If any fhip fuffers fhipwreck, and, neverthelefs, a part both of the fhip and good's be faved, if the puffengers have gold, filver, welvet, pearls, or precious fonies a'bout them, the gold that is laved fhall pay the tenths, and the filver the fifths: and, if the velvets be not damnified, they fhall pay the tenths, as gold; but if they be, the dimage fiall be deducted, and the remainder fhall contribute; and the pearls, as they fhall be rated, equalling the weight of gold, thall compentite the value of the hip.

ILLUSTRATION.
What the reafon may be that filver, which certinly is more burthenfome in a thip than gold, fhould pay one half lefs towards the damage in cafe of mipwreck, cannot eafily be conceived, no more than what fhould make velvets, which are yet more burthenfome and bulky than filver, be taxed wice as much as filver. It is certain, that that commodity was much efteemed among the Ancients, when it was nut io commonly wore as it is now; but we can hardly telieve that it was more precious than filver. As to the pearis, of

## R H O

which mention is here made, the term in the Greek is fuapropita, which, in the Latin tranllation, is rendered uno, from unus, oNE, becauie (feveral being found in one fhell) not one of them is like another; but that term not being ufual in England, we thought it convenient to render it by the common name of pearl.

## A R T ICLE XLI

Of fhips being loft, and the goods of paffengers faved.
If any fhip be difabled or loft, and there being paffengers on board, their goods and baggage be faved, they thall contribute towards the lofs of the fhip: and if two or three of the paffengers lofe their money, all the others (according to their ability) together with the fhip, fhall contribute towards the lofs of their money.

## A R,T I CLE XLII.

Of a fhip's being laden with goods, and turning leaky.
If a merchant-ihip turn leaky, the lading being taking out, it thall be in the mafter's choice to put it aboard another fhip, or aboard the fame, if once repaired; and that not being repaired, if the mafter offers to carry them in another to the port agreed upon, the merchant fhall pay the whole freight.

## ARTICLE XLIII.

## Of ejection and damage in a tempeft.

If a fhip be furprized with a ftorm, and an ejection be made, or if the yard-arms, mafts, rudder, anchors, or fhip-boats be broken, all that is preferved of the Jhip and goods fhall contribute towards the damage.

## ARTICLE XLIV.

## Of other damage happening in tempefts.

If a thip has goods on board, and in a tempeft lofe her mafts, rudder, boats, \&c. and, by the violence of the ftorm, the goods happen to be wet, there fhall be a contribution; but, if the lading be more damnified by the fink than by the tem. peft, the mafter fhall, notwithtanding, receive his whole freight, but thall deliver the goods by the fame mealure, and in the fame condition that he received them.

ILLUSTRATION.
This article contains a fpecial provifo for preventing of damage to merchants goods, by the negligence of the mariners, in not taking due care of the hold and the pump, which fometimes occafions confiderable lofs to the owners' of the lading; for which, the mafter of a hip is very juflly, by this law, obliged to reftore the goods (the danger of the fea only excepted) by the fame meafure, and in the fame condition; in which he received them; and, on the other hand, the merchant is enjoined to pay bis full freight. Now, as to this law obliging the mafter to return the fame meafure of goods, in the fame condition he received them, that is, in fome cafes, impoffible; for there being goods which, if once wet, can never be reftored to their primitive goodnefs and luflre, they cannot, confequently, be returned in the fame condition; by which it is plain, that as no law commands impoffibilities, here muft only be meant, that if, by the neglect of the mafler anid mariners, the goods be damnified in the fhip, he muft fuftain the damage.

## ARTICLE XLV.

## Of faving any part of a fbipwreck.

If a chip be furprized at. fea with whirlwinds, or be fhipwrecked, any perfon faving any thing of the wreck, fhall have one fifth of what he faves.

## A R TICLE XLVI.

Of feamen perifhing in a form, and of the hip's boat.
If the ropes break, and the boat goes adrift from the fhip, with mariners in it, and they perifh at fea, the mafter fhall pay their heirs one full year's wages; and if any perfon finds the boat, and preferves it fafe, he fhall reftore every thing as he found it, and receive one fifth part as a reward.

## A R T I CLE XLVII.

Of fhipwrecked goods filhed up in the fea. If gold or filver, or any other thing, be taken up out of the fea eight cubits deep, he that fo takes the fame up fhall have one third ; and, if 15 cubits, he ihall have one half, becaufe of the depth: and if any thing is caft on thore by the tide, and taken up only one cubit deep, the finder fhall have a tenth part.

ILLUSTRATION.
The three precedent articles determine the rewards due to perfons that find and fave fhipwrecked goods, as three of the

## R H O

four fublequent do the punifhments of fuch as feal or embez zle any part of a wreck, or do in any manner aggrieve, or caufe any detriment to perfons under that misfortune: and as the circumftances of place, \&c. are different, the rewards are always to be proportionable to the danger from which the perfon delivers the goods; it being very reafonable that a perfon fifhing up goods in' the main fea have a more confiderable reward allowed him, than one that finds them caf albore upon the fea-fands.

## ARTICLE XLVIII.

## Of perfons taking fhipwrecked goods by violence.

Whoever takes any thing from a wreck by violence, fhal! reflore four-fold.
The above article is taken out of the fecond title of the eleventh book, and is of itfelf fo exprefs and rational, that it needs no illuftration.

## A R T I CLE XLIX.

## Of fuch as force mafters of fhips to fail.

Whoever impores a private burthen upon the public, and forces a mafter of a fhip to fail, thall not only bear the lols and damage of the fhipwreck, but be feverely punifhed.

ILLUSTRATION.
This article is taken out of the fifth title of the aforefaid book, and does not feem fo very plain but that it may admit of a fhort explication.
We fhould, indeed, have been at a lofs to guefs at the meaning of it, if the fummary prefixed to it had not been plainer than the article itfelf, in which thefe words [to fail] are only underfood, but are expreffed in the fummary preceding the article; fo that, comparing both together, we find the meaning of it to be this: that if any merchant, or other perfon, fhould, upon any occafion, force a mafter of a fhip to fail againft his own will and inclination, and there fhould afterwards happen any misfortune or difafter to the thip, the perfon that forced the mafter to fail thould be anfwerable for all the damages: which, indeed, is highly reafonable.
We own that it is very oddly exprefled in the article, which verbatim runs thus: Whofgever impofes a private burthen upon the public, and forces a mafter to it, fhall not only, \&cc. But confidering that the word imponere, which we bere render impofe, may likewife fignify to lade, and that onus, which we render burthen, may likewife very properly fignify the burthen or lading of a fhip, and confidering alfo the fullowing words' of the article which concern mipwreck, or damage happening in fuch a cafe, it is plain enough, that the natural fenfe of that law can be no other than what we have interpreted it.
As to the words private and public, they feem to beproperly enough made ufe of on th s occafion, becaufe, when a man pretends to force another perfon, againft his will, to take an intereft in his private and particular concerns, it is certainly an impofition on the public; for though injuries done to particular perfons regard immediately only them to whom they are done, yet they-mediately affect the commonwealth in general, which is undoubtedly attacked in every affault that is made upon the perfon or privileges of any of its members; which plainly appears from the univerfal practice and confent of all the kingdoms, ftates, and civil focieties in the world, who agree that the public has a right to punifh crimes, though committed againft private perfons, and that without the confent of the perfons to whom the injuries were done, it not being neceffary that that thould intervene in order to the criminal's' punifhment: and fo we may obferve, that in fuch cafes, befides the counfel appearing for the plaintiff at the profecution of the criminal, the follicitor, or attorney general, ordinarily appears for the king, as they likewife do in other countries.

## ARTICLES L, and LI.

Of perfons violently robbing and preying upon fhipwrecks.

## ARTICLEL.

Whoever violently takes away any of the miferable remainders of hipwrecks, or takes any advantage of that grievous misfortune, thall reftore fourfold to the owners.

## ARTICLELI.

If any man more grievoully oppreffes fhipwrecked perfons, and forcibly carries off any fhipwrecked goods, after reftitution made, if he is a freeman, he fhall be condemned to three years banifhment; if a man of low degree, he fhall be employed in the public works during that time; and if a flave, he fhall be put to the moft fevere and hardeft labour.

ILLUS.

## R H O

## R H O

ILLUSTRATION.
Thefe two laft articles are extracted out of the 5 th title of the LXIId book of the Digefts, and determine the punifmments to be inflicted upon perfons robbing, or in any manner oppreffing fuch as have had the mistortune to fuffer fhipwreck; which punifhments are proportioned to the circumifances by which thofe crimes may either be aggravated or extenuated. Mof happy would our mariners think themfelves, if fuch wholefome conftitutions could take place throughout all his Britannic Majefty's dominions, in fome parts whereof they are extremely wanted, and particularly upon the coaft of Cornwall and Wales, where, if an unfortunate fhip does happen to run athore upon the fands or rocks, the inhuman, brutifh, and uncivilized inhabitants, far from tendering any friendly fuccour or affiftance to the perfons in diftrefs, moft barbaroully deprive them of the miferable remains of their fhipwrecked fortunes, ftripping them even of their wearing cloaths, and fometimes cruelly murdering thofe unhappy people, who would have met with a milder fate amidft the waves of the'ocean, than in the unmerciful hands of thofe barbarous coafters. See the article Shrpwrecks.

## REMARKS.

The laws of the Rhodians were fo much effeemed amongft the ancient Romans, that they were unanimoufly received as the rule of all maritime affairs, except in cales where they were directly oppofite to the nativelaws of their country. And as the fraud and difhonefty of men had found means to elude the true defign and intent of the frift Rhodian legiflators, the Romans took care to reform fuch abufes, by fome explanatory additions to the aforefaid laws, which, as long as that monarchy lafted, they always held in great veneration.
The ancient Romans were not athamed to take all the helps and affiftances they could have from other nations, to render their own body of laws the more perfect and compiete. It was with this view that they fent perfons into Greece, there to collect the beft and moft ufeful laws which they could pick up among the commonwealths of that country, which were afterwards digefted into twelve tables, and were made the ground-work of the body of the Civil Law. It was likewife for the fame purpofe that they borrowed of the Rhodians their laws relating to maitime affairs, as being the beft collection of laws of that kind that were then extant, and inferted them in the body of their own laws. And at this day the Rhodian laws, the laws of Oleron [fee OleeRON'S LAws], and other maritime laws of other nations [fee $W_{\text {isbuy }}$ Laws], are received as the general law for deciding all caufes civil and maritime, in aid of the municipal laws of each country, and without any apprehenfion that the faid foreign laws will be an infringement of their own municipal laws, becaufe they are received by virtue of their own authority, and only to fupply the defects and omiffions of their own laws, for deciding cafes for which their own laws have made laws, for deci
Thefe laws, as well as the other maritime laws which are interfperfed throughout this work, having a clofe affinity with, and indeed being incorporated with the civil law, a due knowlege of the latter flould feem to be indifpenfibly requifite to enable us to make a right judgment in the decifion of maritime controverfies. I fhall not prefume to take upon me to afcertain the Iimits, power, and jurifdiction of the courts of common law, when compared with that of the high court of admiralty: I fhall only obferve, that they have for fome ages been jealous of the power and authority of each, and the courts of common law feem to have gained the afcendancy, and to have drawn all the bufinefs they could from the civil Jaw courts. Whether this has proved moxe for the eafe, benefit, and advantage of the fubjects of this kingdom, I cannot prefume to judge. I hope, however, that 1 may be permitted to fay, without offence, that, in whatever court maritime and commercial difputes and litigations are brought for adjudication, thofe who are to plead, or to adjudge in fuch courts, cannot be too well acquainted with the maritime laws of weight and authority that have been promulgated in all wife and civilized nations. Now as it is certain, that it is in the body of the civil law we have the moft complete, if not the only collection, of the rules of natural reafon and equity, which are to govern the actions of mankind ; and therefore it is, that it has been called Ratio Scripta, written reafon, as containing the molt periect sules of reafon for deciding all differences that may arife among men in their intercourfe with one another: and as all maritime and commercial laws ought to be founded on, and confiftent with the principles of the civil law, which is the fame in all countries, it follows that the ftudy of the civil law fhould by no means be neglected in a trading empire.
In ail other countries where the ftudy of the civil law is cultivated, they have peculiar laws and cuftoms of their own, of which they are as tenacious as we can poffibly be of ours. Yet they are fo far from baniihing or difcouraging the ftudy of the civil law, under an apprehenfion of its encroaching, upon their own municipal laws, that, on the contrary, they give the profeflors thereof all encouragement; they ftudy it
V OL. II.
as a qualification for the better underfanding of their own laws, and make it fubfervient to them; by applying the general rules of natural reafon and equity, which are contained therein, to clear up any difficulties and obfcurities, and to fupply any defects or omilions that may occur in their own municipal laws.
In former times, when the civil law was more univerfally known and ftudied here in England than it is at prefent, the judges and profeffors of the common law had frequent recourfe to it, in caies where the common law was eilher totally filent, or defective. So that the fages of the law of thofe days were fenfible of the good ufe that might be made of the reafon of the civill law, in aid and fubferviency to the common law of the land, as other nations make ufe of it at this day.
And befides this general advantage that is to be reaped from the fludy of the civil law, we are not to look up, $n$ it altogether as a foreign commodity in this illand, fome of the particular laws thereof having been enacted for deciding controverfies which arofe here in England, and bearing dete from this from the Romans. The greateft part of this inand was governed wholly by the civil law for the fpace of about 360 years, viz. from the reign of the emperor Claudius to that of Honorius; during which time, fome of the moft eminent among the Roman lawyers, as Papinian, Paulus, and Ulpian, whofe opinions and decifions are collected in the body of the civil law, fat in the feat of judgment here in England, and diftributed juftice to the inhabitants. But after the declenfion of the Roman empire, the Saxon, Danif, and Norman cuftoms took place in the illand, according as the faid nations became mafters of us, every one being fond of introducing their own cuftoms.
The law of nations is likewife founded on the principles of the civil law ; and the law of nations is abfolutely neceffary to be well underftood, as well. with relation to treaties of commerce, and of peace and fiendhip, and of all kind of alliance between nation and nation, as with regard to all maritime concerns between one flate and anther. And the neceffity of the law of nations, and confequently the civil law thereupon grounded, being well underllood by the ableft lawyers in this kingdom, appeared manieffly, and beyond contradiction, upon a very recent and very important occafion: I mean the affair that happened a few years ago, between his late Majefty and the king of Pruffia, with refpect to a memorial, and other papers, delivered by Monf. Michell, the king of Prufia's fecretary of the embafy, to his grace the duke of Newcaftle, concerning the Silefia loan. For in the duke of Newcaftle's letter, by his Majefy's order, to Monf. Michell, in anfwer to the faid memorial, \& $c$. there is the moft profound knowlege in the law of nations and the civil law difplayed by thofe able civilians and lawyers, who were ordered by his Majefly to draw up the faid anfwer *. See the article Silessa.

* Thefe gentlemen were, the learned Sir George Lee, judge of the Prerogative Court ; Dr. Paul, his Majelty's advocategeneral in the courts of civil law; Sir Dudley Rider, then his Majefty's attorney-general, afterwards the right honourable lord chief juftice of the court of King's. Bench ; and the honourabie William Murray. Efq; then his Majely's fol-licitor-general, afierwards his M.jeffy's attorney general. The only gentleman now living of the abovementioned, is the
latter, wion is now the lord ctief jultice of the King. Eench.

There are fome particular matters in which the civil law hath always been, and ftill is allowed to be; the only law in England, whereby they are to be decided; and the courts of juftice which have cognizance of the faid matters, do proceed therein according to the rules and forms of the civil law. Thus, in the high court of admiralty, caufes civil and maritime are here to be decided according to the civil law and the maritime cuftoms. 'Thus, in the court of honour, the judges thereof are to proceed according to the civil law. Thus alfo, in the univerfities, and all the ecclefiaftic courts of this kingdom, they proceed according to the civil law, and the cannon law, which is, in a great meafure, founded upon the civil law.- But thefe matters are befide my purpofe.
Having mentioned the cours where the civil law is allowed to be not only of ufe, but of force and authority here in England, we beg leave to confider how far the reafon and equity thereof may be of fervice in other courts, where it has not the force and authority of law. And we cannot but think, that in all courts of equity, where the rigour of the commun law is to be mitigated by the rules of equity, the kric wlege of the civil law mult be oi great fervice, and more efpecially in concerns of a commercial nature : for it is there, and no whete elfe, that we bave the fulleft and mont periest collection of the general rulcs of natural reafon and equity, applied to the various tranfactions and intercourfes of bufinefs between man and man. If, therefore, one were to judge what is juft and equitable in a caufu depending between parties, would it not be a great belp towards forming a right judgment therein, to enquire into the general rules "f equity touching' the faid matter, which have been laid down and eftablifhed by the moft eminent lawyers that ever lived in any age, and to fee how they have applied them in fimilar cafes? Can it be ima-

8 L
gined,

## R H O

gined, that the reafonings of thofe great men upon cafes of the like nature, will not give great light, and contribute very much towards forming an equitable decifion in matters which are to be determined upon the principles of equity, and not according to the rigour of the law? And will not a knowlege of the ancient and modern maritime laws of other wife nations, which are efteemed of authority, as being grounded on the principles of the civil law, greatly contribute to enable lawyers to conduct their pleadings and adjudications, more confiftent with the principles of right reafon and equity, than can be done if they are unacquainted with thefe laws? How far, therefore, there rules of equity, which may be collected fiom the body of the civil and maritime laws, may be ufeful in the bigh court of Chancery, and the court of Ex. chequer, whofe proceedings are according to equity, is moft humbly fubmitted to the great widdom and experience of the learned judges, and others who are beft acquainted with the practice of thofe courts.
And if this knowlege of the rules of reafon and equity can be of fervice in the inferior courts of equity, it cannot be lefs ufeful and neceffary in the fupreme court of equity of the kingdom, which is that of the lords affembled in parliament. It is to that high tribunal that the Cubjects have recourfe, in order to obtain an equitable redrefs of the grievances which they pretend to have had done them by the inferior courts. And the lords who compofe that auguft affembly, and who are the fupreme judges of the property of the fubject, cannot be fuppofed, by reafon of their high rank and quality, and their frequent avocations upon account of the weightier matters of government, to apply themfelves to that minute fludy of the luws which is expected from other judges: and, therefore, reeing they have frequent occafions to act in a judicial capacity, it is the more neceffary that they fhould be acquainted at leaft with the general rules of reafon and equity, which may help to guide them in the judgments which they give in matters of private property that come before them.
And if we confider the faid body in their legiflative capacity, as having under their direction the arduous matters of ftate, and efpecially fuch as regard the intercourfe between us and other nations, the knowlege of the law of nations, which is built upon the civil law, is abfolutely neceffary in deliberations of this kind, that no refolutions may be taken in fuch matters, but what are agreeable to the principles of the law of all nations. And it was upon this account that, according to the ancient cuftom and ufage of parliament, the matters of Chancery, who formerly were civilians, were fummoned, with the judges of the realm, to give their affiftance and attendance in the upper houfe of parliament: for as the judges of the realm were to give their counfel and advice, when required, in matters which depended on the laws of the land; fo the mafters of Chancery, who were fkilled in the civil law, and the law of nations, were often confulted in matters which depended on thofe laws.
There is likewife another court, where we humbly conceive that the knowlege of the civil law may be of fervice, for determining matters that come before it; and that is, the king's privy-council, which is a court of juftice in fome refpects, as it is in others a council with which his Majefty is gracioully pleafed to advife and confult in matters relating to the public. It is a court of juftice, wherein his Majefty is pleafed finally to determine fome matters of private property, as particularly all matters of prizes taken from an enemy in time of war, in which the appeal lies from the high court of admiralty to the king in council: and thofe caufes are to be judged by no other law but the civil and maritime law.
The privy-council is likewife a court of juftice, for the final determination of all appeals that come from the Englifh plantations in America, from the iffes of Jerfey and Guernley, and other places: in all which caules the rules of equity colleited in the body of the civil law, mult be of fervice to judge of the equity of the fentences which are complained of, but more expecially in the caufes which come from the ifles of Jerfey and Guernfey, where the proceedings in their courts of judicature have a great conformity with the civil law ; and the cuftoms of Normandy, which are the law by which thofe inlands are governed, are not only illuftrated and explained by the civil law, but many times the aid of the law is there invocated, as a rule for deciding cafes which are not exprefsly regulated by their own cuftoms, as appears from the commentaries of Rouille, Terrier, and others, on the faid cuftoms.
Having feen in what cafes the civil law may be ufeful, if not neceflary, for determining fome matters that come before the privy-council as a court of juftice, we muft beg leave to conider how far it may be ufeiful in theother matters that come under the deliberation of that auguft affermbly, as a council to his Majefty for the affairs of ftate. It is by their council and advice that his Majefty fteers the helm of government : it is there that all Treaties of Peace and Commerce with foreign ftates and potentates are examined and confidered. See Treaties.
As to what regards the internal policy of the ftate, for maintaining peace and quiet in the fociety, for procering plenty
of all things neceflary to human life, for encouraging manuactures within ourfelves, and promoting a beneficial trade with our neighbours : although all thefe things depend, in a great meafure, on the frame and conftitution of our own 2 vernment, on the foil and climate of the country, on its fituation for trade, and on the natural temper and difpofition of the inhabitants: yet, in order to improve thefe to the beft advantage, we cannot but think that it may be of fervice to know what laws the Romans, the greateft and moft fourifhing commonwealth that ever was, thought fit to enact for promoting trade and manufactures with in them felves, and for the government of their colonies in foreign parts, to preferve them in a due fubjection, and to make them ufeful and fubfervient to the feat of the empire from which they derived their origin, and to which they owed their protection : all which laws are collected in the body of the civil law, and may be ufefully applied by us on many occafions.
But as to what concerns the outward policy of the flate, that is, the intercourfe which it muft have with other flates and princes, we humbly conceive that the knowlege of the civil law muft be of fingular ufe in all tranfactions of that kind: for the civil law being in fo great efteem and veneration among all other nations, that they make it the rule and ftandard of equity in all cafes which are not exprefly provided for by their own particular laws and cuftoms, what more effectual arguments can be ufed to obtain juftice from them in an amicable way, than thofe which are founded on the principles and maxims of the civil law? It is arguing with them upon their own principles, from maxims of their own law, and the law of all nations, which is the moft effectual way to convince them by reafon. And it was in confideration of this that our anceftors, in their great wildom, thought proper to employ generally, in all negociations with foreign courts, and in treaties of peace and commerce, perfons who were well fkilled in the civil law, and law of nations: and although it was neceffary on fome occafions, and more particularly at folemn congreffes, for treating of peace, for the greater luftre and fplendor of the embalfy, to employ perfons of the firft rank and quality; yet, to eale them of the great weight of affars, they were always accompanied by fome perfon of an inferior rank, who being verfed in the fludy of the civil law, and law of nations, might be aiding and affiting in the conferences which were to be beld for fettling and adjufting the refpective interefts of the feveral princes and ftates concerned. And this we fee is the conftant practice of all other nations at this day, who, in their embaffies for treaties of peace, employ always at leaft one perfon who has been bred to the law; although this is the lefs neceffary in foreign countries, where all the, nobility, in their ftudies at the univerfity, go through a regular courfe of the fudy of the civil law, and law of nations: by which means they lay fuch a foundation, as to be able afterwards, from the principles thereof, to affert and defend the interefts of their country, whenever their prince is plealed to employ them in affairs of that kind.
In matters of intercourfe between one nation and another, we have no other law to go by but the law of nations; and this law of nations is chiefly grounded on the rules and maxims of equity which are laid down in the civil law, and which have been received by moft nations, as the rules of juftice between one nation and another. So that, to underftand the law of nations thoroughly, and to be able to comprebend the reafoning of the authors who treat thereof, it is abfolutely neceffary to have fome knowlege of the civil law, as one may eafily perceive by looking into Grotius, Puffendorf, and other authors who have wrote on that fubject.
And I muft obferve here, in relation to the Englifh colonies upon the continent of America, that there is a very great affinity between them and the colonies of the Spaniards, and other nations, who have made fettlements among the Indians in thofe parts: for the grants made by our kings, of tracts of land in that country, for the planting of colonies, and making fettlements therein, appear to have been made in imitation of the grants made by the kings of Spain to the proprietors of lands in the Spanilh colonies, upon the very fame conditions, and in confideration of the fame fervices to be performed by the grantees. So that the government of the Spanifh colonies, and the rights of the proprietors of lands therein, depending chiefly on the rules of the civil and feudal law, as may be feen by the learned treatife of Solorganus, De Indjarum Jure, the knowlege of the faid laws muft be of fervice likewife for determining any controverfies that may arife touching the duties or forfeitures of the proprietors of lands in our Englifh colonies.
We have made thefe few remarks only to fhew in what particulars the civil Jaw is, and may be, of ufe here in England, and how we may reap the fame advantages from it which other nations do, without any danger to our own municipal laws. Our anceftors were fo fenfible of the great importance thereof, both in private and public affairs, that, befides the public profeflors eftablifhed in the univerfities for teaching this fcience, and who have falaries allotted them by the beneficence of our princes, many of the private founders of colleges have,

## R H U

in their endowments, fet apart particular fellowhips, as an encouragement to perfons to ftudy it. And from the principles of the civil law, and the laws of nations bottomed thereupon, we apprehend that not only the commercial and maritime laws of all trading nations may be the better undertood, but fuch other laws may be formed and ordained in this kingdom for the univerfal propagation of its trading interefts.
RHUBARB, is a thick root, of and oblong figure, large at the head, and tapering pretty fuddenly as it extends in length. It is fometimes fingle, but more ufually divided inco two or three parts at the lower end. We frequently meet with it in pieces of four, five, or fix inches long, and three or four ir diameter at the top; it is of a tolerably, fmooth and even furface, and externally of a faint yellow colour, with a large admixture of brown; it is moderately heavy, but not hard; it cuts through very freely and eafily with a knife, efpecially if the blade of it has been rendered a little unctuous, firft by drawing it over an almond, or any other fatty fubftance. When frefh cut, it is found to be of a marbled or variegated appearance; its colours are a pale but bright yellow, and a faint reddifh; the yellow is the ground colour, and the red is difpofed in thort irregular veins, much in the manner of the darker colour in the common nutmeg. It is of a fomewhat lax and fpungy texture; it has an agreeable and fome what aromatic fmell, and a bitterifh, aftringent, and fubacid tafte, upon the whole not difagreeable: it tinges the fittle to a fine bright yellow, on being held fome time in the mouth.
Rhubarb is to be chofen frefh, tolerably hard, and moderately heavy, and fuch as does not duft the fingers in handling; fuch as, infured a few minutes in water, gives it a fine yellow, and, when bruifed in a mortar, has a reddifh colour with the yellow. Rhubarb is not fo often adulterated as damaged; care is to be taken that it be not wet or rotten; much of it is fubject, after keeping too long, to be worm-eaten and fult of holes on the furface. There are certain traders in this drug who have a way of filling up thefe holes with powder of fome of the worft and moft decayed pieces, but this is eafily difcovered, and fuch rhubarb always to be rejected.
The Ancients were not acquainted with rhubarb; it is an error to fuppofe they mean our rhubarb by their rah and rheum; Diofcorides and Galen evidently defcribe, under that name, the rhapontic, a root of a different plant, and very different in its virtues from our rhubarb
Rhubarb is brought to us from Ruffia and the Eaft-Indies. It is produced in great plenty on the confines of China and Tartary, and in many parts of Tartary itfelf; the mountains of Tibct abound with it, and a very confiderable part of what is fent into Europe grows there.
We are not certain that it grows in any part of Ruffia, though we receive confiderable quantities of it from thence; it is poffible it may be firft brought thither from China and Tartary, and then fent to us. The Chinefe are very careful in their manner of drying it: they take up the root only in winter, or early in fpring, before the leaves begin to appear; they cut it into fuch pieces as they think proper, and lay it on a table in a thady place, turning it once or twice a day, for two or three days; after this they itring the pieces on a cord, at a diftance from one another, and then hang them up in a fliady place, where they may dry leifurely. It is by this management that the rhubarb is rendered fo firm and folid as we find it; for if it were hung up to dry at once in a warm airy place, it would become light and fpungy: they fay, alfo, that if the root be taken up in the fummer, it is not only light and of little virtue, but that it has nothing of the reddifh marbling, that is one of the great characters of its goodnefs with us.
The plant which produces the true rhubarb is of the number of the ennandria-trigynia of Linnzus. It was long before it was known in Europe; but of late it has been fent from Ruffia to the gardens at Paris and Chelfea, in both which it thrives extremely well, and fands the fevereft colds unhurt.
The root of this plant thews it to be the genuine rhubarb, and it agrees perfectly with a fpecimen of the plant which fome years fince Dr Amman of Peterfburg had gathered himfelf on the mountains of Tibet
We have proof fufficient now that we have the true rhubarb plant among us; and it will be eafy to propagate a quantity of it, in order to try whether its virtues, when produced With us, will be the fame with thofe it porfefles as brought from its native climate.
The root of the rhubarb plant is long, thick, and perennial its bark, while growing, is of a brownilh red colour, but under this the fubftance of the root is of the true colour of the dried rhubarb, only deeper, of the right nutmeg gran, marbled with red and yellow, and has the true fmell and tafte of rhubarb, efpecially about the upper part of the root. It has a vifcofity indeed in the mouth, that rhubarb, as we meet with it in the fhops, has not; but this may only be the difference of the fame root frefh and dried. A number of large leaves are produced firft from this root; they are of a fine green, elegantly undulated at the edyes, of an oblong figure broadeft at the bafe, and fomewhat auriculated; they tand

## R H U

on very thick and flefby pedicles, moderately long, conveik in their under pant, and flat on the upper ; thefe duvide each into five large and prominent ribs, ruming with many divifions through the whole leaf: in the midit of thefe leaves rifes a ftalk, of an angular compreffed figure, ftriated, and rifing to about three feet high, which, from the middle to the top, is furniifhed with clufters of little flowers, furrounding it at certain diftances; they are very fmall and white, and are fucceeded each by a firgle feed, of a triangular figure: it flowers in June, and ripens the feed in July and Auguit. Rhubarb, on a chemical analylis, is found ta be compofed of a large quantity of fulphur and fixed falt, a fmall portion of acid falt, and a large fhare of earth. On thefe principles, the whole root muft be of the gummous kind, and its earthy and gummous parts are very eatily feparated, and that in large quantity: from an ounce of rhubarb there may be prepared, by means of common water alone, fomewhat more than an ounce of the gummous extract. There is but a very fmall quantity of refinous matter in rhubarb, and what there is is blended with a large fhare of alkaline falt : two ounces of rhubarb, ever fo carefully managed, will not yield more than about three drachms of a refinous, and that a faline extract; the falt in this is in fo large a portion, that it will readily diffolve in common water: and this fhews us the reafon why tincture of rhubarb, made even in rectufied fpirit of wine, does not become milky on being mixed with water, as many of the other tinctures of this kind do.
Rhubarb pofficfes the double virtue of a catbartic and aftringent ; it readily evacuates particularly the bilious humours, and afterwards gently aftringes and frengthens the ftomach and inteftines. It is given with great fuccefs in all obfructions of the liver, in the jaundice, in diarrhceas, and in the fluor albus and gonorrhceas: it is alfo an excellent remedy againft worms. It is fometimes given as a purgative, fometimes as only an alterant; and which ever way it is tak $t$, it is an excellent medicine, agreeing with almoft all ages and conftitutions. The only cafes in which its ufe is to be avoided, are thore in which the bluod and vifcera are too hot. Faliopius fays it is never to be given to people who have diforders of the kidnies or bladder, as it is apt to occation an extraordinary heat in thofe parts; anc Simon Pauli tells us of vertigoes brought on by a too free and continued ufe of it.
Rhubarb is given in powder in infufion, and in its own crude folid ftate, the chewing it being, perhaps, the beft way of giving it of all others, when it is intended to ftrengthen the ftomach and affift digeflion ; the quantity of 25 grains, or thereabout, fhould be chewed daily on thefe occafions, an hour before eating; this is alfo by much the beft way o taking it againft the obffructions of the vifcera. Its dofe in powder is from half a fcruple to two fcruples; in infufion, about a drachm of it will purge gently, but the dofe may be increafed up to two drachns: it is obfervable, that neicher the infufion nor the decoction, nor even the extract of rhu barb, purge nearly fo brifkly as the root itfelf in powder. The preparations of rhubarb in uie in the fhops are, 1. The tincture in fpirit. \&. The tincture in wine. And, 3. The extract ; though the laft is but little ufed.

## Tincture of rhubarb in wine.

Take fine rhubarb two ounces; of the feeds of the leffer cardamum, cleared from their hufks, half an ounce; of faffron two drachms; bruife the rhubarb to a grofs powder, with the cardamums among it; then cut the faffron frnall with a pair of fciflars, and put the whole into a matrafs with a quart of white wine; let them fland three days together without heat, often fhaking them; then ftrain off the tincture, and filtre it for ufe.

## Tincture of rhubarb in fpirit.

Take of fine rhubarb two ounces, of the leffer cardamumfeeds, freed from their hulks, half an ounce, of faffron two drachms, proof-fpirit a quart; make the tincture without heat, in the fame manner as the former.
Both thefe tinctures are purgative, and flrengthen the fomach and inteftines afterwards: they are given in moit of the cafes in which the root itfelf is proper. Their dofe is from one ounce to two ounces and a balf; the latter purges fomewhat more ftrongly than the former.

## Extract of rhubarb.

Take of fine rhubarb a pound, cut it into thin flices, and a terwards bruife thefe to a grofs powder in a mortar; put it into a matrafs, and pour on it two quarts of water ; fet the matrafi in a fand-heat, fo as to keep the liquor moderarely warm, for 10 or 12 hours; then ftrain off the infufion, return the remaining mals into the matrafs, and pour on it rectified fpirit of wine a quart; fet it again in the fand-heat for 24 hours, then ftrain off the tincture: mix this liquor with the former, and gently evaporate the whole to the confiftence of an extract. This is gently purgative; its dofe is from 10 grains to a drachm: but, in truth, the plain powder of the root feems to be a much better medicine for all the purpofes in which this could be given.

The

## R H O

## R H O

The tai-haam, or the rhubarb, grows in feveral parts of China: the beft is that of Tfetchanen; but that which grows in the province of Xenfi, and the kingdom of Thibet, is far inferior to it: what grows elfewhere in this part of the world is of fo little value, that it is not ufed. The flalk of the rhubarb is like the fmall bambooes, or Chinefe canes: $i s$ is hollow, and very brittle, three or four feet high, and of a dark violet co lour. In the fecond moon, that is, in the month of March, it fends forth long and thick leaves, which grow four and four on the fame tail, looking towards each other, and forming a chalice. The flowers are of a yellow, and fometimes of a violet colour. In the fifth moon it produces a fmall black feed, as large as millet; in the eighth moon they pull it up, and find the root large and long; that which is beavieft and moft marbled in the heart is the beft and molt efteemed. This root is of fuch a nature as renders it very difficult to be dried.
The Chinefe, after having pulled up and cleaned the roots, cut them in pieces about two inches large, and dry them on plates of hone, under which they kindle fires: they turn there pieces 'till they are thoroughly diy. If they had ovens like thofe in Europe, they would not make ufe of thefe plates. As this operation is not fufficient to draw out all the humidity, they make a hole in each piece, and fufpend them in the greateft heat of the fun, 'till they are in a condition to be kept without being corrupted.
As to the ufe of rhubarb, the Chinefe are nearly of the fame opinion with the Europeans: however, they rarely ufe rhubarb crude and in lubftance, for they fay it tears the bowele, and produces gripes; and as the Chinefe generally love better not to be cured, than to be relieyed by great pain, they more chearfully take rhubarb by way of decoction, with a great many other fimples, which they combine according to the rules of their art: but if it is neceflary to take it in fubftance, they prepare it in the following manner:
They take as many pieces of rhubarb as they have occafion for, and fteep them 24 hours in rice wine (that of grapes would be better if they had any) 'ill they are very foft, and cin be cut into thin flices. Then they put upon a furnace a kind of kettle, whole mouth is two feet in diameter, and which diminifhes gradually to the bottom in form of a cap. They fill this kettle with water, and cover it with an inverted fieve, made of fmall flips of bark. Upon the bottom of the fieve they lay the pieces of rhubarb, covering the whole with a piece of wood, over which they throw a felt, that the fteam of the'water may not come out; then they heat the furnace, and make the water boil, fo that the fteam raifed through the fieve penetrates the flices of rhubarb, and deffroys their acrimony. At laft this fteam refolving, as in an alembic, falls down into the boiling kettle, and renders the water yellow, which the Chinefe keep for cutaneous diforders. Thefe flices muft remain at leaf eight hours in this circulation of the fteam, after which they take them out, and dry them in the fun. They repeat this operation twice, and then the rhubarb is prepired, and is of a blackifh colour. It may be pounded and formed into purgative pills. Five or fix drachms at leaft make a dore, which purges gently and without gripes. The urine is that day more copious and red than ufual, which, according to the Chinefe, denotes that an unnatural heat is diffipated in that way. They who have an averfion to fo many pills, take the fame quantity of the dried flices, and in an earthen or filver veffel boil them in nine ounces of water to three, which they drink warm, but fometimes they mix fimples with it .
This manner of preparing rbubarb produces the moft falutary effects. An obftinate conittration had reduced a mandarin to the greatef extremity, and no remedies could procure him a ftool; he vomited them up as foon as they were fwallowed, as he alfo did rhubarb, whether taken in pills or decoction: a Chinefe phyfician made him take a decoction of a double dofe of this prepared rhubarb, with which he had mixed fome virgin honey, by which means the patient had no nauleas, and was freed from this diforder without any pains or gripes. Some European phyficians fay, that a drachm of that part of the rhubarb where they fring it, given in the morning fafting, in a glafs of rofe or plantain-water, is an infaliible remedy for fluxes. The Chinefe phyficians think quite otherwife, and fay, that the rhubarb always begins to corrupt at that hole; that the powder found there is of no ufe; that it ought to be thrown away; and that only the internal part of the root, which is weighty and well marbled, ought to be ufed. It may happen, that in China they undervalue this part of the rhubarb, becaufe it is there worth no more than four-pence a pound, or becaule, being much dearer in Eu rope, the natives are unwilling to lofe any of it
R I CE, according to Pomet, is the product of a plant which grows very common in many places of Europe: it commonly grows in the water, and, as fome obferve, though the water increafes during the time of its growth, it fill keeps its ear above the furface of it. That which is commonly fold in Paris, is brought from Spain and Piedmont. This is a feed of fo great ufe and profit, that it may be called the manna of the poor, and throughout feveral entire countries, they have farce any thing elfe to fubfift on.

Chufe the neweft rice, well cleanfed, large, that is to fay plump or well fed, white, not dufty, nor fmelling rancid thofe who take notice of the rice of Piedmont, efteem it much more than that of Spain, which is commonly reddifh, and of a faltifh tafte. The ufe of rice, chiefly at Paris, is for the Lent feafon, when they boil it in water, then in milk, and fometimes reduce it to powder, that is to fay four, which they ufe inftead of wheat flour to thicken their milk with.
To reduce rice into powder, pour boiling water upon it and then wafh it with cold water, fo often 'till the water re mains clear; after this put it into a mortar to pound, and when it is powdered fet it to dry, and then to fearce it fine for it will often appear very fine when it is wet, and yet as it dries fiews that it is coarfe and requires fifting.
It is reftorative, nourifhing, and fweetening; it congluti nates the humours, and is ufeful in fluxes of the belly; it purifies the mafs of blood, and flops hæmorrhages. It is ufed either in ptifans or food.
Befides this, pearl or French barley is ufed, which ought to be chofen new, dry, plump, and well fed, white, but not blanched : it is prepared at Charenton, near Paris; but the beft is that of Vitry. We likewife have rice that is brought from feveral parts of the country, but chiefly to make a fort of coffee of, which it taftes very like when burnt. The poor buy what we call in England groats, which is made from oats, and when ground at the mill is called oatmeal.
There is a millet alfo fhelled and picked, which they prepare in the foreft of Orleans: befides other pulfe, as the green and yellow peafe, which come from Normandy, and the beans of Picardy and other places; there are other things alfo fold in the fhops, which are made of wheat flour, as vermichelli, both the white and yellow fort, and ftarch.
The vermichelli, which the Italians invented, and call vermicelli, is a pafte made out of the fineft part of the wheat flour and water, which is afterwards drove through fmall pipes like fyringes, to what length or thicknefs they pleafe; fo that from the refemblance of its figure to fmall worms, it is called vermicelli. Some of this kind of pafte they make in the fhape of ribbands, of two fingers breadth, and this they call kagne ; other parcels of it are formed like a quill, and thofe they call macaron; and fome in fmall grains like muf-tard-feeds, which they call femoule, the name by which they call the finer flour they compofe it of: and finally, fome in the fhape of beads, which they call patrer. They colour this pafte as they fancy, with faffron or other things, and fometimes make it up with the yolk of an egg, fugar, and cheef. Of late years this is made at Paris, and ufed in foups and broth, as in Italy, Provence, and Languedoc. The white vermicelli ought to be new made and as white as poffible, and the yellow of a fine golden colour, the drieft and the neweft made which can be got.
Starch is made of the fæcula of wheat flour, which the flarchmakers form into cakes and dry in an oven, or by the heat of the fun. This ufed to be brought into France from Flanders and other countries, but at preent that (if we can believe the French) which is made at Paris furpaffes that of all other places, and they tranfport from thence great quantities into other parts of France, and feveral neighbouring countries.
We ought to chufe ftarch for being white, foft, and mort fubject to crumble, likewife fuch as has been dried in the fun, and not in an oven, which makes it of a greyifh white: its ufe is fo generally known that it needs no defcription.
Monf. Lemery fays, this plant bears its falk about three or four feet high, mucb thicker and frronger than that of wheat or other corn: the leaves are long, like the reed, and flefhy; the flowers blow on the top like barley, but the feed which follows is difpofed in clufters, each of which is enclofed in a yellow hurk, ending in a fpiral thread. This feed is oblong, or rather oval, and white: the plant is cultivated in moit or low grounds in Italy, and the feed brought dry from Piedmont, Spain, and feveral other places: its chief ule is for food, but is fometimes made ufe of in phyfic: it nourifhes well and ftops fluxes, therefore is good in armies, camps, and fieges, becaufe it is of light carriage and excellent fuftenance, and eafily prepared; it increafes blood, and reftores in conlumptions: it is made into frumenty by boiling in milk, or, for want thereof, in water; or into cakes with water or milk, and fo baked dry; and is excellent good in broth, with any kind of flefh.
Befide the other ufes of rice, there is an excellent firituous liquor made from it, which the people of Peru call acua, and we, from a wrong pronunciation of the word, arrac.

## R E M A R K S.

6 The firft origin, fays a late French writer, of rice plantations in Carolina, was purely fortuitous; a hhip on its return from the Eaft-Indies happened to be caft away on the coalt of this colony, feme bags of rice being taken out of the hip, a trial was made of fowing them, which fucceeded beyond expectation; and this cultivation has been fo improved, that for fome time paft, one year with another, fifty thuufand barrcls of rice are fent from thence to Europe, each weighing about

## R I C

Four hundred pounds, and at leaft worth from 50 to 60 s. per barrel, and often more ; confequently, at only 50 s. the barrel, here is a fum of 125,000 l. fterling, and the greateft part of this rice is re-exported to foreigners, which is an additional advantage to the Englifh; befides that, like tobacco, it employs a great number of dhips.
For the firft encouragement of this commerce, the government of England laid a heavy duty on foreign rice, exemptthat of its own colonies; but the cultivation of rice oming to be thoroughly eftablifhed, it was made fubject to a duty. See the Business of the Customs, at the end, of P. PLANTATIONs.] And this duty includes only the rice for home confumption, the tranfportation of it from the colonies all over the Mediterranean, and Spain and Portugal, being permitted, on condition that the fhips fhall directly return to England.
Thus the Englifh traders are enabled to fell their rice cheaper than that brought from the Levant, formerly a great market for it; but now, by the wifdom of the Englifh, this trade is at a very low ebb.
If thefe laws ftood in need of any addition, it is a difpenfing claufe in the return of fhips to England, when the owners intended to fell them, the fale of fhips in England being fuch a confiderable branch of commerce, that it is highly the inteeft of that nation to facilitate the means of felling them, for the greater encouragement of building more.
from north to fouth the Englifh are in poffeffion of a chain of colonies, reaching to Spanifh Florida, and very advantageoully fituated for trade and navigation. Our poffeffions, indeed, are of larger extent, ftretching themfelves without bounds *, up the country, where they inclofe all the Englifh ettlements, and the Spanifh in Florida; our colonies may be faid to form a kind of a bow, of which thofe of the wher two nations are the flring.

* Obferve the Frenchman !!Their colonies in North Anterica are boundlefs, fo many of their map-raakers fay; and if their minifters thould be of the fame opinion, what will it avail England to treat about limits, if none fhall be acknowleged? See the article Map, and our article British America. See alfo the articles Canada, Colonies, louisiana, Mississippi, North Carolina, and Plan tations.
The Englifh colonies, continues this writer, in thefe parts, are Nova Scotia, New England, New York, Penfylvania, the two Jerfeys, Maryland, Virginia, Carolina, and Georgia: there different colonies have their refpective government both civil and military; they are independent and feparated one from the other, but the fubjection of the military government, in regard of the civil, will be an eternal bar to any Coalition of their forces for acting harmonioully under one chief*.
* Under the feveral heads before referred to, we have endeavoured to hew the abfolute neceffity of a coalition of forces, and a union of power among our Britifl colonies in North America, before the laft war, as an effectual barrier againft the fhameful incroachments which the French had been many years making in that part of the world; all which camb to pass: and I had the unfpeakable fatisfaction to obferve, that fuch union of forces and. power which I had done myfelf the honour to point out and zealoufly recommend, was adopted by his late Majefty's councils.

Every country being governed by its own inhabitants there, mind only themfelves, with little or no concern about their neighbours ; it is not the authority of the governors, or even of the king himfelf, which, without the confent of the affembly of a colony, can march its troops and militia to the affiltance of any cther which may be attacked; particularly the New England people have carried matters fo far, as to make their governor dependent on'them for his revenue; and on fome differences between them and the king's council concerning their governor, they had the confidence to fay, it was little confidered that this colony afforded an hundred thoufand men capable of carrying arms *.

* Certainly this French feribbler could have fuch intelligence only from fome of his Popinh emiffaries, who are reftefs in fowing the feeds of confuiion, as well in Britifh America as in the mother country.
The military power of a country, where there is fuch a flender fubordination, is little to be feared; yet is it the only one which might be formidable from the great number of the inhabitants, did not their inclination tend rather to be pirates * than foldiers; befides, in every point of the military govermment, it is certain, that we are vafly Superior to the English $\dagger$.'
* What an impudentand groundlefs reflection does this Frenchman make upon our North Americans 1
+ If this be true, as we have now reafon to believe, we doubt not, but from the wifdom of his Majefty's councils at prefent, that the feene will foon be changed, and that our

## R I V

brave North Americans will be as fuccefsful againf the French on the main, as they were at Cape Breton, and that he confequences of their fuccefs may prove more fatisfactory to them in the prefent, thian in the former cafe.
The reader is defired to obferve here as well as elfewhere, that the author wrote this before the laft war, and the laft Treaty of Prace, and judges it more fatisfactory to remain as it does; it giving an infight into the hiftory of the times, and fhews better the nature of the laft peace.

In an act of parliament paffed anno regni Geo. If. tricefimo tertio, intituled, An aet for gran ing liberty to carry Rice from his Majefty's province of Carolina in America, direetly to any part of Europe fouthward of Cape Finifterre, in thips built in, and belonging to, Great Britain, and navigated according to law ; which was to be in force for five years from the 29th day of September 1730, and from thence to the end of the then next feffion of parliament; and alfo an act made in the eighth year of the faid reign, to continue the faid act from the expiration thereof, till the 29th of September 1742, and from thence to the end of the then next feffion, and so extend that liberty to the province of Georgia in America; which faid acts, by feveral fublequent acts made in the $15^{\text {th }}$ and 16 th, the 20th and 27 th years of the faid reign, were further continued from the expiration thereof, till the 2gth of September 1760 , and from thence to the end of the then next feffion, thall be and the fame is hereby further continued from the expiration thereof to the faid 2gth of September 1767, and from thence to the end of the then feflion of parliament.
RIVERS. Navigable rivers are of fuch important ufe in a trading nation, that it is quite needlefs to fay any thing in general upon that head: we fhall, however, take notice of fomething particular in regard to this matter, that feems to merit the public attention.
The ingenious $\mathrm{Dr}_{\mathrm{r}}$ Congreve, late of Wolverhampton in the county of Stafford, after many years obfervation on the cuuntry between the Severn and the Trent, fommed a delign of uniting thofe rivers, and was at the labour and expence of meafuring and calculating every part of the levels in that diftance; and hath publithed this proof of his ingenuity, without fearing the reproachful name of projector, ufually beffowed by the ignorant, on all thote who attempt any thing new for the fervice of mankind. He hath thewn, by comparing it with other works of the fame kind effected in other countries, that this defign may be executed without any very great difficulty or expence; and the mill and forges on the canal.and the navigable rivers and fluices will be mutually ufeful to each other, according to the modern way of conducting improvements of this nature.
The expence will appear lif's confiderable than may be generally fuppofed, by comparing it with works of this kind a!ready executed; and might be lefs fo, by employing the army on this undertaking, giving them a realonable addition of pay.
By the account kept of the expence of cutting the new canal at Chefter, in the year 1735, it appeazs that a canal dug Ioo feet wide at top, 6 feet deep, and 60 wide at bottom, coft 28 s. every ten feet, which amounts to 7391.4 s . per mile; that the expence of that canal 20 miles, did not exceed 17,000 I: But here a canal of half thefe dimenfions will anfwer all purpofes, and will not be half the expence. A barge 120 feet long, 15 feet broad, containing 1800 fuperficial feet, and drawing 2 feet water, is equal in weight to 3600 cubic feet; each foot cubic weighing $7^{\circ}$ pounds, amounts to 252,000 pound weight; this barge, if draun with fix horfes, will carry 126 tons, with two feet water, or very little more. If this fcheme be completed, it will make a paffage by water from York to Briftol, acrofs the middle of the kingdom, where moft of the heavy goods are made or produced. Timber, coals, lead, iron, miliftones, lime, alabaiter, marble, Birmingham, and all other wares made in the kingdom, would be carried to all parts at a cheap rate. What advantage this will be to the land-owners, as well as to trade, I need not mention. But fo beneficial a fcheme, fo clearly ftated, merits the regard of the public.

The diftance and fall of the water from Alderlley to Burton upon Trent, is as follows:

Miles, Fur. Perch. Feet. Inch.

From Alderfley to Newmill is $\begin{array}{llllll}2 & 1 & 25 & \text { Fall } 20 & 20\end{array}$ | Thence to Penkridge | - | 8 | 3 | $3^{6}$ |  | 68 |

From Preftood to Severn - 1308
Total 26 \& 8
$104 \quad 6$

## R I V

In which fpace are 25 mills and forges.
Length of the whole, 70 miles, 29 perches; fall both ways, 475 feet.
There are upon the whole length of the faid water 42 mills and forges, which, by late improvements, will be a great help to make the rivers navigable, without any damage to the mills.
The fall of the water in the canal betwixt Peterfburgh and the Wolga, in Ruffia, both ways (that is, eaft and weft) is 555 feet, which is more than the fall of the water of this canal by 80 feet. Vid. Capt. Perry's Account of Ruffia. In 475 feet (the fall of the Penk and Smethftall) are 158 yards, I foot, which will require 32 locks, wears, and turnpikes, each lock, \&c. being 5 yards high; which is not equal in number to the locks upon the river betwixt Letchlade and London, which, in $13^{8}$ miles, hath $3^{6}$ locks, wears, and turnpikes.

## A canal from Severn to Trent, may be made, viz.

Sixteen thoufand acres are in a fquare whofe fide is five meafured miles: fuch a fquare feems to be betwixt Efington windmill, the head of Chillington mill-pool, and the tops of Wrottelye-park, Tettenhall-wood, Wolverhampton, and Biffhbury-hills.
Seven brooks arife from the fprings and rain-waters that fall on thefe 16,000 acres, and may all be drawn into a magazine in the moors betwixt Tunftall and Penford.
Five or fix hundred acres will be in this magazine, if a dam of 24 feet high be made betwixt the new mills at Penford and the hill, in which the ftone-quarry, and another at the new bridge of Tettenhall, 10 feet high.
Tweive miles or lefs will be the length of the canal from Tettenhall to Preftwood, where the Smethftall meets the water from Stourbridge, and fo goes to Severn.
Eight miles or lefs will be the length of the canal from Penford to Penkridge, from whence the river will eafily be made navigable to Burton: the land-floods of thefe 16,000 acres, that now are hurtful to mills and forges, by this magazine will be made ferviceable.
Seventy-one market-towns and cities may trade by this canal. More may be added.
Two brooks run into the pool at Gofebrook-mill, from whence the water will run both into Severn and Trent, whenever the miller pleafes.
Five brooks only feed the magazine of St. Feriol in Languedoc, which hath 595 acres in it, and fupplies a canal 64 French leagues long. See Philof. Tranfact. No. 56.
Two millions and fifty thoufand acres in the three counties of Stafford, Derby, and Leicefter.
Twenty-four miles inland navigation only to thefe three counties.
One market-town only out of forty hath navigation in the three counties.
Two hundred and fifty thoufand pounds per ann. got by wa-ter-carriage in the fame quantity of land in the feven Dutch provinces.
Two thoufand fix hundred and twenty-five miles is the length of the fifteen Roman roads in England and Wales, many parts of which are fpoiled for want of inland navigation.
One thouland pounds per week loft out of the iron trade within fix miles of Dudley-caftle.
One thoufand tons of coals might, perhaps, be fold every week more than now are in the three counties, and as many of lead, lime, iron, fone, timber, marble, fullers-earth, wool, \&c. if a canal were made betwixt Severn and Trent by Penk and Stour; then clothiers might trade from Burton to Kinfare, and fo to Bridgwater, \&c.
One tenth of the wafte land of the three counties inclofed, will be worth 10,0001 . per ann. at 4 s . per acre, which will make a canal, and keep poor vicars; this canal will make an ealy and cheap carriage betwixt the weftern and northern clothiers, and bring finh living, in well-boats, to fupply thefe three inland counties.
300,000 I. per ann. is, fays Sir William Petty, the charge of the land-carriage in Engtand, one third of which might probably be faved, if this canal were made betwixt Severn and Trent, and another betwixt Severn and Thames by the Bath river, and market-towns have corn, cheefe, \&ic. carried cheaper than by horfes, and 2000 l . per week might be added to the wages of the labourers in hufbandry and manufactory, the money faved by water-carriage.
Nine parts in ten of the product of all tilled lands are owing to the labour of men and horfes, fays Mr. Locke, fo that to take off many men and horfes from humbandry, to land-carriage, muft be a vait damage to bufbandry, and no fmall damage to the roads.
Two miles and a half or more is the length of the magazine in the moors hetwixt Newbridge and Penford on the weft fide of it, three miles the length of it on the eaft fide: it may contain 456 acres.
Fifty acres more might be added to it, by placing one fluice on the Dam-mill brook out of the boggy lands betwixt Barnhurft and Cronkwall, and one other lluice on the Mofely brook, out of the boggy lands betwixt Penford-wood and

Manfell-Newhoufe, upon the road betwixt Wolverhampton
and Stafford.
More magazines may be made on the brooks that come out of the foreft of Cannock, 8xc. which woukd fall into the canal, though not inco this magazine.
Seven mills upon the brooks that would come into there moors, to jom the Barnhurtt brook, viz. Chillington mill Dam-mill, New-mill, Seawall-mill, Gofebrook-mill, Tun, ftall-mill, and Fordhoufe-mill, all which depend upon fprings, and have but fmall pools, except one.
If the rains on thefe 16,000 acres that come into thefe moors betwixt Newbridge and Penford are 36 inches, which is lefs by fix inches than the rains of Lancafhire and Chefthire, which join to part of Staffordihire, they are more than the rains of Lifle by one third, for the rains are but 24 inches which help their canal and that of Mardyke; and almof, double to the rains of Paris, which are ig inches, and perhaps to thofe of Briare, which help to fill the canal betwixt the two rivers of Paris and Orleans.
The rains on thefe 16,000 acres will probably fill this magazine 12 times per ann. 2 yards deep.
The depth of rain-water, if it were to flagnate on the earth, would amount, one year with another, at Townley in Lanncafhire, to 42 inches and a half, at Upminfter in Effex 19 inches and a quarter, at Zurich in Switzerland 32 inches and a half, at Pifa in Italy 43 inches and a quarter, at Panis in France 19 inches, and at Lifle in Flanders 24 inches.
Forty acres allowed to each canal and its locks, fo that the magazine of 500 acres will fill both the canals, and their locks, being 80 acres, five or fix times before it is emply once.
N. B. That the rains on the weft fide of England are double to thofe on the eaft fide, and that this magazine will not be 40 miles from Weit-Chefter.
If, this canal were made, and two or three more, it is very probable that the fame number of working horfes and their drivers now employed in England, working the fame number of hours every day, may improve the produet of the lands of England to be worth $1,000,000 \mathrm{l}$. of money per ann. more than they are now. For the horfes that might be fpared from carriage on the roads, as alfo thefe that carry corn, \&c. to markets, might carry marle, lime, \&cc. which now ie ufelefs in the earth, for improvement of land, to make them produce much more corn and grafs, than they now do.
Observations concerning the Rrvers betwixt Oxford and Bath.

Sir James Long'sobjections were made new in 1683-4, which are faid to be anfwered in 1664 by Mr. Aylyffe, Mr. Smith 8ec. who were for an inland navigation betwixt Avon and Ifis, by a cut to be made from Malmfbury to Summerford upon Ifis near Cricklade.
Sixty thoufand pounds computed by Matthews and Bafkerville to be the charge of the, canal from Briftol to Oxford, though there may be rocks to be cut through.
Three pounds per ton the price of carriage by land, and twenty ihillings per ton by water, from Oxford to London. Mr. Hill and Mr. Rowland Vaughan'were faid to defign this in queen Elizabeth's time.
Judge Vaughan propofes projectors to be hanged that did not finilh any navigation undertaken by fubfeription, if they milapplied the money.
From Cricklade to Purtonitalke one mile and a half, thence to the foot of Purtonhill one mile and an half, thence to Brinkworth betwixt Summerford and Malmbury to fall into the Avon feven miles. Here may a canal be cut.
A boat might pafs from London to Briftol in ten days.
The bill faid to pafs the commons, but flopt when twice read, with the lords.
Cromwell faid to offer 20,0001. at the Navy-Office to join the city of London in this defigned cut.
Matthews dedicates a book about it to king Charles II. ann. 1670.

Vid. Mr. Fridour's book, 1672 , of the Languedoc canal; and Philof. Tranf. No. 56. where is a map of it.
Mr. Collins fays, that from canals to water grounds frinkled with falt is valt profit.
Capt. Matthews had a private feal for the cut granted to him, as he fays, by king Charles II.
Thirty-fix locks, wears, and turnpikes, are upon the river Thames betwixt London and Letchlade, by which navigation London receives the provifions of feven counties, and fend its merchants goods to them.
It is humbly fuppofed, that the fame number of locks, or fewer, may make good this navigation betwixt Severn and Trent, and carry the provifions and manufactures of feven counties, or more, to above 70 market-towns and cities.
Ninety-three miles Engliih is the Iength of the canal begun betwixt the Don and the Wolga, to make a communication betwixt the Cafpian and the Euxine Seas.'
The Ladoga canal defigned for the ufe of Peterburgh 460 Englifh miles long, the fall of the rivers that fall into the Wolga 110 feet, of thofe that fall into the Neva (upon which Wolga 110 feet, of thole that fall into the Nea (upon whic
another dock is to be made) 445 feet fall. Total 555 .

Vid. Capt. Perry's Account of Ruffia.
Four hundred feventy-one thoufand one hundred and fiftyfour men were employed to cut a canal to draw down the lake of Mexico. Vid. Collection of Travels, Vol. IV. page 53 .

## REMARKS.

Under our article France, we have flewn what advantages the trade of that nation derives from the great plenty of ri-ver-navigation that runs through mof parts of their provinces. The convenience of communication, the facility of carriage for the natural productions and manufactures to the fea, are two objects of great importance for a kingdom of fo vaft an extent as that of France. Its principal rivers, the Seine, the Leire, the Garrone, the Rhone, with the others, that run into them, are an advantage it owes to nature. Its induftry has added to it Navigable Canals, admirable for the immenfity of the work, and for the profits the commerce draws from them. Such is the canal of Languedoc, by means af which Riquet eitablifhed a commodious communication between Bourdeaux and Marfeilles, that is to fay, between the ocean and the Mediterranean: fuch the canals of Orleans and Ariare, between the countries watered by the Seiae and Laire; not to mention other canals, and projects for rendering rivers navigable, the carrying of which into execution will have refpectively their ufe and advantage.
The Dutch too have'an infinite number of rivers and canals, running through the whole feventeen provinces [foe the article United Provinces], fome in every part; and as all thefe rivers and canals are navigable, fo this river-navigation is fo confiderable, articularly in thofe provinces, that it is faid, abave 50,000 men are conftantly emplayed upon them in the dominions of the States-General; who being all ufed to the water, make good feamen on occafion. By mean of this river-navigation, the Dutch carry on a great and beneficial commerce with Germany and France, and even as high as Switzerland.
In this they may be faid to have no rival: the trade up the Maefe and the Rhine is, as it were, their own, and through them they trade into all the navigable rivers, which flow into them; by the means of which, the Dutch enjoy a full comimerce on both thofe great ftreams, and poffers the trade of all the countries through which they flow; and by the Danube, which begins to be navigable near the Neckar, they have likewife a trade down that river into Bavaria, and even to Vienna itfelf.
The Spaniards are endeavouring to improve their river navi-gation.-The great importance of making the river Ebro navigable, has been recommended to the court of Madrid by an able minifter. It is intended, it feems, to make that river more navigable from Navarre, or even higher up, down to the very alfaques of Tortofa, where it runs into the Mediterranean. By this means, the fuperfluous commodities and fruits of the feveral countries which this river tese verfes; may be conveyed at an eafier charge, and their traffic on that account facilitated; and many other benefits procured; without any real expence, as the principal difficulties are at prefent furmaunted, infomuch that flat-bottomed veffels frequently pafs from the neighbourhood of Tudela to Tortofa, and even to the fea, laden with gunpowder, bombs, granades, artillery, and other military ftores, manufactured in Navarre, as alfo any other commodities, that want carriage thither; though the navigation bas its difficulties, efpecially at the water-fall of Flix, where they are at the charge and trouble of landing the goods, and putting them aboard again. But this, and the other inconveniencies, they fay, may be eafily removed, as we have feen, in Flanders, France, and Holland, much greater furmounted by means of flood-gates, fluices, and other contrivances. If the navigation of this river fhould be made more eafy, the Spaniards may go up and down the river with common veffels, which will not only promote the mutual commerce of the feveral provinces of Spain, and that which might be carried on abroad, but alfo ferve for the tranfort of all the materials neceffary for the navy; and the above ftores of war, together with wheat, barley, and other fupplies for the army, and his Majelty's garrifons, to the faving of millions of dollars, which have been expended in that kingdom, by carrying them, as they have done on feveral occafions, either upon horfes or in waggons. And,
By erecting of new fhip yards in the alfaques, they propofe to themfelves other advantages. For as they will be fituated at the mouth of the river Ebro, they happen to lie in the very paflage of the mafts, planking, and other timber, which being cut down in feveral parts of the Pyrences, and conveyed by different roads, and fimall rivers into the Ebro, they may be brought down to the ports of the Mediterranean and the ocean. And if fuch quantities of naval ftores in general be detained in the alfaques, as fhall be worked up in the propofed new thip-yards, there will be faved the expence and rifk of tranfporting them to Calabria, and the four towns, as has been done, making a coarting voyage of above 500 leagues; fo that the way will be fo much fhorter than when they carry them to thefe parts, fubject to the expence and hazard above-
mentioned. By this meafure the Spaniards propofe to procure many able hands from the neighbouring provinces tor their new dip-yards, and thereby have fuch kinds of works eftablithed inteveral places: they will, by this means, alfo be enabled to improve and fecure the building and fitting out of men of war and merchant-men, while at the fame time it will be eafier to man the flips upon thefe coafts, that as foon as they are fnimed, they might fail to the ports of Andalufia, or other parts, that chould be thought proper ; fince, even for the few hat have been lately built in the yards of Calabria and the four towns, it is well known, that after great delays and experfe, the Spaniards could procure but a fcanty number of hands in thope provinces to man them for fofhort a trip as to Cadiz.-This is a fpecimen of what the Spaniards are about in regard to the engreafe of their river-navigation.-And we might meation mare inftances of feveral powers in Eutope, who, for the benefit of their trade, are purfining the like meafures. No one need be informed of the unfpeakable benefit arifing to trade from the fiver-navigation on the continent of America. The Lquifiana, as the French have chriftened Florida, a vaft country watered by the river Mififipi, and by a multitude of other fivers, yield the French at prefent more than bare promifes, as we aro likely foon to expericnce to qur coft, unders they iball be effectually checked in their career : nor is the fame of lefs utility and importance in Afia, It cannot be fuppofed, but that in a country of fuch an exceeding extent as China, and fo very populous, thero muft be a communication of the product of one province with another, and that this muft occafion a very great trade amang them ; and, indeed, it is fo to a wanderful degree, as well by land-carriage as by iver-navigation; and efpecially by their canals, of which the royal canal in China from Canton to Pekin is the wonder of the world.
Their river-navigation is exceeding great; the two tivers of Kiang and Hoang are known to bo navigable, the firft above 1200 miles, the latter 700 miles. The great take Phujang is faid to be 300 miles in circumference, and has great flips failing in it. Some exaggerating authors raife there things up to impoffailities, and tell us they have $300,000 \mathrm{fhips}$ and barks, and that it is ordinary to fee 30,000 veffels on the river at Nanquin at once, befides fuch as are continually going and coming upon bufnels.
Certain it is, there is a vaft inland commerce among them, the product of the refpective provinces requiring it : far as the feveral productions are extremely different, fo the diftant provinces call for thofe things in trade which they have not of their own, and which are the product of the provinces moft remote. Thus the carrying and recarrying thofe productions, whether for fubfiftence or for merchandize, neceffarily requires all poffible affiftance of boats, horfes, and men; and this occafions the extraordinary circulation of their trade. For example.
The beft and fineft filk is found in the province of Chekiam, or Chekaing, lying fouth of Nanquin, the country being fpread aver with forefts of mulberry-trees. The chief city of this province is Hamcheu, a place full af the people employed in drawing or fpinning the filk from the worms, and doubling it again, fo as to make it fit for the throwfter's mill: alfo they tell us there are 10,000 throwffers, ar twifters of filk, here. To this city there is a navigation by 17 canals or rivers, fome reaching to one river, fome to another: fo that the filk is, or may be, tranfported by water-carriage to all the great cities and fea- ports in China; fome of which otherwife would not be able to carry on the manufacture of filk, without fetching the materials, at great charge, a long way by land.
It is from this city the raw filk is brought above 100 miles, to the fea port of Limpo, from whence the Englifh factory ieceive it, and bring a way great quantities of it to Europe. From this city it is likewife carried north to Pekin, and fouth to Canton, places diftant and remote, one above 700 miles one way, the other 600 miles another way; in both which cities, as well as in Nanquin (the greateft of them all) the manufactures work it up into the moft curious broad filks, and other manufactures, of which this comntry is fo full. Kiamfi is an inland province, full 300 miles from the fea, at the neareft diftance, and almoft 500 at the remoteft, yet it has the royal canal running through the center of it, in is paffage from Canton to Pekin: fo that, by this canal, there is a navigation quite through the province, and a communication of inland trade from fea to fea, as it may be called: that is, from Lamton Bay, or Langchang, as the Chinefe call it, to the bay of Nanquin, and the fea of Cang below Pckin, which is above 1000 miles.
In the north part of this province alfo is the great inland fea, or lake, of Phangu, or Fujang, which has 1000 very large fhips, or jonks, employed on it, and all the rivers in the province fall into it: they fay it is 300 miles in circumference, and empties all its waters into the great river Kouang, or the Blue River.
In this province, hies the great manufacture of china-ware; that is to fay, the fineft and beft is made here.
From hence, after great multicudes of people are employed in the labouring part, the goods are conveyed by water to all parts of the empire, and to all the feverai ports of Tonquin,

Canton,

## R I V

Canton, Amoy, Nanquin, Pekin, Chufan, Limpo, and from thafe ports to all the reft of the world.
This trade mult of neceffity employ not only a great many hands, but a great many veffels, boats, and barks, upon thofe canals, lakes, rivers, and feas : and it will not be wondered, were we to go over all the provinces in this manner, and view the inland commerce, by which 59 millions of people are faid to be fed, cloathed, and employed (for fo many they tell us the country contains): it will not, I fay, be wondered at, that the numbers of fhips, barks, and boats, are fo many, which are feen upon thofe rivers and canals.
The next province weft of this, and yet farther from the fea, is Huquam. The great river Koiang runs through the heart of this province; and the channel being very broad, and withal exceeding deep, the ftream is mild and gentle, and is therefore not only navigable for great fhips, but the navigation is very fafe and ealy.
Here is alfo another lake, or inland fea, larger than the former, being, as fome write, 400 miles in circuit, and in fome places 50 to 100 fathoms deep, on which there are very large fhips employed. All this is taken notice of, to thew that the inland trade of this country is exceeding great, by the means of river-navigation: for as this river is made ufe of to fupply the two populous cities of Chiccheu and Nanquin, in which are fo many millions of people, as well with provifions as with manufactures and merchandizes of feveral kinds, fo the trade muft be very great, and the number of veffels employed alfo very great; and it is certainly fo, for they tell us there are above a million of people taken up in the navigation of this one river only, and in the canals made from it to the neighbouring provinces, for the convenience of trade, including the two great lakes.
The product of this province is chiefly corn and rice, cotton and fifh; the latter is found in the great lake mentioned above in moft incredible quantities, which are carried down the great river to Chiccheu and Nanquin in boats, with wells to keep them alive.
The great quantity of corn and rice carried down to Nanquin, '\&c. is enough to keep a very great number of veffels conftantly employed, and no queftion it does employ fome thoufands.
But the navigation does not end here, the Koiang being navigable ftill further weft: for this river, which takes its rife in the mountains of Thibet, in the Great Mogul's country, runs above 500 miles, and is a very large river before it enters the dominions of China: fo that it is navigable to the fartheft weftera bounds of the Chinefe empire.
It is alfo very remarkable, how the navigation of this river reaching thus far, is particularly ufeful, and indeed neceffary to trade, becaufe in thefe weftern provinces of China, the heavy and bulky goods are chiefly produced, which could not be carried fo far as to the fea-fide or fea-ports, but by water. For example,
The province of Suchuen, or Suchen, lies weft, extended to che eaftern boundary of the kingdom of Thibet; and this great river runs through the heart of the province, and is diftant there from the fea near 700 miles.
In this province are found mines of feveral metals and minerals, which being heavy goods require water-carriage, or elfe could not be removed, except at an immente charge, to to great a diftance as Canton or Nanquin, or any of the feaport towns which lie fo far due eaft from them.
We have run over thefe provinces to fhew the inland navigation of the country, and the prodigious courfe of trade carried on by that navigation, which is the great occafion their produce and manufactures come fo cheap to the European markets. Which ought to be a prevailing argument with Great-Britain, to cultivate river-navigation to what extent they are able, in order to anfwer the fame wife and falutary purpofes. See the article Roads.
ROADS. The repairs, amendment, and prefervation of the roads of this kingdom, is certainly a public good work, well worth the conftant attention of the legillature; and, by virtue of acts of parliament, the public hath found great advantage from the improvements of the roads, and by the application of tolls collected at the turnpikes.
The firft is, that travelling might be rendered fafer, eafier, and pleafanter to gentlemen and others, upon their ordinary occafions; that this end is greatly anfwered, every one's experience will tell bim, who can remember the condition of the roads about $3^{\mathrm{o}}$ or 40 years ago.
The fecond is, the benefit accruing to our trade and commerce, by rendering the carriage lefs expenfive upen all forts of goods and merchandize: whether they are provifions of any kind, the immediate growth and produce of our lands, or whether any other forts of wares, which muft have conveyance by land.
That this good end hath alfo been greatly anfwered, will clearly appear, by comparing the former rates of carriage with what is nuw paid. Of this we fhall produce fome few inftances to the city of London only, that being the great mart, not only for provifions, but alfo for the various manufactures carried on in the feveral parts of the kingdom. Hither they are chielly brought, and from hence the fame car-

## R O A

rier loads back with fuch goods, as the feveral counties have a demand for, whether they be foreign or otherwife. Thofe who have made it their bufnefs to be rightly informed of this matter, have, upon enquiry, found that carriage in ceneral is now 30 per cent. cheaper than before the roads were amended by turnpikes: of which it may be proper to produce fome proois.
1f, From Birmingham to London it is faid there are not lefs than 25 or $3^{\circ}$ waggons fent weekly; $7^{\mathrm{s} \text {, per hundred was }}$ formerly paid, the price now paid is from 3 to 4 s . per hundred.
2dly, From Portfmouth to London the common price was 7 s . per hundred, the government paid fo in queen Anne's war ; and now only 4 to 5 s . per hundred is paid: and, in the late war, arms and watlike ftores for his Majefty's fervice were carried at the rate of 4 or 5 s. per hundred.
$3^{\text {djy }}$, From Exeter to London, and from other towns in the weft of like diftance, the carriage of wool and other goods is very great, efpecially in times of war.-12 s. per hundred was formerly paid, now only 8 s . per hundred: the fame may be affirmed with refpect to Briftol, Gloucefter, and the adjacent counties; the land-carriage particularly, in time of war, is very large, and the price of it is proportionably reduced. 4thly, Let us proceed now to another part of the kingdom, of lefs diffance from the metropolis, and fee what is the difference between the prefent rates of carriage, and thofe which were ufed to be given: from the woollen manufacturing towns in Eifex to London, 2 s .6 d . was formerly paid for a double bay, but now only is. 6 d.; a fingle bay paid formerly is. 6 d . is now reduced to 6 d . and 8 d . a pack of wool, weight 200 , paid formerly 6 s. now only 4 s.
5 thly, Butter from Cambridge to London, the produce of the ifle of Ely and county of Norfolk, from whence about go,000 firkins are brought yearly, was formerly from 18 d . to 2 s . per firkin, and is now but 14 d . More inftances might be produced, but thefe may be fufficient; and from thefe it may be inferred, that the reduction in the price of carriage is general from all places. To fet this matter in a till more ftriking light,' it may not be improper to defcend to an exacter fcrutiny into this matter. Wherefore to begin in the order wherein we firft fet out.

From Birmingham to London, viz.
15 Tons of goods formerly fold at 7 s . per hundred coft 1.105 ${ }_{15}$ Tons now at 4 s . per hundred coft only
Saved 31. per ton 45
From Exeter to London.

And now let us enquire from whence the faving in land-carriage, fo great a banefit to trade, arifeth; no other caufe, we conceive, can be reafonably affigned, than that, fince the amendment of the roads by turnpikes, our carriers are enabled to draw greater weights, with the fame number of horfes in one carriage, than they formerly could do. Todemonftrate this, we fhall bring an example or two: the roads in general were formerly fo deep and bad, fo full of holes and floughs, that a team of fix horfes could fcarce draw from any place of 60 miles diftance, or upwards, above 30 hundred weight of goods; whereas the fame team can now draw with more eafe 50 or 60 hundred.
Suppofe from Birmingham, or any other place of equal diftance,

Again, fuppofe from Exeter, \&c.
That formerly fix horfes could draw 40 hundred of \}1. 24 woollen goods, at 12 s . per hundred, is
Now 6 horfes can draw 60 hundred at 8 s. per hundred 24

## R O A

From there inftances it is extremely evident, that a team with fix horfes can now draw 20 hundred more than they could do formerly; that the price of carriage is, for this reafon, proportionably reduced, and the public, or trade and commerce, have the immediate benefit of it.-In provifions, as wheat, meal, malt, butter, and cheefe, \&cc. the farmer and landed intereft generally have the benefit of thefe favings. In all our manufactured grods, the public have the benefit of them, whether they are ufed at home or exported. The cheaper the maker can get his wares to market, the cheaper he muft and doth fell them : of this every merchant and trader is fully fen-fible.-It is a known maxim in commerce, that the lefs it is burthened, or the eafier the conveyance both at home and airoad, the more extenfive and beneficial it will certainly prove. I have thewn above, the general benefit that the nation reapeth from the improvement of our roads by turnpikes. I fhall not proceed to point out whence it is, that the farmers and traders apprehend fo great a burthen upon trade, from the late act of limitation; whereby no waggon, \&c. thall be drawn with more than five horfes, unlefs up fteep hills, after the ift of July 1752: and the truftees or commiffioners of the turnpike roads, in their refpective diftricts, are required, on or before the 25th of March 1752, to erect weighing engines at the toll-gates, or elfewhere, upon their refpective roads; and that no waggon, \&cc. be fuffered to pafs through with above 60 hundred, the weight of the waggon, \&sc. included.
We fhall not enter into the merits of this act; there has been fcarce time to thew with what confequences it may be attended, and therefore we muft leave it to experience. If the article of carriage receives as great additional benefit by the laft principal acts, as it bas done by the eftablifhment of tolls and turnpike roads in general, the public will bave no reafon to complain.
However, be this as it may, the public will be no way relieved from the great expence attending the conftant amendment on the highways; and what traders may fave, in reSpect to the point of carriage, the public pays very amply for, I am afraid, for the repairs of the highways: and that expence falling upon the public in general, inftead of traders in particular, is only a feeming alleviation of the burchen; it remains fill a prodigious expence to the nation, from which, in as great a meafure as is poffible, they ought to be difincumbered, and that faviug, if it can be effectuated, will anfwer other public exigencies. All contentions about expedients to fave and preferve the roads by changing the manner of carriage, and laying peculiar reftraints thereon, do not appear to be ftriking at the root of the evil; for fuppofing that the roads by fuch expedients do wear out or decay one twelfth lefs than they did bofore fuch expedients are carried' into execution, yet, if the price of carriage is raifed one twelfth more from inconveniencies that the carriers may experience, we do not fee any great gain that will chereby accrue to the public in general.
The eflential point, we humbly apprehend, to be confidered, is, whether there is any probability fo to repair and amend the highways in general, that the weight of any carriages that have heretofore contributed to, or may hereafter contribute to, Jeflen the price of land-carriage in general, will do little injury to the roads in general, and confequently, after fuch work is gradually completed, will put the nation to very little expence in their conftant reparation, in comparifon to what now is expended by the public for that purpofe. This, we conceive, is the principal matter that deferves to be weighed and confidered: and although we do not prefume to offer any thing to the public confideration, that will effectually anfwer thefe defirable purpofes; yet we fhall give a fummary of what has occurred to us upon this occafion, with a view to fpirit up and excite others more capable, to put a matter of this general concern in fuch a light, as may appear more rational, eligible, and practicable than any thing that we can prefume to fuggeft.
Whether any thing of the nature of that which we fhall take the liberty to offer, may ever be practicable, might be tried by a fair experiment of five miles, or even of one fingle mile only, at the public expence; and if it fhould be found to anfwer in one mile, then it might be ferioully thought of to be made general, or laid afide. Nay, one hundred yards only, experienged in one of the moft public roads, through which the heayieft carriages pafs, would, perhaps, be fufficient to give this matter a fair trial. But this is not an experiment that has never been tried, it was long experienced by the ancient Romans; and as we feldom err in the imitation of their wife example, in many important particulars, the imitating them, perhaps, in regard to the management of their highways, fof far as it may be experienced to be practicable in this nation, may net be attended with lefs emolument and glory than in many other things, wherein we are fond, and even value ourfelves upon following their great and glorious example.
Nor do I pretend to have any merit in the propofal; it was, I undertand, many years fince drawn up by a public-fpirited gendeman, I fhall endeavour only to put the matter in fomehing of a different light, as being more accommodated to

VOL. II.

## R O A

the prefent times, by adding what may feem requifite, and curtailing what may be fuperfluous.
The Romans, while they governed this inland, made it on of their principal cares to make and repair the highways of the kingdom, and the chief roads we now ufe, are of thei marking out; the conlequence of maintaining them wa uch, or at leaft fo efteemed, that they thought it not below them to employ their legionary troops * in this work; and it was fornetimes the bufinefs of whole armies, either when in winter-quarters, or in the intervals of truce or peace with the natives.

* We know by experience in Scotland, what the foldiery can
do in this refpect.

If we lay afide the barbarity and cuftom of the Romans as heathens, and take them as a civil government, we muft al ow they were the pattern of the whole woild fer improvement and increafe of arts and learning, civilizing and me thodizing nations and countries conquered by their valour; and if this was one of their great cares, that confideration ought to move fomething with us. But to the great example of that generous people, we will add three arguments,
I) It is ufeful. And that as it is convenient for carriages, which in a trading country is a great help to negoce, and promotes univerfal correfpondence, without which our inland rade could not be managed.
(2) It is eafy. We queftion not to make it appear it is eafy, to put all the high roads, efpecially in England, in a noble figure, large, dry, and clean; well drained and free from flonds, unpaffable floughs, deep cart-ruts, bigh ridges, and all the inconveniencies to which they are liable; if not conftantly kept in repair in the common way, at a prodigious expence to the public; and when this is once done, much eafier ftill to be maintained fos at a very moderate and trifing public expence, in comparifon to the prefent annual one, raifed by toil, and other rates.
(3.) It may be cheaper; and the whole affeffinent for the repairs of highways for ever be dropped, or applied to other ufes for the public benefit.
The propofal is as follows :
Firft, That an act of parliament be made, with liberty for the undertakers, where it is wanted, to dig and trench, to cut down hedges and trees, or whatever is needful for ditching, draining, and carrying off water, cleaning, enlarging, and leveling the roads, with power to lay open or inclofe lands; to incroach into lands, dig, raife, and level fences, plant and pull up hedges or trees, for the enlarging, widen= ing, and draining the highways, with power to turn either the roads or water-courfes, rivers and brooks, as by the directors of the works fhall be found needful, always allowing fatisfaction to be firlt made to the owners of fuch lands, either by affigning to them equivalent lands, or payments in money, the value to be adjufted by judicious and indifferent perfons, to be named by the lord chancellor, or lord keeper, \&c. for the time being; and no water-courfe to be turned from any water-mill, without fatisfaction firft made both to the landiord and tenant.
But before we proceed, it may be neceffary to fay a word or two upon this article.
The chief, and almoft the only caufe of the decpnefs and foulnefs of the roads, is occafioned by the flanding water, which for want of due care to draw it off by fcouring and opening ditches and drains, and other water-courfes, and clearing of paffagts, foaks into the earth, and foftens it to fuch a degree, that it cannot bear the weight of horfes and cartiages ; to prevent which, the power to dig, trench, and cut down, \&c. mentioned above, will be of abfolute neceffity: but becaufe the liberty feems very large, and fome may think it is too great a power to be granted to any body of men over their neighbours, it is anfivered,
(I.) It is abfolutely neceffary, or the work cannot be effectually done, and the doing of the work is of much greater benefit than the damage can amount to. But,
(2.) Satisfaction is propofed to be made to the owner, and that firft too, before the damage be done, as an unqueftionable equivalent; and both together, I think, are a full anfwer to any objection in that cafe.
Befides this act of parliament, a commiffion muft be granted to fifteen, at leaft, in the name of the undertakers, to whom every county fhall have power to join ten, who are to fit with the faid fifteen, fo often and fo long as the faid fifteen do fit for affairs relating to that county ; which fifteen, or any feven of them, fhall be directors of the works, to be advifed by the faid ten, or any five of them, in matters of right and claim; and the faid ten to adjuft differences in the counties, and to have right by procefs to appeal in the name either of lords of manors, or privileges of towns or corporations, who thall be either damaged or encroached upon by the faid work: all appeals to be heard and determined immediately by the faid lord chancellor, or commiffion from him, that the work may receive no interruption.
This commifion thall give power to the faid fifteen to prefs waggons, carts, and horfes, oxen, and men, and detain thein to work a certain limited cime, and within a certain

8 N
limised
limited fpace of miles from their own habitations, and at a certain rate of payment: no men, horfes, or carts, to be prefled againft their confent, during the times of hay time, or harveft; or upon market-days, if the perfon aggrieved will make affidavit he is obliged to be with his horfes or carts at the faid markets.
It is well known to all who have any knowledge of the condition the highways in England in general would be in, without the conftant great expence we are at to repair them, that in moft places there is a convenient Distance of Land * left open for travelling; either for driving of catile, or marching of troops of horfe, with perhaps as few lanes or defiles, as in any counties: the crofs roads, which are generally narrow, are yet broad enough in moft places for two carriages to pafs; but, on the other hand, we have on moft of the high roads a great deal of wafte land thrown in as it were for an overplus to the highway; which, though it be ufed of courfe by cattle and travellers on occafion, is indeed no benefit at all either to the traveller as a road, or to the poor as a common, or to the lord of the manor as a wafte; upon it grows neither timber nor grafs, in any quantity anfwerable to the land; bur, though to no purpofe, is trodden down, poached, and over-run by drifts of cattle in the winter, or fpoiled with the duft eternally flying from the roads' in the fummer. And this may be obferved in many parts of England to be as good land as any of the neighouring inclofures, as capable of improvement, and to as good purpofe.

* A great quantity of this land has been unwarrantably incroached on, and inclofed within thefe 30 or 40 years; and if enquiry was made into the titles, I doubt not but they will be found very deficient.
Thefe lands only being inclofed and manured, leaving the roads to dimenfions with meafure fufficient, are the fund upon which the propofer would build the ftock of money that muft carry this defign into execution, without any expence to the public whatever.
Thefe lands, which we fhall afterwards make an effay to value, being inclofed, will be either faleable to raife money, or fit to exchange with thafe gentlemen, who muft part with fome land where the ways are narrow? always referving a quantity of the lands to be let out to tenants, the rent to be paid into the public ftock or bank of the undertakers, and to be referved for keeping the ways in the fame repair ; and the faid bank to forfeit the lands, if they, are not fo maintained. Anotber branch of the frock mult be hands, for a flock of men is a fock of money; to which purpofe every county, city, town, and parifh, fhall be rated at a fet price, equivalent to eight years payment for the repair of highways; which each county, \&c. fhall raife, not by affeffment in money, but by preffing of inen, hores, and carriages, for the work; the men, horfes, \&c. to be employed by the directors : in which cafe all corporal punifhments inflicted for mifderieanors, as of whippings, ftocks, pillories, houfes of corrections, \&xc. might be eafily tranfmitted to a certain number of days work on the highways; and in confideration of this provifion of men, the county fhould for ever after be acquitted of any contribution, either in money or work, for repair of the highways, building of bridges excepted.
There will, perhaps, lie fome popular objection againf this undertaking; the firtt is, the great controverted point in England of the Inclosure of the Common $\dagger$, which tends to depopulation, and injures the poor. 2. Who thall be juiges or furveyors of the work, to oblige the undertakers to perform to a certain limited degree.
+ If as much of common land had been inclofed, and the profits thereof applied to the repairs of the highways, as has been unjuftifably folen therefrom, the amount would have greatly, if not effectually, contribated to this good work.
For the firft, the inclofure of the common :'a claufe that runs as far as to an incroachment upon Magna Charta, and a moft confiderable branch of the property of the poor: I anfwer it thus:
(r.) The lands propofed to be inclofed, are not fuch as from which the poor do indeed reap any benefit, or at leaft any that is confiderable.
(2.) The bank and public ftock, which are to manage this great undertaking, will have fo many little labours to perform, and offices to beftow, that are fit only for labouring poor perfons to do, as will put them in a condition to provide for the poor who are fo injured, that can work; and to thofe who cannot, may allow penfions for overfeeing, fupervifing, and the like, which will be more than equivalent.
(3:) For depopulations, the contrary fhould be fecured, by obliging the undertakers, at fuch and fuch certain diftances, to erect cottages, two at leaft in a place, which would be ufeful to the work and fafety of the traveller, to which fhould be an-allotment of land, always fufficient to invite the poor inlabitantt, in which the poor thould be tenant for life gratis, doing duty upon the highway as Chould be appointed; by which, and many other methods, the poor fhould be great gainers by the propofal, inftead of being injured.
(4.) By this erecting of cottages at proper diffances, a man might travel all over England as through a ftreet which
might contribute, in fome meąure, to prevent robberies, and prove directors to travellers in their way
(5.) This undertaking once duly fettled, tright in a few years be fo ordered, that there fliould be no poor for the common and if fo, what need of a common for the poor ? Of which in its proper place.
As to the fecond objection, Who fhould oblige the undertakers to the performance?
(x.) It is anfwered, Their commifion and charter fhould be come void, and all their ftock forfeited; and the lands in clofed and unfold, remain as a pledge; which would be fecurity fufficient.
(2.) The ten perfons chofen out of every county, thould have power to infpect and complain, and the lord chancellor upon fich complaint to make a furvey; and to determine by a jury, in which cafe, on default, they fhall be obliged to proceed.
(3.) The lands fettled on the bank fhall be liable to be ex tended for the ufes mentioned, if the fame at any time be no maintained in the condition at firft provided, and the bank to be amerced upon complaint of the, county.
Thefe and other conditions, which on a legal fettlement to be made by the wiffom of the legifature, might be thought on, that I do believe would form a conftitution fo firm, fo fair, and fo equally advantageous to the country, to the poor, and to the public, as has not been put in practice in thefe latter ages of the world.
By theans of a grant of wafte, and almoft ufelefs lands lying open to the highway, we' may prefume to fay, thofe lands to be improved, as they might eafily be, together with the eight years affeffment to be provided in work mien, a noble magnilficent CAUSEWA Y might be erected, with ditches on eirhir fide deep enough to receive the water, and drains fufficient to carry it off; which CaU leaft; and from thirty to forty feet broad, paved in the middle, to keep it well cemented and cooped in, and fo fupplied with gravel, and other proper binding materials, a s flould fecure it from decay, with fmall occafional reparation.
We hope no man would be fo weak now, as to imabine that by lands' lying open to the road, to be affigned to the undertakers, we fhould mean that all Fínchiley-common, \&x fhould be inclofed and fold for this work: but left fomebody fhould fart fuch prepofterous objections, we think it is no improper to mention, That wherever a highway is to be carried over a large common, foreft, or wafte, without a hedge on either hand for certain diftance, there the feveral parifhes fhall allot the directors a certain quantity of the common to lie parallel with the road, at a proportioned number of feet to the length and breadth of the faid road; confide ration alfo to be had to the nature of the ground, or blife giving them only room for the road directly, hall fuffer them to inclofe in any one foot fo much of the faid common, as fhall be equivalent to the like quantity of land contiguous to the road: thus, where the land is good, and the materials for erecting a caufeway near, the lefs land may ferve, and on the contrary the more; but in general, allowing them the quantity of land proportioned to the length of the caufeway, and forty rod in breadfh; though where the land is poor, as on downs and plains, the proportion muft be confidered to be adjufted by the country.
Another point, in relation to the dimenfions of roads, fhould be adjuṭed, and the breadth of them, I think, cannot be lefo than thus:
From London every way 10 miles, the high poft-road, to be built full 40 feet in breadth, and four feet high, the ditches eight feet broad, and fix feet deep, and from thence onward 30 feet, and fo in proportion.
Crois-roads to be 20 feet broad; and ditches proportioned; 'no lanes and paffes lefs than nine feet without ditches.
The middle of the High Causeways to be paved with ftone, chalk, or gravel, and the beft-cemented matter that can be procured the neareft thereunto, and kept always two feet higher than the fides, that the water might have'a free courfe into the ditches, and perfons kept in conftant employ to fill up holes, let out water, open drains, and the like, as there fhould be occafion. A proper work, for bighwaymen, and fuch malefactors as might, on thofe fervices, be exempted from the gallows.
It may here be objected, That eight years alteffment to be demanded down, is too much in reafon to expect any of the poorer fort can pay; as for inftance, if a farmer who keeps, a team of horfes be, at the common affeffment, to work a week, it muft not be put fo hard upon any man as to work eight weeks together. It is eafy to anfwer this objection. So many as are wanted muft be had; if a farmer's team cannot be fpared, without prejudice to him, fo long together, he may fipare it at fundry times, or agree to be affeffed, and pay the affeffiment at fundry payments; and the bank may make it as eafy to them as they pleafe.
Another method, however, might be found to fix this work at once. Suppofe a bank be fettled for the highways of the county of Middlefex, which as they are, without doubt, the moft ufed of any in the kingdom, fo alfo they require the more charge, and, in fome parts, lie in the worft condition
of any in the kingdom, 'till the prefent great expence for their sepair took place.
If the parliament fix the charge of the furvey of the highways upon a bank to be appointed for that purpole, for a certain term of years, the bank undertaking to do the work, or to forfeit the faid fettlement. As thus:
Suppofe the tax on land and tenements for the whole county of Middlefex does, or thould be fo ordered, as it might a mount to 20,0001 . per annum, more or lefs, which it now doss, and much more, including the work of the farmers teams, which mult be accounted as money, and is equivalent to it, with fome allowance to be rated for the city of London, \&ac. who do enjuy the benefit, and make the moft ufe of the faid roads, both for carrying of goods and bringing provifions to the city, and therefore in reafon ought to conribute towards the highways; for it is a moft unequal thing, if a defign of this kind thould ever take place, that the road from Highgate to Smithfield-market, by which the whole city, is, in a manner, fupplied with live cattle, and the road by thofe cattle horribly fpoiled, fhould lie all upon that one parifh of Iflington to repair: wherefore we will fuppofe a rate for the highways to be gathered through the city of London, of 10,000 . per annum more, which may be appointed to be paid by carriers, drovers, and all fuch as keep teams, horfes, or coaches, and the like, or many ways, as is moit equal and reafonable; the wafte lands in the faid county, which, by the confent of the parifhes, lords of the manors, and proprietors, thall be allowed to the undertakers, when enclofed and let out, may (the land in Middlefex generally letting high) amount to 5000 l . per annum more. If then an act of parliament be procured to fettle the tax of $30,000 \mathrm{l}$. per annum, or eight years, moft of which will be levied in workmen, and not in money, and the wafte lands for ever: we may prefume toaffirm, that the highways for the whole county of Middlefex thould be put into the following form, and the 5000 l . per annum land be bound to remain as a fecurity to maintain them fo, and the county be never after burthened with any further tax for the repair of the highways.
And that we may not propofe a matter in random generals, like begging the queftion, without demonltration, we fhall enter into the particulars how it may be executed, and that under thefe following heads of articles:
(1.) What is propofed to be done to the highways.
(2.) What the charge will be
(3.) How to be raifed.
(4.) What fecurity for the performance.
(5.) What profit to the undercakers.
(I.) In regard to what is propofed to be done to the highways. We anfwer firft, to repair them, and yet, fecondly, not alter them, that is, not alter/the courfe they at prefent run. But perfectly build them as a fabric; and, to defcend to the particulars, it is firft neceffary to note which are the roads we mean, and their dimenfions
Firl, The high poft-roads; and they are, for the county of Middlefex, as follows:

Miles.
Stains, which is $\quad-\quad 15$
Colnbrook is from Hounflow $\quad-\quad 5$
From Londion to

And becaufe there may be many parts of the crofs-roads which cannot be accounted in the number above mentioned, or may eicape our knowledge or remembrance, we allow an overplus of 50 miles, to be added to the go miles above, which together make the crofs roads of Middlefex to be 140 miles. For the by-lanes, fuch as may be flighted need nothing but to be ditched up; fuch as are for private ufe of lands for carrying corn and driving cattle, are to be looked after by private hands."
But of the laft fort, not to be accounted by particulars, in the fruall county of Middlefex, we cannot allow lefs in crofs by-lanes, from village to village, and from dwelling-houfes which ftand out of the way to the roads, than 1000 miles. which itand out of the way to the road
So in the whole county we reckon up,
Of the high polt-roads Miles.
Of crofs-roads lefs public
$67^{\circ}$
Of by-lanes and pafles . . - $\quad 140$
1207
Thefe are the roads we mean, and thus divided under their feveral denominations.
To the queftion, What we would do to them? it is anfwered, (I.) For the 67 miles of high poft road, it is propofed to throw up a Firm strong causeway, well bottomed, weli cemented, and well built, fix feet high in the middle, and four feet on the fides, faced with brick or ftone, and crowned with gravel, chalk, or ftone, as the feveral countries they are made through will afford, being 44 feet in breadth, with ditches on either fide eight feet broad, and four feet deep; fo that the whole breadth will be 60 feet, if the ground will permit.' At the end of every two miles, or fuch like convenient diffance fhall be a cottage erected, with half an acre of ground allowed, which fhall be given gratis, with is. per week wages to fuch poor man of the parifh as thall be approved, who thall once, at leaft, every day, view his walk, to open paffages for the water to run into the ditches, to fill up holes or foft places. Two riders fhall be allowed to be always moving the rounds, to view every thing out of repair, and make report to the directors, and to fee that the faid cottagers do their duty. (2.) For the 140 miles of crofs-road, a like CAUSEWAY to be made, but of different dimenfions, the breadth 20 feet, the ditches four feet broad, three feet deep, the height in the middle three feet, and on the fides one foot or two, where it may be needful, to be alfo crowned with gravel, and well cemented and built, as before; and Is. per week to be allowed to the poor of every parifh; the conitables to be bound to find a man to walk on the highway in every divifion, for the fame purpole as the cottagers do on the greater roads.
Pofts to be fet up at every turning, to note whither it groes, for the direction of Arangers, and how many miles diftant. (3.) For 1000 miles by-lanes, only good and fufficient care to keep them in repair as they are, and to carry the water off, by clearing and cutting the ditches, and laying materids where it is wanted.
This is what is propofed to be done to the roads; and what, if once performed, we fuppofe all people would own to be an undertaking both ufeful and honourable to the kingdom.
(2.) The fecond queftion propofed to be anfwered is, What the charge of all this will be?
Which is reckoned thus:
The work of the Great Causeway is propofed not to coft lefs than IOs. per foot, fuppofing materials to be bought, carriage and mens labour to be all hired ; which, for 67 miles in length, is no lefs than the fum of 17,6,880 l. as thes: Every mile, accounted at 1,760 yards, and three feet to the yard, is 5,280 feet, which, at ros. per foot, is 2640 l . per mile, and that again multiplied by 67 , makes the fum of $176,880 \mathrm{l}$. wherein is included the charge of water-courfes, mills to throw off water where needful, drains, \&c.
To this charge muft be added ditching to inclofe land for 30 cottages, and building $3^{\circ}$ cottages, at 40 l. each, which is 1,200 l .
The work of the finaller caufeway is propofed to be finifhed at the rate of 12 d . per foot, which being for 140 miles in length, at 5,280 feet per mile, amounts to 36,9601 .
Ditching, draining, and repairing 1000 miles, fuppofed at 3 s. per rod, for 320,000 rods, is $48,000 \mathrm{l}$. which added to the two former accounts, ftand thus:
The high poft roads, or great caufeway The fmall caufeway
1.

36,960
By-lanes, \&c.
36,900

1. 263,040

If I were to propofe fome meafures, continues the propofer, for the eafing this charge, I could, perhaps, lay down a fcheme how it may be performed for lefs than one half of this charge. As firft, By a grant of the court at the Old Baily, whereby all fuch criminals as are condemned to die for fmaller crimes, may, inftead of tranfportation, be ordered a year's work on the highways; others, inftead of whipping, a proportioned

5
time, and the like; which would, by a moderate computation, provide us generally a filpply of 200 workmen, and thofe coming in as faft as they go off; and the overfeers fhould make them work.
Secondly, By an agreenent with the African company, to furnifh 200 negroes, who are generally perfons that do a great deal of work; and all thefe are fublifted very reafonably out of a public ftorehoute.
Thirdly, Large carts and horfes to be bought, not hired, with a few able carters; and to the other a few workmen that have judgment to direct the reft: and thus, perhaps, the great caufeway might be' done for 4 s . or 5 s . per foot charge; but of this by the by.
Fourthly, A liberty to afk charities and benevolence for the execution of this work.
(3.) To the queftion, How this money fhall be raifed? I think if the parliament fettle the tax on the county for eight years, at 30,0001 . per annum, no man need afk how it fhall be raifed; it will be eafy enough to raife the money; and no parifh can grudge to pay a little larger rate for fuch a term, on condition never to be taxed for the highways any more. Eight years affeffment, at 30,000 l. per annum, is enough to afford to borrow the money by way of anticipation, if need be, the fund being fecured by parliament, and appropriased to that ufe and no other.
As to what fecurity for performances.
The lands which are inclufed may be appropriated, by the fame a\&t of parliament, to the bank and undertakers, upon condition of performance, and to be forfeited to the ufe of the feveral parifhes to which they belong, in cale, upon prefentation by the grand juries, and reafonable time given, any part of the roads in fuch and fuch parifhes be not kept and maintained in that pofture they are propofed to be, Now the lands thus fettled are an eternal fecurity to the country, for the keeping the roads in repair, becaufe they will always be of fo much value over the needful charge, as will make it worth while to the undertakers to preferve their title to them; and the tenure of them being fo precarious as to be liable to forfeiture on default, they will always be careful to uphold the caufeways.
Lafly, What profit to the undertakers? for we mutt allow them to gain, and that confiderably, or mone would undertake fuch a work.
To this it is propoled, firft,
During the exccution of this work, let them be allowed out of the ftock 30001 . per annum, for management.
Alfo, after the work is finihed, fo much of the $5000 \%$. per annum as can be faved, and the roads kept in good repair, let be their own; and if the Jands fecured be not of the value of 5000 l. a year, let fo much of the eight years tax be fe apart as may purchafe land to make them up; if they came to more, let the benefit be to the adventurers.
It may be objected here, That a tax of $30,000 \mathrm{l}$. for eight years will come in as fait as it well can be laid out, and fo no anticipations will be requifite; for the whole work propofed cannot probably be finifhed in lefs time; and if fo,

The charge of the county amounts to
The lands faved eight years revenue
2,40,000
40,000

1. 280,000

Whioh is 3,000 l. more than the charge; and if the work be done fo much cheaper, as is mentioned, the profit to the undertakers will be unreafonable
To this I fay, I would have the undertakers bound to accept the falary of 3000 l . per annum for management; and, if a whole year's tax can be 'pared, either leave it untaifed upon the county, or put in bank, to be improved againft any occation of building, perhaps, a bridge; or come very wet feafon, or froft, may fo damnify the works, as to make them require more than ordinary repair. But the undertakers thould make no private advantage of fuch an overplus; there might be ways enough found for it.
Another objection lies againft the poffibility of enclafing the lands upon the wafte, which generally bolongs to fome manor, whofe different tenures may be so cros, and fo other wife encumbered, that even the lords of thofe manors, though they were willing, could not convey them,
This may be anfwered, in genaral, That an act of parkiament is omnipotent with refpect to titles and tenures of land, and can empower lords and tenants to confent to what elfe they could not. As to particulars, they cannot beanfwered, ${ }^{2}$ till they are propofed; but there is no doubt but an act of parliament may adjuf it all in one head.
What a kingdom would England be, if this delign were effectually executed in all the counties of it! And yet I believe it is poflible, even in the wort. I have narrowly obforved, fays the propofer, all the confiderable ways in that impariable county of Sulfex, which, efpecially in fome parts of the Wild, as they very properly call it, of the county, hardly admits the country peqple to travel to markets in winter, and makes corn dear at market, becaufe itcannot be brought, and-cheap at the farmer's houle, becaule he cannotifometimes carry it to
market; yet even in that county would I undertake, fays he, to carry on this defign, and that to great advantage, if backed with the authority of an act of partiament.
I have feen, in that horrible country, the road 60 to 100 ards broad, lie from fide to fide all poached with cattle, the and of no manner of benefit, and yet no going with a horfe, but at every ftep up to the fhoulders, full of floughs and horre and covered with fanding water. It cafts them ind fums of money to repair them, and the very places that are mended would fright a young traveller to go over them. The Romans mattered this work, and, by a firm caufeway, The Romans maltered this work, and, by a firm caufeway, made
a highway quite through this deep country, through Dorking a highway quite through this deep country, through Dorking
in Surrey, to Stanfted, and thence to Okeley, and fo on to Arundel; its name tells us what it was made of, for it was called Stone Street, and many vifible parts of it remain to this day.
Now fhould any lord of a manor refufe to allow 40 yatds in breadth out of that road I mentioned, to have the other 20 made into a fair, firm, and pleafant caufeway over that wildernefs of a country?
Or would not any man acknowlege, that putting this country into a condition for carriages and travellers to pafs would be a great work? The gentlemen would find the benefit of is in the rent of their land, and price of their timber; the country people would find the difference in the fale of their goods, which now they cannot carry beyond the firf market town and bardly thither, and the whole county would reap an ad vantage an hundred to one greater than the charge of it. And fince the want we feel of any convenience is generally the firf motive to contrivance for a remedy, I wonder no man ever thought of fome expedient for fo confiderable a defect. - Thus far Mr Projector.

## R $E$ MARKS.

Ancient Rome * was the center of a great number of magnificent highways, which nun through all Italy: Reveral of them crofted the Alps, the country of the Gauls, the Pyrenees and the whole kingdom of Spain. One of them rearked from Rome to Lyons, from Lyons to Rheims, and from Rheims to the Cbannel; it was carried on again in GreatBritain, and continued as far as Scotland. That which cxtended as far as Byzantium [Conftantinople] was continued on the other fide of the Hellefpont, from Chalcedonia through Afta Minor, Syria, and Palettine, then winding through the Ifthmus of Seuez, which joins Afia and Africa, paffed through Egypt, as far as Syene, and thence into Ethiopia. There were others that ran along the coafts of Africa, from one end of it to the other; and hence pofibly the Romans, borrowed the model of their paved ways.

* See the Hiftory of the Highways of the Roman Eifipire, by Nicholas Bergier, counsellor at the court of Rheims; very curious and learned work, and too little read.

If we compare the remains of the Roman roads with the beft of our modern ones at prefent, we fhall find many of the former that have food firm and intire for above $\mathbf{i}: 00$ years, without any repairs, while ours want reparation two or three times, and oftener, a year.
If the Roman highways, through any neglect to mend them in time, are decayed and broken down in lome plages, th this time of day, yet there are feveral countries wbere they ftill remain whole and intire. The Appian Way; which was firft carried from Rome to Capua, and afterwards continued from Ca puato Brundufium, is ftill in good condition, though it has beerf a high road above rgoo years; and we have fome ways in feveral parts of. France, which have fubfifted upwards of 15 or 1600 years. Now it is to their particular fructure that we are to afcribe their long duration; which ftug ture was as follows: They firf of all laid open with a plough two parallel furrows; then the foldiers (for they were generally employed in the works of this kind in time of peace) carried away the light deofe earth that they found betwixt the furrows, and dug 'sill they came to a hard firm bottom: they then flled up the foffe, or bed which they had hollowed, with a more denfeand weighty matter; as for inftance, with a fort of hard fand, or grave), taken out of the rivers, or dug out of the quarries: this done, they rammed the whole hard down, andrfmoothed it withlheavy rollers; nor did they always end their work here, but pftentimes (ro facilitate the draining off the water, and to prevent any mud or dirt from foaking in, which would infallibly undermine and loofen the whole) raifed a terras, or caufeway, feveral feet above the level of the plain, confifting of tour layers, or ftories, of ftrong mafonry.
On the foundation of earth, which, as faid before, was firmly compacted and levelled, they fpread a covering of coment, made of lime and fand, or haffock, about an inch thick. The firft layer, which they placed upon the cement, was of large flat ftones, laid one upon another, ten inches high, and cemented together with well tempered mortar: the largelt ftones of all were ranged along the fides of the caufeway: this layer was called ftatumen.
The fecond layer confitted of ftones of a cubical, round, or oval figure, and of many rough irregular ftones, fometimes
mixed with pottherds and pieces of broken tiles and bricks; ill thefe were fpread with a fhovel over the firft coat of fones, and rammed down into the morter, which cemented them together: this fecond layer was about eight inches thick: this ayer was called rudas.
The third layer confifted of a foot of morter, not made of beaten tile, for that would have been too expenfive, but of chalk, fand, or haflock, mixed with lime, as any of thefe naterials were near at hand. This layer, which was fometimes called the pudding, or pap, though more commonly the nucleus, or kernel, filled up all the cavities or interfices in the inferior layers, and fettled into a hard level coat. The great difficulty we find in breaking it now, fufficiently proves how firm a fupport this was to the upper covering, efpecially when we confider the extreme hardnefs of the inferior ftrata, with which it is fo firmy incorporated, as to form one coma impenetrable body, capable of fuftaining the greateft weight imaginable: this layer was called nucleus.
The fourth and laft layer, which they called the cruft, fometimes confifted of great hard ftones, cemented together, as we find in the Appian Way; fometimes of gravel, or fmall fints mixed with gravel, as we find in moft of the Roman military ways *.

- Miffon's Travels into Italy.

The hardeft fones of all the free-ftone, and the largeft fort of fints, they referved for their towns. This layer was called fumma crufta.

## The fmall ftones, fints, and gravel, were often brought

 hither from other parts, the country people \|| being ordered to gather them in their vineyards, their heaths, and plowed lands, on the banks of rivers, and the fea-ihores, and to bring and lay them by the highway-fide, where the foldiers + had occafion to ufe them in their work. Of thefe materials the Romans made a covering fix inches thick, upon the third layer, and fecured it on the fides with two borders of earth, which they confolidated with heavy ftones, which they laid floping, for the water to run off the caufeway on the plain beneath, to prevent its foaking into, and thereby loofening the gravel. By means of this precaution, the traveller and carrier, in all feafons, enjoyed the benefit of a dry hard road. It fometimes happened that the fint pavement was loofened, by the falling down of the banks and borders which fhould fupport the road on the fides; but the internal layers being fo clofely bound and cemented, they did not fuffer much by it, and the damage was eafily repaired.There would be no great hardhip upon the country people who come for ten miles round to the London markets, and to all other markets throughout the kingdom, and go home with their carts empty, if they were obliged, by act of parliament, to carry a load of proper road materials gratis, to contribute to put the roads into this defirable condition.
$\dagger$ Our own foldiers, in times of peace, might alfo greatly cónribute towards forwarding this good work, provided, curing he time of their working at the roads, they had an addrtio of fxx-pence or eight-pence a day made to their pay, out of We fock appropriated to carry this defign into execution. We have experienced hebenent heir labourin this lhape, in the Highlands of Scotland; befides, by labour of this kind, they will be preferved more healthy, flout, and vi. gorous, kept from the vices and debaacheries which the idle profeflion of a foldier, in times of peace, is too apt to lead them into, and be better fitted to act in their military capacity, when public affairs required them; they will alfo be lefs odious, and efteemed lefs burthenfome to the people in times of peace, when they experience they receive fo grea a benefit from their labour at fo fmall an expence. And what barges are obliged to return empty from London, or any other confiderable market-towns to which, by water-carsiage, they may bring any commodity, fhould alfo be compelled, by the faid act of parliament, to carry back gratis a load, or fuch a quantity as thall make up their load, of the beft road materials that are to be met with the neareft to their river navigation; but they fhall not be obliged to land them any where beyond, or out of the courre of their ne ceflary navigation; nor fhall they land them but ar the mo convenient place nearef to the river-fide where the toad corporation flallorder them: but neither the bargemena the land-market people fhall be obliged to had or uiload the faid road materials, without fone reafonb made them by the corporation Likewife all cong gatuit fels, which now return empty into the all obliged to take a certain quantity of fuch oed, when and where it may prove of beneft to the materials, and no injury whatever in the employmen of coration, nor thall the veffels be ever at any trouble in the in unlading fuch materials, without a reafoble paing or the faid corporation. But lef any thing of this bind only of a temporary nature, fhould look too much, wioug afpef of abirrary power, and be tak for 5 , apead corporation pight allow them the a harchip, the ordinary freight; and fomething of the like kind might be ordinary freight; and lomeching of the like kind might be
done in regard to the land carriage; which they may chufe to accept, rather than go empty.

Every one will readils apprehend the lafting ftrength and fupport that the roads muft receive from the fide walls and abutVOL. II.
ments, raifed to a due height, with proper drains to carry off the water, towards the floping extremity of fuch fide walls and abutments; for if they are mode competently ftrong, they will o cement the road materials, as to render them as hard as rock, and quite impenetrable; at leaft fo durable and perma nent, that, after the roads are effectually completed, they will require very little conftant annual expence to keep them in repairs; and which expence, after the firf, muft be borne intirely by the road corporation, and the public, if I underItand the projector rightly, to be for ever after free from all future tax or incumbrance whatfoever, alf turnpikes be laid afide, and no toll or highway tax be ever more heard of in this kingdom.
ROMAGNA, or ROMANIA, a province in Italy, in the Pope's dominions, bounded on the eaft by the Marcha d'Ancona, along the river Foglia; on the fouth by the Apennine Hills, which part it from Tulcany; on the weft by Lombardy, along the Panero; and on the north by the fens of Verona and the Po, and by part of the Venetian gulph. This whole country is naturally very rich and delightful, and the plains and vallies productive of corn, wine, oil, fruits, and paifures for cattle. There are fome large woods, which abound with all kind of game; and thofe parts which are contiguous to the Adriatic sea furninh the country with a fuf ficiency of falt, both for itfelf and all the neighbouring inland territories. The fea, as well as their many rivers, fupply it with plenty and variety of firh; and fome of thefe being navigable, help to carry on an advantageous commerce. The people here are Atrong and laborious, and equally fit for arms, traffic, or learning; and the mountains yield mines of feveral metals, and the country hath various hot mineral fprings, of excellent virtue for the prefervation of health.
Ravenna city hath the Adriatic on the eaft; the air is very healchy, and the vines in its neighbourhood furninh it with plenty of delicious wines; but as they have no ficilh water but that of rain, the town often labours under a great fcarcity of it.
Cervia, fituate in an unhealthy air, near the coaft of the Adriatic gulph, 12 miles fouth-eaft from Ravenna, and 15 from Rimini. The air is fo bad, and the place fo thinly inhabited, that it doth not contain above 400 inhabitants: it has fome falt-works, which bring in a confiderable profit.
Rimini is pleafantly fituated, on a facious plain on the coal of the Adriatic gulph, at the mouth of the river Mareckhia it being feated between a fertile plain on one fide, and billy grounds on the other, covered with gardens, vines, olives, and fruit-trees.
Forli, a city, fituate 15 miles fouth-weft of Ravenna; its territory is extremely rich and fertile, and produces not only plenty of corn, wine, oil, fruits, beans, and o her pulfe, but likewife great quantitics of cummin, annife, and cardamum feeds; of fenugreek and faffron, both wild and cultivated; befides falt and mineral waters, marble, mill-ftones, fulphur, \&c. It is 46 miles round, and has fuur confiderable dependencies on it. Here is an academy of wits, which has produced many learned men and works, in various arts and fciences.
Faenza, an ancient city, famed, in regard to its trade, for a fine earthen ware, called by its name, and not inferior to the Dutch Deift, and for its fine linen manufacture.
ROMANIA, RUMELIA, or RUMELI, in Turkey, formerly a part of Thrace, a province of European Turkey, is bounded by Mount Argentum, or Rhodope, anciently called Hemus, which feparates it from Bulgaria, on the north by the Euxine Sea and Borphorus, or ftraight of Conftantinople, on the eaft; by the Propontis, or fea of Marmora, and the Archipelago, on the fouth; and by another branch of Mount Rbodope, which feparates it from Macedon, on the weit; being near 300 miles long, and 130 broad. It is a fruitful country, abounding in good arable and pafture ground, but produces fcarce any wine; and the mountains which divide it from Bulgaria and Macedon are excceding cold and barren; but then they are of fuch difficult accefs, that no country is better defended naturally than this, being encompaffed by the fea on the fouth-eaft, as it is by thefe mountains on the north-weft: fo that fhould the Turks be driven out of Servia and Bulgaria by the Chriftians, it would be difficult to penetrate further into the Turkifh-empire.
In the mountains beforementioned are mintes of filver, lead, and allum; but, through the lazinefs of the Turks, the riches that might be gathered from thence are loft. Its chief river is the Mariza, which rifes at the foot of Mount Rhodope, and falls into the Archipelago at Eno, againft the iffe of Sa mandrachi. In this river it is faid that gold fand is fome times found, fuppofed to be wafhed down from the moun tains.
The chief cities and towns are thefe, viz.
Constantinople; the capital of the whole Turkifh empire, is feated at the moft eaftern point of Romania, on a neck of land, which projects towards Natolia, from which it is feparated by a canal, or ftraight, about a mile broad; the fea of Marmora waftes its walls on the fouth fide, and a gulph of the canal of Conftantinople waters it on the north
This city with its fuburbs, according to Tournefort, is the largeft in Europe. Its fituation, by general confent, is ths
moft agreeable, and the moft advantageous of any in the whole world. It feems as if the canal of the Dardanelles, and that of the Black Sea, were deligned on purpofe to bring it the riches of the four quarters of the world: thofe of the Mogul, the Indies, the remoteft north, China, and Japan, come by the way of the Black Sea; and by the canal of the White Sea, or fea of Marmora, come the merchandizes of Arabia, Egypt, Ethiopia, the coaft of Africa, the Weft-Indies, and whatever Europe produces. Thefe two canals are as the door of Conftantinople; the north and fouth, which are the ordinary winds there, are, as it were, the two folds of the doot: when the noith wind blows, the door is fhut, that is, nothing can come in from the fouthern coaft; this door opens when the fouth wind prevails.
The port of Conftantinople is commodious and magnificent; it is a bafon feven or eight miles in circuit towards the city, and as much on the fuburbs fide. Its entrance, which is about 600 paces broad, begins at the point of the Seraglio, or Cape of St Demetrius fituated in the fouth; this point opens to the eaft, and faces Scutari; Galata and GaffumPacha are to the north; laflly, it terminates to the north-north-weft, where the river Lycus empties itfelf; This river is made up of two freams; the biggeft, on which there is a paper-mill, comes from the weft, and the other flows from the north-weft. The Lycus is not every where navigable, and, therefore, there are ftakes to point out the fureft places. The fream that comes from the north-weft is not practicable for boats farther than the village of Hali-bei-cui; the other is deep enough for about four miles. Thefe ftreamsiare of wonderful ufe to cleanfe the baven; for, defcending from the northweff, they wafh all the coaft of Paffim-Pacha and Galata, while part of the waters of the canal of the Black Sea, which defeend from the north like a torrent, dafh violently againft the Cape of Bofinhorus, and recoil to the right towards the weft: by which motion they fweep away the mud that might gather rabout Conftantinople, and, by a piece of natural mechanifm, drive it on by degrees as far as the frelh waters. Thefe frefh waters help to preferve the flipping; for experience thews, that they are lefs fubject to be worm-eaten in fuch ports where there is frefh water, than where there is falt: fome fifh too take greater delight in fuch water, and are better tafted.
The port of Conftantinople abounds with tunny-fifh; dolphins alfo fometimes appear in this port, in fuch numbers that it fwarms with them : their teeth are made like a faw. Procopius, in commendation of the port of Conftantinople, fays it is a thorough port, that is, you may anchor in any part of it; and it is juftly obferved by him, that the fhips there have their prow onland, while the poop is in the water. In fhallower places you go over a plank into the biggeft fhips; fo that there is no occafion for a boat to load or unload them. If the Turks would bend their thoughts to navigation, they might make themelves formidable that way, for they have the beft harbours of any in the Mediterranean; they would be mafters of all the trade to the Eaft, by favour of their ports in the Red Sea, which would open them a door in the EaftIndics, China, Japan, places which the Chriftians cannot reach without doubling the Cape of Good Hope; but the Turks hug themfelves at home, pleafed to fee all the nations in the world come to them. Nothing but the eaft wind can difturb the port of Conftantinople, it being intirely expofed to it; whenever it blows hard from that quarter, efpecially if it be in the night, it occafions a frightful hurley-burley, for the feamen make fuch a bawling, and dogs fuch a barking, hat one would think the town was going to be fwallowed up, if one were not apprized of the caufe of it.
The bazars, or bezeftins, are places like our changes, for felling fine wares of all forts. The old and new bazars fand pretty near each other; there are large fquare buildings, covered with domes, fupported by arches and pilafters. In the old one there is buc little fine merchandize! it was built in 146 r . Here they fell all forts of weapons, efpecially fabres, and likewife horfe harneffes, fome of which are inriched wieh gold, filver, and precious fones. The new bazar is replenilhed with all manner of merchandizes; and though there be none but goldfmiths-fhops, yet they fell furrs, vefts, carpets, ftuffs of gold and filver, filk, goats-hair, \&cc. nor is it without jewels and China wares. They were repairing it when Mr Tournefort was at Conftantinople, in the year 1700; and he tells us that it would be much more lightfome than it was before, and there would be apartments for officers to have the guard of it, and go their rounds night and day. The goods are well fecured in thefe places, the gates being thut betimes. The Turks retire to their own homes in the city, but the Chriftian and Jewifh merchants crofs the water, and return the next-morning. See the article Bazar.
The market for flaves of both fexes is not far off. Here the poor wretches fit in a melancholy pofture: before the buyers cheapen them, they turn them about from this fide to that, furvey them from top to bottom, put them to exercife whatever they have learned, and this feveral times a day, hefore ever they come to an agreement. Such of them, both men and women, to whom nature bas been niggardly of her charms, are fet apart for the vileft fervices; but fuch girls as bave youth and beauty pafs their time well enough, only they are
often forced to turn Mahometans. The retalers of this human ware are the Jews, who take great care of the fluyeducation, that they may fell the better. Theit choicelt thes keep at home, and thither you muft go if you woild they better than urdinary; for it is here as it is with markets for horfes, the handfomeft do not always appear, but are kept within doors. Thefe Jews teach their beautiful he. fives to dance, fing, play on inftruments, and every thind effe that may infpire love. Sometimes they marry very advantageoufly and feel nothing of flavery; they have the fame liberty in their houfes as the Turkifh women themlelves. One fees iner fantly coming from Hungary, Greèce, Cânília; Rưfia, Men grilia, and Georgia, fwarms of young wenches, defigned for the fervice of the Turks. The fultans', the baffa's, and the greateft lords, often chule their wives among them. The vomen whom forrune allots to the feraglio, are not always he beft difpoled of: it is true, a poor Ahephiefd's dauphter may come to be a fultancis; but then, what numbers of them are neglected by the fultan! After the Grand Signior's death they are fhut up for the reff of their days in the Old Seragtio, where they pine themfelves away, unlefs fome bafla courts them. This Old Seraglio was bult by Mahomet II. Here are confined thefe poor wretches, to bewail at leifure the death of a prince, or that of their children, whom the new fultan often caufes to be ftrangled. It would be a crime to fhed a tear in the feraglio where the emperor relides: on the contrary, every body frives to exprefs their joy for his acceffion to the throne. This" Old Setaglio, called by the Turks Fr: qui Serai, is inclofed with a wall 24 fpans high, for two miles in compafs, withith which are lodgings and gardens for thole tadies diverffosi. There is no going into it, the gate being guarded by janizaries and capisi's.
Infead of inns at Conftantiriople, and indeed ali over Tur key, they have public buildings, called caravanferas, or kans erected in convenient parts of the city, for the markets, and traffic of different commodities. Thefe are for all men; of what quality, condition, country, or religion foever they be. See the article Caravansera.
Adrianople is about ito miles from Conftantinaple, to. wards the north-weft; 85 from the confintes of Bulgaria, to the fouth; and 175 from the ftraights of the Dardanelles, to the horth. It is inhabited by Greeks, Jews, Armenians, Turks, and Walachians, and other nations. There is in this city a beautiful exchange, half a mile long, called AliBaffa, taking its narie from its founder. It is a vaft arched building, with fix gates, and contains 365 noble fhops, including thofe that are under the arch of the great gate ; the are furnifhed with all forts of rich goods, and kept by Turks, Ģreeks, Armenians, and Jews, who pay five piaftres, or crowns, a month for each of them, to the founder's heirs, or to fuch as have purchafed them, and half a piaftre to the mofque of Vecerfeli, granted by the Grand Signior, to whom it belonged. Near this exchange is a freet catled Seraci, full of good fhops; with all forts of commodities, which affords a delightful fight for a mile in length.
Nicopoli, fruate on the left bank of the river Neffo, near the confines of Macedonia, is a place of pretty good trade. Galirpoli, in Turkifh Jebbole, is sa place of great trade, by reafon of its convenient fituation, being in the way to Conftantinople and Adrianople ; infomuch that the baffa who governs it makes about 1000 crowns a year of.it, befides the profits of the cadi, aga, and other officers.
The famous canal which feparates the two faireft quarters of the earth, Europe anid Afia, is called the Hellefpont, the Streight of Gallipoli, the canal of the Dardanelles, the Arm of St George, or the Wouth of Conftantinople. This canal is in a fine country, bounded on each fide with fruitful hills, on which you fee fometimes vineyards, fometimes oliveplantations, and a deal of arable land. As you go in, you have Thrace and Cape Greek on the left-hand; Phrygia and Cape Janizary on the right; the Propontis, or fea of Marmora, prefents itfelf on the north, and the Archipelago remains behind on the fouth. The mouth of the canal is four miles and a half over, and is defended by the new caffles built in 1659, to fecure the Turkifh fleets againft the infults of the Venetians, who ufed to attack them in the fight of the old caftles. The waters that pafs through this canal, out of the Propontis, are as rapid as if they Howed beneath a bridge, and, when the north wind blows, no thip can enter; but, when it is fouth, you hardly perceive any current at all ; you muft only beware of the caftes, and yet the parfage might be forced without much danger, the caffles being above four miles afunder: the Turkifh artiltery, however monftrous it appears, would not much antoy the ihips, if they had a good wind, and went in a file. Such merchants thips as come from Confantinople, fop three days at the caftle on the Afiatic fhore, to fearch whether they bave any of the Turks naves on board: and yet there paffes not a day but fome or other of thefe poor creatures make a fhift to efcape. No fhip of war, of whatever natiun, is exempted from being thus vilited, withoue an exprefs order from the Porte: it is true, it is rather a ceremony than a fearch. See Pevant Trade, Oriental Trade, and Tugiey Trade.

## R O Y

R O Y

ROYAL EXCHANGE, a commodious and elegant building in the city of London, for the convenient public meeting, at ftated hours, of the merchants, eminent tradefrien, brokers, xgents, and all who have commercial bufinefs to tranikers, zgents, a buying or felling commodities, making conact, by or drawing or reinittintit monies, either within the tracts, of drawing or reniting monics, ef to foreigh countries, by the means of bills of exchange.
An idea of the Royal Exchange of Lonuon, as given by Mr Addifon, afterwafds feeretary of fate to his Majefty George I.

- There is no place in the town, fays he, which I fo much luve to frequent as the Royal Exchange. It gives me a fectet fatisfaction, and in fome moafure gratifiss my vanity, as I am an Englifiman, to fee forich an affembly of my countfymen and foreigners confulting together, upon the private bufinefs of mankind, and making this metropolis a kind of emporium for the whole earth. I mult confeff, I look upon high change to be a great council, in which all cenfidevable nations have their repiefentative, Factors in the trading world are what ambalfadors are in the politic wotld: they hegosiate aftairs, conclude treaties, and maintain a good cortefoondence between thofe wealthy fecieties of men that are divlded from one another by feas and oceans, or live on the different extremities of a continent. I have often been pleafed to heear dirputes adjufted between an inhatitant of Japan and an alderman of London, or to fee a fubject of the Great Mogul entering into a league with one of the Czar of Mufeavy: I am infinitely delighted in mixing with thefe feveral trimilfers of commerce, as they are diffinguilhed by their different walks and different leagues. Sometimes I am joflled among a body of Armenians; fometimes I am loft in a crowd of Jews; and fometimes make one in a group of Dutchtiten: I am a Dane, Swede, or Frenchman, at different times; or rather fancy myfelf like the old philofopher, who, upon being afked what countryman he was, replied, That he was a citizen of the world.
Though I very frequendly vifit this bufy multitude of people, Though I very frequently vifit this bufy multitude of people,
I am known to nobody there but miy friend Sir Andrew, who often fmiles upon me as he fees me bufting in the crowd, but, at the fame time, conaives at my prefence, without taking any further notice of me. There is, indeed, a nherchant of Egypt who juft knows me by fight, having formerly remitted me iome money to grand Cairo; but as 1 am not verfed in the modern Coptic, our conferences go no further than a bow and a grimace,
This grand fcene of bufinefs gives me an infinite variety of folid and fubftantial entertainment. As I am a great lover of mankind, my heart naturally overflows with pleafure, at the fight of a profperous and happy multitude; infomuch that, at many public folemnities, I cannot forbear exprefling my joy'with tears, that have ftolen down my cheeks. For this reafon, I am wonderfully delighted to fee fuch a body of nien thriving in their own private fortunes, and, at the fame time, promoting the public ftock; or, in other words, raifing eftates for their own families, by bringing into their country whatever is wanting, and carrying out of it whatever is fuperfluous.
Nature feems to have taken a particular care to diffeminate her bleffings among the different regions of the world, with an cye to this mutual intercourfe and traffic amiong mankind, that the natives of the feveral parts of the globe might have a kind of dependance upon one another, and be united together by their common intereft. Alinoft every degree produces comething peculiar to it. The food often grows in one tountry and the fauce in another. The fruits of Portugal are carrected by the product of Barbadoes; the infuition of a China plant fweetened with the pith of an Indian cane; the China plant iweetened with the pith of an Indiah cane; the
Philippic Iflands give a flavour to our European bowls. The fingle drefs of a woman of quality is often the product of an hundred climates: the muff and the fan come together from the different ends of the earth; the fcarf is fert from the torrid zone, and the tippet from beneath the pole; the brocade petticoat rifes out of the mines of Peru, and the diamond necklace out of the boweis of Indoftan.
If we confider our own country in its natural profpect, without any of the benefits and advantages of commerce, what a barren uncomfortable fpot of earth falls to our hlare? Natural hiftorians tell us, that no fruit grows originally among us befides hips and haws, acorns and pignuts, with other delicacies of the like nature ; that our climate of itfelf, and without the affiltance of art, can make no farther advances towards a plum than to a floe, and carries an apple to no greater perfection than a crab; that our meions, our peaches, our figs, our apricots and cherries, are ftrangers among us, imported in different ages, and naturalized in ourEnglifh gardens; and that they would ail degenerate and fall a way into the trafh of our own country, if they were wholly neglected by the planter, and left to the mercy of the funand foil. Norlias traffic more enriched our vegetable world, than it has improved the whole face of nature among us. Our fhips are Jaden with the karvelt of every climate; our tables are ftored with fpices,
and oils and wines; our rooms are filled with pyramids of China, and adorned with the wiorkmanflip of Japan : our morning's draught comes to us from the remoteft corners of the earth; we repair our bodies by the drugs of America, and repofe ourfelves under Indian canopies. My friend Sir Andrew calls the vineyards of France our gardens, the Spice lflands our hot-beds, the Perfians our filk-weavers, and the Chinefe our potters. Nature, indeed, furnifhes us with the bare neceflaries of life, bur traffic gives us a great variety of what is ufeful, and, at the fame time, fupplies us with every thing that is convenient and ornamental. Nor is it the Jeagh part of this our bappinefs, that, whillt we enjoy the remoteft piroducts of the north and fouth, we are free from thofe extrefhities of weather which give them birth; that our eyes gre refrefhed with the green fields of Britain, at the fame time that our palates are feafted with fruits that rife between the tröpics.
For theffe reafons, there are not more ufeful members in the commonwealth than merchants. They knit mankind together in a mutual intercourfe of good offices, diftribute the gifts of nature, find work for the poor, add wealth to the rich, and magnificence to the great. Our Englifh merchant converts the tin of his own country into gold, and exchanges his wool far rubiés. The Mahometans are cloathed in our Britifi manufacture, and the inhabitants of the frozen zone watmed with the fleeces of our theep.
Wheni I have been upon the change, I have often fancied one of our old kings ftanding in perfon, where he is reprefented in effigy, and looking down upon the wealthy cencourre of people with which that place is every day filled. In this cafe, how would he be furprized, to hear all the languages of Europe fpoken on this little fpot of his former dominions, and to fee to many private men, who in his time would have been the vaffals of fome powerful baron, negociating. like princes, for greater fums of money than were formerly to be mec with in the toyal treafury? Trade, without enlarging the Britiin territories, has given us a kind of additional empire. It has multiplied the number of the rich, made our landed eftates infinitely more valuable thàn they were formerly, and added to them an acceffion of other eftates, as valuable as the lands themfelves.'

