, proceeds from the mountains with which they are furrounded, and by which they are confined to this narrow tract, and a low vale along the fea-fide. The breadth of the continent, from the Arlantic ocean to the Miffiffippi, appears to be above 600 miles (of 60 to a degree) of which there is about 140 at a medium, or 150 at molt, that lie between the fea and mountains; and there is fuch another and rather more ferrile tract of level and improveable lands, about the fame breadth, between the weflern parts of thofe mountains and the Miffiffippi: fo that the mountainous country, which lies between thefe two, is equal to them both, and makes one half of ail the lands between the Mississippi and Atlantic ocean; if we except a fmall tract of a level champaign country upon the heads of the ОнIo, which is por feffed by the Six Nations and their dependants. Thefe mountainous and barren deferts, which lie immediately beyond our prcfent fettlements, are not only unfit for culture themfelves, and fo inconvenient to navigation, whether to the ocean or to the Miffiffippi, that little or no ufe can be made of them; but they likewife preclude us from any accefs to thofe more fertile lands that lie beyond them, which would otherwife have been occupied long ago, but never can be fettled, fo at leaft as to turn to any account to Britain, without the navigation of the Mississippi; which is, as it were, the Ocean of all the Inland Parts of North America, beyond the Apalachean Moun'tains, without which those Inland Parts of that Cuntinent can never turn to any Account to this Nation.
It is our fituation in North America, that renders all that continent beyond our prefent fettlements, of little or no ufe to thefe kiugdoms, and nakes the pofieffion of the Mississippi abiolutely neceflary to reap the lenefit of it.
How neceffary luch fettlements on the Mississippi may be, will farther appear from what we poffers on this fide of it. The lands in North America are, in the general, very poor and barren; and if any of them are more fertile, the foil is light and ftrallow, and foon worn out with culture. It is only the virgin fertility of frefh lands, fuch as thofe on the Mississippi, that can render this part of the world permanently advantageous to their mother country. Such lands in our colonies, that have hitherto produced their faple commodities, are now pretty well extaufted and worn out; and when their lands are worn out, neither the value of their commodities, nor the circumftances of the planters,
will admit of manuring them, at leaft to any great advantage to this nation.
The ftaple commodities of North America are fo grofs and bulky, and of fo fmall value, that it generally takes one balf of them to pay the freight, and other charges in fending them to England; fo that unlefs our planters have fome advantage in making them, fuch as cheap, rich, and frefh lands, they never can make any; their returns to England are then neglected, and the trade is gained by others who have thefe advantages, fuch as thofe who may be poffeffed of the Miffiffippi, or by the Germans, Ruffians, Turks, \&c. who have plenty of lands, and labour cheap: by which means they make more of our flaple of North America, Tobacco, than we do ourfelves; while we cannot make their ftaple of Hemp, Flax, Iron, Pot-ash, \&c. By that means our people are obliged to interfere with their mother-country, for want of the ufe of thofe lands, of which there is fuch plenty in North America, to produce thefe commodities that are fo much wanted from thence.
The confequences of this may be much more prejudicial to this nation, than is commonly apprehended. This trade of North America, whatever may be the income of it, confifts in thofe grofs and bulky commodities, that are the chief and principal fources of navigation; which maintain whole countries to make them, whole fleets to tranfport them, and numbers of people to manufacture them at home; on which account, this trade is more profitable to a nation, than the mines of Mexico and Peru. Though our fibery and fugar trades are of great advantage to us, yet the tobacco trade alone employs more feamen in Britain, than either the filhery or the fugar trade *; and brings in as much money to the nation, as moft of the other products of all America at prefent.

- There were 4000 feamen employed in the tobacco trade in the year 1733 , when that trade was under confideration of the legiflature; and we may at leaft reckon them now 4500 .
${ }^{4}$ By the fame accounts taken by the cuftom-houfe officers, it appeared, that the number of Britih Mips employed in all America, including the fifhery, was 1400, with 17,000 feamen; befides between 9 and 10,000 feamen belonging to North America, who are all ready to enter into the fervice of Britain, on any emergency or encouragement. Of thefe there were but 4000 feamen employed in the fifhery from Britain; and about as many, or 3600 , in the fugar trade. In fhort, the trade of North America is the capital nurfery for Britifh feamen, and muft be rendered capital nurlery for Britin feamen, and mift be rendered
more and more fo, as the greas taples of hemp, flax, iron more and more fo, as the great taples of hemp, flax, iron,
pot-ath, filk, wine, indico, timber, pitch and tar, and pot-ath, filk, wine, indico, timber, pitch and
every fpecies of naval fores, $\&$ c. fhall increafe.
But thofe commodities that afford thefe fources of navigation, however valuable they may prove to the public, and this kingdom in particular, are far from being fo to individuals: they are cheap, and of fmall value, either to make or trade in; and for that reafon they are neglected by private peaple, unlefs the public takes care to give them all due encouragement, and to fet them about thofe employments; for which purpofe nothing can be more abfolutely neceffary, than the provifion of good and proper lands, fuch as thofe on the Miffifippi; without which, our defirable improvements in this part cannot be expected.
The many advantages of fuch lands that produce a ftaple for this nation in North America, are with difficulty duly reprefented. The whole intereft of the nation in thole colonies depends upon them, if not the colonies themfelves. Such lands alone enable the colonies to take their manufactures and other neceflaries from Great-Britain, to the mutual advantage of both. How neceffary that may be, will appear from the ftate of thore colonies in North America, which do not make one with another, as much as is fufficient to fupply them only with the neceffary article of cloathing; not to mention, the numerous other things they fland in need of, and take from their mother-country; and how they are enabled to pay, is fome difficulty to reconcile. Our colonies in North America, have found it extremely difficult to make equivalent returns for what they take from us; and they would find it fcarce poffible to fubfift much longer, if at all, in a ftate of dependance for all their manufactures, and other neceffaries, unlefs they are provided with other lands that may enable them to purchafe them; and where they will find any fuch lands, but upon the Miffifippi, is more than we can tell.
When their lands are worn out, are poor and barren, or in an improper climate or fituation, fo that they will produce nothing to fend to Britain, fuch lands can only be converted into corn and pafture grourds; and the people in our colonies are thereby neceflarily obliged, for a bare fubfittence, to interfere with Britain, not only in manufactures, but the produce of their lands.
By this we may perceive the abfurdity of the popular outcry, that we have already Land enough, and more than we can make ufe of in North America. They who may be of that opinion hould fhew us, where that land is to be found, and what it will produce, that may turn to any accouns

## L U B

to the nation. Thore people derive their opinion from what they fee in Europe, where the quantity of land that we pofiefs in North America will, no doubt, maintain a reater number of people than we hive there. But they fhould confider, that thofe people in Europe are not maintained by the planting of a bare raw commodity, with fuch immenfe charges upon it, but by farming, manufactures, rade, and commerce; which they will foon reduce our coonis to, who would confine them to their prefent fettlements, between the fea-coaft and the mountains that furments, bem.-For more matier, fee our article Mississippi, our Remarks thereon fince the Definitive Treaty of Peace, i763.

## U BECKERS.

As of old time the common councils of the free and impeial city of Lubeck, and leveral other towns upon the North and Eaft Seas, have been in union with divers towns of the United Provinces, for defence of the liberty of trade, and of the rights belonging thereunto: and as now the StatesGeneral of the United Provinces, together with the burgomafters and common council of Lubeck, have found it convenient, in the prefent conjuncture, to treat about renewing the aforefaid union and amity, by their refpective depuies, who, after feveral conferences, and reports made, agreed upon the articles following :
i. That this union thall not be offenfive, but only for preferving the freedom of commerce, \&c. that the refpective citizens and fubjects of the union may enjoy the fame without moleftation, and mutually protect each other; fo that the manifold difficulties detrimental to their common trade nay be removed.
II. The union thall not, however, prejudice the friendfhip of the emperor, or holy empire, or of France and GreatBritain. And alfo the town of Lubeck is willing to remain in obedience to the emperor; and none of the leagues, rights, \&c. they have together, fhall be changed by thefe perfents, but remain in full power, falvo prefenti foedere
III. Thofe of the union fhall faithfully obferve the articles, and confirm them by oath.
IV. The States-General fhall manage this union to the beft advantage of the common caufe; but fo as the common council of Lubeck may have a vote in all the deliberations; for which purpofe, a perfon from that town thall always refide at the Hague, or fuch other place as the fates may meet at. And the States-General may depute fome perfon to refide at Lubeck: provided always, that, if any other of the Hanfe-Towns enter into the union, it may be determined, whether it may not be fit the faid deputy fhould refide elfewhere.
V. Thofe of the union fhall contribute to the charges to furnifh fhips, foot and horfe, in fuch manner as thall be neceffary. VI. And if thofe who interrupt commerce and navigation, on being amicably required to defilt, refure, thofe of the union thall defend themifelves vigoroully againt them.
VII. And, if war fhould follow, thofe of the union fhall recall their fubjects from the fervice of the adverfe party, on pain of death and confifcation of eftates. Nor fhall it be allowable to procure or fend to the adverfe party money, troops, fhips, \&xc. on pain of corporal punifhment. VIII. And if the adverfe party fhould arreft the fubjects perfons, lhups, \&c. of thofe of the union, or furprize them at fea, orders thall be given to make reprizals, and mutually to affit each other on that occarion.
IX. The fbips of thofe of the union may freely enter each other's harbours, to victual or refit, ufing no violence, and thankfully paying for what they take.
X. The fubjects of the union fhall, in all their countries, enjoy the privileges of a citizen, and even the right of fucceffion, without diftinction of religion, as that is practifed in the holy empire, fo they fubmit to the laws of the place. XI. None of thofe of the union thall enter into any treaty, without confent of the others, nor do any thing prejudicial to the others, but mutually endeavour to maintain each gther in poffelfion of their liberties and privileges.

## L Y O

XII. So that no truce nor peace-fhall be made with the enemy, but wish common and reciprocal deliberation and confent of all the members.
XIII. This league fhall remain in force fifty years; which term, with common confent, may be prolonged; but if, during the fame, or when expired, any of the union receive damage by reafon of it, they fhall mutually alfif each other againft all perfons whatfoever.
XIV. If any potentate, country, or city, efpecially any of the other Hanfe-Towns, defire to enter into this union, they fhall be received on reafonable conditions. See HanceTowns.

In witnefs whereof, two copies of thefe prefents have been made, and confirmed by oath, and fealed with the feals of the States-Gencral, and town of Lubeck, and figned by their refpective clerk and fyndic, each party retaining one copy. Done in May 1613, and underwritten,

By order of the States-General,
Signed Aerssen.
And by order of the honourable the common council of the town of Lubeck,

> Signed Martin Nordamus,
> Syndic of the Republic of Lubeck.

Duchy of LUXEMBURG, in the Auftrian Netherlands. This province is bounded on the north by the bifhopric of Liege, a fmall part of Limburg, and the territory of Strablo; on the eaft by the country of Eyffel, and the electorate of Treves; on the fouth by Lorrain, or rather now by French Luxemburg; and on the weft it extends to the river Maes. The climate here is mild and temperate; but the foil is not equally fruitful every where; but it abounds with game, as ftags, deers, hares, \&c. There are inon mines here, which furnich almoft all Germany with that metal.
Chief rivers are the Mofelle, Owitz, Sour, and Semay.
Luxemburg is the capital of this province.
Arlon, fituate near the fpring-head of the river Semoy, was formerly a confiderable place, very well peopled; but having fuffered very much by the wars, and been difmantled, it is now only a borough.
Bastogne, near the foreft of Ardenne, is fo well peopled, has fuch a good trade, and is fo well built, that the people of the country call it Paris in Ardenne; though it is confiderably decayed from what it once was.
Vianden has a confiderable trade in woollen cloths, with which they furnifh the whole province. There are alfo here a great many tanners. The adjacent hills produce fome wine, pretty much like the Mofelle wine.
SAINT VIST has a good trade in cattle, and is the ftaple town of the whofe province, it lying in the great road to Liege, Cologne, Treves, and other cities in Germany.
Grave-Macheren is a fmall, but a pretty town, the inhabitants of which have a good trade of Mofelle wine, which grows plentifully on the neighbouring hills.
LYONNOIS, in France. This government, or province, is bounded on the north by that part of Burgundy called Mâconnois; on the eaft by the Saone and the Rhone, which part it from Breffe and Dauphiné ; on the fouth by Vivarais and Velay ; and, on the weft, by the mountains of Auvergne.
This province is pretty fruitful in corn, wine, and fruit; it produces particulariy excellent cheftnuts.
It's chief rivers are the Rhône, Saone, and Loire, befides feveral others of lefs note.
The trade carried on in this government is pretty confiderable, and confifts chiefly in cheftnuts, paper, fine toys, guns, mufkets, piftols, and all forts of iron-works.
The capital city is Lyons, on the conflux of the Saone and the Rhône, and one of the fineft and moft confiderable cities in Europe, for it's fituation, extent, and riches, it carrying on a molt flourihing trade.

## The PRACTICAL BUSINESS of the CUSTOM-HOUSE continued.

The Business of the Custome, with Relation tothe following Particulars, viz.

Some Laws concerning Linens. See article Linens.
I INENS, chekered, friped, printed, painted, ftained, or - dyed, imported, after payment of the duties, are to be marked or ftamped with a feal or mark, to denote the fame. 10 Ann. c. 19. §. 67 , and 12. Ann. c. 9. §. 14, 16.

Stamps or feals to be provided by the commifioners of the cuftoms, which they may alter as occafion requires.
———Counterfeiting the flamps, felony
Coounterfefling the liamps, felony. feit ftamps, their aiders, abettors, and affiftants, are to forfeit rool. and to ftand in the pillory for two hours, ro Ann. c. 19. §.94. and 12 Ann. c. 9. §: 15 .
—— If deligned to be again exported ; before fhipping, notice muft be given to the proper officer appointed by the commiffioners of the cuftoms, when and where they are to be packed up, who is to take off the feals, and return an account of the kinds and quantities to the officer appointed to receive the fame. 12 Ann. c. 9. §. 17 .

Linens Inish, imported into this kingdom, may afterwards be exported to the Britifh plantations in America, Dury FREE. 3 Geo. I. c. 2I. §. 2 .
exp - In Scotland, expoled to fale, or deligned to be exported, not marked with the ftamp of a royal burgh, \&c. penalty 5 s. per piece. Io Ann. c. 12. \$. 3.

- Counterfeiting fuch famp, penalty 50 l. or a year's imprifonment, if the offender prove infolvent. ro Ann. c. 2I. §.4. Britain, exported, the ftained, painted or dyed, \&cc. in GreatBritain, exported, the Drawback and Regulations of exportation. See the End of Letter D.

Britilh and lrifh, the bounty and regulations of exportation. See Ditto.

## With Respect to Lagwood.

Logwood, alias blockwood, may be imported by any perfons, and freely ufed in dyeing. 13 \& 14 Car. II. c. 11 . \$. 26. See the latter end of P . containing an abftract of the laws relative to the Plantations.

## M A C

## M A C

MACE. In the defcription of the nutmeg, we have occafionally mentioned this fpice, which is the fecond coat or covering of the kernel of that fruit. It is a thin and flat menbranaceous fubfance, of an oleaginous nature, and of a yellowifh colour. We meet with it in flakes of an inch or more in length, which are divided into a multitude of irregular ramifications; it is of an extremely fmooth furface, and of a tolerable clofe texture, yet friable, and very eafily cut to pieces. It is of an extremely fragrant, aromatic, and agreeable freell, and of a pleafant, but acrid and oleaginous tafte. It is to be chofen new, not dry, and of a fragant fmell, tough, oleaginous, and of a good yellow. The people who colleat the nutmeg fruit, cut it open and throw away the pulpy fubftance or external coat; they then fee the mace covering the nutmeg, wrapping itfelf every way round it's outer woody fhell. The mace is at this time of a red colour; they take it carefully off from the nutmeg, and lay it in the fun for the whole day. In this time, it's colour, from a ftrong blood+red, becomes dufly; it is after this carried to another place where the fun has lefs power, and there expofed again to it's rays the few hours they reach thither.
By this means it dries gently, and remains tough, and retains it's fragrancy and colour in a great degree; if it were dried more hafily, it would be whitifl, brittle, and would lofe much of it's fmell. After this it is flightly fprinkled over with fea-water, and then put up into bales, in which it is preffed down firm and clofe, by way of preferving it's fragrance and confiftence.
There is great caution to be had to the ftate in which it is packed up, for, if it be too dry, it will be broke and lofe much of it's fragrance; and, on the other hand, if too moint, it will be fubject to breed worms and other infeets.
Mace abounds with the fame fort of oil that is found in the nutmeg; but it is thinner in the mace, and is in a greater quantity. If the oil be feparated by diftillation, what comes firft aver of it is thin and limpid like water, and is of the moft fragrant fmell; what follows this is yellowifh and fomewhat thicker; and, finally, a third kind comes over if the fire be made more violent, which is reddifh; and all three of thefe are fo fubtile and volatile, that, if they are not kept in veffels very clofely ftopped, they will in great part evaporate into the air, all their finer parts fying off. An oil may alfo be drawn from mace in the fame manner as from the nutmeg, by exprefion; it is afforded in a larger quantity this way than from the nutmeg, and is of a fomewhat fofter confiftence. Mace is carminative, ftomachic, and aftringent; it poffeffes all the virtues of the nutmeg, but has it's aftringency in a fmaller degree. It affects the bead in the fame manner as the nutimeg, if taken in a large dofe, and people have become delirious for fome hours, after an immoderate ufe of it. The oils of mace and nutmeg, whether prepared by diftillation or by expreffion, are fo much of the fame nature, that they may be indiforiminately ufed for one another on all oceafions. They give eafe in cholics, and often in nephritic cafes, taken internally from one drop to five or fix of the diftilled oil, or an equal quantity of the expreffed; and, externally, they are of ufe to rub paralytic limbs; they allo affirt digeftion, and will often frop vomitings and hiccoughs, only by being rubbed on the regions of the flomach. The nurfes have a cuftom of applying oil of mace by expreffion to children's navels to eafe their gripes, and that often with fuccefs; and we are affured by authors of credit, that, rubbed on the temples, it promptes, feep. The oils by difillation are very properly added to the fronger cathartics in form of pills, and prove excellent correctives
MACEDONIA; it's boundaries are Servia and Bulgaria on the north, Bulgaria and the Archipelago on the eaft, Levadia on the fouth, and Albania on the weft. It is rich in divers mines of gold, abounds with corn, pafture, cattle, venifon, and in fome parts it produces wine and oil. Here are many rivers and mountains, but none very remarkable, except mount Athos.
The Turks divide it into three parts, viz. Jamboli, whicb extends, frots the gulph of Salonichi on the fouth, to the
borders of Romania on the north-eatt and north, having Macedonia Proper on the weft, and the Archipelago on the eaft.
Macedonia Proper, has Jamboli on the eaft, Comenolitari on the fouth, Albania on the weft, and Bulgatia on the north.
Comenolitari, is the moft weftern and fouthern part of Macedonia.
Solonichi, or Salonica, the metropolis of all Macedonia, and the feat of a Turkifh prefec, ftands at the bottom of a gulph, to which it gives it's name. It is 150 miles diftant from Sofia in Bulgaria towards the fouth, 260 from Conftantinople to the weft, 160 from the ifthmus of Corinth to the north-weft, and r 40 from the neareft coaft of the Adriatic Sea to the caft. In the neighbourhood of it, towards the weft, runs the river - $V$ ardar, which abounds with filh, and the banks of which are adorned with beautiful trees.
MACHINE, in general, fignifies any thing that ferves to augment, or to regulate moving powers : or it may be defined any body deftined to produce motion, fo as to fave either time or force.
Machines are divided into fimple and compound.
Simple machines, are thofe otherwife called mechanical powers. See Mechanical Powers.
The fimple machines are the balance, lever, pulley, wheel, wedge, and fcrew; the compound are conftituted of feveral fimple ones combined together. The latter are innumerable, as well in their form as their application.

## REMARKS.

The lower branches of manufacture, wherein the price is paid chiefly to labour, contribute moft to the increafe of labouring hands. The price of art rifes above mere labours. in proportion as genius is a fcarcer commodity than ftrength. Commercial ftates regard an increafe of riches as fynonymous to an increafe of power, though it be only a mark or fign of it, and that not infallible. The following inflance may ferve to fet the worth of ingenuity above bodily ftrength in a full light, as well as to fhew their different effects on numbers and real power.
In Ruffa, they had no other way of making planks, 'till near the end of the laft century, but by hewing or chipping away a whole tree to the neceffary thicknefs; notwithftanding which, they could afford to fell them cheaper than their neighbours. Two Ruffians might, poffibly, with hard labour, finith a plank in a day in this inartificial way, in the fame time, two common fawyers could, with eafe, cut out 20 good planks.-Without troubling ourfelves with the lofs of timber, if both are fold at a neighbouring port for the fame money, it is plain the Ruffian muft work for $\frac{1}{20}$ part of the fawyer's wages: if a fawyer in Sweden can get ten pence a day, the Rufian muft be paid with one halfpenny. It is faid their renowned Czar, when in London, gave a hundred guineas for the picture of a favourite lady, finifhed probably in the fpace of a day. This fum is more than one of his fabjects would earn, in the above-mentioned way of hewing planks, by the labour of fixty-nine years and fifteen days, or as much as fifty thoufand four hundred of them would gain in one day. Should the returns of two nations be equal, whilf one traded in paintings alone, and the other in planks, hewed in this method, it is evident there muft be fifty thoufand four hundred fubjects in the latter, for every fingle one in the former.
An increafe of wealth may attend a decreafe of numbers and real ftrength, for which reafon the balance of money is lefs to be regarded. The exports of our nation may, at prefent, exceed a million in the lower branches of bays, ferges, druggets, and flannels, and this may employ a million of hands. In a courfe of years we will fuppore this trade to be changed for that of wrought works, tapeftry, painting, and ftatuary, in which our exports might amount to two millions; for which a thoufand hands, full employed, would be more than fufficient.
Hete we fee it poffible that our wealth may be annually increafed a million, whilft our real ftrength is decreafed in the
proportion

Proportion of a thoufand to one. There is nothing incompatible in the arts of ingenuity and thofe of labour, and all the plainer trades may be retained, notwithflanding the higher arts are introduced, in which cale we fhould be both a richer and greater people.
The above inftances may bear a farther application; the car. penter, by the contrivance of the long faw, performs as much in a day, as twenty Ruffians with the axe; but, beyond this, there are in Sweden a kind of mills turned by water, and fo contrived, as to take in large trees on the upper fide the ftream, and deliver them out on the lower, fawed into planks, in a few minutes. One of thefe mills will, at leaft, make 500 planks, whilft the poor Ruffian could hew out a fingle one, when the way of hewing was practifed; fo that it performs the bufinefs of 1000 Ruffians, or 50 common fawyers, in a day, with the attendance of a fingle perion.
If thefe two nations yearly brought to market an equal quantity of planks at the fame price, they who ufed the method moft artificial, would be leaft numerous; but, as there would be a greater plenty of money in proportion to inhabitants here, they would to appearance be richer, in the fame proportion as they were fewer. Apparent plenty of money is a ftrong attractive. The conveniencies of life are generally plentiful, where money appears fo. Perhaps the fmaller nation may make up it's numbers equal to the other, by there temptations to invite ftrangers. Ingenuity in one inftance is never fingle, the fame genius will ftrike out new Trades, which invents compendious methods of performing the old ones, and new employments call for new hands.
The more ingenious nation willikewite ftand the beft chance to gain the whole market; for, befides that Machines generally do the work truer and better than the hand, the labour faved by them is fo very great, that, if the materials are equally plentiful, they who ufe the machine muft underfell the others in a valt difproportion. For, as in this inftance, both are fuppofed to work only to live, provifions can be in no part of the world dearer than another, in the proportion of 500 to Y . A larger quantity, wrought in a more compendious manner, may call for as many hands, as a lefs quantity in'a way more laborious. All thefe confiderations tend to make up their numbers, which will be richer, more improved, and more ingenious, either to defend or acquire; for ingenuity is generally an overmatch for ftrength.
On the other hand it may be argued, that here, as in the mechanics, what we gain in expedition we lofe in ftrength : it can never be that the foreign market, by the ufe of the Machine, or all the confequences of ingenuity, can be fo much increafed as the home one is leffened, or in the proportion of 500 to I . Numbers of men are real power: an equal number of labourers are generally ffronger than the fame number of mechanics. A good writer of the prefent age explodes the ufe of machines, even of water-mills for grinding corn, L'Eip. des Loix, vol. ii. p. 116, 117. The beft conftituted ftates have reftrained them by laws; by what appears from authors, the Romans ufed chiefly hand-mills, and, if we may judge from the filence of Ariftotle, Pliny, and Seneca, machines were very few and fimple, either amongft the Greeks or Romans. There arguments a little vindicate the abfurd policy of the old duke of Mufcory, who, when a perfon offered him a project for towing up a barge with eighteen hands, which then employed an hundred and ten, ordered him immediately into banifhment.
In fuch a variety of reafons, it is not eafy to determine, to what degree the ufe of machines in general flould be admitted. States without commerce regard chiefly the increafe of numbers and their home markets; and commercial ftates are too apt to confider wealth alone, and foreign markets. Without prejudice to either, machines or engines may be allowed in the following cafes.
x . When they do fuch bufinefs as cannot be performed by hand at all. Of this kind are pumps, fire-engines, waterengines, looms, wine and oil-prefles, hand-mills for grain, and perhaps horfe-mills.
2. Where the commodities wrought by them are fuch as would not be ufed at all, except they were done by the machine, either being not cheap enough or not good enough for confumption, when prepared by hand. Under this head are the mills for making paper, thofe for forging, drawing, nitting, iron, copper, fulling of cloth and leather, and making gunpowder.
A people without commerce may fafely refufe to admit ftock-ing-looms, fawing-mills, throwing-engines, weaving or fpinning-engines, mulls for friking files, cutting watchwheels, making nals, and all the varicty of inventions produced by a rivalihip amonglt nations contending for commerce; and private men fur orders.
Commercial ftates mult have their eyes on their neighbours, and, if they defign to engrofs loreign markers, muft provide for the cheapnefs of labour at home; goods muft be made cheap to render them of general ufe abroad and at home. Eagines for hortening bulinefs ought to be rejected, or not admitted in commercial ftates; when the commodity is not at all fold abroad, when it affects not the price of labour,
when the machines would leffen our home markets, more than increafe our foreign ones. See the article Labour. M ADDER, is one of the long and fmall roots, diftinguilhable from all the others by it's remarkable red colour and firm texture. It is brought to us in pieces of four, five, or more inches in length, but feldom in the thickelt part exceeding the bignefs of a goofe quill. It's furface is wrinkled, with a number of furrows running principally in a longitudinal direction; it is light, though of a firm texture, and, for a root of that finall fize, not eafily cut. It's colour is a flrong but fomewhat duky red, both on the outfide and within, but fomewhat brighteft where frefh cut. It has very little fmell, but it is of a very remarkable tafte, and diftinguifhes plainly in it a mixture of fweet and bitter, and a very manifeft aftringency with this.
Madder is to be chofen in long and thick roots found throughout, hard to be broken in any part, and, when cut, of a good colour. It is not fubject to aduleerations, fo that, if it be found and well dried, it is always good, unlefs it have been kept too long, and this is eafily difcovered by it's wanting tafte. Madder is cultivated in vaft quantities in feveral parts of Holland; the Dutch fupply all Europe with it, and make a valt advantage of the trade in it; it is very wonderful, that no other nation has attempted the cultivating it; there is no doubt but it would fucceed very well in France, Germany, or with us, and much ground might be employed this way, to ten times the advantage that it is at prefent. What the Dutch fend over for medicinal ufe is in the root, which is only dried and fent over without any preparation ; the greateft quantity, however, is ufed by the dyers: this they ufually fend in coarfe powder, ground in mills; they make two kinds of this ground madder, the one is' the whole root ground, juft as taken out of the earth and dried; the other is cleaned from the cortical part, which is of a dufkier colour than the reft, and then ground to powder. This is diftinguilhed from the other, by it's being of a paler and more agreeable colour.
The plant which produces the rubia root is of the number of the tetandria monogynia of Linnæus, and one of the herbe ftellatr of Mr, Ray. It grows to two feet high; it's falks are fquare and rough; it's leaves are oblong and narrow, and ftand four at a joint in manner of a ftar. It's flowers grow in clufters at the upper part of the falks, and are very rmall, and of a pale yellowifh-green colour; thefe are followed by a fruit confiffing of two feeds. It has been defcribed by all the botanical writers under the name of rubia fativa, and rubia tinctorum.
The root is an attenuant, and has the credit of being a vulnerary of the firft rank. It is at prefent given with fuccefs in chronic cafes, where there are obftructions of the vifcera. It promotes the menfes and urine, and is good in jaundices, dropfies, and obflructions of the fpleen. It's dofe is from five grains to fifteen, but it is feldom given fingly. It frequently makes an ingredient in infufions and decoctions, among other medicines of the fame intention, and it gives thefe an elegant colour.
It is alfo ufed in great quantities by the dyers, for red and other colours.
MALT, is barley prepared, to fit it for making a potable liquor called beer or ale.

## Observations on the manner of Malting.

This fubject is of large extent, and, if duly profecuted, might tend to the enrichment of the prefent arts, or the dif covery of new ones. For, on regulating the growth, and curing of vegetable productions, depends the perfection of corn, wines, malt, bread, fugar, tobacco, fpice, drugs, fimples, dyeing ftuffs, and the like. And new difcoveries, either in vegetation, or curation of vegetables, might eafily introduce new trades; as has been the cafe in fugar, tobacco, wines, fpirits, \&c.
By experiments in vegetation, we here propofe to fhew the methods of regulating or conducting this natural power for the fervice of arts, by directing it to anfwer particular ends. Thus, by ftopping thort cowards the beginning of vegetation in barley, we procure malt; and, by permitting the grapes to hang 'till they grow not only ripe, but almoft dry, upon the vine, we procure rich fweet wines. And thus we may ftop vegetation at any period, or continue it longer than ordinary, according as the occalions of different arts require. By experiments in curation of vegetables, we have fhewn the methods of collecting, preparing, and fecuring vegetable commodities, fo as that they may long remain found, perfect, and fit for fervice. And thus our prefent defign will confift of two parts: the one relating to the ways of growing vegetables. according to the ufes for which they are intended; and the other to the gathering and prelerving them, fo as to have them conflantly ready at hand, when they come to be required in ufe.
The firf experiment, therefore, is calculated to thew the method of ftopping the natural process of vegetation in the feed, fo as to :prepare grain, pulfe, nuts, maft, and roots, for the making of beer, vinegar, and lpirits. The fecond
is defigned to thew the method of curing both fermented and unfermented vegetable juices, fo as to make them keep found and good for feveral years. The third experiment tends to hhew the method of curing vegetable juices by decoction, or infpiffation, for the fervice of brewing and dittilling. A parcel of garden-beans being plucked up, after they had been fuffered to lie in the ground about fix weeks in the winter feafon, each bean was found beginning to folit, or feparate, into $\mathrm{tr}^{2}$ s two lobes; whillt the radicle was fhot out fome inches downwards, and had begun to take root in the ground; the plame alfo, which becomes the ftalk of the bean, being rifen to the height of two inches. In this ftate a few, being dried over a clear fre, were found turned to a kind of bean-male, that tafted fiweetifh, but mealy betwixt she teeth, and diffolved freely in warm water, fo as to afford a wort fit for fermenting, with yeaft, into a kind of beer or ale.
This experiment infructs us in the ordinary procèf of malting, which, in the cafe of barley, is conformable hereto; and, in the cafe of malting Indian corn, is the proceis itfelf.
In making malt from barley, the ufual method is to fteep the grain in a fufficient quantity of water for two or three days; cill it fwells, becomes plump, fomewhat tender, and tinges the water of a bright brown, or teddifh colour. Then, this water buing drained away, the bariey is removed from the feeping-ciftern to the floor, where it is thrown into what they call the wet couch; that is, an even heap, rifing to the beight of about two feet. In this wet couch the capital part of the operation is performed; for bere the barley fponta. neouliy heats and begins to grow, exactly in the fame manner as in our prefent example of beans; fhooting out firt the radicle, and, if fuffered to continue, then the plume, fpire, or blade. But the procefs is to be fopped fhort at the eruption of the radicle, otherwife the malt would be fooiled. The way of ftopping it, is to fpread this wet eouch thin over a large floor, and keep it turning once in four or five bours, for the fpace of two days, laying it fomewhat thicker each time. After this, the malt is again thrown in a large thuap, and thore fuffered to grow fenfibly hot to the hand, as it ufually will in twenty or thirty hours time; then, being fipread abroad again and cooled, it is shrown upon the kiln, to be dried crifp without fooching.
This is the general procefs of malting, whereinalmoft every malter has his fecret, or particular way of working. But, to render the operation perfect, the following cautions muft be obferved: (1.) That the barley be newly thrafhed, or at deaft newly minnowed. (2.) That it be net mixed, or made up of different forts. (3.) That it be not over-fteeped in the ciftern, or fo long as to make it foft. (4.) That it be well drained. (5.) That it be icarefullyy looked after in the wet couch, fo as to fop the firf tendency of the blade to dhooting. (6.) Another caution is, to turn the wet couch infide outermoft, if the barley tomes, that it fhoots more in the middle than on the fides. (7.) To keep it duly turning after it is out of the wet couch. (8.) To give it the proper heating in the dry heap. (g.) To dry and crifp it thorougbly upon the kiln, but without a fierce fire, fo as to be deveral days in drying a kiln of pale malt. And, if thefe directions be carefully obferved, the malt will always be good. The mechod of malting Indiam corn, or Virginia whear, is mach lefs laborious. For, if this oorn be buried two or three inches deep in the earth, and covered with the loofe mould, dug up to make room for it, in ten or twelve days time the corn will sprout; and appearilike a green field; at which time being taken up, and walhed or fanned from it's dirt, it is immediately committed to the kiln, and by this means it becomes good malt, exactly as beans fo treated would do.
It is obferyable of this corn, that both it's root and blade muft thoot to a confiderable length, before it will make malt. And, perhaps, this is the cafe, ta all large bodied grain and nustor.

## Remarks.

It might be of fervice to tranfer this eafy experiment to the making of malt for barley, rice, and the other fmall grains and feeds; but the attempt may be attended with difficulties, becaufe, in the making of malt, the barley muft only be fuffered to grow in it's root, and not in the blade; whence it would be dificult, at firft, to bit the exact time for taking it out of the groumd. And, again, as the grain is fo fmall; it might prove troublefome to feparate it from the earth or mould. However, the thing may deferve to be tried.
It is a confideration of a higher nature to determine the phyfical effect prociured by malting, and whether the end may not he obtained by cheaper and lefs laborious means. The phyfical difference betwixt malted and unmalted corn appears to be the produftion, or extrication of a fweet faccharine fubitance in the matt, which is wanting under that form in the corn. And it is this fweet fubftance alone, which we require in malt for the making of beer; ale, vinegar, and inflammable fpirits. But even unmalted corn, duly treated, may be miade to afford beer, ale, vinegar, and fpirits : this, therefore, may intimate to us a way of making fuch liquors, without the formal extrication of any remarkably fweet fac-
charine fubftance. And, according to fome trials; unmalted corn affo ds half the quantiry of inflammable fpirit by fermentation and diftillation, as the fame corn would do when malted. And, fuppofe that unmalted corn were to be mado into a kind of dough or pafte, fermented with yeaft, as is ufual for bread, and then baked, would not this be a che?p. fubltitute for malting? They are faid to brew after this manner in fome countries. At leaft it deferves to be tried, how much beer, ale, winegar, and fpirit, might be procured this way, compared with that other of malting.
On the ether hand, if only a fweet faccharine fubftance be required in malt, are there not cheaper and eafier ways of procuring it than by malting? Do not many trees afford fuch a faccharine juice, by tapping in the fpring, without prejudicing the trees? Is not young green corn itfelf remarkably fweet; and does not this fweet juice enter the compofition of the ear, and there remain fixed, or almoft luft in a faccharine form', 'till recovered by malting? Here is a door opened for explaining the uature of fweetnefs, and deducing the particular hiftory of fugar; which is a work, that, for it's uifefulnefs in trades and ordinary life, deferves to be confidered. Ant, "till fome confiderable progrefs is made in a work of this kind, the art of malting, and all thofe that depend upon it, will not arrive at perfection. See the article Sugar.
Thofe who-are difpofed ro go tpon the enquiry, may pleafe to compare the art of ftarch-making with that of malting; and particularly try, whether fome confiderable ufes might not bermade of the refufeiliquors produced in troth arts. The high-coloured liquor drained away in the feeping ciftern is a vegetable tincture, that might, if not by itfelf, yet by being ufed iniftead of water to ground matt, be worth fermenting and diftilling for fpirit: and the flarch-makers refufe liquors have been obferved to contain à quantity of inflamnable fpirit.
Our prefent experiment may in this refpect be inade general, that it fhews as there are different times of fopping, or preventing, the farther growth of vegetables, for the fervice of arts. And this dotrine may be extended to the forming a fett of general rules, for gathering the different parts of plants at differenit feafons of the year, for different ufes.
Thus roots, for inftance, to be had perfect, Thould be gathered and dried in the foring, before the Yeaves are formed; leaves thould be gathered, when they are fully opened, but before the flowers appear; flowers when they are not fully opened, and fome, as red rofes, in the bud. Seeds are to be gathered when full ripe, and beginning to dry, before they fall fpontaneoufly; and trees are generally beft felled and flawed for their bark in the beginnitig of the fpring: But all this is to be underftood of the common ufes of the fubjects; for there are many particular occafions, which require them immature. Thus buckthorn-berries fhould be ripe gathered, for making the fyrup; but unripe, for making the painter's colour called fap-green.

An Abstract of the acts of parliament which have been made in relation to MAit.
I. Malt imported from beyond the feas before the 24 th of June yearly, forfeited, or the value. See the acts of 13 and 14 of Will. III. cap. 5. 8. 27. and 12 Ann. feff. 1. cap. 2. §. 25,28 .-12 Ann. Feff. 2. cap. 3.-And the malt act yearly.

I. cap. 4. $\$ .57$. $\qquad$ During the time of fhipping, when goods are not actually putting on board, the hatches mult be locked down, with two locks to each hatch, one to be provided at the charge of, and to be kept by the proprietor, and the other by the officer: the hatches to be kept fo locked down from the time of being fully loaded, 'till the time of failing out of port. 12 Geo. I. cap. 4. §. 56 .
XVII. - Makers, neglecting or refufing to perform the requifites of this act, forfeit 501.
XVIII. - Oppofing officers, or breaking the hatches locked down, penalty 501.12 Geo. I. cap. 4. §. 58.
XIX. - Makers to be allowed 3d. per quarter, in confideration of the charges of florehoufes, meafuring, \&c. I2 Geo. I. cap. 4. §. 59.

## An excife certificate for malt made for exportation.

No. 9.-Hants collection.-Southampton divifion.-January 2, 1730.
There are to certify whom it may concern, that Mr. A. B. of C. maltfter, did, between the 2gth day of November and the 14th day of December 1730, enter one hundred and five quarters and one bufhel of barley [or other grain] and made the fame into one hundred and feventeen quarters and two bufhels of malt, for exportation; and that, on exportation thereof, the faid A. B. is, by virtue of an act of the 3 d of George II. intitled to the bounty, or premium, of 2 s . 6 d . per quarter, upon one hundred fifty feven quarters and four bufhels of malt, being according to the allowance of thirty quarters of malt for every twenty quarters of barley, or other grain, fo malted for exportation : which faid allowance amounts to the fum of $191.13 \mathrm{~s} . \mathrm{gd}$.
D. E. Officer.

One of which certificates muft be produced for every feparate parcel of malt thipped on each veffel, and muft be carefully examined by the collector and comptroller, and, if found to be interlined, obliterated, or erazed, muft not be accepted; but, if regularly made out, muft be preferved, in order to be annexed to the debenture, as a voucher for the computation of the bounty.

## A debenture for malt.

As to the form of a debenture for malt exported, it will appear, by the following example *, that it is not much different from thofe before prefcribed under the article Corn; but that which is to be particularly noted is, that the bounty for malt is not to be computed on the real quantity fhipped off, as for all other corn, but $\dagger$ after the rate of thirty quarters, and no more, for every twenty quarters of barley, or other corn or grain entered and made into malt, as hall appear by a certificate from the officers with whom the corn or grain intended to be made into malt for exportation was entered; although, in the making of fuch malt, the barley, or other grain, thould either be actually run out to a greater, or Chould
not be run out to fo great a quantity, as is in proportion to thirty quarters of malt, for every twenty quarters of con from which it was made.

* 12 and 13 Will. III. cap. 10. §. 9!, \&c.

A bond for the exportation of malt.

## Noverint univerfi, \&c.

Whereas, in purfuance of an act of parliament pafled in the 3 d year of his majefty's reign, intitled, ' An act for continuing the duties upon malt, mum, cyder, and perry, in that - part of Great-Britain called England, and for granting to - his majefty certain duties upon malt, mum, cyder, and per'ry, in that part of Great-Britain called Scotland, for the - fervice of the year r 730 ; for exempting from the faid du-- ties cyder and perry ufed for diftilling; for afcertaining the s bounty for malt exported; for the better preventing fraud 6 in the malting corn for exportation; for making good the deficiency of a late malt-act; and for giving further time ' to clerks and apprentices to pay duties omitted to be paid - for their indentures and contracts:' the above-bounden Caleb White hath produced, unto the collector of his majefty's cuftoms in the port of Southampton, a certificate from the office of Excife, certifying that the faid Caleb White did, between the 29th day of November and the 14th day of December, 1730 , enser one hundred and five quarters and one bufhel of barley [or other grain] and made the fame into one hundred and feventeen quarters and two bufhels of malt, for exportation; and that, on exportation, the faid Caleb White is, by virtue of the aforefaid act, intitled to the bounty, or premium, of two fhillings and fix-pence per quarter, upon one hundred fifty-feven quarters and four buthels of malt, being according to the allowance of thirty quarters of malt for Every twenty quarters of barley, or other grain, fo malted for exportation : which faid allowance amounts to the fum of nineteen pounds, thirteen fhillings, and nine-pence.
And whereas the faid Caleb White hath entered for exportation the faid one hundred and feventeen quarters and two buffiels of malt, or board the Goodfellow of Hull, Britifhbuilt, whereof Willian Miller, the mafter, and two-thirds of the mariners, are Britifh, bound for Rotterdam.
Now the condition of this obligation is fuch, That, if the faid one hundred and feventeen quarters and two bufhels of malt, and every part thereof, fhall be exported into parts beyond the feas (the dangers of the feas excepted) and that the faid malt, or any part thereof, fhall not be again landed in GreatBritain, or the inlands of Guernfey or Jerfey ; then this prefent obligation to be void, and of none effect, or elfe to remain in full force and virtue.
But, for the greater eafe of the exporters, by preventing any difficulties that they may lie under, by being obliged to give bond at the time of entry; it is chought that the intention of the law will be fully anfwered, though fuch bond be not taken 'till after the malt is hipped; and then the bond may be taken in the following form:

A bond for the exportation of malt, to be taken after the hipping.
Noverint univerfi, \&x.
Whereas the above-bounden Caleb White hath this day entered for exportation, with the collector of his majefty's cuftoms in the port of Southampton, to be fhipped on board the Goodfellow of Hull, whereof William Mifler is mafter, now riding at an anchor in ——, and bound for Rotterdam, oine hundred and feventeen quarters and two bufhels of malt.
Now the condition of this obligation is fuch, That, if the faid one hundred and feventeen quarters and two bufhels of malt, and every part thereof (except fo much thereof as fhall be endorfed on the back of this bond, by the above-bounden Caleb White, and certified by the fearcher not to have been fhipped) thall be exported into parts beyond the feas (the danger of the feas excepted) and that the faid malt, or any part thereof, thall nor be Ianded again in Great-Britain, or in the iflands of Guernfey or Jerfcy: that then chis obligation flall be void and of none effect, or elfe remain in full force and virtue.
Seaied and delivered in the prefence of
A. P. Collector,
B. C. Comptroller.

The form of the certificate to be produced, in order to difcharge the aforementioned, and all other bonds, and the confirmation of the truth thereof, may be as follows:

We the under-written Britifh merchants, refiding at Rotter dam, do certify that there were landed, out of the Good fellow of Hull, William Miller mafter, ninety-one quarters of wheat, forty-nine quarters of rye, thirty-eight quarters five bufhels of barley, for the account of Caleb White, merchant in Southampton. In witnefs whereof, we have hereunto fet our hands and feals. Dated in Rotterdam, the 17 th of March, 1730, N. S.

Charles Wells *,
Jofeph Farrel *.
I know the above figning to be the hand-writing of Mr . Charles Wells of Rotterdam.

George Jones.
I know the above figning to be the hand-writing of Mr . J $\alpha$ feph Farrel of Rotterdam.

## Samuel Palmer.

And if, upon a careful and diligent examination, the collector is fatisfied of the truth and reality of fuch certificates, and of the credit of the perfons certifying, he may cancel the bonds taken at expiration, and forthwith deliver them up, noting the fame on the certificate, as follows:

5th of Apri], i73r.
Canceilled the botid, by virtue of the above certificate.
A. B. Collector, B. C. Comptroller:

In the 26th year of the reign of his late majefty Geo. II. an det was made for allowing interelt upon certail debentures for the bounty granted on the exportation of corn, the fubftance of which is as follows, viz.
That whereas, by an act in the ift year of Will. and Mar. for encouraging the exportation of corn, \&c. [fee the article CORN] every one who fhall put on hip-board, in fuch manner as by the faid act directed, any fort of corn therein mentioned, with intent to export the fame to parts beyond the fea, and thall duly perform every requifite therein required, as before fhewn, thall have and receive of the commiffioners, collectors, or other perfons appointed to collect the duties of cuftoms, in any port where the fame corn fall be fo fhipped, for every quarter of barley or malt, 2 s .6 d . for every quarter of rye, 3 s .6 d . for every quarter of wheat, 5 s . which fums the faid commufioners or collectors are authorized and required to pay to fuch exporter, on demand: and whereas, by a claufe in an act made in the 12 th and $13^{\text {th }}$ years of the reign of king William III. for granting an aid to his majefty for defraying the expence of his navy, \&c. it is enached, That, if the collector of the cuftoms of any port wherein corn thall be exported, fhall not have fufficient in his hands to pay fuch fums of money which thall be due to any exporter, by virtue of the faid act of Will. and Mar. arifing out of the duties out of which it ought to be paid, upon demand, that then fuch collector hall give the exporter, without fee or reward, a certificate under his hand of what is due to fuch perfon for the corn, \&rc. exported; certifying to the cummiffioners of the cuftoms at London that he hath not monies in his hands to pay the fame; which certificate being annexed to the debenture, and produced at London as aforefaid, the faid commiffioners of the cuftoms there are authorized and required; on demand by the perfon that fhall bring the fame, to caule the monies thereby due to be paid in three months, by the general receiver or calhier of the cuftoms, \&c. And
Whereas, by reafon of the great quantity of corn which of late hath been exported, the revenue applicable to the payment of fuch bounties, 8 cc . hath not been fufficient to pay all fuch monies, and divers debentures for fuch monies remain unpaid: now, for making a reafonable compenfation for fuch delay of payment, and to the end that the nation may continue to enjoy the benefits defigned by the faid bounties, be it enacted, \&c.
That if, after the 25 th day of March, 1753, any debenture for the bounty on corn exported, payable as aforefaid, fhall remain unfatisfied more than lix months next following the day when the fame fhall have been produced to the commiffioners of the cuftoms at London, then, and in fuch cale, for the fubearance of fuch money as, after the expiration of the
aid fix months, fhall be due on fuch debenture, interefl, after the rate of three pounds per cent. per annum, thall be allowed to the proprietors thereof, his, her, or their executors, admmiftrators, or affigns, fuch intereft money to be computed from the end of the faid fix months, until the money due on fuch dehenture, together wich fuch intereft, fhall be paid, or until money fufficient thall be received in the hands of the faid general receiver of the cuftoms for that purpofe, and preper notice thall be given thereof.
That fuch wo whom fuch monies may be due, may mot avail thenfelves of their neglect to demand the fame, it is further criakted, 'That, when money fufficient fhall be referved as aforetaid, for payment of the principal and intereft due on fuch debentures, the faid general receiver fhall give notice in writing, to be fixed on thrce or more doors of fome public place or places in the Cuftom-Houfe London, and to be advertifed in the London Gazette, that, on a certain day, to be limited in the faid notice, and on the four days next following fuen day (fo as fix days, at the leaft, intervene between the date of fuch notice, and the day fo limited, and fo as Sundays and holidays be not included in the number of fuct four days) he fhall be ready to pay the principal and intereft duc on fuch debentures; after the expiration of which five days, it the payment of fuch principal and intereft fhall not be demanded purfuant to the faid notice, all intereft on fuch debenture fhall ceale.
Provided always, that the principal monies due thereon, with fuch intereft as thall be likewife due thereupon, before the expiration of the time limited in the faid notice, fhall be paid on demand, at any time afterwards.
And if there fhall be, at any time thereafter, money in hand fulficient to difcharge the debentures, and notice be given thereof, the intereft thercon fhall ceafe, $\& \mathrm{cc}$.
Provided neverthelefs, that the principal and intereft be paid in courle, without undue preference to any of the proprietors.
The day of prefentment to be indorfed on the certificate of debenture; and an order for the payment and intereft to be figned by the commiffioners, \&cc.
The payment to be made of the principal and intereft without fee.
Debentures made affignable.
Where there is not money in hand to pay the bounty on corn exported from Scotland, a certificate to be granted. And The debenture to be paid by the receiver-general in three months.
Such debentures, remaining unfatisfied for fix months, to carry 3 l. per cent. intereft.
Notice to be given when the fame are ready to be difcharged, and intereft to ceafe from thence.
If there fhall be, at any time thereafter, money in hand fuf. ficient to pay off the debentures, and notice be given thereof, the intereft thereon fhall ceafe, \&c.
Debentures in Scotland to be paid by the general receiver, and without uridue preference.
MAN, [the I SLE of MAN,] lies between Britain and Ireland. It is, from north to fouth, twenty-eight miles long, nine broad, and 160 fquare miles. The foil is very fruitful, and produces fuch ftore of barley, wheat, rye, and oats, as does not only furnifh the neceffary ufes of the ifland, but likewife gives leave for the exportation of great quantities. According to the diftinction of north and fouth it is different ; in the firlt it is healthy and gravelly, and in the other they have good meadow and pafture-ground; and the air in general is efteemed extremely wholefome.
A ridge of mountains runs almoft the length of the ifland, which fupply the inhabitants with exceeding good water, and excellent peat for fuel.
The black cattle are generally lefs than thofe of England; the gentlemen have good draught and faddle-horfes: there is a very fmall fort bred in the mountains, about three feet three inches high.
They have no coal mines yet difcovered, but good quarries of a black marble, and other flones for building. They have mines of lead, copper, and iron, which have formerly been worked to good advantage.
This inland was given by Henry IV. anno I405, to John lord Stanley; and in this honourable houfe it has ever fince continued, except fór 12 years during the civil wars, when it was granted to the lord Fairfax, but returned to it's ancient lords at the Reftoration.
Upon the death of the late lord Derby without iffue male, it devolved to the heirs female; and the prefent lord of Man and the Ifes is the duke of Athol.- They have moft of the prerogatives of kings.-The number of inhabitants are about
The principal towns are only four, which are all fituate near the fea; each of them has it's harbuur, or a caftle or fort to defend it.
Castie-Town, to the fouth, about 210 miles from London, longitude 4. 37. latitude 53. 50.-Here the governor and moft of the lord's officers refide; and here the courts of juftice are held.
Pext, or Hotar-Town, to the weft. Within thefe few

## M A N

years feveral merchants have fettled here, and built good houfes and noble vaults, \&c.
Douglas-Town is much the richeft, has the beft market, and is the moft populous of any in the whole inland. As it has of late increafed in trade, it has done fo in buildings. The hafrbour, for thips of tolerable burthen, is the fafett in the illand; and', within thefe few years, they have built a fine mole into the fea, which, when perfected, will be one of the beft harbours in any part of the three kingdoms, and will be of great fervice for fhips to find theiter in diftrefs.
Ramsea, to the north, is the moft noted for a fpacious bay, in which the greateft fleet may ride at anchor, with fafety enough in all winds, but the north-eaft; and, in that cafe, they need not be embayed. They have lately made a good harbour, that will bring more trade to the town, which formerly fubfifted on fifhing.
The trade of this inlan'd was very much improved before the year 1726, when foreign merchants found it their intereft to touch here, and leave part of their cargoes, either to bring the remainder under the cuftom of butlerage, or becaufe the duties of the whole would be too great a fum to be paid at once in England; or, laftly, to lie here for a market, the duties and cellarage being fo fmall.- But, the late lord Derby having farmed out his cuttoms to foreigners, the farmers infolence and impudence drew on the juft refentment of the government of England, who pafied an act, anno 1726, by which the people of the inland were cut off from the liberties and privileges of a fair trade with England.
They improve their lands either by lime, by fea-wreck, or by folding their fheep and cattle in the night, and during the heat of the day, in little inclofures, which are removed from place to place every year; and the lands are foon fo inriched by the urine and dung of the cattle, that they yield plentiful crops of corn; but oat-cakes are the common bread of the country.
The commodities of this illand, befides their black cattle fof which 600 may, by the act of navigation, be imported yearly into England) are lamb's-wool, fine and coarie linen, and coarfe woollen cloth, hides, fkins, honey, and tallow; but it's great and ftaple commodity heretofore was herrings, of which near 20,000 barrels have been exported in one year.
The herring-filhing feafon is between July and AllhallowsTide. The fleet of boats (which are about two tons burthen) is under the government of the water-bailiff on fhore, and under one called a vice-admiral at fea, who, by the fignal of a flag, directs them when to fhoot their nets, \&c.
There is due to the lord of the ille, as a royalty, 10 s . out of every boat that takes above io meafe (every meafe being 500 herrings) and Is. to the water-bailiff.
Here are mills both for corn and fulling of cloth, which are worked in the fummer-time, when there is greateft plenty of water, many of the rivulets not having fufficient to drive a mill the greateft part of the year ; which has put them upon inventing a fort of mill, fo cheap that it is no great lofs, though it fhould fand fill fix months in the year.
Notwithftanding the frictnefs of the laws againft offences committed in the inand, it is a place of refuge for crimes that are committed out of it, as well as for debts that are not incurred in it.-This ifland is alfo a fanctuary for goods, there being no cuftom paid, nor officers to receive it; fo that wine and brandy from France, rum from the Weft-Indies, and callicoes, and other Eaft-India goods from Holland, are often, put afhore here into warehoufes, and afterwards run, in fmall boats, into Ireland, Scotland, and the weft of England.
Since the inhabitants, who were formerly chielly employed inhufbandry, have turned their heads to this more gainful trade of fmuggling, they have much more fhipping than they had, and diwell more upon the fea-coaft than they ufed to do, where, as may be judged of the increafe of their port-towns, new buildings, and gay appearance, \&c. they grow rich. new buildings, and gay appearance, \&cc. they grow rich.
This coaft, except the harbours abovementioned, is rocky and dangerous, and not practicable without good pilots.
Remarks on the Smuggling Trade carried on at the Isle of Man before the laft War.
Extract of a letter from Newry, dated October 3, 1753, concerning running of goods from the Ifle of Man, and publithed in the principal news-papers in London, and in the country.

- Our tea-trade is long fince loft, and is likely to be followed by that for fpirits and tobacco, fuch quantities being daily run from the Ine of Man, that, if the commiffioners do not foon find fome means of effectually preventing it, the fair trader muft be obliged either to fall in with the practice, or be ruined. It is computed that his majefty's revenue fuffers at leaft 10,0001 . per annum by fuch clandeftine dealings in thofe parts, as this illicit trade is now moft in the hands of perfons of property: fo that the dealers all around are fupplied at home, on much eafier terms than they can be from the fair trader here. One great encouragement is, the freight being paid down on Shipping the goods, and the wherries, if taken, not only fuffered to efcape, but the boatmen rewarded with a few anchors, to
induc
induce them not to be over-diligent in getting away another time; fo that, when a barge is not in fight, they boldly make their port in open day, and thus find their account in this defructive commerce, their freight being two Englifh fhillings for an anchor of 10 gallons, which is almoft equal to that for goods imported from the Weft-Indies.
Nor are the finugglers here lefs daring than numerous; for, notice being lately fent by them to the coaft-officers, that fuch a day they intended to carry a confiderable quantity of run goods from the neighbouring mountains, the officers and their affiftants, on coming to prevent it, found near 60 perfons, mounted and in arms, who divided into parties, and the officers doing the like, and, by this means being prevented from affifting each other, they attacked, difarmed, and grofsly abuied them. One of the officers having in the engagement fired among them, and fhattered a man's leg, examinations have been forn againft him, and all his companions, to take of their evidence : who muft now undergo a trial, for having endeavoured to difcharge their duty.
Thefe are the effects of a petty independent fovereignty fubfifting in the heart of the Britifh dominions, which ferves for an afylum to out-laws and bankrupts, and may be confidered as a fortrefs in the hands of our enemies (that trade being principally fupported by the French) a conftantdrain of our cafh, and the ruin both of his majefty's revenue, 'and the fair trade of thefe kingdoms.'
Some Reasons for annexing the Isle of Man to the Crown of Great Britain.
In the 12th of George I. cap. 28. by an act then paffed, the lords of the Treafury were impowered to treat with the earl of Derby, and his heirs, for the purchafe of all right to the Ifle of.Man; and this act was founded upon the almoft impoffibility of preventing fmuggling from that inland, while it remained as a petty fovereignty in the hands of a proprietor. The late lord Derby, from fome notion he had formed of being able to leave the flle of Man by will, would not treat with the Treafury. The duke of Athol, the prefent proprictor, may probably be difpofed to part with it, upon good terms, efpecially when it is confidered the moft part of his revenues arife from finall duties and cuftoms paid the illand upon probibited goods entered, and afterwards fmuggled upon the coalts of England, Wales, Ireland, and Scotland, which, though no method has yet been found out to prevent in any degree (not one in an hundred of the boats or veffels concerned in the fonuggling trade being taken at fea, or feized afterwards) it cannot therefore be fuppofed that the legiflature will fuffer it long to be carried on to fuch an enormous height, which now calls loudly for the ferious attention of every perfon that wifhes well to the trade and welfare of there kingdoms.
The Ifle of Man is fituated in the midft of the three kingdoms, not above fix or feven hours fail from the neareft parts of Scotland, Ireland and England. It is the greateft ftorehoufe, or magazine, for the French, and other nations, to depofit prodigious quantities of wines, brandies, coffee, teas, and other India goods, which are carried off in fmall boats and wherries, built for that purpofe. To afcertain the quantity, the houfe of commons may order the collectors of the noble proprietor's cuftoms in the illand, to lay before them their books of entries, for the laft feven years, of goods; 999 parts of which, out of 1000 , are fmuggled upon our coafts; upon fuch an examination of thefe officers, the whole fcene would come out.
Of late years, a new and deffructive trade has been fet up by Irifh Papifts, who have cheated their creditors, and carried their effects to the lile of Man; and that is, by importing fuch quantities of teas, and other India goods, as ought greatly to alarm the India company. Perhaps they do not know to what a height it is come; or elfe it is hardly poffible they fhould fit ftill, and not complain of whole fhip-loads of teas, and other India goods, brought in for fome years paft from Denmark, as well as Holland and France; and all fmuggled upon our coafts. The captain of a cruizer, did venture to do his duty, and attempted (as he thought he was warranted to do by act of parliament) to feize a Dutch dogger, valued at 12,000 l. fterling, which run from him afhore upon the ifland, where fhe was bound. But the man found himfelf miftaken. Acts of parliament, and Englifh commisfions, could not protect him in that petty principality; they fcized his men, who had taken poffeffion of the dogger, threw them into a goal, where 5 of them will lie, perbaps, till their death. The captain himfelf narrowly efcaped, with two men and a boy, to Whitehaven, from which place he wrote his complaints to the commifioners of the cuftoms. If there gentlemen were called upon by the houfe of commons, not only for thefe papers, but alfo for fuch informations as they have reccived for fome years paffed, from the collectors of Whitehaven and Liverpool, and their officer in the lle of Man, no doubt could remain of the abfolute neceffity of annexing this ifland immediately to the crown of GreatBritain.
Query, Whether the officers in the Ifle of Man are not guilty of an act of rebellion, in feizing the king's boats and
Vol. II:
arms, and detaining them? Another pernicious pratice criried on by fome Irith fugitive Papifts fettled in the illand, who are countenanced and protected, is this; they enter tobacco in rolls from reveral ports of Great-Britain for fome forcign parts, receive the drawback, then carry it to the ifle of Man, and run it back again from thence to Scorland, England, or Ireland, and Waies. This mult always be attended with perjuries, very little regarded by fuch perfons who have firft cheated their own creditors, and then rob the public. Here the cuftoms are actually robbed of great fums
of money. of money.
The ine of Man is likewife a great detriment to the Britifh diftillery. Moft of the ihips that now go from Liverpool to Guinea, \&cc. touch there for their brandies, wines, and India and other goods, \&xc. not of Britifa manufacture.
There, and matny other inconveniencies and mifehiefs arife from fuffering this infand any longer to be in a manner independent of Great-Britain. And a fuiler account of the practices carrying on there will be publifhed, if the ee be not fufficient to awaken all true friends of Great-Britain.
The remedy propofed is, To agree with the prefent proprietor to relinquilh his right to the Inle of Man, and, in lieu of it, to grant him, and his heirs, an annual fum out of the cuftoms of England for ever, or in any other way that thall be deemed more eligible: and fuch an annuity will be a faving to the government of fome thoufands a year, expended to very little purpofe, in maintaining cruizers and officers, 8 c . to guard againft it's illicit and pernicious trade, and ten times the number will never prevent fmuggling from that ifland. This article alone cannot be lefs than 15 or 20,0001. a year, including, in this eftimation, the officers in Ireland, who are kept there on the fame account ; befides the lofs to the revenue, upon the moft moderate computation, of at leaft 200,000l. a year; and the lofs to the fair trader, and particularly the India company, which may be as much more.
The late purchafe of the hereditable jurifdictions in Scotland, hath fet an excellent example, which deferves imitation. And, indeed, the reafons of annexing this petty royalty to the crown hold fronger than in any of the others. For the detriment which the whole kingdom fuftains by the alienation of it, is much greater than that which arofe from all the royalties and juridictions of Scotland. The lofs to the nation, and the gains to the French, are inexpreffibly great. And, as all the fums drained from us are employed by them, in time of war, to hire troops, and pay armies to fight againft us, it will be no exaggeration of the truth to fay, that, fince the peace of Utrecht, they have drawn more money from us, by means of their trade with this fmall ifland, than was fufficient to maintain 30,000 men with a train of artillery, during the late war in Flanders. Would the French have fuffered a like fovereignty of Bellife, formerly in poffeffion of the family of the famous duke of that name? It plainly thews they would not.
In fhort, this ifland may, be looked upon as a fortrefs in the hands of our enemies, draining us of our fpecie (for all thefe goods are paid for with Englifh coin): and alfo continually annoying us in the fenfible parts, our trade and commerce. And the whole queftion is, Whether we ought to difpofieis them or not? A queftion that admits of no difpute, if the public good and welfare of our country are to determine it! -Nor can there be any one gaod reafon affigned, why this illand Chould remain fo long in a manner independent of Great-Britain.
If we look back, and confider how many millions of debt the honeft part of thefe kingdoms is burthened with, by fubmitting for fo many years to be plundered by fuch gangs of thieves, can we poffibly call ourfelves a civilized people? Have we the leaff right to complain of gioaning under fuch a load of taxes, without fo much as looking back to one of the principal caufes of our miferies, or even thinking, as the paft is irretrievable, of a preventive remedy, againft our abfolute future deftruction, and againft our becoming, if not a prey to one another, certain victims to a power, ever aiming at our ruin? Now then, let that Britifh fpirit awaken, with that attention to the national good, it has fo often fignalized itfelf for; directed by thofe calm, ferious, and deliberate confultations, which are alone the fureft means, to perfect the cure of the greateft evils, without pique or refentment againtt any fert of men, without feeking vengeance for, but rather pardoning all paft offences. Thus hall we fee the morals of our people, corrupted by the little attention paid to the enforcing the execution of the laws, recover their former foundnefs, and thofe innumerable and invaluable lives preferved for our employment, ftrength, and happinefs, which are now fuffered to be wafted by firituous liquors, under the thin pretence of incapacity of redrefs, left the revenue fhould fuffer a diminution. See Smuggling.
MANUFACTURERS.
The principal Ianws of England relating to Manufacturers and Artificers.
Perfons employed in making up the woollen, linen, fuftian, cotton, or iron manufactures, embezzling or purloining any
wefts, thrums, or ends of yarn, or any other materials of wool, hemp, flax, cotton, or iron, with which intrufted, or that thall reel falfe or fhort yarn, being thereof convicted by oath of one witnefs, or confeffion, before one juftice, \&c. thall forfeit double the value of damages done, for the ufe of the poor. On negledt or refufal to pay, to be fent to the houfe of correction 'till fatisfaction made; if not able, to be kept there not above fourteen days, publickly whipped, and kept to hard labour. Buyess and receivers of, \&ic. liable to the fame punifhment, i Ann. c. 18. This act at firf was temporal, but by 9 Ann. c. 30 . was made perpetual.
By 13 Geo. II. If any perfon working woollen, linen, fuftian, cotton, or iron manufactures, fhall embezzle or illegally difpofe of the materials, or Shall reel thort yarn, being convicted as preferibed by 1 Ann. Mall forfeit double the damages fuftained with cofts: and, in cafe immediate payment fhall be neglected, the juftice fhall commit the offender to the houfe of correction, to be whipped, and hard labour, not exceeding fourteen days. And, on further conviction for embezzling any of the materials, the perfons fhall forfeit four times the value (whether the fame be or be not made up) fuftained, with cofts. And, if payment with cofts be neglected, fuch juftice fhall commit to the houfe of correction and to hard labour, not exceeding three months, nor lefs than one, and to be publickly whipped in the market-town, at the market-place or crofs, once or oftener. And, by Geo. II, every perfon who thall buy or take by way of gift, pawn, fale, \&xc. from any in the act of I Ann. mentioned, any woollen, linen, fuftian, cotton, or iron manufactures, knowing the fame to be embezzled, fhall fuffer the like forfeiture as the perfons purloining the materials; all which forfeitures are by 13 Geo. II. to be applied, one moiety to the ufe of the party injured, and the other to the poor of the parifh, with benefit of appealing. If any perfon employed in cutting or manufacturing of gloves, breeches, leather, boots, thoes, or other goods, thall fraudulently embezzle any of the laid goods or materials, or thall purloin or exchange any gloves, \&c. when manufactured, or leffen the value, either before or after thade into wares, the perfon muit make a reafonable recompence, not exceeding double the value of the goods; orie half thereof to the party aggrieved, and the other to the poor. But if no goods, and Chall refufe to pay, the offender hhall be for every offence committed to prifon, and kept to labour fourteen days, and fhall be whipped; and for a fecond offence thall forfeit four times the value which the owners fhall fuftain, with cofts adjudged by the juftice: And, not paid, fuch juftice may commit to the houre of correction or prifon to labour, not exceeding three, nor lefs than bne month, and fhall caufe the offenders to be whipped in the market-place or crofs once or oftener. And every perfon, who thall knowingly buy or receive by way of pawn, \&c. from any perfon whatfoever (except of or from the perfon in whom the property is) fuch perfon thall make fuch fuitable recompence, within two days after the fact thall be determined, or elfe be fubject to diftrefs, and, for want thereof, liable to the like punifhment as is directed on perfons as fhall embezzle goods, \&ic. and fo for any fubfequent offence. The fat. 13 Geo. II. proving deficient, the 22d of Geo. II. enacts, if any perfon hired to make any felt or hat, or work up any woollen, linen, fuftian, cotton, iron, leather, furr, hemp, flax, mohair, or filk manufactures made up of wool, \&c. or any of the faid materials mixed, Thall, after the 24 th of June 1749, purloin or difpofe of materials, whether wrought or not into merchantable wares, or fhall reel falfe or fhort yarn, the juftices may commit the perfon to the houfe of correction or public prifon, to labour, for fourteen days, and to be once publickly whipped at fome public place; and, if a further offence, the juftices may commit to the houfe of correction or public prifon to labour, not exceeding three, nor lefs than one month, and may order the perfons to be whipped at fome public place, \&x. twice or oftener.
If perfons thall buy, or take in gift, pawn, \&c. from any employed to make any felt or hat, to work up the woollen, linen, \&c. manufactures made of wool, \&c. or filk, or any of the faid materials mixed, thrums, or ends of yarn, whether made up or not, knowing the perfon to be hired, and not having the confent of the perfon hiring; or fhall buy or take, in any manner whatfoever, from any perfon, any of the faid materials, whether wrought or not, knowing the fame to be embezzled, the perion convicted flall, for the firft offence, forfeit 201. and, if not paid, fhall be committed to labour for fourteen days, or 'till payment; and, if within two days before the faid fourteen, the fame thall not be paid, may order the perfon to be publickly whipped, once or oftener; and, if a further convittion, thall forfeit 401 . and, in cafe the fame be not immediately paid, the juftice fhall commit to labour, not exceeding three, nor lefs than one month, unlefs forfeitures be fooner paid; and, if not paid within feven days before the time, may order fuch offenders to be publickly whipped twice, or oftener; and the faid forfeitures of 20 I . and 40l. aifer fatisfaction to the party injured, with cofts, fhall be diftributed amongft the poor.
If aggrieved, may appeal; and the juftices, in the general or quarter-fefions, are finally to determine the appeal, and award
cofts; and if, on hearing, the judgment of the juftice fhat be affirmed, fuch appellant fhall pay the fum adjudged, or, in default, fhall fuffer the penalties inficted upon perfons who thall neglect to pay.
If any thall be convieted of purloining the materials, or receiving the fame, juftices may iflue a warrant to any perfon, in the prefence of a conltable, \&c, in the day to feat the houfes, and other places, and, if there fhall be found any materials of wool, \&c. to bring fuch materials before the faid juftice, to be detained; and, if within 24 days, it flall appear the perfons from whofe houfes, \&c. the faid materials Thall be taken, are the owners, then fuch materials fhall be reftored; but, if it thall not appear, the fame fhall be deemed purloined, and the juftices may direct them to be fold, and the money (charges deducted) to be diftributed to the poor. The faid juftices (hall, within three days after materials brought, give notice, under hand and feal, to the perfon convicted, appointing time and place for his proving his property fo detained, which fhall be within twenty, and not lefs than eighteen days, after notice is given; and, if the perfon convicted thall be detained in prifon, the juftice may caufe a copy of the notice to be delivered to the keeper, who is to bring before fuch juftice the perfon named in fuch notice; and, if fuch keeper refure, he fhall forfeit to the perfon in fuch notice the value of the materials, to be recovered by diftrefs and rale of the goods of fuch keeper.
Any aggrieved may appeal to the general or quarter-feffions; and, in the mean time, the difpofal of materials fhall be poitponed. Notice under the hand of the perfon intending to appeal, fignifying his intention, given to the juftice before the difpofal of fuch materials. The juftices may fummon and examine witneffes, and may determine the appeal, and, if the appellant fiould not profecute, the judgment of the juftice hall be affirmed, and may award cofts.
If any perfons, intrufted with materials to manufacture, fhall not ufe them, and fhall delay, for twenty days after fuch materials hall be manufactured, to return (if required by the owner) fo much as thall not be ufed, fuch neglect thall be an embezzling; and, being convicted, fhall fuffer as perfons convicted of embezzzling.
Any one juftice, upon complaint on oath or affirmation of any offence within the county, may iffue his warrant, and may determine the matter.
If any perfon who, after the 24 th of June, 1749, Thall work up any of the manufactures for any one mater, thall neglect the performance thereof, by procuring himfelf to be retained by any other, before he fhall have compleated the work, he Gall be fent to hard labour, not exceeding one month.
This adt not to repeal any of the provilions in the 13 th, 14 th, and 20th Car. II. for regulating the trade of filk-throwing, or in 8 and 9 Will. III. for the further encouragement of the manufacture of luftrings.
No perfon thall, by virtue of the faid acts, or of this act, fuffer punifhments twice for one fact.
By 22 Geo. II. the feveral claufes in the 12th of Geo. I, and all the provifions and forfeitures hall, after the 24 th of Junc, 1749, extend to journeymen dycrs, hot-preflers, and all employed about the woollen manufactures, and journeymen, fervants, and labourers, and others, making of felts or hats, or in any of the manufactures of filk, mohair, furr, hemp, flax, linen, cotton, fultian, iron, or leather, or about any manufactures of wood, 8xc. or of any materials mixed, in as ample manner as the provifions and forfeitures are by the faid adt to extend to the feveral perfons therein: and the forfeitures incurred againft the faid act, by any employed about the faid manufactures, fhall be recovered as the forfeitures contained in the act of 12 Geo. I. are directed to be recovered.

## Remarks on the Encouragement of Manufactires

in Foreign Countries.
It is a maxim generally received, that one of the mof effectual means to fettle and improve commerce, or any other political intereft, is the patronage of princes. Difpenfing rewards, and exciting emulation, by invefting with honours, and other marks ofdiftinction, thofe perfons who, by the force of genius or application, have made new difcoveries, or improved upon any thing laudable, and conducive to the inte reft of the public; more efpecially fuch as, upon the ftrength of their own genius, and at their fole charge, have fet up and maintained manufactures, and other works beneficial to the community; and when the introduction of them has been intirely owing to their induftry and public fpirit.
This point we fhall only treat in a general way, as it is not pofible to prefcribe rules for the conduct of it on particular ccafions, fince the honours, as well as rewards and encourage ments, are always to be difpenfed according to the ftation and other circumftances of the claimants, and with an eye to the charge they fhall have been at, and the benefits that Thall refult to the public from them.
It is good policy to give yearly penfions, in order to draw over, and engage to fay in any country, able mafters in manufactures, fulling, dyeing, and other works, either to
introduce thefe forts of bufineffes, or to improve fuch as have been already eltablifhed, by advancing them to a degree of perfection and goodners that is certain to make them efteemed, and procure them a market every where.
As this has been the cafe of the tapeftries of Flanders, the cloths of Abbeville, England and Holland, as alfo the filks of Lyons in France, fo artificers, or workmen, fetting up new and profitable manufactories in foreign countries, it is ufual alfo to allow, for a certain term, an immunity from all troublefome offices, houfes to live in, workihops, and a difpenfation from fume duties; numerous inflances of which have been produced in divers parts of this work; and, at the fame time, for a further encouragement, fums of money hâve been granted, to enable them to bear the firft expence, which ufually runs high. But, in refpect to this advance of money, or the other encouragements, we are as little able to prefcribe ftated rules, as there muft neceflarily be a variety of cafes, according to the fituation of the projectors, and the benefit that will arife from the undertaking. However, it will be always prudent and neceffary, perhaps, for them to give fufficient fecurity to repay, at ftated times, all monies that fhall be advanced to fet up and maintain the manufactories, and other works, which they have laid themfelves under an obligation to do, both in refped to the number of looms, the quality of the manufacure, and the time that fhall be ftipulated with them; all of them circumftances very effential, and for which it behoves trading ftates to explain and covenant very fully; for, thould there be a failure in any one of them, the main purpofe would not be attarned, all the pains, and all the indulgences that had been difpenfed them, thrown away, and the prince have a juft right to with-hold what had been offered on his fide, as alio to put their bonds in execution; and, if there be fill a deficiency, to call upon their fecurities immediately to replace the monies that had been advanced, and to return the houfes, and other things, in the ftate and condition they were received.
And yet it will be always reafonable to fhew fome favour and moderation, and not treat them with the utmoft rigour, when it fhall appear that the mifcarriage arofe from accidents that could not be forefeen, and not from villainy, or a deliberate intent to defraud; both becaufe they merit indulgence, as they erred involuntarily, and, for fear of the rigour they thall be treated with, difcourage the honeft and ingenious from entering into the like covenant and undertakings.
As often as mafters or direCtors of any manufactures faithfully execute what they undertake and covenant, and from the eftablifhment and continuance of their manufactures there will enfue great advantages to the public, it is alfo cuftomary, and good policy, to remit them a part, or even the whole advance-money: for it may ferve as a reward, and a frefh encouragement, and alfo a means of raifing emulation in others, to project fuch other things that are conducive to the public interefts.
It has been ufual, alfo, to grant an exclufive privilege for undertakings of this kind, that, for a certain number of years, no other perfon manufacture the commodities they are under an obligation to introduce and effablifh; but, before indulgences of this nature are ever difpenfed, we ought to confider the affair thoroughly; and when, for fpecial reafons, it is found abfolutely neceflary, in order to obtain a national end, they are even then to be limited and guarded with the utmoft precaution, left they be converted into monopolies, that are of great profit to the proprietor, but of the utmoft prejudice to the public. Moreover, in difpenfing them, though it be with all poffible precaution, it ought at leaft to be attended with the following circumftances; of it's being a new fabric of fome kind, and very difficult to be fet on foot; that there will enfue an improvement to commerce, and a confiderable advantage to the public, as it happened in France, and lately in Spain, in order to revive and eftablifh glafshoufes.
To this end was granted an exclufive privilege, for a certain number of years, in confideration of it's being an undertaking of great fatigue and confiderable charge; and as the event was uncertain, they put to great rifque their pains and money therein employed.
Lewis XiV. king of France, in the year 1665 , during the miniltry of John Baptift Colbert, granted allo an exclufive privilege, and other advantages, in order to fettle a tin manufacture in feveral parts of that kingdom, as it is a very ufful commodity, and of great confumption every-where; and, at the expiration of the term covenanted, the patent was renewed, in the year r695, in favour of Ifaac Robelin, engineer, director of the fortifications of Burgundy, and company; to which partnerihip, it was renewed for another term, in the year 1700 , as appears from the patent granted them.
When it thall be found expedient to grant an exclufive privilege, it flould be done for as fhort a time as poffible, and under due limitations, in order that the manufacture and traffic thereof may become the more freely and expeditioully extended. But thole privileges ought to be the more generally reftrained to fabrics that are entirely new, or of an extraordinary improvement upon the old.

Other advantages, of an inferior kind, and attended with if: public inconvenience, will prove fufficient for works atn $\vdots$ in ventions of a lower nature. When goods, taken to to manufactured by private hands, are nearly of the fame tore as fome already made in the country, though they may be of fuperior quality, as it is from this very fuperiority that, with a ittle diligence, they may be imitated in their own manufactures, there will be no reafon to grant privileges, inculgences, and other diflinguifhing encouragements, which fome have moved for, as in fich cafes they oughit to be common and general ; for any thing fingular and cxclufive would be a great prejudice to other manufacories of the kingdom; which being of equal moment, or little inferior, may, with equal propriety, claim and enjoy the fame advantaec; and, if they fhould not obtain it, the confequence will certainly be, that, favouring a branch, we fhail deftroy the root. The fage Spaniard Uztaritz obferves, That, by the tariff which Lewis XIV. affifted by the great penetration and fkill cf hi vigilant minifter, John Baptifl Colbert, publifhed in the $\gamma$ eat: 1664 and 1667 , all foreign cloths imported into France par? a duty of above 25 per cent. while thofe manufactured his own kingdom were allowed to go abroad, paying only onc per cent. and other commodities were exported free of all duty. This appears from the various edicts, and other ordinances, that we have quoted throughout this work; and I may add, that, to encourage the manufactories of that large and plentiful province of Languedoc, the government of France fettled a premium, of about 13 fhillings ftering, to be given to the mafters for every piece of finc cloth meafuring 30 French yards, that they thould manufacture and fend abroad.
In regard to materials, they obferve a rule fo contrary (but equally advantageous) that they impofe heavy duties upon the exportation of them, and fometimes prohibit it entirely, under rigorous penalties, as we do in England with, our wool, that our own country may reap the benefit of that large gain which arifes from working it up. But they lay very fmal! duties, often none at all, upon the importation of materials which they are in want of, efpecially for their manufactures. This is practifed in Holland with refpect to Spanifh wool, which is imported free, as appears from their own tariff, publifhed at Amfterdam in the year 1710 ; for fo dextrous are they, and attentive to the general intereft of the ftate, that they have conftantly in their eye, and gather the fruits of a piece of experience, that this is a mine more fruitful of gain riches, and plenty, that thofe of Potofi; fince, by working up into cloth a certain portion of wool, that fands them in 20 fhillings, they produce from it the amount of above five times that fum: [fee the article Woon:] for they calculate that, in a yard of fine cloth, the wool it is made of amounts to a fifth of it's value, and the reft is labour, dyeing, and other expences: fo that there remains, as it were, to the manufacturer, an intereft of four fifths; and a million of moncy in materials he can improve to the value of five millions: and this fhews how expedient it is to encourage manufactures, in order to trade, in a great meafure at laft, without our owa commodities.

The prefent fyftem of Spain to advance in their manufactories of every kind, as publifhed beforc the laft war.

The fame author adds, in another place, in order to rouze the Spaniards to trade, that, in regard to manufactories, care mult be taken to eftimate the advantages of each par ticular, according to the quality, number of people, materials, fruits, and addrefs of the refpective diftricts: for, in the article of manufactories, fuccefs does not entirely depend upon the goodnefs and plenty of fruits and materials a country produces: thefe defects and wants may be made up by management and induftry. In proof of ir, many examples might be produced, were it not fufficient to mention Holland and Genoa, in whofe diftrjets, though barren of filk, good wool, and dyeing materials, many and prime manufactories of there and other forts are flourifhing. And, as Spain poffeffes theto and other materials in great plenty and perfection, and is equally furnighed with all the necefiary provifions, for the working hands, which the territories of Holland and Genoa are alfo deftitute of and the nation is fill the fame as in former times, there is reafon to belicve that every thing which has been formerly, may be again, whenever due encouragement fhall be given by them in power, efpecially when thofe heavy fetters are taken off, which with cir own hands we have laid upon the manufactures, and the fale of them tuth at home and abroad, as well by exceffive taxes upon provifions confumed by the working hands, and the materials they make ufe of, as by the heavy and repeated duty of the alcavala at every fale of them, and the 15 per conc. which manufacturers, by the book of rates, are to pay upoi exportation, contrary to the natural and political maxim obfeved by $c_{2}^{2}$. nations.
Nor can I forbear dwelling upon thefe two pnints, mantuctures and a reform of the duties, and frepucht mention $n \frac{f}{s}$ them, as they are the root, which, by a prodent cultivation. is to produce the remedy for our minfortuncs, and give ne:

## MAN

life to the monarchy: for it is certain, that the excefs of thefe duties is the original caufe of the deltruction of our manufactories, a neceflary confequence of which is the lofs of an advantageous commerce (which is now fallen into the hands of foreigners) as alfo the difpeopling, and prefent inability of Spain.
For a better illuftration of this point, and the happy confequences that depend upon it, fuppofe there were fet on foot, for inftance, 60,000 new looms in thefe kingdoms, which would be replacing a confiderable part of thofe which are faid to be in ancient times.
As I am fatisfied there are now in the kingdom of Valencia above 2000 looms, of filk and wool; in the principality of Catalonia above 500: and in the kingdom of Granada 1000, including both forts; and there are alfo in other provinces manufactures of filk, though not very confiderable, and in almoft all of them no contemptible number of looms for the feveral fabrics of wool, fuch as the middling and coarfe cloths, bays, ferges, camblets, druggets, \&cc. one may, I think, without rafhnefs, fuppofe the filk and woollen looms that are now in Spain, to be 10,000 . Now thefe, with the 60,000 new ones that have been imagined to be fet up, would amount to 70,000 ; and one may reckon 14,000 , or about a fifth part of them, to be filk looms, and the remaining 56,000 of fine, middling, and coarfe wool, of which laft there is no lefs confumption, \&c. See the article Catalonia.

## REMARKs.

Throughout the whole of this work, much has been urged for the encouragement of menufactures in general, from reprefentations of what has been done to this end in France and Holland, \&cc. as well as what is, at prefent, doing in Spain, for revival of their old mannufactures, and the eftablifhment of new of every kind that their country will advantageouly admit of. We have likewife endeavoured to animate our artifts of every denomination with fuch a fpirit of emulation, not only in relation to each other, but foreigners, as we hope may tend to the advancement of our old, as well as the invention of new arts and manufactures. Some of the articles, under which thefe particulars may be turned to are, Artificers, Biscay, Bleaching, Black, Blue, Callico-Printing, Candidate, Catalonia, Chemistry, Cloth, Flax, Hemp, France, Fuller'sEarth, Glass, Royal Society, and divers other heads referred to from thefe.
We begin to be now convinced, that we are nearly as much enriched by the labours of our fellow-creatures, as by the productions of the earth; and, if we have reafon to rejoice at the abundance which nature, from year to year, produces for us, we may reap no lefs reafonable fatisfation from all the variety of employments in human fociety, and efpecially by means of our manufactural arts. The firft proofs of this have been taken from the numberlefs kinds of bufinefs, which our fervants and the very meaneft labourers perform for us; not in our houfes only, but from one end of the earth to the other: what they are doing on the banks of Newfwundland, at Potofi, at Mocha, or in the inland of Amboyna, concerns us no lefs than the being decent in our apparel and habitations. Let us confider the reafons we have to efteem artizans of every kind for their induftry, and find new motives, from the numberlefs fervices they do us, to rectify our way of thinking concerning them.
It is cuftomary for all fuch as are under no neceffity of $\mathrm{I}_{\mathrm{a}}$ bouring with their hands, to place themfelves at an infinite diftance above the working trading people; fome affix an idea of meannefs to their condition, and their contempt of it is univerfal. The man who draws up a coveyance, or a bill in Chancery, would think himfelf difgraced by marrying his daughter to a clothier, a weaver, or a taylor. He may, indeed, be very dextrous, cautious, and judicious, in his draughts and pleadings, and extremely well verfed in the forms and precedents of the courts; but thefe qualifications demand not lefs the admiration which is due to the induftry of a man, who makes us cloth and filk for our apparel. A perfon, whofe bufinefs is to recover certain rights, is treated by us with abundance of ceremony and refpect, and yet we fcarce vouchfafe to take notice of a labourer or a gardener, to whom our enjoyment of the fruits of the earth is owing. But this miftake is not a new thing: it has conftantly made it's way into the moft polite nations, in proportion as their luxury had introduced a falfe tafte of delicacy. That Scipio*, who had declared war againk Jugurtha, ftanding candidate for the office of curule ædile, when he was a young man, and, (as the cuftom was) paffing through the place where the country tribes, as well as thofe who refided at Rome, were then affembled, bowed to one, fpake obligingly to another, and, amongft the reft, thaking hands with a labouring man whom he knew, and feeling them hard and callous, he could not forbear joking with him upon it. We gentlemen, fays he, walk only upon our feet, and fhall you bring up a falhion of walking upon your hands alfo? This jeft coft him dear ; for it was told immediately from one to another, even thro' the very loweft ranks; and all the tribes, being offended to think they were reproached for their love of labour, unani-

## MAN

moully rejected this banterer, whom the effeminacy of the city had rendered arrogant and impertinent.

* Scipio Nafica Valer. Maxim. Lib. VIf. cap. 5. n. 2.

Moft of thofe who follow a working trade, have been to accuftomed, among us, to be fet afide, and treated wirhout any fort of civility or regard, that we find them quite confounded, or appearing under an extreme furprize, whenever the magiftrates, the clergy, or other perfons of diftinction, condefcend to converfe or talk with them as to fllow-citizens and freemen; fuch they are in reality: our treatment of them is therefore a difhonour to ourfelves, and our own haughty airs ought to make us blufh.
The laws of fubordination have never, in ftrict juftice, atthorized any perfon to talk to manufacturers as if they were flaves. We fhould infpire them with fome fentiments of honour, and encourage their induftry, would we only feem to be fenfible of their worth, and fpeak to them with gaod nature and affability. But we flall be always very far from forming their manners, or attaching them to us, if we entertain a contempt for their perfons, or remain fo ignorant as we are at prefent of the excellency of their arts: our very ignorance of their merit in fociety is the caufe of our indifiference towards them.
When our reafon firft begins to open, we are talked to for fix years together about the future in rus, and the fupine in um, without hearing one word of the perfection and ufefulnefs of the arts, or the indultry of people that follow employments by which our lives are fupported. When our reafon begins to acquire more ftrength, it is put under the direction of mafters, who, after a vaft deal of preparation, demonftrate that we have a body, and that there are other bodies round us: or fpend whole hours, nay even days in proving, that of two propofitions contradictorily laid down, concerning a poffible future which may never bappen, the one is determinately true, and the other determinately falfe, and the like metaphyfical jargon.
The learning to diftinguidh rightly the productions of the globe which we inh,bit, the ties whereby all the people dwelling on it are united, and the various labours they are employed in, are things the moft neglected. Every one of us has feen the fail of a windmill, and the wheel of a watermill in action: we know alfo, that thefe machines grind corn, and reduce the bark of trees to powder: but we know nothing of the ftructure of them, and can hardly avoid confounding a carpenter with an hewer of wood.
We all carry watches in our pockets, but do we know the mechanifm of the fufee round which the chain is wound? Do we underftand the ufe of the firal line which accompanies the balance? It is juft the fame as to the moft common trades: we know the names of them, and no more. Inftead of endeavouring to gain a reafonable knowledge of commerce, manufactures, and mechanics, which are the delight and ornament of that fociety wherein we are to fpend our lives; we pique ourfelves on attaining all the niceties of quadrille, or bury ourfelves in folitude, upon fpeculations that have no foundation but in our whimfical imaginations. And, if little judgment is hewn in the choice of our plear fures, a ftill greater want of it will probably appear in our ftudies. We run after whatever makes the moft noife, and the moft fenfible people are at laft obliged to confers, that they repent more the lofs of the time they have employed in fudying the fubleties and fooleries of the fchools, the arts of pedantry, and the crack-brained altercations of enthufiaftic zealots, than of what they have fpent in, the learning of muic, which is fometimes an amufement to them.
The father or mother of a family, the head of a community, a merchant, a lawyer, a juffice of peace, or any of thofe who have the government either of the actions or confciences of others, may be never the worfe for not underitanding the monades of Leibnitz, or the difputative bombaft of the dogmatifts. But there is no one of them who would not acquit himfelf better in his employment, was he to acquire a true knowledge of the arts and trades wherein the common people are bufied. This kind of philofophy is a thoufand times more to be efteemed, than thofe fyftems whofe inutility is their leaft fault.
Some philofophers, confidering that diverfity which appears in the labours and inclination whereby men are diftinguibhed, have attributed the caufe of it to the difpofitions alone of certain bodies that govern them, and have from thence drawn objections againtt the fpirituality of the foul ; being more forward, as is commonly the cafe, to decide concerning the nature of fuch things as God has hid from us, than to make us fee and adore that all-wife hand, which, by regulating the differences of our abilitics as well as of our wants, has theieby prepared all the links of the great chain of fociety. Others have been of opinion, that the variety of arts is owing to the difcovery philofophy has made of the wants of mankind, and the means of providing for them. The only redion they have not mentioned, is what they fhould have found out firft.
If we are fupplied with fhoes, linen, and woollen cloths, or candles, \&c. it is not becaufe there are pedantic philofophers
in the wo:ld. It is not they who have taught us to whiten the wax, or handle the chutte: they move commonly in fpheres very diftant fromus; and, if they ever do condefcend to give their opinion of the inftruments we make ufe of, it is only to inform us, that fuch and fuch a thing is wanting, without endeavouring in the leaft to fupply fuch defects by any better inventions. The chiefs of colonies have aftembled workmen, and legiflatures have appointed regulations for different profeffions: but the workmens, as well as peoples wants, were before the colonics were founded; and the legiflature, who eftablifhes rules for the exercife of mens talents, is by no means the inventor of them. Human prudence employs what it has received, not what it has created. Mof fpeculative philofophers have nothing to be proud of they cannot claim any thing as their own, except ufelefs opinions and queftions that cannot be anfwered. We owe every thing to a wife providence, which has made no account of them," as to bearing any part of the labours necerfary to fociety, but which has provided for them effectually by the rich variety it has infufed into the minds of men. In a word, we don't invite a' man of a very mean capacity to take upon him the conduct of great affairs, nor one of a fine penius to lop the trees in a foreft.
The different bials of our minds precedes our wants; and, as God is the author of our wants,; he is alfo the real author of the different difpofitions which are found proper to provide for them. He has likewife, by another precauiion, rendered his work infalible: for, left the wants, the interefts, or the conftitution of each particular hould be infufficient to breed up and perpetuate the different kinds of workmen neceflary to the bulk of mankind, God has infpired an inclination in all children to imitate whatever hits their fancy.
We regard this as a triffe of no confequence; whereas it is, in truth, fomething refembling, as it were, an infpiration of the Deity, productive of the greateft good; for it is this that affords us a conftant fupply of the moft ufeful workmen, and fills the meaneft profeffions as well as the moft exalted.
A child conceives an advantageous idea of what he fees his father do: he follows him flep by ftep, and gocs on in his profeflion; or, if he quits it, it is becaufe he is more induftrious, and finds himfelf capable of rifing higher. One may truly affirm, that imitation is of much greater fervice to us than invention; for inventions appear but very feldom, whereas imitation is found in all countries, and at all times. If, from the firt and only original of fo many ufeful trades, we would defeend to what is to be found curious in them (and often the moft common things deferve our greateft attention) we fhould find throughout, that the progrefs we may make in thefe entertating and really ufeful refearches, leads the mind equally to emulation and gratitude.
Our countryman Mr. Locke fays, in his treatife of Education, "that I have one thing more to add, which, as foon as - I mention, I thall run the danger of being fufpected to - have forgot what I am about, and what I have above writ-- ten concerning education, all tending towards a gentle-- man's calling, with which a trade feems wholly to be inconfiftent. And yet, I cannot forbear to fay, I would - have our young gentlemen learn a trade, a Manual - Trade; nay, two or three, but one more particularly. - The bufy inclination of children being always to be direct-- ed to fonething that may be uleful to them, the advantages, - propofed from what they are fet about, may be confidered - in two kinds; s. Where the fkill itfelf. that is got by ex-- ercife, is worth the having. Thus ikill not only in lan6 guages, and learned fciences, but in painting, turning, - gardening, temipering, and working in iron, and all other - ufeful arts, is worth the having. 2. Where the exercife - itfelf, without any confideration, is neceffary or ufeful for - healch. Knowlege in fome things is fo neceffary to be - got by children whilf they are young, that fome part of - their time is to be allotted to their improvement in them, - though thefe employments contribute nothing at all to - their health : fuch are reading and writing, and all other ' fedentary fudies', for the cultivating of the mind, which - unavoidably take up a great part of gentlemens time,' quite from their cradles.

- Other manual arts, which are both got and exercifed by - labour, do many of them, by that exercife, not only in-- creafe our dexterity and fkill, but contribute to our health - too, efpecially fuch as employ us in the open air. In thefe, ' then, health and improvement may be joined together, - and of thefe hould fome fir ones be chofen, to be made - the recreation of one, whofe chief bufinefs is with books - and fudy
- For a country gentleman I fhould propofe one, or rather - both thefe, viz. gardening or hubandry in general, and - working in wood, as a carpenter, joiner, or turner, thefe -being fit and healthy recreations for a man of ftudy or bu-- finels. For, fince the mind endures not to be conftantly - employed in the fame thing or way, and fedentaryand ftu-- dious men fhould have fome exercife, that at the fame - time might divert their minds and employ their bodies; I Vol. II.
- know none that could do it better for a country geviteman - than thefe two, the one of them affording him exercife, - when the weather or feafon kept him from the other, \&c.
- The great men among the ancients underftaod very well - how to reconcile manual labour with dffairs of fate, ant 6 thought it no Jeffening to their dignity, to make the one - the recreation of the other. That, indeed, which feers - moft generally to have employed and diverted their fpare - hours, was agriculture. Gideon amonglt the Jews was ' taken from threfhing, as well as Cinnatus amongft the Ro' mans, from the plough, to command the armies of their - countries againft their enemies; and it is plain, their dex6 trous handling of the flail, or the plouah, and being good workmen with thefe tools, did not hinder their fkill in ' arms, nor make them lefs able in the arts of war or go' vernment. They werc great captains and ftatefmen, as ; well as hubbandmen. Cato Major, who had with great ' reputation borne all the great offices of the commonwealth,
' has left us an evidence under his own hand, how much he
- was verfed in country affairs; and, as I remember, Cyrus
© thought gardening fo little beneath the dignity and gran-
- deur of a throne, that he fhewed Xenophon a large field
< of fruit-trees, all of his planting. The records of anti' quity, both amonglt the Jews and Gentiles, are full of - inftances of this kind, if it were neseffary to recommend ' ufeful recreations by examples.
'. Nor let it be thought that I miftake, when I call thefe, or ' the like exercifes of manual arts, diverfions or recreations : - for recreation is not being idle (as every one may ob-
- ferve) but eafing the wearied part by change of bufinefs: s and he that thinks diverfion may, not lie in hard and pain-
' ful labour, forgets the early rifing, hard riding, heat, cold
's and hunger of huntimen, which is yet known to be the
conftant recreation of men of the greateft condition.
- Delving, planting, inoculating, or any the like profitable - employments, would be no lefs a diverfion, than any of - the idle fports in fafhion, if men could but be brought to - delight in them, which Custom and Skillina Trade ' will quickly bring any one to do. And I doubt inot, but ' there are to be found thole, who, being frequently called ' to cards, or any other play, by, thofe .they could not refufe, have been more tired with thefe recreations, than ${ }^{6}$ ' with any the moft ferious empoyment of life; though the play has been fuch as they have naturally bad no avertion ' to, and with which they could willingly fometimes divert - themfelves.
- Play, wherein perfons of condition, efpecially ladies, waft - fo much of their time, is a plain inflance to me, that men - cannot be perfectly idle, they mult be doing fumething. 'For how elfe fhould they fit fo many hours toiling at that, which generally gives mose vexation than delight to people, whilft they are actually engaged in it? It is certain, Ga6 ming leaves no fatisfaction behind it to thofe who reflect ' when it is over, and it no way profits either body or mind: ' as to their eftates, if it Atrikes fo deep as to concern them, it is a Trade then, and not a Recrparion, wherein few, ' that have any thing elfe to live on, tbrive; and, at beft, ' a thriving gameiter has but a poor trade on it, who fills ' his pockets at the price of his reputation.'- I hus far Mr. Lócke.
Altho' this recommendation of the exercife of manual trades to the gentry, by fo great a man as Mr. Locke, feems to be intended only for health and recreation, yet I cannot help thinking but this remark may be extended ftill to a greater degree of public utility. For, if the Britifh nobles and gentry were, from their infancy, habituated to the manual exercife of any manufacture, and thereby became fo far experimentally knowing in it's nature and operation, as to have a diftinct idea of each part, and thence be capable of forming a good judgment of the whole thereof: if our people of diftinction in general hould, by this means, obtain a relifh to pry deeply into the practical nature of the various manufactual and mechanic arts, and, to this recreative knowledge and falubrious exercife, they fhould add the political ftudy of the commercial and money affairs of the ftate; is it not reafonable to conceive, that the conjunctive wifdom of the reprefentatives of the nation, in general, could never be liable to deceit and impofition by any diftinct order of manufachurers, in oppofition to the intereft of the wholc? Among a numerdus gentry, if this once becomes fafhionable, there would arife taftes for the exercife of different manual trades and arts; and, from their united knowledge, they would difcern not only the true intereft of every diftinat branch, but the connection and dependency of each upon the other, and be thereby capiciated to judge of the real benefit of the whole, without detriment to any peculiar part: committecs of the honourable houfe of commons would be capable of fo prying into the nature of all trades, and every branch of commerce, foreign as well as domefic, that it would be licarce poffible to be deceived by thofe who confulted their own advantage, in oppofition to that of the community. Would not manual exercifes of this kind tend more to the interelt and glory of the nation, as weli as the benefit of individuals, than that

O

## M A N

itch of gaming which fo unhappily prevails, for want of more rational amufements, which contribute to invigorate the body, and inltuct the mind in ufeful practical atts?
Would if not be more honour for a gentleman in parliament to be able to fay, when any thing in relation to the woollen, linen, filken, \&cc. manufactures, came before that great affembly, that I have exercifed myfelf at the loom, and made feveral pieces of wopllen or linen cloth, and filk, \&cc. and I. know the management of the wool from the fleece, and the flax from the feed, and the filk from the worm; and, therefore, in what fuch manufacturers reprefent to the houfe is falfe and impofinious in fuch refpects, \&ec.- Would not, I fay, this redound infinitely more to the glory of luch a genticman, than to have the reputation of the keeneft gamefter, or the boddeft fox-hunter?
Throughout feveral parts of this work we have hewn the ufefulnefs of many branches of experimental philofophy to the interefts of land and trade; "and, as gentlemen ftand in need of exercife and amufement, herealfo is another foene which will for ever delight and inform; a fcène that will adminifter endlefs improvement to all the manufactural and mechanic arts.
But, left fome perfons of honour and quality fhould ftill remain unconvinced from what we have already urged throughout this work, in relation to the reciprocal dependency between the intereft of land and trade, is may be ufeful to give a further idea of the national advantages arifing from the manufactural arts.
It would certainly be worth the while of any gentleman to underftand the whole progrefs of a manufacture, from it's commencement to it's confumption, and how much it pays to the fubfiftence of the people. This appears from the fuppofition of roo broad cloths fent to Turkey, and the returns of raw filk, that are manufatured for our own confumption, which is as follows

Suppofe a clothier buys at market 50 packs of wool, picked and forted, at 101. per pack With which wool he makes 100 broad cloths; and the manufacture thereof, in carding, fpinning, weaving, milling, dreffing, \&c. as they are ufually brought to, and fold white at Blackwell-Hall, will amount to about the firt coft of the wool

So that the ${ }^{[ } \mathrm{e}$ roocloths are fold by the clothier to the merchant at 1ol. per cloth
Aind the merchant pays for dyeing of the faid 100 cloths, $\frac{x}{3}$ part in grain colours, at 71 . and two-thirds in ordinary colours, at 30 s. per cloth
Alfo, for fetting, drawing, preffing, packing, \&c. 15 s. per cloth

The faid 100 cloths will coft the merchant 14l. 1 s . 8 d . per cloth on board, which amounts to
And, to repay him their coft and charges here, and their charges abroad, with a bare allowance for infurance, and the intereft of his money, they cannot purchafe lefs, I fhould think, than 22 great pounds of therbaffee (or Perfia fine raw filk) for every cloth.
Thus he probably receives, for the faid 100 cloths, 2200 pounds weight of the faid raw filk.
Now, if the half-part of this filk is wrought up into plain coloured tabbies, the manufacturers will receive 13 s. 7 d . per lb .
And, if the other half-part is wrought up into rich flowered filks brocaded, the manufacturers will receive Il. 19s. 9 d . per lb. And the additional charge of dyeing, fuppore but of $\frac{1}{8}$ pari of the faid filk, into grain colours, at 9 s . per lb .

Then the coft and charges of 100 woollen cloths, hipped from London to Turkey, and the manufacture of the raw filk, brought from thence in retarn thereof, muft amount to
The freight of the faid 100 cloths, and of the faid 2200 lb . of raw filk, is computed at
Cuftoms on the faid 2200 lb . of raw flk, at
Englifh factor's commiffion abroad on the fale of the cloth, and on invefting the returns in filk as aforefaid, computed at

It is here clearly reprefented to the view of the reader, that every 2200 lb . weight of raw filk imported from Turkey, and manufac-

tured here for our eprifumption, without paying any thing to the merchant's or mercer's gain, pays to the landholders, the dabourers, and the crown, the fum of

476215
If any thing is to be added for the merchant's and the mercer's gain (and we may depend upon it they will not be at the trouble of driving their trades for nothing) we may very well affirm that the whole coft of this manufacture for confumption cannot be lefs thańit 5000 l. fo that 2200 pounds weight of Turkey raw filk, manufactured here, pays the fum of 5000 I . to the fubfiftence of our own people.
This account takes the return upon 100 cloths exported to Turkey, and makes them pay 5000 l. to the fubfitence of our people; but we have heretofore exported annually two hundred times as many cloths for Turkey, and received, for about half that quantity of cloth, the fame kind of returns in raw filk for our own confumption; and, confequently, our own confumption of Turkey filk paid for the fubfiffence of our own people the fum of 500,0001 , per annum, befides what is paid by the other half of that trade.
But if the confupption of 5000 l , value of Turkey filk manufactured pays 500 l . to the landed intereft, for the wool that is exported to Turkey in manufacuire, then the annual confumption of 500,000 ). value of that filk muft pay 50,0061 . per annum to the landed intereft.
And yet this is not all that the landed interef might receive annually by means of this half-part of the Turkey trade; the crown and the fubjeats, who receive nine times as much for cuftoms and labour, pay, perhaps, a ninth part of what they receive to the landed intereft for cloaths and provifions; by which means the confumption of Turkey fik manufactured in Eng land, either directly or indirectly, pays a fifth partofit's whole value to the landed intereft; that is; it pays directly one tenth part of the value of the filk by the woollen manufacture exported, and as much more by enabling the people to purchafe neceffary cloaths and provifions, of wich as much more is paid to the landed intereft.
It will be objected here, that the rol, above-mentioned upan a pack of wool is not paid to the landed intereft, fince a part of it is paid to the fhepherd's wages, and a part to the labour of picking and forting this wool.
It is very true: but then, confidering how much of the product of the lands is exported to purchafe dyeing goods, and efpecially cocheneal, for our purchafing of which with Eng lith manufactures, the tenth part of the price of the whole fick manufacture may be very well faid to be paid for the product to the landed intereft
But what a condition would the lands be in, if it were not for this trade and manufacture? It is evident; that, of every 50001. value of manufacture from Turkey filk, 5001. is paid for the manufacturing of the Englifh wool that is fentabroad, $333 \mathrm{l} .6 \mathrm{~s}, 8 \mathrm{~d}$. to the charge and labour of dyeing, 7.5 I to other labour beftowed on that manufacture, 7471 i. is. 8 d . for manufacturing one half of our returns, and 21861.5 s . of the other, befides 123 l. 15 's. for dyeing the fame in grain colours; add to this the freight of 401.12 s .6 d . befides the charges to factors abroad, and merchants and mercers at home; and it will -appear that near 4000 of every 5000 l value, or that near 400,000 of every $500,000 \mathrm{l}$, value of Turkey filk wrought in England, is paid to the labour of the manufactures and others beftowed upon it.
Now what fhall the people do for fubfiffence, when they are deprived of this 400,001 .? Certainly they mult come to the parih and the lands for a maintemance. We are obliged, therefore, to this part of the Turkey trade, this which imports raw filk from that country, that it has payed formerly 100,000 l. per annum to our lands, and faved them from maintaining as many people as are now fubfifted, at their own charge, to the value of 400,000 l. per annum. I think this is enough to thew, that the Turkey Trade ought to be the care of every gentleman in England.

## Further Remarks.

The improvement of practical arts and manufactures does greatly depend on the judgnent and ingenuity of artizans and manutacturers themfelves; I mean, chiefly upon thofe who are at the head of any manufacture; for the fancies of mankind are foon tired with the fame fathion; artilts and manufacturers, therefore, muft ever be upon the wing of invention: our neighbour nation, we know, is famous for being the grand parent of all modes and fahions in drefs, furniture, and almoft every thing elfe. From hence they feem to derive a fort of dominion, in this refpect, over the whole world, the conlequence of which may, one day, give them the dominion in commerce; for that nation which diall carry the neweft and moft ornamental modes to foreign countries, in their manufactural and mechanic trafficable inventions, will, at length, carry away the trade.-If our Britifh manufacturers will plod merely in their old-fahioned roads, while our competitors are daily ftriking into fuch new ones as pleafe the general tafte more, will not the trade of the one gradually grow out of date, whilft that of the other is ever growing yourg and flourifhing?

We are furprized that French fathions thould be fo prevalent in England, as well as all Europe. Is not this a fign that they have, fome-how and by fome means, obtained the knack of gaining an afcendency, in this refpect, over all other nations? Our Britifh manufachuners, and other well-meaning Britons, may blame the tafte of the world herein, and may be fo fond of their own modes, 'till they may only keep them within themfelves, and thereby lofe all their foreign trafic. The tafte of the world muft be pleafed, and our artilfs muft follow that tafte, or the traffic will infenfibly leave them. - We may boatt of our being the old fhop for the woollen manufacture, but the French bave cut us out with their new one; we may value ouffelves upon the fubftance,' ftrenth, and excellency of our manufactures, but, if foreign nations like rather the flight and tauxdry than what we call the folid and fubftantial, the fubftance will be converted into Mhadow, and the fladow into fubtance:' I mean, in plain Englim, the French fight and fhowy manufactures, which can be had: for French iright and howy manufackupes, which can be had for their folid and fubitantial, will become the fubftantial commodities, and the folid the fhadowy; for, in this fenfe, I term that manufacture the fubitantial, which fells the more univerfally.
It is not my intention to infinuate any thing to the difparagement of our Britih manufactories in general, or to depreciate ment of our Britilh manufactories in general, or to depreciate
the fkill and ingenuity of our artifts: on the contrary, I am perfuaded their labours, in general, are rather fuperior, than otherwife, to any nation whatever.-All that I would mean to fignify, is, that I have obferved an over fondnefs in our manufacturers to ftick too tenacioully to one and the fame form of fabrics, whereby they lofe the trade, while our rivals, who purfue the cantrary meafures, gain it out of their hands.-This I take to be the true ftate of the cafe; and, therefore, may deferve the moft ferious attention of the public.
Througbout the courfe of this wark I have thewn, from numerous inftances, founded on Fact and Reality, the wife and vigilant meafures that have been, for above half a century, and fill äre fteadily taken, by our moft dangerous trading competitor, to bring every branch of their meehanic and manufactural arts to the lat perfection.-This is done by bringing up every clafs of their practical artifts to excel in their refpective employments.-None are admitted to the freedom of any of their trading corporations, without the actual performance of a matter-piece of workmanflip, in the real prefence of a number of jurats, folemnly fworn for that purpofe. See the article Candidate. See alfo the various manufactural trades and arts defcribed in this performance.- The fervitude of their apprentices to the arts and manufactures is longer, and better regulated, than that of other countries. See the article Apprentice.-The art of Designing, which highly tends to the improvement of our capital manufactures, has been long publickly encouraged in France, and Thamefully hegledted in England. See the article Design, and the article Engraving.- In fhort,' the men of learning in France have, within thefe few years, greatly turned their ftudies to the improvement of the old, and invention of new arts and trades, thinking the value of their old-fafhioned ftudies of infinite lefs ufe to their country than what they have adopted. - To fuch a degree is this fpirit now arrived in that kingdom, that, by late accounts frofn thence, we are informed that they have beguri to fet on foot Societies for the prrfecting of Trades and Manufactures, exiclusive of thelr several Academies, in hopes the Former may have as apparent an Effectin promoting the mechanic and manufactural Skill and Industry, as the Latter have visibly contributed to promote true Science, and a Spirit of Enquiry. Would it be any difcredit to copy Modes of this kind from Would it be any
So unfpeakably great are the advantages arifing to commercial states from manufactures, that it is not to be admired thofe ftates fhould endeavour to decoy the fubjects of fuch jmportance from each other, Nor will the moft rigorous laws and feveref penalies prevent it; there feem to be but two things which will prove effectual to this purpofe: the one is, a love that fuch people muft have to their native country; the other is, to live comfortably and get money.
In regard to the former of thefe, nothing can be more conducive thereto than the wifdom of our conftitution, both in church and ftate; yet experience fhews that alone will not do; for men will fooner-live profperoully under the worl government, than they will flatve under the beft. The great poins, therefore, is to advance our commerce, that they may all ive well, and their families profper, fo that we may have a conftant race and fuccefion of the moft experienced and adroit artifs of this kind.
As fo much depends upon the art and ingenuity of this clafs of people, fhould any wife meafure tending thereto be neglected? With relpect to apprentices in this employment, we have thewn, throughout this work, what other nations do; but the ordinary methods taken by us, in relation to this great point, are nozhing like fo wifely calculated to render them ingenious. -Nor, when they are out of this juvenile
flate of fervitude, the methods taken by us to know, whetheq they have well or ill fpent their time, are not fo well adapted as thofe of our competitors, which we have repeatedly fhewn. How, therefore, can we but expect that our own artifts Thould decline in ingenuity, while thofe of our rival nation are advancing. - This is the cafe of our common laborious working manufacturers and artizans, when comparatively confidered with thofe of France.-And, in regard to the principal undertakers and conductors of our capital manufactures, who find the fortunes wherewith to carry them on, and who are, or Chould be, the great inftruments to improve our old manufactures, as well as to ftrike out fuch new that will his the tafte of foreign countries, they have met with no encouragement in this kingdom like unto what they have metwith in France, as hath been made appear in variety of inftances.
People are conyinced now, that the chief ftates of Europe are ftriving for the dominion in commerce; knowing, if they once obtain that, they cannot want the like in empire. And, fince it is felf-apparent, that the fuperiority and dominion in commerce fo materially depends on our manufaclural arts, does it not nearly concern the contant profperity and happinefs of thefe kingdoms, to think of every meafure that may contribute to the advancement of thofe important arts contribute t
amongft us?
In the management of the more effimable manufactures, there is required not only an extraordinary dexterity, care, and ingenuity, on the part of the comman workmen, to execute their refpective parts to the neceffary perfection; but there is required alfo, in the principal undertakers and managers of fuch manufactures, a judgment and fagacity requifite to conduct and controul every diftinct part, in order that the whole may turn to profit and honour.
Too many, perhaps, may imagine, that the meaneft capacity and the moft awkward wretches are equal to the working and laborious pait of our manufactures, and therefore that the ordinary merhods whereby thofe perfons are trained up from their infancy, are adequate to their employment. I cannot help differing from fuch who think fo. Where great agility and dexterity of limbs are required in manufacture, the ftature, make, and difpofition of youth, fhould be taken into confideration, in order that a right judgment might be made, whether he is formed by nature for rhe employment intended. The human fecies differ as much among themfelves as the brute creation; the harfe that is firted by nature for the race or the faddle, will not do for the coach, the waggon, or the plough, 8 c .
Thofe children who are brought up at the public expence, either in charity fchnols or hofpitals, \&.c. are fo much the children of the public, that they have a right to difpofe of them. And, as the nation ftands in need of a conftant fupply of the manufactural and mechanical artifts, the public bave a right to bring up thefe children who are maintained by charitable benefaction, in fuch a manner as they fhall judge proper, in order to render thefe children the more fkilful and ingenious in thofe arts. Wherefore, in regard hereunto, the following queries are fubmitted, viz.

1. Whether the education of the children of the poor, who are maintained by public charity, does not require a general reformation, to the end that they may become more ingenious in the mechanical and manufactural arts, than their prefent manner of bringing up will admit of?
2. Whether fuch children of the public thould not be duly claffed out, from their make and genius, at a fuitable age, by proper governors, infpectors, and directors of parifhes, $x c$, and apprenticed out to fuch manufactural and mechanic bufinefs, as they may prove the moft fitted for by nature?
3. Whether the fooner they are brought to pradile thofe manual trades, that do not require ftrength beyond their years or their natural make, the nation is not likely to have a more dextrous and ingenious race of working manufacturers, \&c.?
4. Whether fuch fchools fhould not be confituted, by Law,
Working Schoous, and that only two hours of their Working Schools, and that only two hours of their time in the day fhould be allotted to learn to read and write, \&c. ?
5. Whether it may not be expedient to think of proper ways and means to excite an emulation among thefe manufactural children, to excel in their relpective manual trades?
6. Whether thofe children, being apprenticed out to mafter manufacturers 'till they are 24 ) ears of age, might not fomewhat contribute to enable our manufactu ers fo to lower the price of their goods, that the nation might not fuftain fuch injury as we do, from other countries underfelling us?
7. Whether mafter-manufacturers fhould not be allowed a 7. Whether mafter-manufacturers thoula not be allowed a
certain number of thofe children for apprentices, and no more; and whether thofe trades, that are in the mort declining condition, fhould not be entitled to more of there childr: a as apprentices, than thofe which are in a pictiy fiourifhing condicion?
8. Whether infant children at two years of age, whole parents cannot maintain them, and therefore are willing to refign them to the public to be brought up to fome hon:ft maBufacture, fhould not be duly provided for by the putic for
that purpofe; and whether fuch meafures would fnot prevent many infant childrea being brought up by their diftreffed parents, in a feene of thefi and iniguity; and whether this would not be making fuch a ufeful and happy provifion for poor children, as to lay the axe to the root of thofe immoralities, which might otherwife grow up with them, frum the bad example of their parents?
9. Whether it would not greatly conduce to encourage thefe youths, to excel in their pecular manual arts, provided they were entided, after the expiration of their apprenticelhip, to a certain premium, proportionate to their ingenuity and good behaviour in their mafer's fervice?
If, from the preceding, or fuch-like meafures, the kingdom mould be always well fupplied with a fucceffion of adroit and ingenious working manufacturers, the mafter-manufacturers and undertakers will never want hands to execute their moft delicate inventons, which will greatly contribute to the national improvement of thefe arts; for, if thofe upon whom the inventive arts depend, cannot bave a number of proper workmen to execute what they contrive, it is a difcouragement to invention.
The next matter that naturally falls under confideration, according to this train of thinking, is, how, and in what manner, the inventive faculty of our mafter-manufacturers may be fo affifed, as to delign fuch a perpetual feries of new modes and fathions in their fabrics, as may fcarce ever fail to hit the tafte of foreign nations.
Having dwelt fo long upon this head already, for brevity's fake, what I have further to fuggeff, may be beft done by a few thort general propofitions.
I. That, in order conftantly to pleare the tafte of foreign countries in our Britifh manufactures, it is neceflary to confult the climate, the difpofition, and way of thinking and judging of the fevcral ranks of people in fuch countries, what manulacturers they fupply themfelves with, and what they generally import from other nations.
10. Of thefe particulars our mafter-manufacturers should not only inform themfelves by reading the beft accounts we have of thefe things, but fhould confult and advife with our merchants; and, before they put themfelves to too great an expence in their inventions, to get fuch merchants to fend over patterns of their new improvements to fuch foreign countries, in order to have the opinion thereon of the foreign merchants and tradefmen in fuch countries.
11. That various foreign markets be thus tried with one and the fame improved manufactures : for what will fuit one, frequently will many.
12. That our malter-manufacturers conftantly obtain of our merchants, from foreign countries, the patterns of fuch manufacture as are fent by France, or any other foreign nation, and fell well in other countrics, and the price which our merchant exporters can afford to give our mafter-manufacturers for fuch goods.
13. That our mafter- manufacturers think of every kind of materials which the earth, or the brute creation, affords, whereby they might chiefly improve any fort of our old manufactures, or by means thereof might invent any new kind.
14. That our malter-manufacturers, from having all forts of fuch-ike materials always before them, may think of the moft natural, cheap, and elegant methods of compounding and working divers materials together, fo as always to affurd tome new improvement.
15. That they make conftant enquiry after various forts of foreign materiats, and obtain fuch fmall famples of them, as may be compounded and worked ftrongly and beautifully with fome of our own materials, or with our own and the materials of feveral foreign countries, \&c.
16. That our mafter-manufacturers gain a knowiedge of any new invented looms, or other machines, or any kind of invemions, which are ufed in foreign councries, whereby they make fuclo fabrics that pleafe the tafte of foreign nations better than the prefent Britifl.
17. That, in order to obtain fuch knowledge, the maftermanufacturers concerned in the fame branches contribute by a joint purfe, to fend deputies over to any foreign country, either fome one or more of their own body, with intent to get a thorough knowledge of fuch new invented looms, machines, $8 \%-$ Or, that they fend a perfon abroad for that purpofe, who is well fkilled in mechanics, fo as they may beable to bring away fuch new invention into their own country.
18. That, as fome peculiar improvement in divers forts of fabrics of wool, filk, velver, tapeftry, \&cc. may frequently depend on new invented machines, \&c. it feems necellary that our mafter-manufacturers fhould endeavour fo to inform themfelves of the principles of mechanical powers, as to be able to think for themelves, in what manner any improvements in their fabrics might be made, by means of fuch new vinvented looms, machines, \&c.-Or, when they have defigned any new invention in their mind, which they cannot sxecute, by means of their ordinary looms and machines, fuch manufacturers, if they cannot themfelves invent a unachine fuitable to the occafion, fhould apply to fome able practical mechanic, or confult tome ikilful mathematician, who
may have more particularly turned himfelf to mechanical inventions, \&c.
19. That our mafter-manufacturers be bred up regularly to the art of Designing; more particularly thofe in the filk, linen, velvet, and tapeftry, \&xc. fabrics, which will greally help their invention with what may pleafe the fancies of foreigners. See the articles Design and Engraying.
20. That public rewards be given to all fuch, although they are not manufacturers, who hall make any capital improvemonts in any of the old Britifh fabrics which are exported to foreign markets, or fhall invent any new ones for the bencfit of exportation.
21. That all Britih mafter-manufacturers endeavour, to their utmof, to keep their capital difcoveries as much as they can a fecret from foreigners, who may fend their fipes over to obtain a knowledge of them.
For more matter that has confonancy herewith, fee the feveral articles referred to at the beginning of this artucle.

An abftract of an act of parliament for the effectual punifhing of perfons convicted of feducing artificers in the manufactures of Great-Britain or Ireland, out of the dominions of the crown of Great-Britain; and to prevens the exportation of utenfils made ufe of in the woollen and filk manufactures from Great-Britain or Ireland, into foreign parts, and for the more ealy and fpeedy determination of appeals, allowed by another act relating to perions employed in the fame manufactures therem mentioned. 23 Geo. II.

Whereas by an act of the $5^{\text {th }}$ of Geo. I. intitled, An act to prevent the inconvenicucies arifing from feducing artificers in the manufactures of Great-Britain into foreigo parts, it is enacted, That if any perfon or perfons fhall contract with, or endeavour to entice, any manufacturer or artificer of or in wool, iron, fteel, brafs, or any other metal, clock-maker, watch-maker, or any other artificer or manufacturer of Great-Britain, to go vut of this kingdom, into any forcign couitry out ot his majefty's dominions, and thall be lawfully convicted thereof, in the manner prefcribed by the faid act, the perfon or perions, fo convict, thall be fined any fum not exceeding 1001 . for fuch firft offence, \&c. and thall be inprifoned for the fpace of three months, 'till fuch fine flall be patd.-And, if any perfon or perfons, having been once convict as aforefaid, hall offend again, and beto conviet a fecond time of the like offence, in fuch cafe, the perfon, fo convict a fecond time, thall be fined at the difcretion of the court, and hall be imprifoned for twelve months, 'cill fuch fine be paid.-And whereas, notwithftanding the penalties to which offenders againft the faid act are thereby fubjected, divers wicked perfons have of late feduced into foreigut parts feveral artificers in the woollen and other manufactures; and it is become neceffary to make fome more effectual provifion to prevent evils fo deftructive to the trade of this kingdom, sic. Therefore, for preventing the faid pernicious praftice for the future, \&c. be it enacted, \&ic. That if, at any time after the 24 th of June 1750, any perfori or perfons thall contract with, entice, perfuade, or endeavour to perfuade, folicit, ' or teduce any manufalurer or antificer, of or in wool, mohair, cotton, or filk, or of or in any manufactures made of wool, mohair, cotton, or filk, or any of the faid materials mixed one with another, or of or in iron, fteel, brafs, or any other metal, or any clock-maker, watch-maker, or any other manufacturer, workman, or artificer, of or in any other of the manufactures of Great-Britain or Ireland, of what nature or kind foever, to go out of this kingdom, or out of the kingdom of Ireland, into any foreign country, not within the doninions of, or belonging to, the crown of Great-Britair, and fhall be lawfully convict thereof, \&c. the perfon or perions to convicz thall, for every artificer, workman, or manufacturer, to by him, her, or them, refpectively contracted with, enticed, perfuaded, follicited, or feduced, feverally forfeit the fum of 5001 . and fhall fuffer imprifonment for 12 calendar months without bail or mainprize, and until fuch forfeiture thall be paid.-And, for a fecond offence, they fhall forfeit iocol. and be impritoned for two years.-Profecution to be commenced within twelve months aler the offence committed.
Perfons, exporting the utenfils made ufe of in the woollen and filk manufactures from Grear-Britain or Ireland into $\mathrm{f}_{\mathrm{L}}$ reign parts, fhall forfeit the tools and 2001. penalty.
Officers of the cuftoms and revenue impowered to feize all fuch tools as thall be found on board fhips bound to foreign parts, and the fame to be fold after condemnation, and the produce to go to the king and the officer. Captains of veffels, permitting fuch utenfils to be put on board, to forfeit 1001. Captanns of his majefty's fhips to forfeit 1001 . and to be cafhiered.
Officers of the cultom-houfe, figning cockets, \&ic. for the exporting of fuch tools to forlett 1001 . and his employment. One molety of the forfeitures to go to the king, the other to the profecutor.
Prolecutions to commence within fix months after the fact committed, and the perfon fo fued may file conmon bail, and
plead the general iffue.-And, if found not guilty, may give this act, and the fpecial matter in evidence- -If the profecutor become nonfuit, \&xc. the defendant hall recover treble cofts.
MAN URE for land. The matters ufed for this purpofe are various, as well in different countries, as in different pats of the fame countries. The molt ordinary are dung, lime marle, and peat, fea-fhells, fuch as thofe of cockles, periwinkles; all which muft be applied according to the quality of the foil.

## REMARKS.

The temperaments of earth in general may be diffinguifhed into three claffes; fand, loam, and clay. Sand is a collection of folid, fony, and loofe particles, and farce capable of cohefion alone. The parts of this earth, in proportion to their enlargement and variation from a globular figure, are gradually changed into gravel, or a couch of pebbles. Thefe different ftony foils are capable of receiving water, oil, falts, fire, air, and all the principles of vegetation into their interfices; but can never retain them for any confiderable time, fince the nutrimental mixtures flide through the vacuities as eafily as they at firft filled them. To prepare this kind of land for cultivation, it muft be properly tempered with a fuitable loam, clay; or marle.
Pure earth is a mafs of little clods, extremely fine, and qualified for an immediate conjunction with each other, and for continuing imbodied in that manner. When the carth is very compact, and it's conflituent particulars are not feparated by any cavities, it forms foils of clay, marle, or chalk, which retain the juices they receive, but are not very tractable to the imprefions of water, heat, or air. The fibres of plants can hardly penetrate thefe foils, and their culture is rendered very difficult; but, if thefe are duly mixed with a fand that will keep them fuitably open, they may be profitably cultivated.
Loam, or that earth which is a medium between fand and clay, is a powder which partakes of the pliancy of fand and the confiftency of pure earth, and may be called a componition of minute fupple maffes, fomething fpongy in their nature, and eafily difunited by labour. 'They readily open to the influences of the air, and are very retentive of what they receive. Plants can fhoot their fibres into this foil without obftruction, and are accommodated with a copious nutriment.
The juft temperament of the foil, which we call loam, is manifeft by the pliancy of the parts that compole it, and by the vigour of it's productions. But we too often meet with a difproportion in it's qualities, and this earth of an intermediate nature may be fandy in feveral degrees, without being fand itfelf; or it may refemble marle, without having any real intermixture of that fubftance.
When a foil is either too lean or compact, they are corrected with variety of manures, according to the intention. Horledung, which is light and dry, is laid to advantage on a foil of mould, where little clods are apt to imbody with each other; and an intermixture of cow-dung, which is fat and binding, is appropriated to a fandy foil. By thefe expedients confiftence is given to the one, and rarefraction to the other, which is a judicious and profitable proceeding.
The more induffrious have recourfe to a method ftill more efficacious and durable in it's effects, fince it ffrikes at the caufe of the evil. They open the ground to a certain depth, either in their garden or fome adjoining fpot, and endeavour to find a bed of earth entirely different in it's qualities from the land they would rectify. They intermix and thicken a dry and fandy foil with a proper quantity of mould, or at leaft with a marihy earth, which is frequently no more than a black and binding loam. But they open and difunite a marly earth, by mixing it with a large quantity either of river fand, or of that which is found in fubterranean veins of gravel. When the earths are thus blended together, they are thrown into heaps, 'till the different ingredients have had time to incorporate in a proper manner. The beams of the fun, the winds and frofts, together with the cooftant action of the air, will complete the preparation of the whole, and we may then plant in a foil entirely new.
But, as we acquire knowledge by very imperfect fteps and degrees, and may be eafily deceived in the choice of a foil, which appeared to us fufficiently qualified to improve our own land; it will be prudent to make the firft experiments on a fmall quantity of earth, 'till we are fatisfied by very apparent fuccefs, that our endeavours to meliorate the while will not prove ineffectual.
The effential particulars to be regarded are, your permitting the blended, or artificial fort, to be fallow, a year at leaft, before you begin to plant; and your compleating the mixture not in a partimonious manner, but to the depth of three or four feet: otherwife, whatever you plant will inevitably perifh, when their roots begin to penetrate into another vein of earth, which will wound them by it's unpliant cohefion, or parch them up by it's drynefs.
If the foil be grofs and difficult to be moved, or fpongy to an extreme degree, your lands fhould be raifed towards the
Vol. II.
middte, and funk at the extremities into fuitable flopes; by which means the water that would other wife chill your lands, were is to remain upon them too long, flows off lowards the alleys, and may fink into fuch a drait, as will convey it io the ditch that bounds the fields.
Whatever may be the nature of the foil, we find an excellent effect from clearing the alleys, in the winter-feafon, of their foow, and throwing it on the beds, where fertility is greatly improved by this method.
Upon eftates of any confiderable fize, where lands lie united, there are often variety of foils, and by a proper mixture and compofition of the ane with the other, according to the principles before laid down, the one fort of land or foil wrill contribute, in a great meafure, to meliorate the other; fo thar, with due judgment, grounded upon repeated experimental trials, by fmall quantities, the proper manures for many lands very frequently lie contiguous to each other, and yet remain unknown to the proprietor or the farmer, for want of a competent knowledge in the proper mixture and compofitions of carths, fo as reciprocally to aid and allift each other; in order to make a compoft foil, which will help to forward; expedite, and increafe the general principle of fertility. But, I fear there is one general miftake, in relation to the nature of manure, that runs through all our practical principles of agriculture; which is, that we are too apt to imagine that the great principle of fertility depends upon the application of certain kinds of grofs matter to parcicular foils: whereas I humbly conceive, that all grofs matter, as dung, lime, marle, or any other grofs earth whatever, have not inherent and effential to them thofe great virtues which are generally imagined; but, by the admixture and incorporation of thefe forts of earths with others, either to open or thut different foils, fuitable to their refpective qualities; fuch compolitions of earths contribute to prepare foils only for the more, effectual reception of the virtues of fertility; for thofe augmentative vircues of fertility may, perhaps, upon due experimental trials, be found to exiff in the water, the air, the dew, fnow, light, and fire; and that foils, or grofs earths of any kind, are no more helpful to the great principle of vegetation than as a Matrix, conftantly to recerve and nourith the inceffant influence of fertility.
If then it fhall appear, that the nature of vegetation in general, by repeated unerring experience, is grounded upon thefe plain and obvious principles, it may poffibly open an extraordinary door for univerfal improvements in every branch of vegetation. For, if this be the real cafe, it will naturally lead us to the mixture of fuch forts of easths as will neceffarily tend either to loofen or fhut others, fo that the fongy pinciple may be the better promoted, in order to receive more copiouly the influences of fertility that are inherent and effential to the water, the rain, the dew of heaven, as the facred oracles of God ftile it, light and fire, \&c.
We are but too fenfible that our reafonings about the wonderful and intricate operations of nature are fo full of uncertainty, that, as the wife man cruly oblerves, hardly do we guefs aright at the things upon earth, and with labour do w'e find the things that are before us.
And this obfervation we find fufficiently verified in vegetable nature, whofe abundant productions, though thcy are moft vifible and obvious to us, yet are we much in the dark about the nature of them; becaule the texture of theiveffels of plants is fo intricate and fine, that we can trace but few of them, though affifted with the beft microfcopes.
We find, by the chemical analyfis of vegetables, that their fubtance is compofed of fulphur, volatile falt, water, and earth ; which principles are all endued with mutually attracting powers, and allo a large portion of air, which has a wonderful property of ftrongly attracting in a fixed ftate, with a power which is fuperior to valt compreffing forces; and it is by the infinite combinations, action, and reation of thefe principles, that all the operations in animal, as well as vegetable bodies, are affected.
Thefe hort obfervations may excite to further refearches of this nature, which is the chief end of introducing them in a work of this kind. See Agriculture, Chemistri; Earth, Farming, Husbandry.

On the Manuring and Cultivating the Lands of Great-Brisain and Irbland in general, in order to render Labour and Conmodities cheap.

In order to introduce what I have further to fay upon the manuring or cultivating of lands, which is, at prefent, a point arduounly laboured in France, with a view to leffen the price of commodities in general, it may be proper to lay down and illuftrate fome principles relating to money, which may deferve to be regarded as maxims perbaps.
This, indeed, I intended to have done under the article MoNEY; but, confidering that it would not be fo properly adapted to what 1 would urge in relation to lands, and alfo that I fhould have matter of a different kind to come under the head of Money; I judge, upon the whole, it will be beft to come in here.

Pp
I. Money,

1. Money, i. e. gild and filver, being, by the confent of mof nations, beceme counters for adjuiting the value of all things elfe, and balancing accounts between man and man, and the means by which commodities of all kinds are procured and transferred from one to another, is hence become the foles medium of trade.
II. Money can be brought into a nation that hath no mines, by the means of trade only, i. e. by fuch nations exporting more goods in value than they import: for, in proportion as the value of the exports exceeds the value of the imports, money, which muft balance the account, increafeth fafter or lower [fee the article BALANCE of Trade]; and, contrariwife, where the imports exceed the value of the exports, the calh of fuch nation mult proportionably diminilh: this is called, and doth conftitute, the general balance of the trade of all nations that have not mines.
III. Money will be moft plentiful where the mines are : as the quantity of coals will be greater at Newcafle, than at any place that is fupplied only with coals from thence: and, confequently, I mean, that gold and filver will as certainly be lefs valuable where the mines are, than at any other place which is fupplied by them with thofe metals.
IV. That the prices of the produce of manufactures of every nation will be higher or lower, according as the quantity of cafh circulating in fuch nation is greater or lefs, in proportion to the number of people inhabiting fuch nation. See the article CASH.
To illuftrate this, let it be fuppofed that we have ten millions of cafh, and as many people in England; it is evident they have twice as much money amongtt them, in proportion to their number, as they would have, if their number were doubled, and the quantity of cafh remained juft the fame. And therefore I think, they could give but half the price for things in general in this cafe, that they could do when they were but half the number, with the fame quan tity of money circulating amongft them. Wherefore, if the people increafe, and the cafh doth not increafe in like proportion, the prices of things muft fall; for all the people mult have neceffaries, to procure which they muft all have money :' this will divide the fame quantity of cafh into more parts, that is, leflen the parts; and then it is evident they cannot pay fo much for their neceflaries, as when the fame calh, divided into fewer parts, makes the parts greater.
The prices of all things in this kingdom, fome centuries ago, were vaftly lower than they are now. In the reign of king Henry VIII. it was enacted, that butchers fhould fell their meat by weight ; beef at an halfpenny, and mutton at three farthings per pound: and, if we look back to the reign of king Edward III. we find wheat was fold at two fhillings per quarter, a fat ox for a noble, a fat fheep for fixpence, fix pigeons for a penny, a fat goofe for two pence, a pig for a penny, and other things in proportion. See Baker's Chronicle.
Since the great difference of the prices of there things now, to what they then fold for, is undoubtedly owing to the great quantity of gold and filver, which fince that time hath been brought into this kingdom by commerce, it follows, that the prices of 'things will certainly rife in every nation, as the gold and filver increafe among the people; and, confequently, that, where the gold and filver decreafe in any nation, the prices of all things muft fall proportionably to fuch decreafe of money, or the people muft be diftrefled, unlefs the number of people decreale in as great proportion, as the cafh decreafeth in any fuch nation.
V. Banking, fo far as one is paid with the money of another, that is, where more cah notes are circulated, than all the cafh the bankers are reaily poffeffed of will immediately anfwer; fo long, we fay, as this credit is maintained, it hath the fame effect, as if there was fo much more cafh really circulating amongft the people, and will be attended with thofe confequences; that, as the price of things will hence be railed, it mutt and will make us the market, to receive the commodities of every country whofe prices of things are cheaper than ours.
And, though we fhould lay on duties, or prohibit fuch goods, this will not prevent the mifchief, becaufe we hall not be able to carry our commodities thus raifed to any nation, where things are cheaper than ours; and becaule fuch nations will hence be enabled to fet up many of our manufeetures, $\& i c$. and by their cheapnefs fo interfere in our trade at all stiner foreign markets, as to turn the balance of trade againft us, which will diminifh the cafh of the nation. The lame thing muft be underftood of all public fecurities whatever, that operate as money amongtt us.-This fhews the ill'effects to commerce of a large paper circulation, by means of our national debts, ftocks, funds, duties, and taxes. See the articies Circulation, Debts [National Debts], Funds, Duties, Burbles, Taxes.
VI. The plenty or fcarcity of any particular thing is the fole caufe whence any commodity or thing can become higher or lower in price; or, in other words, as the demand is greater or lefs, in proportion to the quantity of any thing, fo will fuch thing, whatfocver it is, be cheaper or dearer.

Nor can any arts or laws make this otherwife, any more than laws or arts can alter the nature of things.
VII. All things that are in the world, are the produce of the ground originally, and thence muft all things be raifed. The more land, therefore, fhall be improved and cultivated, \&c. the greater will the plenty of all things be, and the more people will it alfo employ. And, as the produce will hence be increafed, fo will the confumption of all things increafe too; and, the greater the plenty becomes this way, the cheaper will every thing be.
And thus will money become plentiful, becaufe lefs money will purchafe cvery thing, in jult the fame proportion as the plenty of every thing fhall reduce the prices, by the increafe of every thing in refpect of the demand. And, if this method be fufficiently purfued, the plenty may be increafed fo much, as to make victuals and drink half the price that they are at now; which will make the price of the labour of working people much lower, for the rates of labour are always fettled and conftituted of the price of victuals and drink: and all manufacturea will be vaftly cheaper, for the value of all manufactures is chiefly conftituted of the price or charge of the labour beftowed thereon. This therefore fhews bow to make money plentiful, viz.
Firft, By thus makirg the neceffaries of life-cheaper, to fuch a degree as fhall be found effectual to reduce the prefent rates of labour, and thereby the price of every thing elfe fo much, that the money, now circulating among ft the people, may extend a valt deal further than it now will do.
Secondly, We fhall hence be enabled to make and export our mannfactures at much lower prices, and this muft needs caufe us to export abundance more of them to thofe nations that now take them of us; befides, this will enable us to carry our produce, \&ic. further and cheaper, to induce other nations to take them of us, who now perbaps do not take any of our goods; whence the cafh of the nation will certianly increale, by traifing the value of our exports above the value of our imports; that is, the general balance of trade will thus be in our favour, or money will thus be made plentiful. VIII. Plenty of money never fails to make trade flourifh; becaufe, where money is plentiful, the people in general are thereby enabled, and will not fail to be as much greater cenfumers of every thing, as fuch plenty of money can make them: therefore trade is always found to fourim, i, e. increafe, as money grows more plentiful amongft the people. The year 1720 was a proof in fact of this maxim. And hence the revenue muft needs increafe likewife, if the duties are always levied on the things which the people confume and ufe.
IX. Where trade flourihnes (we mean where the balance of trade is confiderably in favour of any nation) there the people always increafe greatly, and become generally happy, whence fuch nations ever grow potent and formidable. This hath always been found true in fact, and is almoft felf-evident. X. It is the ftrength, honour, and intereit of every government, that their fubjects be as numerous, as the continent they govern will fupport in an happy condition; and, as the happinefs (i. e. the riches) and numbers of the fubjects are greater or lefs, fo will the ftrength, honour, and revenue of every government be.
XI. A kingdom or flate may have more people in it, than the land it contains can well fupport; that people therefore muft be wretched, and that government weak, 'till fo many of the poor people, as diftrefs each other by their numbers, are removed where they can have land to fupport them. The cafe is the fame exactly in every nation, where the land which is cultivated dorh not afford enough to make all things very plentiful, for this alone can make people bappy.
XII. The quantity of land to be further put to cultivation and tillage, muft be fo great, as to increafen the plenty of every thing to fuch a degree, that the Price of every thing may by that plenty be to greatly lowered, that the rates of labour may alfo thereby be lowered, 'till Money thence come to be plentiful amongtt the people in general. 'Till this end be antwered, nothing material is effected, nor can trade be effectually enlarged abroad, or relieved at home: for the cultivation of land is the principal natural encouragement which trade can receive; becaufe all things muft frit come out of the ground, and, according as the produce of the earth is more or lefs plentiful, fo will the confumption of all things be greater or lefs; that is, fo much more or lefs trade will there be amongft the people. On this the revenue of the nation doth fo much depend, that the whole amount of it will be greater or lefs, as this is, or is not duly encouraged; befides, the fame fums will effect more or leff ac cordingly.
XIII. The cafh of any nation will always decreafe and become fcarce, in proportion as the rents are raifed, above what the plenty of money, circulating in trade amongft the people, will well enable them to pay; and, where there is not land enough cultivated to keep down the rents, and thereby to remedy this milchicf and fupport the people, it may go to fuch an extream, as to leave very litale money in the nation. For, where rents are raifed, every thing elfe muft and will rife too: whence other nations will be able to
fupply

## M A N

fupply our market; and, as molt of our commodities will hence become too dear to be taken by them in return, fo we fhall fend much lefs of our goods to other foreign markets; whereby the balance of tuade will turn againft us, and draw off our money, as long we have any.
XIV, Renits have been adyanced, from this principle, which alone can poffibly raife the price of any thing, viz. a demand for farms, \&cc. in greater proportion than they were well to be had.
And, as this hath in a greater meafure hindered the people from going on, as fuch demand for farms fhews they naturally would, in cultivating more land as they increafed in numbers, fo that the furplus or increafe of the people have been obliged to employ themeilves in Trades, Manufactures, and Professions, 'till they have fo much overftocked and embaraffed all thefe, that their trades, \&ic. will not anfwer to fupport them, whilft at the fame time the not anfwer to fapport them, whilf, of life, and rents have been greatly advanced, to neceffaries of life, and rent
what they were formerly.
This, therefore, muft be remedied, or multitudés muft be ruined: nor can the gentleman efcape: for, if money becomes fo fearce (as it certainly in a great meafure is at prefent amongft the people) that the fraits of the earth will hardly bring money enough to fupport the farmers, and pay all charges exclufive of rent; as many gentlemen already find, who, on that account, are obliged to take their farms into their own management: this being the cafe, the gentiemen, we fay, can fake no better than to become fikifful induftrious farmers themfelves, and get their living by that means, 'till money, as it hath heretofore been, becomes plentiful enough to pay all charges, with a furplus to pay rent; which will be done, whenever the rents are lowered rent; which will be done, whenever the rents are lowered
enough to make money plentiful amongtt the:trading part of the people, but not fooner.
XV. If all the gentlemen in the nation would lower their rents at the requeft of the people, this could not anfwer the end; becaufe the demand for the fruits of the earth, which the land at prefent cultivated can produce, is, and will continue to be fo great, if the people be not diminifhed, as neceffarily to keep the price higher than the money circulating amongit them will well enable them to pay for; and becaufe, until many more of the people are employed in cultivation, \&c. to leffen the number of poor, and make greater plenty, all kinds of trade, manufactures, and profeffions, muft needs continue fo overitocked with numbers of people employed in them, as abfolutely to fpoil them all, as to the profits, which is the fole end of trade. Wherefore, the natural way to lower the rents, can only be, by putting fuch very great brafts of wafte land into cultivation, as may make farms abound; which will lower and make the rents eafy, and will employ the people, not in culcivation only, but in every kind of manufacture, trade, and calling. lor all this will be the neceffary confequence of cultivating fuch large tracts of wafte land, as muft be cultivated to make farms abound, and rents eafy.
Senfible we are, that propofitions of this kind, 'till they are thoroughly examined and fcrutinized, will meet with objections at firft from gentlemen of landed eftates: fince, fay thoy, if the plenty of all productions of the land be fo greatly increaled, that the whole thereof fhould become a great deal cheaper than at prefent; the general rental of the kingdom muft neceflarily be lowered, in proportion thereto: we are fo apprehenfive of the temporary prevalence of this prejudice againft what has been fuggefted on this head, that it may not be eafily removed: but, fuppofing that the confequence of inclofing and cultivating great quantities of more lands, both in Great-Britain and Ireland, fhould occafion a fall in the general rental, we conceive it will not prove any real lofs to the proprietors. For,
What has been urged is a weighty argument to thew, that the fcarcity of money among the people will unavoidably difable the farmers to pay their rents. To this caufe, which naturally leffens the confumption of all things, in proportion as the national caht grows fcarcer, and thereby keeps the fruits of the earth from rifing to a price, that might enable the farmers to pay their rents, it mult be afcribed, that corn, \&c. frequently fcarce fetches money enough to pay all charges, exclufive of rent, and not to the plenty of corn, confidered in itfelf. For, cheap as corn is, the number of poor, as moft parithes find, is greatly increafed of late years : this is apparent, from the numbers we are continually tranfporting, and the neceffity of erecting workhoufes for the poor, and the complaints of tradefmen all over the kingdom, which have been, and are very great, and very juft. Now fuppofe corn, \&cc. cenfiderably advanced, to enable the farmers to pay their rents, what muft become of the trading part of the nation, who already, with juftice, complain they can hardly gef money to fupport themfelves, at the prefent rates of things? And how much more would the poor and their calamities increafe, by fuch a rife of neceffaries, together with the ftill greater decay of trade it muft occalion; fince, if the prices of things were to be advanced, the people in general, for want of money, muft, if poffible, be ftill lefs confumers, and confequently occafion

## M A N

juft fo much lefs bufinefs anongt them, who have already much too little ? Befides, it is always found that as trade leffens (or is divided amongt more particulars', which is much the fame thing in effect) the profits of trade jeffen in ftill greater proportion to the bufinefs tranfacted.
But to praceed: To thew that gentemen will lofe nothing by falling the rents, let it be fuppofed, that all the land in the kingdom were to be raifed 201. per cent. per ann. fince the Jand would bear no more corn, graze no more cattle, \&c. than it now doth, muft not the corn and catte, \&c. be confiderably advanced? and muft not the labourer, whofe neceffaries muft then coft more, have move for his labour? and mult not timber to make carriages, and for every other ufe, coft wore to fell and hew it, \&c. and muft not horfes, to draw the fruits of the earth, \&cc. to market, be more valuable ; and confequently carriage, and every manufacture coft more too ? All things would certainly thus be raifed, if money could be found ta circulate them at fuch an adwance. And then, fince gentlemen are confumers, and muff buy every thing as well as others at this advanice, what would they be advantaged by receiving 20 per cent. per ann. more, and paying that at leaft, if not more, for what they want ? But if gentlemen fhould fay, this would be fo as to what they fpend, yet what they fave and lay up, would be more: for inftance, Suppole a genteman of 10001 . per ann. now fpends 500 l . and lays up 5 col . per ann, if eftates were thus raifed, he would at the fame rate fpend 600 l. and lay up 600 l . per ann. But how would he be the richer, fince, the price of every thing being raifed in like proportion at leaft, which is an unavoidable confequence, his 600 l . would purchafe no more than 500 l . did before? Wherefore, gentlemen would, in this cale, be not orie jot advantaged.
If, therefore, rents fhould fall 30 per cent. per ann. every thing would certainly fall, in at leaft the fame proportion; fo that gentlemen would lofe nothing but the name of fo much per annum ; which, I think, the argument above doth fufficiently evince. But, left the name of lofing fo much per annum fhould be a prejudice, ftrong enough to prevent the execution of this fo neceffary propofal, let it be further confidered, that empty houfes, the number of which at prefent is very great, and will be greater ftill, if this method be not taken to. fill them ; I fay, empty houfes, if they can be filled, are real eftates as well as land. Now, if money be thus made plentiful, as it certainly may, this plenty of money will foon make trade flourifh; and a flourifhing trade will foon enable the people to occupy more houles, and hereby the Number of People likewife will foon be increafed; fo that landlords taken in their full extent *, including landlords of houfes, as well as of land, will thus certainly be gainers, by falling their eftates fo much as fhall be needful to make money plentiful, which will foon fill their houles.

* Dr. Nichols, in his Confererce with a Theif, page 64, fays, To confider farther, how mightily this nation of ours hath increaled within a century or two ; motwithtianding the many civil and external wars, ard thofe vaft drains of people that have been made into our plantatinns, fince the difcovery of America: how the city of Lendon hath doubled itfelf within thefe forty years, notwithftanding the laft great plague; and how the country hath increafed, though not in the like, yet in a confiderable proportion, \&ic.

But it may be faid, if lands muft fali 30 per cent. which is near a third, to fill the houfes, and but an eighth, or a ninth of the number of houfes, as I hall thew, remain to be filled; how are landlords, taken in the full fenfe of the word, including landlords of houfes as well as of land, gainers? To which we anfwer, that the rents are now raifed above their proper value; for the proper value of any thing is really no other than what the money circulating among the people will well enable them to pay; nor can any greater value be long fupported, by any means whatfoever.
But it will be afked, How fhall we know when the prices of things are at this proper value? I anfwer, that as the price of labour is always conftituted of the price of neceffarics, and the price of all other things chiefly of the price of labour, whenever the price of neceffaries is fuch, that the labouring man's wages will not, fuitably to his low rank and ftation as a labouring man, fupport fuch a family, as is commonly the lot of many of them to have, the price of neceflaries being then evidently fo much too high, every thing elfe is fo too, or then may the prices of things jufly be faid to be above this proper value.
But it will appear, perhaps, that gentlemen will be the richer for falling all the lands in the kingdon 20 or 30 per cent. per ann. provided this fall be effected only by the addition and cultivation of fo much more land, as will make farms fo plentiful, as to reduce the rents of lands to fuch degree. For,
If ic fhall appear that landed gentemen would be the poorer, if all the lands in the kingdom were raifed 20 per cent. jer ann. it fhould feem the reverfe muit neceflarily follow; i. . . that he would be the richer, if all the lands were fallen 20 or 30 per cent. per annum; that is to fay, 70 or 801 . wha
certainly purchafe more, if all the lands were fo fallen, than 1201. would do, if all the lands were fo raifed: which we fhail endeavour to prove.
If all the lands were raifed 20 per cent. per ann, it is certain they would not produce more, but, perhaps, lefs, than they now do, by putting it, in fome degree, out of the farmer's power to exercife fo much rkill and be at fo much expence to cultivate them, as they could do before the rents were fo ratifed: we fay, fince the land could, however, produce no more than it now does, all the produce, whatever it confifts of, mult be fold, not only for all the 20 pounds more, but there muft be profits likewife on all thofe 20 pounds to enable the farmers to buy whatever they want at higher prices; which every thing muit needs be advanced to, from thus raifing the produce; which, as it palfes through every mechanical and manufactural hand, muft ftill have proportionably increafed profits on the thus raifed prime coft, before it comes to the confumer ; who, therefore, muft thus certainly, in the end, not only pay all the advanced 20l. rent, but likewife the neceffary profits thereon through all the feveral hands it muft pals : and, frace the price of labour [fee the articles LAboijr and Manufacturers] which adds the greatelt value to every thing, muft be enhanced allo, it is manifelt, the fame quantity of produce muft be dearer, by all the firlt advanced 20 l. rent, and by fuitable profits to all the feveral hands through which it mult pafs, together with a greater charge of labour thereon; whence it follows, that if the fame quantity of produce muft thus colt a great deal more, than all the 20l. rent, by which it was firft enhanced, the pasts muft coftmore too in fuch proportion; fo that we need not fcruple to affert, that 1401 . could not, in this cafe, purchafe what iool, now doth: whence it appears, that gentlemen, who are confumers in common with others, would thus evidently be much the poorer for foraifing their eftates; and, therefore, it fhouid feem an undeniable confequence, that they would be the richer by lowering their cftates 20 or 30 per cent. per ann. fince it muft be equally certain, that 70 or 80 l . would purchafe more, in this cafe, than 100 . does at prefent; as it is certain 220]. in the other cafe, would not purchafe fo much as 1001 . now does.
And this both accounts for, and verifies an obfervation, which fome gentlemen make, and wonder at, viz. that they experience they cannot live fo hofpitably on the fame eftates as their anceftors did, who had vallly much lefis income from them, than their fucceffors now have, who make this obfervation.
If therefore, gentlemen find themfelves ftraitened, by raifing rents above what the circulating money will enable them to pay, how great muft the ftraits and difficulties prove which are brought on the people, outtof whom fuch heavy rents are raifed?
It may probably be objected, that this argument concludes too much; fince, if 70 l . will, in this cafe, purchafe more than 120 l . why will not nothing purchafe more than fomething? To which it may be anfwered, There is a proper point, at which it will fop of itfelf, which is this: whenever the wages of the labouring man and price of neceflaries are made fo near equal, that he can, fuitably to that low rank in life, maintain fuch a family as he, in common with all the human kind, may be prefumed to raife: when the labouring man's wages will do this, the rent the lands will then bear, is that proper and fit rent, which will enable gentlemen to purchafe more of every thing, than any larger rents can enable them to do: which may be proved thus:
Suppofe the rents raifed fo much, as neceflarily to carry the price of goods, to confumers in general, to higher rates than the money they can get will enable them to purchafe what they really want; this will make a kind of unnatural plenty of goods, prefenting themfelves for buyers, who, though they really want them, cannot find money wherewith to purchafe them, and therefore are compelled to abridge their necefiary wants as much as they can: this depreffes the value of thofe goods (which thus in the end muft want buyers) below the rates which the rents have made neceflary; and this will inevitably keep the produce of the land which the farmers bring to market fo low, that they cannot make it anfwer to bear all charges, and pay their rents; whence gentlemen muft find it difficult, if not impoffible, to get their rents; whillt, at the time, whatever they buy, as bath been proved, will neceffarily be dearer in a greater proportion, than ever the rents can be raifed; whereby it feems plain, that luch rents of land in general, as will neareft comport with the point above-mentioned, will always purchafe moft of every thing. There is yet another weighty argument to induce gendemen to make money plentiful, by an annual additional culture of a due proportion of land; that is, a due regard to the happinefs of their own families. For, let it be confidered, that men come into this world to raile a new generation, and depart out of it. Now, the term of life, men will be found to have one with another, from the time of marriage to their death, is very little more than 20 years: in which time, one marriage with atather, we may fuppofe, produces about four children, who live to man's citate: fuppole a gentle-
man of 20001 , per ann. to make provifon for his children, lays up 5001 . per ann. which, in 20 years, will be 10,0001 . faved for them, and which divided into four parts, including the widow's fhare, which muft often happen, can be but 25001. for each child's fhare: and, fince this is not only much inferior to the eftate it was faved out of, but hardly fufficient, viz. the intereft thereof, to maintain a fingle perfon handfomely, mof of the children muft be introduced into trade, to improve their money for their families, or they will foon reduce it to nothing. If trade be languifhing and diftreffed, it cannot be expected but many fuch will fink in the general difficulties trade lies under: wherefore, if there be any way practicable to make the money plentiful amongft the people in general, which never fails to make trade flourifh, it ought to be done, not only from a common principle of affection to the public good, but for the particular benefit of every gentleman's own immediate oftspring, many of whom are fure to be affected, as trade prolpers or decays.
But the languifhing condition of trade is by fome afcribed to the luxury of people, concerning which let it be confidered: It is expected of every man, that he provide for himfelf and family a fu'pport; but this expectation is unceafonable, if things are not fo wifely conflituted in their own nature, that every one may attain this end.
The ways men have to attain this fupport, are the exercife of their feveral occupations.
Thefe arife folely out of the mutual wants, \&c. of mankind. Children, who can do little or nothing towards fupplying them(e)ves, make about half the bufinefs of the world, fince more than half the human race die under 17 years of age. If the people mult retrench in their expence, they muft do fome or ald thefe things, viz. wear fewer and worle 'cloathe, \&c. eat lefs and worfe victuals, employ fewer or no fervants, occupy lefs houfe-room, and ufe lefs light and fuel, and fpend little or no money in any pleafure or diverfion; and, inftead of wine or ftrong beer, drink fmall beer or water, and avoid marriage, as many certainly do, becaufe it creates a greater expence than they can fupport. Would not this leffen the confumption of every thing; and hinder many from fupporting themfelves and families, by making fo much iefs butinefs amongft the people, and thereby greatly increafe the number of poor; who, if no other way be found to employ them, which tillage alone in this care can do, mult become a much greater burthen than they are? Befides, where the poor increale, the profits of trade will be ftill more and more reduced, through loffes, and want of trade, and the efiorts of fuch great numbers of indigent people, as muft be ftriving to fupport themfelves in the reduced quantity of trade that remains. And mult not the revenue be greatly diminifhed likewife, fince in this cafe the confumption of things, on which the revenue entirely depends, muft be leffened very much? A beggarly people can neither pay great taxes or great rents.
Inftead, therefore, of urging the people to be lefs confumers, things fhould be made fo plentiful, that they might be greater confumers, that trade and commerce might increafe, and not diminifh. Hereby luxury would find it's natural and proper bounds, which, if any man tranfgreffed in an extraordinary mealure, he would be fufficiently whipped with his own rod.
Moreover, with refpect to the nature of luxury, thofe that are not influenced by the natural motives to frugality, will not eafily be reftrained by any other whatfoever.
The natural motives to frugality are thefe, prefent provifion for families, and fortunes for children.
They who neglect the former, muft foon fuffer want; and they who would provide for the latter, mult confider what the term of life is, which they may reafonably hope for, and take care that their gains and expences are proportioned to the end defigned.
As percons muft, generally at lealt, have tolerable fortunes themfelves, who fhall be able to provide fortunes for their children, lec it be fuppofed, that a man fets out with 2000 ). and by fkilful and prudent management he gains, one year with another, about 500 l . If men who have fuch fortunes muft not live a little decently, whence can trade, which sntirely depends on, and terminates wholly in the confumption of things, arife? How can landiords expect any confiderable rents for their houfes, \&c. and to pay rent and taxes, and all other charges, and maintain a middling family in London, with decency fuitable to a reputable tradefman, when 2501. per ann. is nothing fuperfluous, even where all things are managed with great ceconomy?
But fuppofe, in this cafe, fuch a man hould lay up, one year with another, 2001 . and that for 20 years, which is, I believe, much about the term men have to raife and provide for families, he then would add 4000 l . to his firt 20001 . which makes 6000l. together, to be divided amongft four children, which I take to be the number ne marriase with another raifes; this fum, therefore, will be but 12001 . for each child's ihare, if a like fum be referved for the wiciow; and if there fhould be no widow, but 1500 I . for each chald, which will not often fet them in better circumftanecs than their pa-
rents fet our in: but, if things mult be worfe than this, $\mathrm{ft}_{\mathrm{d}}$ milies muft foon fink into poverty. And, fince thefe things. are fubject to many and great contingencies, nobody ought to think 251 . per cent. per ann. even on fuch a capital employed in trade, too great gain; efpecially, confidering what ployed and pains are neceflary to reach this end, and to what great rifk money employed in trade is always expofed, befide the prefent and future provifion with which families are to be fupplied out of it.
Nothing ought to be deemed luxury in a tradefman, whilat he lives at about half the income of his bufinefs; yet in prudence he ought not to make too great a figure, becaufe of the uncertain and fluctuating nature of trade, which may happen - fome time or other, by misfortune, if not otherwife, to turn againlt him; and becaufe, the more he can lay up for his children, the more will he have done towards raifing them to better ftations in life.
Nor ought it to be deemed luxury in a tradefman if he fpends the whole income of his bufinefs, if fuch expence be unavoidable, when the utmof frugality and good management are exercifed in fuch a man's family.
Peace and plenty comprehend all the felicity mankind were defigned to enjoy in this mortal ftate; and are fo well known to conffitute the happinefs of the world, that they are proverbial terms to exprefs the compleateft general felicity; which undoubtedly fuggefts, that they have by experience been found to anfwer the end.
Wherefore, if there be any difficulty among the peopic, it Wherefore, in there be owing to the defect of one or both of thefe.
As we are now in peace, it muft be owing to the deficiency of plenty that the trade of this nation is in fuch a languifhing condition; the truth of which the numerous complaints to the parliament, and great number of empty houfes, abundantly evince.
Where tillage and cultivation of land are not annually to a confiderable degree increafed, even peace, and the natural confiderable degree increafed, even peace, and the natural
increafe of mankind, do neceffarily produce a general decay of trade.
For peace, which puts an end to the vaft bulinefs which war neceflarily creates, obliges thofe that were employed, and found their livelihood by the affairs of war, to employ themfelves in the trade and bufinefs which the peaceable fate of affairs produce; and, as hereby there is a much greater number of people to be fubfifted on fo much lefs bufinefs as the ending a war puts a period to, it is apparent this muft divide the remaining bufinefs into a great many more parts; whence the profits, which ought to be fo much augmented as the bufinels to each particular becomes lefs (becaufe the expence of living will not be lefs) are always found by experience to ieflen, in a greater proportion than the bufinefs to each patticular leflens. This is the inevitable confequence of having cular lchens. Thber of people in any trade, where the bufinefs a greater nom them all is no greater than when the fame trade and bufnefs were in fo much fewer hands; and hence ruin muft happen to many whofe trades are thus unhappily circuinftanced.
Befides, peace, lowering the intereft of money, brings many more people into trade, who cither cannot live on the reduced more people meir money, or are not fatisfied to do fo, and, therefore, enter on trade to improve their money to better advantage; and fuch, having abundance of money to employ, muft needs take a great deal of bufinefs from thofe that had it before, by doing bufinefs at much lefs profit than it was before done, that they may employ the large fums they bring inco trade. This mult needs make it very difficult for people of much iofs fortunes to get a living, greatly increafe the number of poor, and empty the houfes too, by difabling the people to pay fuch rents as they did before. This ftate of things will alfo drive many out of the nation, to get their bivings by the arts they have learned here.
The heavy debts and taxes which war hath laid this nation under, fufficiently evince that war is not the natural means to make trade flourifh, fince the confequences are fill fo burthenfome to us. And, if we look back to the condition France was reduced to by queen Anne's war, which introduced both famine and peftilence amongft them, and occafin ned the pcople to furround the dauphin's coach in crowds, and cry out, Peace and bread! Bread and peace! Surely thefe things may fully convince us that war is a very great cahamity.
Peace, therefore, being the only natural foundation of happinefi to any nation, and trade the particular means whereby pine people can be employed and fubfifted, the promoting and improving trade flould be always confulted, and efpecially in time of peace, which is favourable to fuch a defign.
In general, there ihould never be any reftraints of any kind on trade, nor any greater taxes than are abfolutely unavoidable; for if any trade, by this means, be cramped and fettired, thofe who fubfilled by the bufinefis, which now hath reftraints and burthens laid uponit, will be rendered incapable of purfining it, and, of confequence, they-muft be employed fome other way, or drove out of the kingdom, or maintained at the public charge ; which laft is always an additional grievance, and ultimately falls upon trade, and fhould, if thers

Vol. II.
be any praible way which might employ tien, be frevented.
That there are natural means to rebfife all mankind in a happy condition, manifently appears from the wifdom and goodneís of the Supreme Being, who hath taken fuch ample care of all the creaturcs below us, that they want no good thing, nor fuffer any hardhips but what unreafonable men bring upon them. Wherefore, if the Almighty hath fo wifely and gracioufly piovided for all the creatures below us, for whofe happinefs other beings evidently appear to be defigned, it muft be abfurd to imagine he hath difpofed things fo, that unhappinefs in any degree fhould unavoidably arife to man, whom he hath placed at the head of all his works in this world. Therefore, whatever difficulties mankind meet with muft be owing to their own mifmanagement, in not looking through the nature of providence with refpect to themfelves.
One branch of that providence, which men thould attend to and confider, is, that mankind as certainly increafe as other animals and vegetables, and, therefore, that increafe mult continually be employed in cultivating proportionably more land: for otherwife, being all confumers, there muft continually be greater numbers fubfifted on the produce of the fame land which was before culcivated; and this will increafe the demand for the produce, and inhance the price of it, whilft the increafing people muft employ them(elves folely in trades, manufactures, \&c. to enable them to fubfit: whence it muft needs come to pafs, that trades, manufactures, \&c. will foon be overftocked; that all the increafe of the people cannot be fubfifted this way, feeing the neceflaties of life, for which they all ultimately work, will all the while be growing dearer, and the people lefs able to purchafe them. And, às I take this to be very much our prefent cafe, fo this propofition of culcivating proportionably more land, appears to me to be one natural remedy to be applied; the happy offects of which, if fufficiently execured, will foon difcover to be an univerfal benefit, notwithftanding any imaginary appearances to the contrary
But I think it needful here to obferve at what rate mankind increafe, becaufe their happinefs certainly depends on cultivating fill more and more land in fuch proportion. We will confider this matter upon the principles of Sir William Petty, who has endeavoured to fhew that mankind will abfolurely double themfelves in 360 years, notwithftanding the contingency of wars and plagues; therefore, accordingly, the quantity of land which every year fhould be taken in and new cultivated, muft be atdleaft a 360 th part of the quantity at prefent in cultivation.
Now, if-England be 320 miles long, and 290 miles wide, it muft, fuppofing it's length and breadth to be every-where alike, contain 92,800 fquare miles: but, as England is not fo regular a figure, I fuppofe it will be needful to deduct a third of it'a contents for it's irregularity, towns, and rivers, and then there will be about 62,000 fquare miles contained in it.
Suppofe that at prefent but about half, that is, 3 I,000 fquare miles, are cultivated, a 360 th part of that, viz. 86 fquare miles at leaft, fhould every year be further added, and taken into cultivation, to hold-proportion to the natural increafe of mankind: and if a greater part of England be already improved than I have fuppofed, or if mankind increafe much fafter than Sir William Petty above afferts, then the addicion every year muft be greater in fuch proportion.
But, as nothing like this hath hitherto been done, it is evident to demonftration that hence all trades, occupations, manufactures, and profeffions, are overfocked with numbers, and embarraffed: and hence rents have been advanced, by the demand which the increafe of people hath occafioncd for land; confequently living is become much more chargeable than formerly, and the people lefs able to fupport themfelves: befides, the inbancing the price of neceffaries hath either advanced our commodities, or made them fo much worfe in quality, that our neighbour-nations have not taken fo many of them as they would otherwife have done; and we probably muft have taken more commodities from them for this reafon. And thus, it is to be feared, that the gentral balance of trade and money is againft us; that is, the gold and filver of this nation have, by this means, been really diminihed, notwithltanding the great increafe of paper credit and circulation; and the prodigious exportation of gold and filver, of late years, is a frong indication of it, wharever pretences may be advanced concerning it to the contrary.
And, if our trade goes on fo , and our competitors, more or lels, fupplant us therenn, we fhall, in time, lole our real cagh , and be obliged to carry on our bufinefs with paper currency only.
But if, to prevent thefe evils, we do, as faft as poffible, put a very great quantity of land into cultivation more than at prefent is cultivated, our poor will be employed, the empty houfes filled, and' our manufactures become much cheaper and better; and this will both increate our exportations to the nations we now trade with, and giverife to other foreign markets to vend our goods at, and prevent the exceffive importation of foreign goods amongt zurfelves: by which po-

M. A N
licy, the gencral balance of commerce will not only be turned in our favour, pro tempore, but, in conjunction with the other meafures we have fubmitted throughout this work, the fame may always be kept fo, and money thereby become plentiful enough amongit the people in general, and their happinets be increafed in proportion to their fteady purfuit of fuch honeft and induftrious meafures: and, perhaps, there is no other way in nature to compafs this end, and effectually to recover the trade of the nation : for thofe nations that can work cheapeft, muft have the money, fo certain as they always will have the commerce; to which I will add, that the people will always flow into thofe nations that get the money (i, e have the general balance of trade in their favour) becaule trade, which is the means of procuring money and landed eftates, is that which employs and fubfits them.
And it may deferve conlideration, whether thefe meafures, fteadily backed and forwarded by fuch others which we have occafionally fubmitted, may not prove a more effectual way than fome that have been propofed, fo to multiply our own people, without giving any difguft or uneafinefs to the nativeborn fubjects, that we may have as little fearcity as dearnefs of labour among ourfeives.
And as to the purchafe of effates, which is always governed by the intereft of money, they will be valued at as many years purchafe as they would, if the annual rental had not fallen; and, though the fums they fell for muft be lefs in proportion as the rents fhall be lowered, yet the money will have, at leaft, all the fame effects apply it how you pleare.
The great number of empty houles within the cities of London and Weftminfter, and places within the bills of mortality ${ }^{*}$, will certainly, in time, be attended with reducing the rents, perbaps, full one half, if the methods propofed be not applicd to prevent it.

By the bills of mortality of the year $173^{\circ}$, which, by the preceding and fucceeding years, appears to be a moderate year, there died in London and Weftminfter, and the fuburbs thereof,

By the no. of deaths, $26_{2} 76 \mathrm{r}$, div, the yea. they lived, 623,713 , and 23 years, and about one third, according to this bill of mortality, appears to be the par-term of human life; mul tiply the deaths by this term, hews the number of people living in the bills of mortality to be about 624,423 per-
fons, and, if we fuppofe the houfes, one with another, to fons; and, if we fuppofe the houfes, one with another, to contain to fouls, then the number of houfes inhabited will be 62,442 .
By a furvey taken in the year 1732, 8000 houfes appeared to be empty in the cities of London and Weftmintter, and places within the bills of mortality; molf of which lett, at an average, for 201. per ann. at which rate, there was upwards of 160,000 . rent yearly loft in the bills of mortality, more than a ninth part of the whole building being cmpty. By this bill of mortality it alfo appears, that more than half the human race die under 10 years of age : and, if we confider the number of young perfons, under and over this age, who live to fupply the places of thofe that die in all the flages of life above this term, there can be no doubt that children make about half the bufinefs of the world, as I have afferted. And though it appears, by this will of mortality, that the term of life, on the par, is about 49 years, excluding all thofe that die at 20 years and under, 49 years, excluding all thofe that die at 20 years and under,
yet I cannot imagine the term men have to raife and provide for families in the marriage-flate doth much exceed 20 years, fince it is pretry certain marriages in general commence a few years at lealt later than the age of 20 years, and are undoubtedly generally diffolved by the death of one of the parties, before they both reach the term of 49 years.

We are fenfible the great number of empty houfes is arcribed to the increafe of buildings: but, whoever confiders that there are not lefs than 6 or 700,000 people in the bills of mortality, and that, according to the natural increafe of mankind, at the lowert computation, of doubling in 360 years, the in-
creafe will be near 40,000 people fince that time *; he with be neceffarily obliged to afcribe the empty houfes to other caufes, and not to the increafe of building folely. However, fince they are built, and their being inhabited, or ftanding empty, will certainly have fuch an influence on the'rents of the kingdom, and the revenue likewife, it behoves us to take the proper methods to fill them; which I am confident will foon be effected by cultivating land enough to make a plenty of money among the trading part of the people in general, but not otherwife.

* We are not infenfible that Mr. Derham, in his PhyficoTheology, hews that the deaths in London, as in moft great cities, are greater than the births; whence an objection may feem to arife to the increafe above-mentioned; which I think is of no weight, becaule if a nation will abfolutely double itfelf in about 360 years, notwithtanding wars and plagues, cities muft do fo too: nay it is plain, by what Dr. Nichols fays, London increafed at fo much greater rate as to double iffelf in 40 years, notwithftanding the laft great plague, which happened in that period.

But further, if the people increafed, as Dr. Nichols fays they did, fo as to double themfelves in London in forty years, notwithftanding the laft great plague, which bappened within the period he wrote of; and the country increafed, though not in the like, yet in a confiderable proportion (and I hope his authority is fufficient to bear me out) then the buildings fince the peace of Utrecht, which hath by no means, I think, been in proportion to one fourth of fuch an increafe of people, cannot be the reafon to which the valt number of empty houfes can be afcribed.
But the empty houres muft be afcribed to fuch a diminution of trade, and, confeguently, of cah amongft the people, which makes it fo difficult for the people to get money to fupport them, that many are become incapable to pay their rents, and many muft have forfaken the nation on this account: for the people will diminilh where the means of getting a livelihood is not well to be attained fuitable to their feveral ranks and fations; which is a neceflary confequence where the general balance of trade becomes againft any nation. For it is evident, fuch a nation hath amongtt them juft fo much bufinefs lefs than their own feveral wants create, as the amount of the balance againft them is, which Ieffening their calh, at the fame time, in the like proportion, brings a double inconvenience with it, viz. want of money and employment: and, if things are fuffered to go on fo, the people muft difperfe and diminith. And therefgre this maxim, well known amongft merchants, appears well founded, it being only the reverfe of what is thewn above, That the people always increafe in whofe favour the balance of trade is confiderable; as it muft needs have been in ours, in that period of time Dr. Nichols wrote of; fince, notwithftanding fo great an increafe of the people, the prices of every thing, as is well known, rather advanced all the time, which they could not have done if the calh of the nation (without the great paper circulation, occafioned fince by our public debts and taxes) had not increafed in yet greater proportion than the people increared, as I think the illuftration of the fourth preceding maxim evinces.
Hence therefore it appears, that every nation ought to keep trade on fuch a foot, as always, on the whole, to have the balance in their favour: for, if mankind double themfelves only in $3^{60}$ years, if the real cafh of the nation be not aug. mented every year 360 th part, the people nuft in a few years be diftreffed for want of money, unlefs all things be made at leaft fo much cheaper to prevent it.
And, as the means of doing this is in the power of every nation, that has wafte land enough to improve to increafe their plenty ${ }^{*}$, and thereby reduce the price of things; fo the improving fo, much wafte land as anfwers this end; will furnifh employment, and confequently a livelihood for the people; and will always, not only prevent a confiderable number of houfes from ftanding long empty, but will continually caufe more to be added all over the kingdom; as the vaft increafe Dr. Nichols afferts there was, particularly in London, within forty years, befides the great increafe in the country in the fame time, doth fully fhew.