REMARKS
On the Royal Exchange, with regard to private Traders.
From this juft, beautiful, and elegant defcription of this affembly of traders, an idea may be formed, not only of their ufefulnefs to the ftate, but what their general conduct ought to be upon this public ftage of aftion; for here the eyes of traders áre like thofe of Argus upon eactio other, and thelleaft faux pas in the management and négociation of their private conceris, may, bring inftantancous ruin upon individuäls, although they may really be men of large fortunes, and even of an extenfive and a brundlefs credit.
As a memento, therefore, "to the ; ounger and lefs expefienced clafs, we thall preiume, from defire of bcing as ufeful as we can to the rifing gencration, to point out fome of thore hloals and rocks, on which numbers have fplit in their adventures, from their mifornduct of the Royal Exchange; to the end that this commercial chart of eürs, wherewith we prefefit them, may guard them againft thooe evils.
To which purpofe, we thall conflder the principal relations wherein traders are under a nocefify of acfing upon the exchange towards' each other, and towards thofe, who may act in any capacity fubfervient to their interefts.
And (x.) With regard to brokers, who are concerned as middle agents between trader and trader, "in relationn to drawing and remitting mofies by bills of exchange.
We thall fifft cónfider the drawer, who has occation to difpofe of his credit ini paper. And herein there is ro litcle depofe of his credit in paper. And herein there is no lithe debrokers in bills of exchange] are prefumed to know, in the couffé of their altercations, the quántity of exchange-bills that are to be difpofed of on a polt-day, as well as the quantity wanted to any peculiar foreign part, they can often, in an hour's time, difcoter how this matter fands, and thereby become mafters of the plenty or fcarcity of bills to be fold, as well as the quañitity réquired to be purchafed.
When this is known (bills of exchange being confidered like another commodity to be bought and fold) the broker, by his private confultation between the buyer and feller, or the drawer and remitter, hias it in his power to difcern, and in a great meafure to fix the price of exchange for fuch bills. But as it is his intereft to execute as much bufiness in a poft-day as be can for the fake of his commiffion, he will not be remifs in bringing thofe contracts to as fyeedy a conclufion as he carr, for the fake of gaining brokerage for his agency. The feller and buyer allo are heedful to their intereft, the one to get as adyahtageous terms for bis bills as he can, the other to get them as cheap as the plenty or fcarcity will admit of. It is, however, the intereff of the broker to oblige both parties, and as there are a certain number of thefe brokers, who are upon the wing to rival each othef, it is the intereft of every individual to catch at all the bufinefs he can,

## R O Y

left, during change time, he thould be'fupplanted by any of his brethren, and thereby lofe his commifion. Thus feveral of thefe brokers applying both to drawers ane remitters, they feel out the market price by thefe altercations; and the remitters may judge from the brokers intercourle, who feem eager to fall their bills below the market price, and a drawer may alfo judge from the price bid, who feem to be under the neceffity to remit.
In the courfe of thefe money-negociations between the principal parties concerned, there arifes a crifis of great delicacy, in relation to the perfonal credit of both, and the broker will eafily difcern it. For if the feller offers his bills at under rate, or the buyer bids more than men of the beft credit upon the exchange, here naturally arifes a fufpicion both on the fide of the drawer and remitter; the latter may from hence diftruft the goodnefs of the bill, and the former may doubt whether his money may be punctually paid, when he has parted with his bill, although the time of payment is fhort. In thefe tranfactions, therefore, both parties will be upon their guard, left in the conduct of thefe concerns, their perfonal credit fhould fuffer upon the change ; for the principals fhould not only confider, that their credits are in the power of each other on fuch occafions, but likewife in the power of the brokers, whom they employ, and who may poffibly afterwards give out fuch fecret innuendoes, that may in one poft ruin a trader's reputation, though he may be a man of fubftance.
Nor is any thing attended with more unhappy confequences to a trader, than the appearance of drawing and redrawing upon the exchange; for this is conftrued as an indication of a man's over-trading, or of his declenfion in credit and fortune. Neceffities of this kind generally proceed from overtrading, and it is to be feared that thereare more traders undone by undertaking too much, than for want of trade. Over-trading is like over-lifting among frong men; vain of their ftrength, and pride prompting them to put it to the utmoft ftretch, they at laft attempt fomething too heavy, and become cripples ever after.
Though the difcounting of bills of exchange by the bank of England and bankers, is a common practice among traders, even of no indifferent repute, yet when too frequentiy practifed, is a fign of want of competent capital wherewith to carry on the circle of their commerce; for who would allow 4 per cent. difcount out of the profits of his trade, if he could do without it? This is another fign of over-trading, and is conftrued fo by the exchange, notwithftanding many are weak enough to think that no one remarks it.
Too many frequently defiring the favour to over-draw on their banker with whom they may keep calh, is copftrued upon change as another token of declenfion, or over-trading; and although traders may flatter themfelves that thefe things remain fecrets and unknown, yet if often practifed, even by pledges in bankers hands, I could tell them how they are generally blown; but this is not my bufinefs. If fome fhouid not be generous enough in their own breaft to thank me for the hint, that fhall not prevent my good offices to others, whofe gratitude I bave experienced.
Traders that ufe the exchange giving out promiffory notes, is no fymptom in favour of a trader, though it may not always be imprudent. A few years fince, practice of this kind gave an alarm in the city of London, when it was difcovered, that feveral traders had entered into a combination to fupport each others credit, which proved to be rotten at bottom, by the mutual loan of promiffory notes. If a man really poffeffes a tolerable fortune, and he plunges in trade fo far out of his depth, as to need the practice of fuch artifices, it will in the end ruin the little credit and fortune he may have: but fuch I am afraid, as well as others, are too apt to flatter them, as great finners do, that their mal-practices are concealed from all but themfelves; when, from the nature of fuch things being carried on in the heart of the metropolis, and, as it were, within the feent of the Royal Exchange, they will foon be fmelt out from the general intercourfe of tranfactions among men of bufinefs.
There are two principal caufes that may be properily called over-trading in a young beginner, and by both which traders are overthrown. (1.) Trading beyond their ftock. (2.) Giving too large credit.
A trader ought to meafure well the extent of his own ftrength; his fock of money and credit is properly his beginning, for credit is a fock as well as money : he that takes too much credit, is not in lefs danger than he that gives too much : and the danger lies particularly in this, if the tradefman overbuys himfelf, that is, buys fafter thaa he can fell; by his buying on credit, payments, perhaps, become due too foon for his compliance therewith: though the goods are not fold, he muft anfwer the bills, upon the ftrength of his proper ftock, that is, he muft pay for them out of his own calh: if that friould not hold out, he is obliged to put off his bills after they are due, or fuffer the impertinence of being dunned by the creditor, and perhaps by fervants or apprentices, and that with the ufual indecencies of fuch kind of people.
This greatly impairs a trader's credit, and if he has any further dealings with his former creditors, he is treated like an
indifferent paymafter: if he bargains for fix months, they know he will take eight or nine in the payment, and this they confider in the price, and ufe him accordingly, and this impairs his gain : fo that lofs of credit is indeed lofs of money, and this weakens him both ways.
The trader that buys warily, generally pays furely, and every young beginner ought to buy cautioully. Some tradefmen pride themfelves on feeing their thops well tocked, and their warehoufes full of goods; this is a fnare to them, and induces to the purchafe of more goods than they can vend fuitably to the credit they take, or the capital they poffers; it is a foolifh as well as a fatal error, whether it lies in their judgment or their vanity ; except in fome retale trades, where a great choice of goods is abfolutely neceflary, or a trader will want trade on that account; otherwife an experienced trader had rather fee his warehoufe rather fparingly filled, than overftocked : if it be too empty, he can fupply its deficiency when he pleafes, if his credit be good, and his calh Ifrong ; but a thronged warehoufe is a fign of the want of cuftomers, and of a bad market; whereas an empty warehoufe is a fign of a quick demand. This conduct will fupport a man's credit on change and elfewhere, in foreign coun. tries as weil as in his own.
He then that keeps his credit unihaken has a double flock; we mean, it is an addition to his real ftock, and often far fuperior to it. I have known feveral traders in the city of London, who have traded to a confiderable degree very fuccefffully, and yet have had a very trifing capital, and fome not a fhilling of their own; but by the ftrength of their reputation, being prudent and affiduous, and having preferved he character of honeft men, and the credit of their bufinefs by cautious dealing and punctual payments, they have gone on'till the gain of their trade has effectually eftablifhed them, and they have raifed good eftates out of nothing.
He that takes credit in trade may give credit, but he muft be exceeding vigilant, for it is the moft dangerous ftate of life that a trader can live in. If the people he trufts fail, or fail but in punctual compliance with him, he can never fupport his own credit, unlefs he inviolably obferves the prefervative maxim not to give fo much credit as he takes: that is, he muft either fell for fhorter time than he takes himfelf, or in lefs quantity; the latter is the fafeft, that he fhould not truft fo much as he is trufted with. If indeed he has a large real capital; befides the credit he takes, that alters the cafe; a man that can pay his own debts, whether other people pay him or no, that man is out of the queftion: but if fuch 2 perfon trufts beyond the extent of his fock and credit, even HE may be overthrown too.
Could the trader buy all upon credit, and fell all for ready money, he might turn ufurer, and put his own fock out to intereft, or purchafe land with it; but as that is not the cafe, he fhould fo reftrain his liberty of buying and felling, as never to give fo much credit as he takes, by one third part at leaft.
By giving credit, we mean that even all the goods which a trader buys at home or imports from abroad upon credit, may not be fold upon credit : perbaps there are goods which are ufually fold fo, and no otherwife: but the alternative lies before him thus, either he muft not give fo much credit in quantity of goods, or not fo long credit in relation to time: to explain ourfelves.
Suppofe a trader buys ro,000 1. value of goods on credit, and this 10,0001 . are fold for 11,0001 . likewife on credit, if the time given be the fame, the man is in a ftate of apparent deftruction. Perhaps he owes the 10,000 l. to twenty creditors, perhaps the II,oool. is owing to him by 200 debtors: it is fcarce poffible that thefe 200 petty cuftomers (if that be his way of dealing) thould all fo punctually comply with their payments as to enable him to comply with his; and if 2 or 30001 . fall fhort, the tradefman muft be inevitably undone, unlefs he has a fund to fupply the deficiency. But, If a trader had bought ro,000 l. in goods at 6 or 8 months credit, and had fold them all again to his 200 cuftomers, at three or four months credit, then it might be fuppofed that all, or the greateft part of them, would have paid time enough to enable him to make the payments on his fide good; not, all would be loft fill.
On the other hand, fuppofe he had fold but 30001 . worth of the 10,0001 . for ready money, and the remainder at fix months credit, it might be fuppofed that the 3000 l. in cah, and what elfe the 200 debtors might pay in time, would fatisfy fuch trader's creditors, 'till the difference might be made good: fo eafy a thing is it for a man to lofe his credit in trade, and fo hard is it upon fuch a blow to retrieve it again: fhould not therefore the trader moft effectually guard as well againft running too far into debt bimfelf, as to fuffer others to run too deeply in his debt? For if his debtors do not pay him, he cannot pay his creditors, and the next thing is a commilfion of bankruptcy: thus a trader may be undone, although he has $11,000 \mathrm{l}$. wherewith to difcharge $10,000 \mathrm{l}$. Though it is not poffible to carry on the extent of trade we do in this kingdom, without a reciprocal credit both taken and given; yet this is fo nice and tender a point, that perhaps, as many traders fail by giving, as by taking too much credit.

## R O Y

## R O Y

There ate divers other ways of over-trading, befides this of taking and giving too much credit; one of thefe is the running into projects and large undertakings, either out of the trader's ordinary road, wherein he is already engaged, or tradering at too many undertakings at once : in both which graping at too ma trader is often wounded, and fometimes too deeply to recover. For fuch adventurers generally ftock-ftarve the trader's ordinary bufinefs, which is his principal conitant fuptrader's ordinary bulinefs, which is his principal contrely add port; and as ichemes out of the way of a trader rarely add
to bis credit, fo if they leffen his fock, they weaken him in to his credit, fo if they leffen his fock, they weaken him in
both his grand fupports, and it is no wonder that he at length finks.
The prudent and fafe trader is he, that avoiding all fuch reThete prucurfions, keeps clofe and fteady within the verge of his own concerns, and exerts his whole attention and abilities in his fhop, his warehoufe, or his counting-houfe, to what he well underftands, and confining himfelf to what belongs to him there, goes on in the road of his bufinefs without launching into unknown oceans; and content with the gain of his own trade, is neither, by too much ambition or avarice, tempted to be greater or richer by fuch uncertain and hazardous attempts. See the article Projector. See alfo the article Credit [Private Credit], wherein I have endeavoured to fhew, both in a perfonal and a national light, the neceflity of all traders carrying on their affairs in general lefs by credit, and more by ready money.
Credit on a public exchange, and among the commercial world, within the compafs of a man's concerns, is fo much a trader"s bleffing, that it is the choiceft ware in which he deals; he cannot be too tender of fo eftimable a jewel, or purchafe it too dear when he ftands in need of it: it is a fock to his warehoufe, it is current calh in his chefl, it accepts all his bills, for it is on the fund of his credit that he has any to accept: demands otherwife would all be made upon the fpot, and he muft pay for his goods before he had them: in a word, it is the life and foul of his trade, and it requires the utmoft attention and vigilance to maintain and preferve it.
If then a trader's own credit fhould be of fo much value to him, and he fhould be fo delicate in his concern about it, ought he not, in fome degree, to have the fame care of his neighbours? As a good name is to a man better than life, as the wife man fays, fo is credit to a trader; it is the life of his traffic; and he that wounds fuch a man's credit without caufe, is as much a murderer in trade, as he that kills a man in the dark is a murderer in matters of blood. There is a peculiar nicety in regard to the credit of a trader, which does not reach in other cafes: any other perfon who is ttigmatized in his character or reputation, it is injurious to him: if it comes in the way of marriage, or a preferment in any fhape, it may greatly difappoint and prejudice him only for a time: but if this happens to a trader, he is inftantly and inevitably blafted and undone. A trader's credit and a maid's virtue, ought to be facred againft the tongues of defamation; and yet how many traders have been thus undone, and how many more have been put to the full trial of their ftrength in trade, and have ftood their ground by the mere force of their good circumftances! Whereas had they been unfurnifhed with calh to have anfwered their whole debts, they mult have fallen with the reft. There have been initances, not only on the London exchange, but that of other places of the like kind, where groindlefs sumour, invidious calumny, and even mean and artful innuendoes, have greatly hurt, and fometimes ruined, the characters of worthy and fubstantial traders. Have we not lately had a moft notorious inftance, as appeared in our courts of law, of a vile and infamous attempt to tain the credit of two very worthy and honourable metchants of the city of London? When I mention the names of a $\mathrm{F}-\mathrm{t}$-d and $\mathrm{C}-\mathrm{k}-\mathrm{t}$, every one acquainted with the true characters of thefe gentlemen, and of the circumftances of this late affair, I am perfuaded, will think that I have herein done nothing more than juftice to the charateters of thefe eminent traders. A trader's reputation is of no lefs nicety thian a blight upon a fine flower; if it is but touched, the beauty, or flavour of it, or the feed of it is loft, though the'noxious breath which touched it, might not reach to blatt the leaf, or hurt the root; the credit of a trader, efpecially in his beginning, is too much at the mercy of every enemy he has, 'till it has taken root, and is eftablifhed on a folid foundation of good conduct and profperity. Every idle tongue carr blaft the character of a young trader: though we would not difcourage, yet we would alarm young beginmers, and apprize them of the form and fcandal which they may expect uporit the leaft flip they make. If they but ftumble, fame will throw them down; if they recover, fhe will, indeed, as faft fet them up; but calumny generally runs before, and bears all down with it; and there are ten, perhaps, who fall under its weight, to one that is raifed again by the hurry of report.
Nor have only young eraders been often the facrifice of obloquy; I could point out many inftances like thote of the honourable, though imprudent Woodwards, late bankers in Exchange-alley. There was a time too, when Lombardftreet was the only bank, and the goldfmiths there were all called bankers; the credit of their bufinefs was fuch, that in e like in private hands has not firice been feen in England. Y O L. H.

Some of thofe bankers had above a million and an half of paper-credit upon them at a time.
On a fudden, like a clap of thunder, king Charles the Ild fhut up the Exchequer, which was then the common center of the overplus cafh, which thefe bankers had in their hands: and what was the confequence? Not only the bankers who had the bulk of their cafh there, but all Lombard-ftreet ftood ftill with aftonifhment; the very report of having money in the Exchequer, brought a run upon the bankers that had no money there, as well as upon thofe that had; and not only Sir Robert Viner, Alderman Backwell, Farringdon, Forth, and others, broke and failed, but feveral were ruined, who had not one penny of money in the Exchequer, and only funk by the rumour of it, which gave a check to the whole credit of Lombard-ftreet.
But thefe are fuch days, that we have never feen fince the happy Revolution; no princes that ever reigned in this kingdom, have been fo tender of the public credit, as thoie of the royal houfe of Hanover; and would our Britifh traders in -general, be as follicitous to preferve their own perfonal credit, and that of their fellow traders, unfullied, as our prefent moft gracious fovereign is to maintain them in their legal rights and liberties, the traders of Great-Britain would be a match in point of ikill and addrefs, in their commercial affairs, for thofe of any, or indeed for thofe of all nations in the world. And while every individual is vigilantly upon his guard, honourably and judicioully to uphold and maintain his own credit, and do no injury to that of other traders, the whole body will become, as it were, a united corps, and may, by dint of their ingenuity and their large capitals, (which in the general are fuperior to thofe of moft nations) rival the traders of every other flate or empire.
As the prefervation of the perfonal credit of our Britifh traders in general, is not only of the greateft importance to themfelves and families, but likewife of unfpeakable benefit to the ftate, I hope I hall be excufed if I urge a word more upon a topic fo interefting and national, more efpecially to the rifing generation of our traders.
Amnng the various fteps of mifconduct that have a tendency to injure and ruin the trader, that of borrowing money (ima prudently) upon intereft is not the leaft. He that borrows uponintereft, fhould inviolably apply the loan to ftop the breach, which made it firft neceflary to him to borrow; otherwife, fuch loan will fink him deeper into the calamity than it found him; he ought to confider, whether he may not be as hard diftreffed to pay back the loan, as the debts which it was intended to difcharge, and whether he may not want money as much then as before.
There is a vulgar error in trade, concerning the borrowing moncy upon intereft: fome think that no man Chould borlow on intereft, but he whofe neceffity obliges him to do it, for the immediate fupport of his credit, and prevention of his ruin, and that as foon as be is able he fhould refund it, to free himfelf from the payment of intereft: this is carrying the matter to a more rigid extreme than it ought, and there may be fome exceptions to this, as there are to moft general rules.
Some teady-money dealers are yet obliged to keep fuch vaft ftocks of goods by them unfold, that they are fometimes undone by that means; but he that buys for credit, and fells for ready money, or lefs credit than he bought for, is always fafe, and he may fafely borrow money upon intereft, for any confiderable fum: the reafon is obvious; his trade muft increafe in proportion to the loan which he takes up; if not, he has no ufe for the moncy he borrows, and will return it of courfe. But if he fees that he can employ more money than be has, and that he can certainly gain more than the intereft he pays will balance, and that he can make his returns in due time, he then knows, how much money foever he borrows, that he gains fo much by it above the intereft, befides the difference of the credit given and taken for exchange.
A. finds he has bought the value of 30001 . in faltpetre, or pepper, at an India fale; but if he could buy 6000 l . value at the fame rate, he has a cuftomer for it, a very good paymafter, who will give him after the rate of 8 per cent. profit ; whereas if he does not buy that quantity, fuch a man will. Upon this A. borrows 3000 l. as 5 per cent. interelt of a frivener, and be buys the goods, fells them again for 3 per cent. profit more than the intereft he pays comes to, and has his money in calh again, time enough to repay the fcrivener. At this way of calculating, A. is fure to gain 3 per cent. whereby he gains good profit, without any hazard, as it were: and if he has a return fooner', as may be the cafe, then he gains fo much more, as the difference of the money comes to, at 5 per cent: per ann. for the difference of time.
On the other hand, he that gives longer credir than he takes, though he gains io per cent. and pays but 5 per cent. may gain nothing. Example : Suppofe he is trufted but 6 months, and he trufts his cuftomers 12 months; if he pays 5 per cent. intereft for the money, and yet thould fell the goods fur 10 par cent. profir, it is plain he gains nothing, and acts with difadvantage into the account; becaufe he runs the rifl of the perfon he trufts, and makes no profit, cither for his trouble or hazard.

## ROX

## R.O Y

By the trufting of cuftomers twelve months, we would not fuggeft that any trader in his wits fhould fell bis merchandize by contract for a year's credir, and for that time to tie up his hands, that he cannot demand his money before. What we mean is, according to the ordinary ufage of trade: Example: A wholefale man deals with another, a thopkeeper, and trades with him upon the general credit of his dealing; the hopkeeper goes on buying and paying; he does not examine when the payment for every particular parcel of goods is due, but he buys as his occafions require goods, and he pays as he can fpare money; and as he is a current man, and purchafes large quantities, he is efteemed a good cuftomer; yet if we look into his accounts, his parcels and his payments anfwer one another, perhaps, after the rate of 9 to 10 and 12 months credit, nor does he think himfelf a bad paymafter; and yet, if the wholefale dealer with whom he trades, paid intereft of 5 per cent. for his money, unlefs he got more than 30 per cent. by this cuftomer, he would lofe money by all'the goods which he fold hum.- This is a reflection that every tradefman oought to make, and well to confider, who may incline to take up money at 5 per cent. intereft.
Befides, if all the while any part of the money-borrower's goods remain in the warehoufes unfuld, and all that while he pays intereft for the money that bought them, this article of intereft-money, if exactly deducted from the profits, eats through the whole bargain; and if fuch trader would keep an accurate account of profit and lofs, he would experience that fuch conduct would deftroy the whole profits of his trade. In a word, intereft of money is a canker worm in trade, eats through and through the trader, and infenfibly confumes him ; and few traders, we fear, ftate to themfelves this matter in a true light; for whatever lofs the trader meets with, the money-lender muft be duly paid his intereft: and with whomfoever the trader compounds, the money-lender makes no compofition, unlefs he is forced, by the ruin of the trader,to compound for principal as well as intereft, when, perhaps, by the mere intereft, he has received doubly his principal. If it be thus fatal to the trader to pay but the legal intereft of 5 per cent. for his money, how deplorable muft his cafe be, when he is uppreffed either by the lender, the procurer, the frivener, or banker, under the fly and ruinous article called procuration, continuation, premio, and the like? And this extortion is made when the debtor is apparently in need of the loan, or that it appears be is not in a condition to refund the money: and although, perhaps, the creditor has good fecurity for his money, yet thofe people never want pretences and artifices, fomehow to hook in new and frequent confiderations, by way of addition to the ordinary intereftmoney.
There is another unhappy practice among the more neceffitous traders, and which in the end is infallibly deftructive and ruinous, at leaft as far as it is followed: this is paffing and repaffing promiffory notes, or bills indorfed by one another reciprocally, and drawn upon themfelves; for fo it may properly enough be termed, for the prefent fupply of cafh, in which they are, in the long-run, even extortioners upon themfelves.
This mifchievous practice began principally among merchants trading in foreign parts, when at an extraordinary pinch for money: fuppofe it be, that the merchant has a fhip come into the river, laden with wines, and he wants a fum of money immediately wherewith to pay the cuftom houfe duties; which being done, will prefently come to market, and reimburfe his money.
The importer wanting cafh for the purpofe, and being in full credit on the exchange, and having a friend at Amfterdam, that he knows will honour his bills, he draws upon him for 2000 1. fterling, payable at two ufances: upon this draught he immediately receives the moncy upon the exchange, for the exchange is the merchant's bank on fuch occafions as thefe: having thus taken up the money on the credit of his bills, he lands his wines, or whatever other goods they are; fells a large quantity of them on the keys, and getting in a competent fum to anfwer it, he immediately takes care of his credit, and of his friend at Amfterdam : and having ftaid but one month, and his bills being payable at two months in Amfterdam, he punctually remits 2000 I. to his friend there in good bills, to anfwer his firft draught upon him, and remits the like fum at ufance; fo that his friend, experiencing in this cafe, how careful he is of his honour, is ready to accept any bills for him another time: thus far this tranfaction is carried on with reputation ; and though a merchant drawing, may have fome fmall lofs, by remitting at a fhorter time than his draught was made for, yet that is not confiderable, the fervice done him upon fuch an exigence requiring it, and merchants of the beft figure are fometimes obliged to ferve themfelves with ready money in fuch a manner.
But fuppofing the merchant finds, that though his wines are landed, and perhaps fold, yet he has other prefling occafions which call for his money, and he cannot remit to Amfterdam to anfwer his draught: hereupon be contrives another fhift to keep the money two months longer; which is by ordering his friend at Amfterdam to redraw upon him at London at two ufances; which he at Amfterdam does accordingly, and
his bills being accepted here, the merchant at Amfterdam is fuly fatisfied, and the drawer's credit remains good at Luudon. But, in this cafe, the merchant at London becomes an extortioner upon himfelf; for, befides the lofs by the exchange, which isgenerally againf him, becaufe he cannot, like a me that draws or remits for the advantage of the exchange, wait and take it this way or that way, as the courfe of exchang may be moft to his benefit; fo his neceflity at firft, and his credit at laft, preffing him to draw when he had occafion and be drawn upon juft as bills become due, his necefficies alio oblige him to run the rifk, and take his chance for the courfe of the exchange; and this is frequently to his difadyantage Befides this, his friend at Amfterdam mult have his cum. miffion, both for the payment of his bills, and again for drawing, with the charge of brokerage both upon the exchange of London and Amfterdam, with poftage of letters, and vther incidents: nor does the matter end here.
When the two ufances are towards expiring, and that, on fuch an approaching day, his bills from Amfterdam will become due, and mult be paid or his credit ruined, and perhaps his friend at Amfterdam too; and being not yet in cafh to an fwer thofe bills, he bas recourfe to another expedient, and having ftill unfpotted credit abroad, he draws for 10,000 crowns upon two merchants, the one at Genoa, the other at Leghorn, his correfpondents, at 30 days after fight, having effects fufficient in their hands to anfwer the payment. In order to back this credit, he buys 20001. Worth of goods of the warehouremen in London, in druggets, or duroys, \& $c$, for which he can currently have fix months credit, and takes care to have thofe goods fhipped, and the bills of lading fent to his correfpondents, before his advice of drawing the bills. To fupport his credit with them alfo, he writes, at the fame time, that, if his effects in their hands fhould nor fupply in time to anfwer his bills, they fhould draw upon fuch another merchant at Paris on his account, to whom he had given directions to accept his bills; all which being politically managed, the bills at Leghorn and Genoa are accepted and paid, without the drawing upon Paris: and now the merchant of London has tranferred his debt from his friends abroad, to two or three warehoufemen, or Blackwell-Hall factors at home, and has now got fix months time for the payment of this 20001 . more than the four months at firft ; fo that in all he has enjoyed this credit ten months.- When thefe fix months are expired, it would be greatly to his intereft that he might be able, out of his ordinary cafh, to pay the tradefmen off; but his other demands do not admit of it, and, that he may not be dunned and difhonoured, he becomes under the neceffity to take the fame courfe again, and his friends at Leghom and Genoa having accepted his bills, on the credit of the effects already in their hands, and hipped to them as above; he now tries his good friend Monf. $\qquad$ , banker at Paris, and draws 2000.1. fterling upon him; and taking up this money upon change, as before, he pays off his warehoufemen and factors, and perhaps buys again, in order to lay in ftill a good bank at Leghorn and Genoa.
All this while the London merchant keep up his credit, his bills are all honourably accepted and paid; but fill the drawing falls all upon himfelf at laft, till by thus frequently running the fame round, if he will make an exact calculation, he fhall find that he has paid at laft from ten to fifteen per cent. for the ufe of this money; and, which is fill worfe, is indebted the principal fums, one where or other; and this gradually eats him up, and devours his fortune, 'till at length fome confiderable difatter happening abroad, in the courfe of his affairs, he receives a blaft upon his reputation, fo that his bills will not be taken as formerly upon the exchange, and then he is undone.
This drawing and remitting, as it is a fatal thing to a merchant, fo, unlefs it be very warily managed, it foon comes to be fimelt into by the ftaunch-credited remitters of money upon the exchange, and they are always jealous where they find a man thus concerned; fo that it rarely can be carried on for any long time without oblervation, unlefs it be done with a vaft variety of changing hands, and fometimes names, and a very punctual anfwering every demand to a tittle; and yet at length it proves fatal to moft that embark in it.
Another thing that often proves ruinous to a trader, more efpecially to the merchant, is the want of requifite accomplifhments to acquit himfelf with credit and honour in his profeffion; but as I have fpoken very amply to this matter under the article Mercantile College [British MercantileCollege] I refer the reader to that head.

## Remarks in a national light.

Though the conftant intereft of our trade and commerce does, in a great meafure, depend upon the induftry, prudence, fikill, and ingenuity of our merchants and traders in general, yet thefe things alone will not anfwer that great end; if the government of Great-Britain does not fteadily, wifely, and zealoully co-operate with our traders to promote and advance the fame caufe, all that our traders can do will be ineffectual. But as too many catch at every occafion to milreprefent the whenduct of the royal houfe of Hanover, in relation to the

## R O Y

care that has been taken of the trade of this kingdom fince the happy acceffion of that auguft family to the threne; I think it my duty to refrefh the memories of fome, with a fhort fate of what h:s been done by his late and prefent.Majefty, with regard to this important point. And as an impartial man, I think this more incumbent upon me, becaufe I have taken. the liberty, where I have thought truth and the public interefts have required it, to give my free and undifguifed fentiments on fome points wherein it appears to me that our minifters have not fo warnly efpoufed this caufe as could be wihhed.-We fhall briefly trace this matter from the beginning of his late Majeft's reign.- To which end we fhall take notice of the treaty, concluded at Madrid, on the I4th of December, 1715 , and, by comparing it with that concluded at Utrecht on the 19th of December, 1713, fhew feveral particulars in which the treaty made with his late Majefty is more advantageous to Great-Britain than that which was made in Queen 'Anne's reign: and indeed it muft be equally furprizing how fo biad a treaty came to be made at the end of a glorious and fucceffful war, and how fo good a one was obtained by king George $I$, in the beginning of a reign difturbed by fuch inteftine commotions. But we may learn from hence, that the wifdom of a fovereign, and the integrity of his minifters, are more neceffary for bringing about works of fuch confequence for the public rood than any juncture of time, or any other the maft favourable circumitance.
We muft here premife, that by the treaty concluded at Madrid in 1667, the duties of importation payable upon the manufactures and products of Great-Britain, amounted, upon the eftablifhed valuation in the Spaniin book of rates (after the deduction of the gratias) in Andaluila to $11 \frac{1}{3}$ per cent. in Valencia to 5 per cent. and in Catalonia to about 7 per cent. or leff, and confequently, upon the whole aforefaid trade, thofe duties could not exceed ro per cent. on a medium. After this fhort account of our trade with Spain before the treaty of Utrecht, made by the late queen, we mult obferve, that, by the explanatory articles of this laft-mentioned treaty, the duties of importation upon the products and manufactures of Great-Britain were augmented in Andalufia to $27^{\frac{2}{3}}$ per cent, at a medium.
But by the treaty made by king George I. at Madrid, the faid duties were again reduced, according to the aforefaid treaty of 1667 , and the deduction of the gratias * is eftablifh. ed as an inviolable law; 'whereas before, the gratias of the farmers of the royal revente of Spain, were particularly altogether precarious, and depended intircly upon courtefy.

* For the nature of thofe gratias in Spain, fee our article Gratias, where this matter is fully explained.
That the common reader, however, may here underftand fomething of the nature of thefe gratias, he muft know, that when the king of Spain had laid higher duties upon our Englifh goods than what the Britifh merchants were able or willing to comply with, he ufed to abate a certain part: which indulgence or abatement went under the name of gratia, or matter of favour, and not matter of right by treaty. But when he had farmed out thele his cuftoms to feveral of his fubjects, the farmers, in order to draw more merchandize to their refpertive ports, and thereby to increafe their own particular profits, ufed to make new abatements, or gratias, to the Britifh merchants, endeavouring fometimes to outvie one another in fuch indulgences, and by that means to get a greater proportion of cuftom into their own hands.
But to proceed. The duties on exportation may be computed to be raifed by the Utrecht treaty, near as much as the forefaid duties of importation : whereas, by the treaty made by his late Majefty, they are reduced to their ancient ftandard. Complaint having been made that the Spaniards, after the fulpenfion of arms in queen Anne's reign, had taken feveral New England, and other Britifh fhips, gathering falt at the ifland of Tortuga, a very full and juft report concerning that affair was laid before her late Majefty, of which we fhall give the reader the following extract.
- Your Majelty's fubjects have, from the firft fettlement of 6 the continent of America, had free accefs to this ifland, c and have without interruptions, unlefs in time of war, ufed - to take what falt they pleafed there; and we have proof < of that ufage for above 50 years, as appears by certificates - of perfons who have been employed in that trade.
- It doth not appear, upon the ftricteft enquiry, that the - Spaniards ever inhabited or fettled on the fard ifland's nor t is it probable they ever did, it being all either barren rock, * or dry fand, and having no frefh water or provifions in it. - We take leave to lay before your Majefty, the confequence - of your Majeity's fubjects being prohibited to fetch falt at - Tortuga; which will in part appear from the number of - fhips ufing that trade, being, as we are informed, one year - with another, about 100 fail.
- The falt carried trom thence to New England is ufed chiefly - for curing of filh, which is either cod, fcate-fifh, or mack-- rel; the former of which is the principal branch of the re - turns made from the continent to Great-Britain, by way * of Spain, Portugal, and the Streights, for the woollen and - other goods fent from this kingdom thither. Befides which,
- the icate fifh and mackrel are of fuch confequence, that the - fugar iflands cannot fubfirt without them, their negroes be6 ing chiefly fupported by this fifh: fo that, if they were nat - fupplied therewith from New England (which they cannot - be if your Majefty's fubjects are prohibited from getting - falt at Tortuga) they would not be able to carry on their - fugar works: This hath been confirmed to us by feveral - confiderable planters concerned in thofe parts.
- Upon the whole, your Majefty's fubjects having enjoyed an - uninterrupted ufage of gathering faltat Tortuga, ever fince - the firft fettlement of the continent as aforefaid, we humbly - fubmit to your Majefly the confequence of preferving that ' ufage and right, upon which the trade of your Majefty's ' plantations fo much depends.'
Notwithftanding it appears, from what is above-written, that our Sugar Islands were like to fuffer confiderably, for want of Fish from New England, no care was takeri to have this matter remedied by the explanatory articles to the Utrecht treaty, which were pofferior to the above mentioned report.
However, in the third article of the treaty made by king George $I$, this bufinefs is fully fettled to our advantage.
The Britilh merchants having had feveral hardfhips put upori them at Bilboa in Spain, which occafioned the decay of out trade at that place, the faid unerchants did make and exccute; in the year 1700, A Treaty of Privileges with the magiftrates and inhabitants of Sc . Ander, very much to the advantage of this kingdom, in order to their removing and fettling there: the effect of which was prevented by the death of king Charles II. of Spain, and the war which foon after enfued. This matter, it feems, was flighted or neglecked by the managers of the Utrecht treaty: for by the XIVth article of that treaty, there is only A Liberty given to the British Subjects tosettle And dwellat St Ander, upon the Terms of the IXih and XXXth Articles of the Treaty of 1667, which are general: but no regard was had to the foremientioned treaty of privileges in 1700; whereas by the fecond article of the forementioned treaty made by king George I, the fore mentioned Treaty of Privileges with Sc Ander, is confirmed and ratified.
Another confiderable advantage obtained is, that the French, by the treaty made with his late Majefty, are to pay the fame Duties at the Dry-ports, through which they pafs by land-carriage, as we pay upon importation or exportation by fea, which was not provided for by the Utrecht treaty. By the fchedules annexed to the treaty of 1667 , the valuable privileges of having Judge-Conservators in Spain (appointed to make a more feeedy and lefs expenfive determinapointed to make a mores arifing in trade between the Britifh
tion of all controverfies merchants and the Spaniards) was fully eftablifhed. But by the XV th article of the Utrecht treaty, that privilege was in effect given up: for it is therein only ftipulated, THAT IN CASE any other Nation have that Privilege, we shallin like Mannerenjoyit. But by the Vth article of the treaty made by his late Majefty king George, it is ftipulated, that We shalle enjoy alil the Rights, Privileges, Franchises, Exemptions, and Immunities whatsoever, which we enjoyed by virtue of the Royal Schedules, or Ordinances, by the Treaty of 166j: fo that hereby the great privilege of Judge-Conservators is again confirmed to us. Thefe are fome of the advantages which the royal houfe of Hanover hath obtained for us in our Spanish Tride.
We thall now give a fhort account of thofe procured for us from the Austrian Low Countries, by virtue of the XXVIth article of the Barrier Treaty.
This branch of our trade wras regulated by a fariff, or declaration of the Duties of Import and Export, in the year $16 \%$, which was fuperfeded by another made in 1680 , and continued 'rill the laft tariff, fettled in 1715 with king George I. As for the two former, thofe who will be at the pains of perufing them, will find the tariff of 1670 laid Higher Duties on feveral confiderable branches of our trade than that of 1680, but in many particulars was more favourable to us than the latter. Now by the tariff made by king George in 17.5, thefe Duties were fixed and regulated for the future by thofe which were mof fayourable in either of the former tariffs, and all our Britifh products and manufactures (one only excepted, which thall be named prefently) fettled upon an eafier foot than ever.
Our woollen cloths, being the moft profitable branch of our trade into thefe countries, by this means gained a very confiderable advantage: for the tariff of 1680 having laid Higher Duties upon the finer forts, and Lower Duties on ordinary cloth, than what were fetted in the tariff of 1670 , his late Majefty, by the forementioned Barrier Treaty, his late Majefty, by the forementioned barrier Treaty,
reduced the Duties on the finer forts to the tariff of 1670 , reduced the Duties on the finer ordts to the tarift or 1670, the tariff of 1680 . Infomuch that the tariff of 1715 , confidered with relation to this valuable part of our trade, reduced the DUTIES at Ieaft one fixth part, fuppofing the exportation of all forts to he equal; but, as there is alway's a much greater exportation of the ordinary cloth than of the
finer forts, the reduetion of thefe duties became ftill much more confiderable.
We muft further obferve, that there had been feveral innovations made to the derriment of the Englifh merchant, fince the tariff of 1680 ; all which innovations were intirely fet afide by the faid treaty of $\mathbf{1 7 1 5}$, upon every fpecies of goods except butter, which is mentioned becaufe we cannot be too minute and circumftantial in accounts of this nature: this article, however, is moderated, and is rated in proportion to what has been paid by the Dutch.
As our commerce with the Netherlands [fee the article Netherlands] was thus fettled to the advantage of our Bri tifh merchants, fo it was much to their fatisfaction.
I cannot conclude this topic without obferving, that as sothing but the great reputation of his late Majeety king George in foreign countries, and of his fixed purpofes to purfue the real good and happinefs of his kingdoms, could bring about treaties fo beneficial to our commerce, in fo few years as he did; fo it is impolible to reflect with patience on the folly and ingratitude of thofe men, who wickedly laboured to difurb him in the midft of thefe his royal cares, and to mifreprefent, as they did at that time, bis glorious endeavours for the good of bis people. And if this great prince did fo much for us, even within the firft two or three years of his reign, and ftill greater things during every year of bis reign afterwards, as I flall thew in its proper place: if this wife monarch did fo much for thefe kingdoms, altho' his whole reign was difturbed with the ftorms of rebellion and invafion, and domeftic ferments of another kind too, what would be not have done for commerce, if his reign had been. a fcene of defirable quiet and tranquillity? Inftead of undervaluing the important things he did in this refpect, we ought rather to admire that he was able to do fo much, when we could not seafonably expect he fhould have been able to have done any thing.
And it may be further faid with great truth, that, as well during the reign of his prefent Majefty, as of that of his royal predecefor, they have never made the leaft attempt to invade the rights of trade or poffeffions of any flate or empire whatfoever; they never difcovered any glimmerings of low artifice, chicanery, or perfidy, in their treaties and negociations with foreign powers, not the fhadow of an intention to injure any in relation to their territorial or commercial intereft. On the contrary, the royal houfe of Hanover have fupported the intereft and glory of this nation by meafures the molt juft, the moft equitable, and the moft honourable towards all countries; and I wifh I could fay the hike of fome ncighbouring nations; but their prefent, as well as their paft conduct, would give the lye to it; for at this time, without the leaft caufe or rovocation on the fide of his Britannic Majefty, his dominions are moft ignominiounly attacked in the face of the whole world: and what adds to the aggravation of the bafenefs and treachery is, that thefe very defigns have been chiefly, and moft effectually meditating, ever fince the laff treaty of peace and friendhip, and under the difguife of the fincereft amity, and moft honourable intentions to preferve the tranquillity of Europe. See our articic PlantaTTONS, and divers others, to which we from thence refer. Ought not fuch conduct as this to roufe all true friends to the trade and intereft of Great-Britain, to unite their zealous endeavours, to make the remainder of his Majefty's reign as great and as glorious as it has hitherto been, and not fuffer it to be fullied with the lofs of any part of his dominions, efpecially thofe which are fo ineftimable to the kingdom, and which are, therefore, fo thamefully invaded at prefent? If the wife and good have any thing of moment to offer at this critical time; either within doors or without, for the true intereft and honour of the nation, let it be offered with moderation and ftrength of argument, not with rancour, heat, and animofity, for this deftroys the power and fplendor of truth and right reafon. Let gentlemen communicate their fentiments like gentlemen: let Britons not widen our breaches, when it is their duty to heal them: let us not debate, but act, when the enemy is at the door: let us demonftrate to the whole world that we are an united people, that we have all imaginable reafon to love and revere our moft gracious monarch, and to be warmly attached to the fupport of his royal houfe, and to the trade and glory of the kingdom; that we are determined to be unamimous to enable his Majefly effectually to refent the indignity which is now offered to the nation, and to chaftife and humble thofe who are the common diflurbers of the peace anid tranquillity of the whole world. And as the chief expence, during the reign of his late as well as his prefent Majefty, has been (as I hope to make appear at a proper time) laid out upon the royal navy of this kingdom, and our magazines are at prefent plentifully filled with naval and military ftores: as the naval power of this nation is much greater now than it ever was before in any period of time, even compared with that of any other, or many nations: and as we are in a capacity, as I could eafily prove, to increafe our naval power to fuch a degree as will foon make our enemies tremble: as this is the real fituation of our public affairs; we need not be intimidated by the bullies of the world. Every true friend to the Proteftart caufe, will chearfully dend his
helping band to fcourge thofe whofe infolence and treachery deferve it ; and certain I am that thofe who thall do otherwife, and endeavour to diftract his Majefty's councils at this crifis, or to perplex the great reprefentative of the nation, or the public in general, with ill-timed difputes and controverfies, can be as little friends to the Proteftant intereft, as to the trad, and the liberties of thefe kingdoms: and fuch who fhall attempt, in any thape, to embroil our public affairs, at fo important a conjuncture, deferve ever to be ftigmatized, as unworthy to live under fo mild, fo gracious, and fo free a government ; they ought to be branded on the forehead with an hot iron, that they may be for ever after fhunned and avoided, as peftilential to fociety, and fitter to live under a Popilh tyranny than under a government like this, of all defirable liberty and freedom. No man has a greater contempt for men in power, who abufe the great truft repofed in them, than myfelf, nor would any one fooner lend a hand to pull them down; and few have fooke their mind with more feeedom upon very interefting occafions than I have done: but as I have done it with that decency and moderation that becomes every man that means good and not mifchief, I do not find that I have given any offence. But whoever impartially confiders the hiftory of his late and prefent Majefty's reigus in thefe kingdoms, will find that their hands bave been tied from doing the nation that good they have ever aimed at; their reigns have been difturbed with rebellions at home, and attempts of invafion from abroad; and aur domeftic fquabbles, under the pretence of popular parriotiif, have not, perhaps, done the nation lefs injury than the attempts of our foreign foes. It is true, great fums of money have been raifed; but what with domeftic ftrife, unnatural rebellions, and the perfidy of foreign courts upon thofe accounts; thefe fums, I am perfuaded, have not bad the effect that half the money would have had, if thofe, who have pretended to have been friends to their country, had approved themfelves really fuch. See the articles Revenue and Trade; fee allo our articlo Parilament [Member of Pariiament].
The Royal Excbange of London is the firft place in the kingdom that will feel the effeets of the injury meditated to bedone at this juncture by forsign rivals and enemies to our trade and navigation ; and I am well perfuaded that great and honourable body will be the firtt who will fupply his Majefty with the frnews of war, to defeat hofe wicked intentions. However our enemies may flatter themfelves with the weight of our debts and taxes, and that we cannot act with that fpirit and vigeur requifite to fruftrate their unwarrantable defigns, they will find themfelves as hamefully miftaken as they have heretofore been. It is true, our debts are large, but their incumbrance, let them remember, is, by the reduction of intereft, rendered much lighter than otherwife it would have been: and there are eafy ways and means to render our debts much lighter ftill than they are; nor will his Majefty want either ampie refources or wife meafures, to reduce a certain nation to as low an ebb as ever the great Marlborough did, if they once more roufe the Britilh lion againft them.

## ROYALSOCIETY.

Of the firft conflitution of the Royal Society of London, eftablifhed in the reign of king Charles II. Charles the IId, by the grace of God, of England, Scatland, France, and Ireland, king, defender of the faith, \&cc. To all unto whom thefe prefents fhall come, greeting. Having long refolved within ourfelf to promote the welfare of arts and fciences, as well as that of our territories and dominions, out of our princely affection to all kind of learning, and more particular favour to philofophical fudies; efpecially thofe which endeavour, by folid experiments, either to reform or improve philofophy. To the intent therefore that thefe kinds of ftudy, which are no where yet fufficiently cultivated, may flourih in our dominions; and that the learned worid may acknowledge us to be, not only the defender of the faith, but the patron and encourager of all forts of ufeful knowledge, KNOW YE, that we, out of our fpecial grace, certain knowlege, and mere motion, having given and granted, and doby thefe prefents give and grant, for us, our heirs, and fucceffors, that there fhall be for ever a fociety, confifting of a prefident, council, and fellows, which fhall be called by the name of the prefident, council, and fellows of the Royal Society of London, for cultivating and improving of natural knowlege, of which fociety we do by thefe prefents declare ourfelves to be founder and patron. And we do hereby make and conftitute the faid fociety by the name, \&c. to be a body corporate, to be continued under the fame name in a perpetual fucceffion; and that they and their fucceffors (whofe ftudies are to be employed for the promoting of the knowledge of natural things, and ufeful arts by experiments, to the glory of God and the good of mankind) thall, by the aforefaid name of prefident, council, scc. be enabled and made capable in law, to levy, hold, poffefs, and enjoy, lands, tenements, \&c. liberties, franchifes, jurifdictions, for perpetuity, or cerms of lives, or years, or any other way; as alfo goods, chattels, and all other things of what nature or kind foever. And alfo by the name aforefaid to give, grant, demife, or aflign the faid lands, goods, 8 sc and
and to do all things neeeflary thereabout. And the faid perfons by the name afurefaid, are enabled to implead, be im pleaded, fue, defend, \& c. in any courts, and before any judges, officers, \&c. what foover, of the king, his heirs and fucceffors, in all and fingular actions, real and perfonal: pleas, caufes, \&c. ' of what kind fuever, as any of his fubpleas, cautes, ject within his kingdom of England, or corporations, are by law capable and enabled to do.
And the faid prefident, council, and fellows, are impowered to have a common feal for their ufe 'in their affairs; and from time to time to break, change, and make anew the fame, as fhall feem expedient unto them.
And his Majefty, in teffimony of his royal favour towards the faid prefident, council, and fellows, and of his efpecial efteem of them, doth grant a coat of arms to them and their fucceffors, viz. on a field argent a canton of the three lions of England: for a creft, an eagle proper on a ducal coronet, fupporting a fhield charged with the lions aforefaid; and for fupporters, wo talbots with coronets on their necks. The faid arms to be borne, \&c. by the faid fociety upon all occafions. And that his Majefty's royal intention may take the better effect for the good government of the faid fociety from time to time, it is eftablifhed, that the council aforefaid fhall confilt of 21 perfons (whereof the prefident for the time being always to be one). And that ali perfons, which, within two months next enfuing the date of the faid cnarter, fhall be chofen by the faid prefident and council; and in all times after the faid two months, by the prefident, council, and fellows [and noted in a regifter to be kepr for that purpore] fhall be fellows of the faid fosiety, and fo accounted and called during life, except by the ftatutes of the faid fociety to be made, any of them ihall happen to be amerced; and by how much any perfons are more excelling in all kinds of learning, by how much the more ardently they defite to promote the honour, bufinefs, and emolument of the faid fociety, by how much the more emnent they are for integrity, honefty, piety, loyalty. and good affection toward his Majefty, his crown and dignity, by fo much the more fit and worthy fuch perfons are to be judged for recept:on into the fociety.
And for the better execution of his royal grant, his Majefty hath nominated, \&c. his trufty and well-beloved, William, vifcount Brouncker, chancellor to his deareft confort queen Catherine, to be the firft and nodern prefident, to continue in the faid office from the date of the patent to the feaft of St Andrew next enfuing, and untill another perfon of the faid council be duly chofen into the fand office. The faid lord Brouncker being fworn in all things belonging thereto, well and faithfully to execute the fand office, before his right well-beloved and right trufty coufin and counfellor, Edward Earl of Claren-
don, Jord high chancellor of England, in the words following :
1 William vifount Brouncker, do promife to deal faithfully and boneltly in all things belonging to thar truft conmitted to me, as prefident of the Royal Society of London, for improving natural knowledge. So help me God.
And his majefty hath nominated, \&c. the perfons following, his trufty and well-beloved Sir Robert Murray, Knt. one of his privy council in his kinguom of Scotland, Robett Boyle, Efq; William Biereton, Efq; eldeft fon to the lord Brereton, Sir Kenelme Dighy, Knt . chancellor to bis dear'ft mother queen Mary, Sir Gilbert Talbot, Knt. mafter of his jewel-houfe, Sir Paul Neile, Fut. one of the ufhers of his privy chamber, Henry Slingby, Efq; one of the gentlemen of his faid privy chamber, Sir William Petty, Knt. Timothy Clark, doctor of phyfic, and one of his phyficians, John Wilkins, ductor of divinity, George Ent, doctor of phyfic, William Erikyne, Eff; one of his cupbearers, Jonathan Goddard, doctor of phyfic, William Ball, Efq; Matthew Wren, Efq; John Evelyn, Efq; Thomas Henfhaw, Efq; Dudley Palmer, of Gray's Inn, Efq; Abraham Hill, of London, EIq; and Henry Oldenburg, Efq; together with the prefident aforefaid, to be the firft and modern 2 I of the council and fellows of the Royal Society aforefaid, to be continued in the offices of the council aforefaid, from the date of the patent to the feait of St Andrew next foilowing, and from thence 'rill other fit perfons be chofen into the faid offices. The faid perfons to be fworn before the prefident of the fociery for the time being, well and truly to execute the faid offices, according to the torm and effect of the aforefaid oath to be adminiftered to the prefident, by the lord chancellor as aforefaid. For the admmifte-ing which oath to the fuid perfons, and all others hereafter from time to time to be chofen iato the raid council, full power and authority is granted to the prefident for the cume being: and the faid perfons duly fworn, and all other from time to time duly chofen into leffid council and fworn, are to aid, advife, and affift in all affairs, bufinefles, and things, concerning the bettel regulation, government, and direction of the Royal Society, and every member theresf.
Furthermore, liberty is granted to the faid fociety, lawfully to make and hold meeting. of themietves, for the fearching out-and difcovery of natural things, and tranfaction of other bufineffes relating to the faid fociety, when and as often as Shall be requifite, in any college, lall, or other convenient place in London, or within ten mils thereof.

VOL. II.

And power is granted to the fait fociety, from time to time to nominate and chufe yearly, on St Andrew's day, one of the council aforefaid, for the time being, to be prefident of the fociety, until St Andrew's day rext enfuing (if he thall fo long live, or not be removed for fome juft and reafonable caufe) and from thence unril another be chofen and put into the faid office, the faid prefident fo elected, before admiflion to that office, to be fworn before the council, accerding to the form before exprefled, who are impowered to adminifter the faid oath from time to time, as often as there fhall be caufe to chufe a prefident.
And in cafe that the faid prefident, during his office, fhall die, recede, or be removed, then, and for often, it thall be lawful for the council of the Royal Society to meet together to chufe one of their number for prefident of the faid fociety: and the perfon fo choren and duly fworn, fhili have and exercife the office of prefident for the remainder of the year, and until another be duly chofen into the faid office.
And in cafe that any one or more of the council aforefaid fhall die, recede, or be removed, (which perfons or any of them, for midemeanor, or other reafonable caufe, are deglared to be amerceable by the prefident and the reft of the council) then and fo often it fhall be lawful for the prefident, council, and feliows, to chufe one or more of the fellows of the Royal Society in the room of him or them fo deceafing, receding, or removed, to complete the aforefaid number of 21 of the council; which perfon, or perfons fo chofen, are to continue in office until St Andrew's day then next enfuing, and until others be duly chofen, the faid perfons being fworn faithfully to execute their office, according to the true intention of the patent.
And his Majefty doth will and grant unto the faid prefident, council, and fellows, full power and authority on St Andrew's day yearly, to elect, nominate, and change, ten of the fellows of the Royal Society, to fupply the places and offices of ten of the aforefaid number of 21 of the council, declaring it to be his royal will and pledure, that ten and no more of the council aforefaid, be annually changed and removed by the prefident, council, and fellows aforefaid. And it is granted on the behalf of the faid fociety, that if it fhall happen that the prefident be fick, infirm, detained in his Majefty's fervice, or otherwife occupied, fo as he cannct attend the neceflary-afairs of the fociety, then and fo often it fall be lawful for himf to appoint one of the council for his deputy, who fhall fupply his place from time to time, as often as he iball happen to be abfent, during the whole time of the faid prefident's continuance in his office, unlefs he ffall in the mean time conftitute fome other of the council for his deputy: and the deputy fo conftituted, is impowered to do all and fingular things which belong to the office of the prefident of the Royal Society, and in as ample manner and form as the faid prefident may do by virtue of his Majefty's letters patent, he the faid deputy being duly forn before the council in form before fpecified, who are impowered to adminifter the oath as ofien as the cafe fhall require.
It is farther granted to the fociety, to have une treafurer, two fecretaries, two or more curators of experiments, one or more clerk, or clerks, and alfo two ferjeants at mace, who may from time to time attend on the prefident; all the faid officers to be chofen by the prefident, council, and fellows, and to be fworn in form and effect before fpecified, well and faithfully to execute their offices, which oath the council are impowered to adminifter: and his Majelty nominates and appoints his well-beloved fubjects, the afurefaiu Will. Ball, Efq; to be the firft and modern treafurer ; and the aforefaid John Wilkins and Henry Oldenburg, to be the firft and modern fecretaries of the Royal Society, to be continued in the faid offices to the feaft of St Andrew next following the date of the patent. And that from time to time and ever hereafter on the faid feaft of St Andew (if it be not Lord's day, and if it be Lord's day on the nexe day after) the prefident, council, and fellows aforefaid, are impowered to nominate and chufe honeft and difcreet men for treafurer and fecretaries, which are to be of the number of the council of the Royal Society; which perfons elected and fworn, in form before fecified, are to exercife and enjoy the faid offices until the feaft of St Andrew next then following.
And if it fhall happen, that the aforefaid eleftion of the prefident, council, treafurer, and fecretaries, or any of them, cannot be made or perfected on the feaft of St Andrew aforefaid; it is granted to the aforefaid prefident, council, and fellows, that they. may lawfully nominate and affgn another day, as near to the faid fealt of St Andrew as conventently may be, for making or pertecting the raid elections, and fo from day to day 'till the faid elections be perfected. And in cafe, that any of the aforefaid officers of the Rnyal Society fhall" die, recede, or be removed, from their refpective offices, then and fo often fhall it be lawiul for the faid prefident, council, and fellows, to chufe one or more into the office or offices, vacant, to hold the fame during the se-. fidue of that year, and untill others be duly chofen and fworn in their places.
Moreover, on the bchalf of the focisty, it is granted unto the prefident and council, that they may affemble and meet together in any college, hall, or other convenient place in

8 Q
Loridon,

## R O Y

London, or within ten miles thereof (due and lawful fumthonsi of all the members of the council to extrordinary meetings being always premifed) and that they being fo met together, bave full power and authority, from time to time, to make, conftitute, and eftablifh fuch laws, flatutes, orders, and conflitutions, which thall appear to them to be good, ufeful, honeft, and neceflary, according to their judgments and difcretions, for the government, regulation, and direction of the Royal Society, and every member thereof; and to do all things concerning the government, eftate, goods, lands, revenues, as allo the bufineffes and affairs of the faid fociety : all which laws; flatutes, orders; \&xc. fo made, his Majefty wills and commands, that they be from time to time inviolably obferved, according to the tenor "and effect of them: provided that they be reafonable, and not repugnant or contrary to the Jaws, cuftoms, \&c. of his kingdom of England.
And furthermore, full power and authority is given and granted unto the faid fociety, from time to time, to chufe one or more psinters and gravers; and by writing, fealed with the common feal of the fociety, and figned by the prefident for the time being, to grant them power to print fuch things, matters, and bufineffes concerning the faid fociety, as fhall be committed to them by the council from time to time, the faid printers and gravers being fworn before the prefident and council, in form before fpecified: which prefident and council are empowered to give the faid oath.
And for the greater advantage and fuccefs of the fociety in their philofophical ftudies and endeavours, full power and authority is granted unto them to require, take, and receive, from time to time, dead bodies of perfons executed, and the fame to a natomize, to all intents and purpofes, and in as ample manner and form, as the College of Phyficians and Company of Surgeons of London (by what names foever they faid two corporations are or may be called) have had and made ufe of, or may have and ufe the faid bodies.
And for the improvement of fuch experiments, arts, and fciences, as the fociety may be employed in, full power and authority is granted unto them, from time to time, by letters under the hand of the prefident, in the prefence of the council, to hold correfpondence and intelligence with any ftrangers, whether private perfons or collegiate focieties, or corporations, without any interruption or moleftation whatfoever: provided, that this indulgence or grant be extended to no farther ufe than the particular benefit and intereft of the fociety, in matters philorophical, mathematical, and mechanical. Full power and authority is alfo granted, on the behalf of the fociety, to the council, to erect and build one or more colleges within London, or ten miles thereof, of what form or quality foever for habitation, affembling, or meeting of the prefident, council, and fellows, about any affairs and bufinefles of the fociety.
And if any abufes or differences thall ever hereafter arife and happen, about the government or affairs of the fociety, whence the conftitution, progrefs, and improvement, or bufineffes thereof may fuffer, or be hindered: in fuch cafes, his Majefty affigns and authorifes his right trufty and right wellbeloved coufin and counfellor, Edward earl of Clarendon, lord high chancellor of England, by himfelf during his life, and after his deceafe, the lord archbifhop of Canterbury, the lord chancellor, or lord-keeper of the great feal of England, the lord high treafurer of England, the lord-keeper of the privy feal, the lord bifhop of London, and the two principal fecretaries of ftate for the time being, or any four or more of them, to compofe and redrefs any fuch differences or abufes. And laftly, his Majefty ftrictly charges and commands all juftices, mayors, aldermen, fheriffs, bailiffs, conftables, and all other officers, minitters and fubjects whatfoever, from time to time to be aiding and affifing unto the faid prefident, council and fellows of the Royal Society, in and about all things according to the true intention of his letters patent.' This is the legal ratification, which the Royal Society received at its firft eftablifhment. According to the intention of thefe letters patent, their council, I believe, has ever fince been annually renewed; their prefident, their treafurer, their fecretaries chofen: the chief employments have been to preferve their privileges, to difperfe correfpondents, and to form the body of their ftatutes, which I will here infert.

An abilract of the fatutes of the Royal Socrety.
Whatever ftatute fhall be made or repealed, the making or repealing of it fhall be voted twice, and at two feveral meetings of the council.
This obligation fhall be fubferibed by every fellow, or his election fhall be void.

We, who have hereto fubfcribed, do promife each for himfelf, that we will endeavour to promote the good of the Royal Society of London, for the improvement of natural knowlege, and to purfue the ends, for which the fame was founded; that we will be prefent at the meetings of the fociety, as often as conveniently we can; efpecially at the anniverlary elections, and upon extraordinary occafions; and
that we will oblerve the ftatutes and orders of the faid fociety: provided that whenever any of us thall fignify to the
prefident under his hand, that he defires to withdraw from the fociety, he hall be free from this obligation for the future. Every fellow thall pay his admifion-money, and afterwards contribution towards the defraying of the charges of obfervations and experiments, \&c.

The ordinary meetings of the Royal Society fhall be held once a week, where none fhall be prefent, befides the fellows, without the leave of the fociety, under the degree of a baron in one of his Majefty's three kingdoms, or of his M M ${ }^{\text {jety }}$ privy council; or unlefs he be an eminent foreigner, and there only without the leave of the prefident.
The bufinefs of their weekly meetings fhall be, to order, take account, conlider, and dilcourfe of philofophical experiments and obfervations; to read, hear, and difcourfe, upon letters, reports, and other papers, containing philofophical matters; as alfo to view, and difcourfe upon the productions and rarities of nature and art; and to confider what to reduce from them, or how they may be improved for ufe or difcovery.
The experiments fhall be made at the charge of the fociety; two curators at leaft thall be appointed for the infpection of thofe which cannot be performed before the fociety; by them the bare report of matter of fact fhall be ftated and returned. The election of fellows fhall be made by way of ballot, and their admiffion by a folemn declaration made by the prefident of their election.
The election of the council and officers thall be made once a year: eleven of the prefent council hall be continued by lot, for the next year, and ten new ones chofen in like manner. Out of this new council hall be elected a prefident, a treafurer, and two fecretaries in the fame way.
The prefident fhall prefide in all meetings, regulate all debates of the fociety and council, ffate and put queftions, call for reports and accounts from committees, curators, and others; fummon all extraordinary meetings upon urgent occafions, and fee to the execution of the ftatutes. The vice-prefident fhall have the fame power in the abfence of the prefident.
The treafurer, or his deputy, fhall receive and keep accounts of all money due to the fociety, and difcharge all money payable by the fociety. He fhall pay fmall fums by order of the prefident uuder his hand, but thofe that exceed five pounds by order of the council. All bills of charges for experiments thall firft be figned by the curators. The accounts of the treafurer fhall be audited four times a year, by a committec of the council, and once a year, by a committee of the fociety. The fecretaries are to take notes of the orders, and material palfages of the meetings; to take care of the books, papers, and writings of the fociety; to order and direct the clprks in making entries of all matters in the regifters and journalbooks of the fociety or council; to draw up fuch letters as thall be written in their name, which fhall be approved at one of their meetings; to give notice of the candidates propounded, in order to election.
The curators by office fhall have a fufficient allowance for their encouragement, which chall increafe proportionably with the revenue of the fociety, provided that it exceed not 2001, a year. They fhall be well fkilled in philofophical and mathềmatical learning, well verfed in obfervations, enquiries, and experiments of nature and art. They fhall take care of the managing of all experiments and obfervations appointed by the fociecy or council, and report the fame, and perform fuch other tafks, as the fociety or council fhall appoint; fuch as the examining of fciences, arts, and inventions, now in ufe, and the bringing in hiftories of natural and artificial things, \&rc. They Mall be propounded at leaft a month before they are chofen : they fhall be examined by the council before the election : to their election every member of the fociety thall be fummoned: they fhall at firft be only elected for a year of probation, except they be of known merits: at the end of the year, they ihall be either clected for perpetuity, or for a longer time of probation, or wholly rejected. The caufes of ejecting a curator thall be the fame with ejecting a fellow, or for fraudulent dealing or negligence in the affairs of the fociety, provided that he fhall firt receive three refpective admonitions. If any curator fhall be difabled by age, infirmity, or any cafualty, in the fervice of the fociety, fome provifion fhall be made for him during life, if his condition requires, according as the council fhall think fit.
The clerk fhall conftantly attend at all meetings; he thall follow the directions of the fecretaries, in regiffering and entering all matters that fhall be appointed : he fhall not communicate any thing contained in their books, to any that is not a fellow. He hall have a certain rate for what he copies, and a yearly ftipend for his attendance.
The printer fhall take care for the printing of fuch books, as Thall be committed to him by order of the fociety or council; and therein he fhall obferve their directions, as to the correction of the edition, the number of copies, the form, or volume, \&c.
The operators of the fociety, when they have any of their work under their hands, Thall not undertake the work of any
other perfons, which may hinder the bufnefs of the rociety. They fhall have falaries for their attendance.
The common feal of the fociety fhall be kept in a cheft with three locks and three different keys, by the prefident, treafurer, and one of the fecretaries. The deeds of the fociety fhall be paffed in council, and fealed by them and the prefident.
The books that concern the affairs of the fociety, fhall be the charter-book, ftatute-book, journal-book, letter-books, and regifter books for the entering of pathorophical obfervations, hiftories, difcourfes, experiments, inventions.
The names of benefactors thall be honourably mentioned, in a book provided for that purpufe.
In cafe of death, or recefs of any fellow, the fecretaries are to note it in the margin of the regifter, over-againft their names.
The caufes of ejection thall be contemptuous difobedience to the fatutes and orders of the fociety, defaming or malicious damnifying the fame. This fhall be declared by the prefident at one of the meetings, and the ejection recorded.
Remarks on the important general utility of the Ropal
SOCIETY, and the confequences of the decay thereof.
Having obferved an affectation in fome to treat the Royal Society and its members with very unbecoming cointempt and indignity, by infinuatiog even that any blockhead, if he is but acquainted with a leading member, may be matriculated into this body, and have his name dignified with F. R. S.; I have pitied the underftanding of fuch cenfurers; for though fools will dare to mingle with the wife, who but a fool will defame a whole body of men, becaufe he may not be acquainted with any of the wife with whom it abounds? But,

Praifing is harder much than finding fault. Rosc.
As I have always looked upon this fociety as one of the moft ufeful, molt important, and moft honourable in the three kingdoms, and more efpecially fo in relation to its trade and commerce, I judge it no way incompatible with this work, to give fome faint idea of this intitution, in order to difabule thofe who may have been deceived by fuch who have detracted from its merits. For that certainly can be afcribed only to the want of due inf sination, with reipect to the nature and utility of this eftablifhment.
That our uninformed readers may make a right judgment of this great and noble defign, we thatl attempt, in few words, a difplay of its high importance to the nation. Now the great purpofe of this fociety is, to make fatthful records of all the works of nature and att, which can come within their reach; that the prefent age and pofterity may diftinguilh error ftrengthened by prefcription, reftore truth neglected, apply thofe known to more various ufes, and make the way more eafy to what remains unrevealed in all ufeful, and more particularly in all commercial fcience; which is the life and foul of thefe kingdoms. This is the compafs of their defign; and thefe great ends they have fo far anfwered, as to have proved of unfpeakable emolument to mankind in general, as well as Great-Britain in particular : and thofe nations of Europe that have followed their laudable example, have likewife been of great fervice to fociety, as well as to their native flates and empires.
As for what belongs to the members themfelves that conftitute this fociety, they are of different religions, countries, and profefliont. For they did not propofe to lay the foundation of an Englifh, Scotch, Irifh, Popifh, or Proteftant philorophy, but a philofophy of mankind. A moft glorious and moft benevolent attempt, and attended with the moft glorious and benevolent confequences!
By their naturalizing, as it were, men of all countries they have fettled a confant intelligence throughout all civilized nations, and made the Royal Society of England the general bank and free-port of the whole world, for found know lege and philofophy grounded on Experiments, not on vifionary hypothefis and conjecture, as it was before their happy inftitution. And by the admiffion of men of all profeflions, thefe two benefits have arofe. (x.) Every art, and every way of life has been facured from receiving detriment by their joint councils. (2.) By the equal balance of all profeffions, no one in particular has by this fociety overweighed the other, or made the oracle fpeak their pritate fenfe only. All ranks of men have fome one darling, upon which their care is fixed. If mechanics alone were to make a philofophy, they would bring it all into their hops, and force it to confift wholly of forings, wheels, and weights; if phyficians, fcarce any thing would be confidered, belides the cure of difeafes. So much is to be found in men of all conditions, of that which is called pedantry in fcholars; which is an obftinate addiction to the forms of fome private life, and too regardlefs of general things. But,
Though the fociety entertains men of particular profeffions, yet the far greater number are gentleme', free and unconfined. This has prevented, in a great mealure, two corruptions of learning complained of: the one, that knowlege fill degenerates to confult prefent profit too foon; the other, that phulofophers have been always mafters and fcholars; fome
impofing, and all the other fubmitting, and not as equal obs fervers without dependance. The firf of thefe were, before the eftablifhment of this corporation, the caufe of much inconvenience. It weakened the ftrength of ufefularis; it made an unhappy difproportion in their increafe; while not the beft, but the mort gainful of them llourihed. But above all, it diminifhed that very profit for which men frive: and fo they were ferved like fome foolifh guards, who, while earneft in picking up imall money dropt out of the prifoner's pocket, let the prifoner efcape, for whom they might have got a great ranfom. A fecond error that has been avoiled by this fociety, is, that the feats of knowlege have fince their time been Laboratories, as they ought to be; not only Schools, where fome have taught, and ail el, reft subscribed.
We fhall next confider what courfe of enquiry they have taken, to make their labours unite for the fervice of mankind 1. In regard to their expence. Of the fock, uton which their expence has been defrayed, that has arofe only from among themfelves, by fmall admiffion-money and contributions. Such a revenue as this can make no great fund, nor amount to any vaft fum; they have been no incumbrance to the public, though the public have enjoyed ail the benefit of their ftudies and their labours.
2. The perfection to which all manual arts have, by their means, been brought, deferves our atrention. Men now generally underitand, to employ thofe very twols which the Ancients left us, to infinite more works than formerly; they have likewife devifed a great multitude of call forts, which were before unknowh. The ordinary fhops of mechanics are now as full of rarities, as the cabinets of the former nobleft mathematicians.
Till the fixteenth century, the art of mechanics was contained in a very narrow compafs, there being nothing more known about it, than the fix ordinary powers. At this time feveral of the moft eminent mathematicians began to confider mechanici, and by the ftudy and induftry of the learned members of our Royal Society therein, and by their great example inciting other nations, mankind have received fuch excraordinary advantages, that none can be fenfible of, but thofe who have diligently ationded to their labours and tranfactions. To the art of mechanics is owing all forts of inftruments to work with, all engines of war, fhips, bridges, mills, curious roofs and arches, columns, pendent galleries, and all other grand works in building of every kind. Alfo all clocks watches, jacks, chariots, carts and carriages; all clegant and ufeful machines of every fort, are owing to the manual ap plication of thefe principles: in a word, architecture, navigation, hufbandry, and military affairs, owe their invention and ufe to this art; and, indeed, whatever hath artificial motion by air, water, wind, or cords; as all manner of mufical inftuments, water-works, \&c. This is a fcience of fuch importance, thar, without it, we could hardly eat bread, or lie dry in our beds.-W ithout mechanics, a general canno go to war, nor befiege a town, or fortify a place; or could even invent a flocking-frame, the weaving-loom, and any thing elfe for the improsement of the manufactural arts. The Royal Society have been happily inffrumental to the advancement of all thefe arts, and to lay open the fecrets of all trades, and the feveral machines uled therein; whereby one trade has derived great aid and affiftance from others, to the mutual benefit and advantage of all. see our articles Artificers, Mechanics, Manufacturers, and Philosophy Experimental.
The method which they have taken to pry detply into natural knowlege, has been the moft judiclous, and this may be reduced to thefe following heads: the queries and directions they have given abroad; the propolals and recomrendations they have made; the relations they have received; the exferiments they have tried; the obfervations they have taken; the inflruments they have invented; the theories that have been propofed; the dificu:fes they have written or publified: the repofitory and library.; and the hiftories of nature and arts, and the works they have collected.
The manner of their gathering queries, and difperfing queftions, is this. Firff, they have required fome of their particular fellows to examine all treatifes and defciptions, the natural and artificial productions of thofe countries, in which they would be informed; at the fame time they have emply yed others to difcourfe with feamen, travellers, tratefmell, and merchants, who are likely to give then the beft light. Out of this united intelligence from men and books, they have compofed a body of queftions, concerning the obtervable things of thefe places. Thefe papers being produced in their affemblies, have been augmented or contracted, as they have in their joint judgment feen occafion. And then the felluws themfelves are wont to underrake their dill ribution into all quarters, according as they have had tie convenience or correfpondence
They have compofed queries and directions, what things are neceffary to be obferved, in order to their making of a natural hiftory in general; what are to be taken notice of towards a perfect hiftory of the air, and atmufphere, and westher; what is to be obferved in the production, grow:h, ad-

## R O Y

vancing, or transforming of vegetables; what particulars are requifite, for collecting a complete hiftory of the agriculture which is ufed in feveral parts of this nation, and others.Whereby they have been the infruments of improving hufbandry in general, and tranfplanting exotics into their own country for the benefit of its commerce.
They have prefcribed exact enquiries, and given punctual directions, for the trials of experiments of rarefaction and consdenfation; concerning the caufe and manner of the petrefaction of wood; of the lond-ftone; of the parts of anatomy; of currents; of the ebbing and flowing of the fea; of the won ders and curiofities obfervable in mines: in all which they have made improvements; that have tended greatly to the advantage of thefe kingdoms, as I could eafly thew in a furprizing vaisety of particulars, would the limits to which an circumferibed admit of it.
To their queries, in general, they have received good returns and fatisfaction. Befides thefe there have been feveral great and profitable attempts, relating to the good of mankind, and that of the Brtifination, propounded to them by many public bodies and private perfons, which they have again recommended to be examined apart by divers of their own number, and by other men of ability and integrity, who have accepted of their recommendations of this kind. In confequence of this conduct, they propounded the comporing a catalogue of all trades, works, and manufactures, wherein men are cmployed, in order to the collecting each of their hiftories; by taking notice of all the phyfical receipts or fecrets, the infruments, tools, and engines, the manual operations or nlights, the cheats and ill practices, the goodnefs, badnefs, and different value of materials, and whatever elfe belongs to the operations of all trades.
The effects of thefe meafures are too manifeft throughout all their labours to need proof.
Their improvements in aftronomy and navigation are not lefs than in thofe of other cardinal points of general ufe. They fuggefted the making a perfect furvey and map of all the fixed ftars in the zodiac, both vifible to the naked eye, and difcoverable by telefcopes; towards the obferving the apparent places of the planets with telefcopes, both by foa and land : and, in order to perfect this great work, feveral of their fellows had their portions of the heavens allotted to them, wherein they have made an extraordinary proficiency, and their members, or thofe who have built upon their difcoveries, have made very confiderable improvements in altronomy and navigation.
They firft recommended the advancing of the manufacture of tapellry; the improving of filk-making; the propagating of faffron; the nielting of lead ore with pit-coal; the making iron with fea-coal; the ufing the duft of black-lead, inftead of oil, in clocks; the making trials on the qualities of Englifh earths of various kinds, in order, if they could not difcover fo fine a fubftance as china, for the perfecting of the potters art : in moft of which the defired improvements have been made, by the generous communication of their fuccefsful experiments, and the fpirit which they firft raifed for thofe things in the nation.
They firft farted the propagation of potatoes; the planting of verjuice grapes in England; the chemical examination of French and Englifh wines; the gradual oblervation of the growth of plants, from the firf fpot of life; the increafing of timber, and the planting of fruit-trees; which they have done, by fpreading the plants into many parts of the nation, and by publifhing free and unreferved accounts of the beft ways of their cultivation.- The great effects that we have experienced in relation to thefe particulars, were firt owing to this noble and generous body.
Nor is there any-branch of the mathematical literature but what has received more extraordinary helps and advancement from this learned corporation, than from any other whatever ; and how far that hath contributed to the promotion of our commercial arts and trade, fee our article Mathematics. But it would be endlefs to recount all the ufeful and important difcoveries and improvements that this learned body have made for the benefit of the trade of thefe kingdoms: nothing lefs can do juftice to them than an ample hiftory of all their tranfactions; wherein we thall find that there is fcarce any branch of trade, or any art or fcience practifed in Great-Britain, but hath received fome advantage from this infitution. This was a part of the affiftance and information which they at firft gave to others, to provoke them to enquire, and to order and regulate their inquifitions. To the fe may be added the relations of thofe effects of nature and art which have been communicated to them. Thefe have been infinite in number: all which have furnimed judicious readers and artifts, from time to time, with admirable hints to direct their obfervations. Among the vaft heap of relations which abound in their entry-books, it is no wonder that fome fhould prove mifreprefentations, and fometimes deceptions of the relators. But this has never long occafioned the propagation of miftakes: hay, fometimes the very erroneous accounts of others have been attended with fome benefit; for as the minds of men zre liable to miftake falfhoods for truths, though they are ever to circumfpect, fo they are often drawn by uncertain,
and fometimes erroncous reports, to ftumble on trubs aid realities.
But if this way of general receiving all credible accounts of natural and artificial productions, thall feem to have been ex poled to over-much hazard and uncertainty, that danger has been removed, by the Royal Society's reducing fuch matters of information into real and impartial trials, performed by their own hands. To which end it has been their ufual courfe, when they themfelves have appointed the trial, to propofe one week fome particular experiments, to be pro fecuted the next, and to debate betorehand concerning all things that might conduce to the better carrying them on. In regard to which, it has been the cuftom for any of the fociety to urge freely what came into their thoughts or memories, either from the obfervations of others, or from books, or from their own experience. This is a moft neceffary preparation to any that refolve to make a deep fearch into nature, or any advancement in the ufeful arts.
It is impoffible but the $y$, who will only tranfcribe their own thoughts, and didain to meafure or ftrengthen them by the affiftance of others, fhould be, in molt of their apprehenfions too narrow and oblcure, by fetting down things for general which are only peculiar to themfelves: it cannot be avoided but they will commit many grofs miftakes, and beftow much ufelefs pains, by making themfelves wilfully ignorant of what is already known, and what is concealed.
It was tried among the Ancients, to find out the pure and primitive language of the world, by breeding up a child fo that he might never hear any man fpeak. But what was the event of that trial? Infted of obtaining that end, the child was made abfolutely dumb thereby. And the like fuccefs will that philofopher find, who thall expect that, by the keeping his mind free from the tincture of all others opinions, it will give hom the original and uninfected truths of things. All knowlege is to be got the fame way that a language is, by induftry, ufe, and obfervation ; it muft be received, before it can be drawn forth. It is true, the mind of man is a glafs, which is able to reprefent to it elf all the works of nature; but it can only fhew thofe figures which have been brought before it. I know it may be here fuggefted, that they who bufy themfelves much abroad about learning the judgments of others, cannot be unprejudiced in what they think; but it is not the knowing, but the peremptory addiction to others tenets, that fours and perverts the underftanding; nay, to go farther, that man who is thoroughly acquainted with all forts of opinions, is much more unlikely to adhere obitinately to any one particular, than he whole head is only filled with thoughts that are all of one colour.
Nor can difcoveries of this nature be better conducled than by the joint labours of the whole fociety. It were an intolerable burthen, if it were wholly caft on the experimenters themfelves: for it is not only true, that thofe who have the beft faculty of experimenting are commonly moft averfe to the reading books, and fo it is fit that this defect fhould be fupplied by others pains: but allo it would too much tire and wafte, or at leaft divert their fpirits, before they came to the main work; whereas the talk being thared amongft fogreat a number, becomes not much more than a bufinefs of delight. Well thens by this firf comment and difcourfe upon the experiment, he that is to try it being prefent, and having fo good an opportunity of comparing fo many other men's conceptions with his own, and with the thing it elf, muf needs have his thoughts more enlarged, his judgment comfirmed, his eyes opened to difcern what moft compendious helps may be provided, what part of it is more or lefs ufeful, and upon what fide it may be beft attempted: the truths which he learns this way will be his pattern, the errors will be his fea-marks, to teach him to avoid the fame dangers; the very fallhoods themfelves will ferve to enlarge, though they do not inform his underftanding.
Thofe to whom the conduct of the experiment is committed, being difmiffed with thefe advantages, do, as it were, carry the eyes and imaginations of the whole company into the laboratory with them; and, after they have performed the trial, they bring all the hiftory of its procefs back again to the teft. Then comes in the fecond great work of the affembly, which is to judge and refolve upon the matter of fact. In this part of their employment, they uled to take an exact view of the repetition of the whole courfe of the experiment here they obferved all the chances, and the regularities of the proceeding; what nature does willingly, what conftrained; what with its, own power, what by the fuccours of art; what in a conftant road, and what with fome kind of fport and extravagance; induflrioufly marking all the various ihapes into which it turns itfelf when it is purfued, and by how many fecret paflages it at laft obtains its end; never giving it over'till the whole company has been fully fatisfied of the cerrainty or impoffibility of the effect.
This critical and reiterated fcrutiny of thofe things which are the plain objects of their eyes, mult needs put out of all reafonable difpute the reality of thofe operations which the fociety fhall politively determine to have fucceeded. If any fhall fill think it a jult philofophical liberty to be jealous of refting on their credit, they are in the right, and their diffentings are
always moft thankfully received, if they be eftablifhed on folid works and oot onily on prejudices or fufpicions. To the Roys iociety it is as acceptahie to be confuted as to difcover, Royng by this mean, they will accomplifh their main dereeing, by this mean, they will accomplith their main defign : others are inflamed, many more labour, and fo the truth is oltained between them ; which may be as much promoted by the contentions of hands and eyes, as it is commonly injurcu by thore of tongues.
The hiltory of the experiments performed being thus fecured the fociety the next matter is their conjecturing upon CA USEs, which is a matter of no lefs delicacy than of general importance in experimental refearches; and hereinfuch exquifite difcernment is required, that they have been cautious to fhun the overweaning dogmatizing on caufes on the one hand, and not to fall into a (peculative fcepticifm on the other; and whatever caufes they have, with fuch deliberation, found to hold good, they have ftill made them increafe, to the advance of icience, by further experimenting upon them : wherein though they have been, in many refpects, very fuccefsful, get this has been owing to their gieat caution; becaufe they have not been over haity and precipitate in concluding upon the caufes, before the effeets have been lufficiently fearched into: for although the experiment bas been the tafk of few, yet the conjecturing and debating on its confequences has been the employment of their full and folemn affemblies. Experience in all ages has evinced that there never can be found, in the breaft of any particular philofopher, as much wearinefs and coldnefs of thinking, and rigorous examination, as is needful to a folid affent, and to a lafting conclufin in regard to matters of experimental fcience: the wifft men are apt to deceive themfelves into a certain confidence of the certainty of their knowlege.
On the other fide, this doubifulnefs of thoughts, this doubtfulnefs of concluding, which is fo ufeful in this cafe, is fo natural to a multitude of counfellors, that it is frequently urged againft them as their infeparable imperfection. It is not in thefe cafes that the moft fpeedy determinations will anfwer the end aimed at: here many delays are required; here he that can make a folid objection, or afk a featonable queftion, will do more fervice than he who fhall rafhly fix on an hundred ill-grounded refolutions.
Nor has the fociety been only fore-armed againat this great inconvenience, they forefaw it, and, therefore, have not regarded the credit of names, but things, preferving to itfelf the liberty of refufing or liking, and fo advancing its ftock, by a fure and double increafe, by adding new difcoveries, and retaining ancient truths.
Another mifchief, againft which this body have guarded in the great matter of Causes, is an eternal inftability and averfion from affigning of any. Though at their firf eftablish. ment they were not daring in fettling general conclufions, yet they laid no injunetions upon their fucceflors not to do fo, when they had obtained a fufficient ftore of well-grounded experiments, whereon they might fafely depend. Nothing found is to be expected from thofe who will fix blindly on whatever they can lay hold on; and nothing great from them who will always wander, who will never leave difputing; the one can produce nothing but unwholefome and rotten fruits, and the other, for fear of that, will endeavour to have no harveft nor autumn at all. It has been the conduet of the fociety, that the way to arrive at advancement in true fcience, a folid fpeculation fhould every day be more and more purfued; which is to be done by a long forbearing of feeculation at firft, 'till all materials be ripe for it. They have never affirmed any thing of the caufe, 'till the trial was paft; whereas to do it before, ever proved a venemous thing in the advancement of fciences; for whoever has fixed on his caufe before he has experimented, can hardly avoid fitting his experiments and his obfervations to his prepoffefled caufe, rather than the caufe to the truth of the experiment itfelf. But this fociety have made little other benefit of the caufes to which they have confented, than that thereby they might have a firm footing, whereon new operations might proceed; and for a continuation and variation of the enquiry, the tracing of a falfe caure hath often conduced to the knowlege of the true. Thus it frequently happens to philofophers as it it did to Columbus, who firft believed the clouds that hovered about the continent to be the firm land; but this miftake was happy, for, by failing towards them, he was led to bis great difcovery: fo, by fometimes profecuting miftaken caufes, with refolution of not giving over the purfuit, this learned focietg, bave been guided to the truth itfelf.
There is nothing of all the works of nature fo inconfiderable, or lo fully known, but, by being made to reflect on other things, it will contribute to enlighten them, and Chew itfelf the more confpicuoufly. Such is the dependance amongft all the orders of creatures, the inanimate, the fenfitive, the rational, the natural, the artificial, that the right apprehenfion of one of them is a good ftep towards the underffanding of the reft: and this is the higheft pitch of human reafon, to follow all the links of this chain, 'rill all their fecrets are open to our minds, and their works advanced or imitated by our hands! Thus bas this learned corporation judged, conjectured upon, and improved experiments, for the benefit of the ufeful arts.

V OL. II.

But in thore that have come under their care, there is one thing more about which the fociety bas been fullucitous; which is, the manner of difcourfe and communication among the fellows, of which, had they not been watchful, the whold fpirit and vigour of their defign had been deftroyed; by impertinent verbofity. The effects of a fuperfuity of prating overwhelms moft arts and profeffions; this fociety, therefore: have been rigorous in putting in execution the only remed y for this extravagance: they reject all amplifications, digreffions, and fwellings of ftule, to return to the primitive purity, when men delivered fo many things in an almoft equal number of words.
By thefe wife meafures the fociety avoided the talkative jargon, and thereby have arrived at a wonderful fcene of uffefu knowlege. They have likewife reduced its principal obfctvations into one common ftock, and laid them up in puble regifters to be nakedly communicated to pofterity, or fup prefled, as by tepeated ferutiny and trial they thall deferve. By this, they have ever made a firm confederacy between their own labours, and the induftry and ingenuity of tuture ages. If their predeceflors, like thefe worthies, had con tinued to add, by little and little, to the fore of experimental knowlege; if they had endeavoured to have been bene factors to, and not tyranto over our reafons; if our learned difputants and wranglers had communicated more of their Works, and lefs of their Wit and Pedantry, they would have advanced, rather than eclipfed, the human knowege, and folid feience would have been, ages before, propagated among mankind, to the proportionate increafe of heir felicitv.
And as their purpofe has always been to accumulate a mixed mafs of experiments, without digefting them into any pertee model, fo, to this end, they have confined them to no peculiar order of fubjects; whatever they have recorded, they have not done it as complete fchemes of fcience or opinion, but as fubftantial materials, wherewith che great ftructure of folid arts and true knowlege might be gradually, and not precipitately erected: for it is certain, that a too fudden friving, as their predeceflors did, to reduce the fciences, in their beginnings, into method, beauty, and fyftem, very much retarded their ncreafe: for it happens to the invention of arts as to children in their younger years, in whofe bodies the fame applications that ferve to make them ffraight and comely, are of ten found very mifchievous to their eafe, their ftrength, and their growib.
By their fair and equal way of regiftering the Inowlege that has come before them, they have left room for their fuct ceffors to augment, to approve, to contradict them at their difcretion. How unfpeakably beneficial to true fcience this conduct bath proved, may be judged, by comparing the ftate of fcience before their time with its prefent. What wonders would not fuch focieties have by this time produced, if they had been begun in the times of the Greeks and Romans, or even of the fchoolmen? If our anceftors, a thoufand or wo thoufand cears ago, had begun, in this manner, to have added gradually to the ftorehoufe of true knowlege, what depth of nature could by this time have been hid from our view?
If in the firft learned times of the Ancients, and all thofe that followed after them, down to this day, their philofophers had chiefly beftowed their pains in making plain hiftories of nature, and not in building up fciences, without fubftantial matcrials for the purpofe, bow un!peakably their fuccefors would have been indebted to them, is much eafier conceived than can poffibly be defcribed. Perhaps, indeed, the names of fome particular men who compiled thofe fyftems and epitomes which they gave us, and which ever cramped true and general fcience, would bave been lefs glorious than they were; though that may be doubted, for we have reafon to believe that thef ages would have honoured a Plato, Ariftotle, Zeno, and Epicurus, as much, if not more, than now they do, if they had only fet things in a way of propagating Experiences down to us as the only Truthes.
But this matter of reputation was only the private concernment of five or fix: as for the intereft of thofe times in general, we may venture to fay, that, in all effects of true knowlege, they might have been as happy without thofe bodies of arts as they were with them, logic and the mathematics excepted To inftance in their phyfics; they were utterly ufelefs in refpect of the good of mankind; they almoft confeffed as mach, by referving their natural philofophy for the retirements of their wife men. What help did it ever bring to the bulk of the people? What vifible benefit to any city or community in the world? Their mechanics and artificers, and hufbandmen (for whom the true natural philofophy fhould be principally intended) were fo far from being affifted by thofe abifrufe doctrines, that featce any one of thofe profeffions has underftood Ariftotle's priaciples of bodies, from his own time down to ours. If, therefore, thofe ages, inftead of raiting fo many mere fpeculative, and, in many refpects, very idle and whimfical opinions, had only minded the laying of a solid ground-work, as our Royal Soc ety has done, fira vaf pile of experimente, to have been continually augmentir
throug

Ctrough all ages, we Chould have infinite more reafon to revere and blefs their memories than we have at prefent. If fuch a courfe had been at firft fet on foot, philofophy would have been kept clofer to material things, and would not have undergone fo many eclipfes as it did. If we reckon from its firft fetting forth in the Eaft, we fhall find, that, in fo long a track of time, there have not been above 400 or 500 years, at intervals, wherein it has been in any requeft in the world. And if we look back on all the ale erations of ftates for thefe 3000 years, we may ftill behold that the ScIences of Men's Brains have been always fubject to be far more injured by fuch viciffitudes, than the Arts of their Hands. What caufe can be affigned for this? Why was learning the firft thing that was conftantly fwept away, in all deftructions of empires and foreign inundations? Why could not that have weathered out the form, as well as moit forts of Practical ArtsandManufactures, which, though they began as foon, or before the other, yet they have remained, through all fuch changes, unaltered, except for the better? The reafon of this is evident: it is becaufe philofophy was made too fubtile for the conceptions of men of bufinefs, who are the great fupport of ail conmunities. The philofophers themfelves did, as it were, banifh it out of the world, by confining it only within the fhades of their walks. By this means, it was firft looked upon as moft USELESS, and fofit fooneft to be NEGLECTED: wherefore if philofophy at firt had been made more to converfe with the fenfes, and to affit famliarly in all the occafions of human life, it would, no doubt, have been thought needful to have been preferved in turbulent, as well as ignorant times: it would have efcaped the fury of the moft barbarous people, as well as the arts of ploughing, gardening, cookery, making iron and fteel, fifhing, failing, and many more fuch handicrafts have done. But it is too late to lament this error of the Ancients, feeing it is not now to be repaired: it is enough that we gather from hence, that, by bringing philofophy down to men's fight and practice, and applying it to the numberlefs commercial arts of life, the Royal Society has put it into a condition of holding out againft the invafions of Time, or even Barbarism irfelf; that by eftablifhing it on a firmer foundation than the airy and enthusiastical Notions of men alone, upon all the Works of Nature, by turning it into one of the great and univerfal Arts or Life, of which men fee there is daily need; this fociety have provided, that it cannot hereafter be extinguifbed, at the lofs of a library, at the overthrowing of a language, or at the death of fome few philofophers: but that men muft lofe their Eyes and Hands, and muft leave off defiring to make their Lives convenient or pleafant, before they can be willing to deftroy fuch philofophy, or ceafe to revere and honour thofe who are the zealous promoters of ir.
After this learned body had received the royal confirmation of their inftitution, the whole civil world entertained the higheft efteem and veneration towards their enterprize. In imitation of this SEARCHING Spirit, this affection to SENsible Knowlege, in England, other nations fell into the like kind of applications; and the moft confiderable effects of their endeavours throughout Europe have been generally recommended to the Royal Society of London by their authors, to be examined, approved, or corctreed. 'This has brought great glory to our nation.
As France hies the neareft to England in its fituation, fo that country has alfo been the neareft to it in its zeal for the promotion of Experiments. In that kingdom, the Royal Sociery has maintained a perpetual intercourfe with the moft eminent men of art of all conditions, and they bave mutually and generoufly communicated their knowlege, for the benefit of each other; and if the politicians of the two empires could have always as happily accorded, and have acted with as much unanimity for the real happinefs and welfare of both nations, as this kind of philofophers have really done, the world would never have been as it has, and is likely always to be, diffracted with eternal wars and bloodihed. If the ftatefmen of both kingdoms were actuated as much by the principles of benevolence towards mankiad, as their refpective experimental philofophers have been: if thefe two nations had fet the world as glorious an example of the love of peace, and the felicity of human nature, it is very likely that Chrittendom in general might have enjoyed an uninterrupted ceflation of halcyon days; for had thefe two ftates acted in concert, upon fuch noble and generous principles towards each other, they would have fo awed the reft of Europe, as ever to have prevented thofe eternal broils that are daily fpringing up among the various potentates. Such conduct among the men in power in both nations, would have proved a far more effectual prefervative for fecuring the everlafting peace of Europe, than even the project recommended for that intent by a learned French abbot, in the year 1712 *.

* See a tract, intitled, A Project for fettling an Everlafting Peace in Europe; firf propofed by Henry IV. of France, and approved of by Queen Elizabeth, and moff of the then Princes of Europe, and now difcuffed at large, and made practicable.-By the Abbot StPierre; of the French

Academy. This is a very cutious and elaborate performance; and it would be very happy for mankind, if fo great and glorious a defign could ever be accomplifhed.

From the phyficians, chirurgeons, and anatomifts of France, our fociety has received many faithful relations of extraordinary cafes; from their moft judicious travellers, the fruits of their voyages; from their famous mathematicians, many advances in that branch of learning; from their chemifts, the effects of their operetions; and from others of their beft obfervers, many rarities, and difcourfes of their fruits, filk, wine, breas plants, falt, and fuch naeural productions of their foil. And to inftance once for all, our fociety was affectionately inviced by the French academy of Paris to a mutual correfpondence: in which invitation, there is one expreffion, that ought not to be paffed over in filence, That they have acknowieged the English Nation to have many advantages for the propagating of real Philosophy, which are wanting to all others. This confeffion is true: yet thefe advantages, unlefs they had been improved by the Royal Society, had been only as thofe that we have had for Fishing, objections and arguments, of our floth and fupinenefs, 'till lately.-In return for thefe communications of the French, our Britifh philofophers have been no ways behind them, they have made ample retaliation; and the French and all the world, are not only highly indebted togreat numbers of this learned body, as might eafily be hown; but they have gratitude enough to acknowlege, that they owe more to one prefident of this fociety, than to all the philofophers that ever lived taken together: I mean the immortal Sir Ifaac Newton, the glory of the Englifh nation, the eternal honour of the Royal Society of, Londun.
From Italy alfo, the Royal Society were at firf earnefly invited to a mutual intelligence, by many of their moft noble wits, but chiefly by the prince Leopoldo, brother to the then Great Duke of Tufcany, who was the patron, at that time, of all the inquifitive philofophers of Florence.
In Germany, and its neighbouring kingdoms, the Royal Sociery met with great veneration, and have had with them a conftant intercourfe of philofophical communication. For which kind of enterprizes, the temper of the German nation is admirably fitted, both in refpect of their peculiar dexterity in all forts of manual arts, their profound knowledge in mineralogy and metallurgy, as well as in chemiftry in general; and allo in regard of the plain and unaffected fincerity of their manners, wherein they fo much refemble the Englifh, that we feem to have derived from them the compofitions of our minds, as well as to have defcended from their race. In the Low-Countries, their intereft and reputation have alfo been eftablithed, by the lafting friendhip of their chief learned men, and at firft principally of Huygens. This gentleman beftowed his pains on many parts of the fpeculative and practical mathematics, with wonderful affiduity, and particularly his applying the motion of pendulum clocks and watches, was an excellent invention. In the profecution of fuch difcoveries, he often required the aid of our Royal Society; and he received the lights of their Trials, and freely admitted their alterations or amendments. And this learned correfpondence with him, and many others in thefe countries, has been continued down to this day. Even during the breach between Charles II. and the States-General, the traffic of fiences was uninterrupted, when all other commerce was ftagnated.
In fhort, moft civilized nations, and efpecially thofe that enjoy any tolerable flare of trade, have now philofophical focieties of this kind effablifhed in their refpective countries, for the advancement of thefe arts in particular, which have any connexion with their commercial interefts and ufeful fciences: and all thofe learned bodies at Berlin, Mufcovy, Denmark, and Sweden, \&c. preferve a conftant correfpondence with our Royal Society at London, pay the highef regard to their judgments in all philofophical and mathematical difquifitions, and always exprefs great veneration for thofe pecular members of that body, who have eminently diftinguifhed themfelves in knowlege of this nature.
But not to wander farther in particulars; it may with great truth be faid, that no fociety ever received greater honours than our Royal Society from all foreigners, who have had a tafte for any branch of folid fcience.-All foreigners, men of letters, the nobility, ambaffadors, and foreign princes that have travelled here, have all vifited the Royal Society, as one of the mof illuftrious inftitutions belonging to the whole kingdom. From hence they have returned home, with a free engagement of their affiftance; the men of learning affuring it of a contribution of their labours, and the itatefmen and princes of their authority and endeavours, in fatifying all philofophical queries, with which they have been plentifully furnilhed.
It would be an ufelefs pomp to reckon up a catalogue of their names, efpecially feeing they are recorded in the regifters of the fociety. It will not be amifs, however, to mention the vifit of one prince to them, becaufe it may afford us a profitable obfervation. When the duke of Brunfwick and Lunenburgh was introduced into their weekly affembly, and

## R O Y

## R O Y

ad fubfcribed his name to their fatutes, there was, according to cuftom, one of the fellows appointed to interpret to him, what experiments were produced and examined at that meeting. But his highnefs told them, that it was not ne ceflary they fhould put themfelves to that trouble, for he well undertood our language, having been induced to the ftudy of it, out of a defire of reading our philofophical books. From whence, fays bifhop Spratt, there may this conclufion be made, that if ever our Native Tongue hall get any ground in Europe, it muft be by augmenting its Experimental Treasure. Nor is it impoffible, but as the Feminine Arts of Pleasure and Gallantry have fpread fome of our neighbouring languages to fuch a vaft extent, fo the English Tongue may alfo in time be more enlarged, by being the inftrument of conveying to the world the Miasculine Arts of Knowlege.
We fhall now relate what encouragement this inftitution has received at home in its native foil. As the original of this fociety met with a general approbation within ourfelves, the moft judicious of all profeffions and interefts, their reverence to the firft trials and intention; fo our moft wealthy merchants and citizens in particular, have affifted it with their prefence; and thereby have added the induftrious and active genius of men of traffic, to the referved and fedentary temper of men of learning. They bave contributed their labours, helped their correfpondence, employed their factors abroad to obtain anfwers to their enquiries in foreign parts; they have laid out in all countries for obfervations, they have beflowed heretofore many gifts on their trealury and repointory. There is one bounty chiefly that deferves applaufe and imitation. It is the eftablifhment made by Sir John Cutler, for the reading on mechanics, in the place where the Royal Society fhall meet. This was the firft lecture that was founded of this kind, amidft the valt munificence of fo many benefactors to learning in our country; and yet in a trading country, this was the moft neceflary of all others. For this chiefly caufed the flow progrefs of manual arts; that the Trades themfelves have never ferved apprenticefhips, as well as the Tradesmen; that they have never had any Masters fet over them, to direct and guide their works, or to vary and enlarge their operations.
Of our phyficians, many of the moft judicious have contributed their purfes, their hands, their judgments, their writings. This they have moft generoufly done, though they have alfo in London a college peculiar to their profeffion; which ever fince its foundation, for the fpace of about 250 years, has given the world a fucceffion of the moft eminent phyficians of Europe. In that they confine themfelves to the advancement of medicine; in this they have alfo with great zeal and ability promoted an univerfal infpection into all natural Knowlege.
Of our nobility and gentry, the moft noble and illuftrivus have condefcended to labour with their hands, to impart their difcoveries, to propofe their doubts, to affift and defray the charge of their trials. This they have done with fuch an univerfal agreement, that it is almoft the only one thing, wherein the nobility of the three kingdoms have been united. This laid a good foundation for removing their prejudices towards each other.
Of our minifters of ftate at home, and our ambaffadors abroad, moft of them have been fellows of the Royal Society, and thefe latter efpecially have been wont to beftow pains in foreign courts, to collect relations and fecrets of nature as well as of fate.
Our great captains and commanders have inrolled, their names amongtt this illuftrious number, and regarded thefe fludies, which are not, as other parts of learning, to be called the ftudies of the gown; they as well becoming the foldier, as any other way of life. Nor have our moft renowned Generalis neglected the opportunities of philofophical enquiries, even in the midft of their greateft enterprizes, on which the fate of kingdoms has depended. They have been furnifhed with infruments and directions by the Royal Sociecy, and amidit the tumults of war and government of fleets, they have found leifure to make fome trials of experiments: which Works as much excel that of declaiming, which fome of the Roman Generals ufed in their camps, as it is beter to Do than to talk well.
Of our churchmen the moft diffinguifhed, by the conftant patronage and afliftance they have afforded the Royal Society, have confuted the falfe opinions of thofe men, who believe that philofophers mult needs be irreligious: on the contrary, the wifert and moft learned among that reverend body have declared their opinions, that the greatnefs of the Divine Ma jefty is belt to be worfhipped, by the honouring and obferving of nature, which is the univerfal minifter of his almighty power. The fearching into the works of nature, while it delights and enlarges the human underfanding, and ftrikes us with the ftrongeft affurance of the wildom and power of the divine architect, in framing tus us fo beautiful and well regulated a world, does at the fame time convince us of bis conitant benevolence and goodiness towards us.
Before the art of philofuptical experimenting took place, fcarce any thing prevailed but vain imaginations, whimfical
conjectures, prefumptunus hypothefes, and wretched reveries of every fort; and thefe were ufhered into the world, and gilded over with the refpectable name of philofophy. Not fuch is the philofophy of the Royal Society, but as differtnt therefrom as light from darknefs, as reafon trom abfurdity, or truth from error.
From the more obvious powers of nature, we are led by this philofophy, aided by the mathematical difquifitions, to penetrate into the powers of nature, and fo to apply her divine principles to the acquifition of every branch of ufeful knowlege. By the principles of attraction and repulfion, we view the fmalleft particles of matter, endowed with a mighty power of action; whence enfues that variety of properties and phænomena, depending on the figure, fize, motion, and action, of the conftituent parts of bodies. Thus we difcern, that by the particles of matter attracting each other, they cohere with various degrees of firmnefs, according to their tangibility, by a greater or leffer quantity of furface; which all variety of bodies does, with different degrees of confifence, from the hardeft to the fofteft, from the moft fixed to the moft fluid bodies.--By thefe principles allo we are fhewn, that on the feparation of the particles of matter beyond the fphere of at traction, there commences a repulive power, by which they mutually repel each other, and acquire their elafticity. Hence the force of elaftic fluids is accounted for on the principle of a centrifugal force, actuating the feparated parts of matter. On this part of philofophy, depends the folution of the phznomena attending the various proceffes of chemiftry; why rolid bodies diffolve in fluid mentruums, and fluid ones become hard; why heavy bodies are fufpended in lighter fluids, and the opake, by folution, rendered tranfparent. Hereby are pointed out the methods of analyfing natural bodies, and difcovering their component paris. Whence infinite difcoveries in art and nature, are brought to light for the ufe of arts and trade.
This philofophy alfo leads to the interior receffes of the earth; fuggefts to us the manner how minerals and metallic ores are generated [fee the articles Mineralsand Metalis]; how fulphureous, faline, and mercurial principles, provuce the variety of mineral waters; why fome are hot or others cold. [See the articles Pyrmont and Spa Waters] Why the phenomena of earthquakes, and the eruptions of vulcanoes. By the nature and laws of fluids, we fee what is neceflary to conftitute matter a fluid fubftance, and how fuch act upon olids, and what relates to their fpecific gravities, the quanity and force of preffure, why things fink or fwim, the nature and ufe of the hydrometer, the hydroftatic ballance, and the whole fcience of hydroftatics.
Before this philofophy became to be ftudied, with what uncertainty did we grope after the origin of fprings and fountains? We knew nothing of the theory of aqueducts, or the reafon why water rofe in a pump; the fufpenfion of mercury in the barometer was a myftery; nor could we account for the action of that fimple inftrument the fyphon, or common crane: much lefs could we eftimate the force of fouting fluids, or fay what the action of the air muft be to move the fails of a mill. And as to the theory of the tides, that was indeed vulgarly adjudged to be the effect of the moon, but, according to what fteady laws it is effected, was a matter too incomprehenfible for any to inveftigate, but a prefident of our Royal Society, a Newton; the eldest Son of wifdom, as the ingenious Mr Martin elegantly ftiles him.
Then as to the doctrine of winds, this philofoply accounts for their phanomena upon the plaineft principles; and thews why fome are conftant, why othors are periodical and alternate ; and why in great latitudes, the winds are uncertain, both as to their immediate caufe, as well as to the point of the compals from whence they blow.
The nature and theory of founds, and in confecuence the fcience of harmony, was a ms Itery'till true philofophy brought it to light ; and this was not 'thl our Newton's days. From him we learn the true caufe of founds, and race them from the tremulous body, through all the elaftic aërial undulations, to the curious mechanifm of the ear. From him we are taught why fome are loud, others low; fome obtufe, others acute; and fome more agreeable than others. Hence all the grounds of melody and mufic are derived, the rationale of muficai proportion, the harmonical divifion of lines, the ftructure of organs, harplicords, and other mufical inftruments, are all the refult of this philofophy.
If we look into the vegetable world, what amazing fcenes does philofophy prefent to our view! The generation of plants was quite myfterious and incomprehenfible, 'till philolophy fhewed us each in its embryo pre-exiftent ftate, and convinced us that plants of every kind were completely included in the feed of each proceeding plant; and to the whole tribe were all contained and included in infinite miniature, in one original feed: this is a moft wonderful difcovery, and incredible to vulgar minds.
Philofophy next apprizes us of the curicus and exquifite apparatus of part, for the production of embryo-plants. The fcene here lies in the flower, whofe delicate ature is deflined not only for beauty and fragrance, but principally for the purpofes of generation. To this end ferve the flamina, with
their apices and included farina, the flylus and matrix, with its included feed s which latter part makes all that agreeable variety of fruit, fo defirable and delightful to the tafte. By our philofophical refearches, we have been enabled to make great improvements in the knowlege of the make and ftructure of the bodies of plants and trees: we fee the wondrous fyftem of the attracting capillary veffels, which imbibe and draw up the fap, or nutritious juices of the earth, by means of the roots, and which is conftantly perfpired off by the leaves. B fides thefe, we find other veflels deftined to fupply the plant with air ; and aftonifhing it is to confider, how each annual fyftem of air and fap-veffels (which makes the annulus or ringlet of wood, by which the tree does each year increafe its bulk) unravel and expand itfelf from the bark, in which all the bulk or lignous part of the tree, is originally contained, Thefe and many other curious and engaging fpeculations in botany, we owe entirely to the invention of optical glaffes, and confequently to our favourite fcience philofophy. But in nothing is the excellence of philofophy fo confpicuous, as in its fublime difcoveries relating to the nature and ftructure of animal bodies, and the ufe of the feveral parts. By this fcience we are taught the divine laws of animal mechanifm; not in the low nonfenfical notion of the Cartefians, who confider animals as mere machines, devoid of life or fenfation: on the contrary, true philofophy reprefents an animal fabric as one of the nobleft works of God, in which dead matter is made to live, inert matter is rendered capable of action and motion; matter abfolutely devoid of any fenfitive faculty, endowed with various powers of fenfibility, in different modes, and almoft infinite degrees. But above all, to confider how this inanimate, inert, infentient fubfance, fhould be conftructed with faculties rendering it capable of mind and thought, is the moft myfterious and amazing fpeculation! This fixes the bounds to philofophical enquires; hitherto can we go, but no further. Bold prefuming man may as well pretend to make an animal, as to account for its powers and functions. Thefe are all the works of infinite wifdom, whofe judgments are unfearchable, and ways paft finding out.
But however infcrutable the origin of an animal may be, the laws by which the feveral animal functions are governed, and the vital actions performed, are the proper fubjects of philofophy; and though the caufe, the manner, and incimate texture of moft parts of animal bodies, are latent and incomprehenfible, yet it is great fatisfaction to think we are admitted to the knowlege of the offices, ufes, and ends of the feveral parts, and the general ceconomy of animal nature, which is one of the molt agreeable and fublimer leffons of philofophy.
Thus we are fhown the nature, make, and difpofition of the bones, and how they give firmnefs and ftability to the body. We are next taught the fructure and ufe of the mufcles, for giving motion and frength to the parts; though the modus agendi (or mufcular motion) be among the number of nature's arcana. We have lately been inftructed in the true ufe and defign of that noble organ the heart, the primum mobile of animal nature; from hence we learn the origin and ufe of that wonderful fyftem or compages of veffels we call arteries and veins for circulating the blood and animal fluids through every part of the body, for the grand and final purpore of nutrition.
Befides thefe, we find another wonderful apparatus of veffels or parts we call nerves, which have their origin from the brain and marrow, and are appointed by nature the inffrumental caufe of fenfation to animals. Thus the optic branch is deftined for vifion, the auditory nerves for hearing, the olfactory pan for fmelling, the nerves fpread over the tongue and paldte for tafting, and all the other nerves, minutely ramified through all the body, for the general fenfe of feeling. But the immediate caufe of this nervous fenfation, whether by means of a fine fubtle fuid, called animal firitts, paffing through the hollow fibrilla of the nerves, or whether by means of a fubtile zethereal firit acing upon the folid capillamenta, or whether this great work of nature be any otherways effected, is as yet a matter concealed from human intelligence.
But whatever be the caufe thereof, it is, without all doubt, derived from the nuble vifcus the brain: for the brain is manifertly of the glandulous kind, and the ufe of the glands is to fecrete the various juices deftined to ferve the various purpofes of animal life. Thus the liver fecretes the bile, the pancreas, the pancreatic juice, the kidnies ftrain off the urine, the breafts collect the milk, the teftes fecern and prepare the femen, and other glands the lymphatic liquor. By fuch wondrous contrivances are the operations of life carried on, and the animal functions perfected through the determined period of duration for each refpective fpecies.
In Astronomy we owe every great improvement to philofophy; we hereby know the nature of circular and elliptic motion, and the laws which govern bodies moving in thefe or any other orbits; we hence learn all the anomalies of motion in a fyftem of bodies, and can fettle the theories for calculation. Hence the places, pofition, afpects, tranfits, occultations, ecliples, and other affections of the heavenly
bodies, become known for any given time, palt, prefent, of to come.
In Chronology, we are guided by the unerring hand of philofophy. We thence get a true idea of time, and the of ly juft methods of meafuring it, and dividing it in a the onand proper manner. By this means our pefiods and cyate our years and days, become conftant and certain; which cycles, otherwife be vague and unfettled, and induce a general con fufion in our accounts, and thereby embarafs the occurrences of life.
In Navigation and Geography [fee thofearticles Na. vigation and Geography], great and manifold are the ufes of philofophy. From thence we learn the fize, dimenfions, and figure of the earth; and by the difcovered properties of the wonderful ftone, are enabled to navigate the for cious feas, with much certainty and fafety. Hence a communication and commerce with other nations and people, is opened unto us; we are hereby made, as it were, proprietors as well as inhabitants of the earth: and moft of the wetors and commodities of life, are owing to this philofophiced improvement of the natural properties of wind and wa ef.
Yea, Geometry itfelf is but the philofoptry of the magni tude and dimenfions of natural bodies, and their various proportions and relations to each other on that account: and no one who underftands any thing of the modern Newtonian mathefis, can deny, that its very firt principle (viz, the doctrine of fluxions) confifts in the doftrine of motions, and velocity of the generating powers of bodies: and therefore every mathematical fcience is, in its general nature, purely philofophical: and it would be very ealy to fhew, that lome of the miof perplexed propofitions of geometry are demonftrated with the greateft cafe by philofophy; and that fome problems, impracticable by the geometrician, are folvable with the greateft facility and exactnefs by the philofopher. In Optics, what variety of the moft curious invention and ftructures of inftruments bas of late flowed in upon us! Scarce a year or month can pafs, not pregnant with optic difcoveries and contrivances; and yet none of thefe inventions, none of thefe machines, owe their origin to any other fource than philofophy. It is this fcience alone that difcovers, not only why a microfcope can affif the eye to difcern fmall ob. jects, or a telefcope diftant ones, but it enables the artiff to give the beft form to his glafes, and to difpofe them in the beft manner, in the ftructure of thefe and other inftruments, to anfwer the ends propofed. And who can fay to what limits this growing fcience may yet extend, under the conduct and direction of our philofophical fociety?
We need notfay, that Perspective, Dialling, or the art of thadows in general is purely philofophical. Theife arts confift only in the various reprefentations and optical views of nature: and to reprefent things under the fame appearance and refpective relation which they have to each other, requires no fmall art or fkill in philofophy. How little do we efteem a mere mechanic dialift, who knows nothing of the reafon or philofophy of his art; who fets the fyle of a dial pointing to the pole, for no other reafon, but becaufe he cannot make it fhew the hour in any other pofition?
Painting, as it congifts in an exact imitation of nature, by a judicious mixture of colours, and a proper difpofition of various tints, lights, fhades, \&c. muft be pronounced a philofophic art, whore theory depends on the moft refined principles of this fcience. A perfon by a thorough fkill in this doctrine of light and colours, might almoft make a picture a priori: how natural, genuine, and excellent muft that portrait be, which is executed by a thand, whofe every motion is directed by the dictates of prefiding fcience!
Gunnery, or the doctrine of projectiles, is, perhaps, the only art whore principles are purely philofophical throughout; and that yet bas not received all the advantage it is capable of from this all-perfecting fcience. 'Till Sir Ifaac Newton's time, all that was wrote on this fubject was errant jargon: lince him, we have had many pieces on the parabolic bypothefis, whofe theories are founded in vacuo, and vacuous theories they are indeed: their authors not underftanding true philofophy, could not inftruct mankind in the principles of gunnery; and this is but too well known an inftance of the fatal confequences that attend either the ignorance or neglect of philofophy, in the momentous affairs of life. However, fomething confiderable has already been done, and more may be expected, to give the engineer all the advantages he can poffibly have from the prefent mathefis and philofophy. See the article MAthematics.
In Physic and Surgery, the whole field of philofophy, in its utmoft extent, is concerned [fee the article Quack]: for, on the one hand, if we confider the human bady as a fyftem of folids and fluids in motion, this will require, at once a thorough knowlege in all the laws of motion, of action and re-action, of attraction and repulfion, of every mechanical principle and power, the hydroftatic and hydraulic laws of fluids, and every other principle of nature's agency in one, who has the care of fuch a noble machine to keep is in order, and to rectify it when out.
And what thall we more fay? For the time would fail us to fpeak of anatomy, and of botany, and of agriculture, and of

## R O Y

## R OY

gardening, and of every mechanical and manual art and trave gifo, even down to brewing and baking '[fee the articles BREWING and BAKING], whofe profeflors and artifts by the various improvements and precepts of philofophy, have been enabled to explain to us the animal œconomy, the nature of vegetation, the culture of plants, the improvement of land [fee the article MANURE], the manufacture of goods [fee the article Manufacturer], and meliorating the methods of procuring and preferving our bread and our meat, our beer and our wine [fee the article Wine]. And it may our beer and our wine inevery that a man in evation, in every employment of life, has occafion enough for the affiftance of this fcience; and that in every occupation no artift can execute and fucceed fo well as he that keeps clofe to nature, and beft under ftands her operations, which is all we have to underftand by fnilofophy.
If then all that has been faid be true, (and who will fay it is not? ' if philofophy be of that importance to mankind, as has been fhewn it is; we need not wonder to fee the wife and knowing part of our fpecies, in every age, have fo great an opinion of fuch a fcience, and fo defirous of being initiated into its myfteries. How ardent were the purfuits of Plato, Pythagoras, Socrates, Ariftotle, Seneca, and other fages of antiquity, after philofophy, even in its infant itate? But to fee and enjoy it in its prefent glory and perfection, to which it has arofe fince the time of the Royal Socie'ty, what ftudies would have been too arduous, what voyages too dangerous, what climates too diftant, for thofe champions of wifdom not to have undertaken, with the greateft alacrity and pleafure?
It is very remarkable, that whereas other arts and fciences give only a polifh to mankind, and make them expert and Ingenious, this of philofophy, in a peculiar manner, confers not only the higheft delight, and the moft tranfporting pleafure to the mind, but even happinefs itfelf. The attribute of philofophy is felicity by general confent: thus the infpired penman-Happy is the man that findeth wifdom.Thus Virgil too,
Foelix qui potuit rerum cognofcere caufas.
An idea of fuch focieties, peculiarly adapted to the general improvements of all the Commercial Arts.
It would be endlefs to urge all that might be faid upon a topic of fuch infinite extent, and of fuch infinite utility to mankind in general. If we have faid enough to give Britons fome idea, thougha very glimmering and imperfect one, how highly they are obliged and indebted to all gentlemen, who have made any advancement in thefe the moft excellent and the moft ufeful of all fciences, and more particularly to that moft learned and honourable fociety, that has produced a fucceffion of the ableft philofophers that ever lived: if, from what has been faid, we have removed the prejudice of fome towards this noble inftitution, and ftrengthened the good opinion of others, this will be no fmall fatisfaction; but that is not all that I would humbly intend: the principal motive with me, is not only to give a faint difplay of the merit of all who have fuccefffully applied themfelves to there ftudies, but to convince the public, that not only the conitant prefervation, but the conftant increafe and advancement of THE WHOLE COMmerce of the three Kingdoms, depend upon duly encouraging and honouring those who excelin any branch of these Sciences that tends to the Benefit of Trade and Navigation, and totheGlory of the British Empire: for if once thefe fludies become neglected and unfafhionable among us; if the ftudents therein are difregarded, and meet with no honour or emolument fuitable to the important nature of their applications, thefe ineftimable fciences will be left only to the men of figure and fortune; and how few the number of thefe bave been, when compared with thofe of another condition, is well enougb known; and how few of thefe have met with any recompence fuitable to their merit is equally notorious.
Indeed in the time of Sir Ifacac Newton, and a $f=w$ years after, the mathematica land philofophical ftudies were inhighefteem; and, becaufe it was the mode of the times to have fome knowlege therein, they were pretty generally purfued: .but the gentleman and man of bulinefs, in the general, have not fo ardent a tafte, or indeed leifure fufficient, fo to apply themfelves as to make any great proficiency in what has been well known for above this century paft; and therefore fuch," in the general, cannot be expected to have grcatly contributed to the adyancument of philofophy; to do which, certainly requires uncommon talente, and greater feverity of application than one gendeman among thoufands wil beftow; and although among the learued profeffions, more efpecially among the moft learned clergy and phylicians, there have arofe many excellent mathematicians and philofophers, who have contributed to the improvement of found philofophy; yet, even among thefe, there have been but very few that have excelled in comparifon to the number who conifitute thefe learned bodies; and thofe whohave made any extrabidinary proficiency, lived in the times when thefe ftudies were more in vogue, and in higher veneration than they feem to be at prefent. In fhort, had it not
V OL, II.
been for the Royal Society of London, (among whom ther has always been, and I hope there always will be, a moft laudable emulation to advance philofophy') it is greatly to be feared we fhould have few philofophers capable of making confider able improvements therein, except in our univerfities; and in thofe noble feminaries too, philofophy is not fo generaily and fo zealoully purfued as it was 50 years ago. And here few derive any great advantage from thefe itudies, except the capital profeffors, and the ordinary tutors to young people of diftinction, who fometimes, by virtue of their office and friendhips contracted with their pupils, obtain handrome preferment in the church; but philofophy now-a-days feems to be as little the road to extraordinary preferment in the church, as in the ftate, though it is the great fupport of ooth.
It is well enough known, and I hope it has been well remembered by thofe whofe duty it is not to forget it, that, in the late war, we had no extraordinary choice of able engineers, while our enemies had numberlefs: we had very few then; and a gentleman that would have approved himfelf, perhaps, one of the ableft in all Europe, was long neglected; and although he was defervedly recommended to his late royal highnefs the prince of Orange, in order to fave Bergen-op Zoom, yet he came too late, and was, on his return, ftill difregarded, 'till the Eaft-India company had occafion for his fervice: but his heart being almont broke before he was provided for fuitably to his diftinguifhed merit, it is no wonder that he did not long furvive the generous preferment he at length met with. It would be no difficulty to give many more inftances of gentlemen of real merit in philofophical ftudies, who bave reafon to complain of the difficulties and difcouragements which they have met with: many a cobler, I am afraid, lives more comfortably than fome able mathematicians and philofophers, who, if duly contenanced by the great, might be made happily inftrumental to improve and advance the commercial arts of this kingdom.
For my own part, I frequently lament the low condition of many of thofe gentlemen; nor can I but think there may be ways and means eafily found out to provide for them, in a manner fuitable to their talents, and that in fuch a manner, as to enable them to promote our commercial arts in particular, by the courfe of their ftudies being duly planned out and regulated by a committee of the Royal Society, appointed for thar purpofe: for I would humbly propofe to make this illuftrious corporation ftill more and more ferviceable, if poffible, to the ftate, than it has been; and this, we conceive, may be done with no lefs glory to themfelves, than honour and emolument to the kingdom.
Nor would I only prefume to fuggef the manner how, under the direction, management, and controul of the Royal Society, fuch fudents in particular may become more ufeful to the nation than they are at prefent, but how this celebrated body may, in other refpects alfo, become inftrumental to a ftill further advancement of all arts that are fubfervient to the intereft of our trade and navigation. And this is fubmitted to be done, by enabting the Royal Society to confer fuitable rewards and honours on all working mechanics, artifans, and manufacturers, who fhall make any capital improvements in their feveral branches, and the like on thofe who fhall make any important advancement in the arts of agriculture, or any thing connected therewith, as farming, grazing, nurferying, mineralogy, metallurgy, \&c.
That fomething of this nature is really wanting in England at prefent, and that to be under the conduct of fo learned and fo experienced a body, feems to be obvious from hence; that in Ireland we find they have long fince inftituted what they call the Dublin Society, which confifts of a number of private gentlemen, and traders of eminence and fortune, who have by themelves, and their influence among their friends and perfons of diftinction, raifed a fund by voluntary fubfcription, for the promotion of induftry and labour among the poor, and for the advancement of manual arts, whereon commerce depends; and the remarkable fuccefs with which the endeavours of thefe gentemen have been crowned, fhould have fome weight, methinks, with us in England, to think of the eftablifhment of a well-conftituted fociety for this, as well as the other laudable purpofes of philofophical improvements, for the benefit alfo of the trading part of the kingdom; for whatever ufeful improvements are made in the latter, the former will be certain to reap all the benefit and advantage by them: every artificer and mechanic, every manufacturer and farmer, every tradefman and merchant, as well as every hinded gentleman and nobleman, will thereby become gainers, and the nation in general the more and more profperous and power ful : and the more efpecially fo, if all proper meafures be taken by the governing fociety, to propagate among the people all thofe difcoveries that dlall be made, either by new inventions, or by the improvement of the old, in the plaineft and moft intelligible manner, that thefe difcoveries may nor remain only in the hands of a few, but be diffeminated through the nation, for the common benefit of all. That England hould feem to be ripe for the reception cf, and the penple well difpofed to promote and encourage, a proper inftitution of this nature, may be reafonably enough int
ferred, from the fpontaneous conduct of feveral bodies of people among us at this time: I mean that laudable and numerous fociery who have diftinguifhed themfelves by the title of $A N-$ TigAllicans, and who have voluntarily and liberally raifed a fund among themfelves, in order to diftribute as premiums, to thofe who fhall excel in any of the mechanical or manufactural arts, for the benefit of our commerce.
In imitation of this public-fpirited body of gentlemen and tradefmen, we find likewife, by repeated advertifements in our public news-papers, addreffed 'To the Public, That - fome of the nobility, clergy, gentlemen, and merchants, - having at heart the good of their country, as their adver* tifement expreffes, have lately met together, in order to - form a fociety for the encouragement of arts, manufactures, 6 and commerce in Great-Britain, by beftowing rewards, - from time to time, for fuch productions, inventions, or 4 improvements, as fhall tend to the employing of the poor, so the increafe of trade, and to the riches and honour of 'this kingdom, by promoting induftry and emulation, 8c.' The advertifement further informs, that 'Though at prefent - their plan is not completed, it has neverthelefs been re-- folved to make a beginning, in manner following: that is - to fay, cobalt having been already difcovered in fome parts - of this kingdom-for producing feccimens, not lefs than - ten pounds in weight, for the beft in quality, to be produced - on or befure the 15 th day of January next, with fatisfactory - certificates of the place where found, and reafonable affu6 sances that it may be obtained in quantity, $301,-$ To be - determined that day fortnight.

- For raifing and curing the moft and beft madder for dying, - in this kingdom, not lefs than twenty pounds in weight, of - which Camples to be fhewn, with Catisfactory certificates, - on or before the 15th day of January, in the year 1756, - 30 l. -To be determined that day fortnight.
c For the beft drawings by boys and girls, under the age of - fourteen years, and proof of their abilities, on or before the - 15 th day of January, 1755, 15 .
- Likewife for the beft drawings by boys and girls, between ' the age of fourteen and feventeen, with like proof of their - abilities, on or before the fame day, 151.

By order of the fublcribers,

## Willifm Shipley.

- Cobalt is a mineral found in mines of copper, lead, fil< ver, tin, and iron, in Sweden, Germany, and other coun-- tries: it has likewife been found in Cornwall, and may pro-- bably be difcovered in other places in this kingdom. It is a - heavy fubftance, fometimes of a blackifh, but more com-- monly of a bluifh-grey, fome of its parts inclining to a fil-- ver colour, and that with much variety, according to its ' mixture with metals, ftoney, or other matters: it has allo - fometimes on its furface a red efflorefcence, which is called - the flowers of cobalt.
- The teft of cobalt is, the ftaining glafs blue in fufion, and - producing arfenic and zaffer, from which fmale is made. - Thofe who may find what anfwers the above defcription, a and are ignorant of making an affay, are advifed to apply - to fome ikilful perfon, as uncautious trials with this mineral ' are dangerous.'
Further Remarks on the greater utility of the Royal Society, to arts, manufactures, and trade, than it ever has been.
It feems to be the temper of the public, at prefent, to cherim and encourage fuch a defign, which makes it needful, at this juncture, to think of it in earneft. The above advertifement acquaints us, that the plan of thofe patriotsis not yet completed; and that of the Antigallicans is but in its infancy; and therefore the public fhould not be wanting to avail itfelf of thefe happy difpofitions in the people; and inftead of dividing themfelves into various independent and disjointed bodies, it would be more eligible, perhaps, to unite their fubfrciptions and donations, and put the fame under the government of one body, duly qualified and experienced to point out what is neceflary to be done for the conftant advancement of the commercial arts of every kind, to diffribute the premiums according to merit, and receive all intelligence and information from practical artifts and traders, of the difficulties their refpective arts and trades may labour under ; to the end that this grand body may deliberate and determine, with their united knowlege and judgment, what meafures fhall be needful for them to take, from time to time, in order to aid and affift all artifts to bring fill to greater and greater perfection their refpective arts and trades. Now, while the Royal Society of London fubfifts in its prefent fplendor and dignity, with its prefent conftitution, and under the royal fanction and authority; fuch an illuftrious corporation, abounding with perfons of the firft-rate knowlege and experience in all philofophical refearches, fhould feem to be the only fit body to undertake the chief controut and management of all thofe fmaller bodics that appear difpofed to advance the commercial arts, by the aid of their voluntary fubfcriptions and donations : for, without any difparagement to other worthy and judicious bodies, this fociety may be prefumed to have all the knowlege requifite to point out the belt
methods of improving the mechanical and manufactural, and all other arts whereon trade depends; and, therefore, they fhould feem the propereft to be invefted with the diffribution of rewards for the encouragement of perfons to excel therein. If any private focieties hhould unite, in order to raife fums of money among themfelves, for the, promotion of the like good ends, thofe focieties may depute fome of their more intelligent members to confer with the Ruyal Society, from time to time; by which means thef: benefactors will, in effect, have the diftribution of their own donations as much in their own power as they would otherwife, with this difference, indeed, they would have the advantage of the advice of that learned body to aid and affift them in carrying their good intentions the more effectually into execution. Nor is it improbable, if the public were to requeft the Royal Society to take this trouble upon them, but the members thereof might not a little contribute with their purfes, as well as with their ftudies and their experiments, to forward fo laudable a finit.
Another advantage that,would attend this matter being invefted in the Royal Society is, that the public could have no reafon to be under any apprehenfion that any pleudo-artif, any pick-pocket pretenders to knowlege, fhould impofe upon them; becaufe nothing could come before them but fome of their members would be thorough judges of, and they being wife experimenters themfelves, and habituated to judge of thefe things with due circumspection and accuracy, it would be very difficult, if not next to impoffible, to deceive them: a man may as well have the confidence to pals upon them lead for gold, or French coin for pure fterling money, as a talie experiment for a true one; whereas among other private bodies of gentlemen, however public-[pirited their intentians may be, yet, if they have not been converfant and familiar with philofophy, both in the theoretical as well as experimental part, they can neither give proper directions for trials to be made, in order to anlwer any capital purpole, nor can they be proper judges of many when laid before them.
Was if not needlefs to fay more, I might further urge, that this renowned fociety confifts of a numerous body of perfons of the firft diftinction in the kingdom; many of whom, though it Phould be fuggefled, they may not themfelves be competent judges of fome things that may come before them, yet they will always be good judges how the public money is beftowed, and prevent its embezzlement or mifapplication. Nor can there be the leaft fear of any thing of this kind, while a noble lord prefides over this fociety, who is nat lefs confpicuous for his profound knowlege in philofophical difquifitions, than for his diftinguifhed honour in every relationfhip.
I have dwelt the longer upon this article, thinking the advancement of the commercial arts a matter of the laft confequence to a commercial ftate. And although fome might imagire, that a fum to be annually raifed by voluntary fubfcription for this purpofe, would amount to but a trifle, and not worthy the attention of the Royal Society; yet I am inclined to believe that a mighty eafy way might be fuggeited, and no way difagreeable to the public, to raife, for a certainty, 20 or 30,000 . a year for fo good a delign, belides what might arife by voluntary fubfrciptions.-But if ever any thing of this nature fhould be thought of in earneft, the many wife in this kingdom will ftand in no need of any intimation from me how to obtain a proper fund for fo popular an occafion. The great Colbert of France, who was prime minifter under Lewis XIV, ufed to declare, That he thought he feent his time well in reading over a hundred propofals for the advancing the wealth and commerce of France, though but one of them deferved to be encouraged. And while other nations are ftudioully cultivating the arts of commerce, we Chall hardly think them undeferving our regard, while our whole dependence is upon them.

A brief Account of the Progress of the above SOCLETY for the encouragement of Arts, Manufactures and Commerce, infituted at London, anno MDCCLIV.

In the Ancient and Useful ARTS of AGRICULTTURE and HUSBANDRY.
The Society have conftantly offered honorary premiums of gold and filver medals, for planting of acorns, chefnuts, elms, firs, and Weymouth pines, in different quanticies, and for fencing and preferving the fame effectually, in order to raife timber, fo effential for the fervice of the navy, and wood for domeftic ufes in building, \&c.
The great utility of the cultivation of thefe trees is fo obvious, and indeed bas been fo well conceived by our nobility and gentry, that it will be fufficient to remark, that the premiums have been claimed, from time to time, by perfons of the higheft diftinction.
The cultivation of madder, which is a root of great ufe in dying, has been encouraged by the Society's premiums from the firf year of their inftitution: it was formerly planted in England in great quantities, but of late years had been wholly difcontinued, the Dutch having conftantly fupplied us with this valuable article; and it is computed that the imports of madder from Holland have amounted for

## R O Y

fome time palt to 200,000 pounds par arnum; but under the fanction of the Sociecy the growth of this plant is revived, and very large quantities are now cultivated by fundry perfons in different parts of this kingdom; one perfon in particular has planted 29 acres, and the premiums offered by the Society are regularly claimed; fo that in a very fhort time we fhall have no occafion to fend to Holland for a vegetable, which will thrive as well in our own country.
The other articles in hưpandry which have been encouraged by the Society are, the raifing apiaries; for which both honorary and pecuniary premioms are offered: the quantity requtred for the firft premium, being eighty pounds, is no lefs than four hundred ftocks in hives or boxes, and before the Society threw out thefe premiums, no perfons ever thought of poffefling fuch a flock of bees-Several forts of fodder, partizularly lucerne, have been cultivated with great faccefs; and laitiy; hemp, the growth and preparation of which in thiskingdom, for the making of fail-cloth and cordage, is of very confiderabie importance, has been greatly encouraged, and the premiums claimed in feveral counties.

## POLITEARTS.

The Society fet out with giving premiums for drawings by boys and girls: thefe have lince been extended to various ages, and to different kinds of drawing, too numerous to rpecify in this place; and honorary premiums of gold and filver medals have been eftablifhed, and cláimed, for drawings by young ladies, the daughters of peers and peereffes. Through the encouragement given by the Society to this art, drawing is become a branch of education; and as a great many of our manufactures, which depend on correatnefs and elegance of defign, are annually exported to foreign countries, the improvement of theff, which will be the refult of encouraging our youth to learn this art, muft in time prove a national advantage.
In the year 1757, premiums were offered for modelling, which are ftill continuid; and this art has been greatly improved amongft us, feveral excellent fpecimens in clay, and in wax, having been prefented to the Society, in confequence of their premiums. The great benefits arifing from the improvement of this art, to the ftatuaries, fculptors, $\& \mathrm{cc}$. is too well known to require a detail.
Etching and engraving, and cafting in bronze, all of which have their various well-known ufes, have been confiderably improved under the fanction of this Society; and premiums for thefe articles arc ftill offered.
In 1758, premiums were publifhed for the encouragement of the medallic art, and the fubjects propofed and executed have been, fome of the moft glorious events of the late war: as there medals are ftruck from fteel dies, an extenfive benefit is derived from improvements in this branch, which is not known in general; a variety of articles in hard ware, as etwees, feals, \&c. of which vaft quantities are exported, are likewife ftruck from fteel dies, and,therefore all improvements, of them muft prove beneficial to thefe manufdetures by increafing the variety of defigns or patterns.
Hiftory and landícape painting have likewife been encouraged, and alfo ftatues and baffo relievos in marble; by which many young artifts and fome mafters have been induced to produce fuch performances in each branch, as have done honour to the Society under whofe fanction they have been produced.
Engraving on gems bas been encouraged with fuccefs; and feveral other articles of inferior note, but which are all ufeful in their kind.