* Dr. John Laurence, in his Syftem of Agriculture, p. 45 fays, Without all queftion, improvenent of lands, of what kind foever, makes riches and plenty, and plenty calls togecher inbabitants, and people to confume ic. And p. 47, he fays, So plain it is, that inclofure is the greacett encouragement to good hufbandry and remiedy for beggary, the poor being employed by the continual labour bellowed on fuch land, which is, doubly repaid by the fruisful crops it annually yields.

That we may put this matter paft all doubt, let it only at prefent be granted, which we fhall hhew hereafter, that the people in London and Wcftmintter were really doubled in about forty years; fince this, nor any thing like this, could be the effect of the natural increafe of mankind, it muft have fome othe powerful caufe: this caufe, we apprehend, was a flourifhing trade, which we thus prove, viz.

The people were doubled in the city of London, and increafed too in the country, though not in the like, yet in a confiderable proportion; neverthelefs, the prices of neceffarics, and all other things in general, were higher than thofe things were forty years before: now this, by our fourth preceding maxim, was ablolutely impoffible, if the cath of the nation had not bech vattly increafed alfo. Wherefore, as we have no mines, the cath could be increafed 'only by exporting fo many more goods in value than we imported. As this is, in itfelf, that which conftitutes a flourifhing trade in any nation; fo we fee the effect was the doubling the peopie in Loudon; wherefore, let our trade be again put on fuch a foot, that we may be abic to raile our produce and commodities of every kind, as cheap as any nation can raife, or make any thing, whercby thev may interfere in any branch of our trade ; and the fame effect will again manifeft itfelf, and confequently not only fill the empty houfes, but caufe more to be added.
As it hence appears abfolutely needful to keep trade on a foot, " whereby the balance may always, on the whole, be in our favour; fo it is certain, the mines which are con-tinually giving gold and filver, do afford fufficient to fupplyfuch a needful balance. For the gold and filver, which the mines; fince the Europeans have poffeffed them, have not only furnihed Europe in general with quantities equal to the increafe of mankind fince that time, but fo much more gold and filver, as to enhance the price of all kinds of commodities throughout Europe in general ; and efpecially in thofe nations who have, either directly or indirectly, had the moft confiderable trade with the countries where the mines are: and this, in all probability, they will always continue to do; but, if not, we fhall fhew, in fome future parts of this work, how to do that which will always be equivalent.
And, with refpect to the countries which are thus continually furnifhing this balance to the reft of the world, they, having the mines, have that which is equivalent to fuch a balance in their favour.
We have before laid it down as a maxim, that gold and filver (i. c. noney)" will be moft plenty where the mines are: let it then be fuppofed, that the people poffeffed of the mines could furnith themfelves with the neceflaries and pleafures of life by the produce of their own country, and therefore fhould think fit to prohibit the exportation of gold and filver, and thould thereby be effectually able to prevent the exportation thereof, which is undoubtedly impoffible: if we fuppofe thefe nations to make fuch prohibition, and at the fame time continue to work thofe milies, fo that they are perpetually yielding more and more gold and filver, how great muft the increafe of thofe commodities foon become? And, fince gold and filver are of little ufe, befides procuring the neceflaries and conveniencies of life, which alone are real riches, and for which gold and filver are now univerfally exchanged; would not the great plenty of thefe commodities, thus continually increafing, caufe proportionably fo much more gold and filver (with which they would at length be incumbered). to be given for the more neceffary produce and fruits of the earth? Aud would not this fo deprefs the value of gold and Silver, by their plenty amonglt them, as to give occafion and encouragement to all the world to go to this market with their produce and manufactures, which they can and will fell for a vait deal lefs gold and filver, than what fuch goods of their own raifing would in this cafe be fold for? Nay, they would find it a convenience to be cafed of the burthen of the gold and filver, which the mines, if continually worked, would produce, as certainly as it is, a relief to any country to export any other fuperfuous commodities: for, if they do not ceale to work the mines, when they have raifed gold and filver enough to be burthenfome, they muft and will certainly drop their cultivation and manufactures; fince men will not eafily be induced to labour and toil, for what they can get with much lefs trouble, by exchanging fome of their excefs of gold and filver for what they want.
And, if they fhould be fuppofed, as is natural enough in this cale to drop their cultivation of land and manufactures, which are much the floweft and moft laborious way of fupplying themfelves with what they could fo eafily and readily prozure by exchanging gold and filver, which they too much abound in, they would certainly, in a great meafure, lofe the arts of cultivation of land, and that of manufactures allo; which has long been the cafe of a neighbouring nation, by the acceffion of wealth which the Weft-Indies afforded: whence they are at beft but a beggarly nation, with their immenfe treafure; and the conduit pipes to difperfe the gold and filver thro' other parts of the world; which other nations drain them of, by making goods cheaper than they can do, and that to fuch a degree, that the mines are fcarcely fufficient to anfwer their crdinary occafions, even in times of peace: and, though they are fenfible of this, yet they find by experience they can't prevent it.
The cale is the very fame, in fome degree, in every nation, whofe quantity of real or artificial cafh is large enough to fupport the prices of thcir goods, confiderably above the rates fuch good's bear in other nations round about them. Whence it is obvious, that all probilitions, with regard to
coin and bullion, as well as all other commodities, mult be injurious to commerce; becaufe, befides all other mifchiefs thereby occafioned, they are always defigned to reftrain the money from going out of the nation; which will be eternally impracticable, whilit the general balance of trade is againft a nation.
We confers that we judge it moft nationally beneficial to prevent the importation of all foreign commodities, as much as poffible, but not by acts of parliament, fuch reftraints, perhaps, being no good to commerce in general ; it is therefore we recommend the raifing fuch goods ourfelves, fo cheap as to make it impolible for other nations to find their account in bringing them to us: as this is the only natural and effectual prohibition of fuch things as we would not receive from abroad; fo I wihh every nation in the world would do the like, as much as ever they can; for then the plenty of every thing would be fo great, that all mankind would be happy, if this world is capable of making them fo; for we are not partial to our own country, but wifh all mankind to be as happy as I wilh my country and myfelf. Upon the whole, the reader will obferve what we aim at.
Firft, That it is of no confequence, whether any nation hath a vaft deal of gold and filver, or very little money amongtt them, if fufficient care be taken to make the plenty of every thing great enough, to render the money they have amply extenfive, to circulate their trade in every branch, and fully to employ and fupport all their people; which mult and will make them all happy, and certainly caufe them to have vaftly more foreign trade, by thcir thus being able to make and fell their manufactures, and produce them at lower rates than their neighbour nations can do. And this is abfolutely in the power of every nation, that will cultivate land enough to effect it, unlefs any nation thould have' more people in it than they have land to fupport them; which may eafily be known, from the demand there will be for land, and raifing the rents in confequence thereof, 'till the prices of neceflaries become fo dear, that the wages of the labouring people will not purchafe what is needful for the fupport of their families; and there be no more land left to cultivate, and remove this mifchief, which will fall more or.lefs on every occupation, in proportion as the poor become thereby poorer and more and more diftreffed.
In this cafe, there is no relief but tranfporting the people wher they can have land enough for them.
Sccondly, It is of little or no confequence to the trade of any nation, whether the people fpend near or all their gains, provided they do not fpend more than they really gain, for this difables them to make good their contracts; or whether they are generally frugal, and lay up confiderably. For the trade of a nation doth very little depend on thefe things, but entirely on employing the people in cultivation of land in general, in proportion to the other employments of mankind; that the neceffaries of life, which all ultimately work for, may be fo plentiful, that the meaneft of the people may eafily attain a fufficiency of them, for plenty of thefe comprehends all human felicity.
Remarks on the whole of this article of Manuring and Cultivating additional quantities of Land.
Reducing the prefent Rates of Labour appears fo abrolutely neceflary to increafe our foreign and domeftic trade, that we have endeavoured to hew, as well under this head, as others fynonimous and correfpondent therewith, how this very important and interefting matter may be effected, to the great advantage of every clais of people within the community; and the way that has been propored at prefent, 'rill taxes upon our native commodities can be greatly leffened, or abrolutely annibilated, is, perhaps, the only one whereby to procure lo great a bleffing: and this method will caule multitudes of the Britifh fubjects to become the poffeffors of property, who otherwife will never have a fhilling to fpare. What we have urged, upon this occafion, we fhall endeavour to corroborate in the fequel, where any natural opportunity fhall offer: for, as the principles of trade in general, whereon we have endeavoured to proceed, feem to be founded in the eternal and immutable nature of things, and the conftitution of the world itfelf; fo we are inclined to think that they are capable of frict demonftration, let them be viewed in whatever national light they can.-As certain branches of trade, indeed, may, in the procefs of time vary, either by increating or otherwife, or thifting their channel, or by any great alteration in the ftate of public affairs, \&c. in fuch cafes, perhaps, it may be neceflary to deviate occafionally from fome of thofe maxims which prevail throughout this work.This will ever be the fate of what is mutable; but the neceflity of any temporary variation, in the application of our general principles, will fcarce be thought an argument of their imperfection and invalidity.
MAP, a plain figure, reprefenting the furface of the earth, or a part thereof, according to the rules of perfpective*.

* Perfpective is the art of delineacing vifible objects on a plain farface, luch as they appear at a given diftance or height, upon a tranfparent plane, placed perpendicularly to the upon a tranfparent plane, placed perpe
borizon between the eye and the object.

## M A P

Though nothing can reprefent the heavens or the earth in their natural appearances fo exactly as a globe, yet the two hemifpheres, either of the heavens or of the earth, may be reprefented upon a plain fuperfices, which are generally called projections of the fphere *.

* Projection of the fphere in plano, is a reprefentation of the feveral points or places of the furface of the fphere, and of the circles defcribed chereon, or of any affigned parts thereof, fuch as they appear to the eye fruate at a given diftance, upon a tranfparent plane placed between the eye and the fphere.
The moft ufual projection of maps of the world is that on the plane of the meridian, which exhibits a right fphere, the firt meridian being the horizon: the next is that on the plane of the equator, wherein the pole is in the center, and the meridians the radii of the circle.-This reprefents a parallel fphere.

If you fuppofe a globe to be cut in halves juft at the equator, and each hermiphere reprefented on a plane, it is called a projection of the globe upon the plane of the equator. Then the equinoctial line will be the circumference, and the two poles of the world will be the centers of thofe two projections, and all the meridian lines will be fo many ftraight lines, or fermidiameters, meeting in the center. This is the moft common method of reprefenting the celeftial globe and the ftars. If the globe be cut alunder at the horizon of any particular place, and thus reprefented on a plane, it is called the projection on the plane of the horizon: then the zenith and nadir will be the centers of thofe projections, and the horizon is the circumference : the two poles will be placed at fuch a diftance from the circumference, as the pole of the world is elevated above the horizon of that place; and the meridian will be reprefented as curve lines, meeting in the pole-point, excepting only that meridian that paffes through the zenith, which is always a right line. This is a more uncommon projection of the fphere, tho' it is much ufed in dialling.
The moft ufual way of defcribing the earthly globe on a plane, or a map, is to cuppofe the globe cut in halves about the firft meridian, at the ifland Faro, or Teneriff: this is a projection on the plane of the meridian; then the firf meridian will determine the circumference: the pole-point will ftand in the upper and lower parts of that circle, and the other meridians will be curve lines, meeting in the pole-points, except that which paffes through the center of the projection, which is a right line.
Here the equator will be a fraight line, or diameter, croffing all the meridians at right angles, and at equal diftances from the two poles.
Here the two tropics of Cancer and Capricorn are drawn at their proper diftances, of $23^{\frac{x}{2}}$ degrees from the equator; and the two polar circles are at the fame diftance from the poles. In this projection the ecliptic is fometimes a ftraight line, cutting the middle of the equator obliquely in each hemifphere, and ending where the two tropics meet the meridian: but fometimes the ecliptic is drawn as a curve line, or an arch, beginning where the equator meets the meridian, and carried upwad juft to touch the tropic of Cancer in one hemilphere, and downward to touch the tropic of Capricon in the other. It is in this form the maps of the world are generally drawn, in two large hemifpheres.
Note here, that it is impoffible to reprefent a fpherical body exactly in it's'due proportion upon a plane; and, therefore, the artificial meridians, or lines of longitude, parallels of latitude, \&c. are placed at fuch different diftances, by certain rules of art, and the degrees, marked on them, are often un equal, but fo drawn as may moft commodioully reprefent the fituation of the feveral parts of the earth with regard to one another.
The meridian, or circumference of thefe circles, is divided into four quarters, and each marked with go degrees, beginning from the equator, and proceeding towards the poles. Thefe figures, or numbers, fhew the latitude of every place in the earth, or it's diftance from the equator; and, at every Io degrees, there is a parallel of latitude drawn on purpofe to guide and direct the eye in feeking the latitude of any place.
The equator of each hemifphere is divided into 180 parts, which makes 360 in the whole; and the feveral meridians, or lines of longitude, cutting the equator at every 10 degrees, direct the eye to find the longitude of any place required.
A's the equator, the feveral lines of longitude, of latitude, \&c. cannot be reprefented on a plane exactly as they are on a globe, fo neither can the feveral parts of the world, kingdoms, provinces, iflands, and feas, be reprefented in a map exactly in the fame proportion as they ftand on a glabe; but, as the divifions of degrees in a map are bigger or lefs, fo the parts of the land and fea are reprefented there bigger or lefs, parts of the land and fea are repreiented there bigger or leis, titude amongtt which they are placed.
Therefore, though the length, breadth, or diftance of places on a map of the world, cannot be meafured by a pair of compafes, as they may be on a globe, yet you may count the
number of degrees to which fuch Jengths, breadths, or diftances correfpond, and thereby you may compure their real dimenfions, though not always fo well as on a globe.
Thus much fhall fuffice concerning maps that reprefent the whole world, or the globe of eatth and water. Let us next confider thofe maps which reprefent particular parts of the world, kingdoms or provinces: thefe are generally drawn in a large fquare, and are to be confidered as parts of a projection on the plane of the meridian.
From the top to or toward the bottom of the fquare are drawn meridans or lines of longitude; and the number of degrees of longitude are divided, and marked on the upper and undermoft line of the fquare.
From fide to fide are drawn parallels of latitude, and the degrees of latitude are marked on the two fide lines.
Thus you may eafily fiñd on a map what is the longitude or latitude of any place given, or you may find the point where any town ftands, or fhould fland, when the true longitude and latitude of it are given.
Note, In fuch maps of particular countries the longitude is not always reckoned from the firt meridian, as Faro, or Teneriff, but of entimes it is reckoned from the chief city of that kingdom which is defcribed in the map.
Obferve farther, that, though in globes and maps of the whole world the longitude is reckoned from the weft toward the eaft, yet, in fmaller maps; it is often reckoned both ways, as Briftol is $2^{\frac{1}{2}}$ degrees of weftern longitude from London, Amfterdam has near five degrees of eaftern longitude.
Note alfo, that, when a fmall country is reprefented in a large map, the lines of longitude and parallels of latitude are drawn not merely at every 10 degrees, as in the globe, but fometimes at every five degrees, and fometimes at every fingle degree.
Lee it be obferved, alfo, in large maps, that defcribe any particular country or province, as a fingle or double crooked waving line fignifies a river, when it is made ftrong and black; fo a public road is defcribed by a fingle or a double liae, drawn from town to town, not quite fo curled nor fo ftrong as a river is, but ftraight or winding, as the road iffelf happens: and, where the roads lie through a broad plain, or great common, without houfes or hedges, they are fornetimes defcribed by a double row of points.
As villages and fmaller towns are deferibed by a little circle, or fmall round o, in maps of larger countries, where the cities are reprefented by the figure of a houfe or two, with a fpire or fteeple: fo, in maps of fmaller countries or provinces, the little towns and villages are defcribed by the figure of a houfe or two, and great towns or cities are marked like feveral buildings put together, in profpect, or elfe the naked plan of thofe very towns or cities is drawn there, and diftinguified according to their ftreets.
As maps are drawn to defcribe particular countries by land, fo a defcription of coafts or hores, and of the feas, for the ufe of mariners, is called a fea-chart; and it differs from a map chiefly in there particulars:
I. A map of the land is full of names and marks, defcribing all the towns, countries, rivers, mountains, \&c. but, in a fea-chart, there are'feldom many parts of the land marked or deferibed, befides the coafts or thores and the fea-ports, the towns or cities that border upon the fea, and the mouths of rivers.
II. In a map the fea is left as an empty face, except where the lines of longitude and latitude, \&c. are placed: but, in fea charts, all the fhoals or fand, and fhallow waters, are marked exactly according to their fhape, as they have been found to lie in the fea, by founding the depth in every part of them.
III. In fea-charts, the meridians are often drawn in ftraight and parallel lines, and the lines of latitude are allo ftraight parallels, croffing the meridians at right angles. This is called Mercator's projection; and the points of the compafs are frequently repeated and extended through the whole chart, in a multitude of croffing lines, that wherefoever the mariner is upon the fea, he may know toward what point of the compafs he muft fteer, or direct his veffel, to carry it toward any particular port; and that we may be able to fee, with one caft of an eye, the various bearings of any port, coaft, inland, cape, \&c. toward each other.
IV. The fea is alfo filled, in fea-charts, with various numbers or figures, which denote the depth of water, and fhew how many fathom deep the fea is in thofe places where the number flands: thefe are called foundings.
$V$. In fea-charts there is not fuch care taken to place the north parts of the worid always directly upright and before the face of the reader; but the coafts and countries are ufually defcribed in fuch a pofition as may afford the fitteft room to bring in the greateft variety of thores and feas within the compals of the fame chart, whether the eaft, weft, or north, be placed directly before the reader.
Maps are laid down and proportioned to a certain fcale, which is always taken from the degrees of latitude.
The degrees of latitude are always marked on the eaft and weft fides of the map.

The degrees of longitude are always marked on the north and fouth fides of the map.
A degree of latitude is always of the fame breadth: wherefore the diftance of two places feated disectly north and fouth, is immedately known by knowing the different latitudes; but a degree of longitude is of different extent, for this is the diftance of a place from the firft, or fome other meridian.
When Prolemy invented the way of diftinguifhing the fituation of places, he did it by parallel and meridian lines; the latter paffing round the globe through the equator and poles, and the former lying parallel to the equator; which parallel lines were found very convenient for marking the latitude into degrees and minutes. Then, for longitude, he fixed upon Teneriff, one of the Canary IMands, as the moft weftern part of the then known world; which, having a very high moun$t$ ain, was a good mark for mariners, and the fitteft place from whence to begin a general computation.
Accordingly, all the old maps begin their eaft longitude from Teneriff; and, becaufe then only one fide of the globe was known, the degrees were only 180 ; but, fince the difcovery of America, they are carried quite round to 360 . This method was always efteemed, and Teneriff reckoned a good ftandard meridian, 'till the French, who like nothing which they themfelves do not invent, thought proper to alter it, and make the ifland of Faro their new meridian, which, by late obfervation, lies juft two degrees more weft : wherefore, to prevent confufion, our modern geographers and delineators of maps make the metropolis of their own nation the firt real meridian: and, in this cafe, longitude is two-fold, being, from London, either weft or eaft, as at fea it is computed from fome known port or head-land. The longitude of any place from London being known, the difference in the hour of the day is alfo known: for, as the fun performs his diurnal circuit in 24 hours, he gains in each hour 15 degrees, being a 24th part of 360 , or one degree in four minutes; fo that, at any place 15 degrees eaft of us, noon is an hour fooner with them, as it is an hour later with thofe who live 15 degrees weft from us.
If a clock, or any time-piece, could be fo made as to go equal and true, ac any feafon or diftance, the theory of longitude at fea would be no longer a myftery: but, as that is impracticable, our modern aftronomers have contented themfelves with obferving the folar and lunar eclipfes; for, if their appearances and calculations are exactly known with us, and the fame appearances are obferved in any other part of this globe, the difference arifing from thofe times will fettle the difference in longitude, by the foregoing rule. See LongiTuDe. The eclipfes allo of Jupiter's moons, and the fpheroidal figure of the earth, two important difcoveries of the feventeenth century, will each, in their turn, lead us farther on a true fyftem of longitude.
Laftly, though all degrees of latitude are equal in length, yet degrees of longitude vary in every new parallel of latitude: for, all the meridian lines meeting and interfecting each other at the poles, the degrees of longitude do naturally diminifh, as they proceed either way from the equator.
The latitude and longitude of a place being known, you may find it immediately in the map, by drawing a line or thread crois the map both ways, and, where the two lines.cut one another, the place ftands.
The earth being a globe, a map of the whole earth moft neceffarily confilts of two parts, both fides of the globe not being vifible at once. Accordingly, in an univerfal map, the right-hand circle fhews the old world, or Europe, Afra, and Atrica; and the left-hand circle thews the new world, or America.
Upon the general map are marked the circles correfpondent to thofe in the fphere, namely, the equinoctial line, the two tropics, and the two polar circles, all which crofs the map from eaft to weft; and the firft meridian furrounding the two hemifpheres from north to fouth, the parallels lying from north to fouth, at 10 degrees diftance; and the meridians, at the fame diftance from weft to eatt, are alfo marked upon general maps. Particular maps, being part of this, retain the meridians and parallels belonging to that particular part, which are made fmaller or larger, as the paper on which it is drawn will admit; and the diftance of place's mentioned in it are always exactly proportioned to the breadth of the parallels: fo that, Iet a map be ever fo fmall, the diftance of places is exactly fhewn, if meafured actording to the degrees of latitude in that particular map.

## Remarks relative to the perfidious Desicn of

 France in their Map-making.The utility of maps and charts is fo well known, that it $i^{s}$ needlefs to fay any thing concerning them, in relation to that point: but they have their abufe, as well as ufe, more efpecially the former, viz. maps; and this has been practifed with no little artifice and effrontery, in order to deceive the whole world, if fuch a thing was poffible: for certain it is, that forme foreign map-makers have taken unaccountable liberties in parcelling out the globe of the world at their pleafure. in parcelling out the globe of the world at their pleafure.
Whether this may be looked upon as their own Sic volo, fic VaL. II.
jubeo, or that of fome body elfe behind the curtain, with a view to anfwer fome purpofes not fo honeft and laudable as could be wiher, we thall not take upon ourfelves to determine: yet we think it incumbent on us to take fome notice of a matter of this nature, that the Englifh reader may be fo put on his guard as not to receive French coin for fterling.
Whoever is acquainted with the hiftory of our Britifh colonies and plantations, and the caufe and foundation of thofe firft royal grants and charters given by the crown of Great-Britain to it's fubjects, for railing there colonies and plantations, muft be fenfible, that fome neighbouring nations have attempted to make unwarrantable and fhameful incroachments upon the Britifh righss of trade and poffeffions in the American world, as well as tliewhere: and thofe rights are not only ufurped by their map-makers by dint of feale and compals, but are affumed and juftified in many refpects ellewhere; which always has, and ever will tend to deftroy the public tranquillity, 'till thofe points are impartially and honourably fettled and adjufted between the interefted potentates.
We are forry to be under the difagreeable neceffity of faying this, in regard to any nation, the end of our labours being to promote peace and good harmony with all, and to be as little inftrumental in ftirring up broils between one foreign country inftrumental in firring up broils between one foreign country
and another, was it in our power, as between our own and others. But nothing can be fo effectually prefervative of general peace and tranquillity among all nations, as the juft eclairciffement of their refpective rights of commerce and polfelfions; for, if thefe are left unafcertained, it will always give a handle for animofities.
That our readers may judge how far our Britifh rights of commerce and poffeffion remain as yet undetermined, we refer them to the following articles, viz. British America, Canada, California, Florida, Luuisiana. And bow far a certain foreign map maker has attempted to invade the Britifh rights, by the means of pen, ink, and paper, we alfo refer the reader to our Maps of Norith America, placed at the end of our Firft Volume, where he will find the following rectification of the French map by Monfieur D'Anville, viz.
That Monf. D'Anville has very partially included within the bounds of French Canada, to the fouth and eaft of the lake Ontario, the country poffeffed by the five Indian nations, named by the French the Iroquois: whereas they are the allies, and under the protection of the crown of Great-Britain by treaty*: fo that, in right of them, the Englifh have a claim, not only to all the lands fouth of the river St . Lawrence claim, not only to all the lands fouth of the river St. Lawrence
(including the French fettlements about the Champlain, and other lakes) which were the original property of thofe Indians and their dependents, but alfo all the lands in and about the five great lakes, viz. lake Ontario, Erie, the Hurons, Michigan, and the Upper Lake, which the Five Nations have fubdued, or made tributary.

* According to the treaty of Utrecht it is fipulated,-Galliz fubditi Canadam incolentes, aliique, quinque nationes (a), five cantones Indorum, Magne Britannix imperio fubjectas, five cantones Indorum, Magnæ Britannix imperio fabje.tas,
ut \& cxteros America indigenas eidem amicitiá conjur.Etos, ut \& cxterosterum impedimento aut moleftiâ a afficiant, \&c. That is to fay, the fubjects of France inhabiting Canada, and others, fhall hereafter give no hindrance or moleftation to the five nations, or cantons of Indians, fubjects to the
dominion of Great-Britain, nor to the other natives, of America, who are friends to the fame, \&c.
(a) The five original confederate Indian nations are the $\mathrm{S}_{\mathrm{xN}} \mathrm{EKAs}$, CAYNGAS, ONONDGGAS, OnEEDas, and Mohocks ; the TuscArzose, Miss Angos, and other tribes, and fince incorporated
with them. Therefore, as all the land fouth of St. Lawrence's $R$ iver is the original property of the Five Nations, with their allies and tributaries, the French can have no fladow, of pretence to any part of this country; and their feetlement about ChampLAIN LAKE is mere depredation, contrary to the Britilh title, which is derived from agreement and purchafe.
The limits of New Scotland, or Acadia, by the fame treaty, are St. Lawrence's River on the north, Penobfcut River on the weft, and St. Lawrence's Gulph on the eaft : therefore the boundary line drawn by Monf. D'Anville in his map, crof's thefe provinces, from lake Ontario to the Isthmus at the bottom of Fundy Bay, is an Arbitrary Fiction, falfe and unjuft, and feems to be done for our Britifh mapmakers to copy, and mifguide the whole nation, if poffible; for which reafon we have ftruck it out, having juft authority fo to do, and have put the whole word Canada on the weft fide of St. Lawrence's River.
The line that parts French Canada from Britith Canada was fertled by commiffaries after the peace of Utrecht, making a curve from Davis's Inlet, in the Allantic Sea, down to the 49 th degree, through the lake Abitibis to the North-weft Ocean: wherefore Monf. D'Anville's dotted line eaft of James's Bay is likewife falfe.
The French map-makers having alfo exciled near one half of our fettlements, by drawing a pretended line from St. Lawrence's River down to Georgia, we think it our duty to inform the public that the fame is a romantic prefumption, void of alf authority; for, by public Indian treaties, our right is far beyond the great lakes, and fouth-weft to the Chickafas

R r
atuon,

## M A P

nation, by the branches of the Miffifippi: and, fince many of the Indian people among the faid lakes are united with the Iroquois Indians near New York, either by covenant or conqueft, it is an idle vanity to fuppofe a dotted line in a French map will exclude the Englifh from all thofe nations, where their trade and dominions fo vifibly extend.
In this refpect, alfo, we have in our maps endeavoured to renore the Englifh fettlements to part of their juft pretenfions: and, indeed, by the grants of our kings we might, perhaps, have carried our preteofions quite through Louifiana, welt ward to the South Sea, without being guilty of incroaching on the juft rights of the French, as the French map-makers have been of incroaching on ours.
By feveral treaties made and renewed with the Cherakees, the Chikasas, the Nautches, and the other Creek Nations, the fubjects of his Britannic Majesty have a right of poffeffion at leaft from Lake Erie to the ChikaSAS, at the river Miffiffipi: whereas, in many of thole parts, the French have no other title but that of intrufion and force. Their map-makers, therefore, are advifed to put their Louisiana farther weft, as is partly rectified in our firft map of North America, for no part of the Apalachy Mountains is any fixed boundary to the British Empire in America.
Thefe inftances, with a great many others we could give, which relate as well to other countries as our own, point out, perhaps, the true reafon and motive why the French have long endeavoured to engrofs the care of geography to themfelves; and it muft be confeffed, by the meafures taken by them, they have brought it to greater perfection than any nation in Europe. This is owing to the proper encourage. ment which it's profeffors meet with in France, who were never fo numerous as at prefent.
Our neighbours appear to be particularly zealous for the advancement of geography, in order, it may be, to extend their commerce and dominions firft upon paper, to pave the way to do it hereafter in reality; for, by their map-makers throwing out their incroachments and depredations in this feemingly harmlefs and inoffenfive way firft, they fo feel the pulfe of other nations, that they can pafs a good judgment what lengths they may prefume to go in any important $\mathrm{n}-\mathrm{n}$; and may, with a better grace, authenticate their pretenfions, by producing to our commiffaries their own infallible maps.
There is an office in the French marine, for depofiting charts and plans, to be made ure of for the benefit of navigation : a regulation proper to be eftablifhed in every maritime trading nation*。

* Monf. Bellin on this occafion obferves, in the preface to his Collection of Memoirs, 'That it is difficult to correct 6. the charts effectually, foce itrequires extraordinary helps, - out of the power of a private man to procure, and which - thofe only who are at the head of aftairs are able to pro-- vide. There is no poffibility of collecting all the mate-- rials neceffary for fuch a defign, but by eftablifhing an < office for the purpole, like that of charts, plans, and - journals, belonging to the marine of France.' Pland will journals, belonging to the marine of France. - And will not the fame hold good in relation to maps? And would
not fuch an inftitution as this, both with regard to charts not fuch an inflitution as this, both with regard to charts
and maps, and the journals of all curious navigators, well and maps, and the journals of all curious navigators, well
become the wifdom of the Britifh nation? Certain it is that the great difagreement which is apparent between charts and maps, renders fomething of this kind abfolutely neceffary. Thofe maps publifhed by Monf. D'Anville, and which we have tranllated into Englifh for this work, and greatly corrected and improved, erpecially in regard to the fecurity of our Britifh rights of trade and poffefions, coft the duke of Orleans, by whofe order they were undertaken, feveral thoufand pounds fterling: and whether our maps, engraved by thofe great artifts Mr. Emanuel Bowen, geographer royal to his Britannic majelty, Mr. Kitchen, and Mr. Seale, are not executed with refpect to he engraving parts full as well as the French, and better than any before done'in England, is fubmitted to the public. But thefe are not the only fpecimens we have of the great abilities of thofe Englifh artifts in the art of engraving: their general maps of England and Wales, together with their particular maps of the counties, printed on faperfine atlas paper, and fold by J. Tinney, at the Golden Lion in Fleet-flreet, London, demonftrate that they are inferior to no artifts in their way, in the whole world. And, 'till thefe gentlemen did exert themfelves, it cannot be denied but the French greatly excelled us in this particular; but, fince we have fuch celebrated artifts of our own, it is to be hoped they will receive all encouragement from the public, that their merits entitle them to. Maps are not only of important ufe to the nation, by afferting our rights of commerce and poftefion to the face of the whole world; but, by being a general manufacture, will now be acceptable in all foreign nations, fince, at length, we have the honour of being inferior to no country whatever in this particular. I am very forry to lay, but it is matter of fact, that not only our map-makers and map engravers, but our engravers in general, have long laboured under great difficulties and difcouragements, There is one thing I would crave leave to mention at prefent; that, as a neighbouring nation gives fuch remarkable encouragement for the ad.

## M A R

vancement of geography, it is very flange the royal geo, grapher of Great Britain hould enjoy oniy tire title wittout a falary. Certain I am, if this matter was properly re. prefented to his moft gracious majeity, fo fuperlatively good and benevolent is our beloved fovereign, that he would as chearfully grant his geographer a ftipend as a tille.

The count de Maurepas, being at the head of the marine, about the year 1737, to remove the complaints which at that juncture lay againt the French charts, and provide an accurate fett for the ufe of the king's thips, ordered Mr. Bellin ta undertake the tafk, and publifh by degrees a fett of new charts, for all paits of the ocean: which talk he bas at length in a great meafure performed.
Another inftance we have of the care of this nation to excel in their charts, is that of Le Neptune Oriental, ou Routier Général de Côtes des Indes Orientales, $\&$ de la Chine, par Monf. Mannevillette, publifhed in the year 1745, and dedicated to Monfeigneur Orry de Fulvy, counfellor of ftate, in tendant of the finances, and royal commiffary to the EaftIndia company.
The ingenious and elaborate author tells his patron in the dedication, ' That 'till naw, my lord, fays he, our naviga-- tion to the Eaft-Indies hath depended on foreigners. Guided 6 only by the Englifh and Dutch charts, we learnt, as it were, only from thofe two nations, the way to conduct our ' felves at our firft eftablifhment. Upon their inftructions ' the good or ill fuccefs of our voyages depended. At the 6 beginning of our navigation into theie feas, it was neceffary - to make ufe of their helps, they having more frequented 6 thofe feas than we. But, fince our own experience has - procured us more certain knowledge to be relied on, we ' have difcovered their charts to be very erroneous; they are * no longer ufeful to navigators, than to reunite in one body 6 all the difcoveries fucceffively made, and therefrom to com' pofe charts more correct.'

Essential Remarks on Maps, fince the laft war, and the Definitive Treaty of 1763.

The furegoing remarks, we think proper to let remain, that pofterity may know in what a precarious and unfetted ftate our poffeffions were in North America, before the Definitive. Treaty afcertained their boundaries; which are now fo clear and explicit as to admit of no future difputes, either between Great-Britain and France, or the former and Spain, with relation to the colonies upon the American continents. See America, for the Definitive Treaty at large, British America, French America, Canada, Louisiana, and fuch other articles we from them refer to. MARBLE is a kind of beautiful fone, dug out of quarries, in large maffes; and is of fo compact a texture, as to take a delicate polifh: it is greatly ufed by way of ormament in columns, ftatuary, tombs, altar-pieces, chimney-pieces, flabs, tables, \&c.
There arc great varieties of marble, which are denominated from their colour, their country, their grain, their degree of compactnefs and hardnefs, their weight, \&xc. Some are of one colour, as white or black, others variegated with ftains, clouds, and veins, \&c. They are all opake, excepting the white, which, when cut thin, is fomething tranfparent. It is both endlefs and ufelefs to defcribe the infinite different varieties; it is fufficient to obferve, that thofe which are of the firmeft texture, and greateft gravity, and take the fineft polifh, appear the moft beautiful to the eye, and are the moft eftimable for every kind of ornament.
MARCASITE, a fulphureous metallic mineral.
As it is generally found among the metallic ores, it is always impregnated with the qualities of them, and of other foffils, whence they aflume various colours, and degrees of cohefion. There are only three diftinct fpecies of it in the fhops, viz. marcafite of gold, filver, and copper; the one of a bright filver colour, the other of a bright gold colour, and the third filver colour, the
The filver-coloured is a very beautiful body, of compact texture, though fomewhat irregular, and very ponderous. It is found conftituting whole ftrata of great extent, thowgh not of great thicknefs; fometimes, like many other bodies naturaty confifting of itrata, it is found in irregular and broken mafles. It is, when broken, of an uneven furface, and made up of multitudes of irregularly fhaped flaky bodies, of various fizes, wrapping round one another.
It very freely and readily gives fire with fteel, and makes no effervefcence with aqua fortis.- When put into the fire, it cracks and burfts, yielding a blue flame with a fulphureous fmell : it burns thus for a confiderable time, and calcines to a frong deep red.
This is it's ufual appearance, but it is liable to great varieties; fometimes it contains a lead ore, fometimes of tin, and often a ferrugineous matter.
It is found in abundance in the lead and tin mines of feveral parts of England, and is no lefs common in other countries; our counties of Devonfhire, Derbythire, and Cornwall, have large quantities of it.

The golden-coloured marcafite is rather-more beautiful and The golden-coloured marcafite is ing than the former. It is of lefs compact texture than any other marcafite. It is confiderably heavy, and ufually found in long but thin Arata, fometimes in large and miffhapen modules. In fome parts the texture is, as in the other marcafites, more lax and open than in others; and it is to this irregularly foliaceous ftructure, that all their other varieties are owing. 'It is naturally of a fine ftrong gold yellow, but varies at times into a paler or redder hue, and, like the others, fometimes exhibit the rainbow colours in reflection.
It gives fire pretty readily with fteel, but much lefs freely than the filver fpecies. It makes no effervefcence with aqua fortis, and, when put into the fire, it feldom burfts, but is gradually covered with a pale blue flame, which burns lefs time than that of the former, and calcines to a deep purple.
The other fort is a fpecies of lefs beauty than the preceding kinds in it's ordinary ftate; it is a very folid fubftance, of a compact and firm texture, and is confiderably heavier than any of the other. It is extremely hard, and requires a ftrong blow to break it: and is of a pale and dead white, like the colour of tarninhed pewter, and fomewhat bright, but much lefs fo than the other kinds: when broken, it appears at a flight view an uniform mafs, but, when more ftrictly examined, is found compofed of irregular flakes like the other kinds; but thefe are more clofely laid together than in any other fpecies, and differ from all the reft, in that, when ftrictly examined, they are found to be of an obfcurely ftriated texture.
It freely and readily frikes fire with fteel, and gives larger and brighter fparks than any other body of this fort.
It makes no effervefcence with acids, and burfts in the fire, barning violently with a deep blue flame of a ftrong fulphureous ficent.
It is liable to all the varieties of the firft kind, but has them much more rarely; it is common in Devonihire, Cornwall, and many other counties, and lies at all depths, fometimes in regular ftrata, fometimes filling up the horizontal cavities of thofe of coal, or different ftones.

## REMARKs.

By marcafites, metallurgifts generally underftand all thofe mineral, earthy, and fulphureous matters, that are otherwife called pyrites, fire-ftones, brafs lumps, mundics, or the like. For, though thefe may be diftinguifhed in refpect of leffer differences, yet in general they are all a compofition of fulphur, uninflammable earth, and a fmall proportion of metal.

## A fhort analyfis of marcafites.

Take half a pound thereof reduced into powder, and put it into an earthen retort; which being placed in a naked fire, fit on a capacious glafs receiver, and lute the junctures well with a mixture of loam and horfe-dung, then give degrees of fire up to the ffrongeft: let all cool, and take off; you will find at the bottom of the receiver a fmall proportion of acid liquor, like the fpirit of fulphur made by the bell, and a confiderable quantity of flowers of fulphur fublimed to the top.
The caput mortuum being taken out, and fluxed with about half it's weights of iron filings, will afford generally a fmall lump of a reguline metallic fubftance.
Hence we fee, that marcafites chiefly refolve into fulphur, and a more fixed earthy part; which, being treated as an ore, yields a proportion of metal. And hence, perhaps, all the pyrites, brafs lumps, mundics, and marcafites, are but cruder kinds of ore, and, if brought to maturity, they would have proved real ores.
Marcafites, upon lying long in the open air, attract it's humidity, and thence grow hot, in fome meafure diffolve, form, an effervefcence on their furface, and gradually turn into a vitriol, of the fame kind with the metal they contain. Thus, if that metal were iron, the vitriol becomes green or martial; if copper, blue or cupereous. On this is founded the artificial method of making vitriol, now practifed in feveral parts of England. See Vitrior.
From the heating, fuming, and firing of thefe fulphureous earths, by the moifture of the air, we may, perhaps, learn the origin of hot baths, mineral waters, damps, and fires in mines. For it is found, that a pile of thefe fulphureous earths, being barely moiftened, will at firft fmoke, and at length take fire, and burn like glowing coals.
Thefe experiments likewife thew us a way of examining thefe marcafites (which have been taken frequently for rich ores, both in England and elfewhere) and of extracting the metal they may hold, after having firft feparated their fulphur. Many fkilful metallifts have been impofed upon by a fpecious thew of thefe marcafites, for they ufually have a great fpecific gravity, and fome of them a greater than real ,ores: whence again they may poffibly contain the matter of metals, though in a crude, imperfect, or unfixed fate. But to bring this matter to the teft, to try the validity thereof, requires a more than ordinary knowledge in metallurgy. See Metallurgy.

## MARINERS.

## Of mariners and feamen.

A mariner, or feaman, is under the command of the mate: of a thip, that is hired to work therein, and do all common bufinefs for the failing and prefervation of the fhip. The fhip's crew are called mariners, and owe obedience to the mafter, who hath the fupreme rule on Chipboard, and therefore his authority is much countenanced by law.
If a mariner rebels or commits a fault, and the mafter lifts up the towel three times before him and he do not fubmit, the mafter at the next place of land may difcharge him: and, if he refufes to go alhore, he fhall lofe half his wages, and all his goods in the thip; but, if the mariner fubmits, he is to receive his whole wages.
A mafter of a hip may juftify the giving moderate and due correction to his men: but, if a mariner affaules the mater on hipboard, he fhall pay five fols, or lofe his hand; yet it is faid he may after one ftroke defend himfelf. Leg. Oleron. c. 14. By the ancient Rhodian laws, the mafters, mariners, \&c. that fail together, were to take an oath of fidelity, or mutual engagement. Sea Laws 83 .
Mariners are not to depart from on thipboard when they are in full pay (which is always when they break ground) without the mafter's licence for fo doing; nor may they in any cafe quit the thip, without leaving a fufficient number to guard her: they-muft affif one another both at fea and in port, or upon the oath of their fellows of any refufal fhall lofe their wages: if mariners in a ftrange port leave their fhip, not having the licence of the mafter, or without faftening her with four ropes, the lofs, if any happen, falls upon them; they are alfo to attend the fhip until the be difcharged, and ballafted anew; and, if any mariner, during the time of her difcharge or lading, labours not with the refl of the mariners but ablents. himfelf, he fhall pay a fine to the others pro rata: and the mariners are not only to difcharge and deliver goods out of the fhip, but likewife, if no porters or carriers be in thofe parts, they muft carry the fame themfelves for fuch hire as other workmen fhould have had for it. Lex Mercat. Malinés, 104, 105.
In a ftrange country, the one half of the feaman, at leaft, ought to remain on Chipboard; and thofe who go alhore, are to keep fobriety and abftain from fufpected places, and not be abfent on pain of being punifhed, like unto him who abfents, when the fhip is ready to fail. If it happens otherwife than well with the mafter, the mariners are obliged to bring the Thip to the port from whence The was freighted, without any delay, except it be otherwife provided: and a mariner thall forfeit his wages, if the thip break in any part, and he doth not help with all his diligence to fave the goods on board. Ibid.
Where a mariner is hired, and he deferts the fervice before the voyage is ended, by the law marine and the common law, he fhall lofe his wages: and it has been adjudged, that if the thip do not return, but perifhes at fea, either by tempeft, enemies, fire, \&c. the mariners fhall not have their wages; for, if they were allowed to have wages in thefe cafes, it is prefumed their beft endeavours would be wanting to preferve the fhip; and the mariners thall lofe their wages, as well as the owners their freight. If the Thip unlade any part of the cargo, the mariners thall have their wages; but, if after they have unladen the veffel at any port abroad, they demand the fame, with an intention of leaving the fhip, the mafter may detain a reafonable proportion thereof as his fecurity, 'till they have brought back the fbip. Leg. Oleron. c. 18. I Siderf. Rep. 179. I Keb. 830.

It was held by Holt chicf juftice, That, if a thip is loft before the arrives at any port of delivery, the feamen lofe all their wages; if the be loft after the comes to a port of delivery, then they only lofe their wages from the laft port of delivery; but in cafe they run away, though after they come to any port of delivery, they lofe all their wages. Hil. 13 Will. III. 3 Salk. Rep. 23 .
A mariner being hired for a fimple mariner, if afterwards in the voyage he finds hiring to be a pilot, or other officer of a fhip, by the law marine he may pafs over, reftoring his former hire, and fo it is, if he marry abroad: but if a mariner fhall depart the 'fhip, at the mafter's command, and the mafter do not take another, if any damage happens to the thip or goods, the mafter muft anfwer. Mariners may not carry out of the flip any drink, nor above one meal of meat; and, if they embezzle the goods on board, 8c. they are accountable to the maiter, the matter to the owners, and the owners to the merchant or freighter. Though in cafe of a ftorm, if goods are caft overboard for lightening the fhip, the mariners, making oath that it was done for preferving the veffel, thall difcharge the mafter; fo if goods or merchandize in fuch cafe receive damage at fea, by the oath of the mafter and mariners they may be cleared. Leg. Oleron. c. 7, 14 .

If a mariner fhall commit any fault, by reafon of which the mafter, owners, or the fhip, anfwers damage to the merchant, an action will lie againft him. But, when a mariner is on Chipboard, he ought not to be arrefted by any one
for debt, nor to be taken away from thence, for the fhip is compared to a man's dwelling-hou'e, which is as his caftle, and a fure refuge by law; unlefs it be for a fworn debt, or penalty to the king, \&c. the wages and goods of fuch mariners thall in thefe cales be liable; and, if a mariner takes up money or buys clothes on credit, and the fame is entered in the purfer's books, this will enritle a difcount of fo much of his wages, as the fame amounts unto. Moll. 212. Lex Mercat. of Malines, 105.
In cafe a fhip happens to be feized for debt, or otherwife become forfcited, the mariners thall receive their wages, except, through any act of theirs, there be a forfciture of all; if the thip be laden with prohibited goods, as wool, and the like, though it fubjects the veffel to forfeiture, yet it deprives not the mariners of their hire, who have faithfully performed their parts, and for which the fhip is obliged. Trin. 7 Jac . B. R. A mariner may either keep his portage or allowance of goods in his hands, or let the fame out to freight, by the Jaws of Oleran. Lex Mercat. of Malines, 104.
The act 2 Geo. II. c. 36, for better regulations of feamen in merchants fervice, has ordained, That no mafter or commander of any thip or veffel thall carry any feaman or mariner, except his apprentices, to fea, without firf coming to an agreement or contract for their wages; which agreement fhall be in writing, figned by the mafter and mariners, on pain of forfeiting 51 . to the ufe of Greenwich-hofpital, to be recovered by information, upon the oach of one or more witneffes, before a juftice of peace, \&c.
And, if any feaman or mariner fhall defert, or refufe to proceed in the voyage on board any veffel, after he has figned fuch contract, he fhall forfeit to the owners of the flip the wages due to him at the time of his deferting, or refufing as aforefaid : and, in cafe he deferts or abfents' from any fuch fhip, wherein he hath fo contracted to ferve, upon application to any juftice of the peace, he may iffue his warrant to apprehend fuch feaman; and, on his refufal to proceed on the voyage, the juftice may commit him to the houfe of correction, to be kept to hard labour not exceeding thirty days, nor lefs than fourteen. And by the fame ftatute, if any feaman thall abfent himfelf from the veffel to which he belongs, without leave of the mafter, or other chief officer having the charge of fuch fhip, he fhall, for every day's abfence, forfeit two days pay, for the ufe of Greenwich-hofpital; and, if he fhall leave the veffel to which he belongs, before he hath a difcharge in writing from the mafter, he fhall forfeit one month's pay, to the ufes aforefaid: and the mafters or owners of ihips are impowered to deduct, out of the wages of any feaman, the penalties and forfeitures incurred by this act; and thofe penalties which are to be applied to the ufe of Greenwich-hofpital, fhall be paid by the mafters of hips, to the officer at any port, who collects the 6 d . a month, deducted out of feamen's wages for the ufe of the faid hofpital ; and, neglecting to do it within three months, they fhall forfeit treble value. lbid.
Alfo by the faid act, on the arriving of any hip in GreatBritain, from parts beyond the feas, the mafter fhall be obliged to pay his feamen their wages, within thirty days, if demanded (except the contract for ferving be to the contrary) or at the time the feamen thall be difcharged, which fhall firf happen; deducting thereout the penalties and forfeitures, and not paying the fame, fhall be liable to a penalty of 20 s . over and above the wages due to each fcaman, to be recovered by the fame ways as the faid wages are recoverable; and no feaman or mariner thall fail in any fuit for recovery of his wages, for want of producing the contract with the mafter on whom it lies, to produce the fame, if neceffary. This act fhall not extend to debar any mariner or feaman, belonging to any merchant fhip or veffel, from entering into his majefty's fervice, on board any of his fhips; nor thall fuch feamen or mariner, for his entry therein, forfeit the wages due to him during the time of his fervice in fuch merchant-fhip or veffel; nor fhall fuch entry be judged a defertion from the fhip. Stat. 2 Geo . II.
By the ftatute of I Geo. II. feff. 2. c. I4. for encouraging feamen voluntarily to enter into the king's fervice, \&c. the governors, minifters, and confuls in foreign parts, or where none fuch are refident, any two or more Britifh merchants there refiding, are authorized and required to provide for all feamen, fubjects of Great-Britain, that fhall by thipwreck, or other unavoidable accident, be driven or caft away in or other unavoidable accisent, be driven or catt away in
fuch foreign parts or places, and fhall fubfint them by an allowance after the rate of 6 d . per diem each, \&c. and put them on board the firft fhip of war arriving there in convenient time, or they may be fent by any merchant fhips wanting men, or others bound for any port in Great-Britain. Mafters of thips abroad fhall take on board four men for each hundred tons of which their veffels confift, and receive from the commiffioners of the navy 6 d . a day, for the paffage and provifion of every feaman, from the day of their imbarkation homewards, on producing a certificate of the man's being taken on board, and the time when, \&c. By the acts 9 Geo. II. c. 25. and 10 Geo. II. c. I4. a fmall fum of fo much per ton is to be paid by all mafters of veffels, \&rc. trading from any part of his majefty's dominions to Ca- .
diz, and port St. Mary's in Spain, or to the port of Lechorn, to perions appointed by the confuls and a majority of Bititifh merchants ihere; and fuch mafters paying it fhall be rein. burfed by their freighters, or the perfons to whiom the goods are configned, sc. and the money to be applied for relieving feamen thipwrecked, or taken in war, and other perfons being Enghth fubjects in diftrefs in the faid ports.

Remarks fince the laft War, and the Definitive Treaty of ${ }^{2} 763$.
In what a precarious and unfettled flate the boundaries as well as the trade of our colonies in North America have been for many years, fee our articles British America, French America, lojisiana, Canada, and the article Map. In what manner the boundaries of the colonies on that continent have been afcertained between Great-Britain and France, by the Definitive Treaty, fee our article Amprica, and fuch other to which from the preceding we refer.
As it is expected, that from the prefent Britifh fouthern colonies on the continent of America, we fhall produce bemp, flax, filk, pot-afh, wine, oil, raifins and currants, we may hope for a proportionable increafe in our navigation to thefe parts, and in confequence thereof a fuitable augmentation of Brytish Mariners, who will contribute to defend our new acquifitions in time of war, and advance their trade in time of peace.

Some authentic law cafes, determined in the courts of judicature in England, in relation to mariners.

## Hooke verfus Moreton.

Mr. Eyre moved for a prohibition to be directed to the admiralty court, to ftay a fuit there upon a libel by the mate of a fhip for mariners wages, upon fuggeftion of the feveral ftatutes, which reftrain the admiralty from proceeding upon contracts made upon the land. And (by him) the admiralty has no original jurifdiction of fuch fuits, 13 Rep. 5 I. And, though they are in their- nature maritime, yet the place where the contract is made, alters the cafe, 12 Rep. 79, 80. Therefore the admiralty has no jurifdiction of charter-parties, nor of policies of affurance, 4 Inft. 14I. Prohibition granted to a fuit is for a mariner's wages, I Sid. 331. Befides, that in this cafe the fuit is by a fingle mariner; and, therefore, it is the fame thing to him, to fue here at common law, or in the admiralty. And the cafe of Woodward verf. Bonithon, Raym. 3 , is a cafe in point. For, though the fuit was for other things as well as for mariners wages, yet, if a prohibition had not lain for the wages, the prohibition fhould have been granted quoad, \&c. Objection, I Ventr. 343Anfwer, That is no authority in this cafe, becaufe the motion was made there after fentence; and, if it does not appear in the libel that the court had not jurifdiction, no prohibibition thall be granted after fentence. See 2 Roll. Abr. 318. 12 Co. 77.

Mr. Pratt againtt the prohibition argued, That, if all the mariners fue for wages in the admiralty, the King's-Bench at this day will never grant a prohibition, I Ventr. 343. and there is no difference where the fuit is by one mariner or many, 2 Ventr. 181. Allefon v. Marfh, in point; and the mate of the fhip is but one mariner. Objection. Raym. 3. Woodward v. Bonithon. Anfwer. There the contract was for other things as well as for mariners wages, and the contract is entire; and, per curiam, there is no difference where one mariner libels and where many: for the reafon why the King's-Bench permits mariners to libel in the admiralty for their wages, is not. only becaufe they are privileged to join in fuit in the admiralty, whereas they ought to fever at common law, becaufe the contracts are feveral; but alfo by the maritime law mariners have fecurity in the fhip for their wages, and it is a fort of implied hypothecation to them: therefore the King's-Bench allows mariners to fue in the admiralty for their wages, becaule they have the thip there for fecurity. But the queftion is here, whether the mate of a hip differs from any other mariner; for, if the plaintiff had been a fingle mariner, doubtlefs no prohibition would have been granted. And it feemed to the court, that the mate is but a mariner; and, per Holt chief juftice, heretofore the common law was too fevere againft the admiralty, it did not allow ftipulations; but at this day they are always allowed. Ruled, That Mr. Pratt move the court for their opinion at another day. Lord Raymond, 397.

Clay verfus Snelgrave.
The defendant, as executrix to the mafter of a hip, libelled in the admiralty court for the wages owing to the teftator by the owner. On which the plaintiff, to have a prohibition, fuggefted the ftatute of 15 , Rich. II. cap. 3. that the admiralty court thall not have cognizance of contracts made upon the land, and thews this contract to have been made upon the land. And this cafe was feveral times moved by Sir Bartholomew Shower, and Mr. Acherley, for the prohibition, as
well in Michaelmas as Hilary and Eafter terms laft paft, as in this prefent term; and it was oppofed by Mr. Northey and Mr. Hall; and the counfel for the prohibition argued, That prohibitions are grantable de jure, and are not diferetionary in the court. Raym, 3, 4. That the cafe in Winch, rep. 8 was the firf cafe where a prohibition was denied in cafe of a fuit by mariners for their wages in the admiralty court; and the denial was grounded upon compaffionate reafons, becaule they were poor men, and becaufe there they might join in action, but here they muft fever; but the faid cafe is contrary to the realon and grounds of the law, for, where the contract is made upon the land, though the fervice was done upon the fea, it is out of the jurifdiction of the admiralty and fo vice verfa, if the fervice was done upon the land, and the contract upon the fea. 12 Co. 79, 80. Staunf. 5 I. C. Hob. 212. A confultation is always denied in cafe of a fuit by mariners, if there is a charter-party [fee Charter-ParTY] and the fealing of a writing cannot make any difference in reaSon, Raym. 3, a prohibition granted where the matter libelled alone. Mr. Northey and Mr. Hall è contra for the de fendant faid, That the cafe of mariners was now fettled, and ought not to be ftirred; but that the great reafon why they are permitted to fue there is, the thip is the debior, and, by the law of the admiralty, they may attack her, which they cannot do by the common law; and, in the admiralty court, they may all join in fuit, whereas, by the common law, they mult bring feveral actions: that the cafe of the mafter is not different, for the fhip is fecurity to him, and he is but a mainer, and his wages are wages at fea.
But however, where the mafter dies in the voyage, as he did in this cafe, there can be no reafon to exclude his executors from fuing in the admiralty, becaufe he had no opportunity of bringing his wages to account with the owners; and in 2. Ventr. 181 , Allefon verfus Marfh, the purfer, though an officer of the thip; was allowed to fue for his wages in the admiralty; and in 2 Keb. 779. Pl. 6. Rex verfus Pike, prohibition was denied, where the mafter and mariners joined in a fuit in the admiralty for their wages. (But Holt faid, that a prohibition ought to have been granted quoad in the (aid cafe.) And he cited a cafe, Hil. 27 and 28 Car. II C. B. between Cooker and Older, where Atkins and Ellis juftices were of opinion, That a prohibition ought to be granted to the fuit in the admiralty court by the mafter of a fhip for his wages ; but North chief juftice, and Windham juftice, held the contrary opinion. But Holt chief juttice faid, That it is an indulgence that the courts at Weftminfter permit masiners to fue for their wages in the admiralty court, becaufe they may all join in fuit; and it is grounded upon the principle, Quod communis error facit jus; but they will not extend it to the mafter of the fhip, efpecially if he was mafter at the beginning of the voyage here in England, and the contract was made with him here. Poffibly if the mafter of a dhip died in the voyage, and another man took upon him the charge of the fhip upon the fea, fuch cafe might be different. As in the cafe of Groffwick verfus Louthlley, where it was held in this court lately, that, if a fhip was hypothecated, and money borrowed upon her, at Amfterdam, upon the voyage, he who lent the money may fue the admiralty for it: and this court granted a confultation in the faid cale. But in another cafe, where the money was borrowed upon the fhip before the voyage, the King's-Bench granted a prohibition, and the parties acquiefced under it. There are many precedents, in the court of admiralty, of fuits by the mariners for their wages, but none for the mafter of the fhip. And the cafes differ; for the mariners contract upon the credit of the fhip, and the malter upon the credit of the owners of the fhip, of whorr generally he is one. The opinion of lord Hobart, That, where there is matter of property to be tried, a prohi bition thall be granted is a little too hard. Gould juftice agreed with Holt, and faid, he was of opinion that prohibitions were grantable of right, though it had been controverted in bis time. To which Holt chief juftice faid, That Hale chief juftice, and Windham juftice, held prohibitions to be difcretionary in all cafes ; but Kelynge chief juftice was of the contrary opinion; and he faid, He did not efteem them to be matter of right. Then Mr. Northey moved, That the court would compel the plaintiff to put in bail to the action, to be brought for the wages at common law, or otherwife deny the prohibition; which, he faid, had been done often. Holt chief juftice confelled, That the court had fometimes interpofed, and procured bail to be given; but it was by confent, and in cafe of the proprietor himfelf; but, in regard that in this cafe the plaintiff was a purchafer without notice, there was no reafon ; and a prohibition was granted. Lord Raymond, vol. i. p. 397.

## Baily verfus Grant.

Upon the motion of Mr. Raymond, towards the end of laft Michaelmas term, a rule was made to hear counfel of both fides, the firt day of this term, why a prohibition fhould not be granted to the court of admiralty $y_{2}$ to ftay a fuit there by the mate of a thip, for his wages. And he urged, That the admitting the mariners to fue there, was rather anindulgence Vol. II.
than any proper jurifiction that they had to hold plea theie of wages arifing upon a contraci made upon the land ; and that it was a long while before it was permitted, but that now it ought not to be extended any farther: that, in the cafe of a mafter of a fhip, a prohibition was granted lat Trinity term, between Clay and Sinelgrave (ante 576 .) that this feemed to be a middle cafe; but rather inclining to that of the mafter; becaule, in cale of the death of the matter, he fucceeded in the government of the fhip, and was always overfeer of all the other mariners: that the fame motion was made Mich. Io Will. III. B. R between Hooke and Moreton (ante 397.) and that the rule was made as here, to bear counfel, 8 cc . and, upon it's being many times moved, no prohibition was made, and they proceeded no Farther in the admiralty; for whictr, \&c. But è contra ferjeant Hall argued, That no prohibition ought to be granted; and of that opiaion was the whole court, becaufe the mate is not diftinguifhable from other mariners, only in title: he contracts with the mafter, and is as his fervant, and, therefore, does not differ from the mariners. But the mafter contracts with the owners upon their credit; whereas the mate contracts only with the matter, and not upon the credit of the owners, but upen the credit of the fhip: and, therefore, the rule was difcharged. The fame rule was made this term; upon a motion in the Common-Pleas. See 2 Ventr. 18r. Marfh verfus Allefon. Lord Raymond, vol. i. p. 632 .
Upon a thotion for a new trial in an action for a feaman's wages, Holt chief juttice faid, That, if the fhip be lont before the firft port of delivery, then the feamen lofe all their wages; but, if after the has been at the firlt port of delivery; then they lofe only thofe from the laft port of delivery; but if they ron all away, although they have been àt a port of delivery, yet they lofe all their wages. Lord Raymond, vol. 1. page 639.

John Edwards, and Elizabeth his wife, widow and executrix of Capt. Jenefer, verfus Sir Richard Child, Shepherd, and others, owners of the fhip Succefs, and the Eati-India company.

In 1693, Jenefer was appointed captain of the fhip Succefs, on a voyage to India, at IOl. per month wages, and to have two fervants, the one at 30 s . per month, and the other at 20 s . per month wages. Jenefer, the mafter, and the defendants, the part-owners, enter into a charter-party with the Eaft-India company, in which recital was made, that the company had paid to the mafter and märiners in part of freight, 12001 . by way of imprett-money; and furcher agreed, that the feamen, at the end of every fix months during the voyage, fhould receive one months wages, and that, until fix day's after the return of the fhip to the port of London, the Ealt-India company were not to pay any freight, fave the faid impreft-money, which was not to be returned, although the fhip fhould be loft in the voyage: and therefore, by the direction of the company, Jenefer the commander, when he hired the feamen, took bonds from them not to demand any wages 'till the return of the fhip to the port of London, and that they fhould not demand any wages, if the fhip was lof before her return to Londion.
The fhip failed to Bengal, and there delivered her outwardbound cargo. In her return home the thip was taken by the French, on the coaft of Ireland, and the captain and mariners made prifoners,
The captain was fued by the mariners for their wages, being four months, that became due at Bengal, the firft delivering port; and, although the bonds were given in evidence, yet the mariners recovered their wages, in an action tried before the lord chief juftice Holt.
The bill by the plaintiffs, the wife being the executrix of Capt. Jenefer, was to recover about 8001 . he had been forced to pay to the mariners, and likewife to have the captain's own wages, and the wages of his fervants, for four months, that became due at Bengal, the firf delivering port.
Upon producing of precedents, where relief had been given in like cafes, viz. the cafe of Sir Humphry Edwin and Capt. Stafford, againft the Eaft India company, in 1695 , and the cafe of Buck and Sir Thomas Rawlinfon, affirmed upon an appeal in the houfe of peers: notwithitanding the Eaft-India company had taken bonds from the mariners, not to demand their wages, unlefs the Chip returned to the port of London, the lord chancellor decreed the plaintiffs to be paid the wages due to Capt. Jenefer, for himfelf and fervants, and likewife what Jenefer had paid to the feamen, with intereft and coits. Vernon's Reports, vol. ii. p. 727.
MARITIME, or MARINE AEFAIRS, and MARINETREATIES, relating to trade and navigation.
Under the following articles we have reprefented, in our Firft Volume, many effential particulars which have relation to marine commerce, of which it may be requifite to apprize the reader; viz. Admiralty, Assurance of fhipping and merchandizes, Average, Baratry, Bills of Lading, Bottomry, Caf-Merchant, CharterParty, Conyoys and Cruizers, Flotiam, Gries:
wich Hospital, Hanse-Towns, Hypothecation, and Indulto.
In this our Second Volume we continue the fame fubject, under thefe feveral particular heads, viz. Ma'riners, Marque, Letters of, Masters of Ships, Navai Affairs, Oleron, it's Law of marine trade, Pilots, Ports and Hayens, Piracy, Prizes, Quarentine, Rhodian Laws of marine trade, Sea Laws, Salyage, Shipping, Wisbuy Laws of marine trade, Wrecks, \&c. \& c,
Under the prefent article, we chall give an abftract of the principal Marine Treaties concluded fince the year 1600 , between the chief princes, ftates, and fovercigns of Europe, which may be ufeful to have recourfe to upon peculiar occafions.
The firt piece of this nature that occurs is the memorable league into which the States-General entered with the republic of Lubeck, in the year 1613 , which was folemnly confirmed about two years and eight months afterwards, and ftrengthened by the acceffion of moft of the other HanseTowns, upon the following occafion :
The king of Denmark having, fome time before, laid heavy taxes upon their thips failing through the ftraights of the Sound, \&c. [fee the article Denmark] they found the new impofitions not a little detrimental to their navigation; and the northern traffic being none of the moft inconfiderable branches of the Dutch trade, as well as of that of the Hanse-Towns, they foon began to let their uneafinefs appear, and fo negociated their bufinefs among themfelves; and the town of Lubeck firft brought the bufinefs to a conclufion, by means of the following treaty with the States-General ; in which, though not a word is faid of his Danifh majefty, that prince eafily penetrated into the defign of that combination; and, the new confederates being, on the other fide, apprehenfive of his refentment, it was thought convenient to fortify the alliance, by receiving into it feveral of the other HanseTowns, who judged it their intereft to join with the others, with a defign to enter into a vigorous war with the king of Denmark, whofe late impofitions they were refolved not to pay: for though they pretended that their alliance was only defenfive, they, certainly intended to reduce that prince to a necelfity of abolifhing the beforementioned taxes; which may be gathered from the treaty as it hereunder follows :

A treaty between the States of the United Provinces of the Low-Countries, and the town of Lubeck, concluded in the year 1613
As of ancient time the honourable the common-council of the free and imperial city of Lubeck, and feveral other towns fituate on the northern and eaftern feas, have been in union and amity with divers towns of the free United Provinces, for the defence of the liberty of navigation, trade, and commerce, \&cc.-And as now their high mightineffes the StatesGeneral of the United Provinces, \&c. have found it neceffary to negotiate and treat about the renewing the aforefaid union, by the noble deputies, \&c. - Who, after feveral conferences, have agreed together, treated, confented, and concluded upon the points and articles following :
I. That this union be only for maintaining the freedom of navigation and commerce in the northern and eaftern feas, the fole intent being, that the refpective fubjects of the union, according to the law of nations, \&c. may accordingly enjoy the fame without moleftation; fo that the fubjects of the faid union may reciprocally defend and protect each other, againft fuch as would difturb them, that the difficulties detrimental to the common trade and navigation may be removed, \&c.
II. In fo doing, this union fhall not be prejudicial to the friendthip of his imperial majefty, nor the holy empire, nor to their royal majefties of France and Great-Britain. \&cc. III. Thofe of the union thall faithfully obferve thefe articles, and corfirm them by oath.
IV. The States-General fhall manage this union to the beft advantage of the common caufe; but in fuch manner, as the common-council of Lubeck may give a voice in all the deliberations; for which purpofe a perfon from Lubeck mail always refide at the Hague, on behalf of the town; and the States-General may depute fome perfon to relide at Lubeck, the better to deliberate with the council of that place.
V. Thofe of the union fhall contribute towards the charges, according to the obligations into which they are entered, in order to furnifh fhips, foot and horfe, \&c.
VI. If fugh who interrupt commerce and navigation, after having been amicably required to defift, refufe, againft juftice and reafon, to do it, thofe of the union hall defend themfelves vigorounly, to fecure to them fuch liberty of commerce and navigation.
$\forall$ II. If the confequence hereaf fhould be a war, thofe of the union thall recall their fubjects from the fervice of the adverfe party, on pain of death, and confifcation of their eftates. Nor thall it be allowable to procure, or fend to the adverfe party, money, troops, hips, ammunition, arms, provifions, \&c. on pain of corporal punifhment ; and all endeavours fhall
be ufed to prevent their receiving fuch fuccours from other piaces.
VIII. And, if the adverfe party thall arreft the fubjects, Thips, morchandizes, or debrs of thofe of the union, or furprize them at fea, and carry them off, orders fhall be given to the towns and countries of the union to make reprizals, and mutually to affift each other.
IX. The fhips of thofe of the union may freely enter into the harbours and rivers of each other, to provide neceflarics, or to reft ; but no violence fhall be ufed, and they fhall pay for what they take.
X . The fubjects of the union fhall, in all their countries, enjoy the privileges of a citizen, and even the right of fucceffion, which fhall defcend without diftinction of religion, as permitted in the holy empire; but every one fhall fubmit himfelf to the laws of the place.
XI. None of thofe of the union thall enter into any treaty, or be reconciled to the enemy, without the confent of the others: on the contrary, all the members hall endeavour to keep their citizens, inhabitants, fhips, merchandizes, and effects, free from all damage, and to maintain them in their liberties and privileges, \&c.
XII. So that no peace or truce fhall be made with the enemy, but with the reciprocal confent of all the members. XIII. This league fhall remain in force for 50 years, which, with the common confent, may be prolonged.-If, during the fame, or even after the expiration thereof, any of the union receive any damage by reafon thereof, whether by fea or land, they fhall mutually affift each other againft all perfons whatfoever.
XIV. If any potentate, country, or city, and efpecially if any of the other Hanfe-Towns, defire to enter into this union, they fhall be received upon reafonable çonditions.

In witnefs whereof, two copies of thefe prefents have been made, and confirmed by oath, and fealed with the feals of their high mightineffes the States-General, and of the faid town of Lubeck, and figned by their refpective clerk and fyndic; ' of which copies each party has retained one. - Done in the month of May, in the year 16I3, and underwritten,

By order of the States. General,
Signed Aerssen.
And, by order of the honourable the council of the town of Lubeck,

## Signed Martin Nordamus,

 Syndic of the republic of Lubeck.Here follows the fecond league, concluded between the Dutch and the republic of Lubeck, together with feveral of the other Hanfe-Towns; which, though it be much to the fame effect with the former, is of too great importance not to deferve a place in this work.

A treaty of alliance, between the United Provinces of the Low-Countries and the Hanfe-Towns, concluded in the month of December, 1615 , in confequence of that concluded with the town of Lubeck in the year 1613.
As not only the Hanfe-Towns of the eaft, fituate upon the Eaftern Sea, together with thofe upon the Wexel, the Oder, the Elbe, and the Wefer, and the neighbourhood thercof, but likewife feveral towns of the Low-Countries, lituate upon the Northern and Southern Seas, as alfo thofe fituate on the Maefe, the Wale, the Rhine, and the Yffel, and other flreams and rivers flowing into the Northern and Southern Seas have been comprehended in the common league of the Hanfe-Towns, and have remained in a firm union and friendfhip with one another, and have obtained of the neighbouring kingdoms and countries many common liberties, privileges, and prerogatives, which, by their united counfels, frength, and forces, and by the defenfive arms of feveral of them, have been defended and maintained; and, as the HanfeTowns of the Low-Countries have, in latter times, by reafon of a tedious war, and other accidental mifunderfandings, being hindered from affifting at the general meetings of the Hanfe-Towns, and, by teafon of their own burthens, have not been able to bear the chiarges of the common league, which fome of their neighbours have taken to be a rupture and feparation, and which has occafioned feveral uneafy burthens upon the freedom of traffic, commerce, and navigation, which ought to be remedied; that has put a frelh obligation upon the parties concerned, to think of ways and means by which, with the divine affitance, there inconveniencies mar be removed, and the aforefaid liberties and common rights and prerogatives may be re-eftablifhed and confirmed. And as, in this fucceffion of time, the greater part of the HanfeTowns do look upon their high mightineffes the States-General of the United Provinces as members of their ftate, and not judging it convenient to labour feparately towards the faid.
re-eftablifhment, but in conjunction with their high mightinefles, fince, by that means, the treaty that thall be concluded will be more ufeful, more profitable, and more convenient, there having been of late years, feveral delibera tions upon that fubject, upon which the burghermafters and the common-council of the free and imperial city of Lubeck did treat with the aforefaid lords the States-General, in the month of May in the year 1613: for thefe caufes, after mature deliberation, the faid lords the States-General have, by their deputies, together with thofe of the Hanfe- Towns of the eaft, renewed the antient friendhip and union that was between them; and, in order to unite themfelves yet more clofely, have concluded and agreed upon the points and articles following:
I. That this union fhall not be offenfive with regard to any; but only for maintaining and preferving the freedom of navigation and commerce in the Northern and Eaftern Seas, and thall not be any otherwife undertood: fo that thofe of the union refpectively, and their fubjects, may, without any impediment, enjoy the benefit of the laws of nations, and all the liberties, rights, and privileges ufual in the aforefaid Northern and Eaftern Seas, and in the rivers, ftreams, and other currents. All thofe of the union fhall defend conjointly, and protect their citizens, inhabitants, and fubjects, who may be by unjuft means molefted by others, and to whom commerce may be forbidden, or upon whofe merchandizes any particular impoft may be laid in going or coming ; to the end that the faid impediments and redoubled impofts, fo prejudicial to commerce and navigation, may be abolifhed, and the fame may be freely carried on throughout the holy German empire, and may be increafed for the benefit and advantage of thofe of the union.
II. Wherefore this union thall not be prejudicial to the friendfhip contracted with his imperial majefty and the holy empire, with their majeflies of France and Great-Britain, and with the evangelical electors and circles of the holy empire, and which has been hitherto maintained with their lordihips the States-General, and likewife with the honourabie Hanfe'Towns, who have been 'tili now under the protection and obedience of his imperial majefty and the holy empire, and every town that has a mediate authority, all the leagues, rights, ftatutes, ordinances, and obligations, fhall remain in their full force; the whole, however, Salvo prefenti foedere.
III. Thofe of the union thall fincerely obferve and maintain the prefent articles, which they Chall confirm by oath.
IV. Their lordfhips the States-General fhall managethis union to the beft advantage of all the members thereof; but in fuch a manner, however, that in all undertakings, each party Thall freely give their voice: for which end there fhall always be a refident at the Hague from the Hanfe-Towns of the eaft, who chall give his advice in what ccncerns the union; and the States-General may appoint another perfon to refide at Lubeck, or at fuch other place as occafion fhall require; to the end that the mutual advices and opinions may be the more eafily communicated, and what fhall be neceffary may be effected.
V. Thofe of the union fhall keep in good order, and well provided, at their expences, the fhips, and troops of foot and horfe, and all things belonging thereto, according to the con tributions which each is obliged to furnin, and for the time that fhall be judged convenient; and hall caufe them to repair to the places whither it fhall be thought neceffary to fend them, according as the name of every Hanfe-Town of the union, and the quotas of the faid contributions, are contained in the particular writings.
VI. And, in cafe it happens that thofe that would caufe any impediments to be given to navigation and commerce, againft the aforefaid privileges and treaties agreed to, will not defift, after having been thereto amicably required, and according to the rules of juftice, reafon, and equity, thore of the union fhall proceed againft them defenfively; the defign of the union being only to affure the liberty of commerce and navigation. And if it fhould happen that any of the towns of the union hould, becaufe thereof, or by reafon of any particular privilege, fuffer any damage, the faid town Shall be forthwith affifted, 'till liberty is obtained, and reparation of damage made.
VII. And if, by the common confent, war hould break out, thofe of the union fhall command their inhabitants and fubjects, whether feamen or foldiers, that are in the fervice of the adverfe party, to abandon the fame under pain of death and confifcation of effects. Nor thall it be allowable to fend from the towns and countries of their obedience, to the faid adverfe party, money, troops, fhips, ammunition, arms, provifions, or fuch other things; but, on the contrary, that thall be forbidden, on pain of corporal punifhment; and all endeavours fhall be ufed, as far as it is poffible, to hinder others from furnifhing them.
VIII. And in cafe, alfo, the adverfe party fhould arreft the perfons, Mips, merchandizes, and debts of the fubjects of thofe of the union, or if they are furprized at fea, or taken or carried off, they fhall make reprizals in the countrics of thofe of the union; and, in that cafe, they thall mutually aifift and defend one another.

## M A R

IX. The fhips of thofe of the union may freguent the rivets and harbours of each otber, without any let or hindrance, and there refit their veffels, and provide themfelves with all manner of neceflaries; upon condition that no violence be ufed, but that they tharikfully pay for every thing they take. $X$. The fubjects of thofe of the union fhail every-where enjoy, in the towns and countries thereof, the rights of citizens, and fhall inherit fuch fucceffions as belong to them, accordinat to the cuftoms of the place, without any diftinction of religion, as it is practifed and permit ed in the holy empire; but every one fhall behave himielf as a citizen, and thall fubmit and conform himfelf to the laws of the place.
XI. None of thofe of the union thall make any agreement with the adverfe party, without the confent of the others, nor fuffer any thing to be done to the prejudice and damage of the others; but, on the contrary, fhall endeavour to maintain the common tranquillity, and to keep each others citizens, inhabitants, fübjects, fhips, merchandizes, and effects, free from all moleftation, and fecure to them the en joyment of the liberties and privileges aforefaid.
XII. A peace, or truce, with the adverfe party, muft be concluded with the common advice and confent of all, and not otherwife.
XIII. This league fhall remain in force twelve years, and fhall be prolonged with the common confent. But if any of thofe of the union, during the faid league, or even after the expiration thereof, fhould be attacked or injured by reafon thereof, all the members fiall mutually affift one another.
XIV. If any potentate, country, or town, defire to enter into this league, they fhall be received, with the common confent, upon reafonable terms.
In witnefs whereof, divers uniform copies of thefe prefents have been drawn up, for their high mightinefles and the Hanfe-Towns, which fhall be confirmed by oath, and by the appofition of the reciprocal feals, after that a report thereof has been made. Concluded in the month of December, in the year 1615 .

## RemARKs,

Thefe leagues having, for the moft part, wrought the defired effect, and deterred the enemies of the Hanfeatic liberties from profecuting the defigns that were fulpected to have been formed againft them, things continued much in the fame condition till the year 1640, or thereabouts, that the Hanfe-Towns, being again difurbed with frelh jealoufies, began to renew and fortify their former league, and take all the other neceffary meafures for preventing a furprifal from any of their real or fuppofed enemies.
In order thereunto, the towns of Lubeck, Bremen, and Hamburgh, firft began to enter into a ftrict alliance amony themfelves, by a negotiation then fet on foot, and at laft brought to a conclufion between them, by a treaty dated the 24 th of November, 164 I ; which being pretty long, we fhall here content ourfelves with taking notice only of what is moft material.
In the preface to that treaty they declare, That, finding the prefent pofture of affairs to be fuch as might give them juft grounds to provide for the fecurity of their proper rights and privileges, both in friritual and in temporal matters, the moft effectual means, for preferving them from being liable to foreign violence and oppreffion, would be to renew the ancient amity and good intelligence with the reft of the Hanfe-Towns; in order to which, and for the intereft and advantage of his imperial majefty, and of the holy empire, they agree upon the following articles:
I. That they fhall forthwith put themfelves in a good pofture of defence, by fortifying all their towns, and railing in proportion to their flrength, a competent number of regular troops, and putting their own citizens and fervants in condition to protect them againft all fudden infults and attempts that might be made againft the Hanfeatic towns, or any of them.
II. That they fhall upon all occafions, and efpecially in the prefent critical conjuncture. live in a perfect repore and union with one another, and without giving any fubject of offence to any other perfon or perions whatioever.
1II. That, in cale of any fudden hoftility committed againft any of their members, the injured party hall not expect any fuccour from the others, 'till, by their interpofition in an amicable manner, the others endeavour to compofe the differences, and procure them a realonable fatisfaction.
IV. But that, if fuch friendly methods of proceeding fhould prove at laft ineffectual, and the aggefifor fhould unreatonably perfift in oppreffing any of their towns, in cheir firitual or temporal rights, liberties, privileges, prerogatives, comuncres, navigation, perfons, or effects, by fuges, blockades, bulding of fortreffes, hoftile invafions, exacting of contributions, arms, ammunitions, provifions, or orher violent and unjuft oppreffrons, then the party injured fhall be fpeedily and effectually affifted, according to the ne effity and circumitances of the cafe, with men and moncy, and every other thing that might be neceffary for them.
$V$. That none of the confederates, nor their flbje 7 fs , fhall give in any manner of fuccour or necefares ic th enemy,
openly or lecretly; and that fuch as fhall be convicted of the fame fhall be feverely punifhed.
VI. The aforementioned fuccours and affiftance fhall be given' as is above expreffed, againft all and every perfon and perfons that fhall do any damage to any of the league, by fea or land, or in the ports and rivers.
VII. If the town infulted be of opinion that the imminency of the danger cannot admit of a preliminary deliberation, the inhabitants may immediately call the others to their affiftance, and then an affembly fhall be appointed.
VIII. If any town be fo fuddenly attacked that the others cannot fend a timely fuccour, thofe that are neareft hall not only fend thither their foldiers, but fhall likewife advance at leaft one month's pay, and fhall alfo raife immediately other troops; of which charges they thall be reimburfed by the other confederate towns, with all convenient fpeed, \&cc.'
IX. If two or three towns fhould be attacked at one time, the whole confederate towns fhall neverthelefs fuccour and affift one another, to the utmoft of their power.
$X$. For the more fpeedy difpatch of affairs, the oppreffed town thall immediately make known it's condition to it's neareft neighbours, who thall forthwith acquaint the other confederates that they, without any delay, may appoint a diet, and fend thither their deputies.
XI. And, if the danger be very imminent, the oppreffed town hall have power to appoint a diet, according to the exigency of the cafe.
XII. The direction of any defenfive war fhall refide in thofe to whom the fuccour is fent; but, if they require it at their hands, the other confederates fhall fend deputies to affift at the deliberations.
XIII. If any town is fo fuddenly attacked or blocked up, as that the others cannot fend in any perfons to them, they fhall endeavour to find means to fend out one or more perfons, to let their confederates know their circumftances.
XIV. However, fuch as have been, or ftill are oppreffed, being fuccoured by the confederates, fhall not conclude any treaty without their privacy and confent.
XV. And, if things can be brought to any reafonable accommodation, all poffible endeavours thall be ufed to obtain fatisfaction to the injured party, and to bring the treaty to fuch a conclufion that the parties may have no occafion left for future quarrels.
XVI. This league, which is in confirmation of the eighth article of the former, fhall fubfift during ten years, and may then be renewed and prolonged; and, in cafe of a war, reafonable fatisfaction thall be made to fuch as have been at the charge thereof.
XVII. If, after the expiration of this league, any of the members thereof fhould come to be attacked by reafon of it, they fhall, notwithftanding that the league be expired, mutually affift each other.
XVIII. Lafly, all the Hanfeatic towns that will enter into this league upon the aforementioned conditions, fhall be received by the common confent.
All which articles fhall be faithfully and fincerely oblerved. Signed and fealed, \&c.

## Remarks.

This treaty being fo concluded, the ftates of Holland found it their intereft to enter into another, with the towns of Bremen and Hamburgh, on the 4 th day of Auguft, in the year 1645 ; of which you may take the following fhort account, which I have carefully extracted out of the Latin original.
The preface to the treaty infinuates, That there having been of ancient time a firm and fincere friendhip between their high mightineffes the States-General and the honourable cities of Bremen and Hamburgh, and the other Hanfeatic towns, and it being neceffary, for their common intereft and fecurity, to cultivate and augment that good intelligence, by renewing their former engagements, they oblige themfelves to oblerve the following articles:
I. The league fhall not be offenfive to any, but fhall only tend to the fecurity and freedom of commerce and navigation, according to the laws of nations, and the rights and privileges formerly granted them by feveral treaties and contracts.
II. The faid league fhall not be prejudicial to the friendfhips of the ftates and their confederates with his imperial majefty and the holy empire, nor to the obedience that fome of the faid confederates owe to his faid majefty; and that the other confederates fhall not, by virtue of this league, be under any obligation to concern themfelves in the prefent war between the king of Spain and them.
III. That if any of the confedeaates fhould be oppreffed in their trade, or otherwife, the other fhall endeavour to compofe all matters amicably; and, that means failing, all the members fhould contribute toward the charges of a defenfive war. IV. That the ftates fhall manage the affairs of the confederates, to the common advantage, with the advice of the other members; and deputies fhall be appointed to refide for that purpofe, at convenient places.
V. That the fhips of all the confederated towns, \&ic. Ahall freely enjoy each other's ports and harbours, \&c, paying for what provifions they fhall have occafion.
VI. That if any diffenfion fhould happen among the confederates themiefives, they fhall be amicably compuled.
VII. That none of the parties Chall act any thing to the prejudice of the other members, or any of them, but thall, as much as in them lies, contribute to the interelt, honour, and advantage of each ocher.
VIII. That the league fhall fubfift fifteen years.
IX. That the other Hanfeatic towns thall be received with the common confent.
$X$. And, laftly, That the ratifications fhall be exchanged within two months.
Signed and fealed the $4^{\text {th }}$ of Augut, 1645 .

## Remark o.

This treaty being fo concluded, nine days afterwards another was brought to a period at Chriftianople, between the arhbaffador of the king of Denmark and thole of the States-General ; by which it is agreed:
I. That there fhall be a firm and fincere friend/bip between the fubjects of both parties, who thall mutually perform all good offices to one another, in fo far as the trcaties of either party with other princes and eftates could allow it.
II. That, for the forty years next enfuing, the tolls fhall be paid in the Baltic Sea according to a regulation figned and confirmed between them; and that, during that time, they fhould not be augmented; but that, after the expiration thereof, things fhould be regulated according to the treaty concluded in the year 1544, except another treaty fhould intervene within the aforefaid time.
III. The fearching of the thips and goods belonging to the inbabitants of the United Provinces, and paffing through the Baltic Sea, fhall ceafe, and intire credit fhall be given to the mariners that produce their cockers ${ }^{*}$, who, thereupon paying the toll, fhall be difmiffed without any trouble or moleftation, and Chall not be detained in the cuftomary place (called Den Drooghen) near Copenhagen. But if, in time to come, it Ahould appear that his Danifh majefty is defrauded in the toll, their high mightineffes, being acquainted therewith, hallthink upon convenient methods for remedying the fame, and fhall take care that no injuftice of any nature be done to his majefly.

* Cocket fignifies a certificate and clearance, ordinarily given
by the officers of any cuftom-houfe to fhips going to fea.
IV. The tranfportation of no goods (what name foever they bear) Gall be forbid through the Baltic Sea.
V. All goods that thall be proved really to belong to the fubjects of the United Provinces, whether exported or imported, fhall not pay any greater duties in the kingdom of Denmark and Norway, than are paid by the fubjects and inhabitants of the faid kingdoms themfelyes: nor thall his Danifh majefty's fubjects pay any greater duties in the faid provinces than the inhabitants.
VI. Ships fully laden in any port of the kingdom of Norway, being once fearched there, and having paid their tolls, fhall not be fearched again in the fame, nor in any other port at which they may touch, but, upon producing the receipt thereof, fhall be freely difmiffed; but, if they lade in feveral ports, they fhall be fearched there, and not elfewhere: and, as the exportation of oak is prohibited and forbidden, if any perfon is convicted of exporting any of the faid wood, he fhall be fined in double the price of the oak.
VII. The toll hall be paid in Norway, in the fame quantity and manner that was ufual in the year 1628 , nor fhall any greater be exacted 'till his Danim majefty and their high mightineffes agree about the method of exacting the duties for all forts of wood; concerning which affair his majefty and their high mightineffes fhall enter into a treaty, as foon as that can be conveniently done, that fomething more certain may be determined about it.
VIII. The merchants and mariners of the United Provinces, Shall by no means be obliged to purchafe their planks of fome certain perfons in Norway, but fhall buy the fame at fuch plates, and of fuch perfons as they pleafe.
IX. The fhips of the fubjects of the United Provinces trading to Norway, fhall be meafured by two Norwegian and as many Dutch mariners, to whom that fervice thall be intrufted; and, being figned by them, fhall be confirmed by the magiftrates of the place, and recorded in the books of his judicature, that the mariners, in cafe of neceffity, may have recourfe to the fame; and afterwards the meafure fhall be marked upon the maft and bcak-head of the fhip, that the toll may be the more conveniently determined, 'till it be otherwile agreed, as is already faid.
X. Full and ample reflitution hall be made for all the extortions that the fubjects of the United Provinces can prove to have bẻen made, againft his Danifh majefty's command, after the year 164r (4 per cent. of the price or quantity of the wood being deducted) as of every thing that has been exacted contrary to the treaty then entered into.
XI. The prefent treaty concluded between his Danih majefty and their high mightineffes chal! be figned and fealed by his majelty and the moft ferene prince of Denmark, and all and every one of the counfellors of the kingdom.
XII. The rights and privileges granted to the townis of the United Provinces of the Low-Countries by the treaty of Spires, and publifhed and confrmed by the authority of the ancient kings of Denmark, hall not be in any manner diminithed by the prefent treaty, but fhall temain as formerly, in their full and entire force, 8 ce .
XIII. His Danifh majefty obliges himfelf that he fhall not, upon any account, detain any of the flips belonging to the fubjects of the United Provinces, nor take any goods or merchandizes out of them, nor force any of them into his fervice, without firft agreeing with the mafters and proprietors thereof, and paying them the full price of the fame; nor fhall he, without the confent of the poffeffors, take out of the faid fhip any men or warlike neceffarics, or other things, under any pretence whatfoever, and it fhall be free for them to fail ihrough the mouth of the Baltic, and to trade through all his majefty's dominions.
XIV. Goods exported out of the United Provinces, in foreign fhips, fhall be fuffered freely to pafs through the mouth of the Baltic Sea, paying the fame toll that is ufually paid for goods exported out of the United Provinces: but, upon this condition, that it thall be made appear, by fufficientit teftimonies either from the cities of the faid United Pravinces, or others fituate upon the ocean, that the faid goods belong to no other but the fubjects and inhabitants thereof.
XV. All the fubjets of the faid provinces that refide in the eaftern cities, carrying either their own goods, or thofe of the other fubjects or inhabitants of the faid provinces through the Battic, hhall be treated in the fame manner as the otherinhabitants thereof.
XVI. The fhips of the United Provinces having paid the toll, and being fearched in any port of Denmark, thall not again be fearched in any other port of Denmark and Norway, except they take aboard goods there ; but, on the contrary, they thall be freely difmiffed.
XVII. The receivers, and other officers of the tolls in Norway, hall not exact of the mariners any more than what is due, nior take any more for their difcharge, than the king's order bears; and his majefty thall caufe fuch as do otherwife to be feverely punithed.
XVIII. As to what concerns the toll at Gluckftadt, if that affair canno: be accommodated by the treaty now commenced for that effed with the city of Hatrburgh, the Tubjects of the United Provinces, producing their ordinary certificate, hall be free from the effect thereof.
XIX. And as, by virtue of the prefent articles, all differences between his Danih majefty, and their high mightineffes the States-General of the United Provinces, are compofed anidentirely removed, it is mutually agreed and promifed, by the ambafladors and commiffaries of either part, that the ratifications thall be delivered on both fides within three months. Signed and fealed, 88c. at Chriftianople, the 13 th day of Auguft, 1645 .

## Remarks.

To this treaty (of which we have left out fome tedious formalities, not material to our point) there is annexed a promife of the Danifh ambalfadors, by which they oblige themrelves, in the king's name, to caufe the * tariff, according to which the tolls were paid by the Hollanders in the year 1628 , to be renewed and publifhed with all convenient fpeed, and that nothing fhould be exacted of the fubjects of the United Provinces, contrary to the contents of the faid tariff.

* Tariff is a term properly exprefling what we call the book of rates in England, being a book in which are written down the duties and cuftoms to be paid on all forts of goods.
Thus much being faid of the circumftances and affairs of the Hollanders, and of the Hanfe-Towns with the Danes, we thought it aeceffary to interrupt, for fome time, the relation given of their marine intrigues and negociations; to oblige the public withra treaty concluded on the very fame day, viz. the $13^{\text {th }}$ of Augult 1645, between the crowns of Sweden and Denmark, which being a curious and ufeful piece, and pertinent to our prefent fubject, we thall bere give a trandation of as much as concerns navigation and marine affairs.
In the preamble of this treaty, the ambaffadors, \&c. of all parties fer forth, That feveral mifunderftandings and differences having of late arofe between the crowns of Sweden and Denmark, and that efpecially concerning the immunity of commerce and navigation, and of the duties, \& cc . exacted in the narrow palfage of the Sound; which differences having at laft broke out into a war, to the great lofs and difadvantage of both kingdoms, in the name of the moft ferene and mighty prince Lewis XIV. the moft Chriftian king of France and of Navarre, his mother, the queen-regent, out of her fincere compafion towards thole kingdoms, and her care for the welfare of all Chriftendom, and defire to prevent the further miferies and calamities of war, and to give repofe and peace to Chriftendom, his moft Chriftian majefly a forefaid, having, for that effect, fent the year before his ambalfador extraordinary in the North, to the courts of Sweden and Denmark, with orders to exhort both to a re-

Vol. II.
conciliatioh, by repreferting to them the miferable condiiion of the Chriftian world, and by offering to interpofe the trediation of France, for the compoftion of their differences. For thofe caufes her Swedilh majefty, out of refpect to his moft Chiriftian majefty, as well as out of the earneft defire fhe has to put an end to the war, and to enjoy and preferve peace within the limits of her kingdom, and to maintain a fincere friendflip, and good correfpondence with all her neighbours, and efpecially with Denmark and Norway, who, becaufe of the vicihity of their fituation, ahd for feveral other reafons, have many things in commion with the kingdom of Sweden, has received the friendly counfel of his moft Chriftian majefty, and accepes and acquiefces in the offers made of the interpofition of the mediation of Erance, and his Danifh majefty having likewife declared, that he accepts of the fame mediation, a meeting being appoinced at Brombroo upon the frontiers, on the 3 d of February, between the commiffaries and plenipotentiaries of both kingdomis, being four on each fide, and of equal quality, where the faid ambaffadors being affembled, with the help and affiftance of the ambaffador of Erance as mediator, they concluded a firm and folid peace, and agteed to the following articles:
I. As to the paffage and navigation thtough the ftraight of the Sound and Belt, and from the Baltic fea into the ocean, and likewife from the ocean into the Baltic fea, and the immunity from paying all tolls antd taxes, becaufe of the faid paffage and navigation, the certificates for goods, and the fearching, viliting, ftopping, and jufticiary arrefts and proceedings, eftablifhed for thips and goods to prevent fraud, and preferve the fhips and goods from all danger, and likewife for preferving the liberty of commerce, the interruption of which has given oecafion to the prelent war and commotions, after many conferences, in which all means of reconciliation have been propofed and examined, it is agreed as under, viz.
I. It is promifed in the name and orit the behalf of his Danifh majefly and his fucceffors, ard of the kingdom of Denmark, that, in time to come, her Swedifh majefty, and her fucceffors, kings and queens of Swieden, and their fubjects and inhabitants in the kingdom of Sweden, great dutchy of Finland, Ingria, Efthonia, and Livoria, fhail have rigtr, liberty, and power to navigate, whether in their owin, or in hired hips, with all forts of veffels great or frall, armed or unarmed, men of war or merchantmen, and to tranfport their goodstand effects of any kind or fort whatfoever, throughi the ftraights of the Sound and the Belt, according to the opportunity and pleafure of every man; nor fhall that privilege be forbid them, nor they any ways troubled and molefted in the enjoyment of the premifes.
II. And this fhall be fo underftood, that it thall be free for her Swedifh majefty and her fucceffors, and her and cheir faid fubjects, inhabiting in Sweden, Finland, Ingria, Efthonia, and Livonia, to tranfport, according to their power and pleafure, through the ftraights of the Sound and the Belt, all forts of merchandize and effects, without diftinction, exemption, or limitation, whether it be goods bought or purchafed in other towns or kingdoms, or whether it be the product of the earth or manufactures; more efpecially all forts of munitions of war, and every thing that may be ufeful therein, and particularly brafs or iron guns, great or fmall fufils, mufquets and arms, fwords, ball, gunpowder, falt-perre, and every other thing belonging to war or antos, by what name foever it may be called, without any impediment, detention, inhibition, charge, or tax; whether fuch things be tranfported from Sweden, Finland, Ingria, Efthonia, Livonia, Pomerania, Mecklenburgh, Lubeck, or from the towns of Pruffia and Courland, into the lands along the ocean; or whether they be tranfported from the aforefaid places thro the Baltic fea into Sweden, and the aforefaid provinces, or directly into Pomerania, Mecklenburgh, Lubeck, the towns of Pruffia and Courland, or others.
III. All hips and goods of what kind foever, belonging to her Swedifh majefty, and her rubjecis and inhabitants in Sweden, Finland, Ingria, Efhonia, and Livonia, their mariners, merchants, and other paffengers, whether the fhips belong entirely to them, or whether they have only a fhare in the fame, fhall be free from all tolls and taxes in the ftraights of the Sound and the Belt, that now are in practice, or that the mind of men can in time to come invent, under any pretence whatfoerer, not only during their abode in the faid ftraights of the Sound and the Belt, but likewife during the whole courfe of the voyage, whether in going or coming; but, if the veffels do wholly belong to ftrangers, or if they have any fhare therein, and the fame may be only failed by her Swedifh majeity's fubjects, they fhall pay to the king of Denmark, for their paffage through the Sound and the Belt, what ought to be paid according to treaties and cuftoms, whether for the whole flip, if it entirely belongs to ftrangers, or for any part thereof proportionably; preferving, however, in every thing, the liberties and imminities of the Swedifh fhips, effects, and perfons.
IV. It is agreed, as to the liberty of navigation of the Swedes and their exemption from tolls, and his Dania majefty pro-
mites and deternines them in this manner, in his own name, and in that of his fucceffors, kings of Denmark, and of that kingdom, that her SwediCh majerty, and her fubjects in Sweden, F'inland, lngria, Efthonia, and Livonia, Mall, without diftinction, enjoy thefe rights and liberties, in their perfons, thips, goods, and merchandizes, whether of the product of the earth, or manufactures; and, in time to come, all the aforefaid fhips of Sweden, and all others carrying Swedih goods and effeets, writings and perfons, fhall be free from all fearching, vifiting, meafuring, and other vexations in the paffage of the Sound and the Belt, and that no right of fuperiority or jurifdiction thall be exercifed over them in any thing concerning their paffage, traffic, and navigation; and much lefs fhall any fhips be feized, or any effects taken out of the hips, or any fhips forced into the Danifh fervice, without the confent of the owners.
V. And becaufe the certificates, and the different expofitions and explications of them, have very much contributed to the eftablinhing of the cuftom of fearching of ihips in the paffage of the Sound, and given occafion to the differences that have happened, and to the prefent war between thefe kingdoms: for thefe caufes, and for preventing fuch mifunderftandings in time to come, and for the more eafy diftinguifhing between the free thips and goods of Sweden, and thofe that are fubject to the taxes, it is finally concluded and agreed by thefe prefents, that all Swedifh fhips of war; great or fmall, laded or unladed, whether there be one alone, or feveral together, paffing through the ftraights of the Sound, and failing to Cronenborg (which thall not be practifed in any other place of the paffage of the Sound) Mall ftrike the main fail in paffing by the citadel of Cronenborg, and falute the fame with the ordnance, which falutation thall likewife be returned by the citadel; and, if the fhips of war continue their voyage, without coming to an anchor, it fhall be free for them to fail on without any further ceremony; but, if it happens that any Swedifh man of war come to an anchor in the ftraight of the Sound, and the governor of Cronenborg fend to the captain to enquire of him, in a friendly manner, whence he comes, and defire him to fhew his certificate, without picking otherwife any quarrel with him; the captain fhall not decline fhewing his paffport to the perfon fent by the governor, but they fhall receive and entertain one another with all imaginable refpect and civility, and the captain fhall not be troubled in any other manner whatfoever. And, as for the narrow paffage of the Belt, the Swedifh fhips of war may freely pafs by Nyburgh, according. as the wind and their conveniency will allow tham; but, if they come to an anchor, before, or near the citadel, the fame thing fhall be obferved, that has been already expreffed concerning the citadel of Cronenborg in the ftraight of the Sound.
VI. And befides, that all Swedifh fhips or veffels belonging to her Swedilh majefty's fubjects, and to the inhabitants of her majefty's dominions in Sweden, Finland, Ingria, Efthonia, and Livonia, wholly laden with the goods and effects of the merchants and inhabitants, ihall be according to thefe articles and conventions free from all charge and vexation, provided they have general certificates for their free paffage from ber majefty and her officers in fpecial matters, and in other cafes from the confuls and renators of the towns, to have a juridiction over the Bhips and goods belonging to the citizens and inhabitants of the kingdom, by which it thall be certified in general terms, that the fhips and goods do really belong to the fubjects and inhabitants of Sweden, which certificate lhall be conceived according to the following manner:

A form of the general maritime paffort for a Swedifh fhip,
entirely laded with Swedifh goods; which (changing what entirely laded with Swedifh goods; which (changing what is to be changed) may likewife ferve for foreign fhips, entirely laded with Swedilh goods.

## We confuls and fenators of the town of

 that the thip commanded bybelongs to our town of (or fome other town) in Sweden, and is only laded with gaods belonging to Swedes, and is bound for the ocean, as the mafter and the owners thereof (if they be more than one) have declared before us in our court, defiring this certificate as a proof thereof: the thip and goods being thereby to be exempted from all taxes and vexations in the paffage of the Sound and the Belt, according to the treaties between the two kingdoms. In teftimony whereof, we have caufed the feal of the town to be put to thefe prefents, which we have likewife caufed to be figned by the clerk. Given, \&cc.

Which certificate fhall be thewn and configned in the hands of the officers of his Danifl majefty's cuftom-houfes at Elfineur and Nyburgh, in the paffages of the Sound and the Belt, who thercupon thall be obliged forthwith to difcharge the fhips, with a teftimony that they have paffed with their lading; which teftimony thall be conceived according to the following model:

A model of the teftimony to be given by the officers of tho cuftom-houfes of Elfineur and Nyburgh, to fuch as hew their certificates.

In the year one thoufand
N. N. mafter of the hhip the belonging to the town of B.
has delivered his certificate for fhips and goods, dated at $B$. the day of in the year
In witnefs whereof we have given him this teflimony, 8 c.

Which being done, fuch mafters may freely depart with their goods and men, without any hinderance, prejudice, charge, or vexation.
VII. Ships hired by merchants and inhabitants in Sweden, and only laded with Swedifh goods, thall be treated in the fame manner; and after thewing their certificates conceived in general terms, and leaving the fame at Elfineur or at Ny burgh, and receiving a teftimony thereof (which is to be done without dclay) paying what is due for fhips that are wholly, or partly foreign, without prejudice to the rights of Swedifh perfons and goods, according to their proportions, it fhall likewife be free for them to continue their voyage, without any further trouble or moleftation.
VIII. And fo if any Swedifh merchant-fhip, not laded, pafs through the ftraights of the Sound and Belt, the mafter fhall make it appear (as is already faid) at Elfineur and Nyburgh, by a general certificate, that he belongs to Swedea, Finland, Ingria, Efthonia, or Livonia, after which he thall pay what is due, and depart at his own conveniency, without any other tax, vexation, hinderance, or detention.
IX. If any veffel, great or fmall, pals through the ftraights of the Sound or the Belt, Jaden partly with Swedifh, and partly with foreign goods (which latter are liable to pay all the duties levied at that place) the mafter muft have certificates of all the goods and effects he has aboard, belonging to the merchants of Sweden, Finland, Ingria, Efthonia, and Livonia, in which Thall be particularly expreffed the weight of the goods in fuch manner as one may diftinctly fee all the heavy goods that are uncovered, and are not bound or packed up, with their weight, number, and meafure, according to the cuftom of the fea; fuch as copper, brafs, iron, pitch of all forts, corn, falt, falt-finh, butter, tallow, hemp, flax, and fuch other goods; and, as for fmall goods that can be put up in cafks and barrels, they fhall not be fpecified, but they fhall be marked with a Swedifh mark upon the calks and barrels, and it thall be expreffed in the certificate, that the faid cafks and barrels, and the goods they contain, and which are not fpecified, belong to merchants and inhabitants of Sweden. And for the greater clearnefs of the thing, and avoiding all occafions of difference, there is here under added a model of the faid certificates.

A form of the certificates to be given to the Swedirh thips, laden partly with Swedifh, and partly with foreign goods, which are fubject to pay the taxes; which, making fome alterations, may likewife ferve for foreign hips hired by Swedes.

We confuls and fenators of the town of N .
certify, that, upon the day under-mentioned, P. P. citizen (or inhabitant). of our town of $N$. (or fome other town) in Sweden, appearing before us at our court, declared, that he had mipped on board of the fhip R. of which his owner S. S. and mafter T. T. the number of.
pounds of copper, iron, or flax, or tons of wheat, rye, or barley; or the number of beams, planks, or mafts, or of tons of wine, or the number of cafks or barrels of goods and merchandizes, marked L. L. belonging to Q. Q. citizen (or inhabitant) of the town of C . in Sweden; and the faid P. P. requiring this certificate to indemnify the fhip and goods from all taxes and vexations in the ftraights of the Sound and the Belt, according to the treaties between the two kingdoms; we have granted him the fame, after having caufed it to be fealed with the feal of the town, and figned by the clerk. Given, \&c.

Which certificate agreeing with the quantity of goods, and being thewn to the officers of the Danifh cuftom-houfes at Elfineur and Nyburgh, the faid Swedifh goods, expreffed in the certificate, hhall be free and exempt from all other fearching, vifting, detention, jufticiary proceeding, or confifcation. But, if it happens that there be reafon to learch the fhip for other prohibited goods, or others that are fubjeed to the taxes; in that cafe, fuch goods as fhall be called in queftion; fhall be taken out of the hip and depofited, and examined at Elfineur or Nyburgh, which thall be performed within the fpace of eight days at moft, fo that, within the faid time at furtheft, any Swedifh or other thip, freighted by Swedes, may be free to depart with all the Swedifh goods, without any further retardment; and that the fhips and veffels, merchandizes and effects, belonging to the fubjects and inhabitants of Sweden, Finland, Ingria, Efthonia, and Livonia, be not,
in the leaff tormented with unneceffary fearchings and vexations, by reafon of the faid miftakes and errors.
X. If any fhip of Sweden, Finland, Ingria, EAhonia, or Livonia, be freighted by ftrangers, and laden with foreign goods that are fubject to pay the taxes, the thip and perfons fhal neverthelefs enjoy the liberties, privileges, and immunities, which are rightly due; as by thefe prefent articles are granted to the Swedes, and the foreign merchant thall give an account of his goods, without any violation of the immunities of the Swedes in the ftraights of the Sound and the Belt.
XI. And, that no retardment or damage may be caufed to the Swedifh fhips and goods in their voyages, contrary to the intent of thefe prefents, it has been promifed in the name of his Danifh majefty, that things Thall be difpofed at Elfineur and Nyburgh; that the mafter of the cuftom-houfe, or fome other officer in his place, thall attend at certain hours, before and after noon, every day at the faid cuftom-houfe, there to receive the certificates; and, immediately upon the receipt thereof, to give others to the maters in the form above prefcribed, in fuch manner that the Swedifh fhips and goods may continue their voyages, and freely pais, without any hinderance or moleftation
XII: And, if it afterwards thould happen, that her Swedifh majefty's hips, or thofe of her fubjects, whether they be therr own or hired thips, being forced by tempeft, or otherwife, fhould defire a fafe port in Norway, or any other place of the king of Denmark's dominions, it fhall be freely granted them, and they fhall not be molefted in any manner, neither for taxes, fearches, nor any other thing, but Chall only pay the duties that other friends and ftrangers pay for anchorage, and fuch other conveniencies, in places where fuch things are ufually levied. But, as to their goods and merchandizes, they thall have the liberty to purchafe necef faries for their money; and the Danilh thips of war, and others, fhall have the fame privilege in the like cafe in the ports in Sweden.
XIII. If it happens, that either her prefent Swedifh majefty, or her fucceffors, kings of Sweden, fhould levy foldiers, either horfe or foot, in the kingdoms or dominions of their friends along the ocean, or fend any to the provinces in their neighbourhood of the Baltic fea, or into Oftrogoth, and they pals on one fide or other through the Baltic fea, it is agreed, that her majefty and her fucceffors fhall have entire liberty to do it without any oppofition; provided, however, that there fhall not pals together above 1200 men, and that notice be given to his Danifh majefty three weeks before, that thereby all fufpicions may be removed, and the paffage may be free. But, if any Swedifh officers, or others, would pals through the Baltic fea, with their own horfes and equipages, they may freely do it in one, or feveral fhips, without giving any notice.
XIV. And, to prevent differences between the two kingdoms in time to come, or if the fleets of the two kingdoms meet, or one Chip of war meets another; or if by accident the Swedifh fleet enters into any of the ftraights of the Baltic fea or the Belt, and there meets that of Denmark; or if the fhips or fleet of the latter enters into any place or port where the Swedes are before them; it is agreed in the following manner, that if the fleet of either of the kingdoms meet the other in the Baltic fea, or in the ocean, they fhall mutually receive one another with marks of friendihip, and fhall. falute and honour one another in the fame manner, firing guns according to the cuftom; and neither the one nor the other hall attempt any thing further, nor endeavour to exercife any act of fuperiority, whatever pretenfion they may believe they have; the fame fhall be obferved when one or two fhips meet; but, if one or two fhips of either of the kingdoms meet the fleet of the other, they thall falute it by fring of guns, and ftriking their main topfail, 'till the fleet be pait, or 'till it come to an anchor in fome port, but they fhall not be obliged to ftrike their flags: and, if there be more than two fhips of either fide together, and they form a fleet, they fhall content themfelves to fire guns on both fides without ftriking their fails, and the one fhall not oblige the other to do it.
XV. It hall be free for one, two, three, four, or at moft five, Swedifi men of war, to pals through the ftraights of the Sound or the Belt, without giving previous notice to his Danifh majefty or his fucceffors; and when they are arrived at the Atraight of the Sound, and have faluted after the Swedifh manner, with two guns (as has been already faid) they Ball lower their main toplails before the caftle of Cronenborg 'till they be palt it; and, if it happens that his Danifh majefty's thips or fleet be there before them, they hall be fatisfied with the two guns aforefaid, without being obliged to any thing further, and much lefs thall any other marks of honour or deference be required of them. But if her Swedlh majefty or her fucceffors be obliged to pafs the ftraight of the Sound or the Belt, with a fleet of Chips of war, it is agreed that his Danifh majeity thall have notice of it three weeks beforehand, that the arrival of fuch a flect may give no ground of fufpicion or miftruft; and, fuch notice being given, the Swedes thall have free liberty to pafs without any oppofition or damage to the Danes.
XVI. And as to what concerns the illand of Burgen, whers his Danifh majefty has kept for fome time a gallery, and levied cuftom; his faid majefty by thefe prefents yields, and entirely renounces that practice, and promifes to make ufe of the fame no more, and that henceforth he will not pretend to exact any toll there.
XVII. With refpect to the duty which his Danifh majefty has levied of late years at Gluckftadt, upon fhips and goods going from one place or another to Hamburgh, it is likewife agreed in the following manner, that, as his Danifh majefty is now in a negociation with the Hamburghers, concerning the differences between them, and for abrogating of that cuftom, if they agree between themfelves, and the aforefaid duty be abrogated, the fubjects of his Swedifh majefty who rade that way, fhall alfo enjoy the fame privileges; and though, againft'all appearance, the difference with the Hamburghers about that duty continue, or though they fhould conlent to pay it, in that cafe the Danifh commiffioners have promifed in his Danifh majefty's name, and in that of the duke of Holftein, and have obliged themfelves, that all her Swedifh majefty's fubjects and inhabitants in Sweden, Finland, Ingria, Efthonia, and Livonia, that trade upon the Elbe, hhall be freed therefrom; and that they fhall not be molefted nor detained, by realon thereof, by any of his Danilh majefty's, nor the duke of Holitein's minifters, whether they refide in forts or Mhips; and that they fhall be free from all taxes and uneafy fearchings, and further that they fhall not fo much as be obliged to fhew any teftimonies in writing, and much lefs to produce certificates, or give any other account of that nature.
XVIII. And, as the experience of by-paft times has demonfrated, that the privileges and liberties granted to the Swedes in Deninark and Norway, and to the Danes and Norwegians in Sweden, to trade together, and be exempted from all duties introduced partly by ancient cuftom, and partly by the tranfactions and treaties concluded between the two kingdoms, has given birth to feveral differences, and has even occafioned a hatred and animofity between the kingdoms, and as often fer the king and fubjects of the kingdoms at variance with thofe of the other, infomuch that that has been the principal caute of breaking the ancient friendmip which fubfifted between the two kingdoms, and there has fcarce been any conference between the commiffioners of both parties where that grievance has not been reprefented; befides that, at this time, that liberty cannot be fo conveniently continued as it formerly was. For thefe caufes, it is agreed on both fides, that all immunities of duties and taxes ceale and be removed, for the Danes and Norwegians in Sweden, and or the Swedes in Denmark and Norway, without prejudice of the exemption of duties, and of the free paffage of the Swedes in the ftraights of the Sound and the Belt, and likewife paffage fhall be forbidden to the Swedifh merchants with their merchandizes, to go into Denmark and Norway beyond their limits; and the fame thing fhall be forbidden to the Danes and Norwegians to go into Sweden, as well into the country as into the maritime towns and provinces. However, any Swedifh merchant trading, for the time to come, into Denmark and Norway, fhall bave the privilege of trafficking in the maritime ftaple towns appointed for it, whither it is lawfül for merchants to go; and he fhall there enjoy the fame liberties and privileges granted to other friends and foreigners, according to the laws and flatutes of Denmark, preierving mays the privileges of the towns; and, on the other hand, a Danilh or Norwegian merchant, trading in Sweden or any of the provinces depending upon it, fhall enjoy the fame privileges and liberties of trading in ftaple ports appointed for that purpofe, and in which other foeigners and friends are allowed to come, according to the ftatutes and laws of Sweden, preferving always the privileges of the town. And, to the end that their Swedifh and Danifh majefties may not be troubled and molefted in their kingdoms, they thall difpofe of their fubjects, according as every one's occafion and condition requires.
XIX. The trade and navigation upon the river of Trotheat between Weftgoth and the territory of Bahus, fhall remain under the fame condition, liberty, and privilege, that it anciently was, and thall not be hindered nor interrupted at either of the entries towards Gothburg and Kongel, and all buildings that have been erected, or other things that have been funk in it's channel, that may be any ways prejudicial to the one or the other, Thall be removed, and the channel hall be cleanfed without any oppofition, and eipecially what was thrown into it, to ftop it's entry towards Bahus, thail be taken away, and, after an exact fearch, it's ancient current fhall be reftored to it, and what damage is done fhall be repaired. The Swedes thall not be in any manner difturhed by the Danes and Norwegians, nor thall the latter by them; but, on the contrary, navipation and commerce thall be carried on with equity, and thips fhatt go up and come down the fame river on the fide of Gothburg, without any hinderance, charge, or grievance, as it has been formerly practifed.
XX. And further it is agreed, thar her Swedilh majcily thail have in time to come, as she has had bitherto, a pol-muifie:
at Elineur, and a poft between Sweden and Hamburgh, who fhall pafs on all fides without hinderance or moleftation; and the thall likewife have perfons to carry her majefty's letters, and thofe of her fubjects, and others that are fent out of the kingtom, or into it, and that without any obftacle, retardment, or fearcting; and his Danifh majefty fhall have the like power, that is to fay, to keep an agent at Stockholm, for his own and his fubjects bufinefs.
XXI. The eftates enjoyed by the Swedifh genitry in Denmark and Norway, and thofe enjoyed by the Danifh and Norwegian gentry in Sweden before this war, Thall be reftored to the right owners, who thall poffefs the fame according to the ancient treaties, and according to the laws and ftatutes of each kingdom, without any moleftation or hinderance whatfoever.
X.XII. And, becaufe the war hias occafioned fome confifcations an both fides, and fome loffes to the fubjects whilft it lafted, all things thall be forgot on either fide, upon confideration of this peace, and all that has been adjudged, and actually confifcated, and all private lofers hall remain in the condition they now are, and nothing thall be paid on either fide by the fubjects; nor thall any moleftation be given, nor any action intended againf fuch as by reafon thereof have contracted debts, and have not lawfully paid the fame as well within ăs without the kingdom.
XXIII. But, if any thing be found (whether it be adjudged or not) that is not actually confifcated, and all debts that the fubjects and inhabitants of Sweden had right to demand beFore this war of his Danifh majefty, or the Danes and Norwegians of her Swedifh majelty, upon due proof, thall be forthwith paid on both fides.
XXIV. And if, during the courle of this war, any fentence has been given either in Sweden or Denmark, to the prejudice of any Swede in Denmark, or to the prejudice of any Dane or Norwegian in Sweden, it thall be of no effect ; and it thall now be free for every man to purfue and prove his right.
XXV. As her majefty the queen Chriftiana of Sweden has, during this war, reduced to her obedience feveral of his Danifh majefty's forts, provinces, territorities, and towns in Jutland, Scania, Halland, Belking, Bornholm, and Holftein; and likewife in Stormaren and Ditmarfen, and namely Chriftianople, Pinnenberg, Helfingburgh, Lanfcroon, Laholm, Engelholm, Saltzburgh, Hammerfufen, or by what other names foever they are or may be called, now poffeffed by right of war; for that, and feveral other confiderations, and by the mediation and diligence, and the continual exhortation and perfuafions of his moft Chriftian majefty's ambaflador; her majelty, the queen of Sweden, makes over, and confents to give, to his Danifh majefty and his fucceffors, all the title the may have acquired, by the right of war, to the faid provinces, lands, forts, houfes, fields, towns and territories; all which things thall depend on him and his fucceffors, according to the tenor of this peace; and that, becaufe of the defire the has to prevent the extraordinary miferies with which the continuation of the war would be attended; well confidering how neceflary a reconciliation between the northern kingdoms is, for breaking a way for the peace and repofe of Chriftendom, fo long wifhed for: and, that the care and defire of their majefties, the moft Chriftian king, and the queen regent his mother, to end the differences and wars between thefe kingdoms, may not be without effect, his Danifh majeefy efpecially, being perfuaded by his moft Chriftian majefty's ambaffadors, having promifed in his own name, and for his fucceffor, and the kingdoms of Denmark and Norway, as effectually by thefe prefents', he tonfents and promifes to her Swedifh majefty and her fucceffors, kings of Sweden, and to the faid kingdom, that, in compenfation'for the provinces, fortreffes, towns, and territories, which are to be reftored, he makes over all Jemptland, including Heredalia, \&c. as likewife Gothland, and the town and citadel of Wifby, and the iflands and arms of the fea depending on the fame, as likewife Oefel and Arnfburgh, with all the iflands and appurteriances, and every thing depending thereon, with the fuperiority, royal privileges, and ecclefiaftical and political jurifdiction, tributes, revenues, and dues, by fea and land, in the fame manner as the kings of Denmark, and particularly Chriftian IV. now reigning, has enjoyed the fame; which thall belong, and appertain in time to come, to her Swedith majefty, and her fucceffors to the kingdom of Sweden, to be by them porfeffed by a perpetual right, as the fpecial inftrument of ceffion drawn up for that, and figned and fealed by his majefty, and by the counfellors of Denmark, do more fully teftity. And, befides, his Danifh majefty confents and promifes in his name, and for his fucceffors, and for the kingdom of Denmark, to the end that her Syredin majefty, and her fucceffors, and fubjects in Sweden, Finland, Ingria, Efthonia, and Livonia, may have fecurity for enjoying, without moleftation, the freedom of commerce and navigation in the Atraights of the Sound and the Baltic fea, according to there prefent articles, to give to the faid queen, her fucceffors, and to the kingdom of Sweden, as a pledge and fecurity for the obfervation of the faid articles and conventions for the
thirty years next enfuing, all Halland with it's forts, Holin, Helmftade, and Warburg, together with all the towns and villages fituated within that territory, as well the aforefaid Holm, Helmitadt, and Warburg, as Falkenburg and Kaningllachen, and all the lands and fiefs there contained; according to the ancient bounds, limits, and borders of the aforefaid countries; upon condition that her majefty and her fucceftors, and the kingdom of Sweden, fhall enjoy and poffefs the faid province of Halland, with all it's forts, towns, magiftracies and rights, revenues, ordinary and extraordinary fuperiorities, royal rights and juridictions, ecclefiaftical and civil, and all other emoluments arifing from the lands, waters, rivers, feas, ifles, ports and fields, without excepting any thing whatfoever, by whatfocver name it may be called, in the manner that the kings of Denmark have poffeffed the fame, and efpecially in the manner that the prefent king Chriftian IV. poffefies and enjoys them, and all the inhabitants of that province, as well in the country as in the towns, ecclefiaftical or fecular, gentry and commonalty, inhabiting and dwelling therein, thall not be obliged, during the aforefaid term of thirty years, to take any oath of allegiance, fidelity, or obedience, but to her Swedifh majefty and her fucceffors, and to the kingdom of Sweden, until the faid term of thirty years, without any interruption, be expired, according to the tenor of the prefent convention, as in the particular infrument for the pledge and fecurity given by his Danifh majefty, and figned and lealed by all the counfellors of his kingdom, it is more fully expreffed, And it is further agreed, concerning this pledge and fecurity, That, the aforefaid term of thirry years being expired, his Danifh majelty and the kingdom of Denmark thall be obliged, before the reftitution of the faid province, either to let it fill remain for fecurity to her Swedulh majefty, and to the kings her fucceffors, and to the kingdom of Sweden, or to give in lieu thereof as good a pledge, with which ber faid majefty, and the kings her fucceffors, and the kingdom of Sweden may be fatisfied, that they may have fecurity for the obfervation of the prefent articles.

## Remarks.

As this long article does not particularly concern the marine affairs, I fhould not have troubled the reader with it, if I had not obferved a very remarkable paffage, from which a weighty inference may be realonably drawn, in favour of what we have faid under the article Sea, viz. that the fea is capable of, and fubject to, dominion; which, we think, does very plainly appear to have been the fentiment of the princes concerned, and of the plenipotentiaries and other politicians employed in the management of this treaty, fince in the perpetual and temporary ceflion that the king of Denmark makes, in favour of the crown and kingdom of Sweden, of feveral lands and territories, moft exprefs mention is made of the arms of the fea, feas, waters; sic, depending on the fame, \&c.
As the fifteen following articles have but little relation to maritime affairs, we Thall leave them out, in order to have the more room for what is moft effential to my prefent purpofe. XLI. It is alfo agreed by thefe articles, that all the towns, comprehended in the Hanfeatic league, fhall have a thare therein, and fhall enjoy the freedom of commerce by land and fea in both kingdoms, referving the obfervation of the ancient treaties between thefe kingdoms and the Hanfeatic Towns for a better time; and no injury fhall be done to any town, citizen, or fubject, for any action perpetrated during the war.
XLII. Particularly the town of Dantzick is comprehended in this peace, and fhall enjoy, in the fame manner it has hitherto done, the liberty of commerce by fea and land, in both the kingdoms; and all offences, happened during this war, Ihall be buried in perpetual oblivion.
XLIII. This treaty, for the greater fecurity, thall be ratified, and figned and fealed with the privy-feal of Sweden and Denmark, and likewife fhall be figned and fealed by the counfellors of both kingdoms.
XLIV. Each kingdon thall fend a fplendid ambaffy, into France, to return thanks for their mediation, and invite that kingdom to take care of the obfervation of the treaty concluded the 13 th of Auguft 1645 , \&x.

## REMARKs.

This treaty being fo brought to a conclufion on the 13 th of Auguft, two days afterwards another treaty of guarantee was concluded at Suder-Okra, between the minifters of the queen of Sweden and the States-General, by which thofe two powers agreed, That, in cafe the king of Denmark fhould in any manner infringe his treatics with either party, they fhould mutually affift each other, and fternuoufly vindicate and maintain the freedom and immunity of commerce and navigation, according to the laws of nations to ancient cuftom, and to the paricular conventions and treaties between them.
The 25th of Novernber following, was brought to a conclufion, at Copenhagen, a treaty between Lewis XIV. and
his mother the queen regent of France on one part, and the king and kingdom of Denmark on the other, by which they
I. That there fhall be in time to come, between the two kingdoms, a perfect and inviolable friendihip, \&c.
II. The fubjects of either prince fhall freely trade between the two kingdoms, according to the refpective laws eftablifhed in the fame.
III. His moft Chriftian majefty's fubjects going into Denmark or Norway, about their own or their mafter's affairs, whether concerning commerce or any other thing, ohall have liberty of conscience ; and the king's minifters, refiding there, fhall be allowed the exercife of the Roman Catholic religion in their own houfes.
Iheir own houles. The fhips of either kingdom, entering into the ports of IV. The thips of either kingdom, entering into the ports of
the other, fhall be favourably received and kindly treated, \&cc. V. The fubjects of either crown trafficking by fea, and paffing by the coafts of the other kingdoin, hall not be forced to enter into any port whatfoever, except they be bound thither; and, if they come to an anchor, they thall not be obliged to unlade their goods, nor to exchange or fell them, but thall have free liberty to do what they think molt convenient and advantageous for their affairs.
VI. When French fhips, or fhips hired or laded by Frenchmen, pafs through the ftraights of the Sound, whitherfoever they are bound, or from whatfoever place they come, or what goods foever they may have aboard, they fhall not be obliged to pay any other toll than that which the king of Denmark has ordered in a fpecial treaty upon this fubject, concluded the 27 th of September of this prefent year, under the counter-feal, of which there is a table of the tax or toll. . And if, in time to come, the Dutch pay any thing for fea-marks and fires, the French thall do the fame.
VII. The fubjects of the king of France that thall carry into Norway the product of their country, or fhall go thither in bailaft to purchafe the commodities they have ufe for, hall pay no more for the entry of the goods they carry thither, nor for the cuftom of thofe they purchafe there, than what is now, or fhall be in time to come, impofed upon the king of Denmark's own fubjects.
VIII. And likewife the fubjects of the king of Denmark, trading into France, fhall not pay any other, nor greater duties than the French themelves, or their other friends or confederates; and they fhall be allowed to fell and difpole of their goods to whom they pleafe, and at the price they think fir.
IX. Ships of war and others, going into the ports of either kingdom, fhall be kindly received, paying for the neceflaries they want.
$\mathbf{X}$. No hhips of war or others, belonging to either of the kingdoms, thall be forced into the fervice of the other, without the confent of the prince, the fhips of war belonging to or of the owners of the others; and that, though the captain of the veffel fhould confent.
XI. The two kingdoms thall ufe their utmoft endeavours for the advancement of commerce and navigation, and fhall fupprefs pirates, \&c.
XII. And, as the liberty of commerce does principally confift in maintaining the ftate of things in the weftern, northern, and Baltic fea, in the fame condition that they have been hitherto, both kings fhall ufe their endeavours to preferve entire, and without any alteration, the ancient balance and equilibrium that has been hitherto found to be the fureft foundation for the public peace and tranquillity.
Note, The other five articles of this treaty are not very material to our point.
Signed and fealed at Copenhagen, Nov. 15, 1645, \&c.
Remarks.
The next treaty of this nature that occurs, is that by which the town of Lubeck renewed their old league with the StatesGeneral, who notwithftanding their late accommodation with Denmark, the better to bring that court to a compliance with their defires, gladly entered into a frefh alliance with the faid towns, in which they more plainly difcovered their difcontents with the Danifh impofts upon their fhips than in any precedent treaty; for there they plainly declare their refolution of maintzining the freedom of their navigation in the Baltic; which refolution of theirs, and the meafures they had fallen upon to make it effectual, did probably incline the court of Denmark to come to an agreement with them, by a treaty concluded by his ambaflador at the Hague, the 12th of February, 1647; which treaty, though it be very long, as it contains a great many things that are not unworchy the perufal of the curious and attentive reader, we have thought fit to give the world a full and exact tranfation thereof in the following terms: to which I was fo much the more inclined, that it may ferve to give the world fome diftinct nutions of the great trade that the Hollanders have drove in the Northern Seas.

## Article IIf.

A treaty of commerce concluded between Chriftian IV, king of Denmark, and the Wnited Provinces of the Low CounVol. II.
tries, concluded at the Hague the rath of Ficleriaity, it the ycar 10647 .
I Corfits Ulefeldt, counfellor of ftate, firft manter of the houfhold, and governor of the ifle of Morn, sc. ambenfiador extraordinary from his majelly the king of Demmari:, Norway, \&cc. my moft gracious king and lord, to the high and mighty lords the States-General of the United Provinces, on one part : and we John lord of Ghent, and one of the nobles of Guelderland; Gerard Scaep, ancient burghermatter and counfellor of the univerfity of Leyden; Namin; Keyfer, counfellor and penfioner of the town of Horn in Weft-Friezland; Jacob Veth, counfellor and penfionary of the town of Middleburgh in Zealand; Gilbert Vander Hoolick, ancient burghermafter of the town of Utrecht; Charles Van Roorda, grietman of Idaderabel; John Vander Beeck of Doornick and Crytenberg, burghermafter of the town of Daventer; Hieronymus Eyben, hoovelingh of Niehoue, burghermalter of the town of Groningeh, commifaries deputies, and provided with full powers from the high and mighty lords the States-Geheral of the United Provinces, on the other part: be it known by thefe prefents, that, on the 13 th day of the month of Auguft, in the year laft paft, 1645 , there was a treaty agreed to, and concluded at Chriftianople, between his majefty the king of Denmark and Norway, and the high and mighty lords the States-General of the United Provinces, containing, amongft other things, that, in time to come, there fhould not be levied any greater duties, or toll, in Norway, nor in any other marmer, or upon any other account, than was practifed in the year 1628, 'till his majefty and their high mightineffes fhould agree upon a fure and certain method, according to which the tolls and taxes upon wood fhould be paid at fo much per laft: and, his majefty having offered to treat with their high mightineffes concerning that affair, with all convenient fpeed, we the abovementioned lords commifioners; being for that effect affembled, have, after a diligent negociation, agreed and concluded what is under:
I. In the firft place, all the fubjects of the United Provinces of the Low Countries, from the day of the date of this treaty 'till the 23 d of Auguft, N. S. in the year 1685, hall pay the tax or toll in Norway as follows:
II. All hips, failing from the faid United Provinces of the Low Countries to Norway, fhall repair to five or fix commodious havens of the faid provinces, to be there meafured and marked by fuch as fhall be appointed for that fervice on both fides; for which there fhall be three perfons named by the king of Denmark, befides another perfon who thall have an infpection over them; and their high mightineffes, if they pleafe, may alfo appoint the like number of perfons, with one infpector, alfo on their fide.
III. The fhips thall be exactly and faithfully meafured, according to their depth, lengch, and breadth.
IV. And, that no mifunderfanding may arife between the Danifh and Dutch meafurers and infpectors, we have thought it convenient to propofe a model, according to which thofe calculations and meafures thall be made, copies of which model, or table, as it is here incorporated in this treaty, thall be delivered into the hands of the meafurers and infpectors, who thall be regulated thereby.
A table, or model, for meafuring the fhips, according to the meafure of Amfterdam.
The length hall be taken from the exterior part above the beak or beak-head of the fhips in one end, to the fame part of the beak in the other end.
The breadth hall be taken from the oppofte inner planks of both fides of the hip, before the main-maft.
The depth, or capacity of fhips, fhall be meafured between the main-maft and the mizen-maft, where it is moft hallow, and wideft near the pump, from one fide to the other, and afterwards they fhall meafure from the middle of the meafuring line, through the wood, to the bottom of the hold; after which they fhall proceed in the following manner:
A fhip 125 feet in length, 25 feet in breadth, and 14 feet in depth, with a half-deck the length of the hatches, fhall be adjudged to contain 155 lafts.
A fhip 123 feet in length, $24 \frac{1}{2}$ in breadth, and 14 in depth, with a half.deck, 146 lafts.
A fhip 122 feet in length, $24 \frac{1}{2}$ in breadth, and $13 \frac{1}{2}$ in depth, with a half-deck, 138 lafts.
A hip 120 feet in length, 24 in breadh, and $13 \frac{x}{2}$ in depth, having a balf-deck, 130 lafts.
A fhip 118 feet in length, and 13 in breadth, with a halfdeck, 123 lafts.
A thip 116 feet in length, and 13 in breadth, with a halfdeck, 118 lafts.
A thip 114 feet in length, $23 \frac{1}{2}$ in breadth, and 13 in derth, with a half deck, 112 lafts.
A thip 112 feer in length, 23 in breadth, and 13 in depth, with a half-deck, 107 lafts.
A hhip $x 10$ feer in length, 23 in breadth, and $12 \frac{x}{2}$ in depth, with a half-deck, 101 lafts.
A fhip 108 feet in length, $22 \frac{1}{2}$ in breadth, and $12 \frac{1}{2}$ in depth, wish a half deck, 96 lafts.

Atip

A hip 106 feet in length, 22 in breadth, and $12 \frac{1}{2}$ in depth, with a half deck, 91 lafts.
A fluip 103 feet in length, 22 in breadth, and $12 \frac{1}{2}$ in depth, with a half-deck, 86 lafts.
A hip 95 feet in legth, $21 \frac{1}{2}$ in breadth, and 12 in depth, 73 latts.
A fhip 90 feet in length, $21 \frac{1}{2}$ in breadth, and 12 in depth, 66 lafts.
A fhip 85 feet in length, $2 I$ in breadth, and $11 \frac{1}{2}$ in depth, 60 lafts.
A fhip 80 fect in length, $2 I$ in breadth, and $I I$ in depth, 50 lafts.
A fhip 126 feet in length, 25 in breadth, and 13 in depth, with a complete upper-deck, having four feet in height between decks, fhall be judged to contain about 172 lafts.
A fhip 124 feet in length, 25 in breadth, and 13 in depth, with a full deck, $3 \frac{1}{2}$ feet high, 162 lafts.
A fhip 122 feet in length, $24 \frac{x}{2}$ in breadth, and 13 in depth, with a deck of $3 \frac{1}{2}$ feet high, 153 lafts.
A fhip t 20 feet in length, $24 \frac{1}{2}$ in breadth, and 13 in depth, with a deck $3 \frac{1}{2}$ feet bigh, 445 lafts.
A fhip 118 feet in length, 24 in breadth, and $12 \frac{x}{2}$ in depth, with a deck of $3 \frac{1}{2}$ feet, 134 lafts.
A fhip 130 feet in length, 28 in breadth, and 12 in depth, with an upper-deck 6 feet high, fhall be judged capable of carrying about J 95 lafts.
A fhip 126 feet in length, 26 in breadth, 12 in depth, and having a deck as above, 170 lafts.
A thip 124 feet in length, 25 in breadth, and $I \frac{1}{2}$ in depth, having a deck $5 \frac{1}{2}$ feet high, 166 lafts.
A fhip 122 feet in length, 25 in breadth, and II in depth, with a dack 5 feet high, 156 lafts.
A thip 120 feet in length, $24 \frac{1}{2}$ in breadth, and $I I$ in depth, with a deck $4 \frac{1}{2}$ feet high, 146 lafts.
$\dot{A}$ fhip 118 feer in length, 24 in breadth, and $10 \frac{1}{2}$ in depth, with a deck of $4 \frac{1}{2}$ feet high, 135 lafts.
A flip 116 feet in length, $23 \frac{1}{2}$ in breadth, and 10 in depth, with a deck of $4 \frac{1}{2}$ feet high, 120 lafts.
A fhip 112 feet in length, 23 in breadth, and 10 in depth, with a deck of $4 \frac{1}{2}$ feet high, 113 lafts.
A thip 110 feet in length, 22 in breadth, and 10 in depth, with a deck of $4 \frac{1}{2}$ feet high, 110 lafts.
Such veffels as thall not be found to be precifely of the fame form or burthen abovementioned, thall be taxed by the meafurers and infpectors, conformably to the aforefaid regulation, and in proportion to their burthen.
And the aforefaid calculation being made by the laft of St. Ubes, of eorn or falt, as the veffels cannot be fo deeply laded with wood, becaufe of it's lightnefs and fliffnefs, one fifth part of the calculation of every veffel fhall be abated.
V. The fhips, being meafured in the aforefaid manner, thall be marked upon the fail-yards and upon the beak-heads, fore and aft, witb a hot iron ; and two acts, or certificates, fhall be drawn up for the fhip, which fhall be figned by the meafurers and infpectors of both fides, one of which thall be delivered to the mafter of the fhip, and another depofited in the hands of the magiftrates of the place where the flip is meafured.
VI. There fhall likewife be kept two records, or comptrolis, of fhips fo meafured, which fhall likewife be figned by all the perfons that meafure the fame, one of which fhall be fent into Denmark, to be communicated to the commanders of the caftes, and other officers, that recourfe may be had to the fame, in cafe of need, and the other fhall remain at the difpofal of their high mightineffes.
VII. Such veffiels fhall be meafured before the end of the month of April at lateft, and fooner, if it be poffible, in order to which, both parties Mall ufe the utmoft diligence. VIII. All veffels failing from the United Provinces to Norway, and having aboard a certificate of their meafure in due form, fhall pay, at their going out of the kingdom, according to their burthen, as under: that is to fay, any fhips carrying, ascording to the certificate of the meafures, 125 lafts, ihall pay the tax but for 100 ; and fo all fhips carrying wood out of Norway fhall pay but for four-fifths of their burthen, the other fifth being abated, iq confideration that they have been well and faithfully meafured; concerning which, his majefty fhail give the neceffary orders to all his cuftom-houfes of Norway, ix. Veffels failing from the United Provinces of the LowCountries to Norway, and carrying merchandizes thither, fhall only pay for fuch merchandizes the duties his Danifh majefty's fubjects are obliged to pay; fo that the inbabitants of the faid Low Countries fhall not be at any greater cbarge than thofe of Denmaris and Norway.
X. All the fhips failing from the United Provinces of the LowCountrics to Norway, and having aboard a faithful certificate of their meafure, as is'above expreffed, thall give a rixdollar yer laft, deducting, as is abovefaid, one fifth of the number of iafts.
XI. The faid veffels, lading wood, may likewife, in the fane harbours, lade pitch, tar, ikins, ifinglafs; or any other commodity that may be tranfported, paying the aforefaid duty of one rixdollar per laff, and no more.
XII. This fhall only be underftood of veffels tranfporting
wood from Norway, and in the harbours where wood is fold, but not from other places, and efpecially from Bergen, where that trade is not driven; in which harbours the fubjects of the United Provinces mall pay the fame duties for other goods that his Danifh majefty's lubjects pay; and this fhall only be underftood of veffels laden with wood from Norway, and from the harbours where that trade is driven, and no where elfe. XIII. All the other duties and by-tolls, of what name foever, that have been hitherto impofed upon that trade, fhall be, and are abolified, by thefe prefents, and none other thall be impofed in time to come but that already mentioned, called the toll of the lalt of the wood, of whatfoever name or nature it may be.
XIV. Any of the faid veffels laded with wood, having paid the toll according to the certificate of it's meafure, the faid fifth part being deducted, fhall be no further troubled or molefted with fearching or unlading, under any pretence whatfoever, but thall be in full liberty to depart, upon the payment of the faid duty or toll.
$X V$. There fhall be no diftinction made of the quality of the wood that is laded, whether it be of the beft, or of the middle, or coarfeft fort; and much lefs fhall fuch veffels be fearched, unladed, or detained; fo that, if the faid veffels of the United Provinces of the Low Countries Mould load any oak, or other prohibited wood, no fearch thall be ordained, but the prohibited wood Chall be detained, only when it is found out of the vefiels: in which cafe the fubjects of the faid United Provinces thall not fuffer in any manner, neither in their perfons or effects, nor thall be incommoded or malefted, under any pretence whatfoever.
XVI. The expences laid out in the harbours of Norway, for the prefervation of foreign fhips, fuch as iron rings, and other conveniencies, fhall not be required of the fhips that have been taxed and meafured, as is above expreffed;' 'but, on the contraty, all neceflary conveniencies and affiftance fhall be given them, without any further charge.
XVII. During the term expreffed in this treaty; no alteration nor innovation fhall be made, directly nor indirectly, by heightening the tolls of taxés upon the laft of wood, or in any other manner, or under any pretence whatfoever; but all things hhall remain in the fame flate as is herein expreffed, viz. one rixdollar per laft for every fhip lading wood, and carrying it out of the kingdom.
XVIII. If any new fhip, or others not meafured, fail to Norway to lade wood, they fhall be meafured and taxed in Norway, by three or more Danes or Norwegians, and as many Dutch boat-men, according to the model already inferted; and the exact capacity, or burthen of the fhips, fhall be marked and figned by thofe that meafure them, and the duties paid accordingly, deducting one fifth as above.
XIX. And it fhall be henceforth allowable for the fubjects of the United Provinces of the Low Countries to tranfport from Norway linden trees, afh-trees, elm-trees, wood for fajlyards, and mafts, from 16 to 20 palms, and no difinction fhall be made with regard to the toll between the different forts of wood that are exported, but all iball pay by thelaft, as is above expreffed.
XX. When his Danifh majefty, for the exigencies of his own dominions; fhall have need of linden, afh, and elmtrees, and of fail-yards and mafts of 16 palms, the merchants fhall not, in that cafe, export fuch timber without his majefty's exprefs permiffion, provided, however, that, in that cafe, what is faid and ftipulated in the 15 th article concerning oak be duly confidered.
XXI. If, in any time to come, it fhould happen that the tolls and duties thould be diminifhed in Norway, in favour of, his majefty's fubjects, or thofe of other nations that tranfport wood out of Norway, and notinto the proper dominions of his majefty, but into foreign countries, in that cafe the fubjects of their high mightineffes thall pay no more than they, but be taxed conformably to them.
XXII. The whole without prejudice to the precedent treaty of the $13^{\text {th }}$ of Auguft, N. S. in the year 1645, concluded at Chriftianople, between his fuid majefty and their high mightineffes, which, in all it's parts, fhall remain in full force and power, in as far as it is not altered by this.
XXIII. And as, by the precedent articles agreed to by us the refpective ambaffadors and commiffaries, fuch things as could not be brought to a conclufion concerning the 7 th and 9 th articles of the aforefaid treaty, in the year 1 $6, A 5$, between his majelty the king of Denmark and Norway, and the high and mighty lords the States-General, are now entirely determined: we have reciprocally confented and promifed to earh other, that each party fhall caufe to be delivered to the other, in the name of their refpective mafters, within three months after the delivery of this treaty, a ratification thereof in good and due form : and their high mighrineffes may make ufe of their refident in the Sound, or any other that they think convenient for the delivery of theirs, which, as foon as bis majefty has received, be fhall fign the other, and caufe it to be figned by the prince of Denmark and the lords of the council, in order to the delivery thereof.
XXIV. All which points and articles have been agreed to and concluded by us, the refpective plenipotentiaries and

## M AR

commiffaries mentioned at the beginning of this treaty ：in witnefs whereof we have figned thefe－prefents with cur hands， and confirmed the fame with our feals ；of which two inftru ments have been drawn up of the fame tenor，of which each party has taken one．Done at the Hague the 12th of Fe－ buary， 1647.
The moft illuftrious and moft mighty prince and lord， Chriftian IV．king of Denmark，Norway，and of the Goths and Vandals，\＆c，having been pleafed to fend，to their high mightineffes the States－General of the United Provinces，the Heer Corfits Ulefeldt，Knt，and governor of the ine of Moon，\＆c．firft fteward of the houfhold，and counfellor of ftate to his Danifh majefty，and his ambaffador extraordinary， o negociate with the faid Iords the States－General concerning feveral matters of importance，and，among other things，to agree upon a duty，or toll，at to much per laft，on all the wood tranfported out of Norway：and，at the fame time， his excellency having been acquainted，by an order of their high mightinefles，with the great inconveniencies occalioned o the veffels of the United Provinces navigating through the Sound towards the eaft，by reafon of paffes from the cuftom－ houfe，and the counting of 12 barrels of round feed for a aft，inftead of 24 barrels；the faid lord ambaffador has pro－ mifed and obliged himfelf to ufe his endeavours with his faid najefty for obtaining orders for caufing the faid complaint ceafe，and that the veffels belonging to the fubjects of heir high mightinefles may be and remain free from all ex－ tortion of money，and from the inconveniencies of fearching， and other retardments．And further，that 24 barrels of lint－ feed，and other round feeds，be allowed to the laft，according to the cuftom of merchants，and in confequence of the 3 d article of the lat treaty，concluded between his Danifh ma－ jefty and their high mightineffes，in the year 1645.
And the faid lord ambaffador has further promifed，in the name of his faid majefty，that，in time to come，for prevent－ ing all misfortunes，there fhould be buoys，and other fea－ marks put up，for the utility and conveniency of commerce and navigation，provided that each fhip in her lading fhould pay to his majefty，or his officers，four rixdollars，and each hip in ballaft two．In witnefs whereof，we his majefty＇s aid ambaffadors，and we the commiflaries and deputies of the faid lords the States General，have figned thefe prefents with our hands，and put our refpective feals thereto，by vir－ tue of our reciprocal full powers and procurations；and two inftruments of the fame tenor have been drawn up；one fo each party．Delivered at the Hague，the i2th of February， n the year 1647.
And as，during the years 1645 and 1646 ，feveral laded vef－ els belonging to the United Provinces have pafled the＇Sound towards the eaft，and likewife veffels in the ballaft，without having paid in paffing or repalfing，any toll or impoft，or without having been any－where recorded，fo that on this occafion it might be difficult to ftate a clear account：for thefe caufes，I Crofits Ulefeldt，ambaffador，\＆c．aforefaid， as one part，and we the commiffaries and deputies of the States－General，likewife aforefaid，on the other part，have confented and agreed that the ftates fhall pay for the faid failures，in paying of tolls upon the fum of 120,000 rix－ dollars，which thall be paid in this country；upon the pro duction of his majefty＇s difcharge，by fuch as his faid ma－ jefty fhall authorize for that effect，at the delivery of the ra－ ifications of this prefent treaty，which are to be interchanged on both fides，within three months after the date of thefe pre－ ents．In witnefs whereof，we the ambaffadors of the faid king，and we the commiffaries and deputies of the States－ General，have figned thefe prefents with our hands，and con－ firmed them with our refpective feals，by virtue of our full powers．And two inftruments of the fame terior have been drawn up，and one delivered to each party at the Hague， the 12 th of February， 1647

REMARK
After this account of the fituation of the marine affairs in the arthern countries and the treties between the crowns Sweden and Denmark，the United Provinces and the Hante Towns，we fhall now return to Britain，where civil diffen－ fions were at the greateft height．
The firt of thefe acts that comes in order to be mentioned is a manifefto publifhed by the parliament of England againf the States－General of the United Provinces，the $3^{1} \mathrm{ft}$ of July， 1652，in which they fet forth，That it is an almot incre－ dible ingratitude in the Dutch，fo bafely to requite the gene－ rous efforts by which the people of this nation had refcued them from the tyrannical oppreffion of the Spaniard，at a great expence of Englifh blood and treafure；in return of which，they，reprefent，That the Dutch，after having fevere－ ly fomented the divifions during the civil wars of England， did afterwards，both openly and fecretly，obftruct the peace of the kingdom；and，in the year 1648，made confiderable preparations to carry on a war arainft it．
They likewife call to mind the cruelty and treachery with which they affautted and maflacred the Englifh in Anboyna， and tranfiently accufe them of many other finifter attcmpis of the like nature．

In the next place，they accufe them of naving neglecter the friendly meafures propofed by the parliament of England for accommodating of all differences，and contiming therr mu－ tual liberty and freedom，\＆xc．adding，＇l hat，alter they had rent an envoy to the Hague，and the States had refuled hmi audience，the parliament bavinc fent thither a lecond，be was there mof barbaroufly and villainoully murdered；and the States had not taken any care to punifh the perpetrators of that horrid crime．
They further reprefent，That，while the Dutch ambaffadors were in England，to amufe the government with difingenuous promifes and proteftations，they fecrelly and elandeftinely affifted the enemies thereof，and only fpun out the time with fham pretences，without any likenefs of reality or fincerity． To which they add，That the commonwealth of England having，after the pacification of their own inteftine divilions， fent over a fplendid embaffy to Holland，with fufficient in－ ftructions for ending all former controverfies；and to give all poffible marks of their fincerity and good－will towards thofe of the United Provinces；their ambaffadors were contume－ liounly ufed and reviled，and all forts of indignities offered to them，without any regard to their character，or refpect to the nation they reprefented：they themfelves having been infulted and affronted；and their lervants and attendants abufed to a high degree，and no notice taken，nor fatisfaclion given to the States，for fuch an unaccountable practice．
But that，notwithftanding the fincere inclinations of the commonwealth of England，to cultivate a good friendfip and correfpondence with the United Provinces，they always de－ layed and protracted the negociations concerning the fame； ＇till，feeing the fuccefs the Englifh had evety－where obtained， they at laft fent over their ambaffadors to England，where， when they were arrived，they ftill delayed，under various pretences，the negociations that were fet a－foot，alledging that they were not fufficiently impowered，and pretending to write over about thofe matters to their principals，fo that no－ thing could be determiner＇till the States－General fhould be conveniently affembled；by all which it plainly enough ap－ peared，that the friendifip they affected was no ways real or fincere：
After which their ambaffadors baving，during the conferences， acquainted the parliament that the States had refolved to arm 150 fhips，befides the fleet they already had at fea，which they only did with a defign to protect their trade，and encou－ rage navigation，without any infidious intention againft Eng－ land ；though the States themfelves are not ignorant of the de－ fign they had in fetting out fo great a fleet，and though there was no appearance of any thing like an enemy in thefe feas． To all this，however，the parliament（which they thought to have lulled anleep by thefe pretences）did not give any anfwer， but feduloufly applied themfelves to provide for their own de： fence；and，in the mean time，omitted nothing that was in their power to bring the negociations that were depending with the Dutch to a happy conclufion．
Notwithftanding which，the Dutch immediately got together their whole fleet in one place，under admiral Trump，whofe defign will fufficiently appear to any perfon that confiders his behaviour，joined to fome other paffages precedent to that equipment，and particularly that of a certain Dutch fhip； who，meeting an Englifh man of war，commanded by Capt． Young，and being friendly required by him to pay the bo－ nour that is ufually paid to the fhips of war of this nation， as another fhip in company with the fame had done，and that not only as a cuftomary piece of civility，but as a tefti－ mony of the undoubted right the Englifh have to the domi－ nion of the adjacent fea，which is acknowledged by all the neighbouring princes and republics，and which，particulatly； the States themfelves，and their predeceffors，have acknow－ ledged；the mafter of the faid fhip did neverthelefs refufe to comply with that defire，affirming that it would be deemed a capital crime in him to do it．
This paffage was followed by that hoftile and heinous infult of admiral Trump，perpetrated againft friends and neigh－ bours that had given many remarkable teftimonies of their fincere defire to continue and confirm the fame；and with fo much arrogance and injuftice was that action performed， even during the conterences that were holding in order to enter into a ftricter league，that Trump himielf pretended to ufurp what he refufed to pay to us（though our own un－ doubted right）and carried the affront to fuch a height，that， purfuing the thips of this republic，he attacked them in an hoftile manner，upon their own coafts，and in their own friths and roads，with a defign to begin an unexpected war， in hopes to ruin entirely the trade and navigation of the com－ monwealth of England．
The reft of this manifeflo does only contain fome furthet remonftrances，by which the then government of England endeavoured to vindicate their procecdings agdintt the Stans of Holland，with whom they declare that they are fored， againft their inclination，to go so war；who anfwered the Englifh manifefto with a declaration given at the Hacue，the 2d of Augult following；in which they，on the other hand pretend to lay all the blame of thofe confufions upon the Eing lifh；whofe manifefto，as well as that of the Eutrh，i．
effect, nothing elfe but a declaration of war, as may be obferved by the foregoing compendium of the firft, and the following abridgment of the latter.

## ARticle IV.

A abridgment of themanifefto of the States-General againft the nation and government, \&ic. of England. Given at the Hague the 2 d of Auguft, 1652.

The States General, \&c. being fenfible that all lawful powers being ordained of God, for the good of their fubjects, are not only obliged to govern them with moderation and order, but likewife to endeavour to prevent, and prudently to avert whatever may threaten them from abroad; and being alfo fenfible of the neceffity of living well with, and procuring, by all forts of good offices, the amity and friendihip of other States, and efpecially of their neighbours, knowing that, in cafe of any accidental, or other mifunderftandings, they ought to exert themfelves to the utmof of their power, by endeavouring to remove the fame in a peaceable and friendly manner; they are not, however, ignorant, that, when all other methods prove ineffectual, it is reafonable and neceffary to make ufe of the power that God has put in their hands, and to repulfe vigoroufly and caurageoully, by force of arms, the violence and injuries exercifed upon their fubjects and people, in order to procure fatisfaction and reparation for the damages fuffered, and reftitution for what has been unjuftly taken away.
And accordingly, having bitherto endeavoured to maintain our ancient amity and friendhip with the Englifh nation, and having of late feen that nation divided in itfelf, and torn to pieces by inteftine cormmotions, our hearts were filled with grief and heavinefs, and we took as much care as in us lay, that nothing fhould be tranfported from our country and ports that might foment their divifions, and, by the continuation of the war, might render their cure more difficult, and lefs poffible; but, on the contrary, underftanding that their divifions had produced very great defolations and miferies, and that the famine raged in feveral of their provinces, being thereto required by both houfes of the then parliament, we and our good fubjects were fo fenfibly touched at the recital of fo many complicated miferies and mifchiefs, that, by virtue of our permiffion, granted at the earneft defire of the parliament aforefaid, a confiderable fum of money, amounting to feveral tons of gold, was raifed by the liberality of thefe provinces, and fent over to relieve the neceffities of fuch as were in mifery; for which we received letters of thanks from the faid parliament, confirmed verbally by their refident with us. But, for a further proof of the fincerity of our affection, of which we had given them fuch evident marks, in order to compofe the differences and mifunderflandings between them, we fent over, for the advancement of fo great a work, an embafly to the king and parliament; but the Almighty, whofe judgments are incomprehenfible, not having fuffered their divifions to be terminated by fuch a friendly agreement, that nation having now received a form of government quite different from that it then had, the aforefaid government having, under fpecious pretences, afterwards offered to enter into a treaty of a fair alliance and friendhip with us, believing that they were ingenuous and fincere, and looking upon that project as very convenient and neceffary for the tranquillity and fecurity of commerce and navigation, as well for ourfelves as for all our neighbours and other kingdoms and ftates that fupport themfelves by trade. And, for avoiding all the rifing difficulties and differences occafioned by the concurrence of the fame intereft between the aforefaid government and ours, we gave them to underifand, that the offer they made us was very acceptable; and they having fent over their ambaffadors extraordinary, the Sieurs Oliver, John, and Walter Strickland, we endeavoured by all poffible methods, as much as the conflitution of our government could allow, to find out means to bring that treaty to a conclufion; fo that the faid ambaffadors entering into a conference with our deputies, and the former having delivered general projects, though they were earneftly required by our deputies to explain their general propofitions, and defcend to particularities, a counter-project being propofed to them, when they had but lightly touched the matter, foon after the firft audience, they pretended to be going; but having, after many perfuafions, confented to ftay a little longer, and having preiented a more fpecial project, we fo induftrioufly handled the matter on our part, that they cafily faw there was but little difference between us; and finding us come home to the purpofe, defiring of them a more exprefs and pofitive declaration, they declined that, under pretence of their fudden departure: notwithtanding which, confidering that a fhort delay could not operate any confiderable alteration in the thing, we preferring the excellence and benefit of fo good a work to the outward ceremonics and formalities, upon the proteftation the Gid ambaffador made us, at their departure, of the fincerity of the intentions of that government towards us, we refolved to fend a confiderable ambafiy into England, which we accordingly did, in the month of December laft;
though that government, fince the departure of their ambafladors had publifhed a ccrtain decree that nether favoured of the good neighbour nor the good friend, fince thereby the accuftomed liberty of commerce, and the correlpondence between the two nations, was very much diminifhed. Neverthelefs, in hopes that all diffenfions thould have been fuddenly ended by the treaty, we did our utmoft endeavours to bring it to a happy conclufion; but, on the contrary, the faid government, far from having any regard to the requefts we made them, that the execution of that decree fhould be fut pended 'till the conclufion of the treaty, and the fhips and goods of our good fubjects, that had been feized and taken by them, reftored to the proprietors, they did under feveral pretences, attack on every fide our veffels; and pirates, under their cloak, did the fame every where, and no reparation could be obtained by our ambaffadors in any manner.
And, though fuch a multitude of reafons gave us juft caufe to right ourfelves and fubjects, by way of reprizals, we abfolutely refufed to do it, and wouid not fuffer any injury to be done them, in hopes that all things fhould have been compofed according to equity and juftice. And having endeavoured, on one fide, by our ambaffadors, and, on the other fide, having equipped a confiderable fleet, to put a ftop to the infolence of the pirates, we at the fame time declared That it was not with any intention to incommode any of our friends, or allies, and particularly them with whom we defigned to entertain a good friendihip and correfpondence.
And though this declaration ought to have been taken as a mark of our fincerity and candour, the aforefaid government did only endeavour, under various pretences, to weaken our flates, by ruining of our commerce, as does plainly appear by that inftance of their admiral, who meeting with vice-ad miral Trump, whom we had made commander of our fleet, the faid Trump, not having foon enough (according to his fancy) lowered his flag, though it be evident, by the teflimony of feveral indifferent perfons, that he was actually a ftriking his fails, and occupied in hoifting his boat to fend and compliment the faid admiral; he neverthelefs gave him a ull broadfide, and forced bim and the fhips that were with him to defend themfelves; who, notwithftanding, were fo moderate, although they were fuperior in number, and could have deftroyed the aggreifors, if they had pleafed, they only kept upon the defenfive : to which difcretion their adverfaries had fo little regard, that, another of their fquadrons coming up, they fell upon the hindermoft veffels of our feet, deftroying one, and taking another with them. Which action, that the regency may cover with fome fpecious pretences, they have caufed a report to be fpread abroad, as if we had been the firf aggreflors at that rencountre, and accordingly put themfelves in a pofture to demand reparation of the injury they pretend to have received from us.
But, on the contrary, that accident no fooner came to our knowledge, but we protefted folemnly, by our ambaffador that it had not been committed by our order, and that we were entirely ignorant of what had paffed, as more fully ap peared by a letter from our admiral, in which he recited, word for word, the commiffion and inftructions we had given him. And, for a further proof of the fincerity of our intentions to live well with that ftate, we earneftly prayed that an exact enquiry might be made into the matter, and that the treaty, which we thought to be in a very great forwardnefs, might not be retarded by reafon of that unlucky rencountre, by which we had been mightily furprized.
But the aforefaid government, having no regard to fuch a reafonable defire, did forthwith give order to feize both men of war and merchant fhips, as many as they poffibly could find belonging to us and our fubjects; which accordingly has been done, and all forts of injuries and violences whatfoever committed againft us; by which a great deal of innocent blood has been thed, and many of our good citizens ruined. Notwithftanding all this ill ufage, we have fent a fecond ambaffy extraordinary, to endeavour to bring all matters, and efpecially that difference concerning the rencountre of the two fleets, to a friendly accommodation; they injurioully alledged, for covering their own pernicious and odious defigns, that we had equipped that fleet on purpofe to attack them as enemies, though the Heer Hadrian Pauw, our ambaflador, whofe employment of penfionary of Holland giving him a right to be prefent at all the aflemblies and deliberations of the States, did moit folemnly proteft, that never any fuch thing had been projected here, and that, far from aniy commillion to do the Englihh, or any other body any injury, the admiral had orders to give that government all poffible marks of our peaceable and friendly difpofitions.
And, becaufe the aforefaid regency pretended to make quite another thing of that action than it really was, and demanded reparation for what was paffed, and affurance that no fuch thing thould happen in time to come, our ambaffador aforefaid toid them openly, That, in order to remove that flum-bling-block, or principal difficulty occafioned by the accidental combat between the two feets, and the eafier to bring the treaty (which was then fo far advanced) to a happy conclufion, a convenient regulation fhould be eftablifhed, and punctually obferved in time to come, by the veffels of both nations, pro-
tefting
tefing that this fate had never any thought of difpeting with the Englifh nation the honour and dignuy we had hitherto yielded them; requiring afterward,, that, daring the negociations, all hoffile atrempts and actions flould ceafe; and farther defining, that a due enquiry might be made into the whole matet, with promife that, if cout ad miral fhould be found to be the aegreffor, the States thourd not only difown the act, but punith the actor according to the importance of the thing; upon condition that the Englifh hould treat their admiral in the fame manner, in cale he fhould be found to be in the wrong.
But they ftill rejecting all means of reconciliation, and refufing themfelves to propofe any project, by which things might be brought to an accommodation, did continue to leize and plunder our fhips, and, at laft, were not ahmamed to demand of us an immenfe fum of money for the lolis and damage they faid they had fuftained, and the charges they had been put to, upon account of the fleet we put to 'rea; after payment of which fum, or fecurity given for the fame, all acts of hoftility fhould ceare: fo that they, having heaped up injuries upon injuries, and committed all forts of violences againft us and our good fubjects, with a defign, by all thele infupportable proceedings, by ruining our trade, to weaken our ftrength at fea, and fo take poffeffion of the imaginary empire to which that government pretends over the ocean, and, beginning with us, to extend it over all other nations, and render them tributary, if they could. For there caufes, being refolved to make ufe of the power that God has put into our hands for our own defence, and that of our good fubjects, \&c.

## REMARKs

The following lines of this manifefo contain, in fum, a declaration of war; which being made public at the Hague, the 2d of Auguft, 1652, the 5th of December following there was an ordinance publifhed by the States-General, forbidding their fubjects all commerce with England, and withall exhorting other nations to abftain from fuccouring the Englifh with fuch things as might be neceffary in the war, and fo might fall under the notion of what is taken to be in that cafe contraband goods, according to the cultom of nations; threatening, otherwife, to feize and conficate the fame, as in the aforefaid ordinance is more dargely expreffed; with which we fhall not trouble the reader, flince it is not material to our prefent purpofe.
The Dutch, being thus entered into a wär with England, in the end of the year 1652 , were glad to take advantage of the mifunderftandings which then arofe between this country and Denmark, and ro concluded a treaty of alliance with Frederic III. then reigning in that kingdom, containing in fub-fance.-- That the Englifh having not only paffed the Sound with armed merchant hips, but likewife with a fleet of eighteen men of war, without giving any previous advertaiement; and having likewife feized and taken feveral of his Danifh majefty's thips at fea, and detained others in England, and in divers ways interrupted the free courfe of trade; an edict fhould be publifhed forthwith after the figning of the treaty, whereby all Englifh thips, whether men of war or others, hould be forbid, under pain of confifcation of thips and goods, to pais and repafs the Sound or the Baltic fea, during the continuation of the war with Holland.
That the king of Denmark, for the fecurity of commerce, fhould keep, in and about the Sound, the number of twenty Thips of war well equipped, according to a lift already given, from the firt of April 'till the firft of November yearly; and, if any of them be loit, he fhall fupply their place with others of the like burthen.
That the States fhall pay the king 192,000 rixdollars yearly, for his charges during the war, \&c.
That they hould mutually aid and affist one another againft all enemies whatfoever, by fea and land.
That the faid twenty Danifh men of war hould, at the requeft of the minifters of the States, fail to attack the Englifh in Cartegat and Schagrack, but no farther into the northern fea, except in fome extraordinary cafes.
That the Danifh and Dutch fhips meeting in the north, or elfewhere, Mould jointiy attack the Englifh, and do them what harm they could.
That they fhould mutually protect one another's fubjects, ihips and effects, in both countries.
That, in cafe of a conjunction of both fieets, the Danifh admiral Ihould have the firf voice, and then the Dutch admiral, and fo a Danith and Dutch officer of equal poft, alternatively fhould give their voices, the Dane always firft.
That, if their united fleets fhould take any prizes, the fame fhould be difpofed of in the country, which had moft fhips at the taking of the prize; but that not without the privity of the refident of the other councry, and to his fatisfaction. That the fhips of war of either fide fhould affift the other with fuch neceffaries as they might have occafion for, at a reafonable rate; and that they might refit and provide themFelves in each others ports and harbours, with the permiffion of the governors or magiftrates thereof; and that privateets, VoL. II.
\&ic. might carry their prizes into one ancticis's port:, and fhould there receive protection.
That fuch other princes, ftates, and potentates, as thought fit, might enter into the league.
That all former treaties thould fubfift.
That this treaty fhould fubfit 'till the liberty of ecmmerce apd navigation was refored, and the difturbers theitus brow.gh to redionable terms.
That neither of the allies fiould make peace nor truce will. out the other.
That, if the twenty Danifh men of war were not a:l in ford order and condition, a proportionable dedustion hazuat be made out of the fubfidy pronimfed, \&x.

## REMARES.

The effeat of this good underntanding between the Dances and the Dutch appeared by another treaty concluded between thore two powers at Copenhagen, the 26 th of September of the following year, 1053; by which that of 1644, touching the impofts in the Sound, is annulled, all former treaties in favour of the United Provinces renewed, and their ment of war allowed to lie in the roads of Lubec, and before E1fineur ; and are likewife (obtaining his majelty's permiffion) allowed to be cleaned and refitted, even at Copenhagen; with feveral orber benefits and privileges of that nature.
But, notwithftanding this frict union with the crown of Denmark, the Dutch, beginaing very foon to be wealy of the war with this country, were glad to relinquifh all other advantages to conclude a treaty of peace, of which here follows an abftract.

An abflract of a treaty of peace and union between Oliver Cromwell, as protector of England, and the United Provinces of the Low-Countries.
I. In the firft place, it is agreed, that, from this day forth, there fhall be a firm and inviolable peace, and fincere frendfhip, \&c. between the republic of England, and the StatesGeneral of the United Provinces of the Low Countries, and he lands, regions, and cities, fituate under their jurifdiction without difinction, and between their people and inkabitants of any degree whatfoever.
II. That henceforth all enmity and hoftilities fhall ceafe.
III. That all offences, injuries, damages, and charges, fuffered after the 18th of May, O. S. 1652, thall be entirely buried in oblivion; and no fuits thall be moved, nor actions be intended for the fame, excepting fuch depredations as hall henceforth be committed in the Britifh feas, after the fpace of twelve days, and between the Britioh feas and Cape St. Vincent fix weeks; and thence in the Mediterranean fea, and to the equator, afier the fpace of ten weeks, and beyond the equator after eight months from the publication of this treaty, or immediately after due notice of the peace ; and reftitution thall be made of all things taken, and injuries done, after that time.
IV. That all prifoners of war, of whatfoever degree or condition, and in whatoever place they be, fhall be let at liberty without ranfom.
$V$. That fuch as attempt to diffurb the peace of either ftate, Thall be reputed enemies.
Note, The fix next articles are not much to our purpofe.
XII. It is agreed that the fubjects of either flate fhall freeJy travel through and trade to all the dominions of the other in Europe, without prejudice of the laws and cuftoms of particular places, \&c.
XIII. It is likewife agreed, that as well the Chips of war, as the other fhips of the United Provinces, meeting with the fhips of war of this fate in the Britifl feas, fhall ftrike their flag, and lower their topfail, in the fame manner as has been done in any former time, under any government whatfoever. XIV. That, for the greater fecurity and encouragement of trade, all pirates be duly punifhed in the dominions of either ftate, and the effects, feized in their cuftady, reftored to the tight owners, if any can be found.
Note, The fout next articles are foreign to our prefent purpofe.
XIX. That the merchants, mariners, failors, and pilots, \&c. of each ftate, nor their fhips, goods, nor effects, thall either be detained or arrefted, nor forced into the fervice of the other, without an abfolute neceffity; in which cafe too, fatisfaction thall be given for the lame.
XX. That the flips of war of either fate fhall take into their protection, and under their convoy, all flips belonging to the other ftate, as long as they fteer the fame courfe with them.
XXI. That if the flips belonging to the fubjects of one of the ftates be taken in the ports of the other, by thore of a third nation, the fate under whofe jurifdiction fuch hips are taken, fhall do their endeavours to recover the fame.
XXII. That if any injury fhall be done on either fide, no letters of reprizal fhall be granted 'till three months after juflice has been demanded in a friendly manner, and refuft.
XXIII. That
XXIII. That fuch as obtain letters of reprizal of either fate, hatll give in fecuric; before the judge, which delivers then the eame, for their behaviour.
XXIV. It is further agreed, that the veffels of both nations, whether flips of war or others, fhall be free to enter into each uther's ports, and there buy provifions and other neceffaries, or reft, if need be; provided always, that not above eisht thips of war enter into any port of either ally, except they be forced in by tempeft or enemies; in which cafe they fhall forthwith acquaint the governor, or chief magillrate of the place, and thall not remain any longer there than neceffi:y requires.
$X X V$. It is likewife agreed, that the Dutch chall do juftice upon all thofe concerned in the तlaughter of the Englifh at Amboyna, if there be any of them remaining.
'ithe following articles of this treaty only contain fome fii$p$ lations for 1 eceiving the king of Denmark into it, and for procuring the reftitution of fome Englifh effects feized in that country, and reparation of damage, \&c. together with fome other things no ways material to our purpore, and therefore I fhall pafs by them.