## CHEMISTRY, MINERALOGY and DYING.

Premiums have been offered for fundry preparations and improvements in thefe very ufeful arts, and are ftill continued : thofe which have been particularly improved or eftablifhed, and for which premiums have been paid, are, verdigris ufed by the dyers, the making of which from Britifh materials has been fo far eftablifhed to the fatisfaction of the Society, that the premium is difcontinued. White enamel, in imitation of the Venetian, has been produced, and a matiufactory eftablifhed in England, in confequence of the premiums thrown out for this article.
Premiums have likewile been claimed for improvements in dying cloth and filk in grain, and for dping cotton fcarlet, or crimfon in grain, and to anfwer the purpofes of the Turky or India red. Specimens of improvements of varnifh, to anfwer the ends of Martin's at Paris, have been brought in for the premium offered for this article, and are now under examination ; and alfo a compofition to prevent fteel from taking ruft: the making falt petre of pig and bar iron, fal ammoniac, a fubittitue for borax, \&kc. are fubjects for which premiums are offered under this head; and it is not to be doubred but that confiderable improvements will be made in every branch of thefe commercial arts.

MECHANICS.
The firftarticles in this clafs which the Society enteouraged by premiums were improvenents in wind and water mills,

## R O Y

models of which have been produced to the Society, and afo kept in their repolitory
Premiums were likewife offered for improvements in fpinningwheels, and this year a complete foinning-wheel has beengproduced, with which one perfon may fing fix threads at a time, and it will prove very ferviceable to feveral of out manufactures by favirtg a number of hands; but an arricle of much greater confequence lately brought to perfe日tion is, the erecting of a faw-mull for fawing of planks, the model of which bas lately been purchafed by the Society for one hundred pounds, and is now lodged in their repofitory : this machine is worked by water, and carries fixteen faws: from this model vadious mills may be conftructed for the fame purpore.
Bounties have alfo been granted for feveral ufeful inventions and improvements in mechanics, which bave from time to time been laid before the Society, particularly improvements in reels for winding filk; a new invention of a machine for planing caft iron, efteemed very curious and ufeful; and feveral other things of lefs confequence. To this curfory review of the Society's fuccefs in the purfuit of the firft part of their plan, the encouragement of arts, I have only to add, that they have a repoitory confifting of a variety of models, machines, \&c. fome of which have been prefented to the Society; others have been depofited in confequence of the ir premiums and bounties; and feveral have been purchafed of the inventors or improvers for the benefit of the public; and as this repofitory is continually increafing, either by donations from gentlemen, or in confequence of premiums and bounties, they may in time form a collection equally ufful and extenfive. The fecond branch propofed to be encouraged by this Society is,

## MANUFACTURES.

Several valuable manufactures have been improved, and fome actually effablifhed, through the patronage of this Society. In the year 1755, premiams were offered for making buff leather for the ufe of the army; in confequence of which, bullocks hides were dreffed in oil, and were found to be as good as the hides of buffaloes imported from abroad: lord Romney introduced the ufe of this leather among the Kentifh militia, and it has fince been approved by feveral regiv ments.
In 1756, the Society offered a premium for making carpets in England in imitation of thofe made in Turkey and Perfia, which have been brought to very great perfection by Mr. Moore, in Chilwel-ftreet, Moor-fieids, who produced to the Society a carpet in many refpects equal, and in fome fuperior, to thofe imported from Perfia and Turkey.
A manufactory of crucibles made of Englifh materials, has been eftablifhed by Mr. Leiberick in Weftminfter, in confequence of a premium publifhed by the Society for that purpofe.
Marble paper, which bas hitherto been imported from Holland, chiefly for the ufe of bookfellers and ftationers, has been brought to fuch perfection this prefent year, as in every refpect to equal the Dutch; and the firft premium offered for this article has been claimed by, and granted to, the manufacturer, who refides at Exeter.
Paper for rolling-prefs printing has likewife been confiderably improved by means of the encouragement given by this Society: the French excel in this article, and their impreffions from copper plates are more perfẹt than ours; but we have lately manufactured a quantity of this paper nearly equal in quality to the French.
Quilting in the loom, in imitation of Marfeilles or India quilting, has been eftablifhed in this country, and brought to great perfection, under the patronage of the Society, and the premium has been claimed and adjudged.
The making of flowers of point lace, after the manner of Bruffels lace, having been encouraged, great improvements have been made therein, and the premiums have been claimed and granted.
Premiums have been publifhed for making chip hat9, which have thereby been confiderably improved, and the premiums have been granted accordingly.
Alfo great encouragement has been given to the manufacturers of druggets, ipecimens of which were produced, fo excellent in their kind, that the premium is difcontinued.
Thefe are the principal manufactures that have flourifhed under the fanction of the Society, and have rendered this part of their plan of equal utility with the encouragement of arts.
The encouraging of improvements in arts and manufadures, has fo direct a tendency to the fupport of commerce, that little remains to be faid on this head, which completes the plan of our laudable Society: however, feveial articles in

## COMMERCE

Have been greatly improved by means of their premiuns, efpecially in our colonies.
The planting of white mulberry trees, whofeleaves are the proper food for filk worms, has been promoted by premi-
ums; and great quantities of cocoons, being little balls or bass on which the inclofed filk worms have fpun the filk, have been produced to the Society's correfpondents in the colonies, who have paid the premiums that have been claimed for this article.
The importation of raw filk from the colonies has likewife been promoted by premiums, which are ftill continued. A premium is alfo offered for producing wines in our American colonies, and fome famples have been fent over of both red and white, which were greatly approved of in the Society; but as the time for granting this premium does not expire till 1765 , we may expect further improvements, and that fuch wines will be produced as thall deferve the reward of one hundred pounds.
The cultivation of hemp, of the olive and cinnamon trees, of aloes, fafflower, \&c. in the colonies, is encouraged by fuitable premiums, and various other articles to be imported from thence; amonglt which the importation of pearl-afh has been effected this prefent year, though not in fuch large quantities as to merit the premium; but the proprietor has been honoured with the Society's gold medal, in confideration of what he has already done towards promoting their intentions with refpect to this commodity.
And fo large a field is opened in the colomies, for carrying on the laudable defigns of this Society, that it is impoffible to fet bounds to the advantages that may one day arife, from affording this encouragement to our fellow fubjects in America, efpecially if it be confidered that our poffeffions in North America are fo extenfive, that they include almoft all the different climates of the world; and there is the greateft reafon to imagine that moft of the fice trees, plants, and other valuable articles, which at prefent are peculiar to the eaft, may be cultivated in the weft.
Having now given an account of the principal public advantages arifing from the premiums and bounties granted by the Scciety for the encouragement of Arts, Manufactures and Commerce,
I bave only to add, that this refpectable body at prefent confifts of between two and three thouland members, and that their proceedings are carried on with the utmoft candour, propriety, and decorum, by means of a well-digefted fet of rules and orders, which are printed for the ufe of the members, the fubftance of which I hall endeavour to comprize in as few words as poffible.
The Officers of this Society are, the prefident, the viceprefidents, of whom there are ten, the fecretary, affiftant fecretary, regifter and collector: thefe are chofen annually by ballot. The election of a new member is likewife by ballot: he may be propofed by à member, at any meeting of the Society, and be balloted for at the next meeting, when, if two thirds of the members then prefent ballot in his favour, he is deemed a perpetual member on payment of twenty guineas, or a fubfcribing member on payment of any fum not lefs than two guineas, fo long as fuch payment is annually continued.
Their meetings are held in their great room oppofite Beaufort buildings in the Strand; and they meet every Wednefday at fix in the evening precifely, from the fecond Wednefday in November to the laft Wednefday in May; and in the intermediate time, on the firft and third Wednefday in every month: thele are called ordinary meetings, befides which, there are eight general meetings every year, and fome occafional extraordinary meetings.
When the Society is fitting, the prefident or prefiding member conducts the bufinefs of the evening agreeable to the book of rules and orders which lies on the table before him: the bufinefs begins with reading the minutes of the preceding meeting, which being once read, are on a fecond reading to be difcuffed if neceffary, article by article, before any other fubject is confidered : all the minutes which are not objected to on the fecond reading, ftand confirmed: after this the reports from committees are read, and agreed to or difapproved; unlefs a motion is made and feconded to poftpone the reports, in order to introduce any new propofition, which cannot be received after ten o'clock: if fuch motion fo feconded is carried by a majority of hands held up in fupport of it, then the new propofition is immediately confidered, being firft delivered at the chair in writing; and in this, and all other cafes, the greateft freedom of debate is allowed, and carried on with the utmoft decency and candor, every member being patiently and attentively heard without iaterruption, unlefs he departs from any order of the Society, or fpeaks more than once to the fame queftion, which is not permitted, unlefs a gentleman has been mifunderftood, and defires to explain himfelf: when any member fpeaks, he flands up and addrefies himfelf to the gentleman in the chair, and the reft remain filent: no limitation of time is prefcribed to the fpeaker, but few exceed ten minutes, except on very extraordinary occafions; and moft gentlemen, for the fatisfaction of fo large an auditory, fpeak as audibly as poffible.
There are nine ftanding committees, and two chairmen to each committee, belides which there are occafional committees for mifcellaneous fubjects : to thefe committecs are referred
the feveral fubjects properly falling under their confideration, as letters, to the committee of correfpondence, polite arts, to the committee of polite arts, \&cc. and every nember is of every committee, though particular gentlemen are nominated to each committee.
Thefe are the principal regulations that have not been already noticed in the courfe of this narrative, which I cannot more aptly conclude than with a fincere and fervent prayer, "that "this molt free and independent Society, inllituted FOR "c the Public Good, may long continue to do honour " to its patrons, and that its prefent moft excellent plan "" with all poffible improvements may be handed down to "s pofterity, and by them be facredly revered, and firmly "upheld with the reft of thofe ineftimable privileges, which
" have rendered us fuperior to all the nations of the "earth."
RUM, a fpirituous liquor, often ufed in punch: it is made in the Weft-Indies, of fugar-canes, and is, in the general, of ftronger body than brandy, i. e. it contains a larger quantity of oil, and lefs phlegm and falt: its oil is lefs attenuated and fubtilized, whereby its volatile falts are more embarraffed and theathed up. Neither is its oil reduced to fuch minute and fubtile particles, either becaufe the canes were lefg fermented with the water, or becaufe the oil and falt of this cane are more vifcid and grofs, than thofe of the molofles 'drawn from the fugar, which has undergone the fundry neceflary operations, and has been thorougbly fermented afterwards. For although all thoroughly fermented liquors afford much more fpirit, in proportion to their body and kind, than the lefs fermented; yet it is certain, that the fundry operations fugar undergoes in the making, may, and does break, attenuate, feparate, and divide the principles in the moloffes (though the groffeft of the fugar) more than thefe fame principles exifting in the crude cane, where the firm union of the grofs oil and falt makes the unprepared fugar of almof a loathfome lufcious tafte. And alfo all liquors, thoroughly fermented, have, during the fermentation, a free accefs and communication with the external air; whereby the intefine motion is promoted, and the fmalleft and moft feparable parts are too much attenuated and reduced to a fubtile aura, which exhales to the depauperating of the liquor of much of its fineft parts ; hence it yields lefs (though a furtile) firit.
That rum which is of a brownifh, tranfparent colour, of a fmooth, oily, gratefui tafte, of a ftrong body and confiftence, of a good age, and well kept, is the beft. That of a clear, limpid colour, and hot pungent tafte, is either too new, or dathed with fpirits.
To fuch'palates and fomachs as can bear it, rum is certainly preferable to brandy, either for a dram or punch, in many cafes. Brandy (e. gr.) is diuretic, becaufe it ftimulates the veffels, and rarefies the blood, whereby only its finer and more ferous parts are ftrained off by the kidnies; but rum not only ftimulates by its falts, but lubricates by its more and groffer oil, and thereby expands and dilates the renal lateral veffels; whereby not only the thinner, but alfo the groffer and more excrementitious parts of the blood, are allowed a ready' paffage through the renal ftrainers, and get off by the ureters.
Again, when the veffels are fluggifh, and the blood fizy, brandy promotes perfirition in a gouty habit, and forces off part of the falts by utine, as it at the fame time carries much effential vegetable falt into the blood; but rum foftens and dilates the veflels more; bence a freer perfpiration both of falts and ferofities, as well as a difcharge by urine; and at the fame time it conveys lefs falt into the blood, and its more and grofly oil fheaths the remaining acrimony of the blood; which anfwers two valuable intentions. In It thereby dilates the corrugated capillary veffels, wherein the gouty matter was ftopped and lodged, and the relaxation of the veffels gives nature an opportunity to pour in thinner fluids upon thefe gritty lodgments and fharp matter, whereby they
are diluted, diffolved, thruft forward, and expelled by the are diluted, diffolved, thruft forward, and expelled by the excretory ducts of the 1 kin . 2. It blunts the edges of the pointed pricking falts, and obtunds the reigning acrimony, makes it lels unealy to the patient, till the elaftic veffels can
attenuate, feparate, and diffolve it, fo as to be either perattenuate, feparate, and diflolve it, fo as to be either per-
fpired or thrown back into the blood, 'tll it axrive at and be ftrained off by the kidnies.
In nephritic pains and gravelly cafes, where the veffels are always much contracted, and fometimes inflamed, the ufe of rum is preferable to that of brandy, becaufe it relaxes the contraction more, increafes the fream of urine, and makes way for the obftructed matter to pafs off, or be forced and walhed out of the channels. Bilious conflitutions can bear the ufe of rum, diluted with water, better than brandy, beceufe their folids being elaftic and contracted, and their veffels narrow, and fluids acrimonious; for whatever blunts the acrimony of their juices, and foftens and dilates their fibres and veffels more, muft be beneficial. On the contrary, whak, and the to the ftimuation and contraction of their
flarpnefs and faltenefs of their fluids, muft unavoidably be hurfful. All fuch as have elaftic fibres, contracted velfels, fharp and thinjuices, lean and flender bodies, if they will be meddling with drams (which, if they prefer health and long

## R U M

## R U S

life to tafte and luxury, they fhould ufe but as medicines; i. e. from neceflity, not choice or pleafure) fhould prefer rum. Hard drinkers, who have broken their conftitutions by frequent debauches, will have a moderate dram, that will not only raife, but preferve the tone of the ftomach, maintain and ftrengthen good digefion, and keepthem from being too much damped : here rum thould take place of brandy; not only becaufe it fills and invigorates the nervous tubes with lefs volatile and more durable fpirits, but, at the fame time, its oil blunts the points of the falts, which other liquors have left too plentiful in the blood.
In chronical afthmas, coughs, and ftuffing of the lungs, if any moderate dram may be allowed, rum is the beft, becaule its foirits are lefs volatile, its oil more and groffer, to fmooth the ftiffand contracted veffels, expand their fodes, make way for fpitting, and, by its folid particles, clearing the tubes of fome parts of their load.
In choleric dilorders, from acrimony, pricking, paining and tearing the nervous threads, rum offers fairer for relief than brandy, becaufe it is more oily, fmooth, and foftening. It is allo more fuitable to old age, becauf, at the fame time it ftimulates, it alfo lubricates and dilates the veffels, whereby they keep longer open and paffable, the fraitening, fhutting up, and coaleficence of which, is the only caure of old age and natural death.
In recent great colds, without a fever, rum is more fervicéable than brandy, provokes both perfpiration and urine more powerfully, as it theathes the falts, makes their fimulus lefs fenible and contracts the veffels lefs, nay, its fulphur fmooths and dilates them more.
When the perfon is very hot and thirfty, a dram of rum is much better to drink than brandy, before water, fmall beer, or milk; for this keeps the veffels more pliable, dilated, and lax, maintains a freer courfe for the fluids to pafs without lett or ftoppage: for the mifchief done by water, or fuch Imall liquors, in this cafe, is, being drank cold, they fuddenly contract the veffels, fo as the liquids cannot pafs; their fineft and thinneft parts are difcharged through the interftices, or forced along the tubes, whilft the more grofs are obffrufted, fixed, and wedged in; herice obftructions, ftagnations, inflammations, ulcerations, or mortifications, or fchirrhus's, and carcinomatous tumours of fome vifcera of the lower belly.
But for thefe reafons, phlegmatic and corpulent people muft ftill allow brandy the preference, becaufe it ftimulates more, and raifes a greater contraction; for it abounds more with falts, and its oil is more fubtile, exifts in fmaller particles in the liquor; and their veffels and fibres are fo foaked in infipid humidities, and relaxed with oil, that they want no lubrication, nor the falts in their blood any abforbent. Cachectic, hydropic, lethargic, and paralytic perfons, muft alfo chure brandy on the fame account ; and fo muft thofe who have furred-up veffels and foul glands (which raife fcropbulous knots, oedematous (wellings, whether fixed or fhifting) for the fpirits of brandy being more fine and fubtile, they rarefy the blood, and ftimulate the veffels more. In exceffive hot weather, when the fibres are much relaxed, and perfpiration, or fweat, profufe, brandy muft have the precedency, becaufe it ftimulates and contracts more, and rarefies the thick and fizy matter better, raifes a brifker motion in all the juices; though it mult be owned, that thefe its good effects are but of fhort flanding.
In a moilt, foggy, or marfhy air, where the moifture hangs upon the fkin, and ftraitens or ftops the mouths of its excretory ducts, and diminimes perfpiration, or where the fpring of the air is weakened or broke, fo that it neither expands ittelf fufficiently in our lungs, food, nor blood, but renders the juices both ways fizy, a dram of brandy is better than rum. But in an infected air rum is before brandy, becaufe it leaves more oil in the mouth and throat, which entangles and imbibes the infectious effluvia, or miafmata, floating about and hanging in the atmofphere, and fucked in together with the air; and in this cafe, the greateft prefervative is to fpit out all our fpittle whilf we are in that infected air.
Rum being a fpirit procured from the fermented fcummings, wafte, and refufe matters of a primary fugar-houfe, that immediately works the fugar from the cane, differs from a fugar fpirit, as containing more of the natural flavour, or effential oil of the fugar-cane, a deal of the raw juice, and parts? of the cane itfelf, being often fermented in the liquor, or folution, whereof the rum is prepared.
The unckuous flavour of rum is often fuppofed to proceed from the large quantity of fat ufed in boiling the fugar; which fat indeed, if coarfe, will commonly give a difagreeable, nidorous, or oily flavour to a pirit, as I have found by experience; but rum has its fpecific and natural flavour from the cane.
When a fufficient flock of thefe refufe materials is procured, they are fermented in the common method, though always flowly at the beginning of the feafon of making rum in the iflands, for want of yeaft, or other fermenting matter, to fet the liquor at work; but, by degrees, they procure a fufficient quantity of the ferment, which fponcanerully rifes as a head in the operation: and thus they come, in a little time, to ferment and produce their rum with great expedition.

VOL. 11 .

When the waih is fully fermented, or to a due degree of acidity, the diftillation is carried on in the cothmon way, and the firit made up prdof, though fometimes advanced nearet to alcohol, or the ftate of double proof; in which cafe they call it double-diftilled rum.
It may be otherwife rectified to advantage, as it is commonly firft drawn with a full dofe of high-flavoured oil in it, which requirés to lie, or digeft for a lonig time in the fpitit, before the whole becomes foft and fit for ufe; whereas, were it to be well rectified, it would grow mellow much fooner, and have a much lefs potent flavour, which fometimes renders it difagreeable.
The beft fate to keep it in, both for exportation and otherwife, is, doubtlefs, that of alcohol, unlefs when the grofs oil is required in it, for the fake of mixing and covering; and, by duly throwing out its oil, it may be brought nearly to the flavour of a fine fugar-fpirit, or arrac, as a very fmall proportion of it, ufed in its natural itate, to a fine taftelefs firit, will give it a flavour bordering very near upon that admired in arrac.
This fpirit is ufually very much adulterated in England, with one or other of the cheaper forts; even a rectified malt-fpirit, if ufed in moderation, much lefs a moloffes; or fugar-fpirit, being not eafily diftinguibable therein.
The ways of trying its goodnefs are the farme with thofe men: tioned under brandy [fee Branisy and Distillation.] In this, and moft other refpects, it ought to be confdered as a brandy of a particular fpecies; fo that what is delivered in regard to brandy will be alfo applicable to rums: for though the fugai-cane differs from the vine, yet the fweet faccharine fubftance whereto both the juice of grapes and the juice of the fugar-cane are, by the fame art, reducible, fits them to afford wines and brandies that hall not be readily found to differ; which is a pregnant hint, that may prove of unfpeakable advantage to the Britifh fugar colonies. See the articlés Sugar, Sugar Colontes. See alfo the Business of the Custom-house at the end of this letter R.
RUSSIA, or MUSCOVY, is bounded on the north by the Northern Ocean; on the eaft by Great and Chinefe Tartary, and part of the Japonic Sea; on the fotith by the Calmuc and Cuban Tartary, Perfia, Georgia, and the Cafpian and Euxine Sea; and on the weft by Poland and Sweden. Its extent from eaft to weft, that is, from the confines of Sweden to thofe of China, is computed, by forme geographers, to be $\times 500$ leagues; and from north to fouth, that is, from the Frozen Sea to the Euxine, 600; though others differ in their accounts: the whole countify, towever, lies between the 46 th and 7 oth degree of north latitude, and in fome parts eaftward reaches even beyond it, and between the 3oth and r6oth of eaft longitude.
Ruffia may be divided into Weftern and Eafterns Tartarian and Laponic, and the late conquefts in Affa.
I. In the Western Muscovy are the following proyinces: 9. Preskow, or Pskow. 2. Great Noyogorod. 3. Twera. 4. Rzeva, or Reschow. 5. 'Biela, or Bieliski. 6. Somolensko. j. Severia, 8. Czernichow. 9. Vorstin, io. Rezan. if. Bielgokod. 12. Mordoa, \&c. 13. Nisinovggorod, or Lower or Lesser Novogorod. 14. Volodimer. 15. Súldal. 16. Moscow. 17. Rostow. 18. Yero. slawla. 19. Bilijesora, or Belozero., zo. Vologda. 21. Cargápol, Owega; \&c. 22. Dwina. II. In the Eastern are the provinces of,

1. Mezon. 2. Jugora, or Ingorski. 3. Candoria and Teesca. 4. Petzuro, or Borandai. 5. The country of the Vơulisí. 6. Permia. 7. Oustiong. 8. Ziraniá; and, g. Viatía, or Viadskat.
III. In the Muscovian Tartariy are thofe of,
2. Casañ, or Cazañ. 2. Bulgara. 3. Baskirian 4. Astracan. 5. Siberia; and, 6. Samoieda.
V. In the Russian Lapland.
i. Murésimantol, or Maritime Leporia. 2. Tergm kor Leporia. 3. Moreski Leporia; and, 4. Nova ZËmea.
We fhall not, in fo large a territory, enter into a minute defcription of thefe diftinct provinces, many of which afford little trade, but give the beft general fate of this trade that we can.
As the Czarina is now miftrefs of a vaft extended dominion, there muft neceffarily be a great varicty in the trade of fo many countries; and yet, as they are all under the management of one fovercign, fo they are, by an extraordinary conduct, brought at laft to run, as it were, in one general channel; which was the effect of the exquifite conduct of the lare Czar Peter, emperor of Ruflia.
The Mufcovite dominions are fomething wonderful in their fituation, and which qualifies them for commerce with almoft all the world, in a manner which no empire but this can boait of.
They bave a communication with four parts of the world, by feas fo remote from one another, that nothing can be thewn like it in the whole globe; and, in the oblerving this, we thall be able with the greater ea'c to defcribe the prodigious commerce they now carry on.

## R U S

I. They have the port of Archangel, in the White Sea, as it is called by fome, the Frozen Sea by others; and by this they have a navigation to the nothern ocean, can fit out fhips to Spittbergen (Groenland) and, by the north cape, into the German and Caledonian Oceans, and may fend thips to any part of America, paffing by the north of Scotland and Ireland, with as great eafe as the Dutch, who go north about, do to the fame countries. It is true, the Mufcovites have not yet meddled with thofe remote branches of trade, but it may not be long ere they do.
2. They have the port of Peterfburgh, in the gulph of Fintland; by which they have opened a door into the Baltic Sea, and, by that fea, into the Britifh Channel, and fo with all the reft of the world. They have alfo the intire poffeffion of Wiborg, Narva, Revel, and Riga, four of the beft ports for trade in that part of the Baltic Sea.
3. They have the port of Aftracan, in the Cafpian Sea, by which they have a navigation to the coaft of Georgia and Perfia, and where they are likely one day to open effectually the moft important trade in that part of the world, notwithftanding they met with fome obftruction, in relation to the Perfian raw-filk trade from Geylan, on the fide of Georgia: and to that purpofe the late Czar fortified Terki, on the utmoft weftern bound of Circaffia ; and the late Czarina built a fort and royal city there, which they boaft will, in time, be equal to that of Peterfburgh in the gulph of Finland.
4. They have three fmall forts on the fide of the Black' Sea, which, when they took Afoph from the Turks, they flighted, as having refolved to make Afoph the feat of a naval power, equal to that of the Turks, and fo have obliged the Grand Seignior to allow them a free paffage out of the Palus Meotis, and the Black Sea, by Conftantinople, into the Mediterranean, which would have been a door of trade worth a kingdom itfelf; but that great defign mifcarried afterwards, by the lofs of Afoph*, which they were obliged to reftore to the Grand Seignior, by that fatal treaty made on the banks of the river Pruth, in Moldavia; and, fince that, they are glad to make ufe of thefe fmaller ports in the Black Sea ; but they have not yet appeared to be of much fervice, either in matters of trade or war, having no harbours to feaward capable of receiving any thips of burthen, nor any navigable river by which to carry on their commerce by land, the country next adjoining being moftly defert, and incapable of trade: yet it is faid the late Czar, had he lived, would heve fettled a communication that way by caravans, and fo have had a trade to Terki on the Cafpian Sea.

* This town ftanding on the frontiers of Ruffa, againft Turkey , has been feveral times taken and retaken of late years; but on the laft peace, concluded in the year 1739 , between thofe powers, it was agreed that the fortifications fhould be demolifhed, and the town remain fubject to Ruffia.

Thefe are the four feas into which the great extent of their dominions gives them an entrance ; which yet are io exceedingly diftant and remote in their fituation, as to have no practicable communication by fea with one another: but the fituation of Mufcovy is fuch, that, by the great river Wolga, which runs from north to fouth through the heart of their dominions, they may one day form a communication for trade between all thefe parts, being able, with the help of two fmall camals, which his Czarifh Majefty had begun before his death, to join the waters of the lake Onega with the ftream of the Wolga, and fo in effect caufe the waters of the Cafpian, the Baltic, and the White Sea, to meet one with a nother. In the like manner, by a canal at Varonitza, he had brought the navigation of the rivers Wolga and the Don, or Tanais, together, and fo joined the waters of the Cafpian with thofe of the Euxine Sea ; though by the difmantling of Afoph, as above, that communication is not rendered near fo ufelefs to this country as it otherwife might have been.
Having thefe advantages for extending their commerce by fuch a ftrange kind of river-navigation, we will proceed to enquire into the funds of trade which are to be found in this valt dominion. And here we may obferve, that though the induftry of the people of Mufcovy is really fcandalous (at leaft it was fo before their prince fired their minds with expectations of getting great things from trade) and that their manufactures were very few, yet now no fingle country (take it complexly) has fo many, and fuch valuable things for exportation, as the Mufcovite dominions, and thofe both of land produce and manufacture, and which, confequently, bring a prodigious return to the country in money; but 'till the late Czar fettled his court at Peterfburgh, opening a trade to the Baltic Sea, and bringing his fubjects to cloath and drefs after the German and French manner, they had no great confumption of Britifh or French manufactures among them, and, confequently, no great commerce this way; but now their exports and imports are exceedingly increafed, and are daily increafing; and certain it is, that the ballance of trade is greatly to the advantage of the Ruffians, with moft countries with which they have dealings.
The produce of the European part of this country is as follows.

## R U S

From Ruffia and north parts of Mufcovy,

Tar in a prodigious quantity.
Honey and bees-wax.
Ruffia-leather, deer, bear, and elk-ìkins.
Pot-afhes, timber and plank, iron, and fome cop per, the laft from Kexholm, or South Finland Hemp and flax.
Linen and linen-yarn.
Furrs, fuch as fable, black fox, ermin, rain-deer, martens.
Raw filk, by the Wolga.
Perfian, Indian, and China goods; the laft by land-carriage.

rom Circaffia, - Tobacco, which is very much in creafed.
All thefe are extraordinary exportations; and the more, becaufe exported in an extraordinary quantity: but their manufactures are but fmall in proportion to thefe; except their linen, linen-yarn, and Ruffia leather; and thefe, it muft be acknowleged, are articles of very great extent, and have been much increafing for many years paft. Of thefe merchandizes, the tar is, as before obferved, a prodigious article. The late Czar was; as the Czarina now is, the fole merchant, and it is principally exported at Archangel and Wiborg.
The Czarina is likewife faid to be the only merchant in the tobacco of Circaffia. Tobacco, it feems, was once prohibited to the Mufcovites, that is to fay, to fmoke; the reafon was, that it affected their heads, and made them drunk: and they fay of a Ruffian, that if he is drunk, he becomes mad, is a mere ruffian ; and the quarrels and murders which frequentiy happened among them were fuch, occafioned chiefly by this tobacco, that it obliged the late Cziar to prohibit the ufe of it: but, as the people were gradually brought under a new difcipline, they became more civilized, and under government ; and upon this the Czar allowed them the ufe of tobacco again; which, as it grows in exceeding plenty, and very good, in their own dominiohs, they are fupplied from thence wholly, and the government makes a very great revenue fromi it. The country of Circaffia they fay yields above 60 or 70,000 hogheads of tobacco yearly, and they vend no inconfiderable quantity of it in the Baltic, and in Sweden and Poland, to the great detriment of the Englifh and Duteh merchants, who had all that trade before.
Between the port of Astracan and the coaft of Persia, there is a very large commerce carried on.
From Siberia, the Czarina's flare only of the fables and rich furrs taken there, is faid to amount to above 150,000l. fterling a year, and the duty paid upon the reft to as much more; by which fome guefs may be made of the value of thefe fine furrs, the whole trade of that kind being in her dominions.
The trade in their new conquefts was very great before, and is not leffened fince their falling into the hands of the Ruflians. The hemp, flax, and other naval fores fhipped off every year at Riga, Revel, Narva, Wiborg, and Peterfburgh, are fo exceeding great, that the Dutch only are faid to load 300 fhips a year at Peterfourgh, and near as many at Wiborg.
The tar being a monopoly in the Czarina's own hands, brings in about 250,000 l. fterling profit to her exchequer, occafioned chiefly for the following reafons:
I. Becaufe of the exceflive tyranny of the nobility and boyars, the labour of the people is of no great value; and their mafters being obliged to yield the Czarina fo many barrels of tar, according to the lands and eftates they hold, they again oblige their vaffals to produce it to them; fo that it really cofts next to nothing either to the Czarina or to the nobility but the expence and confumption of an infinite quantity of timber in the country; which, on the other hand alfo, is of no value, the woods being of fuch a boundlefs extent, that, if we give credit to fome travellers, there is one wood; or if we give credit to come travellers, there is
foreff, equal to the whole infe of Great-britain.
2. Becaufe of the great quantity produced ; for though is
that extremely cheap, yet the quantity fupplied is fo great, that it makes the revenue from it amount prodigioully : and fome think it rifes to as much more as we have mentioned.

The late Czar erected two or three foreign trades out of the way of all Europe befides, and in which none could difturb him, nor does any one yet pretend to it : the one is, a trade by caravans from China. This trade he long ftrove to accomplifh ; and becaufe the diftance is prodigious great, and the way moft of it defolate and dangerous, he erected ftages, at proper diftances, on the way, fo that travellers might fubfint at a reafonable expence, and likewile be fecure from the infults of the Tartars, who are naturally thieves, and who rove about, and furround paffengers, and fometimes plunder them of all they have, and murder them alro. Nay, in fome places he built cities, as Janifea, on the river Janifea; Albaffin, or Albaza, on the Yamour; Sehelinga, on the river Schelinga; Argun, on the river Argun; and the like.
If due notice is here given of dangers to travellers on thefe roads, the governors of the feveral flages, or cities, are always ready to fend convoys to efcort the merchants from one ftage to another; and when they hear of any caravans of merchants coming, and having notice of any hoords of Tartars on the road to atrack them, they fend detachments of their foldiers to meet their caravans, and conduct them lafe : and this they are obliged to do, without taking or demanding any gratuities or rewards, much lefs obliging the merchants to pay any tolls or duties on their goods.
Thefe caravans, or companies of merchants, fometimes confift of feveral hundred horles and camels, and bring a very large quantity of rich goods; and would the Chinefe emperor have done his part towards opening a trade with Europe that way, as the Czar would have done, it might have been made eafier to them both, and infinitely more confiderable. For example:
There are feveral rivers capable of being made navigable, whofe courfe running from weft to eaft, have their beginnings in the Mufcovite dominions; and, were due methods taken to clear thefe rivers of the obftructions which prevent their navigation, and which are rather accidental than natural, half the journey might be turned into a voyage, and be performed by water.
There are likewife other rivers, more fouthward, which rife on the frontiers of China; fome take their courfe direcily into China, and paffing by or through fome of the greateft trading cities and provinces in that country, empty themfelves into the Chinefe ocean.
Other rivers rifing on the fame frontiers, and not very remote from the firtt, take a quite contrary courfe, and empty themfelves into the Cafpian fea. So that were thefe mighty monarchs agreed to promote reciprocally the good of each other's fubjects, a fmall expence to fettle caravans, or land-carriages, between the faid rivers, for the diftance, perhaps, of 12 or 20 days journey, would facilitate the commerce of thofe nations that way, and goods might come even from Pekin in China to Peterfburgh itfelf, almof all the way by water. We fhall but juft mention with what eafe thefe two powerful monarchs, if they concurred in their endeavours, might bring the world to a certainty about the continuity of the northermoft land of Afia with that of America, and the poffibility or impolfibility of a paffage by the north-eaft feas to China and Japan; whether Nova Zembla be an ifland or a conti-, nent; whether there be any fuch thing as paffing from the mouth of the river Oby, and the river Janifea, into the ocean, or whether thofe rivers empty themfelves into the ftraights called Waygat's, and whether that ftraight is a bay or a vare, and opens caltward into the ocean; whether the river Tartarus opens into the faid Indian Ocean, or whether its ftream is continually diving under a furface of ice; whether the north eaft part of Grand Tartary, and the mountains of which our geographers fay they know not how far they extend, run out beyond the pole, or whether they are broken off by the ocean, and leave room to fhips to fteer to the fouth-eaft, and to the land of Jeffo and Japan.
We do but juft mention thefe things, however inftructing they might be, becaufe the emperor of China, not addifted to improve his people by commerce or correfpondence with turope in this thape, is no way inclined to make difcoveries, or, perhaps, apprized of the advantages it might be to his country if he did.
But we muft not omit, that the late Czar of Mufcoyy, a very enterprizing and politic prince, had encouraged feveral of his own people to travel by land, and trace the northern coaf, in order to difcover what they could of thefe things; but either for want of conftancy to endure the extremity of the weather, or for want of judgment, they have, 'till very lately, done nothing worthy of the defign, nor afforded any accounts that have been fatisfactory: not that the thing was impracticable, for as they never came to any country but what was inhabited, it is hard to conceive that it fhould be impofible for fome people to travel through a country where others could dwell; or, which is ftill more, that they could not pafs through a country in the fummer, where others could fubfift the whole winter. We make no doubt, but if the late Czar had lived, and accomplifhed his other great enterprizes for the advancement of the commerce of bis people, he would have found fome methods to make a commerce with

China more practicable by fea or by land, by caravan, or by river-navigation, than it is at prefent.
Whether the journey to China may be fhortened by the convenience of water-carriage, it may be confidered, that the way which travellers from Mofcow to China now take, is this: they go north to Jeraflow upon the Wolga, 200 miles; then toWolagda, on the Ruffian Dwina, 188 miles farther, the fame river, which runs to Archangel; then north to the latitude of the arctic circle (to avoid a great defert of 800 miles, which lies in the way) then fouth-ealt to Tabolfki, on the river Irtifch, which fome make in 54, but Sanfon places it in 66, degrees of north latitude; and this is 3000 miles from Morcow, if we may believe the journal of the Holftein ambaffador, lifrand of Gluckftadt, who travelled as minitter of the Czar of Mufcovy, from Mofcow to Pekin.
From hence they crofs the river Oby, and travel eaft to the river Janifea, which by the account of Ifbrand held them 67 days.
All this might be traverfed another way, thus: from Mofcow to Cafan, all the way down the Occa and Wolga, about 300 miles; at Cafan they enter the river Kama, by the ftream of which, large enough for veffels of 80 tons, they can go up to Perma Mielki, within three days journey of Irtifch : fo that by travelling only three days by land, all the journey of 2200 miles to Joboliki may be performed by water
Let it be fuppofed, that from Jobolfki they go by water 'till they enter the Oby, which bas been done, and is practicable every day: from the banks of the Oby to the Janifea, and from the Janifea to the great lake of Baikala, is the 12 or 20 days journey we fpeak of. Out of this lake iffues the great river Angara, or Argun, by fome called Yamour, according to Sanfon, or Jamor, or Amour, according to others; which running with a vaft channel, empties itfelf, after a courfe of 2720 miles, into the great Tartarian ocean, or fea of China.
This is the river which the Chinefe ought to take care of, and which, perhaps, may be as eafily opened for navigation as the Wolga, whofe courfe is as long, and channel as large : and, as it lies in a latitude not to be incumbered with ice, it may probably be an eafy paffage into the Chinefe fea, and anfwer as well, perbaps, to the Ruffians, as a north-eaft paffage by fea would to the reft of the world.
Some of the modern map-makers, though their authority is much to be queftioned, bring the head of the river Irtifch farther fouth, and make its courfe much longer than the Ancients; they lay the fream parallel with the Oby, and that with Janifea, and their fpring-heads not far afunder; fo that according to thofe maps, from Cafan on the Wolga, it cannot be above fix days journey to the Irtifch, without going north up the Cama at all, and then they may pafs' down the ftream of Irtifch, which lies northeaft by eaft, 'till they come into the Oby, and then to the land by the river or the lake Janifea ; and from thence in 20 days journey, as above, they reach the lake Baikala, whence they go by the Angara. But thofe differences can only be adjufted by the Ruffian geographers, and thefe routes fettled to China, fo as to make it eafy for the carriage of merchandizes. But, as the Chinefe have not concurred herein, there lie difficulties, which, perhaps, may never be removed except by force.
But the late Czar, who had this trade to China much at heart, had his eye another way; and though even this, according to one method, wanted the concurrence of the Chinefe government, yet if that failed, there was another method which would not want it at ail, which was thus:
The navigation from Mofcow to the Cafpian Sea is known, and is all within themfelves; the Wolga enters the Cafpian Sea about the latitude of 46 degrees on the north fide of the faid fea. On the eaft, almoft in the fame latitude, is a great river called Khun or Sihun ; others call it Oxis or Oxus, which enters itfelf into the fame fea, and is navigable many hundred miles, or may be fo: it rifes out of the fame mountains, and not far from the head of the great river Ganges. From the head of this river, or fo far as it may be fuppofed to be made navigable, they travel now in 26 days to the frontiers of China, where they meet with the river Coccei, or the Yellow river, by which the Chinefe do already correfpond with fome of the Tartars of Karakathay, and of the kingdom of Tibet, which fome call the Independent Tartary. This river Coccei is, therefore, navigable already, even on this fide of the Chinefe dominions; and when it enters China, it paffes through the heart of the country, between Pekin and Nanquin, and receives into it the river that runs through Pekin, or the Royal Canal, which the emperor began to make for that navigation, and then falls into the fea of China in the latitude of 33 .
There is yet another way to be propofed for this paflage to China, and that is paffing out of the Cafpian Sea up the faid river Gyhun, to Bokara. This is a city of great trade already, and to which great quantities of rpices are brought from Surat up to Lahor upon the river Indus, of which we fhall fpeak feparately.
From Bokara they keep flill the fream of the river Gyhun, about 300 miles; then overland to Cachemire, within three

## R U S

R U S
days of the great river Indus, which they crofs over; and keeping under the mountains, and in the Great Mogul's country, they come to Syrmagar on the river Ganges, all which is a journey of about 18 days. Here they embark, and fail down the ftream to Minapourg: where they go up another river for about ten days more; then landing, they travel by land to Barantola, the capital city of Laflebontan. Here, or within a very littele of this place, they meet with the great river Kiam or Kaim, which runs directly into China, and upon which they pafs above 460 miles to Nanquin in the heart of China.
So that in all this paffage there is not above 28 days journey by land, all the reft being upon very confiderable rivers, well known to thofe who have been in thefe countries.
By any of there methods it is evident, that a much eafier way of trading to China might be fetted, than is now carried on by caravans, which are four or five months upon the roads; and if they perform it, it is with great fatigue as well as great hazard: whereas the methods of carriage being letiled as above defcribed, the trade fhould feem ealy to to be carried on, by giving commiffion to captains for buying and configning to other factors for fale, às is the practice of other countries nearer home.
But there is yet an cafier way for this commerce with China, than what has been mentioned, and which; we are told the late Czar had in his eye, and refolved to attempt or not, as his expedition to Georgia might fucceed: and, indeed, if there was a friendly dilpofition in the Perfians, or in the Great Mogul, it would appear moft ealy to eftabliih a commerce with India that way almoft all by fea; and then the commerce from India to China by fea likewife will be a thing fo eafy, that it would by no means be worth while to make any attempt by land. For example:
From the mouth of the Wolga in the Carpian Sea, to the mouth of the Sihun, or to the mouth of the Oxys, is an eafy voyage; the former of thefe rivers is navigable up to Bokaria, a city already full of merchants, and which has a great trade for all the kinds of goods which we now bring from the coaft of Malabar, from Bombay or Surat.
Thefe goods are brought up the river Indus to Cachemire ; alfo the trade of the bay of Bengal, is brought up the river Ganges to the lake of Tibber; and both being in the Great Mogul's country, they are brought within eight days journey the, laft, and within five days the firft, to the city of Termed on the Gyhun, from whence they come by water to Bokara, and after into the Cafpian Sea.
So that to bring it to a fhort conclufion, the whole trade of the Indies from the mouth of the gulph of Perfia, which is very near to Surat, and the mouth of the river Indos to Achim on the ifland of Sumatra, may be brought by water (eight days caravan only excepted) to Bokara on the Sihyn, thence over the Calpian Sea to Aftracan on the Wolga, and thence to Peterfburgh, the late Czar's new canal to Peterfburgh being fuppofed to be completely finilhed, as he originally intended.
From Cbina then to Bengal, every one knows is no long voyage; and the goods of China are every year brought by the Chinefe junks through the ftraights of Sincapore to Achin in the ifland of Sumatra, and thence to Hugeli on the Ganges, and that with much lefs charge and time, than they can come one twentieth part of the way over the deferts from Pe kin to Mofeow. So that the Ruffians feem to have no more to do, than to induce the Great Mogul, by a proper treaty of commerce, to open the trade of the Ganges and the Indus, and fettle a fafe correfpondence between his fubjects and the Mufcovites, and the trade to China would be effectually fecured.
This profpect was fo: glorious, and the advantage of fuch a commerce would have been fo confiderable, that it accounts for all the great enterprizes and motions of the late Czar that way : his embarking an army', and building a fleet to make himfelf mafter of the Cafpian Sea *: all which, at one time, the world feemed to look upon as chimerical, and of no weight, not fubftantial enough to anfwer the expence; but we are likely one day to fee a trade fo effectually opened, either through Perfia into the Mogul's country, or by the iver Oxus and the Sihun to the faid country, as may rende the Ruffian dominions immenfely rich and potent, by making them the mart of all Europe for the Eaft-India and Chinefe commodities, efpecially the fineft, and fuch as are not too bulky for carriage.

- Although the trade of the Carpian Sea hath not hitherto proved fo fucceffful, either to the Rufian or Britioh empire, as was expected, yet the matter is raid, at prefent, to be upon the tapis; jome proporals having been lately made to the Ruffian court about it, by means of an annual, fleet, to be built at the expence of the crown; the dhips to be commanded by Ruffian officera, or at leaft officers in the Ruffian fervice; but merchants and their goods to be tranfporied at a retronable rate, with a fufficient force to efcoite and protect them. In cafe this defign can be brought to bear, it is intended to make Aftracan the mars where all Perfian commodisies are to be vended. But 'till the troubles of Perfia are fome way or other at an end, it is not eafy to conceive how a fcheme of chis fort can be carried into execution with fuccefs.

4

As for the advantages of the north-eaft paflage to China and India, which fo many adventures have been made for and fo many lives loft, it is in the power of the Mufo vites to fearch that to the bottom, and to bring the world to a certainty about it : but we mult add alfo, that if it was found practicable, it would not be any great adgantage to the trade of the people of Mufcovy in particular, mose han to the reft of the-world: nay, it might, perhape, prove the contrary, and, therefore, it may not be amilis to ob Serve, That
In former times both the Englifh and the Dutch made feveral attempts to difcover the northermoft coafts of Europe, and to find out a paflage that way to China and the EafloIndies. The Englifh in queen Elizabeth's time, under Sir Hugh Willoughby, made a fatal attempt; that unhappy gentle man, with his fhip, beat it long at fea in vain, and being driven into a creek on the hhore of the RuffianLapland, endeavoured to winter there; but they were all frozen to death, by the violence and extremity of the weather, not having difcovered fo much as the W hite Sea.
The Dutch, in the year 1596, under the famousiHemmkirk and Barents, difcovered the ftraights of the Waygats, as thoy are now called, and went, as it was thought, into a fraight or paffage between Nova Zembla and the main, but were not able to proceed far enough for the ice; no, not fo much as to know, whether there was, a paflage through, or onty a deep bay, and fo were obliged to return again. After which Heemfkirk failed round the north part of the land or ifland of Nova Zembla, paffing into the latitude of 80 degrees, and then coming back into the latitude of 76 , and being dxwen on fhore by the ice, he loit his thip, and he and his whole crew were obliged to ftay all the winter in great extremity of cold: and the next year building themfelves two Ahallopa of the wreck of their chip, with great difficulty, they got to the fhore near the mouth of the river Cola in Laponia Ruf fienne, but came home no wifer than they went out, as to knowing whether there was any paffage orino.
We mention thefe things only, to intimate how induftrides both the Englifh and Dutch have been, even fo long as about 160 years fince; to find out a paffage to the Indies that way: and no.doubt it would be very advanitageous to both thefe nations in their trade, ( r ) As the voyage to China in particular, would be at leaft 8000 miles thorter than it is now, by the Cape of Good Hope, and the ftraights of Sunda or Sincapore, (2.) That the danger as to health would not berfo much this way, being beyond all comparifon healthier, becaure it is not needful to pafs the line at all, or go into any violent hot climates; whereas our navigators pafs the Line four times in every yoyage to China, as they now ga; and extreme cold is found to be much healthier than extreme heat, and eafier to be borne.
But to bring this to a point; fuppofe this paflage could de found out, the queftion, in regard to the trade of Ruftiahia What advantage would fuch a trade be to the Mulcovites? The anfwer is, nothing, in comparifon, perhaps, to what it may otherwife prove: for if. the Mufcovites can, upon any tolerable terms, bring the manufactures and growth of Chipa and the Indies home to their awn country, they would thereby make themfelves the merchants, and their country the general mart of this part of the world for thofe goods, and raife an immenfe profit, from the trade; feeing all the northern parts of Europe muft neceffarily come to their markets to purchafe thefe commodities.
But if the Engliih and Dutch could go about by the northeeaft to China, and, bring all thofe goods by fea, Ruffia could bave no benefit thereby, except what might happen on any fhip's putting in by ftrefs of weather into their ports $!$ which would prove of little confideration to what we bave put in competition therewith. Befides, they would have the montification of feeing the trade all carried away by their doors, without paying them any toll or profit whatfoever.
It is true, that could a paffage be found beyond the land of Nova Zembla, from the mouth of any of the rivers in the Muicovite dominions, as from the siver Oby, or the Janifea, which is ftill farther, and fo the trade fhould firft come into the Czarina's dominions, it would do very well on their fide, and her country would be the great emporium for all the riches of the eaft: for our navigators have hitherto been no more able to find a paffage through the Waygats, than they have been able to pafs quite round by the north of NovaZembla.
But the grand difficulty does not feem to lie about pafing the ftraights of Waygats, or failing round Nova Zimblas it fhould feem that there is an ocean beyond it, becaufe the great rivers Oby, Janifea, and others, whofe namee our geographers do not agree about, and which rifing in the fouthern parts of Grand Tartary, and taking their courfe due north, muft empty themfelves fomewhere into the ocean, on the north fide of the country.
It is pleafant to obferve, that although none have ever yet been able to pais through the Waygate, or to difcover to general fatisfaction whether Nova Zermbla be an inland or a continent, or whether the northermoft parts of Afia be contiguous with America; yet our map-makers. hew us af north-

## R U S

north-eaft part of Afia a great promontory of land, and a long ridge of mountains, and fay it is not yet difcovered where they end; at the lame time putting thefe words over the fea coaft, between thofe two undifcovered lands,- [Here they may fifh for whales, but the navigation is very difficult.] Upon the whole, though fuch pallages have not hitherto been difcovered, yet we cannot anfwer for what futurity may bring to light; but if fuch paflages thould be found, if they are not practicable in the ordinary way of commerce and navigation, the difcovery will as little avail Ruffia as any other flate or empire.
For though there fhould be (uch a paffage difcovered, yet if it be found fo hazardous that hips fhould often be obliged to return back without being able to beat through, and others ftranded and run on fhore, and then inclofed among the ice and loft, this would, as to trade, be no paffage at all, feeing in trade that may be faid not to be practicable, which is not fo to the advantage of the merchant.
What difcovers iffelf to us in the late attempts of the Murcovites to find out a pafiage to Chiia by fea is, that they do not intend it from theWhite Sea at Archangel, and fo through: the Waygats, by which all Europe would foon be as able to go as therinfelves, and fo the difcoverers be nothing the better for it ; but their defign feems to be to difcover, whether a paffage being found out by the north-eaft point of Tartary, it may not be navigated from fome other part of the Mufcovite coaft, either by the river Oby or the Janifea, or fome other rivers, by which means, though they would have the chief benefit of it to themfelves, yet even this way, fuch a difcovery might be of fome advantage to the reft of this northern world too.
Now, if the Mufcovites can firt make out the main difcovery, viz. That there is a pallage, and that they may fail about by the north-ealt point of Afia, and then could ftill keep the ftraights of the Waygats undifcovered, and as it were flut up, they would by fuch a difcovery have the whole trade of China and the Indies to themfelves, being, able to bring their thips into fomte particular port or place, not fo liable to be frozen up as the Waygats, and then bring the goods, by the rivers Oby or Irtifch, into the very beart of their country.
But we bave not yet done with the trade of Ruffia, in which we are to take notice, tbat on the eaftern fide of this great empire, and on or near the bank of the great Kama, they have great quantites of rock-falt, which they dig out of the earth, then diffolve it in its own brine, as it may be called, that is, in falt-water which rifes out of the mines of falt, and then boil it up again to be very fine white and fltong fait.
They drive a confiderable trade in this falt, infomuch that it is ordinary to fee 20,000 people employed in making it, all at 2 time.
They bring this falt down the river Kama, thence carry it up by the Wolga and the Occa to Meflow, and down the Wolga' to other cities, even as far as the city of Aftracan:
They cure alfo vaft quantities of fifh in the great lakes at the head of the Oby, the Janilea, and other lakes in the frontiers of Kathay; which fifh is brought down thofe rivers to Calan, and fo into the Wolga, and up to Mofcow.
As we have mentioned the produce of the Ruffian dominions for their trade on this fide, and by the exportation of which fo much wealth daily flows into their country, it feems neceffary to add fomething of the increafe of their trade this wayd and of the city of Peteriburg, as it refpects the trade of the Baltic Sea.
Pbtersburge is agreat city; and the Czar, befides the houfes of the inhabitants, founded many magnificent ftructures there; among the reft, the fortifications are faid to be invincibly ftrong, taking in its advatitageous fituation by water Alfo the warks which he made at Croniflot are very confiderable; and the hore is fo lined with artillery in all places, that no power in that part of the world will, perhapss ever make any attempt on that fide. But notwithftanding that, it may not be abolutely impracticable by other nations: nor are the fortifications at Cronflot, or on any other part of the entrauce of the Neva, fe formidable as to fecure the city from all appretiention of an attempt, when it thould come to be made by any nation able and experienced in foch undertakings; and this appeared by the panic, which feized thom in the year 1726, when a fquadron of Britifh men of war appeared before the harbour of Revel, threateninigy as-they thought, an attack upon this place
The Czar alfo built a cathedral, feveral churches, and a palace for himfelf, with great many fine apartments, and fo many lines drawn for increafing them, that had he lived, it was believed he would have equalled, if not exceeded, the palage at Verfailles, a model of which he had caufed to be taken Here are very fine docks and yards for building large faips of war, from 70 to 90 guns; and, as it is faid, the emperot refolved to keep in conftant pay a full complement of feathen to man them fit for fervice. Nor is it imponfible, perhaps, that this' empirc Ahould one day obtain a competency of conPant naviesation, as a nurfery for the maintenance of a much larger royal navy than they have at prefent.
'Till withirt thefe twenty years, a Mufcovite feet was a thing V OL. II.

## R U S

that was never heard of; it feemed at firft to appear in the Baltic, like a comet in the wafte or Aarry fpaces; or like the new ftar in Caffiopeia's chair, for all the world to wonder ar Yet fo it is, that the Ruflians are able now to figure it in the Baltic, with a naval power no waf contemptible. But what is it, that is not abfotutely impoffible to accomplinh, which prince of the late Czar's great natural abilities and indefatigable application, was not able to do?
Though Peterfburgh is the capital city of Ruffia, yet it ftands very low, and is expofed to inundations; and therefore fome have thought that the Czar was ill advifed, and took a very injudicious ftep, when he pitched upon the fpot of ground on which he buile this new city; for that the great quantity of waters, which fometimes come down from the Ladoga, and from the innumerable lakes of Finland and Carelia, are fuch that the Neva cannot give vent to them faft enough, to prevent the city of Peterburgh being fubject to inundation : no can any humãn art, fome fay, be able to prevent this, there being no way poffible to be contrived on that fide, whereby to carry the water off, except a canal, exceeding deep and broad, were opened from that great branch of waters, which paffes near Kexhold to Wiborg. This, it is imagined, might curn the water another way, and the Czar, it is alfo faid, had ordered fuch a canal to be opened.-But, however, Peterf burgh is fo fituated, as to be the center of a vafly-extended commerce; and may one day, perhaps, fhow the world, that o trade to that city, will be to trade to Turkey, to Perfia to India, and even to China itfelf all at once.
We have already fpoken of the grandeur and magnificence of this metropolis, the eftablifhing the navy there, and the building thips, as well men of war as merchantmen ; of all which it muft be obferved, that this cannot fail to bring vaft concourfe of bufinefs and of people; and trade muft fol low the court, as naturally as the court follows the fathions. We are told there are in Peteriburgh above thiree quarters of a million of people; and that their numbers daily incteafe by the prodigious increafe of the court fince the time of Czar Peter; as alfo in a particular manner by the increafe of the naval power of Ruflia, of which this port is the center in fo prodigious a manner, within a few years, as to have at once from 60 to 80 fail of capital men of war, befides leffer men of war, prohms, frigates, floops, and gallies, am ing to above 300 more. All the feamen, workmen, artif cers, tradermen, \&ic. depending on fuch a navy, muft necef farily increafe the inbabitants of this imperial,city; and this number of inhabitants muft confequently bring a new face of trade into this part of the empire, of which it is proper to take fome notice.
The fupply of provifions to fo great a body of people, has occafioned numerous trades to be fet up, which greatly tend to the increafe both of fhipping and of people, and par ticularly of that ufeful fort of people called feamen, who are fet of men more imminently wanted now in this part of the Ruffian empire.
The bringing corn to ferve this city, employs now a prodigious number of veffels and boáts, great andefinall, upon the river Neva, and upon the great lakes of Ladoga and Unega, to and from all the towns on every fide of there lakes: all which part of the country is now exceedingly enriched and aggrandized, to what it was before this capital was built; the lands are improved almoft beyond all imagination, by the great quantity of corn raifed in the country, adjoining to thefe rivers and lakes; to which before the inbabitants never applied, not having a convenient pert for its exportation, mucin lets a capital city for its confumption.
Nor is the country on the fhores of all thofetivers and lakes, fufficient for fupplying the faid capital city with cortn, but a great number of thips are employed, more than ever before, in fetching corn from the coaft of Livonia and Erhonia, and even from Dantzic itfelf, for the fupply of the markets at Peterfburgh.
As the corn-trade thus employs a number of veffels, fo does the firbing as well in the Baltic, viz. in the gulph of Finland, as alfo on the great lakes of Ladoga and Onega, which are covered with filhing-boats, always employed in catching fifh at the proper feafon, and carrying them to Peterfbuigh, as well freth fill for the daily markets' as cured and dried for keeping, and foring fhips and houfes for winter confumption, when the faid lakes are frozen up.
Abundance of fmall craft arealfo employed on the Wolga, and men and carriages between the W olga and Peter保gh, for conveying goods and merchandizes to Peterfburgh, fuch as tobacco, boney, wax, leather, and all forts of goods, the growth and produce of the fouthern parts of Mufcovy; and for the return of the merchandizes imported at Peterfburgh, fuch as grucery, wine, oil, fruits, woollen manufactures, filk, and all other goods, occafioned principally by the building fo great a city in that place.
And though all the importations to this city from the exterior provinces cannot be minutelv enumerated, yet it may be concluded, that the trade from Peterburgh to Mofcow itfelf, the great and moft ancient capital of the whole empire, is exceedingly great, that city having all its fupply of manufactures, and of other goods befides, through the faid river

Wolga, or by land-carriage, by fleds from the city of $\mathrm{Pe}-$ teriburgh.
This increafe of commerce is manifeft by the great number of hopkecpers, manufacturers, artifieers, and other tradefmen, with whom the metropolis at prefent fwarms.
It is not probable (we might fay hardly poffible) but that the erecting a new capital and imperial city, in a place where there was no town of note before, and bringing together fuch a body of people where there were very few inhabitants before, muft, as is obferved of the trade by water, confequently improve the lands, employ the country, and draw together people for bufinefs of all kinds, from the inland provinces, as well to the adjacent towns, as to the banks of the rivers, the feacoafts, lakes, \&c.
Of this the famous city of Novogorod was a remarkable example: this was a city once prodigioufly great, populous, and rich, fo that it was called the Golden City; by which the whole correfpondence between the Ruffian empire and the reft of Europe was carried on, and it was the mart of the whole trade.
While this city fourifhed, all the country round it did fo too: the wealth and numbers of people collected there, inriched and employed all the adjacent provinces, the lands were cultivated to furnifh provifions for their fubfiftence, all the richeft grounds were employed to feed cattle for them, and to raife fruits and plants to fupply the markets.
Thus it is now at Peterfburgh, which, if we may believe fame, is much greater, much richer, and far more populous, than Novogorod ever was, and confequently muft in proportion increafe and inrich all the adjacent country, and fill their towns with people and money, becaufe it will fill them with bufinefs and trade.
But with this exception, the city of Peterfburgh is inriched by the fleets, the marine part of trade, and by the court, and by the magnificence of the equipages of their nobility, great officers, \&ic.' and has an infinite advantage by all meeting together as in a common center.
It is true, the Czar found he had another weighty clog upon his new empire as to trade: nature had feemed to exclude the Mufcovite dominions from a communication of trade with the reft of the world,' 'till by a wonderful chain of victories, unexpected even to himfelf, that emperor opened a door for his fubjects into the Baltic, by his conqueft of Ingria and the mouth of the Neva, which he could no way come at before. Many of his anceftors had in vain attempted this communication by the way of Narva; but, though they had feveral times conquered that city, they could never keep it: but the Czar not only fecured the Neva, and fince that conquered Narva, and all the coift of Livonia, but alfo reduced Wiborg, on the other fide; fo that the whole gulph of Findland was intirely his own: and, which is fill more, he alfo fecured the poffeffion of thele conquefts by a peace, as well with Sweden as with all his other neighbours.
But his Czarilh majefty, befides this, had another great obftruction to his mighty enterprizes, which was, that the king of Dentnark kept the paffage of the Sound, the great key through the navigation of the Baltic, and no fhips could pafs in or out without paying fuch an unlimited toll as he thould think fit.
This rendered the Mufcovite commerce into Europe tributary to the Danes; and this was now the only impediment to the Czar for the trade of his people; which, but for that occafion, he would have foon extended to France and Spain, Italy and Venice ; for which too, he had laid a good foundation by treaties.
This difficulty, under which his dominions laboured, gave firft birth to the defign of cutcing a canal from Hufum to Skcfwic, or fome other port in Holftein' (for there are feveral places where there was no great difficulty in the execution) and thereby to have joined the two feas, and opened a back-door intoand out of the Baltic, and which the king of Denmark would have had no power or right to interrupt; nor would the reft of the trading world have been difpleafed therewith.
Thefe are fome of the obftacles that this great prince met with in his glorious undertakings, which if he could have furmounted, he would have bid fair to have been as powerful at fea as molt of his neighbours; and this would have rendered tine alliance of Ruffia by fea not lefs confiderable than it now appears by land.
But he had his difappointments, as well as other princes, and particularly one of no little muatification to fo enterprifing a monarch. He had been compelled to reftore Afoph, at the mouch of the river Don, of which once he not only had the poffeffion, but had, at an immenfe expence, made it one of the moft impregnable fortrefles in the world; nor could the whole Turkifh empire have recovered it, unlefs the Czar had been firft beaten from it by land; and, had he kept it, he would have built fuch a fleet of fhips of war, from 70 to 100 guns, at Voronitz upon the Don, or Tanais, which would foon have enabled bim to have brought the Grand Seignior to bave granted nis thips a free paffage and commerce through the Thracian Bofphorus and the Hellefpont, into the Levant Seis, or have driven the Turks out of the Euxine Sea, and have farved Conftumtinople itfelf.

But, in this refpectalfo, this illuftrious primee was difappoint ed, being, by furprize, brought into fuch a labyrinth in $M$ ol davia by the Turks, that he and his whole army bad been fiol lowed up, if he had not purchafed his peace and deliveraal among other things, with the yielding back Afoph to the Turks The late Czar refolving to reform 'and civilize his people who, before his time, were little better in the general than favages, he determined to make a general change in apparel and brought the Ruffians, efpecially thofe about his court, to cloath themfelves after the German fabion: this change put his fubjects inceffantly upon a new expence, viz buyin cloaths in an unufual manner, for which purpofe the manufactures of England and Scotland, \&c. were introduced, as well at Peterfburgh-as at Mofcow, in prodigious and unufual quantities.
But the Czar, after the example of the Swedes, the Pruffians, and the Saxons, attempted to act herein greatly for the profperity of his fubjects in this particular of new cloathing them refolving to introduce the making and manufacturing all thofe cloths and ftuffs which his fubjects were then beginning to wear, and to have them all made in his dominions, that his poor might be ufefully employed.
Nor was it fo unlikely an undertaking as at firft it feems to be, in that he had an eafy fupply of wool out of Poland and Saxony, efpecially of the firft, fufficient for thofe works.
His Czarifh majefty had alfo refolved to bring manufaclure from France, to fettle in Peteriburgh, to manage and carry on the filk trade, furnilhing them with filk from Perfia, by the navigation of the Calpian; by which means the filk itfelf is fo cheap, and the labour of the people more particularly fo, he refolved to have all forts of the richeft brocade filks, as alfo ribbons, \&c. wrought in his own country, as well for their own ule as for the exportation to foreign parts; but this is one of the great improvements that is not likely foon to be brought to perfection.
The Ruffians have had alfo, fome years, a royal foundery: for having a fufficient quantity of iron ore in the country about Kexholm, which they bring to Peterfburgh by water, the late Czar refolved to fupply foreign countries with cannon, bombs, thells, fhot, and all forts of military ftores which are furnifhed from the iron; as alfo fmall arms, mulkets, piftols fwords, halberts, \&c. This foundery is kept continually at work, and the Czarina, his fucceffor, gave directions for enlarging and encouraging the works, having got fome very fkilful workmen out of the king of Pruffia's dominions, This foundery, as well as their iron manufactures in general, have proved a very great advantage to this empire, and are daily advancing.
In hort, there feems to be nothing wanting to make the city of Peterfburgh a center of commerce to the whole Baltic, but the raifing fome fettled employment for the poor in genesal, by which they may gain a comfortable fubfiftence to themfelves and families: and this fubfiftence after the Ruffian manner being fo exceeding cheap, and labour, by confequence moderately low, it is manifeft, if they have but two things provided for them, viz. proper materials to work upon, and fkilful workmen to inifruct them how to manage thofe materials, they would work as cheap as the Indians and Chinefe, and in a few years, perhaps, fill Europe with their manufactures, in fuch a manner as none in thefe parts would wifh to fee. And the effabliihing manufactures feems to be an effential part of the fyftem that they have at prefent a dopted, which we muft more and more fenfibly feel and experience as they advance therein, unlefs we fhall take lefs of their productions and commoditics, in proportion as they fhat import lefs of ours.
Of the Monies, Weights, and Measures ofRusgia.
In Peterfburgh and Archangel moft merchants keep their accounts in rubbles and copecks; and fome keep them in copecks, grieveners, and rubbles.
The Ruffian coins go under divers denominations, viz. copecks, altines, grieveners, polpoltins, poltins, and rubbles. They have likewife a fmali gold coin, called a Ruffian ducat, worth between eight and nine fhillings fterling.
The faid monies are reckoned as follows: 3 copecks is an at tin, 10 copecks one grievener, 25 copecks is a polpoltin, 50 copecks is a poltin, 100 copecks is a rubble, and 2 rubbles is a ducat.
They count their fmall money in altines, adding one copeck to make the rubble.
The rubble is worth between four and five fillings ferling. An Englifh crown-piece gnes among them according to weight, at between 120 and 130 copecks.
Their weights are zollotaicks, pounds, poods, and barquits ; 96 zollotnicks make their pound, which is counted equal to 13 oz .3 dwts. 6 grs. Troy weight; 40 pounds is one pood; so pound is a barquit: a pood of 40 lb . Ruffian weight will render in England $35 \frac{1}{2}$ or 36 lb , avoirdupoife weight.
Their long-meafure for linen and woollen is the arfheen, which is divided into 16 vefficoves, and is 28 inches London meafure; and 7 Englifh yards make 9 of their arfheens, or 100 arfheens make 55 Englifh ells.

信 When the captains of ihips run the goods through the Sound without paying the duty to the king of Denmark, the merchant allows the captain $\frac{2}{3}$ of the duties faved, for his trouble.
UUSSIA COMPANY. The Ruffia company was firf projected towards the end of the reign of king Edward VI, executed in the firft and fecond years of Philip and Mary, but had not its perfection 'till its charter was confirmed by act of parliament under queen Elizabeth, in 1566 . It had its firft ife from certain adventurers, who were fent in three veffels on the difcovery of new countries, and to find out a northeaft paffage to China: thefe falling into the White-Sea, and making up to the port of Archangel, were exceedingly well received by the Mufcovites, and at their return, follicited letters patent to fecure to themfelves the commerce of Ruffia, for which they had formed an affociation.
The charter was promifed them by Edward VI. but he dying, was firft difpatched by queen Mary, in 1555. By this charter, the aflociation was declared by a body politic, under the name of the Company of Merchant-Adventurers of England, for the Difcovery of Lands, Territories, Iflands, \&c. unknown, or unfrequented. Their privileges were, to bave a governor, four confuls, and twenty-four affiftants for their commerce ; for their policy, to make laws, inflitt penalties, fend out fhips to make difcoveries, take poffeffion of them in the king's name, fet up the banner royal of England, plant them, and, laftly, to enjoy the exclufive privilege of trading to Archangel, and other ports of Mufcovy, not yet frequented by the Engliih.
This charter, not being fufficiently guarded, was confirmed by parliament, in the eighth year of queen Elizabeth; wherein it was enacted, That, in regard the former name was too long, they fhould now be called the Company of Englifh Merchants for difcovering New Trades; under which name they fhould be capable of acquiring and bolding all kinds of lands, manors, rents, \&c, not exceeding 100 marks per ann. and not held of her Majefty. That no part of the continent, inand, harbour, 8 cc . not known.or frequented before the firft enterprize of the merchants of their company, fituate the the north or north-eaft of London; nor any part of the continent, inands, \&c. under the obedience of the emperor of Ruffia, or in the countries of Armenia, Media, Hircania, Perfia, or the Calpian Sea, fhall be vifited by any fubjects of England, to exercife any commerce, without the confent of the faid company, on pain of confifcation.-The faid company fhall ufe no thips in her new commerce but thofe of the nation, nor tranfort any cloths, ferges, or other woullen ftuffs, 'rill they have been dyed and prefled.- it hat in cafe the company difcontinue of itfelf to uuload commodities in the road of the Abbey of St Nicholas in Ruffia, or fome other port in the north coafts of Ruffia, for the fpace of three years, the other fubjects of England fhall be allowed to traffic to Narva, while the faid company difcontioues its commerce into Ruffia, only uling Englift veffels.

This company fubfifted with reputation almoft a whole ceritury, 'till the time of the civillwars. It is faid, the Czar then reigning, bearing of the murder of king Charles I, ordered all the Englifh in his fates to be expelled; which the Dutch taking the advantage of, fettled in their room. - After the Reftoration, the remains of the company re-eftablifhed part of their commerce at Archangel, but never with the fame fuccefs as before, the Ruffians being now well accuftomed to the Dutch merchants and merchandize
This company fubfifts ftill, nearly on the foot of that of Hamburgh, and the Northern and Turkey companies, i. e. each member thereof traffics for himfelf, and on his own bottom, only paying an acknowlegement for admifion-money, befides fome other dues impofed from time to time, for the occafions of the company, and the commerce in general.

Of the British Caspian Trade, as it wasattempted to be carried on through Russia to Persia.
'Till the fixteenth century we had no Cafpian commerce, and then only fmall trials. His prefent Majefty king George II, renewed a treaty of commerce with Ruffia in 1734, by which a liberty of this trade is granted. In 174 I the parliament of Great-Britain paffed an act, granting a liberty to fuch perfons as are free of the Ruflia company, to import the Raw Sil $k$ of Perfia into Great-Britain, in return for Britifh manufactures fold in Perfia ; in confequence whereof, were fent 170,000 1. value into Perfia.-In 1743, Jobn Elton, one of the factors in Perfia, engaged himfelf as a fhip-builder in the fervice of Nadir Shah, which offended the Ruflians, and at length occafioned a decree of the Ruffian court, publifhed in 1746, prohibiting this trade.-The cruelties of Nadir SHAH involved his people in fuch mifery, that no fales of goods could be made by the British factors in the north of Perfia, from I 744 to 1747 .-In June 1747 NADIR fuffered a violent death.-His nephew Ali fucceeded to the throne, and trade revived.-In January following, Amur Aslan Khan, a coufin of Nadir, revolting from Alf, fent a body of forces, who pillaged the British factors in Reshd, to the amount of 80,0001 . -Yet the Britifh Caspian traders did not give over all hopes of the recovery of their lofs.-The rebel amur Aslan Khan, the author of the plunder of the Britifh factory, was foon feized by IBRAHTM, and put to death.-After that, Shahrokn was chofen king, and fupported by a powerful party.-This carried Ibrahim back, but his fortune was reverfed, by the defertion of his army, and his total defeat.--The Britifh Caspian traders applied tu Shatrok for redrefs, about the month of Jan. 1750.- Afterwards the English factors in St Peterfourgh united in fending a perfon of reputation to act in concert with Mr Wilder in Perfia, intending to reconcile certain difficulties which had arifen among the adventurers, and apprebending that a coalition of intereft would be the beft means of preferving that unanimity, without which, a follicitation for the recovery of their lofs' would prove fruitlefs. - With regard to their refpective loffes, they had now but one common intereft: but here we experienced the great want of proper re gulation, and what perplexities commercial affairs in AsIA are fubject to, if left free and open, or with the appearance of a Body Corporate, without the fubftance of it*. See ourarticles Levant Trade, Oriental Tiade, and Turkey Trade.

* In Europe every man has a right of claiming according to the laws of the country he is in, rcgard being had, at the fame time, to private agreements, or the authority of the conful of his own nation, as has been found productive of the general good of the whole factory or community: but in Asia there muft be fome regulations independent of the national government, or animofity ard confufion' inevitably enfue; fo at leaft we found it in che Caspian trade. Hanway's Travels.
The fuccefs the merchants had at Astrabad, the remembrance of the promifes of ADil SHAH, the aflurance that Perfia abounded in money, likewife that Shahroke was eftabliihed in the goveriment, inclined the factors and merchants to attempt a recovery, at the rifk of fome expence; the ancient laws of Perfia alfo favoured this defign: however Mr Chamberlain, who was charged with the 'king's letter, found it unneceffary to proceed any farther than R U SS IA, Persia being fill torn with inteftine commotions; but nothing has been yet done, and it may be prefumed that a great part of the Indian treafure is diffipated fo as to leave no hope of accomplifhing any recovery.
There diftractions having continued for fix jears, the cultivation of raw filk in Persia has alfo been much neglected *. Many other reafons concurred to raife the price of filk to this nation. Under thefe circumftances, the British parliament was induced to try if our own plantations could produce this valuable commodity, and accordingly an act was pafied, entitled, An act for encouraging the culture of raw filk in his Majefty's colonies or plantations in America. See the articles Silik, and British America, particularly Georgia.
* The Armenians and Russians, have for fome years paft imported hardly $\frac{1}{\text { IT }}$ part of the ufual quancity.

Notwith-

Notwithftanding the encouragement given by the legillature to the culture of raw filk in our American colonies, an ample fupply of this commodity, we fear, can be brought only from Afia, unlefs we fhall be able to make fome very extraordinary improvements. Europe, during the laft war, did not produce the ufual quanity, nor his the price of fome particular kinds declined fince that time: for the confumption of this article rather increafes than diminilkes. The EAS'TIndia company, therefore, we may prefume, applied to parliament for an alteration of the duty of China filk, the obtaining of which affords an encouragement to the importation of it*, and no doubt we fhall have a fufficient quantity. The act in fayour hereof is entitled, An act for repealing the Duties payable upon China raw filk, and for granting other Deties in lieu thereof. See Silk.

* In 1752, we find accordingly a large fupply of China raw filk arrived.

The Ruffia company finding themfelves thus excluded a ranch of trade, from which they had expected many private as well as national benefits, applied their thoughts how beft to repair this injury: the moft natural expedient was to obtain a liberty to purchafe the fame commodity in Russia, which they could no longer provide in the north of Persia, at leaft not to tranfport it through RUSSIA: they might, indeed, purchafe filk in RUSSIA to traniport to other countries, but an act of parliament was neceffary for the importation of it into England. Accordingly the following petition was prefented to the parliament.

The petition of the merchants of London trading through Ruffia into Perfia,
Sheweth,

- That your petitioners did, in the year I74I, obtain an act of parliament to enable them to import Perfian raw fink by the way of Ruffia from Perfia, if purchafed there with the produce of Britifh woollens, and ocher manufactures. Your petitioners having, in confequence of the faid act, fent into Perfia about 200,0001. value in Britifh manufactures, and received part of their returns in Perfian raw filk, are now prevented by the many revolutions and fatalities which have happĕned in Perfia fince the commencement of this trade. Other accidents alfo have intervened to obftruct the defign as at firft propofed, his Majefty not having any minifter at the court of Perfia, to protect our factors, his Majefty's fubjects, and our effects in that country, which gives the Ruffians and Armenians very great advantage over us, your petitioners.
And as the Ruffians and Armenians do bring large quantities of Perfia raw filk yearly into Ruffia, which cannot be purchafed by your petitioners to be fent into Great-Britain, the prefent act reftraining all imports of Perfian commodities, but fuch as are in return of goods actually fold in Perfia; the raw filk in queftion is therefore carried to Holland by the Armenians, and woollen goods taken of the United Provinces in return.
Your petitioners therefore humbly pray, that in order not to lofe fo valuable a branch of trade, as that of importing raw filk, a commodity at this time fo much wanted, that a claufe may be annexed to the bill now depending, relating to the importation of China raw filk, to permit your petitioners to import Perfian raw filk, from Ruffia, fubject to the fame refrictions as they have done from Perfia by the way of Ruffia.

## And your petitioners, \&c.

In confequence of this application, the following feparate act * was obtained, from which fome happy effects may be felt, as foon as the Perfians are in any capacity to fend a fupply of filk into Ruffia: and this will probably be the cafe, whenever Perfia fhall be reftored to a ftate of tranquillity.

* In 1750; ${ }^{23}$ d year of his Majefty's reign.

An act for permitting raw filk of the growth of Perfia, purchafed in Ruffia, to be imported into this kingdone from any port or place belonging to Ruffia.

- Whereas by an act made in the fourteenth year of his prefent Majefty's reign (enticled, An act for opening a trade to and'from Perfia through Ruffia) it is (amongtt other things) ewacted, that from and after the 24 th day of June 174 n , it fhall and may be lawful to and for any perfon or perfons, free, or to be free, of the fellowfhip of Englifh merchants for difcovery of new trades, commonly called the Rufia company, exclufive of all others, to bring and import into this kingdom, in Britifh-built Chipping, navigated according to law, from any port or place of or belonging to the Czar or Emperor of Rufifa, raw filk; or any other goods or commodities of the growth, produce, or manufacture of Perfia (provided fuch manufacture be made of the growth or produce of Perfia) being purchafed by barter with woollen, or other mariffaciures, goods, or commodities, exported from Great-

Britain to Ruffia, and from thence carried into Perfia (rold and filver in coin or bullion excepted) or with the produce arifing from the fales of fuch manafatures, goods or commodities, fo exported to Ruflia, and carried into Perfia as aforefaid, and not ocherwife: and it is by the faid act alfo further énacted, that no filk, or other produce, commodities, or manufactures of Perfia, thall be imported into Great-Hritain through Ruffia, by virtue of the faid act, unlefs the irnporter or importers thereof do take an oath, or (being of the people called Quakers) a folemn affrmation, beiore the collector, cuftomer, or comptroiler of his Majefty's cuftoms (who are by the faid act impowered to adminifter the fame) at the port or place of importation, that, to the beft of his or their knowlege and belief, the filk, and other the produce, commodities, or manufactures of Perfia, contained in his or their entry or entires, was or were really and truly purchafed by barter with woollen, or other manufactures, goods, or commodities, exported from Great-Britain to Ruffia, and from thence carried into Perfia (not being gold or filver in coin or bullion) or with the produce arifing trom the fales of fuch woollen, or other manufactures, goods, or commodities, fo exported as aforefaid, and not otherwife; and that in default of taking fuch oath or affirmation, all fuch filk, or other the produce; commodities, or manufactures of Perfia, fo imported from Ruffia, fhall be liable to be feized and forfeited, in like manner, as if the fame had been imported contrary to the act made in the twelfth year of the reign of king Charles II. entitled, An act for encouraging and increafing of thipping and navigation: and whereas, foon afo ter the commencement of the faid act made in the fourteenth year of his prefent Majefty's reign, a very beneficiat trade between Great-Britain and Perfia, through Ruflia, was opened, by means whereof great quantities of raw filk, and other the goods and commadities, of the growth, producc, or manufacture of Perfia, were imported into this kingatom, in return for the woollen and other manufactures, goods, abd commodities of Great-Britain, upon much eafier and more advantageous terms, than fuch filk, and other goods and commodities of the growth, produce, or manufacture of Perfia could have, been otherwife procured: but whereas the faid trade between Great-Britain and Perfia, through Rufia, hath been for fome time paft interrupted, the fubjects of Great-Britain not having been of late permitted to tranfport Britifh manufactures, gnods, and commodities into Perfia, through the dominions or territories of or belonging to the empire of Ruffia, in confequence whereof the importation of raw filk, and other commodities of the growth, produce, or manufacture of Perfia from Ruffia, hath been difcontinued: and whereas it would be of great advantage to the trade of this kingdom in general, as well as contribute to the increafe and improvement of the filk manufactures in particular, if raw filk of the growth or produce of Perfia, purchafed in Ruffia, were permi ted to be imported from any of the countries, dominions, or territories of the empire of Ruffia, in return for woollen and other manufactures exported from Great-Britain to Ruffia, although the fame be not carried from thence into Perfia ; may it therefore pleafe your Majefly that it may be enacter, and be it enacted by the king's molt excellent Majefty, by and with the advice and confent of the lords fpiritual and termporal, and by the commons, in this prefent parliament afferibled, and by the authority of the fame, that from and after the 24 th day of December 1750, it fall and may be lawful to and for any perfon or perlons, free or to be made free, of the faid fellowhhip of Englifh merchants for difcovery of new trades, commonly called the Ruffia company, exclufive of all others, ta bring and import into this kingdom, in Britifi-built fhipping, navigated according to law, from any port or place within the countries, territories or dominions, of or belonging to the empire of Ruffia, raw filk of the growth or produce of Perfia which fhall be purchafed by barter with woollen or other manufactures, goods, or commodities, exported from Great-Britain to Rufia, although the fame be not carried from thence into Perfia (gold and filver in coin or bullion excepted) or with the produce arifing from the fale of fuch manufactures, goods, or commodities, exported from GreatBritain to Ruffia as aforcfaid, and not otherwife, upon paying, or fecuring to be paid, the cuftoms and other duties now payable for the fame, by any law now in force, according to payable for the fame, by any law now in force, accorn man-
fuch rules, methods, and directions, and in the lame mat fuch rules, methods, and directions, and in the fame mancounts, and drawbacks, and under fuch penalties, forfeitures, and difabilities, as are by law prefcribed and practifed, on the importation of raw filk of the growth or produce of Perfia, imported into this kingdom from any por: or place in the Levant Seas, by any perfon or perfons tree of the Levant or Turkey company; any thing in the faid a $:$ made in the fourteenth year of his prefent Majefty's reign, or in the faid act made in the twelfth year of the reign of king Charles II, entitled, an Act for encouraging and increafing of fhipping and navigation, to the contrary notwithfranding.
Provided always, and be it further enacted, that no filk of the grow th or produce of Perfia, flall be imported into Great-

## R U S

## R U S

Britain, from any of the countries, dominions; or territories, of or belonging to the empire of Ruflia, by virtue of this aet, unlefs the importer or importers thereof do make oath, before the collector, cuftamer, or camptroller of his Majeify's cuftoms (wheare hereby impowered and required to ad minifter fuch oath) at the port or place of importation, that, to the beft of his or their knowlege and belief, the filk, contained in his or their entry or entries, was really and truly purchafed by barter with woollen or other manufactures, goods, or commodities, exported from Great-Britain to Ruffia (not being gold or filver in coin or bullion) or with the produce arifing from the fale off.fuch.woollen, or other manufactures, goods, or commodities, fo exported as aforefaid, and not otherwife; and in default of making fuch oath, all fuch filk fo imported from any of the countries, dominions, or territories, of or belonging to the empire of Ruffia, thall be liabie to be feized and forfeited, in like manner as if the fame had been imported contrary to the faid act, made in the twelfth year of the reign of king, Charles II, entitled, An act for encouraging and increafing of hipping and navigation. Provided allo, that nothing herein contained thall extend, or be conftrued to extend, to deprive the corporation of the united company of the merchants of England trading to the Eaft-Indies, of any of the powers, privileges, franchifes, and benefits, which do: or Chall belong to them, or which they could or might have had and enjoyed in any manner whatfoever, if this: act had not been made, any thing herein contained to the conctary notwithitanding.
And be it further enacted, That this act fhall be deemed a public att, and fhall be judicially taken notice of as fuch, by all judges, juftices, and other perfons whatroever, withcut fpecially pleading the fame.'
-I prefume, fays the judicious Mr Hanway, in his Travels, it is meant by this aet to reftrain all purchafes of filk in Ruffia to the produce of Perfia only, for the words of the act allow no more : but filk of the grawth of Greece is fometimes brought through Walachia into the Ukrain, and from thence tranfported to St Peteriburgh, but the quality does not anfwer. It may be neceflary to obferve, that this act has been explained to mean filk purchafed with the produce of Britifh manufactures at large; for in barter, or with the identical money received for fuch goods, it is hardly poffible. This ad will very much favour the Armenians, for befides the encouragement they had to bring filk from Perfia into Ruflia, either to tranfport into Holland for their own ac count, or to fell it in Ruffia, they may now difpofe of it al Co in England, and by being naturalized may alfo import fuch filk into thiskiagdom, for their own account, as one of them bas already done. The advantages this bill is calculated to produce are many, for whoever receives the profit o the firlt fale, the more there is brought to market, the cheaper it muit be to us.
The benefits of the filk manufactory muft. ever appear conGderable, even upon the moft fuperficial view, when it is confidered, that a pound of i 6 ounces of the plaineft manufactured filk is commonly worth 35 or 40 s . and that rich filks increafe in proportion to the greater labour which is beftowed on them. The great pound of 24 ounces, cofting $2 x$ s. the fmall pound is 14 s . : let us nowi fee what profit arifes from it, and how much it increafes, in value, as it palfes through the hands of the feveral workmen; and here the charge only of throwing the fmall pound is 5 s . dyeing, grain colours included, on a medium, is 2 s . and winding, weaving, '\&c. is 10 s . fo that allowing is. for the dyeing materials, the nation gains 16 s . at deaft on every pound of hik manufactured here and exported abroad, and in fome articles much more. To inftance only in one particular, a pair of filk. gaure: ftookings weighs about $2 \frac{1}{2}$ ounces of filk, which computed as above is. 2 8. ad. and 20 per cent. brokerage, and other contingencies on the filk, is lefs than 3 s. and wet the flockings fell for 9,10 , or: 12 s . Thus this beneficial branch of commerce gives, a fubfiftence to the induftrious artificer, and enriches the nation?'

## An abfract of.Mr Hanway's view of the Britifh trade and

 factory, at St Peterfburgh.The productions of the earth, fays this genteman, and fo reign trade, are the great fources from whence the riehes o every nation proceed: Ruffia bas made great frides in the improvement of her commerce for-feveral years paif, enjoying lome advantages beyond any other nation: the number and greatnels of her rivers opena communication almoft to every part of the glabe, but particularly within her own extended dominions. As to timber, hemp, iron, which are the inflrumental caufes of trade, no country in the world produces a greater quantity, which is a natural cenfequence of the cheapnofs of land and labour: the former of thefe Grmat-Britain enjoys in her American dominions, though not the latter; but if we liave occafion for the commadities of Ruffia, that empire has the greateff fource of her, revenues in the trade which this inand carries on with her: iubjects.

Hemp, which twenty years fince was hardly werth 3 fubbtes the berquevitz", of late years has been about twice that value; the increafe of filver makes money every year lefs valuable: as they can afford this article in St Peterburgh at 6 ar 7 rubbles, they will certainly bring enough of it to marke: fo long as they can obtain 8 or 9 .

- Or 61. per ton firft coft in St Peterburgh.

Iron is alfo a very improveable article: they have both woods hands, and ore in Siberia, fufficient to make a quantity which would depreciate the value of the Swedifh iron, raife their rivallhip and competition with the Swedest in this important article of the revenues of that nation, and at the fame time greatly augment thofe of the Ruffan empire. But by a certain fatality which prevails in every country in fome mitance or other, the Ruffian government, for a courfe of years, has preferred a proft of about 15,000 l. or 5000 tons, to near twice that advantage which they might have had to all appearance, though the price fhould have been reduced, had the quantity been more than doubly augmented. The great difficulty was, in whofe hands to lodge an increate of power in that diftant country Siberia. It is not 40 years fince the Ruffians began to open iron mines, and yet in the year 1750, they exported 20,000 tons: the ordinary annual export may now be called 12 or 15,000 tons, which is fo much more in favour of the Ruffians, as the Swuedish forges, for, thefe few years paft, have not produced fo much by one third as formerly.

The quefion is, Whether, with tegard to the ballance of
pawer in the North, the SwEDEs, are not, poor enough in all confcience

The ordinary computation of the Ruffan general export from St Peterfburgh is three millions 4 , of, which the Britif fubjects in Ruffia take off two, confifting chiefly in hemp, flax, iron, hogs-briftles, hare-fkins, hempen and flaxen manufactures, Ruffia leather, and other articles.
\# In 1750, the exports were four millions of rubbley, of -880,0001. value.

The ordinary imports of the Ruffians were two millions, confifting in indigo, cochineal, lead, pewter, tin, wrough filks, gold and filver lace, toys, cotton and linen manufac tures, woollens and wines. The Ruflians receive the bal lance in their favour in filver and gold, of which part is a fum of about 500,000 filver rixdollars, of the coin of the United Provinces; thefe do not, however, pafs current in Ruffia, but the duties on goods muft be paid in them at a certain rate, according to weight. The confumption of the Ruffians is fo far iacreafed with their acquifitions by commerce, that they import now more than ufual, but the Eng lifh have ftill above a million ballance againft them.
lt/feems to be a maxim eftablifhed in all countries where commerce has made any progrefs, that the value of exports muft exceed that of the imports', for otherwife the ballance muft neceffarily be paid in money : againft this the Rufians have-taken the precaution of making it death to expott their coin, nor is any plate or bullion exportable without express permiffion. I-have already obferved, that in countries-poffefied of filver and gold mines, money may be confidered as a commodity; but even in thefe countries we do not find fuch great wealth, as where the only refource is in the induftry of numbers of working Prople, and in thole-productions of the earth, which. being effential to the fupport of mankind, are really intrinfically worth more than filver, gold, or precious fones.
When a people are defirous of foreign productions, and efpecially articles of luxury, if they do not exert themfelves to pay for:fuch commodities by their labour, and the produce of their own lands, they muft be impoverifhed, and in danger of ruin. The augmentation of the revenues of Ruffia ought to be imputed, in a great meafure, to the increafe of her trade for fome years paft; and the increafe of her national wealth, to the great annual ballance in her favour, of one million of rubbles. \&

## $5220,0001$.

The interior trade of Ruffia is certainly very much augment ed, and the commerce they carry on with the Tartars and other frontier nations, is a confliderable object, as Ruffia fometimes receives a large quantity of foreign filver and gold from thofe nations, in exchange either for her own or foreign productions. I will not undertake, from an impulfe of my good wilhes, to determine what articles Ruffia hould be cautiopus of importing ; but thofe of the produce of Great Britainare either effentially neceffary to ber, or fuch as the can never fuffer by: I speak not of the major part of them, for I think not one article, even our ale, but tends to the good of the Ruffians; not to mention the great advantages to Ruffia of the Riga and Narva trade with Great-Britain and Ireland. As our Ruffian trade is well conducted, I fhal

8 X
pals if over, obferying only, that in whatever light it is confidered, it ought to be a means of eftablifhing a PERpeteál friendship between this nation and the Ruffian empize.

## N': Observations on the Russian Coin.

It is remarkable, that when the Ruffian trade began to flourifh, and for fome time after, their rubble, which was intrinfically worth no more than 39 current ftivers of Holland, was eftimated an exchange at 70 current ftivers, and this price of their commodities regulated accordingly in the merchants calculation of them; at length it was reduced to 50 , and from 45 to 50 it has ftood for many years. The Ruffian rubble has too confiderable an alloy to encourage the exportation, bat it is not fo bafe as to induce any piratical traders to bring falle coin into the country: I feak of the filver money. But by an error in politics in a late reign, the want of money induced the government to make a copper coin of 5 copecks value, which was not intrinfically worth 2; the confequence of which was, that fome millions of this coin were run in upon them, particularly by the Jews of Poland; fo that at length, in the years 1744,45 , and 46 , the government wifely reduced the value each year a copeck, and it now flands at 2 copecks. They keep accounts, as before obferved, in rubbles and copecks, 100 copecks to a rubble; and their old way of reckoning, yet in the greateft ufe, as it is in fome parts of Germany, is with beads on wires, which they work without pen and ink.
Before I take my leave, fays Mr Hanway, of Ruffia, I ought, perbaps, to mention a circumftance of fome moment to my friends in that country, if not to this nation. The Englifh factory in Ruffia, as I have already had occafion to mention, was firfe eftablifhed in Archangel, in virtue of a charter granted by king Plilip and queen Mary, at the fame time that the Czar Ivan $W$ affilowitz fwayed the Ruffian fcepter.
This charter is of too extenlive a nature, either in regard to, the crown, the Ruffia company, or the Britifh fubjects at large, to be fully complied with, and is confequently. become in certain refpects obfolete: it referves, however, in full force, fuch neceffary authority as excludes all foreigners, ex-cept-Ruffans, from - a participation of the Ruffia trade to Great-Britain; and in virtue of the bye-laws to which the traders acquiefce, the good government of.the company is fupported; a rmall tax is levied fur extraordinary occafions, and for the charitable purpofe of relieving poor feamen and the widows of deceafed mariners.
The factors employed abroad in the name of the Ruffia company, removed from Archangel to St Peterburgh, foon after Peter the Great founded that city, which he made the feat of the Ruffian commerce. Among other particulars it is remarkable, that this factory has been for come time blended with foreigners; who, in confequence of their naturalization, have enjoyed a participation of the privileges and immunities of the company. The Britifh factors faw this with impatience, and at length fent their remonftrances to their principals in London, in confequence of which an oppofition was made to a bill * then depending before the parliament in behalf of a foreigner. This is a circumftance in every refpect interefting and about which there are 2 great variety of interelting, opinions: fome particulars retang to the cale of the merchants of Great-Britain refiding at home, or in the Britifh factories in foreign countries, with refpect to perfons obtaining acts of naturalization, without any purpofe of continuing in thefe kingdoms, were printed, and of which I have preferved fuch extracts, as ferve as an introduction to the fubject, viz.

## * 1752.

6 The granting to frangers all the privileges and immunities which the conftitution derives to thofe born under its protection, and who have a mutual tie of duty and affection, has been ever regarded, in all civilized nations, as a point of the higheft importance to the public; as it plainly is in Great-Britain, where fuch a participation, in the birthright of its fubject, cannot be beffowed but by the legillature; that is, in effect, by the confent of the whole kingdom.
Whenever, therefore, this high and great favour is conferred, it mult be prefumed to fow from juft and weighty reafons; fuch as eminent fervices actually performed by thofe who feek it, or which may be rationally expected from them; and in this light, acts of naturalization are highly realonable, as they are apparently calculated for the public benefit; and atguments of this kind may be ufually fuggefted, when favours of this fort have been rendered more general; with a view to invite into this country foreign proteftants of eafy fortunes,' "kilful in commerce, capable of introducing or improvifig manufactures, or, in a word, fit to become ufeful members of the community; into which they are received in the moft folemn manner, and become entitled to all that is dear and valuable to Englifhmen.
Thefe motives, arifing from reciprocal advantages, have bein efteemed fo wife and equitable, that acts of naturaliza-
tion, fo founded, have been ever confidered as tending highly to the advantage of this nation, and more efpecially to the mercantile interbif, which certainly reaped very fignal and indifputable advantages from them; as is particularly manifeff from numbers of opulent families now fubfifting in there kingdoms, that were originally invited, fixed, or eftablifhed here, in virtue of fuch wife and falutary laws.
But this being the cafe, it is not eafy to fee how the fame benefits, or any other adequate to them, can arife from particular or general acts of naturalization, where the privileges granted to ftrangers are not in fome meafure reftrained to their refidence within the British Dominions; and this, from the laft bill for fuch a general naturalization, feemed to have been the fenfe of the legiflature, from a claufe evidently founded upon this reafoning.
Tie naturalizing foreigners, and thereby giving them a title to all the privileges of Britilh fubjects, without requiring from them the plain and natural equivalent of Residing here, puts it in their power to fettle in foreign countries, with all the advantages due to the fubjects of Great-Britain; and thereby affords them an opportunity of ferving their own countrymen, and, indeed, foreigners of all nations, at the expence of Great-Britain, withour any the leaft advantage accruing to this nation.
With refpect to foreigners thus naturalized, and eftablifhed as factors abroad, we are not led, either from reafon or experience, to conceive, that they can have any particular attachment to the interefts, or any real zeal or rooted affection for the welfare of Great-Britain; but muft be chiefly governed by that principle of felf-intereft, which originally led them to feek fuch privileges, of which they might avail themfelves, in confequence of thofe treaties and alliances concluded with the kingdoin of Great-Britain, and by which many valuable immunities and indulgencies are fecured to her fubjects, equivalents for which are, and will be always expected from the Britifh nation. Thefe may frequenly occafion a public expence, and that expence muft be raifed by taxes on the natives of this inand; but thefe naturalized foreigners refiding abroad, do not in the leaft contribute to them. Foreigners, under thefe circumftances, are then more favoured than the natives.
The arguments in favour of unreftrained acts of naturalization to factors abroad, ought to be extremely clear and convincing; for in Ruffia, and, perhaps, in other countries, it is difficult, if not impracticable, to make the natives underftand, how the people of any other country can become Englifhmen, or Britifh fubjects, and by that means entited to the privileges that by Treaties are ftipulated to us, Thus fuch treaties may be rendered very precarious, the dignity of the nation weakened, and the conduct of fuch foreigners fubject is to difputes and inconveniences, which otherwife might never have arifen.
The act of navigation, that wife and falutary law, which has been the bulwark of the Britifh commerce, breathes a fpirit that would incline us to think the fame regard ought to be had to Britifh fubjects, as to Britifh bottoms; and that all imaginable precaution fhould be taken to fecure the advantages arifing by a commiffion on the fale of the commodities and manufactures of this illand, to their natural proprietors and native fubjects; more efpecially at a juncture, when there is nothing more evident, than that all the nations in Europe have opened therr eyes to the advantages of commerce.
The queftion then is, If upon this principle we ought to be very circumfpect in beftowing the privileges of fubjects on thofe who were yefterday our rivals, without any fecurity that they will not become the fame to-morrow? To this we may alfo add, that as there was a time when the whole of our traffic was engroffed by Lombards, merchants of the Steel-yard, members of the Hanfe-Towns, and other foreigners, if we ought in common prudence to avoid every thing that may bring us into the like fate again?"
The connexion which the nation hath with foreigners, and the advantages confeffedly derived from them, has made a deep impreffion on the minds of fome of the greateft men in this kingdom; but general views of things do not always give the mind that light and fatisfaction as a particular object, which it can more 'eafily' grafp, and from thence, with the greateft facility, enlarge itfelf, and take in others of a fimilar nature. Let us then examine the particular cale which gave occafion to thefe remarks. 'The amount of the reatons a6 gainft any reffrictive claufe in the acts of naturalization of - foreigners, as factors in Ruffia *, was this, that the treaty - of commerce between the crowns of Great-Britain and - Ruffia is really a matter of no great moment, ard that the - figure which the Englifh make in Ruffia is owing to their ' alfociation with foreigners in that country.' A further argument was, 'That foreigners fituated in Ruffia are under - peculiar difadvantages to all other foreigners, or even what - they themfelves would be if fituated in any other country, - not by any particular law of the legiflature, but from - partial regulation of the Ruffia company, by which each

[^9]
## R U S

member is reftrained, by virtue of the oath taken upon his c admiffion to his freedom, from giving any commiffions to - any perfon not free of that company; and that freedom is - never granted but to Britith-born and naturalized fubjects: from whence it is deduced, that the trade is a monopoly.
Thus becaufe the Ruffia company do not give up to forcigners the benefits of the Ruffian trade with Great-Britain, therefore their charter is hurtful to Great-Britain. Now it is evident, that there cannot be a greater trade where a greater Jiberty is open to the natives of a country than this in queftion. The Ruffian markets are always well fupplied, each trader purfuing his own inclination to import, and his own opinion concerning the rife and fall of markets, and the opportunities of fale. I have known Britilh houles in St Peteriburgh, that, for feveral fuccefive years, have had from 40 to 100 bales of cloth remaining over the annual demand. The credit given the Ruffians is never lefs than twelve months, unlefs in frmall articles, and it is often extended to fifteen and cighteen months; and the prices of goods are as low as pofible, for the merchant to receive a living profit.
There are no monopolies or exclufive privileges affumed by the Ruffia company, nor any rule of conduct eftablifhed, which has the leaft appearance of being injurious to this nation; for any natural-born Proteftant fubject may, for 51 . take his freedom of the company, go into Ruffa, and eftablifh a houfe of bufinefs, under the protection of the Britifh crown. The Englifh merchant may alfo confign goods to any perfon who is a native of Ruffia, or a fubject of GreatBritain, remembering that the advantage in favour of the Britifh fubjects in Ruffia, according to the 27th article of the treaty of commerce, is about one-third part in the cuftoms of foldiers cloths *', Yorkfhires $\ddagger$; and flannels. Nor is there any reftraint with regard to the markets of thefe kingdoms, for any Ruffian, as well as freeman of the company, may fend Ruffian goods into England; he is only to pay the aliens duty, as eftablifhed by law $\ddagger$. The law of nations, the right of reciprocal protection, and the laft articles of the treaty do, I apprehend, make the Ruflians intirely free to trade to this country. Some Ruffian merchants have actually been here, but finding they could not difpofe of their goods in a fatisfactory manner, nor live near fo cheap as at home, they returned to their own country.

* Coarfe cloths fo called.
$\dagger$ A thick coarle cloth.
$\ddagger$ This duty amounts to 3 s .4 d . on a ton of hemp, or about 2 per cent. on the prefent value of hemp, at 23 l. per ton which, in general terms, is provided for in the treaty of commerce.
Befides this favour in the cuftoms, the Britifh factors in St Peterfburgh efteem it a valuable privilege, that, in all cafes where they are defendants, particularly bankruptcy, their affairs are cognizable by the college of trade, and their books facred to the infpection of reputable merchants, appointed by that college: In many cales, alfo, where they are plaintiffs, they apply to the college of trade; but their common fuits and demands for money of the Ruffian merchants, have been for fome years transferred to the magiftracy *.
* This was a molt ignorant and corrupt tribunal, and a fhame to the Ruffian nation in my time; but if is fhould continue the fame, it is in the power of factors to reprefent this grievance.
With regard to the quartering of foldiers in Ruffia, the Britifh fubjects are indulged in a peculiar manner, and no doubt it ought to be deemed a favour, under a military government, to be exempt from it. This privilege, however, was more facred and more confiderable formerly than of late years: I have myfelf oppofed attempts made by the officers of the police to oblige me, as a tenant, to find quarters. I do not know that thefe attempts have yet fucceeded againft tenant or landlord; but if the landlord is compelled to find quarters, and the rent is raifed on this account, the tenant ought to complain : for we confider it not only as the firit of the treaty, that Britifh fubjects thall enjoy an intire exemption from quarters, that is, the landlord not being chargeable with it, the tenant fhall have his rent fo much the cheaper. This mult be the fenfe of the 16th articie, or it means nothing for who can imagine it hould be deemed a favour to a Britulh government, that conmon foldiers may not fit in the compt-ing-houle of a Britifh merchant in Ruffia ?
How cautious the Ruffians are of being lavifh of any effential part of the treaty, appears by this, that, in order to afcertain the leg.lity of property, when a Britih fubject firf appears in the cuftom-boule of St Peterfburgh, the officers demand a certificate of his Majety's conful, that the perfon is really what he pretends to be, and without it they will not clear his goods.
In what manner this treaty of commerce is confidered by the Rufians, may be deduced from the embafly of Monfieur de Dicu at the Ruffian court, in 1745 . It is generally reported and I believe it is true, that bis chief bufinefs was to negociate a treaty of commerce on the behalf of his malters, the States of the United Provinces, on the plan of that of GreatBritain; but certain it is, that he did not accomplifh any fuch
treaty : and if fo able and fo favoured a minifter could not procure this privilege for his countrymen, the Ruffians certainly meant not that the advantages they grant to British Subjects fhould become general; fo that naturalizations granted to foreigners in Ruffia tend to enervate the treaty of commerce, and may at length render it contemptible
that difcovers A very well, that the Englifh were the firf lege of trade to Rufangel; that they had an exclufive privilege of trade to Ruffia in the reign of queen Elizabeth; that Peter the Great, whofe maxims of government are juftly near to them, always fhewed a diftinguinhed regard to the Englifh merchants, and even at the time that the politics of the two nations did not intirely coincide ${ }^{*}$, he gave them his royal word, that, at all events, they might confider themfelves as under his peculiar care and protection: this I have been affured by one who was familiar with his imperial Majefty The Ruffians are alfo fenfible of the political, as well as of the commercial intereft of the two nations, and confider this country, and I hope will always confider it, as their bereditary friend $\dagger$. As our extenfive commerce has reached every corner of the earth, the greater qur fupport is at home, the greater muft our reputation be abroad. Reputation is cerainly no imaginary thing, but mult be in fome degree prouctive of good to our commercial intereft, with relation to the fpirit of commerce in our factories abroad.
* Some difference with his late Majelly as electior of Hảnover.

I remember the compliment made to this nation by the izo.
vernor of Aftracan, a very ingenious vernor of Aftracan, a very ingenious man, whom I have
mentioned in the courfe of thefe papers, fpeakme to bis mentioned in the courfe of thefe papers. Yeakmg to his
friends in my prefence: ' You are to confider, foys te the - Englifh merchants in a different to confider, fays he, the - Englifh merchants in a different light from thofe of any - other nation trading to this country; they are fikilful, - onerous, humane, upright ; they extend their com merree *is,enriched by them. The commodities they deat in are neceflary, fubfan ial, of the greateft ufe to the commu' nity, and they take off more of the Ruflian commoduties than all the other nations united.

The Britifh houfes in St Peterfburgh have not only a trade to Great-Britain and Ireland, but to Holland, Prufia, Sweden, Holitein, and feveral parts of Germany; alfo to Portugal, Spain, and Italy; this has arıen from the connections of ther extenfive commerce, intirely independent of naturalized fubjects in Ruffia. On the other hand, this is not the cafe with naturalized fubjects*. There long bas been, and I hope ever will be, an bonourable diftinction abroad between us and other foreigners, both as Britons and as Merchants, not in the efteem of the Ruffians only, but of all other nations. Whether it is worthy of national obfervation or not can be determined only from the nature of the fubject; , but it is apparent, that the naturalization of foreigners to refide in Ruffia creates ill blood in the breafts of his Majetty's natu-ral-born fubjects who are in that country: it would have created much more, but that there are but ftw of the natu ralized factors who have not failed; had they conducted their trade with moderation and prudence, it is probable the Britifh commerce might have been intirely in their hands, and this nation nothing the better for the commiffion on the fale of Britilh commodities, or on the purchafe of thofe of Ruffia Befides, is it not highly reafonable to think that fuch natu ralized fubjects would be lefs tender than the Britih factors, in regard to the prices this nation might pay for $\mathrm{N}_{\mathrm{Aval}}$ Stores?

* I have heard the Ruffian merchants occafionally treat us with ridicule, by ufing a droll expreflion, which figi ifiee, 'Are you a white-wafhed Engliihman ?' And a naturalizec factor being in fome diftrels, pleaded his being an Englif ubject, to Valenolky, a miniter of the emprefs Anne: You an Englifh iubject! iays the miniter, why you was
born in Calan, in the dominion of the emprefs.:
I paffed fome years of my life at Libon, where I obferved that the French Proteftants in that place live in mutual barmony with the native fubjects of this illand; and from the experience we have that their riches always center here, they are confidered upon the fame footing with other Britifh fubjects.
The trading world is often fufpected of acting upon narrow principles; yet our factors abroad are not only for the moft part loyal, but, upon the comparifon of the feveral governments under which they live with the excellent conftitution of thefe kingdoms, they contract a patriot and difinterefted firit: but when, from the flrongeft evidence, they apprehend the intention of the legiflature is defeated, and their own intereft hurt at the fame time, they are alarmed, and think it their duty to appeal to their country. The Britifh factors in Portugal are jealous of thofe foreigners, who having obtained of the Britifh crown a participation of the Britifh birthrights, carry ail their wealth to any country except this ifland, where, indeed, their paternal connections do not center.*. Many of the Portugal traders figned the petition already mentioned, the meaning of which is intelligible beyond difpute,
- Mr Raihleigh, a great Porrugal trader, who has given eflates to many Hamburghers in Libon, can tell if any of them ever brought a filling of is into this country.
and feems to fpeak the general fenfe of the merchants of this metropolis, though fome may be inclined, upon DIFFERent Principles, to different Sentiments.
The British Factors in Hamburgh have not one naturalized fubject among them. The convention of the Bririfh Hamburgh company with the regency of that city, will not admit any naturalized fubject to a participation of the valuable immunities of that company, and which, for a feries of years, they have enjoyed with a mott unblemifhed reputation : and what could this nation gain by an admiffion of naturalized fubjects into that factory?
It would be eafy to prove, that whatever we play into their hands is a lofing game to this country; for I do not comprehend what they could give us in exchange. My reafon for thinking it is a lofing game is this; with regard to the Ruffia factors, I know at this time eight or ten-Britifh fubjects, I fuppole there are more, who laid the foundation of their fortunes as factors in that country, and fome of them are yet interefted in houles there; there is not one of thole perfons but has brought riches, more or lefs, and fome of them, I believe, to a confiderable amount, to the national ftock of this country, and are, I have great reaion to think, good! members of the community.
On the other hand, I have feen a lift of 24 foreigners, many of whomi I know perfonally, who, within thefe 25 years, have been naturalized, and of all this number, in all this time, only one ever came into this kingdom, and be had particular connections with a Britifh fubject. It mult be obferved, that it was only 25 years fince any naturalization reached Ruffia; the trade then was not fo confiderable as it is now, nor had our people eftablifhed themfelves there under the 'fanction of fuch a treaty as the prefent.
We are jealous of weakening ourfelves by the want of foreign aids; but to think ourfelves dependent in cafes where our intereft in one light is apparently wounded, is it not to weaken ourfelves, for fear of being weakened? Not to confound things of a different nature under one name, it muft be obferved; that the circumftances of naturalized fubjects at home, under this government, and intitled to, enjoy all the good, and fubject to fhare in all the evils, which befal the ftate, are very different from thofe perfons who participate of the advantages which this nation enjoys abroad.
The intention of naturalization, no doubt, is the benefit of this inland; and if there are cafes in which naturalizations are not attended with any benefit; but, on the contrary, proftitute the honour of the nation, enervate its influence, and counteract its native fubjects, it is to be prefumed that fuch cafes have not been fet in a proper light.
The French Proteftants have, indeed, ftrong connections with this iffand; their parentage, their intereft, or the protection they receive, induce them to confider this as their proper home, and, confequently, they are intitled to all the regard which we can thew them.
If experience is the beft guide of life, it is that which muft teach us whom to receive into our breafts as friends, and who to reject, in the commercial light we now confider the fubjeet, as no friends to this country. By what rale can we judge better, than by obferving thofe people who retion ourt kindners with gratitude, and thofe who forget the benefits they receive?
If our firft concern ought to be for our own children, it ought then to be confidered how many fons of tradefmen, merchants, gentlemen, and even noblemen, are loft to their parents, their country, and their God, for want of employment? Merchants are no where more honourably efteemed than in this country; but they often lay the foundation of that knowlege for which they are efteemed in diftant climes and thall we encourage foreigners to take their place ?
There cannot be more trade carried on than a country will bear ; it will ufually employ fo much money, fo many hands, and no more. Do we want money in this nation to carry on our trade? By no means. It is true, the national intereft is already very low, perhaps it will be lower fill; and whatwill be the confequence, but we muft throw more money into trade, and extend our fettlements and commercial intereft over the earth as much as poffible? : Why hould we encourage Foreigners to do any thing for us Abroad, which we can do better OURSELVEs? What circumftances thould we be in, if all our Factors Abroad were foreigners? What tie, or what fecurity fhould we have of their integrity, in the Sale of our Conmodities, much lefs in the promotion of our National Manufactures, in oppofition to thofe of other countries, or zeal in the purchafe of the commodities of the countries. where they refide, if they left us no pledge of their fidelity, nor fpent any part of their lives in this illand?
On the other hand, what riches do not our Factors bring home! How many confiderable men have not swe in this:metropolis from Lisbon! Who can be ignorant of the wealth that has been brought here by East-India Factors? Are not thefe great national objects? Italy, Spain, and other countries, are ever fending us new recruits to our commercia frength, arifing from Factorage. But there is yet a further reafon which occurs: let the warmelt advocates fo
general nafuralizations, without any diftinctions of perfons, profeffions, or refidence, confider how deftructive fuch turalizations are to our General System of Natu ralization and National Profit. If we give ta foreign Proteftants abroad that which Phould invite them hither, we may even prevent their coming to us. By being lavifh of our beneficence, we feem to be fufficiently paid by their acceptance of it, without any regard to the return which they are to make us. For what foreigner, feeing us fo pro digal of our bounty in a cafe of this nature, which be knows to be injurious to the natural-born fubjects of this ifland, can, in proportion as it is beneficial to himfelf, entertain any other opinion than that we do not pretend to purfue our own intereft?
The original intention of naturalization being confeffedly the benefit of this, nation, where there is the leaft ground of fufpicion that the party going abroad means not to add any thing to the national advantage, ought he not, in fuch a cafe, to declare on what principles he pretends to the fayour in queftion; and if it fhould appear that he deceived the legiflature, would not fuch a refentment be due as at leaft to refufe a compliance?
If a reciprocal regard to the intereft of this nation is the fote motive of the invitation given to foreigners who refide here, and if by their refidence they do in fact give us the carneft of a grateful return, is there no fecurity to be afked of thofe who do not fo much as pretend to live amongt us, nor give us any kind of equivalent? The very expectation of advan. tage from them is diftant, remote, confufed, and, perhaps, utterly unintelligible.
The injury is obvious to demonftration, and is attually come plained of by thofe who feel it, whofe intereft is commpn with that of the whole nation.
The reader to whom the fubject is new, malt now be informed, that the merchants and Ruffia factors at length obtained the thing they afked, by fixing the time of abfence to the naturalized foreigners already mentioned, to three years, and then to refide three years alternately in this country, or to become an alien : but this was a temporizing aocommodation of the matter, and does not feem to anfwer the full intent of the legiflature. Upon the principle s that this refrictive claule will produce the end propoled, it might become a rule of conduct to the nation in fimilar cafes of naturalized factors. As a trading nation, we might be yet more indulging to thofe whofe connections are nearly equal with the common ties of the natural-born fubjects. But let us confider difpaffionately, how dangerous it is in politics to enter very deep into refinements of this fort, either immediately to advance the intereft of a nation, or to prevent an dajury which may be more remote.
The object mof dear to an honeft man is the real happinefs of his country. This priociple being laid down, let us conuder what means are, moft effeetual to obtain this end in a direct view. We fepe one of the wifeft princes in Europe ufing his utmofteodeavours to bring people into his country, as, we defire to engage foreigners who, can bring riches, arts, or; indufry, to come to this illand. He gives them lands and great ipmunities; be has brought 20,000 into his capital in a few years; but he is far from extending thofe privileges to perfons out of his dominions. With regard to ourfelves, the fame seafons that induce us to give encouragement to people to come to this illand,-may be a fufficient motive not to give it out of thefe dominions, and under foreign jurifdiction. If we carry our views fo far as to give foreignersabroad a puwer of taking thare, in what our own people poffers, without any fecurity of the leaft return from fuch foreigners, nay, where all،appearances make againft any return, do we not counteract our jown principle?
If-it is urged, That a nation cannot be faid to confer a favour which by reftrictions is rendered lefs valuable; I do not apprehend, without being Quixotes in politics, what it is we mean by there words: for fuppofe intereft is the object in purfuit: as to weakening the influence of naturalization, by which commerce is intended to be promoted, this allo feems toprowe nothing more, than that we fhould run all hazards, rather than lofe any poffibility of getting a fubjece who is a foreigner, though at the expence of a fubject who is a native. It is faid that nafuraligation witheut limitation has, after an indefinite abfence, brought forcigners into this country, who might not ptherwife have come. It would be well worth examining if this, is true, and wha, fuch perfons are, and what were their inducements to fettle here, before this argument can be anfwered; for, when they do in fact come, We recoive them with open arms; and.we ought to comptenance and encourage tbole who may fettle bere, if we do not pay too much for it. But I do not comprehend that here are any fettlements of fuch,weight, as to eftablith a pule of conduet in oppofition to our commercial interelt, as it appears in a direct view. The cafe before us is foreign to the countenancing of strangers, who fet, out upon a principle of defigning torfettle in this ifland. Ifay, foreicn to.such Princr$P_{i} L_{E} ;$; for thoughmany French Proteftants have came bere, after being, as longabroad, under the pratection of the crown of Great:-Britain as they, pleafed, yet itill, the matser will reft

## R U S

## R U. S

on this iffue: are we fo fond of naturalization, as to give a power to foreigners, without diftinction, to fupplant our own people, when experience teaches us we have no juft grounds to expect any fuitable returns?
It cannot be too often repeated, that we ought to be cautious of curbing in any degree the inclinations of the natural-born fubjects in regard to commerce, or of damping that foirit and trade, on which is founded the opulence of thi nation, and its ftrength and influence as a maritime power And whilf intereft is the great incentive to buman actions, and particularly actions of this kind, I think it is apparent, that the more we interpofe to countenance foreigners in commercial defiens, in cafes not demonfrably beneficial to this country the more we deprefs the firits of our own merchants, who confeffedly do advance the intereft of the naiion: and this difcouragement may extend not only in regard to their being deprived of thofe profits which immediately accrue from the fhare fuch raturalized foreigners have in their trade, but alfo to a jealouly of being intirely fupplanted, in the courfe of time.
May it not be queftioned what prejudices would this nation Meceive, if no naturalized fubject, 'till he has refided here feven years, nor the children born abroad of perfons already naturalized, their parents not having lived in his Majefty's dominions for the fame number of years, were received abroad as factors or merchants, in common with native-born fubjects? If it can be demonfrated that fuch prejudice will greater than any that can be proved on the other tide the eftion, there is no room for a debate; but if it can be made appear that it is only equal, the fcale, we may expect, will turn in favour of the native fubject, much more if the prejudice is againft the latter, for this plain reafon, that the national and mercantile intereft are but two words for the lame thing. The impartial reader will confider the argument, not the writer, if I am furpected of intereft, where I have no ther wiew than national benefit; yet the real truth can receive no diminution: I hope that will be done which is moft for the intereft of my country, be it what it will.'
Russia confidered with relation to other principal fates and empires.

The northern parts of the empire of Ruffia, from the frontiers of the Swedifh dominions to thole of China and Japan, are guarded in fuch a manner, as to be fecure not only from danger, but from appreherfions, having on that fide a fea hitherto impenetrable, and through which, if any paffage could be found, it mult turn to the benefit, but can never prove of any diladvantage, to the fubjects of Ruffia; which is a point of great confequence, and a bleffing fcarce known to any other country than this. The frontiers of the empire towards China are alfo inacceffible, as confifting of deferts impenetrable by armies, but which yield a tolerable paffage for caravans; fo that the Ruffians may always reckon on the friendhip of the Chinefe, and, whenever they apply themfelves ferioully thereto, may make this friendihip turn to theiz advantage.
The Tartars inhabiting the countries between Ruffia and Perfia, are no longer formidable to the firt-mentioned empire; on the contrary, they all refpett it, and many of them have willingly fubmitted, and become vaffals to it.
The Cafpian Sea, and the dominions which the Ruffians have on that fide, give them a fair opening into Perfia, which they have already improved fo, as to gain to themfelves a very advantageous trade; and this by degrees may be extended, perhaps, as far as the Ealt-Indies.
It will always be the intereft of Ruffia to cultivate a good underitanding with the Shah; but, in cafe of a rupture, the would not have much to fear, fince the frontiers of Perfia being open, the might foon make an end of the war, by letting loofe upon them the Tartars who are her tributaries. The Turks, and their affociates the Crim Tartars, are more danerous enemies; but, at prefent, the circumftances of the Porte are fuch as fcarce will allow her to break with the Ruffans, if the had concluded a peace with Perfia ; and we fhall hereafter fee, that Ruffia can never want the power of defonding herfelf on this fide, or even of making the Turks fenfible of the folly of breaking with her without juft provocation. The two great Chriftian principalities depending upon that empire, will always have a biafs in favour of the Ruffians, and, therefore, the Turks run a greater hazard by making war with this, than with any other nation.
The interefts of Ruifia in Europe are not hard to affign. As to Sweden, it is of great confequence to live upon good terms with that crown; and, on the other hand, the fuperiority of Ruffia, when forced into 2 war, has of late been rendered fo apparent, that there are good grounds to expect the Swedes will continue quiet on that fide for a long time to come, even fuppofing that no ftreff thould be laid on the natural connections between the two branches of the houfe of Holftein, when they come to govern thefe nations. As it is requifite for the court of Peterlburgh to be well with the Swedes on one fide, fo it imports them no lefs to be upon good terms with the Poles on the other; for which reafon, we fee the late Czari-

VOL. II.
na omitted nothing to fet the prefent king Auguflus upon the throne of Poland, well knowing that his interefts were of fuch a nature as muft, without treaties, bind him effectually to her's.
There feems to be no great caufe of intercourfe between Ruffia and Denmark, farther than what refults from attention to the ballance of power in the North, which will al ways incline a wife adminiffration in this empire to keep the fcales as even as may be, between this crown and that of Sweden and Denmark.
The interefts of Ruffia, with refpect to the houfe of Auftria, are its moft material concern; for while thefe houfes are united, not only by general alliances, but by a due and hearty regard for each other's profperity, neither has much to fear from the Turks; but if they are divided, and the Ottomans fhould recover their anciemt power, they may be formidable to both.
As to Pruffia, of late years great regard has been due, and, in fucceeding times, it is like to claim a greater; but certainly, if thefe two powers purfue their true interefts, and are not mifled by ambitious views, they are not like to fall out. The maritime powers are the natural allies, and hitherto have been and are like to be faft friends to Ruffia
As to the other potentates of Europe, their dominions lie at too great a diftance for Ruffa to have very great intercauffe with them of any fort; and with refpect to the houfe of Bourbon, as the court of Peterfburgh has never had any caufe to like, fo, in fpite of all its power, there is no probability of its ever feeing much reafon to fear it.
And now the imperial prince has iffue, there does not appear any fign, at prefent, that this empire will foon be difturbed by any inteftine commotions in regard to the fucceffion; nor could any thing diftrefs the Ruffians on this occafion, unlefs we fuppofe that Sweden, Denmark, Poland, and Pruffia, fhould unite, and continue united in this league, to promote a revolution, which feems now far from probable.
It is very certain, that the great power of the Ruflan empire and her clofe connexion with the houfe of Auftria, has excited a fpirit of fufpicion and jealoufy in the North, to which alfo the particular views of feveral powers have not a little contributed; but notwithftanding this, what has been faid remains not at all the lefs certain.
But if, on any future occafion, a war fhould actually break out between the houfes of Auftria and Bourbon, \&c. the turn of that war muft remain very uncertain, fince the force of the Ruffian empire is really much greater than is commonly imagined, and would be found fo in fuch a cafe.
We may from hence form a judgment of the abilities of thofe minifters who direct at prefent the councils of this empire, and who by fhewing an unfhaken fteadinefs in purfuing that syftem which they have adopted, have at leaft raifed the credit of their government to a very high degree, and, for fome time, made this empire not only the arbiter of all differences in the north, but have likewife extended its influence to the moft diftant parts of Europe, fince it is univerfally confeffed, that the march of the Ruffian auxiliaries, during the late war was the meafure that contributed moft to the conclufion of the definitive treaty at Aix la Chapelle. It deferves the reader's notice, likewife, that, in the prefent ftate of things, the true interefts of this empire will certainly be the rules of the reigning Czarina's government; for remaining fingle, and having no particular defires or defigns to gratify, the peace and profperity of her governmert can depend on nothing elfe.
In confequence of this, a conflant and firm adherence to that fyftem, beft calculated to promote the good of her fubjects, and the glory of the empire, will be the ftanding maxims in the Czarina's councils. As fuch a conduct cannot fail of having a frong tendency to promote peace and fatisfaction at home, and to fecure the attachment of the allies of Ruffia, by maintaining the credit of the adminiftration abroad, there are no grounds to apprehend, at leaft in our times, any great inconveniences of extraordinary alterations flould enfue. We may likewife add, that things remaining, as they are like to remain, in their prefent pofture for a few years, the advantages of thefe meafures will become more and more perceptible, and a proper fenfe of loyalty and gratitude diffure itfelf through the inhabitants, even of the remoteft provinces of that extended empire, which is certainfy in a very thriving condition, and will by degrees, in confequence of the improvements that are daily making, come to exiend its power and influence much farther than thofe who are unacquainted with, or unattentive to, political principles, can eafily conceive.

Remarks on our article Ruffia, fince the laft war, and treaty of peace of 1763 .
As the laft treaty of peace has annexed fuch extenfive erritories to the crown of Great-Britain in North-America, it is now hoped, that we fhall no longer fland in need of $N_{A}$ val Stores of any kind from Ruffia, or elfewhere; we being able to produce them there, in what quantities we pleafe, provided rational and vigorous means hall be taken by the overnment of England for that purpofe. See our articles Naval Stores, Nayal Affatrs, War.

That the court of England feems to be in earnef about this important matter, it is faid that an Additional Duty will foon be laid on the foreign importation of Hemp, Hempseed and Flax, particularly from Russia and the Baltick; great quantities, the growth of our own American colonies, being expected over in the fpring.
RUTLANDSHIRE, the fmalleft county in England, almoft of a circular form, encompaffed on the eaft and fouth with Lincolnfhire and Northamptonhhire, with Leicefterfhire on the fouth and weit, and with part of Leicefterfhire and Lincolnhire on the north. It is about - 5 miles in length, 10 in breadth, and is computed at 136 fquare miles.
The air is fweet and healthful, it being quite free from fogs and milts. The Guafher-Wafh is the chief river which runs through the fhire, which is from eaft to weft, in the middle of the county. There are feveral brooks that run into this river, by which the inhabitants are fupplied with water, and with plenty of filh; almoft all the fouth and eaft parts, in
particular, have good fupplies from the river Welland, which feparates it from Northamptonflire and Lincolnfhire.
The foil is very fruitful in corn and pafture, which breeds grea numbers of cattle, efpecially fheep, whofe wool is obferved to be more red than in other countries, from a red quality peculiar to the foil. The vale of Catmos in particular, where Oakham ftands, is not inferior in fertility to the vales of White Horfe and Belvoir. It allo produces abundance of wood for fuel.
OKEHAM is the capital of the county, and fhire-town for the affizes, and for tranfacting' all other public affairs.
Uppingham, a modern town, the fecond in the county, and
the only one that has a market. It is 2 neat the only one that has a market. It is a neat, compact, well-built town, with a well-frequented market for cattle, corn, \&c.
This, though a fmall county, is remarkable for many fine feats, and fome of the firft rank, particularly the earl of Gainf borough's at Enton, and the earl of Winchelfea's; at Buriey or the Hill, both near Okeham.

# Of the PRACTICALBUSINESS of the CUSTOM-HOUSE, continued from the end of letter Q . 

## With regard to RUM.

RUM imported in cafks not containing 20 gallons, at the leaft, (except for the feamen's ufe) forfeited, or the alue; but, if it appears, to the fatisfaction of the principal officer of the cuftoms, to be imported without fraud or concealment, may be admitted to entry. 5 Geo. I. c. 15. §. 2. and 27 Geo. II. c. 18. §. 4.
or fpirits, of the Britifh fugar-plantations, imported directly into Great-Britain, may, on entry, and before payment of the duty of excife, be landed and put into warehoufes, provided by the proprietor or importer, and approved of by the commiffioners of excife, under the joint locks of the proprietor and warehoufe-keeper; fecurity being firft given to pay the faid duty, (according to the gauge at landing) as foon as fuch rum or firits fhall be fold, or at the end of fix months, if they fhall not be then fold. 15 and 16 Geo. II. c. 25. §. 1, 7. and 23 Geo. II. c. 26. §. 2.
-If. the duty is not paid at the expiration of the faid, fix months, the commiffioners may caufe fuch rum or fpirits to be fold by auction, and out of the produce difcharge the duty and all expences, and pay the furplus, if any, to the proprietor. 15 and 16 Geo. II. c. 25. §. 9. and 23 Geo, II. c. 26. §. 2.

- Landed without being entered at the cuftom-houfe, and without the collector of excife, or without a warrant from the proper officers, or without the prefence of an excife-officer, forfeited; one moiety to his majefty, the other to fuch perfon as thall feize, inform, or fue for the fame. 15 and 16 Geo. II. c. 25 . §. 3. and 23 Geo. II. c. 26. §. 2.
—— May from time to time be delivered out of fuch warehoufes, (but not in lefs quantities than one cafk, containing at leaft 20 gallons, unlefs it was for the ufe of the feamen in the voyage) on paying the duty, and producing to the warehoure-keeper, and officer appointed to attend, a warrant or certificate from the collector, certifying fuch payment. 15 and 16 Geo. II, c. 25. §:5, 6. and 23 Geo. II. c. 26. §. 2.

Warehoufe-keepers, and officers appointed to attend warehoufes, are to enter, in' proper books, accounts of all rum, 8 cc . which fhall be brought into and carried out of their refpective warehoufes; and at the end of every fix months tranfmit an account thereof, upon oath, to the commiffioners of excife, together with what is remaining; and if it thall appear to the faid commiffioners, that any of the faid rum, \&c. has been delivered out before payment of the duty, then fuch warehoule-keepers and officers refpectively offending, ftall be difabled to hold any publick office, and alfo forfeit 1001. 15 and 16 Geo. II. c. 25. §.4. and 23 Geo. II c. 26. §. 2.

No rum nor fpirits of America, (except of the growth or manufacture of his majeftys fugar-colonies there) may be imported into Ireland, unlefs fhipped in Great-Britain in hips legally navigated, upon forfeiture thereof, or the value, together with the fhip and her furniture. 6 Geo. II. c. 13. §. 4 .

And fince, there has been an act of parliament, made in the 33d year of his late majefty, for encouraging the exportation of RUM and SPIRITS of the growth, produce and manufacture, of the Britifh fugar-plantations, from this kingdom, and of Britifh (pirits made from moloffes.
The duties of cuftom payable upon the importation of rum and fipits from the Britifh fugar-plantations, to be repaid upon the exportation thereof-And the duties of
excife to be remitted upon all fuch as fhall be exported before payment is made of the faid duties-The exporter to give bond for the due exportation thereof-Upon producing a certificate of fuch bond having been given, the rum, or fpirits mentioned therein, are to be delivered out of the warehoufes -And a certificate of the quantity, and fize and marks of the calks, \&c. to be given therewith-And produced to the officer attending the fhipping-Due entry to be made of fuch delivery-Bonds to be given for the duties are to be delivered up, upon oath made of the intended exportation-And certificates produced, \&c. of the quantity fhipped, and that the fame are proof fpirits; and alfo of the delivery thereof from the warehoufes, \&c.-If part only of the rum or fpirits, mentioned in the bond, are certified to be delivered and thipped, the quantity is to be indorfed on the bond-And the bond is to be delivered up, when the remaining part thall be certified to be delivered and flipped; provided the fame be before the time ftipulated for payment of the duties.-All rum and fpirits intitled to the faid drawback, \&c. are :o be exported in cafks containing not lefs than 100 gallons, and in veffels not lefs than xoo tons burthen-The quantity delivered out is to be computed according to the gauge taken upon the importation thereof-If after delivery they fhall be concealed, or not fhipped within 12 hours, or the cafks opened, or the fame be reduced or altered in quantity or quality; fuch rum or fiirits are forfeited, and the bond is to be put in fuit; unlefs the commiffioners fee caufe to forbear the fame-Bunds given for exportation are not to be difcharged 'till certificates be produced of the due exportation and landing, and proof made thereof on oath, in manner reguired by the act, for preventing the exceffive ufe of firittuous liquors, \&cc.-The condition of all bonds taken fhall be to produce fuch certificates, within fuch times refpectively as are limited by the act, for producing the certificates therein required to be delivered-In cafe no fuch certificates fhall be produced within the time limited, the bonds may be pur in fuit-If fuch rum or firits fhall not be exported, or fhall be fraudulently relanded, the fame, together with the veffels, cattle and carriages employed therein, are ForFEITED; and the perfons concerned forfeit double the amount of the duties-And the mafter or commander of the veffel, if he affifts or connives thereat, is to fuffer alfo fix months imprifonment; or if the package be altered before arrival at the place of difcharge, he forfeits 100 l . -The rum or fpirits to be exported, are to be Proor; and the exporter is to give five days previous notice of the fhipping thereof, and allow the officers to mark the calks, and take famples, paying for the fame, if demanded, upon Penalty of forfeiting 1001 .-If any rum or firits fhall be altered or reduced, in quantity or quality, after being thipped, the fame is Forfeited, and the perfons concerned therein forfeit 1001.-And no drawback is to be allowed for the fame-Penalty for granting a falfe certificate, or of counterfeiting, altering, \&c. any oath or certificate, 500 l .; one moiety to the crown, and the other to the profecutor.An additional Drawback of 31. 3s. per tun, allowed on all Britifh-made fpirits drawn from moloffes, exported; oath being made of the truth thereof, and the duties being duly paid; and certificate produced of the quantity fhipped, and that the fame were Proof Spirits, \&c.
The powers, regulations, forfeitures, and claufes, 8 cc . in the recited act, relating to the Drawbacks hereby granted on the exportation of firits, and to the preventing or punifhing Frauds, \&rc. are extended to this act-And all Fines,

## Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE.

Penalties, and Forfeiturfs, impofed by this act, fhall be fued for, levied, recovered, or mitigated, by fuch ways, means, and methods, as may be recovered or mitiways, by any law or laws of excife (not otherwife directed by ghated act) or by action of Debt, Bill, Plaint, or Information, in any of his Majefty's courts of record at Weftminfter, or in the court of Exchequer of Scot land ; and that one moiety of every fuch Fine, 8 cc . Shall be to his Majefty, \&cc. and the other to him or them, who fhall difcover, inform, or fue for the fame. - That any perfon fued, \&c. in purfuance of this act, may plead the general iffue, and give this act, \&ic. in evidence in their defence, iffue, and give this act, \&c. in evidence in their defence,
\& cc. and if a verdict fall pafs for defendant, fuch defendant \&c. and if a verdict Chall paf
fhall have treble Costs.