## REMARKS,

The next important marine treaty that occurs, is one between bis majelty king Charles II. after his reftoration to his dominions, and the States-General of Hiolland; in which they compore all ancient difference, and amongt other things cxprefisly confirm that former article, concerning the homage to be puid by all Dutch thips to Englifh men of war, which artcie only we thall here infert.
Art. X. It is litewife agreed, that the fhips and veffels of the faid United Provinces, as well men of war as others, meeting any of the ihips of war of Great-Britain, within the extent of the Britilh feas, fhall frike their flag, and lower their main topfail, in the fame manner that it has been obferved in any former time whatfoever.
The next treaty that followed after the war between GreatBritain and Holland, was a treaty of peace and alliance concluded between king Charles II. and the States-General. the 2 ift of July, O. S. 1667.
And, as the firft eighteen articles of that treaty do not particularly relate to marine affairs, the nineteenth being precifely the fame with the tenth article of the precedent treaty, but juft now inferted, we fhall begin at the twentieth article, and infert the reft of the treaty in the fame order we find it. XX. And, for the greater freedom of commerce and navigation, it is agreed and concluded, that the faid king of Great Britain, and the faid States-General, fhall not receive into their havens, cities, and towns, nor fuffer that any of the fubjects of either party do receive pirates or fea-rovers, or afford them any entertainment, affiftance, or provifion, but fhall endeavour that the faid pirates and fea-rovers, or their fharers and abettors, be found out, apprehended, and fuffer condign punifhment, for the terror of others: and all the fhips, goods, and commodities, piratically taken by them, and brought into the ports of either party, which can be found: nay, although they be fold; fhall be reftored to the right owners, or fatisfaction fhall be given, either to their owners, or to thofe who by letters of attorney thall challenge the fame; provided the right of their property be made to appear in the court of admiralty, by due proofs according to law.
XXI. It fhall not be permitted to the fubjects of the faid king of Great-Britain, and the inhabitants of the kingdoms and countries under his obedience, or to the inhabitants and fubjects of the faid United Provinces, to do or offer any hoftility or violence to each other, either by land or by fea, upon any pretence or colour whatfoever : and, confequently, it thall not be lawful for the faid fubjects or inhabitants to get commifions or letters of reprizal from any prince or ftate, with whom either of the confederates is at difference, or in open war: and much lefs, by virtue of thofe letters, to moleft or damnify the fubjects of either party. Neither fhall it be lawful for any foreign private men of war, who are not fubjects to one or the other party, having commifions from any other prince or ftate, to equip their fhips in the harbours of either of the aforefaid parties, or to fell or ranfom their prizes, or any other way to truck, as well the fhips and goods, as any other lading whatfoever. And it fhall not be lawful for them to purchafe any provifions, but what Shall be neceffary to bring them to the next port of that prince, from whom they obtained their faid commiffions. And, if, perchance, any of the fubjects of the faid king of Great-Britain, or of the faid States-General, fhall buy or get to themfelves by truck, or any other way, fuch hip or goods which have teen taken by the fubjects of the one or he other party; in fuch cafe the faid fubjects fhall be bound to reftore the faid fhip or goods to the proprietors without any delay, and without any compenfation or reimburfement of money paid or promifed for the fame; provided that they make it appear before the council of the faid king of GrearBritain, or before the States-General, that they are the right owners or proprietors of chem.
XXIL. That in cafe the king of Great-Britain, or the faid

Sates-General, do make any treaty of amity or alliance with any other kings, republics, princes or flates, they fhall therein comprehend each other and their dominions, if they defire to be therein comprehended, and hall give to the other notice of all fuch treaties of friendfhip or alliance.
XXIII, That in cafe it happens, during this friendfhip, confederacy, and alliance, that any thing thall be done or at tempted by ary of the fubjects or inhabitants of either party againt this treaty, or any part thereof, by land, fea, or frefh waters, neverthelefs this amity and alliance between the faid nations fhall not thereby be broken or interrupted, but mall remain and continue in it's full force ; and that only thore particular perfons thall be punifhed, who bave committed any thing againft this treaty, and none elfe; and that juftice fhall be rendered, and fatisfaction given to all perfons concerned, by all fuch who have committed any thing contrary to this treaty, by land or fea, or other waters, in any part of Europe, or any places within the Straights, or in America, or in any lands, illands, reas, creeks, bays, rivers, or in any places on this fide the Cape of Good Hope, within twelve months fpace after juftice fhall be demanded; and in all places whatfoever on the other fide of the Cape (as hath been abovefaid) within eighteen months next enfuing, after demand of juftice thall be made in manner aforefaid. But in cafe the offenders againft this treaty do not appear, and fubmit themfelves to judgment, and give fatisfaction within the repective times above expreffed, proportionably to the diftance of the places, they thall be declared enemies of both parties, and their eftates, goods, and revenues whatfoever, thall be confifcated for the due and full fatisfaction of the injurics and wrongs by them offered; and their perfons alfo, when they come within the dominion of either party, fhall be liable unto fuch punifhoments as every one chall deferve for his refpective offences.
XXIV. That the fubjects of the faid king of Great-Britain, and thofe which trade under his jurifdiction, may freely and fecurely travel in all the provinces of the Low-Countries, and all their dominions in Europe, and through them by fea or land pafs to other places there or beyond them, and through all quarters of the United Provinces, cities, forts or garrifons whatfoever, which are in any parts of the United Provinces, or elfewhere in their dominions in Europe, as well they themfelves exercifing trade in all thofe places, as their agents, factors, and fervants, may go armed or unarmed (but, if armed, not above forty in company), as well without their goods and merchandizes as with them, wherefoever they pleafe. The people alfo and inhabitants of the United Provinces fhall enjoy the fame liberty and freedom in all the dominions of the faid king in Europe, provided that they, and every of them, do, in their trade and merehandizing, yield obedience to the laws and flates of either nation refpectively.
XXV. That, in cafe the merchant-fhips of the fubjects of either nation chall by ftorm, pirates, or any other necelfity whatloever, be driven into any haven of either dominion, they may depart fecurely at their. pleafure, with their fhips and goods, without paying any cuftoms or other duties, provided they break no bulk, nor fell any thing; nor fhall they be fubject to any moleftation or fearch, provided they do not receive on board any perfons or goods, nor do any thing elfe contrary to the laws, ordinances, or cuftoms of the places, where they (as aforefaid) thall happen to arrive.
XXVI. That the merchants, mafters, and feamen of either party, their fhips, goods, wares, or merchandizes, fhall not be arrefted or feized in the lands, havens, roads, or rivers of the other, to ferve at war, or any other ufe'; by virtue of any general or fecial command, unlefs upon an extraordinary neceffity, and that juft fatisfaction be given for the fame; but fo as the fame fhall not derogate from the feizures and arrefts duly made in the ordinary courts of juftice of either nation. XXVII. That the merchants on both fides, their factors and fervants, and alfo the mafters and other feamen, as well going as returning by fea and other waters, as alfo in the haven of either party, or going on Chore, may carry and ufe, for the defence of themfelves and merchandizes, all forts of weapons, as well offenfive as defenfive; but, being come into their lodgings or inns, they fhall there lay by and leave their arms, until they be going on board again.
XXVIII. That the men of war, or convoys of either nation, meeting at fea any merchant-1hip or thips belonging to the fubjects of the other, holding the fame courfe, or going the fame way, fhall be bound, as long as they keep one courfe together, to protect and defend them againft all and every one who would fet upon them.
XXIX. That if any fhip or thips of the fubjects of either nation, or of a neuter, be taken by a third party in the harbours of either, not being of the fubjects or inhabitants of either nation, they, in or out of whofe haven or juriddiction the faid fhips hall be taken, fhall be bound to endeavour, with the other party, that the faid fhip or thips be purfued brought back, and reftored to the owners; but all this fhall be done at the charge of the owners, or whom it concerns. XXX. That fearchers, and other like officers on both fides, fhall regulate themfelves according to the laws of cither na
tion, and fhall not impore or demand more than they are al lowed by their commilfions or inftructions.
XXXI. That if any injury be done or practifed by either nation, or the fubjects of the fame, againtt the fubjects' of the other, or againit any of the articles of this prefent treaty, or againf common right; yet neverthelefs no letters of reprizal, marque, or counter-marque, fhall be granted by either fide, 'titl juftice hath been firf demanded according to the ordinary courfe of law; but, in cale juftice be there denid or delayed, then that the faid king of Great-Britain and the faid Stares-General, or commiffioners of that nation, whole fubjects or inhabitants have fuffered the wrong, fhall publickly require juftice from that other party, where (as aboveraid) it was denied or delayed, or from that power appointed to hear and decide fuch difference, that there may be a friendly compofure, or due procefs' of law. But if itiil there happen more delays, and neither juftice be adminiftered, nor fatisfaction given within three months after fuch demand, that then letters of reprizal, marque, or counter marque, may be granted.
XXXII. It is alfo agreed, if at any time it happen (which God of his mercy forbid) that the differences, now compofed between his faid majelty and the faid States-General, fhould fefter and break out again into open war, that then thofe fhips, merchandizes, or any kind of moveables of either party, which nall be found to be and remain in the ports, and under the command of the adverfe party on either fide, fhall not, for all that, be confifcated, or made obnoxious to any inconvenience; but the fpace of fix monith fhall entirely be allowed to the fubjects and inhabitants of either party, that they have leifure to tranfport from thence' the forementioned things, and any thing elle that is theirs, whither they thall think fit, without any kind of moleftation.
XXXIII. That they who have obtained private commiffions from either party, before they receive fuch commiffions, fhall give good and fufficient fecurity before the judge of the court where they receive fuch commiffions by refponfible men, who have no part or fhare in fuch fhips, that they fhall do no damage or injury to the fubjects or inhabitants of either fide. XXXIV. It is alfo' agreed and concluded, that the rubjects and inhabitants of either party fhall always have free accefs to each other's fea-ports, there to remain, and from thence to depart with the fame freedom; and not only with their merchantfhips and lading, but alfo with their men of war, whether they belong to the faid king or States-General, or unto fuch as have obtained private commiffions, whether they arrive through violence or tempeft, or other cafualty of the feas, or to repair their fhips, or to purchafe provifions, fo they exceed not the number of eight men of war, when they come there voluntari; nor thall remain longer in the havens or places adjacent than they fhall have a juft caufe to repair their faid fhips, or to purchafe provifions, or other neceffaries : and, if a greater number of men of war fhould upon occafion defire to come into fuch ports, they thall in no cale enter thereinto, until they have firit obtained leave from thofe to whom the faid havens do appertain, unlefs they be compelled fo to do by ftorm, or fome force or neceflity, whereby they may avoid the danger of the fea : in which cafe alfo they fhall prefently make known the caufe of their coming, unto the governor or chief magiftrate of the place, and fhall ftay no longer than the governor or chief magiftrate fhall permit them, and fhall not commit any acts of hoftility or other prejudice in the aforefaid havens, during their abode there.
XXXV. Furthermore, it is agreed and concluded, that both parties thall truly and firmly obferve and executa this prefent treaty, and all and every the matters contained therein, and effectually caufe the fame to be oblerved and performed by the fubjects of either nation.
XXXVI. Alfo, for further caution and affurance, that this treaty and confederacy thall be duly and bonâ fide obferved on the part of the faid States-General of the United Provinces and their people, it is concluded and agreed, and the faid States-General by thefe prefents do agree, and firmly bind themfelves, that all, and every one of whom they, or the ftates of the provinces, fhall at any time chufe, appoint, or make captain general, governor, or chief prefident, or ftadtholder, general of armies or military forces by land, or admiral or general of the fleets, fhips, or forces at fea, fhall be bound and obliged by oath to confirm this treaty, and all the articles thercof, and promife facredly upon affidavit, that they fhdll as far as it is polfible, religioufly obferve and execute the fame, and, as much as concerns them, caufe the fame to be oblerved and executed by others.
XXXVII. Under this prefont treaty of peace, thofe fhall be comprehended, who may be named by either party with com. mon confent before the exchange of ratifications, or within fix months after. But, in the mean time, as the covenanting parties do thankfully acknowledge the friendly offices, acd unwearied endeavours, whereby the moft ferene king of Sweden, interpofing his mediation, hath; through the alliftance of God, promoted and carried on this bencficial work of pacification, unto the defired coriclufion; fo, to teftify their like affection, it is decred and covenanted by the com. mon confent of all the parties, that his above mentioned ma-
jefty of Sweden, with all his kingdoms, dominions, provinces, Sc. be comprehended in the prefent pacification, in the moft effectual manner that may be.
XXXVIII. It is aifo covenanted, concluded, and agreed, that the prefent treaty, and every thing therein container, Thall be confirmed and ratified by the faid king of Great-Bri tain, and the faid States-General of the United Provinces, by letters patents on both fides, fealed with the great feal in due and authentic form, within four weeks next enfuing, or fooner, if it can be done; and that, within the faid time, the ratifications on both fides fhall be exchanued at Breda; and that, prefently after the delivery and exchange of the fame this treaty and alliance thall be publifhed in fuch form and place as is ufual

Done at Breda the $\frac{7 x}{3 x}$ day of Juty, 1667 .
The fame day was likewife concluded andther treaty concerning marine affairs; but, as that was only the forerunner of another of the $\frac{7}{17}$ of February, $1667-8$, we Aall only infert the latter, which is more methodical and politive, and confequently fitter for our purpofe.

Articele VI.
Articles touching navigation and commerce, between the moft ferene and mighty prince, Charles II. by the grace of God, king of England, Scotland, France, and Ireland, 8 cc . and the high and mighty lords the States-General of the United Netherlands, concluded at the Hague the $\frac{?}{12}$ of February, 1667-8.

Whereas by the blefling of almighty God, for the mutual fafety of the two parties, as well as the common good of Chriftendom, a perpetual defenive treaty was concluded; and figned on the 23 d day of January laft paft, between the molt ferene and moft potent prince Charles II. and the high and mighty Jords the Srates General of the United Netherlands, with ftipulation of confiderable fuccours, to be mutually given by the parties, as well by fea as land: and whereas the faid king and fates did on the fame day; and by another inftrument, readily enter into a folemn treaty and agreement for compofing the affairs of their neighhours, and reftoring peace to Chriftendom, fo as nothing feems now remaining that can at any time hereafter interrupt a friendfhip and alliance renewed with fo equal defires, unlefs fuch controverfies as may otherwife hereafter happen to arife about determining the different forts and natures of merchandize; which, being left dubious and uncertain, would give occation to the further growth to fuch differences : and therefore, that it may appear with what fincerity and good faith, the faid king, and the faid fates, defire to preferve and entertain, not only for the prefent, but to all pofterity, the amity they lately contracted between them, they have at laft, for the taking away all ground, not only of differences and mifunderftandings, but even of queftions or difputes, and fo utterly to cut off the hope and expectation of thole, whoever they are, that may think it their intereft, by new controverfies, to endeavour the difturbance or interruption of the faid peade, mutually agreed on thefe following articles, which are to be on both fides, and for cver oblerved as the meafure and rule of fuch maritime affairs, and mutual fettlement of trade, or at leaft fo long, 'till by the joint confent of both parties, commiffioners be appointed, and do meet in order to the framing a.more ample treaty concerning this matter, and the laws and rules of commerce and navigation, as by farther experience fhall be found moft advantageous to the common good of both parties.
I. All the fubjects and inhabitants of Great Britain may, with all fafety and freedom, fail and traffic in all the kingdoms, countries, and eftates, which are or thall be in peace, amity or neutrality with Great Britain, without being troubled or difquieted in that liberty by the fhips of war, gollies; frigates, barks, or other veffels belonging to the Stares-General, or any of their fubjects, upon occafion of the hoftilities which may hereafter happen between the faid StatesGeneral and the abovefaid kingdoms, countries, and eftates, or any of them, which are or fhall be in peace, amity, or neur rality with Great Britain.
II. This freedom of navigation and traffic fhall extend to all forts of merchandize, except thofe of contraband.
III. This term of contraband goods is underitood to comprehend only all forts of fire-arms and their appurtenances; as cannon, mufquets, mortar-pieces, petards, bombs, granadoes, fire crancels, pitched-hoops, carriages, refts, bandcliers, powder, match, faltpetre, bullets, pikes, finords, morions; head-pieces, coats of mail, halberts, javelins, horfes, great faddles, holfters, belts, and other utenfls of war, called, in French, Affortiffements fervant a l'uiage de la guerie.
IV. In this quality of contraband goods, thefe following fhall not be comprehended; corn, wheat, or other grain, and pulfe; oils, wines, falt, or generally any thing that belongs to the nourifhment and fuftenance of life; but fhall remain free as other merchandize and commodities not comprehended in the precedent article; and the tranfportation of them fhall be permitted, even unto places in enmity with
he fail States-General, except fuch cities and places as are belieged, blocked up, or invefted.
$V$. It hath been agreed, for the due execution of what is abovefaid, that the fhips and barks of the Englifh, laden with merchandize, being entered into any port of the faidStatesGeneral, and purpoling to pafs from thence unto the ports of their enemies thall be only obliged to thew unto the officers of the port of the fald States, out of which they would go, their paliports; containing the feccification of the lading of their flips, attefed and marked with the ordinary feal of the officers of the admiralty of thofe places from whence they furf came, with the place whither they are bound, all in a ufual and accuftomed form: after which, fhewing of their palipprts in the form aforefaid, they may not be difquieted nor learched, detained nor retarded in their voyages, upon any pretence whatfoever.
VI. The fame courfe fhall be ufed in regard of the Englifh mips and vefiels which fhall come into any roads of the coun tries under the obedrence of the faid States, not intending to enter into the ports, or being entered thereinto, not to unlade and break bulk; which hhips may not be obliged to give account of their lading, but in cafe of fufpicion that they carry unto the enemies of the faid States any contraband goods, as was abovefaid.
VII. And, in cafe of fuch apparent fufpicion, the faid fubjects of his majefty nall be obliged to hew in the ports their paffports, in the form fpecified.
VIII. But, if they were come within the roads, or were met in the open fea by any of the faid States hips or private men of war their fuhjects, for avoiding of all diforder, the faid fhips of the United Pio inces or of their fubjects, thall not come sear within cannon- Thot of the Englifh, but fhall fend out their lcing-boat, and caufe only two or three men to go on board the Einglifh thips or veffels, unto whom the paffport and certificates of the propriety of the fhips be fhewn by the mafter or captain of the Englifh Chips, in the manner above fpecified, according to the form of the faid certificates, which fhall be inferted at the end of this treaty; by which paffport and certificate, proof may be made, not only of the jadug, but alfo of the place of the abode and refidence of the matter or captain, and name of the fhip itfelf, to the end that by thefe two ways it may be known, whether they carry contraband goods; and that the quality as well of the faid fhip, as of it's mafter or captain, may fufficiently appear. Unto which pafforts and certificates entire faith and credit fhall be given. And, to the end that their validity may be the better known, and that they may not be in any wife fal fified and counterfeited, certain marks and counter-figns of his majefty and the faid States-General fhall be given unto them.
IX. And, in cafe any merchandize and commodities of thofe kinds which are before declared to be contraband and forbidden, fhall, by the means aforefaid, be found in the Englifh fhips and veffels, bound for the ports of the faid State's enemies, they fhall be unladen, judicially proceeded againft, and declared confifcate before the judges of the admiralty of the United Provinces, or other competent officers: but fo that the fhip and veffel, or other free and allowed goods, merchandize, and commodities, found in the fame chip, may not, for that caufe, be in any manner feized or conficated. X. It is furthermore agreed and covenanted, that whatioever hall be found laden by his majefty's fuljects upon any fhip of the enemies of the faid States, although the fame were not contraband goods, fhall yet be confifcated with all that fhall be found in the faid fhip, without exception or refervation : but, on the other fide alfo, all that fhall be found in the flips belonging to the king of Great-Britain's fubjects, fhall be free and difcharged, although the lading or part thereof belong to the faid State's enemies, except contraband goods, in regard whereof fuch rule fhal! be oblerved, as hath been ordered in the precedent articles.
XI. All the fubjects and inhabitants of the faid United Provinces fhall reciprocally enjoy the fame rights, liberties, and exemptions in their trade and commerce upon the coafts, and in the ports, roads, feas, and eftates of his faid majefty (as was now faid) which his faid majefty's fubjects fhall enjoy in thofe of the faid States, and in open fea; it being to be underftood that the equality fhall be mutual every way on both fides, even in cafe the faid States fhould hereafter be in peace, amity, and neutrality, with any kings, princes, and ftates, who thould become enemies to his faid majefty; fo that either of the parties are mutually to ufe the fame conditions and reffrictions exprefied in the articles of this prefent treaty, with regard to trade and commerce.
XII. And the more to aflure the fubjects of the faid States, that no violence fhall be offered them by the fhips of war belonging to his majefly of Great-Britan or his fubjects, all the captains of the king's fhips, and all his majefty's fubjects, that fend out private men of war, fhall be charged and enjoined not to moleft or endanage them in any thing whatfoever, upon pain of being punifhed and made anfwerable in their perlions and goods for all coft and damages, until due reftitution and reparation be made.
XIII. And, for this caule, the captaing and capers fhall from
henceforth every one of them be obliged, before they go out, to give good and fufficient fecurity before comptent judges, in the fum of 55001 . fterling, or $\times 5,000$ livres Tournots, that they will give full fatisfaction for any injuries or wrongs they may commit in their courfes at fea, and for their captains and officers that fhall violate this prefent treaty, and the orders and proclamations of his majefty, which fhall be publifhed by virtue and in conformity to, the regulation therein made, upon pain of forfeiting their faid commilin ns and licences; which fhail in like manner be practifed by the fubiects of the faid States General.
XIV. If it fhould happen that any of the faid Dutch captains fhould make prize of a veffel laden with contraband goods, as hath been faid, the faid captains may not open not break up the chefts, nails, packs, bag's, calks, or fell or exchange, or otherwife alienate them, until they have landed them in the prefence of the judges or officers of the admiralty, and after an inventory by them made of the faid goods found in the faid veffels, unlefs, the contraband goods making but a part of the lading, the mafter of the fhip fhould be content to deliver the faid contrahand goods unto the faid captain, and to purfue his voyage: in which cafe the faid mafter fhall by no means be hindered from continuing his courfe, and the defign of his voyage.
XV. His majefty, being defirous that the fubjects of the faid States may be ufed in all countries under his obedience as favourably as his own fubjects, will give all neceffary orders, that judgments and decrees upon prizes which fhall happen to be taken at fea, may be given with all juftice and equity, by jodges not fufpected nor concerned in the matter under debate; and his majefly will give precife and effectual orders, that all decrees, judgments, and orders of juftice, already given and to be given, may be readily and duly executed according to the cenor of them.
XVI. And, when the ambaffadors of the faid States General, or any other of their public minifters refiding in his majefty's court, Thall make complaint of the judesments, which hhall be given, his majefty will caufe a review to be made of the faid judgments in his council, to examine whether the orders and precautions contained in the prefent treary have been followed and oblerved, and to provide for the fame according to right and equity; which lhall be done, within the fpace of three months at the fartheft : neverthelefs, neither before the firt judgment nor after it, during the time of the review, the goods and effects which are reclaimed, may be fold or unladen, unlefs it be with the confent of the parties interefted, to avoid the fpoiling of the faid commodities, if they be perifhable.
XVII. When procefs fhall be moved in the firft or fecond inffance, between thofe that have taken the prizes at fea, and the perfons interefted therein, and thofe perfons fhall come to obtain a favourable decree, the faid decree fhall have it's execution, upon fecurity given, notwithftanding the appeal of him that took the prize : but the fame fhall not hold on the contrary, where the fentence goes againff the claimers. And that which is faid in this prefent, and in the precedent articles, for the caufing of good and fpeedy juftice to be done unto the fubjects of the United Provinces in the matter of prizes, hall be underfood and practifed by the States-General, in regard of prizes taken by their fubjects from thofe of his majefty.
XVIII. But, fince the conveniencies and inconveniencies of things and agreements cannot be difcovered but in procedure of time, and by obfervations drawn from mutual experience, it is therefore agreed between the king of. Great-Britain, and the lords the States of the United Netherlands, that at any time hereafter, when both parties fhall fo think fitting, certzin commiffioners, by each party refpectively chofen, thall meet by the common confent of both, who fhall make it their care and bufinefs to fupply whatever thall be found wanting in the aforementioned articles, to change or limit whatever fhall not be convenient and commodious for both, and fully compleat a further treaty, both concerning thefe things, and all others relating to the laws of navigation.
XIX. All thefe agreements, \& cc . hall be confirmed and ratified by the faid king of Great Britain and the States-General of the United Provinces, by letters patents of both parties, fealed with their great feal in duc and authentic form, within four weeks next enfuing, or fooner, if it may be; and mutual inftruments fhall be exchanged by each party, within the time aforefaid.

Remarks.
Here follow certain forms, whereof mention is made in the eighth article.
A form of the certificate that ought to be given by thofe that have the ordinary power of the admiralty of England, to the fhips and veffels that go out thence, according to the eighth article of the prefent treaty.
high admiral of England,
To all who fhall fee thefe prefents, greeting,
Thefe are to certify, That we have granted leave and permiffion to
mafter and captain of

## the thip called

 burden of of the city of of the the port and haven of laden withafter fearch fhall have been made of the fhip, and he before his departure fhall have made oath before the officers that exercife the juildaction of maritime caufes, that the faid veffel doth belong to one or more of his majefty's fubjects, an act whereof fhall be put at the bottorn of thefe prefents, as allo to keep and caufe to be kept, by thole aboard him, the orders and rules of the marine, and fhall put into the regiftery a lift figned and cerrified, containing the names and furnames, the nativity and habitation of the men that are aboard him, and of all that fhall embark themfelves, whom he may not take on board without the knowledge and permiffon of the marine officers; and, in every port or haven where he fhall enter with his hip, fhall haw the officers and marine judges this nis prefent licence; and, having finifhed his voyage, fhall make faithful relation of what hath been done, and hath paffed during all the time of his faid voyage, and fhall carry the flags, arms, and colours of his majeity throughout his whole voyage. In witnels whereof, we have figned thefe prefents, and caufed the feal of our arms to be put thereunto, and the fame to be coun-ter-figned by our fecretary of marine, the
day of
one thoufand fix hundred

containing about
lafts, of which be is at prefent the mafter, belongeth to inhab tants of the United Provinces. So help him God. And, as we would willingly fee the faid Chip-mafter affifted in his juft affairs, we do requeft you and every of you, where the abovefaid mafter fhall arrive with his thip and goods, that you will pleafe to receive him courteoully and ufe him kindly, admitting him, upon paying the ufual dues, tolls, and other cuftoms, to enter into, remain in, and pafs from your ports, rivers, and territories, and there to trade, deal, and negociate, in any part or place, in fuch fort and manner as he thall defire. Which we fhall moft readily acknowledge on the like occafion.
In witnefs whereof, we have caufed the feal of our city to be thereunto put.
In witnefs and confirmation of all and every part whereof, we the commifioners of his faid majefty the king of GreatBritain, and of the faid lords the States-General, having fufficient power given us thereunto, have figned thefe tables, and fealed them with our feals. At the Hague in Holland, the 17 th of February, in the year 1668.

This marine treaty being fo concluded between his majefty and the States, for their dominions in Europe, another was fome time after fet a foot, and agreed to, for regulating their naval affairs all over the world, which very well deferves a place in this collection, and which the reader may take in the following terms.

## Article VII.

A treaty marine between the moft ferene and mighty prince Charles II. by the grace of God, king of England, Scotland, France, and Ireland, defender of the faith, \&c. and the high and mighty lords the States-General of the United Netherlands, to be obferved throughout all and every the Vox. II.
countries and parts of the world, by fea and lanci, irt.
cluded at London the ift day of Decenber, if cember, 1674, s. $V$
I. That it thall and may be lawful for all and every the fub. jects of the moft ferene and inighty prince, the king of Great Britain afnrelaid, with all freedom and fafery to fail, trade and exercile any manner of traffic in all thole kitiggders, countries, and eftates which are, or at any time bereatier hall be in peace, amity, or neutrality with his faid maje:ty oo that they thall not be any ways molefted in their reviea ion or trade, by the military forces, nor by the hips of wa or any other kind of velfels whatfoever, belongings cither t. the high and mighty States-Gencral of the United Nerherlands, or to their fubjects, upon occafion or pretence of any hoftility, or difference which now is, or Mall hercafrer hap pen between the faid lords the States-General, and any other princes or people whatfoever in peace, amity, or neutrality with his faid majefty: and likewife, that it fhall and may be lavful for all and every the fubjects of the faid hi,h and mienty lords the states-General of the United Netheriands, with all freedom and fafety to fail, trade, and exercife any manner of traffic in all thofe kingdoms, countries, and eitates which are, or at any time hereafter fhall be in peace, amity, or neutrality with the aforefaid lords the States; fo that they fhall not be any ways molefted in their navigation or trade, by the military forces, or by the thips of war, or any other kind of veffels whatfoever, belonging either to the moft ferene and mighty king abovementioned, or to his fubjects, upon occafion or pretence of any hoftility or difference which now is, or thall hereafter happen between his faid majefty and any princes or people whatfoever in peace, amity, or neutrality with the faid lords the States.
II. Nor fhall this freedom of navigation and commerce be infringed by occafion or caule of any war, in any kind of merchandizes, but fhall extend to all commodities which fhall be carried in time of peace, thole only excepted which follow in the next article, and are comprehended under the name of contraband.
III. Under this name of contraband, or prohibited merchandizes, fhall be comprehended only arms, pieces of ordnance, with all implements belonging to them, fire-balls, powder, match, bullets, pikes, fwords, lances, fpears, halberts, guns, mortar- pieces, petards, granadoes, mufquet-refts, bandeliers, falt-petre, mufquets, mufquet-fhot ${ }_{2}$ belmets, cornets, breaftplates, coats of mail, and the like kind of armature ; foldiers, horfes, and all things neceffary for the furniture of horfes; holfters, belts, and all other warlike inftruments whatfoever.
IV. Thefe merchandiżes following fhall not be reckoned among prohibited goods, viz all kind of cloth, and all other manufactures woven of any kind of wool, flax, filk, cotton, or ony other materials; all forts of cloathing and veftments, together with materials whercof they ufe to be made; gold and filver, as well coined as not coined; tin, iron, lead, copper, and coals; as alfo wheat, barley, and all other kind of corn or pulfe; tobacco, and all kind of fpices; falted and fmoaked flefh; falted and dried fifh, butter and cheefe, beer, oils, wines, fugars, and all forts of falt; and, in general, all provifion which ferves for the nourifment and fultenance of life; likewife all kind of cotton, hemp, flax, and pitch, and ropes, fails, and anchors; alfo mafts and planks, boards and beams, of what fort of wood foever, and all other materials requifite for the building or repairing fhips; but they thall be wholly reputed amongit free goods, even as all other wares and commodities which are not comprehended in the next precedent article, fo that the fame may be freely tranfported and carried by the fubjects of his faid majefty, even unto places in enmity with the faid States; as alfo, on the other fide, by the fubjects of the faid States, to places under the obedience of the enemies of his faid majefty; except only towns or places be feized, invironed, or invefted; in French, blocquées ou invertiés.
V. And, that all manner of differences and contentions on both fides, by fea and land, may from henceforth ceafe and be utterly extinguifhed, it is agreed, that all kinds of fhips and veffels whatfoever, belonging to the fubjects of his faid majefty, entering or being entered into any road or port under the obedience of the lords the States, and purpofing to pafs from thence, Mall be only obliged to fhew unto the officers acting in the ports of the faid States, or to the captains of the States fhips, or of private men of war (if any happen there to be) their paffport, commonly called a fea-brief (the form whereof is added at the end of thefe articles) nor fhall any money, or any thing elfe, be exacted from them under that pretence: but, if any fhip belonging to the fubjects of his majefty of Great-Britain thall, in the open fea, or elfewhere out of the dominions of the faid States, meet the flips of war of the faid lords the States, or private men of war of their fubjects, the faid fhips of the lords the States, or of their fubjeCts, fhall keep at a convenient diftance, and only fend out theit boat; and it thall be lawful for them, only with two or three men, to go on board the fhips and veffels of the fubjects of his majefty, that the paffiport (or fea-brief) and the propriety thereof, according to the form hereafter fpecified, may be

Rewia

Shewn to them by the captain or maftef of fuch hip or veffels belonging to the fubjects of his majefty; and the fhip which fhall fhew the fame hall freely pafs; and it fhall not be lawful to molelt, fearch, detain, or divert the fame from her intended voyage: and all the fubjects of the lords the States fall enjoy, in all things, the fame liberty and immunity, they, in like manner, Thewing their palfports (or fea-briefs). made according to the form puelcribed at the latter end of this treaty.
VI. But if any fhip or veffel belonging to the Englifh, or other fubjects of his majefty, fhall be met making into any port in enmity with the lords the States; or, on the other, fide, if any thip belonging to the United Provinces of the Netherlands. or other fubjeets of the lords the States, fhall be met in her way making into any port under the obedience of the enemies of his faid majefly; fuch fhips fhall thew not only a paffyort (or fea-brief) according to the form here under preferibed, wherewith the is to be furnifhed, but alfo her cockets, expreffing the contents of the goods on board, given in the ufual Form, by the officers of the cufoms in the port from whence the came; whereby it may be known whether the is laden with any merchandize prohibited by the third article of this treaty
VII. But if, by the fhewing the abovefaid cackets, expreffing the conients of the goods on board, given in the ufual form by the officers of the cuftoms in the port from whence fhe came (concerning the fhewing whereof it is above agreed) either party fhall difcover any kind of merchandizes which, in the third article of this treaty, are declared to be contraband or probibited goods, configned to any port under the obedience of their enemies, it fhall not be lawful to open the hatches of fuch fisip in which the fame fhall happen to be found, whether fhe belongs to the fubjects of his majefty, or of the lords the States: nor to unlock, or break open chefts, mails, packs, or cafks in the fame, nor to convey away any the leaft part of the merchandizes, before the whole be firft Janded in the prefence of the officers of the admiralty, and inventaried; neicher fhall it be any ways lawful to fell, exchange, or otherwife to alienate the fame, until fuch prohibited goods are rightly and lawfully proceeded againft, and that the judges of the admiralty have, by their refpective fentences, conficat ed the fame: provided always, that, as well the fhip itfelf, as the reft of the commodities found in the fame, which by this treaty are to be reputed free, fhall not, upon pretence of their being infected by fuch prohibited goods, be detained, much lefs confifcated for lawful prize: but if not the whole, but a part only of the lading confifts of contraband or prohibited commodities, and that the mafter of the fhip fhall be willing and ready to deliver them to the captain who feized the fame, in that cafe the captor fhall not compel the fhip to go out of her courfe to any port he thinks fit, but fhall forthwith difmifs her, and upon no account hinder her from freely profecuting her defigned voyage.
VIII. It is further agreed, that whatfoever fhall be found laden by his majelty's fubjects, upon any hip whatfoever belonging to the enemies of the lords the States, although the farme be not of the quality of contraband goods, may be conGifcated: but, on the contrary, all that which fhall be found in the fhips belonging to the fubjects of his majefty, hall be accounted clear and free, although the whole lading, or any part thereof, by juft title or propriety, fhall belong to the enemies of the lords the States; except always contraband goods, which being intercepted, all things thall be done according to the meaning and direction of the precedent articles: and, for the fame reafon, whatfoever fhall be laden by the fubjects of the lords the States, in any fhip whatfoever belonging to the enemies of his majefty, although the fame be not of the quality of contraband goods, may be confifcated ; but, on the other fide, all that which fhall be found in the fhips belonging to the fubjects of the lords the States fhall be accounted clear and free, although the whole lading, or any part thereof, by juft title of propriety, fhall belong to the enemies of his majefty; except always contraband goods, which being intercepted, all things thall be done according to the meaning and directions of the precedent articles. And, left any damage fhould by furprize be done to the one party who is in peace, when the other party fhall happen to be engaged in war, it is provided, that a fhip belonging to the enemies of the one party, and laden with goods of the fubjects of the other, fhail not render the faid goods liable to confifcation, in cafe they were laden before the expiration of the times hereafur mentioned, after the declaration or publication of any fuch war, viz. if the goods were laden in any port or place between the limits called the Soundings, and the Naz in Norway, within the fpace of fix weeks after fuch declaration; of two months, between the faid place the Soundings and the city of Tangier; and of ten weeks in the Mediterranean Sca; or within the fpace of eight months in any other country or place of the world: fo that it thall not be lawful to confircate the goods of the fubjects of his majefty taken or feized in any fhip or veffel whatioever of any enemy of the lords the States, upon that pretence, but the fame hall be without delay reftored to the proprietors, unlefs they were laden after the expiration of the faid terms of time refpective-
ly; but fo that it may not be lawful for them afterwards to carry to the enemy's ports the faid merchandizes which are called contraband, and, for the reafon aforefaid, fhall not be liable to confifcation:" neither, on the other fide, thall it be lawful to confifcate goods of the fubjects of the lords the States, taken or feized in any thip or veffel whatfoever of an enemy of his majefty, upon that pretence; but the fame fhail bo furthwith reftored to the proprietors thereof, unleis they were laden after the expiration of the faid terms of time refpective ly: but fo that it may not be lawful for them afterwards to carry to enemy's ports the faid merchandizes which are called contraband, and, for the reafon aforefaid, fhall not be liable to conficcation.
IX. And, the more to affure the fubjects of his majefty and of the Caid States, that no injury hall be offered to them by the fhips of war, or private men of war of either fide, all the captains of the fhips, as well of his majefty as of the faid States, and all their fubjects who fhall fit out private men of war, and likewife their privileged companies, fhall be injoined not to do any injury or damage whatfoever to the other; which if they do, they hhall be punifhed, and moreover be liable to fatisfy all cofts and damages, by reflitution and reparation, upon pain and obligation of perfon and goods.
X. For this caule all the commanders of private men of war fhall from henceforth be obliged, before they receive their commiffions, to enter, before a competent judge, good and fufficient fecurity, who have no part or intereft in fuch @ip, in the fum of 1500 J . fterling, or 16,500 guilders; and, when they have above 150 men , then in the fum of 3000 l . fterling, or 33,000 guilders, that they will give full fatisfaction for any damages or injuries whatfoever, which they or their officers, 8 c . fhall commit in their courfes at fea, çontrary to this prefent treaty, or any other whatfoever, between his majefty and the faid States, upon pain of revocation of their faid commiffions; in which it fhall be always inferted, that they have given fuch fecurity as abovefaid: and likewife it is agreed, that the fhip itfelf hall be alfo liable to make fatisfaction for injuries and damages done by her.
XI. His majefty and the faid States, being defirous that the fubjects of each othet may be mutually treated, in all countries under their obedience refpectively, with the like kindnefs as their own fubjects, will give all neceflary and effectual orders that the judgment upon prizes taken be given according to the rules of juftice and equity, by judges beyond all furpicion, and not any way concerned in the caufe under debate; and his majefty and the faid States will likewife give ftrict orders that all fentences already given, and which thall be hereafter given, be (according to the tenor thereof) duly put in execution, \&c.
XII. And whenfoever the ambaffadors of the faid lords the States, or any other their public minifters, refident at the court of his moft ferene majelty of Great-Britain, hall complain of the unjuftnefs of fentences which have been given, his majefty will caufe the fame to be reviewed and examined in his council, that it may appear whether the orders and precautions prefcribed in this treaty have been obferved, and have had their due effeet, and will alfo take care that the fame be fully provided for, and that right be done to the party complaining, within the fpace of three months: and likewife when the ambaffadors, or other public minifters of his majefty, refident with the States-General, fhall complairt of the unjuftnefs of fentences, the faid States will caufe a review and examination thereof to be made in the affembly of the States-General, that it may appear whether the orders and precautions prefcribed in this treaty have been obferved, and had their due effect; and they will likewife take care that the fame be fully provided for, and that juftice be done to the party complaining within the face of three months : neverthelefs it thall not be lawful to fell or unlade the goods in controverly, either before the fentence given, or after it, during the review thereof on either fide, unlefs it be with the confent of the parties interefted.
XIII. A fuit being commenced between the takers of prizes on the one part, and the claimers on the other, and decree being given for the party reclaiming, the faid decree (upon fecurity given) fhall be put in execution, notwithftanding the appeal made by him that took the prize, which fhall not be obferved, in cafe the fentence fhall be given againft the claimers. XIV. And whereas the mafters of merchant-Ahips, and likewife the mariners and paffengers, do fometimes fuffer many cruelties and barbarous ufages, when they are brought under the power of Chips which take prizes in time of war, thereby to extort from them fuch confeffions as they would have to be made: it is agreed that both his majefty and the lords the States-General fhall, by the fevereft proclamations or placarts, forbid all fuch heinous and inhuman offences; and as many as they thall, by lawful proofs, find guilty of fuch acts, they Thall take care that they be punifhed with due and juft punifhments, which may be a terror to others; and fhall command that all the captains and officers of hips, who thall be proved to have committed fuch heinous practices, either themfelves, or by infligating others to ald the fame, or by conniving while they were done, fhall (befides other punifhments, to be inficted proportionably to their offences), be
forthwith

## M A R

forthwith deprived of their offices refpectively; athd every fhip brought up as prize, whofe mariners or paffengers fhall have fuffered any torture, fhall forthwith be dimidfed and freed, with all her lading, fiom all further examination and proceeding againft her, as well judicial as otherwife.
XV. It is alfo agreed, that the like feverity of punifhments fhall be intileed upon thofe who, contrary to the meaning of the 2 ift aritel: of the treaty of peace concluded at Breda, fhall take comm.fions from enemies to ferze the hhps of either ally, contrary to what is provided in the faid article. XVI. Laftly, It is agreed and concluded, that this prefent treaty, \&ic. fhall be, whh all convenient fpeed, on bort fides ratified and confirmed; and that the ratifications thereof thall be, within two moniths from the date thereof, reciprocally exchanged between both parties: and alfo, that the faid treaty Shall, within one month atter fuch exchanging of the ratificacions, be delivered, in due and authentic form, to the governors of the Engliih Eaft-India and African companies, and to the directors of the Dutch Eaft and Welt India companies; and fhall, with the firft conveniency, be alfo fent by his faid majefty, and by the faid lords the states, to their refpective governors and commanders in chief of their colonies and plantations in every part of the world out of Europe, to the end that it may be by them, and all others within their dominions and under their power, punctually obferved and fulfilled.

The form of the paffport (or fea brief) to be required and given by the lord high admiral, or by thofe to whom the exercife of admiralty- jurifdiction is ordinarily committed, or by the mayor, or other chief magiffrate, or by the commiffioners, or other principal officers of the cuftoms in their refpective ports and places within his majefty's dominions, to the fhips and vefiels failing out thence, according to the purport of the 5 th article.
To all unto whom thefe prefents thall come, greeting. We lord high admiral of
lords
commiffioners executing the office of the lord high admiral of

> or we the admiralty of or we the mayor, judges of the high court of or other magiftrate of $\quad$ or we
miffioners, or principal officers of the cuftoms in the city or port of
do teftify and make known, That mafter or commander of the fhip called the hath appeared before us, and hath declared,

An explanatory declaration upon certain articles of the marine treaties concluded between his majefty and the States-
General of the United Provinces, February 17, 166 $\frac{7}{8}$, and December I, 1764.
Whereas fome difficulty hath arifen concerning the interpretation of certain articles, as well in the treaty marine which was concluded the ift day of December, 1674 , as in !that which was concluded the 17 th of February, 166 $\frac{7}{8}$, between his majefty of Great-Britain on the one part, and the StatesGeneral of the United Provinces of the Low'Countries on the other, relating to the liberty of their refpective fubjects to trade unto the ports of each other enemies: We Sir William Temple, Bart. ambaffador extraordinary from his faid majefty of Great-Britain, in the name, and on the part of his faid majefty; and We William Van Heuckelom, Daniel Van Wyngaerden, lord of Werckenham, Gafpar Fagel, counfellor and penfioner of Holland and Weft-Friezland, John de Mauregnault, John baron of Rude and Renfwoude, William de Haren, retman of the Bilt, Henry Terborgh, and Luke Alting, deputies in the affembly of the faid States-General for the States of Guelderland, Holland, Zealand, Utrecht, Friezland, Overyffel, Groningen, and the Ommelands, in the name, and on the part of the faid States-General, havedeclared, as we do by thefe prefents deciare, That the true meaning and intention of the faid articles is and ought to be, that fhips and veffels, belonging to the fubjects of cither of the parties, can and might, from the time that the faid articles were concluded, not only pais, traffic, and trade from a neutral port or place to a place in enmity with the other party, or from a place int enmity to a neutral place: but alfo from a port or place in enmity to a port or place in enmity with the other party, whether the faid places belong to one and the fame prince or ftate, or to feveral princes and ftates, with whom the other party is in war. And we declare that this is the true and genuine fenfe and meaning of the faid articles: purfuant whereunto we underftood that the faid articles are to be obferved and executed on ali occafions, on the part of his faid majelty and the faid States-General, and their refpective fubjects; yet fo, that this declaration hall not be alledged by either party for matters which happened before the conclufion of the late peace in the month of February, $167 \frac{3}{4}$; and we do promife, that the faid declaration thall be ratified by his faid majefty, and by the faid States-General, and that within two months, or fooner if poffible, reckoning from the day of the date of this declaration, the ratifications of the fame fhall be brought hither to the Hague, to be here exchangeds It witnefs whereof we have figned thefe prefents at the $\mathrm{Hague}_{3}$ the 3oth day of December, 1675 .

After the conclufion of this marine treaty with Holland, the next material one that occurs is another of the fame nature with France, which may deferve a place here, amongft the reft.

## Article VIII.

A treaty marine between the mof ferene and mighty prince Charles II, by the grace of God, king of Engliand, Scotland, France, and Ireland, defender of the faith, \&c. and the moft ferene and mighty prince Lewis XIV. : the molt Chriftian king, concluded at St. Germains en Layc, the 24th day of February, $167 \frac{5}{7}$.

1. That it fhall and may be lawful for all and every the futh jects of the moft ferene and mighty prince the king of Grest-

Britain afurefaid, with all freedom and fafety, to fail, trade, and exercife any manner of arafic in all thole kingdoms, councries, and eftates, which are, or at any time hereafter thall be in peace, amity, or neurrality with his faid majefty: fo that they hall not be any ways hindered or molelted in their mavigation or trade by the military forces, nor by the Gips of war, or any other kind of vellels whatioever, belonging either to the moft Chriftan king, or to his fubjects, upon occafion or. pretence of any hoftility or difference, which now is', or heseafter fhall happen between the faid moft Chriftian king, and any princes or people what foever in peace, amity, or nutullity wish the faid king of Great Britain. And likewife, that it fhall and may be lawful for all and every the fubjects of the laid molt Chriftian king, with all freedom the lubjects of the taid molt Chrittian king, with all freedom
and fafety, to fail, trade, and exercife any manner of traffic in all thofe kinydoms, councries, and eftates, which are, or at any time hereafter thall be in peace, amity, or neutrality with the aforefaid molt Chriftian king: fo that they fhall not He any ways hindered or molefted in their navigation or trade by the military forces, nor by the Chips of war, or any other kind of veffels. whatfoever belonging either to the king of kind of veflels. whatoever belonging either to the king of
Great-Britain above-mentioned, or to his fubjects, upon occalion, or pretence of any hofility or difference which now is, or hall bercafter happen between his majefty and any princes or people whatfoever, in peace, amity, or neutrality with the faid moft Chriftian king.
II. Nor fhall this freedom of navigation and commerce be infringed by occafinn of any war, in any kind of merchancizes, but Mall extend to all commodities which hall be carrited ia time of peace, thofe only excepted which follow in the next article, and are comprehended under the name of concrathand.
III. Under this name of contraband, or prohibited merchandizes, thall be comprehended only arms, pieces of ordnance, with all implements belonging to them ; fire-balls, powder, match, bullets, pikes, fwords, lances, feears, halberts, guns, mortar-pieces, pecards, granadoes, mufquet-refts, bandeliers, falt-petre, muiquels, mufquet-fhot, helmets, corlets, breaftplates, coats of mail, and the like kind of armature; foldiers, horlies, and all things necellary for the furniture of horfes; holfters, beits, and all other warlike inftruments whatio-
IVv. Thefe merchandizes following thall not be reckoned among prohibited goods, viz. all kind of cloth, and all other manufactures woven of any kind of wool, Alax, filk, cotton, or any other materials; all forts of cloathing and veftments, together with the materials whereof they ufe to be made; gold and filver, as well coined as not coined; tin, iron, lead, copper, and coals; as alfo wheat and barley, and all other kind of corn or pulfe; tobacco, and all kinds of fpices; falted and fmoaked flefh; Falted and dried filh, cheefe, butter, beer, oils, wines, fugars, and all forts of falt; and, in general, all provifion which ferves for the nourilhment and fuftenance of life ; likewife all kind of cotton, hemp, flax, and pitch, ropes, fails, and anchors; alfo mafts and planks, boards and beams, of what for of wood foever, and all other materials requifite for the building or repairing thips; but they fhall be wholly reputed amonglt free goods, even as well as all other wares and commodities which are not comprehended in the next precedent article; fo that the fame may be freely tranfported and carried by the fubjects of the moft ferene king of GreatBritain, not only from one neutral place to another neutral place, or from a neutral port or place to a place in hoftility with the moft Chriflian king, or from a place in hoftility with him to a neutral place, but allo from one place in enmity with the moft Chriftian king to another port or place in enmity with him; be it that fuch ports or places do belong to the fame prince or flate, or to feveral princes or ftates, with whom the moft Chriftian king fhall happen to be in war; and in like manner that the fame may be freely tranfported by the fubjects of the moft Chriftian king, not only from one neutral place to another neutral place, or from a neutral port or place to a place in hoftility with the "king of Great-Britain, or from a place in hoftility with him to a neutral place; but alfo from one place in enmity with the king of Great-Britain to another port or place in enmity with him; be it that fuch ports or places do belong to the fame prince or ftate, or to feveral princes or fates with whom the king of Great-Britain Thall happen to be in war, except only towns or places befieged, inviraned, or inveited; in French, blocquées ou iñvertiés.
V. And, that all manner of differences and contentions on both fides, by fea and Jand, may from henceforth ceafe and be utterly extinguifhed, it is agreed that all kind of ihips and veffels whatfoever, belonging to the fubjects of his faid majefty of Great-Britain, entering or being entered into any road or port under the obedience of the moft Chriftian king, and purpofing to pars from thence, Thall be only obliged to fhew unto the officers acting in the ports of the faid moft Chriltian king, or to the captains of the moft Chriftian king's thips, or private men of war (if any happen there to be) their paffports, commonly called a fea brief (the form whereof is added to the end of thefe articles) nor fhall any money, or any thing elfe, be exacted from them under that pretence :
but, if any Thip belonging to the fubjects of his majefty of Great-Britain Chall, in the open fea or elfewbere, out of the dominions of the faid moft Chriffian king, meer his Chips of war, or privateers of his fubjects, the laid fhips of the moft Chriftian king thall keep at a convenient dittance, and only fend out their boat, and it fhall be lawful for them, only with two or three men, to go on board the chips and veffels of the fubjects of his majefty of Great-Britain, that the paffport (or fea brief) and the propriety thercof, may be fhewn to them by the captain or mafter of fuch hip or veffel belonging to the fubjects of his majefty of Great Britain: and the hip which fhall thew the fame thall freely pafs; and it fhall not be lawful to moleft, fearch, detain, or divert the fame from her intended voyage: and all the fubjects of the moft Chriftian king Ghall enjoy in all things the fame liberty and immunity, they in like manner fhewing their paffiport, made according to the form prefcribed at the latter end of this treaty.
VI. But if any thip or veffel belonging to the Englifh, or other fubjects of his majetty of Great-Britain, thall be met by any man of war making into any port in enmity with the moft Chriftian king; or, on the other fide, if any thip belonging to the moft Chriftian king, or others fubjects of the faid moft Chriftian king, fhall be met in her way making into any port under the obedience of the enemies of bis faid majefty of Great-Britain; fuch thip thall thew not only a palfport, wherewith the is to be furnithed, but alfo her cockets, exprefing the contents of the goods on board, given in the ufual form, by the officers of the cuftoms in the port from whence the came; whereby it may be known whether he is laden with any merchandizes prohibited by the 3 d article of this treaty.
VII. But if, by the fhewing the aboveraid cockets, expreffing the contents of the goods on board, given in the ufual form, by the officers of the cuftoms in the port from whence fhe came, either party fhall difcover any kind of merchandizes which in the 3 d article of this treaty are declared to be contraband or prohibited, configned to any port under the obedience of their enemies, it hall not be lawful to open the hatches of fuch thip in which the fame fhall happen to be found, whether the belongs to the fubjects of his majefty of Great-Britain, or of the moft Chriftian king; nor to unlock or break open the chelts, mails, packs, or cafks in the fame, nor to convey away any the leaft part of the merchandizes, before the'whole be firft landed in the prefence of the officers of the admiralty, and inventoried: neither thall it be any ways lawful to fell, exchange, or otherwife to alienate the fame, until fuch prohibited goods are rightly and lawfully proceeded againtt, and that the judges of the admiralty have, by their relpective fentences, confifcated the fame: provided always, that, as well the fhip itfelf, as the reff of the commodities found in the fame, which by this treaty are to be reputed free, fhall not, upon pretence of their being infected by fuch prohibited goods, be detained, much lefs confifcated, for lawful prize; but if not the whole, but a part only of the lading confirts of contraband commodities, and that the mafter of the fhip fhall be willing and ready to deliver them to the captor who feized the fame, in that cafe the captor thall not complel the thip to go out of her courfe to any port be thinks fit, but thall forthwith difmifs her, and upon no account hinder her from freely profecuting her defigned voyage. VIII. It is further agreed, that whatfoever fhall be found laden by the fubjects of his majefty of Great-Britain, upon any thip whatToever belonging to the enemies of the moft Chriftian king, although the fame be not of the quality of contraband goods, may be confifcated: but, on the contrary, all that which fiall be found in the fhips belonging to the fubjects of his majefty of Great-Britain, fhall be accounted clear and free, although the whole lading, or any part thereof, by juft title of propriety, fhall belong to the enemies of the moft Chriftian king : except always contraband goods, which being intercepted, all things thall be done according to the meaning and direction of the precedentarticle: and, by the fame reafon, whatfoever thall be found laden by the fubjects of the moft Chriftian king, in any fhip whatfoever belonging to the enemies of his majefty of Great-Britain, although the fame be not of the quality of contraband goods, may be confifcated; but, on the other fide, all that which fhall be found in the fhips belonging to the fubjects of the moft Chriftian king, ihall be accounted clear and free, although the whole lading, or any part thereof, by juff title of propriety, fhall belong to the enemies of his majefty of Great-Britain, except always contraband goods, which being intercepted, all things fhall be done according to the meaning and direction of the precedent article; and, left any damage fhould by furprize be done to the one party who is in peace, when the other party thall happen to be engaged in war, it is agreed that a fhip belonging to the enemies of the one party, and laden with goods of the fubjects of the other, hall not render the faid goods liable to confifcation, in cafe they were laden before the expiration of the times bereafter mentioned, after the declaration of any fuch war, viz. if the goods were Jaden in any port or place between the limits called the Soundings and the Naz in Norway, within the fpàce of fix weeks after fuch declaration; of two months between the faid place,
the Soundings, and the city of Tangier; and of ten weeks in the Meditenanean Sca; or wirhin the face of eight months in any other country or place of the world; fo that it hall not be lawful to conficate the goods of the fubjects of his majefty of Great Britain, taken or feized in any thip or veffel whatfoever of any enemy of the moft Chriftian king, upon that pretence; but the fame fhall be without delay reftored to the proprietors, unlefs they were laden after the expiration of the faid terms of time refpectively; but fo that it may not be lawful for them afterwards to carry to enemies ports the faid merchandizes which are called contraband; and, for the reafon aforefaid, fhall not be liable to confifcation: neither, on the other fide, fhall it be Jawful to conffcate the goods of the fubjects of the moft Chriftian king, taken or feized in any fhip or veffel whatloever of any enemy of his majelty of Great-Britain, upon that pretence; but the fame fhall be forthwith reftored to the proprictors thereof, unlefs they were laden after the expiration of the faid terms of time refpectively; but fo that it may not be lawful for them afterwards to carry to enemies ports the faid merchandizes which are called contraband, and, for the reafons aforefaid, fhall not be liable to confication.
IX. And, the more to affure the fubjects of his majelty of Great-Britain, and of the moft Chriftian king, that no in. jury fhall be offered to them by the fhips of war, or privateers of either fide, all the captains of the fhips, as well of his majefty of Great-Britain as of the moft Chriftian king, and all their fubjects who fhall fit out privateers, and likewife their privileged companies, thall be injoined not to do any injury whatfoever to the other; which if they do, they fhall be punifhed, and moreover be liable to fatisfy all cofts and be punithed, and moreover be hable to fatisfy all cofts and
damages, by reftitution and reparation, upon pain and obligation of perfon and goods.
X . For this caufe, all the commanders of privateers fhall from henceforth be obliged, before they receive their commiffions, to enter, before a competent judge, good and fuf ficient fecurity, by able and refponfible men, who have no part or intereft in fuch thip, in the fum of 15001 . fterling, or 16,500 livres; and, when they have above 150 men , then in the fum of 3000 ]. fterling, or 33,000 livres, that they will give full facisfaction for any damages or injuries whatfoever, which they or their officers, or others in their fervices, fhall commit in their courfes at fea, contrary to this prefent treaty, or any other whatroever, between his majefty of Great-Britain and the moft Chriftian king, upon the pain of revocation and annulling their faid commifions; in which it fhall be always inferted, That they have given fuch fecurity as abovefaid; and likewife it is agreed, that the fhip itfelf thall be alfo liable to make fatisfaction for injuries done by her.
XI. His majefty of Great-Britain and the faid moft Chriftian king, being defirous that the fubjects of each may be mutually treated, in all countries under their obedience refpectively, with the like kindnefs as their own fubjects, will give all neceffary and effectual orders that judgments upon chips and merchandizes taken at fea be given according to the rule of juftice and equity, by judges beyond all fufpicion, and not any ways concerned in the caule under debate. And his majefty of Great- Britain and the moft Chriftian king will likewife give frict orders that all fentences already given, and which thall be hereafter given, be according to the tenor thereof duly put in execution, and obtain their effect.
XII. And whenfoever the ambaffadors, or other public minifters of the king of Great-Britain, refiding at the court of the moft Cbriftian king, thall complain of the unjuftnefs of fentences which have been given concerning fhips or merchandizes taken at fea, and belonging to the fubjects of the king of Great-Britain, then the faid moft Chriftian king, on demand of the faid ambaffadors or minitters of the king of Great-Britain, fhall caufe the faid fentences to be reviewed and examined in his privy-council, and hall confirm or revoke the fentences wherefoever given; and likewile the faid moft Chriftian king fhall take care, that right be done to the party complaining within the fpace of four months, to be accounted from the day of making fuch demand.
In like manner, if the ambaffadors, or other public minifters of the moft Chriftian king refiding at the court of the king of Great-Britain, fhall complain of the unjuftnefs of fentences, which have been given concerning fhips or merchandizes taken at fea, belonging to fubjects of the faid moft Chrifian king, the faid king of Great-Britain thall forthwith commiffion, under his great feal, nine of his privy council to adjudge fuch matters, or to confirm or revoke the fentences wherefoever given; and the faid commiffioners thall meet within the fpace of one month from the day of delivering the complaint: and likewife the king of Great-Britain thall take care that right be done the party complaining within the fpace of three months, to be computed from the firf day of the meeting of the faid commiffioners.
XIII. A fuit being commenced between the takers of prizes on the one party, and the claimers thereof on the other, and a fentence being given for the party reclaiming, the faid fentence, upon fecurity given, hall be put in execution, notwithftanding the appeal made by him that took the prize;
which fhall not be obferved, in cafe the fentence fhall b: given againft the claimers.
XIV. And whereas the mafters of merchants fiips, and likewife the mariners and paffengers do fometimes fuffer many cruelties and barbarous ufages, when they are broughe under the power of thips which take prizes in time of war, the takers in an inhuman manner tormenting them, thereby to extort from them fuch confefions as they would have to be made; it is agreed, that both his majefty of Great Britain and the moft Chriftian king hall, by the fevereft proclamations or edicts, forbid all fuch heinous offences, and as many as they fhall by lawful proofs find guilty of fuch acts, they thall take care that they be fo punifhed, as may be a terror to others; and fhall command that all the captains and officers of thips, who fhall be proved to have committed fuch heinous practices, either themfelves, or by inftigating others to do the fame, or by conniving while they were done, 亻hall, befides other punifhments to be inflicted proportionably to their offences, be forthwith deprived of their offices refpectively; and every fhip brought up as prize, whofe mariners or paffengers thall have fuftered any torture, fhall forthwith be difmiffed and freed, with all her lading, from all further examination and proceeding againft her, as well judicial as otherwife.
XV . It is alfo agreed, that the-like feverity of punilhments fhall be inflicted upon thofe, who fhall take commiffion from enemies to feize the fhips of either ally or party.
XVI. Laftiy, it is agreed and concluded, that this prefent treaty, and all and fingular the things therein contained, fhall be, with all convenient fpeed, on both fides, ratified and confirmed, and that the ratifications thereof fhall be within two months from the date hereof reciprocally exchanged.
Dated at St . Germains en Laye, the 24th day of February, in the year of our Lord 1677 .

The form of the paffport, or fea-brief, to be required, and given by the lord high admiral, or by thofe to whom the exercife of admiralty jurifdiction is ordinarily committed: or by the mayor or other chief magiftrate, or by the commiffioners, or other principal officers of the cuftorns, in their refpective ports and places within the dominions of the king of Great-Britain, to thips and veffels, according to the purport of the fifth article.
To all unto whom thefe prefents fhall corne greeting. We ord high admiral of
We
lords commiffioners exe-
cuting the office of the lord high admiral of
or we
the mayor, or other magiArate of or we com miffioners, or principal officers of the cuftoms in the city or port of do teftify and make known that mafter or commander of the fhip called hath appeared before us, and hath declared by folemn oath, that the faid thip or veffel containing about tons, of which he is at prefent mafter or commander, doth belong to the inhabitants of
within the dominions of the moft ferene and mighty prince, the king of England, Scotland, France, and Ireland, defender of the faith, \&c. So kelphim God. And, in regard it would be moft acceptable to us, that the faid mafter or cornmander be affifted in his lawful affairs, we do requeft you and every of you, wherefoever the faid mafter or commander fhall arrive with his hip , and the goods laden on board and carried in her, that you would pleafe to receive him courteoufly, and ufe him kindly, and admit him, upon páying the lawful and ufual cuftoms and other duties, to enter into, remain in, and pafs from, your ports, rivers, and dominions, and there to enjoy all kind of right of navigation, traffic, and commerce, in all places where he fhall think fit; which we fhall moft willingly and readily acknowledge upon all occafions: in teftimony and confirmation whereof, we have with our hands. figned thefe prefents, and caufed them to be fealed with our feal. Dated the
of in the year of our Lord
And the like form of paffport, mutatis mutandis, fhall be ufed by the fubjects of the moft Chriftian king.

## REMARK

After the conclufion of this marine treaty between GreatBritain and France, we do not find any other of the fame nature in which this crown is much concerned, 'till the time of king James II. who, in the month of Auguft; 1685 , renewed all former alliance with the Dutch, and particularly the fix following treaties, viz.
I. A treaty of peace and alliance, concluded the $\frac{2 \pi}{3} \frac{T}{T}$ of July, in the year 1667.
II. A treaty of commerce and navigation of the fame date.
III. A treaty of peace and friendthip, concluded at Weft. minfter the $\frac{4}{14}$ of February 1673-4.
IV. A marine treaty, concluded at London the ift of De cember 1674 , together with a declaration by which fome articles of the aforefaid treaty, as well as of another marine treaty

## M A R

M A R
treaty of the * of February $1667-8$, are more fully ex. plained and expounded.
$V$ Arucles concluded at London, the $\frac{8}{5}$ of March $1674-5$, forterminating all differences between the Englifh and Durch Eaft-India companies
VI. A league defenfive, concluded at London the $3^{\text {d }}$ of March 1678 .
The next remarkable marine treaty that occurs is that between their late majefties king William and queen Mary, and the Stares-General, concluded at Whitehall, the 2gth of April 168 g , in purfuance of the treaty concluded between king Charles II. and the States, of the 3 d of March 1678 , which is confirmed by this with fome additions. The articles are to this effect :
I. That their majeftics fhall put to fea 50 large men of war, viz. I of the 2 d , I' of the 3 d , and 32 of the 4 th rate, with 15 frigates, and 8 fire-fhips, having on board in all 17,155 effective men.
IL. That the States fhould put to fea 30 large fhips, viz. 8 from $70^{\circ}$ to 80,7 from 60 to 70 , and 15 from 50 to 60 guns, with 9 frigates and 4 fire-fhips, which fhall have on board 10,572 effective men.
1II. That the fleets Chall join, where the king of GreatBritain fhall think fit.
IV. That the fleets of the two mations thall be divided into three fquadrons; the firft to be of 50 large fhips, fix frigates, and eight fire-fhips, to ferve in the Mediterranean; the fecond of 30 large fhips, 8 frigates, and 4 fire-fhips, to ferve in the Irih lea and in the channel, except it be otherwile ftipulated, by confent; and the third of ten frigates, to ferve betwcen the mouth of the channel and Yarmouth, on the coaft of England and the aforafaid place, and the ifle of Wafchere on the coaft of Zeland : the two laft fquadrons to affif occafionally each other.
V. Each of the fquadrons fhall be compoled of the thips of both nations proportionably.
VI. All the fhips of both fquadrons fhall be provided for one year. What cannot be conveniently kept aboard the fhips of the Mediterranean fquadron, the king of Spain, the duke of Tufcany, and the republic of Genoa, fhall be defired to give them a favourable reception.-
VII. Each fquadron Thall be commanded by the Englifh admiral or commander in chief.
VIII. The councils of war fhall be compoled of all the flag officers of both nations in equal number; when the votes are fplit, the captains flall be called; the Englifh admiral fhall be prefident, and the Englifh officers of equal rank fhall have the precedency of the Dutch.
IX. All caufes relating only to the officers, feamen or affairs, of either of the nations, fhall be tried by a council of war of that nation; but, if both nations are concerned, the officers of both 1 hall be prefent at the trial.
XI. All prizes fhall be divided between their majefties and the States in proportion to the fhare they bear in the charge of the fleet. That is to fay, their majefties fhall have $\frac{5}{8}$, and the States $\frac{3}{8}$.
XII. Prizes thall be adjudged by the admiralty of the nation by whofe fhips they were taken, and none but neceflary charge fhall be allowed, without any fees for officers.
XIII. And, if the prizes are taken by fhips of both nations, they fhall be adjudged by the admiralty of the nation, to whom the ftrongeft fhips prefent at the caption do belong. XIV. The fhips of either nation fhall have fpecial orders to proted each other's merchant-men and plantations in the Weft-Indies.
XV. This treaty to be ratified by both partiès.

## REMARKs.

This treaty which I have here abridged, contains fuch remarkable ftipulations and regulations for marine affairs, that I thought it very well deferved to be inferted. And that, and all precedent treaties between thefe kingdoms and that fate, were renewed and confirmed with additions, by a treaty of friendhip and alliance, concluded at London in the month of Augult following. And after that, in the month of October' 1692 , a treaty was concluded by the king of GreatBritain and the States of Holland with the king of Spain, by which that prince obliged himfelf to put to fea at leaft 16 men of war of 60 guns each (which perhaps, was more than he could) with 4 fire-fhips, and 25 gallies, and provifions for ten months; to be joined by 16 other Englifh and Dutch men of war of the fame force, and 4 fire-fhips; upon condition, that all friendly offices fhould be done them by the Spaniard.
It is obfervable, that as to the ceremonial of the falutation, and other fuch punctilio's, which neither of the kings thought fit to yield to the other in the Mediterranean, (but which the king of Spain muft have yielded to his Britifh majefty in the Britifh feas) for avoiding all differences on that account, it is agreed, That there fhall be no fuch thing at all ; as may be oblerved by the 10 th article, which follows
$X$. The men of war, gallies, and fire-hhips, fhall meat at the rendezvous which fhall be affigned them, without any ceremony, falutation, or counter-falutation; which fhall be
oblerved, all the time they aft together, as well by the whete fleet as by detachnents.
And fo nice have princes, and efpecially the kings of Engs land, always been upon this tender point of the maine, thatfor fear any fmall condefcenfion of any of their commanding officers thould afterwards militate againft them, and be looked upon as a deference paid to the Spaniard, it is agreed by the eleventh article, That they foould meet the firft time on board the Dutch admiral, or other commanding fhips of hat nation, afunder.
XI. And, for the firft time, the commanding officers fhall meet in the fhip of the firft Dutch officer, there to regulate matters, according to the tenor of the feparate articles, which thall be agreed on for the purpole.
Which feparate articles here follow.
The commanding officers fhall meet without any ceremony of rank at the firft joining of the fleet,' in the fhip of the firft Dutch officer, and'fhall concert amongft themfelves, according to their orders, the neceffary meafures for acting againft the enemy with the greateft appearance of fuccefs.
After this we do not meet with any other marine treaty very remarkable, 'till that concluded at the general peace of Ryfwick, between France and Holland; in which, befides feveral other matters relating to commerce, it is agreed, That the French and Dutch may freely frequent, with their bhips and merchandizes, the countries, lands, towns, ports, and places of each other, with equal and reciprocal privileges, and without paying any other or greater duties in each other's countries, than the natural fubjects of the country.
That the thips of war of either nation fhall always be free to come in, lie at anchor, and go out of roads, rivers, ports, and harbours of each other, without being fubject to any fearch, provided they give not any reafonable caufe of jealoufy.
That the fhips of war of either nation, whether belonging to the fovereign or the fubjects, fhall have liberty to conduct, whether they pleafe, the prizes they take from their enemies, without paying any duties or fees ; and, on the contraty, no retreat fhat be allowed to fuch as have made prize of any of the fhips of his majefty, or the States-General, or their fubjects : but, if they be forced in by tempeft or otherwife, they fhall be obliged to depart as foon as poffible.
That the fhips of either nation, coming to an anchor at any port in their paffage upon a longer voyage, fhall not be obliged to fell any part of their goods : and that the fhips, nor goods, nor mariners, or other fubjects of either nation, fhall be arrefted or detained by the other, under any pretence whatfoever, 'except it be for a juft caufe, and according to the due forms of law.
That it fhall be lawful for the fubjects of either nation to trade with the enemies of the other, and to carry thither all forts of goods that are not contraband; under which term are only comprehended arms and ammunition, and warlike accoutrements of all forts for men and horfe. And the fhips of both nations, whether at fea or any port or road, fhall fhew their paffports and other rea-papers in due form, to which entire credit fhall be given.
That all goods belonging to the fubjects of either party, being feized on board an enemy's fhip, fhall be confifcated, except fuch as have been laded; if between the mouth of the channel and Norway, more than four weeks after the declaration of the war; if between the mouth of the channel and cape St. Vincent, more than fix weeks; if further in the Mediterranean orelfewhere on this fide of the Line, more than ten weeks; and if beyond the Line, all the world over, more than eight months after the declaration of war: and it is agreed, That neither the goods nor perfons of enemies fhall be feized by either nation in the flips of the other, except the perfons be in the immediate fervice of the other.
That any captain of either nation, making prize any fhips laden with contraband goods; fhall' not break open coffers, chefts, bails, or any other thing 'till the fame be done, in due form, by the officers of the admiralty; except the captain of any thip, having only a part of his lading contraband goods, confent to deliver the fame up, and purfue his voyage with the reft.
That judgment fhall be given with all juftice and expedition, concerning all fhips take at fea; and, upon the complaint of the minifter or envoy of either party, the caufe thall be heard over again in council; and, notwithftanding the appeal of the captor, fentences, pronounced in favour of the owners of hhips taken, thall be put in'execution, upon their giving fecurity to be forth-coming.
That the fubjects of either nation may freely freight, or caufe to be built in the dominions of the other; all manner of hhips, whether for war or commerce, and that the enemies of either fhall not enjoy that privilege.
That in cafe of fhipwreck upon the coaft of either nation, the effects that can be (aved thall be reftored, if reclaimed within the year and day, without any form of procels.
That neicher party fhall fuffer the fhips of the other to ${ }^{\text {b }}$ be made prize in their ports or harbours.
That this treaty thall fubfift 25 years.

By a feparate article of the fame date, the duty of 50 fols a ton impolid upon all foreign fhips in France was taken off the Dutch, except only, when the latter fhould lade in one port in l'rance, to unlade at another in the faid kingdom. L1: the bteakint out of the enfuing war put a fop to the exccution of this treaty.

## R E M A R K S.

We have dwelt the longer upon the point of maritime affairs and treaties, in difcharge of our promife made to the public; and, in the fubfequent parts of this work, we fhall give the ubftace of other the moft material treaties of this kind, which have fubfifted between the chief potentates of Europe. The ufe hereof is not only to convey fome knowledge of the hiftory of Chriftendom, in relation to the ftate of commerce, but to give readers, whó may not have been converfant with affairs of this nature, fuch an idea thereof from what is paft, as may enable them the better to judge of the recitude of what has been tranfated of the like kind fince. And, From due attention to what fhall be laid before the public an this head in the courfe of our undertaking, it will appeat, that thofe who take upon them to make treaties of commercial or maritime concerns, cannot be too well acquainted with the fubject of trade and navigation; they cannot bave too minute and familiar a knowledge of practical trade, who would judge of it to good purpofe in any refpect: a genera notion, which only fkims over the furface of commerce, can only afford an imaginary, not fuch a real and fubftantial knowledge, as will einable a man to promote the public intereft himfelf, or capacitate him to judge of the meafures of others. For confirmation of the truth hereof, this work af fords no little variety of inftances. See in particular the ar ticles Colonies, Chambers of Commerce, Brifish America, Consuls, France, Gratias, Levant Trade, Naval Affarrs, Tradie, Treaties of Commerce, Custom-House Business, Duties, \&xc. See alfo feveral of the other articles feferred to at the beginning of this article, which have affinity with this fubject.
MARLE, for the manuring and cultivation of land, is of various kinds and different colours. The earth generally known by the name of marle, is a tight fríable fubttance, of midde nature between chay and chalk, but neither to fat as clay, nor fo denfe as chalk, and fiticks to the tongue.

## REMARKs.

Under the articles Earth, Farming, Husbandry, Manure, we have fhewed the neceffity of advancing the arts of agriculture, and have opened a fcene to the improvement thereof in general. Likewife under fuch other heads as we refer to from them, the fame fubject is purfued with all brevity and perfpicuity with relation to its fundamental particulars that concern trade, which is as much as the reader will expect in a work of this nature.
The moft ordinary help for fertilization of land, is ftercoration. Sheep's dung is one of the beft, the next is the dung of kine, and, thirdly, that of horfes, which is held fomewhat too hot unlefs it be mixed. That of pigeons for a garden, or a fimall piece of ground, is excellent.
The method of applying the dung to arable land, is to fpread it immediately before ploughing, fo as to plough it in ; for, if it fpread long before, the fun will exhale much of it's fatnefs. For grazing ground, the way is to fpread it fomewhat date, towards winter, that the fun may have lefs power to dry it up.
The fecond kind of compoft is, divers kinds of earth; as marle, fea-fand, chalk, earth upon earth, pond earth, and mixtures of them. Marle is thought the beft, as having moft fatnefs, and not heating the ground too much *. The next is fea fand, which obtains a particular virtue from the falt, for falt is the firft rudiment of life. See the article Salt. Chalk overheats the ground a little, and therefore does beft upon cold clay, or moint ground.

* See Sir Hugh Plat's Jewel-Houfe of Art and Nature, page 114, \&c.
It is a common error to think chalk is fo great a help to arable, but not to grazing ground. The error proceeds hence, that, after chalking of the ground, they wear it out by many crops without reft, and then, indeed, it will bear little grafs. It was a good expefment to lay chalk upon arable ground a little before ploughing, and plough it in as they dodung; but then it muft firlt be made friable by rain or lying. Earth is a compoft to earth. A garden, that had a feld, as it were, poured upon it, bore fruit excellently the frrt year, for the furface of the earth is always the moft fruitful. And earth fo prepared bas a double furface. But fuch earth as affords faltpetre, if procurable without too much charge, is beft. The way to haften the growth of faltpetre, is to exclude the fun; and, therefore, to make a large thatched hovel over fome quantity of ground, or even to plank the ground over, will produce faltpetre. Pond-earth, or river-earth, is a very good compoft for manure; efpecially if the pond has been long uncleaned, and fo the water
be not too hungry; and we judge it would be yet better, if mixed with chalk
Another help for ground is procured by means of fome other fubftances, though not merely earthy, having a virtue to fertilize: wherein afhes excel, infomuch that the countria about Etna and Vefuvius have a kind of amends made then in the exceeding fertility of the foil, for the mifchief done them by the eruptions; which fertility is caufed by the ables fcattered over the ground.
Soot alfo, though thin fpread in a field or garden, is found a very good compoft. Salt is generally too coftly: it has been tried, that mixed with feed-corn, and fown together, it proves ferviceable; and we are of opinion, that powdered chalk, mixed with feed-corn, would do good, perhaps as much as chalking the ground all over
The fuffering vegetables to die into, and fo fatten the ground is another help; as the flubble of corn, efpecially of peafe. Brakes caft upon the ground, in the beginning of winter, will make it very fruitful, It were proper alfo to try, whether leaves fwept together, and mixed with fome chaik and dung, to give them more heat, would not make a good compoft, for there is nothing wafted fo much as the leaves of trees : and, as they lie fcattered and without mixture, they rather make the ground four than otherwife
Heat and warmth is likewife a good help to ground. It has been anciently practifed to burn heath, ling, and fodge, with the advantage of the wind, upon the ground. We find that the warmth of walls and inclofures is an amendment ; fo lying open to the fouth, and the folding of fleep, as well by their warmth as their compoft: and, perhaps, the covering of ground with brakes in the beginning of the winter, may help by means of the warmth. The ufual way of gathering flints in finty ground, and laying them in heaps, is no good hufbandry; becaufe they are magnets to heat, and would keep the ground warm.
Another help to fertility is watering, which may be done two ways; the one by letting in and fhutting out the water at fea fonable times: for water let in at fome times, if it fay not too long, does good; but at others, if it fay too long, hurt. And this only ferves for meadows, adjacent to a river. The other way is, to bring water from fome high grounds, where there are fprings into the lower, carrying it in long furrows and from thefe furrows drawing it tranfverfe, to fpread the water, which makes an excellent improvement both for corn and grafs: though the expedient proves the richer, if theie hanging grounds be fruifful, becaufe the water thus wafhes down fonie of the fatnefs of the earth. Generally where there are great overflows in fens, or the like, the drowning them in water makes the following fummer more fruifful, as keeping the ground warm and nourifhing it. But the fenmen hold it, that the fewers may be kept fo as to continue the water too long in the fpring, 'till the weeds and fedge be growt up; becaufe then the ground, like a wood, will keep out the fun, and fo continue the wet, and never graze well that year. For more matter correfponding hereunto, fee the articles Earth, Farming, Flax, Husbandry, MaNURE.
Marles, befides their application with other proper compofts for vegetation, they afford a fit matter for the making of veffels; fuch as cricibles, retorts, bodies, \&c. in chemiftry. They likewife ferve to procure the difcontinuation and divifion of certain falts and other materials, that would otherwife rife and boil over in the operation. Thefe are, therefore, employed in the diftiliation of nitre, turpentine, wax, \&c. They alfo contribute more materially, more intimately, and more effentially, as to quantity, in the fixation of certan bodies; as of oils, for example, of common fulphur, and even of mercury. For which fee Becher's firf fupplement to his Phyfica Subterranca.

## MARQUE

Of letters of marque and reprizal, granted on depredations
committed on trade and navigation, and of reftitution, \&c.
Letters of marque are extraordinary commiffions granted by authotity for reparation to merchants, taken and defpoiled by ftrangers at fea : and reprizals is the retaking, or taking again of one thing for another.
The goods of others may be taken upon the fea, by letter of marque and jus reprifaliarum; but the fame cannot be done by any private authority, only by the power of that prince or fate, whofe fubject the injured perfon is; nor is it grantable by authority, but where the party damaged has juttice denied him, or the fame is delayed contrasy to the laws of nations: this law or cuftom of reprizals was eftablifhed by the confent of nations, and, without it, licence would be tolerated for the committing of depredations; but princes, by the laws of nations, are anfiwerable for public injuries, and floould by prudent meafures, prevent thofe that are private, not fuffering foreigners to receive wrongs in their countries: nor hould the prince of the perfon injured value his misfortune at fo low a rate, as to deny him letters of requeft for fatisfaction; and, if juftice be denied after fuch requeft, it is reafonable to arm him with power, to take Catisfaction by reprize and military force.

And there are ufually fent two or three letters of requeft, according to the fatisfaction returned in anfwer, before the reprizal is awarded; and fuch letters, generally affign a time certain for damages to be repaired; if not, reprizals to iffue forth.
King Charles I. after the maffacre of the Dutch at Amboyna, granted letters of requeft to the States of Holland for latif faction within eight months, otherwife letters of reprizal were to follow. King Charles II. on the petition of Meff. Gouler and Canham, granted one Lee letters of requeft to the great duke of Tufcany, for redtefs againft the government of Leghorn.
In the year 1674, the fame prince iffued out the like authority to the king of Spain, requiring fatisfaction for the depredations committed on the fhip and goods of Mr. Stampe at the Havanna. He alfo publifhed the year following a proclamation, promifing a reward for apprehending the offenders dead or alive.
In the profecution of thefe letters there muft be, I . The oath of the party injured, or other fufficient proof, touching the injury thereby fuftained. 2. A proof of due profecution for obtaining fatisfaction in a legal way. 3. The deferring or denial of juttice. 4. A complaint to his own prince or fate. 5. Requifition of juftice made to the fupreme head or flate, in the ordinary courfe it was denied. 6. Perffifing fill in the denial of juftice. After all which, letters of reprizal under fuch reftrictions and limitations as are confonant to law, and as the cafe requires, may iffue not only by the civil, but by the municipal laws of this kingdom: and then the prince of that country, againft whom the fame are awarded, muft repair the damage out of his or their effects, who committed the injuries, or, if that proves deficient, it ought to fall as a common debt on his country.
Such authorities grantable by the laws of England are twofold, ordinary and extraordinary: the ordinary are either within the realm, or without the fame; the firft are grantable where Britifh merchants have fuffered in their perfons, and their merchandize are fooiled or feized beyond the feas, by merchant ftrangers, and the Britifh merchants upon fuit, or the king's demanding of juftice by his ambaffadors, \&c. cannot obtain fatisfaction to the perfon injured ; then the parties proving they have profecuted the offenders in a due courfe of juftice, and have been denied or delayed illegally to have right done them, fhall, in fuch cafe, have a writ out of Chancery to arreft the merchant ftrangers of that nation, or their goods in thefe kingdoms. And the lord chancellor, in this cafe, has always the approbation of the king and council for fo doing.
The other reprizals without the realm, are by patent under the great feal, and cannot be ordinarily revoked;' becaufe, after the perfon injured has petitioned, and according to law proved his lofs, obtained letters of requeft, and no reparation has been made : as foon as the letters patents are fealed, the fame does immediately create and veft a national debt in the grantee, to be fatisfied in fuch manner, and by fuch means, as the faid letters patents direct, out of the goods and eftates of that prince's fubjects, who refufed, or illegally delayed juftice.
But, if the fupreme power thinks the execution of thefe letters of reprizal cannot well be effected without endangering the peace of both ftates, it may be refpited till a more convenient time; and princes are careful, in granting fuch letters patents, to have them made fo as they may not be reckoned a breach of the peace; but the granting of them for particular fatisfaction does not, in the ordinary way, amount to a breach.
As to the extraordinary reprizals, they are by letters of marque, for reparation at fea, or any place out of the kingdom, granted by the fecretaries of ftate, with the approbation of the king and council; but they are only during the king's pleafure, and generally in time of war, fo that they may at any time be revoked.
In king Henry the IVth's reign, on the complaint of the commons of England, who had fuffered many wrongs and injuries in the lofs of their fhips and goods upon the main fea, contrary to leagues, $8 x \mathrm{c}$. which were violated by the fubjects of other nations; and reciting the willingnefs of the pariament to provide remedy and relief for the grieved; a law was made, by which it is enacted, that, upon application to the keeper of the privy feal, he fhall fign letters of requeft to demand reparation; which, if not made in convenient time, then the lord chancellor of England thall grant letters of reprizal in due form of law, to obtain the fame by force, and for the indemnity of the perfons injured: this is confirmed by ftat. 4 Hen, V. cap. 7. and other ftatutes.
But letters of reprizal were granted long before thefe ftatutes, by the kings of England, by virtue of their prerogatives; nor was the king's prerogative in the leaft diminifhed by them, but remained at the common law, to judge when it was expedient to grant them; and the before-mentioned act of king Henry IV. notwithftanding it ordains letters of requeft and of reprizal, doth not reftrain the king's plerogative thercin.

The cafes where reprizals will or will not lie, are thus flated: on wrong judgment given in a profecution abroad, in matters not doubtful which might have been redreffed, and the which wats apparently perverted or denied, reprizal may be granted : though, if the matter be doubtful, it is ocherwife; for in caufes dubious, there is prefumption that juftice was truly adminiftered. If an Englifhman profecutes a perfon in any legal court beyond the feas, whereupon the military governor oppofes the fuit, and by his means the debtor and his goods are conveyed away, but a fentence or judgment is obtained: by this the execution is fruftrated; and letters of reprizal fhall be had.
Yet, if'a merchant of England Chall commence a fuit in the courts of law, beyond the feas, and judgment paffes againt him, from which he appeals to the fupreme court, and there the firft judgment is confirmed and allowed; though the complainant hath received a judgment contrary to the right of the caufe, here he fhall not have letters of reprizal; but it may, in an extraordinary cafe, occafion fuch letters to have a rehearing.
If any perfon fhall be killed, wounded, or any way damaged in an hoftile manner, in the territories or places of any king or potentate, to whom letters of requeft are tranfmitted, and no fatisfaction thall be made to the perfon injured, there is no compulifion to refort to the ordinary profecution, but letters of reprizal thall be iflued: but, where misforcunes happen to perfons, or their goods, refiding in a foreign country in time of war, reprizals are not to be granted; in this cafe, they muft be contented with the lofs, for they are at their liberty to relinquifh the place on the approach of the enemy, when they forefee the country is fubject to devaftation; and, if they continue, they muft partake of the common calamity. It is not the place of any man's nativity, but of his habitation, that fubjects him to reprize ; for the law doth not confider fo much where he was born, as where he lives: therefore, if letters of reprizal hould be awarded againft the fubjects of the duke of Tufcany, and a native of Florence, but denizened or living in England, fhould have a fhip on a voyage for Leghorn, if in fuch cafe a capture be made of this ihip, it is not lawful, nor can the fame be made prize.
There are certain perfons, as well as thips and goods, that are exempted or privileged from reprizals; fuch as ambaffadors and their retinue; travellers through a country, ftaying but a little while there; ecclefiattical perfons, \&c. And a merchant of another place than againft which reprizals are granted, although the factor of his goods were of that place, is not fubject to reprizals. Molloy Jur. Marit. 2I.
Where fiips are driven into port by ftrefs of weather, they have an exemption from the law of reprizals, according to common right; but by the laws of England it is faid to be otherwife, unlefs exprefsly provided for in the writ or commiffion: and, if fuch hhip flies from his own country to avoid confifcation, or for fome other fault, and is driven to by ftrefs of weather, the may then become fubject to be prize. But it is unlawful to make feizure of thip for reprizal in any ports, but in that prince's who awarded the reprizals, or bis againft whom the fame are iffued; the ports of other princes or ftates are not to be difturbed, but be peaceably maintained.
If a fhip, having letters of marque or reprizal, fhall take the hips and goods of that nation againft whom they are awarded, and bring the fame into a neuter port, the owners may there claim and feize her; or the admiral may make reflitution, according to law, of the fhip's goods to the owners, and the captives to their liberty; for that the fame ought firft to have been brought infra prefidia of that prince or ftate, by whofe fubjects they were taken: and, if it be not fo done it has been refolved, that fuch fhips cannot become lawful prize, nor are the owners of fuch a caption divefted of their property. Trin. ${ }_{17}$ Car. I. in B. R. Marih's Rep.
When any thip that hath letters of reprize attacks a veffel, and the refufes to yield, the may be affaulted and entered; and if it falls out, that by accident fome of thofe which make refiftance are flain, the fault will be at their own doors, for hindering the execution of what is legal and granted by authority. But in cafe a letter of marque hall knowingly take a fhip and goods belonging to another nation, againit whom the commiffion is not awarded, but of fome other ftate in amity, this amounts to piracy; whereupon the offenders will incur a forfeiture of their veffel, \&c. Roll. Abr. 530 . Though if fuch letters of marque be affigned over to another perfon, who takes any fuch thip or goods of another nation, on a prefumption that it belonged to the right of him againft whom reprizals are granted: here, if the fufferers recover their goods and fhip, yet the captors are not to be punilhed criminally, nor the grantees of the letters patents civilly. The captors neverthelefs may not be excufed from anfwering the damages, but the grantees are excufable both as to that and punifhment, unlefs they are privy to the caption: it is like unto the cafe of an officer arrefting a wrong perfon, he is liable to anfwer the damage to the party arrefted, but not the perfon that employed him. Stat. 4 Hen. V. cap. 14. Sea Laws 470.