## With regard to the Russia Company.

RUSSIA COMPANY. - Any Britifh fubject may be free of it, upon payment of 5 l. for admiffion. Io and in Will. III. cap. 6. §. I, 2. - Any perfon free of this company may import, in Britifh-built fhips legally navigated from Ruffia, any good's of the growth, produce, or manufacture of Perfia (provided fuch manufactures are made of the growth or
produce of Perfia) purchafed by barter with, or the produce of, woollen or other goods exported from Great-Britain to Ruffia (except gold or filver in coin or bullion) and from thence carried into Perfia, to the truth whereof the importer is to make oath; paying the fame cuftoms as fuch porter is to make oath; paying the fame cuftoms as fuch
goods are liable to if imported from the Levant feas by goods are liable to if imported from the Levant feas by

## SAF

SABLE. Several authors have, here and there, given deferiptions of thefe fpecies of precious animals. I hall therefore only add thus much, viz. (1.) That it is the nature of thefe creatures, at a certain time of the winter, to fleep for a while; but firft they hide themfelves fo fecurely, that it is a very hard matter to find any of them. And if at any time they are difcovered, they lie wrapped up, as it were, like a ball, and you may roll and throw them about, without waking them. (2.) That they live upon mice, cedar-kernels, red-berries, fifh, \&c. (3.) That thofe years, when cedar-kernels and red-berries are moft plenty, thefe animals are the moft difficult to be found, and their furr is the worfe; becaufe feeding plentifully, they reft moft; on the contrary, if there be a fcarcity of cedar-kernels and berries, they are eafier caught ; for they then run more about, and exercile makes the furr much more beautiful. (4.) That the moft beautiful fable fkins have generally the worft tails, and the worft fkins, on the contrary, the fineft tails. (5.) That there are fables as white as fnow, but they are met with very rarely. (6.) Upon the inlands in the north-eaftern fea, beyond Khamtfehatki in Ruffia, the fables are very indifferent, but then they have tails a quarter of a Ruffian ell long, freaked red and black. Near Crafnoyabr, Abakan, Kuanetiko, and fome other places, you may buy a hundred of the beft fable tails for about fix or eight rubbles; whereas they are worth from 25 to 30 rubbles at Toboliky, and will fell for roo rubbles at Mofcow. The fkins bear the fame proportion of price. A timber of fables confifts of 40 fins, or 20 couple.
Note, a rubble is about 45. 6d. fterling. See the article Russia.
SADLER. Under this title is carried on a very confiderable trade, but in very different degrees.
Their bufinefs is not only faddle-making, which is a curious as well as very ancient employ, but to complete fome, and fell all other neceffaries for the faddle-nag and horfeman.
Some only work privately, making up goods for town and country trade.
Some keep but fmall fhops, and for the moft part fell and repair the middling forts of fadlery-wares, but feldom make up. Others have large fhops, and make up and fell all forts of the fineft horfe-furniture.
Others again keep large ftocks of goods for exportation, and merchandize a great deal on their own accounts.
They were a company before the year 1190 , but not incorporated 'till 1272. In the reign of king Edward I. Liveryfine rol. whereof his royal highnefs the late prince of Wales was a member.
Their hall is near Fofter-lane in Cheapfide, and their courtday on the firft Tuefday in the month.
Before their hall-gate they have a ftand, in which they fit to attend the lord mayor on the day of his inftallation.
SAFE-CONDUCTS, PROTECTIONS, PASSPORTS.
A fafe-conduct is a fecurity given by the king, under the great-feal, to a ftranger, for his fafe coming into and paffing out of the realm, touching which are feveral ftatutes. A paffport is a licence granted by any in authority, for the fafe paflage of man or hip, \&cc. from one place or country to another.
Protections are of two forts; public, where a prince takes on him the defence of another prince or ftate; or private, of perfons or fhips, in effect only a paffport.
By the law of protection, the protected perfon owes all refpect to his protector, who, on his part, fhould defend and fuccour the protected; or he may withdraw himfelf from the protection, and feek another. The Genoefe revolting from the protection of the French king, he changed their conditions into privileges, that he might deprive them of them when he fhould think fit. Molloy 84.
In protections of thips and perfons, generally great faith is kept by the granters; for at this day, if a fhip hath a Barbary protection, the pirates of that nation will reftore any fuch fhip they bave taken; and if no protection, yet if taken
within fight of their caftles, the prize is not abfolute, uniefi refiftance be made.
The flatute of Magna Charta, 9 Hen. III. cap. 30. ordains, That all merchant-ftrangers fhall have fafe conduat into, out of, and whillt in, England, to buy, fell, \&cc. if not openly prohibited; except in time of war, and in an enemy's country. And by 27 Edw. III. cap. 2. Safe-conduct is granted to merchant-ftrangers, to dwell and traffic in this kingdom, and return at pleafure.
By 15 Hen. VI. cap. 3. it is recited, That whereas the king had granted fafe-conduct to certain perfons coming in and out of England, France, and Ireland, with certain laden fhips; and faith fhould be given both to the copy called Vidimus, and the original of thofe letters: and that one Johnde Guntier granted fuch copy to as many as he pleafed, fealed with the feal of him that called himielf king of France; by which a great navy of enemies was affembled, and took many fhips, \&c. to the great damage of England.
The *ing, at the grievous complaint of the commons in parliament, ordains, that the claufe Vidimus fhall not be put in any future fafe-conduct granted, without great caufe. And alfo that in all fafe-conducts, the name of the fhips, maters, number of mariners, and fhip's burthen, fhall be exprefied. By 18 Hen. VI. cap. 8. Merchants aliens' may charge veffels of Spain, and other parts, enemies of the king, if the mafters, owners, \&c. have fafe-conduct. And if any fuch fhips be taken by the king's fubjects, not having authentic fafe-conduas, the poffeffors may enjoy the fame. And proclamation is to be made of this ftatute on the fea-coafts, that merchants aliens may have knowlege of it.
By 20 Hen. VI, cap. r. All letters of fafe-conduct granted to the king's enemies, or others, thall be enrolled in chancery before delivery, or elfe be void: and if at any time hereafter, goods are taken by Englifh fubjects on the fea in enemy's Chips, not having legal fafe-condut, they fhall enjoy them without reflitution.
And the king's fubjects, taking fuch fhips, and forcibly bringing them into any port of the realm, fall not receive damage, if ready to make reftitution within reafonable time after they fhall have knowlege of letters of fafe-conduct, enrolled in chancery before taking them.
By 3 I Hen. VI, cap. 4. Any fubject offending upon the fea, or in any port of the kingdom, to the injury of any ftrangers in amity with us, or having fafe-conduct, the chancellor of England may iffue procefs to bring the offenders to anifwer to the parties grieved, and make fuch reftitution as fhall feem to the chancellor expedient.
And on this procefs, the chancellor fhall further proceed, to And on this procefs, the chancellor fhall further proceed, to
make full delivery and reftitution, of perfons, hhips, 8 xc . with all cofts and loffes, diburfed and fuffered by them.
A late act 4 Geo. II. cap. 18, recites, That treaties are fubfifting between the king and fubjects of Barbary, by which it is ftipulated, that all fhips belonging to his Majefty or his fubjects, may pafs the feas, and enter the harbours of the faid governments, without feizure or moleftation, on producing paffes under feal of the admiralty-office, called Mediterranean paffes. It is therefore enacted, That if any fhall forge or counterfeit any fuch pafs, or make any alteration or erazement, \&c. fuch perfons, on conviction in any of his Majelty's dominions, fhall be guilty of felony.
And the faid offences, wherefoever committed, may be tried and adjudged in any county of England, or before any jufticiary in Scotland.
By the laws of France, no veffel fhall put to fea from any port, without paffiport from the admiral, recorded at the admiralty-office of the place whence the mafter fails; who, in 24 hours after his arrival in any port, thall prefent his paffport, and declare all the confiderable circumitances of his voyage, \&cc.
And by a treaty marine, made by king Charles II. with the king of France in the year 1677 , a form of paffiport is appointed to be given by the lord admiral of England, or by the mayor or other chief magiffrate, or the principal officers of the cuftoms, in the feveral ports and places of the king's
dominions, to fhips and vefiels. See Marque [Lettrers of Marque], Reprisals, Marine Treaties.

## AFFRON

## Of its growth and cultivation in Englanid.

As faffron grows at prefent moft plentifully in Cambridgefhire, and has grown formerly in feveral other counties of England, the method of culture does not, I believe, vary much in any of them, and therefore I have judged it fufficient to take notice of the obfervations which feveral capable perfons have made, in different feafons, in the years $1723,24,25$, and 28 , up and down all that large track of ground that lies between Saffron Walden and Cambridge, in a circle of about ten miles diameter. In that country, faffron has been longeft cuhivivated, and therefore it may reafonably be expected, that the inhabitants thereof are more thoroughly acquainted with it than they are any where elfe
I fhall begin with the choice and preparation of the ground. The greateff part of the track already mentioned, is an open level country with few inclofures; and the cuftom there is, as in moft other places, to crop two years, and let the land lie fallow the third. Saffron is always planted upon fallow ground, and all other things being alike, they prefer that which has borne barley the year before.
The faffron-grounds are feldom above three acres, or lefs than ore, and in chufing them, the principal thing they have regard to is, that they be well expofed, the foil not poor, nor a very ftiff clay, but a temperate dry mould, fuch as commonly lies upon chalk, and is of a hazel colour ; though if every thing elfe anfwers, the colour of the mould is pretty much neglected.
The ground being made choice of, about Lady-day, or the beginning of April, it muft be carefully plowed, the furrows being drawn much clofer together and deeper, if the foil will allow it, than is done for any kind of corn, and accordingly the charge is greater.
About five weeks after, or during any time in the month or May, they lay between twenty and thirty loads of dung upon each acre, and having fpread it with great care, they plow it in as before. The chorteft rotten dung is the beft, and the farmers who have the conveniencies of making it, fpare no pains to make it good, being fure of a proportionable price for it. About Midfummer they plow a third time, and between every fixteen feet and an half, or pole in breadth, they leave a broad furrow or trench, which ferves both for a boundary to the feveral parcels (when there are feveral proprietors to one enclofure) and to throw the weeds in at the proper feafon.
To this head likewife belongs the fencing of the grounds, becaufe moft commonly, though not always, that is done before they plant. The fences confift of what they call dead hedges, or hurdles to keep out not only cattle of all forts, but efpecially hares, which would otherwife feed on the faffronleaves during the winter.
About the weather we need only obferve, that the hotteff fummers are certainly the beft, and if therewith there be gentle fhowers from time to time, they can hardly mifs of a plentiful rich crop, if the extreme cold, fnow, or rain of the foregoing winter, have not prejudiced the heads.
The next general part of the culture of faffron, is planting or fetting the roots ; the only inftrument ufed for which, is a narrow fpade, commonly termed a fit- hhovel.
The time of planting is commonly in the month of July, a little fooner or later, according as the weather anfwers. The method is this : one man with his fitit-fhovel raifes between three and four inches of earth, and throws it before him about fix, or more inches; two perfons, generally women, following him with faffron heads, place them in the fartheft edge of the trench he makes at three inches diftance from one another, or thereabouts. As foon as the digger or fpitter has gone once the breadth of the ridge, he begins again at the other fide, and digging as before, covers the roots laft fet, and makes the fame room for the fetters to place a new row, at the fame diftance from the firf, that they are from one another. Thus they go on 'till a whole ridge, containing commonly one rod, is planted, and the only nicety in digging is to leave fome part of the firft fratum of earth untouched to lie under the roots; and in fetting, to place the roots directly upon their bottoms. What fort of ropts are to be preferred, fhall be fhewn under the fourth head; but it muft be obferved in this place, that formerly when roots were very dear, they did not plant them fo thick as they now do ; and that they have always fome regard to the fize of the roots, placing the largeft at a greater diftance than the fmall ones. The quantity of roots planted in an acre is generally about fixteen quarters, or 128 bufhels, which according to the diffances left between them, as before affigned, and fuppofing them all to be an inch in diameter one with another, ought to amount to 392,040 in number.
From the time that the roots are planted, 'till about the beginning of September, or fometimes later, there is no more abour about them; but as they begin to fire, and are ready to thew themfelves above ground, which is known by digging
V O L. II.
a few out of the earth, the ground muft be carefully pared with a fharp hough, and the weeds, \&c. raked into the furrows, becaufe otherwife they would binder the growth of the
plants. plants.
In fome time after appear the faffron-flowers, and this leads us to the third branch of our prefent method. The flowers are gathered as well before, as after they are full blown, and the moft proper time for this is early in the morning. The owners of the faffron get together a fufficient number of hands, who place themfeives in different parts of the field, pull off the whole flowers, and throw them handful by handful into a baiket; and fo continue'till all the flowers are gathered, which happens commonly about ten or eleven o'clock. Having then carried home all they have got, they immediately fpread them upon a large table, and placing themfelve round it, they fall to picking out the filamenta, ftyli, or chives, and together with them, a pretty long portion of the ftylus itfelf, or fring to which they are joined. The reft of the flower they throw away as ufelefs. The next morning they return into the field again, whether it be wet or dry weather, and fo on daily, even on Sundays, 'till the whole crop be gathered.
The chives being all picked out of the flowers, the next la bour about them is to dry them on the kiln. The kiln is built upon a thick plank (that it may be moveable from place to place) fupported by four fhort legs. The outfide confifts of eight pieces of wood, about three inches thick, joined in form of a quadrangular frame, about twelve inches fquare at bottom on the infide, and twenty-two inches at the top, which is likewife equal to the perpendicular height of it. On the forefide is left a hole about eight inches fquare, and four inches above the plank, through which the fire is put in. Over all the reft, laths are laid pretty clofe to one another, and nailed to the frame already mentioned, and then are plaftered over on both fides, as is alfo the plank at bottom very thick, to ferve for a hearth. Over the mouth, or wideft part, goes a hair-cloth fixed to two fides of the kiln, and likewife to two rollers, or moveable pieces of wood, which are turned by wedges or fcrews, in order to ftretch the cloth. Inftead of the hair-cloth many people now ufe a net-work of iron wire, with which it is obferved, that the faffron dries fooner, and with a lefs quantity of fuel; but the difficulty of preferving the faffron from burning, makes the hair-cloth be preferred by the niceft judges in drying.
The kiln is placed in a light part of the houre, and they begin by laying five or fix fheets of white paper on the haircloth, upon which they fread wet faffron, between two and three inches thick. This they cover with other theets of paper, and over there lay a coarfe blanket five or fix times doubled, or, inftead thereof, a canvas pillow filled with fraw and after the fire has been lighted for fome time, the whole is covered with a board, having a large weight upon it, At firt they give it pretty ftrong heat, to make the chives fweat, as their expreffion is; and in this, if they do not ufe a great deal of care, they are in danger of fcorching, and fo of fpoiling all that is on the kiln.
When it has been thus dried for about an hour, they take off the board, blanket, and upper papers, and take the faffron off from that which lies next it, raifing at the fame time the edges of the cake with a knife. Then laying on the papers again, they Ilide in another board between the hair-cloth and under papers, and turn both papers and faffron upfide down, afterwards covering them as above.
The fame heat is continued for an hour longer ; then they look to the cake again, free it from the papers and turn it; then they cover it, and lay on the weight as before. If nothing happens amils, during thefe firft two hours, they reckon the danger to be over; for they have nothing more to do, but to keep a gentle fire, and turn their cake every half hour, 'till it be thoroughly dry; for doing which as it ought, there are required full twenty-four hours.
In drying the large plump chives they ufe nothing; but towards the latter end of the crop, when thefe come to be fmaller, they frinkle the cake with a littie fmall beer to make it fweat as it ought; and they begin now to think, that ufing two linen cloths next the cake, inftead of the two innermoft papers, may be of fome advantage in drying ; but this practice is followed, as yet, but by few.
Their fire may be made of any kind of fuel; but that which fmoaks the leaft is beft, and charcoal, for that reafon, is preferred to any other.
What quantity of faffron a firft crop will produce is very uncertain. Sometimes five or fix pounds of wet chives are got from one rod; fometimes not above one or two, and fometimes not enough to make it worth while to gather and dry it. But this is always to be obferved, that about five pounds of wet faffron go to make one pound of dry, for the firft three weeks of the crop, and fix pounds during the laft week; and now the heads are planted very thick, two pounds of dryed foffron may, at a medium, be allowed to an acre for a firft crop, and four and twenty pounds for the two remaining, the third being confiderably larger than the fecond.

In order toobtain thefe, there is only a repetition to be made every year of the labour of houghing, gathering, picking, and drying, in the fame manner as before fet down, without the addition of any thing new ; except that they let cattle into the fields, after the leaves are decayed, to feed upon the weeds, or perhaps mow them for the fame ule.
About the Midfummer after the third crop is gathered, the roots mult all be taken up and traniplanted: the management requifite for which is the fourth thing to be treated of. To take up the faffron-heads, or break up the ground, as their term is, they fometimes plow it, fometimes ufe a forked kind of hough called a pattock, and then the ground is harrowed once or twice over; during all which time of plowing, or digging and harrowing, fifteen or more people will find work enough to follow and gather the heads, as they are turned up. They are next to be carried to the houfe in facks, and there to be cleanfed or raifed. This labour confifts in clearing the roots thoroughly from earth, and from the remains of old roots, old involucra, and excrefcences; and thus they ecome fit to be planted in new ground immediatelys or to be kept for fome time without danger of fpoiling.
The quantity of roots taken up, in proportion to thofe that were planted, is uncertain ; but at a medium it may be faid, that allowing for all the accidents that happen to them in the ground, and in breaking up, from each acre may be had 24 quarters of clean roots, all fit to be replanted. The owners are fure to chufe for their own ufe the largeft, plumpelt, and fatteft roots, but above all, they reject the longifh-pointed ones, which they call fpickets or fpickards, for very fmall round or flat roots are fometimes oblerved to flower.
This is the whole culture of faffron in the country above mentioned; and we have only now to confider the charges and profits which may be fuppofed, one year with another, to attend this branch of agriculture ; and of thefe we have drawn up the following computation for one acre of ground, according to the price of labour in this county.

| Rent for three years | - | - | - | 1. | s. | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 3 | 00 | 0 |  |  |  |  |
| Plowing three times | - | - | - | 0 | 18 | 0 |

lowing three time

Punging

## Hedging

Spitting and fetting the heads
Weeding or paring the ground
Gathering and picking the flowers
Drying the flowers
Inftruments' of labour for three years with the kiln, about
Plowing the ground once, and harrowing twice
Gathering the faffron-heads
Raifing the heads
1000 $1 \quad 120$

Total charge $23 \quad 120$
This calculation is made upon the fuppofition, that an acre of ground yields 26 pounds of neat faffron in three years, which is fated only as a mean quantity between the greateft and the leaft; and therefure the price of faffron muft be adjufted accordingly, which I think cannot be done better than by fixing it at 30 s . per pound ; fince in very plentiful years it is fold for 20 s , and is fometimes worth between 3 and 4 l . At this rate, 26 pounds of faffron are worth 39 l. and the neat profits of an acre of ground producing faffron, will in three years amount to 15 I .13 s . or to about 51.4 s . yearly. This, I fay, may be reckoned the neat profit of an acre of faffron, fuppofing that all the labour were to be hired for ready money; but as the planter and bis family do a confiderable part of the work themfelves, fome of this expence is faved : that is, by planting faffron, he not only may reafonably expect to clear about 51. yearly per acre, but allo to maintain himfelf and family for fome part of each year; and it is upon this fuppofition only, that the refult of other computations which have been made of the profits of faffron, can e faid to have any tolerable degree of exactnefs; but the calculations themfelves are undoubtedly very inaccurate.
We have faid nothing here concerning the charge in buying, or profits in felling the faffron heads, becaufe in any large track of ground, thefe muft at length always ballance one another, while the quantity of ground planted yearly continues the fame.

## An effential extract of faffron.

Take two ounces of the choiceft frefh Englifh faffron dried, and either cut fmall or remaining whole; put it into a clean bolthhead with a long and flender neck; pour upon it fo much of the pureft alcohol, containing no foreign thing, as may float four or fix inches about it: then ftop the glafs dightly with a wreath of paper, put it into a wooden little furnace fupplied with a live coal buried under fifted afhes, that the heat may be only a bundred degrees. Leave it thus in digeftion for three days, the veffel being often thook ; let it afterwards reft for 24 hours, in a cold quiet place; then carefully ftrain off all the tinged liquor through a piece of clean linen, placed in a funnel fet in a clean glafs, and keep it clofely ftopped. It will be of a bright red colour.

The faffron remaining at the bottorn of the glafs, will be found paler than before. To this pour the like quantity of frefh alcohol, and proceed as before, and mix the tincture thus acquired with the former ; the faffron will now remare paler. If more alcohol be added to it, and the procefs be re peated, a ftill poorer tincture will be obtained, which be reto be kept feparate: the faffron will now become pale, but otherwife will have the fame appearance and bulk, as befo To this if water be added, digefted therewith, and poured To this if water be added, digeited therewith, and poured
off, it will be of a yellow colour ; put on frefh, and continue thus, 'till no more tincture can be extracted; and nowthe chives will appear quite white, and ifgently dried, will retain their former figure, though they appeared much fhrunk perfectly inodorous, and infipid, fo as fcarce to be diffin guifhed from bits of clean thread; whence it is wonderful where the feat of that furprizing matter extracted from is Chould be, which is found to give fo rich a tincture to fo large a proportion of alcohol. Let the tincture procured by the two firft digeftions, be diftilled in a glafs body, fitted with its head, and perfectly well clofed, with a fire of a hundred degrees, 'till about an ounce remains behind, which, when cold, is to be poured into a glafs veffel, to be kept carefully ftopped. It will prove of an exceeding red colour, a highly fragrant odour, and a bitter, aromatic, penetrating tafte, and have the confiftence of thin oil. Let it be kept under the title of the effential extract of faffron. The fpirit that comes over in the diftillation will be limpid and colourlets, but retain the grateful and aromatic fmell and tafte of faffron. This is to be referved for the fame ufe, and thus every time becomes the richer.

## The USE.

This furprizing experiment fhews us a new fpecies of matter, which we can neither call oil, fpirit, gum, rofn, relinous gum, wax, or balfam; but it is fomething perfectly fingular, and of a fpirituous oily nature. This extrad mixes with water, fpirit, and oil, and has fuch exhilarating virtues, that being ufed too freely, it occafions an almoft perpecual and indecent laughing; but ufed moderately, it becomes proper: it tinges the urine red, and is particularly faid to deftroy the petrefying power thereof in the kidnies, and therefore to be an extraordinary remedy againft the ftone.

## REMARKS.

Thus we find that nature has prepared, in particular parts of certain vegetables, a determined kind of bady, fo different from all others as fcarce to be referred to any other known kind; and has, at the fame time, endowed it with virtues, otherwife inimitable. We bave feen an example of this in the chives of faffron, which the principal chemifts have fo highly efteemed, as to call it the philofophers fpice. It is incredible how rich this faffron is in colour, tafte, odour, and virtue; how fmall the sulk is that poffeffes all thefe rich faculties, and how tender and eafily corruptible the thing itfelf is, and therefore requires the above peculiar method of operation.
Saffron is in many places in great efteem in fauces, and on many occafions in foods, but its great ufe is in medicinc. It is a high cordial, a powerful aperient, detergent and refolvent. It gives great relief in faintings and palpitations of the heart ; it alfo ftrengthens the ftomach, and affifts digeftion. It is certainly a noble medicine, under the direction of a filful phyfician, but given by a quack may prove as hurtful as otherwife it might be falubrious.
The Englifh faffron is allowed by all, except the French writers on thefe fubjects, to be greatly fuperior to any other. It is to be chofen frefh, tough, and flexile, difficultly broken, of a frong fmell and very bitter tafte, and fuch as ftains the hands in touching it. Our druggifts are apt to keep it in damp places, to increafe its weight, whereby it becomes mouldy, and fuch is to be rejected.

## AIL-CLOTH.

## The chief $L_{A w s}$ relating to this manufacture,

Makers of fail-cloth fhall fix ftamps, with their names, \&ce. to every piece, under the penalty of 5 l. Perfons cutting off ftamps, or ufing any falfe names, incur certain penalties. A bounty is allowed on exportation of Britifh-made fail-cloth. All foreign fail-cloth imported, for which duties are granted, flall be ftamped with a ftamp expreffing from whence imported, $\& \mathrm{cc}$. on forfeiture of rol. upon conviction before one or more juftices. New fhips on firft fetting out to fea, hall have a complete fet of fails, bonâ fide, belonging to her, manufactured here, on pain of sol. Flax yarn ufed in Britifh fail-cloth, thall not be whitened with lime, on forfeiture of 6 d . per yard.
Every mafter of a flip, belonging to a fubject (Eaft India fhips excepted) having any foreign fails on board, Mall, at the time of making entry of his thip, alfo make entry, on oath, of all foreign fails ufed on board, fur which the fame duties thall be paid as by ftat. 12 Ann. cap. 16. Foreign failcloth, unftamped, fhall not be made into fails, under penalty
of 50 . and forfeiture of the fails. Sails made of foreign fail-cloth unftamped, fhall not be mended, under penalty of 201. Every fail-maker thall imprefs on every new fail, a mark of eight incbes diameter, containing his name and place of abode, and under the penalty of 101 . See the articles place of abode, hemp; and fee the Business of the CusCansat the end of Letter S. for the Laws relative oSail-Making
SAIL-MAKER. The fail-maker cuts out and fews the ieces together, which form the fails of a fhip. It is a profitable rade.
SAILOR, fee the article Seamen.
SALT. This being a commodity of general utility in commarce, as well with regard to our fifheries as our royal navies, did fips concerned in the merchants fervice, and there beand delicacies in the operation to produce a falt baitinie to all occafions of life, we fhall give an abftract of the learned Dr Brownrigg's late improvements upon the making of falt, to a greater perfection than has been heretofore practifed in this kingdom.
Mines of falt, fays the doctor, have been long difcovered and wrought in England, Spain, Italy, Germany, Hungary, Poland, and other countries in Europe. Moreover, the fea affords fuch vaft plenty thereof, that all mankind might thence be fupplied with quantities fufficient for their occafions. There are alfo innumerable fprings, ponds, lakes, and rivers, impregnated with common falt, from which the inhabitants of many countries are plentifully fupplied herewith.
In fome countries which are remote from the fea, and bave little commerce, and which are not bleffed with mines of falt, or falt waters, the neceffities of the inhabitants have forced them to invent a method of extracting their common falt from the afhes of vegetables
In fhort, this falt is difperfed all over nature; it is treafured up in the bowels of the earth; it impregnates the ocean; it defcends in * rain; it fertilizes the foil; it arifes in vegetables; and from them is conveyed into animals; fo that it may well be efteemed the univerfal condiment of nature.

* See Boyle on the faltnefs of the fea.

Naturalifts, obferving the great variety of forms under which this falt appears, have thought fit to rank the feveral kinds of it under certain general claffes, diffinguifhing it moft ufually into rock or foffil-falt, fea-falt, and brine or fountainfalt: to which may be added others of thafe muriatic falts, which are found in vegetable or animal fubftances. Thefe feveral kinds of common falt often differ from each other in their outward form and appearance, or in fuch accidental properties as they derive from the heterogeneous fubftances with wohich they are mixed; but, when perfectly pure, they have all the fame qualities; fo that chemifts, by the exacteft inquiries, have nót been able to difcover any effential difference between them.
By rock-falt $\dagger$, or native falt, is underftood all falt dug out of the earth, which hath not undergone any artificial preparation.
f By rock-falt, fal rupium, the ancient chemifs mean falt adhering to the rocks above the high-water mark, being there lodged by the fpray of the fea, evaporated by the heat of the fun; which is the purefl falt of all for chemical ufes, and is to be had off the rocks of Sicily, and feveral illands in the Wefl-Tndies.
Under the title of bay-falt may be ranked all kinds of common falt extracted from the water, wherein it is diffolved by means of the fun's heat and the operation of the air; whether the water from which it is extracted be fea-water, or natural brine drawn from wells and fprings, or falt water ftagnating in ponds and lakes.
Under the title of white falt, or boiled falt, may be in cluded all kinds of common falt extracted by coction from the water wherein it was diffolved; whether this water be fea-water, or the falt water of wells, fountains, lakes, or rivers; or water of any fort impregnated with rock-falt, or other kind of conmmon falt.
The firf of thefe kinds is in feveral countries found to pure, that it ferves for moft domeftic ufes, without any previous preparation, triture excepted. But the Englifh foffil-falt is unfit for the ufes of the kitchen, until by folution and coction it is freed from feveral impurities, and reduced to white falt. The Britifh white-falt alfo is not fo proper as feveral kinds of bay-falt for curing fifh, and fuch feelh-meats as are intended for fea-provifions, or for exportation into hot countries. So that for thefe purpores, we are obliged, either wholly or in part, to ufe bay-fatt, which we purchafe in France, Spain, and other foreign countries. To remedy thefe inconveniencies, what follows may be ufeful, in order to fhew how the fubjects of Great-Britain may be fapplied with falt of their own manufacture, fit and fifficient for all their occations. In order that the methods here propofed might be better underftood, and that the reafonablenefs of them might more fully appear, it is neceffary to premife a brief account of feveral ways of preparing bay-falt, as well as white-falt. From this hiffory may be formed a judgment, how far the methods now in ufe are proper, in what deficient, where
erroneous, and how they may be improved for the benefit of our trade.
Bay-salt in general may be divided into two kinds. Firf, bay- falt, drawn from fea-water, as is practiled in France, Spain, Portugal, and many other countries. Secondly, bayfalt extracted from falt fprings, ponds, and lakes; as at Cape de Verde iflands, Tortuga, and other places. Of thefe the firft is imported in large quantities into Great-Britain and Ireland : our American colonies, in times of peace, are chicfly fupplied with the latter; but in time of war they have large quantities of bay-falt from Lifbon, and other parts of Portugal.
Bay-falt is prepared in a manner the moft fimple and eafy, when the water of ponds and lakes impregnated with falt, is totally exhaled by the force of the fun and air, and the falt is left concreted into a hard cruft at the bottom of the lake or pond. Of falt thus prepared we bave inftances in many parts of the world, as in the Podolian defert near the river Boryfthenes, on the Ruffian frontiers towards Crim Tartary, in the kingdom of Algiers, and in other parts of the world. Bay-falt is allodrawn from the brine of ponds and lakes, and it is prepared in this manner in the Cape de Verde iflands. This account was collected chiefly from the relations of feveral perfons of credit, who themfelves affifted in making falt in thefe illands. Every kind of bay-falt is prepared without artificial heat, and by only expofing the brine under a large furface to the action of the fun and air, by which, in proportion to the ftrength of the brine, and to the different temperature of climate and feafon, the falt cryftallizes into what we call bay-falt, and comes under different appearances to us from different places, which arife principally from the cleanlinefs and care of the artif.
White-salt, although in general, is made in warm climates, with the greateft eafe, and at leaft expence, by the heat of the fun, after the methods already defcribed; yet in feveral countries, where bay-falt might be conveniently made, they prepare all their falt by culinary fires. Thus in Auftria, Bavaria, and many other parts of Germany, and allo in Hungary, and even in fome parts of Italy, they conftantly boil the water of their falt-fprings into white-falt. But in other parts of Europe, as in Britain, and in the northern parts of France and Germany, an erroneous opinion long prevailed, that the heat of the fun was not there fufficiently intenfe, even in the fummer feafon, to reduce feawater or brine into bay-falt. And all arguments would probably have been infufficient to remove this miftake in the Englifh, had not the contrary been fully proved by experiments, which were firft accidentally made in Hamphire. However, the method of making falt by codion, will probably ftill continue to be pratited in Britain, as the falt fo prepared is for feveral ufes preferable to bay-falt; and when prepared after a particular manner, is preferable to common bay-falt, even for curing provifions, as the practice of the Hollanders fufficiently teftifies: fo that the due and right preparation of white-falt feems very deferving of the notice and regard of the public.
White-falt, as it is prepared from various faline liquors, may therefore be diftinguifhed into the following kinds :
i. Marine boiled Salt, which is extracted from fea-water by coction. 2. Brine or fountain-falt, prepared by coction from natural brine, whether of ponds or fountains. 3. That prepared from fea-water, or any other kind of falt-water, firft heightened into a ftrong brine by the heat of the fun, and the operation of the air. 4. That prepared from a ftrong brine or lixivium drawn from earths, fands, or ftones impregnated with common folt. 5. Refined rock-falt, which is boiled from a folution of foffilfalt in fea-water, or any other kind of falt-water, or pure water. 6. Laftly, Salt upon falt, which is bay-falt diffolved in fea-water, or any other falt-water, and with it boiled into white falt; and under thefe heads may be ranked the feveral kinds of boiled falt now in ufe. The learned author before mentioned has given us an exact hiftory of the manner of preparing thefe different kinds of falt, as practifed in different places, with mifcellaneous obfervations and cautions relating to their refpective proceffes, for which in general we muft refer to the work iffelf: but the making falt upon falt deferves more particular attention, as the author, being under no tie of fecrecy, has revealed to us the method of making in Holland and Zealand that ftrong and pure kind of falt, with which they cure herrings, and all other provifions for long-keeping, which gives the Dutch a great advantage over all other nations in the herring-fifhery; fince fifh preferved with this falt look much cleaner and fairer than thofe that are cured with bayfalt, and keep much better than thofe preferved with any other kind of white-falt.
From thie procefs whereby white-falt is made from fea-water by coction, it appears that fea-water, befides common falt, contains feveral other ingredients, fome of which are feparated before the common falt falls, and others remain in the bittern, after all the falt is extracted. Our author bas given a full and circumftantial account of thefe in an exprefs chapter under the appellation of Mempirs for an Analyfis of Sea-water.

## S A L

## S A L

The falt-boilers, and particularly thofe who prepare brine-falt, have long been accuftomed to make ufe of various fubftances, which they call additions, or fealonings, and mix them with the brine while it is boiling, either when they firft obferve the falt begin to form, or elfe afterwards, during the time of granulation. Thefe additions they ule for various purpoles. Firft, to make the falt grain better, or more quickly form into cryftals; fecondly, to make it of a fmall fine grain; thirdly, to make it of a large, firm, and hard grain, and lefs apt to imbibe the moifture' of the air; fourthly, to render it more pure; and, laftly, to make it ftronger, and fitter for preferving provifions.
Thefe additions moft commonly ufed to anfwer the abovementioned purpofes, are wheat-flour, refin, butter, tallow, new ale, ftale beer, bottoms or lees of ale or beer, wine-lees, and allum. Wheat-flour and refin are ufed for the property they poffers of making the falt a fmall grain; butter, tallow, and other unctuous bodies, are commonly applied, as they are faid to make the brine crytallize more readily; for which end, fome falt boilers more particularly prefer the fat of dogs; but others have little to plead for their ufing thefe fubitances, but immemorial cuftom. How far they have the effects afcribed to them, can only be determined by experiments, as feveral boilers, who formerly ufed them, now find they can make as good falt without them. Wine-lees, new ale, ftale ale; the lees of the ale and beer, are now generally rejected by the marine falt-boilers, except in the weft of England, where the briners, who ufe them, affirm that they raife a large grain, and make their falt more hard and firm, and fome fay that they make it cryftallize more readily. Hoffman prefers the ftrongeft ale; and Plott affures us, that it makes the falt of a larger or fmaller grain, according to the degree of its ftalenefs. The only good effects that fermented liquors can have as an addition, are probably owing to their acid fpirit, which may correct the alkaline falts of the brine, and fo render the common falt more dry and hard, and lefs apt to diffolve in moilt air: if, therefore, it Gould be thought neceffary to ufe any of thefe additions, in order to correct the alkaline quality of the brine, ftale ale, or Rhenith wine *, ought to be chofen, as new ale contains but little acid.

* Why not malt vinegar?

Allum is an addition long known and ufed in Chefhire, together with butter, to make the falt precipitate from fome forts of brine, as we are affured by Dr Leigh, in his Natural Hiftory of Lancafhire, Chefhire, \&cc. who firf taught the Cheflure falt-boilers the art of refining rock-falt. As the bad properties of their falt proceeded from hard boiling, they found every method ineffectual, until they had recourfe to a more mild and gentle heat. \& And as allum hath been long difufed amongft them, it is not likely that they found any extraordinary benefit from it, otherwife they would fcarce have neglected it, and continued the ufe of butter. However, the late Mr Lowndes hath lately endeavoured to revive its ufe, afferting, that brine-falt hath evermore two main defects, flakinefs and foftnefs; and, to remedy thefe imperfections, he tried allum, which fully anfwered every thing he propofed, for it reftored the falt to its natural cubical fhoot, and gave it a proper hardnefs, nor had it any bad effect whatever. But our author is of opinion, that whoever confiders the nature of allum, will fcarce expect fuch extraordinary effects from it. Neither does it here feem wanted; for the grains of common falt will always be fufficientiy hard, and of their natural figure, large fize, and no ways difpofed to run by the moifture of the air, if formed by a gentle heat, and perfectly free from heterogenebus mixtures: fo that the goodnefs of Mr Lowndes's falt does not feem owing to the allum with which it is mixed, but chiefly to the gentle heat ufed in its preparation.
The Dutch, who have long fhewn the greateft fkill and dexterity in the art of boiling falt, make ufe of another addition, which they efteem the greateft fecret of their art: this is whey, kept fo long 'till it is extremely acid, now firt revealed by our author to the Britifh falt-boilers, but long held in great efteem by the Dutch, for the good effects it bath upon their falt, which it renders ftronger, more durable, and fitter to preferve herrings, and other provifions.
Bay-falt, as well as whice falt, is of different kinds, and poffeffed of different qualities: with the different kinds of thefe, provifions muft be cured, according to the ufes for which they are defigned. The Dutch, indeed, ufe no falt for curing provifions, befides their own refined falt: with it they can preferve fleth and finh of all kinds, as well as with the frongeft bay-falt, and chufe to be at the expence of refining bay-falt, rather than to defile their provifions with the dirt and other impurities with which it commonly abounds.
Salt effeemed the beft for curing provifions, and for preferving them the longeft time, is that which is the ftrongeft and the pureft. This may be known by the following characteriftics, viz. it is ufuilly concreted into large grains or cryftals, which are firm and hard, and, in refpect to thole of other kinds of common falt, the moft folid and ponderous; it is not difpofed to grow moift in moderately dry air, to which it has been
expoled a confiderable time; its colour is white and fomewhat diaphanout; it hath no fmell; its tafte is truly muriatic, and more fharp and pungent than that of other kinds of common falt: it has, befides thefe, feveral other diftinguilled properties, mentioned by our author. The falts which approach neareft to this degree of perfection, are the beft kinds of bay-falt, and the ftrong Dutch refined falt; but moft of the falt now made for fale is very far from anfwering to thefe characteriftics.
Having related the various methods of preparing that are now in ufe, as far as they are come to our author's knowlege, it appears, that this art is not brought to fuch perfection in the Britifh dominions as in feveral other countries, the falt here prepared being unfit for preferving many kinds of provifions. It remains now to hew, that this want of a ftrong falt of Britifh manufacture, proceeds not from any defect in nature, but of art, and that, if proper fkill and induftry be ufed in the Britifh dominions, and due encouragement there given by the legiflature, fuch improvements may be made in this art, that not only Great-Britain, but Ireland alfo, and the Britifh colonies in America, may be fupplied with falt of their own manufacture, proper for curing all kinds of pre vifions, in quantity fufficient for all their occafions, in quality equal, if not fuperior, to any foreign falt now made at a moderate price.
Thefe are truths, which appear evident from the facts and reafonings contained under the following politions:
Lemma 1 . The quantity of water which annually falls in rain, fnow, and hail, is very different in different parts of Great-Britain, there commonly falling almoft double the quantity on the weftern coafts, that falls on the eaftern coalfs of that ifland.
Lemma II. The quantity of rain which falls in Lancalhire, during the four hotteft months of the year, viz. May, June, July, and Auguft, doth not, at a medium, amount to more than a third part of the quantity of water which falls in rain, fnows, and hail, during the whole year.
Lemma III. The water which afcends in vapours from the fea, very greatly exceeds that which defcends thereon in rain and other aqueous meteors; but the quantity of water which ufually exhales from a given part of the ocean, in a given time, cannot with any exactnefs be determined.
Lemma IV. The quantity of water which commonly exhales in Great-Britain from fhallow ponds, during the four hotteft months of the year, greatly exceeds the quantity of rain which commonly falls on the furface of thofe ponds during the faid months.
From thefe lemmata, which the author has fupported by the obfervations not only of himfelf, but of other learned men, are deduced the following propofitions :
Propofition I. In feveral parts of England large quantities of bay-falt may be extracted from fea-water, during the hotteft months of the year, by receiving the falt water into ponds, and fuffering its aqueous parts thence to exhale by the heat of the fun, and the operation of the air and winds.
Propofition II. In feveral parts of England large quantities of bay-falt may very commodiouly be extracted from feawater, after the fame manner that is practifed in France, and in other parts of Europe.
Propofition III. Bay-falt may be extracted in England from fea-water, in larger quantities, and with more certainty, than by the foregoing method, if care be taken to preferve the brine contained in the falt-pits from being diluted with rains, and to promote the evaporation of the water by feveral artificial means, which may eafily be put in practice.
Propofition IV. In feveral parts of England large quantities of excellent bay-falt may, with great eafe, be made from the natural brine of falt fprings, and alfo from the rock-falt diffolved in weak brine, or fea-water.
Propofition V. ' Bay-falt may be prepared in England by the foregoing methods, at a very moderate expence, equal in goodnefs to the beft foreign bay-falt, and in quantity fufficient for the confumption of all the Britifh dominions.
Propofition VI. In feveral of the Britifh colonies in America, bay-falt might, with little expence and trouble, be prepared from lea-water, in quantities fufficient to fupply the American fitheries, and all other occafions of thofe colonies, fo as to become a confiderable branch of their trade.
The author has fupported all there propofitions with great ingenuity; but we cannot pafs over in filence the artificial means to promote the evaporation of fea-water mentioned in Propofition III, as well as to preferve the brine contained in falt-pits from being diluted with rains; we therefore fhall lay before the reader a thort account of thefe.
It will be proper, fays our author, to make all the falt-pits of the marfh in one long row, extended from ealt to weft, and for each pit to make covers of thin boards, or rather of coarfe canvas, or fail-cloth, Itretched on frames of wood, and painted white. Thefe covers muft all be fixed with hinges, to ftrong pofts and beams, on the north fide of the pits, fo that they may be let down and drawn up with cords and pullies, or by fome other contrivance, fomewhat like draw-bridges. Thefe covers, thus fixed, may be let down
over the pits like a fhed, or penthoure, in rainy weather, and in dry weather may be erected almoft to a perpendicular, but inclining a Fittle towards :he fouth, fo as to form a wall with a fouth afpect. Thus thefe may ferve a donble-purpofe, as coverings for the pits in wet weather, and as reffectors of the fun's heat upon them in dry weather, and thus greatly promote the evaporation of aqueous patts of the brine: The hinges on which the reflectors turn may be fixed about eight or ten inches from the ground, by which means, when the reflectors ftand upright, there will be an opening left beneath them, through which the air will continually flow in a brifk current, and greatly increafe the evaporation of the water.
After havirig gone through that part of Dr Brownrigg's work which relates to bay-falt, we proceed to the methods that genticman propofes for preparing and improving white falt, which, if brought into ufe, may probably be of advantage, not only to private undertakers, but allo to the public: for it appears; that two very different kinds of white falt are required, the one for the ufe of the table, and the other as a condiment for provifions. Its whitenefs, drynefs, and the framilnefs of its grain, are the properties which chiefly pecommend the firft kind; and its gieat ftrength and purity, the latter It is this ffrong and puife kind of white falt which is wanted in the 'Britiff dominions'; and it is', therefore, our author's principal defign hete to confider how this defect may be fupphied, although, at the fame time, inftructions are given how to prepare table-falt, not only bétter in quality, but alfo at lefs expence, than it is now prepared by the common methods. Lemma I. In the common proceffes for making white falt, the falt is deprived of a conifiderable part of its acd fpirit, by the violent boiling ufed in its preparation.
Lemma II. Moit kinds of white falt are rendered impure by the mixture of various heterogeneous. fubftances.
Lemma III. White falt, by the violent coction commonly ufed in its preparation, is rendered lefs fit for preferving fifh, flefh, and other provifions, than it would be if prepared with a more gentle beat.
Lemma IV. The heterogenepus fubftances which are commonly mixed with white falt, render is lefs proper for preferving provifions than it would be if feparated from them. After having fully' confidered'the foregoing lemmata, our author gives a method of preparing a kind of white falt proper for curing fifh, flefh, and other provifions; likewife a method of refining falt; but for thefe we muft refer you to the work itfelf, as well as for the tables, wherein the feveral expences attending there operations are minutely confidered.
Mol of the facts referred to in thefe difquifitions are fuch, as the conftant practice of thofe who make falt fufficiently warrants us to rely upon for true and certain'; or elfe they are the obfervations of judicious falt-officers, daily converfant in thefe matters, or of curious and inquilitive navigators, merchants, travellers, and naturalifts; or, lafly, the experiments of many learned phyficians, chemifts, and philoropiers: the truth of whicli feveral facts, though many of then have been fome time publihed, hath never been'called in queftion. So that thefe oblervations and experiments may probably be more relied on by the public, than if they had only been made by our author, fince they have the eftimony of many fkilful and unprejuticed perfons, who could have no notion of the ufes to which they have been here applied. If, therefore, the arguments founded upon thole facts fhould be efteemed any ways realonible and latisfactory', the author prefumes to remark, that it might not be unworthy the wiffotn of the Britifh legillature to direct a möre full enquiry to be made into a matter of thigimportance, and to order proper works to be erected for making bay-falt, and for making and refining white falt, and to put thote works under the management of able and" judicious perfons, to make exact and accurate trials, in order to dilcover the beft and cheapeft methods of doing them; and the miettods which fhould be moft approved of might, for the general good, be made public, and eftablthed, by law, a common itandard, to which all thole who make falt in the Britifh dominitons fhould be obliged to conform.
The making and refining falt muft certainly be confidered as one of thofe mechanic arts, the hiftory of which, as we are taught by the noble * lord Verulam, is a necelfary part of that knowlege, that true fcience of nature, which is not taken up in vain and fruitleft feculations, but effectually fabours to relieve the necelfities of human life. See The Business of the customs at the end of Letters, for the Laforrelative to Salt,

- Werulam de Aus. Sciestl. lib. ii. cap. z.

SALTERS, or, as they àre offen termed, DRY-SAL TERS, who deal in divers foreigni goods of a eiryilh kind, as $\log$-wood, cochineal, put-afles, \&c. and much like merchants, moifly in $x$ whotefale way.
They were incorponated into a company by queen Elizabeth, and are one of the twelve of the city of London.
SALT-PETRE. It is a falt, though extracted out of the earth, yet abundantly impregnated with the firit of the air; it alfo cleaves to fone walls, rocks, clefts, and caverns under VOL. II.
ground. That which is extraeted out of fat earth, is nimate in moft countries in Etirope; but our greateft quantities conse from the Eaft-Indiest It is cempored of near an equat quantity of fixed and volatile nitrous aërial falts, bitterift in tâte: it is the product of the elements; depofrted in the bofom of the earth, for the generation and nourifiment of vegetables; and may not be improperly called the univerfal and unffecific mercury,

## Purification of falt-petre.

Take what quantity you pleafe of nitre, diffolve if in 系 watun water, filtre, evaporate, and cryyttadizé; as youi do other fatas: Some efteen the cryiftaline nitre baft others the hump; but I could never obferve any difference in them, the one being the top, and the lump the bottom of the pan in prhich the nitrous liquor was put to fhoot.

* Somewhat more than fix times its weight of boiling water is, fufficient.

## Of the gathering of falt-petre in quexntitiea.

Although it be certain that the air and the water are ali impregnated with a kind of nitre, which is frequently to be feen coagulated into fine white falt, like flour of wheat (tiont by the very tafte may be eafily known to be petre) ftickiag to the fides of plaftered walls, and; in brick walls, to the mortar between the bricks (in dry weather, or where the vaill is defended from the rain) for lime doth fitrongly atinact it; and although dew and rain do convey much of it to the earth; and the clouds feem to be fpread, out befare the face of the fun, either to inribibe forme part of his influence, or to have a falt generated in them, for to advance the fertility of the earth, and certainly they return not without a bleffing; for falt-petre may be eafily extracted out of rain and dewts, but from the batter more plentifully, accompanied, indeed, weith a greafy parple oil, in geeat plenty: thaugh likewife moft franding vaters, and even deep wells, have fome fmall quantity of falt-petre in them: though the face of the earth, if it were not impregnated with this falt, could not produce wegetables, for falt (as the lord Bacon fays) "is the firft rudiment of 1 ife , and nitre is, as it were, the life of vegetables; yet; to be' more fure of it, experiment laews hikewife, that fome is to be found in fallows, and the eanth which moles caft up in the fring: though the air arid water want it nat; yet it is not there to be had in any propertion anfwerable to the charge in getting it: and though the earth munt neceffarily have great quantities thereof generated or infufed into it, yet, in thefe temperate countries of Europe, it is no fooner dilated by rain, or,other waters, but it is immediately applied to the production or nutriment of fome plant, infect, ftone, or mineral; fo that the artift will find as little of it here to ferve his turn, as in the other two elements.
The chief places, therefore, where falt-petre is to be faund in any quantifies in thefe northern countries, are in fables, pigreonhoufes;'cellars', barns, warehoufes, or, indeed, any place which is covered from the rain, which would diffolve it, and make it vegetate, as alfo from the fun, which doth rarify it, and caufe it to be exhaled into the air. (For the fame reafon, hufbandmen alfo might make double or treble the profit they ufually do of their mucky if they will lay it up under a havel, or fome covere'd place, until they carry it our upon their land.) A nd I have been told by an experienced workman, that no manure yields petre fo plentifully as the earth in churches, were it not an impiety to difturb the afhes of our aneeftors, is that facred depofitary. See the article Manure.
For this purpofe the earth fhould be of good mould; and the better the mould is, the more petre is produced, for in clay or fandy earth, little or none is to be found: the freer ingrefs the air hath into a place, it is fill of more advantage, fo that the fun be excluded; and let the earth be never fo good, if it be laid on a brick or boarded floor, it will not be for rich in perre as if it had free communication with the extalations of the lower parts of the earth.
Ia arry place thus quatified, you cannot mifs of grod quaxtities of petre, if it have not been drawn out in fome years before, which a workman will quickly find; after he hanh digged the firft Ipadeful of earth, by laying a little of is on the end of his tongue ; and if it taftes bitter, he is fure of good ftore of faltpetre; if the ground be good, it consinues rich to fix or eight feet deep, and formesimes, but not often, to ten.
After the falt-petre is extracted, if the earth be laid wet in the fame place again, it will be twenty years ere any canfiderable quantity grows there of it; but if the earth be well dried, it will come in twelve or fourteen: and if they mingle with the dried earth ftore of pigeons-dung and mellow horle dung, and then temper it with urine (as was ufual before we were fupplied with petre from India) it will be fit to dig again in five or fix years. He that thall cart water upon a ground fit en it will quite defrou earth; but he that throws foap-fuds onit the pecre (as the workmen have a tradition) and it very well deferves a further enquiry.
That falt-petre, and the way of drawing it out of the earth 9 A
now in ufe, was a modern invention, is generally concluded. by all authors; but whether we owe it to chance, or the fagacity of fome great wit, is as unknown as the time when it was firit difcovered.
It feems to have many years preceded the invention of gunpowder, which by the Germans is afcribed to Conftantine Autlitzer, or Berthwold Scwertz; a monk of Friburgh, and was in all probability not long difcovered when the inventor (Polydore Virgil tells us) taught the ufe of guns to the Venetians, at the battle of Foffa Claudia, where they obtained that notable victory over the Genoefe, anno $1380^{\circ}$ : for there is mention made both of falt-petre and aqua fortis, in the writings of Geber, a Spanifh Moor, and an alchemift; but at what time he lived is not fatisfactorily known, though it be certain fome hundreds of years before Raymund Lully, who, about the year 1333, publifhed rome of his books, wherein he treats of falt-perre and aqua fortis, It is no ill conjecture of Maierus, that the aforefaid monk being a fkilfulalchemift, had a defign to draw a higher firit from petre than the common aqua fortis, and, that he might the better open the body of petre, he ground it with fulphur and charcoal, by which compofure he foon became the inventor of gun-powder. See Gun-Powder.

The manner of collecting falt-petre in quantities.
In the firft place you muft be provided with eight or ten tubs, fo large that they may be able to contain about ten barrows full of earth each of them: thefe tubs muft be all open at the top, but in the bottom of every one of them you mult make a hole, near to that fide you intend to place outermoft, which hole you muft fit very well with a tap and a fpiggot, on the outfide downward.
On the infide of the tub, near the tap-hole, you muft carefully place a large wad of ftraw, and upon that a fhort piece of board, which is all to keep the earth from fopping up the tap-hole. When you have placed your tubs on their ftands, at fuch a diftance one from the other that you may come with eafe between them, then fill them up with fuch petre earth as you have chofen for your work, leaving only void about a fpan's breadth between the earth and the edge of the tub; then lay on the top of the earth in each tub, as near as you can to the middle, a rundle of wicker, like the bottom of a bafket, and about a foot in diameter, and by it flick into the earth a good frong cudgel, which muft be thruft pretty near the bottom; the wicker is to keep the water, when it is poured on, from hollowing and difordering the earth, and the cudgel is to be ftirred about, to give the water ingrefs to the earth upon occafion: then pour on your earth common cold water, "till it ftands a hand's breadth over the earth; when it hath ftood eight or ten hours, loofen the fpiggots, and let the water rather dribble, than run, into half-tubs, which muft be fet under the taps. 'This lixivium the workmen call their raw liquor; and note, that if it come not clear at the firf drawing, you mult pour it on again, and, after fome little time draw it off, 'till it come clear, and of the colour of urine.
If you are curious to know how rich your liquor is before boiling, you may take a glafs phial, containing a quart, fill t with the common water you ule, then weigh it exactly; next fill the fame glafs with your liquor, and find the difference of weight, which, compared with the quantity of all your liquors, will give you a very near guefs how much faltpetre you are like to make by that boiling.
Then pour again, on the fame earth, more common water, that it may bring away what is remaining in the earth of the former liquor. This fecond liquor is of no other ufe but to be poured on new earth, inftead of common water, becaule it contains fome quantity of falt-petre in it.
When this is done, turn the ufelefs infipid earth out of the tubs, which you muft fill with new earth, and continue this operation, 'till you have in the fame manner lixiviated all the earth: then fill your copper with your liquor, which copper, for one of the profeffion, muft be about two hundred weight, and fet ftrongly in a furnace of brick-work; befides, on one fide of your furnace you are to place a tub full of your liquor, which, at a tap below, may dribble as faft into the copper as the force of the fire doth wafte your liquor ; which invention is only to fave charges in fuel.
When you have boiled it up to that height, that a little of it, flirted off the finger on a live charcoal, will Hafh like gunpowder (which for the moft part falls out to be about two days and a night's boiling) at that time, upon trial, a hundred weight of the liquor contains about 35 lb . weight of petre; but the workmen feldorn make ufe of any further indication, than by finding the liquor hang like oil on the fides of the brazen fcummer, when it is dipped into it, which is a fign it is fit to be paffed through the afhes, which is done in this manner.
You muft prepare two tubs, fitted after the manner of the firlt, wherein you put your earth, faving that at the bottom of thefe tubs you muit lay reeds or ftraw, a foot high; over them place loofe boards, pretty near one another, over them again a little more ftraw (which is to keep the alhes from the
top, and give the liquor room to drain the better fron them:) then fill up your tubs with any fort of wood-afhes, to half a foot of the top; pour on the forefaid liquor, as it comes fcalding hot out of the copper, on the afhes contained in the firft tub; after a while draw it off at the top: and focontinue putting on and drawing off, firft at one tub of afhes, then at the other, 'till your liquor grows clear, and lofes the thick turbid colour it had when it went on.
When all the liquor hath in this manner paffed through the afhes'of both tubs, that by this means all its grealy oil is left behind in the alhes, you mult keep it for the fecond boiling in a veffel by itfelf: in the mean time, pour upon your athes a fufficient quantity of common water, very hot once or twice, to bring away what is remaining of the liquor in the afhes.
When you begin the fecond boiling, put firt into the copper the water that went laft through your afhes, and as that waft eth, let your ftrong liquor drop into the coppet, out of the tub above defcribed, ftanding on the fide of the furnace, 'till the liquor in the copper be ready to fhoot or cryftallize,
Note, That toward the end of your boiling, there will arife great ftore of fcum and froth, which muft be carefully taken off with a great brals fcummer, made like a ladle, full of little holes; and ufually about that time it lets fall fome common falt to the bottom, which you muft take up with the faid fcummer, and lay it afide for another ufe.
To know when the liquor is ready to fhoot into petre, you need but drop a little of it on a knife, or any other cold thing that bath a fmooth fuperficies, and if it coagulate, like a drop of tallow, and do not fall off the knife when it is turned downwards, which alfo may be judged by its hanging like oil to the fides of the fcummer; when the liquor is brought to this pafs, every hundred weight of it contains about three fcore and ten pounds weight of petre.
When you find your liquor thus ready to fhoot, you muft with great iron ladles take it out of the copper;' into a high narrow tub for that purpofe, which the workmen call their fettling tub; and when the liquor is grown fo cold, that you can endure your finger in it, you thall find the common, or cubic falt, begin to granulate, and Atick to the fides of the tub; then at the tap, placed about half a foot from the bottom, draw off your liquor into deep wooden trays, or brafs pans, and the cooler the place is where you let them ftand to fhoot in, the better and more plentifully will the falt-petre be produced; but it will be of no good colour 'till it be refined, but will be part white, part yellow, and fome part of it blackifh.
The falt which fticketh to the fides and bottom of the fet-tling-tub is of the nature of common falt, and there is fcarce any petre to be found but is accompanied with it, though no doubt fome of this is drawn out of the afhes by the fecond liquors: if it be foul, they refine it by itfelf, and about London fell it at good rates, to thofe that falt neatstongues, bacon, and collar-beef; for, befides a favory tafte, it gives a pleafing red colour to moit flefh that is falted with it.
When the liquor bath food two days and two nights in the pans, that part of the liquor which is not coagulated, but fwims upon the petre, muft be carefully poured off, and being mingled with new liquors, muft again pafs the affees, before it be boiled, elfe it will grow to greafy that it will never generate any falt. To refine falt-petre, fee above. Before we take our leave of this article, it may not be amifs to obferve, firft, that though petre will diffipate in gun-powder, yet if you fulminate it in a crucible, and burn off the volatile part with a powder of coal, brimftone, antimony, or meal, there will remain a falt, and yet fo fixed (very unlike common falt) that it will endure the force of almoft the ftrongeft fire you can give it; which being diffolved into water, and firit of nitre dropped into it, 'till it give over hifing (which is the fame with the volatile part that was feparated from it in the fulmination) it will be again reduced to cryftals of petre, as it was at firft; which roble experiment the world hath already been taught, by an honourable member of the Royal Society of London, with a train of fuch important obfervations as never were before raifed from one experiment.
That which' I aim at then is, that, if the fpirit of volatile falt of foot, or of the urine, blood, horns, hoofs, hair, excrements, or, indeed, any part of animals (for all abound with fuch a volatile falt fixed, and oil, as petre doth) could by the fame way, or any like it, be reduced to petre, or fome nitrous falt not much differing from it ; it would excelliently make out a theory that I am much delighted with, 'till I an convinced in it, which is, that the falt which is found on vegetables and animals, is but the nitre which is fo univerfally diffufed through all the elements (and muft, therefore, make a chief-ingredient in their nutriment, and, by confequence, of their generation) a little altered from its firf complexion: and that the reafon why animals that feed on vegetables are obliged by nature to longer meals than thofe that feed on other animals, is, becaufe animals are fuller of that falt than vegetables: and, indeed, fuch animals are but

- caterers of it for man, and others whom nature's bounty catererifies with a more ftrong and delicious diet.: SAL.VAGE, an allowance made for the preferving goods from fhipwreck.

## The principal laws relating thereto.

By the naval laws of Oleron, if a fhip departing with her lading to any place abroad, happens, in the courfe of her voyage, to be rendered unfit to proceed therein, and the feamen fave as much of the lading as poifibly they can; if the merchants require the goods of their mafter, he may deliver them if he pleares, they paying the freight in proportion to the part of pleaies, they paying the voyage that is performed, and the cofts of the falvage : the voyage that is performed, and he cofts one may can readily refit his vefle, he may do it; and although he has promifed the people who belped him to fave the thip, the third or the half part of the goods faved, for the danger they ran therein; yet, if fuch a caufe come before any judicature, it thall be confidered the pains and trouble they have been at, and the reward be accordingly, without any regard to the promifes made them by the parties concerned, in the time of their diftrefs. See Oyeron's LAWs.
If a hajp puts to fea with merchants goods, and there the is difabled or perifhes, by the fault of the mafter or his men, the goods that are faved thall be fecured in a certain place, free from danger : but if it be proved by witnefles that the misfortune was occafioned by tempeft, what remains of the thip and goods thall be brought to a contribution, and the mafter hall retain half the value of the freight, by the laws of Rhodes. And the fame laws have ordained, that if a hip be furprized at fea with whirlwinds, or wrecked at fea, any perfon faving any part of the wreck, fhall have one fifth of what he faves. See Rhodian Laws.
And for the charges of falvage, very great allowances have been made; as to the divers and falvers, the balf; the third, or the tenth of the things faved, according to the depth of the water out of which they pere fifhed, whether fifteen, eight, or one fathom: alfo a tenth part for ralvage on the coalt, and the fifth to him that, faving himfelf, carries fomething with him. If the flip only perifh, and the goods be faved, then the goods fhall pay the tenth or the fifth, as the difficulty of the faving thereof fhall require: and gold, filver, filk, and the like, being of eafy tranfportation, thall pay lefs than goods of greater weight, and more burthenfome for carriage, which are in greater danger. Lex Mercat. Malines, 119 :
Where things are caft up by thipwreck, or left through cafting in florms, the law s of R hodes allow to the finder a fifth part for the faving; and in France they allow one third part for falvage; but by the common cuftom of countries, every perfon of quality, or lord of a manor, \&c. claims all as his own, if it cometh upon his land; contrary to fome fea laws, which give it to the finder: though, by the opinion of hawyers, the finders thereof Ghould do therewith as with other goods found upon land; they ought to proclaim the things to be forth-coming to the true owner or lofer, and, if no man claim the fame, then the finder to keep them to himfelf. Lex Mércat, Malines, 1 Ig.
By fatute 12 , Ann. cap. 18. All perfons required by conftables, \&cc. who fhall act in the faving and preferving any thip in diffrefs on our fea-coafts, or the cargoes thereof, Mall within 30 days after be paid a reafonable reward for the fame, by the mafter of the chip or merchant ; in default whereof, the thip or goods fo faved Chall remain in the cuftody of the officers of the cuftoms, 'till payment be made: and if any difference arife about the falyage, three juftices of peace fhal adjuft the quantum to be paid to the perfons acting therein, which Chall be binding to all parties, and recoverable in an action at law.
And if goods thus faved are rot claimed in twelve months, they thall be fold, the juitices taking an account thereof in writing, figned by the officer of the cuftoms, into whofe hands they are fafely to be put; and, if they be perifhable goods, they are to be forthwith fold, and, after charges deducted, the money arifing by fuch fale fhall be tranfimitted into the Exchequer, with a fair account of the whole, for the benefit of the owner, who giving proof of his property before one of the barons of the Exchequer, fhall, upon his order, receive the fame.
If any perfons fhall moleft any one in faving the thip or goods, or, when faved, Chall deface the marks of any goods,
before the fame be entered in a book for that purpofe, fuch perfons fhall, in 20 days, make double fatisfaction to the party grieved, at the difcretion of the two next juftices, or, in default thereof, mall be fent to the houfe of correction for 12 months. See the remainder of this ftatute under the article Wrecks.
SAMOGITIA lies on the north of Pruffia, between Courland and Semigallia, on the nórth; Lithuania on the eaft and fouth eaft; and Ducal Pruffia on the fouth-weft, with a frmall part of it extending weft, quite down to the Baltic. $\mathrm{I}_{\mathrm{t}}$ is a marfhy foil, and has abundance of rivers and lakes, that at fome frafons overflow the land, which yields corn and
pafture. The country has inacceffible mountains, and is over-rum with woods, wherein the inhabitants find great quantities of honey, every tree, alrnoft, having a fwarm of bees; and their was is purer and whiter than that either of bees; and their was is purer and whiter than that either of
Lithuania or Livonia. Here is a breed of horfes which are fall, but frightly, fwift, and hardy.
The Samogitians, as well as Poles, plow, fow, and harrow, all at the fame time; and the ground having been but once improved by burning, will bear crops feven or eight years tegether, without dunging. When they burn the woods on the lands, if they meet with high trees, they do not cut them down, but only prune off their fide branches, to let in the rays of the fun upon the ground; which they perform with fuch dexterity, that one peafant will prune above a thoufand trees together, without once coming down: for which end, he provides himfelf with a feat of rope, much like a ftirrup, which he faftens to a long cord, and having caft it over an arm of a tree, a boy, who is on the ground, draws him up and down; and, when this is done, by the help of another tree he eafily flifts himfelf, with His hook, to the next. They have allo as odd a way of fowing; which is, by mixing two parts of barley with one of wheat, and putting them into the ground together, in the fring; whereby it bappens, that the barley may be mowed in one harveft, and the wheat reaped the next. This wheat being trod down by thofe that mow the barley, the next harveft commonly comes up very thick and high. In time of war they bury their corn under ground, in a place made up with pofts and bark of trees, for that purpofe; and they dry their corn with fmoak, before they lay it up in their granaries, by which means it keeps good for feveral years together.
SARDINIA, an ifland in the. Mediterranean, Thuate befween 8 and 10 degrees of eaft longitude, and between 39 and 41 degrees of north latitude; bounded by the ftraight which divides it from Corfica on the north; by the Tufcan Sea, which flows between this illand and Italy, on the eaft; and by other parts of the Mediterranean Sea on the fouth and weft; and is about 140 miles long, and 60 broad; a warm country, but not efteemed very healthful.
This illand, which is the moft confiderable in the Mediterranean, next to Sicily, for bignefs and fertility, is faid to be about 700 miles in circuit, comprehending the turnings and windings of the coaft, namely, the capes and the gulphs which way of calculating is no lefs uncertain than laborious; herice fome have it only 500 miles in compaifs. The foil is fruitful in all Yorts of corn, and no lefs productive of various fruits, in great quantity and perfection. It allo breeds yaft herds of large and fmall catte, fo that it furnifhes Italy with wool, hides, and a fine fort of cheefe, befides its home confumption. The traffic it drives moreover from the fifhery of coral, linen, filk, \&c. is no lefs confiderable. The moft rocky and mountainous parts of the ilfand are no lefs rich within than barren without, they yielding great quantities of metals and minerals, as gold, filver, lead, iron, fulphur, allum, \&c.

## R'EMARKS.

This iffand was under the dominion of Spain xill the year 1708, when Sir John Leak, the Englifh admiral, reduced it to the obedience of the late emperor Charles VI. It was afterwards allotted to the duke of Savoy, anno 1719 , with the title of king of Sardinia, under whofe dominion it ftill remains: but the duke was obliged to make a ceffion to the houfe of Auftria of the ifland Sicily [See Sicily] to which throne he had been advanced by the parties to the Utrecht treaty, anno $17{ }^{1} 3$.
The commerce of the dominions of his Sardinian Majefty was heretofore fo very inconfiderable, as to be farce worthy of notice; but by degrees, and under the two laft reigns, more efpecially, things have been much changed. The ftaple commodity of Piedmont is a kind of filk indifpenfably neceflary in many manufactures, and his Sardinian Majefly has put this under fuch regulations às to make it rife to the higheft amount poffible; the navigation of the Po enables the inhabitants of Turin, and the adjacent country, to carry on a confiderable trade to Venice.
There is a little (and but a llittie) traffic flirring at Alexandria and Villafranca. Befides all theere, "his Sardinian Majefty has gradually and filently poffefled himelf of ali the paffages, by which the inland trade is carried on between France and Italy, and having it by this means in his power to lay what duties he thinks proper, derives from thence an additional revenue, which is not only of great confequence in itfelf, but the more fo by keeping the neighbouring fates in a kind of dependance, through fear of the injuries he might otherwife do the commerce of their fubjects.
This fufficiently demonftrates the power of his Sardinian Majefty, and that it is both natural and expedient the ballance of Italy thould be held by him. This his interefts feem to direct, the fituation of his country demands, and even without the leaft fufpicion of flattery, we may add, the conduct of the prefent king deferves it. Whatever addition of territory he receives from any quarter, is not more an acquifition to him, than to the commion caufe; and we have
reafon to wifh his power may increafe, becaufe we tee the whole of his power has been excrted for the nobleft purpofes, in preferving the freedom and independency of Italy'; which, without queftion, will be allways at his heart, and in his
The doubts and fufpicions which weak and nárrow minds have been, at certain feafons, too"apt to fuggelt, with reference to this great prince's conduct, are in reality as idle and improbable, as they are falfe and groundlefs'; becaufe it is impofible, that the houfe of Bourbon fhoutd ever give him any fecurity for the performance of the promifes they may be induced to make him. A little confideration will fet this in the ftrongeft point of light. The offers they made him bave been almoft without limits, which;' at the fame time that it Thews his importance, mutt coinvince him, that unlefs they had mighty views for their own advantage, they woild never make them. But what are thefe views'? The eftablifhing a fuperior power in the hoife of Bourbon in Italy. If we put this into other words, it means neither more nor lefs, than propofing to give him a mafter; which is fuch a propofition, as no offers whatever can tempt a wife and brave prince to liften to with the leaft attention.
It was to avoid this, that in the earlieft part of his reign he entered into an alliance with thofe very powers, which gave him an opportunity of knowing their maxims fo welt, while they profeffed themfelves his friends, that it is the greateft abfurdity to fuppofe he can ever be brought to truft them, after having had them fo long, and to fuch a degree, his enemies. It was to prevent his having a matter, that he engaged in the late war, and run fo many rifks in the courfe of it. This was manifeftly the bafis of the treaty of Worms, the whole fcope of which was to render him independent, and to give him the power of fupporting that independency. To depart, therefore, from this plan, for the fake of any thing that could be offered by the Spaniards and French, would be fuch a manifeft facrifice of the fubftance to the fhadow, that, confidering the knowlege we have of his Sardinian Majelty's character, ought never to be fufpected. The fmalleft diftrict granted him by the queen of Hungary, under the guarantee of his other allies, is of more real confequence to him, than half the duchy of Milan given him by the houfe of Bourbon, admitting they fhould have it in their power to give it ; becaufe they can never have this power, without having at the fame time the power of taking it again; which would not only render the poffeffion of that, but of all his other dominions, precarious.
It is very apparent, that even as things ftand now, the territories of this monarch are very far from being extenfive; but it muft be allowed that they are very populous, and the people of Savoy, and of the vallies, are natürally martial; To that under thefe two laft reigns, a very confiderable army of regular troops has been conftantly kept up, and the king can never be at a lofs to bring 40 or 50,000 men into the field, when occafion requires it.
This force is, indeed, nothing in comparion to that of France and Spain ; but it will dppear very confiderable, when compared with the ftrength of other Italian princes. Befides this, the fortrefles of Piedmont are in fo good order, that his Sardinian Majefty can always make a ftand, 'till he is fupported by the Auftrians, which he muft be fo long as they defire to preferve their dominions in Italy.
Upon thefe principles, therefore, we may lafely lay it down, that though his revenue is not fo large as that of the Great Duke ${ }_{\text {, y }}$ yet he is one of the greateft powers in Italy, and is juftly efteemed fo by his meighbours, his allies, and his enef mies. His claim upon the city of Geneva, and the attempts made by fome of his predeceflors to become mafters of it, will be hardly ever forgot by that republic ; which, however; is fufficiently covered from either his ambition, or his refentment, by its ftrict league with the Swifs Cantons, as well as by the protection it may always expect from the Frenc. crown.
The pretenfions he inherits from his anceftors to feveral places poffeffed by the republic of Genoa, will probably hinder hims, at leaft for fome years, from living in any ftrict degree of harmony with that commonwealth, which is năturally jeat lous of him, and will probably continue fo; though, if the knew their own intereft, they would certainly compromite their differences with shis prince, which would be a thing of great confequence to both.
His taking the citle of king of Cyprus, and fome circumfances, has created a coldnefs between this monarch and the republic of Venice, though it is certainly for their mutual good to farget old injuries, and to affift each other.
There have been formerly high difputes between his Majefty's predeceffors and the Pope, which have been renewed in the laft, and even in the prefent reign; but they feem now buried in oblivion, as they ought to be, confidering that the: pontiff muft be long ago conyinced by experience, that the thunder of the Vatican has loft its efficacy; and excommunications will do very little, either with this prince or his fubjeits; and as to the temporal power of the Pope, it is not to be compared with that of the Sardinian monarch.

The teritories of the-Kirig of the Two Sicilies, if we confider him only the thght of an Italian potentate, lie at too great a difance to create any difference between therm; but confidered as a prince of the houfe of Bourbon, the kithg of Sardinia cannot but be jealous of any augmentation of his power. Buf to fay the truth, the great point which this monarch muft always keep in view, is the ballancing the power of that houfe anid the houfe of Auftria; to the latter of which, notwithfanding his near relation in blood to the former, it is more natural for him to adhere:
As things fand at prefent, it is far from being probable that the court of Vienna will incline to medafures that may'juftly provoke a prince, to whom fhe has fo many' obligations.- for whofe affiftance fle muft have fo often occafion, aind who, in that cafe, w'ould eafily' find refources fufficient to defend himclf againft all attempts.
On the other band, while, from a duy regard to their refpective interefts, a good correfpondence is kept up between them, the light of experience plainly thews, that their enemies will find it very hard to make any impreffioh upon either; and in procefs of time it is highly probable that fuch alterations may tappen in Spain; as' will render' their' capacity of defending themfelves ftill greater than they are at prefent.
But with refpect to the houle of Bourbon, though it will be always decent atrid proper for his Sardinian Nİajefty to preferve or it a juft meafure of refpect and complaifance; yet a's his fafety finuft perpetually depend u'pon the greatnefs of his own ftrength, and the limitation of their power, fo it can never become either requifite or agreeable to him, to enter into any clofe alliance with that family, the aggrandizing of which muft be always, if not at his expence, at the rifque of his fecurity. Therè aré affó good reafons tó believe, that France will not eafily be drawn to quarrel with a prince, who keeps, as it were, the gates of her dorriinions, and who may be juft'y ftiled a terror to her, while fhe is fo to all the reft of her neighbours; for, withouc doubt, if the king of Sardinia were thoroughly provoked, and the houfe of Auffria at full berty to fupport him, he might carry his arms either into Dauphiny or Proverice, or, perhaps, into both at the fame time, more efficacioufly than in the laft, or the preceding war; in both which, however, írruptions on this fide have brought thie French monarchy into circumftances of very great diftref. As for the maritime powers, they are, though at a diftahce, the natural and coniftant allies of the monarch of whom we are fpeaking, becaule their interefts and his are the fame: and if a good port could be made in the county of Nice, capable of admitting men of war, he would be quickly able not only to maintain his own freedom, but alfo to protect the libefty and independency of Italy againft anl invaders; though hie would not be evea then in a capacity of giving aw to others.
If ounce the affairs of this part of the world were put into ruch à fituation, the benefils refulting to the people there, as well as to all the reff of Europe, would be fo great and fo evident, that his Sardinian Majefty would have no room to apprehend anỳ nëẅ confedéräcy formed againft himí, fince his néighbours would be then as willing to defend that fyftem, as, for want of confidering it propierly, they formetly feemed averfe o receive it.
We have dwelt the longer upon this article, becáufe, with relpect to the Britifh nation, there is no power in Italy, with the frength and flate of which it imports us fo nuch to be well acquainted, as the crown of Sardinia.
But there is one thing very requifite to be obferved before we conclude, which is this, that nothing can be of greater importance to the trade of this nation, thah the preferving the ballance in Italy; which, if loft, muft neceflarily throw all that valuable branch of commerce, in which we have at prefeint to large a fhare, and from which we derive annually a confiderable profit, into other hands, and, which is wortt of all, into the hands of the French; a thing againtt which we have as much reafon to guard, as a trading nation, as the king of Sardinia himfelf hàs caufe to oppofe, as. far as poffible, the growth af the French power, out of regard to his own fafety. This fufficiently fhews, that our interefts are really mutual, and that there is nothing of political art in what we have been told, of the expediency of fupporting this monarch againft all his enemies, though at a large expence to ourfelves. See the article Mediterranean, efpecially our reafons for the conftant care and poffeffion of Gibraltak, the key of all our Italian and Levant ComMERCE, and the grand prefervative of the ballance of power in Italy.
S A V O Y duchy is fituated between France and Italy, on the weft fide of the Alps, bounded by the lake and territories of Geneva on the north, by Switzerland and Piedmont on the eaif, by another part of Piedmont and Dauphiné on the fouth, and by Fsanche Compte and Dauphine on the weft. It is a barren country, generaily being encumbered with the high cold mountains of the Alps; however, there are fome pleafant fruitful vallies, producing corn, wine and fruit; and they have large herds of cattle, and abundance of game, venifon, and wild fowl, in their mountains, and plenty of

## S A X

fifh in their lakes and rivers. Their greatelt misfortune is, that they lie open to the incurfions of the French ; and whenever their prince is at war with that kingdom; Sazoy is firf made fenfible of the ravages of the French troops, and ffed as a conquered country, though upon every treaty of peace it has hitherto been reftgred to the duke of Savoy, at prefent king of Sardinix. See the articles Sarninia and PizdMONT.

## rivi 4

## SAXONGREEN COLOUR,

Method of dyeing white cloth green, called Saxon green.
The ordinary greens, fained blue in a woad vat, and afterwards yellow, in a bath of dyers woad, are feldom uniform, almoft always dull, and require feveral days labour to finith them entirely. The green, dyed according to the new procefs, of which the Saxons are belieyed to be the inventors, ii, without comparifon, more freth and lively; and, in four and twenty hours, one may dye feveral pieces of cloth, firft bue, and then green, in the fame copper.
Although this green is not fo folid, when tried inftantaneoufly, as the common greet, neverthelefs it relifts, as much as thefe, both the action of the air, and the rays of the fun; and its luftre hath obtained it the preference over them in England, Germany, and the northern countries.
The firf Saxon greens imported inta the kingdom of France were purchaled immediately, and the public, aftonifhed at their livelinels, was deffrous that they fhould be imitated in France. Their defire was complied with, as foon as it was pofible to learn the bafis of the procefs; and thofe who were charged with the execution, have fucceeded fo much to their wifh, that the laft cloths which they dyed are, at leaff, as precty as the fineft greens brought from Saxony
The foundation of this green is a blue, extracted from indigo by the acid of vitriol : it is covered with a yellow, extracted from real yellow woad, from dyers weed, or from any other ingredient, which gives a yellow of a good tint: but the fuccefs of the procefs depends upon the chaice of the acid, known in trade by the appellation of oil of vitriol; and alfo upon the equal diffribution of the fame acid, when it is incorporated with the blue of indigo in the copper, where the cloth is to be dyed firtt a lively thining blue, and afterwards a yellow, which is to be changed into a green.
If the oil of vitriol is weakened by a too great quantity of aqueous parricies, it doth not attack the beft indigo, or, at leaft, extracts from it an ugly grey. If the indigo blue, extracted by a concentrated, or very acid oil of vitriol, is not equally difributed in the bath of the copper, as this liquor is much heavier than water, it is precipitated to the botrom hy its own gravity : in this cale, the cloth dipped in the bath imbibes the blue very unequally, and appears vatioully fhaded. It takes, indeed, the green colour in the bath of yellow; but that green is alfo differently fladed.
In publifhing the procels of a Saxon green, we thought proper to begin with informing dyers with the method of preventing thefe defects. The common oil of vitriol which is bought of druggits, or brought from Hamburgh or Holland, mult be concentrated by difillation. But this operation is difficult for a dyer, who may not be always' fuppofed capable of conducting diffillation by a retort. Now it is required to have the oil of vitriol with the feweft aqueous particles poffible; thefe may be expelled by a fand-fire, ftrong enough to make them evaporate into fmoke or vapour. When the oil of vi triol ceafes to fmoke with the fame degree of heat, it is a fure fgn that it is concentrated, or acid enough to extract the blue colour from indigo," and confequently to make what is called, in the procefs, the compofition. This evaporation is performed in a glafs pot without a funnel, better than in any other veffel: where that is wanting, a well-burnt fonie pot may be ufed, provided it is not porous; or finally; an earthen pot well varnifhed, which, however, is not fo proper for that operation, as either thofe of fone or glafs.
This veffel, of glafs, of ftone, or of varnifted earth, is to be placed upon an iron pan, half, or two thirds, full of fine fand, which ought to be well dried before. This iron pan muft be put upon a fove, with a grate, and an ath-pan under it, and the bed of fand muft be gradually heated with a charcoal fire, that the glafs, fone; or earthén pot, may likewife be heated by degrees, and not be in danger of cracking, which would certainly be the cafe, if it was warmed too precipitately.
As foon as the oil of vitriol emits no more aqueous vapours, the acid begins to evaporate: is is eafiliy judged if the vapour is acid, by holding a piece of blue paper flretched over it: it the paper becomes red almof finftantarieoulty, the liquor is fufficiently evaporated: allow it then to cool till it be lukewarm, by taking the pot off the hor fand, and placing it upon fraw at a finall diftance from the ftone, that the contiguous air may be dry: for, was it placed in a moint air, the oil of vitriol would re imbibe the aqueous humidity, which is loft by evaparation. This liquor, being thus cooled, to as to be hardly lukewarm, muft be poured upon the quantity of indigo which thall be afterward preferibed. The indigo, however, muft be beforthand reduced to a powder, and put

VOL. II.

## S A X

into a glafs or ftone veffel, which ftoald be well flopped with corki with wax round it, Yeft the oil cf vitriol, after diffolving the indigo, which is then called the compoftion of blue, hould re-attract the moilture of the air.
In fine, if you would be abtolutely certain that the oil of vitriol is concentrated enough not to fail in forming this crmpofition, you bave only to pour two ounces of it upon forty or fifty grains of pulverifed indigo, put into a phial, and to mix them well by fhaking the phial; in an hour's time, the liquor which floats above the fediment, thould be of a fine dark blue: if it is only grey, the oil of vitriol is fot enough concentrated.

Procels for dyeing a piece of cloth twenty ells long into a Saxon green.

Diffolve in a fufficient quantity of river water, which breaks foap perfectly well, three pounds and a half of Romanallum, and two pounds of the powder of white tartar ; boil the cloth in it half an hour, or five and thisty minutes at moft; take it out and expofe it to the air to cool, but do not wafh it.
Refrefh the bath of this boiler:with twenty or five and twenty buckets full of water, and throw in, at two different times, the compofition of blue defigned for the cloth. It the oil of vitriol has concentrated, or bas ftood the proof as defcribed above, it is fufficient to take a pound and a half, and pour it ukewarm upon two ounces and an half of fine powder of indigo. You mult wait till the diffolution is made; and the liquor becomes a fine dark blué; but if this compofition of blue has been made fome days before, fo much the better; for then you may take one pound ten ounces, or a little more, and pour the half of it into a large flone pot, or into a bucket, proper for the ufe, into which there muft be put before, ten or twelve pints of the refrefhed bath from the boiler. The whole muft be well' jumbled, in order to diffure the compofition of blue. You muft hikewife bave a ftrainingbag of cloth, feep it well in the bath of the boiler, open it, and pour into it that half of the compofition which is alseady mixed. By this means you will preferve the liraining bag, which, without this precaution, would have been burnt by the oil of vitriol, if it bad been poured in as much concenrated as at firft.
Put the fraining-bag over the whole extent of the bath, that it may imbibe the blue equally: palliate likewife the bath, that the diftribution of the colouring particles may be more equal ; when the cloth is cooled, let it down into the cauldron, and keep it there five or fix minutes without bolling, turning it rapidly, and agitating the bath with a pole of white woad. Then take out the cloth, raifing it only upon the turn. Put the fraining bag again into the lame bath, and hrow in the other half of the compofition of blue, alter it has been difolved, as the former half, in ten or twelve pints of water taken from the boiler. Pafs the ftraining-bag oves the bath, as formerly, palliate it ftrongly, let down the cloth, and turn it three or four times very quickly, in continuing to agitate the bath with the flick: in fine, in order to make the colour even, boil the bath of blue ve'y gently, and turn the cloth in it flowly for feven or eight minutes. Take it out ftamed blue, and let it cool.
Empty this boiler of three-fourths of its contents, and as many buckets full as you take out of the blue bath, pour in the like number of the yellow bath, defcitibed below.
In order to make the yellow bath, you munt hear gradually another boiler, into which muft be put a fufficienc quantity of pure river water, with a bag of new coarke cloth, containing from ten to twelve pounds of real yellow woad (oot fuftic) cut into chips.-When this bath has been heaked by degrees 'thl it boil, you mult let boil two full hours. Yellow woad, cut into chips, fucceeds better than when it is ground; in this cale, eight pounds are fufficient for a pieca of cloth of twenty ells ; but there is a great rifque of ufing it dulterated.
After you have poured into the firf boiler when the blue was made, the quantity of the yellow bath, prefcrihed above, or even a greater number of buckets fult, according to the thade of green sequired; the blue cloth, which ought to be (uficiently sooled, muft be let down into this new bath, when very bot, and ftirred about 'rill you have' the ihase of green you want: then take out the cluth, cocl it by expofing it to the air, walh it, lay the nap, dry it on the tenter-hooks, brufh it, as fcarlet is brumhed; and afterwards prefs it, but in this operation let it be as cool as poffible. If you bave feveral pieces of blue cloth to be dyed green fuccecfively, you muft take from the bath, which. dyed the preceding piece blue, as many buckets full as are to be added from the yellow bath to dye the blue clorh into a green; which will amount to cwenty buckets full, or thereabouts, to be taken out, and twenty to be fupplied; by thefe means, the ghades of green are rendered more equal and uniform.
The Saxen green of that cloth, which hath been firlt dyed blue in a bath compofed of allum and white tartar, is much more fulid than that which is fained blue in a new bath of plain water, without thefe falts, but is bas not fo $g$ god 2
luftre. However, as it refifts the rays of the fun for twelve days, it' hay be reputed a'very good tint. Being made by means of an acid, it muft not be proved by roap, which is preferibed for the ordinary greens made in the blue vats. In order to proye it, you foould boil it for five minutes in a 'quart of water, with two drachhs of Roman allum, as fcarlet is tried, whien is alfo dyed with an acid: if it preferves its colour, it may be reckoned a very good tint, although, by this operation "it flyes milich more than in the rays of the fun.
SAXONY, the electorate and dominions of Saxony in Germany.
Thefe dominions, as they are included in the circle of Upper Saxony, are bounded by the duchies of Magdeburgh and Brunfwie' on the north, 'Silefia and port of Bohemia on the cait, Bohemia and Franconia on the fouth, and the Landgraviate of Hefle on the weft.
The particular divifions, as they lie from fouth-eaft to northweft, where the Upper leads to Lower Saxony, are as follow, viz.
The firft, which lies betwixt the Elb and Oder, is the marquifate of Lusatia.
It is for the moft part fandy and boggy, that they have little corn; bur hare is fuch plenty of wood, venifon, and fith might enrich them if they had any trade.
Gormitz is the largeft town in the marquifate, and by fome called its capital. Their chief trade is in beer, and in dreffing and dyeing woollen and linen cloth.
Lauban upon the river Queils is a litile town, but has a great linen manufacture.
Zittaw is a fine city, has a good trade in beer, and a great manufacture of cloth
Camisz is a populous little city, and has a manufacture both of woollen and linen cloth.
Guben is a large and populous town, and has a woollen manufacture.
Sommerfield has alfo a woollen manufacture, and Calow has a great market for woot,
The marguifate of Misnia is the fecond divifion of the electorate of Saxony. It has Lufatia on the eaft, Thuringia on the weft, Merfburgh, Bohemia, and Franconia on the fouth, and the duchy of Saxony, with Anbalt on the north. Their plains abound with all forts of corn, and their hills with rich minerals.
Dresden is a large city fituate on the Elbe, the capital of the electorate of Saxony, 65 miles north-weft of Prague, and 85 fouth of Berlin.
The trade of this place is very inconiderable. The moft important commodity here is filver, of which the mines near Fridburg produce every fifteen days about the valuc of 20,000 dollars *, which is brought into the city in ingots in a regular carriage appointed for that purpofe, and immediately coined and delivered to the proprietors. The mines are under the care of directors, whofe bufinefs it is to fupport the value of the flock; but they ufually go in a beaten track, without making any efforts to increafe the quantity; on the contrary, it often comes fhort of the ordinary computation. This-filver is immediately coined into florins of 16 grofch, which, with refpect to the current money of bats, driers, \&c. is worth 7 per cent. advance, and is confequently fo fpeedily conveyed into the neighbouring territories to be again melted down, that it is next to impoffible to obtain in change, in this true filver, money for one fingle louis d'or in the ordinary commerce of the people : in which inftance the Saxons feem very regardlefs of their own intereft; for though this filver may be confidered as a commodity, the currency of fuch a coin as their bats and drivers, muft be detrimental in propertion as they'are worfe than 'their genuine coin.

* 3500 I .

The exchange here is regulated as in Leipfic. The par is reckoned 125 Saxon dollars for 100 rixdollars current in Amfterdam, but the exchaniee is generally 135 for their fmall monies : there is an agio of 3 per cent. when payment is made for bills in louis d'ors, and for ducats 4 per cent. is allowed.
Meissen has a manufacture of porcelain, which is more beautifully painted and emamelled than that of Japan, and much dearer; and the vent of it brings no inconfiderable fum añnually into this country. See our article Porcelain.
Colditz is a little town of good trade, at the conflux of the Muldaw and Multa
Freyberg is a large, well-built, and populous town, butowes both its increafe and rife to the neighbouring mines of all forts of metal, but efpeciaily filver, copper, pewter, and lead, befides brimftune, vitriol, \& c .
Thuringia is bounded on the north by the duchy of Brunfwic and the principality of Anhalt, on the eaft with Mifnia, on the fouth by Franconia, and on the weft by Hefle.
Gotha, the capital of the duchy of SAxe Gotha, is a large walled city on the river Leina. Its chief trade is in dyers woad.
Exsenach is a pretty lictle city on the river Nefa. It has a confiderable trade in iron, of which here are mines not far from it.

ERFURT is reckoned the sapital city of Thuringia: it lies in a plealant fruitful plain on the river Gere, in a country abounding with all forts of corn and good wines, by their trade in which, and in woad, the inhabitants get much money at their two great fairs.
Weymar is a neat, well-built city, on the river llma. It has a good trade in wine, yet the adjacent country abounds with corn-fields and hop-grounds, inftead of vines.
Mulha usen on the river Untrut lies in a fruitful foil, and reaps fo much benefit by its river, in point of commerce that it was admitted amongft the Hanfe-Towns, and is called a large populous city.
WIPREN, on a river of the fame name, is a town of good trade.
One of the chief places of trade in the circle of Upper Saxony, is
Leipsic, in the principality of Mifnea or Meiffen fituate on the river Pleifs, 42 miles north-weft of Drefden.
Leipfic, by its advantageous fituation in the centre of Germany, is become one of the moft commercial cities of Europe; none in Germany are equal to it, being but little inferior to Hamburgh itfelf; though (mall, it is very populous, and as well built.
In order to a juft idea of the trade of this city, it muft be confidered in two points of view, during the time of the fairs and out of the fairs. [See the article FAirs.] Leipfic abounds in merchants, with'a few or no manufactures; yet confiderable fortunes are raifed there. Three years ago only a retale dealer left an only fon three millions of livres, and M. Stoman, who fet out with little or nothing, even outllripped the former. Eftates of 2 or 300 thouland rixdollars are no extraordinary matter ; feveral of four or five may be produced.
The merchants of Leiplic may be divided into three claffes, the wholefale dealers making 150 , the retalers to the number of 250 , and the woollen drapers, who make no fmall number. To thefe may be added the bookiellers, a confiderable body, Leipfic having the greateft book-trade of any city in Germany, but differently managed from any part of Europe. The German and northern bookfellers furnifh thenfelves at Leipfic; and this is done either by barter, or ready money, but the far greateft part by barter.
One of the moft lucrative branches of the commerce of this city confifts in exchange of monies, which is fo confiderable, as to be computed at four millions of livres each of the principal fairs.
The fecond branch of trade lies in home and foreign goods; by the home are meant the products of the foil and manufactures of the inhabitants of the country. As to the foreign, Leipfic is a flaple for all French, Englifh, and Dutch commodities, for which there is a demand in the North, and of fuch northern goods as turn to good account among the more foutbern uations. The former are Lyons ftuffs, Nifines and Paris ftockings, French jewellers work, and hard-ware, Dutch and Englifh cloths, filk and woollen ftuff, and hard-ware. This trade is carried on perfonally or by commiffion; many limit themfilves to the Jatter and find the fiweets of it. In and out of fair-time, commiffions pous in upon them from merchants of all quarters to buy or fell goods, draw bills of exchange, receive or pay money, and to forward goods.
The fairs are unqueftionably the main fprings of is opulence, few, if any in Europe, equalling them in the amount of the fales and bargains tranfacted there; and they may be faid chiefly to awe the incredible refort thither to the conveniency of their appointed times, and the privileges of the city. The moft confiderable fair is that of Eafter, beginning on Jubilate-day, three weeks after Ealter; this is fucceeded by that of Michaelmas, opening on the ift of October; the laft is New Year's fairg, beginning the 2d of January, and fcarce worth the name of a fair in comparion of the others.
The city privileges are alfo very favourable to commerce; its citizens are its garrifon; no foldier of the king of Poland is fo much as to lie a night in the place. During tho fatr, it is in the fulleft fenfe a free port for the home goods, and the foreign pay orily one duty, which is a very fmall excife; the Steel-yard fee is alfo very moderate. The magiftracy omit nothing for the fafety and eafe of frangers. As to the total of the bufinefs done at the fairs, it cannot be well afcertained, by reafon of the difference of them; that of the Jubilate is eftimated at ten millions of livres, and the produce of the Steel-yard at four hundred thoufand.
In Leipfic are about thirty French refugee merchants and come Italians; but the natives only are allowed to deal by retale or purchafe land; however the trade for French cloths and laces is chiefly in the hands of the faid refugees, feveral of whom go themfelves every year to Lyons to buy up their fortments.
The quantities of home goods at L̀eipfic aftonifh a franger. Among the various manufactures of Saxony, that of linen at Lufatz is not the leaft confiderable. The prodigious quantities of Cherinitz dimities and handkerchiefs, are carried off by the Englifh and Dutch, to fend to both the Indies. The Saxion woollen ftufts, annifeed, tin-work, the celebrated porcelain, juftly preferred to China, fmalt, called the Pruf-

## S A Y

fian blue, are all articles which deferve to come into account. Likewife gold and filver lace, velvet, camblets, damaiks, and other filk ftuffs, are madeat Leipfic ; but they are not the beft in the world: what goes off much better is, thin waxen linen bedaubed with flowers and antic figures; thefe being fold extremely cheap, are all taken off their hands by the northern traders, who difpofe of them for tapeftry. The Leipfic fairs were confirmed by the emperor Maximilian I. with a prohibition of the like within 15 German ( 75 Englifh) miles. By its jus ftapula, or ftaple privilege, the refufal of all goods coming on the king's roads from within 15 miles, is to be offered to the merchants of Leipfic.
SA Y, or ASSAY, a term ufed in the art of refining. See the article Assay.
SAY, or SAYE, in commerce, a kind of ferge, or light aroffed fuff, made of wool; greatly ufed abroad for linings of cloaths, and by the religious in Popihh countries for fhirts. Thofe made in England are chiefly exported to Portugal and Spain, and fome to Leghorn.
SCILLY, weft longitude 7, latitude 50, a clufter of inands and rocks, fituated in the Atlantic Ocean, 3 miles weft of Cornwall, the moft wefterly county of England, dangerous to be approached by ftrangers on account of the hidden rocks, and have been very fatal to many thips of our own nation on their return home; particularly admiral Shovel, with three other men of war, were caft away here on the 22d of October 1707, in the night-time, in their retuin from the Mediterranean and the fiege of Toulon, there being near 1000 people on board the admiral, feveral of them gentlemen of quality, both of Spain and England. There is, however, a fafe paffage to thefe iflands, where fhips are furnifhed with pilots from the place, and there are fome fecure harbours in them, Jarge enough to receive the royal navy. In the towns of St. Mary's, the people trade in feveral forts of commodities, ufually fold in fhops, many of which they are furnifhed with from England; and thips coming in, or paffing by the illand, fupply the reft of their occafions. With thefe ftrangers they fometimes exchange dried fifh, cattle, or provifion of the ifland, for fuch commodities as they want. A fleet of coafters, forced in by an eafterly wind, is of advantage to the inlanders, as well in their pilotage of them into the harbours, as in the traffic and expences of the people afhore. Commanders and paffengers of fhips from the WeftIndies, or other foreign parts, putting in, never fail of thewing their liberality, and of leaving fome of their commodities and riches behind thern. By this means the illanders are fupplied with a flock of rum, brandy, wine, and other foreign liquors; fome for confumption upon the iflands, and fome (by leave of the cuftom-houfe) for confumption eliewhere. For the fake of this trade, which is their principal dependance at prefent, the people of Scilly run very great hazards in going off with their fmall boats to fupply themrelves from mipping paffing by, thewing undaunted courage and refolution, in venturing when the feas run mountains high. There being no owners of houfes and lands in Scilly, the peoples hindrances in the improvements of land and trade, are the fhort leafes, and fcarcity of houfes to be met with; it requiring an intereft to procure a houfe, and another for a leafe of one. On which account, it was ufual here to engage houfes at the deceafe of the prefent dwellers. If any houfes are built by leave, at the expence of an iflander, they become the property of the proprietor after a fhort term: fo that no iflander poffeffes houfe or land, but upon pleafure or leafe.
The agent is the proper perfon to apply to for a houfe, or land, or a leafe of either, or both; who has the direction and management of all the houfes, buildings, repairs, rents, \&c. upon the illands; who alro has it in his power to diftribute favour, or thew vengeance, in unequal meafure. But the prefent agent is a gentleman, efteemed for his generofity, good fenfe, and humanity.
The inhabitants are very civilized, and are improved in trade and commerce. The lands are naturally very fruitful, and could eafily be improved; but as thefe iflands are beeld of the crown by preprietors, the perfons in truif for the proprietors have ufually made their advantage of then, injurious to the inlanders, and the good intent of the repofers of that truft; But if, inftead of the cuftom of letting thort leafes (of about twenty-one years) long leafes were lett, as in Cornwalt, and other parts, it would much encourage the improvement of lands in Scilly, and foreigners to fettle there. And no doubt but thofe inlands are as well ytored with tin, as many partsof Cornwall.
SCLA V ONIA, including Ratzia, is bounded by the river's Drave and Danube, which feparate it from Hungary, on the north-eaft, by the river Save, which divides it from the Turkifh provinces of Servia and Bofnia on the fouth-weft, and by Croatia and the country of Cilley on the weft, being 200 miles long and 60 broad, a fine level fruitful country where it is cultivated; but having been for many years a frontier province againft Turkey, and fubject to the ravages of the Chriftian as well as Turkifh armies, it has produced but litule corn or wine: the chief town is Pofeqa, which, with the whole country, is fubject to the houfe of Auftria: the people
are a mixture of Greek and Latin Chriftians. The Ratzians inhabit the eaftern divifion of this country.
with England All that part of the continent, which is joined with England and Wales, and lies beyond the counties of Cumberland and Northumberland, belongs to Scotland, together with gieat numbers of inands on all the other fides, which are bounded by the ocean. It is in length about $25^{\circ}$ miles, and 150 in breadth; in the moft foutherly part it is 54 degrees 54 minutes in latitude; and 15 degrees 40 minutes in longitude; but the moft northerly it is 58 degrees; 32 or 30 minutes in tatitude; and 17 degiees 50 minutes in longitude.
The foil in general is not near fo fruitful as that of England, being much more fit for pafture than corn: yet in fome of the inland counties they have great ftore of grain, wherewith they tiade to Spain, Holland, anid Norway. The Ikirts of the country abound with timber, which is of a vaft bignefs, efpecially their fir-trees.
We having already, in the alphabetical order, given a pretty minute ftate of the trade and fifheries carried on in the feveral principal ihires and ftewarties in Scotland, we fhall here only give a fummary view of the trade in general of this part of the united kingdom, and what elif may contribute to give a juft idea of its circumftances for traffic.
Memorr concerning the Banks eftablifhed by authority
in Scottand.
The bank of Scotland, commonly called the Old Bank, was erected by act of the Scots pariament, of date the 7 th of July, 1695.
By which act the incorporation is allowed to have a capital of r,200,000 l. Scots, or 100,000 . fterling, and each hare thereof to be iovol. Scots, or 83 l .6 s . 8 d . fterling; and each fubfcriber to the faid capital paid one tenth of a hare in fpecie, being 100 I . Scots, or 8 1. 6 s .8 d . fterling, making $120,000 \mathrm{l}$. Scots, or 10,000 l. fterling; on which fum then paid, this incorporation commenced their banking.
After this, they made a call of another tenth, and continued to deal on thefe two tenths till the year 1720 , when, upon an emergency, they called for a third tenth.
They made for many years large dividends, proportionable to thefe calls, which at length they thought fit to reduce to 5 per cent. annually, payable in the month of Ápril, and chofe to retain the furplus profits to increafe their dealings. Some years ago they were willing and capable, out of their furplus profits, to make an extraordinary dividend to their proprietors of one tenth of their refpective fhares: but, in place thereof, the proprietors were willing they fhould retain the money, and hold it as or in place of a foursh call, or tenth, and take annually 5 per cent. for it.
At two other different times they were ready alfo to make extraordinary dividends, each of one temth, and the proprietors in like manner chofe to have them retained, and deemed to be other two calls, to be attended with 5 per cent, yearly dividend: whereby there are now, fix tenths of their capital paid, being 50,000 l. Aterling, upon which they iflue a dividend yearly of 5 per cent. and beyond which they probably have furplus profits, to be the fubjeet of future extraordiaary dividends.
Though thus the calls made on the fock are fix tenths, being 6001 . Scots, or 50 l . fterling per thare, upon which the ordinary annual dividend is only 301 . Scots, or 2l. io s. fterling, yet the current price of one fhare is 7 ᄋ 1 . fteding, wheteby the putchafer has only $3^{\frac{1}{2}}$ per cent.-The flock is very feldom in the market
The Royal Bank was erected by charter, of date the 13 th of May $17^{27}$, a copy of which I have obtained, and hadd give an abridgment of at the end of this Memoir, which muft be confidered with the aft of parliament and charter of the Equivalent company therein recited.
In confequence of the charter of the Royal Bank, the proprietors of the equivalent fublcribed only to the amount of
 this bank.
The bank, immediately after theis, erection, made a call of 10 per cent onthe fubicribing proprietors of the faid capital: and foon atter made a fecond cal!, of, anocher no per cent which two calls being about 22,000l. ferling, was theit firt fund gf panking, together with 4 per cent. which they receive yearly for their capital out of the Equivalent Fund.
About three years after their commencement, they were obliged to accept of a loan of 40,0001 . Atarling, from the S-ciety of Truftes for improvement of manufactures and Filheries in Scotland, at 5 per cent. intereft; which doan they continue to bold, whereby their fund is 62,0001 . fterling, befide their faid annual dividend from the Equivalent.
This bank obtained another charter, confirming all their powers and privileges by the former, and impowering them to inlarge their faid capical, and add $40,000 \mathrm{l}$. to it by fubfription, on fuch conditions as they think equitable : but this power they have not exercifed.
This bank, a few years after their commencement, raifod the yearly dividend to their proprietors to 6 per cent. of their
capital, payable one half at Chrifmas, and the other half at Midfummer; which dividend is nearly 5 per cent. of both capital and calls paid; and this dividend they continue uniformly to make, retaining any furplus profits for extraordinary dividends.
About twelve years ago, they made an extraordinary dividend of 5 per cent. on the capital, being one fourth of the calls, and are about to make another dividend of 15 per cent. which will repay to the proprietors the whole calls; or they may retain the money for a fund of banking, giving each proprietor credit for his thare of it in their books, and to add one balf per cent. to the dividend annually, making in all $6{ }^{3}$ per cent.
The Equivalent company have, by the aforefaid act of parliament, 6001 . fter ling yearly tor expence of adminiflration, of which they have annual favings, which fometimes they divide among their partners. Some few years ago the Equivalent company divided their favings, whereof the bank's fhare afforded 2 per cent. of the capital to each of their proprietors, which was iffued to them.
The current price of the ftock of this bank is 1601 . for every 1ool. capital; and yet the purchafer at that price will have nearly 41. per cent. when the aforefaid $\frac{x}{2}$ per cent. is added to the annual dividend.
Both the banks lend money upon fecurity in lands, upon perfonal bonds and bills.
They do not chufe to lend upon lands; and, when they do lend upon that fecurity, they have frequently indulged the debtors to repay 10 per cent. yearly of the capital, befides the intereft.
When they lend on bills, they take them payable at 60 days date, and add the legal intereft for that time to the fum lent. Neither of thefe banks difcount bills, or lend upon depofits or pledzes of any fort.
The exchange between London and Edinburgh was very variable, and fometimes the private dealers in Edinburgh would have taken 2 per cent. for bills on London, which was hurtful to trade. - The Royal bank, to remedy this grievance, have, for feveral years, dealt in that branch of exchange, and correfpond only with the Bank of England, and never take more than one per cent. for draughts on the Bank of Eugland payable at fight, which keeps the private dealers from extortion.
Both banks allow cafh accounts with them to merchants, capital manufacturers, manufacturing companies, and other men of bufinef, and give them credit to draw on them beyond their monies lodged, to various extents, from 1001 . to 50001 . fterling, fuitable to their refpeAive circumftances, trade, or bufineis; the benefit of which is, that thofe who have fuch cafh accounts chufe always to be fomewhat indebted to the bank, and may pay in at any time not lefs than 1ol. and upwards, which reduces the debt, and by which means the merchants never have any furm above 1ol. lying dead, the bank charging intereft only for what ballance is due to them upon every payment. This is not the cafe with the bank and bankers in London.-In fuch accounts, the two banks give credit for above 300,000 l. fterling, which create conftant operations in paying in and taking out by thefe compt-holders, and is a very great encouragement to traders and great manufacturers. For fome time after the Royal Bank was erected, there was a jealoufy, emulation, and bickering, between them and the Old Bank, through the peevifhnefs of fome in their directions: but, of late years, thefe are removed, and there is fufficient bufinefs for them both, and they at prefent harmonize; each of them receive the notes of the other bank in payments, which once in the week they exchange, and take furplus notes of the other.
About fix years ago, four merchants in Aberdeen commenced a banking company, ftruck notes, and endeavoured to have all the fame operations as the two eftablifhed banks in Edinburgh.
Some time after, two different focieties of merchants and gentlemen in and about Glafgow, commenced each of them in like manner a banking company in Glafgow.
The company in Aberdeen gave up their trade in December laft, called in their notes, and publickly advertifed that their partnerlhip was diffolved: Thofe in Glafgow yet continue ; but it is probable they may be judged illegal.
The fubftance of the Warrant of the Charter erecting the Royal Bank of Scotland.
Our fovereign lord confidering, That, by an act of parliament made and paffed in the 5 th year of his Majefty's reign, intitled, An act for fettling certain carly funds, payabic out of the revenues of Scotland, to fatisfy public debts in Scotland, and other ufes mentioned in the Treaty of Union; and to difcharge the Equivalent claimed on behalf of Scotland, in the terms of the fame treaty; and for obviating all future difputes, chatges, and expences, concerning thefe equivalents: it is enacted, amongit other things. That every year, from the feaft of the Nativity of St John the Baptif, one thoufand feven hundred and nineteen, the fum of 10,000 l. of lawful money of GreatBritain, thall be a yearly fund for the particular purpofes in that aft exprelfed, concerning the fame, and fhall continue
and be payable for ever, fubject neverthelefs to redemption by parliament, according to a provifo in the faid act contained in that behalf; and that the faid annuity of $10,000 \mathrm{I}$. during the continuance thereof, thall be chargeable upon, and be payable out of, the monies arifing from time to time from the cuftoms, duties, excifes, or revenues, that are or flall be under the management of the commiffioners of the cuftoms, and commiffioners of excife, in Scotiand, or of any commiffioners, farmers, or managers of thafe revenues, or either of them, for the time being, with fuch preference as in the faid act is mentioned; which faid annuity is thereby enacted to be payable quarterly in manner in the faid act mentioned and to be free from all taxes and impofitions whatever. - His Majefty is authorifed, by fuch names as he fhall think fit, to incorporate the proprietors of the debts, ftated to amount to 1. $248,550: 0: 9 \frac{2}{2}$, due to the creditors" of the public in Scotland.-And the faid 1. 248,550:0:9 $\frac{1}{2}$, Thould be the capital, or joint-ftock of the corporation, and be deemed perfonal or moveable eftates, not liable to arreftments or attach ment.-6001. per annum to be paid to the corporation for charges of management.-His Majefty, by his letters patent did give, grant, and ordain, that all perfons, natives and foreigners, bodies politic and corporate, who then were proprietors of the debts and furns of money fo ftated to amount to $1.248,550: 0: 9 \frac{1}{2}$, or who by any lawful title, derived to the faid proprietors at any time thereafier, fhould be intitled to any part, fhare, or intereft therein, fhould be called one body politic and corporate of themfelves, in deed and name, by the name of the Equivalent Company: and that fuch corporation, and their fucceffors, fhould have perpetual fucceffion, fubject to fuch redemption as is therein mentioned, and ufe a common feal, and ihou'd by that name be capable to fue and be fued; and that the fum of $1.248,550: 0: 9 \frac{1}{2}$ be the capital, or joint-ftock of the ECUIVALENT COM-PANY.-And the annuity of 10,0001 . payable to the company, or their cafhier, to be divided among the propsetors, according to their fhares in the ftock. - The ftock of the company to be transferable. -The 6001 . is payable to the EQU1valent Company, or any perfon to be appointed by them, under their feal to receive the fame.-Dintinct books of lubfrription to be left at London and Edinburgh, wherein the proprietors are to declare at which of thefe places they are to have credit for their ftock.-Diftinct books of transfer to be kept at thefe places likewife. - Two of the directors to be for ever chofen, refiding at Edinburgh, to have the cultody of thefe books.-Stock in the books at London may be difcharged therefrom, and new credit got in the books at Edinhurgh, and reciprocally for fock at Edinburgh.-His Majefty covenants to give the Equivalent Company further powers and privileges, upon their humble fuit and requeft.-And the company requefted, that his Majefty would be pleafed, by letters patent under the great feal of Scotland, to enable fuch of the proprietors of the faid corporation as fhould fubfcribe their fock for that purpofe, to have the power of Banking in Scotland only, with liberty to borrow and lend upon fecurity there; and that the corporation may, for that purpofe, be impowered to take fubfrciptions at Edinburgh, for fuch fhate of the fock as they fhall incline to fubject to fuch Trade or Banking, under fuch regulations as they by by-laws fhall appoint, and that fuch fubicribed fock only thall be affected by the tranfactions relating to Banking, and fhatl (after fo fubfcribed) become tiansferable from the other ftock of the company, and that at Edinburgh only, and thereafter to be transferable from the other ftock of the EQUIvalent Company, at Edinburga only--Accordingly a charter was ordained to pais the feals of Scotland, authorizing the directors of the Equivalent Company, or any three of them, in fuch way as the majority of them thall direct, to receive at Edinburgh all fuch voluntary fubfriptions as fhould be made on or before the 2gth of September, x727, by the proprietors of the faid company, who thatl, at fubferibing, have credit for ftock in the company's books at Edin $u$ UGH; which fubfcriptions are to be entered in books to be kept for that purpofe. - The ftock fo fubfribed to be under the management of the company hereby eftabilifhed.The fubferibers to be called by the name of the Royal Bank of Scotland, and by that name to have perpetual fucceffion, and a common feal, \&c. be capable in law to fue, and be fued, \&ic. in any of the courts within Scotland.To purchafe linds, \&cc. in Scotland, and to fell the fame.The Royal Bank to have a power of banking within Scot-land.-- To lend any fums at any intereft not excecding lawful intereft, upon perfonal and real fecurity, and pledges of any kind.-The Royal Bank may keep the crfh of other per: fons, and borrow, owe and take up money on their bills or notes, payable on demand:-A prohibition to trade with the money or ftock of the company, in buying or felling wares of any fort,-Allowance neverthelefs to deal in bilis of exchange, in buying builion, \&cc. and felling wares bunà fide pledged, and lands, \&cr, purchafed, and the produce thereof. - That there fhall be, from time to time, a governor, deputy-governor; nine ordinary, and nine extrandinary directors, for managing the affuirs of the corporation ; the governor and nine ordinary directions, or any five of them, to
te called a court of directors.- The members of the corporation may, from time to time, meet at Edinburgh, for chufing their governor, deputy-governor, and directors, and for making by-laws, \& c .-Public notice thereof to be given $3^{\circ}$ days, at leaft, before the time appointed for fuch meeting. The members fo allembled to be called a general court of the corporation. - That there be four general courts in the year.The governor, deputy-governor, and directors, after the 24th of December, 1728 , to be chofen annually, on the firf Tuefday of March.-Their qualifications of focks, viz. the governor 20001. deputy-governor 15001. an ordinary director 1000 l . an extraordinary director 500 l . - One vote allowed for 3001 . two votes for 6001 . three votes for 12001 . and four votes for 2000 l . - No perfon intitled to more than four votes.-Proxics qualified with ftock, allowed to vote in elec-votes.-
tions.-FFrm of the oath that may be put to perfons claim-tions.-Form of the oath that may be put to perrons claim-
ing to voie, as follows, viz. I, A. B. do fwear, that the fum ing to voie, as follows, viz. I, A. B. do fwear, that the fum
of
of the capital ftock of the body politic, calied the Royal Bank of Scotland, doth at this time belong to me in my own right, and not in truft for any perfon or perfons whatfoever. - The oath to be adminiftered by the governor or deputy-governor, or, in their ablence, by any two directors. - No perfon refufing to take fuch oath, fhall be capable to vote. - The fame oath to be taken by fuch as appoint proxies, before a jultice of peace, or chief magiftrate of a burgh. - The proxy to produce his powers for voting, with fuch affidavit, to the general court. - Each fucceeding governor, deputy-governor, and directors fo chofen, to continue for one year, and 'till others are cholen and fworn into their places.-In cafe of the death, \&c. of any of them, thofe remaining in their offices may call a general court, to chufe others in their room. - None to be chofen into thefe offices but fuch as are fubjects of Great-Britain, or naturalized, and qualified with fock as aforefaid. - And not to continue in thofe offices longer than the continuance of fock in their own names and rights. - Nor thall they be capable to act 'till they have taken the oath of office, as before reprefented. - To be adminiftered by any of the barons of the court of Exchequer, or any two directors, who fhall have taken the faid oaths before any of the barons of that court-An oath de fideli to be adminiftered to the calhier, and other officers. - No governor, deputy-governor, or director, nor any officer or fervant under them, thall be capable to act, until fuch have produced certificates from the proper officers of their having taken the oaths to the government.Any neglecting to take the faid oaths, or to take upon them their office for 40 days, if in Scotland, or 40 days after their coming into Scotland, their places fhall become vacant, and others may be chofe in their places, by a general court.-The court of directors, of major part of them, may call a general court, upon 30 days notice, and fhall upon demand of any nine or more of the members, having each 10001 . ftock, call a general court.-And in their default of calling fuch court, the faid nine or more members, having each roool. ftock, may fummon and hold a general court, upon notice as aforefaid.Which general court, for any mifdemeanor or abufe, may remove or dilplace the governor, deputy-governor, or any of the directors, and elect and chufe others in their room.The governor, deputy-governor, and directors, or any five of thern, may meet at any place in Edinburgh, for the management of the affairs of the corporation, and hold courts, and furnmon general courts, as they fee caufe, and act according to the by-laws to be made and given unto them by the general court; and, where fuch by-laws are wanting, thes, or the major part of them, may direct and manage all the affairs of the corporation, and may appoint a calhier and fecretary and all other officers, and may allow them falaries, and difplace them, as they fee caufe.-No governor, deputygovernor, nor director, capable to be named; or chofen, into the office of cafhier, or any other the officers of the corpora-tion.--Five extraordinary, and four ordinary directors at leaft, tomect to fate and audit the account, and fign and approve the fame, as often as directed by the by-laws. - The extraordinary directors to have no powers but fuch asthall be given to them, and allowed of by the general courts.- The general courts to make and conititute by-laws, \&ce.-A And to impofe mulats and amerciaments upon offenders, which; if not duly paid, may be retained out of their dividends. - The generab court may make calls upon the proprietors, which are not jn the whole to exceed 50,. upon the 1001. capital, and no call to be above 10 l. per eent. at a time. - Any perfon neglect ing or refufing to pay fuch calls, thall not be allowed to tranffer, or part with any part of their Atock.-Such calls charge able with intereft, from the time they ought to be paid, and their dividends may be detained, and applied for payment thereof-Books for transfers to be kept for Ediniburgh.-Form of transfors, when made by the party himfelf: IA. B. this day of
bear of aur Lord
do affign and transfer being all my intereft, or thare, or (as the cafe may be) part of my interelt, or thare, in the capital fock, or fund, of the Royal. Bznk of Scotland, and all beneft arifing thereby, unto C. D. his.executors, adminiflrators, and affigns. Witnefs my hand, A.B. Or, in cafe the party afigning be not perfonally prefent, then, by an entry in the book or books, figned by fome perfon thereunto
lawfully authorifed by letter of attorney or factory, under hand and real, attefted by two or more witneffes, in the words, or to the effect following, viz. I A. B. this
day of in the year of our Lord by virtue of a letter of attorney, or authority, under the hand and feal of dated the day of ... in the faid year do, in the name and on the behalf of the faid
affign and transfer being all the intereft, or fhare, or (as the cafe may be) part of the intereft, or fhare, of the faid in the capital flock, or fund, of the Royal Bank of Scotland, and all benefits arifing thereby, unto
his executors, 'adminiffrators, or affigns." Witnefs my hand. - Former acceptance is as follows.-And no other method of transfer fhall be valid.-Letters of attorney to contain the names and defignations of the writer and witneffes, and to be attefted by a notary, juftice of peace, or minifter of the parifh where the granter refildes.-Any fhare of the fock may be difpofed of by laft will and teftament. - An extract of the teftament is to be delivered to the company, and a memorandum thereof entered in a book to be kept for that pur-pofe.-All the fhares or interefts in the ftock to be deemed perfonal eftates, and not to be liable to any arreftment of attachment.-A court of directors to confift of the governor, deputy-governor, and ordinary directors, or any five of them at leaft, wherein the governor is to prefide, and, in his abfence, the deputy-governor; in the ablence of both, any director prefent may be chofen to prefide in that court of directors, or in any general court of the corporation ; and, in default thereof, the general court may chufe a prefident; the prefident to have no vote, but in cafes of equality. The court of directors may name committees to manage their affairs.-The camier of the coiporation, or any other perfon authorized by them, to receive their proportion of the ro,0001. annuity. - Which is to be paid without any fee or reward whatioever. - The general court twice every year is to declare a dividend, at fuch two of the quarterly courts as they think fit.-No dividend to be made, but out of their fhare of the 10,0001 . annuity, and the profits of banking. - Calls upon the ftock may be repaid.-A general court may affume fuch of the proprietors of the equivalent ftuck, as fhall not have fubicribed before the 2 g th of September 1727, within two years from the date of the charter. Upon fuch terms and conditions, and at fuch times as the majority of the firf- fublcribers fhall appoint in, a general court.-Such further fublcriptions to be under the management of this corporation, from the time of fubfribing.And to enjoy the fame privileges, \& \& c. with the firft fubferibers. - The charter to be conftrued in the moft favourable fenfe for the advantage of the corporation. - His Majefty covenants to give fuch further privileges as he may lawfully grant. - Which fhall be devifed by their own council, and approved of by the lord advocaté, or follicitar-general for. Scotland for the time.
Under ouraticle Aberdeenghire, we have takennotice of the board of truftees eftablidhed by charter for the-improvement of the manufactories and filheries of Scotland, in confequerice of an act of parliament anno 1727, granting fome encouragements to them from funds ariling in Scotiand. Thefe, though fmall, yet by oeconomy have had a furprizing good effect; which will beft appear from the following genuine abftract, which has been tranfimitted to me from Scotland.

Account of Linen Clot h for fale, ftamped in Scot-
land from November 1,1727 , to November 1, 1753, diftinguifhing the quantities and value annually:

| Years. | Yards of Linen. | Value in moners. |

## REMARKS.

This is a very extraordinary increafe in the linen manufacture of Scotland, in the fpace of 26 years, it being above quadruple the number of yards and value to what it was at the beginning, and amounts now to almoft half a million of money per annum. But befides the quantity of linen before thewn, there has been likewife no inconfiderable quantity manufactured by private people, for bedding and table-linen, for fhirting alfo, and for home ufe of every fort, and great quantities of tape and incle, and thread exported, which are not taken any account of by the officers of the truftees: the country too, in the general, is remarkably well ftocked with line cloth; even the lower fort of people are now plentifully provided with body, bed, and table-linen.
Upon the north fide of the city of Edinburgh, in the road to Leith, is built a neat row of houfes, with a large and commodious garden, called Picardy, for the reception of fome French families brought from France, for the improvement of the cambric manufacture; which has been of great ufe, and is daily growing more and more profitable.
Anno 1733, the faid board of truftees, amongft other premiums, appropriated 1500 . fterling per annum, after the rate of 15s. per acre, for 2000 acres of ground to be fowed with Lint Sedi and Hemp-Seed, according to the rules laid down in a peculiar plan for that purpofe. This had a very agreeable and extraordinary good effect, the growth of lint increafing greatly every year. Premiums alfo were given for erecting lint-mills, and bleach-fields; but of late years the faid premiums for fowing of lint and hemp-feed are withdrawn, on account of the funds for thefe good purpofes not anfwering to the extent of what they were formerly; whereby we have the mortification to fee the growth of lint much decreafed; but it is greatly to be defired that ways and means will be found to lupply this deficiency.
In regard to the propagation of lint, it may be worth oblerving, what method has been found by experience to be the beft for cultivating of moffes at a fmall charge in Scotland, of which there are a great many, to be fit either for tillage or pafturage, which is creating fo much more valuable ground in the country. This has proceeded from feveral years fudy and experiments of an ingenious gentleman, Mr Grame, of Argomercy in Stirlinghire, the truth of which is attefted by feveral gentlemen in the commiffion of the peace, and by them recommended to the faid board of truftees. They fay in every piece of mofs he intends to labour, he makes only a few fmall ditches, three feet deep, for drains; he pares his field, covers it with earth, which he brings by an eafy carriage from the adjacent lands; or, if thefe lands are too diftant, he gets earth enough by digging in the mofs itelf: he then mixes this earth with afhes, which he obtains eafily, by burning the mofs, that being a foft rotten earth: then he ufes a breaft-plough, which a fingle man puthes eafily before him : his harrows, his rollers, and all his inftruments, are fuited to the nature of his foil and labour, and are purchafable at a very eafy rate. He performs all his work with men, without horfes or oxen; nor is he at any expence either for dung or lime; his manure cofts nothing but a very cheap and eafy labour, and he makes his foil as rich as he pleafes. Conftant tillage impoverifhes other, but greatly meliorates a moffy foil. The highef eftimation of all this charge is 40 s. per acre, viz. 20 s. for digging and laying on the earth, los. for paring, 5 s . for burning, and 5 s . for extra-charges. - The whole may be reduced to 25 s. per acre. Neither does mofs cultivated in this manner immediately run out, but being refrefhed with earth and afhes every third year, it will improve every year by the tillage.
From this judicious gentleman's experience, and that unqueftionably attefted by perfons of honour and credit, mofs prepared in this manner anfwers admirably well for the growing of lint, either coarfe or fine. If he wants ftrong rank lint, he plows the ground very deep, lays a greater quantity of earth upon it, and a great quantity of afhes; harrows them well, then plows his fields half as deep as before: after which he fows Riga lint-feed thin. If he wants fhorter, fmall falked, or fine lint; he does not plow fo deep, gives lefs athes, and fows Dutch lint-feed thick. He has raifed of both kinds, efpecially the coarfe, which is moft wanted, and is, pernaps, moft profitable for this country. The gentleman bas likewife had good crops of potatdes, rape, peafe, beans, wheat, barley, and oats, clover, and natural grafs; and after two or three years culture, they bear good turncps. - A man with his paring plough can eafily pare an acre in ten or twelve days, which he then burns, and fpreads the afhes and earth, plows it with his new brealn plow, without catte; and where cattle can go, two little Highland harfes may do it. An acre thus dreffed and fown with lint, is a living for a family the whole year; and, when the flax is manufactured, at a moderate computation may be reckoned worth 100 l . flerling.
Some years ago, his prefent grace the duke of Argyle, ever seady to promote the public good, and other lords and gentle-
men, finding fome difficulties to attend the fpinners of flax into yarn, as well as the weavers of the faid yarn into different forts of linen, by reafon of the want of a ready fale for their goods and they being unable to keep them on band for a market, were often obliged to fell them at an under value, to the grea prejudice of the manufacture: on thefe confiderations they were incorporated by a charter from his prefent Majefty, under the name of the Britifh Linen Company, with a capital 100,000 . fterling, for trading in all branches of this manufacture. They import flax from abroad, the beft lint-feed pot and weed-afhes for bleaching, and fell them qn credit to proper hands, then buy the yarn and linen, all at reafonable prices; which linen, particularly the fort correfponding to Ofnaburghs, \&c. fit for America and the Weft-Indies, they keep in large ware-houfes, both here and at London, wher they are fold for exportation: by which means this manufic ture has been greatly improved and increafed; but I am heartily forry to tell you, fays my correfpondent, and you with very good reafon will grieve, that it has now received fuch a blow (as cannot eafily be recovered) by taking off the Bounty upon Exportation, whereby above 8000 weavers in this country are turned out of their bread. I am informed that, upon the act's taking place, and merchants ceafing to buy their goods, thefe weavers went about defiring to inlifit not only in the Britifh, but alfo in the Dutch fervice from whence they frequently defert to France, and thereby become a double lofs to the kingdom, by aflifting our rivals, \&c. In the county of Angus, where many of thefe weaver live, alfo my lord Panmure, a molt amiable gentleman, who being in the army and having occafion to recruit there, found moft of them to be weavers.
Anno 1749, being then in London, I gave my beft affiftance in forwarding the act for a bounty on the whalefifhery; and, on my return hither, did affociate with others to eftablifh that trade from this place [Scotland] which has fucceeded fo well, though unfortunate the two firit years, that laft year we fent fix large chips out to Greenland, and the example was followed by feveral other places in this country ; our fleet laft year were in all 17 large fhips from Scotland: but again I am much concerned to tell you, that we meet with a great difcouragement ; and fome companies at Glafgow have already given up this moft national and valuable branch of trade, by reafon that the Bounties are not regularly paid in this Country; for though the act of parliament enacts, that the faid bounties fhould be paid out of the Customsingeneral, yet, by opinion of the late at-torney-general fent to our commiffioners of the cuftoms here, he reftrains thofe Customs to five articles, viz. Old Sub sidy, Petty Customs, Additional Duty, one per Cent. inwards, and Compositions on Petty Serzures; out of which cuftoms, it feems, that the cummiffioners falaries and all other charges, are firft paid, and there does not remain a fufficiency for the payment of Bounties.
The enfuing winter I again repaired to London, having bad the honour to be appointed commiffioner from our Convention of Royal Boroughs, to follicit the act for encouraging the British-Herring-Fishery; by virtue of which act, on my return here, we conffituted a Fishing Chamber forlherrings, with a capital of above 13,000 l. ferling; upon which we began our operations with buffes; and fome other towns followed our exampie, by eftablifhing filhing chambers, with ftocks of 10,000 . fterling each, befides fome private traders upon the general bounty of $3^{\circ}$ s. per ton.
Though we did not fucceed very well at firft, as all things are attended with cafualties and extra-charges at their commencement, yet we continued 'till this year, when we broke up, and fold our buffes, \&cc. by reafon of the premium, or bounty, not being regularly paid, as above mentioned. As you, Sir, have been already fo full upon this fubject of Fisheries, I necd fay the lefs; you having, upon this occafion, mentioned the old proclamations and rreaties in formen times, that no foreigners thould come and filh within light or within 14 miles of our thores: if there fhould be revived, it would do our bufinefs at once, and fave the charges of all Bounties.: Iam, and ever was, fo much inelined to forward fifheries of every kind in this kingdom, that I have been at Dronten, and laft year at Bergen, in Norway, on this occafion, where 1 got fuch information as, I humbly conceive, may tend to the improvement of our herring-fifhing, which thail be communicated in the fequel, when I come to mention fome things farther about the Highlands and their adjacent iflands. See our article Figheries.
Upon both fides of the Firth of Forth is plenty of great and fmall coal, which are exported abroad, and coaft-ways: the great coal is efteemed the beft firing for houfe uft: many hips are loaded at Alloa, where the price is from 5 s . to 6 s , 8 d . per 24 hundred the ton. The coal is brought to Leith by water, and to this city by carts, weighing about 12 hundred, and fells for 5 s. per cart; and at the fame rate we have them from other collieries round the town. The rofule of the great coal is ufed for boiling of fea-water to make falt, of which we have great quantities in this firth, and fells for
$7 \frac{1}{2}$ d. per buthel, or 25 s. per ton: the Englifh Iceland fifhers are generally ferved in that article here, and a large quantity are generiad to Bremen, Embden, and to the Baltic. - We is exported to Bremen, Emoden, and to the Bape, -alfo to Ahave fome foreign trade to moft parts in Europe, alro to A-
merica and the Weft-Indies; but thefe two laft are chiefly merica and the Weft-Indies; but thele two lat are chiely
earried on from Glasgow and DUMFRIEs, which trade earried on from Glasgow and Dumpries, which trade in return for them, fugar, rum, and tobacco, \&c. large quantities of the latter are re-exported, which bring in a ballance of money, or anfwer for other commodities that we have occafion to import.
This brings me to Glasgow, which is a large, handfome, regular, and well-built city, upon the river Clyde. They have a good univerfity, a town-houfe, fine churches, the houfes mofly built of free-ftone; many of their opulent merchants have villas on both fides of the river : the tide and finall chips come up to the town.
Upon the Union of the two kingdoms, this town commenced Upon the Unon of the two kingdoms, this town commenced
their trade to America, which became very confiderable, and has imported from 20 to 23,000 hogheads of tobacco in a year, befides fugars, and other Weft-India commodities, together with their large concern in the herring-filhing in the Firth of Clyde and Highlands, which are exported to the Baltic. They alfo fend fome fhips to Greenland and Davis's Streights, for the whale-fiffing; all which has increafed their chipping very much, and encouraged every kind of manufactures, particularly linens, fine and coarfe, cheques, tapes, hicle, thread fockings, handkerchiefs, and plaids, or tartans. They have feveral fugar-houfes, an iron nitting-mill, all forts of iron manufacture, a glafs-houfe; rope-walks, and foaperies, a Delft-work, alfo a very confiderable tannery; having their raw hides from Ireland, \&c.
Six miles from Glafgow is the town of Pailly, remarkable for the induftry of its inhabitants, and the effects thereof, by increafe of people, buildings, churches, and an hofpital. About 60 years ago, they had not above 60 weavers, including journeymen and apprentices; now there are about 1400 weavers, and 93 thread-mills. They make cambrics, lawns, minionets, linens, handkerchiefs, thread and tapes, \&cc.
About 14 miles down the Clyde from. Glafgow, is New Port and Greenoc; the former has a good harbour, fine ware-houfes, and is the port of Glafgow; the latter is a town of good trade.
Irvine and Air are allo towns of pretty good trade; the former hasabove 6o fail of fhips in the coal-trade to: Dublin, and other places; the latter has five or fix thips in the to-bacco-trade from America.
Campbelton, a royal burgh in Cantire, is a pleafantfituated town, has a fine bafon and good harbour. The inhabitants of this place and country are vety induftrious in agriculture, linen mariufactures, and filheries. They had a Greenland company for the whale-fifhing, but fome differences arifing amongft thofe concerned, it broke up; however, they carry on a confiderable trade with herrings, alfo cod and lingfibing, with wherries at Barra, Lewns, and at ZetLAND, as well as in their own neighbourhood, which they carry for moft part to Ireland.
Dumpriss is a neat well-built town, much increatal of late years, has imported about 3000 hogheads of tobacco from America in a year; but in the neighbourhood of it, upon that coaft, they have too mureh trade with the Iste of MAN, from whence they bring great quantities of French brandy, and other diquors, to the great injury of Britain, and her revenues. See MAN, [ISLe of, MAN, and Bujgeling.
4. 4 :

Ceyd
Annandale, Nithisdale, and Ceydesdale, are great theep countries; reme fore mafters haveabove $30 y 0 n 0$ Theep $v$ and rent roook a year ; but being /iarce of firing, they are thinly inhabited, and manufacture but litte of their own wool, which is fent to other places. At DUNCE in BERWACKSHIRE, JEDBURGH zanddratuc in Roxburgeshire, they manufacture plaids, eampetaniand ferges, \&c. Tiviotdale, and hive of Maiksts aseagood corn cuuntries; wheat, barley, and oats, are exported from BRRWICK and EYMOUTH. . The finites of the three Lothians are remarkable forffertilicy in fine corns, particulaly wheat, baysleys, wand eats. Fife, Perth, and Angus-Shires, hiveithe geateft chare of the linen manufagture, yarn and throad, particularly in
And about the towns of Cou per, Perthid Dundien, Arbroath, and Montrose. Shipsareloaded from theyfour Jaft-mentioned places to London, with quantities of goods of great value; and they have otherwife a very good trade.in
Aberdeen town and hire: the town is populous, large and well built, has a town-houfe, traders and merchants hofpitals, and one for old women; alfo Gordon's hofpital, endowed with ro,oool. the intereft wbereof is at 5 per cent, per annum, for education of boys; they have fix churches, and a very good univerfity. The barbour is fafe and capacious, and aight be made to hold a great number of fhips; the entry is guarded by a fort, and though there is a bat, it may be removed, and made deep water, by carrying the pier - little farther out. Erom this port is fometimes exported

3'or 4000 tons of oat-meal in one feafon, The manufactufes here are chiefly fine and coarfe ltockings, plaidings, and ferges, to agreat amount ; I have heard of fhips loadings of thefe goods to Holland, from to to 15,0001 . in one cargo; but thefe trades are now fomewhat fallen off, as the country pebple have of late run more into the linensmanufactures. They have a very extraordinary falmon, filhings both on the rivers Dee and Don; they havelikewife a company for the Greenland whale,fifining, and within thefe ten years have had a tobacco-trade from America, with 101012 fail of thips.
The exports from : Aberdeen, before the Union, were fatt falmon to France, dried cod and ling, both to France and up the Mediterranean; narrow and broad fingrims and ferges, to Holland, and fome fockings to Hamburg and Hôlland. Our imports from thence were wine and brandy from France, bay-falt, foap; ftarch, and barrel-ftaves, from Dantzic, and fome flax from the laft place and Holland.
Soon after the Union, a company here opened a trade to Vir ginia; but unfortunately two fhips being loft at that time, puc an end to the attempt.
The moft material branch, and of longeft ftanding here; is the manufactory of knit iftockings, which was only begun for the Hofiand market, about the Revolution; they have heres rifen to fuch an extent, that, for fome years within thefe twelve preceding, there have been fhipped for Holland and London from 60 to 86,000 l. fterling value:
The wool, little of which is the product of thiscountry, is brought raw from Newcaftle and London; this was for many ycars retaled by the importers to the country peopic, who bought it in fmall parcels, as they could afford to buy: it was combed, fpun, and knit into flockings : by the women and children, and, when wafhed out, fold either in town, or in the country markets, to merchants exporters : then infufficiency, and cheating of every degree, was frequent, and they were truly not worth the money they gave here to the laft wearer:ithis, as in the like cafes, brought a damp on their fale at every market, and they have not as yet recovered credit at London, where the fockings of the like kind, from Guernfey and Jerfy, outdo ours.
Some mercbants about ten or twelve years ago, fucceffively undertook a reform of that abufe; fince which they have introduced the trade of wool-combing, fo that now, I believe, we have more wool-combers than in all the relt of Scotland: the merchant imports the wool, combs it in his own warehoufe, and gives it out to the people, who pin the yarn and knit the ftockings, into any form or fize they are directed: I have known fundry times ftockings fhipped for Campveer in one bottom, to the value of 20001 . Aterling.
About ten or twelve years ago fome merchants here introduced a trade to Virginia, and they have kept flores both there and in Maryland; we have four companies trading in the importation of tobacco from different parts in North America, which trade was ptetty brifk until the late act of parliament has brought even the fair trader under fundry difcouragements; and at prefent the imports are conifiderably leffened, though I ftill hope the trade will not be wholly loft here.
Since the peace of Aix la Chapelle, our merchants have much turned their thoughts on the linen manufacture; this was occafioned by the confumplion they bad for both coarfe, and better forts of linen in North America. We had fome years ago fet up a manufacture of coarfe unbleached linen, known by the name of Ofnaburghs, which cloth was greatly encouraged by the bounty given on exportation; and we were aflured from all parts, that ours were the beft made in Scotland, When the parlizment laat yeat took off the bounty, that manufacture was converted into one of failcloth, which remains entitled to the bounty, but they continue fill to make fome Ormburgh cloths. Befides the above, there are three other manufactures of bleached linen, each of which has frow thisty to forty looms, confantly employed th the manufacture of cloth, of the watue of is 6 ds to 9 s. per yauds and aboukstyo yearkjage, an ifland upon the river Dons abouthalfia miletabove the bridge, was made into a bleach field nof sabat five) Icresw + The illand is pleafantly fituated, weHiwatend and melceted, and for the two laft fummers has prodused las yine and as beautifully bleached ototh ars any in Earmpe. But our hadertakers in the linen wayifay the market is dead atiprefents and large wtocks on hand unglde One of thofe liven companies have got about eight or ten hocking frames, for the weaving of cotton and tinen fockings, caps, bece and bave alfoulately erected /an incleframe, which at ohce yields 40 pice.
There is befides anothet company, who have erected about There is beldes another company, who have ereeted about twelve or twenty frames for weaving cotton tockings,
caps, \&c. befides, all our linen companies make checques, caps, \&c. befides, all our tinen companies make checques,
napkins of cotton and linen, and tartans. Laft year two napkins of cotton and linen, and tartans. Lalt year two
merchanti enly bere have; mitfoiduced; and very fuccersfully caried on, the manufacture of white and coloured threads for fewing; so fome confiderable value.
The two rivers of Deesand Don, which abound in falmon, may afford annually at an average one hundred lafts of faltfifh, whichare thofo caught aftes the 19 ch of May, and are filb,
moftly fold for the French, and fome for the Flanders market, where they have the reputation to be the beff finh, and beft cured of any in the world. From the beginning of the filhery-feafon, which is the middle or end of January, to the 15 th of May, the falmon caught are either fent raw or pickled for the London market, and this may be yearly to the value of about 30001 . fterling.
We have bere pork which is falted and cured both for London and fometimes for Holland; it is efteemed for the fat and the lean being better mixed and fweeter than the pork of England; and there is exported, and Chipped coaft-ways about fifteen or twenty lafts yearly.
The chief product of this part of Scotland is oats and oatmeal, the ftaple articles that bring here the freeft return of money, in the time of good crops. The two counties of Aberdeen and Bamf have, befides a competent provifion for home fervice, often afforded from 50 to 70,000 bolls of oatmeal, which are fold in the Firth of Forth, and Tay on the eaftcoaft of the Firth of Clyde, and in the Highlands on the weft, and very often in Ireland, to which laft place we have about five or fix weeks ago begun to export.
For fome years paft there has been a demand from London, which I am told is afterwards carried down and ufed at Manchefter, for linen yarn; it is a very coarfe kind, bought here at from 18 d . to 2 s . per fpindle; but as it is made of flax bought by the country people, they often cheat both in the tale and in the length of reel, and it has for twelve months paft been on the decline. I am told, that few years ago from 12 to 20,0001 . fterling value has been fent to London; but unlefs fome method be taken like that lately with the ftockings, this branch will be loft. It would be to the benefit of the country, if it could be got wove here, and a reafonable profit on the linen.
There are 35 fhips belonging to this port, including our two whale-fhips; and they confift of about 4500 tons, and are chiefly employed in the North American trade, and in that to London, Holland, and two annual fhips to Dantzic, as many to Riga, fome to Norway, and one annual thip to Antigua, and to France with falmon.
'The, greateft part of our fewel is coals imported from Newcaftle to the Firth of Forth. They are chiefly brought us by fmall hips of about 200 tons, belonging to the fea-ports in Fife; we take alfo about 30 or 40 cargoes of lime, and above 20 cargoes of Scots-made falt; fo that about 30 or 40 Firth barks have their whole bread in thofe employs, which ferve to take off our ready money, though in fmall parcels.
The country people live chiefly on oatmeal, greens, and milk. The knitters of ftockings and fpinners of linen yarn, are only the women and children: they are not able to gain above $2 \mathrm{~d} . \frac{1}{2}$ per diem at the firft, nor exceed $3 \mathrm{~d} . \frac{x}{2}$, fterling per diem at laft, when linen yarn bears any tolerable price at London.
They have here, perhaps, the moft plentiful and beftferved filh-market in the world; there are above 60 filh-ing-boats within 16 miles of this town on both fides. The whole of the filh caught by 30 boats come duly to our market; at leaft, the half of the filh caught by the other $3^{\circ}$ are fold here, fo that after a ftorm, when filh are fcarce, our other provifions become fenfibly dearer.
Bamff, Murray, Ross, and Caithness Shires, are very good corn countries, and generally export barley, bigg, oats and oatmeal; all forts of vivers in thefe northern counties are extraordinary cheap, and wages very low.
Although the woollen manufacture is not the ftaple of this country, yet it is far from being inconfiderable. There is an opulent company eftabliifhed at HADDINGTON, where they make all forts of fuperfine and coarfe broad and narrow cloths, alfo bays, Thalloons, long ells, carpets, and worted plufhes. Before the union of the two kingdoms, there was a very confiderable undertaking of this fort at New Mills near Haddington, which had large privileges by act of parliament, but upon the Union that company diffolved; yet the working people, who had been employed therein, continued to make cloths and other woollen manufactures. At this place is a weekly market, where large quantities of raw cloths are purehafed from the country people, which are milled, dyed, and preffed by the cloth-dreffers here.
At Dalkeith in Mid Lothian, is a confiderablemanufacture of bed-coverids, which fupplies moft of the country with that commodity. At Musselburghare alfo made fome broad cloths, but the principal manufacture here is a fort of narrow ftuffs of various colours, which are allowed to be the cheapeft manufacture in Europe, being fold by the weaver at $2 \frac{1}{2} \mathrm{~d}$. per yard. Of thefe, large quantities are exported to Holland ; they alfo make a fort of white ftuffs yard wide, that is much ufed in the country for bedcurtains, \&c.
At Edinburgh, fhalloons and tartans, or plaids, are reckoned the beft in Britain; but the largeft quantities are made at and in the countries about Stirling, where many hundred looms are employed in the manufacture of
erges, fhalloons, and tartans; the two former are exported to Holland, and the latter to England, America, and the Weft-Indies.
At Alloa, four miles from Stirling, down the Firth, are made camblets, blankets, and long ells. At KILMARNock, and in the adjacent country, they make cloth ferges, which are exported to Holland and Hamburgh; ifrom thence they are fent into Germany, and there milled and dyed for foldiers clothing: alfo in this place are made carpets, coarfe floor cloths, and cloths made in imitation of thofe at KENdal.
This country abounds greatly in mines and minerals, though hitherto but little regarded. Some old and late works are thofe of Leadhills, alias Hopetoun, belonging to the right honourable the earl of Hopetoun, lying in the thire of Clydespale; thefe are molt remarkable for all kinds of lead ore; the green, yellow, grey, and black, are found here, as well as the blue and white; the two latter are got in great quantities, and in all their varicty; the foft broad grained ore is got mool frequently, and in greater quantities than the hard fhort ground fteel ore. Of this broad ground blue ore, pieces are got from the mine like a mirror, as if polifhed by art. Of late, the white ore has been got in great plenty. There are fome pieces almoft tranfparent, fhot out in the form of cryttals of all figures, from every part of the cavity, adhering to the fides of it, as branches to a root; of which fome are fhort and folid, joined by pairs to one furface, croffing one another like two perpendicular plains, and at right angles; others are long, fometimes joining both fides of the cavity, clofely united one to another, and hollow like tubes. The fine foft blue ore is often crufted with thefe cryftals, as if defigned by nature to beautify the mafs, which in its native ftate is very brilliant in the mine, attracting with admiration the eyes of the curious.
There has been and is ftill found, gold in thefe parts, of which formerly, broad pieces, Jacobufes and Carolufes, have been coined. It is fometimes found upon the furface amongft a particular kind of earth like red and yellow paint, by the gatherers called oker and brimftone; which earth does not extend to a great breadth, but it has its courfe in length, regular as the lead veins. They gather it generally in the hollow places near the fides of the rivulets, to which places it is walhed down by the rains from its proper bed. Within thefe few years a piece was found on the fide of Glengonner water about nine drop weight, which was brought to the earl of Hopetoun.
It was fearching for gold, when they firf difcovered the lead mines, which were in the high grounds there about 380 years ago; but in the lower grounds only about the year 1534. Sir James Hopetoun, the prefent carl's great grandfather, got poffeffion of there grounds by his lady Anne Foules, of the family of Collingtoun, in the year 1641. Since which time they have produced great quantities of lead; fome years 1500 tons of lead, and 600 tons of potters ore*.

* This is a bright flakey ore, in large lumps, ufed for glaz. ing earthen ware. Great quantitics are fent to Deltt in Holland.

At Wanlockhead, belonging to the duke of Queenfberry, about a mile from lord Hopetoun's works are very good workings in lead-mines, which were difcovered at the time of thofe at Lead-hills, but their ore is generally of the blue hard fteely kind, and contains about 14 ounces of filver in a ton of lead, which is refined and extracted out of it; they have alfo of the foft flakey blue ore, and the works have been fo rich this laft year, as to produce about 30,000 bars of lead, each bar containing $\pm \frac{2}{4} \mathrm{Ct}$. which makes 1875 tons.
Anno 1600 , at Tartriven, 12 miles weft of this city, was a fine filver-mine wrought, the bottoms of which were cleared out anno 1730. The York-Buildings company expected the work to continue, but were difappointed.
Anno 1715 , Sir John Erikine, of Alva near Stirling, found a neft of filver at Alva, which he wrought out that fame year to the amount of 15,000 . fince which no more has been difcovered; but in the fame range of hills, called the Echals, there have been feveral old and late workings in copper-mines, which contain a quantity of filver, particularly at Aithry, Blair, Logy, and Tillycoultrie; the appearances are very good and encouraging in feveral places.
At Strontian, in Argylefhire, are very confiderable lead mines, difcovered by Sir Alexander Murry, anno 1727 , wrought for account of the duke of Norfolk, and fundry other partners; thefe were afterwards lett to the York-Buildings company, and fince to others; I have known 1500 hands employed in thefe works at one time.
At Tyndrum, upon the earl of Broadalbin's eftate, anno 1740, lead-mines were difcovered and wrought by Sir Robert Clifton, now leafed to the Mine Adventarers company, and produce large quantities of ore. There are feveral other leadworks in different parts of the country, and appearances with-
out number; but in this country, few are willing or able to venture upon fuch precarious bufinefs; and indeed, it is moft proper for focieties.
There is lately a mine of wadd or black-lead difcovered upon M•Donald of Glengary's eftate in Invernefshire, leafed and wrought by Capt. Thyne; alfo in the fame fhire, about 20 wrous a fine copper-mine was difcovered and wrough by Mr Champion of Briftol, upon the eftate of M•Donald of Applecrons, oppofite to the illand of Sky, but being troubled with water, it was neceffary to bring up a level, which was too expenfive for him to undertake.
Thereare feveral other good copper-mines in that neighbourhood and in the inlands, which ought to be tried.
This country is happily interfected with many firths and lochs, or long inlets of the fea, which is a great conveniency to trade; the Firth of Forth from St Abb's-head to Stirling about 60 miles, and 'from the Forth of Glafgow on the Weft Sea, is only 18 m!les over land; from thence to Fairlandpoint in Wigtounfhire, being the Firth of Clyde, is 90 miles; the Murry Firth from Kinnaird's-head to Invernefs, is about 70 miles. This town has a good trade with the Highlands, and a chamber for the herring-fifhery from InHighlands, and a chamber for the herring-Eaft to Weft Sea, is 48 miles, all a valley, fine-made roads, great lochs or lakes in the middle, and bounded with mountains on each fide; from Invernefs to the eaft-end of Lochnefs, is four miles. The loch is 20 miles long, at the upper end is Fort August us. They have a veffel to carry ftores and provifions; the river of Nels is well ftored with falmon; from FortAucustus to Loch Oich is 2 miles and a half, the loch 5 miles, one mile to Loch Lochy, which is ten miles long, from thence to Fort William five miles and a half; from Fort William is an inlet of the fea to Caftle Deuart in the lifand of Mull, 36 miles.
Upon the Murray Firth, oppolite to the town of Fortrofe, about fix miles from Invernefs, is a large new fort now buildingat Airdersier, well fortified; the barracks will be fufficient to hold 1500 men , and there is free accefs to the fea. This comes in place of Fort George at Inver. ness, now demolifhed, as is alfo an old fort on the other Finde of the town, built by Oliver Cromwell. Fort Augustus and Fort William, make a chain from the Eaft to the Weft Sea as above mentioned, and divide the Highlands, which might not only prevent a junction upon any infurrection or invafion, but may alfo be a means to affilt the civilizing and introducing manufactures and induftry amongit the Highlanders, which will certainly prove the beft and moft effectual way of maintaining peace and improving the coun try. To all thefe forts there are fine fpacious roads made, fit for any wheel-carriages from the fouth and low countries. The wifdom of the legillature cannot be fufficiently admired for annexing the Highland forfeited eftates to the crown, particularly lord Cromarty's in Rofsfhire, lord Lovat's in Inver nefsfhire, Cameron of Lochiel's in Argyleihire, and the duke of Perth's in Perthihire, and in appropriating the revenues thereof, for the improvement of the country in the manufactures, \&c. and farther for the fame purpofe, by an act of the laft parliament, 3000 l. per ann. payable out of the cuftoms, is granted and put under the management of the commiffioners and truftees for improving fifheries and manufactures in Scotland; and they have already made a beginning and publifhed a plan for diftributing the faid fum for the firf year, viz. for introducing the linen manufactures at four different ftations and fettlements, in certain parts of the Highlands, in the fhires of Inverness and Ross (where it hath not hitherto been introduced) and applied a fum not exceeding 6301 . each ftation, conformably to the plan; which is for building proper houfes, purchafing lint-feed, giving premiums to the raifers and dreffers of flax, and for wheels, reels, heckles, and all forts of utenfils, for mafters and miftreffes to breed up others, 25201 .-For fupporting and encouraging the manufacture in thofe places where it hath been already introduced, but hath not yet arrived to any confiderable degree of perfection, 300 l . -For falaries to one or more infpectors, not to exceed 1001 . and for defraying incidental expences attending the execution of this plan, 80 l.-It is hoped that thefe wife and ufeful meafures will have the defired effect.
The moft confiderable fir-woods in this country are in Striath or the valley Spee, chiefly belonging to Sir Lodovick Grant, Mr Grant of Rothiemurchas, and the duke of Gordon. Sir James Grant, Sir Lodovick's father, fold fixty thoufind weil-grown trees to the York-Buildings company, the boughs and tops of which they burnt into charcoal, having erected a furnace and forges for making of iron, and having bog and rock-ore in the country. Alfo they got pigfron trom Mr Rawlinfon's furnaces at M‘Donald's of Glengary, lying between Fort William and Fort Augultus; to which place fine ores were brought from Lancafhire, mixed with Scotch ores, and there fmelted.
The trees were partly cut into deals, and partly carried whole down the river Spey to London, for mafts, yards, and bowIprics for thips. But the company's affairs at London going wrong, made them give up thefe undertakings, however promifing they were. Formerly there were allo iron-furnaces

VOL. II.
and forges at Achnacarry on Loch-Lochy, ten miles from Fort William, and in other places of the Highlands. At prefent there are new iron works erecting at Bonawe in Argylefhire, to which place great quantities of timber are brought down from Glenorchy to Loch Awe, and then by the water or river Awe, in which are plenty of falmon. Alfo from Logh Etive to Bonawe.
Upon Lochiel's eftate are fine woods, which may eafily be brought to Fort Wiliiam-Alfo upon Loch Nefs, particularly on lord Lovat's eftate, which might be brought to Invernefs. Upon Chifholm's eftate are likewife very fine woods on the river Beauly, but fo difficult to be brought to the river, which has feveral falls, that it makes the wood of little value. In like manner lord Braces has very fine woods about the head of the river Dee, forty miles from Aberdeen. but fomewhat the fame difficulties attend them as do the laf mentioned. It is much to be regretted, that fuch fine timber, fit for fhips mafts, hould be cut down into boards, or left rotting on the ground; I can't think, but by fome contrivance they might be brought to water-carriage.
All round about the weltern inlands, and oppofite upon the main, are plenty enough of herrings, cod, ling, and talmon; \&c. to enrich a nation. We have fometimes a hundred fail of thips there in a feafon, and all of them get their loadings ; and many more thips might be loaded, if the fifhery was upon a right eftabllfment ; but at prefent it is attended with fo much charge, and is fo precarious, that many adventurers fuffer greatly by it, and it is in a great meafure given up; for the chief herring. feafon is in the winter time. Ships come thither from the eaft and weft country loaded with falt and barrels, and provifions for three or four months voyage, befides ftores of tobacco, fpirits, eatmeal, and bread for the Highland fifhermen; for they carry no nets of their own, but engage the Highland boats to fifh for them, giving thefe Highlanders provifions fifh or no fifh, and then giving fo much more for the barrel of frefh herrings, according to their fuccefs and demands.
The proprietor of the eftates where fuch fifhings are, exacts one night's fifhing, the beft in the week, for himfelf; alfo a tax for the liberty of packing them upon the fhore. If a veffel gets a cargo, when many of them are together, it will come pretty dear, by the quantity of provifions given to the fihermen, and the bigh price for the frefh herring, every one triving to have his cargo firft, by reafon of the bad weather at that time of year. It fhould not be forgot alfo, that it is fomewhat precarious, for though the herrings come annually pretty regular, yet.it is uncertain into what loch they will come, and how long they will remain.
Suppofe a number of fhips goes to Loch Boque on the weft fide of the Lewis, and after flaying fome time, they hear that herrings are plenty in Loch Broom upon the main; if the wind is wefterly, which is often the cafe, they may not get about the ifland for a long time, and when they arrive at Loch Broom, the herrings may have fhifted to Loch Seafort or Stornway, on the eaft fide of the Lewis, and thereby the fifhers be altogether difappointed. Then it comes to be a heavy lofs upon the adventurers; the dead freight of the fhip which from this Firth is generally 40 s . per laft, being funk, ftores exhaufted, falt wafted, barrels fpoiled, fxc.
Wherefore, in my humble judgment, ftorehoufes fhould be erected in fundry places, falr, barrels, and other neceffarics lodged there, and fhips not to come till their loadings are ready.
I fhall communicate fome farther thoughts about improving of this article, amongft other remarks fubjoined to this letter, and beg reference thereto.--But I muft here previoully obferve, that the confequence of fuch fettlements would be the making of fo many towns, cultivating more ground, growing of corn, and planting of potatoes, \&xc. Alfo the tiphermen would always be at hand, and prompted to follow after the fucceeding fifteries of cod and ling. In many of thefe weftern iflands, they have great quantities of fern, which is found to contain the beft and moft falts of any vegetable; they burn the fern to afhes, and either ule them in place of foap, or make a pot-alh and foap of them. Thefe fhores likewife abound with fea-weeds, which are burnt into kelp, fit for bottle glafs-houles, and great quantities thereof are brought to Newcaftle.
Some of thefe illands are very fruitful in corn, barley, or bigg, and oats, particularly the ifland of Tyric, which is level; it belongs to the duke of Argyle, and the fouth end of the fouth-weft belonging to M•Donald of Clandronald, abounds moftly with limefone and marle; alfo they here ufe the feaweed for manure.
They often delve their ground with garden-fpades, and fow their corn by drilling, by which means it produces fixty fold. Thefe inlands and the Highlands in general, abound with black catcle, which are drove down to fairs and markets in the low countries, particularly to Crief and Falkirk; at the former of which places, I have feen twenty thoufand head of cattle, and fold from 30 to 40 s . per head; moft of them are drove from thence to England, where they are fattened and brought to Lnndon, which is alío a great trade from the fire of Gallowhy.

OREMEY

Orkney and Shethand iflands are the moft northerly parts of his'Majefty's dominions in Scotland ; the former of thefe helps to feed the latter, Orkney being plentiful in corn and all forts of vivers; they are very populous, moft of the inhabitants are fifhermen, or at leaft they underftand to hande the oar; oatmeal is from 7 to 8 s . per boll, or I s. 4 d . Englifh; bigg 5 to 6 s . per boll, or fix Winchefter bufhels; beet and muiton $\frac{3}{4}$ to 1 d . per pound; geefe 4 d . to 6 d . fowls 2 d . to 3 d . eggs id. 'per dozen, or 14 ; eating butter $2 \mathrm{~d} . \frac{1}{2}$ per pound, greafe butter $3^{\circ}$ to 40 s. per barrel. Wages for women fervants, 5 s. 6 s .8 d . to 8 s . 4 d . perann. men fervants, 12 to 15 s. per ann. wages for head fervants about 4 d . per diem, and maintenance. Their filhing here is not confiderable, on account of the rapidity of the tides; in Pentland Firth, the tide running nine miles an hour, yet they have plenty of filh for their own confumption, and fome for exportation ; however, they are fo expert at the bufinefs, that they go generally to the illand of Bara, the fouthernmolt of the long weftern inlands, to the ced and ling-fifhing, and are annually employed by all the Britilh cod-fifhers to Iceland.
The Hudfon's-Bay fhips call there every year, and carry fome of them to remain at their fettlements in Hudfon's-Bay for feveral years, and afterwards bring them home and exchange them for others. This year about 300 of them are employed on board the herring-buffes belonging to the London fociety; I think they may alfo be made very fubfervient and ufeful to our Greenland whale-fifhing.--They have fome linen and woollen manufactures, particularly thofe of coarfe fockings.Capt. M•Kenfie has made a very exact furvey of the Orkney and Lewis iflands, with defcriptions of them, alfo of the foundings and tides, publifhed in folio; he is now employed by the lords of the admiralty to go on with the furvey of all the weftern iflands and coafts, which, when publihed, will be of very great ufe.
Zetland, or Shetland, grows but litle corn; yet the country is populous, and is fupplied with oatmeal from the Orkneys and other parts; they are much employed in fifhing for herrings, cod, ling, and tufque. This laft-mentioned is a thick, fat, and delicious fifh, fomewhat like a fmall cod, not found any where elfe in Britain; they have a confiderable trade to Hamburgh with their fifh and coarfe flockings, from whence they bring many neceflaries as well as fuperfluities of life.
Brassa Sound, famous for the rendezvous of the Dutch herring-buffes; formerly eighteen hundred fail have been here from Holland in one feafon. The Dutch buy of them coarfe ftockings and mittens.-Whales come frequently alhore on fome of thefe iflands, which proves a good perquifite to the admiral. Alfo there are too often fhipwrecks of Dutch, Danifh, and Swedihh Indiamen, and large Norwegian thips bound for the. Irifh channel.- They have fine beef and mutton in this country, and live very comfortably, but their fifheries might be much improved.

## REMARKS.

The laft parliament, continues my correfpondent, were inferior to few in regard to the wife meafures taken by them for the encouragement of trade and manufactures, as well as for feveral ufeful laws, tending particularly to the improvement of this part of the united kingdom. Many of the fame perfons being ftill in the adminiftration, and the new parliament having an addition of many true patriots, gives us the pleafing hope and profpect of a continuation of fuch a fyftem of policy, as will effectually preferve and promote the commerce, and the public credit of thefe kingdoms.
Amongit thefe, the filheries are not the leat. We have feen Amongit thele, the fineries are not the leaft. We have feen
the happy effects of the bounty for the whale-fifhing; though it was granted only for feven years, yet the trade has increafed fo much, that we have had this year eighty-nine large ftout Britifl fhips in Greenland, which have been, in the general, pretty fuccefsful; the nett produce of which filhery is near all gain to the nation, befides the multiplying our fifhers and failors. But as extraordinary charges attend every new trade at its commencernent, and in this cafe in particular, from the neceffity of erecting of boiling-houfes and warehoufes, and bringing from the illand of Foern on the coaft of Jutland, commanders, (pectioneers, and harponeers, \&c. both to execute our bufinefs and inflruct our people: thefe things are very expenfive to the firft undertakers. We are obliged to give thofe chief officers high wages and premiums, and are at the charge alfo of fending them home again annually.
On thefe confiderations, it is judged abfolutely neceffary to have a prolongation of the BOUNTY for feven years farther, which was laft winter approved of by a late able minifter, but put off 'till this winter on account of a new parliament. As this and all bouaties are given amongt ourfelves, they can be of no lofs to the nation; and therefore it is to be hoped, a meafure fo expedient will meet with no obftruction. Belides, in this cafe, the revenue is firlt increafed by all the duties on the articles uled by this trade, viz. on iron, hemp, flax, oak plank, pitch and tar, \&cc. for building of fhips; alfo the duties and exc.fes on (pirits, liquors, and falt, \&c. confumed in thefe voyages, make us fit out and navigate, at a greater charge than our neighbours and rivals. Wherefore
the bounty is but returning only a part of thofe duties, and put ting us on a footing with our neighbours. And after the cef fation of this bounty, it is reafonable enough to believe, that this trade may be able to ftand upon its own legs, and con fequently will greatly tend to increafe the revenue, as well greatly benefit the whole kingdom. It is to be hoped likewife, that by the time of expiration, we fhall have no occa fion for thefe Jutlanders, who make good advantage in ferving us at prefent, as well as the Hollanders, Hamburghers, Bremeners, with the chief officers in the whale-fifhery. But as every faving is neceflary to be made upon an infant trade, wherein we are rivalled too, it is humbly propofed, That As the iflands of Orcades lying in the latitude 58 and 59 , and directly in the way to Iceland and Greenland, are a very plentiful country for all forts of provifions, and well peopled, more efpecially with fifhermen; fo the fleet of 25 to 30 fail of veffels from Broad Stairs, Ramsgate, or Margate, for the annual Iceland cod-fifhing, foould proceed from thofe parts to the Orkneys, with no more hands than are neceffary to navigate the veffels thither; where they Chould take on board all the additional hands wanted for the fifhing, and fet them down again in about a month or fix weeks upon their return from the fifhing; by which means there will be a confiderable faving in the articles of wages and provifions.-In like manner our Greenland-fhips might fail from all the different ports in Britain, at firft with their officers and as many hands only as are neceffary to navigate the fhips to the Orkneys, and there take in the additional hands for boat-fteerers, \&c. wanted for that fifhery; thefe bands may be made boat-fteerers the firft year, and earn in a few voyages to become dexterous harponeers and pectioneers, \&cc.: thefe additional hands likewife may be fet down again upon their return from the filhing. This would not only prove a great faving in wages and provifions in thofe fifheries, but alfo be a certain refource for thefe officers and hands, that are fo neceffary for the bufinefs; whereas, at prefent, we are at an extraordinary charge for our dependance upon the Jutlanders before mentioned; and thoúgh many of our people are taught to be chief officers, as harpaneers, \&c. yet it frequently happens, that the neceffary Jutlanderṣ are otherwife engaged in voyages abroad, or out of the way when wanted; fo that the Orkneys may, in this refpect, fupply the place of Jutland: for which purpore, fome new regulations in the law for obtaining licences, in order to give tirle to the bounty, would be neceflary.
We before obferved, that there are in Scotland i 6 large fhips employed in the Greenland trade, which, in proportion to the number of merchants and their fock, is more than in England: but as the articles of our cuftoms, out of which, as we have faid, thefe bounties are payable, viz. out of the Old Subsidy, Petty Customs, Admitional Duty, one per Cent. inwards, and Composition in petty Seizures, have proved infufficient to anfwer the intention of parliament; there are already confiderable arrears due to the Greenland fhips and herring-buffes, contrary to the defign of the legillature. Upon this account, the herring fiihing chamber of Edinburgh has already given up; and $I \mathrm{am}$ afraid, unlefs fome remedy is found, the other chambers and whale-fifhing adventurers in Scotland, will be obliged to follow their example; for it is not enough that the government owes them fo much money, thefe trades cannot be carried on in Scotland without punctual payment of the bounties; and what a pity would it be, that fuch a national and beneficial trade mould be fo fhort lived! But we have all reafon to hope, that the parliament, when applied to, will give fpeedy and effectual relief; and that they will not ftarve, but nurfe and cherifh, thefe infant undertakings.
Having mentioned the herring bufs-fifhing, which in Holland is called the great fifhery, it requires and deferves fome confideration. I am glad that fo many gentlemen of worth and conideration are concerned in the fithing fociety at London, who may overcome any difficulties that may occur in fuch a delicate branch of trade, wherein we have many rivals. In order to anfwer this great end the more fpeedily and fubftantially, we are humbly of opinion, that the act of parliament needs feveral amendments. The chief intention of the legillature, was certainly to make this branch of trade general, and to fpread itfelf throughout the kingdom: but the 3 per cent. bounty upon the amount of money employed that way, being reftrained to the fociety at London, and the chambers at the out-ports, prevents this trade becoming general, becaufe no private adventurers in buffes are entitled to it. Moreover, the out-port chambers complain of trouble and expences in being obliged firft to remit their money to London, which is defigned to be employed in this trade, paying it into the bank and drawing it out again, without any manner of ufe. Another great inconventency is, that they are obliged to fend all their vouchers to the fociety at London, in order to receive the faid 3 per cent. through their hands.
Now it is humbly fubmitted, that if the parliament fhould think fit, in lieu of the faid 3 per cent. which correfponds to about ros. per ton, and in lieu of $3^{\circ} \mathrm{s}$. per ton already flipulated to be paid, to grant 40 s . per ton for the whole bounty to every bufs, that thall be fitted out with nets, and all
all neceflaries for the herring-fifhing, the buffes being furveyed and certified by the officers of the cuftoms, in the lame manier as the whale - fhips are furveyed, \&c. it would anfwer much better; and, indeed, when the great charge of nets is confidered, the herring deferves rather a larger bounty than the whale-fifhing.
It may be worth obferving, that it has been found by experience the herrings are often feen about the Lewis and weftern illands, in the monchs of May and June, as well as in the autumn and winter months: wherefore, it might be permitted for bufles to fifh in thefe places in all feafons; they will always go where they expect the beft fucceis: it may be fufficient for them to be properly fitted out, and to be employed in the fifhing, at leaft four months in the year, to entitle shem to the bounty. This article of early herring and bafs-hining comes to be very dear, on account of the great charge of nets, and the filh are chiefly confumed in the Netherlands and Germany: the Dutch themfelves for that reaion are much fallen off from this early fifhery. The Baltic confumption is chiefly cupplied from Norway, where they have large quantities of herrings cured and packed, at about 6 or 7 s. per barrel: they are afforded fo cheap, by reaton of their being caught within lands and inlets of the fea, by a number of fmall boats and nets at an ealy charge, and the people being always at home. They have of late years a contrivance, which may deferve the attention of our people, by which they catch great quantities in a fhort time. The method is this: when the herrings come into fome of their deep bays, they draw a parcel of large nets joined together like a fleet of buls-nets, acrofs the mouth of the faid bays; which is called an inclofing net, by which means the herrings are inclofed and hemmed in ; then the fmall boats with their nets fall to work, and do great execution.
We have before obferved, what advantages may be derived to Scotland from the many lochs or inlets of the fea, in the weftern iffands and the Highlands, which run up from to to 30 miles within land, and often not above one mile broad; particularly the Firth of Cromarty, Lochs Rogue, Seaforr, and Stornaway in the Lewis, and Lochs Affynt, Broom, and Torndon, oppofite on the main, and fundry others; into feveral of which lochs, herrings do annually come in great plenty. Since this is the cafe, we might enclofe and ham them in, by a fleet of buls-nets drawn acrofs the loch, as is done in the Baltic; and notice being given to all the boats round about, they would come with their fmall nets, and filh what quantities they pleafed.
If this thould be found practicable, it wrould be requifite to have proper places, the moft centrical for this fifling, ftorehoufes with falt and barrels, and all forts of neceflaries, where coopers, twine-fpinners, and net-breaders, \&xc. may have employment the whole year; and when the herring fea fons are over, the fifhers may be employed in the cod and lingfifhery, of which there are great plenty and very good in thefe parts ; there are likewife many rivers fored with fine falmon much neglected; thefe fifheries, when improved to the extent they are capable of, would greatly contribute to increafe the wealth of the united kingdom, and prove an additional nurfery for feamen: but theie things are more proper for fome fociety, public or private, the adventure and trouble being too much for private people.
Wherr herrings are caught in thefe parts and properly cured for exportation, cither to the Weft-Indies or other places, the beft opportunities of fhipping are from London, Briftol, Liverpool, \&rc. yet there are difficulties in bringing them coaftwife, by reafon of the debenture upon exportation : this ought to be regulated, as a further inducement for private perfons or focieties to engage herein. See the article Debent yre. They are much embarraffed alfo in Scotland in relation to the article of foreign falt, imported for the cure of finh [fee our article $S_{A L T}$ ], which requires fome amendment in the law. Though a quantity of falt fhould, at prefent, lie a number of jears, in which time it will wafte confiderably, yet no allowance is made to the trader for fuch wafte. For when weighed out again, the cuftom houfe claims a perialty of 10 s . per bufhel duty for every deficient bufhel. If at importation it is entered for the cure of filh, and there is no opportunity for ufing it that way, which has been the cafe in this Firth for feveral years, as falt is generally brouglit bither by our retour fhips from the ftraights; yet that falt is not allowed to be exported, but muft lie as a dead fock; and wafte away, belides being liable to the above-mentioned penalty; which is a difficulty on this trade, that feems neceflary to be removed. Alfo when any parcel of fuch fatt is carried from Edinburgh to the Highlands and weftern inands for the cure of fith, there are fome hardfhips that attend traders herein; for they give bond at TO s, per buibel, and the merchants or purchafers grant alfo new bonds to the cultom-houre in there parts where it is lodged and to be ufed; yet the firft importer is atill held bound to cancel thefe bonds, though it Thould be many years after, until the faid falt fhall be confumed: fome remedy would be neceflary for this article likewife.
We come now to the confideration of the linen manufacture, which certainly is an object no way unworthy the moof ferious public regard and attention.

This faple ranufacture was firft cherifbed and raifed in Scotland by the means of bounties; but by fome unhappy miftake, thinking it could atand upan its own legs, the bounty was this year withdrawn, which has given a fudden check to is growth; nor will it be able to rife again without fome powerful aid. For I am informed by good authority, that above eight thoufand weavers are quite turned adrift, many of whom are fent to our plantations, many become foldiers both in the Britifh and Dutch fervice, and fome are gone into other employments of various kinds at home.
If this, upon due inquifition, fhould be found to be $F_{A C T}$, is not this undoing all that has been bitherto done? If this capital manufacture fhould ever be revived again, it mult be fome confiderable time firft; a number of hands cannot be collected and bred to this manual art of a fudden. See our articles Artificers and Manufacturers.
Ireland, though more concerned in the linen manufacture than Scotland, does not fuffer fo much, becaufe of their high bounties at home. It is true, the government has granted 30001. per ann. in aid to civilize the Highlands, by promoting the growth of lint and eftablifting the manufacture there; which moft certainly in time will be of great ufe, but cannot be a prefent relief to this valuable and important article, and preferve it from ruin.
It is fuggefted by fome, as a redrefs for this grievance, to take off the drawback on the exportation of foreign linen; but we are afraid, this meafure will not effectually anfwer the purpofe, and may be attended with confequences no lefs difadvantageous than thofe it is intended to prevent; for, if the drawback is taken off, only upon what linen is re-exported to our plantations, it is likely to prove a means of encouraging fraud and fmuggling, by entering the fame out for other places, and fmuggling it into America. If the drawback is wholly taken off, thefe linens from other places may fill be fmuggled to America.
Moreover, a meafure of this kind may difcourage our trade to Germany, by not taking fome of their goods in exchange for ours. And may not our commerce to Spain, \&zc. be greatly prejudiced, for want of an acceptable aflortment of cargoes? As other nations may obtain the proper affortments from France and Holland, if this lhould prove the cafe; fo the remedy leaft injurious, hould feem to be the revival of the bounty upon Britifh linen exported. And although the giving. fuch bounty thould be thought a prefent incumbrance, yet as it wholly centers and circulates among ourfelves, the nation cannot be the poorer, but mult necelfarily fo profper in its binen manufactures and the employment of the poor, as to make ample and permanent compenfation for this tomporary national burthen.
Another article of great importance, which feems to be in a declining way at prefent, as well in Scotland as in England, is our tobacco trade, which hitherto has occationed a great demand and confumption of our mapufactures, and given employment to many fhips; and the re-export thereof has brought money into the kingdom, and enabled us to pay the ballance due for other articles imported. But we are informed, that the late act of parliament, though well internded, to prevent many abuies and frauds committed in this trade, is attended with fo many real difficulties and difcouragements to traders, that both officers and merchants are often at a lofs what to do - wherefore, feveral American merchants in Scotland have given up this trade, and others, it feems, are ligely tofollow their example. This has an evil afpeet. To remedy which, it would be happy if fome method could be found, that would prevent fraud, without cramping or deftroying the trade. 'Till fomething better can be fuggefted, we would fubmit to confideration the example of lowering the duyties onteas: This has had To happy a tendency, as to produce a far larger revenue to the crown than it did before, [fee the articie SmugGling and to prevent fmuggling in the like proportion. Let it be duppofed that the duty on tobacce was, in like manner, reduced even to 2 d . por pound, is it not highly in ine manner, reduced even to 2 d . per paung, is it not highy follow thereftom, as haih done in regard to the duty on teas? and that the revenue would be thereby confiderably increafed, and fmuggling proportionably ceafe, which is now encouraged as well by the bigh duties at home, as the great drawback on exportation? Nor is encouragement to fmuggling the only difadvantageous canfequence of thefe high duties; it alfo gives foreigners the benefit of manufacturing our tobacco cheaper than we can do ; and that tobacco which does not coft them above 2 d . per pound, is fent us again worth from 2 s .6 d . to 5 s. per pound, fuch as Strafburgh rappee; \$8c. whereas if the manufacturing of tobaccoes in all its thapes at home wals encouraged, as well as the exportation of the fame fo manufactured, and either no drawback at all, or only half of the duty, allowed for the export of unmanufactured tobacco, we fhould then not only bave a great additional benefit from the trade, but the revenue augmented in proportion to the increafe of the vent and confumprion.
This manufacture of tobacco in France alone, has enabled the farmers to pay for that branch, and falt, 40 millions of livres; which, in the time of Lewis the XIV th, was faimed
for no more than 8 or io millions; for which reafon, perhaps, they will not be very ready to promote the growth of it, either in America or at home. I have been told another reafon for our tobacco being brought folow is, that we plant too great a quantity, and that it would be better to burn a part of it, as the Dutch do their (pices: wherefore, would it not prove more nationally beneficial to raife a fmaller quantity of tobacco, and employ our (pare ground and hands in raifing hemp and flax, \&cc. ?
The article of mines in Scotland feems to be greatly neglected, though feveral works have turned to no inconfiderable account; which may ferve as a fpecimen of what may reafonably be further expected. This part of the united kingdom is mountainous, and has many promifing appearances of veins of copper, lead, and, in fome places, tin; and fome of thefe contain fuch a proportion of filver, as is worth the extraction. Yet hitherto ftrangers have not ventured much into the Highlands, the reafon of which, we may prefume, has been, that property was formerly not fo fecure there as could be wifhed. The cafe at prefent is much altered for the better, fince the plan formed by the lafi parliament for appropriating the forfeited eftates in the Highlands to the public benefit, appears to be of fuch national importance; and, fince his Majefty, in his late moft gracious fpeech, recommended it to the prefent parliament to make fuch further provifions as may be expedient for perpetuating the due execution of the laws in that part of the united kingdom *, we may expect that not only improvements in the Highlands will be made in the mineral kingdom, but in many other manufactures, and in the fifheries. This will certainly give a new face, not only to the Highlands, but to every part of the kingdom of Scotland; it will convert, we hope, the firit of rebellion into that of honeft induftry, and ufeful commerce, which will render the people profperous and happy, inftead of poor and turbulent, under his Majefty's benign government.

* See his Majenty's Speech, November 14, 1754 .

As an inducement to cultivate the arts of mineralogy and metallurgy in Scotland in particular, where nature feems to have given fo generous an invitation, we need only confider what a beggarly country Sweden would be without their mines; nor has Ruffia, of late years, lefs profited by them. Upon the whole, Scotland, it is certain, has by nature many advantages for trade; a large territory; of eafy defence; plenty of people, if employed at home; a wholefome air; mines; a proper fituation for the eaftern and weftern trades; a fafe coaft ; rivers of eafy entry; the feas and rivers flocked with fifh. This country is as capable of extended trade as any in all Europe ; yet, 'till within thefe few years, it was reduced to a very low ftate: trade was ruined; the national ftock wafted; the people forfook the country; the rents of lands were unpaid; houfes in towns, and farms in the country, were thrown upon the owners hands; the creditors could not have the intereft of their money to live on; and the debtors perfons and eftates were expofed to law.-But fince the Union, the afpect of things is certainly greatly changed for the better; and, if this country had not unhappily been the dupes and bubbles of a rebellious crew, thisnation would have certainly been in a far more profperous condition. And it is to be hoped, that no wife meafures will be wanting effectually to eradicate this curfed fpirit of rebellion among the more ignorant Scots, for that is not likely ever to prove of other confequence to them than to promote, the firit of anarchy, and, confequently, of woe and poverty.
Before I conclude this article of Scotland, I think it proper to acknowledge, that the chief matter of which it is compofed was communicated to me by Francis Grant, Efq; brother to Sir Archibald Grant, Bart. and alfo to the right honourable the late lord high advocate of Scotland, and now lord Prefton-Grange, one of the lords of feffion.

## Of the Weights and Measures of Scotland.

The weight in Scotland upon which not only their other weights, but likewife their liquid and dry meafures are founded, is the French Troy ounce, being about one and four fifths per cent. lighter than ours; but their pound confilts of 16 ounces, whereas that of our's is only of 12 .
There is no doubt but this ounce was originally the fame with our's, and that it is only time and neglect hath made this difference.
The Scottifh pint, upon which all their wet and dry meafures are founded, ought to weigh, of the running water of Leith, 55 of thofe ounces, and to contain about 99 fquare inches: confequently, their three pints being as 297 is to 282 , is 5 per cent. better than our beer gallon, near 103 of fuch pints going to our beer-barrel.
Their ordinary peck confifts of $21 \frac{1}{4}$ of fuch pints; but the peck ufed for oats, barley, and malt, contains near 31 of fuch pints; and thus their boll confifts of four fuch pecks; their
ordinary peck is about one-fifteenth part lefs than our buibei, but the extraordinary about a fourth pare more.
In this kingdom they did ufe to keep their accounts three different ways, viz. in Scotch pounds, fhillings, and pence; in Scotch marks; and in Englifh pounds, (hillings, and pence: counting 20 Scotch fhillings to a pound, and 12 Scotch pence to a Scotch fhilling, and 13 Scotch hillings and four Scotch pence to a mar'k; a Scotch Ailling being then only valued at the price of an Englifh penny, and their mark was valued at no more than $13 \frac{2}{5} \mathrm{~d}$. Englifh money.
But fince the union of the two kingdoms, the fame feecies of gold and filver as are coined in the king's mint in the Tower of London, pafs current in this kingdom.
SEA DOMINION in general. 'The conftant profperity of our trade and navigation depending principally on the figure the nation is capable of making at fea, and preferving thofe rights and privileges upon that liquid element, to which we are not only intitled by nature, but by the laws of nations, and by treaties; it becomes neceflary, in a work of this kind, to take proper notice of a topic of fuch high concernment.
By the word fea, according to the genuine fignification, is underftood the ocean and main fea, as well as gulphs and inland feas, fuch as the Mediterranean, Adriatic, Egean, Britilh, and Baltic Seas, which are more immediately fubject to dominion : for as to the fovereignty of the vaft ocean, no man can pretend to it, unlefs he was lord of the univerfe; and the dominion of every prince and ftate can extend no farther on the main feas than where it is reafonable that his neighbours thould begin, or where the particular dominion is loft in the boundlefs deep.
By dominion is meant a propriety, or right of ufing, enjoying, difpofing of, and freely alienating the thing fo enjoyed and poffeffed. This dominion is of two forts; that which is common to all men, as poffeflors without diftinction; and that which is particular to fome, appointed and fet apart by peculiar perfons or ftates, fo that all other perfons are excluded from a liberty of ufe and enjoyment, withour the previous confent and permiffion of the proprietor or enjoyer.
That the land is fubject to fuch a dominion is not doubted; but feveral have objected againft the dominion of the fea, They fay the nature of the element will not admit of any fuch property, that being fluid, and, confequently, fubject to a continual alteration, by the acceffion of new waves, which continually fhift from one place to another; whereby the ftate of it is fo abfolutely uncertain, that it is hard to fuppofe any part of it retainable in a particular poffeffion, which naturally confifts in the diftinction of limits, and they cannot conceive this poffible in the fea.
To which it is,anfwered, That as God has ordained the land ihould be ruled, protected, and governed by public power, fo the fame is appointed for the fea, which cannot be alleged to be near fo fluid as rivers, the property of which has been feldom, if ever difputed. If it is faid, Rivers being bounded on either fide by land, can admit of particular dominion more eafily than the fea, this makes for our purpofe, to prove the king of Great-Britain's title to the fovereignty of the Britilh Seas, they being in a great part bounded by land. But to anfwer the above-mentioned objection more generally; no reafonable man will deny, that tho' the water is frequently fhifted, the channel, or fpace of ground over which it flows, continually remains the fame; and when a man is faid to rule over a fea or river, it is underftood not of the element, but of the fite where they are piaced. The waters of the Britifh and Adriatic feas continually run out, yet the fea is the fame; as the Tyber, Po, Rhine, Thames, or Severn, are the fame rivers as they were a thoufand years ago ; and this is what is fubject to princes by way of protection and government.
Would it not feem ridiculous if any man fhould allege, that the fea ought to be left without protection, fo far that any one might do what he pleafed there, well or ill, rob or foil? Which alone argues, that the fea ought to be governed by thofe to whom it moft properly appertainsby divine difpofition. The air is a much more fluid element than the water, and yet that fpace which is above any piece of land that any particular perfon poffeffes, is fo abfolutely the property of the owner, that he may lawfully hinder any man from extending a fconce, or any thing from any contiguous building, that may reach over his ground, even though the foundation of any fuch building be entirely upon the ground of him who owns it. And if the poffeffion of the ground gives the praprietor an unqueftionable title to the dominion of the air, the poffeffion of the channel of the fea muft fufficiently intitle the poffeflors to the dominion of the waters. As to their not being capable of limits and bounds, on account of their fluidity, that is a frivolous argument: for, unlefs the lea is fuppofed to be infinite, it mult neceffarily be bounded; and it is certain the fea and land do fo mutually embrace one another with crooked windings and turnings, this by peninfulas and promontories, and that by creeks and gulphs, that they both promifcuoully fet bounds to one another; and, befides, it has been bounded.

## S E A

## SEA

Others o.ject againt the particular dominion of the fea, that freedom of paflage, commerce, and traffic, is a right fo inherent to mankind, that it can no where be abrogated or herent to mankind, that it by any law or cuftom what feever, and that the fea is like the highway, common to all. To this we reply, It is fo, as much as other highways by land, or great rivers are, which, though common and free, are not to be,ufurped by private perfons to their own intire ufe, but remain to the ufe of every one; not that their freedom is fuch that they fhould be without the protection and government of fome prince or flate.
As the fea is capable of protection and government, fo is the fame, no lefs than the land, fubject to be divided among men, and appropriated to cities and potentates; which long fince feems to have been ordained as a thing moft natural.
As to the commiunity of the fea by freedom of patiage, rib body pretends an inoffenfive paffage ought, of can in reaion be denied to travellers aud ftrangers at lea, in as much as it has relation only to the offices of humanity; and where there is no caufe of fear or jealoufy; which freédom of paffage does not in the leaft derogate from the dominion of the place where fuch perfons are permitted to pals: becaule the pallengers be ing allowed that liberty, not as having a regal right and title to it, but by permiffion; and the perinitting of another to participate of any thing, does riot in the leaft diveft the owner of his propriety, or any ways diminilh his pover over his own, efpecially when he himfelf lofes nothing by it: All paffages through foreign ccuntries are (as they ever have been) fubject to fuch limitations and reltrictions, as thefeveral princes and fovereigns of the countries, through which paffage is defired, think fit for the welfare and fecurity of their own people, as well as of their allies
The right of the flag, which is in the crown of Great-Britain, demands a mark of refpect from all thips pafling in the Britifh Sea, and is the limitation and reftriction on which fuch paflage is permitted. As to that part of the objection which relates to the liberty of trade, it appears, at firit view, fo trivial, that it needs no other confutation but a flat denial, as the objectors give no other reaion but their bare affertion: but, to filence them, let us fuppofe that, in time of peace, France would exchange her wines with England's wool, and the Englifh, not finding it confftent with the intereft of the nation to let the wool be exported (as certainly it is not) nor being willing to give the French money for their wines, fince they can be abundantly fupplied with that commodity from Spain and Portugal, in exchange for Englifh manufactures, fhould refufe any fuch commerce with France; the queftion is, Whether France has any right to compel England to compliance with her demand? Who is there that will not anfwer in the negative? it being certain that every nation in the world may confent to or refule all traffic with any other, as they think fit, except there has preceded fome treaty or compact to the contrasy. Some who oppole the dominion of the fea, inftead of arguments, pretend to produce authorities againft it, which we fhall obferve, as far às they feem to have any weight with them.
They tell us Antoninus Pius, according to Marcianus the lawyer, and Juftinian in his Inftiturions, declared, That, by the law of nature, the air, as well as the rivers, the fea, and its fhores, ought to be common to all. Accordingly be allowed the fifhernen of Formia and Capena (and all others in general) to filh upon the fhore, with this provifion only, that they fhould not meddle with towns, monuments, and buildings, which were not by any law common to all. They allo cite Ulpian againft the dominion of the fea, as faying, That the fea, being by nature free for all, cannot be fubjected by any peculiar law or private dominion; and in another place, That the fea and fhores are common to all, as the ait, and that it is often declared by the emperors, That none fhould be deprived of the liberty of fifhing. We are told alfo, that Antoninus Pius faid, That he himfelf was lord of the world, but the law of the fea. If the opinion of fome particular perfons was of fufficient authority to build the fuppofitions of the abfolute community of the fea upon, thefe objections might be of fome force: but, by inquiring diligertly into the laws and cuftoms of molt ages and nations, we fhall find the matter to be quite otherwife; and to evidence it, in the courle offour argument, we thall inftance feveral nations that were fuc ceffively in poffeffion of the fuvereignty of the Eaftern Seas. As to the teftimuny of Ulpian, let us make ufe of him him felf againft it : for he reckons the revernues of filheries (which are generally luoked upon to be part of th: regalia, or royalties of the prince) anong the public cuftoms, and places fifhponds among the other pollelions that are deemed liable to pay affelfments. Juftinian's laws, as exceilent as they are, pave fuffered confiderable infractions and alterations, and particularly in one relating to the matine: for by his laws, íbips driven by tempelt upon a fhore, fhould either belong to the former owners, or as things relinquifned and unpofleiled become theirs who firft fhould find them; which good law is confirmed in the German empire, but intirely altered by feveral other nations, and, among others, by the Englifh. In a word, it is not to be fupp ifed that Juftinian meant, by any decree or inflitution of his, to forbid a particular domi-

VOL. II.
nion of the fea, fince he appropriated the Hellefont to him felf, in fuch a manner that the liberty of that fea, and the ports there, coft the merchants and mariners that frequented them very dearly, according to Procopius, who was his contemporary, and wrote his hiftory. The moftconfiderable authority the objectors quote; is the anfwer of the emperor Antoninus Pius, That he himfelf was lord of the land, but the law of the fea. This matter being put in a wrong light, the reader thould be informed of the fact, which is this:
Endemon Afaticus, a native of Nicomedia, a city in Bithynia, having fuffered fhipwreck in the Egean Sea; and his goods having been feized by the cuitomets of the Cyclades Iflands (in the Archipelago) he reprefented to the emperor Antoninus how unjuftly and cruelly thefe cuftom-houfe offcers had dealt by him, and petitioned him for relief (according to Volufius Marcianus, who was one of that emperor's privy-counfellors) in thele words, Oh emperor Antoninus, our lord, we having been thipwrecked, were robbed of all by the receivers of the cuftoms that inhabit the Cyclade Illands! To which the emperor made him the following anfwer, I indeed am fovereign of the world, but the law of the fea: let it be determined by the Rhodian laws [fee R ноdian Laws] which are prefcribed for the regulation of fea affairs, fo far as they are not oppofed by any of our laws: f:r the eniperor Auguftus was alfo of that opinion. The only con troverfy that ever was about the reading of this anfwer, is in telation to the pointing of it, and particularly to the full point, or period, which is found after thefe words, But the law of the fea: there being a full point after the words beforementioned, the objectors allege, that the but implies the em peror indeed acknowleged himfelf to be lord of the land, but not of the fea, and that the law only, and no man, was lord of the latter. Whereas the true fenfe of this anfwer feems to be, That fea affairs ought properly to be determined by the Rhodian law, which was appointed to be the rule in fuch cafes: for fince the emperor afcribed to himfelf the fovereignty of the whole world, he undoubtedly intended in that to comprehend the fea; which; as well as the land, was fubjected to his authority, though in a different manner, controverfies in relation to land affairs being always determined by the Roman laws only, but thofe relating to marine affairs were decided according to the fea laws of the Rhodians; with this reftriction, indeed, that the Rhodian laws fhould only take place when they did not oppore any Roman law: befides the difputes about the reading of this anfwer, Joannes Igneus, and others, affirm, That the emperor Antoninus, far from declining to afcribe to himfelf a dominion over the fea, rather feems to intimate, by this anfwer, that he was lord of it; alleging, that, by thefe oftenrecited words, I indeed am fovereign of the land, but the law of the fea, he means to fay, I indeed am the lord of the world; and I alfo am the law of the fea. With this agrees the opinion of the learned Samuel Petit, a Frenchman, who fays, Antoninus does not here deny himfelf to be lard of the fea; fo as to decline to give law, and do juftice to thofe who frequent it; for, on the contrary, he orders the controverly between Endemon and the cuftomers to be determined according to the Rhodian law; by which law, however, he does not think himelf fo tied up, as to be deprived of other means of relieving Endemon, even againft it; in cafe he fhould fuftain any injury by the Rbodian law; which he plainly and pofitively makes fubject to his own laws. Monfieur Pétit adds, he believes the Greek word in the petition (which was both made and anfwered in that language) that fignifies law, has been by a miftake inferted for another; that has fome affinity to it in the found and letters, and fignifies wind: fo he thakes the emperor fay, I indeed am lord of the land, but the wind of the fea. Whether the fault is in the pointing; or in the conGruction, it is very unlikely that Antoninus fhould affert a thing contrary to the known laws and cuftoms of all ages, and his own imperial prerogative
The opinion of the fovereignty of the fea has been oppofed by two very learned men, whom we may fuppofe to be fet to work by their feveral mafters, and wrote to ferve a particular turn: the one is Fetnando Vafquez, counfellor to Philip ILI. of Spain, the other the famous Hugo Grotius. Vafquez, in his Difcourfe of the Law of Nature and Nations, writes to this purpofe: Their opinion is not much to be efteemed; who imagine the Genoefe or Venetians may forbid others a paffage through their refpective gulphs, as if they could lay claim to thofe feas by prefcription ; which is equally contrary to the imperial laws, and to the primitive law of nature and nations, which cannot be fubject ro any alteration. That it is againft this law is evident, becaufe by it not only the feas, but all other immoveable things whatever, were in common: and though afterwards that law came to be partly abolifhed, fo far as it relates to the dominion and propilety of lands, which being firt enjoyed in common, according to the law of nature, were afterwards divided and feparated from common ufe; yet it is otherwife as to the dominion of the lea which has been from the begianing of the-world, and is to this prefent day, common, withous she leaft adienation, as is univerfally known.

## SEA

And many of the Portugueze are of opinion, their king has, acquired, by prefeription, fuch an anctent right to the vaft ocean of the Weft-Indies, that he may lawfully refufe other nations paffage through it; and the vulgar fort of Spaniards feem likewifte to be of opinion, that no people but themfelves have a right to fail through that vaft and fpacious fea that leads to the Indies, which the kings of Spain have conquered, as if they allo obtained a right by prefcription to them; yet we look upon thefe mens imaginations as no lefs vain and foolifh than the opinion of thofe who have dreamed the fame things of the Gencefe and Venetians. The law of prefcription can be of no force in deciding controverfies which happen between princes and people that acknowlege no fuperior, becaufe the peculiar civil laws of any country are of no more weight, in relation to foreign nations, than if fuch laws had never had a being: fo that for deciding controverfies of that nature, recourfe muft neceffarily be had to the general law of nations, originally or fecondarily, which certainly can never admit of fuch an ufurpation of a title to the dominion of the lea by prefeription.
The reader, by the weaknefs of thefe arguments, will have a tafte of the reff, and defire no more of them. Notwithftanding Vafquez has the character of a great man in the learned world, he begins with a plain contradiction; for although he fays he holds the law of nature to be abfolutely unchangeable, and cannot be fubject to any alteration, yet he owns afterwards, that law came to be partly abolihed, \&c. He acknowleges, that, by the law of nature, the land was common at firft, and being evident that it is not now fo, what fhould hinder a private dominion of the fea, which, according to himfelf, was not more common in the beginning than the land? For if he alleges that fuch a property over the land is ufurped, as he fays of that of the fea, he overthrows all property, and abolifhes all laws, both divine and human; and if, on the contrary, he acknowleges fuch a dominion over the land to be juft (as certainly it is) why then fhould he deny a propriety of the fea?
The other parts of his difcourfe are of the fame ftrength; for whereas he fays the fea has been from the beginning of the world, and is to this day common, as is univerfally known, it is fo plain a fallhood, that one would wonder a man who, in other things, is extolled for his wifdom and fufficiency, fhould affert a thing fo contrary to the laws and cuftoms of moft ages and nations, as we fhall fee prefently : but Don Vafquez was to pleafe the court of Spain, who then were on no good terms with the republic of Venice, whofe greatnefs at fea hindered the Spaniards from being mafters of the Mediterranean. The fenate afferted their dominion in the Adriatic about the fame time, as may be feen in Julius Pancius's track of the Dominion of the Sea, where we find enough to confute what Vafquez fays of the Venetians: it is in the fecond book, chap. 6 . In the year 1630 , Mary, fifter to the king of Spain, being married to the emperor's fon Ferdinand, king of Hungary, and the Spaniards defigning to convey her from Naples with a \{quadron of their own, the Venetians furpected they intended fome infringement of their privileges by this fpecious precedent, which they might, perhaps, afterwards pretend to make ufe of to their prejudice, and thought they took this occafion, when the republic was involved in a war abroad, and infected with the peftilence at home, to endeavour to undermine the fovereignty of the Adriatic Sea; which had been uninterruptedly enjoyed by the figniory of Venice by immemorial prefcription.
The Spanifh ambaflador baving acquainted the ftate that his mafter's fleet was to tranfport his fifter, the queen of Hungary; from Naples to Triefte, the doge anfwered, That her Najefty fhould not pafs but in the gallies of the republic. To which the ambaffador replying, That they were infected with the plague; the fenate met to confult about it, and came to the following refolution: That his Catholic majefty's fifter fhould not be tranfported to Triefte in any other fleet but that of the republic, according to the ufual cuftom of the gulph, with which her Majefty fhould be attended, with all the marks of refpect and deference that were due to her quality; adding, that if her Majefty proceeded any other way, the republic would by force affert her rights, and attack the Spanifh gallies in an hoftile manner, as if they were enemies. Upon which the Spanifh ambaffador was obliged to defire the favour of the fenate to tranfport that princefs with their gallies to Triefte, which was accordingly performed by the Venetian general, Antonio Pifani ; and both the emperor and king of Spain returned the Venetians thanks; which is a plain indication that they did not then call in queftion the Venetians title to the dominion of the Adriatic Sea.
The mult confiderable adverfary we have to deal with in this controverfy, is Hugo Grotius, author of the celebrated piece, intitled Mare Liberum, which the learned Selden fully aniwered in his Mare Claufum. After the treaty between the Spaniards and Hollanders, held at the Hague in the year 1609 concerning the freedorn of trade and navigation to the EaftIndies, the above-mentioned author publifhed his book, with an intention to prove that the hollanders had liberty to trade to the Ealt-Indies; which he endeavoured to do by the law of
nations, allowing fuch a liberty of navigation to all man. kind, in which none can be molefted without injury
He afferted further, That the right of navisation through the Atlantic and Southern Sea to the Indies, cannot be the propriety of the Portugueźe, or of any other nation in particular; becaufe the law of nature not only permitg, but requires, that fhould be common. The learned author of this tract had certainly good reafon to affert the Hellanders and other nations right to the liberty of the Atlantic Ocean, and to trade in the Ealtern Seas as well as the Portugueze: for who can fay in the midft of the vaft deep, fuch a channel or fuch a fpace is mine? and who has a right to exclude any one a paffage through the main? So that the difpute is brought within a narrower compafs; and by the dominion of the fea, is only meant the fovereignty of fuch a part of it, as, bounding any country, may be faid to belong to it, and to extend as far as certain imaginary lines or vifiblemarks. And herein Grotius agrees in fome meafure with us, when he fays, that fuç fmall parts of the fea as can in a manner be inclofed, if they may be at all poffeffed, ou'ght to fall to them whoffirt acquire a title to them by occupation. Now the difference between a greater and lefs part, canhot well take place in the determining of a private dominion, fince it is not the face nor the extent of the thing poffeffed, bit the nature and validity of the title, by which the matter fhould be deeided. And the author in another place in exprefs terms excepts a bay or creek; and fays elfewhere, he does not fpeak of an inland fea, which being ftraitened on either fide, exceeds not the breadth even of a river, but the ocean; which the Ancients called immenfe and infinite, the parerti and origitial of things confining the air, sic. He adds a little after;' The controverfy is not about a ftreight or creek in the ocean, nor of fo much as in the view of the fhore. And in other places, he fays things much to the fame purpofe; fo that in the difpute about the fovereignty of the Britifh Sea, we Chould have little to do with him; for he grants enough to warrant the crown of Great-Britain's afferting its doninion over it. He advances every thing modeftly, and the main of his argument tending to fet free the Atlantic and Southern Seas from the fovereignty the Portugueze claimed, he is in the main in the right; or it is impoffible to poffefs the whole ocean, or to bave a title to the dominion of it, unlefs a prince or peaple were fovereigns of the whole world. Alexander's conquefts gave him but a fmall fea-dominion, about half the Mediterranean; and part of the Indian Sea. The Romans, indeed, had a title to the dominion of almoft all the known part of the Great Ocean, as lords of the fhore: but there never was, nor ever will be, a power fo infinite as to fubject the whole werld and to be fovereign of both fea and land, exclufive of all others. The fea bounding the land under the fubjection of any prince, will be under his dominion. Grotius, in his excellent treatife de Jure Belli \& Pacis, fays*, The land and rivers, and any part of the fea that may fall under the private dominion of any nation, ought to be open to fuch as have occafion to pals upon juft and neceffary grounda; and even a creek, or narrow fea, may be poffeffed by any that poffefs the land on both fides, provided the fpace of fea be not fo great as, being compared with the land, it cannoc feem to be any part of it. In a word, he acknowleges the right of primary occupation of creeks and ftreights of the fea, at leaft, that it was not by virtue of any natural right that the fea was not appropriated and entered upon by occupation, atributing the community of it only to cuftom, and confeffing that cuftom being changed, the reafon of the community ceales. That it has been changed, is too well known to need any further proofs of it againft $V$ afquez, and as much of Grotius as is againft the dominion of the fea:

## * Book ii. chap. z. $\{13$

We might bring many authorities of the fame weight, but Thall only take notice of two or three, as Reginerus Sixtinus, in his book de Regalibus, where he fays, The thing in queftion concerning the fea and its fhore is, whether they ought, as navigable rivers, \&c. to be reckoned among the regalia, or royalties, of the prince, every thing that is reputed fuch being as much the private and peculiar right of the prince, as the fubjects eftates are theirs. And fo Catheranus Decif. 155. no. 8r. and Ferrarius Montanus de Feud, book v. chap. 7. reckons the fovereignty and dominion of the fea among the royalties of the prince, without making any diftinction between that and a public river. . And Mynfingerus, Auf. 1. no. 162. decad 5 I. fays, The property of the fea is a part of the royalties of the prince. But not to detain the reader longer on this head, we thall prove by law and hiftory, facred and profane, ancient and modern, that the fea is capable of a private dominion and propriety.
Holy writ, in more tharr one place, jultifies this; for there Holy writ, in more tharr one place, jutifies this; for there
we find it faid, Replenilh the earth and fubdue it, and have we find it laid, Replenifh the earth and fubdue it, and have
dominion over the filh of the fea, \&c. And again, The fear of you, and the dread of you (which are terms implying dominion). fhall be upon every beaft of the field, and every fowl of the air, upon all that moveth upon the earth, and upon all the filhes of the fea, \&x. Which words, though it mult

## SEA

be andwleged drey are not meant of private dominion (fince, in the perforis of our firf parents, and of Noah and his three Cons, this blefling was given to them and their pofterity in generali;) yet it is by no means to be forgotten, that the rea and land did fo pars together at firt into the common enjoythent of mankind, that from hence we may very reafonably whitude, that being both in one globe, there could be no Luch diverfity in their nature, ais might hinder the one more than the other to pafs at the pleafure of men, in the future diftribution of things, into private dominion and poffeffion. Nor is there, by that donation, any community ordained mankiad are left to their own thoice; to ufe and enjoy both chanais latad, as they think fit. To thefe paffages of Scriptures the iebjectors ospipofe other, as, The heavens, even the heavens are the Lords, but the earth hath been given to the children of men. From which they pretend to infer, that there being no mrention of the fea, the Alinithty referves that peculiarly to mimitelf; which explication is formally contradifted in foveral places of the Scriptures, and particularly in that above cited. They may as well fay Gob is not the creaton of the fea, becaufe in the fame Pfalm it is faid, You are loffed of the Lord, that made heaven and earth. Who will deny but that the Pfalmint, by the word EARTH, means the would in goneral, which comprehends both fea and land? 4ndílooth are equally poffefled by the children of men. Several other paflages of Scripture are quoted on both fides in this aptroverly : but the objectors firid them as little to their purpofe as that before recited out of the Pfatms.
thal now give inftances of the private dominiori of the copoifailed by feveral nations: and firft by the

## Tyrifins.

Tyre was a towngreat in frength and fiches, by her commerce; according to Ifaiah, The harveft of the river is her fevenue; than whioh nothing can be more expreffive, nor mote elegant. And:again, fpeaking fittl of Tyre, The fea bas fooken, even the flvength of the fea. Nothing can be more apparent, and no authority fo fulland unexceptionable It ib faid by the Pfalmit, I will fet his hand atlo in the feà Ond his right-hand in the rivers; by which; according to Eben Ezra, the dominion of the waters is affigned to king David, that he might rule over fuch as failed theriein. There Balfo a clear and convincing paflage in Holy Writ to our purpofe: And the king Ahafuerus laid a tribute upon the land, and upon the ifles of the fea; by which it appears very dainly; that prince was lord of the fea and iflands, upon Which he impofed a tfibute. There are fome apocryphal texts, which confinm what we affert ; as that, O ye meni, do no excel in ftrength, that bear rule over the fea and land,' and things in chem : . but yet the kirg is more mighty; for the is lord of all thefe things', and hath-dominion over them. And that, The fea is fet in a wide place, that it might be deep and great; but in cafe the entrance were narrow, like tha of a river, who thein could enter the fea, to look upon it, and Wave dominion over it, without paffing through the freight? Whover will give themfelves the trouble to lodk over the comments of the Jewifh rabbins in the xxxivth chapter of Numbers; where the bounds of Canaan are fet out, will find they are poitively of opinion that the fea is included.
Tha rabbi Johuda, a celebrated interpreter of the thw, from the exprefs words of the holy law concludes, that the whole Whying before the weftern coaft of the Holy Land, being lithtited by frait lines drawn on each fide, from the northgall and fouth borders, through that great fea into the weft, having been; together with the main land, given to that by God, thofe precepts flould no lefs be obferved in that imimenfe ocean, than in the Holy Land itfelf, according as the author's opinion is delivered to us in the moft ancient digefts of the Jewimh law, de Libellis Divortii \& Manumiffionis, cap. I. fol. 8. All that lies directly oppofite to the land of Ifracl, is of the fatne account with that law, accotding as it is written, As for your weft border; you fhall even have the great fea for a border; this thall be your weft border the border of the fea, or of the weft. Alfo the "flamess fituated miaither fide; in the fame direct line, fell under the fame account with the fides themelves; fo that a line being drawn hrough the ifles, from Cephalonia to the main ocean; and Ifo from the river of Egypt to the ocean, whatever is contaimed within that line is under the dominion of Ifrael, and what lies whthout that line is out of its dominion; which this auchor, rabbi Eben Ezra, and others, made to reach araugh even the Spanim sea, notwithtanding its vaif dithance from the continent of the land of Ifrael; atleging by that palfage; where it is faid, The great fea fhall be thy border, it wras meant, the great foa, which of itfelf whas their border, fhould alfo be their poffeffion.
This is, perhaps, to ftretch the folvereignty of the Jews too far; and other rabbins, by moderatirls their explication of the law, come nearer to the true nieaniny: They would have a ftraight line drawn from the promontory of Mount Hor, to the entrance of Pelufium, or from the north-ealt to the fouth, by which they would bound the weftern dominion of the Holy Land, reckoning whatever fpace of fea or jfland
hould fall within the compars of the faid line towards the Ean fhould belong to the territories of trael. After this manner the faid tine would include very confiderable : fpaces of the fea, lying before the fhore inhabited by the tribes of Alhur Ephraim, Dan, Zabulon, and Simeon; which lea was föoked upon to be the property of that people, as weil as the land according to the digefts of the Jewilh laws.
Of thefe two opinions of the rabbins, this latter (by which only the ludjacent parts of the fea are conceived to be, ${ }^{\text {b }}$ b Gods appointmeht; allignied with the Promifed Cand to the children of Irrael) is the moft undverfally received, as is evident, not only by both volumes of the Talmud, but alfo by the teltimony of the molt learned rabbins, Mofes Maimoni des and Mores Cotzenfis: and this latter opinion ferves difeetly our puirpofe, as well as the firft for we affert, Tha the cea is capable of dominion, and it is not the extent; but the nature of the thing, that is here called in queftion.
By the law civil and domeftic, as tvell as by the common law whether intervenïent or imperative; and by the moft know practice and cuftom of the moft renowned nations and king doms that are known to us, fuch a fovereignty and dominion of the fea has been univerfally admitted. It mult be allowed either that all there mighty nations, who either by virtue of fome domeftic law of their own, or of fome other law common to therifelves ánd their neighbours; have admitted of fuch dominion, are, or have been, competent judges of the natural permiffive law ; of elfe it muft be fuppofed, that the mott famous nations of the world have erred for many year againft nature, the law of which, according to Juftinian, is, That whichbeing eftablifhed by natural reafon amongit all men is obferved by all alike, and called the law of nations, becaufe it is fuppofed to be a laww which all nations ufe; fee his Infituthons de Jure Naturali: whith which paffage that of Catus in his book de Acquirento Rerum Dominio, very wellanteres where he fays; Thertaw of nations is by natural reafon ob ferved in the fant manter amongit all men, And that the dominion of the fea bas been the law and practice of niatuons we are now to prove from profanie hiftory firft, arid thent that thas been contintied down to our own timtes.
The inthatiants of the inland of Crête, now called Cantia, had a very large dominion in the neighbouring feas, as appears in the writings of Diodorus Siculus, and others, par ticularly Thucydides, wha tells us, when they acquired thit dominion, Minos, the fon of Lycaltus, fon of Jupiter', king of Crete, 'poffefled all the Cretan, and a great part of the
 pius, the empire of the Cretans oyer that part of the fea, did not expire 'till Cacilius Metellus made an intire con that ifland. We may fee, by Plato's works, that the fea laws of the Cretans were attributed to Minos. This dominion of the Cretans is luppored to be in the time of the Judges, and to have lafted 'till that of the Lydians, which began $\bar{x} 75$ years afterwards: Thefe

## Lydians,

According to Eurebius; held this dominion 92 years ; but Ifaac Cafaubon was of opinion, that XCII was by a miftake inferted in the Greek for CXX.: Marianus Scotus, and Flo rence the monk, both make mention of the dominion of the Lydians, which is generally reckoned to tave Begun abbut the timie of Ineas. Their fucceffors in it were the

## Pelasel,

Of whom Eufebius fays, They in the fecond place poffefed the dominion of, the fea, which is meant exclufively of the Cretans, who were not in his catalogue; and though thit author makes their dominion to liff 85 years, it is conjectured it did not laft above 55. The time of it is placed in th days of Solomon, And, after thein the

Thracians
Held the dominion of the fea, which began in Jeroboam reign ; but authors do no agree how long it lafted. W now come to the

RHodmais,
Who, though they are omitted By Marianus and Flofemitud according to Eufebius; held the dominion of the fea 23 years, beginning about the refign of Jehofophat. Stratbe in his fourth book fays; That Rhodes was favereign miftrefs of the fea a confiderable time. They indeed have rendered their namie and fovereignty immortal, by their fea laws; which, as Conftantiüs Harmenopulus affrms, in his Porchif. Juris; lib. xii. tit. it are the moffaricient now in being, and were in force among the Romaris from the cime of Tiberius, as you fixa fee in fus Grieco-Romann, tom ii. p. 265. The paffage before-mentioned, in the emperor Anfoninus's aniwer to Endenion's perition; confirin's this; and it is certain, the emperor Juftinian pat thore laws inso the Digefts. Next to them the

## S E A

## S.EA

## Phrygians

Aequired the dominion of the fea, as it is fuppofed, in the time of Lycurgus. Eufebius writes they maintained it 25 years, others fay 26 ; and then the

## Cyprians

Poffeffed it. Some authors fay they maintained it 23 years, and others $3^{1}$ years: the time is faid to be the reign of Joaz. The

## Phoenictans

Held this dominion in the days of Uzziah, king of Judah: from them all the bottom of the Mediterranean was called the Phoenician Sea; and Pliny tells us, That people were very kilful in the art of navigation, infomuch that Atergatis, queen of Syria and Phoenicia, publifhed an edict, importing, That it fhould not be lawful for any one to cat fifh without her licence and permiffion: it afterwards became cuftomary to confecrate to Atergatis fintes of gold and filver, when fhe was placed among the goddeffes. After the Phoenicians the

## Egyptians,

As we find in Eufebius, Marianus, and Florence the monk, were fovereigns of the fea, under their kings Pramnitis and Bocchoris, who flourifhed a little before the beginning of the Olympiads. Next to them the

## Milesians

Held this dominion ; and though Eufebius takes no notice of the time they enjoyed it, Marianus and Florence agree their dominion lafted 18 years. Stephanus alfo obferves, That Naucratis, a city of Egypt, was built by the Milefians, who then poffeffed the fea: Eufebius adds, their fovercignty was about the time of Romulus. They alfo built Sinope, on the Euxine Sea, which, according to Strabo, in his xiith book, commanded the fea flowing within the Cyanean Iflands. The

## Carians,

As Eufebius, numb. 1281, and Diodorus Siculus, biblioth. 5. enjoyed 2 dominion in the fea, about the time of the good king Hezekiah; as did afterwards the

## Lesbians.

See Eufebius, numb. 134 r : their dominion, according to fome authors, lafted 69 years; but Marianus makes it laft but 58 years. The

## Phocians

Succeeded them in the dominion of the fea; about the time of the Jews captivity at Babylon; and Eufebius writes, that they maintained it 44 years. The

## Corinthians

Were alfo fovereigns of the fea, though they are omitted in the catalogues of the hiftorians; however, Thucydides, lib. i. reports, that being very potent in fhipping, and mightily fuppreffing piracies, they acquired a very great reputation and command by fea, as well as by land. He takes notice alfo of their diligence and fuccefs in reftoring the affairs of navigation to their former perfection: it muft neverthelefs be confeffed, that authors have been too filent with refpect to them and the

## Ionians,

Whofe dominion of the fea is taken notice of by the fame hiftorian, in words to this effect: the power and ftrength of navigation were in the hands of the fonians in the time of Cyrus the firf king of the Perfians, and his fon Cambyfes. The

## Naxians

Enjoyed this maritime fovereignty after them, during the foace of io years, in the reign of Cambyfes and Darius; they inhabited the ifland of Naxos, one of the Cyclades, in the Archipelago. After them the

## Eretrians

Poflefled the dominion of the fea for about feven years. They were fo called from Eretrias, a rich and famous city in the illand Eubcea. The next mafters of the fea were the

## Ægineta:

They were the inhabitants of the illand Egina; and not long before the Peloponnefian war broke out, were fo ftrong at fea,
that they infulted the Aheniasis, and it was to carb then that the flate of Athens increaied dewer havid itengh, by which they afterwards acquired the foverciguty of ehe Eatlen Sea. Not only Eulebius, but S'trabo and dillidn, take notice of the dominion of this people: fome make is laft ra, come 20 years, and fome more. But the Athenians were too great a nation, to fuffer fo inconfiderable a peopie as the Itgrieta were, to enjoy this power long. After theth the

## Athenians and Lacedfmonians

Enjoyed the fovereignty, though they are not inferted in the catalogue of the lords of the fea, Demothenes, in his Mid Phil. Cays, The Lacedæmonians had a dominion over the lea and over the land, and who does not know that Eurybiades the Spartan, commanded the Grecian fleet in the war between the Grecians and Xerxes? It is true, the Laceddemonians were not fo flrong by their own naval ftrength, as by that of their allies the Peloponnefians; but their domsnion at land was the occafion of their being preferred to the dominion at fea; and they always had the chief command, till the famous Timotheus an Athenian general, having fubdued Corcyra, brought the people of Epirus, the Athamanians, Chaonians, and other nations, to enter into an alliance with them. Upon which the Lacedæmonians found themfelves under an indifpenfible neceflity to refign the iovereignty of the fea to the Athenians, in a treaty of peace then concluded between the two nations.
The Lacedæmonians were not allowed to put to fea fo much as one fhip of force, but thips of burchen only; and the A. thenians obliged Artaxerxes Longimanus king of Perfia, to agree, That the king's fhips fhould not come within the length of a horfe-race of the Grecian Sea, and that it fhould not be lawful for him to fend any fhips of force within the Cyanean and Chelidonian Illands, which fortherly had been infefted by his navies, as may be feen in Plutarch's life of Cimon the Athenian. Indeed, the Greek hiftory is full of inftances of the power and dominion of the Athenians at fea. Ifocrates fpeaking of it tells us, It was not lawful to fail in long fhips or gallies beyond Phafelis, a town fituated in a direct line with the Chelidonian Ilands.
This dominion was entirely loft in the end of the Peloponnefian war, when Lyfander deftroyed their fleet and took Athens. And they never recovered it fo far as to be faid to be mafters of the fea afterwards, though they grew powerful again. If any fhould be curious to know how thefe catalogues of the maritime fovereigns have been preferved, we can only inform them, that it is very probable, that Caftor Rhodius, who lived about the time of Auguftus Cæfar, and wrote a hiftory of thofe that had ruled at Sea, as Suidas witneffes, furnihed Julius Africanus and Eufebius with thefe lifts of the nations who held dominion at $£=a$, though Caftor's hiftory is itfelf loft.
To continue as far as we can trace this dominion of the fea after the Athenians loft it, there were not above 70 years between the Peloponnefian war and the reign of Alexander the Great. When the Tyrians, according to Quintus Curcius, had not only a fovereign dominion over the neighbouring fea, but was milfrefs over all the feas through which their fhips did fail. Before this we find by the Greek hiftories, that the Lacedæmonians were again mafters at fea, and the Boevtians afpired to it, if they did not obtain it after their fucceffes at land. But the Tyrians were fuch abfolute maffers, that Tyria Maria, or Tyrian Sea, became a proverbial expreffion for all feas poffeffed, fo as the paffage through then could not be obtained without the permiffion of the lord. We find a query in Ariftotle's works, Whether it be for or againft the intereft of any well-governed nation, to maintain a fovereignty of the fea, fo as to exclude all others from the bencfit of navigation through the part fo poffeffed, either upon account of paffage, traffic, or fifhing, \&c.? But he had been too well inftructed of the lawfulnefs of fuch a daminion, by the continual practice of all the neighbouring nations, to declare againft it. Though the many inftances that have been given of the fovercignty of the fea from ancient hiftory, are fufficient to convince any reafonable man, that is is capable of dominion; yet we fhall add fome further arguments, which feem to corroborate what has been urged. It is very well known by all who are acquainted with the hiftories of ancient times, that according to the cuftom of the Eaft, the fymbols of dominion and cmpire, which the kings of Perfia demanded of the Greeks and other nations, were earth and water; by which was undoubtedly meant the empire of the fea as well as the land. Darius demanded earth and water of the Athenians and Lacedzmonians, who threw his ambaffadors into a well. He allo demanded it of Inda thyrfus king of Scythia, as we find in Herodotus, and in the Greek copies of the hiftory of Judith ; that Netuchadnez zar required earth and water of the neighbouring nations, with which he threatened to make war.
Several parts of the fea belonging to the Eaftern Empire were reckoned among its provinces and governments. Wit nefs Conftantius Prophyragennetus, lib. I. Them. 17. where he fays, That the Hellefpont was very exprefsly afligued to
the commander in chief of the Egean Sea. And again, That the Egean Sea was reckoned among the provinces of解 mate Che Chios, belonged to markevernment of the Egean Sea. The einperor Leo by a an delared that every man fhould pollefs the fea lying decree declared, that every man hould polers the fea lying before his lands, by fuch a peculiar and unqueftionable right, that he fhould have power to deprive any other perion of uling or enjoying the fame in any manner, fo as to reap any gain or benefit, without the fpecial confent of the owner.
By which the opinion of the univerfal community of the fea utterly defroyed and a private and feparate proopriety and uminion introd This decree took inmediate effee dominion introduced. Lord goo, without any oppofition, about the year of our Lord well as over the Bofphorus, Hellefpont, and all the other feas fabjected to the Conftantinopolitan empire.
We have hitherto confined ourfelves to the Levant or eaftern art of the Mediterranean: let us now fee how the dominion of the fea was maintained in the weftern; where firft we find the

## Spinetans,

So called from the ancient city Spina, fituated near the mouth of the river Po, in poffeffion of the fovereignty of the Adriaic Sea; where, as we read in Strabo, lib. 5. and Dionyfues Halicarnalleus, de Orig. Rom. lib. I. they raifed fuch confiderable revenues, that they ufed to fend very liberal tenths to the temple of Apollo at Delphos. The fame author adds, that the

## Tuscans

Were abfolute fovereigns of that part of the Mediterranean that wafhes the fouthern coaft of ltaly. And Diodorus Siculus, lib. 20. fays, The Tyrrheni or Tufcans were fo powerful upon the fea, which they poffefled as lords of it, that at laft it took their name. But the

## Carthaginians

Grew fo mighty at fea, that all other naval dominion ceafed, and none could pretend to difpute with them the maritime empire, 'till the reign of Agathoclas, king of Sicily, who fhared for fome time with them the fovereignty of the fea, His fubjects in Africa revolting from him about the 118th Olympiad, the dominion of the Mediterranean devolved almof entirely upon the Carthaginians, who held it near 40 years, and gave laws to all navigatars, 'till the begimaing of the firf Punic war, when the Romans refuled any longer fubjection to them at fea. Before this, the peupie of Rome, notwithftanding they had extended their conqueits very far at land, gave up the fovereignty of the fea to the Carthaginians, as we may fee by the firlt league concluded between there two mighty ftates, about the 68th Olympiad. By which Polybius tells us it was ftipulated, That neither the Ro mans nor their confederates, fhould fail beyond the Fair Promontory, unlefs they fhould be driven thither by tempefts or enemies. And Polybius further gives an account, That in the fecond treaty of peace concluded between the two nations, it was provided, That no Roman mould fo much as touch either upon Africa or Sardinia, except it were either to take in provifions or repair their fhips. But after the fecond Punic war, when Carthage was forced to fubmit to what laws the Romans, their conquerors, pleafed to give them; when the Roman fleet was alfo victorious at fea as well as Scipio by land, the dominion the Carthaginians held at fea, was o courfe transferred to the people of Rome ; and, indeed, they became mafters of the Mediterranean, before they were matters of Carthage; fo induftrious had they been to increafe their naval ftrength, without which they fay, they could ne ver fubdue their rivals, the Carthaginians: for Hannibal in his fpeech to Scipio, in the 30th book of Livy, feems to acknowlege the Romans to be lords of all the Mediterranean, and its illands. And accordingly after the conclufion of the peace at the end of the fecond Punic war, the Carthaginians themelves burnt 500 gallies, that they might not be obliged to pay homage to their conquerors, of whom they had formerly exacted the fame marks of fubmifioṇ. The

## Romans

Having thus acquired the dominion of the fea, were very careful to maintain it, and had always a powerful feet ready, either to fupprefs pirates, or afferr their fovereignty.
The fleet that was given to Pompey of fcour the Mediterranean Seas, is mentioned by all the Roman hiftorians; ánd Pliny tells us, that by freeing the fea from prates, he reftored the dominion to the people of Rome. H: alio made them matters of that part of the fea, to the fovereignty of which the Cilicians pretended, as appears by an ancient league between them and Antiochus king of Syria, That the latter fhould furrender his warlike fhips and their furniture, except ten gallies, none of which fhould be rowed with above thirty

VOL. II.
oafs; and Polybius fays, it was not allowable for him to have fo much as one with that number of oars ; and that none of his thips fhould pafs the promontory of Sarpedon; unlefs it were to carry money ot hoftages.
As to the nature of the fia dominior of the Romans, and the extent of it, Appianus Alexandrinus makes them fovereigns of all the Mediterranean, and Dionyfius Halicarnaffeus, lib. I. de Orig، Rom. writes, their dominion ext nde ed over the whole ocean as far as it is navigable. However extravagant this boundlefs empire may appear at firft, it will not at a fecond view feem improbable, that the Romans were fovereigns of moft part of the known feas ${ }_{3}$ as they were of the land. For the fovereignty of the Britifh Seas was in their poffeffion as long as they were mafters of any confiderable part of Britain ; but they looked on the Mediterranean to be entirely their property, as appears by feveral paffages of Florus, Salluft, and other authors, who being Romans, gave ordinarily to that fea the general name of our iea.
Their naval dominion may be proved by fo ninany examples, that we hhoold tire the reader to repeat them, and the ealtern emperors pretended to the fame maritime fuvereignty as the people or Cæarars of Rome enjoyed. Themiltius, in his sth Oration, freaking of the emperor Theodofius the Elder, afcribes to him the dominion of almof the whole earth and fea, of which he calls him ruler. Dion Chryfoftom tells us, the emperor Trajan; long before this, granted the citizens of Tharfus a dominion and jurifdiction over the river Cydrus; and the adjacent fea.
Thus much is fufficient to fhew, that the Antients believed and practifed the dominion of the fea. When the Barbarians over-ran the empire, the Roman powet was broken as well by fea as land; and as their territories fell under the dominion of feveral princes, fo their naval force was divided, navigation negle $\mathcal{t e d}$, barbarifm prevailed, and with that, ignorance; and commerce growing dangerous, fleets grew leis, and the fovereignty of the fea was not talked of again, 'till there arofe a power able to maintain, as well as aflert it. The firft of this kind was that of the

## Venetians,

Who claimed the fovereignty of the Adriatic Sea, formerly fo called, from the ancient city of Adria. At the bottom of this fea, bay, or gulph, ftands the famous city of Venice, governed by a republic, that, from the beginning, have made it one of their chief political maxims to encourage trade, and imprave their ftrength at fea. This bay is 600 miles long, and the land on both fides poffeffed by feveral priaces, infomuch, that a fixth part of it does not belong to the Venetians; yet by their promoting commerce they grew formidable at fea, afferted their dominion over the gulph, as beionging to their city, the capital of thofe parts, and for fome time there was no nation that durft difpute the fovereignty with them.
Flavius Blondus, Decade 2. lib. 8. tells us, That in the year 1265, when Lorenzo Tepolo was doge of Venice, the republic impofed a tax upon all that craded in the Adriatic Sea, making a law (which to this day remains in force) that all who failed between the gulph de Quevera and the Capd did Pola, or promontory of Solo and coaft of Revenna, thouild (if thereto required) come into Venice and pay cuftom, and (if the officers thought fit) unlade their goods and let them be furveyed.
Several barks were oidered to cruize day and night about the hisrbours to enforce the execution of this law. The inhabitants of Ancona complaining to the Pope of this exaction, the cafe came to be confidered, and Gregory X. confirmed to them the right of levying their cuftoms in the Adriatic for the maintenance of mariners employed by them againtt the Saracens and pirates. The ceremony of the doge's wedding the Adriatic Sea, is much older, and fhews their fovereignty is as old as Alexander III. by whom it was inftituted according to Anton. Peregrino in his 8th book de Jure Fifei 185. This ceremony is performed on Afcenfion-day, when the doge goes in his bucentors, a magnificent galley of fate accompanied by the chief noblemen in a moft pompous manner, and as a fign of the perpetuity of the republic's dominion over it, throws a ring into the water in token of wedding it, laying thefe words as tranlated from the Italian, Weespousethee, oSea, asa Signoffarealand perpetual Dominion.
But the proofs of the republic's affering this fovereignty are fo many, that they would be almoft endtefs, fhould we come to inftances: we therefore refer the curious to a treatile written by way of epiftle from Francifcus de Ingenius to siberius Vincentius, in vindication of it againft Joannis Baptifta Valen zolo, a Spaniard, and Laurentius Motiorus, a Roman, who being the duke of Offuna's creatures, wrote againt it to who being the duke of viceroy of Naples, and a great enemy to the republic.
In this epiftle, the author reckons no lefs than thirty eminent lawyers of his opinion, in favour of the Venetian's dominion in the Adriatic. In the year 1399, when the king of Nay les had married his fifter to the aichduke of Auftia, he did $n_{<i}$

9 F
preten

## S E A

pretend to tranfport ber by way of the gulph, without firft afking the republic's leave. There are two letters extant from the emperor Frederic III. to Giovanni Mocenigo, then doge of Venice, defiring liberty of the fate to tranfport corn through the Adriatic from Apulia; and others from the kings of Hungary to the fame purpofe are produced by Francis de Ingenius above mentioned. All the commanders of their thips treat as open enemies thofe of any prince or ftate though in peace with them, that attempt the lealt infringement of this their dominion; of which a very fignal inftanc happened in the year 1638, when the Turkifh fleet having entered the gulph without the Cenate's permifion, the Veetian general attackid them in an hoftile manner, funk feveral of their flips, and drove the reft into Valona, a port upon the Adriatic Sea, belonging to the Grand Seignior.
The Venetian, not fatisfied with this, landed his men, an put a great number of mariners to the fword who had ef caped him at fea. The Sultan not long after concluded a treaty with the fenate, and thereby it was agreed, That it hould be lawful for the Venetians in time to come to feize by force, if they did not otherwife fubmit, all Turkifh veffels, which fhould enter the gulph without their licence, and that even within the ports and havens $\mu$ nder the obedience of the Grand Seignior, fituated on the Venetian Gulph. We have inftanced before, their refufing to let the queen of Hungary pafs, and the emperor and king of Spain's owning their dominion by complying with them. It is true, the emperors had from time to time endeavoured to fhare this dominion with them, but the republic would never admit of it; and in the year 1535 , commifioners on both fides met at Friuli, to decide this important queftion; where two advocates, Rapicio for the emperor, and Chizzola for the ftate of Venice, learnedly difputed this matter. After a full hearing, and feveral weighty arguments too long to be inferted here, the imperial commiffioners acknowleged, that by the native force and evidence of the learned Chizzola's difcourfe, they were perfuaded in thei confciences that the commonwealth of Venice was the undoubted miftrefs and protectrefs of the Adriatic Gulph, and might there impore what cuftom the thought convenient. Than which declaration nothing could be more gloricus for the republic of Venice, as being an acknowlegement paid her by the agents of the greateft power in Europe nor can any thing be a better proof of the dominion of the fea in them. Which makes good the argument of his Britannic Majefty's fovereignty: for there is not one reafon urged by Chizzola in behalf of the Venetians fovereignty of the Adriatic, but will ferve to vindicate the right of the crown of Great-Britain to the dominion of the Britifh Seas, of which fee the article SEA British.
The Venetians are not the only nation who have pretended to dominion at fea. The

## Tuscans and Genoese

Have done the fame. The Great Duke of Tufcany is generally acknowleged to be the lawful lord and fovereign of the Tuican Sea. To maintain which fovereignty, he has built feveral forts and caftles there, to which fuch foreign Thips as arrive before them, are obliged to pay thofe marks of efpect, that by the laws of the country áre eftablifhed. The Genoefe were formerly very confiderable at fea, efpecially in the time of crufades, when, though rather by policy than power, they were fuperior in the Eatt to the Venetians. And before the Englifh and Dutch fell into the Perfian and Tu:kifh trade, Vence and Genoa were the only marts and Ataple ports of Chriftendom, for all the precious commodities of thole countries.
The hiftories of Italy thew us how likely the Genoefe "were once to reduce the commonwealth of Venice. Their fleet befieged the city of Venice, and their admiral Doria triumphed in the Adriatic about the year 1300 ; but the Vene tians afterwards recovered their naval power, and followed the Genoefe' fo clofely, that they broke theirs. However the city of Genoa is fill much frequented by foreign merchants; and according to Benedictứs Bonius, lib. de Cenfibus, artic. 16. §. 40. Genoa is the lawful fovereign of the LiguAic Sea, and this fate always keeps a certain number of armed gallies, and other fhips for the defence of their sight and title to that dominion. The

## Pisans

Were alfo very confiderable in the Mediterranean Sea, about 400 years ago, and once a match for the Genoefe; but they foon loft their reputation, and fince the city has been annexed to the Great Duke of Tufcany's dominions, its trade is funk, and Leghorn is now the only flourilhing port in Tufcany. The

## Pope

Pretends alfo to the fovereignty of the fea, which bears the name of the Church's Sea, as is proved by the very words
f the bull Ccenz Domini; which, among other delinquents, excommunicates and anathematizes all rovers, pirates, and robbers, baunting and infefting our fea, and efpecially that part of it which lies between the mountain Argentaro and Sarracius. The

## Spaniards

Have fometimes thought fit to fpeak favourably of the community of the fea; yet when it was for their prefent purpore, they have as feverely maintained the particular dominion of it as any other nation; and notwithfanding, that by the common law of Caftile, the ufe of the fea is free, yet many of their moft efteemed lawyers have declared in exprefs terms not only that, according to their opinion, the fea is capable of dominion, but that fuch a dominion was acquired by their king: and fo the prince may grant any man a permiffion to filh in any certain part of the fea, fays Gregarias Lopez ad Alphonfinas, Partid. 3 tit. 28. 1. i i. Nor mult we forget that feveral German authors in the titles of Charles $V$. emperor and king of Spain (and particularly in the preface to the conftitution concerning public judicatures in the empire) ftile him King of the Canary lslands, and of the Islands and Continent of the Indies, and of the Ocean, \&cc
By which, though he was not really fo, it fufficiently appears they did not quettion the lawfulnefs of a dominion in the fea. As to the

## Portugueze,

They are, above all others, obftinate maintainers of this doctrine of the lawfulnefs of a dominion and propriety in the fea, as will fufficiently appear by the ufual title of their kings. And particularly king Emanuel, in his preface to the laws of Portugal, ftiles himfelf, Dom Manuel, per Gracede Deos, Rey, \&c. Senhor de Guinee, et da Conguista, \&c. Navigacamet Commercio d'Ethiopia, Arabia, Persia, et da Indie, \&c.
Where he pretends to be fole lord of the navigation and trade of Ethiopia, Perfia, \&c. But all this is nothing in comparifon to what is found in the body of the laws of Portugal, concerning the pretenfions of that nation to the fole dominion, even of the vaft Atlantic ocean itfelf: for among the faid laws, O quinto libro des Ordonaconnes, tit. I 12. there is a moft pofitive and abfolute prohibition to any perion whatfoever, whether native or ffranger, in any fhip or veffel, to pars to the countries, lands, and feas of Guinea and the Inties, either upon occafion of war or commerce, or for any other reafon whatfoever, without the king of Portugal's fpecial licence and authority, under pain of death and confif cation of all effects, to be inflicted upon all fuch perfons as fhould ptefume to go thither in contempt of the prohibition.
Purfuant to this law, feveral perfons who fell into the hands of the Portugueze, were put to death; and it extended to foreigners as'well as the king's own fubjects, though the former never acknowleged his pretended title to the dominion of the Atlantic and Southern Sea, which gave occafion to a very warm difpure between our queen Elizabeth and Don Sebaftian king of Portugal. But the matter then in queftion was not, whether king Sebaftian was capable of becoming lawful fovereign of thofe feas, but whether he had acquired fuch a dominion by right of occupation, or otherwife, which it was plain he had not. If we look into the biftories of the northern nations, we fhall alfo find that feveral of them have demanded dominion at fea; as the

## Danes, Norwegians, Swedes, and Polanders.

Before Denmark and Norway became united under one monarch, the Norwegians had a feparate fovereignty in the fea, as well as the Danes. Saxo Grammaticus, in the $7^{\text {th }}$ book of his Hiftory of Denmark, writes, That in the time of Harald Hildeland, king of Denmark, none durft prefume to ufurp any privilege or dominion in the Danifh Seas, becaufe the empire of the land and fea was the fame in Denmark. Headds, that Olo, who fucceeded his father in both duminions, vanquifhed all fuch as pretended in any manner to infringe his fovereignty therein. In the year 1582, Frederic II. king of Denmark and Norway, permitted and lett out the paffage and ufe of the Norwein Sea to the Englifh Mufoovy company in the fame gian Sea to the Englifh Mulcovy company,
manner as if he had rented out a piece of land.
manner as if he had rented out a piece of land
The SWEDEs are of the fame opinion, with regard to the The SWEDES are of the fame opinion, with regard to the dominion of the fea, as very plainly appears by the treaty concluded between Chriftiern IV. king of Denmark, and Guftavus Adolphus king of Sweden ; in which the latter entirely renounced the fovereignty formerly claimed by him over the feas of Norway, Norland, and the jurifdiction of $\stackrel{\text { over }}{ }$ Warbhuyfen.
All merchants concerned in the Baltic trade, know very well

## S EA

What great revenues the king of Denmark raifes out of the royalties of that and the Norwegian Sea.
As to the Poles, we find by Janufzowikius Syntazma of the flatutes of that republic, lib. 3: tit. 1o. fol. 109. that when Henry duke of Anjou was king of Poland, the French ambaffadors agreed that the faid moft illuftrious prince then chofen, as foon as he fhould aflume the governprince then cholen, as doon as he fhould altume the governa navy fufficient for the defence of the ports, and of the fovereignty of the fea belonging to the kingdom and dominions of Poland

## The French.

Though the French have fometimes, in oppofition to the English, declared for the community of the fea, yet it is very certain they have pretended to the dominion of it, and even of part of the Britifh Seas. Charondos Caronæus, in Not. ad Cod. Henrici III. lib. 20. tit. 7. Conftit. 1 and 28. fays, The king is fovereign of the feas which flow about his kingdom, becaufe the univerfal right of all things common by the laws of nature and nations, is transferred into bis dominion. With which affertion agree feveral paffages of Stephanus, Pafchafius, Ludovicus, Servinus, Popellenerius, and ochers.
They pretend to derive a title to the fea that flows about They pretend to derive a the
the coaft of Britany, from the poffeffion of that continent, which they allege had once a fovereignty in the fea; for the proof of which they inflance one Rotlandius, mentioned by Eginhart in his life of Charlemagne. He is there fpoken of as governor of that hhore, where they affirm it was ufual to exact a certain cuftom of thips that navigated there; whereas that cuftom was only a fort of pilotage or conductmoney, which was principally paid by the inhabitants, or at moft by fuch only as traded upon the coaft, for pilots to conduct them fafe from the Chore of Bretagne, which is very dangerous.
That this was the nature of that exaction is plain, by the account Bertandus Argenterus gives of its origin, in his book ad Confuet. Brit. art. 46. where he fays, the ancient kings of Britany, confidering the frequent leipwrecks that happened upon that rocky fhore, which then was almoft deftitute of havens, made a law, that none fhould go to fea without taking guides and paffes, for which they paid a certain fum, called in Bretagne, to this day, droit de falvage.
The French kings have been fo far from difowning the fea is not capable of dominion, that they have ufurped a fovereignty which does not belong to them, by pretenditg to that part of the Britifh Seas: for Henry II. and Henry III. publifhed two ediets, requiring all foreign fhips navigating in the neighbouring feas, and meeting with any of their Chips, to ftrike their top-fails, in acknowlegement of their pretended fovereignty; which edicts they endeavoured to get the convention of States to confirm, but never could effect it: on the contrary, the latter of them was declared void, and of no effect in law, in a notable cafe, in which fome Hamburgh merchants were plaintiffs, againft Mich. Butardus and other defendants, before an affembly of the States of that kingdom, held at Tours by Henry IV.
We fhall not in this place anfwer the vain argumerits brought by the French authors, to prove their king's title to the fovereignty of the fea flowing about their coafts: for "by afferting and proving that there can be no legal dominion of any part of the Britifh Sea, but what is vefted in the crown of Great Britain, all the French pretend to the contrary will be at once deftroyed, and appear to be ground lefs. See our article SEA British. Having taken notice of the dominion of the fea claimed by the nations of Chriftendom, we muft now obferve what naval fovereignty the

## Turks

Pretend to in the Levant. The Grand Signior, fueceeding by right of conqueft to the fea dominion of the emperors of Conftantinople, changed. the name of the Egean and Euxine, into thofe of the White and Black Seas, of which he in a very folemn manner files himfelf lord. This is particularly remarkable in the league concluded at Paris, the 20th of March, 1604, between Henry IV. of France, and Achmet the Ottoman emperor; by which, Achmet granted the French liberty to fiff, and fearch for coral, in certain freights and bays upon the coaft of Africa, fubject to the Sultan. Befides this, Coriolanus Cippicus, in his tiftory of Pietro Mocenigo, fays, The Turks had built two very ffrong caftles, oppofite to one another, oo both fides the Hellefpont, at its narroweft paffage, which being well provided with ordnance and ammunition; the governors had orders to fink all hips that fhould attempt to, pafs without the permiffion of the Grand Signior. See the article Romania in Turkey.
As to the opinion of the Dutch in relation to the fovereignty of the fea, they, as well as the Hanfeatic towns,
have declared for a community of the fea; but that is becaufe they once being the greateft tradets in the world, got more by that community than any other people, and have very little to pretend to by a fea dominion. Whatever their real fentiments are, they feem to be againft any fuch fovereignty. But what is their oppofition to right, reafon, and the practice of almoft all countries and ages?
The Hanseatic Towns, in a difpute about the Venetians afferting the fovereignty of the Adriatic Sea, uiged by their advocates, that Inter res communes, uti ipfe imperator numerat mare, \& ideo nemo in mari pifcari aut navigare prohibitur, \&t adverfus inhibentem competit Astio Injuriarum, J. Io. fiquis in mare, I. Injuriarum, fect. ult. de Injuriis. Sin littora quoque communia funt, 1. 2. re diverf. Quia accefforium funt mercis; \& accefforium fequitur naturam prithcipalis, 1. 2. de Peculio Legat. c. Accefforium de Reg Jutis 6. Ad littus maris igitur accederpe quivis poteft, non pifcandi tantum gratia, fed etiam ædificandi sc occupandi caufa. 1. quod in Lit. de-Acquir. rer. Dum. I. in Lit. ne quid in loc. pub. Jo. Angelius J. C. de Repub. Hanfiat. par. 6. fol. 85 - edit. Francof. An. Dom. 164 I. But thefe argumeats were eafily anfwered by the Venetian lawyers, Quemadmodum communi littorum reffringitur ad populüm æquo occupata funt, lib. 3. fect. Littora D. de quid in loc. pub. Ita etiam communia maris, adec ut per nare a nemine occupatum, navigatio fit omnino libera; per mare autem occupatum ab aliquo principe liberam habeant navigationem, qui funt illi principi fubject; alii vero earenus; quatenus idem princeps permittit. Julius Tacitus de Dom. Maris Adriatici.
The infringements the Hollanders have made on the dominion of the Britifh Sea, have cof them dear; but now the two nations are fo nearly allied by intereft, it is to be hoped they will rather help us in maintaining that juft dominion, than ever think of abridging any part of it; firtce it will appear, under our article SEA BrItish, that the fovereignty and dominion of the Britifh Seas are the fole and undoubted prerogative of the king of GreatBritain.

## REMARKS.

Our reafon for introducing this article, which affents and proves a right to the dominion of the SEA, is, in order not only to vindicare and maintain, in its proper place, this nation's right of fovereignty in the Britifh Seas, on which the prefervation of our fifheries, \&c. depends; but to confronc alate certain French writer, who has endeavoured to fubvert thofe principles, with a view to pave the way fome time or other, we may prefume, to fome intended encroachments and ufurbations of his Grand Monarque on the Britifh rights of navigation. The author to whom I allude is Manfieur Deflandes, in his Eflay on Maritime Power, publifhed during the late war. This gentleman was encouraged to write this eflay, by the count de Maurepas, whu had the care of the French marine. The defign in writing it is pretty evident; that minifter has been long endeavouring to infpire the councils of that conntry with an ardent paffion of retieving the naval power of France, and fetting it again on the foot upon which it ftood in the reign of Lewis XIV. In order to bring this gradually to bear, the counide Maurepas, from time to time, cauled feveral treatifes to be written and pubtifhed on navigation and commerce, in fuch a method as was mof likely to ftimulate the pride, and excite the jealoufy, of the French nation; and in juftice to the learned ând judicious author, I think it in many refpects a very ingenious and mafterly performance of its kind, notwithiftanding I am abuut to cenfure the following paffage, which is as follows, viz. 'I think it pioper - to oblerve, fays this excellent writer*, that mof of the - Rates of Europe have been for appropriating to theinfelves - the fovereigncy of fuch Seas as wafh their coalls, and excluding others the ufe of them. As for France, incapable 'of giving into fo vain a notion, he bas always fupported cher right of navigating thips in Ay i SEAs; and the king sof Denmark having dared, in 1637, to djfiturb fome veffels that were empluyed in the whale-fithing on the coalt of -Greenland, Lewis Xtit, caured him to be informed, by -count d'AVAUX, his ambaffador, that all SEAS were open to his fubjects, and that he was able to maintain them - in the poffefion, of which he would fuffer no body to © doubt. And it is, indeed, one of the firft priaciples t in

* To confirm what he urges upon this head, he has the following note: : To be perfuaded, fays this gentleman, be-- yond all polfibility of doubt, that there is nothing more - frivolous, or worfe founded, than thefe fort of preten-- tons, one need only read two excellearned Hugo Gro-- upon this fubject, the one by the liemater the title of MARE Lider by * Theronore Graswinckem, advocate fifcal of the do-- maines of the Srafes of Holland, under the tile of MA. - mis Liarri Vindicim.'
$\dagger$ This learned author difcovers here no fmall prejudice in favoar of his country; be ought cerainly, in juftice, to have

## S EA

## S E A

mentioned the book written in anfwer to Grotias, by our learned Sriden, under the title of Mare Clausum, spu de Dominiomaris, Libri Duo, Londini, 1636, 8 vo ; and his aniwer to the other book cited by our author: in which two works he has fully proved, that a Richt may. be acquired overthe Sea, that fuch a Righr has been ac quired over our Seas by our anceftors, and that it has always been fubmitted to by our neighbours, nay, that our kings have granted commifions to hear complaints, even againft the French king for injuries done at Sra. We fay, our earned Selden has proved all this as fully as any thing can be proved by reafon; authority, or evidence; and to his treatifes, therefore, we refer the Englifh reader, for full fatisfaction on this head.

- the law of nature, as eftablithed by our old lawyers, Mare - COMMUNE OMNIUMEST, fay they, \&IITORA, SICUT c AER, \& Est sexpissime rescriptum, Non posse c Quemprscari prohiberi: i. e. The fea is common - to all, and fo are its coafts; and it is often fet down as c law, that no body has a right to prohibit fifhing in them.
- Lewis XIV. pufhed his authority fill farther, and em-- ployed it not only in favour of his fubjects, but alfo of his - allies : for the king of England, Charles the Second, in-- clining to difturb the Hollanders, and even French, in c fifhing in the channel, or along the coalt of Flanders, - Lewis XIV, in 166 r , charged the count D'Estrades, - his ambaflador, to tell him, That he was in the wrong to - extend his prohibition of fifhing, to the prejudice of comc mon right, which gave that liberty to all the world; that c befides the intereft he had in this, in refpect to his own 6 fubjects, he could not help affifting, in this cafe, the - Dutch, his allies, or refufe them his interpolition, having c a maritime force, fufficient to render him not afraid of be-- ing oppofed in this refpect by any prince in the world ${ }^{*}$.-- Such were the terms, continues Monfieur Deflandes, in - which this prince expreffed himfelf, who having had the c affiftance of good councils, knew how to render himfelf " powerful in hipping, and formidable at fea.'-However, as a more fatisfactory anfwer to what this learned Frenchman has fuggefted in regard to this matter," we fhall refer to the article following.
- This is another very indifferent proof of the French inde. pendency at Sen. They engaged in war with us, in conjunction with the Dutch, with no other view than they afterwards engaged in a war on our fide, againit the Dutch; to make the maritime powers weaken each other, and to gain frength and experience at our coft. If there was any weight in count D'Estrames's declatation, in favour of the DuTch right to fihhing on our coaft without our permifion, it was certainly taken away, by the French king's joining with us in a war againft Holland; among the caufes of which, this was one, that they had fished in our Seas without leave: fo that if the French king's authority could avail any thing in this cafe, here it is on both fides.

SEA BRITISH. The fovereignty of the Britifh Seas, maintained and afferted to have always been, and ftill continues to be, the undoubted right of the kings and queens of GreatBritain.
We fhall firit fettle the bounds of the Britinh Sea. The eaftern and fouthern coatts of Britain are wathed by the German Ocean, and that which Ptolemy calls particularly the Britifh Sea, and which according to Mela, in his treatife de Situ Orbis, lib. ii. cap. 3. reaches as far as the northern'coaft of Spain. And the Arabian geographer, (Clim. 4. part 1, ) Cays, Towards the North Andalufia, by which name the Arabians comprehend all Spain, is walhed with the Englifh Sea; adding, there are nine ftages from Toledo to St James's, which place he fays (Clim. 5. part. 1.) is fituated on a promontory of the Englinh Sea. St James's is a town in the province of Galicia. On the weft fide of Britain lies the Vergivian Sea, which, where it wafhes the coaft of Scotland, takes from thence the name of Deucaledonian Sea: of this Vergivian Sea, the Irihh, or St George's Channel, is a part. Upon the north of Britain flows the Caledonian Sea, in which are fituate the Orcades. Thus the Britifh Sea, or the channel lying between England and France, the Vergivian, the Deucaledonian, and the Caledonian Seas, are properly called the Britifh Seas, and, as fuch, are fubject to the Britifh empire. Hugo Grotius, in the fecond book of his treatife of Peace and War, chap. 3. §. II. fpeaking of the fea, has thefe words: - The bare poffeffion of the fhore is not fufficient to intitle - any people to a right to the adjoining fea : nor is it enough - for a prince to imagine, or write himfelf lord of the fea, - without proclaiming himfelf by fome Overt-Act to be - fo.'-By which he certainly means, that it is not from a bare occupation or poffeffion of the neighbouring land, but from an actual and peculiar ufe and enjoyment of the fea itfelf, and exerting all the functions of a fovereign upon it, fuch as prefcribing rules of navigation to thofe that frequent it, punifhing delinquents, protecting of others, and receiving from all that homage and advantage due to every lawful fovereign, that fufficiênt arguments can be derived for proving 2 lawful title to the dominion of it. Now, if we make it
appear, that the poffefrion of the Britin Sea was at frft ac. quired, and ever fince afferted, in the very manner fpecified by that author, though be wrote aganit it, we hope there will be no room for objection, by which the argument can be invalidated.
Before we proceed further, it may be proper to obferve, that the extent of the Rritigh dominions in the Eaftern and Southern Seas was fettled by a treaty concluded in the ycar 1674, between king Charles II. and the States-General; by which it was to reacl from the middle point of the land Vanflaten in Norway to Cape Finifterre. The dominion of the fea intitles the lawtul poffefors to the fix following prerogatives. (I.) The royalty of granting the liberty of finhing for pearl, coral, amber, and all other fuch precious commodities.
(2.) To grant licences to fifh for whale, fturgeon, pilchard, falmon, herring, and all other forts of fifh whatfoever, as is ufual in Spain, Portugal, and feveral other places.
(3.) To impofe tribute and cuftom on all merchants thips, and fifhermen fifhing and trading within the limits of the fea and firhermen filhing and trading within the
(4.) The regular execution of juftice for protecting the innocent, and punifhing the guilty for all crimes committed withoin the extent of fuch fea dominion.
(5.) To grant free paffage through any fuch fea to any number of fhips of war belonging to any other prince or republic, or to deny the fame, adcording to circumfances and occafion of fuch paffage, in the fame manner as any prince or ftate may grant or deny free paflage to the foreign troops through their territories by land, even though the prince or ftate to whom fuch fhips or land forces belong be not only in peace, but in alliance, with the prince or republic of whom palage is defired.
(6.) To demand of all foreign thips whatfoever within thofe feas, to ftrike the flag, and lower the topfail, to any thips of war, or others, bearing the colours of the fovereign of fuch feas.
All which prerogatives do unqueftionably belong to the kings and queens of Great-Britain. And although the duty of the flag is but an indifferent honorary ceremony, yet is is a fisnificant acknowlegement that the abfolute fovereignty of the feas in which the colours are required to be ftruck, is velted in the prince to whom that duty is paid. And fuch is the high regard that the Britifh nation puts upon the execution of this ceremonious homage, that a contempt thereof, according to the marine laws, is punifhable as open rebellion or high treafon.
That this ackncwlegement was always taken for a confeffion of the abfolute fovereignty of the Englifh Seas, appears by a memorable record among the marine laws, about the end of the reign of king John, viz. * ' That if a lieutenant in any - voyage be ordained by common council of the kingdom, - do encounter upon the fea any fhips or veffels, $l_{\text {d }}$ den or un-- laden, that will not Strike and veil their Bon-- Nets, at the commandment of the lieutenant of the king, - but will fight againlt them of the fleet, that, if they can - be taken, they be reputed as enemies, and their veffels, fhips - and goods taken and forfeited as the goods of enemies, - though the mafters or poffeffors of the lame would come ! afterwards, and allege that they are the fhips, veffels, and - goods of thofe that are friends to our lord the king; and - that the common people in the fame be chaftized by the " imprifonment of their budies for their rebellion, at dif' cretion.'

* Inter Leg. Marina, fub fine anni regni Henrici Secundi le Ordinance called Haftings.
The claim of this Britifh fovereignty at fea has the fanction of no lefs than 17 or 18 centuries to countenance and uphold the like uninterrupted practice; and even fo long ago as Cxerar's time the Britons afferted and maintained the like dominion, as may be feen in his commentaries, liv. iv. where he fays*, - That before his defcent in Britain, having fummoned ' the merchants and other feafaring Gauls together, and - made a diligent enquiry concerning the fituation of the - Britilh fhore and ports, he found that none dared to crofs ' the feas to go into Britain, without permifion, but mer' chants, and that they too were fo ignorant of thore thores - (as being deprived of a free ufe of the fea) that he was - obliged to fend Volufenus, in a long fhip, to found the Br't tifh coalts.' Whence it may be rationally inferred, that fince the ancient Britons excluded the Gauls and others, at their pleafure, from the free enjoyment of the fea, they mult certainly have been the lords of it. And that this was not 3 bare prohibition of coming into the illand of Britain, but even of navigating within the extent of their martime dominion, is plain from hence: that the merchants themfelves, who were allowed to go thither, feem to have only had the liberty of coming to an anchor, and difpofing of their gouds upon the coafts, without being admitted into the ports but
*     - quaz omnia ferè Gallis erant incognita. Neque enim temere prater mercatores, illò adit quifquam; neque is $1 p$ fis quidquam, prater oram maritimam, atque eas regiones quæ funt contra Galliam, notum eft, \&c.

## S E A

## S E A

very feldom; fince thofe that Cafar had fummoned to con duct his navy into Britain, could not undertake to do it, a being entirely ignorant of the fituation of their ports. If they were permitied to come to any place, it is conceived to be Gaul's Town, near Yarmouth. They had a naval force to Gain the naval dominion which when Cefar faw, he predefend thir thips to 1 ferred ther hips affiftance of the Gauls were the occafion of his expedition to Britain, to revenge himelf for the fuccours the inhabitant had fent their neighbours, his enemies.
Julius Cwfar fubdued only an inconiderable part of the coaft; nor did the dominion of the. Britifh fea fall into the hands of the Romans 'till the reigns of the emperors Claudius and Domitian, who having conquered the fouthern parts of the inland, the empire of the fea, at leaft in proportion to that part which was conquered on the fhore, did neceffarily devolve upon the poffeffor of the land, and was actually reckoned a part of his dominion, as well by his fubjects as by himfelf.
Though Claudius was the firft of the Roman Emperors who had fubjected the Britilh Sea to his dominion, yet the Ro mans were not then fo fully in poffefion of the Britifh Seas, as they were afterwards in the days of the emperor Domitian; who fending Agricola to be his lieutenant in the province of Britain, this general extended the Roman conquefts much farther toward the North, than any had done before him: he alfo failed round the land, difcovered the Orcades or Orkney Illands, fituate on the North of Scotland, and till then unknown; and having conquered them, the empire of the Northern Britilh Seas was polfeffed by the Romans, as well as that of the Southern.
Seneca alfo witriefles, That Agricola defigning to make war upon the Caledonians,' provided a powerful fleet to favour; by a mighty diverfion by fea, the enterprizes of his army by land. The Romans having acquired the fovereignty of the Britith Seas, committed the management of naval aftairs here to a great fea-officer called Archiguburnus, who had a numerous fleet under his command, with which he was ordered to affert and maintain the Roman dominion in the Britifh Seas ; but the Romans abandoning afterwards their conquefts in the North, retired into the fouthern parts of Britain; and we may fuppofe, as they loft the dominion of the land in the North, fo they were obliged to give up the fovereignty of the fea there, which naturally returned to the Britons.
We find little mention made of the affairs of the Romans in Britain, efpecially thofe relating to the fea, 'till the reign of Dioclefian, who fent C. Caraulus to foour the Britifh Seas, which were infefted with Gaulifh and Saxon pirates. This Caraulius afterwards ufurped here, and maintained the fovereignty by fea and land feven yèars. Caius Allectus, who killed him, coined a medal, having on one fide his name and image (for he alfo ufurped) and on the reverfe a three-oared galley, with this infcription, Virtus Augufta; by which reprefentation, he meant to exprefs the force' and greatnefs of the empire of the Britilh Seas. Conftantius Chlorus, who reduced him, is complimented upon it by feveral authors; who, amiong other things, highly extolled him for the reftitution of the fea dominion to the Romans, and of freedom of traffic and commerce to all nations, by fcouring the fea from pirates; not only upon the coafts of Gaul, but even of Spain and Africa
About the time of Conftantine the Great, an officer was eftablifhed in Britain, by the name of count of the Saxon fhore; who, befides his command at lanid, had under his government the feas flowing between Friance, Holland, Germany, Denmark, and this illand; and that not as a bound, but as a diftinct part of the Britifh empire, as there was a prafect of the Euphrates,' a count of the Danube, a count of the Rhine, \&xc. By the Saxon thore it is very plain, that the thores of all the above-mentioned countries are meant, becaufe the Saxons, being then the moft potent people in Germany, enlarged their conquefts all along the coafts of Germany, Holland, and France; which appears by the Breviary of the imperial dignities, where fpeaking of that tract of land extending from the mouth of the Loire to that of the Seine, it is faid, under the command of the duke of that province, there was a tribune of the firf band of roldiers of Armorica and Grammona, on the Saxon Thore. And again, fpeaking of that fhore which extends from the Seine to the Maefe, including Normandy; Picardy, and Flanders, it is faid, there were Dalmatiati horfemen lodged upon thofe borders on the Saxon fhore: and in effect, all the fhores extending from the weftern parts of Denmark to the weftern parts of France, are in the Brevia y moft exprefsly comprehended under the general term of the Saxon fhore; the count of which refided in Britain, as the feat of the fovereignty of all thore feas.
It is very certain the Saxons never feated themfelves in Britain, 'till after the Romans had abandoned the inland. Some defcents they might probably have made as pirates, but never poffeffed themfelves of any part of the country, 'till after king Vortigern called them in againft the Picts; whereas they had fertled on the coafts of Gaul and Belgia; and the
V OL. II.

Saxon fhore cannot, without committing a great ablurdity, be fuppofed to mean that of Britain, where, the Saxons had not feated themelves, but that of Belgia and Gaul, where they had; which coaft by the Breviary is plainly proved to be the Saxon thore, ynder the count above named, who refided, as has been faid, in Britain. And for a confirmation that Britain and the Saxion flode wefe two different jurifdic tions, we thall here infert a lift of other governors and officets, that were under the command of the magifter militum * prefentalis, according to the very words of the Breviary.

* In the edition of Alciatus and Pancirolus, the word mili turn is by a miftake inferted for lititum.

Sub difpofitione viti illuftris magiftri peditum prefentalis comites limiturr infra friptorum.
Italix, Africx, Tingitanx, tractus Argentoratenfis, Britanniarum, littoris Saxonici per Britannias.
About the year 450 , the Romans having entirely abiandoned Britain, the Britons refumed' the fovereignty of the fea as foon as they found themfelves in poffeflion of that of the land. But having been weakened by the frequent levies that the Romans made of foldiers here, to ferve them in other parts of their empire, the Scots and Picts, to revenge themfelves for old quarrels, fell upon them, and forced them to call in the Saxons to their affiffance, declaring they were not capable of affifting them. The Saxons by treachery got poffeffion of feveral parts of the ifland, turned their arms againft thofe they came to affift, and new adventurers coming from Germany to Britain to make their fortunes here, the leaders of each colony founded a kingdom, and from the number of thefe monarchies, the famous name of Heptarchy was given to the fovereignty of this ifland; to which the dominion of the Britilh Seas was always a certain appendant, where the Britons, Saxons, or Danes, were mafters of the ifland. It is faid, "Arthur failed with his victorious fleet and army as far as Ireland, forcing thofe northern people to pay obeifance to his ftandard, and acknowlege him for fupreme lord, even from the Britifh to the Ruflian fhore. Though this, perhaps, is in the fable, yet it is plain it was the received opi nion, that the Britons pretended'even then to the fovereignty of the fea.
Having fooken of the maritime fovereignty of the Britons and Romans, that of the Saxons and Danes comes next to be treated of. The Saxons, everi at the time of their firft arrival in Britain, "were very powerful at fea, and very expert in the art of navigation, as it was practifed in thofe days which is proved by the charatter given them by Bede and other authors of credit; the Saxons, fay they, were fo familiarly and particularly acquainted with maritime affairs, that by an almof incredible nicety in their obfervations they counted months and years only by the continual revolution of the tide, or ebbing and flowing of the fea; calling the former in their language ledones, or lidunas, and the latter malinas, and Ethelberd, an antient writer, feems to infinuate in his firf book, that the Britons being then informed the Saxons were: a people very expert in mavigation, and well provided with all things neceflary for war, they were the more defirous of their alliance : to whom they fent ambarfadors with confiderable prefents, and offers of a free trade and commerce; that they came, conquered, and were themfelves conquered by the Danes, is related in our Engliih biftories.
All that can be expected from us is, to report as much out of them as proves, that both Saxons and Danes, while they were mafters here, were in poffeflion of the dominion of the Britifh Seas.
Gildas relates, that OAta and Ebiffa, two leaders of the Saxons, extended their dominions on the northern coaft of this illind, and Allor, with his fons Ciffa and Cimenus, on the fouthern; and that they became foon mafters of the feas to the fouth ward of Scotland. - The former with forty armed veffels failing about that kingdom, invading and fpoiling the Orcades, but minding their fovereigaty at land 'more than at fea, their naval ftrength fell, to decay; which the Danes and Normans obferving, it was a tempration to them to infeft this ifland, and commit frequent robberies in the Britifh Seas, in a fort of long-boats or gallies of their own invention, with which they ufed to be too hard for the Engl ih Saxoms, till Alfred caufed a great number of other thips to - be built longer, deeper, and nimbler than the Danes; by which means he drove thofe invaders out of the Englifh Seas, and recovered the abfolute dominion of them; which was tranfmitted to the fucceeding kings, of whom Eugar became powerful at fea.
Edgar began his reign in 957, according to the Saxon Chronicle; and as to his fleet, it confifted of near 1000 fail; and he did not coaft round his kingdom once a year in one of the three fquadrons, as fome fay, but each fquadron carsied him to the extent of its cruize, and then he embarked on board the other fquadron; and in the year 973, be caufed himfelf to be rowed over the River DeE by eight kings, while himfelf feered the helm ; and in his titles, he conftantly ufed this, of Lord of the British Seas. This is a fact of spuch greater certainty than can be produced for any naval

9 G
power

## S E A

power within this period of time; and therefore it deferves our attention.
We may fee, by an extract of an old record, how far king Edgar pretended to the fovereignty of the fea. Albitonantis Dei largiflua qui, eft rex regurn, ego Edgarus Anglorum Bafileus, omniumque rerum infularum oceani qua Britanniam circumjacent, cunctarumque nationum quæ infra eam includuntur, imperator \& dominus *: and Randulph of Chefter, though, he does not fwell the number to above 400 fhips, makes mention of his failing round the inand, Idem quoque Edgarús 400 nayes congregavit, ex quibus omni anno poft feftum parchze 100 naves, ad quamlibet Angliz partem ftatuit; fic aftate infulam circumnavigavit: but the Danes afterwards, as they had been before, were very fucceisful in their attempts againf the Saxons here both by fea and land.'

* Ex. Chart. Fundam. Ecclef. Wigorn.

Infomuch, that the Englifh or Saxon-Britons, wexe forced to buy them off: and a tax call Danegelt, was levied here, to be paid them that they might not affault the inhabitants of this inand, either by land or fea. The Saxons, or Englifh, maintained the Danifh fleet, which was to be employed for the defence and guard of the Englifh Seas, as well as of the kingdom. Edward the Confeffor abolifhed this tribute, as far at leaft as it was to be paid to the Danes : fome authors fay, that this tax was levied after the Englifh threw off their fubjection to the Danes, for the maintenance of the Englifh navy, which was afterwards ftrong enough to defend the fovereignty of the Britifh Seas," "till the Norman inyafion.
Hence' it appears, that the dominion of the fea went with that of the land; and that in Edgar's time, the Englifh Saxons enjoyed it without competitors, as they did alfo under Canutus the Dane; of whom it is written, that defigning to check the vanity of flatterers, by fhewing them, that even the greateft kings were, at their higheft pitch of grandeur, only men, fat down on a feat on Southampton fhore, to make a trial before them of the obedience of the fea, to whom he thus addreffed himfelf.

Thou, $O$ fea ! art under my dominion, as the ground upon which I fit is mine, and none did ever difobey the and was unpuniffied. I command thee not to come up upon my land, nor to prefume to wet the feet or garments of thy lord. Matth. of Weftminfter, anno 1035
Buf the tide flowing in the ordinary manner, and wetting not only his Majefty's feet, but his legs, the king leaping up refigned his crown of gold to a crucifix, declaring none was worthy of the name of a king, but him alone, who can command both fea and land, and they obey.
It can hardly be expected, that the fovereignty of the Britifh Seas hould be maintaned without any intervals of invaion by foreign powers, efpecially in fuch confufed times as the Heptarchy, and the contention between the Englifh and Danes; but it will be feen, that whenever the dominion of this inand was fettled, that of the fea was always an appendant to it: and fince the Norman invafion, the kings of Englañd have defended their fovereignty againft all foreign powers, and their dominion at fea has been allerted and acknowleged, without any remarkable interruption, from the year 1066, to the prefent times: we hall now, therefore, prove, that the civil and natural poffeffion of the fovereignty of the Englifh Seas has been inverted in the kings or queens of this nation, from the Norman invation to our cimes. By a civil poffeffion (according to the explication of Hugo Grotius, in his treatife de Jure Civili, lib. 5.) we mean, That which is requifite by law to found a right and title upon, and by a natural poffefion we mean an actual poffeffion, which, according to the fame author, is alfo neceflary for proving the validity of any prince's title to the fovereignty of the fea: both of which we undertake to affert and maintain. As,
I. That the kings of England have, by many folemn overt acts and declarations, afcribed to themfelves the dominion of the adjacent. feas; and that dominion has been both allowed and confirmed, not only'by the laws and cuftoms of the nation (as appears by the records of parliament, \&zc.) but allo by the common and univerfal affent of all the neighbouring and other foreign nations concerned,
II. That the kings and queens of England have always exercifed the dominion of the Englifh Seas, as well as of the illands fituate in them, as of a province belonging to them, in which they have levied tribute and costoms of foreigners, and have alfo prefcribed laws of navigation to fuch foreigners, as in time of peace have enjoyed their protection there, and that (in cafe of the violation of fuch laws) foreign princes and ftates, by making application to them, have thereby openly acquiefced and acknowleged them to be the fovereign Jards of the fea.
III. That paffage through the Englifh Seas having been hum bly defired, has been fometimes granted, and fometimes refufed, by the kings and queens of England, to the foreigners that petitioned for it; and alfo that all hips navigating in their feas, on certain occafions, have bean ftopped and arreit-
ed for the fervice, and by the command, of the kings of
England. England.
IV. That the liberty of fifhing in the Britifh Seas has been frequently obtained by licence of the kings and queens in Britain; and that protection haspbeen given by them to the finhers, upon whofe humble requelt fuch licence had bren granted, and a tribute exacted for that protection.
To this thall be added feveral other corroborating evidences but as for what happened from the Norman invalion, to the union of the two crowns under James I. we thall not the particular, as in what has fallen out fince that time ; bear that being of later dates will confequently be of ecagie weight.
The order which we propole to obferve, will naturally len us to treat of the dominion of the Weytemur Irith Seas. in difcourfing of the eftate of the maritime aftains of Enguand, at the time that the fovereignty of that fea was added to that of the Englifh, by the acceffion' of Ireland ta the crown of England, under king Henry II. and king John, who conquer ed that ifland,
As to the dominion of the Northern or Catedonianand Deil caledonian Seas, we diall endeavour to evince, that it is the fole and undoubted prerogative of his Britannic: Majefty, a a neceffary appendant of the fovereignty of the kingdom of Scotland, both which he has derived by an unqueftionable right from his royal predcceffors, the kings andqueens of that country.
To begin with William the Norman, it appears by fevoral paffages in Doomfday-book, that he maintained the maritime iffairs of England in a yery flourifhing fate. And other hiftories fpeak largely of his powerfal navies, which, by the addition of the Norman fleet, mult have been fufficient to fecere the dominion of the fea; and though the Danes. peared in the northern parts, and committed fome piracies in the weitern, yet they dared not engage the royal navy of England; but what they performed was by ftealth and curprise. The Normans immediate fucceffors, William Rufus and Henry I. were as careful in maintaining their empire at fea, as their father the firft William had been. Florence of Worcefter and Hoveden relate, That being about to declare war againf Robert duke of Normandy, who was then prepaning for an exportation to England, he commanded his butfecanti, a fort of fea-officers then known by that name, to guard the feas, and take care that no perfon thould pafs over from Normandy towards the Englifh coafts. Befides, this being a fufficient proof of his ftrength at fea, the very office of threle butfecarli proves, that he looked upon himelf as lawful fovereign of it; they being noother thanCuftodes ipfius maris, or guardians of the Sea, as will be thewn morefully hereafter.
The confufions that happened in Stephen's reign, hindered the growth of the Englifh frengih at fea; and, indeed, his dominion by land was rendered precarious, by the intereft of Maud the emprefr, and ber Son Henry II. in whole time, Ireland being conquered, the Wëtern Sea was added to the maqritime empire of the kings of England; and that thefe kings have exprefsly vindicated and afferted their title to the dominion of thofe feas, appears among other Irifl fatutes, by an act made in the reign of Edward IV. Itat. Hibermeap. 6. forbidding filhing there without licences, and laying a tax on all boats and veffels coming thither to fifh: fince which, king James I. did, by a folemn proclamation, pofitively forbid all fifhing upon the Irifh coalts to foreigriess, withoat permiffion.
Many other inftances might be given to prove, that the kings of England have, from time to time, affertedtheir right to the fovereignty of the Irifh, as well as of their other feas. Which warrants us, from the reign of king Johin, when Ireland was annexed to the crown of England, to reckon them a part of the Britifh Seas; the empire of which we are now endeavouring to maintain, to be part of the fovereignty of Britain.
King John, in the paffage before cited, challengeddhe homage of the flag near 500 years ago, by that memorable ordinance at Haftings, whereby this duty was required, not bately as a mark of courtefy, but as a matter of undoubted rights cum debita reverentia, and all that refuled is were to be treated as enemies. This homage of the Hag is a confecutive ac knowlegement, that the right and dominion of the feas are in him, to whofe flag they frike and pay that homage; implying, that the prince grants a general licence for fhips to paf through his feas, that are his friends, paying him that duty like thofe fervices when lords grant out eftates, referving a pepper-corn, or fome fuch trifle, the value of which is not regarded, but is anly a fignificant mark of the remembrance and acknowlegement of their benefactor's right and dominion. This falutation is to be paid, not only by foreigners, but al fo by natural-born fubjeets; and fuch as refufe to do it, may be brought to the flag to anfwer the contempt.
King John afferted his title to this homage, by a fieet of no lefs than 500 hips , in a voyage royal of his, when be failed to Ireland, commanding all velfels, which he met in his way, to pay that duty and acknowkegement $;$ and our fucceeding

## S E A

kings have done the fame, with more or lefs vigour and fuccefs according to the circumftances of their affairs. His fon Henry III. was too much involved in his wars with the barons, to mind his naval dominion: but then Henry's Fon Edward I. coming to the crown about the year 1272, fon Earing into war with Philip the Fair of France, both and entering into a war freedom of commerce (then called princes agreed upon a freedom of commerce (then cognizance of all chings relating to this agreement, which they were to decide, according to the laws and cuftoms of merchants, as far as it was allowed by the aforefaid treaty of commerce.
When there two kings concluded a peace, they mutually When themfelves to be enemies to each others enemies, exobliged the princes exprefsly mentioned in the treaty of peace cept forme princes exprefsly mentioned in the treaty of peace
and alliance*. But feveral complaints arifing concerning injuries done, and violences offered to merchantmen upon that fea, not only during the fufferance, but after the peace; and the two kings forefeeing the differences between the king. of France and the earl of Flanders, might give occafion to other complaints of that nature, they appointed each four commirfioners, with full power to decide all controverfies of that kind that had happened, or might happen. Upon which a very remarkable remonftrance was exbibited to thern, no only in the name of the whole body of the people of Eng land, but there alfo joined in it the procurators of all the nations in Europe, that were then in any manaer confiderable for trade and navigation, who all unanimoully acknowledged the kings of England to have been time out of mind (quatenus kings of England) the lawful Sovereigns of the English Seas.