A perfon

## M A S

A perfon who had letters of marque in the Dutch war, took an Oftender inftead of a Dutch fhip, and brought her into harbour, and was profecuted for damage, \&cc. And one Broom, by letters of marque, scc. under others, having taken a French thip at fea, he carried the fame into Africi, and the admiralty there condemned her as prize; afterwards he fold her, and applied the money to his own ufe, and then, coming into England, he was fued in the admiralty to give an account, and fentence was given againft him ; though he appealed for a prohibition, but it was denied. I Lev. 248. 1 Salk. 32 .
A fhip being lawfully taken and brought into port, the captor muft exhibit all bis fhip-papers and captive mariners to be ex muift exnibit, in order to adjudication; 'till 'when, and the examined, in order to adjudication; till when, and the
goods are legally condemned, bulk ought not to be broken; nor may the captain permit any embezzlement of the lading, or fell, barter, or difpofe of any part, without commiffion, for the king hath a proportion in all prizes [fee Prizes]: and the common profits of prizes are to be equally divided among all the fhips prefent, and not be folely to the captor; fo that if letters of reprizal are granted to two fhips, and they happen both of them at fea to meet a prize, and the one attacks and enters her, by means whereof the becomes conqueror, although the other did nothing in the engagement, he hath a right to an equal diftribution with the captor, becaufe the prefence of the other veffel, armed and prepared for battle, becomes a terror, and will occafion a fhip the fooner to yield. 3 Eliz. cap. 5. 2 Leon. Rep. 182.
If the caption of any fhip or goods be by men of war, the property will immediately be in the captors; except it be loft again, and the fhip or goods are recovered by the perfons from whom they were taken, or be in battle regained. And, by the law of nations, the dominion of the things taken by thofe to whon letters of marque are granted, become the captors, 'till the debt and cofts, that is, the original damage and fubfequent charges are fatisfied; which being done, the refidue ought to be reltored: fo the Venetians ufed their equity, having taken the fhips of Genoa; they did not fpoil any of the lading, but preferved the fame very carefully, until the debt was paid; and then they made reftitution of the things entirely, withcut diminution. Molloy, 23 .
In cafe the king of England fhould be in enmity with the States of Holland, and one of their thips of war takes an Englifh merchant-man, and afterwards another hhip of war of England meets the Dutch fhip and his prize, and regains the fame, there reftitution is commonly made, the owners paying the falvage: fo where the prize is recovered by a friend in amity, or comes into his ports, reftitution is to be made. And the taking of fhips and goods by force and arms is fo odious, that if, by any poffibility, the right owners may have reftitution, the fame hath been granted. Ibid, 6, 7 . Where, for the fault, perbaps, of a few, a debt becomes national, the goods of the guiltlefs become liable (if taken) for fatisfaction; but fuch party ought to have contribution by the law of England, as when one is put to the whole burden, and more are bound te do one thing. Though when depredations have happened here to foreign merchants, and complaint hath been made concerning them, our kings have often iffued conmiffions to enquire of the fame, and awarded fatisfaction: and, upon the petition of fome merchants of Genoa, who complained againft the inhabitants of the ifle of Guernfey for a depredation, in taking away and detaining their merchandize and goods to a confiderable value, out of a fhip wrecked by tempeft near the faid ifle; on this a commiffion was granted, by which the commiffioners were impowered to punifl the offenders, and make reftitution and fatisfaction for tho damages fuftained. For as the Englifh fubjects may have their goods by way of reprize, for the fatisfaction of a debt from foreigners, fo they may have the benefit of thefe commiffions, to make themielves whole out of the eftates of the offenders. Pat. 26 Edw. MI. See ftat. 3I Hen. VI. cap. 4.
But he that will fue to have reftitution in England for goods taken at fea, mult prove that the fovereign of the party was in amity with the king of England, \&c. and letters of reprizal make no war, or enmity between nations. 22 Edw. III. MASTERS of SHIPS. See our article Commanders of Ships, containing fomething curious relating to the difcovery of the Longitude at fea. See alfo Longitude.

## Mercatorial laws and ufages relating thereto.

The mafter of a hip or veffel, is to be chofen by the part owners in proportion to their concerns, not by the majority; and that man which is moft able, is to be preferred. As the whole charge of the veflel and lading are conmitted to the mafter, the owners fhould be very careful who they admit to be commander of their thip; and he ought to be a perfon of honefty, as well as ability and experience.
The law looks upon a mafter as an officer, who muft give an account for whatever he has under bis care, and on failure to render fatisfaction; therefore, if any misfortune bappens by the negligence, wilfuluefs, or ignorance of himielf or his marimers, he muit be anfwerable for it. As foon as goads and Yos. Il.
merchandize are iaden aboard the fhip, whether the be riding in port, haven, or any other part of the feas, he that is mafter is chargeable therewith; and, if the fame be there loft or purloined, or fuftain any damage, either in the haver or port before, or upon the feas after the is in her voyage, he mult anfwer the damage; for the very lading of the goods on board the fhip doth fubject the mafter to anfwer the fame. Hob. Rep. Ir. Molloy Jur. Marit. 197. A merchant fends goods aboard a fhip, and the mafter having figned his bills of lading for the fame, the goods were flowed; but in the night divers perfons, under pretence that they were prefs-mafters, entered the fhip and robbed her of thofe goods and merchandize; and, in an action brought by the merchant againft the mafter of the fhip, it was made a queftion, whether he fhould anfwer for it? And it was alledged on his parr, that there was no default or negligence in him; for he had a fufficient guard, the goods were all locked up under hatches, and that the thieves came on the pretence aforefaid and robbed the ihip, and he could not have prevented the fame: but it was notwithftanding adjudged, that, as mafter, he muft at his peril fee that all things are forth-coming that were delivered to him, let what accident will happen (the aft of God or an enemy only excepted) and from fire, thieves, and the like, he is obliged to anfwer, and is in the nature of a common carrier; though it is at the merchant's eletion to charge either the mafter or the owners, or both, at his pleafure, but he can have but one fatisfaction, Hil. 23 Car. II. B. R. 2 Lev. 69. See alfo i Mod. 85.
Where the mafter is fubject to anfwer damage, is generally to be underfood in fuch cafes, where the lading was brought abroad either by his confent or bis deputed fervant's; for any other, or fuch goods, as thall be fecretly brought in not being entered in his deputed fervant's book, or in the bills of lading, the mafter fhall not be compelled to fee forth-coming; unlefs it be fuch things as the parties bring into the fhip about them, as cloaths, money, or the like, which being feldom entered, yet commonly are vifible, and the mafter by law is refponfible for them. So likewife if a mafter forewarn a paffenger to keep his goods, and that he will no way take care of them, and, if they be loft, or purloined by the fhip's crew, he will not be obliged to fee them forth-coming; here the mafter is not held anfwerable in cafe of a lofs, efpecially if there be any thing of an agreement concerning it. Molloy, $215,216$.
But, if goods hall be fent aboard a fhip, and the mafter fhall appoint a cabbin for the fame, and deliver the key thereof to the lader, and tell him he will not be anfwerable if a lofs happens, yet, if the goods are ftole, he muft make fatisfaction. And if a mafter fhall receive goods at any kay, or fend his boat for them, and they happen to be loft, he fhall likewife anfwer both by the maritime and common law. Moor's Rep. Trin. 25 Eliz. Moll. 216, 198.
If a mafter commits any offence wilfully, or through negligence, he fhall be anfwerable to his owners, who may compel him to make fatisfaction for the damages, and, in fuch cafe, they may fue feparately: $f 0$, alfo, if the fhip hath earned freights, and fome of the owners have received their parts, and the reft have not, they may bring an action for their fhare, without joining with the others. Hil. 26 and 27 Car. II. And, when goods are tranfported for hire, and no contract is made with the proprietors of the thip, there the mafter is chargeable for the goods in refpect of his wages; and the owners are fo in refpect of their freight, that they seceive for the carriage thereof. Per Holt chief juftice.
It is faid, That, where goods are once delivered to a mafter, the cargo is not fubject to be attached in his hands; for they are in law, as it were, bailed to the fhip, until the freight and all other charges are paid. And it has been held, That, as the mafter or owners of a thip may have an action for the freight, either the one or the other are anfwerable, where goods are damaged in a fhip; but, in cafe there are feveral owners, and one diffents from the voyage, he thall not be liable to any action afterwards for a mifcarriage, \&c. Comberb. Rep. 116.
If goods are fo embezzled or damnified, that the feamen or If goods are fo embezzled or damnified, that the feamen or
mariners muft anfwer, here the owners and mafters are to deduct the amount of the damage out of their freight to the merchants, and the mafter fhall deduct it out of the wages of the mariners: for, though freight is the mother of wages, it is allo the very father of damage ; and, before a mariner can claim his wages out of what the fhip hath earned, the fhip muft be acquitted from the damage that the mercbant hath Suftained by the negligence or fault of the mariners: and the
reafon is, for that, the goods being obliged to anfwer th: reafon is, for that, the gonds being obliged to anfuer the
freight, fo the froight and fhip are tacily engaged to clear the freight, to the froight and hip are tacidy engaged to clear the
damage, and, when that is done, the manmers fhall then be lat into their wages. Molloy, 212 .
The law doth impute the offences committed by mariners, or if done by paffengers aboard the hip, or others, to be the $n$ :sligence of the matter, to make him liatle; and, were it otherwife, the merchant would be in a very dangerous condition: and further reafons why he ought to be anfwerabie for his men are, becaufe the mariners are of his own ciafng, and
under his correction and government, and know no other fuperior on fhip-board but himfelf; and, if they are faulty, be may punin them, and likewife, if the fact is apparently proved againtt them, miy reimburfe himfelf out of their wages due. Palch. 1 I Jac. I. B. R. I. 2 Roli. Abr. 530. A mafter of a thip hath power to freight out the veffel, take in goods and paffengers, mend and furnith the fhip; and, for that purpofe, if need be in a ftrange country, he may borrow money, with advice of his mariners, upon fome of the tackle, or fell fotne of the merchandize; and, if part of the goods fhall be fold in fuch neceffity, the higheft price that the remainder are difpofed of for muft be aniwered and paid to the merchant; after which, fuch merchant is to pay for the freight of thofe goods, as well as for the remaining merchandize; but, if the thip in the voyare happens to be calt away, then only fhall be tendered the price that the goods fo fold were firft. bought for. Leg. Oleron. I.
Such is the duty of a mafter of a fhip that is provident, that he ought not to make fail and put forth to fea, without the confent of his company; if he doth, he fhall anfwer the damages arifing thereby. And be is not to fet fail without a fufficient number of able mariners, nor in tempeituous weather; neither muft he flay in port or harbour, without juft caufe, when a fair wind invites his departure. Alfo he mult not proceed in his voyage with infufficient rigging or tackle, or with other or fewer cables than are ufual and requifite, refpect being had to the burthen of the veffel: and, if any damage happens by the delivery of the goods in the lighter, as that the ropes break, and the like, there he mult antwer; but, if the lighter come to the wharf, and then, in taking up the goods, a rope breaks, the wharfinger is liable. Leg. Oleron. 2 Co. Entr. 3 .
If a commander of a fhip fhall break ground, or endeavour to fail away, after an embargo is laid upon fhipping by the ftate, he fhall be anfwerable for all damages which thall accrue: the reafon is, becaule his freight is due, and mult be paid, though his goods be feized. He ought not to refufe payment of the juft and ordinary duties and port-charges, to the hazard of any of his lading; but, if the officers infift upon more than is due, and he offers what is juft, and which he ought to pay, then he thall be excufed. If, by the mafter's default, confifcation of goods, or other damage happen, for non-payment of cuftoms, or falfe bills of entry in the cuftomhoufe, or for tranfporting of unlawful merchandize, the mafter fhall anfwer for the fame, with the intereft: but, concerning the fuing for fuch goods, the malter may well do it; and, notwithftanding, if it be found that the merchant is in any fault, then, if the mafter and four of his mariners fwear that there was no fault in them, he will be cleared thereby. Leg. Oleron. Molloy, I98. Lex Mercat. of Malines, 103. The mafter of a fhip, taking Jinen or cloths aboard, fhall provide good canvas, left the goods be damaged; he muft not overlade the fhip above the birth-mark, or take into his fhip any perfons of an unknown or obfcure condition, without letters of fafe conduct; nor ought he to lade any of his merchant's goods on board the fhip of an enemy (though his own fhip be in diffrefs) without fuch letters of fafe-conduct; for, if he does, the fame may be made prize, and he mult make good the damage. And he muft not lade any prohibited goods; in which cafe, he is not only'anfwerable, but alfo for any damage happening by any unreafonable fowing or breaking of goods, and therein he and his company may be put to their oath. He ought not to fhip any merchandizes, but only at the public ports and kays [fee Kays], and he may not make ufe of any unlawful colours, enfigns, pendants, jacks, or flags, whereby his thip or lading would be fubject to feizure, 18 Hen. VI. I9 Eliz. cap. 9. 12 Car. II. cap. 18. 26 Car. IL.
He may not deviate in his courfe, without good caufe, or fteer a dangerous and unufual way, when he can have a more fecure paffage (though, to avoid illegal impofitions, it is faid he may fome what change his courfe) nor may he fail by places infefted with pirates, enemies," \&cc. or notorioufly known to be unfafe, or near rocks, or remarkable fands, if he be not thereto neceffitated by violence of wind and weather, or deluded by falfe lights. He fhall not freak into the creeks, or other places, when laden homewards, but come direetly into the king's great ports (unlefs he be driven in by tempeft), for, in fuch cale, be would incur a forfeiture of the merchandize, and is obliged to anfwer. Molloy, 200. 4 Hen. IV. cap. 20. If feveral thips are in company on the fame voyage, the mafteis are oblised, by the marine laws, to flay for one another, or thall be liable to the damages that the ochers ihall luitain from an enemy, or pirates. Sea Laws.
A malter is to deliver to the owners the names of ail the perfons whom he is to tranfport, and of his mariners wfore he departs the kingdom; and, at his return, fhall :..ute a true inventory of the goods of any perfon which fhall happen to die, to be delivered to them, that his kindred and friends may have intelligence of it, and the goads may be forthcoming for one whole year: but of thefe goods, in the mean time, the bedding and appurtenances may be taken by the maner and mate to their ufs; as allo the cloathing, and
other things upon the deceafed's body, may be delivered to the boatfwain and the company. The mafter fhall keep his company in peace; and, if any feaman be hurt in doing fervice, he mult take care that be be cured; and, if done by his companion, the charges fhall be recovered of the other mariner: in cafe a mariner falls fick, the mafter fhall order him to be laid in a houfe, with all fuftenance neceflary and ufual in the Chip, but fhall not ftay until he recovers; and, when he is recovered to healch, muft pay him his wages, or if he dies, fhall give it to the wife, or his neareft friends. Lex Mercat. Malines, 103.
If mariners want money during the voyage, the mafter ought to lend it them; but he thall not be anfwerable for the contracts of his men, for, in fuch cafe, they may be detained: he ought to give his mariners flefh three days a week, and the other days fifh, or fuch-like victuals, with fufficient drink. If, through the mafter's fault, the fhip-boat perifh, with any mariners in it, then fhall the mafter pay one whole year's hire to the heirs or executors of the perfons drowned. Lex Mercat. Malines.
On a thip's arrival rafe in port; a mafter is firft to fee that the fhip be well moored and anchored, and then he muft not relade or fet fail again, until he hath been legally cleared, fo as to have made fatisfaction for damage, if any happened by default of him or his men, \&cc. And, when any mafter of a thip Chall arrive at Gravefend, he fhall not be above three days coming up the river to London, nor thall he touch at any kay or wharf, 'till be comes to Chefter's Kay ; and he or his purfer are there to make oath of the burthen, contents, and lading of the fhip, to the beft of their knowledge; alfo where the took in her lading, in what country built, and how manned, who was mafter during the voyage, and who the owners. Stat. I2 Car. IL. cap. 18.
Nor fall the mafter lade on board any goods outwards, to any place whatfoever, without entering, at the Cuftom-Houfe, the name of the fhip and of her mafter, the burthen, guns, ammunition, and to what place bound; and, before he fets out, hhall bring in a note, under his hand, of the names of every merchant that fhall have laid aboard any goods, with the marks and numbers of all fuch goods, and be fworn as to the fame, under the penalty of 100 l . by 14 Car . II. cap. II. And if any goods are landed, on the coming of a fhip into port, for which duties are to be paid, without entry made, and the cuftoms agreed, they may be feized, and a door broke open for that purpofe, \&c. 12 Car. II.
By late ftatutes, if any maiter of a merchant-hip or vefiel Shall, during his being abroad, force any man afhore, or wilfully leave him behind, or refufe to bring all his men home again, who are in a condition to return, he fhall fuffer three months imprifonment. Stat. 11 and 12 Will. III. cap 7. But no matter of a thip thall bring into this kingdom from Ireland, Jerfey, \&c. or the plantations, any vagrant rogue, on pain of forfeiting 5 l. And mafters of fhips bound for Ireland, \&c, fhall, upon a warrant to them directed by a juftice of peace, tranfort vagrants at the rates fet at the quarterfeffions, under the like penalty. 12 Ann. cap. 23.
Mafters of thips are to take poor boys apprentices, fuch as are 13 years old, whofe parents are chargeable to the parifh; they muft be bound with the confent of two juftices, \&c. to ferve 'till they are 21 years of age; and the church-wardens and overfeers of parifhes fhall pay the matter, when fuch boy is bourd apprentice, 21. Ios. for cloathing and bedding, to be allowed them on their accounts, and fhail fend the indentures to the collestor of the cuftums of the port to which the malter fhall belong, who fhall regifter them, \&c.
A mafter of a hip from 30 to 50 tons fhall take one fuch apprentice, one more for the next 50 tons, where the fhip is larger, and one more for every 100 tons, above the firft roo; and refuling fuch apprentices, are liable to a penalty. Poor boys, bound to other employments, may be turned over to any mafter of a hip; and the widows and executors, \&c. of fuch mafters, have power to affign fuch an apprentice to any other mafter of a fhip. 2 Ann. cap. 6. 4 and 5 Ann, cap. 19.
Every feaman ferving on board any fhip, and perfon employed upon the coafts of Great-Britain or Ireland, in the taking of finh which are brought frefh to fhore, and boats that trade in from place to place, or in open boats upon the coafts, thall pay 6 d . per month for the better fuppori of Greenwich-Hofpital [fee Greenwich-Hospital], and the mafter of every thip or veffel is to detain the fame out of the mariners wages, and pay it to the perfon who thall be appointed by the admiralty to receive it, and is to give an account upon oath, on pain of rol. But mafters and fervants of hoys, fmacks, or other veffels belonging to London, and employed in bringing corn, filh, or ather provifions, thall not be liable to this duty. 10 Ann. cap. 17.
By 8 Geo. II. cap. 29. it is enacted, That, in cafe any feaman, on board any merchant-fhip belonging to the fubjects of his majefty, hall be maimed in fight againft any enemy, fuch feaman thall be admitted into the royal horpital at Greenwich, as any other feaman wounded in the fervice of his majefty.

Some other authentic Law Cases adjudged in the Courts of Judicature in England.

## Bofon verfus Sandford, \& al. Mich. J. W. \& M. B. R. intr. Hil. I and 2 Jac. II. Rot. 302.

Cafe againft A. and B. part owners of a hhip, for that he put goods on board, and the defendants undertook to carry them fafely for hire, but yet were fo negligent that the goods were rpoiled: upon not guilty pleaded, in evidence it appeared, That C. and D. were alfo part owners, and that the fhip was under the care of a mafter, to whom the goods were delivered; and, this being found rpecially, it was argued pro quer. That the action is grounded on the wrong, and may be againt all, or any of the proprietors: there was alfo another doubt flarted, and that was, whether the owners were liuble, when in trath they did not undertake, but, in fact, the mafter fuper fe fufcepit.
Eyre juftice held, There was no difference between a landcarrier and a water-carrier, and that the mafter of a fhip was no more than a fervant to the owners in the eye of the law; and that the power he has of hypothecation, \&c. is by the civil law. Et per Holt, chief juftice, The owners are liable in refpect of the freight, and as employing the mafter; for, whoever employs another, is anfwerable for him, and undertakes for his care to all that make ufe of him.
2 dly , The court held, That all the owners were liable, for they are charged in point of contract, as employers, and are all equally intitled to the freight: either mafter or owners may bring an action for the freight; but, if the owners bring the ation, they muft all join, ergo, they muft all be joined; as the freight belongs to all, fo all are equally undertaking; and a breach of trult in one is a breach of turit in all; as, where two make one officer, the act of one is the act of the other.
3dy, The court held this was not an action ex delicto, but ex quafi contractu, and it was not the contract of one but of all: that there was no other tort but a breach of truft. Therefore the court gave judgment for the defendant, hecaufe all the owners were not joined. Salk. p. 440.

## Wilfon verfus Bird.

The flip was libelled againft in the admiralty, for that the mafter, being taken by a French privateer, had ranfomed the thip for 300 . and had fued for the payment of it, and was carried prifoner to Dunkirk, and the moncy was not paid, \&c. and fentence was given in the admiralty againft the fhip; and, upon motion for a prohibition, it was denied by Holt chief juffice, then alone in court, becaufe, the taking and pledge being upon the high fea, the fhip, by the law of the admiralty, fhall aniwer for the redemption of the mafter by his own contract. Lord Raymond, vol. i. p. 22.

## Benzen verfus Jeffries.

Motion was made for a probibition to the court of admiralty, where a fuit was profecuted againft a fhip, which the matter had hypothecated for neceffaries, being upon the fea in ftrefs of weather. And the fuggeftion was, That the agreement was made, and the money lent, upon the land, viz. in the port of London, it being a Venetian veffel, which came here by way of trade, and not ftrefs of weather.
But, per Holt chief juftice, the mafter of the thip has power But, per Holt chief juftice, the mafter of the inip. has power
to hypothecate it, but he cannot fell it; and, by the pawning, the fhip becomes liable to condemnation. This was refolved in folemn debate, in the cafe of Coftard verfus Lewftie, 2 Will. and Mar. B. R. Then there is no remedy here for the hypothecation, but by way of contract: therefore, fince the King's-Bench cannot do right to the parties, it will not hinder the admiralty from doing them right; for the King's-Bench allows the hy pothecation, and yet denies the remedy: it will be a manifeft contradiction. An action was brought upon the ftatute 2 Hen . IV. cap. 1 I . for fuing in the admiralty upon an hypothecation, and it was held to be out of the fatute, in the time of my lord Hale. And as to the objection, That the contract was made upon the land, and the money paid there, it muft of necefity be fo, for, if a man be in diftrefs upon the fea, and compelled to go into port, he muft receive the money there, or not at all. And, if his hip be impaired by tempeft, fo that he is forced to borrow money to refit, otherwife fhe will be loft, and for fecurity of this moncy, he pledges his thip: fince the caufe of the pledging arifes upon the fea, the fuit may well be in the admiralty court; but, becaufe there was a precedent where a prohibition in fuch cafe had been granted, the court granted the prohibition, and ordered the plaintiff to declare upon it, for the law feemed clear to them, as before is faid. Lord Raymond, vol. i. p. 152.

## Tranter verfus Watfon.

Watfon was mafter of a merchant's thip, which was taken at fea by a French privateer. Wation agreed with the cap-
tain of the privateer for the ranfom of the fhip and goods, at 1200 l . and as a pledge or fecurity for the payment of the money, Watfon was detained and carried into France, but the fhip and goods were releafed, and were brought into Briftol, where the fhip was unladed, and the goods landed (after cuftom paid) and delivered to cre Day, but whether in truft for the benefit of the mafter, or for the ufe of the owners, was not agreed.
Watfon commences his fuit in the court of admiralty, againft the owners, to compel them to pay the 12001 . and redeen him; and, thereupon, a warrant was filued out of that court to arreft the fhip and goods, in quadam caufa falvagii, in order to compel the defendant to appear there; and the fhip and goods were rcized thereon. Mr. Broderick and Mr. Dee prayed a prohibition as to the goods, fuggefting the feizure on land infra corpus comitatus, and fo not within their jurifdiction. He infifted, That the :rafter has no power to make fuch an agreemen, nor to fubject the goods to the payment of his raníom, without the exprefs authority and confent of the owners. The power of isppothecation in a voyage for neceffaries is incident to his office, and allowed for the neceffity of the thing, ind the beneft of the owners; but this is not fo, for this is a redemption, and a new buying of the thip, and, if this be allowed lawful, it will give a power to the matter to do an injury to the owners, by obliging them to the performance of an agreement of his making, upon any terms never fo unreafonable, and to compel them to pay more than the fhip and goods are worth, as the agreement in this cât is.
Bufides, the power of the matter is only over the fhip, and he has no power over the goods and lading, to make any difpofition thereof. Admitting the mafter has fuch power, to iubject the goods to the payment of this ranfom, yet he ought not to bring the fuit in his own name, but the fuit ought to be carried on in the name of the vendee or purchafer of the goods. Admitting the fuit proper, yet the feizure is illegal, for the court of admiralty cannot award fuch procefs as their firft procefs to compel the party to appear, in the nature of an execution againft the goods; and they can no more begin with fuch procefs than an inferior court; and, as a prohibition Shall be awarded to an inferior court in fuch cafes, fo ought it in this, though the party have not yet appeared, nor any libel be as yet exhibited. And fo it was done in the cafe of Capt. Sands and Sir Jofiah Child, 5 Will. and Mar. a prohibition was there granted on the warrant, before any libel. On the other fide, it was infifted by Mr. Eyre and Mr. Montague, That noprohibition ought to go in this cafe, for that the mafter has power, in this cafe, to fubject the goods to the payment of his redemption; and it is founded on the fame reafon as his power of hypothecation, the neceffity of the thing, and the benefit of the owners, by parting with fome part of the goods to fave the reft ; whereas, otherwife, the whole would have been loft. So is Molloy, 213,214 . Hob. Ir, 12. [Note, Holt chief juftice, upon bis citing Molloy, faid, Cite the authorities there mentioned, if you will, but do not cite the book itfelf;] but this, being a matter and a caufe properly within the jurifdiction of the admiralty, thall be determined there. And in a maritime caufe, whereof they have cognizance, the procer's of the court may he executed upon land, infra corpus comitatus.
Befides, the fale or delivery of the goods upon land will not take away the jurifdiction of that court, fince they have jurifdiction of the original matter. And fo it is adjudged, 1 Sid. 320. Thompfon verf. Smith. 3 Cro. 685.2 Sand. 259. Radley verf. Egglesfield. I Lev. 243 . Turner verf. Neale. As to the objection, that the fuit in curia admiralitatis ought not to be in the mafter's name, they anfwered, That it is moft proper in his name; for the captors, to whom the ranfom belongs, and who have the mafter in their cuftody, cannot fue in their own names, becaufe they are enemies; but, if the fuit be not carried on between proper parties, it is good caufe for an appeal, and thall be determined by the rules of the marine law, but it is no ground for a prohibition.
But admitting the merits of the caufe to be againit the mafter, yet the owners came too foon for a prohibition before they have appeared, and before any libel exhibited, fo that it cannot appear to this court what the nature of the fuit is.
The court defired to hear a civilian, before they made any rule in this cale : and, accordingly, Dr. Lane attended for the plaintiff in curia admiralitatis. He argued, That falvage, or caula falvagii, as jt is mentioned in the warrant, is of admiral jurididion: that'the mafter reprefents both the owners of the fhip and the traders, and has a truft repofed in him, which extends to the goods as well as the fhip; the mafter may detain the goods of the merchant for the freight of the fhip, or wages of mariners. The mafter, in this cafe, by the marine law has an hypothecation of the grods to him, to keep 'till payment be made of the money agreed, and not only a bare poffeffion, and, therefore, though he part with the poffeffion of the goods before payment, that does not diveft his intereft.
The goods were in the power and poffeffion of the enemy, who might have kept or deftroyed them all, if they had not been redeemed by the matter, which is for the benefit of the
owners.
owners. Redemption is a redemption by the mafter, and gives fecurity for the payment of the money agreed, by fubjecting his perfon as a pawn or pledge; fo that he has, as it were, paid for the goods. This power of redemption is not founded on the Rhodian laws, or the laws : Ol Oleron, but arifes from the cuftom and law of nations, and the fame cuftom or law, gives the mafter, in this cafe, an intereft in the hip and goods. See Oleron Laws and Rhodian Laws. Here Holt chief juffice interrupted him, and faid, We are not now upon the merits of the caufe, for that is not before us upon this motion.
It was agreed by the whole court, that no prohibition fhould be granted in this cafe.
Holt chief juftice faid, You come too foon for a prohibition, before appearance, and a libel filed, for you are not yet in court. If this procefs be an illegal procefs, and not juftifiable by the rules of their law, you may take your remedy by an action of trefpafs or replevin. The cafe of Sands and Sir Jofrab Child was on an action upon the ftatute of Rich. II. and fiah on a prohibition, as was fuggefted.
We cannot try the legality of the procefs upon a motion. If it come before us on an action of trefpafs, we fhall then judge both of the legality of the procefs and the power of the mafter. If a replevin or an action of trefpafs be brought, and there be a jurildiction, we muft determine whether what was done was legally done or no, upon whatloever law it is grounded, whether ecclefiaftical, maritime, the law of nations, or whether [H. J.], It feems very juft and reafonable in this cafe, that the owners of the goods ought to pay the redemption. If a pirate fhould take the thip and goods, and the mafter redeem them, the owners thall make him fatisfaction; and then much more in this cafe when taken by an enemy.
When the mafter makes a compofition for the benefit of the When the mafter makes a compofition for the benefir of the
owners, it is highly reafonable that he fhould be indemnified. The whole fhip and goods would have been prize, if he had not made this compofition; therefore, where there is an inftant danger of lofing fhip and goods (as in this cafe, when they were under the capture and power of the enemy) and no hopes of faving them then appears (though afterwards it may happen that the flip may be refcued on frefh purfuit) cannot the mafter make fuch an agreement as this, as well as he may throw part of the goods overboard, in cafe of a tempeft, to fave the reft? The mafter has the cuftody and care of the fhip and goods: fuppofing then that the mafter has fuch a power of compounding, the goods then remain to him as a lecurity to him, and he may detain them 'till payment, as he may for freight. But then it is to be confidered, whether when he has once delivered them to the owner, or to his ufe, he has not parted with his fecurity, and has no way to come at them again, as it is in cafe of freight ? Thefe things are confiderable, if we go into the merits of the caufe; but, that not being before us, I give no opinion therein.
Pewell juftice. This procefs being only to compel the parties to appear, you come too foon for a prohibition before libel. We cannot determine the legality of the procefs in this manner: if that court has a power in any cafe to proceed againft the goods, and to feize them on procefs, we ought not to grant a prohibition; for how does it appear to us, but that this procefs is awarded in fuch a cafe, wherein it lawfully may? As to the merits, it feems very reafonable, that the mafter thould have power to make fuch a redemption, as he may throw part overboard in a tempeft, to fave the reft. And here the goods feem to remain in the nature of a pawn to the mafter, to fecure the payment; and if the mafter, by delivering out of the goods, has loft his intereft therein, and fo the feizure illegal, yet we cannot determine that on the return of the procefs before libel: you may plead that matter there, but we cannot take notice that the procefs is illegal; if it be, you have your remedy.
Gould agreed; Powis ablent. Lord Raymond, vol, ii. p. 931 to 934 .

## Clay verfus Snelgrave.

The defendant, as executrix to the mafter of a fhip, libelled in the admiralty court for the wages owing to the teftator by the owner. Upon which the plaintiff, to have a prohibition, fuggefted the flatute of 15 Rich. II. cap. 3. that the admiral court fhall not have cognizance of contracts made upon the land, and fhews this contract to have been made upon the land, \&c. And this cafe was feveral times moved by Sir Bartholomew Shower and Mr. Acherley, for his prohibition, as well in Michaelmas, Hilary, and Eafter terms laft paff, as in this prefent term: and it was oppofed by Mr. Northey and Mr. Hall: and the counfel for the prohibition argued, That prohibitions are grantable de jure, and are not diferetionary in the court. Raym. 3, 4. That the cale, in Winch. Rep. 8. was the firf cafe where a prohibition was denied in cafe of a fuit by mariners for their wages in the admiralty court; and the denial was grounded upon compaffionate reafons, becaufe they were poor men, and becaufe there they might join in action, but here they muft fever; but the faid cafe is contrary to the reafon and grounds of the law ; for where the contract is made upon the land, though the fervice
was done upon the fea, it is out of the jurifdiction of the admiralty; and fo vice verfa, if the fervice was done upon the land, and the contratt upon the fea. $12 \mathrm{Co} .79,80$. Stanf. 5I. b. Hob. 212. A confultation is always denied in cafe of a fuit by mariners, if there is a charter-party: and the fealing of a writing cannot make any difference in reafon, Raym. 3. A probibition granted where the mafter libelled alone. Mr. Northey and Mr. Hall è contra for the defendant faid, That the cafe of mariners was now fettled, and ought not to be ftirred; but that the great reafon why they are permitted to fue there is, the thip is the debtor, and, by the Jaw of the admiralty, they may attach her, which they cannot do by the common law ; and in the admiralty court they may all join in fuit, whereas, by the common law, they muft bring feveral actions. That the cafe of the mafter is not different, for the fhip is fecurity to him, and he is but a mariner, and his wages are wages at fea. But, however, where the mafter dies in the voyage, as he did in this cafe, there can be no reafon to exclude his executors from fuing in the admiralty, becaufe he had no opportunity of bringing his wages to account with the owners.
And in 2 Ventr. 181. Allifon verf. Marfh, the purfer, though an officer of the fhip, was allowed to fue for his wiges in the admiralty. And in 2 Keb. 779. PI. 6. Rex verfus Pike, a prohibition was denied, where the mafter and mariners joined in a fuit in the admiralty for their wages. [But Holt faid, That a prohibition ought to have been granted quoad in the faid cafe.] And he cited a cafe, Hil. 27 and 28 Car. II. C. B. between Cooker and Older, where Atkins and Ellis juftices were of opinion, That a prohibition ought to be granted, to the fuit in the admiralty court by a mafter of a thip for his wages ; but North chief juftice faid, and $W^{\top} y$ ndham juftice heid the contrary opinion. But Holt chief jultice faid, That it is an indulgence that the courts at Weftminfter permit mariners to fue for their wages in the admiralty court, becaufe they may all join in fuit ; and it is grounded upon the principle, Quod communis error faciat jus; but they will not ciple, at the beginning of the voyage here in England, and the contract was made with him here. Pofibly, if the mafter of a fhip died in the voyage, and another man took upon him the charge of the hip upon the fea, fuch cafe might be different, as in the cafe of Groffwick' verfus Louthly, where it was held in this court lately, That, if a fhip was hypothecated, and money borrowed upon her at Amfterdam, upon the voyage, he who lent the money may fue in the admiralty for it; and this court granted a confideration in the faid cafe. But in another cafe, where the money was borrowed upon the thip before the voyage, the King's Bench granted a prohibition, and the parties acquiefced under it. There are many precedents, in the court of admiralty, of fuits by the mariners for their wages, but none for the mafter of the fhip. And the cafes differ; for the mariners contract upon the credit of the fhip, and the mafter upon the credit of the owners of the thip, of whom generally he is one.
The opinion of lord Hobart, That, where there is matter of property to be tried, a prohibition hould be granted, is a little too hard. Gould juftice agreed with Holt, and faid, He was of opinion that prohibitions were grantable of right, though it had been controverted in his time. To which Holt chief juftice faid, that Hale chief juftice, and Wyndham juftice, held prohibitions to be difcretionary in all cafes; but Kelynge chief juftice was of the contrary opinion: and he faid, He did not efteem them to be matter of right. Then Mr. Northey moved, That the court would compel the plaintiff to put in bail to the action to be brought for the wages at common law, or otherwife deny the prohibition ; which, he faid, had been done often. Holt chief juftice confefled, That the court had fometimes interpofed, and procured bail to be given; but it was by confent, and in cafe of the proprietor himfelf: but, in regard that in this cafe the plaintiff was a purchafer without notice, there was no reafon: and a prohibition was granted. Lord Raymond, page 576.
MATHEMATICS. We fhall not enter into the origin of this fcience of fciences, nor attempt, under this fingle head, to convey a competent knowledge of any of the fevera? branches whereof it confifts; becaufe that would be only to amufe and deceive our readers, and make them believe they receive great benefit, when they obtain only a very fuperficial and confufed notion of they know not what. Wherefore we fhall, at prefent, content ourfelves with giving the man of bufinefs fuch an idea of thefe ftudies, that he may be able to judge what parts may be neceflary for him to purfue, and what to let alone; which is the view in touching on this article at all.
In all ages and countries, where learning hath prevailed, thofe fciences have been efteemed as the mof confiderable branch of it. Amonght the fiences that are reckoned to be the feven líberal arts, four are mathematical, to wit, arithmetic, mufic, geometry, and aftronomy.
It is itrange, that, notwithfanding their ufefulnefs and excellency, a general fupinenefs and indifferency to thefe ftudies fhould of a fudden fpread itfelf among us; when, within thefe 30 years, nothing has been more fathionable; which
mult be owing to an averfion in the greateft part of mankind to ferious attention and clofe reafoning, or to their not comprehending fufficiently the neceffity and great utility of thefe in the other parts of ufeful learning: or, perhaps, from an opinion that this knowledge requires a peculiar genius and turn of head, which few are fo happy as to be born with. For thefe, and probably forne other reafons, this ftudy begins to be as generally neglected as it was warmly cultivated, and is now regarded only by fome few, whofe genius and curiofity have prompted thems to it, or who have been forced upon it by it's immediate fubferviency to fome particular art or employment.
We think, therefore, it may be of fome public fervice to fhew, that, of all parts of human knowledge, the mathematics, for the improvement of the mind, for their affiftance and fubferviency to other arts, and their ufefulnefs to the commonwealth, and it's trade, commerce, and navigation, deferve fill to be highly encouraged, and univerfally ftudied. The advantages which accrue to the mind from this kind of knowledge, confift chiefly in thefe things: (I.) In accuftoming it to attention. (2.) In giving it a habit of clofe and demonftrative reafoning. (3.) In freeing it from prejudice, credulity, and fupertition.

1. Thefe ftudies make the mind attentive to the objects which it confiders. This they do by entertaining it with a great variety of truths, which are delightful and evident, but not obvious. Truth is the fame thing to the underffanding as mufic to the ear, and beauty to the eye. The moft part of other fciences confifting only of probable reafonings, the mind has not where to fix; and, wanting fufficient principles to purfue it's fearches upon, gives them over as impoffible. And youth is generally fo much more delighted with mathematical knowledge than with the unpleafant tafks that are fometimes impored upon them, that many have been reclaimed from idlenefs and neglect of learning, and have acquired a habit of thinking, affiduity, and attention; qualities which we ought early to beget in their defultory and roving minds.
The fecond advantage which the mind reaps from this knowledge, is a habit of clear, demonftrative, and methodical reafoning. We are formed by nature to learn more by imitation than by precept: and we believe, in that refpect, reafoning is much like other arts (as dancing, finging, stc.) acquired by practice. By habituating ourfelves to reafon clofely about quantity, we acquire a habit of doing fo in other things *. It is furprizing to reflect, what fuperficial, inconfequential reafonings, latisfy the moft part of mankind. A witticifm, a jeft, a fimilè, or a quotation of an author, paffes for a mighty argument with too many: with fuch things as thefe, are the moft part of authors ftuffed; and, from thofe weighty premifes, they infer their conclufions.

- © He that has to do, fays Mr. Locke, with young fcholars, - efpecially in mathematics, may perceive how their minds - open by degrees, and how itis Exprcise alone that opens - them. Sometimes they will ftick a long time at a part - of a demonitration, not for want of will and application, - but really for want of perceiving the connexion of two - cifed, is as vifible as any thing can be. The fame would - cijed, is as virible as any thing can be. The fame would - be with a grown man beginning to fudy mathematics : - the undertanding, for want of ufe, often ficks in a very - plain way; and he himexif that is fo puzzled, whe the he - ftuck at, in a cafe fo plain.
-I have mentioned mathematics," as a way to fettle in the - mind an habit of reafoning clofely and in train; not that - I think it neceffary, that all men fhould be deep mathe-- maticians, but that, having got the way of reafoning, - which that fudy neceffarily brings the mind to, they - might be able to transfer it to other parts of know-- ledge, as chey fhall have occafion. For, in all forts of - reafoning, every fingle argument thould be managed as - a mathematical demonfration; the connexion and depen-- dance of ideas fhould be followed, 'till the mind is brought - to the fource, on which it bottoms, and obferves the coa fuch rrain is not enough to fertle the judgment, as in de. - monfrative knowledge.
- Where a truth is made out by one demondration, there - needs no farther enquiry: but in probabilities, where - there wants demonfration to eflablifh the truth beyond - donbt, there it is not enough to trace one argument to - it's fource, and obferve it's ftrength and weaknofs, but all - the argumeats, after having been fo examined on both - fides, muft belaid in balance, one againf another, and, - upon the whole, the underftanding determine it's affent. - This is a way of reafoning the underftanding flould be - This is a way of reafoning the underftanding thould be - accuftomed to, which is to different from what the ini-
terate are ufed to, that even learned men oftencimes feem - terate are ufed to, that even learned men oftenimes tee
- to have very litule, or no notion of it. Nor is is to be - to have very litle, or no notion of it. Nor is it to be
- wondered, fince the way of difputing in the fchools leads them quite away from it, by infifing on one topical argu-- ment, by the fuccefs of which the truth or fallhood of - the queftion is to be decermined, and victory adjudged to - the opponent or defendant; which is all one, as if one - Should balance an account by one fum, charged and dif. charged, when there are an hundred others to be taken into confideration.

This, therefore, it would be well, if men's minds pere accuftomed to, and that early; that they might not erect their opinions upon one shagle view, when fo miany others are requifite to make up the account, and muit - come into the reckoning, before a man can form a right judgment. This would enlarge their minds, and give a - due freedom to their underflandings, that they might not - be led into error, by prefumption, lazinefs, or precipitancy; for I think no body can approve fuch a conduct of the undertanding, as fhould millead it from truch though it be ever fo much in fathion to make ufe of it.
To this, perhaps, it will be objected, rhat to manage the undertanding, as I propofe, would require every man to be a fcholar, and to be furnifited with all the maverials o knowledge, and exercifed in all the ways of reafoning To which I anfwer, that it is a fhame for thofe that have - time, and the means to attain knowledge, to want any helps or affiftance for the improvemenc of their under flandings, that are to be got, and to fuch 1 would be thought here chiefly to fpealk. Thofe, methinks, who
by the indultry and parts of their ancetiors, have been fet free from a confant drudgery to their backs and therir

- bellies, fhould beftow fome of their fpare time on their heads, and open their minds, by fome traais and effays,
- in all the forts and matters of reafoning.

I have before mentioned mathematics, wherein algebra ' gives new helps and views to the underfanding. If I - propofe thefe, it is not, as I faid, to make every man a thorough mathematician, or a deep algebraif, but yet $I$ - think the fudy of them is of infinite ufe, even to grown - men; firft, by exferimentally convincing them, that, to make any one reason well, it is not enough to have parts wherewith he is fatisfied, and that ferve him well enough in his ordinary courfe. A man in thofe lludies will fee, that, however good he may think his under-- fanding, yet in many things, and thofe very vifibie, it may fail him. This would take off that prefumption which moft men have of themfelves in this part, and they would not be fo apt to think their minds wanted no - helps to enlarge them, that there could be nothing added - to the acutenefs and penetration of their undertandings.
-The fludy of mathematics would fhew them the neceffity - there is, in reafoning, to feparate all the diftinct ideas and fee the habitudes that all thofe, concerned in the prefent enquiry, have to one another, and to lay by thofe, - which relate not to the propofition in hand, and wholly to leave them out of the reckoning. This is that, which, in other fubjects, befides quantity, is what is abfolutely requinite to juft reaioning, though in themfelves it is no - fo eafily oblerved, nor fo caref illy practifed. In thofe parts of knowledge, where it is thought demonttration

- has nothing to do, men reafon as it were in the lump;
' and if, upon a fummary view, or upon a partial con-
- fideration, they can raife the appearance of a probability,
- they ufually reft content ; efpecially if it be in a difpute,
where every little ftraw is laid hold on, and every thing
that can but be drawn in any way, to give colour to the
argument, is advanced with offentation. But that mind is not in a pofure to find the truth, that does nor diffinctly take all the parts afunder, and, omitting what is not as all to the point, draw a conclafion from the refult of all the particulars, which any way infuence it. There is
another no lefs ufeful habit to be got, by an application
to mathematical demonftrations, and that is, of ufing the
- mind to a long train of confequences.' Thus Mr. Lock'e.

This effeminacy of mankind, in being perfuaded where they are delighted, have made them the fport of orators, poets, and men of wit. Thofe lumina orationis are indeed good diverfion for the fancy, but not the proper bufinefs of the underftanding. Even formal logical precepts are more ufeful. But, in the fearch of truth, an imitation of the method of the geometers will carry a man further than all the dialectical rules. Their analyfis is the proper model we ought to form ourfelves upon, and imitate in the difpofition and gradual progrefs of our enquiries; and even he who is ignorant of the nature of mathematical analyfis, ufes a method fomething analogous to it. The mechod of the geometers in demonftrating truths already difcovered, viz. by definitions of words agreed upon, by axioms, and propofitions that have been already demonftrated, is practicable in other fubjects, though not to the fame perfection, the natural want of evidence in the things themfelves not admitting it, but it is imitable in a very great degree. One who has been trained up in the feveral branches of thofe fciences, which they have cultivated, will hardly bear with the confufion of other fciences, but endeavour to reform them. Thirdly, Mathematical knowledge adds a manly vigour to the mind, frees it from prejudice, credulity, and fuperfition. It does this two ways, 1 it, By accuftoming us to examine, and not to take things upon truft. 2dly, By giving us a clear and extenfive knowledge of the fyftem of the world; which, as it creates in us a profound reverence for it's great author, fo it frees us from the mean and narrow thoughts, which ignorance and fuperfition are apt to beget. How reat an enemy mathematics are to fuperfition, appears from this, that, in thofe countries where Romioh priefts exercife their barbarous tyranay over the minds of men, aftronomers, who are fully perfuaded of the motion of the earth, dare not fpeak out: but, though the inquifision may extort
a recan-

## M A T

M A T
a recantation, the Pope' and a general council will hot find haemfelves able to perfuade to the contrary opinion. Per hop; this may have given occafion to a calumnious fuggeftion as if mathematics were an enemy to religion, which is a fandal thrown both on the one and the other; for truth can never be an enemy to true religion, which appears always to the beft advanage, when it is moft examined. On the contrary, thele ftudies are friends to religion; inafmuch as they chuin the rational pafion, reftrain the impetuofity of imagination, and purge the mind from error and prejudice. Vice is error, confution and falfe reafoning, and all truth is more or lefs oppolite to it.
What we have faid, may ferve to recommend mathematics for acquiring a vigorous conftitution of mind; for which purpofe they have been experienced as ufeful, as exercife is towards the health and frength of the body.
We fiall now touch upon their extent and ufefulnefs in other parts of knowledge. And here it might fuffice to oblerve, that mathematics is the fcience of quantity, or the art of reatoning about things that are capable of more or lefs, and that the moft part of the objects of our knowledge is fuch; as matter, foace, number, time, motion, gravity, \&c.We have but imperfect ideas of things without quantity, and as imperfect a one of quantity itfelf without the help of mathemancs. All the vifible works of nature are made in number, weight, and meafure; therefore, to confider them, we ought to underftand arithmetic, geometry, and ftatics : and, the greater advances we make in thele arts, the more capable we are of confidering, for all the ufeful purpoles of ife, fuch things as are the ordinary objects of our concepton. This will further appear from particulars.
i. If we confider, to what perfection we know the courfes, periods, order, diftances, and proportions of the feveral great bodies of the univerfe, that fall within our view, we fhall have caule to admire the fagacity and induftry of the mathematicians, and the power of numbers and geometry well applied.
Let us confider aftronomy in it's infancy, or rather let us fuppofe it itill to begin; for inftance, a colony of rude country perple, tranfplanted into an ifland remote from the commerce of all mankind, without fo much as the knowledge of the calendar, and the periods of the feafons, without inftruments to make oblervations, or any the lealt notion of obervations or inftruments. When is it we could expect any of their pofterity thould arrive at the art of predicting an eclipfe? Not only fo, but the art of calculating all ecliples that are paft or to come, for any number of years, which has proved of unfpeakable ufe and confolation to mankind. When is it, we could fuppofe, that one of thofe iflanders, tranfported to any other place of the earth, fhould be able, by the infpection of the heavens, to find how much he were fouth or north, eaft or weft of his own ifland? Though we know this may be, and is daily done, by what is known in aftronomy, yet when we conlider the vaft induftry, fagacity, multitude of obfervations, and other extrinfic things neceffary for fuch a fublime piece of knowledge, one would be apt to pronounce it impoffible, and never to be hoped for. Now we are let fo much into the knowledge of the machine of the univerfe, and motion of it's parts by the rules of this fcience, perhaps the invention may feem eafy. But when we reflect, what penetration and contrivance were neceffary to lay the foundations of fo great and extenfive an art, we cannot but admire it's inventors: as Thales Milefrus, who, as Diogenes Laẹrrius and Pliny fay, firft predicted eclipfes; and his fcholar Anaximander Milefius, who found out the globous figure of the earth, the equinoctial points, the obliquity of the ecliptic, the principles of gnomonics, and made the firf fphere or image of the heavens; and Pythagoras, to whom we owe the difcovery of the true fyftem of the world and order of the planets. Though it may be, they were affifted by the Egyptians and Chaldeans. But, whoever they were that firt made thefe bold fteps in this noble art, they deferve the praife and admiration of all future ages.
Though the induftry of former ages had difcovered the periods of the great bodies of the univerfe, and their true fyftem and order, and their orbjts pretty near, yet was there one thing referved for the glory of this age, and the honour of the Englifh nation, the grand fecret of the whole machine; which, now it is difcovered, proves to be (like the other contrivances of infinite wifdom) fimple and natural, depending upon the moft known, and moft common pro perty of matter, viz. gravity. From this the incomparable Sir lfaac Newton has demonftrated the theories of all the bodies of the folar fyftem, of all the primary planets and their fecondaries, and among others the moon, which feemed mof averfe to numbers: and not only of the planets, the floweft of which compleats it's period in lefs than half the ure of man, but likewife of the comets, fome of which it is probable fpend more than 2000 years in one revolution bout the fun; for whofe theory he laid fuch a foundation, that afrer-ages, affifted with more obfervation, are able to calculate their return. In a word, the preceffion of the equinoctial points, the tides, the unequal vibration of pendulous bodies in differentlatitudes, \&ce, are no more a quer-
tion to thole, that have geometry enough to underfand what he has delivered on thele fubjects: a pertection in philuiophy, that the boldeft thinker durit hardly have hoped; and, unlets mankind turn barbarous, will continue the reputation of this nation, as long as the fabric of nature thall endure. After this, what is it we may not expect from geometry, joined to obfervation and experiments?
The next confiderable object of nature we take to be Light. How unfucceffel enquiries ale about this glorious body without the help of geometry, may appear from the empty and frivolous difcoveries of a fort of men, whom nothing will ferve, forfooth, but the knowledge of the very effence and intimate caules of every thing: while, on the other hand, the geometers, not troubling them felves with thofe fruitlefs refearches about the nature of light, have difcovered two remarkable properties of it, in the reflection and refraction of it's beams: and from theie, and thei ftraitnefs in other cafes, have invented the noble arts of Optics, Catoptrics, and Dioptrics; teaching us to manage this fubtile body for the improvement of our knowledge, and uleful purpoles of life. They have likewife demonftrated the caures of feveral celeftial appearances, that arife from the infiection of it's beams, both in the heavenly bodies themfelves and other phænomena, as parhelia, the iris, \&c. and by other experiments they have difcovered the celerity of it's motions. And we know yet more furprizing properties of light, from the works of that fuperlative philofopher Sir Ifaac Newton.
The fluids which involve our earth, viz. air and water, are the next great and confpicuous bodies, that nature prefents to our view: and it may be we know little of either, but what is owing to mechanics and geometry.
The two chief properties of air, it's gravity and elaftic force, have been difcovered by mechanical experiments. From thence the decreafe of the air's denfity, according to the increafe of the diftance of the earth, has been demonttrated by geometers, and confirmed by experiments of the fubit dence of the mercury in the Torricelian experiment From this alfo, by affiftance of geometry, they have determined the beight of the atmofphere, as far as it has any fenfible denfity, which agrees exactly with another ofervation of the duration of the twilight. Air and water make up the object of the hydroftatics, though denominated only from the latter, of which the principles were long fince fettled and demonitrated by Archimedes, who has demonftrated the caufes of feveral furprizing phænomena of nature, depending only on the æquilibrium of fluids, and of folids fwimming or finking therein. Here alfo the mathematicians confider the different preffures, refiftances, and celerities, of folids moved in fluids: whence they explain a great many appearances of nature, unintelligible to thofe who are ignorant of geometry.

* A term frequently ufed among phyfical writers, in the phrafes, Torricellian tube, and Torricellian experiments, on account of the inventor Torricelli, a difciple of the great Galileo.-The Torricellian tube is a glafs tube about 3 feet long, and $3 \frac{1}{4}$ of an inch diameter, whofe upper orifice is hermetically fealed, The Torricellian experiment is performed by filling the tube with mercury, then ftopping he orifice with a inger, inverting the tube, and planging that orifice in a veffel of mercury.-This done, the finger is removed, and the tube futtained perpendicularly to the furface of the mercury in the veliel.-The confequence is, that part of the mercury falls out of the tube into the veffel, and there only remains enough in the tube to fill from 28 to 31 inches of it's capacity, above the furface of the ftagnant mercury in the veffel.-Thofe $28,8: c$. inches of mercury are futtained in the tube by the preffure of the atmofphere on the furface of the ftagnant mercury; and according as that atmofphere is more or lefs heavy, or as the winds, blowing upwards ordownwards, heave up or deprefs the air, and fo increafe or diminifh it's weight and fpring, more or lefs mercury is fuftained from 28 inches to 31 .The Torricellian experiment makes what we now call the barometer.

If we defcend to the animal kingdom, there we may difcern the brighteft ftrokes of divine mechanics. Whether we confider the animal ceconomy in general, either in the internal motion and circulation of the juices forced through the feveral canals by the motion of the heart, or their external motions, and the initruments wherewith thefe are, performed, we muft reduce them to mechanical rules, and confefs the neceflity of the knowledge of mechanics, to underftand them, or explain them to others. Borelli, in his excellent treatife De Motu Animalium; Steno, in his Myologia Specimen, and other mathematical men on the one hand, and the nonfenfical, unintelligible trall, that the common writers on thefe fubjects have filled their books with on the other, are fufficient inftances to fhew, how neceffary geometry is in fuch feculations.
The only organ of an animal body, whofe ftructure and manner of operations are fully underftood, has been the only one, which the geometers have taken to their fhare to confider. It is incredible, how fillily the greatelt and ableft phyficians talked of the parts of the eye and their ufe, and of the modus vifionis, before Kepler, by his geometry, found it

## M A T

out, and put it pait difpute, though they applicd themfelves particularly to this, and valued themfelves on it: and Galen pretended an extraordinary divine commiffion to treat of it. Notwithltanding the full difcovery hereof, fome go on in copying their predeceflors, and talk as ungeometrically as ever. It is true, we cannot reafon fo clearly of the internal motions of an animal body, as of the external, wanting fufficient data and decifive experiments: but what relates to the latter (as articulation, fructure, infertion, and vires of the mufcles) is as fubject to ftrict mathematical difquifition, as any thing whatfoever; and, even in the theory of difeafes and their cures, thofe who talk mechanically, talk moft intelligibly. Which may be the reafon for the opinion of the anciert phyficians, that mathematics are neceffary for the fudy of medicine itfelf, for which we might bring long quotations out of their works.
If one of the reafons of the ancients for this was heretofore unfafhionabie, to wit, becaufe they thought a phyfician fhould be able to know the fituation and afpects of the flars, which they believed had influence upon men and their difeafes (and pofitively to deny it, and lay, that they have none at all, is the effect of want of obfervation *) we have a much better and undoubted one in it's room, viz. That mathematics are found to be the beft inftrument of promoting natural knowledge.

## * See Dr. Mead on the Sun and Moon.

If alfo we confider, not only the animal aconomy in general, but likewife rhe wonderful ftructure of the different forts of animals, according to the different purpofes for which they were defigned; the various elements they inhabit, the feveral ways of procuring their nourifhment, and propagating their kind ; the different enemies they have, and accidents to which they are fubject; here is ftill a greater need of geometry. It is rare, that the qualities of an expert anatomift and fkilful geometer meet in the fame perfon. Such, however, have difcovered a whole terra incognita of delightful knowledge, to employ their time and reward their induftry. As for the other two kingdoms, Borelli, and others mathematically turned, feem to reafon very clearly of vegetation *: and Steno, another mathematician, has applied this part of learning very handfomely to foffils, and fome other parts of natural hittory. We fhall add only one thing more, That if we confider motion itfelf, the great inftrument of the actions of bodies upon one another, the theory of it is entirely owing to the geometers; who have demonftrated it's laws, both in hard and elaftic bodies ; fhewed how to meafure it's quantity, how to compound and refolve the feveral forces by which bodies are agitated, and to determine the lines which hofe compound forces make them defcribe: of fuch forces gravity, being the moft conftant and unerring, affords a great variety of ufeful knowledge $t$, in confidering feveral motion that happen upon the earth, viz. as to the free defcent of heavy bodies, the curve of projectiles, the defcent and weight of heavy bodies when they lie on inclined planes, the theory of the motion of pendulous bodies, \&uc.

See Dr Stephen Hales's Vegetable Statics.

+ See Sir Iface Newton's works, and thofe of his illuatrators.
From what has been faid, we fhall draw but one corollary, That a natural philofopher, without mathematics, is a very odd fort of a perfon that reafons about things that have bulk, figure, motion, number, weight, \&c. without arithmetic, geometry, mechanics, ftatics, \&cc.*
* So wild and extravagant have been the notions of a great part of philofophers, both ancient and modern, that it is hard to determine, whether they have been more diftant in their fentiments from truth, or from one another; or have not exceeded the fancies of the molt fabulous writers, even poets and mythologitts. This was owing to a precipitate proceeding in their enquiries, and a neglect of geometry and experiment; without the affiftance of which, it is impofitle the powers of natural agents thould be difcovered. The manner of philofophizing, among the ancients, was to afcribe to bodies certain arbitrary properties, fuch as beft ferved their purpofe in accounting for the phenomena of nature ; from whence proceeded fo many various fects of philofophers, every one affigning a different caufe to the fame appearance, as his particclar genius and imagination led him.
The chief agreement, obfervable among moft of them, confifts in this, viz. that they conceived all bodics, as compofitions of air, earth, fire, and water, or fome one or mare of chem, from whence thefe acquired the name of principles or elements, which they ftll retain.
Epicurus advanced a little farther, and afferted, that tho', bodies confitted of fome one or more of thefe, yet that they were not frictly elements, but that thefe themfelves confitted of atoms; by an accidental concourfe of which (as they were moving through infinite face in lines nearly parallel) all things received their form and manner of exinfence (a).
(a) For the opinions of the ancient philofophers, sonfal: Diogenes Laçrtius, and Stanley's Lives,

## M AT

Des Cartes has contrived an hypothefis very diffirent from the refl: he fers out with a fappofition, that the univerfe at firt was entirely fuil of maiter; that from this matter, when firft put in morion, there would neceflarily be rubbed off (by the grinding of the feveral parts one againft another) fome particles fufficiently fine to pafs through the hardelt fome particles suffciently fne to pais through the hardett and moft folid bodies, without meeting with any refiftance:
of thefe confilts his materia fubtils, or materia primi elementi. Thofe which did not fo far lofe their firt figure, as menti. Thofe which did not fo far lofe their firft figure, as to come under the denomination of materia primi, or fecundi elementi, he called materia tertii elementi, and
maintained, that all the variety which anpears in natural maincained, that all the wariety which anpears in natural
bodies, was owing to different combinations of thofe ele-
He likewife fuppofes, that God created a certain quantity of motion, and aligned it to this mafs of matter ; and that hat motion (being once created) could no more be annihiated, without an omnipotent hand, than body iffelf: in confequence of which he was obliged to teach, that the quantity of motion is always the fame: fo that, if all the men and animals in the world were moving; yet fill there would be no more motion than when they were at reff, the motion which they had not, when at reft, being transferred ot the wther. So unaccountable are the notions of this reat philofopher, that it is furprizing his doctrine fhould have met with fuch univerfal reception, and have got fo Atrong a party of philofophers on his fide.
Des Cartes has been faid, by alate writer (a) to have joined, to his great genius an exquifite fkill in mathematics, and be mixing geometry and phyfic together, to have given the world hopes of great improvements in the latter. But this writer ought to have confidered, that what he looked upon in Des Cartes's book of Principles, as demonflrations, are only illuftrations, there not being a demonfration from geometry in all his philofophical works (b).
(a) Mr. Wotten, in his Refections on Ancient and Modern
b) See this f
andis fubject difcufled in Keil's Introduction to his Ex
The prefent method of philofophizing, eftablifhed by Sir Ifacac Newton, is to find out the laws of nature by experi ments and obfervations. To this, with a proper application of geometry, is owing the great advantage the prefent yytem of philofophy bas over all the preceding ones, and the vaft improvements it has received within the laft age. It is, indeed, in vain to imagine, that a fyttem of natural philofophy can be framed by any other method; for, without obfervalions, it is impoffible we fhould difcover the phænomena of natare; without experiments, we mult be ignorant of the mutual actions of bodies; and, withoat geometry, we can never be certain whether the caufes we affign be proportionate to the operations we would account for, as the various fy flems of philofophy built on other foundations evidently fhew.
This way of fearching into nature was firft propofed by my lord Bacon, [fee the article Philosophx,] profecuted by the Royal Society, the Royal Academy at Paris, the Hon. Mr. Boyle, Sir Ifaac Newton, \&cc.
What wonderful advancement in the knowledge of nature may be made by this method of enquiry, when conducted by a genius equal to the work, will be beft underfood by confidering the difcoveries of that excellent philofopher lait mentioned
To him it is principally owing, that we have now a rational fyltem of natural philofopty; it is he, who, by purfuing the fare and unerring method of reafoning from experiment and obfervation, joined with the molt profound ikill in geometry, has carried his enquiries to the moft minute and invifible parts of matter, as well as to the largeit and mott remote bodies in the univerfe, and has eftablifhed a fyltem not fubject to the ancertainty of a mere hypothefis, but which flands upon the fecure bafis of geometry itcelf.

Every body knows, that chronology and geography are in difpenfible preparations for hiftory: a relation of matter of fact being a very lifelefs thing, without the circumftances of time and place. Nor is it fufficient for one, that would underftand things thoroughly, that he knows the topography, that is, the name of the country, where fuch a place lies, with thofe of the near adjacent places, and bow thefe lie in refpect of one another; but it will become him likewife to underftand the fcientifical principles of the art: that is, to have a true idea of a place, we ought to know the relation it has to any other place, as to the diftance and bearing, it's climate, heat, cold, length of days, \&c. which things much enliven the reader's notion of the very action itfelf. Juft fo, it is neceffary to know the doctrinal part of chronology, if a man would be thoroughly Ikilled in hiftory, it being impoffible without it to unravel the confufion of hiftorians. Dr. Halley, I think, has determined the day and hour of Julius Crfar's landing in Britain, from the circumfances of his relation. And it is well enough known, how great ufe our incomparable hiftorian, Mr. Dodwell, has made of the calculated time of eclipies, for fettling the times of great events, which before were, as to this effeptial, circum great events, which bee
dances almoft fabulous.
Both chronology and gengraphy, and alfo the fun and moon's motions, fo far as they relate, nor only to the confliution
of the calendar and year, are neceffary to a divine, but in order to the right underftanding of the fcriptures: we have a remarkable inltance of this within the prefent year, by the Kev and learned Mr. John Kennedy, author of the New Scripture Chronology*.

* See the reverend author's New Scripture ChronologyAnd the Doctrine of Commenfurability, between the diurnal and annual motions, illuttrated and confirmed by above a hundred calculations, which are all adjufted to the meridian of Greenwich, and publifhed to afcertain the aftronomical principles of the Pentateuch of Mofes. - The molt accurate obfervations which can be made for the current year, \& feq. are appealed to as the only proper telt of their truth.
If this reverend and learned author's difcovery mould prove true, it will be of unfpeakable fervice to the caufe of religion, and have a happy tendency to convince learned men of the divine authority of the fcripture. - But this is befide my province.

No body, we fuppofe, will queftion the intereft that mathematics have in painting, mufic, and architecture, which are all founded on numbers. Perfpective and the rules of light and hadows are owing to geometry and optics: and we think thefe two comprehend pretty near the whole art of painting, except decorum and ornaments; which are only a due oblervance of the hiftory and circumftances of the fubject reprefented.
If mathematics had not reduced mufic to a regular fyftem, by contriving it's feales, it had been no art, but enthufiaftic rapture, left to the roving fancy of every practitioner. This appears by the extraordinary pains which the ancients have taken to fit numbers to three forts of mufic, the diatonic, chromatic, and inharmonic: which, if we confider, with their nicety in diftinguifhing their feveral modes, we fhall be apt to judge they had fomething very fine in their mufic, at leaft for moving the paffions with fingle inftruments and voices.
But mufic had been imperfect ftill, had not arithmetic ftepped in once more, and Guido Aretinus, by inventing the temperament, and making the fifth falle by a certain determined quantity, taught us to tune our organs, and intermix all the three kinds of the ancients, to which we owe all the regular and noble harmony of our modern mufic.
As for civil architecture (of military we thall speak afterwards) there is hardly any part of mathematics, but is fomeway fubfervient to it. Geometry and arithmetic for the due meafure of the feveral parts of a building, the plans, models, computation of materials, time and charges: for ordering right it's arches and vaults, that they may be both firm and beautiful: mechanics for it's ftrength and firmnefs, "tranfporting and raifing materials: and optics for the fymmetry and beauty. And no one fhould affume the character of an architect, without a competent kill in all thefe. Vittuvius requires thefe and many more, for making a complete architect.
It muft be acknowledged, that fhould any one fet up to practife in any of the aforementioned arts, furnifhed only with his mathematical rules, he would produce but very clumly pieces. He that hould pretend to draw by the geometrical rules of perfpective, and compofe mulic merely by his fkill in harmonical numbers, would fhew but aukward performances. In thofe compofed fubjects, befides the ftiff rules, there muft be fancy, genius, and habit. Neverthelefs, thefe arts owe their being to mathematics, as laying the bafis of their theory, and affording them precepts, which, being once invented, are fecurely relied upon by practitioners. Thus many defign, that know not a tittle of the rutes they practife by; and many, no more qualified in their way, compole mufic better, perhaps, than he could have done that invented the frale, and the numbers upon which their harmony is founded.
As mathematics laid the foundation of thefe arts, fo they muft improve them; and he that would invent, muft be fkilled in numbers. Befides, it is fit a man fhould know the true grounds and reafons of what he ftudies: and he that does fo, will certainly practife in his art with greater judgment and variety, where the ordinary rules fail him.
We fhall now proceed to thew the more immediate ufefulnefs of mathematics in civil affairs. To begin with arithmetic; it were an endlefs tafk to relate it's feveral ufes in public and private bufinefs. The regulation and quick difpatch of both feem entirely owing to it. The nations that want it are altogether barbarous, as fome Americans, who can hardly reckon above 20. And I believe it would go near to ruin the trade of the nation, were the eafy practice of arithmetic abolifhed: for example, were the merchants and tradefmen obliged to make ufe of no other than the Roman way of notation by letters, inftead of our prefent. And, if we fhould feel the want of out arithrnetic in the eafieft calculations, how much more in thofe, that are fomething harder; as intereft, fimple and compound, annuities, logarithmetical tables, \&c. in which it is incredible, how much the ordinary sules and tables influence the difpatch of bufnefs.

Arithmetic is not only the great inftrument of private commerce, but thereby, in conjunction with the incompayable art of debtor and creditor properly applied, are, or ought to be, kept the public accounts of the nation: we mean not only the accounts of the public revenue in all it's branche:, but thofe likewife that regard the whole ftate of a commonwealth, as to the number, fructification of it's people, irrcreafe of ftock, improvement of lands and manufactures, balance of trade, coinage, military power by fea and land, \&c.-Thofe that would judge or reafon truly about the ftate of any nation, muft go that way to work, fubjecting all the forementioned particulars to calculation. This is the true political knowledge. In this refpect the affairs of a commonwealth differ from thofe of a private family, only in the greatnefs and multitude of particulars, that make up the accounts. Machiavel goes this way to work, in his account of different eftates. What Sir William Petty and feveral others have wrote in political arithmetic, does abundantly fhew the ufefulnefs of fuch fpeculations. It is true, for want of good information, their calculations fometimes proceed from erroneous fuppofitions, but that is not the fault of the art. But what is it the government could not perform this way, with regard to our own dominions in particular, who have the command of all public records?
Laflly, numbers are applicable even to fuch things, as feem to be governed by no rule, fuch we mean, as depend on chance: the quantity of probability, and proportion of it to any two propofed cafes, being fubject to calculation as much as any thing elfe. See the articles Annuities, Leases, Lives [Annuities on Lives], Lotteries, Mortality [Brles of Mortality.]
Upon this depend the principles of game. We find harpers know enough of this, to cheat fome men that would take it very ill to be thought' bubbles: and one gamefter exceeds another, as he has a greater fagacity and readinefs in calculating his probability to win or lofe in any propofed cafe. To underftand the theory of chance, thoroughly, requires no little knowledge of numbers, and a pretty competent one of algebra.
The feveral ufes of geometry are not fewer than thofe of arithmetic. It is neceffary for afcertaining of the property both in planes and folids, or in furveying and gauging. By it land is fold by the meafure, as well as cloth :. workmen are paid the due price of their labour, according to the fuperficial or folid meafure of their work: and the quantity of liquors determined for a new regulation of their price and duty. All which do wonderfully conduce to the eafy difpatch of bufinefs, and the preventing of frauds and contraverfies. We need not mention the meafuring diftances, laying down of plans and maps of countries, in which we have daily experience of it's ufefulners. Theie are fome familiar inftances of things, to which geometry is ordinarily applied: of it's ufe in civil, military, and naval architecture, we fhall fpeak afterwards.
From aftronomy we have the regular difpofition of our time in a due fucceffion of years, which are kept within their limits as to the return of the feafons, and the motion of the fun. This is of no fmall advantage for the due repetition of the fame work, labour, and actions. For many of our public, private, military, and country affairs, appointments, \&c. depending on the products of the ground, and they on the feafons; it is neceffary, that the returns of them be adjufted pretty near to the motion of the fun, and we fhould quickly find the inconveniency of a vague undetermined year.
Befide, the adjufting of the moon's motion to the fun's is required for the decent obfervation and celebration of the feafts and fafts of the eftablifhed church, according to the antient cuftom and primitive inftitution; and likewife for the knowing of the ebbing and flowing of the tides, the fpring and neap-tides, currents, \&c. So that, whatever fome people may think of an almanack where all thefe are reprefented, it is fometimes the moff ufeful paper that is publifhed the fame year with it : nay, the nation could, perhaps, better fpare all the voluminous authors in the term catalogue, than that fingle fheet.
The mechanics have produced fo many ufeful engines fubfervient to conveniency, that it would be a talk too great to relate only the feveral forts of them: fome of them keep life iffelf from being a burthen. If we confider fuch as are invented for raifing weights, and are employed in building and other great works, in which no impediment is too great for them; or hydraulic engines for raifing of water, ferving for great ufe and comfort to mankind, where they have no other way to be fupplied readily with that neceffary element; or fuch as, by making wind and water work for us, fave animal force and great charges, and perform thofe actions, which require a great multitude of hands, and without which every man's time would be too little to prepare his own aliment and other neceffaries; or thofe machines that have been invented by mankind for delight and curiofity, imitating the motions of animals, or other works of nature; we fhall have reafon enough to admire and extol fo excellent an art. What fhall we fay of the feveral inftruments, which are contrived to meafure time? We fhould quickly find the value of them,
if we were reduced to the condition of thofe barbarous nations that want them. The pendulum-clock, invented and compleated by that famous mathematician Monf. Huygens, is an ufeful invention. Is there any thing more wonderful than feveral planetary machines, which have been invented to fhew the motions of the heavenly bodies, and their places at any time?
Here we fhould not forget to mention the fciatherical inftruments, for want of which there was a time, when the Grecians themfelves were obliged to meafure the fhadow, in order to know the hour; and, as Pliny (cap. ult. lib. vii.) tells us, the Romans made ufe of an erroneous fun-dial for 99 years, 'till Q. Marcius Philippus their, cenfor fet up a better; which at that time, doubtlefs, was thought a jewel. And, at laft, that famous pyramid was fet up in the Campus Martius, to ferve for a gnomon to a dial marked on the ftreet. To this fort of engines ought to be referred fpheres, globes, aftrolabes, projections of the fphere, 8ic. thefe are fuch ufeful and neceflary things, that alone may recommend the art by which they are made. For by there we are able in our clofer to judge of the celeftial motions, and to vifit the moft diffant places of the earth, without the fatigue and danger of voyages; to determine concerning their diftance, fituation, climate, nature of the feafons, length of their days, and their relation to the celefitial bodies, as much as if we were their inhabitants. To all thefe might be added thofe inftruments, which the mathematicians have invented to execute their own precepts, for making obfervations either at fea or land, and for furveying, gauging, \&c.
The catoptrics and dioptrics furnifh us with variety of ufeful inventions, both for the promoting of knowledge, and the conveniencies of life; whejeby fight, the great inftrument of our preception is fo much improved, that neither the diftance, nor the minutenefs of the object, are any more impediments to it. The telefcope is of fo vaft ufe, that befides the delightful and beneficial purpofes it is applied to here below, as the defcrying fhips and men, and armies at a diftance, we have by it's means difcovered new parts of the creation, frefh intances of the furprizing wifdom of the fupreme and almighty caufe. We have thereby difcovered the fatellites of Jupiter, the fatellites and ring of Saturn, the rotation of the planets about their own axes, befides other appearances, whereby the fyltem of the world is made plain to fenfe, as it was before to reafon.
The telefcope has alfo improved the manner of aftronomical obfervations, and made them much more accurate, than it was polfible for them to be before. And thefe improvements in aftronomy have brought along with them correfpondent improvements in geography. From the obfervation of Jupiter's fatellites, we have a ready way to determine the longitude of places on the earth. On the other hand, the microfcope has not been lefs ufeful in helping us to the fight of fuch objects, as by their minutenefs efcape our naked eye. By means hereof men have purfued nature into her moft retired receffes, fo that fhe can hardly any more hide her greateft myfteries from us. How much have we learned, by the help of the microfcope, of the contrivance and ftructure of animal and vegetable bodies, and of the compofition of fluids and folids?
But if thefe fciences had never gone further than, by their fingle fpecula and center, to give thofe furprizing appearances of objects and their images, and to produce heat unimitable by our hotteft furnaces, and to furnifh infallible, eafy, cheap, and fafe remedies for the decay of our fight, arifing commonly from old ageand from purblindnefs: they had merited the greateft efteem, and invited to the clofeft ftudy: efpecially if we confider, that fuch as naturally are almoft blind, and either know not their neareft acquaintance at the diffance of a room's breadth, or cannot read, in order to pafs their time pleafantly, are, by glafles adapted to the defect of their eyes, fet on a level again with thofe that enjoy their eye fight beft, and that without danger, pain, or charge.
Mathematics are likewife highly ferviceable to a nation in military affairs. I believe this will be readily acknowledged by every body. The affairs of war take in number, fpace, force, diftance, time, \&cc. (things of mathematical confideration) in all it's parts, in tactics, caftramentation, fortifying, attacking, and defending. The ancients had more occafion for mechanics in the art of war than we have: gun-powder readily producing a force far exceeding all the engines they had contrived for battery: and this we reckon has lof us a good occafion of improving our mechanics; the cunning of mankind never exerting itfelf fo much as in their arts of deftroying one another. But, as gun-powder has made mechanics lef's ferviceable to war, it has made geometry more neceffary: there being a force or refiftance in the due meafures and proportions of the lines and angles of a fortification, which contribute much towards it's ftrength.
This art of fortification has been lefs fudied of late years in this kingdom than in fome neighbouring ones, which was too apparent in the late war: nor dare we affirm that it has attained it's utmoft perfection in any : and though, where the ground is irregular, it admits but of fimall variety, the meafure Fon. II. well determincd by geometry and experience,
,
yet, where the ground is made up of natural ftrength and weakneffes, it affords fome frope for thinking and contrivance.
But there is another much harder piece of geometry, which gun-powder has given us occafion to improve, and that is the doctrine of projectiles, whereon the art of gunnery is founded Here the geometers have invented a beautiful theory, and rules and inftruments, which have reduced the cafting of bombs to great exactnefs. As for tactics and caftramentation, mathematics retain the fame place in tnem as ever; and fome tolerable fkill in thefe is neceflary for officers, as well as for engineers.
An officer that underftands fortification will, cateris paribus, much better defend his poft, as knowing wherein it's ftrength confifts, or make ufe of his advantage to his enemy's ruin, than he that does not. He knows, when he leads ever fo fmall a party, what his advantages and difadvantages in defending and attacking are, how to make the beft of his ground, 8 cc . and hereby can do truly more fervice than another of equal courage, who, for want of fuch knowledge, it may be, throws away himfelf and a number of brave fellows under his command: and it is well, if the mifchief reaches no further. As for a competent fkill in numbers, it is fo neceflary to officers, that no man can be fafely trufted with a company that has it not. All the bufinefs is not to fire mufquets; the managing of affairs, the dealing with agents, \&c. happen more frequently: and, the higher the command is, the more ikill in all the aforefaid things is required. And I dare appeal to all the nations in Europe, whether, cateris paribus, officers are not advanced in proportion to their fkill in mathematical learning, except that fometimes great names and quality carry it ; but fill fo, as that the prince depends upon a man of mathematical learning, that is put as director to the quality, when that learning is wanting in them.
Lafly, Navigation, which is made of aftronomy and geometry, is fo noble an art, and to which mankind owes fo many advantages, that, upon this fingle account, thofe excellent fciences deferve moft of all to be ftudied, and merit the greateff encouragement from a nation that owes to it both it's riches and fecurity. And not only does the common art of navigation depend on mathematics, but whatever improvements fhall be made in the architectura navalis, or building of ihips, or fhips of war, whether fwift-running, or bearing a great fail, or lying near the wind, be defired; thefe mult all be the improvements of geometry.
Ship-carpenters, indeed, are very induftrious; but, in thefe things, they acknowledge their inability, confefs that their beft productions are the effects of chance, and implore the geometers help. Nor will common geometry do the bufinefs; it requires knowledge of the moft abftrufe geometry to determine the different fections of a thip, according as it is defigned for any of the aforefaid ends.
The great objection that is made by fome againft the neceffity of mathematics, in the forementioned great concerns of navigation, the art military, \&c. is, that we fee thofe affairs are carried on and managed by fuch as are not great mathematicians, as feamen, engineers, furveyors, gaugers, clock-makers, glafs-grinders, \&c. and that the mathematicians are commonly fpeculative, retired, ftudious men, that are not for an activelife and bufinefs, but content themfelves to fit in their ftudies, and pore over a fcheme or a calculaion.
To which there is this plain and eafy anfwer: the mathematicians have not only invented and ordered all the arts abovementioned, by which thole grand affairs are executed, but have laid down precepts, contrived infruments and abridgments fo plainly, that common artificers are capable of practifing by them, though they underftand not a tittle of the grounds on which the precepts are built: and in this they have confulted the good and neceffities of mankind.
Thofe affairs require fo great a number of people to manage them, that it is impoffible to breed fo many good, or evea tolerable mathematicians. The only thing then to be done was to make their precepts fo plain and familiar, that they might be underfood and practifed by a multitude of men This will beft appear by examples.
Nothing is more ordinary than difpatch of bufinefs by common arithmetic, by the tables of fimple and compound intereft, annuities, \&c. extraction of the fquare and cube roots, logarithms, \&c. yet how few men of bufinefs underftand the reafons of common arithmetic, or the contrivance of thofe tables, and rationale of thofe rules, now they are made, but fecurely rely on them that are made? They were the able mathematicians that made thofe precepts fo plain, and inveftigated thofe rules, and calculated thofe tables, that facilitate the practice fo much. Nothing is more univerfally neceflary than the meafuring of plains and folids: and it is im poffible to breed fo many good mathematicians as that there may be many that underftand all the geometry requifite for furveying, and meafuring of prifms and pyramids, and thein parts, and meafuring frutums of conoids and fpheroids, in every market-town where fuch work is neceffary.
The mathematicians have therefore infribed fuch lines on their common rules, and fiding rules, and adapted fo plain
precepts

## M A T

## M A T

precepts to them, that every country ctrpenter and gauger can do the bufinefs accurately enough, though he knows no more of the rational foundation of thofe inftruments, tables, and precepts he makes ufe of, than a hobby-horfe.
So, in navigation, it is impofible to breed fo many good mathematicians as would be neceffary to fail the hundreth part of the fhips of the nation. But the mathematicians have laid down fo plain and diftinet precepts, calculated neceffary tables, and contrived convenient inftruments, fo that a feaman that knows not the truths on which his precepts and tables depend, may practife fafely by them. They refolve triangles every day that know not the reafon of any one of their operations. Seamen, in their calculations, make ufe of artificial numbers, or logarithms, they know nothing of their contrivance: and, indeed, all thofe great inventions of the moft famous mathematicians had been almoft ufelefs for thore common and great affairs, had not the practice of them been made practically intelligible to thofe who cannot underftand them. Whence it is plain, that it is to thofe fpeculative retired men we owe the' rules, the inftruments, the precepts for ufing them, and the tables which facilitate the difpatch of fo many great affairs, and fupply mankind with fo many conveniencies of life. They were the men that taught the world to apply arithmetic, aftronomy, and geometry to failing, without which the needle would be ftill ufelefs. Juft the fame way, in the other parts of mathematics, the precepts that are practifed by multitudes, without being underfood, were contrived by fome few great mathematicians.
Since then it has been fhewn how much mathematics improve the mind, how fubfervient they are to other arts, and how immediately ufeful to the commonwealth, and it's commercial emolument, there need no other motives to governments to encourage them. This is the natural conclufion from thefe premifes. Plato, in his Republic, lib. 7, takes care, That whoever is to be educated for magiffracy, or any confiderable poft in the commonwealth, may be inftructed firft in arithmetic, then in geometry, and thirdly in aftronomy. And, however neceffary thofe arts were in Plato's time, they are much more fo now: the arts of war and traffic requiring much more the affiftance of thofe fciences now, than they did then, ats being brought to a greater height and perfection. And accordingly we fee thefe fciences are the particular care of princes that defign to raife the force and power of their countries. It is well known that this is none of the leaft arts whereby the French king has brought his fubjects to make that figure at fea which they at this time do; I mean the care he takes for educating thofe appointed for fea-fervice in mathematical learning: for in the ordinance marine, title 8, he orders that there be profeffors to teach navigation publicly in all the fea-port towns, who muft be well fkilled in defigning, and teach it to their fcholars, in order to lay down the appearances of coafts, \&cc. They are to keep their fchools open, and read four times a week to the feamen, where they muft have charts, globes, fpheres, compaffes, quadrants, aftrolabes, and all books and inftruments neceffary to teach their art.
The directors of horpitals, alfo, are obliged to fend thither yearly two or three of their boys to be taught, and to furnifh them with books and inftruments. Thofe profeffors are obliged to examine the journals depofited in the office of admiralty, in the place of their eftablifhment, to correct the errors in prefence of the feamen, and to reftore them within a month, \& cc .
King Charles II. who well underfood the importance of eftablifhments of this nature, founded one fuch fchool in Chrift's Horpital, London. And his majefty king William III. during the time of the war, eftablifhed a mathematical lecture to breed up engineers and officers, as knowing very well the importance thereof. And this continued fome time after the peace. And it is worthy the confideration of the wifdom of the nation, whether the reftoring and continuing this, even in peace, be not expedient for the breeding of engineers, who are fo uffeful and valuable, and fo difficult to be had in time of war, and fo little dangerous in times of peace.
Befides the croud of merchants, feamen, furveyors, engineers, fhip-carpenters, artizans, \&xc. that are to be inftructed in the practice of fuch parts of mathematics as are neceffary to their own bufinefs refpectively, a competent number of able mathematicians ought to be entertained, in order to apply themfelves to the practice; not only to inftruct the former fort, but likewife to remove thofe obtacles, which fuch as do not think beyond their common rules cannot overcome., And doubtlefs it is no fmall impediment to the advancement of arts, that fpeculative men and good mathematicians are unacquainted with the particular defects of thofe people, and the feveral circumftances in them, that render things practicable or impracticable.
But, if there were effectual public encouragement, we fhould have fkilful mathematicians employed in thofe arts, who would certainly find out and remedy the imperfection of them. The lords commifioners of the admiralty knowing that there are ftill two great defiderata in navigation, viz. the theory of the variation of the magnetic needle, and a method of finding out
the longitude of any place that may be practicable at fea [ke the article Longitude] and being fenfible of what importance it would be to find out cither of them, formerly employed a very capable perfon, the learned and ingenious Dr. Halley, who had joined an entire acquaintance in the practice to a full and thorough knowledge of the more abftrufe parts of mathematics. And, although that great man was not able to make thofe difcoveries, yet he has been of important fervice to navigation, by correcting the fituation of the coafts where he touched, and, by them, others.
The next thing that is neceffary for the improvement of mathematical learning is, that mathematics continue to be more generally and conftantly ftudied at our univerfities* than they at prefent are. From thofe feminaries the ftate juftly expects and requires thofe who are acquainted both with the fpeculation and practice. In thofe are all the encouragements to them imaginable, leifure and affiftance : there are at hand all requifite books and inftruments, às alfo other fcholars that have made equal pregrefs, and may be affociates in ftudy, and the direction of the profeflors. There are alfo in perfection all the incitements to this ftudy, and efpecially an acquaintance with the works of the ancients, where this learning is fo much recommended. Here other faculties are ftudied, to which thofe ftudies are fubfervient. There alfo are the nobility and gentry bred, who, in due time, mult be called to their fhare in the government of the fleets, army, treafury, and other public employments, where mathematical learning is abfolutely neceffary, and without which they, though of never fo great natural abilities, mult be at the mercy and diferetion of their fervants and deputies, who will firftrick them, and then laugh at them for fuffering it. And not only public employments, but their private concerns, require mathematical knowledge. If their fortunes lie in woods, coal, falt, manufactures, \&c. the neceffity of this knowledge is open and known: and, even in land eftates, no undertaking for improvement can be fecurely relied upon without it. It not only makes a man of quality and eftate his whole life more illuftrious, and more ufeful for all affairs, but, in particular; it is the beft companion for a country life. Were this ever to continue a falhionable ftudy (and the mode exercles it's empire over learning, as well as other things) it is hard to tell how far it might influence the morals of our nobility and gentry, in rendering them ferious, diligent, curious, taking them of from the more fruitlefs and airy exercifes of the fancy, which they are apt to run into.

- Does it not well deferve a public enquity, how and from What caufes it proceeds, that fo many of the Britifh nobility and gentry are fent in their youth to foreign univerfities, for their education? It cannot be pretended that travelling is the motive, while they are confined in a college ?

The only objection I can think of that is brought againft thefe ftudies is, that mathematics require a particular turn of head, and a happy genius that few people are mafters of, without which, all the pains beftowed upon the ftudy of them are in vain: they imagine that a man mult be born a mathematician. To which it may be anfwered, that this exception is common to mathematics with other arts. That there are perfons who have a peculiar capacity and fitnefs to one more than another, will hardly be denied : and from experience, we prefume, it is not in any higher degree true concerning mathematics than the others: a man of good fenfe and application is the perfon that is by nature fitted for them, efpecially if he begins betimes: and, if his circumftances have been fuch that this did not happen, by prudent direction the defect may be fupplied, as much as in any art whatfoever. The only advantage; I am afraid, this objection has is, that it lies on the fide of foftnefs and indolence, thofe powerful allies.
In order to obtain a fundamental knowledge of thefe fciences, we would lay it down as a principle, that no gentleman fhould be taught the praciice of any rule without the true and folid reafon and demonftration of the fame. Rules without demonftration muft and ought to be taught to feamen, artizans, \&c. as has been already obrerved; and fchools for fuch people are fit in fea-ports and trading towns; but it is far below the dignity of the noblemen or gentlemen, or any who are defigned for folid and true learning, to do this.; It is by fuch meafures that all muft be raifed, who are able to remedy the defects of the practical and commercial arts: and, therefore, nothing on them muft be taken by truft, Seamen and furveyors, gaugers and accountants, \&c. remember their rules, becaufe they are perpetually practifing them: but fcholars, who are not thus employed, if they know niqt the demonAtration of them, prefenily forget them.
Secondly, It has been thought a great miftakic by our ableft mathematicians, that any part of their fciences hould be taught by compendiums: this follows from the former. Compendiums are fit to give a general and fuperficial knowiedge, not 2 thorough one. It's time, and not the bulk of books, we ought to be fpairing of: and we may appeal to any perfon of experience, whether folid knowledge is not acquired in fhorter time by books treating fully of their fubjects, than by, compendiums and abridgments.