* Selden de Dom. Maris, 1. z. c. 14, 27, 28-Rel's 2 Parl. 174.

This is fuch an authentic proof, that none can, with any colour of reafon, object againft it. The original writing is among the archives, kept in the Tower of Lonton, in the old French or Norman tongue, in which it was then ofual to draw up fuch fort of inftruments. The reader, pertiaps, will not be difpleafed with a tranflation of as much of it as relates to the prefent cafe.

- To you uur lords, auditors, deputed by the kings of Eng-- land and France, to redrefs the injuries done to their lub-- jects, by fea and land, in times of truce and peace; we - the procurators of the prelates and nobles, and of the ad-- miral of the Engliin Sea, as well as of the cities and towns, - and of the merchants, mariners, mefienmers, and foreign
- inhabitants, and all others belonging to the realm of Eng-
- land, and other dominions and territories belonging to
c the king of England; as alfo of divers other inhabitants - of Genoa, Catalonia, Spain, Germany, Zealand, Friez4 land, Denmark, and Norway, and of fundry other mari-' - time places of the empire, moft humbly fhews: That - time places of the empire, mont humbly Hews: That
* whereas the kings of England, by right of the faid king-- dom, have always been in peaceable poffeffion of the
- sovereign Lordship of the- English Seas, and - of the Islands fituate within the fame, with power of - conftituting and appointing of laws and ftatuces, and of - prohibiting the ufe of arms and paffage of fhips otherwife - equipped than merchant-hips, and of taking fecurity and - granting protection, as occafion fhall require, and of ap-- pointing all other things neceflary for the maintaining of - peace, juftice, and equity, amorg all manner of people, as -well foreigners as their own fubjects navigating in thofe feas, and alfo of determining all caufes and differences, - and adminiftering juftice to high and low, according to the 6 aforefaid laws, fatutes, ordinances, conftitutions, and pro-- hibitions, and generally of doing and acting all other things - incumbent and belonging to the exercife of their fovereign - juriddiction within the aforefaid feas; and whereas, \&c.*'
* See Coke Inliti. : 42.

Though the Flemmings are not mentioned in this inftrument, it appears in the records, Rot. Par. I4 Edw. II. part 2, membran. 26. that the ambaffadors of the earl of Flanders to that king, fully acknowleged the undeniable right of the crown of England to the fovereignty of the adjacent feas. The paffage is this.

## Memorandum.

- That whereas for the reformation of certain injuries in an - amicable way, done by the fubjects of the earl of Flanders - to the fubjects of the kingdom of England, and by the - fubjects of the faid kingdom to thofe of Flanders, fince the - time that our faid lord the king undertook the government - of his kingdom, \&rc. And whereas the faid ambaffidors - had been admitted by our faid lord the king, to treat anew * of this kind of injuries, thefe ambaffadors or other am-- baffadors of the aforefaid earl, in the aforefaid treaties, - did, among other particulars, that they required before ali - things, make fupplication, that the faid lied the king, - would at his own fuit, by virtue of his royal authority, - caufe enquiry to be made, and do juftice, about a certain - depredation lately made by the fubjeقts of England (as it
' is faid) upon the Englifh Seas, of wines and divers othet ' merchandizes belonging to certain men of Flanders, to'wards the parts of Cianden, within the territory and ju' rifdiction of our faid lord the king, alleging, that the ' aforefa d wines and merchandizes taken from the faid Flem' ings, were br sught within the jurifdistion and realm of the - fard lord the king, and that it belonged to the king himfelf, - fo to do, for that he is Lord of the said Sea. To thefe teftimonies of the dominion of the crown of Eng land in the neighbouring feas, we fhell now add fome other remarkable ones in the reign of Edward III. the originals, of which are yet to be feen in the Tower of London: and the firft is that king's commiffion to Geofrey de Say, admiral of his Weffern and Southern Seas, in which is this paflage: © We ' calling to mind that our progenitors, the kirgs of England, ' have in former times been Lords of The English Seas - on every fide, and defended the fame againft all invad rs; - and confiderıng, that it would extremely grieve us if (which - God forbid) ous royal honour ihould, in any maner, be - impaired, or chould fuffer any diminution of this nature in 'our time, and defiring,' \&c. Nor was the commifion given at the fame time to John de Norwich, admiral of the Nor thern Seas of England, in any manner different from that to Geofrey de Say
There is yet another obfervation which may be made upon an action of the fame Edward III, which is his coining of thofe ancient pieces of goid called rofe nobles, in which he has been imitated by feveral of our kings of later date. Upon this piece is feen the reprefentation of a fhip floating in the fea, there being feated in the fhip, as on a throne, a king armed wich a thield, having a royal diadem on his head, and a fwo d in his hand; by which, doubtlefs, that great prince intended to denote, that the Sovereignty of the Englifh Seas belonged to him, nor was it ever fubject to a mafter that defended it better. For king Edward III. is faid to have entertained 1 Ioo fhips of war, fuch as were ufual in his time, for preferving the freedom of the Englisi $\mathrm{S}_{\mathrm{e}} \mathrm{as}$.
It is ubjected, indeed, that upon fome pieces of moncy anciently coined in France, there were much the fame figures, and that allo fome coins of Zealand bear the reprefentation of a ton rifing out of the fea, \&c. To which it is anfwered, That as to Ftance, there was never any money coined there with the'e infignai of the fea, \&ic. except fuch as were ftamped by tie kings of England, whle they were in porfeffion of that country: and with refpect to Zealand we hall allow, if the pleafes, her animal rifing unnaturally put of the fea, to denote the fituation of that ifland, but believe the owners will fcarce pretend, that piece of money reprefents any dominion in the fea. But there are innumerable other examples to prove, that the kings of England have always afluried, and afcribed to themfelves, the dominion and fovereignty of the adjacent feas; but the inftances we have given are fo full, that there will be no need of a ding any mole to them. And the tafk would be endlefs, if we hould attempt to cite all the paffages out of our lawyers, that have fupported this claim of the crown of England to the dominion of the British Seas. There is one point univerially known, and as univerfaliy acknowleged by all, viz. that in law thefe two phrafes intra regnum, within the king.hm, and intra quatuor maria, within the four feas, have one and the fame fignification ; that is, that all the actions done within the. limits of the Englifh empire, in thofe, are deemed to be done in England itfelf.
In the antient records concerning the cuftom of the Admiralty, we read it was ufual in the time of Henry I. and of other kings of England, who reigned about the beginains of the 12 th century, when any perfon accufed of a capital cr:me commited at fea, after being five times fummoned by the public cryer, did not, within a certan limited time, make his appearance before the court of Admiralty, fuch perfon or perfinis were ban:lhed out of England, and out of the SEAS belonging to the king of England, for a greater or lefs number of years, according to the pleafure of the admiral. It was alfo formerly cuffomary toenter actions in exprefs terms, concerning differences arifing in thofe feas, in the ordinary courfe of our common law.
Howevcr, the fea province of the Englifh empire does properly belong, according to the antient and received cultom of the kirgdom, to the lord high admiral of Englanu, or his deputies, not only with relation to its defence and fa:eguard, but to its government and jurifdiction, which the fand efficers have always had cognizance of. As for the prerogative of the $k \mathrm{kin}_{4}$ of Eugland in conftituting and appointing of naval laws, it is very ancient ; for befides what has been faid of our Saxon kings, Richard I. fume years before his death, which happened in the year 1199, publifhed the Sea Laws, that to this day are famous by the name of the laws of Oleron [fee the article Oleron's Laws], which illand he was then poffeffed of, and ir is faid by fome authors, he was then there. Athd firce the king of England is univerially acknowleged to have been the author of thefe laws, which have taken place ever fince that time, it is to be fuppofed his right to give laws was univerfally allowed, or the making of them would have been inpertinent, or of no ufe.

Edward

Edward I. prefrribed a method to be obferved for the more regular execution of thofe laws, as we find in the records of the Tower, de Superioritate Maris, and in the reign of his grandfon Edward III. the judges of England were confulted, to the intent, 'That the form of proceeding, formerly in-- ftituted by Edward I. and his council, at the requeft of his

- fubjects, might be refumed and continued for the better re-- taining and preferving the antient fuperiority of the feas of - England, and the authority of the Engliih Admiralty, in - explaining and corretting the laws and ftatutes made by his - progenitors the kings of England, for the maintenance of - peace, and the adminiffration of juftice, to all nations and - people navigating in the English Seas, and the taking - cognizance of all attempts made againft the liberties 6 thereof, by punifhing the guilty, and awarding fatisfaction ' to the injured, according to the laws and ordinances made - by the lord Richard, king of England, upon his return - from the Holy Land, and declared and publifhed in the ' aforefaid ifland of Oleron.' Which record proves fufficiently by whom, and where, the laws bearing the name of that illand, were publifhed.
The officers appointed by the kings of England for the management of maritime affairs, were the butficarli, who were fometimes called guardians of the navy, and fometimes guardians of the fea. In the time of Henry III, authority to guard the Eaftern Sea and fhore was given to Thonron de Moleton, with the title of captain and guardian of the fea. Rot. Parl. 48 Henry III. numb. 3. 8 Rot. Clauf. 48 Henry III. mem. 3. In the fame prince's reign, Hugh de Crequeur is ftiled warden of the Cinque Ports, and of the fea in thofe parts.
After him, in the year 1292, Edward I, dividing his fleet into three Squadrons, gave the three officers commanding them the name of admirals; and the like command and character was given to three other fuch officers, in the time of his fon and fucceffor, Edward II; which prince being likewife fucceeded by his fon, Edward III, in his reign a parliament was called, to provide for the peace and fecurity of the realm, by Land and SEA. In the time of Richard II, Hugh Calverlee was made admiral of the fea, and fo others, as appears by the general lift of admirals; by which it is plain, provifion was no lefs punctually made by the kings and parliament of England for the defence of the fea, than for the fupport of the government by land; and of what nature the commiffions granted to thofe admirals were, may be feen by the form thereof, yet extant, of which we have tranfcribed as much as is necelfary to exprefs the extent of their jurifdiction in thofe days.
- We give and grant to N - the office of our great ad-- miral of England, Ireland, and Wales, and of the domi' nions and iflands belonging to the fame; alfo of our town - of Calais, and our marches thereof, Normandy, Gaf" coigne, and Aquitair: and we made, appointed, and or-- dained, and by thefe prefents we make, appoint, and or' dain, him the faid N- our admiral of England, Ireland, ' and Wales, and our dominions and ifles of the fame, our ' town of Calais, and our marches thereof, Normandy, - Gafcoigne, and Aquitain: as alfo general governor over 6 all our fleets and feas of our faid kingdoms of England and - Ireland, our dominions and iflands belonging to the fame. - And know ye further, that of our fpecial grace, and - upon certain knowlege, \&c. we give and grant unto the ' faid N——, ourgieat admiral of England, and governor-- general over our fleets and feas aforefaid, all manner of - jurifdictions, authorities, liberties, officés, fees, profits, - duties, emoluments, wrecks of the fea, regards, advan'tages, commodities, preheminences, and privileges what-- foever, \&c.

King Edward VI, in the third year of his reign, granted a commiffion to John earl of Warwick, his admiral, wherein he calls him 'Our admiral of England, Ireland, Wales, Ca' lais, and Boulogne, and marches of the fame, and of Nor-- mandy, Gaicoigne, and Aquitain, as alfo governor-general ' of all our fleets and feas.
From thefe forms of the commiffions of our Englifh admirals, for feveral ages paft, we fhall only infer, that the coafts of the tranfmarine provinces mentioned in the faid commiffions, are only inferted to denote the extent and limits of the fea that is thereby committed to their charge and protection; for either the names of the provinces of France inferted in thefe commiffions muft fignify fomething or nothing: it is ridiculous to fuppofe they fignify nothing; and if they denote any thing, it muft be the bounds of our admiral's jurifdiction, for the following reafons.

1. It cannot be imagined the names of thefe provinces are there inferted in confequence of our king's pretenfions to the crown of France, for then they would have given their admirals the title of admirals of England, France, \&c. befides, the Englifh were driven out of France, except Calais, and the Englifh pale in Picardy, before the names of any of thefe provinces, Aquitain only excepted, were mentioned in the commiffions of the admirals of England. By which it appears, II. That the kings of England only added the names of thofe provinces in their admirals commiffions, for the
better diftinction of their boundaries: for while they por feffed the maritime provinces of France, there was ceffity of mentioning them in their commiffions, becaufe the dominion of thofe feas belonged to them as kings of England, and not as dukes of Normandy, Aquitain, \&c. but having been difpoffeffed of thefe, by adding them afterwards as bounds of the jurifdiction of their admirals, they intended to prevent all differences about the extent of their ancient dominion, as kings of England over the fea.
It appears by the infrument before mentioned, prefented to the commiffioners appointed by Edward I. and Philip the Fair of France, to determine certain maritime differences, that, by the confent of all the trading nations in Europe, the kings of England had then been in peaceable poffeffion of the dominion of the fea by immemorial prefcription; that the fovereignty of the fea belongs to them, not becaufe they were Domini utriufque ripx, when they had both England and Normandy, and were lords, of both fhores : for Edward I, at that time, had not Normandy, but that it is infeparably appendantr to the kingdom of England., Our kings being fuperior lords of the laid feas, by reafon, as the very record mentions, of the faid kingdom; and fince the fovereignty of the fea did always belong to the king of England, not in any other right than that of the kingdom, no prince or ftate ought, or can doubt, the title by which our prefent claim is deduced. It is objected, That admirals were eftablifhed many centuries ago in France, as well as in England. But this does nor prove that they had the fame power as the Englifh admirals had; on the contrary, it is very evident that thofe officers were at firft only occafional commanders of naval forces, on certain expeditions; and fo far were they from pretending to any real jurifdiction in the fea itfelf, as belonging to the crown of France, that they were, in ancient times, for the moft part foreigners and mercenaries, hired for fome prefent fervice, for which we fhall give a very unfufpected teflimony, viz. that of Joannes Tillius, a clerk of the parliament of Paris, who in his fecond book de Rebus Gallicis fays, - The kingdom of France having been leffened by (inteftine divifions, and its kings reduced to narrow do-- minions by their potent vaffals, (fuch as the kings of Eng-- land, who poffeffed Normandy, Aquitain, and other coun' tries, the dukes of Bretagne, the earls of Elanders, Pro-- vence, and Languedoc) and having for a long time no ' command in the fea, had confequently no occation for ad' mirals, 'till they undertook the expedition for the Holy - Land, in which they made ufe of mercenaries, whom they ' hired of the Genoefe, Spaniards, and other maritime ' nations expert in the art of navigation, with whom ' they agreed for the tranfportation of their forces,' $\& \mathrm{c}$. Which appears to be very true, by the lift of French admirals, where Engerenæus Concæus is the firt that is faid to have enjoyed that dignity, which was conferred upon him, according to Joarnes Feronius, by Philip the Bold, king of France, about the year 1280. And Joannes Tillius makes the inftitution of that office of a later date; for, according to him, 'Amaurius, vifcount of Narbonne, was firft made - admiral of France, about the year 1300: nor do the ' edicts and decrees of Charles V. and VI, Lewis XII, - Francis I, Henry II. and III, and other French kings, 'concerning marine affairs, and the admiralty, feem to - relate to any thing but to the goods and perions of the fub-- jects of the crown of France, and of the enemies taken in - time of war by them: for though the admirals of France ' be therein ftiled our lieutenant-general, throughout the - fea, and the fhores thereof, yet that lieutenant-general, ' as they call him, never had any command over any part ' of the fea flowing between Britain and France, as a pro-- vince, or dominion, belonging to his mafter the king of - France, but only over the fhips and naval forces of the - faid king paffing through the Britifh Seas, much in the fame ' manner that any fovereign prince commands and governs - the perfons belonging to his own retinue, though in a 6 foreign country, but witbout pretending to have any ' jurifdiction out of his own family, in that territory.'
As to the French kings having at the beginning, been in poffeffion of Normandy, Picardy, and Flanders; (though it muft be obferved, that their kingdom was for a long time difpoffeffed of them), the pofferfion of the fhore, as we have already remarked out of Grotius, gives no title to the dominion of the fea flowing before it. And Julius Pacius de Domin. Maris Adriatici, writes, That the right to the fea arifes not from the poffeffion of the thores, for the fea and land make diftinct territories. It is no more neceflary that every fea-town fhould command 100 miles at fea, than that each city fhould command 100 miles by land.
By the laws of England, the land is called the Realm, but the fea the Dominion; and as the lofs of one province does not infer that the prince muft refign up the reft; fo the lofs of the land territory does not, by concomitancy, argue the lofs of the adjacent feas.
It appears further, that the office of admiral was at firft occafional in France; for that, though all the great officers of the crown, as the conftable, mafter of the horfe, great mafter of the houfhold, and others, have each their

## S E A

SEA
particular fation in the parliament of Paris : yet it was politively denied, in the time of Henry II, to Gafpar de Coligni, admiral of France; and Henry of Montmerancy feemed to be convinced of the French admirals narrow juriddiction, when, in the year 1612, caufing a ftatue to be erected at Chantilly, in honour of his father the duke of Montmerancy, be ftiles himfelf only, in the infcription, Navalis militize magiter, or bimelf only, in mitia hy fer he ance. The general of the militia by rea, he being admiral of rance. The polfeflion of the iflands of Guernfey, Jerfey, and fome other illes on the coafts of Normandy by the kings of England, is made ufe of as an argument to prove the extent of their dominion over the Channel, and that thofe iflands do not belong to them as an appendant or remainder of the duchy of Norcondy; but it appears, by feveral treaties between the kings of England and other princes, that thofe ifles are fpoken of as belonging to the crown of England: and in the grant made of them by Henry V. to his brother John duke of Bedford, that prince was to enjoy the fovereignty of them, without any recognition to be made to that king, or his heirs, notwithflanding any prerogative of the crown for any other tenure held of him out of the faid inlands, which may in any manner belong to the faid illands, caftle, or dominions. And befides it is certain, that Henry duke of Warwick was, by Henry VI, made king of thofe illands, and of the Ifle of Wight. Now it is not probable that prince would have erected them into a kingdom, if he had not poffeffed them by a title fuperior to that of an appendant of the duchy of Normandy.
Our kings have frequently forbidden hoftilities between foreigners at war with one another, within fuch diftances from the ports and harbours of thofe illands as to them feemed convenient: and we fhall fee, by a patent granted by Edward VI, to the inhabitants of Jerfey, that he gave them the privileges contained in it, from no other principle than as he was malter of the British Seas. This patent was confirmed by queen Elizabeth and king James I. By which 'all mer* chants, natives or ftranyers, and enemies as well as friends, - are allowed, in time, of war, freely, lawfully, and fe-- curely, to fail into and about, and frequent the faid ifland - and the coafts thereof, with their fhips and goods, as well - for fhelter againlt foul weather, as upon any other lawful coccafions, and there to ufe free traffic and commerce, and ' to abide with all fecurity and fafety, and to come thence ' and return thither at pleafure,' 8 cc .
This duminion of the inles on the cuaft of Normandy, and all the iflands within the extent of the Britifh Sea, is no inconfiderable proof of the fovereignty of the kings of England over them.
That they had always a right of impofing tributes for the protection given by them to foreigners within their feas, might be further evinced, from variety of other remarkable infances: we fhall only infert the following abftract of the records of parliament, as it may be feen in the original Norman, Rot. Parl. 2 Rich. II. articie $3^{8 .}$ in fchedula, of which the following articles are a iranflation.
The merchants of London having been confulted by the earl of Northumberland and the mayor of London, about the proper methods for the guard and defence of the Nort thern English Seas, it was refolved by the commons in parliament, That that fea fhould be guarded by two men of war, two barks, and two bilanders, armed for war, and exact of all fhips as follows:
(1.) Of all fhips and barks, of what burthen foever (except ©hips bringing goods from Flanders to London, or carrying wool or ikins from London to Calais, which were alio to pay for their convoy, if they required any) paffing through the faid fea, for the voyage going and returning, 6 d . per ton.
(2.) Of all filher boats filhing in that fea for herring, 6 d . a week per ton.
(3.) Of all fhips or boats fifhing there for other forts of fim, 6d. per ton every three weeks.
(4.) Of all Newcaftle colliers, 6 d . per ton every three months. (5.) Of all other fhips and veffels trading with Pruffia, Norway, or any other of thofe parts beyond fea, for the voyage going and returning, 6 d . per ton.
Nor have the kings of England been contented with exacting tribute, as an acknowlegement of their dominion in the Britifh Seas; they always obliged all foreigners paffing through their feas to pay them fuch other homages and tokens of fubmifion, as are fufficient to prove they acquiefced in the lawfulnefs of their title to that dominion. It was ever accounted even treafon for any fhip, of any nation what-* foever, to refufe to acknowlege the fovereignty of the kings of England, by ftriking their colours, lowering their top-fails, \&cc. or performing fuch other ceremonies as have been required by the admurals, or captains, of any of the king's navies, or fhips meeting with foreigners at fea; and fuch as refufed fo to do, forfeited ipfo facto, by that refufal, all the privileges and rights to which they mightotherwife be intitled as allics, and were punifhable by the king of England, or his admirals, in the fame manner as if they had committed a crime withon the jurifdiction of his territories by land.
Thefeceremonies, as we have fhewn in the preceding pages, have been for many ages exacted by the Englifh kings, with all imagimable rigour. By an article of the Offensive
and Defensive League, concluded betwcen the French and Dutch, anno 1635 , it was agreed, 'That if at any ' time the Dutch fleet (which, according to the league, was ' to fcour the French coaft in the Mediterranean from pi' rates) fhould meet with the Erench fleet, the Dutch ad-- miral fhould, at his firft apptoach to the French, Arike - his colours and lower his top-fail, and afterwards falute the - French admiral with guns; which falutation the French ad' miral was to return with guins only ${ }^{*}$.' - But even the duty of the flag there claimed By the FRENCH in the Mediterranean, is vaftly inferior to that duc to the English in their feas, the firft being only a bare token of refpect, the refufal of which could, at moft, amount to no more than a breach of the league; whereas the homage paid to the English being a real and fundamental prerogative of the crown, the contempt of it is, as has been faid, deemed to be open rebellion, and the contemners may lawfully be invaded in an hoftile manner, according to the ordersand inftructions that are given to the admirals and commanders of the English Navies and Ships.

* Leo ab Aitzmet Hift. Tract, Pacis Belg. pag. r77. edit. Lugd. Batav. 4. 10; 4.

Another point, in relation to the fovereignty of the kings of England to the dominion of their feas, is the practice very much ufed of old by them, to extend their embargoes all over the British Seas, and feize foreign hips paffing there, as well as if they had been within their own harbours, and employing them in their own fervice, as will appear by the following mandate, iffued out by king John to this purpofe.
The king to all Sturemaníi (fea captains and officers) and Marinelli (mariners or fea foldiers) and merchants of England ufing the fea, greeting: Know ye, that we ' have fent Alanus Juvo of Sorbam, Walter Staltun, Vin' cent of Haftings, and Wimund of Winchelfea, with ' others of our barons of the Cinque Ports, \&c. four faith-- ful Sturemanni and Marinelli of our gallies, to ' arreft and fafely bring into England all ihips that they can ' find, with all that flall be found in them: and therefore ' we command you to be aiding to them in this bufinefs, ' fo that ye be in England with your fhips and goods at fuch ' ports as they thall appoint : and if any fhall attempt to 'refift them, contrary to our command, ye our liege - men are required to affift them with all your power, as ' you tender yourfelves and your chattels, and your quiet ' and refidence, and that of all your kindred within our 'dominions.'
Much the fame order was given by Edward III, to Thomas de Wenlock, vice-admiral of his weftern fleet, to reize and arreft all hips for his immediate fervice. However, a competent hire was always allowed for thips fo impreft, according to their burthen, and the number of their hands.
That it was cuftomary for the kings of England to grant paffports, or fafe-conducts, to fuch foreigners as defired liberty to pafs through their feas, may alfo be fufficiently proved, out of the records of parliament, where will be found the conditional claufe of fuch paffpotts, 'That the - perfons who had obtained them fhould not convey, or ' caufe any thing to be conveyed, nor in any manner re-- lieve nor impart any thing to be conveyed, nor in any man' ner relieve nor impart any thing to the king's enemies in - France.' And in Edward the Firft's time it was always a péculiar injunction laid upon his fea commanders, That they fhould take fpecial care to vindicate and maintain the fovereignty which his predeceffiors, the kings of England, were wont to have in the SEA, concerning the explication and amendment of the laws, which had been by them inftituted for the government of all nations and people navigating in the Englifh Seas; than which nothing can more explicitly demonftrate that they poffeffed the dominion of them.
In a paffport granted by Henry IV. of England, to Farrando Urtis de Sarachione, a Spaniard, that king permits him to fall freely from the port of London through his kingdoms, dominions, and jurifdiCtions, to the town of Rochelle. And what can be meant by Dominions and Jurisdictions here, but thofe of the feas flowing between London and Rochelle? And the ambafladors of Charles VI. of France, and Robert III. of Scotland, in the paffports they obtained of the fame king Henry, are therein allowed free paflage through all the places, territories, and dorninions, under bis power, by fea as well as by land: whereas the paffports granted by feveral king; of France to the embafladors of the kings of England, only run thus:

- P-, by the grace of God, king of France, to all our ' governors and fubjects, greeting,' \&c.
The reafon of which muft certainly be this, that the king of England being himfelf lord of the fea, there was no neceffity that the kings of France Chould fecure them within cempry that the kinge of Frands of their own juridiction; which John king of Sweden feems very well to underftand, when in his letter to queen Elizabeth, in the year 1587, he defires leave for 9 H

Olaus

Olaus Wormæus, one of his fubjects, to pals through her Majefty's Sea Dominions, to carry fome merchandize into Spain.
The * Hamburghers and the Hanfe-Towns petitioned for The * Hamburghers and the Hance- Towns petitioned for
licence to -tranlport corn thither about the fame time, and were pofitively forbidden, being told plainly, That fuch as fhould prefume to go beyond a former licence, 'fhould - for that bold prefumption fuffer the lofs of all their goods ' and effects, in cafe they fell into the hands of any of her - Majefty's fhips of war, or others.'

* June 30, anno 1598.

Wetefeldius and Bernfcovius, ambafladors from Chriftian IV, king of Denmark, defiring the fame liberty of tranfporting corn to Spain, by order from their mafter, were anfwered, 'That her Majefty could by no means confent * to the king of Denmark's demands; neither would the ' grant fuch a liberty to her own fubjects, or any elle, 'til 'the war between her and the Spaniards was at an end.' If queen Elizabeth was not fovereign of the English Seas, why did fo many fates humbly requeft her for privileges which the had no right to grant or refufe? The frequent applications that have been made by foreign potentates for obtaining liberiy to fifh in the English Seas, and the conditions upon which that privilege has been granted, are other proofs of the lawfulnefs of the Englifh dominion in their feas.
Mention has already been made of the tribute impofed upon fifhermen in the English Seas, in the time of Richard II, and in the Irifh Seas in the reign of Edward IV, to which we thall now add fome notable inftances of the fame nature.
We find in the Rolls of Parliament, in the reign of king Edward I, a protection was granted by that prince for the men of Holland, \&c. to this purpofe:

- The king to his crufty and well-beloved John de Buteturtu,
- warden of the port of Jernemouth, greeting: being informed - that men of Holland, Zealand, and Friezland, who are now - in amity with us, defign to come and fifh in our fea, near
- Jernemouth, we require you to caufe public proclamation
- to be made once or twice a week, forbidding all manner s of perfons whatloever employed in our fervice, to prefume - to do, or caufe to be done, to thefe men, any injury or ' damage, 8 cc .'
The records are full of fuch protections in the reigns of that king's fucceffors, Edward II, Edward III, Richard II, Henry IV, Henry V, and Henry VI ; the laft of whom, as appears by Rot. Franciæ, 38 Henry VI. mem. 9 and I4. frequently gave licences, efpecially to the French, to fifh in his Seas, prefcribing a certain time, as well as the fize of the boats, they or others were to fifh in. So jealous have our princes always been of this prerogative, that Edward VI. appointed cuftodes, conductores, and waftores, guardians, conductors, and wafters, with a fpecial power to protect the Fishermen upon the coaft of Suffolk; for which protection 2 tribute was levied on the fifhers, according to their burthen. The words of their commiffion will thew us what their office was: they had power to ' raife and collect all cofts, charges, - and expences, to arreft and apprehend all perfons who fhould - pretend to protect, conduct, or wafte the fifhermen, and to commit them to the next gaol, there to be kept fecurely, - 'till the king thould be pleafed to give order for their de' livery.' And in the patents of that nature granted by Richard III. and Henry VII, thefe officers were impowered to exact this tribute, ' even though any one or more of the - faid fifhermen may have obtained letters of fafe-conduct - [fee the article of SAFE-Conduct] from any other king, 'prince, potentate, or governor whatfoever.'
Queen Mary I. being married to Pbilip II. of Spain, granted, for a fine and a yearly revenue of 1000 l . to be paid into the treafury of Ireland, a generallicence for the Netherlanders to fish on the Northern Parts of that Kingdom. Mr Camden in his Britannia, fpeaking of the Nortbern Sea, which wafhes the coaft of Yorkhire, fays, - The Hollanders and Zealanders firft obtaining leave ace cording to the ancient cuftom, of the governor of Scarbo6 rough caftle, made a very plentiful and advantageous Her' ring-Fishing : the Englifh referving only the honour c and privilege to themfelves, have, by a very condemnable - negligence, al ways refigned the Profit to Strangers.' This liberty of Fishing in the English Seas has been always requefted by Strangers, and particularly by the French, though they would gladly ufurp a thare of the Marine Sovereignty, if they had power to maintain it. Henry IV. of France, his admirals ufually afked of our Queen Elizabeth licences for the French Fishermen to fish in the Neighbouring Seas for Soles for that Prince's own Table.
The Englifh do not pretend that their kings were fovereigns of the Caledonian and Deucaledonian Seas, 'till the kingdom of Scotland was united to that of England, under James I. Though the ancient Scots enjoyed, without any competitors, the fovereignty of the greateft part of the feas with which their fhores are wafhed; yet they had, for many ages to-
gether, a continual controverly with their neighbours, the Danes and Norwegians, about the more northerly parts of the Caledonian Sea, to the poffeffion of which they all pretended ; and, in the main, the government of thofe feas did for the moft part accompany the fovereignty of the Orcades, and other iflands fituate near them; which, after many re volutions and changes of mafters, did at length devolve upe the kings and queens of Scotland, who peaceably pofieffed them a long time: for about the year 1468, Chriftiern, king of Denmark, furrendered the Orcades and Scotland to James III, king of Scotland, who had married his daughter Mar garet, and refigned the right to thofe ifles to him and his heirs for ever. By which furrender and refignation, the Scots kings became poffeffed of the fovereignty of the Northern Seas, in which they are fituate, as well as of the ifles. Nor have the Scots neglected, on feveral occafions, to affert their dominion of the adjacent feas. Mr Welwood, an eminent lawyer of that nation, in a treatife he wrote of the dominion of the adjacent feas, takes notice of a quarrel that had happened between the Dutch and the Scots, about the propriety of the fea, which, at laft, was compofed on the following conditions, "That the Dutch Fisher-Boats hould not - come within 80 miles of the fhore, and that, in cafe they - fhould be driven in thither by ftrefs of weather, they Mould - pay a certain tribute at the port of Aberdeen, where a - caftle was built and fortified chiefly on that occafion; and ' the Dutch, for fome time, did really and effectually pay ' that tribute,' \&c.
In a parliament held in the fixth year of the reign of Mary queen of Scotland, that dominion was again afferted, and all foreigners were exprefsly forbidden to FISH within the extent of the Scottish Szas, without licence. King James VI. of Scotland, and I. of England, had that act confirmed and enlarged: 'And all fifhers, or other perfons whatfoever, oc-- cupying the Scottish Sea, and fishing for herfings ' or white fifh, were enjoined to bring the fame to be fold - at Free Ports within the kingdom of Scotland, that his - Majefty and his fubjects might not be deprived of the ad' vantages and emoluments which God had appointed for ' them.'
Since the union of the crowns of England and. Scotland, the fovereignty of the Scottish Sea, and the other feas with it, which we have taken notice of in fpeaking of the extent of the British Seas, devolved upon the kings and queens of Great-Britain; and we fhall, in the fequel, obferve how they have been careful to affert and maintain it.
But we muft firft take notice, that the Englihh had great privileges and immunities in the Northern Seas granted them by the kings of Denmark and Norway, who had at firft excluded them from all commerce and traffic in fome parts of them. At laft it was agreed, by a treaty made in the year 1485, between Henry VII. and John If, kings of England and Norway, that the Englifh hould for ever enjoy the liberty of fifing, trading, and failing fafely and fecurely to Ireland, called in the treaty the inland of Tyle, and of buying, felling, and merchandizing in thofe feas, upon payment of the ordinary duties of the ports, provided that by petitioning for fuch liberty once in feven years, they acknowledged the fovereignty of the kings of Norway in thofe feas. Thus we find the dominion of the fea is not only capable of being poffeffed, but that other princes, befides the kings of England, have claimed and enjoyed it. - Frederic II, king of - Denmark and Norway, in a letter to queen Elizabeth, in ' the year ${ }^{5} 585$, fays, That if the Englifh abfained from ${ }^{6}$ doing any injury, they fhould enjoy their former liber' ties and privileges, without petitioning any more for li' cences.'
This privilege depended on the good will of the fovereign of thofe feas at firft, but having been long enjoyed, the Englifh pleaded a right of it by prefcription. It is certain, however, that they have a better title to the dominion of the Northern Sea towards the coafts of Greenland: for their Mufcovy company firft acquired a right to that fea by actual occupation, their Mariners being the difcoverers of it, and their Fishers improved the whale-fifhing.
An actual and primary poffeffion is much more fufficient than an intentional one, to veft the difcoverers with a title to the propriety of the thing fo difcovered: of which king James 1. feemed very fenfible, when in his letters of credence given to Sir Henry Wotton, his ambaffidor to the States-General of the United Provinces, he fays, "That the Fishings in the - Northern Seas, towards the coafts of Green land, were ' acquired by right for him, and his only.' Notwithflanding which, it is certain that the Hollanders have been too unfriendly, by incroaching upon the British Fisheries, not only on the Northern Ocean, but even on the coafts of Great-Britain.
We thall now obferve how the kings and queens of GreatBritain have afferted the dominion of the Britifh Seas, fince the union of the two crowns of England and Scotland.
When king James I. fucceeded to the kingdom of England, the nations of Europe were almof all in profound peace, except the Dutch and Spaniards; and the quiet of the Englifh Seas was in fome meafure difturbed by the frequent buali-

## S E A

ies that happened between the Spaniards and Dutch; upon which he publithed a proclamation, forbidding (as lord of thofe feas) any fort of injury or violence to be offered by either party, within certain limits which he appointed, as may be feen by the proclamation itfelf.

- Our pleafure is, that within our ports, havens, roads, creeks, - or other places of our dominion, or fo near to any of our faid ports and havens as may be reafonably conftrued to be - within that title, limit, or precinct, there fhall be no force, violence, or offence, fuffered to be done, either from men ' of war to men of war, or men of war to merchantmen, or ' merchantmen to merchantmen, of either party, \&c. And though that proclamation did only prohibit the committing of hoftilities within or near certain creeks, bdys, ports, and harbours, (which were called the king's chambers, fome of which took in 30 leagues of the fea) no inference can be brought thence to deftroy that prince's title to the fovereignty of the more diftant parts of the English Sea; for he allows the two nations at war between themfelves (but both at peace with him) to invade, attack, and make prize of one another in the open fea: nor did the SPANIARDS make any cruple to claim the king of England's protection againft their enemies the DUTCH, and all others whatfoever, not only within the feas abovementioned, but all over the English EAS, which they looked upon to be as much a part of his dominion as the land, as appears by the difcourfe of their advocate here, who pleads it in exprefs terms; adding, ' That towards the north and weft the kings of Great-Britain's SEA $^{2}$
- Dominions were of a vaft extent; for that the northern
- coaft of Britain having no oppofite fhore, their fea jurif-
- diction that way had no limits; and the fouth of Ire-- land lying oppofite to Spain, and the weft to the Indian - countries belonging to that crown, were confequently ' bounded by then.'s So far did this Spanifh lawiyer make the dominion of our kings extend. Whether he has extended it too far or not, we fhall not undertake to determine, bu make no difficulty to affirm, that the Hollanders have, of all nations, been too free with the Englifh on this occafion, and encioached too much on our Marine Sovereignty. This is faid without any defign to revive old mifunderftandings, or to put any Briton out of humour with our ancient and natural allies, who have appeared fo refolutely in the caufe of liberty, and are now, we hope, in a ftrict alliance with Great-Britain *.
* However incompatible the interefts of Great-Britain and the United Provinces may agpear in the eyes of fome, in relation to their commercial concerns, we cannot but think it polfible to promote and cement a union in this great and effential point, which, if it could be happily effected, would tend more fubftantially to the reciprocal lafting intereft of both fowers, than treaties and alliances founded on any other principles only: for this commercial concert and good underfanding would enable us, by means of our joint maritime Arength, both mercantile and otherwife, not only to preferve hat hare of trade and naval power we both at prefent porers, but toincreate them at the expence of our common ene nies, and oo keep them in fubjection, that they may never have in their power to injure either ftate. Let it be fuppofed or inftance, that fuch a frict and interetting connection fubfifted at prefent between thefe two powers, would no that effectually prevent thofe meafures that the French feem obe now taking to injure our trade in the Eaf-Indies, and elfewhere? And if the French carry the point at which they aim in Afra, againt Great-Britain, and fettle the French empire there, according to the fyftem that it is faid Dupleix has formed, may not the Dutch likewife foon feel the of etts of the French power in that part of the woild? If the Englif thould be extirpated from the trade of the Ein dies, and the French power from the trade of the Eaft-1nthe like proporrion as hat of Eugland Ohall decline, what hin he ince proportion as that of England hail decline, what hin here alfo? hewe have the $A$ ane power that England and prance now have in the Eal-Indies, is onked alone, it would be fcarce poffible for the Dutch to fupport hemfelves in their polielions and commerce in that part o the world. On the other hand, if the Englifh and the Dutch fhould heartily unite in preferving and increafiog that empire and commerce which they now have in thefe Indies would be impolible for France there to withitand their united force; and would not this enable Great Britain and Holland to give law to all other European powers who hould attempt any trade in this part of the world? The hike confequence would foilow in regard to the commerc of thele two potentates in Europe, provided their intereft in commerce and navigation could become one, and happi $y$ coincide, for the mutual prefervation and glory of both tates. Would fome of the wifeft and ableft men of both thefe Protellant maritime empires, think ferioully of a matter of this high confequencf to them, we fhould foon experience he weignt and inluence of to happy a commercial concert it would prove, in its confequences, a far more effectual prefervative of the ballance of power than any other expe deat, not only in Chriftendom, but throughout the whole globe, becaule Great-Britain and Holland, in concert with other of their Proteftat allies, would then be able to give law, whencver occafion thould require. And this defirable union between thefe manitime powers, in regard to their erading intercf, may not appear impracticable, if ever it
hould be thought of in earneft by the joint wifdom of both nations. See the articles United Provinces, Holland, Flanders, and Netherlands

Notwithftanding king James exercifed great forbearance to wards the Dutch and others, yet there was no point of which he was more jealous than of the fovereignty of the fea, which may be feen by the following proclamation, which he iffued in the year 160 g .

- Whereas we have been contented, fince our coming to the crown, to tolerate an indifferent and promifcuous kind of liberty to all our friends whatfoever, to fik within ou
Atreams, and upon any of our coafts of Great-Britain, Ire land, and other adjacent iflands, fo far forth as the permiffion or ufe thereof might not redound to the impeach ment of our prerogative royal, nor to the hurt and damage ' of our loving fubjects, \&c. finding our continuance herein hath not only given occation of over-great encroachments s upon our regalities, or rather queftioning of our right, but hath been a means of daily wrongs to our own people that - exercife the trade of fifhing, \&c. which is a matter of grea confequence to our eftate, confidering how much the
ftrength the teof confifteth in the power of hipping, and
' ufe of navigation; We bave thought it now both juft and neceifary (in refpect that we are now, by God's tavour,
lineally and lawfully poffeffed, as well of the ifles adjacent)
to bethink ourfelves of good and lawful means to prevent
- thofe inconveniencies, and many others depending upon
the fame: in confideration whereof, \&cc. we have refolved
firf to give notice to all the world, that our exprefs plea fure is, that, from the beginning of the month of Auguft next coming, no perion, of what nation or quality foever, ' being not our natural-born fubject, be permitted to fifh upon any of our coafts and feas of Great Britain, Ircland, and the reft of the ifles adjacent, \&c. until they have orderly
- demanded and obtaihed licences from us, \&cc. upon pain of
fuch chaftifemett as ihall be thought fit to be inflicted upon wifful offenders.'
The Dutch got too much by their fifhings on our coaft, to be frightened with a proclamation: and this pacific king had no great inclination to any harfher methods than what words would effect. The Hollanders knowing his temper, pre fumed upon it fo far, as to plead immemorial poffefion. Upon which king James commanded his ambaffador at the Hague o give the States-General to underftand, that he expected other fatisfaction with reference to the fifhings. And indeed the Dutch dealt with him fo unfairly in that matter, that a prince of more martial temper would have been provoked to a rupture; but negociations were king James's beloved way of concluding affairs, and a long one commenced about this in which we fhall fee what was urged by the Englifh on this fubject.
We fhall begin, therefore, with an abftract of a letter written by the fecretary of ftate in England, to the Englim ambaffador at the Hague, dated December 21, 1618, viz.
' As to their [the Dutch] claiming an immemorial poffeffion,
' founded by the law of nations, his Majefty will bave them ' told, That the kings of Spain have fought leave to fifh ' there (in the Britifh Seas) by treaty from this crown, and s that the king of France (a nearer neighbour to our coaft ' than they) to this day requefts leave for a few veffels to fifh ' for provifion for his own houfhold, and that it appears fo - much the more ftrange to his Majerty, that they, being 2 - fare of fo late date, fhould be the firft that would prefume to ‘ queftion his Majefty's ancient right, fo many hundred years inviolably poffeffed by his progenitors, and acknowleged by ' all other ancient ftates and princes. That themfelves, in 6 their public letters of the laft of June, feemed then to con-- firm their immemorial poffeffion (as they term it) with di' vers treaties, as by that of the year 1550; and another be-- tween his Majefty's predeceffor and Charles $V$, as prince of 'thofe provinces, and not by the law of nations. To which - their laft plea, his Majefty would have them told, That he ; Being an illander prince, is not ignorant of the laws and rights of his own kingdom, nor doth expect to be taught - the laws of nations by them nor their Grotius: for his Ma-- jefty taking this for a high point of his fovereignty, will not s have it flaghed in any faftion whatfoever, \&c. Let them ' advife to feck leave from his Majefty, and to acknowlege ' him bis right,' as other princes have done, and do; or it - may well come to pafs that they that will needs bear all the world before them with their Mare Liberum, may foon - come to have neither Terram and Solum, nor Rempublicam Liberam.' To which litter the ambaffador returning an anfwer, among other things fays, 'I told the prince of - Orange, That howfoever his Majefty, both in honour of ' his crown and perfon, a.d intercit of ki: kingd.m, neither - could nor would any longer defift from having his right ac-- knowleged by this ftate, as well as by all other princes and commonweals; $\epsilon$ p. cially finding the fame openly oppugned (both by the ir States men of war, and the writings of Greties and the taking of John Brown the laft year, may teftif, ' yet this acknowlegement of a right and due was no exclu: - fion of gr..ce and faveur, and that the people of this count'y

5 paying that fmall tribute upon every one of their buftes - Which is not fo much as difputed by any other nation - whatfoever) fuch was his Majefty's well-wifhing to this - ftate, that I prefumed of his permiffion to fuffer them to c continue their course of filhing, which they might ufe 6 thereby with more freedom, and lefs apprehenfion of mo-- leftation and lett than before, and thereby fare the coft of c fome of their men of war, which they yearly fend out, to - maintain that by force which they might have of courtefy.

- The prince anfwered, He would do his beft endeavour to 6 procure his Majetty contentment, but he doubted the Hol-- landers would apprehend the fame effect in their payment - for fifhing, as they found in the palfage of the Sound, where 6 at firft an ealy matter was demanded by the king of Den-- mark, but now more exacted than they can poffibly bear. - And touching their men of war he faid, They muft ftil
- be at the fame charge with them, becaule of the pirates.
- He afked me whether this freedom of fifhing might not be c redeemed with a fum of money. To which 1 anfwered, - It was a matter of royalty, more than of utility, though "princes were not to neglect their profit.' The fame ambaffador wrote home afterwards, That the States had acknowleged their commiffioners in England had gone beyond their inftructions in ufing of the term of immemorial poffeffign. But this difpute dropped, and nothing came of it in king James's reign, except a verbal acknowlegement of his domixion in the Britifh Seas; with which this king fatisfied himfelf; and bis eafinefs encouraged our neighbours to contemn the authority of his fon Charles $I$. in the beginning of whofe reign they committed innumerable abufes, which provoked his Majeity to equip a fleet, and publifh a proclamation, declaring the reafon of his making that armament, A. D. 1636 . Wherein having thewn what outrage had been done to his father's and his own prerogative, by feveral people fifhing in their feas without licence, he fays:
6 We being very fenfible of the premifes, and well knowing - how far we are obliged in honour to maintain the rights of c our crown, efpecially of fo great confequence, have thought it neceffary, by the advice of our privy-council, to renew the aforefaid reftraint of filhing upon our aforefaid coafts - and feas, without licence firft obtained from us; and by 6 thefe prefents to make public declaration, that our refolu6 tion is (at times convenient) to keep fuch a competent - ftrength of fhipping upon our feas, as may (by God's blef-- fing) be fufficient both to hinder fuch further encroachments upon our regalities, and affift and protect thofe our - good friends and allies who hall henceforth, by virtue of our licence (to be firft obtained) endeavour to take the be ' nefit of fifhing upon our coafts and feas in the places ac - cuftomed.'

The Dutch expreffing their apprehenfions of thefe naval preparations to Sir William Bofwell, then refident at the Hague, he acquainted the minifters in England with it, and Sir John Cook, then fecretary of ftate, fent a letter, wherein, after be had fet forth the feveral encroachments made by the Hcllanders on the fifhings in the Britifh Seas, and other marine offences, he writes thus: 'Confidering that peace and war muft be maintained by the arm of power, which only 4 keeps down war by keeping up dominion, his Majefty thus provoked, finds it neceffary, even for his own defence and fafety, to reaflume and keep his ancient and undoubted c right in the dominion of thefe feas, and to fuffer no other * prince or ftate to encroach upon him, thereby affuming to themfelves, or their admirals, any fovereign command, 6 but to force them to perform due homage to his admirals c and Chips, and to pay them acknowlegements as in former ' time they did. He will alfo fet open and protect the free trade of his fubjects and allies, and give them fuch fafec conduct and convoy as they fhall reafonably require : he * will fuffer no other fleet, or men of war, to keep any guard "upon thefe feas, \&c.," In the fame letter the fecretary fays, c We hold it a principle not to be denied, that the king of - Great-Britain is a monarch at land and fea, and that it concerns him as much to maintain his fovereignty in all the Britifh Seas, as within his three kingdoms, becaufe without that thefe cannot be kept fafe, nor he preferve his ho' nour and due refpect with other nations.
This fleer, however, did not finifh the work it was defigned for; and king Charles being afterwards involved in a war with his parliament, it was not likely he fhould then much mind his dominion at fea, But when the Rump had the government, they, out of jealoufy of the neighbouring commonwealth, fitted out a fleet, to maintain the right of fo vereignty of the new pretended fovereigns to the Britifh Seas. This fleet was fcarce arrived in the Downs, when the Dutch, trinking to furprize it, fell upon it, and hoped to deftroy the naval ftrength of the Englifh at once; but Blake, who commanded the Englifh fleet, making his party good with them, though they had two thips to his one; and Oliver, after they had been well beaten in feveral naval fights, obliging them to beg a peace of him, the duty of the flag was heartily agreed to, and the fovereignty of the Englifh Seas very plainly acknowleged by the Dutch, in the 15 th and 16 th articles of the treaty concluded between the two nations, November 15 ,
1653. The fubftance of which two arlicles is as follows AR TICLEXV
6 That the fhips and veffels of the faid United Provinces, a well men of war as others, be they in fingle fhips or in - fleets, meeting at fea with any of the fhips of the fate of England, or in their fervice, and wearing the flag, fhall 6 ftrike the flag, and lower their top-fail, until they be palfed 6y, and fhall likewile fubmit themfelves to be vifited, 6 thereto required, and perform all other refpects due to the ' commonwealth of England, to whom the dominion and 'fovereignty of the Britifh Seas belong.'
Leo ab Aitzma, fol. 847, fays, The States would have this addition inferted, after paffed by, 'In fuch manner as the ' fame has been formerly obferved in any times whatfoever.' This article was from hence tranfcribed into the tenth articie at Whitehall *, and afterwards into the rgth article at Breda ; from thence into the 6th article made at Weftminfter after + ; and that claufe of fearching each other's fhips made tecip; cal ; by the 5 th article of the marine treaty at London. By the Britifh Seas in this article are meant the four feas, and not the Channel

## ARTICLE XVI.

(All Dutch fhips are allowed to pals and repafs in the Britifh - Seas, either men of war or others, without any wrong or c injury, not exceeding fuch a number as fhall be agreed up-- on, \&c. buit, in cale the faid States-General thall bave oc-- cafion to pafs through the faid feas with a greater number 6 of men of war, they Thall give three months notice of their c intention to the commonwealth, and obtain their confent ' for the 'paffing of fuch a fleet.'
Whatever infringements were made of thefe articles, we queftion whether king Charles II. would ever have broken the peace on that account. There is nothing more certain, than that the firft Dutch war in this reign was owing to French councils: however, the effects anfwer our defign and prove that the Dutch, who have moft openly oppugned the title of the Englifh to the fovereignty of their feas, have molt folemnly acknowleged it, as may be feen by the rigth article of the treaty of peace concluded between that king and the States-General, July 29, 1667, to this purpofe: 'That c the fhips and veffels of the faid United Provinces, as well 6 men of war as others, meeting any of the faid king of c Great-Britain's men of war in the British Seas, thall - ftrike the flag, and lower the top-fail, in fuch manner as ' the fame hath been formerly obferved in any times what 'foever.'
When the Dutch applied to queen Elizabeth for fuccours, one argument for her affeffing them, made ufe of by their agent, was, that the fituation of their provinces would be a great fecurity for the prefervation of her empire in the ocean; as may be feen in Stowe. And how that wife ftate came to forget themfelves fo far afterwards, as to put the realm of England to the charge of two or three wars to bring them to reafon, we cannot comprehend: for the bomage the Englifh require at fea is a trifle, in comparifon of the advantages they reap by their alliance, and the fecuity of their protection. It is probable the imperious methods ufed by the Englifh in demanding the flag of the Dutch, might exafperate ihat fate, and that the court of England were excited by the French, who under Richlieu began firft to apply themfelves vigoroully to the increafing their traffic and frength at fea: but Richlieu left that undertaking to the famous Colbert, who had the glory to finifh it, and to fee the French fleets in a condition to contend with the moft powerful maritime ftates. He formed companies for trading to Africa, the Eaft and Weft-Indies, and founded a polity for the government of the marine. But knowing all the French naval ftrength would fignify little, while the Englifh and Dutch continued theirs, he may reafonably be fuppofed to advife his mafter to fet them one againit the other, in order to deftroy them both; and how far be proceeded in that fatal defign, the hiltories of the reign of king Charles II, will make appear.
England then connived at the growing greatnefs of France at fea, than which nothing could more endanger her maritime Covereignty. She not only fuffered, but affifted the French to build a fleet; and had not the parliament, though almort too late, put a timely end to the mifunderftanding which the French did very induftrioufly foment between Great-Britain and Holland, with a defign to ruin the naval power of both, Lewis XIV. would not have found it fo difficult a takk to acquire the dominion of all the European feas, as he did to defend his own coafts and harbours againtt the vidorious fleets of the queen of Great-Britain, and the States-General of the United Provinces.
The great efforts the French court made to encourage and improve navigation, were feconded by the labours of ingenious perfons, appointed by the miniftry * to write tracts, in

* Monfieur Savary's French Dictionary of Commerce was
undertaken in France from this motive; and we find that

## S E A

there engaged in that work, written mary years fince, not only two brethers of dillinguihed abilities, who spent a confiderable part of their lives therein, bur that merchants of the firf clats, the public affices of the kingdon, the council of commerce vtielf, petopages of variops rạnks eminent for their knowlege in trade, and even the firt minifters of fate, unanimoufly concarred to encourage the compofition and publication of that performance, for the benefit of their country: and doubtleif they judged wifely hat nothing could more effectually raife an emulous fpiri both among themfelves, and in oppofition to foreigners the whole nation experiencing the greatef men in $i$ devot to the general improvement of trade, and earneftly aboaring by their example; to render the knowlege and ractice ractice ified their penetration and forefight. The prefent
 athor of this of hispy as of his labors in public ferfice; mecer mer any patronage from any man whatroever, nor any fort of pubc or pivate enco beme bacen the contrany, he has met with a feries of mal-treatment and difouragement, fo his zealons and public-fipited endeavours to ferve his country.
order to raile the fpirit of commerce in the kingdom, and to xcite people of all qualities to be more or lefs concerned in the trading companies that were then forming; wherein the king, and moft of the princes of the blood, and the lords of the court, had very confiderable fhares, that, by their examples, others might be induced to venture in the fame bottoms. And to one of thefe authors we are obliged for an acknowlegement of the Englith dominion in the feas lying between us and France, which we fuppofe fell from him accidentally. This paffage is to be found in a treatife intitled Le Parfait Negotiant, written by the Sieur Savary, and firf publifhed atParis in the year 1675, with the order and approbation of Monsieur Colbert, prime minifter for the marine, to whom it was dedicated.
This author, pages II8 and ing, fpeaking of the difcovery of the Canary Mands, days, 'That the duke of Burgundy 4 joining with the king of England, an enemy of trance, made a defcent into Normandy, with 1000 dhips, fo that - the war being broke out, and the Englifh poffeffing the 'fea and our ports, the admiral could not get,' \&ec. Now if the Englifh poffefled the fea in fuch a manner, that the admiral of France himfelf durft not equip a few tranfport-fhips, to fend men and provifions to the Canaries, to the difcovery and right of which the French pretend, none can imagine the French at that time prefumed to cope with us at fea; and if fuch a poffeffion as that attributed by the French them felves, was not an authentic proof of dominton, we cannot tell what is
It is true, the French may ánfwer to this, When we lon their ports, we loft the dominion of the fea; but it has been Thewn, that the Britim naval fovereignty was not founded upon fo precarious a poffeffion, but is as old as hiftory, and as undeniable as any thing can be, which is proved by the acknowlegement of all nations and ages. We have looked into the hiftories of moft of our kings, from the Norman in vafion, to king Charles the IId's reign, and have found they all afferted and maintained rheir dominion of the fea.
King James II. was bulied about other things, and what navy he had was intended rather to fecure his arbitrary govern ment by land, than to defend his fovereignty at fea. King William, his fucceflor, gloriouly afferted and maintained it, in conjunetion with the Dutch, by giving laws to all na tions, in all the feas in the world where a royal fleet ever ap peared. And queen Anne did with the fame vigour and fuc cefs uphold that dominion at fea which king William left her the French managing their fea aftairs hike pirates, and pre tending to no dominion but what they got by furprize, a corfairs do over hips they can malter.
In the late queen Anne's reign we have an inftance of he afferting her fovereignty at fea; for admiral.Whetfone, in July-1706, meeting with a feet of Swedich merchantmen tunder convoy of a Swedifh man of war, her Majefty's ihip the Worcefter fired a gun, as a fignal to command the Swede to Itrike; but the Swedih captain fent his lieutenan aboard, to acquaint the Englifh commander that he had pofitive orders not to ftrike to any flag whatfoever, even in the Channel itfelf. The captain of the Worcefter receiving that meflage, inftead of the ordinary marks of homage to be expected from all foreigners in the Englifh Seas, fired a ball, which being anfwered with a broad-fide by the Swede, the Worcelter, and another Englith man of war, engaged the Swedifh man of war, killed and wounded about 150 of her men, with fome lofs on their fide, and brought her and all the merchant Thips into the river; nor were they difcharged 'till Gatisfaction was given the queen for the affront put upon her admiral in her own feas. Some inftances of the fame nature, though not fo folemn, happened in king William's reign, and will, we hope, be fufficient to induce other nations not to invade the right which the kings and queens of Great-Bri-

VOL. II.

tain ate as lawfully pofferfed of, to the fovereignty of the Bri cilh-Seas, as to the dominion of the Britifh empire at land.

## R E MARK 8 .

It is an obfervation worthy the ferious attention of every Engliltman, That empire bas always followed trade, travel ing (as it were) from one part of the world to another, as commerce has fhifted its ftation; and, in all countries, ftill rowing or declining in power, in proportion as traffic has been encouraged or difregarded. And the commerce of ihis nation depends on our dominion at fea.
Cicero ad Attic. fays, Qui mare teneat, eum neceffe rerum potiri : which hews this to have been the opinion of a very great man, who had been at the head of affairs in a powerful tate, above feventeen hundred years ago: and the practice of all princes who have lived fince that time, and bave ever detigned either to extend their dominion, or to render themfelves confiderable to their neigbbours, fully proves the obrevation to be true
The Romans (who afpired to nothing lefs than univerfal empire) while their conqueds were confined within the narrow bounds of Italy, were fo much prejudiced with the notion of a landed intereft, that, as Livy relates, they thought it Ccandalous for a man of fathion to exercite any merchandize; and, in confequence of that prepofitifion, they were not in capacity to make any figure by fea, an element little practifed on by them, and lef's underftood. But this notion lafted only 'till they had an opportunity to look niore abroad into the world then experience taught them, as they came to quarrel with the Carthaginians (wbo at that time were the great trading people) that commerce was neceffary to eftablin their empire, and that not only their conquefts were at an end, but the poffeffion of the territories they had conquered was precarious, unlefs they could acquire and fecure o themfelves the dominion of the fea.
We have feen that it is not an empry title, which the kings of England have always taken to themfclves, of being fupreme lords and governors of the ocean furrounding the Britilh hore, but a right which shey have conitantly maintained, at the expence of numerous fleets. In that famous accord, made between our great king Edward I. and Philip the Fair of France, it appears, that the French king was by him called to an account for piracies, committed by his fubjects within he Britifh Seas: and by that memorable ordinance made at Haftings, in the reign of king John of England, the honour of the fag (ever claimed by the Englifh) is decreed to take place univerfally, not barely as a civility, butas a right to be paid (cum debita reverentia) with due deference.
This due maintenance of the fovercigrity of the Britilh Seas has animated the Englifh nation to endeavour likewife to maintain, in concert with other allies, a fuperiority of maritime power in general; whereby, from time to time, the ballance of power amongft the European States has been hitherto preferved, and fince the Revolution, the Proteftant intereft, atd the liberties of millions of peoples may be truly faid to owe their exiftence to the Maritime Prowess of thefe kingdoms in particular; for if this power had not been occafionally exerred, the united maritime power of all other fates and empires together, could not have prevented that univerfal empire of flavery, that has been fo fteadily purfued by neighbouring power. See our article Friance.
The nations recorded in hiffory to have been at any time porfefled of the empire of the fea, have always efteemed a neighbouring prince's offering to fet up a naval power, by building more thips of war than were reguifite to fecure the trade of his fubjects from piracies, \&c. to be as juft a foundation of political jealouly, as the raifing of new forts upon his fromtiers, or the levying of a formidable army in a time of profound peace: and, therefore, they have always taken meafures either to prevent fuch attempts, or to deftroy them in their birth. This was the practice of the Romans, and this has been the practice of his Majelly's royal predeceffors the kings of England.
The Romans, as foon as they had acquired the fovereignty of the fea (which they thought not dearly purchafed with the lofs of above 700 (hips) immediately entered upon meafures to preferve fo valuable an acquifition, They grew watchful over this new dominion, and were foon alarmed by the fmalleft umbrage from any power that did but feem to interfere with them in Naval Affairs. It was from thefe political confiderations that they would not permit the Car thaginians to fit out any fleets, and that they forbad AN Thochus (at that time the greateft king in the Eaft) тo build more than Twelve Ships of War. Upon the like principles his late Majefty king George acted, when the Spanifh fleet was deftroyed by Sir George Byng in the Medierranean. This fingle action rendered the king of Great-Britain, as that time, as much mafter of the Mediterranean, as he has been always acknowleged to be fovereign over the Britilh Seas. This many. years prevented the growth of the naval power of Spain : and did not England and Holland aet in concert, from the like motive, when they infifted 9 I
on the diffolution of the late Oftend Eaft-India company, in the Auftrian Netherlands? [fee Aust rifin Netherlands, and Ostend East-India Company]: for the chief reafon given by the maritime powers was, left A New NAval Power hoould arife in Europe, in conlequence of this commercial eftablifh ment.
There is no occafion for troubling my readers with a detail of examples to the prefent purpofe, fince nothing is more known in our Englifh hiftory, than that our kings bave ever been jealous of their neighbours making ufe of any pretext to increafe their naval ftrength, anid have accordingly judged it of the greateft importance to fruftrate fuch defigns, though at the rikk of war: for what lefs did our immortal queen Elizabeth rifk, when the fent to the French king, to prohibit his building any more fhips of war than what he then bad, without her leave firft obtained?' This was an inftance of wifdom'and refolution worthy a princefs who claimed the fovereignty of the fea.
Our maritime force is undoubtedly our chief bulwark againft foreign invafions, and what hath given us fo great a weight and influence over our neighbours. It is this only which raifed us from a little, defpifed, inhofpitable people, to a great, polite, and formidable ftate. To this we are obliged for our trade, our riches, the improvement of our land, the confumption of our manufactures, and the poffeffion of all our valuable colonies and plantations abroad, as well as the dominion and fovereignty of thofe feas which furround us at home.
It therefore behoves us, in the frongeft manner, not to fuffer the royal navy of England to be infuited, triffed with, or brought under contempt, by friend or foe, under any pretence, or upon any occafion whatfoever. National honour, once lof or impaired, is, like the honour of a private perfon, very hard to be retrieved. Thofe nations which have, for feveral ages, ftood in awe of us, will begin to act the part of bullies, if ever we give them the leaft reafon to fufpect we are afraid of them. Moft people are too apt, through vanity and felf-love, to conftrue the effects of lenity, forbearance, and a pacific difpofition, as the refult of pufillanimity, and a fudden dread of offending them; which may produce another bad confequence, by depreffing the firits of our failors, and erafing that laudable partiality for the native valour of their country, which inclines them to believe that no oppofition, nor inequality of numbers, is able to withftandit. I think it proper, in the firft place, to lay before the reader the inftructions, which (as I am informed) are given to all the captains and lieutenants of our men of war, to this effect.

## Inftructions to the captain.

-Upon your meeting with any fhip or fhips within his Majefty's leas (which, for your better guidance herein, you are to take notice extend to Cape Finifferre) belonging to any foreign prince or flate, you are to expect that in their paffage by you, they ifrike their top-fail, and take in their flag, in acknowlegement of his Majefty's fovèreignty in thofe feas; and if any fhall refufe to do it, or offer to refift; you are to ufe your utmoft endeavours to compel them thereunto, and in no wife to fuffer any difhonour to be done to his Majefty.

## Inftructions to the lieutenant

You are to take upon yourfelf the intire charge and conduct of his Majefty's faid fhip, and ftandaccountable for the well executing the whole duty of commander thereof, during the abfence, or in cafe of the death of your faid commander, with refpect as well to the printed general inftructions given to commanders (a copy whereof is hereunto annexed) as any other particular orders of his Majefty, \&c.
I fhall now give an inftance or two of the ftrictnefs with which thefe orders have been executed in former reigns, and begin no higher than that of king James the Firit, who, though perhaps the moit inactive monareh that ever fat upon the Britifh throne, protected one of the officers of his navy (who bad obliged a French thip to frike to him under very particular circumitances) ragainft the ftrongeft reprefentations of that court, and even'refufed to make them any fatisfaction himfelf, as appears from cardinal Richlieu's Teftament Politique, in that chaptor treating of the neceffity which France is under to be powerful at fea. The cardinal addrefles bmfelf to Lewis the XIIIth in the following terms, viz.
<-England being fituated as it is, if France was not flrong - in its fleets, might undertake whatever fhe thought proper ' to the prejudice of France, without apprehending any 'return to her difadvantage. : She might deftroy our fifheries, - difturb our commerce, and, by , blocking up our greateft - rivers, oblige our merchants to pay her what tribute the - Should think fit to impofe upon them. - She might unmo-- lefted make defcents on our illands, and even on our con-- tinent. - In a word, the fituation of the native country of ' that proud nation is fuch, [proud only, I fay, of prefery-
ing her own, as well as the liberties of thofe whom France -would enlave * ] that they have no' reafon to fear the great6 eft powers of the earth; and the ancient hatred t they bear *this Kingdotm, might probably make them undertake any © thing againft us, fhould there ever come a time that we © Chould be fo weak as not to have it in our power, to at of t fenfively àgainft them.

* See the article France.
$\dagger$ If England bears any hatred to France, fee the rearons why, under our article Plantationss, where we have fet forth the perfidy of the flatefmen of that- ration, for above a century paft.
- The infolence which the Englifh wereguilty of towards ' the duke de Sully, in the reign of the king ybur father ' ought to oblige us to put ourfelves in fuch'a pofture, as not cto fuffer fuch an affront another time.
That duke being appointed by Henry the Great, ambafa-- dor extraordinary to the court of England, Xnd baving cembarked at Calais, on board a French thip, carrying the ' flag of France upor her main topmaft-head, was no foener - got into the Channel, but being met by an Eothifh yachr, - that was fent to receive him, the captain of the yacht commanded the French fhip to Atrike.
- The dúke, thinking his quality of ambaffadon cufficient to - protect him from fuch an affront, manfully refufed toltrike; - but this refufal being anfwered by three cannon-lant from - the Englifh yacht, which pierced his fhip, and, at the - fame time; pierced the hearts of all good Frenchmen, ' force obliged him to do that which: reafon ought to have "defended him agaioft; and to alf the complaints he made, - he could receive no other fatisfaction nor anfwer from the - Englifi captain but this, That as his dury obliged him to - honour him as an ambaflador, it obliged him alfo to fee ' the honour done to his mafter's hag, that was'due to the - fovereign of the feas. - And though king James expreffed ' himfelf upon this affair' in' civil terms,' , is words had no ' other effect than to oblige the duke to find his ondy fatis' faction' in his owr prudence, by feigning himfelf to be ' cured, at the fame that he felt the greateft fmart, and what - his wound was not to be healed.
- The king your farher was obliged to difemble uphn this ' occafion; but with a refolution, upon fome other opportunity, to fupport the honour of his crown, by the naval - force which time houild make him mafter of.
- I reprefent to myfelf this great princé, upon that occafion, - laying the fcheme which your majefly ought now to putin ' execution.'
The war between the parliament of England and the frates of Holland, in the year 1652 (the fharpeft fea-war that was ever known between any two nations) was occafioned by this punctilio of the honour of the flag, which the Dutch admiral, Van Tromp, refufed to pay to our admiral, the miral, an 1 ro
In the reign of king Charles the Second, arother bloody fea war was commenced between England and Holland, on the fame account, with this very particular circumftance, that the captain of a fingle yacht, fent over to Holland to bring home Sir William Temple's lady, was ordered to demand this acknowlegement from the' whole Dutch flet. I confers the Englifh miniftry, at that time, did this in order to pick a quarrel with Hollant; ; but I mention it only to thew the obligation which officers of the navy are under to perform their duty; for whatever the intention of thefe orders might be, the captain was undoubtedly obliged to execute them, under pain of being difmiffed the fervice with infamy at leàf
The late king William, of immortal memory; had the fame regard for this right of the honour of the flag, and made it one of his reafons for dedlaring war againft the late French king, as appearis from the following article of the declaration itfelf; 'The right of the flag; inherent in the crown of ' England, hath been difputed by his, the king of France's 'orders; in violation of our fovercignty of the Narrow Seas, ' which in all ages hath been afferted by our predeceffors; ' and we are refolved to maintain the honour of our enown, 'and of the Englifh nation.'
We mall conclude thefe inftances with a pallage out of Sir John Borough's treatife upon this fubject.
- The fovereignty of our feas (fays he) Being the moft pre'cious jewel of his Majefty's crown, and next under God ' the principal means of our wealth and Cafety, all true Eng${ }^{4}$ lifh hearts and hands are bound, by all porfible means and (diligence, to prelerve and maintain the fame, even with the uttermoft hazard of their lives, their goods, and for' tunes:?
SEAMEN. Their importance to this kingdom is too well known to need animadverfion; the eflential point to be confidered is, how they may, be tendered more ufeful to the kingdom than they are, and be kept from going into foreign fervice; by preferring that of their own country.
It is obfervable, that whenever this kingdom is engaged in a war with any of its neighbours, two great inconveniencies conftantly follow, one to the kirg, and one to trade.
I. That

## S.E.A

1. That to the king is, That he is forced to prefs feamen for the manning of his navy, and force them involuntarily into the fervice: which way of violent dragging men into the fleet, is attended with fundry ill circumftances; as,
(i.) Our naval preparations are retarded, and our fleets always late, for want of men; which has expofed them not a little, and been the ruin of many a good and well-laid expedition.
(2.) Several irregularitics follow, as the officers taking money to difmirs able feamen, and filling up their complement with raw añd improper perfons*.

- This has been the cate ever fince the days of the great Sir Walter Raleigh, and it is certainly high time to redrefs a grievance fo injurious to the public.
As concerning the mufters and preffes, fays Sis Walter, for fufficient mariners to ferve in his Majefty's.flipa, either the care therein is very litide, or the bribery very great; fo that of all other fhipping, his Majelty's are ever the wort that of all ond at fuch times as the commifions come out for manned: and at \{uch cimes as officers do fet out the mof the prefing of mariners, the fors needy and unable men, and. For coniter fort a felves beft known do dincharge the better fort, a mater commony ured, that it is grown into a proverb amongt the failors, That the male mante do cary the bell a dole men in thetr Pockets; achitom very evil-and dangerous, where the ervice and ure ormen muld come in tial. For many of thele poor fifhermen and idlers, that are commonly preiented to his Majeity 's; thips, are fo ignorant in fea-fervice, as that they know not the name of a rope, and, therefore, infufficient for fuch labour. That which might cafily be redrefied, if the vice-admiral of the fhire where men are muftered, and two juftices, had directions given to join with the multer-matters, for the prefing of the beft men, whom they well know, and would not fuffer the fervice of their prince and country to be bought and fold, as a private multer-mafter would do. Befides; the captains themfelves of the fhips, if they be bare and needy (though pity it were that men of fuch condition fhould have fuch charge committed unto them) will oftentimes, for commodity, chop and change away their good men; and therefore it were ficly provided to bridle fach odd captains, that neither they themlelveq, nor any of their men, hould receive his Majelty's pay but by the pole, and according as they were fot down in the oficers books when they were delivered, without changing of any names, except to fupply fuch men wilhour ching by death or ficknefe, upon good teftimony asder the hand of the matter the boat wain the mafter under the hands of the purfer, and other officers of the thip: for it gunner, the purser, and other vell thereunto, having daily ule of them (a).
(a) See Raleigh's Works, by Dr Birch.
(3.) Oppreffions, quarrelings, and oftentimes murthers, by the raftuefs of prefs-mafters, and the obftinacy of come unwilling to go.
(4:) A fecret averfion to the fervice, from a natural principle, common to the Englifh nation, to hate compulfion.
(5.) Kidnapping people out of the kingdom, robbing houfes, and picking pockets, frequently practifed, under pretence of preffing for feamen.
With various abufes of the like nature, fome towards the king, others towards the fubject.
II. To trade; by the extravagant price fet on wages for feamon, which they impore on the merchant with a fort of authority, and he is obliged to give, by reafon of the fcarcity of men; and that not from a real want of men, for in the height of a prefs, if a merchantman wanted men, and could get a protection for them, he might have any number immediately, and none without it ; fo by are they of public fervice.
The firf of thefe things has cof the nation more millions of money, during the three laif wars, than I care to fay, in thefe three particulars.
(1.) Charge of prefing on fea and on fhore, and in fmall craft employed for that purpofe.
(2.) Ships lying in harbour for want of men, at a vaft charge of pay and victuals for thofe they had.
(3.) Keeping the whole navy in conftant pay and provifions all the winter, for fear of lofing the ment aganft fummer, was done for feveral years, befides bounty-money, and other expences, to court and oblige the feamen.
III. The fecond of thefe, viz. the great wages paid by the merchant, has coft trade alfo above 20 millions tterling. The coal-trade gave, in king William's time, a fpecimen of this, for the firft three years of the war, 9 I. a voyage was given to common feamen, wha before failed for 36 s . which, computing the number of dhips and men ufed in the coal-trade, and of voyages made, at fight hands to a veffel, toes, modeftly accounting, make $8,96,000$. difference in one year, in wages to feamen in the coal-trade only, at that time. In the fucceeding wars, the like has taken place, though not quite to fo great a degree.
For other voyages, the difference of failors wages has been 50 s . per month, and 55 s . per month, and upwards, to foremaft-men, who before went for 26 s . per month, befides fubjecting the merchant to the infolence of the feamen,
who are not to be pleafed with any provifions, will admit no half-pay, and command of the captains even what they pleafe; nay, the king himfelf can hardly pleafe them. For the cure of thefe inconveniencies, various propofals have been fubmitted to the public attention; the fubftance whereof we fhall lay before the reader with all brevity.

## The firft propofal is as follows, viz.

That by an act of parliament, an office, or court, be erected, within the juriddiction of the court of admiralty, and fubject to the lord high admiral, or otherwife independent, and fubject only to a parliamentary authority, as the commifion for taking and fating the public accounts.
In this court or office, or the feveral branches of it (which to that end fhall be fubdivided, and placed in every feaport in the kiagdom) Shall be lifted and entered into immediate pay, all the feamen in the kingdom, who flall be divided into colleges, or chambers, of fundry degrees, fuitable to their feveral capacities, with pay: in proportion to their qualities, as boys, youths, fervants, men able and raw, midhipmen, officers, pilots, old men, and penfioners:
The circumftantials of this office.
(i) No captain, or mafter of any fhip or veffel, fhould dare to hire, or carry to fea with him, any feamen but fuch as he fhall receive from the office aforefaid.
(2.) No man whatfoever, feaman of other, but applying himfelf to the faid office to be employed as a failor, fhould immediately enter into pay, and receive for every able feaman 24 s . per month, and juniors in proportion, to receive half pay while unemployed, and liberty to work for themfelves, only to beat the call of the office, and leave an account where to be-found.
(3.) No failor could defert, becaufe no employment would be to be had ellewhere in the kingdom.
(4.) All fhips; at their clearing at the cuftom-houfe, fhould receive a ticket to the office for men, where would be always choice, sather than fcarcity, who thould be delivered over by the office to the captain or mafter, without any trouble or delay; all liberty of choice to be allowed both to mafter and men, only fo as to give up all difputes to the officers appointed to decide.
$\omega_{0}$ By this would be avoided the great charge captains and owners are at, to keep men on board before they are ready to gos whereas now the care of 'getting men will be over, and all come on board in one day; for the captain carrying the ticket to the office, he may go and chure his men, if he will, otherwife they will be fent on board him', by tickets fent to their dwellings, to repair on board fuch a fhip.
(5.) For all thofe men that the captain or mafter of the thip takes, he fhall pay the office, not the feamen, 28 s . per month (which 4 s, per month overplus of wages, will be employed to pay the half-pay to the men out of employ) and to in proportion of wages for juniors.
(6.) All difputes concerning the miutinying of mariners, or other matters of debate between the captains and men; to be tried by, way of appeal, in a court for that purpofe to be erected, as aforefaid.
(7.) All difcounting of wages and time, all damages of goods, averages, ftopping of pay, and the like, to be adjuited goods, averages, ftopping of pay, and the inke, to be adjuited
by ftated and public rules, and Jaws in print, eftablifhed by the fame act of parliament; by which means all litigious fuits of this nature in the court of admiralty (which are infinite) would be prevented.
(8.) No thip that is permitted to enter at the cuftom-houfe, and take in goods, fhould ever be refufed men, or deldyed in the delivering them above five days after demand made, and a ticket from the cultom-houfe delivered, general cales, as arrefts and embargoes, excepted.

## The confequences of this method.

(1.) By this means the public would have no want of feamen, and'all the charges, and other inconveniencies of preffing men, would be prevented.
(2.) The intolerable opprefion upon trade, from the exorbitance of wages, and infolence of mariners, would be taken off. int bu.
(3:) The following fuchsof money flibuld be paid to the office to lie in bank, as ar publicifund for the fervice of the nation, to berdipofed of by order of parliament, and not otherwife; a committee being always fubfituted, in the intervals of the feffion, to audit the accounts, and a treafury for the money, to be compofed of members of the houle, and to be changed every leffion of parliament.
(1.) Four fhilings per month wages advanced by the merchants to the office for the men, more than the office pays them.
(2.) In confideration of the reducing mens wages, and, confequently, freights, the owners of hips, or merchants, Thall pay, at the importation of all goods, 40 s . per ton freight, to be ftated upon all goods and ports in proportion, reckoning it on wine-tonnage from the Canaries as the ftandard, and on feecial freights in proportion to the freight formerly paid; and half the faid price in times of peace.

Note, This may well be doné; and no burthen; for if freights are reduced, as they will be if wages are fo too, then the merchant may well pay it.
The payment of the abovefaid fums being a large bank, for a fund, and it being fuppofed to be infarr hands, and currently managed, the merchants Imall , further pay upon all goods fhipped out, and thipped on board from abroad, for and from any port of this kingdom, 41 per cent. on the real value, bona fide, to be fworn to, if demanded: in confideration whereof, the faid office hall be obliged to pay and make' good all loffes, damages, averages, and cafiualities whatfoever; as fully as by the cuftom of affurances now is done, without any difoounts, rebates, or delays whatfoever; the faid 41. per cent. to beffated on the voyages to Barbadoes, and enlarged or taken off, in proportion to the voyage, by rules and laws, to be printed and publickly known.
Referving only, that then, as reafon good, the faid office Bhall have power to direct fhips of all forts, how, and in what mianner, and how long they thall fail with, or wait for, convoys; and Thall have power (with limitations) to lay embargoes on fhips, in order to compofe fleets for the benefit of convoys.
Thefe rules, formerly noted, to extend to all trading by fea, the coafting and home-filhing trade excepted; and for them it may be ordered,
Firft, for coals: the colliers being provided with men at 28 s . per month, and convoys in fufficient number, and proper ftations from Tinmouth bar to the river, fo as they need not go in fleets, but as wind and weather prefent, run all the way under the protection of the men of war, who hould be centinually cruizing from ftation to fation; they would be able to perform their voyage in as fhort a time as formerly, and at as low pay, and confequently could afford to fell their coals 20 s . per chaldron, as well as formerly at 15 s .
Wherefore, there Thould be paid into the treafury appointed at Newcaftle, by bond to be paid where they deliver, Ios. per chaldron, Newcaftle meafure; and the ftated price at London to be 22 s . per chaldron in the pool, which is 30 s : at the buyer's houfe, and is far from being dear, in a tinie of war efpecially, as it is cheaper than ever was known in a war; and the officers fhould by proclamations confine the feller to that price.
In confideration alfo of the charge of convoys, the flips bringing coals thall all pay il. percent. on the value of the hip, to be agreed on at the office; and all convoy-money exacted by commanders of hhips, fhall be relinquifhed, and the office make good all loffes of fhips, not goods, that Mall be loft by enemies only.
Thefe heads, indeed, are fuch as would need fome explication, if the experiment were to be made, and, with fubmiffion, would reduce the feamen to better circumitances; at leaft it Mould feem to bid fair to bave them in readiaefs for any public fervice, much eafier than by all the methods of encouragement that have hitherto been tried.
For, by this method, all the feamen in the kingdom would become the king's hired fervants, and receive their wages from him, whoever employed them; and no man could hire, or employ them, but from him: the merchant fhould hire them of the king, and pay the king for them; nor would there be a feaman in England out of employ, which would prevent their feeking fervice abroad: if they were not actually at fea, they would receive balf-pay, and might be employed in works about the fhip-yards, ftores, and naval concerns, in order to keep all things in repair.
By this mèans, if a fleet or \{quadron was to be fitted out on any fudden emergency; they would be manned in a week's time, for all the feamen in England would be ready: nor would they be fhy of the rogal fervice, for it is not an averfion to the king's feevice, nor is it that the dety is barder in the men of war than the merchant-men; neither is it fear of danger which thakes our feamen fork and hide themfelves in a time of war, but it is the article of wages is the matter: 24s. per-menth in the king's. fervice, and from 40 to 50 s . and upwards per month from the merchant, which is the true caufe; and the fearian is in in-the tight of it, for who would ferve his king fid coentrys and fight, and run the rifk of being knoeked on the head, at 24 sf permonth, that can have 50 . without the like degree of hazard ? and till this be remedied, in wain afeoallthe encouragements whichean be given to feamen; for they tend but to make theminiotent, and encourage their extravagancevin sw 3 ams
Nor would this prodéeding te:añy damage ta the featnen in general, for ${ }^{2} 4$.s. per month twages, and trabe kept in conftant fervice, or half-pay when ide, is really wetrer to the feamen than 45 or 50 s . per month or upwards, as they now take it, conifidering how long they often lie idle on fhore, out of pay: for the exbrbitant rate of Yeamens wages, though it has been: an intolerabie burthen to trades has not vifibly enriched the faibors, and they may as well be content with 24 s. per month now as formerly.
On the other hand, trade would be fenfibly revived by it, the intolerable price of freights-would be reduced, and the public would reap an immenfe benefit by the payments mentioned in the propolal: for,
(1.) Four llillings per month upon the wages of all the feamen employed by the merchant, which if we allow 200,000 feamen abways in employ, as there cannot be lefo in all the lhips belonging to England, is 40,0001., per month.
(2.) Forty hallings per ton freight upon all goods ina. ported.
(3.) Four per cent. on the value of all goods exported or imported.
(4.) Ten fhillings per chaldron upon all the coals mipped at Newcaftle, and I per cent. on the thips which carry them.
What thefe four articles would pay to the Exchequer yearly, it would be very difficult to calculate': but, perhapp, few fingle taxes ever given in time of war, have exceededitit:
It is true, out of this the public would be to pay half pay to the feamen, who thall be out of employ, and all the loffes and damages on goods and flips; which, though it might be confiderable, would be raall, compared to the payment aforefaid; for as the premium of 4 per cent. is but fmall, fo the fafety ties upon all men, being bound to infure: for I believe any one will grant, that it is not the frmallnefs of a premium ruins the infurer, but it is the fmallnefs of the quantity he infures; and, perhaps; if a premium of 4 per cent. be paid into one man's hanid for all goods imported and exported, and any man might be the general infurer of the kingdom, and yet that premium could never prejudice the merchant adventurer.
So that the large revenue which this Anould raife, would be felt no where; neither poor mor rich would pay tha more for coals; foreign goods would be brought home cheaper, and our own goods carried to market cheaper; owners would get more by fhips, merchants by goods, and loffes by fea would be no lofs at all to any body, becaufe repaid out of the public flock.
Another unfeen advantage would arife by it ; we hould be able to out-work ail cur neighbours, even the French and the Dutch themfelves, by failing as cheap, and carrying goods as cheap in time of war as in peace; an advantage, which has more in it than is eafily thought of, and would have a notble influence upon all our foreign trafic. For what could the Dutch or the French do in trade, if we could carry our goods to Cadiz at 50 s. per ton freight, and they give 8 or mol. and the like in other places? Whereby we could be able to fell oheaper, or get more than our neighbours.
There are feveral confiderable claufes might be added to this propofal, fome of great advantage to the general trade of the kingdom, fome to particular trades, and more to the public; but I avoid being too particular in things whith are but the product of a private opinion.
If the government fhould ever proceed to the experiment, no queftion but much more than has been hinted at would appear; nor do we fee any great difficulty in the attempt, or who would be aggrieved at it; and there I leave it, rather wilhing than expecting to fee any thing like this undertaken.

Another Proposal fuggefted by the judicious Mr Cazey, late of Brittol, merchant, in his Difcourfe on Trade.

That gentleman obferves, 6 That navigation is the medium between बur inland and foreign traffic : the latter is carried on by fhips and failors; the former are the fea-waggons, whereby we tranfport and carry commodities fromone market to another ; and the latter are the waggoners, who drive and thantiage thent: thefe"are a fort of jolly fellows, who are generally bold in their undertakings, and go through any kind of labour in their own waxt, with a great deal of chearfultel's; are undaunted by ftorms and tempelts, the fea being as it were their element, and are allowed by all to be the beft n navigitors in ${ }^{2}$ the world; they are our wealth in peace, and s ode defeniee in war, and oughto be fróre encouraged than they are int both, but efpecially in'the latter; which might -abe done, iff fettey nethods' weresulfed to engage them in the acferyice, and leatef treapmene doner they are there: now I

 they, are bound for their lives: this, and the manner of pref-
 men nôt âaringite put their hands to the oar, left the next
 underfatial ndthits thf the Jede by this means our men of Wap wouldwe whitheitwith able feamen, and not with fuch

 to ferve:in inêrctiafits fhitps, and might be eafily met wilhh at the return of their voyages: by thefe means, in a fhort time,

## S E A

## SEA

there wou'd be a double fet of mariners, enough both for the fervice of the fleet and of trade, the laft of which would every year breed more.
This would allo prevent great mifchiefs, which arife from preffing failors out of merchant-fhips whilft on their voyages, many of them being thereby loft at fea, and others have been detained in the Weft-Indies, to the difcouragement of trade; and it would alfo prevent another mifchief, too much practifed abroad, where captains of men of war prefs-failors from one merchant-fhip, only to make advantage by felling them to another.'-Thus far Mr Carey.
There has lately appeared a treatife, drawn up with no lefs judgotent than zeal towards the public incerefts, entitled, An Essay towards a method of feedily Manning a Fleet, upon any sudden Emergency. - After this ingenious qeutleman has fhewn the neceffity of the nation being always in a condition to man and equip a refpectable fleet at thort warning, he then modefly fubmits his own propofal for a voluntary Register for Seamen to public confideration, the fiufftance of which is as follows, viz.
I. When a king's fhip returns from a voyage or cruize, ssc. and is to be paid off, the captain or commanding officer fhould have power to declare to the fhip's company, that any able-bodied man, defirous to enter his name, \&c. in the regifter for feamen, is at liberty to do it, under the conditions therein mentioned and prefcribed; which are to be then publickly and audibly read to the men, that no perfon may afterwards plead ignorance.
II. The men fhould be called over by their names, according to the fhip's book; and each man afked feparately, whether he chufes to enter his name in the Register or not. If be does not, he fhould be at full liberty to refufe it, but having once refufed it, fhould not afterwards be admitted, fo long as a fufficient number of others offer themfelves to complete the Register.
III. A lift being thus taken of the names of fuch as are willing to enter, and are fit for the fervice, proper columns are to be made for entering, at the fame time, each man's age, complexion, ftature, marks, if any trade, county or country, and the city, town, hundred or hamlet, he declares his intentions to go to for the prefent.
IV. A copy of this lift, figned by all the commiffion and warrant officers on board, is to be forthwith fent to the admiralty or navy-board, from whence præcipe's or orders will be iflued to the feveral magiftrates of the cities, towns, \&cc. to which thefe men go (according to the lif) to enter the name of every man that comes into his diftrict, with all his defcriptions, and the name of the place he laft came from.
V. A return is to be made to the admiralty, \&c. every month, more or lefs, by the mayor, bailiff, or neareft juftice of the peace, of the name and defcription of every regiftered man that has come into, or left bis diftrict during that month, taking particular care to mention the place he declared an intention to go to; whilft the other magifrate, of or near the place he goes to, makes in the fame manner his return, fpecifying the place from whence any new man laft came
Let it be taken for granted, fays this gentleman, that a Recister for Seamen would be a fuccelsful and proper method to engage their fervice: the next point to be confidered, is what number of men would anfwer that purpofe.
I fhall leave that entirely to the wifdom of my fuperiors. But permit me to fuppofe at prefent, that the number was to be 10 or 12,000 men; and that each man was to receive after the rate of 51 . per ann. or 2s. a week, which amounts to 51.4 s . a year. The fum neceffary to pay 10,000 men, would then be 50,0001 . or 52,0001 . a year, and fo in proportion for any greater or fmaller number.
After the rate of 500 men to a fhip, this number would equip 20 or 24 line of battie fhips: and if thefe be not fufficient, this method does by no means preclude the preffing of vagrants, idle, loofe, and diforderly men, without any vifible means of maintaining themfelves in an honeft induftrious calling. On the contrary, let the magiftrates exert themelves, and be every where encouraged to reize, imprifon, and convey to the feveral fea-ports, all perfons under that defcription: and by dividing thefe difolute fellows amongtt the feveral fhips, more hands would be added, more fhips equipped, and the country cleared of thefe noxious irreclaimable villains. This would, be prefing in a legal manner, and perhaps the only method for putting a ftop to the outrages dally cominited in all paris of the town and country.
Fifty thoufand pounds a year may, perhaps, at firft view, be efteemed a very large additional expence to the nation : but when the advantages arifing from ic thall be confidered, 1 latter myfelf, that every well-wifher to his country would think that fum, or even a much larger, well employed. Some few of thefe advantages are as follow
Firf, This may be a means of faving a large expence to the nation, by deterring our neighbours from any fudden and rahh attempts upon the rights and privileges of the VOL. II.
crown and fubject. For when they know is in a condition to do ourfelves juftice, as weli as difpofed to efent an injury, they may not be fo forward in difturbing our tranquillity and peaceable difpofition.
Secondly, A great many lives may hereby be fpated. For if this fcheme fhould prevent infults and incroachments, which are generally the firft feeds of war; the confequence is, that many-officers and feamen who would be engaged, and lofe their lives in that war, are bereby laved to the public.
Thirdly, Thefe men; who have been employed in the fervice of their country in time of war, would, in thme of peace, have fome gratification for their former fatigues and dangers, inftead of being turned adrift to ftarye; rob, and murder, as they actually do ; or being driven, by neceffity, into foreign ervice.
Fourthly, Large annual fums are now raifed and paid, as rewards, for apprehending highwaymen, footpads, \&cc. who are brought to the gallows and gibbet ; a great part of which might probably be faved, as well as the lives of thefe miferable wretches, were this fcheme to take place.
Men who have been forcibly taken from their trade and family, and have been kept four or five years abroad, who have loft almoft all the fkill they had in their feveral callings; and, perhaps, been deprived of their friends by death, removals, \&c. can fcarce fettle immediately to any ufeful and induftrious way of life, when turned afhore.. But this fcheme would, in a great meafure, prevent them from taking any defperate courfes; it would give them an affurance of not wanting fome provifion for the future, the want of which gencrally drives fuch men to extremities. And as the lords of the admiralty would have a power to difcharge any man who behaved ill, this would oblige the men to a more fober and regular behaviour. The very regitter would be a great check to fuch irregularities: for, as the place of each man's refidence, and his defcription would hereby be well known, he would certainly; fooner or later, be difcovered: he would be juft in the fame condition as a deferter from the army, few or none of which efcape punifhment.
But, moreover, an encouragement of this fort might probably draw many of our men out of foreign fervice, to that of their country again. An advantage of ineffimable value, as it not only weakens their hands, but frengthens ours.
It is true, they receive, when paid off, the wages due to them: but this only leads them into lewdnefs, debauchery, and bad company; which fo far corrupt their morals, whilft the money lafts, that, when it is gone, they affociate into bands of the moft abandoned fort, and perpetrate all manner of wickednefs, to enable them to continue in and fupport the way of life they have fallen into.
As a farther encouragement to be given to fuch feamen as fhall voluntarily enter themfelves, it is prepofed,
Firft, No man hould be allowed to ply a boat on any river, in any port or harbour, unlefs he be regitered, if a regiftered man offers himfelf for that purpofe.
Secondly, A worn-out regiftered man, not admitted into Greenwich-Hofpital, flould be allowed to ply a boat, as above, in preference to any other regiftered man, and confequently to any man not regiftered.
Thirdly, Preference fhould be given to a man regiftered before a war, to remain upon the lift in time of peace (if able and fit for fervice) before any man regiflered during the war, and before the peace.
Fourthly, All warrant-officers doing duty on board any Chip in ordinary, by a deputy, fhould be obliged to take a deputy from amongft the regitered men (if any fuch offers, that is fit for the bufinefs) rather than any other man, under a penalty.
Fifthly, A regiftered man to be received into GreenwichHofpital, in preference to a man not regifered; and when fruck off the lift, as nolonger fit to ferve, to be conftantly received there.
Thefe regulations neceffarily require the keeping an exact account of the date of each man's regiftery.
As this fcheme propnfes the keeping up the number of to or 12,000 men, exclufive of thofe employed on ordinary occafions in time of peace, it becomes nectlary, that as foon as any regiftered man is taken into the king's fervice (except in time of war) another man be admitted to regifter in bis ftead. I have here inferted an exception, which, in my humble opinion, had better have been omitted. For if fund were once raifed, and appropriated to that fule ufe, I do not perceive the leaft inconveniency that could arife from continuing that method in time of war likenile; that rom whan regife forvice, the fame fhould be completed as foon as poffible: otherwife our enemies, knowing pleted as foon as poffible: otherwile our endemie oner ftand that our flock of feamen is drained, would no longer ftand in awe of any further armaments. But, in the height of a
war, it can fcarce be fuppofed we mould have men enoug b war, it can fcarce be fuppofed we thould have men enough
complecely to mari our fleet, and to fill the regifter at the fame time. It to many men hould be found, then we 9 K
have
heve always 10 or 12,000 men ready upon any occafion. If, as is moft likely, men fhould be wanting, then the fund would thereby be fo long increafing, and enabled, at the conclufion of the war, to provide for fo many more men as fhould be judged proper.
The only inconvenience I can forefee that may attend this meafure is, that, at the end of the war, the regitter may poffibly be full, and, confequently, no room left for fuch as have ferved during the war. But that is not at all likely; and if not, then the increafe of the fund will admit of fo many additional men, for a time at leaft: and we prefume to hope, that a fcheme of this nature will be fo generally approved, as in time to meet with all the encouragements at this day beftowed upon other generous and charitable inflitutions, no one of which can be put in any competition with this, for the importance of, and advantages arifing from, it, to the nation in general, and every individual.
Perhaps it will be faid, That every body is convinced of the neceffity of encouraging our feamen, and having always a certain number ready to be called together at fhort warning: but the difficulty is, how to find a proper fund for that purpofe.
How difficult foever that may be, if it is neceffary, if the msrcantile intereft, and our general fafety, fuffer by that neglect, the difficulty fhould be no objection. Large fums are annually expended in buildings, and other, perhaps, neceffary works; but furely no one of them can be compared to this for expediency, and general advantage.
When our real intereft is in queftion, it is not to be doubted but a Britifh boufe of commons will find the proper refources, See An Eflay towards a Method of fpeedily Manning a Fleet upon any Sudden Emergency. Printed for Sandby in Fleet-Street.

## REMARKS.

In the year 1740 , the houfe of commons gave leave to bring in' a bill for regiffering all feamen, watermen, fifhermen, keelmen, bargemen, and feafaring men, capable of fervice at fea, throughout his Majefty's dominions; but it being judged by the houfe to be overioaded, and too arbitrarily to affect the liberties of the fubject, it was dropped; upon which the houle refolved itfelf into a committee of the whole houfe, to confider of heads of a bill for the further and better encouragement of feamen to enter voluntarily into his Majefty's fervice; in which committee feveral refolutions were agreed to, but nothing further done.- It may be ufeful, however, here to give the feveral refolutions of the houfe of commons upan this occafion, which are as follow, viz.

1. That a voluntary regiller of feamen will be of great utility to this kingdom.
2. That it fhall extend to all the dominions of the crown of Great-Britain.
3. That the fraternity of Trinity-houfe of Deptford Strond be intrufted with the management of the faid regifter, with power of appointing inferior officers and fervants neceffary for the execution of the faid truft.
4. That a certain fum of money be paid to every man who is willing to regifter.
5. That every regiffered man fhould be obliged to give an account of the place of his abode to the regifter office.
6. That the regiftered men thall be divided into clafies,
7. That a yearly penfion be allowed to every regiffered man who fhall be difabled in fight, over and above fuch allowances as are now given, and a yearly penfion to every widow of a regiltered man flain in fight, over and above the prefent allowances made to fuch widow; and if the party leaves any children, that each of them have a yearly penfion, until they arrive at the age of fourteen.
8. That every regiftered man be exempted from paying the king's or parifh taxes, or ferving any parifh offices, or ferving in, or contributing towards, the militia.
9. That none be preferred to be petty officers in any of his Majefty's thips but regiftered men.
10. That all petty officers in merchants fhips, as boatfwains, gunners, \&c. be chofen out of the regiftered men.
II. That all men who fhall regiter themfelves do remain on the regifter no longer than to a certain age.
11. That all men who thall have continued on the regiffer a certain age, do enjoy all the advantages of regiftered men during life.
12. That all regiftered men fhall have the preference of being admisted into Greenwich Hofpital.
13. That all captaias and commanders of his Majefty's fhips of war, who thall be applied to in foreign parts, fhall take on board any regiftered men, and the men fo taken on board fhall, from that time, be deemed part of the fhip's company, and receive wages accordingly.
14. That regiftered men be allowed to go into the merchants fervice, when the fervice of his Majefty thall not require them, and that the proper officers do give them certificates for the fame.
15. That regiftered men be intitled to receive their wages in certain proportions.
16. That all seamen now abfconding in foreign parts, or at home, on account of running goods, who fhall enter, on board any of his Majefty's fhips, and claim the benefit of this regifter, fhal) be inticied to their pardon, except perfons who have been concerned in actual murder.
17. That all regiftered men who fhall be fummonedito appear on board any of his Majefty's fhips, and thall ne to aprefufe to do the lame, fhall be fubjeet to be punifhed as deferters.
18. That all foreign feamen who thall claim the benefit of this regifter, fhall be intitled to all the rights and privileges of natural-born fubjects.
19. That the truftees of charity fchools for the education of boys, hall be obliged to put forth apprentices to the fea-fer vice, fuch as fhall find mafters willing to take them.
20. That the regiftered men fhall wear fome hongurary mark of diftinction.
21. That the regifter-office be obliged to give an account to the lord high admiral, or the commiffioners for executing the office of lord high admiral, for the time being, of all the men that fhall be regiftered.
22. That the regifter-office fhall, on the receipt of an order from the lord high admiral, or the commiffioners for execuring the office of lord high admiral for the time being, for any number of men contained on the regifter, iffue out their order for the faid number of men to appear, according to the order directed to them as aforefaid.

Further Remarks.
Were an act of parliament to be paffed for eftablifhing 10,000 able feamen certain for ever, for the king's fervice, we may prefurne to affirm, that it may be plainly demonftrated, that the advantages which would accrue therefrom to every part of the nation in general, would render the extraordinary expence of fuch eftablifhment, if any at all, very inconfiderable. Should any one be ftartled at the very found of fuch a large number of men, without giving himfelf either time to confult the merits of another propofal we are about to offer, which may be drawn from what has been faid, afk, in objection to it, what occafion the government would have, during the time of peace, which may fometimes hold, very probably, for ten or twenty years, to encumber itfelf with fuch numbers of a fet of people, who, in their opinion, muft be very unneceffary? we fhall requeft of him a candid perufal of what follows, and doubt not but to find him mueh better reconciled.
By the advance money that Chould be given, and the certainty of not being difmiffed, after any fhort expedition, from his Majefty's fervice, to make what provifion they can for themfelves, in that of others, the number of volunteers that would immediately offer themfelves, would very quichly make up the lift propofed ; nor would the manner in which they fhould be employed, even at thofe times when the fleet may have a call but for a very few of them, be a lefs temptation for them to enter.
As his Majefty's docks and yards do continually maintain a very large number of workmen, in the feveral articles relating to the navy, one part of the faid feamen might, with litule prejudice to the hands already employed, be made ufe of in time of peace, in the work there: at firft, in fuch parts only of it, as may be moft eafily attained in a very little time, 'till by degrees they may arrive to fuch a colerable knowlege in the others, as will not only enable them, by the money they fhall earn, to maintain themfelves and families very comfortably, but render them, when required to their original province of failing, more ufeful and expert in the intire management of every particular belonging to the hip; whillt the other part of them, or as many as there may be a call for, provided it does not exceed one half of the number, unemployed in his Majefty's fleet, shall have a permit for a year, to fail in fuch veffels as are coafters, or make fhort voyages, fuch as to France, Ireland, Norway, \&ic. by which means they will acquire fuch perfect knowlege of the many rocks and fands that almoft intirely furround us, that they may prove, when fummoned again into his. Majefty's navy, of very important ufe, even in the quality of pilots. And to prevent any' difficulty, or difpute, that may arife between the mafters of fuch veffels and the king's failors, that want to fhip themfelves on board them, the merchants or mafters, bound for any fuch ports as abovementioned, fhall be obliged to receive into their veffels one half of their complement of the King's Men, at the common wages, who fhall likewife have a written power, or authority, granted them, to fhip themfelves on board any coafters or velfels trading as beforementioned, in any port of Great-Britain where they are, provided they do not exceed the number of ocher hands fhipped on board of the faid veffels.
A Register may alfo be kept at every port, of the number of hands each veffel thips, that the government may be aflured of the punctual and ready compliance of the mer* chants, or captains, in receiving one half of their complement of king's men, without any manner of evalion or objection, if fuch offer themfelves. . And if it thould fo chance, that many of thefe failors fhould feek employment all at the
fanc port, where there were veffels lying in expectation of hands; there may be fuch regulations, that no one veffel fhould take in more than an equal proportion of the faid failors. As for inftance, if three' veffets lay in the fame port, fuppofing ach vefil carty ten hands. and five of his Majeity's men fhould offer themfelves only to one of thefe three fhips, they Ohall not be allowed to go all together in that one veffel, but thall diffribute themfelves amongft the three, and that veffel, whofe lot it was to have but one, fhall receive the next king's man that comes to enter himielf at that port; as his fair dividend.
Noowners, or mafters of the veffels beforementioned, thall piefer, in their firft choice of the hands they propofe to flip, any other failors to thofe belonging to his Majefty; but if no application is made from any of them, the captains may be at heir own diferetion ta receive others for the whole voyage. And for the future eafe of the faid eftablifhed number of feamen, and to make them in every degree more ufeful to the Eovernment, after the expiration of the year, for which the permit was granted to one half of them to go into the merchants fervice, there may be an exchange of ftations for the fame length of time, between them and the other half that were left and employed at home. By thefe meafures the grandeur and fecurity of the nation will ftand upon an immoveable and unperifinable bafis; and the inconveniencies which it may otherwife futtain, from having mott of the hands in their veffels, during the time of war, impreffed, perhaps, juft as they are clearing out for their voyage, and loaden with commodities which may be in danger of being greatly damaged by fuch a retardment to their failing, will immediately vanifh, and the approach or declaration of a war carry with it none of the jll effects on the apprehenfions of the trading people, which it may at prefent.
The number of failors which the government, upon this fcheme, may have occafion to diffribute amongft them, oughr, very far from being judged an act of compulion, to be received as the frongelt initance of its lenity, tendernefs, and regard for their interelt. The king's men, it is to be prefumed, will be as good, if not better, than what they may otherwife be obliged to take up with; nor, if any exigency of affairs fhould conftrain the government to call off thele men into the moyal fervice, can they poffibly think the lofing a part of their complement an Kardhip, as their voyages will be fo very fhort, that they may have time enough, from the firfe fummons of his Majefty for his failors to return, 'tilil the time limited for fuch return (which may be three weeks, or a montr) to provide themfelves with a fupply, and even without being neceffitated to pay any fuch exorbitant wages as the fcarcity and timidty of the feamen, during the time of prefs, exacts from them. If, as I am informed by fome perfons who pretend to have made a pretty exact computation of the number of feamen employed in the home and neighbouring trades, there may really be 3o,ooo; then, were the whole effablifhed number of his Majefty's feamen diftributed equally among the merchants, in the room of fome of the others, fuch feamen would be but one third of each fhip's complement; fo that the merchants can neither icruple to receiv fo few, to the prefudice of the other failors, northink it any grievance to part with them, when his Majefty's occafions demand them.
As it is an inherent principle in every Englifhman, to fubmit with reluetance to any thing that feems to carry a check up on his literty and free choice; fo I would not, in this engagement to his Majetty's fervice, have men conftrained to bind themfelves up either for life, or for a long term of years; but chufe to leave it to their own difcretion to quit the fervice when they mave an inclination, on this eafy and reafonable condition only, that they fhatl be obliged to give a year's notice of their intention, on the faiture of which, proper penalties may be thought of to be inflicted. Such an argument as this wifl be no more than what is entered into almoft every diy between man and mari, in every branch or kind of buffinefs; but for their encouragement not only to enter, bat to continue in the fervice voluntarily, I could wifh an eaff fund might be found dut, whereby the government might be errabled to cloath them from head to foot, oncè in two years, with a badge of the fag of Englaind, as a pecufar and honourable diftinetion from all other failors: those cloaths to be worn by fuch as work in the yards, only af fuch times as they fhall be abfent from their work
So many brave and fkilful men, all appearing in a national li-2 very, cannot but affect the minds of every thinking Britifh fpectator with the moft fenfible fatisfaction, when he beholds "i the true protectors of the kingdom's grandeur and happinefs fo defer redly cherifhed ; and every foreigner will have the ftrongeft fentiments as well of our gratitude and policy, as of our undoubted fecurity. The men themfelves, when the neceffity of affairs may have recourfe to a ftrong navy, will think themfelves under the greateft obligations to repay, with extraordinary chearfutnefs and bravery, fuch extraordinary marks of the mation's bounty and regard for them. For the firft three years, any able feamen may be adriitted upon this eftablifh ment, not exceeding forty years of age, but, aifter the faid three years, none fhall exceed the age of thirty. And as a
further reward and inducement for their long continuanta in the fervice, it is propofed, that thofe who have ferved for fuch a term of years, or done fuch fervices as the difcretion of the board of admiralty, or the commiffioners, fhall judge worthy of it, fhall receive a fmall penfion for life, though they are not any way difabled in the fervice; and in cafe any of them leaves a widow, the thall enjoy for her life one moiety of what was before his allowance; but if any of them quit the fervice, and afterwards re-enter, they fhould have but half the benefit of the time they ferved betore. And if any of them, whilft in the merchants fervice, fhould, by any accident that might happen to the veffel, in ufing their endeavours for its fafety or otherwile, fuftain any damage in their limbs, fo as to render them incapable of earning their bread as failors for the future, they fhould be confidered, notwithftanding, as the king's men, and receive the fame benefit of a penfion, or the hofpital, as if the $l$ had fuftained fuch wounds or damage in the king's own hhips. And at laft, to all thefe confiderable and inducing advantages, I wouldjoin that great and moft neceffary encouragement of all, the certainty of having their pay, whatever capacity they ferve in, whether in merchant-fhips, or the governor's own, on the moft eafy regulations both to themifelves, their creditors, friends; or relations, who may be their executors, or poffeffed of their powers of attorney, without any unneceffary delays upon account of unjuit and vexations claims, and free from exorbi ant and unwarrantable deductions, which has been but a too frequent and enormots practice.
During our wars with the French in our late reigns, complaints of this kind were fo loud, to miferable, and fo hume rous, that they pierced the hearts of every Englifman, ex cepting fuch as were the principal authors of their opprefion, and made a very guilty gain from their miferies.
In that melancholy time their hardihips, Thave been affured, were as great, as if fome of the perfons to whom a part of the infpection and management of the naval affairs was entiufted, had been in an aधual league with the French to deftroy them.
That they were impreffed from their callings at bome, or on their return, perbaps, from a tedious Eaft-India voyage, when they were big with the hopes of refrething themfelve on thore for a few weeks, and regainicg, in their own native air, their health and vigour, which might be impaired by a long continuance in a foreign climate.
This was a grievance that might eafily allow of a mitigation, and be rendered in fome part juftifiable, from the neceffities of the ftate at that time, provided they had not been forced into a fervice, where, from the corrupt management of fome avaricious perions, there was not only an uncertainty of receiving the pay they hould be intitled to in fuch fervice, on any reafonable terms, but danger of being defrauded of the greateft part of it, together with a probability, from too fevere a confinement on board the feet (which was fometimes for two or three years together) of forfeiting, by their deaths, the benefit of what was due to them from the merchants, from whofe fervice they were fo abruptly taken, or leaving it, at leaft, a difputable legacy to their widows, or other relations.
From this inability of the failors to make fuch convenient returns of their pay as would have been a comfortable fubfift ence to their diftreffed familees, the parifhes were loaded with infupportable taxes for their relief, whilft the purfers were fufpected and accufed, by the miferable fufferers, of burthening the failots with large, demands for the little conveniencies they were obliged to take up of them, that fome, when they had the faxour of having their accounts in fome manner ftated, had not, perbaps, one farthing to receive. To this manifeft difcouragement of the failors, when on board, was owing the abfolute neceffity of impreffing them during all thofe wars, in fuch a violent snanner, that he who could hide himfelf from the diligent purfuit of a prefs-gang, thought it as great happinefs, even though he was almof ftarving all the while, as if he had efcaped falling into the hands of an Algerine rover; and the merchants have been obliged to advance their wages from 24 s, to 50 s , and 31 . and upwards, a month per man, after the inconvenience of waiting a long time, before even that would be a fufficient temptation for any of them to venture. Nor were the colliers forced to give lefs extravagant hire in proportion, for the bringing their veffels up the river.
I mention there ingonveniencies, which in the times before named affected not only the merchants and the feamen, but the whole nation, not fo much as an handle for a general outcry againft the cultom of impreffing men into his Majefty's fleet, as from a melancholy refiection, that the faid occonomy at that time ufed in diftributing their due encouragement to each failor, thould force the government to fuch rough meafures as it then did, to obtain an able one: whereas, had it been otherwife, and each man knew how to come at what he had earned in a lefs dilatory and difadvantageous manner, 1 fincerely believe that above balf the money that was allowed for impreffing men bad been faved, and that abundance of feamen would have thought the glory of ferving in the navy preferable to fome advanced wages they might gain from the merchants.

## S E A

Should any of the methods we have fuggefted for executing what is propofed, a, pear to the judgment of others, not f.) entirely practicable, as we have the zeal to imagine they may be, we are confident, the numerous advantages pre faged therefrom, for the pood of our king and country, will render any errors of that zeal pardonable. To be fo well fortified in that moft valuable branch of Great-Britain's fecurity (its maritime force) as not only to be in a conftant readinel's to engage in a war, but from the reputation of fuch an armament, in a capacity to prevent the approaches of one, appeared to me fuch a defirable bleffing, that no difficulties ought to difcourage any true and honeft lover of his country, from ufing his utmoft abilities to obtain it.
To give a chearful and fuitable encouragement to the failors, is no more than an act of juffice and gratitude due to them as our protectors, and of prudence to ourfelves, as being protected and aggrandized by them. And we have engaged the more ftrenuoufly in favour of this one point, as it is but too manifet, that from a deficiency of fuch encouragement, and the want of means to make fome certain provifion for them, after they are difcharg $d$ from on board the fleet, many out of the numbers that are unemployed at the fame time, are obliged to go into foreign fervice, that only great and datgerous poffibility of rendering our prefent imagined fuperiority over all other nations precarious for the future; every foreign realm, whofe intercft it is to turn its genius to naritime affairs, fearching duligently after, and receiving greedily, Eng LISH SEAMEN, preferably to thule of their own, or any other nation; whilft others of them, too frequently from a death of employment, are tempted to fupply their neceffities, by plundering, robbing in the freets, breaking open houles, \&c. too notorious an evidence of which is, that at almoft every feffions at the Old-Bailey, there has been, at fuch times, generally one or more feamen among the people convicted of capital crimes. A prevention, therefore, of thefe grievances, is to be wifhed, as much for the fecurity of the government, as for the eafe of the people.' That the merchants fhould fuffer as little as poffible, tither from the damage done to their goods, or the kefing fome part of the benefit of the foreign markets, from being detained too long in their home ports, by the feizure of their men, or by being obliged to give extravagant wages for feamen, who, perhaps, may be only foreigners, old men, or boys, as few others will venture themeives duting the time of a prefs, Chould be the fpeedieft caution of a government, whofe Revenue is fo much interefted in the flourifhing or oppreffed condition of the trading part of the nation. That the parifhes fhould not be overburthened by an extraodinary charge of poor, which muft be the cafe, when perfons, who are, perhaps, fettled in a tolerable way of bufintrs, able to fupport themelves and families, are involuntarily hurried on board the fleet; and, in fhort, that no rudden prepirations for war, fhould be of fo ill confequence to the meaner fort of people, as to diminith the benefit of what they earn by hard labour, by creating any advanced prices on the moit common neceffaries, demands the confideration of their f"periors, not lefs from humanity than pulicy.
Thus, from fuch regards as thefe being fhewn for the ftrength of the kingdom, and the felicity of all the members of it, every thing muft flourifh in the moft delightful manner, the fovereign fortified againft all attempts of his enemies, and the people ready to make him the moft grateful returns for their profp: rity.

Remarks upon the whole of the article Seamen.
The reader has now before him, under this article Seamen, the fubftance of what has been propofed fince the Revolution, in regard to the meafures requifite to be taken, in order to the fpeedy manning of the ro) al navy upon any emergency. Which of theie propofals may deferve the preference, or whether any of them may be eligible, I fhall not take upon me to declare ; the judicious, perhaps, may find fomething in every one that may deferve their attention, and may, from the whole, form one better than either. It is obfervable, that the fenfe of the parliament has been to promote a voluntary regiller; and the fcheme propofed in the effisy before cited feems to be built upon the fame principles; and, indeed, all compulfory methods upon this occafion ought to be avoided, becaufe they are 1.kely to have no better effect than the violent means of impreffing men by force have hitherto bad, aud, therefore, can by no means anfwer the falutary end propofed. Moreover, whatever hath a tendency to Atrike at the liberties of the wh le feafaring body of the peop!e, fould be ftudioufly guarded againft in a land of liberty. Nor will the violent and arbitrary example of France, or that practiled in any other nation, have any weight with Great Brtain, to induce her to follow it; and, therefore, every thing that can be urged from topics of this kind, will Iffe its weight with a Britifh parliament. That fomethirg effectual is indifpenfably neceflary to be done, to anfwer an end fo much for the fafety and glory of the kingdom, is agreed on all hunds.
The mechods which the French and Spaniards have lately taken, have rendered thim, in cafe of a war, much more
powerful enempics than they were fome years ago. Our trade can never be faid to be fafe, unlefs our thing of war are, at leaft, equal, if not fuperior, to theirs in number. That we exceed them as yet in number, as well as in goodnefs of fhips, is a point not to be difputed: may this fuperiority long continue! I think it muft, and will, if we are not wanting to ourfelves; but it behoves us to have a watchfuk eye upon their motions. Thefe neighbours of our's a re daily increafing their fleets, and fending large armaments (in time of peace) to dif. ferent parts of the globe, in order to make new fetulements, enlarge their commerce, and protect their fubjects. It is notorious that the Spaniards, with a high hand, encourage their guarda coftas in the Weft-Indies, even to infolence, as well as injuftice. And it is allowed that the French, by fecret methods, and by open and hofile attempts, are endeavouing to diffurb and endanger our fettements in the Eaft-Indies, as well as thofe in America. The prefent flate of their maritime power muft, undoubtedly, be the true caufe and foundation of all thefe outrages. Such attempts would be ufelefs and impolitic, if they apprehend any probability of our calling for an immediate reparation of damages; but they are perfectly acquainted with our fituation, and bid defiance to our number of thips in harbour. They know it would be exceedingly difficult for us to equip even a fmall fleer, upon any fudden emergency; wheretore they prefume upon our not doing it, 'till we are driven to it by fome great and abfolute neceffity, They are apprized of the impediments arifing from our conftitution, and the time it takes to man a fleet, let the circumftances be ever fo preffing, and perceive that their fhips may be at fea, and poffibly have ftruck their ftroke, before a fmall fquadron of our large fhips can be manned and equipped.
At the conclution of the laft war, when the firft fhip was paid off, there were, if I miftake not, 65,000 feamen on board his Majefty's fleet; and yet, when a few thips were, a little while ago, to be fitted out for the Eaft-Indies, we were obliged to have recourfe to fevere methods, in collecting a fufficient number of hands to man thers, fo as to fail in due time. Nay, further, when only four fhips were ordered, the laft fpring, to take on board the troops for Gibratar and Minorca, they were, if I am rightly informed, detained a confiderable time, only for want of hands to man the thips for fo Thort a fervice. Our feamen, as well as artificers, are faid to be engaged in foreign fervice, where they meet' with proper encouragement: whereas we take little or no care of them, any longer than whilft we want their affiftance. Thus when prefs-warrants are iffued, the poor fellows abfcond, and run any hazards, rather than be forced into the fervice; the few that voluntarily enter, or are taken in their lurking-holes, are no better than llaves; for as new ones are no where to be found, fo thofe no fooner return from a long and hazardous voyage, than they are turned over to other fhips, and are fent upon fome diftant expedition.

Of our Laws relating to Seamen.
Every feaman in the fervice of the crown, or any fubject, except of hoys, fmacks, \&c. belonging to London, employed in bringing corn, fifh, or provilions, to pay 6d. per month to Greenwich-Hofpital. Mafters of fhips to dctain the 6 d . per month out of feamens wages.
The 6 d . a month paid by feamen, fhall extend to fhips belonging to Great-Britain and Ireland, and the illands in America, \&c. and collectors to be appointed, who may examine all mafters of veffels; and they to pay the duty before fhips are cleared, under the penaliy of 201 .
Only the feamen in the king's fervice' were entitled to a place in Greenwich-Hofpital; whereupon the following act was made, fetting forth, that
As there is no provifion made for fuch feamen in the merchants fervice, as are difabled by accidental misfortunes, or for thofe worn out by age, or for the widows or children of fuch as fhall be killed or drowned in the faid fervice; and as the feamen in the faid fervice are willing to allow 6d. per month out of their wages, to be applied for the relief of fuch as fhall be difabled or worn out by age, and of the widows and children of thofe killed in the faid fervice;
It is provided that Alexander Hume, John Briftow, John Bance, Henry Gough, \&c. Thall be one body corporate and politic, by the name of the prefident and governors for the relief and fupport of fick, maimed, and difabled feamen, of the widows and children of fuch as hall be killed, flain, or drowned in the merchants fervice; and that by the fame name of the prefident and governors, they thill have perpetual fucceffion; and that they may receive and enjoy in truft, for the purpofes of this act, all fuch fums of money as are granted, and fhall be raifed by virtue of this act, or thall be contributed or bequeathed by well-difpofed perfons; and that they may at any time bereafter, without licence in mortmain, purchafe or receive any lands, tenements, or hereditaments, or any eftate or intereft thee ein, fo that the fame be only for the fcite of, or to be converted into, an hoipital, with offices and appurtenances neceffary for the faid purpofes.

## S E A

The prefident and governors fhall provide in the faid hofpital for the reception of feamen rendered incapable of fervice, or Chall allow them certain penfions, 'or otherwife, as they fhall think mof for the advantage of the faid charity; and hall alfo relieve the widows and children of-fuch feamen as than be killed or drowned in the faid fervice, provided fuch chi dren are not of the age of 14 , or if , of that age or upwards they are incapable of getting a livelihood, by reafon of lamenefs, blindnefs, or other infirmities, and are proper objects of charity: and thall make reafonable allowances to thofe who fhall lofe an eye or limb, or be otherwife hurt in fighting, defending, or working the fhips in which they ferve, or in loading or unloading the cargoes, or otherwife hawfoever in doing their duty, in proportion to the damage they thall receive, fo far as the revenues will extend for the faid pur, fuch rules, orders- and regulations, as fhall be eftablifthed im purfuance of this act.
No feaman thail be provided for by a perfion or otherwife, as decrepit or worn out, unlefs he fhall have ferved five years in the merchants fervice, and paid 6 d . per month out of his wages for that time for the purpofes of this act.
If any perfon thall at one or more payments contribute 50 . for the purpofes of this act, he fhall bee declared a governor of the laid corporation.
Every feaman, or perfon employed in any veffel belonging to a fubject of England, and every mafter or owner navigating the fame (other than fuch apprentices, under the age of eighteen, as are exempted from payment of 6 d . per month to the hofpital atGreenwich, by an act of 2 Anne, anaperfons employed on the coafts of englatid, in taking of filh brought frefh on fhore; and perfons employed in boats or veffels that trade only from place to place within any river in England, or in open boats upon the coafts thereof), and pilots employed on board veffels, fhall, after the 29th of September 1747, pay 6d. per month, and proporitionally for a effer time during their employment, for the purpofes aforefaid.
The mafter, ownier, or commander, of every veffel, is to deduct out of the wages, \&c. of every fuch feaman, \&cc. (except as before excepted) the faid duty of 6 d. per. month, and flall pay the fame to fuch receivers as the prefident and governors, or the truitees of the out-ports, Mall appoint, if fuch feamen, \&c. (hall have or be-intitled to any;wages, hares, or profits.
Thofe feamen who fhall have been longeft in the faid fervice, and contributed moft towards the faid duty, -fhall be firf provided for as worn out or decrepit.
If any feaman, or other perfon employed on board any veffll, fhall, in the difcharge of his duty, either on thore or on board, break any limb, or be otherwife hurt, fo that immedhate care is neceflary to be taken of him, the prefident and povernors of the port of London, and the relpective truftes for the out-ports fhall provide proper relief for fuch perfon, until he be to well recovered of fuch hurt, as to be removed and fent with fafety to the port to which fuch yeffel belongs; and the expence thereof, not exceeding 2 d . per mile; thal be paid by the prefident and governors at the port of London, or by the truftees for the out-port to which fuch perfort thall be fent.
If any feaman or other perfon fhall ferve five years or more in the merchants fervice, and thall have, paid the 6 d . per month for that time, and thall' be adjudged by the prefident and affiftants, or the refpective truftees, a proper object of relief, he fhall be provided for at the port where he fhall have paid the greateft past of the faid duty for the laft five years of his fervice.
If it fhall happen that feamen employjed in the merchants fervice, within the limits of this act, hall be fhipwrecked, or taken by the enemy, and on their return from their imprifonment may be travelling with paffes to the place'of their
abode, the prefident and governors, and the"refpective trufees, may relieve them in fuch manner as they thall think propet.
Whereas the united company of merchants of England tra... ding to the Ealt-Indies, have at theiri own expence provided for fuch feamen employed by them às have been rendered incapable of fervice, and have efablifhed a fund jor that purpofe, and are therefore defirous that the perfons employed in the faid fervice, may be exempted from the patment of the faid 6 d . per month; it is therefore enaced, that no officer, Seaman, 8cc. of any veffet, employed in the teryice of the faid companys thall, daring the time of Tuch, fervice, be liable to the payment of the raid duty.
No officer or feaman' 8 \&c. during his employment in the fer vice of the faid company, nor the widows or children of fuch as fhall be killed or drowned, thall be entitled to any benefit by this act, during the time they fialli beemployed in the faid fervice.

- The act for making perpetual an act for the better refzula-
r. tion and government of feamen in the mërchants fervice, and for extending the provifions thereof to his majefty's colonies in America, was made in the rif yeâr of George III.
- From and after the ift of May, 1764 , all the provifions,

1. penalties, matters and things, in the act of 2d of Geo. II,

VOL. II.

## SHI

are eytended to his majefty's colonies in America; and the forfeitures applicable to Greenwich Hofitital are to be paid there, to the officer conffituted by the admiralty; and mafters of flyps deducting any of the faid forfeitures out of the feamens wages, and not duly paying over the fame, forfeit treble the value to the ufe of the faid hofpital. SHIP-BUILDENG; fee Architecture Marine.

## SHIPPIN'G.

The dimenfions', tonnage, and number of guns of fome men of war built in Spain, the Indies, France, Erigland, and Genoa; and the rules of the Spaniards, French, Englifh, and Dutch, in regard to their failors and mariners, according to Don Géronimo Uztariz, the celebrated Spaniard.

In the collection of the laws of the Indies; and fome other books publifked in Spain, there are inftructions and directions for building thips; and there were plans drawn up by lieu-tenant-general Don Antonio Gaffaneta, and approved by his Majefty, in the years 1713 and 1720. Though both there fchemes met with oppofition from the variety of opinions ufual upon fuch occafions, *and the difagreement between kingdoms in this article, which not only differ from one another in their rules, but even from themfelves in practice, we ought to prefer the plan laid down by this general for his Majefty's hhips of war, both from his great experience in navigation, and his fkill in naval architecture, acquired both by theory and' practice; and purfue it at leaft, 'till his Majefty hall'think proper to prefcribe another.
In each of thefe plans are expreffed the particular dimenfions and other circumftances, that ought to be obferved in building men of war and merchant thips; however, I fhall give the dimenfions, number, of guns, and men of a fhip, built after the rules practifed in Cantabria, and allo of fome others built in France, England, Genoa, and Campeachy, within the laft five and twenty years; and at the fame time fay fomething of our old method of building; that as we obferved the great difagreement already mentioned, by comparing our own rules with thofe of foreigners, we may be moft likely to difcover the beft and fafeft plan.. This account is taken with great care from the papers drawn up at Cadiz in the year 1718, by fome officers of bis Majefty, of great experience in the fea fervice, who made a very particular furvey of thefe and the reft of the fhips and frigates of his Majefty's fleet that year. TThe extracts which I have taken from this memorial, are as follow :

The St Lewis, built in Cantabria in the year 1715, a third rate.

| The lower tier |  | Pound. | Guns. |
| :--- | :---: | :---: | :---: |
| The fecond tier | - | 18 | 26 |
| The third tier | 12 | 26 |  |
|  |  | 6 | 8 |
|  |  | Total of guns | 60 |

It is to be obferved, that in manning fhips of war at Cadif, they neither obferve the old cuftoms of Spain, nor yet that of the French, Englifh, or Dutch, and therefore I Glall give each of them dintinctly,
The number of hands on board the fhips of the Spanifh fleet in general, was after the rate of 26 failors and 26 marines to a hundred tons, But in the capitana and admiral's ship, after the rate of 28 of each fort to a hundred tons, and uporr account of the fignals a bundred hapds more, viz. 50 failors and 50 marines, were added to the complement of each thip, agreeable to feveral royal ordjnances, made between the years
To a fhip of ho densw wer atowed as many
gunners, and a fouthmore making in all
There was added a fourth of , this number 75, viz. 58 fes-oflicers, which makes There were failors equal in number to both
thefe ums, and a fifth more or thefe fums, and a fifth morfe, of
Boys equal to a third part of the failors or
75 gunners. 18 fea-officers

II failors. 37 boys.

Total 24 I
To there 241 mariners were added the fame number of marines

241 marines.
Both fums, in which their officers are included, make

## S H I

The complement of a French man of war is three men, 2 gunner, a marine, and a failor, to every four pounder.

So that a fhip of fixty guns, viz. the St I_ewis,
which mounted 26 eighteen pounders, 26$\} 560$ hands twelve pounders, and 8 fix pounders, accord-
ing to this rate, has for her complement
The Englifh and Dutch fay, they have a man $\left.\begin{array}{l}\text { lefs than the French to every gun, fo that their } \\ \text { complement of fixty gun ohips mult be after }\end{array}\right\} 500$ hands complement of fixty gun thips mult be after this rate
$\left.\begin{array}{llll}\text { A Spanifh fhip's complement for fixty guns } & 482 \\ \text { French } & - & - & 560 \\ \text { Englifh and Dutch } & - & - & - \\ \hline\end{array}\right\}$ hands.
A diftinct lif of the officers, failors, marines, \&c. making up the 500 hands, which, according to the cultom of Spain, were allowed to a fixty-gun fhip , including fifteen fwobbers, that were not reckoned in the 482 ; becaufe the full complement was fhipped according to the rate of the men of war, independent of thefe, there having been a reform made in refpect to the number of marines, which before made up half the thip's crew, that they might be reinforced with troops in cafe of their making auny invafion afhore; but as engagements at fea are now decided by great guns, failors are fitteft for this fervice.

Superior officers.

To thefe 500 men are appropriated 509 ratios, or allowances per day, in conifideration that 6 ratios are affigned to the captain of every large fhip, and to the cadets or guards marine, during any expedition, half a ratio extrzordinary. So that there multiplied by 30 , the number of days in a month make 15,270 ratios.
The following articles make up a thoufand ratios.

| Bifcuit | - | 11 Quintals, 25 pounds. |
| :--- | ---: | ---: |
| Wine | - | 46 Arrobs, 7 azumbres. |
| Bacon | - | 1 Quintal, $9 \frac{1}{2}$ pounds. |
| Beef | - | I Quintal, 46 pounds. |
| Bacallao | - | 86 - Pounds. |
| Cheefe | - | 54 Pounds. |
| Burter | - | 1 Quintal, 25 pouthds. |
| Oil | - | I Arrob, 2 pounds. |
| Vinegar | - | 1 Arrob, 4 azumbres. |
| Wood | - | 15 Quintals. |
| Water | - | 125 Arrobs. |
| Salt | - | 1 Celemin. |

In the 30 ratios, or day-allowances, are included the follow. ing articles for every thouland.

| White bifcuit | - | $22 \frac{1}{2}$ Pounds. |
| :---: | :---: | :---: |
| Mutton | - | yo Pounds. |
| Fowls | - | $2 \frac{4}{7}$ Fowls. |
| Egg | - | $3^{0}$ Eggs. |
| Raifins | - | 3 Pounds to ounces. |
| Almonds | - | $2 \frac{3}{4}$ Pounds. |
| Sugar | - | $14{ }^{2}$ Ounces. |
| Charcoal | - | 15 Pounds. |

The fhip Nueftra Senora de Begona, built at Genoa, in the year 1703.

The flhip Nueftra Senora de Guadaloupe, built at Campeachy in the year 1702.

## Fourth rate. <br> Cubits

N. B. In the memorial it is mentioned, that notwithifanding this Thip was feveriteen years old, it might fill be fit for fervice twelve or fourteen years more, on account of the goodnefs of the timbers.

The Hermione frigate, built at Breft in the year 1702.

The St Jofeph frigate, built in England in the year 1704. Fifth rate.

Cubits.

## S HI

The thip Conde de Tolora, built at Toulon.

Englifh packet, or advice-Thip, built in England.

3 pounders
The lhip the Conquiftador, builtin England.

Of the Royal Shipping, or Marine of France, and other States, being an abftract from M. Deslandes, drawn up by the order of, and addreffed to, the Count DE Maurepas, fecretary of fate and of the marine in France.

Every body knows the feveral eftablifhments of the marine in France; every one knows, at lealt in the grofs, what pains, what labour, what vaft fums of money they have coft; how many experienced arts and artifans have been drawn together, all of them, in point of curiofity, as well as utility, worthy the particular attention even of fuch as are ufed to, and well' verfed in, thefe fort of things. Thefe eftablifhments are likewife remarkable, by a great number of officers of all ranks, placed in fuch a relation to each other, as that their fubordination affifts, and never prejudices, their duty; and as, in the marine, there are three principal objects, that, by turns, command and employ all their care, fo thefe officers are divided into three clafles, who have, indeed, different parts affigned them, but who, by the difcharge of their fevesal duties, concribute all to one great end.
The firft object of the marine in France is, as it were, a prologue to the reft; and confifts in affembling the materials that are proper, in forting and in difpofing them, fo as to render them applicable, with the greateft eafe, to all the ufes of navigation. Thefe preliminaries relate to the viewing, purchafing large falls of timber, and appropriating them to their proper ufes, on the knowlege of buying and fo ting an infinite number of all kinds of commodities, on the manner of employing them, and drawing the greatelt utility from them, in the conftruction, careening, and equipment of veffels. It is difcernable at firft fight, that to be mafter in this art, there is required a judicious mixture of theory and pracart, there is required a judicious mixture of theory and prac-
tice, joined to a very extenfive genius, perfected by a conftant experience.
Hence it is that France have never bad, in the marine, but two intendants of confummate abihtes, viz. Defcloufeaux and Vaurre, both chofen by M. de Sergnelai, bath of them men of elevated genius, who had high conceptions, and who never confidered difficulties in any other light, than as fteps conducing to the glory of furmounting them.
The fecond object comprebends the management of the dif-
ferent branches of duty on hip-board, and the conduct of fhips at fea, or navigation, ftrictly and properly taken: and this fuppofes two parts, viz. the art of piloting and of working : the firf refpects the ufe of the compars, maritine charts, inftruments for taking the height of celeftial bodies, or for meafuring the fhip's run, with the rules and conjectures neceffary to make a good eftimate [fee the article Navigarion]. The other regards the management of the fails and of the helm, as well with regard to her courfe, as to theadvantages that may be obtained from the winds, and from currents, and with refpect to the fhip's driving or altering her courfe through their force *. How many opportunities are there here for exercifing all the faculties of the human un derftanding!

* Mr Pitot; onie of the members of the Royal Academy of Sciences, has given us an excellent work on that fubject which far exceeds any hitherto publifhed. The book men tioned by our author, is entitled, The Theory of working Ships applied to Practice, containing the Principles and Rules for Sailing with the greatef Acvantage poffible.

The laft object of the marine feems only to comprehend what is acceffary; and yet this, by little and little, comes to be con fidered as the principal part. The acceffary confifts in certain forms and methods, which are feitled in every port, in order to bring all expences to a juft account, fixing the eftimate, mufter-rolls, and other things of a like nature, and, in fhort, what is called keeping the hip's books. It is true; that, generally fpeaking, theie things are neceffary and ufeful, efpecially in providing againft frauds and abufes; and yet it may be that even thefe frauds and abufes had better be borne with; than the tedious and troublefome parade of formalities invented to get rid of them.
To thefe three claffes anfwer three forts of officers, who keep themfelves each to his province; and never pretend to carry their views farther. This is all that is expected at this time of day: fo that every profeffion is bounded, and any one of them is thought fufficient for the exercife of one man's capacity.
This is, in grofs; what concerns the royal marine. As to the marine in the bands of private perfons, it is diffributed through, and flourihes in, all the maritime provinces of the kingdom, where it is more or lefs diftinguifhed, firft, according to the degree of fortune, ability, and induftry of thofe concerned in it; fecondly, in proportion to the quantity of gold or filver that circulates; thirdly; according to the critical circumftances, which increafe and diminifo quicken or retard; this circulation. Hence it is, that the fame places are not always equally powerful, or poffeffed of an equal fhare of trade. Repofe and inaction frequently fucceed the greateft hurry; fometimes, alfo, that luxury, which iol lows riches at the heels, ats they again are produced by trade; that luxury creates fuch a diffipation of wealth, that, before it is well feen, it vanithes away.
Upon this fubject I will jult mention one of thofe happy obs fervations that every body makes; and no body minds. Moft of our traders burn with vehement defire of growing rich: to do this, they fpare neither pains nor labour, but run all haeards, and endure all toil, to attain this end, but when they are once become exceffively rich; by all their affiduity and fatigues, they think of nothing but procuring pompous tides; and noble alliances, of which they find juit caule to repent, every vein of their hearts : they are defoifed and flighted, while they foolifhly confume what with fuch infinite labour they acquired.
There cannot be then any thing more iffeful for exciting and recompenfing judicious and ab'e traders, than to teach them that fenfible maxim of the author of Occonumies Royal and Politic, viz. To banifh intirely luxury and fuperfluty, whence their ruin is drawn on, and thereby a wide gap opened in fociety.
Commerce by fea is carried on in three different ways: the leaft confiderable is that from one port or creek to another, and which is called coafting: it ferves principally for maintaining a conftant correfpondence between all the maritime provinces of the kingdom, by fupplying from one what is wanting in another. This commerce is fo much the thare advantageous in France, becaufe it inccurages induftry, and may be carried on with equal cafe and fafety in almult all feafons of the ear; whereas, in the northern couniries in England, and even in Holland, they are blocked up the beft part of the winter by the ice, which hems in their veficis, and expofes them to greater inconveniencies, by unexpected fhocks when at fea: France is, benides, much lefs expofed to fudden inundations of the fea, and there happen fewer thipwrecks on its coafts than in thofe of other countries, though even its coafts are nor every where free from danger.
The fecond kind of maritime commerce is, that which is carried on throughout Europe, and comprehends thofe real and effectual fuccours which one country lends antither, and by effectual fuccours which one country lends ancther, aind
which all its feveral kingdoms become riciprocally uleful. which all its feveral kingoms become riciprocally uleful,
Thefe fuccours confift either in the products of their foil, in she works of manufacturers, or in curivitities; ald it is eafy

## S H I

## SHI

to difeern, that the better any kingdom is ftocked with thefe, the more ftrangers will refort thereto, and the more trade will flourifh. The two branches of which it is compofed in all countries are, as I have faid, the product of a fruitful foil, and the labours of an induftrious people. France, in her hemp and flax from Bretagne; in the falts of Broüage, of Marennes, and of Croifie; in the red wines of Bourdeaux; in the white wines of Anjou; in the brandies of Nantes, of Cognac, and the life of Rhe; in the papers of Auvergne and Angquieme; in the parchments of Normandy, and the gold and filver brocades fabricated at Lyons; in all forts of grain, wheat, barley, oats, rye, has fufficient refources for commerce, which never can fail her. I muft confefs, that fince the revocation of the edict of Nantes, over which we ought to draw a veil, as the moft unlucky event in the reign of Lewis XIV. I muft confefs, I fay, that many of our manufacturers are naturalized in foreign countries; but there are ffill enough left in the kingdom, if they were well managed, both to employ its inhabitants, and to inrich them. All that we ought to fear is remifnefs, bad working, and, if I may dare to fpeak out, a fpirit of fraud and deceit; for we ought not to fatter ourfelves, that through the wife rules, and from the authority of many royak ordinances, which direat the obfervations of thofe rules, our manufactures are no Jonger fubject to thefe three forts of revolutions.
From the time that Edward the Third drew over a vaft number of artizans, who efcaped from the exceffive cruelty committed by the Spaniards in Ghent, Louvaine, and other cities of Brabant, and made ufe of them for effablifhing in England woollen manufactures, thefe manufacturers have never degenerated, have never loft their credit or reputation *; they are ftill on the fame foot, and furnifh fine cloths of all colours, with which the Englifh carry on a large trade, as well in Germany, by means of the ftaple they have eftablifhed at Dort, as in the Levant, by the way of Smyrna. Heretofore, neither they nor the Dutch could approach the coafts of the Grand Seignior's dominions, but under the banner of France [fee the article Levant Trade], but at this day they trade there in their own name, and in their own right; and one may very fafely fay, that, in proportion as their trade has increafed, our's has fuffered by many loffes, bankruptcies, and other caufes of declenfion, that many very much queftion whether it will ever be able to recover its ancient luftre. The voyages of which I have been hitherto fpeaking, even fuch as carry us to the very extremities of Europe, merit only a curfory attention: the true commerce by fea is that which embraces the other three parts of the globe, that which requires the whole force and fkill of the nautic art. As the dangers therein are greater, and the riks run more than ordinary, fo its profits are alfo very confiderable; and it is thence that we derive fo many fhining fortunes, acquired by lawful means, and which ought never to be confounded with thofe baftily raifed and odious eftates drawn out of the miferies of the people, and tinctured, if I may fo fay, with their blood.

We wifh what Monfieur Deflandes fays upon this occafion was true; but fome recent inftances prove the contrary, to the great candal, as well as detriment, of the Englifh woollen manufacture : but it is to be hoped that the legiflature will take due notice of a practice fo pernicious in its confequences. See the articles Artificers, Manufactures, Mechanics, and Royal Society of LonDON.

Almoft all the nations of Europe carry on, at this day, fome commerce either with Alia, Africa, or America; but we are not to conceive from thence, that this renders them all equal. Though the Portugueze are very juitly confidered as the reftorers of the marine, and of navigation, as having heretofore great territories in Afia, infomuch, that feveral Arab kings were in their pay, and many pagan princes thought themfelves honoured by the commands of thefe new mafters, their authority, however, is now but the fhadow, and their power but the fkleton, of what it was. [See the article PORTUgueze East-India Trade.] They fupport themfelves on the remains of their old reputation, which time has almoft worn out; and Goa itfelf is no longer known but for its terrible inquifitionx that horrible tribunal *, where no forms of jultice are obferved, and where natural equity never finds a place in their decrees. The Hollanders, at prefent, are the great mafters of the commerce in the Eaft-Indies, which they manage with infinite addrefs, mingling com-

* The hifory of this inquifition was written by a phyfician, who had proved not its falutary, but its unjuft rigours. Happy France, to have looked always with horror on a ribunal which has fo much dicredited, and rendered to odious the Chriftian name! More happy fill, if the priefts do not, fome how or other, find means to introduce it under another name!
The phyfician mentioned above, was one Mr Dellon, and a very good book his is; bat the beft that I have ever feen on the fubject, and that which deferves to be read by every curnous perion, is the Memoires Hittoriques poar fervis a l'Hatorre des Inquifition. A Collogne 1716,2 vols. 12 mo .
plainance with a pirit of dominion, and having equallir re courfe to artifice and force. An ancient wrier wothed, that arms were always fuhject to the gown; at Batave, and in the relt of the Dutch colonies, they are both fubjuct o trade.
All the world knows that the belt part of America belongs to the Spaniards: I muft confets I am a liftle in the dark as to their title; nor can I pofitively fay, whether the ill urage they havé given the natives, and the many thoufands of heir throats they have cut, has created them a good one: but this is certain, that their power is too extenfive in itfelf, oo ruinous, by the conduct of their bifhops and governors, who purchafe all their dignities and employments, and too much hurt by that fraudulent fpirit of private gain which poffeffes all who refide there, to fubfift long. Befides thts, their government grows daily worfe and worfe, there being little union between the principal who manage there, and a kind of infenfible ufurpation growing up, which the Spaniards themfelves do not perceive, or, which is worfe, affect not to perceive.
The principal fault in the government of thefe valt kingdoms appertaining to the Spanifh monarchy is, that their orders never arrive in time, and, when they do arrive, it is next to an impoffibility to get them executed; two things which ufually caufe the mifcarriages of all great affairs.
Within about half a century paft, the Englifh have found the true method of managing affairs in America, and without which they will hardly ever fucceed: all their fteps in that country are directed with the wtmoft prudence; they fearch for, and embrace, every new branch of commerce that induftry can difcover, or that chance prefents; they protect and perfect all their old colonies, and, at the fame time, do not neglect planting new; in fhort, they act as if fortune had referved for them, fome time or other, the intire dominion of that mighty country *.
* The Englifh reader-fhould be here put in mind, not to be led away with the praifes beftowed upon their nation by his writer, and of their wifdom in conducting their colonies. Thefe are not to be confidered as genuine and candid reprefentations, flowing from the real fentiments of the author, but as artuficial colourings, neceflary to raife the jealoufy of thofe to whom he writes, and making his countrymen thereby the more keen for the deftruction of this kingdom.

As to the advantages, continues this writer, which regard the marine, and which France, in her fituation, may find in her own proper bofom, they may berreduced to four ; of which the firft, without contradiction, is her fituation, the moft commodious, and the moft advantageous that can be in the world, as well for attacking as defending, and for difturbing the commerce of others, as for cultivating her own; fending to all places, and receiving trading veffels from all parts of the earth : hence it was faid to the late Czar, Peter I, whofe head was always full of great projects, and to the king of Sweden, Charles XII, fo unfortunately affaffinated before Frederickfhal, That, if any kingdom could afpire to be the miftrefs of all her neighbours, it minf be France. In effect, the is placed in the middle of Europe: nothing can impede, nothing can prove an obftacle to her; the commands, on the one fide, over the ocean, and it feems, by the extent of her coafts, by their turnings and windings, that the feas of Spain, Germany, and Flanders, ftruggle to pay her Homage; on the other, fhe is bounded by the Mediterranean, looking full upon Barbary, having on her right-hand Spain, at her left Nice, Genoa, the dominions of the Grand Duke, and all the reft of Italy. What a fituation is this, if we knew but how to make ufe of it, and if, opening our eyes to our intereft, we no longer languifh in foft effeminate idenefs!
The Englifh and the Dutch are forced to frike out far for whatever is neceffary to them, and are conftrained to put out to fea, in order to reconnoitre and attack their enemies whereas France is able to attack them, as it were, hand to hand, to combat with advantage, and to retire with eafe which are advantages of no fmall confequence at fea: but, what is ftill more, foreign veffels that return from long voyages, worn and beaten by the wind, and by the tempefts, foul in themfelves, and weakly manned, pais, as it wese under our eyes, in the view and at the mercy of France, as cardinal d'Offart obferves, and, in fite of themelves muft approach our coaft. One may eafly judge what a facility this gives of carrying them off, or, at leaft, difturbing their navigation, which mult turn, fays the fame cardinal, to the profit and commodity, to the fafety, grandeur, and reputation, of the crown of France.
As to the reft, all that I have been faying here is not to cry up, or to make an elogium on war, in order to turn mens minds thereto, who have, perhaps, but too great an inclination for it already. I know, on the contrary, all the merit of a gentle and moderate government, of a government where juftice and good faith prefide, where all endeavours are ufed to drive out the feeds of hatred and jealoufy, and where no pains are fpared in the cultivation of $\begin{gathered}\text { tranquillity }\end{gathered}$
tranquillity and peace ; but to avoid being deceived, fays cardinal Richlieu, we muft fleep like the tion, without shutting our Eye3, which ought to be continually open, in order to forefee the fmalleft inconveniencies that may happen. For hence it is that we often fee in ftates, that fuch evils as were imperceptible in their origin, and which fuch evils as were imperceptible in leaf dangerous, and thofe which prove of the greateft confequences in the end.
In effect, a wife prince, and one who has regard to his intereft, ought to watch attentively over every thing that may contribute to the fervice, or to the prejudice, of his crown. He ought, with the fame vigilance, to weigh duly the prefent fituation of his own kingdom, and of the other kingdoms that furround him. While the ballance continues even, an eafy and pleafant union will certainly reign; hut, as foon as this fails, quarrels, animofities, and diffentions, will arife, and will encreafe: FRANCE is too clearfighted ever to be ignorant of the Extent of her Power, and nothing can outrage her more fenfibly, than to fufpect her being ignorant of it . Always ready to DECIARE WAR, fhe ought, bowever, never to attempt it unjuftly; ever in a condition to defend herfelf, the fhould never be in a dif polition to bear injuries: Veniendum tunc ad arma, faid Theodoric, king of Italy, cum locum apud adverfarias juftitia non potelt reperire; i. e. We are then to have recourfe to arms, when juffice no longer finds place amongft our adverfaries.
It is reported, that Henry III. imagined onie night that he was in the midht of a troop of lions, tygers, and leopards, ready to devour him; and the next morning, quite out of his wits, and terrified about the confequences of a dream, which he ought to have defpifed, flew to the caftle of Madrid, where he kept a great many foreign wild beafts, and ordered them to be all killed in his prefence. This tragedy fettled his mind, as idle and ridiculous as it was. Any one might have whifpered in his ear, The animals that threatened you, were not thofe in your menagerie, but, on the contrary, your neighbours, always difpofed to hurt you, and above all, your-maritime neighbours.
The fecond advantage in which we ought to think ourfelves happy is the fecurity of "our coalts, which in a manner defend themfelves, and which have hitherto defeated all the defcents that ever were attempted on them. Witnefs thofe that admiral Tromp would have made in 1674, not only at the mouths of the Loire and of the Groyne, but along the coafts of Bretagne, Poitou, Saintongue, and Guienne. He found that all was fo well guarded, and that every where fo good orders were given, that he durft attempt nothing conliderable. Witnefs again the defcent attempted by the lord Berkley in 1694, at Camaret, in which the Englifh loft upwards of 1200 men , with general Talmafh, who commanded the troops that were debarked. The French, however, oppofed him with no more than two independent companies of marines and the militia appointed for the defence of the coaft. Piqued at this unfortunate expedition, ord Berkley attempted feveral other defcents on Normandy and Flanders, none of which, however, were attended with any better fuccefs.
To this natural fecurity of our coafts, which enables us to fave a mighty expence, may be added the fertility of our Maritime Provinces, as well as thofe that are wafhed by the ocean; a fertility which renders them extremely agreeable, opulent, and populous, by drawing to them a vaft concourfe of ftrangers. All the other kingdoms of Europe, on the contrary, complain of the unlucky fituation of their coafts. Here they are abfolutely barren and full of mountains of fand ; there grows nothing that is ufeful, nothing that comes to maturity farther off; both country and people feem alike neglected by nature.
Thefe kingdoms, however, have an advantage that is peculiar to them, and which I could almoft envy them; it is this, that the fea wathes their principal cities where the court makes their refidence, and where we fee united all the politenefy attending a royal prefence, with all the force that depends on a maritime ftrength. We admire there the art and intelligence that' is neceffary to make the feveral parts of fo vaft a machine move in regular order, and in fuch a manner as to affilt each other; they take by the hand, if I may be allowed fo to fay, riches and conveniencies from all quarters; every body interefts himfelf in the profperity of trade *, and nohe are fo blind as not to fee, none fo obflinate not to acknowlege, that upon this depends the happinefs of the ftate.

* It is to be wifhed, that what this French author fays, was really the cafe in Great-Britain

This is what happens every day in Portugal, Mufcovy, Denmark, Sweden, Great-Britain, and Holland, of which al the capital cities ftand upon, or very near the fea; Paris, on the contrary, knows nothing of ir, but by maimed relations, and, if I may fo fpeak, flories at fecond hand. We behold there a voluntary indolence throughout, which concerns itfelf about nothing that does not conduce either to amufement or VOL. II.
to pleafure; and 1 am very pofitive, that as to half the thing ${ }^{3}$ that are confumed, and balf the raricies that are admired there, they know not by what country, or by whofe induftry they are fo obliged.
This ignorance; which is almioft general, of what is produced in our own country, and what comes from abroad of the neceflaries of life, or that ferve to nourifh lazineis and increafe luxury, affords room for that llight regard, or rather abfolute contempt, that is had for navigation and commerce* But this unjuft contempt would be quickly extinguifhed, if inftead of a fedentary education, alwars within the fhadow of the houfe in which they were born, we took care to make fuch young people travel, as feem deftined, either by their birth or fortune, to the firft places in the government. If we explain to them exactly all that relates to our colonies, all that is indifpenfably neceffary to fupply the wants of this kingdom, which daily grows more and more: if we inftructed them in the principal manufactures that employ and enrich our feveral provinces; and pointed out to them fuch as are beginning to decay, and fuch as, though they are abfolutely decayed, might yet be rettored, and brought to be of infinite benefit to the kingdom, by preventing going out of great fums into foreign parts: if, in fine, they were made perfeatly to comprehend the three branches that conftitutue the riches of the kingdom, viz. eftates in land, trade, and manufactures: if we lhe wed them the connection of thele three branches, and how they ougbt mutually to prop and fupport each other, how the real effects of any country augment in yalue in proportion as commerce and manufactures are themfelves augmented, and thereby the circulation of gold and filver, which is become the flandard, the commion meafure of the confidence of the public, and the authority of the fovereign: if all this fhould be laid down in a clear and familiar method, and in juft and evident calcuations, in order to avoid loading the memory too much; would not fuch an education be infinitely more valuable, than thofe of which we are at prefent fo fond? Would there not arife from thence both greater refpect for, and greater profit to, the common-weal $\dagger$ ?

* This is apparently calculated to animate the French nation to the fludious regard of its trade and navigation.
$\dagger$ We are willing to flatter ourfelves that the work wherein we are engaged, will not a little contribute to the cultivation of fuch kind of knowledge among the nobility, gentry, and merchants of this kingdom. See our article Mercantile Cellege.

The third advantage which France enjoys is, that the mot confiderable armaments may be there made with the greateft readinefs and facility. She not only draws out of her own tores almoft all the materials requifite to a maritime force, but fhe nourifhes alfo, within the compals of her dominions, an infinite number of able artificers, capable of employing thefe materials in the beft manner.
There are likewife amongt theic workmen, fome ingenious difcoveries, very little known abroad, and which baving been made at different times, have paffed as a kind of legacies from parents to their children. Thefe difcoveries do not confift in perplexed réafonings, but in Experiments and FACTS, which fuffice for the current fervice of the MARINE, where, generally lpeaking, it is of far greater conequence to execute quickly, than to think how a thing may be done nicely, and where whatever is performed by men labour, is preferable to what is done by machines. The conclufion of all this matter is, that we cannot be too careful in preferving this race of workmen, [fee our articles Artificers, Manufacturers, Mechanics], whofe induftry is perpetual, and increafes as it continues; a race of mean people it is true, but who furpafs, in my humble opinion, the lazy noblity, who make the purfuit of pleafure their fole occupation; a nobility, as M. de Sully fays, among whom we find more mongrel gentlemen, who are fit to make buffoons, gamefters, or porters, than to apply themfelves in a generous way, in carrying arms for the fervice of their king,' or the defence of their country
What I have been faying recals to my mind an excellent remark inferted by M. Colbert, with his own hand, in the inftruction which he caufed to be drawn up in 168I, for the dyeing of wool of all colours, and for improving drugs, and other materials employed therein: 'One cannot look, fays - he, on the fertility of France, or fee fo great a number of ' lazy fellows, who fit ufelefs, and with their arms folded, - while they might be fo advantageoufly employed, either in - the cultivation of the earch, or in many other ways, which - nature has pointed out for their benefit, in order to live at - the expence of the blood and fubltance of others, without - blaming the form of government, and negligence of our ' anceftors, and their attachment to ufelefs employments; 6 which ferved only to fill their heads with wind and fmoke, - and thereby very often produce fuch forms and tempefts c as went very near deftroying the fate by the fury of civil " wars.' Before the time of M. Colbert, we were obliged to bring from Holland almoft every kind of fea-ftores, down to the iron-work for our anchors, match, cordage, 9 M
cables ready made, faltpetre, and even cannon powder, as if there had not been in this kingdóm forges, bemp, iron, faltpetre, fulphur, or men capable of going through hard latour. M. Colbert was determined to banifh forégn manutactures, and to eftablifh things of this fort at home, upon fo much better footing, as that they fhould quick'ly excel thofe which we formerly employed. He farther retolved, that we fhould extract from the natural riches of the kingdom, whatever it was poffible it fhould produce. He created in France, Ar ts, Taste, Genius, of which, 'till then, France was utterly ignorant, and which the has fince carried to fo great a perfection; and with regard to particular manulactories, he brought from countries where fuch manufactures were in the bigheft perfection, perfons who thoroughly underitood them fettled them in this kingdom, and whofe pofterity, enriched by his favours, do, even at this day, honour to his choice How much does fuch an example deferve to be follawed and how many illuffrious ftrangers would an obliging reception bring amonget us !
I mult confefs, that there are \%ome forts of commodities and merchandize neceffary to the marine, which only the northern countries produce. But it will be always eafy for us to provide ourfelves with thefe, by adhering conftantly to the two following precautions; the firf, maintaining a clofe alliance with one of the three great powers in the Baltic: the fecond, carrying on all this trade on our own bottoms, without ever receiving them' at the fecond or third hand, withou paying commiffions, which are always heavy and ruinous. I hall here take notice of a very fenfible regulation that is ob ferved in England, that ought to be regarded as the balis o all her commerce : the Eng lifh themfelves are alone permitted to export the commodities of their own country, or to import thofe of foreign nations. This practice puts that great ifland in continual motion, and is the reafon that money never circulates there at a price confiderably above its real value. It likewife hinders a pirit of indolence from communicating itfelf, and fpreading from one to another; that dangerous firit, more dejecting, through a too quick fenfe of evils, than thoughtful how to repair them, and which proves thereby; in the end, the ruin of the ftate. The connection there is between all the different parts of the fociety is fo clofe, that it is fimply' impoffible that a fingle perfon fhould be hurt, without the reft feeling the blow.
Though the times were then very perilous and difficult, yet we were not altogether ignorant of the value of fuch a cuftom, even in the days of Charles IX. In effect, that prince, fupported by an ordinance of Henry II, his father, prohibited, about the middle of the year 1567, all his fubjects to freight any foreign fhips, and all foreigners exporting French commodities in any other than French bottoms, under pain of confifcation: falt only was excepted on account of the prodigious fale, which is much funk fince the Hollanders, and other people of the North, have thought fit to purchafe it in Portugal, and to be content with the fort that country yields. Will it be believed, that the cutting off fo-antient and fo valuable a branch of commerce, which cardinal Richlieu efteemed more than the Spanifh Indies, is owing to nothing but certain ILL-CALCUlATED DUTIES, to which we have endeavoured to fubject it? What happineff! could this kingdom be brought once to underftand, that every operation in Favour of the Revenue which hurts commerce is mifchievous in itfelf, and that, with regard to commodities that are indifpenfably neceffary to life, the confumption is always proportionable to the duties impofed upon them.
The only remark as can be made, in fupport of this, regards the wants, we begin to feel in France, of all forts of wood fit to be employed in building. Neither ought this obfervation to be confined only to that fort of wood, but to all others, that ferve either for carpenters, makers of carriages, or even which is deftined for the fire: thefe laft are particularly grown, almoft every where, exceflively fcarce, and prodigioufly dear: forges, glafs-houfes, the luxury of great cities, the too great curiofity exercifed about drefling good cheer, have confumed prodigious quantities, and we have taken no care to replace them: we feel every where the want of wood, and ftill we let it every where decay.
Thefe are certainly confiderations important enough to ftir up the zeal of fuch as are intrufted with the management of our Waters and Forests, confiderations which ought to induce them to fay, with one of the ableft men of the Roman empire, That we ought never to felicitate ourfelves on having done any thing, while there is yet any thing that remains to be done; and how many remain to be done which we know not! How many things are they ignorant of, who are intruited with thefe offices, and of which they will atways remain ignorant, while they retain fo great a concern for their own bafe intereft *!

* That the royal fhipping of the kingdom of Great-Britain has been fubject to much greater expences thaia has been neceffary, is a matter which, in the opinion of fome of the wifeft, greatelf, and honeffeft men in the kingdom, requires fevereft ferutiny into. This was the fentiment of a late able minifter, who, I am perfiaded, would have probed this matter to the bottom, had he lived.

No bady can pofibly doubt that wood, properly Ailcd foreftwood, was heretofore much more common than it is at prefent: moft towns, mont boraughs, a great part of tha equites, hat are at fuch a difance from themat chis day, were not only near, but even in the middt of thefe moods, I have travelled acrefs a long chain of mountains, which extend from weft to "eaft, and, in a manner, thwart the whole country of Bretagne: the ancient tradition of the place reports, ihat all there mountaing, which in a mannes touch one another, were formerly a continued foreft; and, is effect, having caufed an infinite number of places to be borad, to the depth of 35 or 49 feet, and have there found, amongt pradigious fpoils of the vegetable and animal kingdoms, trees in a manner quite intire, and as found as if they had been biut that moment cut down. This could have proceeded from nothing elfe but the quality af the foil in which they were pisntedid foil dry and fony, mingled with a red fand, and particles of iron, eafily taknin up by a knife touched with a loadfone.
But the greateft milchief that has bean done to the marine is, that of not haviag preferyed the foretto lituated near the fea-coalt, or on the banks of navigable rivers. Thefe forofts, condemned one after another, have been cut down out of caprice, or under feveral frivolous pretences. How much coft and expence, what an infinite labour, might have beenfpared, if they had flill fubfinted! It feems they made, here tofore, fome fuch reflections, and that the governors of Maritime Provinces were particularly charged with the care of Woops, and with the infpection of the fea and rivers; whence it came to pars, that thofe governors, officers removeable at the pleafure of our princes, while as yet fons never fucceeded their fathers in their offices, on a fuppaftion of their inheriting their virtues, took the title of farefters. This title was principally in vogue under the fecond race of our kings ; and we are affured, that Charlemagne was the firft that beftowed that title, and that he conferred on a Saxon lord, who fettled himelf in Flanders, the coafts of which were then altogether naked, and expofed to the incurfions of the Danes.
It is very probable that thefe great forefters performed the functions of a fort of officers, who began to be known, in the reign of the emperor Conftantine, under the titles of comites litoris Saxonici per Britanniam, of comites Cimbrici \& Ba. tavici litoris, of duces traClus Aremoricani, \&ec. Thefe officers were very powerful, and acknowleged none for theirfuperiors but the profectus pratorio of Gauls; they were equally charged to look to the fafety of the coafts, and to the prefervation of the forefts, eafles, and other edifices which ftood in or near the coafts.
The celebrated John de Tillet, firf fecretary to the parliament of Paris, obferves, that the word Forefl is derived from an old Low-Duteh term, which fignifies rivers, as will as woads. He cites, in fupport of this, feveral authentic charters, which are ftill preferved in the archives of the palace: amongft the reft, one by which Childebert, founding the abbey of St Germain des Prez, yields to it all his rights on the river Seine, as he then held them, adding, as the fame Til let obferves, and as they were his forefts. The true fignification of which term is certainly to be learned from bence, that anciently all the banks and fhores, indeed all the places adjacent to the fea, and to rivers, were filled with trees; and as they were firft iuhabited, grubbed up, and cultivated they beftowed the name of foreft equally on all place where wood and water were joined. The neigbbourhood retaned its denomination after it became more peopled; but by degrees, as inhabitants began to increafe, and barbarilim gave way to fofter manners, to more polifhed converfation, and to pleafures, towns were formed, arts were introduced, and the conveniencies of life were refined and improved every day. It was neceffary to facrifice to thefe ufes a great quantity of wood, in order to give prople, if we may fo fpeak, room to breathe: hence it came to pafs, that, preferving a few trees for ornament, they cut down all the reft, without reflecting, that a very tranfitory fatisfaction would induce frequent and grievous fits of repentance: in effect, the common complaint throughout almolt every part of the kinglom is, that there is no wood left, or, at leaft, that the poople are ruined by the expence of its carriage.
The late marquis'Seignelai, whofe views extended to futurity The formed a defign of caufing all the fea fhore to be planted with timber fit for Ship-Building. I don't know what obftacle hindered that defign, which was undoubtedly worthy the moft clear-fighted miniftry: it may be that, after mature deliberation, M. de Seignelai began to diftruft the French genius, always ready to feize, with ardour, new fchemes, and to abandon them afterwardsout of pure diffafte. He was affaid that a project which required an age, or an age and a half, to bring it to perfection, would appear a chimerical project: for the bulk of our nation, through a rapidity and intemperance of tafte, would have us purpofe and execute at the fame time, and would have iavention and perfection appear almoft together: works that require great application, fays cardinal Richlieu, are litde agreeable to our humour or natural difpofition.

The

## S H I

## S H I

The laft advantage refpects the order of government, and, in one word, the whole fy ftem of cur marine. The different ufages, regulations, and employments, and all forts of labours, are difpofed in fuch a mianner, that they enter into, and corroberate each other, fo as to afford mutual affiftance. We bave nothing to fear from what gave fo much uneafinefs. to the famous duke de Sully, when he became fuperintendant to the financès: as he found himfelf fopped at every turn by a heap of ufelef's formalities, difputes, and very ill-founded semonfranees, he could not help faying in a brifk tone, which exceedingly became him, 'Great kingdoms are not governed ‘ by flips of paper, fkins of parchment, frokes of a pen-knife, - feratches of a pen, vain words, or, in fhort, by imagina ${ }^{-}$ 4 tions, fancies, fhrugs, and grimaces.' The aim of this minittry was to quicken, and to render more fimple the operations of the treafury; and he was juftly afraid, that a long train of formalities, and round-about methods, fhould zeader the moft effential and decifive parts of all affairs lefs attended to.
In regard to the marise, it is divided into two corps, who are fo perfectly well acquainted with their refpective privileges and prerogatives, as to obferve one another with fome degree of jealoufy, and to put each other reciprocally in mind of their duty; and, while one of thefe corps,devotes itfelf to the fatigues of war, and diftinguilhes itfelf by its firmnefs and bravery, on the moft fhining and perilous occafions, the other, more tranquil in appearance, faves it a thoufand cares, and a thoufand inquictudes, which would confume that body to no purpofe. Courage begins to grow cold, when deprived of its,liberty of acting in its full extent, or when depreffed by many important cares; it wants only favourable occafions to appear and diftinguifh itfelf: at leaft, this is what the great M. Turenne believed, efpecially in the latter part of his life, and which he generoully expreffed, with a franknefs and confidence worthy of fo great a man. I have, faid he, only one thing to do, which is to conquer. Choifi has put all the frontier places into a frate of defence, Du Metz takes care of the artillery, and Jacquier makes it his pufine/s to pre vent my ever fuffering for want of provifions.
And fince I have been fpeaking of $M$. Turenne, give me leave to report a fine faying of his.in 1665 , to Lewis XIV, who afled him, in confidence, 'What would be proper to - be done, in cafe Philip IV. of Spain, who was very ill, - fhould happen to die?' M. de Turenne anfwered, upon the fpot, 'In that cafe, Sire, the augmentation of your thips s of war and gallies, would be of as great urility as the in-- creafe of your land troops, as well in refpect to what the - king of Spain has in the Indies, in Italy, and in Sicily, as - with regard to Spain iffelf, the entrance of which lies fair ' and open, by the way of Portugal.' An anfwer like this appears to me decifive; and if we had reafoned in this manner when the crown of Spain devolved on a branch of the houfe of Bourbon, all had ended well, and we had brought England and Holland, joined together, to the laft Extremity, by weakening their Trade. I will add further, that, though in virtue of his rank as inarflaal-general of the camps and armies of the king, M. de Turenne ought to have given his advice only in that fort of war which was properly his province; yet, fuch was the extent of his genius, and fo quick his apprehenfion of truch, as enabled him to difcern, that there were certain occafions in which.a Maritime Power alone ought to be employed, and where one vidory at $S_{\mathrm{EA}}$ is of equal value to a long feries of victories obtained by land: the very perfection of policy is to know how to enter into the differences, which are fure to efcape fuperficial minds.
I return to the eftablifhed order in the Marine of France: and I muft confefs, that what diftinguifhes it in a particular manner is, that Military Corps of which it is compofed, and which has an air of dignity, which diffutes itfelf over all its parts. Confidered in this light, there is not one in Europe which ought not to yield to it with reverence. The character of the maritime power of the DUTCH is ceconomy, and that of the maritime force of the Englisi is activity the firft, according to the republican genius, place all honour in faving, and direct all their views this way; whatever thould contribute to the ftrength or fecurity of their flips, they pare off to fave charges, as far as poffible, and by repeated endeavours this way, they expofe their veffels to frequent flipwrecks. I lay it down as a thing pretty certain, that, for want of thofe neceffary precautions, the Dutch lofe a third of the hips they equip every year.' As for the English, who are more judicioully covetous, they more than recover, by quickneifs and diligence, what they lay out in extraordinary expences.
One of their fhips makes as many trips in four months, as a Dutchman can in five, or even in fix; and there is certainly no kind of profit more real, or more certain, than that which arifes from the fhortnefs of campaisns, or of voyages at fea: The French hold a middle charater, as it were, between thefe two; without having the ceconomy of the Dutch, or the activity of the Engliih, they furpars them, without diffculty, in the arrangement and exactnefs of their fervice;
they have gained by this I know not what title, the Superiority and Empire.
But there happens from hence fometimes two inconveniencis. The firft is, that we think ourfelves checked, as the marquis de Montlue fays, if we don't march with all the attendance of a prince, and yet this fometimes leads us into great inconveniencies. It is better to move like a private gentleman, and not to play the prince, than, by fraining things to a great height, to run the hazard of bringing upon one felf fome mifchief. The fecond, that, through too great attention to the procuring every thing neceflary, we fometimes go too far, and provide alfo for fuperfluities; fo that by an excafs of prudence, we fall fhort in expedition. However, it is frequently necellary to difpatch, for fuccefs depends on a cettain degree of boldnefs, and not feldom on a fingle ftroke. In great affairs, fays cardinal d'Offer, in a letter to M. Villeroy, in order to avoid a great evil, or to gain a great good, one muft venture, and put fomething to the rifk, and refolve at once, and, without delay, to get out of a bad fituation in the brifkeft and quickeft manner pofible.
It is eafy to judge, from what I have been faying, that French veffels ought, in general, to be betterarmed, and better equipped; than thofe of all other nations. In them there is nothing wanting, as to what is requifite for the campaign, or for the prefervation of the feamen and foldiers embarked. For in cur marine, we know perfectly well the value of mens lives, and efteem it the higheft point of prudence to take all the care that is poffible for preferving them.
There is fill more than all this; we have in France, as it were, an entire nation, who, exempt from all other charges and impofitions, apply themefles entirely to, and think of nothing elfe but, Sea Affairs. Their courfe of life is undoubtedly very thorny and laborious. But as they are bred to it from their infancy, and as they are pleafed, by a continual variety of objeets, they accuftom themfelves to it by little and litte, and pafs from one campaign to another, almoft without perceiving it: thefe people, with all this, are infinitely brave; of IRON, in point of LABOUR; of STEEL, in point of Courage, as Crfar fays of the ancient Gavils. They attempt befides things aftonifing, and, in refpect to which, nothing but an apprenticefhip * could have diminified, in their eyes, the peril and the rifque. It is true that our feamen have one difadvantageous quality, which is, that, on the lighteft difcontent, they withdraw, and go into foreign fervice: but this fault, however, is not fingular in them, it is, indeed, the fault of the whole nation; curious after novelties, and full of vain caprice, they often quit the kingdom. Hence it is, that one every-where fces Frenchmen, and that we find them fighting under every banner, Nullum bellum fine milte Gallo.

* The claffies of the marine, is one of the finet eftablifhments in the kingdom of France, and, at the fame time, one of the moft ufefill and advantageous. Mr Armoux and Bonrepos, intendant of the marine, eftablifhed them, though,
as it but too often happens, the prime minifter ran away as it but too often happens, the prime minifter ran away with the credit.
- There clafles, that our author talks of, are no other than the eprolled feamen in France, and this was the firlt fixed,
- by an ordinance, dated 22 Sept 1688 : the feamen were then divided into three clanfes, of which one was obliged to ferve annually on board the king's fhipe, and the other two were as liberty to ferve, the merchants. They have been fince diffributed into five clafles. In the year 168 I , - there were 60,000 men entrolled.

Behold the principal adyantages of which France has a right to boaft, and which the cannot neglect, but to her thame and to her prejudice. Her fituation is fuch, that, I repeat it gain, all the nations of Europe cannot help looking upon her with an eye of Jealousy. It may be, that I hall have an objection flarted to me here, of litile folidity indeed, but which, noiwithftanding, bas dozzled and mifled many perfons of merit. ' A maritime power, fay they with difdain, however ufeful, however beneficial it may be fup-- pofed at bottom, draws after it too great an expence, and ' has too ruinous a train at its heels; confequently it ough - rather to be abandoned, on account of the immenfe fums it muft coft, than preferved for the fake of the profits that 'from it enfue.'
To this objection, which they endeavour to render fo much the ftronger, by many affected computations, I hall offer three things in anfwer, which are not only very weighty, but altogether decifive; and I hope they will trike the reader in fo forcible a manner, as to leave him no inclination to demand any farther, or more ample explication.
In the firft place, it is true, that the marine demands expence, and even expences that are pretty large. But what part of government, what branch of the flate does not demand them? Can one fuftain a war, can one adjult the management of the revenue, can one give a proper air of magnificence to the king's houfhold, can one fecure the good-will, or entertain correfpondences with foreign nations, withour having in one's hands confiderable fums of money, and dif. pofing of them in a proper manner, and as neceflity requites? In great affairs, fays the cardinal de Retz, one ought never
to regard money. A fovereign is too rich, while difcovering a noble courage, a greatnefs of foul, quick parts, and itrong penecration, even in his moft trival actions, he favours the Commerce and Manufactures of his fubjects. Before him, the cardinal de Richlieu had remarked, "That 'he ought to be careful in laying up money to fupply the - necellaries of the flate, and religioully exact in preferving ' them, when no occafions offered for laying them out; but ' that he eught to be equally liberal in employing them 6 whenever the good of the public required it, and to do it 6 in time, and in proper meafure; otherwife any retardment - on fuch occafions, cofts the ftate very often extremely dear, - by making it lofe opportunities that never are to be re'covered.'
Befides, if for maintaining the marine, it is requifite to be continually advancing money, and providing things long beforehand, I dare aver, that the marine will indemnify with ufury, and not be at all llow in paying. Is it not that which protects and enlivens trade, both at home and abroad? Is it not that which fecures all our traders, all our merchants, who are difperfed through all the different parts of the world; that preferves them, in the midft of the Grand Signior's dominions, from pillages and infults, to which they would be otherwife fubject; that procures them capitulations, and valuable privileges on the coalt of Barbary, and in the feas of the Levant, and enables them to fail in fafety, wherever the French flag hath appeared? Is it not that which, in a time of war, keeps off the enemies from our coafts, which would be otherwife ravaged, and preferves a free paffage for the navigation between one maritime province to another? In a word, is it not that which fo amply fills the coffers of our kings, and that which gives their fubjects fo favourable an opening for difcharging their fuperfluities, by ferding into foreign countries the fruits of their harveft, or of their induftry? The abbe de St. Pierre has'obferved, in one of his Political Memoirs, That the ballance of our commerce with foreigners, amounts to, at leaft, one hundred and fifty miilions a year (that is, about 7,000,0001. Aterling) which makes, one month with another, twelve millions and a half. Is it not the maritime power that preferves this ballance, and by preferving it, fuftains our credit, always on the point of falling, through the jealoufy of our neighbours? Secondly, If cardinal de Richlieu thoroughly underftood the thing, and has not carried it too far in his Political Teftament, we ought to agree, that the principal riches of a ftate is its reputation, fo important to a great prince, that it is impoffible to purpofe to him any advantage, that can in any degree compenfate the lofs of it. But how is that reputation to be acquired and preferved, that reputation, I fay, which Machiavel looked upon to be fo neceffary to all fovereigns, that he called it, The apple of their eyes? How can a prince ever reckon on his tame? Or fuppofe it thould force frangers, delicate as to point of honour, to acknowlege his fuperiority, the fame cardinal de Richlieu has pointed out two methods equally noble and fure; the firft is, to entertain in all courts ambafladors, whofe birth, conduct, train, and expence, may do honour to the mafter who employs them; the other, to feize, with the utmof brifknefs, whatever has the leaft tendency to increafe the domaine of the marine; to caufe confiderable fquadrons to be yearly fitted out, and to let them rendezvous regularly every year at certain places; fuch as Ca diz, Genoa, before Algiers, at Copenhagen, and in the paffage of the Sound. It is there, fo to fpeak, where all the nations of Europe affemble, and where it is proper to ftrike their eyes, by the appearance of ftrong fquadrons. It is there that a prince, who has a good reputation, does more by the bare interpofition of his name, than others can do, who are efs efteemed, with all their menaces and intrigues. I do not fpeak of ftill more numerous fquadrons, that it may be convenient to equip from time to time, and to fend to America, and into the Eatt-Indies; it fuffices me to repeat here what that great minifter, whom I before cited, has faid, that nothing is more indifpenfable to a ftate, than its reputation the diminution of which, however flighted it be, may prove ftep to create an unlucky difpofition towards its abfolute declenfion.
In the third place, if there be any excefs in the marine, if things relating thereto are fometimes pufhed too far, it is not that which ought to be accufed, but the prefent fyftem of affairs in this kingdom, in which, to fay the truth, we farce diftinguifh any thing that looks like frugality, ceconomy, or difintereflednefs. All things are now execured at a prodigious expence, and all we do is fwallowed up in pomp and decoration; private intereft, in moft mens minds, overballances the love of public good*, and that regard which is due to their country. Happy the hand, who thall eftablifh things in their oatural fituation! Happy the age, in which there fhall be feen a nobility, accuftomed from their very infancy

- Patrize rem unufquifque, non fuam, augere debet. Melius elt enim pauper in divite, quam dives in paupere imperio verfari. Val. Max. lib. 4. i. e. A man ought to ftudy to augment the public fiock, not his own. For it is much better so be poor under a rich government, than to be rich under a poor enc.

5
to a mafculine and generous virtue, above little interefls, defpifing frivolous occupations, and even life itfelf, whenoppofed to the grandeur of their fentiment. I would flep, Gays the M. de Montlue, to thofe whom I leave behind me, that I am this day the oldeft captain in France, thar I mev, fought repofe, but endeavoured to acquire honour by doiner fervice to the kings, my mafters, which was the fole end and aim of my life, fying all thofe pleafures and delights, which turn out of the road of virtue and true greatnefs young men, whom God hath endowed with commendable parts, and who are on the point of advancement.
In regard to frugality, it is more neceffary to foldiers, than to any other fort of men. Is it not then fhameful, while their life is thick ftrown with rifks and hazards, to be thinking how they may invent new delights, and pique thenfflves on refining luxury and pleafure ? An emperor was, heretofore, treated as loofe and effeminate, becaufe, after his death, a looking-glafs was found in his tent. What an example this of Roman aufterity! Charles V. being once on the point to take the field, the townimen of Antwerp and Bruges went to make him a prefent of Flemifh pictures, of infinte value, in which were reprefented Bacchanalian forts, marriazes, and country feafts. The emperor, who fcarce deigned to look upon them, putting on a ferious air, faid, Carry back your prefents, they don't by any means fuit me, I feenothing
in them but cramming*. in them but cramming*.

* Our kings have often endeavoured, though to very litile purpofe, to reprefs, during a wat, the expence and fumptuoufnefs of tables, of which Tacitus fpeaks well, when he calls them luxuriofos apparatus conviviorum, \&cc. irrita-
menta libidnum.

I ought not to forget here, a queftion that hath been often handled among the Englin. They enquire whether the gentry are fitter for maritime fervice than foldiers of fortune, who have nothing to fubfift on, but their merit and their experience? and with them it feems to be decided in favour of the latter. It is true, according to cardinal de Richlieu, that all men being equal by nature, muft fuffer, with regret, that difference, which protection and riches put between them. It is alfo true, that many, who are obliged to give way, blame, with reafon, thofe who command them to fhew, that though they are inferior to them in power, yet, in merit, they furpafs them.
But without weighing critically what, perhaps, belongs in a peculiar manner to England, I Aball only fay, that in France the marine has gained confiderably fince it has been compofed of felect youths, and of officers chofen out of the bett families. It is not that I would exclude ceriain men, who may be faid to be privileged, and who indemuify themfelves from an obfcure birth, by a difplay of talents fuperior to any birth. I willingly compare them to that plebeian, f, famous in the Roman Hifory, and to whofe peech I will give a place here, in order to humble thofe who want every thing but birth.
I cannot, faid he, expole to the eyes of the public, the - portraits, the triumphs, or the confulates, of my anceftors; - But if you incline to fee them, I can produce abundance c of pikes, ftandards, horfe-harnefs, and other military re'wards, befides many wounds. Thefe are my charters, ' thefe are my nobility, which it is true I have not received 6 from my fathers, but have purchaled, by my own proper ' toils, and at the expence of my blood. There is nothing ' of deceit in my words; that is a kind of art with which I - am abfolutely unacquainted. Virtue is beft feen and diftin-- guifhed by ber own light. Let thofe who have been wantcing to their honour, and have committed bafe and fanda' lous aftions, feek to varnifh them over by the pomp of - their difcourfes; for my part, I never learned the fciences * of the Greeks, which I don't fee have rendered either - wifer or more virtuous many of thofe, who boaft of be-- ing well verfed in them. But I have learned what the re-- public ought to advife and to approve; to attack the ene-- my, to fuccour fpeedily fuch as are under my orders, to - fear nothing but infamy; to brave, by turns, the fcorch-- ing heat of fummer, and the winter's pinching cold; to - lie upon the ground; and, in fine, to fuffer all that is molt ' tedions or tirefome in war,'
Nobility; without doubt, owes its fplendor to fair and generous actions; but as it degenerates every day, ought we to complain that fuch actions are revived, and appear in other men? The nobility brigue and intrigue, in order to acquire charges and employments, without ever thinking how to merit, or to execute them. What madnefs in thefe vain men! Their anceftors have left them, it is true, all that depend on them, riches, great names, and fhining titles; but they have not left them perfonal merit; that lay beyond the extent of their power; that alone they could not communicate, that alone is the thing not beredit.ry. They fay that Iam a brutifh fellow, and without the lealt tincture of good manners, becaufe I am athamed to own a player for my companion, difdain either thewy or effeminate pieafures, and give lefs wages to my cook than to any other of
my domeftics. What mighty crimes! and yet they are all my mine.
I thought this elogium due to feveral officers of great merit, I thought this elogium due to neveral onfers of grean heavy who have rendered whe, in fpite of the obftacles they mar campaigns; and who, in fite of the obitaces they mar
with at every curn, it fure of their rivals, who feem to block up their way to preferment, have acquired it notwithftanding, and that too with the higheft applaufe; fuch, even in late rimes, was in. de Gué Trouin, as much diftuggifhed by his unduaterj bravery, as by his fuperior capacity, who ed byofed himfelf rapidly and boldly to all forts of dangers, expofed himfelf rapidly and boldy to all Corts of dangers, even to thofe which he had not forefeen, and which his in-
trepidity feemed to ward off, by not fuffering them to confound him.'

Remarks, regarding the lafting fecurity and glory of the BRITISH EMPIRE.

Thus far Monf. Deflandes, who has zealoully endeavoured to raife a ppirit in France for a boundlefs advancement of the maritime power of that kingdom; and who does not difcern this to be the grand fyftem, which now prevails at that court?
The Romans, though thẹir city was fituated very conveniently for maritime affairs, $n$th being above fifteen miles diftant from the Tyrrhenian Sea, and having the river Tyber running through it, capable of receiving the fmaller veffels, yet feem wholly to have neglected all naval concerns for many years after the building of Rome; and fome eminent writers have been willing to affign this as one of the principal caufes which preferved that ftate follong in its primitive innocence and integrity, free from all thofe corruptions, which an intercourfe with foreigners might probably have brought into fafhion.
But, as an inftance of what may be done by a vigilant people, we find, that, about the year of the city 492 , the Romans obferving, that the coafts of Italy lay expofed to the depredations of the Carthaginian fleet, which frequently made defcents upon them, and confidering that the war with that republic was likely to continue, they determined to render themfelves mafters of a naval army: which they accomplifhed, with fuch wonderful bravery and refulution, as foon to be capable of trying their naval ftrength againft their more formidable eneny, and afterwards to give many fignal defeats to the Carthaginians, who, 'till that time, held the dominion of the fea uncontefted, derived down to them from their anceftors.
Whoever confiders this fluctuation of power, from the Carthaginians to the Romans, muft perceive a dangerous parity in that acceffion of naval ftrength which bas accuued to the crown of France, from the begioning of the reign of Henry IV. to the end of the reign of Lewis XIV. Who could have imagined that France, in fo fhort a time, could have been able to equip a fleet capable of difputing the dominion of the deep againft the united navies of England and Holland? But after the diminution of her maritime power during the war with queen Anne, who could have fufpected that France fhould have fo fpeedily recruited and augmented her navy, fo as frequently to deride the $B$ itifh power, before the French had the infolence to conduct Navarro out of Toulon, and commence that inglurious engagement, wherein a brave Britifh admiral was not only fhamefully unaffifted by his colleague, but afterwards difgraced for nobly defending the honour of his country? And who could bave thougbt, that the French after the reduction of their fleets in its two interceptions by the admirals Anfon and Hawke, and after the lofs of 2185 Chips taken from them by us,s during the courle of the late war, fhould be able fo expeditioully to reflore their debilitated navy, and retrieve their commerce to a Atronger, and in a better condition than it ever enjoyed before? - But all this has been, and now is, unhapply for us, the cafe! which fhould roufe Britain from that apathy, fhe has too long and too tamely fuffered, while her enemies have been audaciounly infulting her in too many parts of the univerfe.
It is the invariable policy of France to amufe her neighbours with delufive negociations, while fhe is fecretly preparing to afflict them with the rapacity of her arms. See our Remarks on the article Plantations. Was not this the unkingly conduct of Lewis XIV. that grand ravager, in his barbarous deftruation of the Palatinate, and his perfidious invafion of the United Provinces? Was not this the behaviour of Lewis XV. to her Hungarian Majefly, wher he as unkingly renounced the Pragmatic Sanction, and, inftead of preferving th: indivitibility of the Auftrian inheritance, was the firft to lop the branches of fo fair a tree, by his invafion of Bohemia? And what can Great-Britain expect will be the corifquence of the treaty of Aix la Chapelle, 'for eftablifhing a chriltian, univerfal, and perpetual peace, as well by fea as land; and for preferving a fincere and inviulable friendhip between the feveral high powers at war, both as principals and auxiliaities, their heirs, fucceffors, kingdoms, ftates, provinces, countries, fubjects, and vaffals, of what rank or condition fosver they may be, without any excep-
vOL.II.
tion either of places or perfons?" Why, from the French nation we can expect nothing but French policy; that is, whenever France is able to untheath the fword, the will think it no difhonour to cancel the raft facred engagements the has made with the pen. This is certainly the policy of France; and this we bave been told by fome of our minifters themfelves, who, as they are fo well acquainted with the practice of our moft inve:erate enemy, ought to be perpecually on the guard for our own fecurity.
The French navy is now grown to an enormous lift, and our brave admiral Vernon, more than a year ago, fhewed an account which he had procured of the French navy then in the ports of Breft and Toulon; whereby it appeared that, exclufive of what were in the harbour of Rochefort, the thips of force amounted to near one hundred fail. What a wonderful augmentation fince the clufe of the year 1747, when, according to the moft accurate accounts of many, the whole royal navy of France amounted to no more than 3r fhips of the line, from 80 to 90 guns, befides feven frigates; of which 7 were old and unferviceable, and the remainder two few to attempt any thing in oppofition to the navy of England! But let us alfo remember, that the Britifh nation at the fame time, notwithitanding the detriment the had fuftained by the interceprion of commerce, and the lufs in the royal navy, was fill capable of continuing the maritime war, and of profecuting it with redoubled vigour ; her royal navy in 1747, coniriting of 126 fhips of the line, befides 75 frigates, 43 floops, 16 bombs, and 11 fire-fhips, in all 279 , of which 225 , were in commiffion, being 96 more than thofe in empioyment at the commencement of the Spanilh war; but, at the conclufion of the war, in the beginning of ${ }^{1} 749$, on the reduction of the Britill navy, the Chips continued in commiffion were only $7 x$ of the line, with 29 frigates, befides floops and tenders for which 10,000 failors have been fince continued in the fervice of the royal navy.
Therefore, we ought not to be intimidated at the views of France, but rather vigilant in our own.
Every court in Europe knows, that fuch has been the feady conduct of Great-Britain for many years paft, to act perfectly confiftent with ber treaties andalliances, and chiefly upon the defensive, to preferve not only the rights and liberties of her own people, but to protect her allies from being oppreffed and over-run by the power of Fiance, whereby all Chriftendom muft have been involved in the calamitous event. England cannot be charged in any refpect, during the reign of the prefent family efpecially, with having violated her engagements with any ftate or empire, or with having attempted to act offensively againft any power without.very great provocation; and the exertion of their maritime ftrength on thefe occafions has been with the greateft moderation, and in order only to preferve that ballance of power, which has hitherto preferyed the liberties of all Europe. But this will not long continue in the power of Great-Britain, if other nations increafe and ftrengthen their maritime power, for the fake of protecting and extending their trade, and the Englifh, at the fame time, do not ufe all poffible means to keep up theirs: if we are regardlefs of our well-being in this refpect, our rivals in trade muft fooner or later become our fuperiors, and this muft produce very injurious and fatal effects to this kingdom. For as trade is the chief fource of our affluence, and confequently, the great inftrument of power, fo, if we fuffer our trade to decline for want of due protection by a maritime force, our influence, as a maritime fate, and all our prefenc affusence and fecurity, muft neceffarily dwindte in a juft proportion to it. That we may be the better apprized of the fchemes and meafures of France for many years paft to augment her marine, in order one day to affert and maintiin an afcendancy over the Englifh and Dutch in maritime prowefs, we refer the reader further to the article Naval Affairs. To make fill a further judgment upon concerns of this nature, fee alfo the articles Maritime, or Marine Affairs, Naval Stores, British America, Colonies, Plantations.
As we would not omit any thing effential under fuch interening heads, as thofe we have juif referred to, we fhall take notice of a particular or two more, which feem to require the ferious attention of the public at this time : the firft is, that Spain, as well as France, feems at prefent to be engaged in fuch meafures, that can fearce fail to raife not only her royal navy, but her-niercantile fhipping, to a height fuperior to what it ever was. See the articles Castille, Catalo nia, Factors, Florida, Mediterranean, Manufactures, Maritime, or Marine Affairs, Naval Affairs. In regard to fome of our laws relative to ihipping, fee the article Masters of Ships. See alfo Mexico. There are likewife many other of the lefler flates, that are either raifing a new maritime power, or augmenting what they have; and as the machunations of cercain potentates may hereafter be productive of fuch alliances, as may one day occafion a union of maritime power that may prove formidable to Great-Britain, it behoves her to guard betimes againft thofe pofible evils; and more efpecially fo, 9 N
reeing that the marine, as well as the finances of our naturalally, the States General, are, by certain intrigus and diftractions fomented amongtt them, in worfe plig't and condition than they have been for half this century: nor is this theonly melancholy fituation of Holland, that may prove difadvantageous to thefe kingdoms on urgent occafions; thete is another circumftance, that relates to the affairs of that ftate, which is no lefs detrimental to the joint intereft of England and the United Provinces: I mean the prefent unfettled flate of the barrier, which has been poftponed too long, and may be attended with confequences equally injurious to the common caufe with what elfe has been intimated. See the articles Holland, Flanders, Netherlands. - Thefe confiderations taken with their united force, fhould, methinks, have their due weight with Great-Britain to preferve and augment the power of her oyal nayy to fuch a degree, thar the may be able to affer and maintain that fuperiority of maritime ftrength for which fhe has been fo long renowned, and which has hitherto proved the falvation of the liberties of the whole Protetant interefts. See the articles Sea Dominion and Sea British.
Nor does it appear to me, that the augmentation of our royal navy to the height requifite at this or any other conjuncture, need be fo great a burthen to the ftate, as fome are wont to apprehend ; efpecially if thofe marine concerns were managed with that ceconomy and fagacity, which many judge neceffary: and if, befides this, due meafures were taken to provide ourfelves wholly with naval ftores of every kind, and not to be under the neceflity of taking any from other flates, or, at leaft, fuch a proportion only as may be politic, in order to uphold and cement fuch a mutual degree of commercial intereft as good policy may fuggeft; for we cannot expect to be fellers to all nations, and buyers of none. If, however, we are wife enough to fupply ourelves with fuch a proportion of our naval fores in general, as will keep the bulk ol the treafure thereon expended within ourfelves, an expence of this kind may, perhaps, add riches to the nation, inftead of being an incumberance to it. See what I have urged in this light in particular, under the article Naval Affairs. See alfo the article Naval Stores.
HROPSHIRE is bounded on the eaft by Staffordhire, on the north by Cbefhire, on the fouth by Worcefterfhire, Herefordhire, and Radnorlhire, and on the wett by Montomery and Denbighifhire in Wales, and is computed to be 134 miles in compafs. The air of this county is very healthy, as it generally is in fuch as are mountainous or hilly. The foil is various, the hilly parts not being altogether fo fruitful as the low grounds. Here are mines of coal, copper, lead, iron-ftone, and lime-ftone.
SHREWSEURY, the county town, is delightfully fituated on the Severn. Here is a market every Thurfday for Weich cottons and flannels, of which there are fold as much as comes to roool a week one with another.
Bridgnorth, on the fame river, is a place of great trade carried on both by land and water: its markets are well ftocked with all neceffaries, and its fairs are reforted to from mof parts of the kingdom for horfes, black cattle, fheep, butter cheefe, bacon, linen cloth, hops, and moft other goods and merchandize. The town is well furnihhed with artificers, who deal in making and felling clothes, leather, iron-tools, and the common manufactures of the kingdom, and is as famous as any other for making of flockings.
Oswestry has a great traffic on its market-day for the Welch flannels and freizes, of which it is the ftaple.
SIAM, a kingdom of Afia, beyond the Ganges, in the farther Eaft-Indies, bounded on the north by the kingdoms of Pegu and Ava; on the eaft by Cambaya, Lao, Jancoma, and Tanga; on the fouth by a bay of its own name; and on the weft by the bay of Bengal; making a femicircle of about $45^{\circ}$ leagues, though others make it larger, and bounded by Pegu and Lao on the north, the China and Indian Ocean to the eaft and weft, with the kingdom of Malacca to the fouth.
Siam Proper, or the Upper Siam. The air is very temperate, and the foil in general very fat and fruitful. The country abounds with rice, cotton-trees, and others, from whence they extract oils for divers ufes. They have abundance of trees that yield a gum, which is the chief ingredient of the Japan and Chinefe varnifh. The beft fort of ben jamin comes from hence, it being pure, clear and white with little ftreaks of an amber colour.-They till their lands after the rains, and gather their harveft of rice after the waters are retired, though fometimes they do it before, in boats; for, according to fome hiftorians, it grows fo faft, that the ear is always above water, though it rifes a foot in 24 hours. - The rice which grows where the rivers do not overflow, and which is nourithed by great cifterns, or trenches of rain-water, is more fubftantial, durable, and better relifhed than the other. They raife feveral forts of herbs, pulfe, and roots.- They have alfo lemons, citrons, pomegranates, and oranges, which they call cryftal ones, becaule of their value, arifing from their ufe to fick people. - In fine, the country abounds with all the fruits of the Indies; the moft
eftimable is the arrac-tree.- Their fruits are large figs, like faulages in form, jaikes, fhaped like large melons, and of a delicate tatte-and fmell, fugar-canes, pepper-trees, cocoa's anana's, and that remarkable plant called ginfeng, which they drink like tea, in a morning fafting
They, bave mines of gold and filver, lead, tin, iron, load ftone, marble, agats, fapphires, cryftals, antimony, emeralds, and tambank, which is a mixture of copper, with little gold and filver. They have fteel, of which the inhabitants make fabres, poignards, and knives, but they are in ge neral bad fmiths. A diamond-mine was difcovered here once but neglected for want of encouragement, becaufe the mines are entailed on the crown, which has the fole benefit of them.Here are various kinds of beafts, as elephants, zhinocerofes, leopards, tygers, with all the other tame and wild beafts of the Lndies; but they eat little fleih, and only catch deer, whereof they breed great numbers, for their fkins, which they fend yearly to Japan.
They are ignorant of the arts, except the ordinary forts of mechanics, but âre dexterous at gilding, and'beating of gold into plates. They make a coarfe fort of cotton cloth, and are goodat embroidering. The common people employ themfelves in filhing, and the better fort in merchandizing. The women are the chief merchants, fome of whom trade con fiderably, though none of them get eftates by foneign trade, that being appropriated to the king
The chief places are,
Chantebon, or as fome call it, Liam, flands at the mouth of a river of the fame name, near the gulph of Siam, and in the extreme fouth-ealt part of this country. The river is navigable for large fhips, and there is a colerable trade carried on here.
Bankasoy, on a river which lies four or five leagues to the eaft of the bar of Siam, where are two iflands called the Dutch iflands, at which fhips are obliged to fay in the fouthweft monfoons, when they cannot get water over the bar that bears off it fouth-eaft and by fouth, about nine leagues diftant. It is a place not much frequented by ftrangers, though it produces much aquila and fapanwood, and elephants-teeth, which are all fent to the king, who traffics with them. This place is of chief note for ballichang, or a fauce made of dried thrimps, cod, pepper, falt, and fea-weed, or grafs, all mixed, and beaten up to the confiftency of thick muftard. Many hundred tont hereof are expended in Siam, and the adjacent ceuntries.
Bancock, or Bencock, in an illand formed by the river Menan. Moft thips bound to India put in here, to give an account from whence they came, as well as of their lading, and complement of men, \&c. and to pay cuftom, the acquittance for which they fhew at another place up the river, called Canon-Bantenau, within a league of the town of Siam and then they have liberty to trade any where through the kingdom without paying any thing, but for their cocket, which they are obliged to do on penalty of forfeiting the fhip.
The capital of the country, and the feat of the king, is
SIAM, a large city, formed by three ftreams of the river Me nan, or Memnan, which is generally full of thips, prows, sce. 30 leagues from Bontempia.
The Dutch have a factory here, about a mile below the town on the fame fide of the river, and their chief makes a good figure here, though the Siam market takes off but little of Eu sopean goods; and their greateft traffic is in tin, Capan-wood, and deet-fkins, which they buy up for the Japan market, The Portugueze had a great trade here formerly, till they obffructed the commerce of the natives with the Dutch, and attacked the latter in the river Menan; which fo incenfed the king, that he became an enemy to the Portugueze ever after, and encouraged the Dutch, whofe trade bere is very advantageous with refpect to the inles of Java and Sumatra.
The Englifh had a factory here for many years,' 'till about 1686, the Eaft-India company had a quarrel with the Siamefe, and withdrew it. The fuburbs, which are inmabited chiefly by ftrangers, lie on both fides of the river.
TENNASERIM is a city of great trade, near a river of its own name, which falls into the bay of Bengal with three mouths, and is above 200 miles north-weft of Siam, and 20 leagues within the bay, amongit feveral fmall iflands.
Cul, or Coulr, is a place on the coaft hereabouts, whic produces great quantities of tin and elephants-teeth; but all are fent to Siam, for the king's ufe.
Margux, Merjee, ftands in an ifland near Tennaferim, 1.40 miles fouth-weft from Siam, and is efteemed, by fome, the beft port in the Indies. It is a fafe harbour ; and the country produces rice, timber, tin, elephants teeth, and aquila-wood. A large number of Engliih merchants tettled here formerly, and carried on a confiderable traffic, but were obliged to quit it in 1687 , by the OId Eaft-India company; who having a mind that the Englifh here Chould refide at Fort St George, threatened the king of Siam with a war, if he did not deliver them up, or force chem out of his country: and the officer whom they fent with the meffage behaving infolently to the government, and putcing fome of the Siamefe to
death without caufe, the enraged populace maffacred $7^{6}$ of the Englith, by way of revenge. This place, and Tennaferim, is the road where fhips from Guzaratte arrive, in June and July, and merchants tranlport their goods from hence over land to Siam.
Ligor, the capital of a country of the fame name, which was formerly a kingdom of itfelf, 'till by civil diffenfions it became a prey to the king of Siam; it ftands above 380 miles couth of Siam. The Dutch have a factory here, which trade in tin and pepper, the country producing abundance of the former, which they engrofs all to themfelves.
SANGOR fands on the fide of a large river, about 12 leagues fouth of Ligor; it produces tin, elephants-teeth, aquilawood, and fome gold; but the inhabitants meet with fuch difcouragement in digging for tin, that there is little, to be got, and what is manufactured is bought up by the Dutch factory at Ligor.
Jonsalam, or Juncalan, or Jonkuyloan, on the weftern coatt, is an ifland within a mile of the continent, but the fouth end is about three leagues from it. Between this and the continent there is a good harbour for fhipping, in the fouth-weft monfoons, and on the weit fide of the illand Puton Bay is a fafe one in the north-eaft winds; between this ifland and Merjee there are feveral other good harbours ; but the fea-coaft is very thinly peopled, becaufe of great numbers of freebooters, called Salleiters, who inhabit iflands along the coaft, and both rob and take people for flaves, whom they tranfport to Achim, in Sumatra, and there fell them : this town often fuffers by their depredations. Thofe iflands afford for traffic ambergreafe, the horns of the rhinoceros, good mafts, and abundance of tin; but few people dig for it, by reafon of the abovementioned out-laws; befides, their governors being generally Chinefe, buy their places at the court of Siam, and feece the people to reimburfe themfelves: yet the villages on the continent drive a fmall trade with fhips that come from Coromandel coalt and Bengal, but both the buyer and the feller deal by retale; fo that a fhip's cargo is a long time in felling, and the product of the country as long in purchafing: the inland is about 80 leagues north-eaft of $A$ chim, and was formerly called a kingdom.
Martaban, or Martavan, once a kingdom independent on the bay of Bengal, which Moll places in the empire of Ava, and the Sanfons fay it formerly belonged to Pegu, but it is now a province fubject to Siam. It abounds with corn, medicinal herbs, oil of jeffamy, rofes, oranges, lemons, figs, pears, chefnuts, \&c. mines of gold, filver, iron, fteel, lead, copper; it has alfo rubico, lacque, benzoin, and they make a fort of porcelain veffels, varnifbed black, much efteemd for keeping liquors. It is faid to extend 300 miles from the fouth to the north, and 115 where broadeft, from eaft to weft. Father Piemento fays, it formerly yielded three barvefts a year; but about 1597, much of it was laid wafte by the Siamefe. Boufingault lays it has fo good an air, that the inhabitants never have the head-ach. It has Pegu on the north, Siam on the fouth and eaft, and the Indian Ocean, and bay of Bengal, on the weft. The capital, of the fame name, is a well-built populous town, and has one of the beft havens in the country, with a free entrance at all feafons, to which hips trade from Malacca with pepper, china ware, camphire, \&ic. and make their returns in rice, which they likewife export to Cochin. Moll places it 223 miles north weft of $\mathrm{Si}-$ am , on the eaft fide of the gulph of Pegu, from which city it flands about 92 miles to the fouth, and it was reckoned it principal haven.

The Gold and Silver Weights of Siam
Are by tual, which weighs neareft 9 dwts . 10 grs. and is $9 \frac{1}{2}$ dwts. better than ftandard filver.

## Great Weights

## Are from their coias likewife, as

| 80 Tuals is i catty, or | - | lib. | ox. dir. |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 50 Cattys is I pecul, or | - | 2 | 9 | $4 \frac{3}{4}$ Avoir. |
| 129 | 0 | 3 |  |  | But 50 cattys of Siam fhould make 1 pecul China, of 132 ib . for they weigh all their goods by the China dotchin; but it is never found that the king's dotchin at Siam gives more than 129 lb . which fhould be 132 lb .

## Coins.

Their coins are tuals, miams, tuangs, and famporfs.

| 2 Samporfs is | - | I Tuang |
| :--- | :--- | :--- |
| 2 Tuangs |  | I Miam |
| 4 Miams |  |  |

Their accounts are kept in cattys, tales, tuals, miams, tuangs, and cowries.

10 miams pafs for a tale China, and 85 tales Siam are always reckoned at 8 tales China.

## Customs.

The Chinefe, Maors, and Bamians, pay 8 per cent. cuftoms The Englifh, at prefent, pay no cuftoms, but pay meafurage for their ihips; a lhip of 200 tons burthen pays from 1150 to 1200 rupees meafurage, and fo for other veffels, in pro portion to their burthen.

## REMARKS.

In order to make a right judgment of the nature of the Eaft India trade in general, and confequences of the fame trade to thefe kingdoms in particular, the reader is defired to comult the following articles throughout this work, viz Bengal, Cambodia, Caravans, China, Companies, Coromandel, Dutch East-India Company, EastIndia Company of England, Europe, France, in regard to its Eaft-India trade in particular; Gold, with refpect to the gold brought from the Eaft-Indics into Europe; Japan, Indostan, Monopolies, Oriental Trade, ostendeast-India Companx, Pegu, Portugueze East-India Company.
Under thefe heads, and what we Chall further lay before the reader in the fequel, he will find fuch FActs, and fuch argumentative matter fated, naturally deducible therefrom, as will enable him to deternine within his own breaft, that great point, whether it is for the intereft of the nation that the Eaf-India company fhould be continued under its prefent conftitution, or whether it mould be annihilated, and the trade laid open to all his Majefty's fubjects.
And as the fubftance of what has been urged againft the company will be found faithfully reprefented under the preceding articles, fo will alio the anfwers thereunto; but there having lately appeared an anfwer to fome of the principal objections which have been ftarted againft the company, and that in a ght tomething different from what has been given throughout the preceding parts of this woik; l hould be charged with partiality, if I was to omit this addirional argument in favour of the company, fince I have fuppreffed nothing of weight that has been urged in oppofition to that corporation. Another inducement to this is, that I fhall fcarce have another opportunity of faying any thing more in relation to the Eaft-India trade before this work is completed ; and, therefore, all evidence in regard to a fubject of this importance, will be expected to be fairly laid betore the public, for their information. -The fubftance of this argument in vindication of the company is as follows, viz.

- The remoteft traffic is always moft beneficial to the kingdom's ftock; for example-Suppofe pepper to be always worth two hillings the pound, and a merchant fhould fetch it from Holland, and pay there twenty-pence the pound, he willgain well by the adventure; but if he fetch this pepper from the Ealt-Indies, he cannot give above five-pence the pound to obtain the like gain, clear of all charges; which fufficiently proves the great advantage we have by purchafing commotities in remote countries, not only for our own confumption, but for exportation: fo that it is plain we make a much greater ftock by gain upon many commodities, than thofe nations do where they grow; and furely there is not lefs honour and judgment by getting riches in this manner, than by an increafe of our own means, efpecially when this latter is advanced for the benefit of the former, as hath been found in the $£$ aft-Indies by fale of our native commodities.
But for the better underftanding thereof, we muft diftinguin between the gain of the kingdom and the profit of the merchant; for although the kingdom pays no more for this pepper than is before fappofed, nor for any other commodity purchafed in foreign countries, more than the flranger receiveth from us for the fame; yer the merchant payeth not only that prise, but alfo the Freight, Ingurance, Interest, Customs, and many other Charges, which are exceeding great in long voyages: but all thefe, in the kingdom's account, are but commutations among ourfelves, and no privation of the public fleck; they remain fill in the kingdom.
It is of greatimportance to the nation, that the price of lands fbould be improved [fee our article Landed Interest], which never hath, nor can be done, but by a fuccefstul fo reign trade, the ballance whereof is the only means and rule of our treafure ; that is to fay, when, either by iffing out of the realm yearly, a greater value in wares than we confume of foreign commodities, we grow rich; or, by fpending more of ftrangers goods than we fell them of our own, we are impoverifhed: for the firit of thefe courfes brings in the money which we have; the laft wiil carry it away again mhen we have got it. See our article Baliance of Then we
It is a true faying, That plenty or fcarcity of money make all things dear or cheap in a commonwealth [fee our articles Money, Cash, Circulation]; but it is neceffary to diftinguifh the feeming plenty of money from that wh:ch only is fubftanial, and able to perform the work; for there are
many ways and means to procure money into a kingdom (for a fhort time) which therefore do not enrich, but rather impoverifh the fame, by the feveral inconveniencies which sver accompany fuch alterations; for inftance, if we fhould melt down our plate into coin [fee our atticle CoIn], it would caufe plenty for a time, yet hould we be nothing the richer, but rather this treafure being thus altered, is made the more apt to be carried out of the kingdom, it we exceed our means by excefs in foreign wares, or maintain a war by fea or land, where we do not feed and cloath the foldier, and fupply the armies, with our own native provifions; by which diforders our treafure will be exhaufted, for it is not the merchants exchange by bills that can prevent the laft of the abovementioned evils. [See the article Exchange.] But whether it be the ftranger or the Englifh merchant brings money into this country, it mult ever be done upon a valuable confideration, either for wares carried out already, or after to be exported, which helps us nothing, except the evil occafions of excefs or war aforementioned be removed, which will exhauf our treafure; for otherwife, the money that one man bringeth in for gain, another man fhall be forced to carry out tor neceffity, becaufe there fhall ever be a neceffity to ballance our accounts with itrangers, although it fhould be done with great lols upon the rate of money, which is exported at great rifk and danger of confications, for neceffity or gain will ever find fome means to violate the laws.
So that the treafure which is brought into the realm by the baliance of our foreign trade, is that money which only. doth abide with us, and by which we are inriched; and by this plenty of money thus gotten (and no otherwife) do our lands improve; for when the merchant difpofes of his cloth well abroad, he prefently buys a greater quantity, which raifeth the price of wool, and other commodities, which improves the landlord's rents, as the leafes expire daily; and alfo by this means money being gained, and brought more abundantly into this kingdom, it doth enable many men to buy lands, which muft make them the dearer; but if our foreign rade come to a ftop or declination, by neglect at home, or injuries abroad, whereby the merchants are impoverifhed, and fo the commodities of the growth and product of the naton lefs iffued, then do all the benefits abovementioned ceafe, and our land fall daily in price; wher fore the flourifhing eitate of our general trade is the only means to make our ands improve: fo the particular trade to the Laft Indies is a Principal Instaument therein, becaufe it harh much increafed the generd traffic of this kingdom.
In the courfe of a foreign trade there are three degrees of gain; the fult is that of the commonwealth, which may be done when the merchant (who i, the principal agent therein) hhall lofe. The fecond is the gain of the merchant, which he fometimes doth juftly and worthly eff. c , although the cumonwealth be a lofer. The third is the gain of the king, whereof he is ever certain, even when the commonwealth and the merchant thall be both lofers.
It hath been already obferved, that the commonwealth may be intiched in the courfe of trade, by the ballance of the fame, when exceffes are avoided; but it may be affirmed, that fuch happinefs may be in the commonwealth, when the merchant, for his particular, thdll have no occafion to rejoice. As for example: fuppofe the Eaft-India company fhould fend out one hundred thoufand pounds in goods, or money, into the EaftIndies, and receive home for the fame the full value of three hundred thoufand pounds; hereby it is evident, that this part of the public fock is trebled : and yet it may be proved, that the company thall be lolens by the adventure, if the returns be made in bulky commodities; for the freight, the charges abroad and at home, his Majefty's duties and cuifoms, and other charges, will be ahove two hundred thoufand pounds; which being added to the principal, produceth lofs. And thus we fee, that not only the kingdom, but alfo the king, may get very much, when the merchant fhall lofe; which gives good occafion to confider how much more the nation is nriched by this trade, when all things pafs fo bappily, that the merchant is a gainer alfo, together with the king and kingdom.
But for the better explaining of that which hath been affirmed as above, we muft underftand, that if the faid one hundred thoufand pounds fhould be trebled by the return of fo much filks, and orher fine commodities, out of the Indies, then the merchant likewife thould gain by fuch an adventure, becaufe thofe commodities would require but five hundred tons of fhipping to bring home the fame, which is but a very fmal charge, in refpect of four thoufand five hundred tons of fhipping, which would be required to lade home the like value in bulky commodities.
The fecond fort of gain in the courfe of trade is, when the merchant, by hislaudable endeavours, may both bring in and carry out wares and commodities to his advantage, by buying them, and felling them to good profir, which is the end of his labours; yer neverthelefs the commonwealth fhall decline and gruw poor, by a diforder in the people, when through pride, and other excelies, they confume more foreign wares in value than the wealth of the kingdom can fatisfy and pay,
by the exportation of our own commodities; which is the very quality of an unthrift, who fpends beyond his means See our articles Exportation and Importation
The third fort of gain is the king's, who is ever furc to ge by trade, when the commonwealth and the merchant fhall lofe feverally, as aforefaid, or jointly, as it may and fometimes doth happen when the merchant is unfuccefsful, and when our commodities are overballanced by foreign wares confumed: but if fuch diforders be not prevented, his $\mathrm{Ma}_{\text {- }}$ jefty in the end fall be the greatelt lofer, when his fubjects be impoverifhed.
The fafety of this kingdom confifts not only in its own ftrength and wealth, but alfo in the laudable and lawful performances of thofe things, which will weaken and impoverifh fuch powerful princes, as either may or are become our enemies in remote countries.
All nations (who have no mines of their own) are entiched with gold and filver by one and the fame means, which is already fhewed to be the BALIANCE of their foreign trades; and this is not ftrictly to be done in thofe countries wher the fountain of treafure is, but rather with fuch order and oblervations in their trade, and againft excefs, as are beforementioned: for fuppofe England, by commerce with Spain may get and bring bome five hundred thoufand ryals of eigh yearly, yet if we Jofe as much by our trade in Turkey, and therefore carry our money thither, it is not then the Englifh but the Turks, who have got this treafure, although they have no trade with Spain, from whence it was first brought. But if England having thus loft with Turkey, does notwith ftanding gain twice as much by France, Italy, and other members of her general trade, then there will remain five hundred thoufand ryals of eight clear gain by the ballance of the fame; and this comparifon holds between all other nations, both for the manner of getting, and the proportion that is yearly gotten. But if yer a queftion was made, whe ther all nations get treafure, and Spain only lofe it, I anfwe no; for fome countries by war, or by excefs, do lofe that which they had gotten, as well as Spain, by war, and want of wares, doth lofe that which was its own.
The induftrious Hollanders wanting means in their own hands, do find rich mines in his Majefty's feas; golden mines they may be termed, for the States fo call them in their pub lic proclamations [fee our article Fisheries], which they have fet forth on all occafions for the better prefervation of their filhing: a treafure it is (indeed) ineftimable, and an employment moft profitable: from hence originally proceed the increafe and maintenance of their people, their arts, their private wealth, their public treafure, the multitude of their thips which fetch materials to build fhips, the fwarms of their fmall vafiels which catch fifh, to lade their great hlips which trade with fing the produce whereof doth furnifh them with all their wants of foreigil commodities, and make them alfp rich in treafure, with which treafure they do alfo enlarge their trade into all the quarters of the world, whereby they become the magazines for England, France, Spain, and other places. In which courfe of trade, they are not lefs injurious to fupplant others (efpecially the Englifh) than they are careful to frengthen themlelves, with more than ordinary diligence; for they know well, that trade hath raifed their fortunes, and doth feed their hopes.
We have no other means to get treafure but by foreign trade; for mines we have none: and how this money is gotten in the management of our trade is already fown; that it is done by making our commodities, which are exported, to overballauce in value the foreign wares which we confume: fo that it remains only to fhew, how our money may be added to our commodities, and being jointly exported, may fo much the more increafe our treafure
And here let it be fuppofed, that our yearly confumption of foreign commodities is to the value of twenty hundred thoufand pounds, and our exportations to exceed that two hundred thoufand pounds, which fum it may be affirmed is brought to us in treafure to ballance the account : but if we add three hundred thoufand pounds more in ready money, into our former exportation in wares, what profit can we have (will fome men fay) although by this means we fhould bring in fo much ready money, feeing that we have carried out the like value?
To this the anfwer is; that when we have prepared our exportation of wares, and fent out as much of every thing as we can fpare or vend abroad, it is not therefore faid, that then we fhould add our money thereunto to fetch in more money immediately, but rather efinf. to enlarge our trade therewith, by enabling us to bring in more fore'gn commodities; which being fent out again into the places of their confumption, they will in due time much increafe our treafure: for though in this manner we do yearly multiply our importations to the maintenance of more shipping and ma riners, improvements of his Majefty's cuftoms, and other benefits, yet our confumption of thofe foreign commodities is no more than it was before; fo that all the faid increafe of commodities brought in, by the means of our ready money font our, as aforefaid, doth in the end become an exporta-

## S I A

ion unto us of a much greater value than our faid monies were, which is proved by the three feveral examptes following.
Firft, fuppofe that one hundred thoufand pounds fterling, being fent in our fhipping into the eaft countries, and that it will buy there one hundred thoufand quarters of wheat, clear of all charges on board the ibips, which being after brought into England and houfed, to export the fame at the beft time for vent thereuf in Spain or Italy, and that it there fells for wo hundred thoufand pounds to make the merchant but a faver, yet by this reckoning we fee the kingdom hath doubled hat treafure.
But the profit will be far greater when wee trade thus with our money in remote countries; as for example, if we fend one hundred thoufand pounds into the Eaft-Indies to buy pepper there, and bring it hither, and from hence fend it to ltaly or Turkey, and that it yields there five hundred thouland pounds, at thofe places, in regard to the exceffive charges which muft be difburfed in thofe long voyages in fhipping, wages, victual, intereft, cuftoms, and the like, all which charges the king and the kingdom gain; and it may be here obferved, that as the puolic profit by foreign trade is the only means whereby we gain our treafure, fo the trade to the Ealt-Indies (in its proportion) doth far excel all others.
The third example is, where the voyages are fhort, and the commodities rich, which therefore will not employ much fhipping, the profit to the kingdom will be far lefs; as when another hundred thoufand pounds fhall be employed in Turkey in raw filks, and brought hither to be exported from hence, the merchant thall have good gain, though he fells for one hundred and fifty thoufand pounds; and thus, take all the voyages together in their medium, the ready monies exported will be returned to us near treble. But if any man will yet object, that thefe returns come to us in wares, and not really in monies as they were iflued out,
The anfwer is; that if our confumption of foreign wares be no more yearly than is before fuppofed, and that our exportations be fo mightily increafed by this manmer of trading with ready money, it is not then poffible (in the courfe of trade) but that all the overballance or difference fhould return in either money, or fuch commodities as we mult export again; which, as is before plainly thewed, will be fill again; which, as is before plainly hewed, will be ftult a greater means to increafe our treature; for it is in the ftock
of a kingdom as in the eftates of private men, who, baving ftore of wares and merchandize, do not therefote fay, that they will not venture out or trade with their money (for this would be ridiculous) but do allo turn that into wares; whereby they multiply their money, and fo by a continual and orderly change of one into the other grow rich, and when they pleafe turn all their eftates into treafure, for they that have wares cannot want money; for what originally begot the monies fent out, but our wares?
Neither is it faid that Money is the life of trade, as if it could not fubfift or pafs current without the fame; for we know that there has been great trading by way of comnutation or barter, when there was but little money ftirring in the world. There are fome nations which have fuch remedies againft this want, that it can neither decay nor binder their trade; for they transfer bills of debt, and have other ways whereby they affign their credit from one to another daily' for very great fums, with eafe and fatisfaction by writing only; whilft, in the mean time, the mals of treafure, which gave foundation to thefe credits, is employed in foreign trade as a merchandize which doth much increafe their traffic. It is not, therefore, thekeeping the Moneyin the Kingdom, which makesa quick andample Trade, but the Use of our Wares inforeigen Countries, and our Want of their Commodities, which causesthe Vent and Consumption on all Sides.
And here it may be obferved, that Leghorn is one of the moft famous places for trade in Europe, and yet the merchant hath but little means to make their returns from thence, but only in ready money; which they may, and do carry away freely at all times, and without cuftom, to the great advantage of the duke of Tufcany and his fubjects, who have been much enriched by the continual great concourfe of merchants, from all the ftates of princes their neighbours, bringing them money daily to fupply their want of the faid wares; and thus we fee that the current of merchandize, which carries away their treafure, becornes a flowing ftream to fill them arain in a greater meafure with money.
Therefore, let no man doubt but that Money muft ever' attend on Merciandize, for they go together: and it is worthy the noting, that there are princes who are content to part with their treafure, only to enjoy the trade of the wares which are brought them, for which (to encourage the merchant) they take no cuftom; whereas we, by fending out our Money, do gain the employment of our Shipping, the trade of our Wares, and the profic of the Customs, which is a treble benefit.
Some men have thought, that thofe countries which permit money to be carried out, do it becaufe they have few or no wares to trade withal ; but we have great flores of commodi-

VOL. 11.
ties, and therefore their action ought not to be our example. $=$ To this it may be anfwered, that if we have fuch a quantity of wares, as doth fully provide $*$ s of all things needful from beyond the feas, why fhould we then doubt that our monies beyond the feas, why hould we then doubt that our monies
fent out in trade muft not neceffarily come back again in treafure, together with the great gains which it may procure fuch manner as is before-mentioned? and on the other fide, if thofe nations which fend out their money, do it becaufe they have few wares of their own, how come they to have fo much treafure as we ever fee in thofe places, which fuffer it freely to be exported at all times, and by whomfoever?' The anfwer is, Even by trading with their MoNIEs; for by what other means can they get it, having no mines of Gold or'Silver?
It may now be expected, that I fhould give my thoughts with refpect to the great complaints which have been this year publifhed, againit the India company's exportation of goid and filver bullion; but I chufe rather to obferve;
That the foreign bullion exported by the EaftIndia company, their officers and fervants, for five years, commencing at Michaelmas 171 I and ending at Michaelmas 1716, amounted to 1. $1,636,257$ Befides, more than one tenth part of the whole export, was yearly rent to the Eaft-Indies in goods of Englifh product.
In five years; from Chriftmas 1712 to Chriftmas 1717, the Ealt-India goods exported from England to foreign parts, a mointed on their nett value to
Exclufive of the drawbacks and prompt pay-
3,335,928 ment allowed the merchants.
By which it is apparent, that over and above the value of the bullion exported to India, there was a ballance accruing from foreign parts to the amount of
$1,699,671$
Which have been anfwered to Great-Britain by
goods, exchange, or bullion. Befides this fum,
The company have paid for cuftoms in five years to Chriftmas 1717
The drawbacks on exportation of goods in the fame time

- 898,179

So that the remaining furplus towards clearing the debt of the nation, amounted to
To which is to be added, as a further gain to the nation, all the falpetre, drugs, tea, coffee, pepper, cotton, yarn, raw filk, muflins, and callicoes, expended in Great-Britain in the faid five years, which otherwife muft have been purchafed at much dearer rates of our neighbours.
Note, The Eaft-India company did licence foreign bullion for purchafe of diamonds, from Michaelmas 1711 to Michaelmas $1716,1.123,537$.
But, becaufe much the greateft part of the faid diamonds are again exported, this fum, is not added to the above bullion. I fhall now only obferve, that I think the trade to the EaftIndies will entirely be loft to this nation, if it fhotild be laid open; but as I may probably publifh too much on this fubject for our natural enemies, or our profeffed friends and allies to hear at this times fo I will defer giving my thoughts thereupon 'till a more proper opportunity offers.' Some Thoughts relating to Trade in general, and to the Eaft-India Trade in particular, printed for Baldwin:
That the reader may have a fummary view of what has been urged for and againtt the Eaff-India trade and company, the following fhort queries may not be unneceffiary.

1. In favour of the Trade and Company.
2. Quere. Whether the Eaft-India trade in general be beneficial or otherwife, upon the whole, to the European potentates interefted therein?
If it has been, and ftill continues to be; detrimental to the Europeans upon the whole, can it be fuppofed that they would be fo infatuated as to carty on a lofing trade for many years? And,
If it is a commerce detrimental to the refpecive ftates that are engaged, how comes it to pafs that other nations are endeavouring to eftablifh this trade?
If the trade to the Eaft-Indies could be moft advantageoully carried on, by the feveral powers therein concerned, in a manner free and open to all the fubjects of thefe powers, how happens it that every one of them thould rather pret: large joint-ftock exclufive companies?
If ald the European ftates, engaged in this trade, carry on the fame by the means of rich and powerful joint-ftock corporations, with privileges and immunities exclufive of the fubjects of fuch flates, and Great-Britain alone was to attempt to carry on this trade different from them all by a regulated company, and to leave the fame free and open to all his Majefty's fubjects-Quere, Could Great-Britain be prefumed to carry the trade on with the like degree of profit and fafety that other nations do?
Whether the importation of gold from the Eaft,Indies, and Whe re exportation of Eaf-India commodities to Europo the re exportation of Eafter and Anica, together with the building, employment of the lhipping concerned therein, breeding of feamen, 90
the benefits arifing from freight, affurance, cuftoms, and all other charges, are not of far greater advantage to the kingdom, than the exportation of filver is a detriment? And whether, if the trade was laid abfolutely open to all his Majefty's fubjects, the expurtation of filver would not rather be augmented than diminifhed?
Whether gold and filver, or bullion, ought not to be efteemed by the legifiture as a commodity, or metchandize, and fuffered, like other wares, to be freely exported? [See our article Bullion, Vol. I.] And if fo, whether all objections raifed againft the company, by reafon of their exportation of filver, are not inconclulive, and of no more weight againft the company than againft the trade itfelf, if laid open, becaufe it cannot be carried on without fuch exportation?
Whether, if all the filver that has been produced in America was now circulating, as money ${ }^{*}$, in Europe, Europe would be the richer for it? And whether filver, if that was the cafe, would not have been as cheap as tin, or, perhaps, copper?

## REMARKS.

* It may be here neceflary to obferve, that it muft be beneficial to trade, that our princes, noblitity, and gentry, thould wear the richef gold and filver cloashing, and ufe fuch utenfils, and adorn their palaces and houfes with thofe precious metals, as much as the revenues of the crown, or income of the eftates of the nobility and gentry will admit; only with this difference, that crowned heads may lay out this way, whatever the extent of their revenues will allow; but the nobility and gentry mult act in this, with yach
regard to their families, that they may all be properly proregard to their families, that they may all be properly pro-
vided for, whilt the heir only hould fill up fueh fplendid appearances.
The reafon of which is this, that as the gold and filver (i. e. money) increafes in greater proportion than the people increafe, fo will the prices of every thing advance, and that in much greater proportion than the rents will or can rife; wherefore it cannot but be beneficial even for trade, that as much of thefe metals be ufed in fplendor, as is confiftent with the above-mentioned circumftances ; becaule, by thus keeping fo much of thofe metals out of trade, the more juft diftinction will it keep up amongf the feveral ranks and thations of men, whillt at the fame time it will give fo much greater employment, and that in the moft nice and curious arts, to mechanics, \&c. and to prevent our markets from rifing fo high, as to hinder the exportation of our commodities, or give too great encouragem nt to the importation of foreign goods.
I am induced to make this remark, fiom the praßkice of the Ean Indians, who, as I have often heard, carry this matter fo far, as to bury the money they get by trade; as E. Philips, Efq, p. 7. alfo fays, that they have, fince the year i6oz, buried above 150 millions of filver, which hath been brought into Europe (a).
(a) Money is the tradefman's working tools, without which he cannot proced in trade at all; therefore, finee the increafe of money
amongt the people will increafe the price of things in greater proportion than the rents can be raifed; the more money circulates in trade, the more muft the traders have in their bands to carty it on; and this will neceffarily raife tradefmen fo much nearor the rank of gentry, as the guantity of calh they circulate is greater in were kept lower, the way above fuggefted.

Whether this trade extends to exhault our wealth, or whether, on the contrary, our re-exportations of Eaft-India goods do not, in the Ballance of Trade with other countries; compenfate us for the money paid for them; and whether we could carry on thefe Trades fo extenfively, and to that advantage, without Eaft-India goods to mike up our fortments, as thefe goods are now, by the prefent channel and courfe of trade, become neceflary for our foreign markets? But,
Whether, if the trade is lajd open, private traders, who are difunited in their interefts, can have fuch large capitals lodged in the Indies, and fuch a degree of weight and infuence there, as are neceflary to carry on trade with the natives; and whether numbers of feparate traders going to India will not raile the price of the Indian commodities, and leffen the price of our own?

## II. In Opposition to the Company.

Query-If the Eaft-India trade is fo effentially connected with many other branches of our trade, whether it would not, if laid open, very much enlarge our trade in Gen er al, increafe our Navigation, and add to the wealth and riches of this kingdom?
Whether this trade is not carried on by the company with greater prejudice to the nation than it would be if made fret and open, as they export lefs of its manufactures, and fet their own price upon what they import, at the expence o: the people of Great-Britain
Whether, if the tride was laid open, a much greater number of ©hips would not be employed in this trade than at prefent, and thofe the ftrongeft and moft warlike, which, by this means, would be more extenfixe and enlarged in place:
already traded to, and to others hitherto unfrequented; and; confequently, whether more of our fullow fubjects would not find employment both abroad and at home, more of our woollen, and other manufactures, be exported, and we have thofo goods much cheaper from thence for our own fumption, which we cannot well be without, and not interfere with our own; and whether thofe which we re-export wherehy our traffic wihh them in foreign markets would be very much enlarged, and the confumers of thofe goods take them from Us, which they now do from other nations?
Would not laying open this trade prove the means to carry on a great coaft-trade in the Indies, and our coarfe and fine cloths, and other manufactures, in all probability, be fold in greater quantities than hitherto, and a very great profit arife to the kingdom, by the additional freight which our hips will be able to make, in carrying of goods and palfengers from one country to another?
Whether thofe who may be againft this trade being laid open, as thinking the nation would be the more exhaufted, ought not to examine what commodities are brought from thofe parts of the Ealt-Indies, that take from Us the greateft quantity of our product and manufactures, and in return, give us commodities that we cannot well be without ; that are partly peexported, and that do not interfere with, or hinder the confumption of, our own; and what from thole parts, to which we chiefly export gold and filver? And whether upon thefe enquiries it will not be found, that thofe people who take from us moft of our product and manufaclure, give us in return faltpetre, pepper, cowries, \&c. indico, and other dyeing goods, as well as drugs of moft kinds, and very often gold and filver, particularly the former, which is afterwards exchanged for goods at Madrafs; and whether thofe places to which we chiefly fend gold and filver, do not give us, in eturn, goods manufactured, interfering with, and hindering the Consumption of, our own, or fuch as ferve us only for Luxury, and whereof a very fmall value is re-exported to foreign countries independent of Great-Britain?
Whether, therefore, if this trade is now carried on to the difadvantage of the nation, it would not be the contrary when laid open; efpecially if we are as carefulas our interest obliges us to be, to encourage the different Trades to sonie of thofe places, and with fome of thofe people, and to difcourage it to and with others? And whether, if this trade was laid open, under proper regulations and reftrictions by the Legislature (whofe bufinefs it is to difceurage the trading to all difadvantageous ports of India, by Duties on commodities ferving only for luxury, or interfering with, or hindering the confumption of, our own manufactures) the nation would be fo far from being thereby the more exhaufted, that a more extenfive and beneficial trade would not be carried on, and greater employment given to our navigation and feamen? For when a trade is confined to a FEw, who are in no apprehenfion to be outdone by any riyal, they are not like to take any extraordinary pains to improve it ; whereas, when many carry on a Trade, their induftry and inge. nuity are always at work to outvie one another; and to this it is we owe the increafe of our trade in the courfe of 100 years paft, and the extenfivenefs of our commerce at prefent. Whether the government, or a number of gentlemen that a regulated Company fhall be compofed of, cannot apply money to the maintenance of forts and caftles with good garrifons, as well as a number of gentlemen of whom an exclufive company is compofed ; and whether the fervants of the government, or the factors of a regulated Company, cannot do all in INDIA that the fervants or factors of an exclufive company can do, touching Trade, Presents, and Alliances? \&c.
SIBERIA, or ASIATIC RUSSIA, formerly denominated GREAT TARTARY, is fituated between 60 and $13^{\circ}$ degrees of eaft longitude, and berween 47 and 72 degrees of north latitude, being bounded by the Frozen Ocean on the north, by the Pacific Ocean, China, and Chinefian Tartary on the eaft, by the Mogul's and Ufbec Tartars on the fouth, and by the rivers Oby and Irtis, which feparate Affatic from European Ruffia on the weft, being upwards of 2000 miles in length from eaft to weft, and 1500 miles in breadith from north to fouth; the north of it a cold, barren, uninhabited country, covered with fnow eight or nine months in the year; the Pouthern provinces, a more fruitful foil, but moft of the natives live a vagrant life like the ancient Scythians and Tartars, depending chiefly on what they take by hunting and fifhing, or the produce of their flocks and herds: there are very few towns, and very little of the land cultivated, except near Tobolnki the capital, to which part of it the Swedifh prifoners were banifhed fome years ago, and to which the Ruffians fend moft of their pifoners and fume large colonies; but ftill there want hands to manure the ground, and great part of Siberia remains a defert. They have fcarce any trade or manufactures; the principal traffic of the Mufcovites of Siberia, is by hedges over the lake and frozen country to China in the winter, and they bave been endeavouring to find $\mathbf{a}$ way into the fea of Japan and China, by their rivers
which fall into the Frozen Ocean, but have not fucceeded wet, as I can learn; but they redate they have met with fome yet, as I can refara; and copper in the mountains of Siberia, which they tiave begun to work. We include the Calmuc Tartars within the limits of Siberia, as they acknowlege themfetves fubject to the empire of R affia.
Toboxski, or Tobolika, the chief city of Siberia, is fituate on the confluence of the rivers Tobol and Irtifik, in latiade 58, longitude 67. 10, eaft: It is leated on a high bill of a ude 5 , lof large compans, Tartars, who drive a good trade up the river Irtilk, and carry their merchandizes acrofs Great Tartary, quite, to Chína.
This city is, likewife, a famed mart for all the commodities which are brought thither, not only from moft parts of Mufcovy, but likewife from Tartary, and other countries: and the concourfe of thofe merchants doth daily increafe, and is vaftly advantageous to the Ruffians.
Here is plenty of all forts of provifions, and very cheap. An bundred weight of rice is fold for fixteen pence, and a good ox for two rixdollars, and the reft in proportion, efpecially fifh, which is here in great plenty and variety; infomuch that a fturgeen of forty pounds weight is fold for five or fix pence, and the Tame may be faid of all kinds of game. In this city are held the fupreme courts of judicature for all Siberia and Dauria; and here is likewife the refidence of a metropolitan, fent hittorer from Mofcow, who bas a fupreme firitual jurifdiction over thofe two provinces.
The river Irtifk, which runs along one fide of the town, is reckoned as rapid as the Danube, and flows thither from the fouth, and empties itfelf into the Oby. That of Tobol, which runs along the other fide, and from which the town takes its nanie, is fuppofed to have its fpring-head from the fame territory with the Irtifk, and falls into it a little below it; and both bring a conflant flow of merchandizes into it all the fummer.
Demiangi, feated on the river Irtilk, fifty leagues north of Tobolika, is a town of good traffic.
Somaroskoi Jam, is another town of fome trade on the fame river, about 50 leagues below Demianfki, and about 20 above its confluence with the Oby.
Tinncen, Tinnen, alias Tinna, is fltuated in lattude 56. 50 , longtude 65.10 , on a river of its name, called alfo Tox A : it ftands about 46 leagues fouth of Toboifia, and is a great market for all kinds of furrs. It is large, populous, and furrounded with fout walls and ramparts; and is chiefly inhabited by Tartars, who are very affable and courteous, and carry on a confiderable trade with other nations.
Japanzin fands in latitude 58. 10, longitude 63.25 , about 45 leagues north-eaft of Tinncen, on the river Toza, and was built for a ftage for perfons. who travelled on this road; as was alfo Vergaleria, the firft town of Siberia, for thofe who travelited thence in Perfia. It was built anno 1590 , and is the refidence of a governor, and of a numerous garrifon, who yearly diftribute out the corn, and other provilions, to other fortrefies and garrifons feated in countries not tilled.
Tara, fituate in latitude 57.5 , longitude 71.45 , almoft in the middle of the province, upon the river Irtife, is another confiderable place for trade, and built by the Mufcovites for the fecurity of it down that tiver.
Surgut is feated on the north-eaft fide of the river Oby, and is a poor town, thinly inbabited, and worre puilt; and in thort, in the whole territory of it the people are fo poor, that they can'fcarcely afford cloatbs to keep themfelves warm. They cultivate bur little land, and that very indifferently; and fublift almoft wholly on their hunting of lables, ermin ss, black foxeb, beavers, and fach-like creatures, with which this territory abounds; fome of which they catch in traps, others they hunt with dogs, and traffic for their fkins. The ermines are here the fineft and largeft in all Siberia; and the black foxes are in fuch effeem, that a fkin of that fort is fold for two or three hundred rubles. Hyenas and beavers are, likewife, in great plenty here.
Narim, in latirude $5^{8}$. 50 , langitude 8 z. 53 , capital of a territory of that name, is, likewife, fituate on the Oby, a little below where that river receives the Keta.' It is large and populous, and defended by a ftrong fortrefs, and a good garrifon of Coffacs. The territory about it abounds with foxes, beavers, ermines, fables, \&ec.
Tomskas is a ftrong frontier town, and the capital of a province of its name. It is feated on the river Toza, which falls into the Oby a litte below it. It ftands about 30 leagues fouth of Narim, latitude 56.50 , longitude 84.37 , eaft.
Other towns along thofe rivers above- named are, SIBER, or Gibier, Berrsat, Jurgoet, which laft fands on an ifiand in the Oby; and the fortrefs of Comgoficio on the river Telt, which hath a good garrifon.

## REMARKS.

The inhabitants of this laft Narim, were a little above 30 years ago ordered to get upon their fledges, and make what farther difcoveries they could towards the eaftern part of this province. They sravelled eaftward through feveral wafte
and defeft countries, which had, however; abindance of rivers, trees, and a good foil; and, at the end of three weeks, found a champaign country, inhabited by a fort of wild people, who lived in huts, and canted themfelves Tingoefi: They were ferted along the fiver Jenizea, vihich is larger than the Oby, and runs in ahriof a ftrait courfe northward, the length of 25 degrees, frotn the lake Baykal; Where it rifes, to the Morthern Ocean, into which it difcharges itfelf. 'This ríver is obferved to ovetfow in fummer like the Nile in Egxpt, to above 70 leagues of the flat land; during which time; thefe Tingoele move up, with all their cattle, towiards the mountains, 'till the waters are dried up; and then return, and make the beft of that fine pantire and.
The next year a new Tet of Mufcovites were fent with the former, and fome Samoiedes and Tingoefe, who were their guides, and here and there theirinterpreters; and thefe ftill kept towards the eaft, rot daring to decline tbwards the fouth. In their way they met with fome wild people an this tide the river Perfida, which is not fo wide, but is as rapid as the Jenizea; and thefe were a ftout robuift people, wisthlittle eyes, who made figns as if to tell them, that on the other fide of that river, there was heard an omon, which fome underftood of thunder, others of the found of bells. The report they made at their return, excited the curiofity of others; and the waiwode fent thither, the year after, about 700 men, who penertated again as far as the river Perfida, and encamped there along irs banks, waiting for the fpring, that the might fee it thawed and open. Here they perceived, when the wind fat towards them, the confured found of bells, of men, and horfes, on the other fide of the river, though they met with no men on this fide: they fancied likewife, that they faw fome veffels, with their fuils of a fquare form, fuch as are ufed in India. In'the months of April and May they Law, with pleafore, the whole country covered with variety of flowers', plants, fruits, beafts, birds, soc. and, by low journeys, returned, and arrived in Siberia in autumn, where they gave and account of what they had feem
This tiver of Perfida-is fuppofed to be the boundary of the kingdom of Cathai, on that fide which lies between India and China, ande this gave them great hopes of more confiderable difcoveries in procers of time; but the froubles which happened in Mufcovy, put an end to the embafy they bad defigned to fend thither, in a fummer or two. How ever, the governor of Siberia fent thither a frefh caravan by land, and a number of covered veffels down the Oby into the Northern Sea, to difcover the coafts of it as far as the mouth of the Jenizea; and the firf that come, whether by land or water, were to wait for the others a whole year, and then return by the fame way. Both performed their parts, and made a faithful report of what they had obferved, which was fent, fealed, to the court of Mofcow, to be made ufe of as foon as the war was ended. But by the little notice that has fince been taken of it, it is probable, that the account has been either lof, or difcouraged; and that the Mufcovites have returned, in a great meafure, to their priAtine averfion to all difcoveries of this kind, and all comomerce with other nations: otherwife they have very great conveniencies, by means of thofe rivers, moft of them navigable, to cariy their enquiries a great deal farther after the fo much defired North-east passage into China and Japan. For inftance, they bave here a large river called the Taas, which falls into the Oby, and which feems to come down from a foreft not far from the Jenizea; whence fomings another river not far from the former, which falls into the Jenizea ; fo that from the $\mathrm{Oby}^{2}$ one might, by means of the Taas above mentioned, crofs part of Siberia and Samoieda, and, after about two or three leagues march by land, come to another called the Torgalf, and fail down it into the Jenizea, the Torgalf having been lately difcovered by the Tingoefe and Samoiedes, and found to be navigable, quite into the Jenizea above mentioned.
The Jenizea, fo lately mentioned, is another river that would no lefs contribute to fuch ufeful difcoveries, and, confequently, may deferve a particular defcription in this place. It hath its (pring-head in fome lakes near high mountains on the fouth fide by Siberia, and thence running towards the northweft, croffes the land of the Curges, or Kurgiffes, where it grows confiderably larger, by the addition of a great number of brooks and rivers; particularly the Angara, which fprings out of the lake Baykal above named, and waters the city of Jenizea in the territory of the Tongufcan Tartars, and called, by moft travellers, Jenizefkoi, the Padkamena, and Tonguica, both of them allo very confiderable.
A good way below this it enters into Samoiedia, where it receives, among mariy of a leffer fize, thofe of Nizaia Tongufca, which runs through the territories of the Tongufci, a litele below the conflucnce of which is the monaftery of Troitzcogo, and fomewhat lower ftill, on the oppofite fide, the town of Turaganfcoi, where the Turngan falls again into the Jenizea. Next to it, it receives thofe of the Schoriga, Corefiga, Gataka, and Ubo; and below thefe one branch of the Gufkina; and a feiw leagues fartber the other, by which is formed the illand of that name; and, ifter a great
winding
winding along the eaft fide of a vaft ridge of mountains, it divides itfelf, before it falls into the Frozen Sea, and forms a fecond inand over-againft Nova Zembla. We thall only obferve farther, concerning the courfe of this river, that it receives a great number of others, for fome of which we hardly find any names in maps.
A fhort account of the many attempts that have been made for the difcovery of a North-West Passage.

The firlt perfon who attempted this difcovery was John Cabot, employed by Henry VII. of England, towards the end of the fifteenth century, but was prevented from finifhing his difcovery by his people mutinying. He was always of opinion there was a paffage, and that he fhould have difcovered it if not prevented by his men.
It was alnoft fourfcore years before another attempt was made, and then undertaken in the year 1576 by Sir Martin Forbifher, who was fo little difcouraged by an unfucceffful voyage, that he made two more, though with the fame fucvefs. In 1583 Sir Humphry Oilbert went on the fame expedition, but went no farther than Canada, in which voyage he fettled the cod.filhery at Newfoundland. In 1585 , Capt. John Davis made an attempt, but without fuccefs, and two more in the two following years, but without fucceeding in his great attempt of difcovering the north-weft paflage, though he proceeded to the height of 72 degrees north:
Mr Hudfon, in the year 1610, after having in vain made a trial of the north-eaft paflage, attempted the difcovery of the north-weft, paffing through the ftreights that have fince borne his name into an open fea; but was, like John Cabot, prevented from proceeding by a mutiny among his feamen, who refufed to proceed any farther. After him Baffin made three voyages in the years 1612,1615 , and 1616 .
In the year 1618, Mr Henry Button, afterwards Sir Henry, attempted to improve upon the difcoveries made by Mr Hudfon, and wintered at port Nelfon, where, by the extreme cold, he loft great part of his men. He was the firft perfon who wintered in thofe countries.
During thefe attempts of the Englifh, the king of Denmark, thinking to perfect their attempts by the vicinity of his country, in the year 1605 fitted out two hips, and fent them on the fame expedition, under the command of Capt. Cunningham, a Scotfman, who fucceeded no better than the Englifh; which did not prevent another expedition in the year 1607, when the men mutinied, and obliged the captain to return. This ill fuccefs only occafioned the king of Denmark to change the people; and having fitted out two Chips, fent them under the command of a Dutchman, named Chriftian Richardfon, manning his fhips from Norway and Iceland, but with the fame fuccefs, the men mutinying before they faw the land of Greenland. In 1619, the Danes fent Capt. Munk, who wintered there, and loft all his men but two, with whom he got home in the pinnace, leaving the fhip behind.
In the year 1631, the Englifh refumed the undertaking, and fent two fhips, one from London under the command of Capt. Fox, and one from Briftol under the command of Capt. James, who met near port Nelfon in the month of Auguft. Fox came home that year, but James wintered in that country; and endured almoft incredible bardfhips, but at laftarrived fafe in England.
The ill fuccefs of thefe attempts put a fop for many years to any fhips being fitted out for this difcovery, efpecially as the Hudfon's-Bay company, which was eltablifhed in Charles the IId's time, had taken that difcovery under their more immediate care, being by their charter obliged to fit out hips of fend on that dilcovery; though we read of only two expeditions, one under the command of Capt. Barlow, who was loft, and another unfucceffful under the care of Mr John Scrogg, in the year 1722.
From this time 'till Capt. Middleton's expedition in the king's Thip Furnace, in the years 1741 and 1742, we hear of no attempt. This voyage occafioned a controverfy between Arthur Dobbs, Efq; now governor of North Carolina, and the captain, on bis return, but with little fatisfaction to the public, the principal intent of the voyage, the difcovery of the palfage, not being completed.
In the year 1744, an act was paffed, promifing a reward of 20,0001 . to be paid by the lords of the treafury, to any perfons who fhould fucceed in difcovering the north-weft paffage. This, with other advantages, which the undertakers propofed to themejves by fuch an attempt, encouraged a fubficription for fitting out two fhips from London, called the Dobbs and California, under the command of the captains Moor and Smith, who failed the 20th of May, 1746, and after wintering at port Nelfon in Hudfon's-Bay, to be ready to go on with their expedition early the next year, and making many attempts, which proved to them only the probability of a paffage, and not the certainty by fuccefs, they arrived fafe in Yarmouth-roads on the I4th of October, 1747. The laft voyages that we have heard of, are thole made by Capt. Swaine from Philadelphia, but with as little fuccefs as any of the former.

## Of the North-East Passage.

The north-eaft paffage has likewife been often attempted by the Englifh, the Dutch, and the Danes, but hitherto unfuccefffully. There have been, however, as I am informed fome difcoveries made within thefe few years, that have no only a tendency to facilitate fuch a difcovery, but are of fuch a nature, as feem to prove demonftrably the Certainty of fuch a paffage : and thefe difcoveries, if I am rightly in formed, are now in the poffeffion of an Englifh gendeman, who has been at no inconfiterable trouble and expence fitently to come at fuch intelligence, by refiding feveral years in Ruf fia, and there employing proper people to purfue fuch mea fures as have been inftrumental thereunto. Such a happy difcovery, made by a fubject of the crown of Great-Britain, muft not only give eternal glory to the kingdom, but be attended with unfpeakable advantages. As I know fomething of this gentleman's character, I am confident that he would be the laft perfon who would offer any thing of this kind to the public, if it was not grounded upon very rational principles.
SICILY. See Naples.
SILESIA, a duchy in Germany. This country lies between Bohemia, Moravia, and Lufatia, on the fouth-weft, and Poland on the north-eaft. On the fide next Bohemia are many barren mountains ; but the reft of the country is good foil, abounding with corn, wine, fweet-cane, or galengal, madder, and Gax ; and in the mountains which divide it from Moravia are mines of filver, the richeft in Germany: there are others of copper, lead, iron, quickfilver, falt, falt-petre, and chalk.
Teschen, which fands between the two tivers Oels and Weichfel, has a good trade in wine and fruit from Hungary, with ftore of venifon, wild fowl, and finh, and two forts of beer, the one of wheat, the other of barley, both much efteemed.
Freystat, on the river Oels, is noted formines of iron, and is a great thoroughfare from Cracow to Vienna:
Striga ftands on the river Polfnitz, and is noted for excellent beer, and that remarkable mineral called terra figillata.
Breslaw, which is the metropolis of Silefia, ftands at the conflux of the Oder and Olaw, and two other rivers. It is a very populous city, and much frequented by Hungarian, Bohemian, Polifh, and other foreign merchants. Here is a fquare near a mile round, where are, on one fide, three grand warehoufes, about 500 paces in length, like market-halls, full of Thops, where they fell filks, ftuffs, fine cloth of all colours, iron wares, \& $\mathrm{c}_{\mathrm{r}}$ and on the other fide are the houfes of the merchants to whom they belong. But the falt-market, in refpect to the magnificent houfes round it, is reckoned the fineft of all its fquares.
Cossen fands near the conflux of the Oder and Boben: it is a neat old city, and has a confiderable trade, particularly in linen cloth and earthen ware, by its rivers.

## REMARKS.

A mifunderftanding having fome time fubfifted between the crowns of Great-Britain and Pruffia, in relation to the Silesia Loan, it may be of ufe to pofterity to know the anfwer that was given, by his Britannic Majefty's order, to the king of Pruffia's memorial upon that occafion; and efpecially fo, becaufe there is great knowlege therein contained of maritime and commercial affairs, and the whole is drawn up with fuch extraordinary judgment and accuracy, as will ever do honour to thofe cclebrated lawyers whofe names are fuperfcribed thereto.

The duke of Newcastie's Letter, by bis Majesty's order, to Monfieur Michell, the king of Prussia's fecretary of the embaffy, in anfwer to the memorial, and other papers, delivered by Monfieur MIchele to the duke of Newcastie, on the 23d of November, and I 3 th of December laft. Publificd by au* thority. London, printed by Edward Owen, in WarwickLane. 1753:

## SIR,

Whitehall, Feb. 8, 1753.
I loft no time in laying before the king the memorial which you delivered to me, on the 23 d of November laft, with the papers that accompanied it.
His Majefty found the conterits of it fo extraordinary, that he would not return an anfwer to it, or take any refolution upon it, 'till he had cauted both the memorial, and the Expofition des Motifs, \&c. which you put into my hands foon after, by way of juftification of what had paffed at Berlin, to be maturely confidered, and 'till his Majefty hould thereby be enabled to fet the proceedings of the courts of admiralty here in their true light; to the end that his Pruffian Majefty, and the whole world, might be rightly informed of the regularity of their conduct, in which they appear to have folgularity of their conduct, in which they appear lowed the only method which has ever been practiced by na-
tions where difputes of this nature could happen, and ftrictly to have conformed themfelves to the law of nations, univer fally allowed to be the only rule in fuch cafes, when therc is nothing ftipulated to the contrary, by particular treaties between the parties concerned.
This examination, and the full knowlege of the facts refulting from it, will fhew fo clearly the irregularity of the proqeedings of thofe perfons to whom this affair was referred at Berlin, that it is not doubted, from his Pruffian Majefty's juAtice and difcernment, but that he will be convinced thereof, and will revoke the detention of the fums affigned upon Silefia, the payment of which his Pruffian Majefty engaged to the emprefs queen to take upon himfelf, and of which the reimburfement was an exprefs article in the treaties by which the ceflion of that duchy was made.
I, therefore, have the King's orders to fend you the report made to his Majefty upon the papers abovementioned, by Sir George Lee, judge of the Prerogative Court; Dr Paul, his Majelty's advocate-general in the courts of civil law; Sir Dudley Ryder and Mr Murray, his Majefty's attorney and follicitor-general. This report is founded on the principles of the law of nations, received and acknowleged by authorities of the greatext weight in all countries; fo that his Majefty does not doubt but that it will have the effect defired. The points upon which this whole affair turns, and which are decifive, are,
Firft, That affairs of this kind are, and can be, cognizable only in the courts belonging to that power where the feizure is made; and confequently, that the erecting foreign courts, or jurifdictions, elfewhere, to take cognizance thereof, is contrary to the known practice of all nations in the like cafes, and therefore a proceeding which none can admit. Secondly, That thofe courts, which are generally ftiled courts of admiralty, and which include both the inferior courts, and the courts of appeal, always decide according to the univerfal law of nations only, except in thofe cafes where there are particular treaties between the powers concerned, which have altered the difpofitions of the law of nations, or deviate from them.
Thirdly, That the decifions in the cafes complained of appear, by the inclofed report, to have been made fingly, upon the rule prefcribed by the law of nations; which rule is clearly eftablifhed, by the conftant practice of other nations, and by the authority of the greateft men.
Fourthly, That in the cafe in queftion, there cannot even be pretended to be any treaty thathas altered this rule, or by virtue of which the parties could claim any privileges which the law of nations does not allow them.
Fifthly, That as, in the prefent cafe, no juft grievance can be alleged, nor the leaṭt reafon given, for faying, That juftice has been denied, when regularly demanded; and as, in moft of the cales complained of, it was the complainants themfelves who neglected the only proper means of procuring it, there cannot, confequently, be any jult caufe, or foundation, for reprizals.
Sixthly, That, even though reprizals might be juftified by the known and general rules of the law of nations, it appears by the report, and indeed from confiderations which mult occur to every body, that fums due to the king's fubjects by the emprefs queen, and affigned by her upon Silefia, of which fums his Pruffian Majefty took upon himfelf the payment, both by the treaty of Breflau, and by that of Drefden, in confideration of the ceffion of that country, and which, by virtue of that very ceffion, ought to have been fully and abfolucely difcharged in the year 1745, that is to fay, one year before any of the facts complained of did happen; could not, either in juftice or reafon, or according to what is the conftant practice between all the moft refpectable powers, be feized, or ftopped, by way of reprizals.
The feveral fucts which are particularly mentioned above, are fo clearly ftated and proved, in the inclofed report, that I thall not repeat the particular reafons and authorities alleged in fupport of them, and in juftification of the conduct and proceedings in queftion. The King is perfuaded, that thefe reafons will be fufficient, alfo, to determine the judgment of all impartial people in the prefent cafe.
It is material to obferve upon this fubject, that this debt on Silefia was contracted by the late emperor Charles the Sixth, who engaged not only to fulfil the conditions exprefled in the contract, but even to give the creditors fuch further fecurity as they might afterwards realonably afk. This condition has been very ill performed by a transfer of the debt, which had put it in the power of a third perfon to feize and confficate it. You will not be furprized, Sir, that, in an affair which has fo gieatly alarmed the whole nation, whoare intitled to that protection which his Majefty cannot difpenfe with himfelf from granting, the King has taken time to have things examined to the bottom, and that his Majefty finds himfelf obliged, by the facts, to adhere to the juttice and legality of what has been done in his courts, and not to admit the irregular proceedings which have been carried on elfewhere.
The late war furnifhed many inftances, which ought to have convinced all Europe how fcrupuloully the courts here do jufice upon fuch occafions. They did not even avail them-

VOL. II.
felves of an open war, to feize or detain the effects of the enemy, when it appeared that thofe effects were taken wrong fully before the war. This circumftance muft do honour to their proceedings, and will, at the fame time, fhew, that it was as litule neceffary as proper, to have recourfe elfewhere to proceedings intirely new and unufual.
The King is fully perfuaded, that what has paffed at Berlin, has been occafioned fingly by the ill-grounded informations which his Pruffian Majefty has received of thefe affairs; and does not at all doubt, but that, when his Pruffian Majefty fhall fee them in their tiue light, his natural difpofitions to juftice and equity, will induce him immediately to rectify the fteps which have been occafioned by thofe informations, and to complete the payment of the debt charged on the duchy of Silefia, according to his engagements for that purpofe.

I am, with much Confideration,
S I R,
Your mof Obedient,
Humble Servant,
Holees Newcastee.

## To the KING's Mof Excellent Majesty.

May it pleafe your Majefty,
In obedience to your Majefty's commands, fignified to us by his grace the duke of Newcaftle, we have taken the memorial, fentence of the Pruffian commiffioners, and lifts marked $A$ and B, which were delivered to his grace by Monfieur Michell, the Pruffian fecretary here, on the $23 d$ of Novemberlaft, and alfo the printed Expofition des Moufs, \&xc. which was delivered to his grace the I 3 th of December laft, into our ferious confideration; and we have directed the proper officer to fearch the regifters of the court of admiralty, and inform us how the matier appeared from the proceedings there, in relation to the cafes mentioned in the faid lifts A and B , which he has accordingly done.
And your Majefty having commanded us to report our opinion, concerning the nature and regularity of the proccedings under the Pruffian commiffion, mentioned in the faid memorial, and of the claim, or demand, pretended to be founded thereupon, and how far the fame are confiftent with, or contrary to, the law of nations, and any treaties fublifting between your Majefty and the king of Pruffia, the eftablifhed rules of admiralty jurifdiction, and the laws of this kingdom:
For the greater perfpicuity, we beg leave to fubmit our thoughts upon the whole matter in the following method:
Firft, To ftate the clear eftablifhed principles of law
Secondly, To ftate the fact.
Thirdly, To apply the law to the fact.
Fourthily, To obferve upon the queftions, rules, and reafonings alleged in the faid memorial, fentence of the Pruffian commiffioners, and Expofition des Motifs, \&c. which carry the appearance of objections, to what we fhall advance upon the former beads
Firft, As to the law.
When two powers are at war, they have a right to make prizes of the fhips, goods, and effects; of each other, upon the high feas: whatever is the property of the enemy, may be acquired by capture at fea; but the property of a friend cannot be taken, provided he obferves his neutrality.
Hence the law of nations has eftabliffed,
That the goods of an enemy, on board the thip of a friend, may be taken.
That the lawful goads of a friend, on board the thip of an enemy, ought to be reftored.
That contraband goods, going to the enemy, though the property of a friend, may be taken as prize, becaufe fupplying the enemy with what enables him better to carry on the war, is a departure from neutrality.
By the maritime law of nations, univerfally and immemorially received, there is an eftablithed method of determination, whether the capture be or be not lawful prize.
Before the fhip or goods can be difpofed of by the captor, there muft be a regular judictal proceeding, wherein both parties may be heard, and condemnation thereupon as prize, in a court of admiralty, judging by the law of nations, and treaties.
The proper and regular court for thefe condemnations, is the court of that fate to whom the captor belongs.
The evidence to acquit or condernn, with or without cofts or damages, muft, in the firft inftance, come merely from the fhip taken, viz. the papers on board, and the examination, on oath, of the mafter, and other principal officers; for which purpofe there are officers of admiralty inall the confiderable fea-ports of every maritime power at war, to ex amine the captains, and other principal officers of every fhip, brought in as prize, upon general and impartial interrogato ries: if there do not appear from thence grourd to condemn, as enemies property, or contraband goods going to the
$9^{P}$
enemy,
enemy, there muft be an acquittal, unlefs, from the aforefaid evidence, the property fhall appear fo doubt'u', that it is reafonable to go into further proof thercof.
A claim of fhip, or goods, muft be fupported by the oath of fom: body, at leaft as to belief.
The law of nations requires good faith: therefore every thip The hw of nations requires be provided with complete and genuine papers, and the muft be provided with lealt, thould be privy to the truth of the trantaction.
To inforce thefe rules, if there be falfe or colourable papers; if any papers be thrown over-board; if the mafter and officers exammed in PREPARATORIO grofly prevaricate; if proper fhips-papers are not on board; or if the mafter and crew cannot fay whether fhip or cargo be the property of a friend or enemy: the law of nations allows, according to the dif ferent degrees of mifbehaviuur or fufpicion, arifing from the fault of the fhip taken, and other circumftances of the cafe, cofts to be paid, or not to be received, by the claimant, in cafe of acquittal and reftitution. On the other hand, if a feizure is made without probable caufe, the captor is adjudged to pay cofts and damages: for which purpofe, all privateers are obliged to give fecurity for their good behav lour; and this is referred to, and exprefsly ftipulated by, many treaties *. [See our articles Privateers, and Maritime, or Marine Affairs, and Treaties of Commerce.]

* Treaty between England and Holland, 19 Feb . 1668 ; art. 13.-Treaty I Dec. 1674, art. 10.-Trea:y between England and France, at St Germains, ${ }^{24} \mathrm{Feb}$. 1677, art 10.-Treaty of commerce at Ryiwick, Sept. 20,1697 , between Fance and Holland, art. 30.-Treaty of commerce at Uurecht, 3t March, 1713, between Great. Britain
and France, art. 29. and France, art. 29.
Though from the fhips papers, and the preparatory examinations, the property does not fufficiently appear to be neu tral, the claimant is often indulged with time, to fend over affidavits to fupply that defect: if he will not fhew the property, by fufficient affidavits, to be neutral, it is prefumed to belong to the enemy. Where the property appears from evidence not on board the fhip, the captor is juftified in bringing her in, and excufed paying cofts, becaufe he is not in fault ; or, according to the circumitances of the cale, may be juftly intitled to receive his cofts.
If the fentence of the court of admisalty is thought to be erroneous, ihere is in every maritime country a fuperior court of review, confifting of the moft confiderable perions, to which the parties who think themfelves aggrieved may appeal; and this fuperior court judges by the fame rule which governs the court of admiraity, viz. the law of nations, and the treaties fubfifting with that neutral power whofe fubject is a party before them.
If no appeal is offered, it is an acknowlegement of the juftice of the fentence by the parties chemfelves, and conclufive. This manner of trial and adjudication is fupporitd, alluded to, and inforced; by many treaties *.
* As appears with refpect to courts of admiralty adjudging the prizes taken by thofe of their own nation, and with refpect to the witneffes to be examined in thofe cafes, from the following treaties:-Treaty between England and Holland, 17 Feb. 1668 , art. 9 and 14 - -Treaty 1 Dec. 1674 . art. It.-Treaty 29 April, 1689, art. 12, 13.-Treaty between England and Spain, 23 May, 1667, art. 23.Treaty of commerce at Ryfwick, 20 Sept. 1697, between France and Holland, art. 26 and 31.-Treaty between England and France, 3 Nov. 1655 , art. 17 and 18. Treaty of commerce between England and France at St Germains, 29 March, 1632, art. 5 and 6.-Treaty at St Germains, 24 Feb . 1677 , art. 7.-Treaty of commerce between Great-Britain and France, at Utrecht 31 March, 1713, art. 26 and 30.-Treaty between Eng land and Denmark, 29 Nov. 1669, art, 23 and $3+$ Heineccius, who was privy-counfellor to the king of Pruffia, and held in the greateft efteem, in his treatife de Navibus ob vecturam vetitarum mercium commiffis, cap. 2. 517 and 18. fpeaks of this method of trial.
With refpect to appeals, or reviews:-From treaty between Encland and Holland, IDec. 1674, art. 12 as it is explained by art. 2. of the treaty at Weftminfter, 6 Feb. 1715-16.-Treaty between England and France, 6 F St Germains, 24 Feb. 1677 , art. 12...Treary of comat St Germains, $24 \mathrm{Feb}. \mathrm{1677}, \mathrm{art}. \mathrm{12.-} .\mathrm{Treary} \mathrm{of} \mathrm{com-}$
merce at Ryfwick, 20 Sept. 1697 , between France and merce at Ryiwick, 2 Sept. 1697, between France and
Holland, art. 33 .-Treaty of commerce at Utrecht, Holland, art. 33.-Ereaty of commerce at trecht, 3 I March, 1713, between Great-
art. 3 I and 32 ; and other treaties.

In this method all captures at fea were tried, daring the laft war, by Great-Britain, France, and Spain, and fubmitted to by the neurral powers. In this method, by courts of admiralty acting according to the law of nations, and particular treaties, all captures at fea have immemorially been judged of, in every country of Europe: any other method of trial would be manifettly unjuft, abfurd, and impracticable.
Though the law of nations be the general rule, yet it may, by murual agreement between two powers, be varied or departed from; and where there is an alteration or exception, introduced by particular treaties, that is the law between the parties to the treaty, and the law of nations only governs fo far as it is not derogated from by the treaty.

Thus, by the law of nations, where two powers ate at war all fhips arc liable to be ftopped, and examined to whom they belong, and whether they are cariying contraband goods' to the enemy : but particular treaties have enjoined a lefs degree of fearch, on the faith of producing folmin paffports, and formal evidences of property, duly attefted.
Particular treaties too have inverted the rule of the law of nations, and, by agreement, declared the goods of a friend, on board the fhip of an enemy, to be prize; and the goods of an enemy; on board the fhip of a friend, to be free, as appears from the treaties already metitioned, and many ochers *.

* Particularly by the aforefaid treaty between England and Holland, i Dec. 1674 ; and the treaty of Utrecht between Great-Britain and France.

So likewife, by particular treaties, fome goods reputed contraband by the law of nations, are declared to be free,
If a fubject of the king of Pruffia is injured by, or has a demand upon, any perfon heré, he ourght to apply to your Majefty's courts of juftice, which are equally open and indifferent to forcigner or native: fo vice verfa, if a fubjeet here is wronged by a perfon living in the dominions of his Pruffian Majefty, he ought to apply for redrefs in the king of Pruffia's courts of juftice.
If the matter of complaint be a capture at fea during war, and the queftion relative to prize, he ought to apply to the judicatures eftablifhed to try thefe queftions.
The law of nations founded upon juftice, equity, convenience, and the reafon of the thing, and confirmed by long ufage, don'f allow of reprifals, except in cafe of violent injuries, directed or fupported by the ftate, and juftice ablolutely denied, in re minime dubia, by all the tribunals, and afterwards by the prince.

* Grotius de Jure Belli ac Pacis, lib. 3. cap. 2. §. 4, 5.