From hence it follows, that the elements of arithmetic and goometry are to be taught. Euclid, in his thirteen books of Elements, gives us both: but our prefent way of notation fuperfedes fome of thofe of arithmetic, as demonftrating the rules from the operations themfelves. There remain then the firft fix books for the geometry of plains, and the laft three for ftereometry. The reft ought to be read in their own place, for the perfection of arithmetic. In teaching thefe care ought to be taken to make ufe of fuch examples as fuit with the condition of the learner: for inftance, merchants accounts and affairs for examples of the operations of arithmetic, to one that is afterwards to have a concern that way; whereas, to a man of the firft quality, examples fhould be drawn from keeping an accurate account of his eftate, either in land or money, \&c. from the increafe and decreare of the people, the ftate of the public revenue, and from land or fea-force, and other principles of political arithmetic. For it is certain nothing makes one tired fooner than the frivilous and trifing examples that are commonly brought for the exercife of the rules of arithmetic, debtor and creditor, and geometry, \&c. tho this is common to them with the other arts, as grammar, logic, \&c.
The manner of writing of the mathematicians of this and the former age makes trigonometry, with the manner of conftructing it's tables, almoft elementary; and the practical geomerry, commonly fo called, is very fit to come next, as an elegant application of the clements of geometry to bufinefs, as furveying, gauging, \&c.
After the elements of fpherics, a full infight into the principles of attronomy will be neceffary.
Mechanics follow after to be read, which are the ground of a great part of natural learning; and afterwards optics, catoptrics, ailu dioptrics.
But none of thcle, except the elements, can be fully underftood until one is pretty well fkilled in conic fections; and all thefe are made more eafy by fome tolerable fkill in algebra, and it's application to geometry.
Thele foundations being laid, any one may, with great eafe, purfue the itudy of the mathematics, as his occafions require, either in it's abftract parts, and the more recondite geometry, and it's application to natural knowledge; or in mechanics, by profecuting the flatics, hydroftatics, \&cc. or in aftronomy, by it's application to geography, navigation, gnomonics, aftrolabes, \& $\&$. But, in moft of thefe, a particular order is not neceffary: any one may take that firft which he is moft inelined to, after he has laid the requifite foundation in arithmetic, algebra, and geometry.

## Remarks on the article Mathematics

Our intention, by this fummary of the univerfal utility of mathematical learning, is with a view to give the commercial clafs of people, as well as others of quality and diftinction, fuch an idea of thofe ftudies, that they may apply themfelves only or chiefly to fuch parts as may be fuitable to their condition and plan of life. And, from what has been faid, it is manifeft beyond contradiction, that this kind of literature, taken in it's comprehenfive latitude, has been, and is ever like to be, while duly cultivated, the grand parent of numberlef's beneficial arts and trades; and, therefore, cannot be too much encouraged in commercial ftates: yet we are forry to obferve, that thefe ftudies rather decline than advance among us, for want of their profeffors being fuitably cherifhed and diftinguifhed.
The vittories which take up the greateft part of hiftory, and attract admiration the moft, have generally no other effects but the defolation of countries, the deftruckion of cities, and the flaughter of men. Thofe fo-much boatted heroes of anriquity, have they made a fingle man the better? Have they made many men happy? And if, by the founding of f:ates and empires, they have procured pofterity fome advantage, how dearly have they made their contemporaries pay for it, by the rivers of blood they have fhed? Thofe very advantages are confined to certain places, and have a certain duration.
UF. what utility to us, at this day, are either Nimrod, Cyrus, or. What utility to us, at this day, are either Nimrod, Cyrus,
or Alexader? All thofe great names, all thofe victories which have aftonifhed mankind from time to time, thofe princes and conquerors, with all their magnificence and vaft defignts, are returned into nothing with regard to us; they are difperfed like vapours, and are vanihhed like phantoms. But the inventors of all arts aiding to the commercial induftry and proferity of mankind have laboured for all ages of the world. We fill enjoy the fruits of their application and induftry. They have provided, at a great diftance, for all our occafions: they have procured for us every convenience of life: shey have converted all nature to our ufes: they have reduced the moft indocile matter to our fervice: they have taught us to extract from the bowels of the earth, and even from the deeps of the fea, the moft precious riches; and, what is infinitely more eftimable, they have opened to us the treafures of other fciences, and have guided us to knowledge the moft fublime, the moft ufeful, and the mof worthy of our nature. They have put into our hands, and placed before our eyes, whateyer is moft proper to adorn the mind, to direct our
manners, and to form good citizens, good magiftrates, and good princes. Thefe are part of the benefits we have received from thofe who have invented, and brought arts and fciences to perfection.
The better to know their value, let us tranfport ourfelves in imagination back to our infancy of the world, and thofe grofs ages when man, condemned to eat his bread by the fweat of his brow, was without aids and inftruments, and obliged, however, to cultivate the earth, that he might extract nourifhment from it; to erect bimfelf huts and roofs for his fecurity; to provide cloathing for his defence againft the frofts and rains; and, in a word, to find out the means to fatisfy all the neceffities of life. What labours, what difficulties, what difquiets! All which are fpared us.
We do not fufficiently confider the obligations we are unde to thofe equally induftrious and laborious men, who made the firft effays in arts, and applied themfelves in thofe ufeful but elaborate refearches. That we are commodioully houfed, that we are cloathed, that we have cities, walls, habitations, emples, fhipping, navigation, and commerce; to their induftry and labour we are indebted for them all. It is by their aid our hands cultivate the fields, build houfes, make ftuffs and habits, work in brafs and iron; and, to make a tranfition from the ufeful to the agreeable, that we ufe the pencil, handle the chiffel and graver, and touch inftruments of mufic. Thefe are folid temporal felicities and emoluments, which have always been increafing from their arigin, which extend to all ages and nations, and to all mankind in particular; which will perpetuate themfelves throughout all times, and continue to the end of the world. Have all the conquerors together done any thing that can be imagined parallel with fuch fervices? All our admiration, however, turns generally on the fide of thefe heroes in blood, whillt we fearce take notice of what we owe to the inventors of the mathematic and philofophic arts, which are the grand fources of all the fecurity, joy, and fplendor of life The progrefs of thofe arts and fiences whereon the mutual intercourfe of commerce between nations depends, and the hiftory of thofe perfons who bave molt eminently diftinguilhed themfelves therein, is the hiftory of the human wifdom, which does not give place to that of princes and heroes, whom common opinion places in the highent degree of glory.
The principal law and jufteft title to deferving folid praifes in this uleful empire of literature is, that every member of it be contented with his own place; that he be void of all envy for the glory of others; that he looks upon them as his collegues; deftined, as well as himfelf, by providence, to mrich fociety, and become it's benefactors; and that he remembers with gratitude from whom he holds his talents, and for what ends they have been given him. Can they believe they may ufe them at their own pleafure, and feek, in the application they make of them, only their own reputation and glory? As providence places kings upon their thrones folely for the good of their people, it diftributes alifo the different talents of the mind folely for the benefit of the public.
But, in the fame manner as we fometimes fee in fates ufurpers and tyrants, who, to exalt themfelves alone, opprefs all others; there may alfo arife amongt the learned a kind of tyraniny of the mind, which confifts in regarding the fucceffes of others with an evil eye; in being offended at their reputation; in leffening their'merit; in efteeming only one's felf, and in affecting to reign alone: a hateful defect, and very difhonourable to learning. The folid glory of the empire of learning is not to labour for one's felf, but for mankind; and this is what places it exceedingly above all the other empires of the world,
Ufeful Remarks, tending to the further advancement of the Mathematical Sciences, in order to the further promotion of Commerce, by the learned Dr. John Pell; which as well deferve attention at this time, when thefe fudies feem to be upon the decline, as they did heretofore.
' I. As to what I formerly confidered, fays that learned gentleman, about the improverient of the mathematical fciences ; the refult was chiefly this: while men are deftitute of inclination, genius, affiftances, and leifure neceffary for thefe ftudies, no wonder if they make no greater progrefs in them: therefore it feems probable to me, that, by the help of the following means, a tolerable good remedy may be found for this evil. That is, if,

1. A mathematical monitor (as we may call it) be compofed, which may give proper anfwer to thefe three queftions, I. What advantages, and of what kind, may be expected from the ftudy of mathematics? 2 . What heips are now in being for attaining fo advantageous a knowledge? 3. What order is to be obferved in making ufe of thofe affiftances? Therefore this monitor hhould contain,
I. An eafy and perficicuous difcourfe upon the limits or extent of the mathematical arts, and of the confiderable advantages that will accrue not only to the perfons themfelves that ftudy them, but likewife to a nation that abounds in ikilful mathematicians.
2. A catalogue of mathematicians, and of works publifhed by them; which is to exhibit, I. A fynopfis of all kinds of mathematical books, whether fuch as are already publifhed,
or fuch as are yet unpublifhed, and, being in manufcript, lie concealed in public libraries; proper numbers, or references, being affixed to every kind, 2, A chronological catalogue of all the celebrated mathematicians, difpofed according to the ages in which they fourihed; always fubjoining the year of our Lord in which their works were firft printed.
3. A catalogue of the fame works, according to the feries of years in which they were printed in any language. In digefting of which, I would proceed in fuch manner, that, marking the year of our Lord, I would add (as in common catalogues) the names of all the mathematical books that were publifhed that year, in any country or any language: 1. Shewing in each how much the volume contained, by marking not only whether it was in folio, quarto, \&c. but the whole number of pages, fo that the bulk of the work might eafily be known. 2. Before the title mentioning the year, to which any one might turn back who thould defire to know when the book was wrote, and when it was laft publithed in any language. 3. Marking in the margin after the title, 1. The year in which any work was laft printed. 2. The number referring the reader to the fynopis, which was given in the firft page of the catalogue. Now, by the help of thefe numbers, any one might eatily and readily run through all the mathematical books belonging to one fubject.
4. An admonition to the fudious, which are the beft books in every kind, in what order and method they are to be read, what is to be chofen and what omitted in reading tome of the minor mathematicians; how we are to proceed fo as to retain every thing in memory.
5. An exhortation and encouragement to all thofe who are fufficiently provided with wealth, opportunity, and ingenuity for the purfuit of thefe fudies; that, I. Having regard to the great advantages that redound from bence, not only to themfelves but to all mankind in general. 2. As likewife to that pure and fincere pleafure which arifes from the fearch of hidden truths, and from ftriving with difficult problems, and the conqueft of them; that they may ferioully apply themfelves to the advancement of fcience, and fo much the rather, as, 3. More expeditious methods are now found out than were known to our anceftors, which fave us much labour, time, and expence.
Then an exhortation to all fuch as are eminent for fetting a right value on thefe ftudies, and are likewife diftinguithed for power and wealth (which furely may be made inftrumental to perpetual fame, if prudently difpenfed) that they may become patrons to ingenious men of this kind, by propofing handfome rewards to the moft deferving of them, to encourage them to complete fuch difcoveries as their own genius's may prompt them to. Lafly, to all princes and commonwealths who cannot eafily procure a greater ornament to their dominions, than by making it their endeavour, r. That they may abound with perfons ikilled in thefe arts. 2. That the way leading to them may be made as little laborious and expenfive as poffible. 3. That mathematical genius's may be more publicly known, and meet with fuch encouragement as they thall deferve.
For this end it will be very neceffary that,
II. A public library may be founded, which may be furnifhed with all the books abovementioned, and with one inffrument of every fort that has been yet invented; and befides may have an endowment fufficient, I. To purchafe copies of all the mathematical books that hall be yearly publifhed anywhere abroad: 2. To maintain a library-keeper, whofe bufinefs it fhould be,
6. To read over all the books of this kind which are publifhed in his own country; I. Suppreffing thofe which are not wrote according to the rules of art, that their miftakes may not lead their readers into error. 2. Toadmonifh authors, left they fhould only republifh things already known, and treated of by others. 2. On peril of their reputation that they fhould approve of notable inventions, and heartily recommend the inventors to proper patrons.
7. To receive, to enter into their catalogue, and difpofe in their proper repofitories, one copy of the books fo read over, when prefented to the library well bound up, at the charge of the author or bookfeller.
8. To give a civil and ready anfwer to any ftudious perfon who thall confult him about any problem, whether it is already folved or no; left he fhould attempt any thing that is well done already, or, on the contrary, fupprefs his difcoveries, out of fear they may be already known, and perhaps difcuffed in fome of the books of the library.
9. To receive, \&tc. all manufcripts that may be prefented to the library, or bequeathed to it by legacy.
10. To keep a conftant library correfpondence with all perfons of this kind that refide in foreign countries, left he fhould be ignorant of what books are publifhed there.
11. To take notice among his countrymen who are fitteft and moft expert in inftructing others in thefe arts.
12. To have an acquaintance with all kinds of artificers who excel in the conftructing of mathematical inftruments and contriyances, whether they work in wood, loadfones, metal, glafs, \&c.
13. After a fair triad, to give their teftimony, both of feecu-
lative knowledge and practical dexterity, to practical men of all kinds, whether mafters of hips, furveyors, accomptants, \&cc. that fuch as have occafion for this kind of men may not be impofed on by ignorant pretenders, to their great lofs.
The Atalogue will eafily inform which, in fuch a multitude of books that almoft overwhelm the world, belong only to this kind of ftudy. The library will exhibit a copy of every fuch book, and inform where more copies may be bought. It will alfo be a kind of ftorehoufe both to natives and foreigners, whence they may eafily learn what affiftances that country can fupply to thefe ftudies.
And this, in my opinion, is the readieft way of making ufe of the helps we are already in poffeffion of. If more are wanting, it will be neceffary that, by the affiftance of ikilful artifts.
III. The three following new treatifes may be compofed and publifhed:
I. Mathematical pandects, containing, as perficicuoully, methodically, compendioully, and ingeniouly as can be done, whatever may be collected or deduced, by way of corollary, from the mathematical books or difcoveries made before our time; quoting the moft eminent authors in which they are found, at the end of every period or propofition; and fo marking in all the following authors, where they have been caught in a theft, or where they have borrowed without making any acknowledgement, or (what is worf of all) have boldly claimed to themfelves the inventions of others. By this means that large library would be contracted into a much narrower compafs, to a great faving of labour, time, and expence, for thofe that come after; and this much more than any would imagine at prefent. But now, fince this work would hardly make a portable volume, there fhould be prepared alfo,
14. A mathematical companion, containing in a manual (and therefore as concifely as may be) all the moft ufeful tables, with precepts to thew their application to folving of problems, whether of pure mathematics, or applied to other fubjects. Finally, that we may not always be confined to books in this kind of learning, there foould be contrived,
15. The felf-fufficient mathematician, or an inftruction to fhew how any mathematician, who is no enemy to labour, may acquire fo much Kill that, without the affiftance of books or inftruments, he may attain the folution of any mathematical problem, and that as eafily as another would folve it by turning over books.
And this is that idea of mathematics which, in my manner, I have long ago figured to myfelf; being always firmiy perfuaded, that then only we can hope for affiftance in great undertakings, when we have conceived an exact idea of them in our minds, and of the moft appofite means of putting them in execution. And, if we cannot exprefs this idea in fact, yet it is fomething to come as near it as may be.
I imagine this is fo far from being above human power, that I think the induftry of one man alone to be equal to it, who is not hindered by his own domeftic affairs, or immerfed in a multitude of bufy cares: for it is evident that the library and catalogue may cafily be provided, if money is not wanting ; and as to the pandects above defribed, if the tafk of compofing them were committed to me, I fhould impofe upon myfelf much feverer conditions than I have mentioned there. For frif I would delineate the infallible procefs of human reafon, in the inveftigation of whatever it propofes to itfelf, by fhewing how it proceeds from the firft principles or rudiments, by an uninterrupted chain, to the moft fublime as well as the loweft application of them. Which art, perhaps, men would not be long without, if hereafter they fhould carefully examine, by what means fuch thoughts have arofe in the minds of certain men whom they admire, how fuch apt means have been found out to obtain fuch an end. How thefe pandects may be abridged into a manual, fuch as may be fit for common ufe, may not be difficult to underftand.
But fo to fix them in their minds that they fhall have no farther need of books (which is what is aimed at by our felffufficient mathematician) will be thought, by moft, to exceed the power of the human mind : lince no one that I know of has yet ventured to conceive fuch a thing in his mind. Yet I believe that men will difmifs fomething of their incredulity, when they confider ferioully with themfelves what arts have been found out for ftrengthening the imagination, for affifting the memory, and for directing the reafoning faculty, and what wonderful effects may be produoed by their conjunction and conftant exercife.'
To this the learned Merfennus made fome objections, concerning the collection of the various writings of the mathematicians; but, upon receiving Dr. Pell's aniwer, Merfennus replied,--I I had no fooner read your letter, learned Sir, but 1 became wholly yours, and was ready to fubfrribe to your opinion, which I intirely approve : an unufual ardor of mind hurried me on: fo that $I$ would recommend this undertaking of yours, great as it is, to the great ones of the world, if I could have free accefs to them. But where is the king that will make a beginning? for I cannot but call it a truly royal defign.'- This likewife was approved by the great Des Cartes, See the article Musfum of Sir Hans Sloane.

## M E A

MEASURES and WEIGHTS of England.
The following being the moft accurate and fatisfactory ac count that I have met with, in regard to the ftandard weights and meafures of England, I Thould be wanting to my readers if I did not give it them as it is, without any alteration whatfoever: and, although the weights are incorporated with the meafures, I do not judge that reafon fufficient to make any variation, having the lefs to fay hereafter under the article Weights.

A ftate of the Englifh Weights and Measures of capacity, as they appear from the laws, as well ancient as modern; with Come confiderations thereupon: being an attempt to prove that the prefent avoirdupors weight is the legal and ancient ftandard for the weights and meafures of this kingdom. By the learned Sam. Reynardfon, Efq; F. R. S.

It is declared by * Magna Charta, that there fhould be, throughout the realm, one mealure of wine $\dagger$, one of ale, and one of corn, viz. the quarter $\ddagger$ of London; and that it fhould be of weights as of meafures.
${ }^{*} 1 \mathrm{C} .29$.

+ Bifhop Fleetwood fays, it was a good law of king Edgar, that there fhould be the fame weights and the fame meafures throughout the realm, but it was never well obferved. Chron. Pretiofum, p. 34-And, 2 Inft. p. 41. fays, this law was grounded upon the law of God, Deut. xxv. ver. 13, 14.-And that there were good laws for weights and meafures made before the conqueff by Canute. See Cultom. de Norm. c. 16 .
$\ddagger$ See hereafter the contents of a quarter
This declaration has been repeated in many fubfequent laws*; and, by feveral of them, the treafurer is directed to provide fandards of bufhels, gallons, and weights of brafs, and to rend them into every country; and all meafures are to be made according to the king's ftandard, the affize whereof is eftablifhed by feveral laws + , as follows: the Englifh penny, called a fterling round, without clipping, to weigh 32 grains of wheat dry, and taken from the midft of the ear: 20 pence make an ounce; 12 ounces a pound; 8 pounds make a gallon of wine $\ddagger ; 8$ gallons of wine make a London bufhel $\|$, which is the eighth part of a quarter. And by other laws it is declared, that the ton of wine, oil, and honey, fhould contain of the Englilh meafure, according to the ancient affize, 252 gallons; the pipe, or butt, 126 ; the tertian 84 ; the hogthead 63 ; and every barrel $31 \frac{1}{2}$, according to the old affize, and to be gauged by the king's gauger.

+ King Stephen, fays Knighton, fettled meafures of length and of land, and made appointments de anfulis, bilancibus \&c. Decem Scriptores, p. 2391.

In the ith year of Hen. VII. complaint being made to th ${ }^{\text {e }}$ parliament that the ancient ftatutes and ordinances of the realm relating to weights and meafures had not bsen obferved and kept, it was therefore enacted, That there fhould be delivered, to the knights and citizens of every fhire and city, one of every weight and meafure, which the king had caufed to be made of brafs, according to his flandard in the Exchequer, to be delivered to the refpective places mentioned in the act ; and that the inhabitants of all cities, boroughs, and market towns, thould make and ufe weights and meafures made according to the weights and meafures fo delivered as aforefaid. In the next year, another aet paffed, reciting, That the king had made fuch weights and meafures of brafs, acconding to the old ftandard thereof remaining within his Treafury; which weights and meafures, upon more diligent examinaton, had been proved defective, and not made according to the flatutes and old laws, and were therefore recalled, and ordered to be broken, and other new buhbels and gallons were directed to be made and fized, according to a new bulhel and gallon to be made according to the affize, to remain in the king's Exchequer: where we now find a bushel, in the cuftody of the chamberlain, called the Winchefler bufhel *, and a gallon agrecing thereto. Upon the bufhel there is the following infcription: Henericus Septimus, Dei gratia, rex Anglix et Francix.
Vol. Il.

## M E A

- The firf time I find it called fo by any law, is in an ant 22 Car. II. cap. 8. And afterwards it is called by this name in feveral acts of partament; but, in the act juft now mentioned, it is faid to be commonly called the Wincheftr meafure: perhaps it firft took that name from the ftatute meafure: perhaps it firft took that name from the ftatute
made at Winchefter, 16 Rich. II. which directs :he cterk of the market to have all his weights and meafures ready, and marked and figned according to the flandatd of the Exchequer.

In the laft mentioned act, the affize for weights and meafures is in fubitance the fame as in the old ftatutes, only the pound is faid to be the pound Troy of 12 ounces. But fince, by this and the former affize laws, the pound is directed to be raifed from 240 iterling pennies, it follows, that the graviny of the affize pound was always the fame; but the dimentions of meafures of capacity refpectively, raifed from a pound of wine and a pound of wheat, will be in proportion to each other as the fpecific gravity of wheat is to that of wine or water.
Thus continued the laws reiating to the Englifh ftandard of weights and meafures, 'till after the reforation, when, a duty of excife * being laid upon beer, ale, and other liquors, 36 gallons taken by the gauge, according to the ftandard of the ale quart. ( 4 whereof made the gallon remaining in the Exchequer) were to be reckoned as a barrel of beer, and 32 fuch gallons a barrel of ale ; and, afterwards, +34 fuch gallons of vinegar (and of beer or ale, ffronger or fmaller) without the bills of mortality, were declared to be a barrel; and all other liquors liable to the excife-duty were to pay according to the wine gallon.

* 12 Car. II. cap. 24. § 20.
$\dagger$ I Will. and Mar. cap. 24. \$.5. 10 Will. III. cap. 21. 11 and 12 Will. III. cap. 15 .

We now find the officers of the revenue determining the contents of our meafures of capacity with great exactnefs: for, on the 25 th of May, 1688 , two general officers of excife, in the prefence of the lord mayor, the commiffioners of excife, Mr . Flamitead, and others, upon an exact trial found, that the old Gandard wine gallon, kept in Guildhall, did contain but 224 cubic inches; neverthelefs, at that time, it was thought convenient to continue the former fuppofed content, being 231 cubic inches, as the ftandard wine gallon, and which has fince been eftablifhed by law *.

* 5 Ann. cap. 27. §. 17.-This aet fays, Any cylinder 7 inches diameter, and 6 inchesdeep, or any veffel containing 231 cubical inches, and no more, fhall be a lawful wine gallon.
In the year 1696, an experiment was made, in order to fix the true and exact contents of the brafs ftandard bufhel of Henry VII, which being filled with common fpring water, and the water meafured out with great nicety and exactnefs, the bufhel * was found to contain 2145,6 folid or cubic inches; and the water being weighed by the ftandard weights in the Exchequer (and by a beam, which would turn with fix grains put into either fiale, with 30 pounds in each fcale) was found equal to I $1 / 3$ r ounces 14 pennyweights Troy; and at the fame time and place the ftandard Troy weights were compared with the ftandard avoirdupois, and I5 pounds of the latter were found equal to 18 pounds 2 ounces 15 pennyweights Troy, which fixes the pound avoirdupois at 7000 grains.
* Everard's Stercometry, p. 193.
* Such grains as the Troy pound weighs 5760 ; and upon three feveral trials, made by the gentlemen of the council of the Royal Society, at the Exchequer, upon a medium, the avoirdupois pound was found equal to 7000,25 Troy grains.
* Ward, in his Young Mathematician's Guide, fays, $6999 \frac{\pi}{2}$ grains. Phil. Tranl. No $465 \cdot$ P. 181. and No $470 .-$ Bihhop Hooper 1o. Pharmacoporia Londin. fays-The avoirdupois pound is faid to be about 7000 graits.
By the firft * malt act, which paffed foon after the making the experiment upon the Winchefter buhhel, it is declared, that every buthel 18 inches and half wide, and 8 inches deep, fhould be efteemed a legal Winchefter bufhel: and the coal bufhel is directed t to be made 19 inches and a half diameter, and to contain the laft bufhel and one quart of water. The firft contains 2150,42 cubic inches, the laft 2217,47 . We now fee different meafures eftablifhed by law §, and, under the excife laws, two different gauges or meafures, ufed for taking the dimenfions of wine and ale veffels. The wine gallon contains 23 x cubic inches, and the ale gallon 282 ; but upon what foundation this laft meafure was eftablifhed, is dificult to determine.
* 13 Will. III. c. 5. 5. 28. and y Ann, flat. z. c. 3. 6. 1o. +12 Ann. flat. 2. c. 17 . §. 11 .
§ Though contrary to magna charta, and feveral o:her laws not repealed.
Troy weights had for some time been eftablifhed and ufed for the money aftairs in the mint, and for weighing gold,
fiver, and fome few commodities ; and the avoirdupois were in general ufe for weighing all heavy and grofs commodities. Wine meafure was generally looked upon as equal to Troy weight : from hence the managers of the excile duty were, perhaps, led to fix the flandard of the ale gallon, bearing the fame proportion to the wine gallon, as the avoirdupois pound did to the Troy ; and, according to this conjecture, the two galions anfwer pretty exactly *, the ale gallon exceeding the proportion by fomewhat more than one cubic inch and one quarter; but it exceeds the Winchefter gailon, or 268,2 cubic inches, by very near 14 cubic inches: and not one of thefe meafures is agreeable to the words of the affize, which directs $t$, 'That the buhel fhall contain 8 gallons of wheat', the gallon 8 pounds of wheat of Troy weight, the pound 12 ounces of Troy weight, \& ce. according to the old laws of this land.' It is very plain the law-makers, in Henry the VIIth's time, took the Troy weight for the ftandard; and mof authors who have wrote upon this fubject, have followed their example.
*For, as $144: 175:: 231: 280,729-A n d$ as $144: 175::$ $224: 272,222$. This laft comes very near the vulgar dry gallon.
+1 12 Hen. VII. c. 5 .
The great dificulty we are under in fixing upon a ftandard pound, agreeable to the affize, arifes from the uncertainty of the rule laid down in our laws of affize for raifing the pound from 7680 grains of wheat; as thefe grains differ in weight in different countries, and in different years, I might have faid in the fame field and in the fame year.
The uncertainty of a pound fo raifed might, with great probability, occafion the variety in our weights and meafures, fo often complained of in our ancient laws, and for the prevention whereof Edward III. in his 14th year, ordered - Standard weights and meafures to be made of brafs, and ' fent into every city and town in the kingdom.'
The laws of affize never received any alteration, except by the I2th of Hen. VII. when the pound is declared to contain 12 ounces of * Troy weight, and the gallon 8 pounds of wheat of Troy weight; and, fince the laws have received no change, we have great reafon to conclude, that the ftandard weights themfelves never fuffered any addition or diminution; but, however this be, we + now find, in the cuftody of the proper officer of the Exchequer, two fetts of weights, kept there as ftandards; one called Troy, the other avoirdupois weight.
* This is the firf time the ftandard weights are called Troy weights. But, in an act 2 Hen. V. ftat. 2. c. 4 . and 2 Hen. VI. c. i3. relating to goldfmiths, there is mention made of the pound of Troy.
4 Phil. Tranf. No 470.-The avoirdupois weight of 14 pounds is marked with a crowned E , and infribed,

XIIII Pounde Averdepoiz.
Elizabeth. Regina.

## 1582.

The Troy weights, marked with a crowned E, are ounces, from 256 down to the 16 th part of an ounce : and there are no whole pounds Troy, pennyweights, or grain weights, at the Exchequer. There not being pounds, or greater weights, feems to be a proof, that the e weights were never defigned or ufed for determining the weight of large vor dies or heavy goods.

As there is no account handed down to us by our anceffors, fhewing at what time, and upon what occafion, there weights, differing confiderably in gravity from each othe:, were there firft depofited, we are at a lofs to determine which is the ancient ftandard weight defcribed by the laws of affize. The act in the 12th of Hen. VII. has called the ftandard weight by the name of Troy weight; this is the firft time the weights are fo called in any of our affize laws; and, notwithttanding this authority, it will be found very difficult, if not impoffible', to reconcite the Troy weight and meafure raifed therefrom with the words of the affize, and any meafure now in being; for the natural and moft ready way to determine this queftion, is to compare both the Troy and avoirdupois weight with meafures raifed from each, according to the rule laid down in the affize, and with fuch meafures as are or have been ufed by authority.

- The moft exact * geometrical way of expreffing the capa-- city of any veffel or meafore, is by exprefling in known * terms the folidity of a body, which will precifily fill it: t the fittef will be water. The folidity of all bodies is beft E expreffed by the help of a cube, whofe equal fides we know * by a ftandard mealure of length 3 and it appears, that this way of determining meafures of capacity is not only the moft geometrical, but alfo exceeding ancient $t$.'
- Bifiop Cumberland's Effay, p. 60.-who alfo fays, The Egyptians made their ardob the cube of their known ftandard the cubit.- And that the Romans made their quadrantal the cube of their flandard the foot.
+ Meafures of bodies are either determined by their folid contents, or weight. Meafures of contents are formed fom cubes of afligned lengrhs. Bithop Hooper, P. z.

By this rulc fome gentlemen at Oxford, in the year 168 s , ierermined the weight of a cubic * foot of rpring-water, or 1728 folid inches, to be 1000 ounces avoirdupois, and by the fame rule the capacity and contents of the flandard buftel in the Exchequer were determined in the year 1696, with great care and exactnefs: by the fame rule, the contents of other veffels of capacity have bcen fetcled; and in the following table, I have inferted the names of fuch meafures as are of any authority, whofe contents are known; by which the proportion they bear to cach other, and to meafures railed according to the affize, as well from the pound Troy as the pound avoirdupois, will be readily obferved.

* Phil. Tranf. No 6 g.

In the next place, let us compare the experiment made upon the cubic foot of fpring-water with that upon the Winchefter buifel, and we fhall find an uniform and perfect agreement between them ; and that, upon each trial, a cubic veffel, the fides whereof were equal to an Englifh foot, did contain * 1000 ounces avoirdupois of fpring-water. From hence we are led to the difcovery of a natural and univerfal ftandard for the Englifh weights and meafures; and fuch an one as is, in every refpect, agreeable to the words of the affize recorded in our moft ancient laws.
oz. pw. cu. in. oz.
cu. in.

* For as 1131: 14 Troy: $2545,6:: 1000$ avoir. : : $1,728,041$. Some writers upon this fubject fay, that a cubic foot of foring-water is equal to 76 pounds Troy, which is to pennyweights 20 grains more than the 1000 avoirdupois. See Arbuthnot's Tables explained, p. 80, 283. Bihop Hooper's State, \&c. p. it.-But the explainer of Arbuthnot's Tables feems to have been quite ignorant of any experiment fince Sir Jonas Moore's time ; and to have difregarded the due proportion between the avoirdupois and Troy pound; and, for 175 to 144, his tables, he fays, are calculated at 17 to 14 .

Magna charta points out the quarter of London, as the only ftandard for meafures and weights of that time, but we are left to guefs of what meafure or weight it was the quarter part. If we fuppofe it the quarter of a ton, or 2000 pounds weight, then the quarter was 500 pounds, and the eighth part of that, or a burhel, was equal to a cubic foot, or $62 \frac{2}{2}$ pounds, from whence lefs meafures and weights were eafily deduced. Subfequent affize laws direct the greater meafures to be raifed from the lefs; that 8 pounds fhould make a gallon, 8 gallons a bufhel, which was to be the eighth part of a quarter; and by this rule the quarter is raifed to 512 pounds, and the ton to 2048 pounds. Thefe meafures and weights are raifed with eafe from known parts of the foot. For a cubic veffel, whofe fides are equal to $\frac{x}{10}$ of a foot, will contain a cube of foring-water equal to an ounce avoirdupois; and from hence, by a regular geometrical progreffion, we fhall obtain cubes equal to * 8-64-512 ounces, or to 4-32-256-2048 pounds avoirdupois: and, from a cubic veffel containing one fuch pound, we fhall have other çubic veffels, equal in weight $8-64-512$ pounds; and in meafure to the gallon, buhhel ${ }_{2}$ and quarter, ascording to the affize.

Eight ounces are equal to a mark, whereof two, or twice the contents of that cube, make a pound avoirdupois.

The * gallon, bufhel, and quarter, are called drymeafures, and are ufed for afcertaining the quantity of corn, and other dry goods; the gallon + is alfo a liquid meafure raifed from a pound, in liquids now called a pint $\$$, from whence all the other liquid meafures are raifed; but with this difference in the proportion, that the liquid buthel is not 64 , bur 63 pounds or pints, eight whereof make the hogthead equal to 63 gallons; from whence the contents, as well of the larger as fmaller veffels or meafures of capacity, are fettled.
*The half buhel, peck, gallon, pottle, and quart, are direeted by 25 Edw. III. flat. 5 . c. 10. to be made according to the king's flandard.

+ See bihop Hooper, p. 6 .
\$ See note hereafrer. -The pint is not mentioned in the affize laws; but binhop Hooper has given a long and learned dylfertation upon that meafure, and calls it the pint of old, P. 458.

The neafures of capacity, thus raifed, are fufficiently convenient for common ufe, and are generally retained as this time; but, for weishts, there has been fome variety from time to time, in the compofition of the larger fort, ufod for determining the weight of merchandize and heavy goods, as will appear from the following extract from feveral oid acts of parlament,- The ftone for weighing lead was fettled at 12 pounds *; for wax, fugar, fpices, and allum, at eight pounds; of which latt, $13 \frac{1}{2}$, or 108 pounds, made the hundred weight: the fack of wool $t$ was to weigh but 26 ftone, 14 pounds to each ftone: a weye of § cheere 32 cloves,

t ${ }_{25}$ Edw. III. flat. 5. c. 9. 13 Rich. II. c. 9.
\$ 9 Hen. VI. c, 8 . The weye equalled 224 pounds.

## M E A

## M E A

each clove 7 pounds. And, for many years paft, the hundred weight has been fixed * at 112 pounds avoirdupois, and that by a general confent, and without any particular law to eftablifh it.

* That is, 14 flone at 8 pounds, or 8 fone at 14 pounds each, according to the old laws, and prefent ufage of the flone weight. The 112 pounds is a very convenient weight for a ftandard, becaure it is divifible into inere even parts than any lefs number-And it is compounded from the alfize bufhel, it's half and quarter; that is to fay, 64,32 , and 16 pounds.

Thefe weights have been univerfally and immemorially * ufed in England, with an exception to the weighing of guld, filver, and fome very few commodities, for which the Troy weight has been ufed for a great many years. When it was firit introduced into this kingdom, does no where appear ; but Mr. Folkes, in his Tables of the Englifh Silver Coinst, tells us, it was not eftablifhed or ufed at the mint before the a Sth of Hen. VIII.
*The apothecaries (who, next to the goldfmiths, are fup. pofed to make the moft ufe of Troy weights) feldom keep weights adjufted to the Troy pound heavier than two drachms ; but, for all above, buy and fell by avoirdupois : and with them, by the term libra in meafare, is meant the wine pint ; though this meafure is not, fay they, fo denominated, from it's containing an exact pound weight of any liquor, and the term uncia in meafure does not denote a twelfith part of the pint, but the fixteenth: though in weight, agreeable to it's fignification, it is ufed to exprefs one twelfth part of a pound; fo that an ounce in meafure is farce more than three quarters of an ounce in weight. See Pemberton's Difpenfatory, p. 44.

+ Page 4. Mr. Foikes lays, The pound ufed at the mint before that time, called the tower or the moneyers pound, was equal to 5400 Troy grains: and, p. 13, 4 , that the weight of the groat, from 13 Hen. IV. to 4 Edw. IV. was equal to 60 fuch grains. Which is agreeable to what is faid in an act of parliament of 2 Hen. VI. that the pound Troy of coinedmoney was worth 32 thillings; for 32 fhllings, or 96 groats, 60 grains each, weigh 5760 grains, or a pound $9^{6}$ groa. Though by the fame act, by reaton of the fcarcity of filver money, and in order to bring bullion into the of int it was enacted That filver uncoined of the fame moodnefs as the money, hould be fold only for 30 dhillings the pound Troy

By reducing the liquid bufhel, or one eighth of the hoghead, from 64 to 63 pints, it feems plain, that our anceftors took the cubic foot for their model; the contents of fuch a veffel being $62 \frac{1}{2}$ pints or pounds: and from hence, and from what has been fhewn before, it is not very unnatural to conclude, that at firft our anceftors fixed and eftablifhed, as well their wcights as meafures, from known parts of this model ; taking always a whole number for each primary weight or veffel, and from thence proceeding, by a regular geometrical proportion, to raife the greater weights or meafures: fo that the Englifh foot (the undoubted and univerfal ftandard of all meafures of length within this realm) is alfo the itandard for the avoindupois * weights, and all meafures of capacity.
*The very name avoirdupois, by which our common weights are known, has by fome been looked upon as a proof that they were of foreign extraction. The firl time I find the word ufed in our laws, is in an act of Edw. III. fat. i. where it is applied to wines as well as corn; as is is afterward in 25 Edw. III. Rat. 3. c. 2. and 16 Rich. II. c. 1. And in an act 27 Edw. III. flat. 2. c. 10 . there is the following claufe:- Becaufe we have perceived foms merchants buy avoirdupois merchandizes by one weight and fell by another, we will and eftablifh, that one weight, one meafure, and one yard, be through all the land; and that wools, and all manner of avoirdupois, be weighed by even balance. This king, in his 14th year, had directed itandard weights to be made of brafs, and fent into every city and town and I conjecture, that thofe flandards, from the words of the forcgoing claule, took the naine of avoirdupois, and were the weights by which the merchant ufed to buy. What were the lighter weights by which they fold, does not appear, perhapsthe pound Troy. That the former were the lawful weights, appears by an act 24 Hen. VIII. c. 3 . where they are fo called; and bucchers, who before that time fold their meat by hand, were thereby befliged to provide themfelves with beams, fcales, and veibuss faled called haberdepois (for avoirdupois), and velgits fealed, cal he avoirdupois weights, now reminin, in hene nextreign, he avoirdpois werghs, noter ing as flandards in the Exchequer, wero depolited there, as appears from the name and infription thercon.

Upon the whole, therefore, I think it is fufficiently proved, that a cubic veffel, whole fides are equal to an Englifh foor, will contain 1000 ounces avordupois, or very near the weight of fpring water: that weights and mealures, deduced by a regular geometrical progrefion from fuch a veffel, or from cuber velfets, whote fides are equal to known parts of an Englifh foot, bear an exaak analozy to each other, and to
weights and meafures raifed from a pound, according to the words of our moft ancient affize laws. This being con fidered, and that the avoirdupois weight is now in common ufe for determining the gravity of all heavy bodies; that this weight now is, and immemorially has been ufed, for fetting the ancient duty of tonnage and poundage, upon all goods and merchandize taken by weight (except fome few drugs, which are charged in the book of rates by the ounce Troy); and that there is not the !eaft proof, either in our ancient or modern laws, to induce a belief that this duty was ever generally taken by the Troy weight, or that Troy weights were ever in general and common efe in this kingdom; it muft furely be allowed, that the weight mentioned in our old laws, or acts of parliament, was the avoirdupois wcight.

## Postscript.

The learned bifhop Cumberland, in his * treatife, fays, -That our Englifh avoirdupois ounce is the fame as the Roman ounce; and was probably introduced into this kingdom by the Romans, when they gave laws and planted colonies here, and hath thence continued unchanged to this day; which is not commonly obferved, becaufe we ufe the avoirdupois weights only about heavier commodities; not in weighing filver and gold, which are weighed by the Troy ounce; which I fuppole was introduced by the Normans, becaufe it takes it's name + from a French town, Troyes, in Champagne,' Moft authors $\ddagger$ have been of this opinion This leads me compare our Englifh foot with the Roman foot, which Mr. Greaves takes as equal to 967 fuch parts, as ours is 1000 . The Roman amphora, or quadrantal, is generally allowed § to be equal to a cubic Roman foot; and to contain 80 pounds, or 960 ounces. Then the fide of the amphora is equal to $\| 986$ parts of the Englifh foot, agreeing exactly with the foot deduced by Villalpandus from the congius of Vefpafian ; and a cubic veffel, whofe fides are equal to 967 parts of the Englifh foot, will not contain + quite $904 \frac{\text { r }}{\ddagger}$ ounces; which, if true, reduces the Roman ounce to $412 \frac{T^{\frac{1}{2}}}{2}$ grains Troy.

- See p. 1i, 103, 107.
t Binop Hooper, p. 432. is of another opinion as to the derivation of the name
$\ddagger$ See Hooper's Enquiry, p. 10, 14, gz. and Arbuthnot's Tables explained, p. 15, 283 .
S See bifhop Hooper, p. 152, 175. Greaves's Mifc. Works, || F 198, 199, 297, 303 .
$\|$ For the cube root of 960 is $986, \mathrm{n}$.
+ The cube of 967 is but 904,2 partr. $^{\text {oz }} 1063$. And Mr. Greaves himfelf fays, an amphora made by the pes Colotianus held only $7 \frac{1}{2}$ congii, equal to 900 Roman ounces ; which comes as near the cube of 967 , as can be expected from the uncertain method we took to determine the contents of that amphora, which was by filling it with 7 congii, and as he gueffed, about an half of milium. See his Mifcellaneous Works, (1737) p. 225.

* Dr. Arbuchnot gives a table of the vulgar dry meafure, ás the contents of the Wincheller meafure. And he had fo little regard to the avoirdupois weight, that he does not give any table thereof.
$\dagger$ The ale meafure even exceeds the coal meafure.- And the excefs of the ale meafure above the Winchefter is more than one in twenty of the laft meafure.
|| See what is faid before.-So far Mr. Reynardfon.
All meafures wharfoever are either receptive or applicative.
The meafures of capacity, or receptive meafures, are again comprehended under the denomination of liquid and dry meafures.
The liquid, for wine, brandy, vinegar, cyder, beer, ale, and fuch other goods.
The dry, for grains, falt, coals, and fuch like.
Applicative meafures are either
The yard, ell, cane, aune, and other fuch meafures, for linen and woollen cloth, fiks, laces, ribbons, and other fuch goods. Or,

The inch, foot, $\& \mathrm{c}$. for wood, or other longer meafures of that nature, for land, \& 8 c .
Not to fpeak of the fractions of an Englifh pint, which are not worh the mentioning in a book of trade, the reader may obferve, that two pints make a quart, two quarts a pottice, and two pottles a gallon; which meafure contains 282 folid inches, and holds of rain-water ten pounds three ounces, or a little more, avoirdupois weight; eight gallons make a firkin of ale, two firkins make a kilderkin, two kilderkins a barrel, and twelve barrels a laft.
It is otherwife in meafuring of beer; for, though the fmall mealures for ale and for beer be the fame, yet they reckon but eight gallons of ale, and count nine of beer to the firkin; two fuch firkins to the kilderkin, and two kilderkins to the barrel. One barrel and a half, or three kilderkins, or fix firkins, or 54 gallons of beer, make a hoghead of beer; two hogheads make a pipe or butt, and two pipes a ton, confifiting of 1728 pints, weighing fo many pounds:
The wine meafures are fmaller than thofe for ale and beer, to which they bear the fame proportion as four to five; to that four gallons of ale and beer are very near five gallons of wine.. And each gallon of wine is 23 x cubical inches, and holds eight pounds, one ounce, and four drachms, avoirdupois weight, of rain-water; eighteen of there gallons make a rundlet, 42 a tierce, 63 a hogthead, 84 a puncheon, 126 a pipe or butt, and 252 a ton.
One pint of wine weighs one pound $\frac{1}{2}$ ounce Troy, and a ton 1700 pounds avoirdupois.
Note, What we generally call a tierce, in fpeaking of wine meafure, is one third part of a puncheon, and one fixth of a ton.
Formerly they made ufe of the wine meafure for beer, ale, cyder, \&ce. But now that is forbid under fevere penalties, and none but the Winchefter meafure is ufed. And as for veffels, in which beer, ale, \&cc. are contained, there is a ftatute, 23 Hen. VIII. giving power, to the wardens of the myftery of coopers within the city of London, to fearch and gauge all veffels made for ale, beer, \&c. (and alfo for foap) to be fold within the city, fuburbs, or two miles thereof; and examining their contents and weight, and finding them right, to mark them with St. Andrew's crofs.
And, by ftat. 3 I Eliz. all brewers are forbid to fell, or put to fale in London, the fuburbs, or within two miles compafs of the fuburbs, any beer or ale in butts, pipes, puncheons, hogfheads, tierces, or fuch other foreign veffels, 'till they be gauged by the mafter and wardens of the coopers of the city of London.
By fatute 16 and 17 Car. II. It is ordained that all fea-coals brought into the river of Thames mall be fold by the chaldron, to contain $3^{6}$ bufhels heaped, according to the bufhel fealed for that purpofe at Guildhall, London. And coals, fold by weight, are to be fold after the rate of 112 pounds to the hundred, under the penalty of the forfeiture of all the coals, and double the value thereof, to be recovered in any court of record, or upon complaint to the lord-mayor and jufices; one balf to the perfon complaining, and the other tos the poor, or repairing of the highways within the parifh, \& . And, by the fame flatute, the lord-mayor and court of aldermen of London are impowered to fet rates and prices upon coals to be fold by retail, allowing a competent clear profir to the retailer. This fatute by 7 and 8 Will. III. c. 36 . is made perpetual.

The received proportion in the weights of liquids is thus:
The amphora of the Romans held, of rain-water or wine,

## M E A

50 pounds of Antwerp weight; $\mathrm{rO} \frac{5}{8^{5}}$ of which make 112 pounds of London; fo that it is a little more than 5 per cent- larger than ours.
And a meafure, containing of wine or rain-water 50 pounds Contains of river-water

53
Of butter or oil
45
Of linfeed oil
Of honey
Of quick fllver
Of quick filver - - - - - 850
Of receptive meafures for dry goods, fuch as corn, and all forts of grains, \&xc, there is
Firft, the gallon, which is larger than the wine gallon, and fmaller than the ale gallon, contains $272 \frac{1}{4}$ inches cubical, and holds the weight of 9 pounds, 13 ounces, $12 \frac{1}{2}$ drachms, avoirdupois weight; 2 gallons make a peck, 4 pecks a bufhel, 4 bufhels a coomb, or cumock, 2 cumocks a quarter, feam or raff; and to quarters a laft, which contains 5120 pints, and the fame number of pounds Troy weight.
This is called Winchefter meafure, and by it, falt, lime, and coals are meafured: but, in meafuring the two latter of thefe commodities, the meafures are heaped, or elfe 5 ftricked pecks are allowed to the bufhel. 36 Buhhels make a chaldron of coals, and, on fhipboard, 21 chaldrons are allowed. to the fcore.
A Table of Dry Receptive Measures.

A buihel, water meafure, contains five pecks. Some make fix quarters of meal a weye, and one weye three quatters a laft.
The fmalleft applicative meafure is a barley corn, of which, Three make one finger's breadth or inch.
Four inches one hand, or hand's breadth,
Four inches one hand,
Three hands one foot.
One foot and a half, or four hands and a half, one cubit. Two cubits one yard, of fixteen nails.
One yard and a quarter one ell.
And again,
Five feet make one geometrical pace.
Six feet one fathom; and
Sixteen feet and a half one perch, pole, or rad.
Forty perches one furlong; and
Eight furlongs one Englifh mile, according to the ftatute 11. Hen. VII.

Sixty Engliif miles and a half, make a degree (though a degree be generally computed only fixty miles.)

A Table of Long Measures.

\section*{Another Table of Long Measure. <br> |  |  |  |  | Inches |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Feet | 12 |
|  |  | Yard | 3 | 36 |
|  | Pole | $5 \frac{1}{2}$ | $16 \frac{1}{2}$ | 198 |
| Furl. | 40 | 220 | 660 | 7920 |
| Mile 8 | 320 | 1760 | 280 | 63360 |

In this table, the pole or perch is computed to be fixteen feet and a half, which is the ftatute mealure; but there are fome cuftomary meafures which are more, as for fens and woodlands they reckon eighteen feet to the pole, and for forefts twenty-one.

A Table of Superficial Measures.

In this table, you have in a fquare mile 640 fquare acres, 2560 fquare roods, 8 zc . in a fquare acre 4 fquare roods, 160 rquare poles, 8 cc . in a fquare pole $30 \frac{3}{4}$ fquare yards, and $272 \frac{1}{4}$ qquare feet, and in a quare yard 9 feet Iquare. Which being rightly underfood, all the tables of reduction are fuffeiently explained
The Englifh mile, by ftatute law, confifts of 5280 London feet, or J 760 yards, or 8 furlongs; of thefe miles, the experiments of Mr. Norwood and Mr. Picart, demonftrate 69 and fomewhat more, to be a degree of the earth's furface, though a degree has generally been reckoned but 60 miles. A marine league is the 20th part of a degree, and moft nations agree to reckon fo for diftances at fea.
A French league is the 25th part of a degree, being near two Englifh miles and three quarters.
A German mile is reckoned to be the fifteenth part of a degree, or better than four Englifh miles.
A Dutch mile, or fuch as are ufed in Holland, is near the nineteenth part of a degree, being about three Englifh miles and an half.
An Italian mile is 1000 paces of five Roman feet each, and the Roman foot being $\frac{2}{5}$ of an inch lefs than the London foot, or as 29 is to 30 , it follows, that 76 Italian miles are neareft to a degree, and the Turkifh miles are reputed equal to the Italian.
The Danes ${ }_{2}$ Swedes, and Hungarians, make long miles, about a German mile and a balf, or at leaft five or fix Enghifh miles; the Polifh miles are near equal to the Dutch miles, and reckoned about 20 to a degree.
The Scotch and Irifh miles are longer than the Englifh by about half.
The Spanifh league is eftimated at four Italian miles, and are reckoned $17 \frac{1}{2}$ to a degree.
The Ruffans ufe a fhort meafure they call vorft, which is a little more than three quarters of an Englifh mile.
The Arabian mile, both ancient and modern, is about an Englifh mile and a quarter.
Things that are not fold by weight and meafure, are fold by tale.
In the primitive ages of the world, when mankind was but little acquainted with numbers, they counted by their fingers, as many indian nations do at this time : and thence, probably it is, that the numerical letters, cyphers, and words are at moft but ten, and in fome places only five.
Several forts of goods are counted after that manner, fuch as fifh, hides, paper, parchment, fables, and other things. Cod and ling, and fuch filh, have I 34 to the 100 . Eels 25 to the flrike, and 10 frike to the bind.
Herrings 120 to the 100, and 1200 to the 1000, which make a barrel, and iwelve barrels make a laft.
Of furs, filches, grays, jennets, martins, mincks, and fables, forty ikms make a timber; and other fkins have five fcore to the hundred.
Of paper, twenty-four fheets to the quire, twenty quires to the ream, and ten reams to a bale.
Of parchment, twelve fkins make a dozen, and five dozen a roll.
Ot hides, ten go to a dicker, and twenty to a laft.
Hay is fold by the trufs, containing fifty-fix pounds, or the load of thirty-fix truffes *.

* Stat. 2 Will. and Mar. cap. 8. 5. 16. every trufs of old hay offered to be fold in the cities of London and Weftmin.
Vol. II.
fter, and within the bills of moitality, between the lat of Augult and the firt of June, fhall contain 561b and every truls offered to be rold between the firt of June and tit: lait of Angulf, being new hay of the fummer growth, fhall contain 60 lb . being old hay, 56 lb ; and the perton bringin the fame thall forfeit for every trufs of lefs weight, is. $6 d$.

Glafs by the feam of twenty-four ftone, and the fone of five pounds.
A laft of gunpowder contains twenty-four barrels, and the barrel a hundred pounds.
By avoirdupois weight is weighed all things that have wafte, as all grocery wares, rofin, wax, pitch, tar, tallow, foap, hemp, flax, wool, 8 cc . all bafe metals and minerals, as iron, fteel, lead, copper, allum, copperas, \&c.
The ton avoir dupois is 20 hundred of all things, except lead, which bas but 19 hundred and a half to the ton, or fodder.
The hundred weight avoirdupois contains 112 pounds, the ftone, or half. quarter of the hundred, is 14 pounds.
But allum, cinnamon, nutmegs, pepper, and fugar, have but 13 pounds and an half to the ftone, or half-quarter of the hundred; 27 lb . to the quarter, 54 lb . to the half, and I 081 lb . to the whole hundred.
Effex cheefe and butter are weighed by the clove, or halfftone, allowing 81 b . to each clove, and 32 cloves, or 156 lb . to the weye; and in Suffolk they allow 42 cloves, or 336 lb . to the weye.
Wool is fold by the clove, allowing but 7 lb . to the clove, 14 lb . to the ftone, 28 lb . to the tod, 182 lb . to the weye, 364 lb . to the fack, and 4368 lb . to the laft.
A faggot of fteel is 120 lb . a burthen of gad fteel is 9 fcore, or 180 lb .56 lb . of butter, or 60 lb . of foap, make a firkin, and 2 firkins of cither make a barrel.
Butchers allow but 8 lb . to the fone

## Of Medsures for Extended Bodes.

In England they make ufe of the aune or ell, for linen only; the yard, or verge, being the ordinary meafure for cloth, filks, and all other fuch goods.
As for timber, and other fuch goods which have likewife length and breadth, as well as fluffs, they are meafured by the foot, which is compofed of inches, and the inches of lines ; thofe meafures being likewife longer and fhorter, according to the ulage of each country.
The veffels in which liquid goods, fuch as wine, brandy, vinegar, beer, oil, boney, \&c. are kept, as every other thing, have alfo different names in feveral countries, fuch as barrei, pipe, hoghead, butt, tierce, muid, futaille, \&c. of which more in the fequel.
The meafures for grain, falt, and other fuch goods, are alfo different from one another, and have their different names, as we fhall fee in it's place.
All forts of metals, fuch as gold, filver, brafs, tin, lead, \&c. as weil as many forts of filks, wool, thread, and feveral other forts of goods, as fpiceries, foap, tallow, chreefe, butter, \&c. are fold by certain quantities called weights, which likewife are different from one another in their names and forts.

Of the divifion of Measures for extended bodies, their differences, and the addition of fractions by the aliquot parts, \&c.

## Of Foreign Measures

The meafures for extended bodies, as aunes or ells, canes, verges, or yards, \&c. for meafuring of cloth, of gold and filver, filk-ftuff, lininen and woollen cloth, \&c. are commonly divided by merchants into the following parts :
$\frac{1}{2}, \frac{1}{4}, \frac{1}{6}$, and $\frac{1}{16}$, or $\frac{1}{3}, \frac{3}{6}, \frac{\frac{1}{1}}{12}$, and $\frac{\bar{x}_{\overline{4}}}{}$.
REMARKs.
Asfor the aunes, and other meafures in foreign places, whither merchants may go to buy goods, it is very ealy to mealure them, either with a compafs or a geometrical foot of England, Holland, or any other country; for knowing how many feet, inches, and lines, there is in the aune of Paris, or any other city, it is eafy to reduce it into our yard of London, and to difoover the difference that is between them.
For the comparifon of the Englifh ell with that of the principal trading countries of Europe, fee the articie England, where you will find them reprefented by tabular infpection, with regard to thofe feveral places.

## Measures for Liquid Goous.

Having given a fuccinct account of the meafures made ufe of for extended goods, and of their difference and conformity with one another, the next thing that falls under confideration, is the different forts of veffels ufed for containing of liquids; fuch as wine, vinegar, brandy, cyder, heer, oil, \&cc. of which I fhall treat with as much order and brevity as poffible.

Of Measures for Wine and Vinegar.
The veffels for containing wine and brandy have different names, according to the quantities they contain, and the countries where they are made ufe of.

Ee
The

## M E A

The veffel called in Germany woeder, made ufe of for keeping the wines that grow upon the Rhine and the Mofelle, do ordnarily contain 14 aams of Amfterdam, but fometimes they contain more and fometimes lefs.
The aam of Amfterdam is a meafure of 4 anckers, reckoning the ancker of 2 fteckans. See the article Aam.
The feckan contains 16 mingles, each of which makes two pints.
The verge, or verteel, of the wines upon the Rhine and the Mofelle, \&tc. is reckoned but 6 mingles, that of brandy is counted $6 \frac{1}{6}$ mingles, as we fhall fee hereafter.
The hoghthead of Bourdeaux, according to the juft meafure, fhould contain $12 \frac{1}{2}$ fteckans, or 200 mingles of wine and lee; and 12 fteckans, or 192 mingles clear wine; fo that the tun of Bourdeaux, confifting of 4 hogiheads, contains 50 fteckans, or 800 mingles, wine and lee, and 48 fteckans, or 768 mingles clear wine.
The tun of Bayonne, and other places thereabout, is reckoned 240 fteckans, meafure of Amfterdam, there being likewife 4 hogtheads to a tun.
In England, and efpecially at London, they reckon the hogfhead 63 , and the tun 252 gallons. The faid gallon weighs $7 \frac{1}{2}$ pounds weight of London; fo that the 63 gallons, or the hoghead, fhould weigh $472 \frac{1}{2}$ pounds, and the tun 1890 pounds weight of London. The faid gallon is faid to contain 4 Paris pints.
The hoghead of Bourdeaux. fhould contain 110 pots with the lee, and 100 pots clear wine, meafure of the faid place; fo that the faid pot of Bourdeaux contains about 2 mingles of Amiterdam.
The Bourdeaux tun of wine fhould weigh with the hoghead, 2000 pounds weight; and, in marine terms in freighting of fhips, by a ton, is meant 2000 pounds weight; fo that, when it is faid any fbip is of fo many tons, it is to be underftood that the fhip can carry fo many times 2000 pounds weight; though in Holland, Flanders, and other northern countries, they only talk of lafts, containing 2 tons each, or 4000 pounds weight
The Rhenifh and Mofelle wines are ordinarily fold at Amfterdam, the former at fo many florins of about 20 each, current money, and the latter fo many rixdollars, of 50 ftivers each, current money, for the aam of 20 verges, or verteels, the verge being, at that rate, 6 mingles, as already faid.
French, Spanifh, and Portugal wines are fold at fo many pound grofs the tun of 4 hogheads, and there is ordinarily I per cent. rebate for payment in ready money, both buyer and feller paying brokerage, each 6 fivers per tun.
The muid of Paris contains 150 quarts, or 300 pints with the lee, and 280 pints clear wine, meafure of Paris.
There are all over France a great many veffels for keeping of wine, different from one another, according to the cuftom of the feveral provinces where they are made ufe of; of which, though there be fcarce any poffibility to give an exact account, we fhall here fet down the regular fractions of the muid of Paris, 3 of which make the tun of France; and, as we have occafion to feak of the meafures of the other provinces of France, we fhall give as diftinct an account as we can of their contents.
The pint of Paris is a meafure pretty well known all over the world; 2 of thofe pints make I quart, 4 quarts I fextier, and $3^{6}$ fextiers 1 muid of Paris; 3 of which (as is already faid) make I tun of France.
The meafure they make ufe of in Provence is called a millerole; that of Thouloufe fhould weigh I 30 pounds, and ought to contain 66 Paris pints, which is about 100 pints of Amfterdam.
At Montpelier, and feveral other places of Languedoc, their muid contains 18 fextiers, and the fextier 32 pots; fo that the muid, which makes but 35 fteckans, or 560 mingles of Amfterdam, makes 756 pots of Montpelier; by which it appears that the pot of Montpelier is $\frac{5}{38}$, lefs than the mingle of Amitterdam. However, you muft here take notice that che cafks of Montpelier are not all of an equal meafure, fome being bigger than ochers; and, in feveral places of Provence, as well as High and Low Languedoc, they frequently tranfport wines, oils, and other fuch goods, in veffels made of goat-fkins.
The butts and pipes of Seville, Malaga, Alicant, Lifbon, Port a Port, Canarica, and Ifes of Fagel, \&c. are likewife of different fizes; for the tun of Malaga, confifting of 2 butts or pipes (which they call Perfemyn at Amfterdam) is seckoned only 36 or 37 fleckans; and thofe of other places are reckoned at 25 or 26 Ateckans the butt or pipe.
As for the wine at Hamburgh and Lubeck, it is fold at fo many rixdollar's of 48 Ilivers, or 3 marks lubs per tun.

Of $B R A N D$.
French Spanifh, and Portugueze brandy, is ordinarily put into biy calks, which fome call pipes, others butts, others piecer, viz. according to the cuftom of the places, there being no politive meafure resulated for that liquor.
In France if is ordinarily put into great cafks, which they call at Bourdeaux pieces, at Rochelle, Nantes, Cognac, Mont-
guion, the Ifle of Rhé, \&c. pipes, which (as we have already faid) contain fome more than others, there being fome which hold at Amfterdam from 60 to 90 verges, or verteels; and they reduce thole mealures into hogheads, by reckoning as under, for

${ }^{2}$ Verges of Cognac, Montguion, Rochelle, and the llle of Rhe.
29 Of Nantes, and oher places in Britany and Anjou. 32 Of Bourdeaux, and other places in Gulenne.
32 Of Bayonne, and places thereabouts.
30 Of Amifterdam, and other places of Holland. 30 Of Hamburgh and Lubeck.
${ }_{27}$ Of Embden.

In Provence and Languedoc they fell it at fo much the quin* tal, or $x 00$ weight with the cafk.
At Bruges they call the verges fefters, of 16 ftoups to a fefter, which they fell at fo much a ftoup.
At London, and generally through all England, they count only by gallons, as we have faid already.
The mingle of brandy weighs, at Amfterdam, 2 pounds 4 ounces; and the verge, or verteel, about 14 pounds; at which rate the 30 verges muft weigh about 320 pounds.
At Bourdeaux, though pieces of brandy contain from 50 to 90 verges, they reckon but 32 to the hogithead; the verge is fomething lefs than $3 \frac{x}{2}$ pots.
You muft know that whatever there is at Bourdcaux in a piece of brandy more than 50 verges, is called by the farmers of the king's duty exces, or an excefs, and pays fo much per verge befides the duties of fortie, or exportation (as they call it) for the 50 verges.
Thofe that make brandy feldom or never put it in fmall barrels, or tierces, except it be defigned for fome particular places in America, or elfewhere, where thofe fmall meafures are advantageoully fold to people, who, perhaps, would not be able to buy a pipe at a time; for a piece of brandy that contains perhaps $1 \frac{1}{2}$ of an ordinary piece, cofts but very little more of freight and carriage than one that contains $\frac{1}{2}$ or $\frac{8}{3}$ lefs. At Hamburgh it is likewife fold at fo many pounds grofs, of $7 \frac{1}{2}$ marks lubs per pound grofs, or at fo many rixdollars in banco; but at Lubeck it is paid in current money, there being no bank.
At Bremen, Copenhagen, and Embden, it is alfo fold at fo many rixdollars; and in this laft place the hoghead is counted but 27 verges.
At London it is fold by the ton of 252 gallons; and, in fhort, in every country according to the cuftom of the country, which muft always be ftrictly enquired into by the dealers for their government.

## Of Measures for Orl of Olives.

The oil of olives is ordinarily kept in butts or pipes, containing from 20 to 25 fteckans, at I6 mingles a fteckan; and there go 717 mingles, or 1434 pints of Amfterdam, to the tun of oil. They reckon at Genoa that the barrel of oil of olives weighs $187 \frac{1}{2}$ pounds nett, of their weights, which make 125 pounds of Amfterdam; and 14 barrels make 717 mingles of the faid place, or thereabout.
At Leghorn, the barrel of oil of olives weighs 85 pounds of their weight, which is a litcle more than 59 pounds of Amfterdam.
In Provence they fell it by the meafure of that country, called millerolle, containing 66 Paris pints, which make about 100 pints of Amfterdam: and, in fome places of that country and of Lower Languedoc, they put it in certain veffels made of goat-fkins, as they do the wine.
In Spain and Portugal it is put in butts and pipes, to be carried over feas, and fometimes in great earthen veffels called jars.

Of Measures for Fish-Oil.
Coarfe fin-oil is ordinarily kept in barrels, containing from 15 to 20 fteckans each.

## Of Measures for Honey.

Honey is kept in many different forts of veffels of wood and earth, and fold in fome places by meafure, and in other places by weight.
At Amfterdam they fell it at fo many pounds grofs per ton, confifting of 6 tierces or aams, or by fo many florins the batrel, or the 100 weight. The Bourdeaux and Bayonne honey is fold at Amfterdam from 301. to 401. grofs the tun.

Of Round Measures for Grain, \&c.
As the great diverfity of meafures of capacity renders it very troublefome for merchants to calculate the quantities thereof, it will be very neceflary to give an account of thofe that are ufed in the principal places of Europe for trade.
The laft is of feveral forts, but all comprehended in thefe two, viz. the fea-laft and that uled by land.
A laft is reckoned at fea both with regard to meafure and weight according to the nature of the goods.

## M E A

In meafure, there are allowed to a lait of goods 2 tuns, or 8 hogitheads of wine, 5 pieces of brandy or prunes, 12 barrels of herrings or peafe, 13 barrels of pitch, 4 pipes or butts of on o' olives, and 7 quarters or barrels of fifh-oil.
By weight, there is generally allowed to the laft 4000 lb . but, as wool is buliky, they reckon only 2000 lb . to the laft thereof, and 3600 lb . of almonds; and to likewife they make fome abatements of feveral other forts of goods, in proportion to their balk.
The land laft is not the fame in all places, there being fome difference introduced by cuftom in the feveral countries of Europe.
Of the Measures of Capacity of Amsterdam and Holland, \&c.
The laft of Amfterdam contains' 27 muds, and each mud 4 fcheppels.
Or, otherwife, the laft of Amfterdam contains 36 facks, and the fack 3 fcheppels.
So that the mud is $\frac{x}{3}$ of the fcheppel, and the cheppel is only 3 of the mud.
A laft of whéat commonly weighs between 4200 and 4800 l . Rye between 4000 and 4200 lb . and barley between 3200 and 3400 lb .
But thofe commodities are fo much fubject to alteration by their humidity, \&c. that there is but little certainty in their weight.
The laft of Am?erdam makes 19 fextiers of Paris, or 38 bufhels of Bourdeaux; and three lafts make 4 muds of Rouen.
The laft of Munickendam, Edam, Purmeran, and feveral other places of North Holland, is reckoned equal to that of Amfterdam.
But that of Hoorn and Enchuyfen, being likewife towns in North Holland, is of 22 muds, or 44 facks; of 2 fcheppels each; and fo is that of Muyden, Naerden, and Weefoop, fmall towns in the neighbourhood of Amfterdam.
At Haerlem they reckon 38 facks to the laft, their facks confifting of 3 fcheppels, 4 of which make 1 hoedt of Rotterdam, and I 4 of thofe facks make r hoedt of Delft.
The laft of Alckmaer, in North Holland, contains 26 facks. They reckon 44 facks to the laft of Leyden, and 8 fcheppels to the fack.
The laft of Rotterdam, Delft, and Schiedam, is compofed of 29 facks, and the fack of 3 fcheppels, of which $10 \frac{2}{3}$ make $r$ hoedt; where, it is to be obferved, that the laft of thofe places is 2 per cent. more than that of Amfterdam.
At Tergow they reckon 28 facks to the laft, 3 fcheppels to the fack, and 32 fcheppels to the hoedt.

## Of the Last of Utrecht.

At Utrecht they reckon 25 muds, or facks; to the laft, $10 \frac{2}{2}$ of which facks make I hoedt of Rotterdam.
The laft of Amesfort is compofed of 64 fcheppels.
That of Montfoort, Yffelftein, Vianen, \&c. is greater than that of Rotterdam; it is compofed of 18 muds, and the mud of 2 facks.

## Of the Last of Friesland.

The laft of Lecuwarden, Haerlingen, and other towns of Weft Friefland, is compofed of 33 muds.
And that of Groningen in Eaft Friefland is of the fame meafure. Ofthe Last of Guelderland, and the country of Cleves. The latt of Nimeguen, Arnhem, and Drefburgh, is compofed of 22 mouvers, and the mouver of 4 [cheppels, 8 of which mouvers make I hoedt of Rotterdam.
At Thiel they reckon 33 fcheppels to the laft.
At Burenande 68 fcheppels.
At Haerderwick they reckon II muds to 10 of Amfterdam.
Of the Last of Over-Yssel.
The laft of Campen is of 25 muds for corn, 9 of which make 1 hoedt of Rotterdam.
And 9 muids of Zwoll make likewife I hoedt of Rotterdam. The laft of Deventer contains 36 muids of 4 fcheppels each.

## Of the Last of Zealand.

The laft of Middleburgh is compofed of $4 \frac{1}{2}$ facks of 2 fcheppels each, of a little more; and that of Flefling, Zirickzee, the Brill, and fome other places, is fomewhat different from it, the fack being there reckoned $2 \frac{1}{2}$ fcheppels.

> Of the Last of Brabant.

The laft of Antwerp is compofed of 38 verteels, of which $3-\frac{1}{r}$ make I laft of Amfterdam.
Their verteel is compoted of 4 mukens, and 32 verteels make the fack for oats.
At Bruffels they reckon 25 facks equal to the Iaft of Amftcrdana.
At Malines they reckon 28 vertecls equal to the laft of Amterdam.
The laft of Louvain is compofed of $3 \bar{i}$ muds, and each mud of 8 halfters.

M E A
At Breda and Steenbergue they reckon $33 \frac{1}{2}$ vertects to the corn-laft, and 29 for oats; and 13 verteels make 8 facks, op I hoedt of Rotterdam.
At Bergen-op-Zoom, they allow 34 verteels to the laft of corn, and $28 \frac{1}{4}$ for oats.
That of Bois. $l^{4}$ - Duc is compofed of $20 \frac{1}{2}$ mouvers, 8 of whith make 1 hoedt of Amiterdam.

Of the Last of feveral towns in Flanders.
The laft of Ghent is compofed of 56 halfers for corn, and of 38 for oats: their mud is compofed of 6 facks, each fack of 2 halfers.
At Bruges the laft is compofed of $17 \frac{1}{2}$ hoedts for corn, and $14 \frac{1}{2}$ for oats, equal to the laft of Amfterdam.
At St. Omers, the laft is reckoned $22 \frac{1}{2}$ raziers, the razicr confifting of 2 fcheppels.
At Dixmude, they reckon $30 \frac{1}{2}$ raziers to the laft of wheat, and 24 for oats.
At L'Ifle, they reckon 41 raziers to the laft of wheat, and 30 for oats.
At Gravelin, they reckon $22 \frac{1}{2}$ raziers to the laft of corn, and $18 \frac{3}{7}$ for oats.
Eighteen raziers of Dunkirk are equal to one hoedt of Rotterdam.

## Of the Last of Liege.

The laft of Liege is compofed of 96 fextiers, of 8 muds each : they reckon the cori-laft of Tongres 15 muds, and that for oats but 14.

Of the Last of Great-Britain and Ireland.
The laft of London confifts of $10 \frac{1}{2}$ quarters, or bariels, compofed of 8 buthels each, and the buithel of 4 gallons.
The bufhel weighs between $5^{6}$ and 60 lb . and Io bulhels of England make about I laft of Amfterdam.
In Scotland, they reckon $3^{8}$ bufhels to the laft, and 18 gal lons to the bufhel; and in freland the fame thing.

Of the Last of Dantzick.
At Dantzick they reckon 36 fcheppels to the laf, which is equal to 58 fcheppels of Amfterdam.
They likewife reckon 16 fchippondts to the laft, and 340 lb . to the fchippondt, which makes 5440 lb . to the laft; but they give only 15 fchippondts or 5100 lb . weight the laft of oats.
They likewife divide their laft at Dantzick into 16 fextiers, meafure of Paris, or 20 bufhels of Bourdeaux.
They buy and fell their corn at Dantzick, as every other thing, by Polifh florins and grofs.

Of the Last of Riga.
At Riga they reckon 46 looper to be equal to the laft of Amfterdam; and they buy and fell it by rixdollars of 3 florins, or go Polifh grofs.

## Of the Last of Koningseerg.

Six laft of that place are equal to 7 of Amfterdam.
Of the Last of Copenhagen.
They have there feveral lafts, which differ from one another confiderably, according to the different forts of grain, or other commodities that are meafured by them. Ricard makes mention of three feveral forts of lafts ufual in Copenhagen, viz. of 42 barrels, of 80 fcheppels, and of 96 fcheppels.

## Of the Last of Stockholm.

At Stockholm they reckon 23 barrels to the laft.
Of the Last of Hamburgh, Bremen, and Embden.
The laft of Hamburgh confifts of 90 fcheppels.
At Bremen they reckon 40 fcheppels to the laft; and 8 lafts of Bremen have held out to 7 lafts, 18 muds, and 1 fcheppel, at Amfterdam.
At Embden they reckon $15 \frac{1}{2}$ barrels to the laft.
Of the Muid, \&c. of France.
The principal meafure made ufe of for grain, \&cc. at Paris, and moft other places of the kingdom is called muid.
The muid contains 12 fextiers, and the fextier 12 , bufhels.
The fextier of good wheat weighs between 244 and 248 lb . marc weight.
They divide the fextier of oats into 24 bufhels, which again are fubdivided into feveral fmaller meafures
Nineteen fextiers of Paris are reckoned equal to 1 laft of Amiterdam.
The muid of Roüen contains 12 fextiers, which are equal to 14 of Paris: it ought to weigh about 33601 l . mare weight, and makes 28 bufhels of Bourdeaux.
Four muids of Roüen are reckoned equal to 3 lafts of Amfterdam.
The fextier of corn weighs 210 lb . weight of Roïen, and is divided into 2 mines, and the mine into 4 bufhels.
The muid of Orleans ought to weigh 6 colb . and is compofed of 12 mines, equal to $2 \frac{1}{2}$ fextiers of Paris, or 5 buthels of Bourdeaux.

## M E A

The meafure made ufe of at Lyons, called afnée, is divided into 6 bufhels, equal to $1 \frac{1}{3}$ fextier, meafure of Paris, or $2 \frac{2}{3}$ bufhels of Bourdeaux.
Eight bufhels of Roüen make 1 fextier of Paris, and 2 bufhels of Bourdeaux.
The afnée of Macon makes $\frac{2}{3}$ fextiers of Paris, or $3 \frac{1}{3}$ buThels of Bourdeaux.
The 5 bufhels of Avignon make 3 fextiers of Paris, and 6 buthels of Bourdeaux.
The fextier of Montpelier is compofed of 2 emines, and the emine of 2 quarters. The fextier, weighing between 90 and 95 lb . weight of that town, being between 75 and 80 lb . marc weight: fo that 100 fextiers make : laft 22 muds of Amterdam.
The fextier of Caftres is compofed of 2 emines, and the emine of 16 bufhels. The fextier weighs about 200 lb . weight of that place, which is about 170 lb . marc weight; fo that it may be reckoned that 1001 fextiers of Caftres make 4 lafts of Amfterdam.
The fextier of Abbeville is compofed of 16 bufhels, and is equal to that of Paris.
The fextier of Amiens weighs from 50 to 52 lb . and 5 fextiers. The fextier of Bologne weighs 270 lb . fmall weight; and 8 fextiers of that place render 5 of Paris.
The fextier of Calais weighs 260 lb . and 12 of them render 13 of Paris.
Which fextier of Paris renders,

The fextier of Arles weighs only 93 lb , marc weight, and the load is 360 lb . weight of that country.
The load of Beaucaire is 2 per cent. greater that that of Arles. The load of Marfeilles is compofed of 4 emines, and weighs 300 lb . weight of Marfeilles, or thereabout, which make 343 lb . marc weight; 100 lb . of which make $123 \frac{1}{2} \mathrm{lb}$. weight of Marfeilles; fo that the emine weighs 75 lb . weight of Marfeilles.
The load of St. Giles's is 18 or 20 per cent. greater than that of Arles.
The load of Tarifeon is 2 per cent. lefs than that of Arles.
The load of Toulon is compofed of 3 fextiers of that place, and the fextier contains $1 \frac{1}{2}$ emines, 3 of which make 2 fextiers of Paris; or otherwife, they reckon that the bufhel weighs 3 II lb . and that $7 \frac{3}{4}$ bufhels make 1 fextier of Paris. The ton of Auray in Britany is reckoned 2200 . lb .
That of Audierne 2300 lb .
That of Breft is 2240 lb .
That of Hennebon 2950 lb .
Port Lewis the lame.
Quinpercorentin the fame.
The ton of Nantes is compofed of 10 fextiers, and the fextier of 16 bufhels: it weighs between 2200 and 2250 lb . the meafure being heaped, and 18 or 20 per cent. lefs, if otherwife. The ton of Kennes weighs 2400 lb .
That of St. Malo the fame.
The ton of Brieux 2600 lb .
That of Rochelle and Maran 42 bulhels.
Of Spain.
At Seville they reckon 4 cahy's to a laft, each cahy confifting of 12 anegra's.
The fanegue of Cadiz weighs $93 \frac{3}{4} \mathrm{lb}$. weight of Marfeilles, $3 \frac{1}{3} \mathrm{lb}$. of which make the load of 300 lb . weight of Marfeilles aforefaid, or 243 lb . marc weight.

## Of Portugal.

At Lifbon they reckon 4 alguiers to the fanegue, 15 fanegues to the muid, and 4 muids to the laft of Amfterdam.

## Of Italy.

Grain is fold at Genoa by the mine.
Two facks of wheat at Leghorn make 288 lb . weight of Marfeilles.
Corn is fold at Venice by the fextier or ftaro, which is the ordinary meature, two of which make a load of Marfeilles.
Of the chief Measures of Constantinople, and of the East-Indies in general.
There being but about 3 per cent. difference betwixt the aunes of Amiterdam and pico's of Contantinople, 100 aunes of Amfterdam make yo3 pica's of Conftantinople; 100 pico's of Conitantinople make 97 aunes of Amfterdam.

## M E A

## Measures of Fort St. George, or Madrab.

 Gainr Measures.$\begin{array}{lll}\text { I Meafure weighs about } & 2 \mathrm{lb} .100 \mathrm{z} . \text { avoir. } \\ 8 \text { Ditto is I mercal }\end{array}$
8 Ditto is i mercal $\quad-\quad 21 \quad-$.
I Madras rupee weighs 7 dwts. II gr. Troy, and is better than Englifh ftandard 14 dwts. 10 gr . in I lb : it is countrytouch $9 \frac{7}{8}$, China touch $98 \frac{3}{4}$. See East-India Compañy.

## Liguid and Dry Measures.

I Meafure is equal to $1 \frac{1}{2}$ pint Englih of 423 cubic inches. 8 Ditto are equal to 1 mercal of 3384 cubic inches.
400 Mercals are equal to 1 garfe of $1,353,600$ cubic inches. I Covid is equal to $18 \frac{6}{x 0}$ inches.
N. B. One meafure weighs about 2 lb .8 oz . avoirdupois.

Eight ditto weigh about 2 rlb . or 22 lb .
3200 Ditto is 400 mercals, or 1 garfe, which weighs 8400 lb . which is $3 \frac{3}{7}$ tons, or roo Bengal baazar maunds of 82 lb . 2 oz .2 dr . each.

## Bengal Measures.

One meafure is five feer.
Eight ditto are forty feer.
The covid (in cloth-meafure) is nine inches.

## Of Malacca Measures.

A Malacca quoing is 3200 chupas, or 800 cantins, equal to 5000 Dutch pounds, or 5475 lb . Englifh, or Canton peculs (according to the Dutch calculation of 125 lb . to a pecul) 40 peculs.
A laft is 2000 chupas, 500 cantins, 3000 Dutch pounds, 24 peculs, 3285 lb . Englin.

Anjengo Measure.
One Anjengo covid is eighteen inches Englifh.
Calaicut and Tellicherry Measure.
One covid is eighteen inches Englifh; and the Callicutt guz, made ufe of in meafuring timber, is equal to $28 \frac{{ }^{2}}{20}$ inches Englifh.
They likewife, fometimes at Callicut, meafure their timber by the covid and borrebl; twelve borrebls is one covid when the timber is fawed, and twenty-faur borrebls is one covid when unfawed: the price generally is one Callicut fanam per folid covid.

## Carwar Measure.

One covid is eighteen inches Englifh.

## Surat Measures,

Are the larger and leffer covid, viz.
One covid of 36 inches, and one covid 27 inches. By the latter all things are fold except broad cloath, velvet, and fattin, which are fold by the large covid, or Englifh yard.

## Gombroon Long Measure,

${ }_{93}$ Guz are equal to 100 yards Englifh.

## Mocha Measures.

Rice, and other grain, are fold by the kalla and tomand; forty kallas is one tomand, and weighs about 165 lb . but the governor's cuftom (of half a kalla per tomand upon all grain fold) being deducted, and the intolerable cheat in the meafuring, together with the pilferage from the water-fide home, being allowed for, the Bengal maund will not come out above nineteen kallas; whereas one bag, or Bengal maund, ought to hold out more than a tomand; but, for the foregoing reafon, two Bengal maunds feldom come out above thirty-eight kallas, and rarely that. See East-India-Company and East-India Trade.
Oil is fold by the cudda, noosfia, and vakia.
Sixteen vakias is one noosfia.
Four noosfias, or meafures, one cuddy poife, about 18 lb . Of late years the price has been from three to five noosfias per Mocha dollar; and, computing the dupper of two Bengal factory maunds to hold out about 67 or 68 meafures each, at which rate the noosfia, or meafure, weighs about $2 \frac{1}{4}$. Cotton is fold by the hearf, and nine hearfs is $11 \frac{1}{2}$ Mocha dollars: it generally fells from 30 to 40 hearfs per bahar.

## Long Measure.

The guz is twenty-five inches Englifh.
The covid is nineteen inches Englifh.

## China.

Canton Measure.
Ten punt is one covid in piece goods, equal to $14 \frac{5}{8}$ inches.
REMARKs.
The following conformity of meafures in regard to grain being of ufe, we fhall give the reader the fame from La Bibliotheque des Jeunes Negocians, by the Sieur Larue, merchant at Syons, dedicated to the count de Maurepas, and publifhed in the year 1747; which is efteemed the moft modern and autbentic account that is publifhed in Europe.

Of the Conformity of the Measures of Amsterdam, Paris, and Bourdeaux, with regard to Grain.

M E A

M E A

Of Round Measures for Salt.
Salt is fold by different meafures in the feveral places where that commodity is made, and whither it is tranfported and expofed to fale.
The moft confiderable places where it is made, are Marenne, Brouage, Tremblade, Rochelle, Maran, Nantes, and other places in the provinces of Britany, Sainteonge, and the country of Aunix in France; and the iflands of Rhé, Oleron, and others, upon the coaft of that kingdom; and Cadiz and St. Ubes, and other places in Spain and Portugal.
And from thence it is tranfported in vaft quantities to feveral parts of Europe.
In France it is fold by the muid, which is greater or lefs, according to the cuftom of the feveral provinces where it is made, and where it is fold.
At Paris, they divide the muid into twelve fextiers, and the Sextier into four minots
At Marenne, the Hle of Rhé, and other places in France, where falt is made, they fell it by the hundred, which they divide into 28 muids, and the muid into 24 bufhels.
The hundred renders commonly at Amfterdam $11 \frac{1}{2}$ lafts, or 23 tons.
At Bourdeatux, that muid renders 42 pipes, or 252 facks or
mintots.

The minot commonly weighs about 240 pounds, mare weight.
But the falt that is made at Brouage and in the Inle of Rbe, is heavier than that of Marenne, Tremblade, and Oleron. The hundred of Brouage, the lae of Rhé, \&xc. renders $1 \frac{5}{4}$ or $I \frac{1}{2}$ lafts, which weigh about 45 or 46,000 weight. At Copenhagen it renders $9 \frac{1}{2}$ lafts, or 18 tons.
At Konigherg it renders about ten lafts, or 40,000 pounds weight. And it is to be obferved, that ftrangers are not allowed there to keep falt in ftorehoufes to fell.
At Riga it likewife renders about 10 lafts, nor are ftrangers allowed any greater privilege about it than at Koningflerg. At Dantzick it renders $11 \frac{1}{2}$, and fometimes 12 lafts: $7 \frac{1}{4}$, or $7^{\frac{5}{2}}$ of which, make the great hundred of Amfterdam.
$7 \frac{1}{2}$ of which, make
Strangers may fell falt at Dantzick to the inhabitants, but not tranfport it by the canals, nor fell it to other ftrangers.
At Stetin in Pomerania, it renders 10 lafts, or 40,000 pounds weight.
In Portugal falt is fold by the muid, four of which make one laft, and feven the hundred, of 404 fcheppels, meafure of Anifterdam.
The muid of France renders about $; \frac{1}{2}$ lafts, meafure of London.

## M E C

It is fold at Amfterdam by the hundred of 404 fcheppels, which is reckoned 7 lafts, or 14 tons, or 28,000 pounds weight, which is alfo counted 208 facks.

Some Examples, to illuftrate the converfion of the Mrasures of one country into thofe of others.
Suppafe that you would know how many aunes of Troyes in Champagne 100 auncs of Paris will make, and that to difcover the fame you have no other knowledge than what fol lows; which we thail exhibit and operate according to the rule of conjunction, that we have exemplified in variety of calc's throughout this work. See the articles Arbitration of Exchanges, Hamburgh, Holland, Exchange.
Antecedents.
Confequents.
If 7 Aunes of Paris make 9 Yards of London,
And 36 Yards of London make 99 Aunes of Holland,
7 Aunes of Holland - 9 Braces of Milan,
3 Braces of Milan —— 2 Vares of Arragon,
5 Vares of Arragon - 2 Canes of Montpelier, 9 Canes of Montp. - 10 Canes of Touloufe, 4 Canes of Toul. - 9 Aunes of Troyes-
How many of Troyes will 100 aunes of Paris make?
Rule-Multiply the antecedents together for a divifor, and the confequents for a dividend, and you will find the quotient to be 150 ells of Troyes to be equal to 100 ells of Pa -ris.-Ot abbreviated according to what is taught under the article Arbitration of Exchanges, \&cc. will ftand thus, which is performed in a minute's times, without thofe tedious multiplications, and will ftand thus by way of equation.

So that the product of all the antecedents, abridged, is reduced to 2 for a divifor, and the product of the confequents to $3 \times 100=300$, and divided by $2=\times 50$ the anfwer.

EXAMPLEII.
Suppore that you owe 100 ânées of wheat at Lyoris, and that you would know what quantity you muft purchafe at Mâcon to replace them, and that you have no other knowledge to come at the fame than by faying, viz.
If 3 ânêes of Lyons make 4 Sextiers of Paris,
And I Sextier of Paris - 2 Bufhels of Bourdeaux, 38 Bufhels of Bourd. - 27 Muds of Amfterdam, 27 Muds of Amfter. - 46 Fanégas of Cadiz,
230 Fanégas of Cadiz - 57 ânées of Mâcon:
How much does 100 of Lyons make?
'The whole abridged will ftand thus :

115100
$46 \times 2 \times 100$ Anfw.
Ergo $\frac{46 \times 2 \times 100}{115}=80$ ânées Mould be bought at Mâcon to replace 100 at Lyons.

## REMARKs.

If the rules that we have laid down, and the reafons thereof which we have demonftrated, in the feveral parts of this work ta which we have referred, be duly attended to, thefe operations can require no farther elucidation. The fame method of calculation is applicable to weights as well as meafures. See Weights.
MECHANICALARTS. Throughout the courfe of this work, we have endeavoured to thew, that artificers, mechanics, and manufacturers, are the grand bafis of all our prefent commerce; and that our ftudents and experimentalifts in arts and philofophy, in conjunction with thefe practical artizans, and the tagacity and induftry of our merchants, are the very life and foul of all our trafficable advancements and fplendor. See the articles Artificers, Manufacturers, Mathematics, Mercantile College, Musfeum, Ruyal Society.
What has been amply urged under the two former of thefe heads, will, in a great meafure, hold good under this article of Mechanics and Mechanical Arts; and, therefore, we thall have the lefs to fay upon the prefent occafion. As nothing more evidently thews the high value and importance of this clafs of people to commercial ftates, than the daily artifices of our rivat nations in trade, to decoy the moft ingenious of our mechanics and manufaturers out of the kingdom; fo nothing would fhew the wifdom of the nation

M E C
more, than to make it for the intereff of fuch to remain among us, and to increale the number, as being the chief inftruments to preferve and advance the trade of the nation. To which end, nothing can fo much contribute as the advancement of our old and eftablifhed branches of forcign trade, and the promotion of new: and thefe depend on the widdom of parliament, and that of the royal ccuncils.
One general ftrain that runs through this work, the reader will pleafe to oblerve, is, to fhew, how great a variety of trades depends upon found philofophy : that is, philofophy. founded on repeated and unerring experiments, and appofitely applied, in conjunction with the mathematical arts to practical trades. See the above articles. And, if this be the cafe, it follows, that, in order to improve the old mechanic arts, and to difoover new, fuch philofophy and mathematics muft be encouraged, or our practical artizans will be deprived of fome of their beft coadjutors; for it would be no difficulty to thew, that moft trades and arts have been derived from this clafs of men; who, although they pafs filently through life in their ferene and contemplative way, yet their memories deferve to be eternally revered.
How that philofophy may be effectually promoted, which has been the parent of all trades, and will ever continue to advance them, will not be judged incompatible with a work of this nature. It is therefore we have interlarded for much philofophy, as is requifite to thew how far particular tyades depend thereupon; and we have alfo under the heads referred to endeavoured to fhew, in what manner philofophy ought to be encouraged by trade, fince trade is fo highly indebted to philofophy.
At prefent, I fhall only add, to what bas been oblerved upon fimilar occafions, a recommendation to our Britifh artifts to endeavour to imitate all thofe curious arts, which are practifed to any fuperior degree of perfection in all ocher nations whatfoever; for this will prove one great means to advance the intereft of particular trades. That I may not be mifundertood, it may be proper to intimate a few intances.

## Remarks on Mechanical Arts.

The country of Bengal furnifhes materials or mechanic arts and fciences equal to moft countries. The artizans here have wonderful fkill and dexterity: they excel particularly in making linen cloth, which is of fuch finenefs, that very long and broad pieces of it may eafily be drawn through a fmall ring. If you tear a piece of mullin into two pieces, and give it to one of their fine-drawers to fet it together again, it will be impoffible for you to difcover where it is joined, though you mark it on purpofe to know it. They will place together fo artifically the pieces of glafs or China ware, that one cannot perceive it was ever broken.
Their embroiderers work in filigreen very curioufly: they imitate exactly any work made in Europe, though the engine they make ufe of, and all their other utenfils, do not colt them above the value of a crown.
The looms that their weavers ufe, do not coft them more: with thefe they fit in in their courts and yards, or on the fide of the highway, and work thofe fine fuffs that are fo highly efteemed over all the world.
They have here no need of wine to make aqua vita, but make it of a fyrup, fugar, fome certain forts of barks, and raifins; it burns better, and is ftronger than that made in Europe.
They paint flowers, and gild very finely upon glafs. I was furprized, fays our author, to fee their veffels which they ufe to cool water in, and are not thicker than two leaves of paper pafted together.
Their watermen row after a different manner from ours; they move the oar with their feet, and their hands ferve inftead of the hypomochlion, or roller on which it turns.
The liquor which their painters ufe, does not any way lofe it's colour, nor is it tarnifhed by lye.
They make ufe of a kind of hand-mill to break their fugarcanes, which does not coft them above the value of ten pence. The perfon that grinds, works and fathions the fone himfelf with lac and emery.
Their mafons will pave the largeft room with a fort of cement made of brick duft and lime, fo that it fhall feem to be but one fone, and is much harder than gravel. I faw them make a fort of pent-houfe, fays our author again, that was 40 feet long, 8 feet broad, and 5 or 6 inches thick; which they raifed up in my prefence, and fixed it to the wall on one fide only, without putting any prop under it to fupport it.
Their pilots take the altitude (or latitude of places) with a cord that has feveral knots in it. They put one end of the cord between their teeth, and by means of a piece of wood fixed to it, that has a hole through it, they eafily obferve the tail of Urfa minor, which is commoly called the polar ftar, or north pole.
Their lime is ufually made of fea Thells: that which is made of foail-fhells, ferves to whiten their houfes; and that which is made of fones they chew with the leaves of betel. I have feen fome of them that would take as much of is in a day: as the quantity of an egg.

I

They make their butter in the firft pot that comes to hand ; they cleave a ftick into four quarters at brie end, and, ftretching them out afuider in proportion to the fize of the pot that contains the milk they turn the flick round different ways (backwards and for'wards)' by means of a cord twifted about it, and by this mearis in a fhort time make the butter. Thofe that fell butter have the art of making it pais for frefh, when it is old and rank: To do this they melt it, and pour upon it four curdly milk; and in eight hours after they take it out in lumps, and ftrain it throvigh á cloith for fale:
Their chemifts make ufe of the firt pot they meet with to revive cininabar, and other préparations of mercury, which they do after a very fimple manner. They eafily reduce all, metals into a powder, as I myfelf can witnefs. They fet a great value upon talc and brafs, which confume, as they fay, all vifcous humours, and remove the moft ftubborn obffructions.
The Chitefe gild paper with leaf-gold and fifver, laid on with a very good fort of varnith they have, which is the fame wherewith they varnifif their lacquered wares; all which; after it is thoroughly dry, they put in a fcrew-prefs, and, with an inftrument like our plane, thave it as fine as they pleafe. They alfo gild paper on one fide with leaf-gold, then cut it in long pieces, and weave it into their filks, which makes: them, with little or no coft, look very rich and fine. The fame long pieces are twifted about filk thread by them fo' artificially, as to look finer than gold-thread, though it be of no great value.
Among the Japonefe, they have the art of making lacca in a manner fuperior to the Europeans: there is fome fo fine and curidus, that whereas, in this country, one may buy an orHinary fmall box for three or four crowns; one of the fame fize, when made in Japan of exquifite lacca, will fell for more than eighty crowns. The author of this account hath four cabinets of his workmanfhip, which he affirms to have: coft him about 40,000 crowns, which he will not fell under 80,000 crowns. Philof. Tranf. n. 49.
The colours wherewith they dye their fluffs never fade: I have feen one of them, which our vermilion and couleur de feu, as the French call it, come not near to. It is extracted out of a flower like to raffron, and one pound of it colfs an incredible price. To try whether the colour will not change by lixivium or lye, they apply an hot iron to it; and, if there it holds, they affure themfeives of the durablenefs of the colour.
The method of making fall, at Chufan and China, may deferve regard: it is this: all the fhores here being mud, inftead of fand, in the fummer-feafon they pare off the fuperficial earth which has been overflown with the falt-water, and $l_{4 y}$ it up in heaps for ufe: when they are to ufe it, they dry it in the fun, rubbing it fmall; then, digging a pit, they cover the botton thereof with ftraw, at which, through the fide of the pit, they pafs a hollow cane that leads into a jar, which tands below the level of the pir's bottom; they fill the pit almoll full with the aforeaid earth, and pour falt water hercun 'till it be covered two or three inches wih water, which drains through into the aforefaid jar, and is afterwards boiled into falt.
Upon the whole, in whatever mechanical or manufactural arts other nations may excel Great-Britain, our aftults fhould be upon the watch, not only to imitate, but furpafs, if polfble. Throughout his work, thofe particulars appear wherein other nations do excel us, under the feveral countries of the world, whofe natural hiftory and traffic we have defcribed, and inay well deferve the attention of our artilts. But thofe which are imported, and which they can fee, bandie, and minutely examine, they are the molt likely to imitate or excel.
As we have arrived at a great perfection in the China ware, why may we not in divers cther eaftern arts and manufactures?

## Remarks in athother light, confiftent with this work.

It is a maxim generally received, that one of the moft effectual means to fettle and improve commerce, or any other political intereft, is the patronage of princes, difpenfing rewards, and exciting ernulation by invefting with honours, and other marks of diftinction, thole perfons, who, by the force of gemius or application, have made new difcoveries, or improved upon any thing laudable, and conducive to the intereft of the poblic; more, efpecially fuch, as upon the Prength of their own genius, and at their fole charge, have fet up and maintained manufactories, and other works of the meehanic arts beneficial to the community, and when the introduction of them has been entirely owing to their induftry and public fipirit. This point I thall only treat in a general way, as it is not poffible to prefcribe rules for the conduct of It on particular occafions, fince the honours, as well as rewards and encouragements, are always to be proportioned and difpenfed according to the ftation and other circumftances of the claimants, and with an eye to the charge they fhall have been at, and the benefits that thall refult to the public from them; things of fuch a nature, that it is abfolutely neceffary to rely upon the judgment and pradence of the mini-

Vol. II.
fters, whom his miajeity flall intruf with the conduat of fuch interefting affairs:
It is cuftomary, and a piece of good policy, to give yeatly penfions and rewards; in ofder not only to cherifh amon ourfelves, but to draw over arid erigage to flay in any couri try, able mafters in manufactures a aid the mechanic arts either to introduce new forts of bufineffes, or to improve fuch as have been already eftablifhed; by advancing them to degree of peifection and goodnefs, that is certain to make hem efteemed, and procure them a market every-where. To artificers of workmen fetitig up new and profitable commercial arts, it is ufual in France and Spain to allow, for a certaih term, an immunity from all troublefome offices; houfes to live in, workfhops, and a difpenfation from fome duties; and at the fame time, for a farther encouragement fums of money have been granted to enable them to bear the firf expence, which ufually runs High. But in refpect to this advance of money, or the other encouragements, we are as little able to prefcribe ftated rules; as there muft receffarily be a variety of eales, according to the futuation of the projectors; and the benefits that will arife from the undertaking It is ufual alfo to grant an exclufive privilege of this kind, that; for a certain number of years, no other perfon manufacture the commodities, they are under an obligation to introduce and eftablifh. But, before we ever difpenfe indul. gences of this nature, we ought to confider the affair thoroughly; and when for fpecial realons it is found abfolutely neceflary, in order to obtain our end, they are cven then to be limited and guarded with the utmoft care, left they be converted into monopolies, that are of great profit to the proprieinr, bat of the utmolt prejudice to the püblic; moreover; in difpenfing them, though it be with all poffible precaution, it ought at Jeaft to be attended with the following circumfrances, of it's being a new undertaking, and very difficult to be fet on foot; that there will enfue an improvement to commerce, and a confiderable advantage to the public. See the articles Monopolies and Patents.
Lewis XIV. king of France, in the year i665, during the miniftry of John Baptift Colbert, granted an exclufive privilege and other advantedges; in order to fettle a tin manufacture in feveral parts of that laingdom, xs it is a very ufeful commodity, and of great conlumption every-where; and, at the expiration of the term covenanted, the patent was renewed in the year 1695, in favour of Ifaac Robelin, en-gineer-director of the fortifications of Burgundy, and compaty, to which partnerihip it was renewed for another term in the year $\mathbf{r} \neq \mathrm{co}$, as appears from the patent granted them. In like manner the woollen and other capital manufactories and mechanical arts have been introduced and effablifhed in this and other trading kingdoms. See the articles Artificers, France.
But we are always to be very cateful, that the term of the privilege (if it be exclufive) be granted for as thort a time as poffible, and under due limitations, invorder that the manufacture and traffic carried on, both at home and abroad, may be freely and quickly extended.
When trafficable commodities of any kind are undettaken to be eftabliohed in a nation by private hands, and are nearly of the fame fort as fome already cftablifhed in the country, and though they may be of fuperior quality, as it is from this very fuperiority, that with a litile diligence they may be imitated, there will be no reafon to grant privileges, indul gences, and other diftinguifhing encouragements which fome have moved for, as in fuch cafes they ought to be common and general; for any thing fingular, or exclufive, is a great prejudice to other manufactures of the kingdom, which boing of equal moment, or little inferior, may, with equal propriety, claim and enjoy the fame advantage; and, if they fhould not obtain it, the confequence will certainly be, that, favouring a branch, we fhall deftroy the root.
It would be impolitic and unjuft to indulge a few artizans, upon no reafonable plea, with immunities and other indul gences, that are denied to thofe of the reft of the kingdom. For this reafon, all encouragements which we have recommended in favour of commerce and manufaciural and mechanical arts, tend to put all, as near as poffible, upon an equal footing under the famc circumftances, unlefs very par ticular cafes require an exemption, as fometimes it does find a place in general provifions, and upon the very principle of an equal diftribution of juftice; in order, that, at the time of carrying thofe indulgences into extcution, an equality may be better preferved in diftributing relief; juft as ftronger and more coflly medicines are adminiftered for a cure under dangerous difeales, while, in maladies of an inferior kind, health is recoverable by gentle pbytic.
MECKLENBURG, called alfo MECKELBOURG, a duchy in Germany, has Pomerania on the eaft; part of the marquifate of Brandenburg, and the duchy of Lunenburg, on the fouth; the Baltic on the north; and Holtein and SaxeLawenburg on the weft; being about 100 miles long, and 60 broad. It abounds with corñ?; fruit, fifh, and fowl; it is well watered with lakes and itivers, and extremely well ficuated on the Baltic for a foreign trade, fome of the principal HanfeTowns lying in this duchy, viz. Roftock, Wifmar, Swerin,

Ggg

## M E D

\&c. [fee Hanse-Towns] which are it's principal places of trade.
At Rostock, their chief commodity is beer, that which was formerly called Lubec beer, which they export in large quantities: fome years fince they had no lefs than 250 privileged brewers, who, it is faid, brewed as many thoufand tons, a year, befides what particular perfons brew for their own ufe fo that the duke's revenue, arifing from the excife on beer, is greater than that from all the other articles together. It's river is navigable to the very walls, but large hips come no farther than Wamemunde, a little town feven miles lower, where the Swedes built a fort formerly.
MEDAL, a piece of metal, in the form of a coin, with fome peculiar ftamp thereon, deffined to preferve to pofterity the portrait of fome diftinguifhed perfonage, or the memory of rome illuftrious action.

Remakns.
It not being confiftent with the tenor of our work to confider this article in the mere light of an antiquarian, we fhall take notice of it only as an object of traffic among the learned and curious, where intereft frequently is no way concerned, the emulation among fuch being to inrich their cabinets, and to complete their collections of thofe eftimable monuments of antiquity.
There are, however, as Mr. Patin remarks, in many of the principal cities of Germany, many dealers who may properly enough be called antiquarian merchants, fince they collect medals only with a view to fell them again for gain; a traffic, fays the beforementioned learned author, that has it's frauds as well as moft others, and wherein the purchafer fhould well examine the merchandize, if he would not receive thofe for rare and valuable which are of a counterfeit ftamp, for fuch medals that are really antique and curious.
Meffieurs Tournefort, Cornelius le Bruyn, and Paul Lucas, the latter in his accounts of Egypt, and the two others in their voyages to the Levant, fpeak of the like commerce carried on in the illands of the Archipelago, and in almoft all the fcales of the Levant, where the inhabitants of the country, well informed of the taite that ftrangers have for curiofities of this nature, take pains to collect them together, and difpofe of them at a dear rate, and often with lefs fidelity than the German antiquarians.
Befides this commerce in medals in Germany and the Levant, which relates only to antiquity, there is a traffic carried on in France for thofe of a modern kind, which is more to be depended on.
This trade confifts chiefly in that numerous and rich feries of medals which were ftruck in order to perpetuate to pofterity the moft celebrated events in the reign of Lewis the Grand, and thofe that are yet ftruck every day, fays our author, in regard to the reign of Lewis XV.
The director-general of the coinage of thefe medals, who difpofes of them, furnifhes thofe only of gold, filver, or bronze.
The elegance and beauty of thefe medals, and the fkill of Monf. Launay, who has the direction thereof ( 1723 ) gives fo great a value to them, that it is fcarce to be doubted but they will one day be in as high efteem as the moft beautiful of thofe of antiquity.
The Sieur Launay has alfo caufed medals to be flruck of all the kings of France, from the commencement of the monarchy to the prefent time, which contain on one fide the effigy of the prince, on the other a fhort, but exact abridgment of the moft remarkable events of every reign. Thefe alfo have entered into the commerce of the modern medals at Paris, and are not of the leaft important fort.
We fhall conclude this article with a fhort account of thofe medals in France which concern the trade and navigation of that kingdom, and which were ftruck in the reign of Lewis the XIVth; being perfuaded, fays Monf. Saxary, in his French Dictionary of Commerce, in favour of that nation, that bis work would want that perfection expected, if the reader did not find thofe remaining monuments that France has fruck of hercommerce, and of the protection that fo great a king has given to it.

Medals fruck in France during the reign of Lewis the XIVth, upon various extraordinary eftablifhments made in that kingdoan for the benefit of their trade and navigation.
The eftablifhment of a number of new manufatories in France, and the old ones being brought to their perfection, make the fubject of the firft medal. This was ftruck in 1664 , a year remarkable for the great number of commercial enterprizes, which commenced from that xra: and which were contiaued duing the adminiftration of Monfieur Colbert, whofe memory will ever be revered and adored in that kingdom.
Upon this medal tocre is a Minerva, who has by her a fpindle, 2 thuttle, bottoms of wool, and a piece of tapeftry: the legend, Minerva Locupletratrix, fignifies the kingdom

## M E D

inriched by arts, of which Minerva is the fymbol ; the exergum, Artes Instaurata, which fignifies the Arts reeftablifhed, M.BC.LXIV.
The fubject of the fecond medal is the re-eftablifhment of navigation, which had been a long while neglected in France: but the grand monarch, applying to their re-animation, rendered his kingdom as powerful by fea as land, and as flourihing by it's commerce as by it's arms.
This medal is of the year 1665 . It reprefents a fhip in full fail: the words of the legend are, Navigatio Instaurata, which fignifies Navigation Re-established: the exergum fhews the date.
The French Eaft-India company, eftablimed in the year 1664, and which took poffeffion of the ifland of Madagafcar in 1665 , gave occafion to the third medal.
This colony, in manner of the ancient medals, is defigned by one of thofe bunch-backed oxen which are in great plenty in the ifland: it ftands nigh to an ebony-tree, which is very common in that country. The words of the legend are, Colonia Madigascarica, which fignifies the colony of Madagafc̣ar: the exergum denotes the date, M.DC.LXV
The union of the two feas, fo commodious and beneficial to the domeftic and foreign commerce of France, is reprefented in the fourth medal, itruck in the year :667.
Neptune armed with his trident, with which he ftrikes the earth, feems to complete this important enterprize: the gufhing out of the water, which pours forth by the Itrength of the blow which he has given, and which (preads itfelf to the right and left, indicates the ocean and Mediterranean, that the canal unites. It has, for legend, Juncta Maria, which fignifies the joining of the feas: the exergum has Fossa a Garumna ad Portum Setium; A Canal extending from the Garonne to the Port of Sete. M.DC.LXVII.

The fifth medal was fruck in the year 1680, in order to preferve the remembrance of the eftablifhment of the feveral claffes of the marine. See the article Naval affairs of France.
The claffes were three at the firf eftablifhment, each confifting of 20,000 failors, one of which was to ferve on board their men of war, the other on board their merchant-men, and the other to reft one year in three.-Thefe claffes have fince been augmented to five, but they make only 60,000 feamen.
This medal reprefents a failor by the fea-fide, leaning upon a broken pillar; he holds in his hand a rudder, covered with a flower-de-luce: the legend has thefe words, Bello et Commercio, fignifying, For War and for Commerce; the exergum has Sexaginta Millia Nautarum Conscripta. M.DC.LXXX. Sixty Thousand Sailors Inrolled.
The fixth and laft medal is on occafion of the eftablifmment of the Chamber or Council of Commerce. As we have defcribed this eftablifhment at large under the article Chamber of Commerce, we thall here only give the type, and the legend of the medal, which was ftruck upon this account in the year 1700 .
It reprefents Juftice, and near her ftands Mercury, the god of commerce, who, with one hand, holds his caduce, or fnaky ftaff, and with the other a puife. The words are, SEx Viri Commerchis Regundis; which fignifies, Six Commissioners proposed for the Regulation of Commerce.

Remarks on the article Medal, fince the laft war, and the Definitive Treaty of 1763.
We have not learned that the French have ftruck Medals to commemorate their extraordinary fucceffes and glorious victories, which they obtained during the laft war; nor to celebrate the memorable advantages they gained by the laft peace, concluded at Paris, the 1 oth day of February, ${ }^{176} 3$, by the Definitive Treaty of friendihip and peace between his Britannic Majefty, the moit Chriftian King, and the king of Spain; to which the king of Portugal acceded on the fame day. See our articles America, British America, French America, Canada, Florida, and others referred to from them.
From the time of ftriking thefe medals, to what degree the French have raifed and extended their trade and navigation, fee the articles France, French America, British America, Levant Trade.
MEDITERRANEAN SEA, extends from the ftraights of Gibraltar to the coaft of Syria and Paleftine, being above 2000 miles in length, but of very unequal breadth; the weft part of it feparating Europe from Africa, and the Levant, or eaft part of it, dividing Affa from Africa, Spain, France, Italy, Turkey in Europe, and Natolia, or the Lefler Afia, bounding it on the north; and the empire of Morocco, Algiers, Tunis, Tripoli, Barca, and Egypt, bounding it on the fouch. The ftraight of Gibraltar, between Europe and Africa, being about 16 miles over, a ftrong current fets through it, out of the Atlantic Ocean, into the Mediterranean conflantly, which requires a good gale of wind to ftem it.

Remarks

## M E D

Remarks, fhewing the important utility of Gibraltar to the British Empirr.
The whole Britifh trade carried on by means of the Mediterranean Sea being of the laft confequence to Great-Britain, and the permanent prefervation thereof depending upon the town and fortifications of Gibraltar; it is neceffary to take fome notice thereof,
Gibraltar lies in weit longitude 6, latitade 36 , and is a porttown fituate, when it belonged to Spain, in the principality of Andalufia, and on the fraight between the ocean and the Mediterranean. It ftands at the foot of Mount Calpe, one of Hercules's pillars, about 16 miles north of Ceuta in Africa, 40 fouth-weft of Cadiz, and 80 fouth of Scville. It is built on a rock, in a peninfula, and can only be approached on the land fide by a very narrow paffage, between the mountain and the fea, crofs which the Spaniards have drawn a line, and fortified it, to prevent the garrifon having any communication with the country. It was taken from the Spaniards nication with the country. It was taken foren 1704 . Several attempts have been made to rein the year 1704. Several attem
take it, but have proved fruitlefs.
Gibraltar is but a fmall, though ancient town. Since the Englifh have been mafters of this town, it is become a place of confiderable trade, which it was not before, efpecially between the coaft of Barbary and this place ; the Englih merchants at Gibraltar having great warehoufes of all kinds of goods of the growth of Barbary, fo that they furnifh the merchants in London on as good terms as they ufually had them in Barbary ; and, by the convenience of thipping, can fend them to England in fmaller quantities than by loading veffels wholly, as they were obliged to do before.
They likewife have a great trade here, by barco longo's, with the empire of Morocco; fo that the trade is feldom fhut up; and Gibraltar is now the market for the wax, copper, almonds, drugs, and other products of Barbary.
That a juft and adequate idea may be formed of the real importance of this place to there kingdoms, we fhall fketch the heads of thofe reafons that have been occafionally urged, both in parliament and without-doors; which, as they have been too much mixed with the temporary acrimony of party, may not, perhaps, have had fuch weight with many as if they were ftripped of that perfonal fpleen and fatire, which generally attend our political altercations. The reafons are fimply as follow, viz.
(I.) Becaufe Gibraltar preferves to us the conveniency, protection, and fecurity of our commerce to the Straights, above that of all other nations, more efpecially in regard to the A1gerines and Salleemen, who are influenced by it to keep their treaties made with us; which they never do longer with any other nation than 'till they find it their intereft to break them. (2.) Becaufe in refpect to the great advantage which the poffeffion of that place hath already given us, when in war with France and Spain ; and, confequently, will always give us again upon the like occafion, whilft we continue to keep it. (3.) With regard to our trade in general up the Mediterranean; for, as it commands the paffage or entrance of all our navigation into that fea, both in time of peace and war; fo it is equally necellary, and as much our intereft, to keep it ourSelves, as for any gentleman to keep poffeffion of the gate which leads to his own houfe; it being in the power of thofe who poffefs this port, at all times, to interrupt, annoy, or hinder whom they fhall think fit in their trade, by keeping two or three thips of war conftantly on that ftation; in the fame manner almoft as the Danes, by the poffeftion of Elfineur command the paflage into and out of the Baltic: fo that, if this port and fortification were in the hands of any other nation, it would be in their power likewife either to permit us to navigate our trade within thofe ftraights, or not, as they fhould think fir, unlefs a very ftrong fquadron was conftantly kept at the entrance of the itraight's mouth, to fecure the pallage, and to be relieved, from time to time, by frefh fhips, which would put us to a much greater expence than we are now at in keeping this place.
(4.) Becaufe, before England was in poffeffion of Tangier, on the oppofite fide of the ftraight, we were never able to deal with the Algerines, and other Turkifh rovers; who, for near a century, had carried on a fucceffful piratic war againft the commerce of this nation, and never could be reduced 'till, by the fituation and our poffeffion of the abovementioned place, we diffreffed them fo much, not only by taking their fhips going in and coming out of the Straights, but alfo by retaking fuch of their prizes as they had taken in the ocean, that at latt they were forced to be content with fuch a peace as we would give them ; the continuance of which is owing to nothing fo much as to our having been, for many years paffied, and at prefent, in the fame condition to chaftize thofe rovers, by the puffeffion of Gibraltar, as we were before by the poffeltion of Tangier.
( $s$.) Becaufe the fecurity of our Italian, Turkey, and finhtrades intirely depends on our poffeffion of this place; and, fhould we ever loie it, or part with it, it is very reafonable to believe, that both the Algerines and Salleemen would foon break with us again; fo that, in fuch a cafe, the abovefaid bianches of trade would alinof wholly fall into the hands of our rivals, the French from Marfeilles, who, by their fuua-
tion, are always ready at hand to furnih thore markets, as foon as they are in want, while we, on our part, fhall be obliged to carry on that trade by the tedious method of flects and convoys, and at laft, perhaps, come long after the market is lupplied by our sivals. Befides all this, the article of infurance, which would certainly run much higher than ufual under thefe circumftances, would prove a beavy charge on our goods, more than thofe of other traders, which would thereby very much affect thofe branches of our ttade and navigation. (6.) Becaufe the mifchief would not fop here: for as the AIgerines, of late years, often cruize at the mouth of our channel, and as fome of them have alfo heretofore come into our very ports two or three years fucceffively; fo it is poffible that, if we Chould lofe Gibraltar, they may become, bcing fo well acquainted with our channel, a much more dangerous enemy to us than ever they were formerly, and may attack all our trade in general, as the St. Malo privateers did in the wars of queen Anne, whenever they thall find that they can carry home their prizes without any interruption; which is not to be done, unjets we hould be difpoffeffed of Gibraltar, and thereby take the bridle, which has hitherto reftrained them out of their mouths.
(7.) Becaufe, in refpect to our neighbours, Gibraltar is fitwated in fuch a manner, that it is in the power of the prefent pof feffors to cut off any naval communication between one port and another, of each of thofe very powerful kingdoms; with which we have had fuch frequent occations to be at war for aimoft thefe fifty years paft, who would foon turn the tables upon us, if they hould recover this place out of our hands, efpeciaily in time of any rupture between us; nothing being more felf-evident than that it gives, to thofe who are mafters of it, the fovereignty and command of the commerce and navigation of the Mediterranean Sea, and makes it impraclicable for any other nation ta trade there without their leave. And farther, by our poffeffion of this place, all nations within the Mediterranean will be obliged to court our friendfhip, or fear our power, particularly the piratical flates, who, bebolding vengeance fo near at hand, will be thereby deterred from attempting to interrupt our trade, while they are deftroying that of ail others.
(8.) Becaufe this advantage is not all that we reap from the poffeffion of Gibraltar; for it hath put into our hands occafionally a great proportion of freight-trade into the Mediterranean, efpecially that of the Hamburghers and Hollanders, who have made ufe of Britifh bottoms to carry on their commerce in thofe feas, 'till the Dutch obtained a peace with the Algerines, whereby we loft one great advantage that belonged to the navigation of Great-Britain, which we before enjoyed, whillt thofe merchants made ufe of Englifh fhips, finding it dangerous to venture their eftates in any other. (9.) Becaufe, laying afide all other confiderations, there can not be a ftronger proof of the importance which the poffefion of this place hath proved to us, than that it bath been a formidable check to the naval power of France, from the hour of our taking it, to the conclufion of the laft French war: nor, indeed, could they ever fend any naval ftores round about into thofe feas, without an apparent danger of their falling into our hands in going through the Straights; fo that the greateft part of their fleet hath thereby, as it were, become ufelefs ever fince. And, had not fuch unhappy mifunderftand ings fell out as did between two admirals in the late war, we fhould have more feelingly experienced the invaluable benefit of this poffeffion.
(10.) Becaufe it's proximity to Cadiz, the great mart and center of almoft all the riches of Spanifh America, gives us the greateft opportunity of commanding that port, and the trade frequenting it from the Weft-Indies; which, in time of war with Spain, may be reckoned of no frall confideration or importance.
(ri.) Becaufe, as the advantages of Gibraltar which refult to this kingdom from the foregoing particulars, are fully confirmed and demonftrated by the experience of many years paft, fo the prefervation of it, at all times, is of much greater concernment than it ever was before, as will appear by confidering the prefent ftate of public affairs: that many capital manutactures are fpringing up in moft parts of Europe, and particularly in France and Spain, and that feveral other powerful ftates are endeavouring to vie with us in commerce and a maritime force; which ought to put us on the frricteft guard, and determine us not to part with a place which is manifeftly of fo much advantage, by fecuring and improving our own trade and navigation, as well as by defeating the attempts of our enemies and rivals therein.
(12.) Becaufe the Spaniards continue their unjuftifiable captures and depredations on our logwood trade in America, which they have more or lefs done for thefe thitty years paff; and that, if we part with Gibraltar, we have reaton to believe that the fame fate may attend our whole Mediterranean trade, to it's abfolute ruin and deftruction. See the articles Logwood and Spanish America.
(I3.) Becaufe Spain and France in conjunetion, if not others, will ever have their eye upon this poffeffion, in order to wreft the fame out of her hands, to ruin the whule maritime power of Great-Bricain.
(14.) Be-

## M E D

## M E D

(14.) Becaufe Gibraltar lies at hand to intercept their Eaft and Weft-India fleets, with the fpoil and riches of both worlds: it feparates and divides Spain from itfelf, and hinders all communication by fea from the different parts of their dominions, and, confequently, muft keep them in a perpetual dependance, and put them under a neceffity to court our friendhip, as well as fear our enmity: it gives us an opportunity to pry into all theit meafures, obferve all their motions, and, withour the moft ftupid remiffnefs on our part, renders it impracticable to them to form any projects, or carry on any expeditions againft us or our allies, without our having due notice.
(15.) Becaufe it will ever check the rife of the naval power of France, which can never be above our match at fea, whillt Gibraltar remains in our hands. It hinders the comitiunication between their ports and fquadrons in the ocean and the Mediterranean : it makes it impofible for them to fupply their fouthern harbour's with naval Stores ejther for building or tepairing of fleets; of which they were fofenfible in queen Anne's war, that, as foon as Sir George Rook had poffefled himfelf of it, they faw themfelves under a neceffity to lay afide their ufual caution, and dare him in open battle; and, not meeting the fuccefs they hoped for, the very fame year; to the unfpeakable prejudice of their other affairs, befieged it in form, and loft a French and Spanifh army before it, and' never afterwards ap peared with a fleet upon the feas again during the whole war, but fuffered theirir great fhips to moulder and rot in their har bours, for want of the means to fit them out again
(16.) Becaufe lohg experience has evinced, that we can never, with fecurity, depenid on the faith of France; and therefore, if Britons are determined never to become vaffals to the dominion of that crown, they can never part with any thing that is fo fubftantial a prefervation of their maritime power, and confequently of their liberties and properties, as that ineftimable fortrels of Gibraltar.
(17.) Becaufe it appears throughout this work, from a feries of facts inconteftible, that the commerce and navigation of France have been increaffng ever fince the time of that great and able French minifter Monf. Colbert; and that they are now fettled upon fo broad a bottom, and with futh peetuliar and extraordiniary advantage for their daily rife and encouragement, that, if Great-Britain gives up Gibraltar, the may be fo eternally' imbroiled in wars with that nation, as to increafe her national debts and inciutribtances to a degree fo enormous, that her whole trade muft inevitably fink under them.
(18.) Becaufe the poffeffion of Gibraltar will always give us reputation and figure in thofe feas, tohich are always sewarded with powet and riches. It will oblige all nations who trade in the Mediterraneari, or have empire there, to court our friendflitip, and keep meafures with us. It will awe even the courts of Rome and Conftantinople, and make them afraid to difturb or provoke us.
(19.) Becaufe the charge and expence of keeping Gibraltar bears no proportion to the advantages we reap by it, ahd the detriment and injury our trade and navigation muft fuftedin, if ever we part with it.
(20.) Becaufe Yort-Mahon, cannot poffibly anfwer all the purpofes of Gibraltar: which mult be evident to any one, who but looks into the map; for the ifland of Minorca lies many hundred miles further up towards the gulph of Lyons, and, in truth, out of the road of all flips trading to Sicily, the Adriatic, the Levant, or Africa. It is fituated at fuch a diftance from France and Spain, that the greateft fleets can fcape unoblerved, unlefs we keep perpetually before their ports to watch and purfue them; whicti is exceeding dangerous, if not impracticable in thofe feas. We fhall be out of the way of all intelligence. And, if we fhould by chance have it, in all likelihood, fhall be too late to take advantage of it; befides, 1 am told, there are but few winds with which fhips can get in or out of Port-Mahon; and, when they are once there, the paflage is fo narrow, that a very fmall fquadron can keep the greateft from failing out.
(2I.) Becaufe nothing is plainer, than that it will be exceeding difficult, if not impoffible, to keep the ifland of Minorca without the poffeffion of Gibraltar; at leaft it will be more expenfive to us than both are now, efpecially if France and Spain thould join again; which event, 1 think, we ought to keep always in view, for then Gibraltar will be the only refource we have to carry on any trade in the Mediterranean, and to prevent the union of the French and Spanifh fleets with themfelves or each other.
(22.) Becaufe all the objections, made againft the facility of a communication of the different ports of France and Spain with one another, will be ftronger againtt us; for they have others near to Gibraltar, where fleets may lie fafe, and have a chance to efcape us, by catching at favourable opportunities, and the advantage of winds; whereas we muft run all bazards, and truft to our ftrength alone, without any harbour to retreat to, in cafe of ftorms or other accidents.
(23.) Bécaufe we have no means of fending naval fores and recruits to our garrifons, and often provifions for them, recruirs to our garrifens, and port to protect using a thoufand leagues failing. without a port to protect us during a thoufand leagues failing.
Portugal will not be fuffered to receive or relieve us, and
then we muft run the gauntlet by fingle thips, with farce d chance to efcape, or fend convoys upon the fmalleft occafions, capable of fighting the united French and Spanifh power.
(24.) Becaule we ought not to be furprized, if the nations of Europe and Africa fhould wifh it in hands lefs potent at fea, and who would confequently enjoy it more harmlefsly to it's neighbours : it muft be undoubtedly terrible to any people who would be our rivals in trade or naval power, or indeed to any fate that afpires to empire, which can never be accomplifhed without fleets as well as armies.
(25.) Becaufe we are not fallen into fuch contempt with our enemies, our neighbours; or our allies, nor can they have fo mean an opinion of our fenfe and difcernment, and the integrity of our ftatefinen, as even to hint fuch a thing to them. (26.) Becaufe, if we part with Gibraltar, to what purpofe have we made war? To what purpofe beftowed great fums, and gained great victories? Did we beat the enemy, and force them to beg peace, and yet mult bribe them to accept of it? Have we conquered, arid fhall they give terms, and get towns by lofing battles? Or, if we do not part with Gibralear for the fake of peace, pray what confideration are we to receive for the fake of Gibraltar? What can be given as an equivalent?
(27.) Becaufe there can be no fubitantial reafons to take fuch a thorn out of the foot of Spain and France, and to remove fuch an obftacle to their greatnefs: the enterprizing genius of the latter is as well known, as it is formidable to all it's neighbours, but in particular to us., And Spain; it is alfo well known, are taking large Atrides to raife manufactures and maritime power. I would afk, in cafe of a new rupture, what refource have we but in our fleets, and by the help of Gibraltar, to make it impracticable for their fquadrons in the ocean and Mediterranean tojoin? We know, by woeful experience, what help we are to expect from our allies, when we have no more millions to give. We are not able to keep great ftanding armies at home, nor is it confiftent with our liberty to do fo; and therefore we ought to take every meafure to increale our maval ftrength, and to put new bridg upon thofé who are, or may foon be, our rivals therein.
(28.) Becaufe the nation in the world whofe power we have moft reafon to guard againft, is that of France; and yet I don't know by what fatality it has often fo happened, that we have been the unhappy inftruments of promoting it. Oliver Cromwell gave the firf rife to it's geatncfs at land, and king Charles II. at fea: the late queen, by an ignominious peace, reftored it, when it was reduced to the loweft extremity, and muft have fubmitted to any conditions The had thought fit to impofe. But fure it will never be faid that any Britifh miniftry, who profefs to be the patrons of libetty, the conftant and declared enemies of thofe proceedings, fhould act fo far in defiance of all their known principles, as, voluntarily and unconftrainedly, to throw away any part of that national fecurity, which former betrayers purchafed at the expence of their country's honour ; and which are the only rewards and recompence of a tedious, fucceffful, and glorious war, carried on at an immenfe expence of blood and treafure, of which we and our pofterity fhall long feel the fevere effects.
(29.) Becaufe there feems to be more reafon for our being tenacious in preferving this poffeffion, at this time, thain there ever was fince we had it; for it is to be feared, that we are the only maritime power that muft alone ftand againft hofe of France and Spain, and fuch allies as they fhall be able to influence; fince our old and natural allies, the States-Ge neral of the United Provinces, do not appear either to beable, or fo fanguinely inclined as beretofore, to unite with GreatBritain, and act with vigour, when occafion may require. 30.) Becaufe it fhould feem that another naval power is bout to arife, by their eftablifhment of a great Eaft-India company *, the weight of whofe power both by land and ea, is more likely to be thrown into the fale of France and her allies, than into that of Great-Britain and her's.

* When the Oftend Eaft-India company was fome years fince eftablifhed, the Dutch acted vigorounly in concert with Great- Britain to effectuate it's abolition, and did fo. How it comes to. pars, that times thould be fo changed within thefe few years, as to fuffer another company of the like kind to be eftablifhed, without any attempt to it's annihilation, we leave thofe to ruminate on, whom it may one day nearly concern to think of. See the article Ostend Com, pany.
(3a.) Becaufe the Spaniards (if I am rightly informed) give more encouragement, by certain artifices, to the French in their trade, by the way of Old Spain to New Spain, than they do to the Englifh; and that, in confequence thereof, our commerce in that channel declines, while that of France increafes: and alfo that the Spaniards feem to favour the French more in the S--h W-t-I-a trade, which they carry on from their colonies, than they do either the Englifh or the Dutch in theirs.
(32.) Becaufe the treatment of the Englifh in particular, by the Spaniards at prefent in America, is faid by fome to be with a view to compel us, at length, to give up Gibraltar;

## M E D

## M E D

which, for that very reafon, we ought to bet the more fanguine to preferve.
(33.) Becaule Great-Britain has already done enough in favour of the court of Spain without facrificing Gibraltar to induce them to defift from their obftruction to our trade and navigation to and from our own colonies, eyen if they were really as unjuftifiable as the Spaniards themfelves have mitakenly reprefented them. [See the articles Logwood, and Spain.]
The conduct of Great-Britain towards Spain, in order to infuence them to preferve that good underftanding, which is fo apparently requifite for the reciprocal benefic of both nations, is notorious to the whole world, and may be chiefly comprehended under two articles. (I.) Our making two fovereigns in Italy to oblige the court of Spain ; and (2.) Our giving up the affiento contract, and liquidating the affairs of the South Sea company, upon terms fo advantageous to Spain, and fo detrimental to Great-Britain in general, and the South Sea company in particular. See the articles Assiento, and Soutr Sea Company. And, if Great-Britain hould cven acquiefce to the creating of a third fovereign to gratify the infatiable ambition of a certain p--s at I--fo, and to give up Gibraltar alfo, what fecurity fhould this nation have, that her logwood trade, and other navigation in America, thould remain uninterrupted? Does not the fyftem of that court for above thefe 30 years fhew, that we are never to expect any fuch fecurity, 'till we have a Gibraltar for that purpofe in America? See the article West-Indies, where we thall endeavour to thew how eafily that might have been accomplifhed, and ftill may.
(34.) Becaufe men in power will always know, that a fortreis conquered by the fleets and armies, by the blood and treafure of England, and folemnly yielded up by treaty made with England, becomes part of the Englifh dominions, and fubject to the legiflative power of England, and could not be difannexed but by act of parliament; and, confequently, any agreement to deliver up fuch a fortrets to an enemy, is bigh trealon within the ftatute of the 25th of Edward III; and to give it to any one elfe is one of thofe high treafons referved by that act for the judgment of parliament.
For more reafons, if more fhould be required, to induce us never to give up Gibraltar, fee the articles France and Spain, and all other articles, which tend to thew the nature and extent of their power and commerce.-For the particular ftate of the trade carried on through the Mediterranean Sea, fee the articles Archipelago, Genoa, Levant Trade, Narles, Oriental Trade, Turkey Trade, Tuscany, Venice.
liote, The difcerning reader will eafly believe, from the preceding fummary heads of argument, that we could have wire-drawed them to a great length, if we were not rather frudious of communicating as much matter as we can in the fieweft words, than to aft the contrary part,

Remarks on our article Megiterranean Sea, before the lait war.

One part of the grand fyltem of the court of Spain, in the time of Alberoni, was ro prelerve the rights of Spain and of the houfe of Parma to Spanifh princes; and to make a fettlement for Don Carlos and Don Philip worthy of their birth, out of the ftates which the emperor poffeffed in Italy and has not this part of the fyftem been fteadily and fuccefs fully purfued? But how could thefe fovereignties be effectually fecured, fays a certain princefs, without the poffeffion of Gibraltar? This, therefore, was a point to be gained, in order the better to fecure the other. The fyftem, at prefens in Spain, is bottomed on the fame principles; it is not only to provide for a third prince in Italy, or ellewhere, but to fall upon the eftablifhment of manufactories, with a view to fupply their extended American colonies themrelves, inftead of taking them from the other nations of Europe. Will not this affect Great-Britain, in proportion to what fhe now fupplies Spain with? Some late accounts from Spain tell us, that it appears, by an authentic lift of the fhips which entered the Spanifh ports laft year, their number amounted to Ir42: of which 643 were Englifh, 277 French, 148 Dutch, and 74 of difficrent nations.
Suppofing this to be true, fome people may infer from hence, perhaps, that the trade of England mult be far fuperior to uny of the reft: fo it is, indeed! But what fort of trade are we carrying on with that nation? We are fending 6 or 700 Chips or more, I am certain, annually to purchafe their wines and their fruits, while France fends between 2 or 300 to carry their own manufactures. If this be the cafe, does not France, therefore, gain far more by their fmaller quantity of thipping, than we do by double the number? The fact is, that we decline in our exports to Spain, and increafe in our imports; while France increafes in their exports to Spain, and decreafe in their imports from thence. Is this then a nation from whom we are ftill to bear infults and depredations? Have they not allured away our manufacturers and fhipwrights out of the kingdom, with a view to turn the hands of qur own artifts againft us?

YoL. II.

That our readers may have a juft idea of the meafures which Spain are really purfuing at this time, which mult inevitably tend to the detriment of the Britifh commerce, as they fhall advance that of the Spaniards; we refer them to the articles Biscay in Old Spain, Catalonia, Dutch America, In-dia-Houşe of Spain, Logwood Trade, Spain, WestIndies. What is uiged under thefe heads, and in divers other parts of this work, will enable us to judge, whether it can ever be advifeable to acquiefce in the giving up Gibraltar; and efpecially fo, if we add to thefe conliderations what we have faid alio under the articles British America and France; becaufe we fhall there fee, that Spain is now following the example of France, in order to ruin the commerce and navigation of the fe kingdoms: for the fyitem of the two courts feems really to be what is faid in a tract lately printed, called the Political Teftament of cardinal Alberoni. 6 While 6 the navy of the two crowns [meaning thofe of France and - Spain] fays the writer, is not fuperior to that of the Englifh c and Dutch together; while Minorca and Gibraltar - are not in poffeffion of the proper mafters; while Dunkirk s is not raifed from the ftate to which it was reduced by the treaty of Utrecht, a defcent on the coaft of England and 'Ireland, will be always ineffectual, \&xc.'
Of the Custom-House affairs in relation to the Mediterranean trade.
I, If a fhip be bound to any port in Portugal or Spain, or to any port on the Chriftian fhore in the Mediterranean Sea, a bill of health mult be granted at the loading port, or elfe the perfons on board will not be permitted to come on fhore in any of the faid ports, 'till they have performed quarantine: the form of which bills of health muft be as follows:

Portus Southamptoniz,
Onnibus Chriftifidelibus, ad quos prefentes literæ pervenerint. Nos miniftri ferenifimi principis domini nofti Georgii fecundi regis, in portu Soutbamptoniæ, in regno Magnæ Britannix, falutem. Cum pium fit \& honeftum verttati teftimonium perhibere, ne error aut deceptio prajudicii ipfam opprimat: cumque navis nuncupata Diligentia, de Briftolia, cujus nauclerus (fub Deo) eft Henricus Hopkins, quæ jam parataeft e di\&to portu difeedere, \& abhinc (Deo volente) ad Italiam, \& alia loca tranfmarina, cum viginti hominieus in eaden nąve appellare. Hinc eft, quod univerfitati veftra te, nore prefentium innotefimus, fidemque indubitatam facimus, quod (Deo optimo maximo fumma laus attribuatur) in hoc dicto portu, nulla peftis, plaga nec morbus aliquis periculofus, aut contagiofus, ad prafens exifit.
In cujus rei teftimonium, figilla officii noftra apponi fecimus, Datuin hoc in regio telonio pradicti portus Southampronix, decimo die Februarii, anno fąlutis Chriftianx, fecundum computationem ecclefia Anglicanæ, millefimo feptingenfing tricelimo primo, annoque regni dieti fereneffimi domini noftri Georgii fecundi, Dei gratiâ, Magnæ Britanniæ, \&c, regis, fidei defenforis, \&c. quarto.
A. B. Collector,
D. E. Comptroller,

* If the fhip be Britifh, and comes from any part of the Mediterranean Seas, beyond the port of Malaga, and hath two decks, and both carry fixteen guns mounted, with two men for each gun, and other ammunition proportionable (which is called an act or qualified fhip) or if one moiety of her full lading outwards, the laft voyage, was fifh, laden in any of his majefty's dominions; the goods imported in fuch fhips are not liable to the duty of one per cent. which is payable when fhips are not fo qualified, or laden with fiff: therefore in thefe cafes, after the places names, there mult be added as follows, viz.
- 14 Car. II. cap. 1 I. § 35,36 .

If the thip be qualified.-Which faid thip has double decks from ftem to ftern, with fixteen [or more, as is the cafe] guns mounted, and other ammunition proportionable.
If the thip went out with fifh.-Which faid fhip went out from Yarmouth to Leghorn this laft voyage thither, full laden [or at leaft one moiety of her full lading] with fifh of Britifh taking and curing, and delivered the fame at the faid port of Leghorn.
But, if a hip that is not qualifed, or was not laden outwards with fifh, has taken in fome part of her lading beyond the port of Malaga, and fome on this fide; the dtairent places where the goods were taken in mult be particularly diftinguifhed in the report, as indeed in frictnefs fhould be praetifed in all cafes where a fhip loads at feveral ports: which diftinctions may be made as follows:

Taken in at Leghorn,
A. B. $\longrightarrow$ a $5 \rightarrow 5$ Cafes $\longrightarrow$ Silk——Andrew Bird,

Taken in at Cadiz,
B. C.-8, $9-2$ Bales——Kid-fkins——Benj. Crofs. And, if the goods are fuch, that they are liable to forfeiture, or fubjeet to a different duty, upon account of the

Hh h
place

## M E N

place at which they were taken in; the truth of their being taken in, at the particular place alledged by the mafter, mult be confirmed, by making the following addition to the oath of his report, viz.
And that the goods above-mentioned to be taken in atwere really there laden on board, and were not landed at , nor any other place whatfoever, but have been kept on board the above fhip, ever fince the firft hipping thereof at board
Mediterranean Passes.-Counterfeiting, altering, or erafing them, or knowingly uttering or publifhing fuch counterfeited, altered, or erafed paffes, is felony without benefit of clergy. 4 Geo. II. cap. I8. §. I.
MELLI, with the country of the MUNDINGOES, in Africa. The country formerly called Melli, now chiefly inhabited by the Mundingoes, who ftill retain pretty much of the character afcribed to the people of Melli, lies to the fouth of the river Gambia; on the weft it borders on the kingdom of Kabo, on the fouth it has Melli properly fo called, and the mountains that part it from Guinea, and on the eaft it extends to the kingdom of Gago.
A great part of this country we are little acquainted with, as is the cafe with regard to molt of the inland territories of Africa, but towards the fea-coaf this country is a little better known.
The firlt place of note we weet with is, Kachao, a Portugueze colony, fituated on the river of St. Domingo, which falls into the fea about 26 leagues below this town.
About 26 leagues above Kachao, on the fame fide of the riyer, is another trading town called Farini, where, in the months of October and November, one may trade for about half the quantity of wax and ivory, which is traded for at Kachao. Here are alfo fome dlaves to be bought.
Bot is a village near the mouth of the river Gefves, where moft of the traders buy rice, which is in great plenty there, and very good.
Gesves is a village on a river of the fame name, on which the Portugueze have a factory. At Gefves one may trade yearly for 250 flaves, 80 or 100 quintals of wax, and as many of ivory.
Near the mouth of the river of Gefves, is a village called Kurbali, where there is a confiderable trade for falt: here are alfo fold fome flaves and ivory.
Rio Grande, or the Great River, runs about 10 or 12 leagues to the fouth of the river of Gefves. About 80 leagues from the mouth of it is a nation of negroes, who are good traders in ivory, rice, millet, and fome llaves. They are called Analons.
Over-againft the mouth of Rio Grande, is a clufter of iflands called Biffago Ifles, the moft confiderable of which is CASAcut, being about fix leagues long and two broad: it's foil is very good, and produces millet, rice, and all kinds of pulfe, befides orange and palm-trees, and many others. This illand, with thefe of Carache, Canabac, and La Gallina, are the only ones where the Europeans may trade with fome fecurity. They trade, however, fometimes at the other iflands, but they mult be extremely cautious; and yet, after all their precautions, they will be robbed and murdered, if they venture to go afhore.
The river Nunho, runs 16 leagues to the fouth of Rio Grande; it is very confiderable, and comes from a vaft diftance in land. One may buy here 300 quintals of ivory, and 100 flaves a year. Rice grows here admirably well, and is very cheap. There are every-where fugar-canes, which grow naturally, and plants of indigo, which might turn to good account. The trade is carried on here from March 'till Auguft.
In the river of Sierra Leone, the late Royal African company of England had, in the year 1728 , two iflands; the one, called Tasso, a large flat illand, near three league in circumference, in which the company's flaves had a good plantation: the reft of the illand is covered with wood, among which are filk cotton-trees of an unaccountable fize.
The other ifland is Bense, whereon frood a regular fort. It was formerly the refidence of one of the Englifh chiefs. For more matter relating to the African trade, fee the articles Africa, African Islands, English African Company, French African Trade and Company, Portugueze African Trade. See alfo British and French America.
America.
Under the article Arithmetic, we have given the whole art, both in rationale and practice, within the compafs of a few pages; which, if well underftood, what we have to add, can be no difficulty.

Of the cuftomary way of taking dimenfions, and meafaring the feveral artificers works concerned in building.

As there are feveral forts of work in building, which require the dimenfions to be taken in feet and inches, for finding the fuperficia!, or folid content thereof, before we proceed to treat of the meafuring the feveral artificers works, it will be neceffary, firft, to thew how to multiply feet and inches by
feet and inches duodecimally, vulgarly called crofs multiplication. For the better underfanding of which, obferve the following rules:
That, if feet are multiplied by feet, the product is feet.
If inches are multiplied intofeet, every 12 of the product is one foot, and any number lefs than 12 are inches.
If inches are multiplied into inches, every 12 of the product is one inch, and any number lefs than 12 are parts of an inch.
If parts of an inch are multiplied by feet, every 12 of the product is one inch, and any number lefs than 12 are parts of an inch.
If parts of an inch are multiplied by inches, every 12 of the product is one part, and any number lefs than 12 are feconds. If parts of an inch are multiplied by parts, every 12 of the product is one fecond, and any number lefs than 12 are chirds.

## Case I.

To multiply feet, inches, and parts, by parts.
Rule. Firft, Place a cypher under the laft place of the multiplicand, inftead of an integer, and alfo another cypher in the place of inches, and then the parts next following to the right hand.
Secondly, Multiply the parts of the multiplier in the multiplicand, carrying I for every 12.

## ExampleI.

Multiply 7 feet 6 inches and a half, by a half inch, or 6 parts. Note, That for a quarter of an inch you muft fet down 3 , for half 6 , and for three quarters 9 ; thofe numbers being the quarter, half, and three quarters of 12 .

Operation:
6 Times 6 is 36 , the twelves in 36 is 3 F. I. P.
times, and nothing remains, therefore fet $7 \quad \begin{array}{llll}7 & 6 & 6\end{array}$
down $o$ and carry 3 ; and 6 times 6 is 36 , and 3 I carry is 39 , fet down 3 and carry 3; then 6 times 7 is 42 , and $3 I$ carry is 45 ,

3930 the twelves in 45 is 3 times, and 9 remains. Now, as the whole multiplication is ended, fet down the 9 that remains under the parts, and 3 under inches, the number of twelves is 45 , and the whole product is 3 inches, 9 parts, and 3 thirds.

## Case II.

To multiply feet, inches, and parts, by inches and parts. Rule. Firft, Place a cypher under the laft place of the multiplicand, inftead of an integer, and the inches and parts in their places towards the right-band.
Secondly, Multiply the parts into the parts, inches, and feet, and carry one for every 12.
Thirdly, Multiply the inches into the parts, inches, and feet, in the fame manner; and, in adding the products, carry ifor every 12 , from one denomination to the other, and the fum will be the product required. .

EXAMPLEII.
Multiply 15 feet, 7 inches, and 3 parts, by 9 inches 4 parts.

## Oferation.

Firlt 4 times 3 is 12 , that is 0 and carry F. I. P.
; 4 times 7 is 28 , and I I carry is 29 , $15 \quad 7 \quad 3$
fet down 5 and carry 2; 4 times 15 is $\qquad$ 60 , and 2 I carry is 62 , fet down 2 and carry 5 , which fet under the next denomination.

|  | 5 | 2 | 5 | 0 |
| :--- | :--- | :--- | :--- | :--- |
| 8 | 5 | 3 |  |  | Secondly, g.times 3 is 27 , that is 3 and

carry 2; 9 times 7 is 63 , and $2 I$ carry is $\begin{array}{lllllll}12 & 1 & 7 & 8 & 0\end{array}$ 65 , fet down 5 and carry 5 ; 9 times 15
is 335 , and 5 I carry is 140 , the twelves in 140 is 1 r , and there remains 8; fet down the 8 under the inches, and rx under the feet, and then add the two products together, and the fum will be 12 feet, 1 inch, 7 parts, and 8 thirds, the product required.

## CASE III.

To multiply feet, inches, and parts, by feet, inches, and parts, when the feet of the multiplicand and multiplier do not exceed 20.
Rule. Firft, Place the feet of the multiplier under the feet of the multiplicand, and the inches and parts in their places to the right-hand.
Secondly, Multiply the feet, inches, and parts of the multiplier, each feparatcly into the parts, inches, and feet of the multiplicand, as before in the preceding rules; and their feveral products, being added, will be the true product required.

Example III.
Multiply 12 feet, 9 inches, and 5 parts, by 9 feet, 20 inches, and 2 parts.

## M E N

## Oferation

Firf, 2 times 5 is 10 , fet down io and carry 0 ; 2 times 9 is 18 , fet down 6 and carry $1 ; 2$ times 12 is 24 , and 1 carried is 25 , fet down 1 and carry 2, which fet down.
Secondly, 10 times 5 is 50 , that is and carry 4; ro times 9 is 90 , and 4 carried is 94 , fet down 10 and carry 7; ro times 12 is 120 , and 7 carried
F. I. P.
$\begin{array}{lll}12 & 9 & 5 \\ & 9 & 102 \\ & & \end{array}$
21610 $10 \quad 710 \quad 4$ $115 \quad 0 \quad 9$
$125 \quad 10 \quad 8 \quad 810$ is 127 , the tweives in 127 is 10 , and 7 remains, which fet down.
Thirdly, 9 times 5 is 45 , that is 9 and carry 3; 9 times 9 is 81 , and 3 is 84 , which contains 127 times, and o remains, fet down 0 and carry $7 ; 9$ times 12 is 108, and 7 carried is 115 , which being the laft figure to multiply, fet down the whole product ; and, laftly, add the three products together, and their fum will be 125 feet, 10 inches, 8 feconds, 8 thirds, and ro fourths.
Having by this time, I hope, fufficiently inftructed the reader in the multiplication of feet and inches, by feet and inches, I hall in the next place proceed, as I propofed, to the meafuring the feveral artificers works concerned in building. and,

## I. Of Carpenters Work, \&ce. to meafure.

The works done by carpenters, are chiefly framing of houfes, barns, Aables, floors, partitions, roofs, \&cc. making of doors, windows, ftair-cafes, cornifhes, frobtilpieces, modillion-cornices, cove-eaves, and boarded floors of all forts, weatherboarding, and boarded and cleft pale fencing.
t. To meafure the body of a timber building, viz. of a houfe, barn, or ftable, \&x.
This fort of work is done by the fyuare, containing 100 fuperficial feet. In meafuring the outfide carcale of a houfe, \&c. take the length of one fide and one end, and add them together, and their fum, multiplied into the height taken from the under-fide of the fill, to the upper fide of the raifng, gives the content of one fide and one end; which, being doubled, is the content of the whole body, or outide carcafe of the building, in feet.
To bring the content found into fquares, divide the product by 100 , or cut off from the product two figures to the righthand, and the remaining figures are fo many fquares, and the figures cut off are feet.

EXAMPLEIV.
Suppofe a houre, \&cc. 40 feet long, 20 feet wide, and 20 feet high, how many fquare of framing is contained in the body or outfide carcafe of the faid houfe, \&c

Oferation.
Add 20 feet the breadth to 40 feet the
40 Length.
Add 20 feet the length, and the fum is 60 , which multiply by 20 feet, the height, the product
is 1200 , the content of one fide and is 1200 , the content of one fide and
one end; which being daubled, or mul-

> 60 the fum. 20 Height. tiplied by 2 , gives 2400 feet for the content of the whole body or outfide carcafe, in feet: from which, if you cut off 2 figures to the right-hand, there remains 24 , the number of fquares required.

2 Multiply
24,00 Cont. 'in feet. Note, That in framing there are nodeductions to be made for doors, windows, \&c. in the meafuring.
2. Of roofs. This fort of work is alfo done by the fquare of 10 feet fquared, or roo fuperficial feet, the particular to be obferved in meafuring of which is, that let the roof be true pitch or not, and the ends thereof gable or flipped, they may be either of them meafured by this general rule, viz. Multiply the length of the building by the length of the rafter, and twice that product is the content in feet.

## Examplev.

In the aforefaid building of 40 feet long by 20 feet wide, admit the roof to be true pitch, viz. the length of the rafter, equal to $\frac{3}{4}$ of the breadth of the building, or 15 feet.

## Operation.

Multiply 40 feet, the length of the Feet. building, by 15 feet, the length of the tafter, and the product is 600 feet, the content of one fide; which doubled, or multipled by 2 , the product is 1200 feet, or 12 fquare, the content of the whole reof.
3. To meafure the gable end of a houfe, $6(00 \mathrm{con}$. of I fide \&c. obferve this rule, multiply the perpendicular by half the bale or breadth of the buildiog or the whole bare by half the perpendicular, and the product

| 40 leng. of build. |
| :--- |
| 15 saft. length |
| $\frac{200}{40}$ |

| $\frac{6}{200}$ con. of I fide |
| :--- |
| 200 |
| content of the |
| [whole. | is the content.

In the gable end of the above-mentioned roof, the perpendicular is It feet 2 inches near, and the bafe 20 feet, what is the content?

## Operation.

Multiply 20 feet, the whole bare, by 5 Feet.
feet 7 inches, half the perpendicular, $20 \circ \mathrm{Bafe}$.
and the product is 111 feet, 8 inches, 57 Half perp. which is I fquare, in feet, 8 inches, the content required.
4. Note, That the fame rule wil hold
good for meafuring the hip end of a roof,
by obferving that the length of the raf- 1 II 88 Cont. ter in this cafe is the perpendicular.
N. B. The rafters, feet, and eaves-beard, are mealured at per foot, running.
5. Of foors. In naked flooring allow 9 or 10 inches for the length of the joift laid into the wall, or meafure to the extremity of the joiff, and from thence compute the fquares contained therein.
6. In boarded flooring you muft take your dimenfions to the very extreme parts, and from thence compute the fquares, out of which you mult make deductions for ftair-cafes, chimnies, \&c.
7. Weather-boarding is done by the yard fquare, and fometimes by the iquare, containing 100 luperficial feet.
8. Framed partitions. The particular to be obferved therein, is only that they are meafured by the fquare.
9. Boarded partitions are alfo meafured by the fquare, out of which, you muft deduct the doors and windows contained therein, except they are agreed to be included.
o. Of windows. Windows are generally made and valued by the foot, fuperficial meafure, and fometimes by the window. When they are meafured, the dimenfions muft be taken in feet and inches, from the under fide of the fill, to the upper fide of the cap-piece, for the height; and for the breadth from outfide to outfide of the jaumbs; and the product of the multiplication is the fuperficial content.
II. Stair-cafes are meafured by the foot fuperficial, and the dimenfions are taken with a fring, girt over the raifer and tread, and, that length or girt, maltiplied by the length of the ftep, the product is the fuperficial content.
12. Door-cafes are meafured by the foot fuperficial, and the dimenfions mult be taken with a fring, girt round the architrave and ipfide of the jaumbs, for the breadth; and, for the length, add the length of the two jaumbs, to the length of the cap-piece, taking the breadth of the opening for the length thereof, and the product of their multiplication is the fuperficial content.
13. Frame-doors are meafured by the yard fquare, containing nine fquare feet, and, if of whole deal, they are allowed work and half work, or double work, if of two inch ftuff, in confideration of their being wrought on bath fides.
14. Note, The fame is to be faid in regard to the meafuring and valuing of window-thutters, as of doors.
15. Modillion cornices, coves, \&c. are generally meafured and valued by the foot fuperficial. Their dimenfions, in refect to the breadth or height, are taken with a ftring, girt into the mouldings, and thore dimenfions, multiplied by the length, is the fuperficial content.
16. Fencing of all forts is done by the rod, lineal meafure, containing 16 feet and a half.
17. Wainfcoting or joiner's work. Wainfcoting is a work generally done by joiners, and is meafured by the yard, fquare, and their dimenfions are taken in feet and inches. Thus, they girt down every moulding with a ftring, contained between the floor and cieling, for the height, and the circumference of the room for the length, deducting the doors, windows, and chimney. The feats of windows, checks, fophetas, linings, \&cc. are all to be taken by themfelves, and doors and window-fhutters are to be meafured and valued as at number 13 and 14 hereof.
18. Frontifieces are meafured and valued by the foot fuperficial, and every part thereof meafured feparately, viz. the architrave, frieze, and cornice, each of them by themfelves, alfo the pilafters or columns by themfelves, and, laftly, add all the feveral meafurements together, and the produft is the content of the whole.
Note, That, in taking the dimenfions, you must girt the moulding with a ftring.

## II. Of Bricklayers Work to meafure

The principal work in a building done by bricklayers, is walling, tileing, rough-cafting, sic.

1. Of brick walls. What is to be obferved therein is, that the meafure by which brick-work is meafured is a fquare rod, or 16 feet and a half fquared, whofe product is equal to 2.72 feet and a quarter, the content of one rod of brick-work at the fatute thicknefs of one brick and a half: and, if the wall is more or lefs than that thicknefs, it muft be reduced thercto by this rule: multiply the number of feet contained in the fuperficial content of the wall, by the number of half bricks

## M E N

that the wall is in thicknefs, and divide the product by 3 , and the quotient is the true content required.
Note, That, although there be 272 feet and a quarter in a rod of brick-work at the ftandard thicknefs, yet workmen meafuring brick-work always reject the quarter, and divide by 272 only.

## Examplet.

How many rods of brick-work are contained in a wall 40 feet long, 8 feet bigh, and 2 bricks thick?

Feet,
Length 40
Height 8
320 feet in the fuperficial content of the wall
Half bricks 4
3) 1280 ( 426 feet $\frac{1}{3}$, the fuperficial content reduced, which to bring into rods, divide the 426 feet by 272 , and the quotient will be rods; and, if the remainder be divided by 68, the feet contained in a quarter of a rod, the quotient will be quarters, and the laft remainder feet.
Note, That the $\frac{2}{5}$ remaining in the firft work is equal to 8 inches.
$272) 426(\mathrm{Irod}$.
272
68) 544 ( 2 quart. The whole reduced content of a piece of brick-work 40 teet long, 8 feet high, 18 feet, 8 inches, as required.

18 feet.
When you meafure brick-work, obferve to meafure every thicknefs by itfelf, and that you make every deduction our of ir's proper thicknefs; allo, that, when you meafure 1 wo walls that conititute an angle, the length of one muft be taken to the outide, and the other to the infide.
2. Chimnies muft be meafured and valued as a folid wall, out of which deduct the vacancy between the jaumbs and the mantle; the funnels are allowed folid, in regard to the trouble of them, and the pargetting the infide. This of fquare chimnies.
3. Angle chimnies, fuch as ftand in a fquare corner, and are equal each way from the corner, obferve this rule: multiply half the breadth of the breaft, or front, by the height of the ftory, and that product by the number of half bricks contained in the inches of the half breadth of the breaft, or front, and divide this laft produet by 3 , and the quotient will be the true reduced content in feet, out of which muft be deducted the vacancy as in fquare chimnies.
4. If the chimney do not fland equal from the corner of the soom on both fides, or the corner be not fquare, it is ufual to lay out the angle parallel to the walls, and take one fide of the angle, and mulupiy by the beight of the fory, and half the other fide of tie angle for the thicknefs; thein proceed in every refpect as before directed, and it will give the true reduced content required.
Remember to meafure the trimmers that fupport the hearths, taking the length by the girt of the arching of them, accounting them half a brick thick; fo that if they are 6 feet long, and I foot 6 inches girt, there is 3 feet of reduced brick-work therein.

## Exampleil.

Suppofe a chimney that fands in the corner, or angle of a fquare room, be 7 feet in front, and the height of the ftory 9 feet 6 inches, and the opening 3 feet fquare, and 18 inches deep, how many feet of reduced brick-work is contained therein?

## feet. inches.

120 , opening to deduct

## 879 remains, the content required.

By the above operation, it appears there are 99 feet 9 inches of reduced brick-work in the chimney; for, there being 99 feet I inch in the quotient, the 2 that remains is equal to 8 inches, being two-thirds of the divifior, which, added to the 9.9 feet I inch, makes it 99 feet 9 inches in the whole; from which if you fubtract 12 feet, the content of the opening, there remains 87 feet 9 inches nett brick-work, for the content required.
5. Befides this rough brick-work, there is other kind of walling performed by foot-meafure, and fuch are facio's, arches over doors, windows, \&c. architraves, friezes, cornices, rurtics, returns, \&c. piers, columns, pilafters, \&ec.
6. Tileing is meafured by the fquare of 10 feet, as carpenters meafure their roofs. You mult obferve, in taking dimenfions of tileing, that you meafure the whole length, that is, as far as the tiles are laid, for your length, and take from the ridge to the eaves for your breadth, and thereby you will have the true content required. When many hips and vallies happen in a roof, every foot remaining muft be added to the meafure as fquare feet.
Note, Obferve to deduct the chimnies out of the tileing.
7. Thatching is a work performed by the fquare, and is meafured the fame as tileing.
8. Befides all the above work, there comes to the bricklayer's hands the paving of kitchens, cellars, \&c. with brick, or pamments, which work is meafured by the yard fquare, containing 9 fquare foct.

## YII. Of Plaststerers Work to meafure.

Rough-cafting, plaiftering, cielings, $\$ \mathrm{sc}$. are done by the yard fquare, and the dimenfions taken in feet and inches.
The principal things to be obferved in meafuring of which are as follow:

1. To make deductions for chimnies, windows, and doors.
2. To make no deductions for rendering upon brick-work, for doors and windows, by reafon the jaumbs and beads generally exceed the vacancies.
3. If the workmen find materials for rendering between quarters, you muft deduct one fifth for quarters, bafes, \&c. but, if workmanfhip only is found, you muft meafure the whole as whole work, for the workman could have performed the whole much fooner, if there had been no guarters.
4. That fuch fummers and girders as lie below a cieling be deducted, if the workman finds materials, otherwife not.
5. In meafuring of whiting and colouring between quartering, there muft be a fourth part allowed extraordinary, for the returns of the quarters, of take the length with a flting, and fo girt the quarters, which is the trueft way.

## IV. Of Masons Work to meafure.

1. Mafons work, which is meafured by foot meafure, either lineal, fquare, or cubical. The principal thing to be obferved herein is, that they girt all their mouldings as joiners do, and take their dimenfions in feet, inches, and parts.
The folids are blocks of fone, marble, or any kind of Rone, columns, cornices, \&c. the fuperficies are pavements, Ilabs, chimney-pieces, and the like. It is to be obferved, that mafons firft meafure the cube of the ftone, and their fuperficial plain work, allo fuperficial moulded work (if any) as follows: Firf, They account all fuch fones as are above two inches thick at fo much per foot, folid meafure, and, for the workmanlhip, they meafure the fuperficies of the fone, but then they meafure no more of the ftone than what appears without the wall.
But, as their method of meafuring is not fo well underftod by many as fome others, it may be proper to give an example how to meafure a chimney piece, as a guide to al! others. Firft, then, take the length of the mantle, or head-ftone, and the flab (whofe extent is generally the fame) for one fum of the dimenfions, and the breadth of both add together, with an inch or more for the under edge of the mantle, and half an inch (or whatever it is) for the upper edge, which, being all added, is the other fum of the dimenfion.
Secondly, Take the length of the jaumbs, or fides, allowing an inch longer than is feen (they going in below the flab) for

## M E N

one fum, and the breadth of one girting, all that is feen, and double it for the fecond fum of the dimenfion.
Thirdly, if there be flips and noifings to the chimney-piece, meafure the length by all the girt that is feen in breadth, or make the dimenfion twice.
Fourthly, Fire-ftone hearths, and coving-ftones, muft be caft up by themfelves, and all that appears in fight meafured.

## V. Of Glaziers Work to meafure.

Glaziers work is meafured by the fuperficial foot, and the dimenfions are taken in feet, inches, and parts, or by feet, and the hundred parts of a foot, as their rules are generally divided: therefore the meafurer of glaziers work fhould underftand decimals; allowing the feet as integers, and the parts as decimals; fo that three quarters, or 9 inches, is 75 ; half a foot, or 6 inches, is 50 ; and a quarter, or 3 inches, 25 of thefe parts.
Therefore, admit a pane, or light of glafs, that is leaded, be 2 feet 6 inches long, and I foot 6 inches wide, they fet it down as on their rules, 250 by 150 .
To fhew the agreement between the decimal and duodecimal way of working, I will give the above example wrought both ways as follow:

| By decimals. | By duodecimals. Feet. Inches. |
| :---: | :---: |
| 2,50 | 26 |
| 1,50 | 6 |
| 1,2500 | 130 |
| 2,50 | 16 |
| 3,7500 | 39 |

By the above operation it appears, that the aforefaid pane of glass, by the decimal way of working, is 3 feet 75 parts, equal to 3 feet and three quarters: and, by the duodecimals, 3 feet 9 inches, equally the fame: for, as 75 is three quarters of 100 , fo is 9 three quarters of 12 . Should there, be feveral lights, or panes, of the fame bignefs, you need meafire but one, for multiplying that product by the number of lights; gives the contents of the whole. As for

> Ex-AMPLE.

Suppofe a fafh-window contains 12 fquares, and each fquare of glafs 125, or a foot 3 inches long, and ,75, or 9 inches broad, and the content required.

## By decimals.

By duodecimals.
Feet. Inches.
1,25

| , 75 |
| ---: |
| 625 |

13
II 3
625
875
Number of fquares 12
9375
1130
No. of fquares 12

| $\overline{18750}$ |
| :--- |
| 9375 |
| 11,2500 |

The content of the whole by both ways is II feet and $\frac{t}{4}$.
To meafure circular, or oval windows, take the fame length and breadth as their diameters, as if they had been fquare windows, becaufe in cutting out the quarries of glafs there is a great, wafte, and more time expended therein, than if they had been fquare windows.

## VI. Of Painters Work to meafure.

Painters work is meafured the fame as joiners work, by the yard fquare, only with this difference, that, inftead of accounting the doors and window-fhutters work and half, they have double work, as being painted on both fides; and they alfo mealure all edges, \&c. where the brufh goes.

1. Salh-frames, fafh-lights, window-lights, and carements, are done at per piece.
2. Modillion, and other outfide cornices, at per foot running.

## Of fuch meafures as are ufed in lands and buildings.

8. A fquare foot is 144 fquare inches.
9. A cubical foot is $\mathbf{1 7 2 8}$ cubical inches.
10. A fquare yard is 9 fquare feet.
11. A cubical yard is 27 cubical feet.
12. A fquare is 100 fquare feet.
13. A load of rough timber is 40 feet.
14. A load of fquared timber is 50 feet.
15. A load of $I$ inch plank is 600 fquare feet.
16. A load of $1 \frac{x}{2}$ inch plank is 400 fquare feet.
17. A load of 2 inch plank is 300 fquare feet.

Vol. II.

## M E N

11. A load of $2_{6 \frac{1}{2}}$ inch plank is 240 fquare feet.
12. A load of 3 inch plank is 200 fquare feet.
13. A load of $3 \frac{1}{2}$ inch plank is 170 fquare fect.
14. A load of 4 inch plank is 150 fquare feet.
15. A load of ftatute bricks is 500

I6. A load of plain tiles is 1000 .
17. A load of lime is 32 buthels.
18. A load of fand is 36 burhels.
19. A hundred of lime is 35 bufhels.
20. A hundred of deals is 120 .
21. A hundred of nails is 120 .
22. A thoufand of nails is 1200 .
23. A ton of iron is 2240 lb . weight.
24. A fodder of lead is 19 hundred and a half, or 2184 lb .
25. A bundred of jead is 112 lb . weight.
26. A table of glafs is 5 feet, and 45 tables is a cafe, but Newcaftle, Norinandy glafs, 25 tables is a cafe.
27. A geometrical pace is 5 feet in length.
28. A geometrical perch is to feet in length.
29. A flatute pole or perch is $16 \frac{1}{2}$ feet in length.
30. A fquare ftatute pole or perch is $272 \frac{1}{4}$ fquare feet.

3I. A woodland pole or perch is 18 feet in length.
32. A fquare woodland pole is 234 fquare feet.
33. A foreft pole or perch is 21 feet in length.
34. Four ftatute perches is one chain's length.
35. Ten chains length is a furlong, or acre's length.
36. Four chains length is an acre's length.
37. Forty fquare perches is a rood, or a quarter of an acre,
38. Four roods, or 160 perches is one acre.
39. A hide of land is 100 acres.

## Remarks.

Since the ffiding rule hath come into general practice among men of bufinefs, thefe operations have been greatly facilitated; and, as thefe are fo eafily and mechanically learned, few tradefmen concern themfelves to enter deeper into the principles of geometry, whereon the whole art of menfuration is bottomed.

## Of Sofid and Curical Measure, and the Use of the Carpenter's Rule therein.

This meafure refpects length, breadth, and thicknefs or depth, being applicable to timber, ftone, \&ic. the dimenfions whereof, fuppofe, are taken in feet and inches.
. When the breadth and thicknefs are the fame from one end to the other.

The General Rule.
Multiply the length by the breadth, and that product by the thicknefs, and the laft product will be the content; or, if the breadth and thicknefs be multiplied together, and their product by the length, it will give the content.

## ExAMPle.

Suppofe a parallelopipedon to be a piece of timber, ftone, $8 c$. whofe length is 18 feet, it's breadth 3 , and thicknefs 2 feet $18 \times 3 \times 2=108$ feet, the content.-Or $3 \times 2 \times 18=108$.

By the Sififing Rule.
The breadth and thicknefs being fo reduced to the mean fide of a fquare, fet I upon $D$, to the length upon C , and oppofite to the mean fide, upon $D$, will be found the content upon C .

## ExampIE.

The mean fide, found as hereafter taught The length
The content

> By the Carpenter's Rule.

Set the length in feet on the fiding-piece to $I$, on the fquare or girt-line; and, oppofite to the mean fide, in inches on the fquare or girt-line, will be found the content in feet, on the fliding piece.
In the foregoing example, the dimenfions were given only in feet, therefore the product was feet. But,
2. When the length is given in feet, and the breadth and thicknefs in inches, the laft produce muft be divided by 144 (the fquare inches in a foot) and the remainder (if any) by 12 , and the quotient will be the content in folid feet and inches.

$$
E \times A M P L E .
$$

Suppofe a piece of timber, \&c. to be 15 feet long, 13 feat broad, and 8 inches thick,
$\because 15 \times 13 \times 8$ Feet. Inches.
$\frac{144}{14}=$ io Io the content.

## By the Sliding Rule.

The breadth and thicknefs being reduced to the mean fide of a fquare, fet 12 upon $D$, to the length upon $C$, and, oppofite to the mean fide upon $D$, will be found the content upon $C$.

Example.

## MEN

MEN

## ExAmple,

The mean fide, found as hereafter taught

- 10,2 Feet. The length - - . - 15 Feet. The length

## By the Carpenter's Rule.

Set the length in feet on the fliding-piece, to 12 on the fquare or girt-line, and, oppofite to the mean fide in inches on the fquare or girt-line, will be found the content in feet on the fliding-piece. $O_{r}$
3. If all the dimenfions are given in feet and inches, they muft be firlt reduced into inches, and the laft product of the multiplication of the dimentions by each other, muft be divided by 1728 (cubical inches in a foot) and the remainder, if any, by 144, and the quotient will be the content in folid feet and inches.

## ExAmpif.

Suppofe a piece of timber, \&c. to be 22 feet 3 inches long, $I$ foot 5 inches broad, and $I$ foot 2 inches thick,
$\because 22,3 \times 1,5 \times 1,2=36,9 \times \frac{3}{\mathrm{~T}_{2}}$-The content.
Note, When the contents are required in loads, the contents in feet muft bo divided by 50 (the folid feet in a load) and the quotient will be the anfwer. And,
If the contents of any folid be required in cubical yards, divide the contents in folid feet (found as before taught) by 27 (the cubical feet in a yard) and the quotient will be the contents in cubical yards.-Or the dimenfions might have been reduced into yards, and the operation performed as for feet. If any folid be exactly fquare (which in timber fcarce ever happens) multiply the fide into itfelf, and that product by the length, and the laft product will be the content.
And, if the fides are not exactly equal, they may be reduced to a fquare by the following methods :

To reduce the breadth and thicknefs of a folid to the mean fide of a fquare: the true way.
Multiply the breadth and thicknefs together, and the fquare root of the product will be the mean fide of a fquare.

Example.
Suppofe a board, whofe breadth is 13 inches, it's thicknefs 8 inches, and it's length 15 feet 6 inches, $13 \times 8$, and extract the root of the product, the anfwer is ro,198-Mean fide of the fquare.

By the Sifing Rule.
Set the breadth on C to the breadth on D , and, oppofite to the thicknefs on C , will be found the mean fide of a fquare on D .

By the Carpenter's Rule.
Set the breadth on the fliding- piece to the breadch on the fquare line, and, oppofite to the thicknefs on the fliding-piece, will be found the mean fide of a fquare, on the fquare-line.
But the way commonly practifed for unequal-fided timber is, to add the breadth and thicknefs (taken about the middle of the piece) together, and then take half that fum (or $\frac{1}{4}$ of the 4 fides) for the mean fide of the fquare of the piece.
This method, indeed, produces a content more than the truth, by a piece equal to the whole length, and whofe fquare is equal to half the difference of the breadth and thicknefs; but, if the breadth and thicknefs are pretty near equal, the difference will be near enough for ordinary practice.
The breadth and thicknefs, or fide of the fquare, being given in inches, to find how many inches in length will make a folid foet.

Ruie.
Divide 1728 (the cubical inches in a folid foot) by the product of the breadth and thicknefs, and the quotient will be the length of the cubical foot.

By the Sidifing Ruie.
The breadth and thicknefs being reduced to a mean fide of a fquare, fet the mean fide on D , to I upon C , and oppofite to 41,5 upon $D$, will be found the anfwer upon $C$.

## Mensuration of Plangs.

Though the menfuration of planks is properly by folid meafure, yet the folid contents may be found by the directions given for fuperficial, if the refpeetive thickneffes are afterwards accounted for.

## Rule.

Multiply the length in feet and decimal parts, and the breadth in inches and decimal parts, together, and divide their product by 12 ; or find their fquare by the fliding or carpenter's rule, and the quotient, or lquare, being divided by the following refpective divifers, will exhibit the folid contents in loads of 50 feet each.

The fquare of the length and breadth of planks of

When the breadth and thicknefs are not the fame throughout, but the folid is broader and thicker at one end than the other,

## The rule for the true method.

Multiply the breadth and thicknefs at the greater end together, and alfo at the leffer, and the two areas by each other, and to the fquare root of that product add the two areas, the total whereof multiply by half of the length, will produce the content.
But the ufual way is to take the breadth and thicknefs in the middle of the piece, or, rather, half the fums of the breadth and thicknefs at each end, for the mean breadth and thicknefs (or find a mean fide of a fquare equal thereto) and then work as before taught, which will produce a content lefs than the truth: but, if the ends are pretty near equal; the difference will be but very fmall.

## Mensuration of Round Timber.

1. When the circumference is the fame from one end to the other,

The rule for the true method, according to the utmoft cylindric circumference.
Firf find the diameter of the circumference, from which the proportion is, as 22 is to 7 , 60 is the girt or circumference to the diameter. Or,

## By the Siding'Rule.

Set the point $c 3$, 141 on $B$, to $I$ upon $A$, and, oppofite to the circumference on $B$, will be found the diameter upon the circum
A.
Or

By the Carpenter's Rule.
Set 3,141 on the fliding-piece, to I upon the upper line, and, oppofite to the circumference on the fliding-piece, will be found the diameter on the upper line.
The diameter being found, multiply it by $\frac{1}{4}$ of the girt, and that product by the length, which will produce the folid con-tent.-Or, multiply the circumference into itfelf, and that product by ,07958 (the area of a circle whofe circumference is unity) and the laft product by the length, which will produce the content-Or multiply the number 282 I (being the fide of a fquare equal to a circle whofe circumference is 90 ) by the girt in inches, and the product will be the fide of a fquare equal to the girt or circumference ; which multiply into itfelf, and that product by the length in feet; then divide the laft product by 144, and the quotient will be the content in feet and decimal parts.

By the Sliding Rule. Set $\left\{\begin{array}{c}42,53 \text { when the circumference is inches } \\ 3,545 \text { when the circumference is feet }\end{array}\right\} \begin{gathered}\text { upon } D \text {, to the } \\ \text { length in feet }\end{gathered}$ C , and, oppofite to the circumference on D , will be found the content in feet tpon C.
The number 42,53 is the circumference of a circle, whofe area is 17 ; and 3,545 the circumference when the area is unity.