Treaty between England and $H$. lland, 31 July, 1667, art. 31. Reprifals fhall not be granted 'till juftice has been demanded according to the ordinary courfe of law.
Treaty of commerce at Ryfiwic, zo Sept. 1697, between France and Holland, art. 4. Reprifals fhall not be granted, but on manifeft denial of juftice.
Where the judges are left free, and give fentence according to their conficience, though it fhould be erroneous, that would be no ground for reprifals. Upon doubtful queftions, different men think and judge differently; and all a friend can defire is, that juftice fhould be as impartially adminiftred to him, as it is to the fubjects of that prince in whofe courts the matter is tried.
Secondly, As to the FACT.
We häve fubjoined here two lifts, tallying with thofe marked A and B, which were delivered to his grice the duke of New. caifle, by Mon. Michell, with the faid memorial, the 23d of November laft, and are alfo printed at the end of the faid Expofition des Motifs, \&c. from whence it will appear, that as to the lift A, which contains 18 fhips, and their cargoes;
4 If ever taken, were reffored by the captors themfelves, to the fatisfaction of the Pruffians, who never have complained in any court of juftice here.
I Was reftored by fentence, with full cofts and damages, which were liquidated at 28011 . 12 s. Id. ferling.
3 Ships were reftored by fentence, with freight, for fuch of the goods as manifeflily belonged to the enemy, and were condemned.
4 Ships were reftored by fentence, but the cargoes, or part of them, condemned as prize or contraband, and are not now alleged, in the lifts $A$ or $B$, to have been Pruffian property.
5 Ships and cargoes were reftored by fentence, but the claimant fubjected to pay coffs, becaufe, from the fhippapers, and preparatory examinations, there was ground to have condemned, and the reftitution was decreed merely on the faith of affidavits afterwards allowed.
1 Ship and cargo was reftored by fentence upon an ap-- peal, but, from the circumftances of the capture, with18 out cofts on either fide.
There need no obfervations upon this liff. As to the eight cafes firft above-mentioned, there cannot be the colour of complaint.
As to the four next, the goods muft be admitted to have been rightly condemned, either as enemy's property or contraband, for they are not now mentioned in the lifts A or B.
If contraband, the thip could have neither freight nor coffs, and the fentences were favourable in reftoring the fhips, upon prefumption that the owners of the fhips were not acquainted with the nature of the cargo, or owners thereof. If enemy's property, the fhips could not be entitled to freiglt, becaufe the bills of lading were falle, and purported the property to belong to Pruffians.
The fhips could not be entitled to cofts, becaufe the cargoes, or part of them, being lawful prize, the fhips were rightly brought in.
As the fix remaining fhips and cargoes were reftored, the only queftion muft be, upon the paying or not receiving cofts, which depends upon the circumftances of the capture, the
fairnefs of the fhip's documents, and conduct of her crew; and neither the Pruffian commiffioners, the laid memorial, or Taid Expofition des Motifs, \& cc. alliges a fingle reaton why, upon the particular circumftances of thefe cafes, the fentences were wrong.
As to the lift B.
Every thip on board which the fubjects of Pruffia claim to have had property, was bound to, or from, a port of the enemy; and many of them appeared clearly to be, in part, laden with the goods of the enemy, either under their own, or fictitious names.
In every inftance where it is fuggefted that any part of the cargo belonged to a Pruffian fubject, though his property did not appear from the fhip's papers, or preparatory examinations, which it ought to have done, fufficient time was indolged to that Pruffian fubject, to make an affidavit that the properiy was bona fide in him; and the affidavit of the party himfelf has been received as proof of the property of the Prurfian, fo as to intitle him to re"itution.
Where the party won't fwear at all, or fwears evalively, it is plain he only lends his name to cover the enemy's property, as often came out to be the cale, beyond the poffibility of doubt.
 Pruffian Majefty, exhibited in a caufe, and certified to be a true extract by Monf. Michell, under his hand; that this colourable manner of fereening the goods of the enemy was ftated in the following words

- Your Majefty's fubjects ought not to load on board neutral - fhips any goods really belonging to the enemies of England, * but to load them for their own account, whereby they may - Gafely fend them to any country they fhall think proper, - without running any rifk: then, if privat ers commet any
- damage to the ihips belonging to your Mijefty's fubjects, - you may depend on full juftice being done here, as in all - the like cafes hath been done.'

Lift B contains thirty-three cales :
2 Two of them never came before a court of juftice in England, but (if taken) were reftored by the captors themfelves, to the indire fatisfaction of the owners.
n h , the gods chim by the Pinn appear to have been actually relored, by fen aden; and, by the place of the lader, and anfwerable tis him.
14 In fourteen of the cafes, the Pruffian property was not verified by the Chip's papers, or preparatory examinations, or claimant's own affidavit, which he was allowed time to make.
1 And the other caufe, with refpect to part of the goods, - is fill depending, neither party having moved for judg ment *. And fo confcious were the claimants that the court of admiralty did right, there is not an appeal, in a fingle inftance, in iift $B$, and but one in lift A.
*The Pruffian has fince applied for judgment, on the 2gth of January, and obtained reftitution.

Thirdly, To apply the LAW to the FACT.
The fixth queftion in the faid Expofition des Motifs, \&c. ftates the right of teprifals to be, Puifqu'on lequr a fi lung tems deniè toute la juffice, qu'ils étoient fondes de demander.
The faid memorial founds the juftice and propriety of his Pruffian Majefty's having recourfe to reprifals, becaufe his fubjects, N'ont pu obtenir jufqu'à prefent aucune juftice des tribunaux Anglois qu'ils ont reclamès, ou du gouvernment auquel ils ont portè leurs plaintes. And in another part of the memorial it is put, Apres avoir en vain demandè des reparations de ceux quif feuls pouvoient les faire.
The contrary of all which is manifeft, from the above ftate, and litts hereio annexed.
In fix of the cafes fpecified, (if fuch eaptures ever were made) the Pruffian fubjects were fo well fatisfied with the reffitution made by the captors, that they never complained in any court whatfoever in this kingdom.
The reft were judged of by a court of admiralty, the only proper court to decide of captures at fea, both with refpect to the reftitution and the damages and cofts, acting according to the law of nations, the only proper rule to decide by: and juftice has been done by the court of admiralty fo impartially, that all the fhips alleged in lift A to have been Pruffian, were ieftored; and all the cargoes mentioned in either lift, A or B , were reftored, excepting 15, one of which is ftil undetermined.
And, in all cafes in both lifts, juitice was done, fo intirely to the conviction of the private confcience of the Pruffian claimants, that they liave acquiefced under the fentences, without appealing, except in one fingle inftance, where the part of the fentence complained of was reverfed.
Though the Prufian claimants muft know, that, by the law of nations, they ought not to complain to their own fovereign, 'till injuftice, in re minime dubiâ, was finally done them, paft redrefis; and though they muft know that rule of the law
of nations held more frongly upon this occafion, becaufe the property of the prize was given to the captors, and ouloht therefore, to be litigated with them. The Prulfian, who; by his own acquiefcence, fubmits to the captors having the prize: cannot afterwards, with juftice; make a demand upon the ftate: If the fentence was wrong, it is owing to the fault o the Pruffian that it was not redreffed. But it is not attempted to be fhewn even now, that thefe fentences were unjuft in any part of them, according to the evidence and circumftances appearing before the court of admiralty, and that is the criterion.
For as to the Prufian commiffion to examine thefe cafes, ex parte, upon nev fuggeftions, it never was attempted in any country of the world before: prize, or not prize, muft be determined by courts of admiralty belonging to the power whofe fubje Ets make the capture : every foreign prince in amity has a right to demand that juftice fhall be done his fubjects in thofe courts, according to the law of nations, or particular treaties, where any are fubfifting. If in re minime dubiâ thefe courts proceed upon fundations directly oppofite to the law of nations, or fubfifting treaties, the neutral ftate has a right to complain of fuch a determination.
But there never was, nor ever can be, any other equitablé methid of trial. All the maritime nations of Europe have, when at war, from the earlieft times, univerfally proceeded in this way, with the approbation of ail the powers at peace. Nay, the perfons acting under this extraordinary and unheardof commifion from his Pruffian Majeity, don't pretend to fay, that, in the four cales of grods condemned here, for which fatisfaction is demanded in lift $A$, the property really bel nged to Pruffian fubjects: but they profefs to proceed upon this pru ciple, evidently falfe, that, though there cargoes belonged to the enemy, yet being on board any neutral lhip, they were not lisble to enquiry, feizure or condemnation. Fourthly, from the queftions, fules, reaionings, and matters alleged in the faid memorial, fentence of the Pruffian commiffioners, and Expofition des Motifs, \&c. the following propolitions may be drawn, as carrying the appearance of objections to what has been above laid down.

Firf PROPOSITION:
That, by the law of nations, the goods of an enemy canhot be taken on board the ihip of a friend: and this the Pruf fian commiffioners lay down as the bafis of all they have pretended to do.
Anfwer. The contrary is too cleat to admit of being difputed: it may be proved by the authorities of every writer upon the kaw of nations; fqme of different countries are referred to *. It may be proved by the conftant practice, ancient and modern; but the general rule cannot be more ffrongly approved, than by the exception which particulat treaties have made to it $\dagger$.

* 11 Confolato del Mare, cap. 273, exprefsly fays, The enemy's goods found on board a friend's fhip, fhall be confif cated. And this is a book of great au hority.

## Second PROPOSITION.

It is alleged that lord Carteret, in 1744, by two verbal declarations, gave affurances in your Majefty's name, that nothing on board a Pruffian hhip flould be feized, except contraband ; confequently, that all effects not contraband, betraband; conequently, that ad be free, and that thefe affur ances were afterwards confirmed in writing, by lord Chefterfield, the 5 th of January, 1747.
Anfwer. The fact makes this queftion not very material, becaufe there are but four inftances, in lifts $A$ or $B$, where any goods on board a Pruffian hip have been condemned, and no farisfaction is pretended to be demanded for any of thofe four cargoes and lifts A and B: however, it may be thole four cargoes and lindlefs this pretence is.
Taking the words alleged to have becn faid by lord Carteret, as they are flated, they don't warrant the inferences endea-
voured to be drawn from them ; they import no new itipulation, different from the law of nations, but exprefsly profers to treat the Pruffians upon the fame foot with the fubjects of other neutral powers under the like circumftances, i. e. with whom there was no particular treaty: for the reference to other neutral power, cannot be underftood to communicate the terms of any particular treaty. It is not fo faid. The treaties with Holland, Sweden, Ruffia, Portugal, Denmark, \&c. all differ. Who can fay which was communicated? There would be no reciprocity; the king of Pruffia don't agree to be bound by the claufes to which other powers have, by their refpective treaties, agreed. No Pruffian goods, on board an enemy's fhips, have ever been condemned here; and et they ought, if the treaties with Holland were to be the rule between Great-Britain and Pruffia; nay, if thefe treaties were to be the rule, all now contended for, on the part of Pruffia, is clearly wrong: becaufe, by treaty, the Dutch, in the laft refort, are to apply to the court of appeal here.

Treaty of alliance between Great-Britain and Holland, at Weftminfter, the 6th of February, 1715-16, article 2.

- Whereas fome difputes have happened, touching the expla-- nation of the 12th article of the treaty marine, in 1674, it s is agreed and concluded, for deciding any difficulty upon that matter, to declare, by thefe prefents, that, by the - provifions mentioned in the faid article, are meant thofe - which are received by cuftom in Great-Britain and in the United Provinces, and always have been received, and which have been granted, and always are granted, in the like cafe, to the inhabitants of the faid countries, and to - every foreign nation.'

Lord Carteret is faid twice to have refufed, in which Monf. Andrié acquiefces, to give any thing in writing, as not ufual in England.
Suppofing the converfations to mean no more than a declaration of courfe, that juftice fhould be done to the Pruffians, in like manner as to any other neutral power with whom there was no treaty; there was no occafion for inftruments in writing, becaufe in England the crown never interferes with the courfe of juffice. No order, or intimation, is ever given to any judge. Lord Carteret, therefore, knew that it was the duty of the court of admiralty to do equal juftice, and that they would, of themfelves, do what he faid to Monf. Andrié.
Had it been intended, by agreement, to introduce between Pruffia and England a variation, in any particular, from the law of nations, and, confequently, a new rule for the court of admiralty to decide by, it could only be done by a folemn treaty, in writing, properly authorized and authenticated; the memory of it could not otherwife be preferved, the parties interefted, and the courts of admiralty could not, otherwife, take notice of it.
But lord Chefterfield's confirmation, in a letter of the 5 th of January, 1747, being relied upon, the books of the fecretary's office have been fearched, and the letter to Monf. Michell is found, which is verbatim as follows:

## - Monfieur

à Whiteball, le 5 Janvr, 1747-8.
' Ayant eu l'honneur de recevoir les ordres du roy fur ce qui ' a formé le fujet du memoire, que vous m'avez remis, du - 8 de ce Mois, N. S. Je n'ai pas voulu tarder à vous in-- former, que fa Majefté, pour ne rien omettre, par où elle ( peut temoigner fes attentions envers le Roy votre maitre, ' ne fait nulle difficulté de declarer, qu'elle n'a jamais eu - l'intention ni ne l'aura jamais, de donner le moindre em-- pechement à la navigation des fujets Pruffens, tant qu'ils - auront foin d'exercer leur commerce d'une maniere licite, - et conformément à l'ancien ufage établi et reconnu parmi - les puiffances neutres.

- Que fa Majefté Pruffienne ne peut pas ignorer, qu'il y a - des traités de commerce qui fubfiftent actuellement, entre - la Grande Bretagne, et certains etats neutres, et qu'au - moyen des engagements formellement contractés de part et - d'autre, par ces mêmes traités, tout ce qui regarde la ma-- niere d'exercer leur commerce reciproquement, a éfé finale-- ment conftaté et regle.
- Qu'en même tems il ne paroit point, qu'aucun traité de la ' nature fufdite exifte à prefent, ou a jamais exifte, entre fa - Majefté et le roy de Pruffe ; mais, que pourtant, cela n'a - jamais empeché que les fujets Prufiens n'ayent été favorisè̀ - par l'Angleterre, par raport à leur navigation, autant que - les autres nations neutres: et cela ètant, fa Majefté ne pre-- fuppofe pas, que l'ideè du Roy votre maitre, feroit d'exiger - d'elle des diffinctions, encore moins de preferences, en fa-- veur des fujets à cet égard.
- Que de plus fa Majefté Pruffienne eft trop eclairée pour ne - pas connoitre, qu'il y a des loix fixes et etablies dans ce - gouvernement, dont on ne peut nullement s'écarter ; et - que s'il arrivoit que la marine Angloife s'avisà de faire la - moindre injuftice aux fujets commerçans du Roy votre - maitre, il y a un tribunal ici, favoir, la haute cour de l'ami-- rauté, à laquelle ils fe trouvent en droit de s'addreffer et de
porter leurs plaintes; affurés d'avance, en pareil cas, qu’on - leur y rendra bonne juftice ; les procedés juridiques de la - dite cour étant ayant été de tout tems hors d'atteinte, - irreprochables; temoin, nombre d'exemples, où des vaif-- feaux neutres, pris illicitement, ont été reftitutés avec fraix ' et dommages aux proprietaires.
- Voici ce que le Roy m’a ordonné de vour repondre fur le - contenu de vatre dit memoire; et fa Majefté ne fauroit que - fe flatter, qu'en confequence de fe que je viens d'avancer ' il ne reftera plus rien à defirer au Roy votre maitre relative ' ment à l'objet dont il eft queftion; et le Roy s'en croit d'au-- tant plus afluré, qu'il éft perfuadé que fa Majefté Pruffienne - ne voudroit rien demander, qui he fut équitable.
- Je fuis avec bien de la confideration,
- Monfieur,
c Votre très humble, \&
- Très obeiffant Serviteur,
‘ Chesterfield.
There need no obfervations. It is explicit, and, in exprefs terms, puts Pruffia upon the foot of other neutral powers with whom there was no treaty, and points out the proper way of applying for redrefs.
The verbal declarations made by lord Carteret in 5744 , which are faid to have been confirmed by this letter from lord Chef terfield, cannot have meant more than the letter expreffes. And it is manifeft, by the above extract from Monf. Andrie's letter to his Pruffian Majefty, that in May 1747, Monf. Andrié himfelf underftood, that goods of the enemy, taken on board neutral fhips, ought to be condemned as prize.
It is evident, from authentic acts, that the fubjects of Pruffia never underftood that any new right was communicated to them.
Before the year 1746, the Pruffians don't appear to have openly engaged in covering the enemy's property.
The men of war and privateers could not abftain from captures, in confequence of lord Carteret's verbal affurances in 1744, becaufe they never were nor could be known: and there was no occafion to notify them, fuppofing them only to promife impartial juftice. For all lhips of war were bound to aft, and courts of admiralty to judge, according to the law of nations and treaties.
'Till 1746, the Pruffian documents were, a certificate of the admiralty, upon the oath of the builder, that the thip was Pruffian built; and a certificate of the admiralty, upon the oath of the owner, that the fhip was Prufian property.
From 1746, the Pruffians engaged in the gainful practice of covering the enemy's goods, but were at a lofs in what fhape, and upon what pretences, it might beft be done.
On board the fhip 3 Soeurs, was found a pals, bearing date at Stettin the 6th of October 1746, under the royal feal of the Pruffian regency of Pomerania, \&c. alleging the cargo, which was fhip-timber, bound for Port l'Orient, to be Pruf fian property, and, in coniequence thereof, claiming freedom of the fhip.
Claiming freedom to the fhip, from the property of the cargo, being quite new, the propofition was afterwards reverled: and on board a thip called the Jumeaux, was found a pals, bearing date at Stettin the 27th of June 1747, under the royal feal, \&c. alleging the Thip to be Pruffian property, and, in confequence thereof, claiming freedom to the goods. But this pafs was not folely relied on, for there was alfo found on board the fame fhip, another pafs, bearing date at Stettin the 14th of June 1747, under the rogal feal, \&c. alleging the cargo to be Pruffian property.
And it is remarkable, that the oaths, upon which thefe paffes were granted, appeared manifeftly to be falle: and neither of the cargoes to which they relate, are now fo much as alleged to have been Pruffian property in faid lifts A. or B. It being mentioned, in the faid Expofition des Motifs, \&c. that Monf. Michell, in September 1747, made verbal reprefentations to lord Chefterfield, in relpect to the cargo taken on board the faid hip called the 3 Socurs, which was claimed as Pruffian property; and no mention being made in lifts A and $B$ of the faid cargo, we directed the proceedings in that caufe to be laid before us, where it appears in the fulleft and cleareft manner, from the fhip-papers and depofitions, that the cargo was timber, laden on the account, and at the rifque of Frenchmen, to whom it was to be delivered at Port Orient, they paying freight according to charter-party. That the Pruffian claimant was neither freighter, lader, or con. fignee; and bad no other intereft or concern in the matter, than to lend his name and confcience: for he fwore that the cargo was his property, and laden on or before the bth of Oetober 1746; and yet the Mhip was then in ballaft, and the whole of the cargo in queftion was not laden before May ${ }^{1} 747$.
Several other Pruffian claims had, in like manner, come out fo clearly to be merely colourable, that Monf. Andrié, from his faid letter, $\frac{29 \text { May }}{9 \text { june, }} 1747$, appears to have been afhamed of them.

## S I L

Third PROPOSITION.
That lord Carteret, in his faid two converfations, fpecified, in your Majefty's name, what goods fhould be deemed conin your
traband.
Anfwer. The fact makes this queftion totally immaterial, Anfwer. The fact makes this queftion totally alleged to be fo, are fo much as now fuggefted to have been Pruffian property in the faid lifts A and B; and, therefore, whether as enemy's property or contraband, they were either way rightly condemned; and the bills of lading being falfe, the fhips could not be entitled to freight.
But, if the queftion was material, the verbal declarations of minifer in converfation, might fhew what he thought contraband by the law of nations; but never could be underfraod to be equivalent to a treaty, derogating from that law. All the obfervations, upon the other part of thefe verbal declarations, hold equally as to this.

## Fourth PROPOSITION.

That the Britifh minifters have faid, that thefe queftions were decided according to the laws of England.
Anfwer. They muft have been mifunderftood, for the law of England fays, that all captures at fea, as prize, in time of war, muft be judged of in a court of admiralty, according to the law of nations, and particular treaties, where there are any.
There never exifted a cafe, where a court, judging according to the laws of England only, ever took cognizance of prize.
The property of prizes being given during the laft war to the captors, your Majefty could not arbitrarily releafe the capture, but left all cafes to the decifion of the proper courts, judging by the law of nations and treaties, where there were any: and it never was imagined, that the property of a foreign fubject, taken as prize on the high feas, could be affected by laws peculiar to England.

## Fifth PROPOSITION.

That your Majefty could no more erect tribunals for trying thefe matters than the king of Pruffia.
Anfwer. Each crown has, no doubt, an equal right to erect admiralty-courts, for the trial of prizes taken by virtue of their refpective commiffions; but neither has a right to try the prizes taken by the other, or to reverfe the fentences given by the other's tribunal. The only regular method of rectifying their errors, is by appeal to the fuperior court.
This is the clear law of nations, and, by this method, prizes have always been determined, in every other maritime country of Europe, as well as England.

## Sixth PROPOSITION.

That the fea is free.
Anfwer. They who maintain that propofition in its utmoft extent, don't difpute but that when two powers are at war, they may feize the effects of each other upon the high feas, and on board the ihips of friends: therefore, that controveriy is not in the leaft applicable upon the prefent occafion *.
*This appears from Grotius in the paffages above cited, lib. iil. cap. 1. fect. 5. num. 4. in his notes. And lib. iii. cap. 6. rect. 6. in his notes. See our article $\mathrm{S}_{\text {Ea }}$ Dominion.

## Seventh PROPOSITION.

Great-Britain iffued reprizals againft Spain, on account of captures at fea.
Anfwer. Thefe captures were not made in time of war with any power.
They were not judged of by courts of admiralty, according to the law of nations and treaties, but by rules, which were themfelves complained of; in revenue courts: the damages were afterwards admitted, liquidated at a certain fum, and agreed to be paid by a convention, which was not performed Therefore reprizals iffued, but they were reneral Noded. due here to Spaniards were ftopped, no Spanifh effects here were feized. Which leads to one obfervation more
The king of Pruffia has engaged his royal word to pay the Silefia debt to private men
It is negociable, and many parts have been affigned to the fubjects of other powers. It will not be eary to find an intance, where a prince has thoughe fit to make reprizals ina delot, due from himfelf to private men. There is a confidence that this will not be done; a private man lends money to a prince, upon the faith of an engagement of honour, becaufe a prince cannot be compelled, like other men, in an adverfe way, by a court of juftice. So fcrupuloully did England, France, and Spain adhere to this public faith, that, even during the war, they fuffered no enquiry to be made, whether any part of the public debts was due to fubjects of the enemy, though it is certain, many Englifh had money in the French funds, and many French had money in ours. This loan to the late emperor of Germany, Charles the VIth,
in January 17 34-5, was not a fate tranfaction, but a wiere private contract with the lenders, who advanced their money, upon the emperor's obliging himfelf, his heirs and poIterity, to repay the principal with intereft, at the rate, in the mannef, and at the times in the coneract mentioned, without any delay, demurr, deduction, or abatement whatfoever ; and, left the words and inftruments made ufe of fhould not be frong enourh, he promifes to fecure the performance of his contract, in and by fuch other inftruments, method, manner, form, and words, as fhould be moft effectual and valid, to bind the faid emperor, his heirs, fucceffors, and pofterity, or as the lenders fhould reafonably delife.
As a fpecific real fecurity, be mortgaged his revenues, arifing from the duchies of Upper and Lower Silelia, for payment of principal and intereft; and the whole debt, principal and intereft, was to be difcharged in the year 1745 . If the mioney could not be paid out of the revenues of Silefia, the emperor, his heirs'and pofterity, ftill remained debtors, and were bound to pay. The eviction or deftruction of a thing mortgaged, don't extinguih the debt, or difcharge the debtor.
Therefore the emprefs queen, without the confent of the lenders, made it a condition of her yielding the duchies of Silefia to his Pruffian Majefty, that he fhould ftand in the place of the late empetor, in refpect of this debt.
The feventh of the preliminary articles, between the queen of Hungary and the king of Pruffia, figned at Breflau, the rith of June, 1742 , is in thefe words; 'Sa Majefté le roi ' de Pruffe fe charge du feul payement de la fomme hypothé' quee fur la Siletie, aux marchands Anglois, felon le con' tract figné à Londres, le 7 me de Janvier, $x$ y $34-5$.'
The ftipulation is confirmed by the ninth article of the treaty between their faid Majeftes, figned at Berlin, the 28th of July, 1742.
Alfo renewed and confirmed by the fecond article of the treaty between their faid Majefties, figned at Drefden, the 25 th of December, 1745.
In confideration of the emprefs queen's ceffion, his Pruftian Majefty has engaged to her, that he will pay this money, feIon le contract, and confequently has bound himfelf to ftand in the place of the late emperor, in refpect of this money, to all intents and purpofes.
The late emperor could not have feized this money, as reprizals, or even, in cafe of open war between the two nations, becaufe his faith was engaged to pay it, without any delay, demurr, deduction, or abatement whatfoever. If thefe words fhould not extend to all poffible cafes, he had plighted his honour to bind himfelf, by any other form of words, more effectually to pay the money; and therefore was liable at any time to be called upoh, to declare exprefsly, that it hould not be feized as reprifals, or in cafe of war; which is very commonly expreffed, when fovereign princes or ftates borrow money from foreigners. Therefore, fuppofing for a moment, that his Pruffian Majefty's complaint was founded in juftice, and the law of nations, and that be had a right to make reprizals in general, he could not, confiftent with his engagements to the emprefs queen, feize this money as reprizals. Befides, this whole debt, according to the contract, ought to have been difcharged in 1745 . It fhould, in refpect of the privatecreditors, in juftice and equity, be confidered, as if the contract had been performed; and the Pruffian complaints don't begin 'iill 1746 , after the whole debt ought to have been paid.
Upon this principle of natural juffice, French fhips and effects, wrongtully taken, after the Spanifh war, and before the French war, have, during the heat of the war with France, and fince, been reftored, by fentence of your Majefty's courts, to the French owners. No fuch llhips or effects ever were attempted to be confifcated, as enemies property here, during the war; becaufe, had it not been for the wrong firit done, thefe effects would not have been in your Majefty's dominions. So, had not the contract been irft broke, by non-payment of the whole loan in 1745, this money would not have been in his Pruffian Majefty's bands.
Your Majefty's guarantee of thefe treaties is entire, and muft therefore depend upon the fame conditions, upon which the ceffion was made by the emprefs queen.
But this reafoning is, in fome meafure, fuperfluous; becaufe, if the making any reprizals upon this occafion, be unjuftifiable, which we apprehend we have fhewn, then it is not difputed, but that the non-payment of this money would be a breach of his Pruffian Majefty's engagements, and a renunciation, on his part, of thofe treaties.

All which is molt humbly fubmitted to your Majelly's royal wifdom.

Geo. Lee,
January 18, 1753.
G. Paul,
D. Ryder,
W. Murray

Translation of the earl of Chesterfield's letter to Monf. Michell.

## S I R,

Whitehall, Jan. 5, 1747-8.
Having had the honour to receive the king's orders upon the fubject of the memorial, which you delivered to me on the 8 th inftant, N.S. I would not delay informing you, That his Majefty, in order to omit nothing, whereby he may thew his attention to the king your mafter, makes no difficulty in declaring, That his Majefty has never had, or will have, any intention, to give any interruption to the navigation of the Pruffian fubjects, as long as they fhall take care to carry on their commerce in a lawful manner, and conformable to the ancient ufage as eftablifhed and acknowleged amongft neutral powers.
His Pruffian Majefty cannot be ignorant, that there are treaties of commerce actually fublifting between Great-Britain and certain neutral ftates, and that by means of the engagements formerly contracted on each fide by thofe treaties, every thing relating to the manner of reciprocally carrying on their commerce, has been finally fettled and regulated.
At the fame time, it does not appear that any fuch treaty exifts at prefent, or ever did exift, between his Majefty and the king of Pruffia: neverthelefs, that has never hindered the Prufian fubjects being favoured by England, with refpect to their navigation, as much as other neutral nations: and his Majefty does not fuppofe, that the king your mafter means to require diftinctions from his Majefty, much lefs any preferences, in favour of his fubjects in this point.
His Pruffian Majefty is too well informed not to know, that there are in this government fixed and eftablifhed laws, which cannot be departed from; and that in cafe any Englifh fhips of war Thould commit the leaft injuftice to the trading fubjects of the king your mafter, here is a tribunal, viz. the high court of admiralty, where they have a right to apply, and make their complaints; and they may be previoufly affured, that, in fuch cafe; impartial juftice will be adminiftered to them; the juridical proceedings of the faid court being, and having ever been, unimpeached and irreproachable, as appears by numerous examples of neutral veffels illegally taken, having been reffored, with cofts and damages, to the proprietors.
This is the anfwer the king has ordered me to give, upon the contents of your faid memorial ; and his majefty cannot but flatter himfelf, that, in confequence hereof, the king your mafter's defire will be fully anfwered, with relation to the point in queftion; and of which his Majefty is the more aflured, as he is perfuaded that the king of Pruffia would not require any thing, but what is equitable.

I am, with much Confideration,
S I R,
Your moft obedient,
And moft humble Servant,
Chesterfield.

Translation of MrPeter Trapaud's declaration of his having made fatisfaction to the Pruffans for the damage
received by the fhip St John, No. 16. in lift A.
In the Expofition which his Pruffian Majefty has publifhed, of fuch fhips of his fubjects as were taken by the Englifh in the laft war; I have obferved in the lift A, No. x6, that the hip St John, John Groffe captain, is therein, mentioned, as having received fome damages to the prejudice of the Pruffian owners. As the fact is known to me, as I was the fole owner of her cargo, I do hereby as fuch teflify the truth, for the fatisfaction of all whom it may concern. And I cannot conceive, how the Pruffan fubjects dare demand an indemaification, which they have already more than received, as I am going to convince them.
In the month of November 1747, I ordered the faid hhip to be freighted at Bourdeaux, and loaded at Libourne with 158 to tons of white wine. On the ift of December following that flip put out to fea; on the rith of the faid month, fhe got as far as the Downs, where fhe was met by an Englifh privateer, called the Prince of Orange, who fent fix of his men on board the Pruffian fhip, and had the Pruffian pilor brought on board him, with the fhip-papers and documents, in order to their being examined. On the 12th of the faid month, as the lay at an anchor, a great florm arofe from the weft fouth-weft, which obliged the Pruffan captain, with the confent of his crew, and of the fix Englifmen who were then on board his fhip, to cut his cable, in order to drive off to fea. The fhip got afterwards into Browerthaven inlet in Holland, on the I $5^{\text {th }}$ of the faid month of December, without any other damage, than the lofs of part of her cable and of an anchor, and arrived at Rotterdam the 21 ft of the faid month. All this is proved by the declaration of both the captain and his crew, made on the $4^{\text {th }}$ of January, 1748 , before Jacob Bremer, notary public in Rotterdam; and afterwards fworn to on the 6th of the faid month, before the commiffioners of the chamber of maritime affairs.
After the fhip was unloaded, the captain gave in to me his account for grofs average, confifting of the following articies: I. For the lofs of his cable and anchor.
2. For the maintaining, during eight days, the fix men who had been put on board his fhip by the Englifh privateer. 3. For a paffiport I procured for him, from the Pruflian envoy at the Hague, which coft 3 or 4 florins.
I paid him for my fhare in that grofs average 704 florins, Holland currency, over and above ros florins which I gave Capt. Groffe as a prefent, and 10 florins 10 fivers I gave as a prefent to the crew of his thip: befides all this, it cofl me 20 florins, or thereabouts, in England, which Meffrs Simond (brothers) had difburfed, by my order, for the Pruffian pilot, who remained on board the privateer, after, the ftorm had parted them.
Thofe who underftand the navigation and fitting out of fhips, muft allow, that the Pruffian owners will find themfelves more than reimburfed for all their pretenfions, by means of the 839 forins io ftivers, Holland currency, which I have paid them; and that they cannot, with any foundation, make any other demands.
All that I have alleged above, can be verified by authentis vouchers (except the prefents or gratuities to the captain and his crew, amounting to 115 florins io ftivers, for which I took no receipt). In witnefs whereof I have figned this prefent declaration. Rotterdam, January 30, 1753.

Peter Trapaud, jun.

LIST of all the Prussian \{hips taken by British armameats at fea, during the laft war, as well thofe detained for examination only, as thofe judicially proceeded upon, together with the judgments given in the admiralty-courts of Great-Brit ain thereupon,
tallying with his Prussian Majefty's List marked A. tallying with his Prussian Majefty's List marked A.

On the $3^{d}$ of February, the duke of Newcafle received a letter from Mr Wolters, his Majefty's agent at Rotterdam, inclofing the following declaration:
DANS l'Expofition que fa Majefté Pruffienne a donnée au public, dectaration: marqué dans a lifte A. no 16 . que le navire le St Jean, Capit. Jean Groffe, y eft notté comme ayant reçù quelques dommages, au prejudice des proprietairea Prufiens. Comme le fait m'eft connu ayant été feul proprétaire de fa cargaifon, je veux en cette qualité rendre témoignage à la verite, pour fervir où il appartiendra. D'ailleurs, je ne puis comprendre, comment les fujets Pruffiens ofent demander un dedommagement, qu'ils ont deja plus que resû, comme je vais les en convaincre.

Dans le mois de Novembre 1747, je fis fretter à Bordeaux, et charger à Libourne le dit navire avec $158 \frac{3}{4}$ tonneaux de vin blanc. Le $\mathrm{I}^{\text {cr }}$ de Dec. faivant, ce navire mit en mer; le 11. du dit mois, il fe trouva à la hanteur des Dunes; là il fut rencontré par le corfaire Anglois, nommé le Prince d'Orange, qui envoya à bord du navire Pruffien fix hommes defon equipage, et fit venir à fon bord le pilote Pruffien avec les papiers de mer, pour en faire l'examen. Le 12 . du dit mois, étant à l’ancre fous les cingles, il s'eleva une farieufe tempête de la part du W. S. W. qui obligea le capitaine Pruffien, du confentement de fon equipage, et des fix Anglois pour lors dans fon bord, de couper le cable pour gagner la mer. Ce navire entra enfuite dans le paffage de Browerfhave en Hollande, le $15^{\circ}$ du dit mois de Decembre, fans avoir eu d'autre dommage que la perte dune partie de fon cable et d'une ancre, et arriva enfuite à Rotterdam le $12^{\text {e }}$. du fufdt. mois. Tout ceci eft conflaté par la declaration du capitaine et de fon equipage, paffee le 4 Janvitr 1748, pardevant Jacob Bremer, notaire public dans Rotterdam; enfuite fermentée, le 6r. du dit mois, pardevant les comminaires de la chambre de la marine.

Après que le navire fuit dechargé, le capitaine me fit fournir fon compte d'avaire groffe, dans lequel it portoit les articles fuivants:
I. Pour la perte de fon cable, et de fon ancre.
2. Pour la noursiture de 8 jours à 6 hommes qui avoient été mis, par le corlaire Angloiss, fur fon bord.
3. Pour une palfeport que je lui fis donner à la Haye par l'envoyé de Pruffe, qui couta $3^{\text {à }} 4$ florins.

Ye puì payai, pour ma portion, dans cette avaire grofte, 704 florins, argent courant d'Hollande, en outre 105 flopins dont je fis prefent au Capit, Grolfe, oc oo. 10 . aufii de prefent aux matelots, qui compoloient fon equipage. Outre tout ceci, il men a couté 20 florins, ou environ, en Angletére,「our autantque Meff. Simond, freres, avoient debourfé par mon ordre pour le pilote Pruffien qui etoit refté à bord du corfaire, lorfque la tém pête les fépura, Ceux qui fe connoiflent en navigation, et en armement de navire, ne pourront difconvenir, que les proprietaires Prufhensfe trouvent, au moyen de 839. cot. courane d'Hollande, que je leur ai payés, plus que rembouries de toutes leurs pretenfions; et s'ils peuvent, avec quelque fondement, ell demander d'autres.
'Tour de gue ${ }^{j}$ avance ci deffus peut fe verifer par des picces authentiques, (à la referve des prefents, ou gratifications, an capitaine ou à fon equipage

Pierre Trapaud, le jeune.
The wheve declaration was fegned in my preferce; and the original vouchers quated in the fame, have been produced to me. Witnefs my hand and feal.-Retrerdamo fanuary the 30 .h. 1753 .
R. Woliters. (L. S.)

LIST of ald the neutral thips, taken by British fhips during the laft war, in whofe cargoes the fubjects of $P_{\text {R USSIA }}$ claim to have been iaterefted; together with the judgments given by his Britannic Majefty's courts of admiralty thereupon, tallying with his Pruliza Majefty"s List marked B.

- On the $2 g^{\text {th }}$ of January, affidavits were exhibited in the court of Admiralty, and fentence prayed on the part of the Pruffian claimant, and the goods were decreed to be reftored.

## SILK-WORMS.

Memorr upon the breeding of Silk-Worms in France, and all other climates where mulberry-trees can be cultivated. By M. de Goyon de la Plombanie.

- A pretty long ftay which I made in the fouthern provinces of the kingdom where filk-worms are bred, together with what I have read in the beft authors, have enabled me to thew the public, that the method commonly followed for this purpofe does not anfwer the end propofed.
In the Indies, and all other places where the climate allows people ta breed filk-worms on the trees, like our caterpillars, the filk is very fine, very frong, and in great abundance. Whence we conceive that a pure and temperate air is neceffary to thofe very delicate animals, which muft be kept very clean, and breathe with difficulty in a confined and thick ait, from which they contract diforders. In thofe happy eaftern climates, nature of herfelf performs her operations; but with us, the requires the affiftance of art; art, therefore, ought to correfpond with nature, fo as to aid her effectually, without ever doing her the leaft violence.
When I was in Languedoc, 1 obferved that in the cold mornings the filk-worms were benumbed, and moved but very little, and that, of all the chambers in which they were bred, thofe which had moft light, the freeft air, and were expofed to the fouth, fucceeded infinitely better than the reft; that thofe people who were leaft careful in keeping them clean, could never turn them to account, and, for want of this precaution, a number of them perifhed, after they had been raifed at a great expence. In this refpect they are fo delicate, that the leaft impure or ftrong frell throws them into convulfions; people of ftinking breaths, rank refpiration, or they whofe fweat is of a difagreeable odour, nay, the fmell of women at certain times, is pernicious to thefe animals, and does them more injury than one would imagine.
A variety of food, gathered from different foils and different trees, contributes to render the filk unequal: the leaves gathered wet, given after they are faded, or mixed together, without feparating the tender from the harih, the worms eating at intervals, or of what they dinlike, all thefe circumftances, which too often occur in the method of breeding them practifed in France, greatly contribute to the little fuccels and returns of the manufacture : yet, hitherto, I have not feen one perfon employ himfelf as he ought, in finding means to remedy thefe inconveniencies. This confideration has determined me to communicate to the public my own ideas of the fubject; and after I fhall have given a detail of them, any perfon can try the experiment in miniature, that he may affure himfelf of the utility of my method.

Some methods which may be ufed in making filk in France, fo as to render it abundant, and of good quality.

Pains muft be taken to have a number of mulberry-trees; they may be planted in allforts of foils where they will grow, but they mult not be fhaded by any other fort of trees. A1moft all the foils that produce walnut-trees and elms, will agree with the mulberry: and they muft be carefully engrafted with that kind whofe leaf is the moft broad and fmooth.

Remarks upon the different foils and qualities of the trees. All thofe trees that rife in light, barren, fandy grounds, that have little moifture, will produce the fineft and ftrongeft filks : whilf thofe which are produced in fertile fat ground, abounding in juice, yield a coarfer and weaker filk; young trees, from 6 to 12 years old, will produce filk that is neither fo fine nor fo good as that from trees of 18 or 20 years growth; fo that the oldeft are always to be preferred. It is the fame cafe with mulberry-trees for filk, as with vines for fruit, which is different in quality, according to the different ages of the trees, and the difference of foil. Nature always makes one thing atone for another; the old vines, and thofe that are planted in a meagre foil, produce the beft wine, though in fmall quantity; thofe raifed in a fat foil, produce a larger quantity, but of an inferior quality: fo that both kinds nearly yield the fame profit. The farme thing will happen in filk, if we do not mix the produce of different foils and different trees. This is an effential remark for the øeconomift, though he has not hitherto regarded it. The practice is to mix the leaves, and give them indifferently to the worms; but it has been obferved, that a worm, fed with leaves of different qualities, always makes an ill-formed filk, as may be perceived by the microfcope : worms thus managed will be like a fpinfter, microfcope : worms thus managed will be like a ipinfter,
who puts indifcriminately flax and hards upon her diftaff, and cannot poffibly fpin thread fo good and equal, as if it had been made folely from one of thefe materials. If the Indian filk is fo beautiful, uniform, and ftrong, it is becaufe the worms eat only of the leaves of one tree, on which they have been bred, and care is taken to pick the cods, fo as that the beft are kept together. From theferemarks it follows, that we ought to furnifh thore little animals with a lodging that would procure to thim, as much as poffible, the fame advantages they enj"'s in thofe countries where they thrive withVOL. II.
out care ; that is, to fhelter them from the injuries of our climate, to procure for them a pure temperate air, that fhall be continually renewed, and give them a great deal of light, which contributes to their health; to clean them gently every time they receive new food, without touching them with the hand, or any fort of inftrument: finally, if we cannot fecure them from the noife of thunder, at leaft, to free them from the fight of lightning, which gives them nore difturbance, by the quick and violent vibration of their Jittle optic nerves, which incommodes their circulation, and affects them with diftempers. If care be taken to prevent all thefe dangers, by the means which I am going to defcribe, we may be affured of having worms that will fucceed to a miracle.

## Of the lodging of Silk-Worms.

When the defign is to raife a great quantity of filk-worms, fo as to profit by the income they will produce, it will be neceffary to build on purpofe a lodging wholly detached, for raifing the worms, proportioned to the quantity of the owner's trees. For example: if the fcheme is, to make 500 lb . weight of raw filk, the lodging muft be 80 feet long, and 20 feet broad, with three flories, comprehending the ground-floor; and every fory muft be io feet high, exclufive of the thicknefs of the roofs, which fhould be plaftered, if plafter is to be eafily got; if not, there muft be a cieling of boards, joined together as well as poffible, upon which feveral folds of brown paper muft be glued, to hinder dirt and duft paffing from one floor to another, for nothing is more hurfful to the worms.
The houfe fhall extend from north to fouth, fronting the eaft and weft ; the ends oppofed to the north and fouth flaall be built up without any opening, fo as that there fhall be no admiffion either to the north wind or fouth fun, which are equally prejudicial to the worms: but the two fronts to the eaft and weft fhall have windows oppofite to each other, fix feet broad, and in height from the cieling to the floor, with an interval of four feet only between them. Each of thefe windows muft be fhut by two faihes of glafs, or at leaft, in lieu of glafs, be covered with white oiled paper: thefe lafhes muft open fideways, upon little fiders, like the feenes in the opera; each fhall be three feet and an inch broad, and lide behind the frame of the window, one againft the other, for the fake of convenience; and, in order to keep out the lightning in tempeftuous weather, there fhall be within fide, at the top of the window, an umbrella of wax cloth, to exclude every ray of light. When this is to be ufed, the glafs or paper fathes may be fhut, by means of a roller, at one end of the apartment, a cord communicating with all the umbrellas may be drawn, fo as to make them act together at once, either for admitting or excluding the light. Every artift will eafily comprehend the nature of the contrivance. It will alfo be neceffary to have a fecond umbrella, of coarfe canvas, on the outfide of every window, which will occafionally ferve to break the too violent action of the wind and fun, and even of the hail, without excluding too much air or light.
Such a building may be executed of wood and mud covered within and without by plaifter, or lime; if in a country abounding with fone, it may be executed in ftone; the greateft expence will be in the glafs-work and umbreilas.
At the two extremities of this houfe there mult be ftoves, foot and a half broad, fix feet long, and two feet high, made of plates of caft iron. Round each ftove, at the diftance of half a foot, a little wall mult be built of brick, or tiles, which fhall furround it, fo as to hinder its heat from being abforbed by the external air. In this interval however, formed on all parts between the fove and the wall, a neceffary quantity of air thall be introduced, by a ventilator, or bellows, made for the purpofe, to be worked either by the wind, or a little horfe. In cold weather the flove mufl be furnibed with fire, to the neceffary degree of heat, which may be communicated through the funnels, in the filf appartment, or hall, in order to be diftributed; but great care muff be taken to prevent fmoke. The air being heated in the intermediate face of the foves, will in like manner be diftributed through the whole firft ball by means of a tin pipe, which muft run the whole length of it, and be furnifhed with fmall holes, proportioned to the diftances; that is, the farther they are removed from the flove, they muft be the larger, and more numerous. Thus the air being treated between the furnace and its cruft, will warm that of the hall, give it a fuitable degree of temperament, and continually renew that which was foul, and this, as the fafhes were fhut, in going out through the joinings, will refift the external cold air, which would otherwife enter.
It will be fufficient to warm one hall in a houfe confifting of three, becaufe that will be enough for rearing the little worms, during the cald mornings of the fpring; and, when they grow large, they may be diftributed into the other halls, in the order which we fhall now defcribe.
We muft plant little pofts of oak, half a foot broad on one fide, and three inches on the other, at the diftance of fix feet between them. They muft be fixed in a line acrofs the ball, and united by ledges of wood, at the diftance of twelve inches from one another ; fo that the pofts being io feet high, there will be nine ledges : an interval of three feet and a balf muft 9 R

## S I L

## S I L

beleft from one range of pofts to the other, for the convenience of paffing between them: the ledges being one inch thick, and three inches broad, fhall be placed horizontally, and mortifed in each poft; then boards of fir, a foot broad, and fix feet long, fhall be tied to thefe ledges, with bits of leather, or theep fkin , in the manner of hinges, one on each fide. Thefe hinges will allow the boards to be raifed or lowered, like the lid of a coffer ; a cord at each end of the boards pdffing through pullies at the roof, and fixed to a hook at the lower part of the pofts, will actuate all the boards of the fame fide, like lattices; and if all thefe boards be kept in a horizontal pofition, they will ferve as fo many fhelves, upon which the leaves and the worms may be fpread. Care muft be taken to put nothing upon the board which is next to that where the worms fhall refide; but when you would renew the leaves, gently raife up the board on which the new leaves are placed, fo that the worms may fee and fmell them; they will not fail to go thither, and abandon that on which they were : and this migration will afford them an opportunity to clean the firft, and prepare it for the reception of new food, when it fhall be thought proper to furnifh it: and this gentle and continual exel cife of the filk-worms paffing and repaffing alternately from one board to another, will keep up their appetites, and ftrengthen their bodies. In order to make them yield filk, they muft be prefented with bits of ftraw and heath, in the ufual way; thefe fmall branches mult be prepared on the next board, when it is perceived they will no longer eat, but feek to depofit their filk, and make their cods.
I fhall not here treat of the different diffempers to which the worms are fubject during their moulding, abundance of authors having already performed that tafk; my fole aim is. to prevent the dangers to which they are expofed, by defcribing the attention which ought to be given, and the precautions to be taken in their lodging, in preferving the air pure and temperate, and in managing the light fo as to ftrengthen their bodies, and to excite them to eat.
There mult be two places for the ftore of leaves; in one they muft be wiped upon cloth, or a very clean board, when they are weited by the rain; and in the other they muft be preferved cool and frefb, that they may not be too much faded. Befides, it muft be oblerved, that in very hot weather there falls upon the leaves a kind of manna, or honey, which is vifcous, and very pernicious to the filk-worms, for it afflicts them with loofenefs, makes them fick, and languifh to death, or, at leaft, deftroys the beauty of the filk. The duft of the roads too, that ofien fticks to the leaves, incommodes and difgufts the worms. Thefe inconveniencies may be alleviated, by putting the frefh gathered leaves in ofier bafkets, and rinfing them feveral times in pure Iimpid water, which will wafh away the duft, boney, or manna. But thefe leaves muft not be given to the worms until after they have been wiped upon theets; and care mult be taken not to let them lie any time in heaps, except in a very cool place, otherwife they will ferment, and become ftill more pernicious. By the choice of food and regimen the caufes of difeafe are prevented. Over and above thefe precautions, thofe who have the charge of breeding filk-worms will be very attentive in chufing the cods, and dividing them into three or fuur clafies, that they may have the finer filk, and that it may not be rendered defective by a mixture of the good with that which is common; afterwards, no pains muft be fpared in unwinding the filk with all poffible art, and if the threads break; as will often be the cafe, they muft be fupplied by other cods, in the room of thofe which have broke, and thefe muft be thrown among the refufe, as being of a defective filk, which would fpoil the other. This advice I give with great confidence, being perfuaded that thofe who follow it will find it turn to advantage.

## Reflections upon the above Remarks.

This memoir will meet with abundance of oppofition, efpecially among people bigoted to old cuftoms; and therefore I propofe to write to thofe only who conduct themfelves by the rules of good fenfe and reafon, and are in a condition to profit by the new lights they receive.
What I propofe is demonftrated from nature, but, if practifed, the expence may feem to exceed the profit. It may therefore be neceffary to undeceive thofe who allow themfelves to be prejudiced againft this memoir, by furnifhing them with means to try the experiment at a fmall expence; for it will be prudent to try the fcheme in miniature, before it is undertaken at large, net only fortinforming one's felf whether or not the author has, fpoke truth, but likewife to know if there would be any real advantage in following his advice. In order to avoid all miftakes, we muft exactly obferve the leaft circumftances, keep account of the time and expence which have been employed, together with the profits which have been drawn, and to compare this with the ufual method, in due proportion, that we may fee which of the two is preferable : this firit of curiofity, inquiry, and application, is always ufeful; by fuch occupation we acquire inftruction, and are infenfibly conducted to ufeful and curious difcoveries, which flatter us the more, as they are the fruit of our own ftudy and meditation.
To begin we may ufe a clofet, or any little place, which may
refemble the large building I have defribed; that is, be equally windowed, enlightened, aired, and glazed, furnilhed with umbrellas to keep out the lightning, and the joinings may be fecured with pafted paper. We muft try to fupply it with frefh air, to leave nothing that yields a bad fcent, and without ufing a flove, to procure warmth by a propercirculation of warmed air. When this fmall apartment is put in order, of warmed air. When this fmall apartment is put in order,
furnilhed with moving boards fuch as I have defcribed, to as to fill up the whole capacity of the lodging, as much as may be, without impairing the conventence of paffing; it may be tenanted by a quantity of worms, fuicable to the extent of the place.
In order to afcertain the number, we muft obferve that one worm, come to its natural growth, occupies the fpace of two inches fquare. As it increafes in bulk it requires more air: and when the feafon is temperate, we run no rifque in opening the cafements in the day-time, but they muft be carefully fhut at night. According to this dimenfion, a board four feet long and one broad may hold about 300 worms; and a clofet 12 feet fquare, and 10 feet high, will contain 18,000; if we can make ro dories, and three rows of fhelves, thefe 18,000 may produce as many cods; but as fome of them always die, I reckon 15,000 may tirn to account: : 150 cods ought to produce an ounce of filk, when they are good; fo that the 15,000 will yield about fix pounds of raw filk. Thus the curious obferver will fee whether his trouble and expence exceed that of the ordinary method, by comparing the charge and profit on cach fide, and by including in this account the lofs which is occafioned by want of care, he will find, if he is judicious, that his crop will fometimes be augmented one half, or at leaft one third. If he is 「atisfied with this experiment, he may afterwards work at large, in pro. portion to the number of his muiberry-trees, build an houfe for the purpofe, fituated on a rifing round, well fecured from bad winds, and not in a bottom, which is always fubject to mifchievous fogs and fqualls of wind.
At the fame time, he mult take care to increafe the culture of his mulberry-trees, without, however, planting fuch a number as will hinder the cultivation of other neceflary provifions, and to make woods of them, as people make coppices; in which cafe the leaves will be finer, and more eafily gathered, and the wood will ferve for firing. They may allo be planted at random, without being fubject to any fort of cultivation, for we cannot bave too many. This tree, when the foil is naturally good, may be u'eful by, its wood, in a great many hapes: its leaves are a treafure; the poultry and hogs are fed by its fruit, which, indeed, is caten by all forts of animals.

## Remarks before the laft war.

Under the article British America, particularly under the colony of Georgia, and alfo in our Remarks on that article, I have taken notice of the production of the filk-worm, which was the firft motive to the eftablifhment of that plantation, in order to raife filk for the carrying on, in fome degree, within ourfelves, that eftimable manutacture, and to fave fome proportion of that ready money we are obliged to expend on the importation of foreign raw filk. How it hath come to pafs that a defign of this kind fhould mifcarry, in a climate confidently declared, time after time, to be proper for it, has never yet been cleared up to the fatisfaction of the public; but certainly this is neceflary, after the nation bas been at fo great an expence on the occafion. England is not efteemed a climate fo fuitable as Georgia, and other of her plantations on the continent of America, for the brood of this delicate animal; and yet there have been inftances which feem to bid fair for fuccefs in a defign of this kind even in England, provided it had been properly and refolutely purfued by fome reafonable public encouragement; but perfeverance and public fpirit feem to be wanting in this kingdom, to bring many important concerns for the benefit of trade to their ultimate perfection, or to give them a tair experimental trial.
How far we have fucceeded even in England, in regard to the How far we have fucceeded even in England, in regard
production of the filk-worms, may defervenofice in the following fingle inftance, and divers others that might be mentioned: and if fo, cerginly in Georgia, and other contiguqus colonies, this matter might be brought to far greater perfection; and this is my chief reafon for laying before the reader the following experiments, that were made in Cbelfea Park, in the montis of May, June, and July, 17 19. Philofophical Tranfactions. April 27 , I received a fmall parcel of filk-worms eggs from Languedoc.
May 6, early in the morning I found them hatched of themfelves; the wind fhifting in the night from eaft northerly, to the weft foutherly, changing the air of a fudden to warm, two days before the change of the moon.
After feeding and managing them according to art, through the whole courfe of their four fickneffes, they were come to. their Itate of perfection, being then as thick as a man's little finger, and from four to five inches long, of a yellowith colour, and, when held againft the light, they might be fecn through, as you may an egg, being of the fame colvur and
confifence, filled with the matter that makes the filk. Tbis
is a certain fign that they will begin to fpin in 24 hours, or lefs. They then forfake their food (being very voracious before) and hunt about for a convenient place to fix their holdfafts for fupporting the balls, or cones, that they are to make, which they do in a moft wonderful mathematical manner with a mixture of a gummy fubftance, that ties all together; with a mix lofe furzy futance is taken off, and fome and when the loofe furzy fubtance is taken off, and come o the filk is wound off, the remainder is fo fmooth and compact fhining like fattin, that they are made ufe of for artificial flowers, and efteemed the beft of any thing yet known for that purpofe, for which they are generally kept in boarding fchools. I weighed many hundred of thete filk-balls, or cones, which I found to weigh from 35 to 40 grains, with cones, which I found their aurelia's, or chryfalis, within them.
their aurelia's, or chryfalis, within them.
June 27, they began to fin, having been hatched feven week June 27, they began to fpin, having been hatched feven weeks
and three days, and in four or five days finifhed their laborious and curious work; but their balls were not fit to be xemoved until eight or ten days.
July 7, Monl. Lachivre began to wind off their filk-balls, with a machine that made great difpatch, winding much fine filk in a day. I found that an ounce of filk-balls would make about a drachm of fine filk; but, to be more certain, I weighed out to the winder 12 pounds of filk-balls, at four times, and told the balls in every three pounds as followeth, viz.

The firft three pounds contained
The fecond three pounds contained
The third three pounds contained
The fourth three pounds contained
812 Bails

So that the whole 12 lb . weight contained
33 rg Balls,
Which, when wound off, was found to yield and make one pound and an ounce, or 17 ounces of fine filk, and about feven ounces of coarfe refufe, unwound, in all a pound and half, avoirdupoife weight, or two pounds Troy; which is as great, or greater, making or yielding, as in any part of the world, and the filk as fine. I thewed it to a noted filk broker, who faid it was Italian filk (not knowing it was made in England) and worth about 2 os. per pound, if I had ever fo many bales of it, \&c.
Now upon this experiment, finding that 3319 filk-balls would mow upon this experiment, finding one ounce of fine filk, I was defirous make one pound and one ounce of fine filk, I was defirous
to know what quantity of filk might be expected from the worms hatched from ane ounce of eggs.
Of which to obtain the knowledge, I made ufe of the following method: by often weighing and telling, I found that noo eggs weighed but one grain : fo that if one grain contains 100, a fcruple muit contain 2000, and a drachm 6000, and an ounce, at eight drachms to the ounce, muft contain 48,000 eggs. Now if every egg hatch a worm, and every worm makes a filk-ball, there muft be, from one ounce, 48,000 filk-balls and if 3319 balls will make one pound and one ounce of fine filk (which by experience I found they did) then 48,000 filkballs will make 15 lb .6 oz . of avoirdupoife weight in fine filk, or 18 lb .8 oz . of Troy weight, which is very confiderable And in the fame proportion, I lb. of filk-worms eggs will produce worms fufficient to make above 180 lb . of filk. But allowing for cafualties, and fuppofing but 121 lb . of fine filk made from the worms and their filk-balls, produced from an ounce of filk-worms eggs, it will be found much to exceed moft countries, according to Auguftino Gallio's computation: for he faith, that in the fouthern parts of France, viz. Languedoc and Provence, they make but 7 or 8 lb . of filk from filk-worms hatched from an ounce of eggs; and in Brefcia in Italy, but 8, 9 , or rolb. of filk from an ounce of eggs; only in Calabria, where the filk-worms and their eggs are larger, they make 11 or 12 lb . of filk from an ounce of eggs, which ftill does not exceed, nay hardly comes up to, what we make in England.
I have only this to add, that experience hath taught me how to batch filk-worms twice in a year, fo as to have two crops of filk in one year ; and that the mulberry-trees will have leaves in England twice in a year, without prejudice to cither tree or fruit, is moft certainly true.

Remarks on our article Stek, fince the laft war, and the Definitive Treaty of Peace, 1763 .
The filk we have from Italy is generally thrown, and ferves for warp for our manufactures, and the greater part we import from Piedmont, the whole principality not being larger than a fmall Englifh county; yet it is reckoned that the king of Sardinia receives at leaft 200,000 l. of us yearly for that commodity, and all in ready money, for he bath loaded all our manufactures with very high duties, which is in effect a prohibition, and admits thofe of France at a fmall cuftom; for which reafon they fupply his dominions with woollen Manufactures.
The prices we pay him for Thrown Silk are alfo extravagant, being in general above twenty Shillings for every pound; neverthelers be appears to be very fond of keeping us dependent upon him; for an engine or machine being erected in this kingdom [fee Derbyshire] for
throwing raw Silk into Organzine, to prevent the ufe thereof, we are told, he hath prohibited the exportation of raw Silk out of his dominions; and we bave now none from thence but what is got by ftealth; however, the markets are open in other parts of Italy.
As we have but one water-engine of the quality of that in Derby fhire for throwing filk in this kingdom, if that fhould be deftroyed by fire, or any other accident, it would make the throwing fine filk among us very precarious; at d it is very much to be doubted, whether all the men now living in the kingdom could make fuch another.
As we have commodious rivers for that purpofe, whore ftreams hold all the year, and run through large towns, where fcarcely any manufactures are carried on, it would be matter of great confequence to our filk manufacture to have three or four more erected, according to the model of that at Derby, though at the PUBLIC CHARGE, which would give us hopes of preferving that manufacture among us for ever; and we fhould come in for a part of the fine raw filk of Granada, Valentia, Murcia, and other provinces in Spain, as well as the products of feveral parts of Italy, in exchange for our woollen manufactures, and not be tied down to the ftrict rules of paying our ready money, as we are now, to the duke of Savoy; and when once fully employed, the profit in a fhort time might defray the whole expence. See the article Silk.
It certainly is extremely impolitic for us to "depend for filk imported from any foreign country, provided we can be able to furnifh ourfelves with fo valuable a material in our own plantation; a matter that has been long hoped for and expected hitherto in vain. Some have artributed this to the unkindlinels of the climate in our continental colonies; [fee our article Silk Worms] but it being afferted many years fince, that Georgia did actually produce filk of a good quality, as good, as was then faid, as that of the Piedmontefe itfelf; and yet no confiderable quantities hitherto having been there produced in fo many years, many have doubted the veracity of the production. Whether it has been owing to want of the proper care, and effectual encouragement, we cannot fay; but this others have thought to have been the real caufe, and not any unfavourableners in the clime. It has been judged by many, who have been well acquainted as refidents in our plantations of Carolina, Virginia, Maryland, and Penfylvania, more northerly climes than Georgia, that thore colonies would produce the beft filk, and as fit for organzine as any in the world; for thefe countries afford vaft numbers of white and other mulberry-trees, which grow wild, and fpring up almoft every where in great abundance, which looks as if nature had called us thither to propagate that manufacure, long before now, in thofe plantations: but if thefe climes are rather too northerly for the delicate tendernefs of the filk-worm; now we are poffeffed of the Floridas, the moft foutherly of thofe continental plantations, we can have no excufe, if we are wanting in our ef forts to attempt this capital material, and that in the moft effectual and vigorous manner, that the climate will admit of.-It is to be hoped, that no poffible care, or even expence, that can be afforded, will be fpared to fet this defigu a-foot; for in time it certainly will prove of as great advantage to this nation, as any employment in the plantations; the manufacture of filk being a more profitable undertaking, where the air and land are happily adapted to raifing the production needful in competent quantities.
It has been a difpute, whether the manufacture of filk, woollen, or linen, is molt confiderable in the world. Many travellers fay the filk, manufacture exceeds either of the other two; and they affign this reafon for it, that the people of CHina, who are computed to be two hundred millions in number, are chiefly cloathed with filk garments, which indifputably demonftrates it to abound with the greateft quantity of filk of any country in the world, it being there fo very plentiful and cheap, that feveral of the Jefuits affirm, five fuits of filk there do not exceed the price of one fuit of woollen in Europe
Certain it is that Perfia, India, and China, had the manufacture of filk long before it came into Europe, the firft that was brought being in the time of Auguftus-We manufacture at prefent very great quantities of thrown and raw filk in this kingdom; it is thought to be fix times, at leaft, as much as it was about threefcore years ago; for then we were fupplied with French and Italian filks, all fully manufactured. The vaft riches of China, arifing from this manufacture, is fufficient to demonftrate the great advantage thereof; and the extraordinary treafure the duke of Savoy draws into bis country by filk, which is made in the little principality of Piedmont, as before obferved, is alfo another inftance: we may judge, if he draws above 200,0col. Aterling a year from this kingdom, what his profits are, which he draws from Holland, and other places where the manufacture is carried on to a very great degree.
We are informed the very land for planting of mulberrytrees, in many parts of Italy, is worth from three to five pounds an acre; and gentlemen there, as well as in Sicily, fell their mulberry leaves to the poor for one half the filk they
make,
make, and the money is equally divided between them upon fale of the filk; and that the leaves of a tree there have yielded three or four pounds.
Now if the manufacture of filk, and the planting of mul-berry-trees has raifed the land to be fo valuable, and fome gentlemen receive fuch confiderable revenues from their crops of leaves, very great things may be expected by our effectually encouraging and promoting the manufacture of filk in our colonies, where as much land may be had for fixpence, as in Italy for five pounds. And if great numbers of mulberry-trees were planted among the Indian nation, when they fhall be duly reconciled to our people, bordering on our fettlements, and fome 1 kilful, good-tempered, perfon employed to inftruct them in the proper feafons for gathering leaves, and feeding the worms, and rewarding them bountifully for their pains, thofe people might be brought to be very profitable fubjects to this nation. The Spaniards, while Florida was in their hands, notwithftanding their pride, were condefcending enough to iuftruct fome of the Indians, under their jurifdiction, to render them very ferviceable in carrying on and improving the manufactures of indigo, cochineal, and feveral others, to the great advantage of New Spain. The French alfo, while they poffeffed Canada, in their fettlements about the river Sr. Lawrence and the great lakes, and on the Miffffippi, took a great deal of pains to inftruct them in every thing they thought might contribute towards anriching their mother-country. They went with them on their long travels in their hunting fealons; and while they had Cape Breton, made thefe Indians inhabiting that part of the continent, very ufeful to them in their Fisheries. If the Spaniards and French engaged thofe people to be fo ferviceable to them, I do not fee it is impoflible, if kindnefs, juftice, and good nature was duly exercifed towards them, but they may be brought to be bighly ferviceable to Great-Britain alfo.
No part of the world. fhould feem to be better adapted to the brood of the filk-worm than our colonies now are; confiftent not only with philofophic fpeculation on the various climes and fituations thereof, but from the unqueftionable experience of moft other parts of the world, where this material is produced of the beft qualities, and the greateft emolument. It is generally obferved, that all thofe countries which afford the beft filk, border upon the fea, and lie pretty near the fame latitude; our plantations, the province of Gilon and Nanking, and Chekian in China, all border upon the fea, and are pretty near the fame latitude. Thofe places in Turkey that produce filk, border upon the fea, and Italy and Sicily are, in a manner, environed by the fea; likewife the provinces of Granada, Murcia, and Valentia in Spain ; the places that yield the beft filk, as well as Languedoc and Provence in France; all lie upon the fea.
Provided we hould never be able to induce our neighbouring Indians in North-America to become ufeful to us in this valuable production, may not the negroes from Africa prove fo? As the great advantages that accrue to Portugal and Spain, as well as to ourfelves in our fugar and tobacco plantations, is by the cheap labour of negroes, may not the fame cheapnefs of labour be alfo of prodigious benefit to us, if employed in our Colonies, in producing and making of filk? And when that feafon is over, may not the fame negroes fervants turn their hands to raifing and dreffing of hemp and flax, the charge being little more than their cloathing from England; for the earth there produces provifions in abundant plenty?
We are told by gentlemen of good intelligence, that the whole charge of making a pound of filk in China does not ftand in above five thillings, and almoft any perfon, man, woman, or child, may work at it ; and a man or woman, with a child to affift in directing the thread of the filk, may, with a proper machine, reel from the coocone or filk-bag, one pound in a day.
Where we have, at prefent, proper land in our plantations for little or nothing, and might have labour performed as above, it is not unreafonable to fuppofe that filk could ftand us in fo much as it may do the Chinefe. A manufacture of this kind might be brought, in a little time, to fo great a degree of perfection, and fuch quantities raifed, that I fhould conceive the labour of negroes employed in this work would produce above twice as much as thofe that are employed in planting either fugar or tobacco: and as this nation now greaty inclines to the wearing of filk garments in imitation of the French, to the great difcouragement of our woollen manufactures, the manufacture of filk from our plantations would not only enable us to fupply ourfelves amply therewith, but enable us to export large quantities of filk fully manufactured.
ILK MANUFACTURE of CHINA. It may be faid that China is the country of filk, and feems to be an inexhauftible fource of that commodity. It not only furnifhes filk to a great number of nations in Europe and Afia, but alfo the emperor, the princes, the mandarins, the literati, the women, and, in a word, all thofe in eafy circumftances, wear habits of filk, and are cloathed with fattin or damalk; very few, except the vulgar or country people, wear cotton painted blue.

The feveral provinces of China furnifh perfectly beautiful filks, yet fuch as come from Tche-hiang are undoubtedly the beft and fineft. The Chinefe judge of good filk by its whitenefs, foftnefs, and finenefs; for if, in handling it, it is rough to the touch, it is a bad fign. Sometimes, to make it look well, they prepare it with a certain rice-water, mixed with lime, which burns it, and renders it incapable of being manufactured when tranfported into Europe
This is not the cale with that which is pure, for nothing can be more eafily wove, and a Chinefe workman will work upon it in an hour without breaking a fingle thread.
Their looms are very different from thofe of Europe, and much more fimple. Two or three windles and a wheel are fufficient to do it ; and, in a word, it is furprizing to fee the fimplicity of the inftruments with which they make the mof beautiful ftuffs. At Canton there is a fort of filk, which comes from Tong-hing, but it is not comparable to that brought from the province of Tche-hiang, provided this last is not too moilt, which we ought to beware of; for the Chinefe, who are generally wont to cheat, fometimes put into the heart of the packet one or two parcels of coarfe filk, widely different from that on the furface. See the article China.
Of this filk the moft beautiful ftuffs are made in the province of Kiang-nan; for to this province moft of the good workmen repair, and it furnifhes the emperor with all the filks he ules, and thofe he makes prefents of to the grandees and lords of his court. The great trade of Canton, where foreign merchants abound, allo draws a vaft number of good tradef. men to it.
They could make fruffs as rich as thofe of Europe, if they were fure of their fale; but they generally employ themfelves on the moft fimple kind, becaufe the Chinefe are fonder of what is ufeful than of what is beautiful.
They, indeed, make gold ftuffs, but they do not paf their gold through the drawing-mill, as they do in Europe, in or der to twift it with the thread, but are content to gild a long leaf of paper, which they cut into narrow ीlips, with which they cover the filk, with a great deal of dexterity.
Thefe ftuffs are very beautiful at firft, but do not laft long; neither are they very proper for wearing apparel, becaufe the air and the moifture foon tarnifh the fplendor of the gold. They are molt proper for curious pieces of furniture, and the ornaments of churches; and none but the mandarins and their wives cloath themfelves with thefe ftuffs, and that very eldom.
The pieces of filk moft ufed by the Chinefe are gauzes, both of the plain and flowered kind, of which they make fummer habits; damafks of all forts and colours; ftriped fattins, and the black fattins of Nankin; corded taffeties, which wear well; feveral other forts of taffeties, fome with flowers, and others ftriped in a beautiful manner; crapes, brocades, and different forts of velvets: of this laft the crimion is the dearef, but it is eafy to be deceived in it ; the beft method of difcovering the fraud, is to take lemon-juice, mixed with lime, and fprinkle fome drops of it on different parts, and, if the colour changes, it is a fign that it is bad.
The Chinefe alfo make a prodigious number of other ftuffs, wo of which are moft generally ufed among them.
Firf, a fort of fattin, ftronger, and lefs gloffy than that made in Europe. This is fometimes plain, and fometimes adorned with flowers, trees, birds, and butterflies.
Secondly, a particular taffety, of which they make drawers, and other forts of wearing apparel. It is thick, and yet fo pliant, that we may fold it and prefs it with our hand, withcut leaving any mark in it. They alfo wafh it, like other fuffs, without lofing a great deal of its luftre.
The Chinefe workmen give the luftre to this taffety with the fat of the river-porpoife, which they purify by wafhing and boiling; then with a fine bruif they give the taffety two beds in the fame direction, on the fide they intend to render glofy. When they work in the night-time, they ufe this fat melted in their lamps inftead of oil, becaufe its fmell banifhes the flies from the place, which is looked upon as a great advantage, fince thefe infects, by lighting on the work, are very detrimental to it.
The province of Cang-tong furnifhes a particular filk, which is found in large quantities on the trees and in the fields. When it is fpun, they make a ftuff of it called kein-tcheou, and this filk is produced by fmall infects, which nearly refemble caterpillars. They do not fpin it round nor oval, as filk-worms do, but in very long threads, which adhere to the buines and fhrubs, as the wind pufhes them to one fide or another. They gather thefe threads, and make of them filk fuffs, coarfer than thofe which are fpun in houfes. Thefe worms are wild, and eat indifferently the leaves of the mulberry, and thofe of other trees. Perfons unacquainted with this ftuff, would take it for a rough fuff, or a coarie drugget. The worms which fpin this filk are of two kinds; and the firft, which is larger and blacker than our filk-worm, is called tfouen-kien; and the fecond, which is fmaller, is called tiaokien. The cotton of the firft is, of a reddifh grey; but that of the other is blacker; and the ftuffs made of them retain thefe two colours. It is very clofe, does not cut, lafts long,
wafhes
wafhes like fuff, and, when it is good, fpots do not fpoil it, not even thofe of oil, but come out of their own accord. This ftuff is much efteemed by the Chinefe, and is fometimes as dear as the fattins and beft-made filks. As the Chineft are very dexterous in counterfeiting, they make falfe kien-ccheou, with the refure of the fik of the hiang, and it is very eafy to be deceived, if we are not very careful. The workmen of Canton alfo make ribbands, filk fockings, and buttons, to great perfection.

An Act of Parlifament for repealing the Duties payable on China Raw Silk, and for granting other Duties in lieu thereof, made in the year 1750. - Whereas the duties now payable upon raw filk imported from China are a great difcouragement to the importation thereof: and whereas a conftant and plentiful fupply of that valuable conmodity to be manufactured in this kingdom, will be a public benefit, and greatly contribute to the increafe and improvement of the filk manufactures: therefore we, your Majefty's moit dutiful and loyal fubjects, the commons of GreatBritain, being defirous to promote and encourage the manufactures of this kingdom, do moft humbly befeech your Majefty, that it may be cnacted, and be it enacted by the king's moft excellent majefty, by and with the advice and confent of the lords $\mathfrak{f}_{\mathrm{p}}$ ritual and temporal, and commons, in this prefent parliament affembled, and by the authority of the fame, That from and after the 24th of June, 1750, the feveral rates, duties, fubfidies, and impofitions, now payable upon the importation of raw filk of the growth or produce of China, by virtue of feveral acts of parliament now in force, fhall ceafe, determine, and be no longer paid.
And be it further enacted, by the authority aforefaid, That from and after the faid 24 th of June, all raw filk imported from China into this kingdom, by the united company of merchants of England trading to the Eaft-Indies, or by any Jicence from the faid company, fhall, in lieu of the faid rates, duties, fubfidies, and impolitions, by this act repealed, as aforefaid, be charged with, and pay the fame rates, duties, fubfidies, and impofitions, as are now charged upon, and payable for, raw filk of the growth or produce of Italy; which faid rates, duties, fubfidies, and impofitions, by this aCt granted, fhall be paid by the faid united Eaft-India company, at the fame times, and in the fame manner, as the feveral rates, dulies, fublidies, and impofitions, by this act repealed, as aforefaid, have been paid.
And be it further enacted, by the authority aforefaid, That the feveral rates, duties, fubfidies, and impofitions, by this act granted, fhall be raifed, levied, collected, paid, and applied, in fuch manner, and for the fame purpores, as the faid ieveral rates, duties, fublidies, and impolitions, by this act repealed, as aforefaid, are now refpectively raifed, levied, collected, paid, and applied; and all the provifions of or in any act or law now in force for raifing, levying, collecting, paying, and applying the rates, duties, fubfidies, and impofitions, hereby repealed, as aforefaid, fhall be in full force, and fhall be put in execution for raifing, levying, collecting, paying, and applying the rates, duties, fublidies, and impofitions, by this act granted, as fully and effectually, to all intents and purpofes, as if the fad provifions were particularly repeated and re-enacted in the body of this prefent act.
And it is further enacted and declared, by the authority aforefaid, That all raw filk of the growth or produce of Cbina, imported after the faid $24^{\text {th }}$ of June, fhail, upon the exportation thereof from this kingdom, be entitled to, and receive the fame drawbacks and allowances only, as are now by law directed to be paid upon the exportation of raw filk of the growth or produce of Italy, any law or ufage to the contrary notwithftanding.

An Act of Parifament for encouraging the Culture
of Raw Stlek in bis Majesty's Colonies, or Plan tations, in America.

- Whereas it will greatly tend to the increafe and improvement of the filk manufactures of this kingdom, to encourage the growth and culture of filk in his Majefty's dominions in America, may it therefore pleafe your Majefty that it may be enacted, and be it enacted, by the king's moft excellent Majefty, by and with the advice and confent of the lords fpiritual and temporal, and commons, in this prefent parliament affembled, and by the authority of the fame, That from and after the 24th of June, 1750 , it fhall and may be lawful to import any raw filks of the growth and culture of any of his Majefty's colonies, or plantations in America, directlv from thence into the port of London, without paying any fubfidy, cuflom, impofition, or other duty whatfoever, for the fame, fo as a due entry be firft made thereof in the cuftom-houfe, at the time of importation, and in the fame manner and form (expreffing the package, marks, and numbers, together with the quantities and qualities of the refpective goods) as was ufed and practifed before the making of this act, and fo as the fame be landed in the prefence of, and examined by, the proper officer or officers of the cuftoms appointed for that purpofe, and fo as the fame be imported in thips or veffels that may lawfully trade to his Majefty's planGOL.II.
tations, manned as by law required: and on failure of the faid conditions, or directions, herein laft mentioned, fuch filks fhall be liable to the payment of the refpetive duties, as if this act had never been made.
Provided always, and be it further enached, by the authority aforefaid, That in order to intitle the importer and importers of raw filk to the exemption intended by this act, every mer chant, or other perfon or perfons whatfoever, who hall, after the 24th of June, 1750 , load any raw filk on board any thip or veffel, in any of the Britifh colonies or plantations in America, fhall, before the clearing out of the faid fhip or veffel from thence, make proof on oath, before the collecto and comptroller of the cuftoms, and naval officer, at the port or place where fuch raw filk hall be put on board, or any of them, that the raw filk, which he, fhe, or they, hath or have, fhipped on board the faid ithip, or vefiel (expreffing the quantity thereof) is bona fide of the growth and culture of fome or one of the Britifh colonies, or plantations, in America, expreffing the parifh or place in fuch plantation where the fame was cultivated and produced, and by whom, producing fuch perfon's oath thereto, made before the governor of fuch ifland or province, or before the next juftice of the peace (which oath the faid governor, or juftice of the peace, collector and comptroller of the cuftoms, and naval officer, or any two of them, are hereby required and impowered to adminifter without fee or reward) and the mafter, commander, or other perfon taking charge of the fhip, or veffel, on board which fuch raw tilk thall be luaded, fhatl alfo bring with him a cercificate, or certificates, from fuch collector and comptroller of the cuftoms, and naval officer, or any two of them, as aforefuid, under their hands and feals of office (which certificate, or certificates, fuch collector and comptroller of the cuftoms, and naval officer, are hereby required and directed to grant without fee or reward) exprefling the marks, number, tale, and weight of the raw filk in each bale, parcel, or other package whatfoever, fo mipped, or loaded on board fuch fhip, or veflel, with the names, place, or places of abode, of the exporter, or exporters thereof, from the faid Britifh colonics, or plantations, in America, and the name or names, place or places of abode, of fuch other perion or perions, who chall have fworn the goods therein mentioned to have been of the growth and culture of the faid Britifh colonies, or plantations, in America, and the name, or names, of the perfon, or perfons, to whom the fame are configned in the port of London; which certificate, or certificates, the faid mafter, commander, or other perfon taking charge of fuch fhip, or veffel, thall, on his arrival in the faid port of London, deliver to the collector, comptroller, or other chief officer of his Majelty's cuftoms at the faid port, at or before the entry of the faid raw filk; and at the lame time thall make oath, before any one of them the faid collector, comptroller, or chief officer of his Majefty's cuftoms (who are hereby required and impowered to adminifter the fame without fee or reward) that the faid bales and parcels, and goods mentioned in fuch certificate, are the fame bales and parcels, and goods, as were taken on board in the faid Britifh colonies, or plantations, in America; and if any raw filk of the growth and culture of the Britifh colonies or plantations, in America, hhall, after the faid 24th of June, 1750 , be imported as herein before mentioned, without fuch certificate, figned and delivered as herein before required, and oath made as before directed, by the mafter, commander, or other perfon taking charge of the hip, or veflel, in which the fame is imported, all fuch raw filks thall be liable to the payment of the refpective duties as if this act had never been made, any thing herein before contained to the contrary notwithftanding.
And be it further enacted, by the authority aforefaid, That if any perfon or perfons fhall, from and after the faid 24 th day of June, 1750, make, or caufe to be made, an entry, or entries, of any foreign raw filk, under the name, or defcription, of raw filk of the growth, or culture, of any of the Britifh colonies, or plantations, in America, or fhall mix, or caufe to be mixed, any foreign raw filk with raw filk of the growth or culture of the Britifh colonies, or plantations, in America, with intent to evade the payment of the duties payable on foreign raw filk, every perfon or perfons fo making, or cauling to be made, fuch entry, or entries, or mixing, of caufing, fuch mixture or mixtures to be made, fhall forfeit and lofe the fum of 501 . for every fuch offence, and all fuch foreign raw filk; and in cafe of any mixture, the quantity fo mixed, both of foreign and Britifh-plantation culture or growth, or the value thereof, together with the bales, or other packages containing the fume, fhall be forfeited, and fhall and may be feized and profecuted, or the value therecf be fued for by any officer, or officers, of his Majefty's cuftoms; one moiety of which penalties and forfettures fhall be to the ufe of his Majefty, his heirs and fucceffors, and the other moiety to him or them that fhall feize, profecute, or fue for the fame, in any of his Majefly's courts of record at Weftminiter.
Provided always, that if any doubt or difpute fhall arife, whether the faid raw filk, or any part tereof, fo to be imported as aforefaid, is of the growth or culture of the Briulh 9 S
olon:
colonies or plantations in America, or of foreign growth or culture, the onus probandi thall lie on the owner or claimer thereof, and not on the informer and profecutor; any law, cuftom, or ufage to the contrary notwithftanding. And be it further enacted, by the authority afurefaid, That if any action or fuit fhall be commenced againft any perfon or perfons for any thing done in purfuance of this act, the defendant or defendants, in fuch action or fuit, may plead the general iffue, and give this act and the fpecial matter in vidence at any trial to be had thereupon, and that the fame was done in purfuance and by authoricy of this act: and if it was done in purfuance and by authority of this act . and in for fhall appear fo to have been done, then the jury fhall find for the defendant or defendants; and if the plaintiff fhall be nonfuited, or difcontinue his action, after the defendant or defendants thall have appeared, or if judgment fhall be given upon any verdict or demurrer againft the plaintift, the deondent or defendants fhall and may recover treble colts, and have the like remedy for the fame, as defendants have in other cafes by law.'

## REMARKS.

Such bas been the encouragement given by the legiflature, to he culture of raw filk in our American colonies. An ample fupply of this commodity, however, can be brought only from Asia, unlefs we make fome very extraordinary improvements. Europe, during the laft war, did not produce the ufual quantity, nor has the price of fome particular kind declined fince that time: for the confumption of this aticle increafes rather than diminifhes. The EAST-INDIA company, therefore, having, we prefume, previoufly taken their meafures, applied to parliament for an alteration of the duty on China filk (as we fee by the preceding act), the obtaining of which affords an encouragement to the importation of it; and, no doubt, by means of the company, we Chall have a fufficient quantity ${ }^{*}$; which will prove highly eneficial to the filk manufacture of this kingdom. And For the further encouraging this important manufacture, the following act paffed in the year 1753 .

* In $175^{2}$ we find accordingly a large fupply of China raw Gilk arrived.

An act for encouraging the filk manufactures of this kingdom, and for fecuring the duties payable upon the importation of velvets, wrought filks, and filks mixed with other materials, not manufactured in Great-Britain.
\& Whereas the payment of the duties charged and made payable by divers acts of parliament, upon the importation of velvets, wrought filks, and filks mixed with other materials not manufactured in Great-Britain, is frequently evaded by the fubtil and fraudulent practices of evil-difpofed perfons, to the great difcouragement of the filk manufactures of this kingdom, and the lofs of his Majeity's revenue : therefore for preventing fuch frauds and abufes for the future, be it enacted by the king's moft excellent Majefty, by and with the advice and confent of the lords firitual and temporal, and commons in this prefent parliament affembled, and by the authority of the fame, That all velvets, wrought filks, and filks mixed with any other materials (fuch velvets, wrought filks, and filks mixed with any other materials, not being manufactured in Great - Britain, and fuch wrought filks, or filks mixed as aforefaid, not being prohibited to be worn therein) which fhall be imported into this kingdom, after the twenty-ninth day of September, one thoufand feven hundred and fifty-three, fhall after the fame have been entered at the cuftom-houfe, and before they are difcharged by the officers, and delivered into the cuttody of the importer or his agent, be marked or fealed at each end of every piece, with fuch mark or feal, and by fuch officer or officers, as the refpective commiffioners of the cuftoms in Great-Britain fhall direct and appoint for that purpofe.
And be it further enacted, by the authority aforefaid, That from and after the faid twenty - ninth day of September, every perion intending to export any fuch velvets, wrought filks, or ilks mixed with any other materials, as herein before are mentioned and defcribed, which thall have been imported into this kingdom, after the faid twenty-ninth day of September, Chall before fuch goods are fhipped in order to be exported, give notice to the proper officer or officers to be appointed for that purpofe, by the refpective commiffioners of the cuftoms in Great-Britain, when and where he will pack up the faid goods in order to be exported; and the faid commiffioners of the cuftoms are hereby impowered and required to caufe fuch officer or officers, to take care that fuch feals, tamps, or marks, be taken off from every piece fo intended to be exported, without fee or reward ; and no perfon fhall be intitled to the drawback allowed upon the exportation of fuch velvets, wrought filks, or filks mixed as aforefaid, unlefs he fhall have given fuch notice as herein before is directed, and until fuch feals, ftamps, or marks, ihall be taken off by the proper officer or officers as aforefaid.
And be it further enacted, by the authority aforefaid, That from and after the twenty-ninth day of September, one thoufand feven bundred and fifty-four, in cafe any velvets,
wrought filks, or filks mixed with any other materials (fuch velvets, wrought filks, or filks mixed with any other mate rials, not being manufactured in Great-Britain, and fuch wrought filks, or filks mixed as aforefaid, not being prohibited to be worn therein) fhall be found in any fhop, warehoule, or other place whatioever, upon land within this kingdom, not being marked or fealed as herein before directed, upon both ends of every whole and entire piece, or upon one end of every remnant of fuch velvet, wrought filk, or filk mixed as aforefaid, the fame fhall be forfeited, and fhall and may be feized by any officer or officers of the cuftoms, and fecured in fome or one of his Majefty's warehoufes; and fuch officer or officers is and are hereby indemnified for fo doing; and all fuch velvets, wrought filks, or filks mixed as aforefaid, fo feized and fecured, fhall, after condemnation thereof in due courfe of law, be publickly fold to the beft bidder, and one moiety of the produce arifing by the fale of fuch velvets, wrought filks, or filks mixed as aforefaid, thall be to the ufe of his Majefty, his heirs, and fucceffors, and the other moiety to the officer or officers who fhall feize and fecure the fame as aforefaid; and the perfon in whofe cuftody or poffeffion the goods fo feized and fecured fhall be found, fhall alfo, for every fuch offence, forfeit the fum of two hundred pounds, to be recovered and divided in manner herein after directed.
And be it further enacted, by the authority aforefaid, That no velvets, wrought filks, or filks mixed with any other materials as aforefaid, which after the twenty-ninth day of September, one thoufand feven bundred and fifty-four, thatl be feized and forfeited by virtue of this act, or for any other caufe of forfeiture, fhall be confumed or ufed in this kingdom, but fhall be exported again, and not fold otherwife than on condition to be exported, and fhall not be delivered out of the warehoufe wherein the fame fhall have been fecured, until fufficient fecurity be given, that the fame and every part thereof thall be exported, and not landed again in any part of Great-Britain.
And be it further enacted, by the authority aforefaid, That if any perfon or perfons thall at any time forge or counterfeit any ftamp, mark, or feal, to refemble any ftamp, mark, or real, which fhall be provided or ufed in purfuance of this act, or thall furge or counterfeit the impreffion of any fuch ftamp, rark, or feal, upon any goods required by this act to be ftamped, marked, or fealed, or fhall fell, or expofe to rale, any of the faid goods with a counterfeit ftamp, mark, or feal thereon, knowing the fame to be counterfeited; all and every fuch offender and offenders, their aiders, abettors, and affiftants, fhall, for each and every fuch offence, forfeit the fum of five hundred pounds, and fhall alfo be adjudged to ftand on the pillory in fome public place for the fpace of two hours.
And be it further enacted, by the authority aforefaid, That all pecuniary penalties and forfeitures by this act impofed, fhall and may be fued for and recovered in any of his Majefty's courts of record at Weflminfter, or in the court of Exchequer at Edinburgh refpectively, by action, bill, plaint, or information, in the name of his Majelty's attorney-general, or in the name of his Majefty's advocate in Scotland, or in the name or names of fome officer or officers of the cuftoms; and that one moiety of every fuch penalty and forfeiture fhall be to his Majefty, his heirs, and fucceffors, and the other moiety thereof to the officer or officers of the cuftoms who Chall inform and profecute for the fame.
Provided always, and it is hereby further enacted, That if any officer or officers of the cuftoms fhall neglect or refufe, for the fpace of one month, to profecute to effect any perfon or perfons for any pecuniary penalty or forfeiture by this act inflicted upon offenders againlt the fame, that then it fhall be lawful for any perfon or perfons whomfoever to fue for, profecute, and recover the refpective pecuniary penalties and forfeitures by this act inflicted, in like manner as is herein before directed with regard to the officers of the cuftoms; and one moiety of the faid refpective forfeitures, when recovcred, fhall, in fuch cafe, go and be applied to the ufe of his Majefty, his heirs, and fucceffors, and the other moiety to the perfon or perfons who hall fue or profecute for the fame refpectively. And be it further enacted, by the authority aforefaid, That upon every action, bill, plaint, or information, entered and filed as aforefaid, for any pecuniary penalty impofed by this act, a capias in the firf procefs fball and may iflue, fpecifying the fum of the penalty fued for; and the defendant or defendants fhall be obliged to give fufficient bail or fecurity by natural-born fubjects, perfons naturalized or denizens, to the perfon or perfons to whom fuch capias lhall be directed, to appear in the court out of which fuch capias thall iffue, at the day of the return of fuch writ, to anfwer fuch fuit or profecution; and fhall likewife, at the time of fich arpearance, give fufficient bail or fecurity, by fuch perfons as aforefaid, in the faid court, to anfwer and pay all the forfeitures and penalties incurred for fuch offence or offences, in cafe he, the, or they fhall be convicted thereof, or to yield his, her, or their body or bodies to prifun.
And be it further enacted, by the authority aforefaid, That if any action or fuit thall be commenced againt any ferion or
erfons for any thing done in purfuance of this act, the defendant or defendants in fuch action or fuit may plead the goneral iffue, and give this act, and the fpecial matter in evi dence, at any trial to be had thereupon; and that the fame was done in purfuance, and by authority of this act: and if thall appear fo to have been done, then the jury thall fand for the defendant or defendants; and if the plaintiff fhall be nonfuited, or difcontinue his action, after the defendant or defendants thall have appeared; or if judgment thall be given upon any verdict or demurrer againft the plaintiff, the defendant or defendants thall recover treble colts, and have the like remedy for the fame as defendants have in other cales by law. And be it further enacted, by the authority aforelaid, That any velvets, wrought filks, or filks mixed as aforefaid, fhal be feized by virtue and in purfuance of this act; and if any doubt or queftion thall arife, where the faid velvets, wrought filks, or filks mixed as aforefaid, were manufactured, the proof shall lie upon the owner or claimer thereof, and not pon the profecutor; any law, ufage, or cuftom to the contrary notwithftanding.

## R E M ARKS.

Silk is a material for a very confiderable manufacture; which being brought from abroad raw, we here twift, dye, and weave into different goodneffes, both plain, ftriped, and fowered, either by itfelf, or mixed with gold and filver; fo richly brocaded, that we are allowed to exceed thofe from whom we had the art. Of this material alfo are made great quantities of ribbons, ftockings, and other things; not only to ferve ourfelves, but alfo to export.
Out importation of raw and thrown filk is from Turkey, Italv, Sicily, and India

1. Thrown filk comes chiefly from Leghorn, Genoa, Naples, and Meffina
2. Raw filk from Turkey, that is, Perfia by the way of Tur key, Bengal in India, and from China.
All this filk is manufactured in Great-Britain, very little excepted, which is fometimes re-exported unwrought, chiefly to Ireland. The growth and increafe of the confumption of filk in thefe kingdoms, has been much owing to the high duties on French wrought filks, particularly their alamodes, luftrings, [fee Alamodes and Lustrings] and rich broad filks of every kind; but more efpecially to the prohibiting the ufe and wearing of EAsT-INDIA wrought filks, which were formerly worn in England to an extraordinary degree ; infomuch that one fhip from India, namely, the Tavitock, brought in one article of wrought filk 9000 pieces of damafk (befides a great many of feveral other forts) each of which was worth at market, one with another, 91 . or more: fo that the aid damafk only amounted to 89,000 . fterling.
At the making of the treaty of Utrecht, the fate of the filk trade was then reprefented as follows *.

## * See The Britifh Merchant.

- As to our increafe of the filk manufacture at home, this will appear in fome meafure by the valt increafe of the importa ron of raw and thrown filks from foreign countries, from Turkey, Italy, and the Eaft-Indies.
But here I mult acknowlege, that the importation of ardafs, or coarfe Perfa filk, from Turkey, is valtly abated. This has been principally occafioned by the impofition of fuch duties on it as it could not bear. But then this lors has been in part fupplied by a vaft importation of grogram yarns; and befides this, the importation of bellandine, or white Turkey filk, and of Geerbaffee of Perfia, is greater now, than that of hefe and the cheap ardafs filk, joined together, ever was before the beginning of the firft war. All the work, therefore that was formerly done with ardafs filks, and is now per formed by grogram yarn, together with the whole increaft of the number of bales imported from that country more than formerly, muf be placed to the account of the increale of the filk manufacture in England.
will not pretend to determine the value of this increafe; all I will fay here, fhall be only to explain it. Suppofe then, that formerly our annual importation of ardals, and other filks imported from Turkey, amounted to 1500 bales, and that, at this time, the importation of bellandrne and fherbaffee amounted to 1600 bales of filk; at firft fight, this would look as if only a hundred bales of filk more were brought into the Englifh manufacture: but if the grogram yarn, which is for the moft part a new importation, fhould be allowed to fupply 500 bales of ardafs filk, and that, neverthelefs, 1600 bales of raw filk from Turkey are imported; then it would be manifeft, that not only 100 , but 600 bales of our prefent annual importation, muft either be re-exported, added to our filk manufacture. If it fhall be allowed that the Turkey trade, by this means, furnifhes 600 bales of filk per annum to our manufacture, more than it did before, I Clall be very glad to be informed, whether fuch a quantity is not fufficient ro produce 80 or $90,000 \mathrm{lb}$. weight of wrought Gik: The Turkey merchants, or rather the weavers of Spi alfields, might certainly anfwer this queftion; and allo, whe ther, at leaft, 600 bales of Turkey filk are not brought an

5
qually to our looms, more than before the beginning of king William's war
But we are yet more fure of our importation of Piedmontefe and Bergamo filks; this amounts to near a thoufand bales in year, and is wholly new. Of thefe, and other Italian thrown and raw filks, we ufe at leaft i 200 bales annually at our looras more than we did before the beginning of the fiff war. And whence is this prodigious increafe of our lilk manufacture, but from the intcrruption of our commerce with France, and the prohbition of Eaft-India filks ?
have by me an account of the Eatt-India raw filks imported for feveral years lift paft; the whole quantity, at a medium, will make 400 bales per annum : fo much of this as is not e-exported, is ufed at the Englifh looms. If, by thefe feve al articles, 2000 bales are ufed at our looms, more than fornerly, the weavers will be ready to anfwer, whether the produce will amount to lefs than $280,000 \mathrm{lb}$. weight. of wrought filk; and this quantity, at sol.per pound, will make the increafe of our ink manufacture 700,000l, per annum. I am very ready to believe that fuch has been the increafe, from what was afferted at the bar of the laft Houfe of Commons, by a gentleman well killed in thefe matters.

## He afferted, that our manufacture of <br> luftring', alamodes, and other black filk: for hoods and fiatves only, a- mounted to <br> Of filks for linings of clothes, in imitation of perfians, to Of filk handkerchiefs <br> 150,000

The whole of there articles* 650,000 I. per ann.

All this, befides the recovery of ftuffs and cottons mixed with filks, which before were almoft inft to this kingdom.
Luftrings and alamodes are now very little ufed; the filks hat are uled in their ftead, are raftiegeans and mantua filks, which are quite a different fabric. But the whole value, it feems, of our black filks is 300,0001 , per annum. This is an entire new manufacture to England, with which, before the firft war, we were wholly firved by France. This is not fuch a prodigious fum as people may imagine; it amounts o hittle more than Is. 8 d , per annum, for every one of the emale fex; and we may very well conceive, that 300,000 of this fex are in thefe filks every one at the charge of $20 s$ per annum, which makes up the whole fum: but whatever is the quantity, France ferved us with the whole before.
For brocades, and other rich filks, almoft the whole quantity ufed in England, were the manufacture of that nation, as well as great part of the perlians for linings: and if this laft fort made in england amounts to I 50,000 , per annum, the whole of thele two articles imported, may very well be believed to be the value of 200,0001 . per annum.
The above-mentioned articles, and that of filk handkerchiefs, make it credible, that I am not much miftaken in $m y$ com putation of 2000 bales of filk manufactured by our own looms, more than were before the interruption of the French commerce, and the prohibition of Eaft-India manufactures: whether fuch a manufacture, of fo much value, deferves ou care or our contempt, is the next thing to be confidered. In the firft place, I muft infilt upon it, that the whole price of this increafe of our filk manufacture, from the worm to the mercer's thop, is paid to the product of our lands, and to the labour of our people.
There can be no queltion of the filks which are imporfed raw from Turkey, and manufactured here in England. No bullion is fent to that country. The raw filks are pur chafed there for our woollen manufactures; and as a part of the price of thefe is paid to the land-holder for his wool, and the reft to the labour of our people that made it up, it muft be affirmed that the whole value of Turkey raw filk, is indirectly paid to our own people, by being paid to them for he goods that are exchanged for it: and as for the whole new value that is fuperadded to it, for the charge of importing, throwing, weaving, and dyeing of this tilk, it is entirely, and directly paid to the labour of our own people. The fame thing may be affirmed of the raw and thrown Italian filks; they are both purchafed by an over-ballance of Englifh manufactures exported to that cuuntry ${ }^{*}$; and if the whole value of there is directly paid to the Englifh lands and labour, and if we could not hope to preferve our Italian markets for them, without taking off their filks, it muf be acknowleged, that our land-holders and labourers are indirectly paid the value of thefe filks, by being paid for the goods that are exchanged for them.

* Although filver is not fent out directly to Piedmont, as it is to India, yet, in fact, it is the fame thing; for the ballance of fome other trade is cartied thither, which otherwife would be remitted to us.

The only difficulty is concerning Eaft-India raw filks, which are purchafed partly by our filver, and partly by our manu fastures.
factures. But of thofe it mult be acknowleged, that the whole price of importing and working them up is paid to the labour of our people. But as Eaft-India raw filks are the leaft part of our importation *, fo it is of thele that we make the greateft re-exportations, and the countries to which we do it, reimburfe us not only our whole coft of the re-exported raw filk that is imported from the Eaft-Indies. However, the throwing of raw filk employs fo many little and otherwife ufelefs hands, that I fhall never quarrel with the Eaft India trade for the filver it exports for thofe ufeful materials.
*The cafe is greatly altered, fince the act of parliament to encourage the importation of China filk.

But this can never be faid in defence of a trade, which exchanges our filver for foreign filks already manufactured to the very utmoft perfection; for what can thefe be faid to pay our lands? what to the labour of our people? It were better for us to fend our money to the Eaft-Indies than to France, for thefe manufactured filks, not only becaufe they are purchafed cheaper in the former, but becaufe the coft of a long importation is all paid to our own navigation; befides that, it were lefs dangerous to enrich a country at fo great a diftance, than fo ncar a neighbour as the French nation.
But that which I am chiefly aiming at is, that this whole increafe of the filk manufacture in England, is fo much Loft to other nations: for all that pretend that we are not richer nor more populous than we were before the war, will grant, that our confumption of wrought filks cannot be greater than it was before. "Whence then is this increafe of a manufacture to the value of 700,0001 . per ann. gained? and to what countries is it loft? It muft be wholly loft to France and the EaftIndies, and how is this lofs to be proportioned?
Our whole quantity of black filks was heretofore brought from France; our own manufacture of this commodity amounts to 300,0001 . per ann. France therefore has loft in this article the felling us fo great a value.
There is no reafon to believe, that the whole value of EaftIndia wrought filks annually confumed in England ever amounted to 200,000 l. per ann. It remains therefore to make up the whole 700,0001 . per ann. that the value of 200,0001 . per ann. more in brocades and other rich filks muft have been imported from France.
Then let the cuftom-houfe accounts make the wrought filks imported from France as much or as little as they pleafe, the increafe of the filk manufacture in England will demonftrate, that our importation of this commodity from France was heretofore 500,000l. per annum.
By the extraordinary induftry and ingenuity of our filk manufacturers, we have the fatisfaction to obferve, that the wear of French filks in general, is in this kingdom greatly difcountenanced, by the wife and glorious example of his Majefty and all the royal family: and, indeed, the fabrics of Spicalfields are now efteemed to be fuperior to thofe of France. We have likewife many excellent defigners among our weavers, which has not a little contributed to the increafe of this manufacture, to that fuperlative height to which it is arrived. See the article Engraving. And if our manufacturers would follow the example of the French in making a very light and cheap fort of iilks, our exportation of thefe manufactures might reafonably be expected to increafe.
The late encouragement given by the legiflature to the importation of China raw filk, it is to be hoped, will have a happy tendency to render a great part of our filk manufactures much cheaper than without this filk. For,
The China filk is not only of excellent ftaple, but comes at little above one third of the price of Italian Piedmont filk. Before the late act, the duty of Bengal raw filk being one third more, and China near three times as much as that of the Italian, hindered our being fupplied fo fully as we ought, and was a great detriment to the nation; for we pay the duke of Savcy moflly ready money for what we have from him, which as effectually drains us of our bullion, as the India or China trade does; with this aggravation, that according to Mr Gee, almoft three pounds of China filk may be purchafed for the money that one pound of Piedmont filk colts us.
Although filver, as before obferved, is not fent out directly to Piedmont, as it is to India, yet in fact it is the fame thing; for the ballance of fome other trade is carried thither, which otherwife would be remitted to us.
The filk of China will anfwer, in moft refpects, the ufe of Italian fijk, provided we could be conftantly fupplied with the fine raw filk of which they make their damafks, fattins, and other fine manufactures, which, by the curiofity of thofefilks, muft come up to the goodnefs of Italian filk.
The China filk that we commonly receive, is purchafed at Canton, the neareft port we trade to in China; but their fine filk is made in the province of Nankin and Chekiam, where their fine manufactures are carried on, and where prodigious quantities of raw filk are made, and the beft in all China. We have never 'till lately imported any of the fuperfine here, but two or three fhips have brought extraordinary good, the
beft of which, we are informed, was brought from Amoy; and doubtlefs, if encouragement was given for the importation of that fine filk, it might be thrown here, and our ma nufactures carried on at a imall expence to the nation: the countries of Chekiam and Nankin that produce it, are much to the northward of the places we now trade to, and near Chufan, about five or fix hundred miles to the northward of Canton, an inland in which we formerly had a factory, and were admitted to trade.
That country is very cold in winter, and I have been informed, fome of our woolten goods have fold very well there, efpecially our callimancoes and long-ells.
Befides, the countries of Chekiam and Nankin are near the heart of the empire, where the greateft trade is drove; and Nankin being the metropolis of trade in that country, as London is in England, fhe fends out her manufactures and merchandize to Canton, as we do to Briftol, and other outports. But, as Canton is the neareft port, fome captains and fupercargoes raife objections againft going further downthe coaft, alleging that it is a difficult pilotage, and in danger of lofing their paffage back that year; that the mandarins, and other officers, impofe upon them, which makes it difficult to trade with them. But when private traders had liberty to go to China, they were of another opinion; they went to thofe places where they could get moft money, and the people of Chufan (where the merchants of Nankin as well as of Hamcheu and Nimpo, two other great trading cities, lodge great quantities of merchandize) would be as ready to cullivate a correfpondence with our captains and fupercargoes, as the people of Canton are; and it is hoped we may find as mueh encouragement to trade to thofe parts, as we now do to Canton, their intereft being the fame among them all. A trade of this nature cannot be immediately fettled, good and prudent management and time muft do that. Some of our ingenious gentlemen have found, that feveral of our commodities, as well as our wollens, would do very well towards the heart of China; and to fpeak freely, every lover of his country ought to have the advantage thereof in view, as well as his own private gains. If this trade could be fixed, and any quantities vended in that valt country, and the fine filk above-mentioned imported, it would exceedingly add to the profits we already receive by the Indian trade, and bring thofe advantages with it, that may enable us to vie with any kingdoms in Europe in the Sile Manufactures; for as cheapnefs and goodnefs always give preference, Silk foimported from China will anfwer in both refpects. And it is to be hoped, improvements of this kind will be readily undertaken by the company, and be an acceptable fervice to them, as well as to the nation in gencral.' Johbua Gee.-And we find that the company, from the preceding act of parliament, have in earneft engaged in this affair ; and we may hope for fuch fuccefs in our filk manufacture, by means of the EaftIndia and Turkey raw filks, that we may not be cutdone therein by any other country.
For more matter relating to the filk trade, fee the article Russia, in regard to the filk of Perfia being imported through Ruffia. See alfo the articles Levant Trade, Oriental Trade, and Turkey Trade, for hints tending to fome improvements to be made in our filk manufactures.

An Act for explaining, amending, and rendering more effectual, an act made in the nineteenth year of the reign of king Henry the feventh, intitled Silk-Works.

- Whereas by an 'act paffed in the ninetcenth year of the reigni of king Henry the feventh, intitled Sink-Works, it is, amongtt other things, ordained and enacted, that no manner of perfon fhall from thenceforth bring, or caufe to be brought, into the realm of England, to be fold, any manner of filk wrought by itfelf, or with any other ftuff, in any place out of the faid realm, in ribbands, laces, or girdlec, upon pain of forfeiture of all the faid ribbands, laces, and girdles, and every of them, in whofe hands foever they be found, or the values of the fame, the one moiety to the king, and the other moiety unto any of the king's fubjects that would fue for the fame:'and whereas notwithftanding the aforefaid act, and the other laws now in being, great quantities of foreign manufactures, and particularly ribbands, laces, and girdles, are brought into, and fold in this kingdom, to the great diminution of the trade and manufactures of this kingdom, and to the great prejudice, bindrance, and impoverifhment, of great numbers of his majefty's fubjects; an evil which, if not timely prevented, will affect and greatly leffen the public revenue, and greatly diffrefs the filk rrade and manufactures of this kingdom: for remedy whercof, be it enacted by the king's moft excellent majefty, hy and with the advice and confent of the lords fpiritual and temporal, and commons, in this prefent parliament affembled, and by the authority of the fame, that if any perfon or perfons fhall, after the twenty fourth day of June, $17^{6} 3$, import, bring, or convey, or caufe to be imported, brought, or conveyed, into this kingdom, any rtbbands, laces, or girdies, not made and manufactured in Great-Britain, whether the fame be
wrought of Gilk alane, or wrought of filk mixed with any other materialt; all fuch ribbands, laces, and girdles, fhall be, and the fame are hereby declared to be forfeited; and the fame fhall and may be feized and detained by any perfon or perfons what foever, in whatever importers, venders, or retilers bonds the fame may be found or difcovered ; and thall be difpofed of as herein after is mentioned; and the perfon or perfons bringing, conveying, or importing fuch ribbands, laces, or girdles, into this kingdom, or caufing the fame to be fo brought, conveyed, or imported, ihall alfo forfeit, for every offence, the fum of one hundred pounds; and all and every perfon and perfons who fhall be aiding, abetting, or affifting in the bringing and conveying or importing into this kingo an fuch ribbands, laces, or girdles, as aforefaid, thall feverally forfeit and pay the fum of fifty' pounds, over and above any intereft which he, the, or they, may have, or may have had, in any fuch ribbands, laces, or girdles. And be it further enacted by the authority aforefaid, That all and every perfon and perfons, being a vender or venders, retailer or retailers, of any kind of ribbands, laces, or girdles refpectively, in whofe cuftody or poffeffion any fuch ribbands, laces, or girdles, or any of them, thall be found, or who fhall fell or expofe to fale, any fuch ribbands, laces, or girdles, as aforefaid, or who thall conceal any fuch ribbands, laces or girdles, with intent to prevent the forfeiture or feizure of the fame, fhall, over and above the forfeiture and lofs of fuch ribbands, laces, and girdles, and all intereft which he, fhe, or they, may have therein, for every fuch offence, forfeit and pay the fum of fifty pounds.
And be it further enacted by the authority aforefaid, That all pecuniary forfeitures and penalties incurred under this act, Shall be paid, one moiety to our fovereign lord the king, his heirs, and fucceffors, and the other moiety to him or them who will fue or profecute for the fame refpectively; fuch of the faid penalties which thall arife in that part of Great Britain called England, to be fued and profecuted for in any of his majefty's courts of record at Weftminitter, by action of debt, bill, plaint, or information, in which no effoin, protection, or wager of law, or more than one imparlance, fhall be allowed; and fuch of them as thall arife in that part of Great-Britain called Scotland, to be fued and profecuted for in the court of Exchequer at Edinburgh, in fuch manner as any penalties and forfeitures for offences againft the laws touching the cuftoms may be fued or profecuted for there refpectively.
Provided always, and be it alfo further enacted by the autharity aforefaid, That whenever fuch ribbands, laces, and irdles, fhall be found and feized in that part of GreatBritain called England, and out of the cities of London and Weftmintter, and the limits of the weekly bills of mortality, and the fame fhall not exceed in value the fum of twenty pounds, it fhall and may be lawful for two or more of his majefty's juftices of the peace for fuch county, city, borough, or place, where the fame fhall be fo found and feized, upon ny information before them, that fuch ribbands, laces, or girdles, were feized as ribbands, laces, or girdles, unduly brought into, and not manufactured within, this kingdom, to hear and determine the fame, and to proceed to condemnation or difcharge thereof, as fhall feem juft ; any thing herein before contained to the contrary notwithitanding.
And, for the utter prevention of all and every fuch ribbands, laces, and girdles, feized and condemned as aforefaid, from ever being made ufe of to the prejudice of the trade and ma nufactures of this kingdom, be it further enacted by the au thority aforefaid, that all and every fuch ribbands, laces, and gidles, after condemnation thereof, fhall, by order of the court, judge or judges, or juftices, where or before whom fuct condemnation thall be had, be publickly burnt and entirely deftroyed; but the execution of fuch order thall and may be fufpended for fo long time only as may be thought juft and meet, for the better attaining the ends of juftice, with regard to any fuit or profecution had, or to be had, for the recovery of any pecuniary penalty or penalties by this act inflicted.
Provided always, and it is hereby further enacted by the authority aforefaid, That forthwith, after the feizure of an fuch ribbands, laces, or girdles, as aforefaid, the fame, until they fhall be condemned, burnt, and deftroyed, as aforefaid, or difcharged as unduly feized, thall be depofited in one of the king's warehoufes belonging to the Cuftom-houfe, in cafe fuch feizure happens to be within the cities of London or Weftminfter, or the weekly bills of mortality, where the fame thall be received and admitted at all times by the proper officer or officers there, who is and are hereby impowered and required to receive and preferve the fame until they fhall be condennned, burnt, and deftroyed, or difcharged as aforefaid ; and in cafe fuch feizure fhall be made out of the faid cities of London and Weftminfter, and the weekly bills of mortality, then the fame fhall be depofited in the hands of the chief magitrate of fuch city, town, or place, where the fame hall be feized, or in the hands of the conftable of the next adjacent village, who is and are hereby mpowered and required to receive and preferve the fame, until they fhall be condemned, burnt, and deftroyed, or dif-

VOL. II.
charged as aforefaid; and all and every fuch ribbands, lacees, and girdles, may, from time to time, be viewed and infpected by any perfon or perfons, on behalf of the profecutor or profecutors, or of the perfon or perfons interefted in, or claiming, the faid ribbands, laces, and girdles, with the leave of the court, officers, judges, or juffices, where or before whom any profecution or fuit fhall be carried on for condemnation thereof, or for recovery of any penalty by his act inflicted, who are and is hereby required to make and give fuch order, from time to tirne, for that purpofe, as may be juft and reafonable.
And, for the better difcovering and detecting any offender or offenders againft this act, be it enacted by the authority forefaid, That upon an information in writing made upon oath before any two or more of his majelty's juftices of the peace for the refpective county or place (which information hall be figned by the party or parties making the fame) that there is good ground and reafon to fufpect that fuch ribbands' aces, or girdles, as aforefaid, have been imported into this kingdom, and are concealed by, or are in the poffeffion or cuftody of any retailer or feller of any kind of ribbands, aces, or girdles, contrary to the true intent of this a $\mathcal{E}$, it hall and may be lawful for fuch juftices refpectively, to iffue heir warrant or warrants to any conftable or conftables, or ther peace officer or officers, within the faid county or place, mpowering him or them to fearch, in the day time, the houfe or houfes, out-houfe or out-houfes, warehoufes, fhops, cellars, rooms, and other places, belonging to, or hired employed, or made ufe of, by fuch retailer or feller who Shall be fulpected to conceal or have in his, her, or their poffeffion or cuftody, any ribbands, laces, or girdles, not made or manufactured within Great-Britain ; and if any fuch rib bands, laces, or girdles, not being made or manufactured within Great-Britain, fhall be found, to feize and carry away the fame, for the purpofe of carrying this act into execution, and to difpofe thereof as is herein before directed. And be it further enacted by the authority aforefaid, That if any action or fuit thall be commenced againft any perfon or perfons for any thing done in purfuance of this act, the defendant or defendants in fuch action or fuit, may plead the general iffue, and give this act, and the fpecial matter, in evidence, at any trial to be had thereupon, and that the fame was done by the authority of this act; and if it fhall appear to bave been fo done, then the jury thall find for the defendant or defendants; and if the plaintiff fhall be nonfuit ed, or difcontinue his acticn, after the defendant or defendants thall have appeared; or if judgement thall be given upon any verdict or demurrer againft the plaintiff, the defendant or defendants thall recover treble cofts, and have the like remedy for the fame, as defendants have in other cafes by law.
Provided always neverthelefs, and it is hereby enacted, That in every fuch action, it fhatll and may be lawful for the defendant or defendants, by leave of the court where fuch action fhall be depending, at any time before itlue joined, to pay into court fuch fum of money as he or they fhall fee fit, as amends for the matter or caufe complained of in fuch action; whereupon fuch proceedings, orders, and judgements, hall and may be had, made, and given, in and by fuch court, as in other actions where the defendant is allowed to pay money into couit.
And be it further enacted by the authority aforefaid, That if any ribbands, laces, or girdles, wrought of filk alone, or of filk mixed with any other materials, hall be feized by virtue and in purfuance of this act, and any doubt or queftion fhall afterwards arife, where the faid ribbands, laces, or girdles, fo wrought as aforefaid, were manufactured, the proof fhall lie upon fuch perfon or perfons, being a vender or venders, retailer or retailers, of any kind of ribbands, laces, or girdles refpectively, in whole cuftody or poffeffion the fame were found, and not upon the profecutor or profecutors, plaintiff or plaintiffs; and in cafe no fuch proof fhall be given, that fuch ribbands, laces, and girdles, were manufactured within Great-Britain, then the fame thall, without any further proceeding, be taken and held to have been manufactured out of Great-Britain, and contrary to, and in violation of, this act ; any law or cuftom to the contrary notwithftanding.
Provided always, and it is hereby declared, That if any fuch perfon or perfons, in whofe cuftody or poffeffion any fuch ribbands, lacés, or girdles, as aforefaid, fhall be feized by virtue and in purfuance of this act (fuch perfon or perfons not importing or concealing the fame) fhall difcover, upon oath, before any one or more juftice or juftices of the peace, the perfon or perfons who fold fuch ribbands, laces, or gir dles, to fuch perfon or perfons, in whofe cultady or pollef fion the fame thall be feized fo as that fuch perfon or perfons fo felling the fame fhall or may be profecuted and convicted according to the intent of this act, as the feller there of, in cafe the fame flall be, or be taken and held to be, within the inrent and meaning of this act, manufactured out of Grear-Britain; fuch perfon or perfons fo difcovering as aforefaid, thall be, and is and are bereby freed and difcharged of and from all and every penalcies and forfeitures by this 9 T

## S I L

act inflicted, upon all and every perfon and perfons, being a vender or venders, a retailer or retailers, having in their cuftody or poffeffion, any fuch ribbands, laces, or girdles, as aforefaid, not $\uparrow$ made or manufactured in Great-Britain, and of and from any proof that fuch ribbands, laces, or girdles, fo feized as aforefaid, are manufatured in GreatBritain.
Provided allo, and it is hereby further enacted by the authority aforefaid, That nothing in this act contained, fhall extend, or be in any wife conftrued to extend, to fubject any perfon or perfons whatfoever, who fhall wear or make ufe of fuch ribbands, laces, or girdles, as aforefaid, as part of his, her, or their apparel or drefs only, to any forfeiture, or to any pecuniary penalty or penalties inflicted by this act, or to any proof that fuch ribbands, laces, or girdles, are manufactured within Great Britain.' 3 Geo. III. c. 2 I.
SILVER, a metal too well known to need a definition. By the art of metallurgy it is found to be the fineft, pureft, moft ductile, and moft precious, according to its natural properties, of all metals, except gold. See the articles Metallurgy and Metals, and the feveral heads from thence referred to.
There are filver mines, more or lefs, in all the quarters of the world. See the article Mrnes. Thofe of Peru and Mexico, and of fome other parts of America, are much the richeft. See the articles America, Peru, Mexico, and Ores.
The mineral ftones or ores, dug out of the earth, are not all of the fame quality, confiftence, or colour; fome are white and afh coloured, others fpotted with blue or red, and fometimes with both; others are black: there laft are the richeft, and the eafieft wrought.-Others of a yellowith red, and of a greenifh colour.
The ufual way of feparating filver from the ore, in Europe, is the fame as that of gold: i. e. by means of mercury [fee Mercury] with the difference only of adding falt. See the articles Gold and Refining.-How filver ore is affayed, fee the article Assay.

## REMARKS.

In the large way of bufinefs, filver and gold ores are treated either by amalgamation with mercury [fee AmalgamaTION], or by fmelting and refining them with lead [fce Smelifing, and Refining]. That by amalgamation is only ufed where the ore is exceeding rich, particularly at the filver mines of Potofi: for by grinding fuch rich ores with mercury, the nobler metals will be drank up by it, and may be readily feparated from it again by diftillation; which' carries over the quickfilver, and leaves the nobler metals behind. Lead is, ufed with the poorer ores, in order to imbibe the richer metals they contain; which it does much after the fane manner'by fufion, as quickfilver does without it, fo as to feparate the heterogeneous parts, by keeping them floating, and afterwards reftoring the nobler metals by cupellation.
The large way of fmelting gold and filver ores is analogous to the frall one of aflaying [fee Assay]; all things being propurtionably larger, the fire animated with bellows, and the blaft directed upon the furface of the melted metal, fo as to blow off the lead in the form of litharge, before it is fully vitrified [fee the article Lead] But here the filver is not perfectly refined at one operation; fome proportioh of lead Aill remaining mixed ameng, it, that re, uires to be bu:nt out, after the fame manner, in a ftronger fire: and eves
thus it is with great difficulty that filver can be obtained pure, or totally feparated, either from lead or copper. This large way of working might, perhaps, be improved in refpect of the veffel or teft employed, and the management of the fire, fo as to work by the means of flame, without the affiftance of bellows.
With regard to the teft, we are to oblerve, that bone-afhes, though ever fo well wafhed and fifted, are not, perhaps, the fitteft matter to make tefts of; the teft fo made being apt to crack in the fire, unlefs dried, very gently, for many days, before they are ufed. But there is a particular kind of talc, or unvitriffable fperth ftone, that being calcined to fine powder, as it readily may, and made up with a fmall folution of vitriol in water, affords fuch tefts as may be almoft immediately ufed without danger of cracking
'Again; the flame of a wind-furnace may' be made to play upon the furface of the melted metal, fo as readily to perform this operation, without blowing with bellows, that violently tear away the filver along with the lead, in the form of litharge. And this farther convenience may be obtained, that not only fmaller and cheaper wood, but even pit-coal, fhall here ferve for the fuel, provided the ftructure of the furnace be contrived for the purpofe. : And in fome places, particularly in Flincfhire, they have of late advantageoully ufed common pit-coal for teffing in the large way, and the fame improvement might alfo be made in the fmall way of aflaying. The methods of obraining filver in purity are various, and differ according to the metal wherewith the filver is mixed or allayed. If copper be mixed therewith, the beft and cheapeft way to purify the filver is, to calcine it with half its, weight of common fulphur, then melt the whole together, and throw into the pot, at feveral times, a due quantity of clean and new iron filings; which will mmediately make the fulphur quit the filver, catch bold of the iron, and form a fcoria at top, leaving the filver free from copper, iron, or fulphur, at the bottom. See the article filux.
One method of feparating Gold from Silver is by Quartation. See the a ticle Quartation. See alfothat of Aqua Fortis and Aqua Regia; as applicable to Gold and Silver. See alfo the article Refining.
Of trafficking in Silver Búllion, fee the article BulLION.
Of the fixing a Par between Gold and $S_{\text {ilver, }}$ fee the article Coin.
Of filver bullion being a commodity, exportable as well as importable like other wares, fee the articles Bullion and Corn.
Of the quantity of feecie requifite to circulate the commerce of a nation, fee the articles Cash and Circulation.

TABLEES of Gold and Silver, compofed from the authority of Mr Lowndes, who infpected the original indenturesy

## Portugal - J. 312 to the lb. Troy. <br> Englifh guineas <br> 312 1 <br> 13 . <br> 1. 46160 46146 00 I 6 $00 \quad 26$ <br> And the Portugal ftandard worfe $\frac{1}{4}$ grain <br> 0040

 This, with the difference in point of exactnefs in coiming, wherein the Portugal is much more defective than the Engliin coins, may be very good reafons for their being refuled in payments in any of the receipts of the public revenue; but anfwer very well the purpofe of thofe who benefit by the ir regularity, in trading with the heavier and paffing off, the lighter by tale; and which, if they can turn into guineas or heavy filver, make another gain.How our fandard is proportioned to that of other countries, and thence what the true par of exchange is between us, fee the article Coln, where you will find Sir Ifaac Newton's tables and the explanation thereof, and bis reprefentation afterwards to the lords of the treafury upon our coin.
S K I E, the biggeft but one of all the weftern Mlands of Scotland, is a part of Iavernefs, from which it is divided by a narrow channel. The foil is generally a black mould, though there is fome of a red colour, wherein iron is rometimes found.' The arable land is for the moft part black, yet affords clay, white, red, and blue; and in fome plabes there is fine white marble, various marcafites, [fee Marcaisites] agate, and variegated fones; cryftals of feveral colouts, plenty of free-ftone and lime-itone. Here are the tapis thecticus, the lapis ceraunius (a fort of cramp-ftone) and plenty of good fprings, fome of wich are medioinal.
It is very high land, both on the coaft and within the country; and almoft to che center of the ifland, there are feven high mountains that lie near one another. The ifoil is fruitful enough in the low grounds, and produces plenty of thofe fpecies of cattle and corn, which are to be found in the other weftern inlands ; efpecially of the latter, for it fupplies the neighbouring continent with barley and oats.
Cod and ling are common upon the coaft, and treerrings in great abundance, for the taking of which here are many convenient harbours and bays, with about thirty rivers that afford falmon and other fifh. [See the article Scotrand.] The country is populous, the people handfome, and very healthy Their cattle are horfes, cows, fheep, goats, and hogs.
SK IN S. After various drdflings of thins, fome of wich are only fimply preferving them, othersiconfift in penetrating, fuppling, and ftrengthening the fkin by means of oil on the flefh fide only, i(for the hair fide is carefully covered during the operation) our furriers begin by employing the furrs of our common wild beafts, fuch as foxes, pole-cats, moles, badgers, otters, rabbets, hares, mountain-cats, and fome others, and thay find means to make them valuable, by-the judicious affortments they make of the moit beautiful of them.
The mountain-cat is a very wild animal, bigger than the fox, and which; for its fparkling oyes, is looked upon by feveral naturalifts to be the lynx of the Ancients. Its ikin :is, perhaps, one of the moft beautiful in the world. But the creature is fourid in the forefts of France as well as in other countries; and people there, as well as in other countiies, had rather pay a high price for fome ikin of a-difrnal colour, and frequently counterfeited and dyed, if they can pleafe themfelves with the thoughts that it comes from fome remote clime. It is true, that the northern parts of Europe and America furnifh us with furrs of igreat foftnefs and luftre *. The countries which fend us the moft valuable, are Siberia on the confines of Tartary and Mufcovy, Nova Zembla, \$pitferg, Groenland, Terra de Labrador, or New Britain, and Canada. The Oftiacks and Samoids $t$, who inhabit the nor thern parts of Siberia near the fea, venture on the ice into uninhabited countries, in order to huint rain-deer, elks, and foxes. The tributes which the Tartars owe, fonje to the emperor of China, others to the courts of Perfia, Conftantinople; or Peterfoourg, are paid in furrs only: and thofe petirs-gris, which the French merchants bring from China probably are not the produce of China, but of Chinefe Tartary.

* Wafferfchleb's Memoirs.
+ Peyrere's Relation of Groenland.
Siberia is the true magazine of fine furrs [fee the article Sr beria.] But our merthants do not go into that country but purchafe thefe goods either:at Archangel or Peterfbourg The Czars have for a lortg time paft claimed the whole property of the' moft valuable product of Siberia, as the fine fkins, and the gold-duft which is found in fome of their ri vers: and the fituation of the country facilitates this fubjection.
Siberia is openonly on the fide of Tartary, of which it makes a part, and where furrs are of Jittle or no value. To the north and weft it is defended by the ice: towards' Ruffia it is hemmed in by a ledge of moustains, the paffages of which are com-uanded by fo many forts and barriers, where all thofe
who come out of the country are fearched with the utmaft rigour, even to the breaking up of the carriages, to fee if there is nothing valuable concealed in them. The criminals, who are exiled from Mulcovy to Siberia, are obliged to go a hunting. They are maintained, but their eaptures belong to her Czarinian Majefty. The other inhabitants who hunt likewife, are not allowed to fell their goads out of the country : but the beft fkins which they have to fell, mult be carried to the governor of Siberia. He. pays them fomewhat above the common price', which is a mere triffe; then puts ftamp on them, and fends them to the finate of Ruffia which diftributes them at Morcow, Petenfbourg, Archangel, and other places of trade. They hunt with gins, or long poles, or blunt darts, which eitner kill or ftun the beaft without injuring the fkin .
The northern furrs in moft efteem are the fabie, the black fox, the ermine, and the petit-gris.
The fable is a fort of weefel, found in Bifcay, Pruffia, Canada, and many other places ; but the moft efteemed is the Siberian, which we call xibiline: the blackeft is the moft valuable. But there are tricks played under the polar circle, as well as in the temperate zone. The Siberians and Ruffians have found out a way to dye the brown fable to the colour of that which is naturally of the moft beautiful black. Lemon-juice is the beft thing we know to difcharge this artificial cotour, and lay the cheat open.
The deareft furrs of the Siberian fable are thofe which are made of the tips of the tails of this creature, anid which can only ferve for fmall things.
The black fox, which is as well known as the fable in the coldeft countries, and is not common any where elfe, may undeceive us of a vulgar error. Same of them, indeed, are found perfectly white, which would naturally be of another colour in dther countries': and fome, which were brown in fummer, turn grey or white in winter, and refume their colour in fummer: but there are many which never change colour.
Ermine, fo much eftemed for its whitenefs and luffre, is Ermine, to much efteemed for its whitenes and lyfre, is
alfo a kind of pole-cat, or weefel. Somedictionaries confound it with the fquirrel, of which we are going to fpeak; and to increafe the confulion, with the Siberian fable, although they are three different animals. The fable and ermine differ as much as black and white. In order to heighten the charming white of the ermine, the furriers cfually prick them here and there with little black fuffs, which are bits of the fkin of a lamb from Lombardy, which is of a very fhining black.
The fourth furr, which we have from the North, is the petitgris. It is the fkin of the fquirrel of cold countries. It differs from ours in this, that from brown, like ours, in fummer, it turns grey in winter, and continues grey after death. Two very different.forts of furrs are made of this.ikin. The black makesthe petit-gris, and the belly is as white, and more hhining, than ermine. It is bordered on each fide with 3 blaik ftreak, which is carefully preferved. When the furr is alternately varied with the back andibelly of the Ikin, it is much the richer: and this is what was formerly called the little vair, which frequently occurs in the coats of arms of fome ancient families.
From that branch of the ikinner's trade which dreffes fkins intire, we may pafs to the other, which generally deffes them without the hair. It is fubdivided into feveral clafles, which have fome operations in common, and others peculiar to each clafs.
Although there is a great difference between the dreffes of fhammoy, allum leather, Hungary leather, Morocco leather, [fee Leather] the tanner, and parchment-maker; yet the fkins which pafs thro' the hands of thefe feveral workmen, ought to have been, for the moft part at leaft, wafhed of the blood and impurities in a running water, fet to drain, worked with the hands, or paunded with wooden pettles in a tub, or vat ; put into the pit (which is made in the ground, and bordered with wood, or flone and mortar) filled with water, in which quick lime is diffolved, in orider to loofen the hair, that it may be eafily rubbed off, without injuring the fkin ; drawn out, and fet todrain on the edge of the pit; ftretched on the leg, or horfe, in order to have the hair fcraped of with a blunt iron knife, or fometimes with a cylinder of wood; pared off the fiefh and membranes on the fefh fide, and of the fcabs, or roughnefs, on the grain fide, with a fharp knife; rubbed wioh a wheftone on the fame horfe, to take off any particles of the lime, or other thing which may occafion hardneffes; thickened ty differenc forts of powders, whereby ohey become greater in bulk, and fo much lighter, as gradually to rife to the furface of the water; ftretched out green, or half-dried, and piled one over another, or put up feparate, after being dried to a cruft; hung out to dir upon poles, lines, or any other way; which muft be done feveral times in dreffing fmall fkins.
This alternate tranfition from the liquid of the air into that of water, and from water ino the air, with the affittance of the lime, falte, and oil, opens the inmoft fibres of the tkin fo effectually, as greatly to facilitate the introduction of fubftances proper for making them pliant, without rendering shem thimaer.

Natural philofophy would be much embarrafied to fettle the order and great number of thefe operations, by the dint of reafon alone. But what the molt penetrating genius has never been able to invent, frequent handing of the fame thing brings a man to practife with fuccefs. Common workmen continue to do the fame thing frrupuloully by habit. One of them more expert than the reft, and whofe experience makes up all his philofophy, overfees the whole, judges of the degree of drynefs and moifture, of the hardnefs and foftnefs, determines jufly, and either repeats, lengthens, or fhortens the proceffes.
Thefe procefles, though really the fame in the four or five principal-dreffings of leather, are fo different in regard to the manner of executing them, and the time required in them, that the knowlege of all the minute particulars is requifite for him only who intends to practife the trade. We will content ourfelves with what conftitutes the true objects of fome of thefe trades; of the Ikinner, becaufe this is of mon general concern.
The allum leather-dreffer dreffes all forts of white leather, from the ox-hide to the lamb-fkin. He works chiefly tor the fadler and glover. For drefling the fadler's leather, he ufes bran, fea-falt, and allum. For that which the glover ufes, after the common preparatives, he firft employs bran, and then with falt, allum, fine flour, and yolks of eggs, mixed in hot water, he makes a fort of pap, with which the 1 kins are daubed and fed, in a trough or tub.
The fhamoy-dreffer foaks in oil not only the fkin of the true fthamoy, which is a wild goat, but likewife thofe of all other goats, though much inferior to the true, and even cheepsikins, which he dreffes like thamoy.
The tanner ufes the bark of young oaks, from 18 to 30 years old, ground in a tanning-mill, in which he foaks ikins more or leff, according to the different fervices expected from them, and their chief ufe is to remain firm, and keep out water.
Whereas the tanner's way of dreffing leather, in linie and tan, takes up two or three years; the Hungary leather-dreffer allows but three or four weeks to that which pafles through his hands. He fupplies the harnefs-makers, fadlers, belt makers, and all other trades that ufe not only white and allum leather, or oiled and tanned leather, but al o fkins coloured grey with ink, and drefled in tallow, which is the difinetive work of the Hungarian leather-dreffer *.

## * Our curriers in England drefs this fort of leather

His name (Hongreyun in French) and method came from Hungary, whither a Ftench workman went, by order of Henry IV. to learn the trade by ftealch, and thereby to lower the price of harnefles and feveral other things made of leather, wanting in his armies
The tanner in certain cajes, inftead of tan, ufes redon, which is a plant cultivated in Gafcony, and very common in Polith Ruffia. It ferves chiefly for tanning rams and fheeps-fkins, which the French call baffanes : but it is alfo ufed in dreffing Ruflia leather, which the Polich Ruffians make a great myftery of, though there is a very good manufacture of that fort at St Germain en Laye.
The confit and fumach are in little ufe but for Morocco lea. ther. The confit, into which goats fkins are put after the common preparation, is a large tub of warm water, wherein they are thrown, after having diffolved therein a very cheap fubfance, taken from the animal kingdom, and that is the fweepings of dog-kennels.
The fumach is tuken from the vegetable kingdom: it is a duft which comes on the leaves and fmall branches of the plant called rhus, or fumach. It is fumach, with galls and allum, that the Morocco leather-dreffer chisfy ufes, whofe intention is to give a grain to goat $\mathrm{fki} . \mathrm{s}$, and thereby to render them fufceptible of the moft beautiful colours. They call grain thofe little wrinkles, or furrows, which run all over the furface of Morocco leather, as allo that of calves and cows-leather, which they bring to a refemblance of it, by dint of wafhing, pounding, wafhing again, wringing, and folding the fkins different ways. We fhall fay nothing either of the water tinged with ruft of iron, which ferves to give a black colour, nor of the lac, and other fubftance, which colour the fkins red, yellow, \&c.
The workmen who give the grain, and the moft lively colours, to the fkins of fhamoy, or other goats, and who drefs calves and fheeps- 1 kins in the fame manner to imitate Morocco, make a great fecret of certain parts of their art, which they fay are the niceft parts of it. The precautions and miftrufts of tradefmen are fometimes very diverting. In my walks among them, I found a rope-maker who refufed to let me take a draught of the mechanifm of making a horfe-girt, without a compulfive order.
As the grain and beautiful dyes of goats-ikins are the work of the Morocco leather-dreffers, the laft preparation and dyes given to certain tanned leather, are the bufinefs of the currier: fo, likewife, when fkins dreffed white by the fliminer, are deftined for writing or drawing, the parchment-maker puts the finifhing hand to them.
V OL. II.

## R E M A R K S.

Skins, and the hair of beafts, manufactur: d, become parcliment and vellum, leather, of which are made foes and bocts, faddles, harnefsand furniture for horfes, glaves and garments, coarhes and chairs, boufhold ftuffs, covers of books, drinkir, veffels, \&c. and furrs for cloathing, hats and caps. Thefe branches of trade that are derivalle from the fiop. Trate, der it a very confiderable concern, and well deferving prefervation as much as we can within ourfelves.
The Englih have greatly inct eafed their quantity of furrs and fkins of all forts, from their northern colonies, fince they have fertled and planted northward to Nova Scotia, Annapolis, and other places towards the tiver Canada.
Thefe feveral forts of ikins brought to Europe from thefe parts, are of the following kinds, viz. deer- 1 kins , bear, beaver, otter, raccoon, fox, elk, car, wolf, marten, mink. mufquefh, fifher, \&c. all which furnifh us with materials within ourfelves to carry on divers valuable and extenfive branches of our commerce, without being obliged to import them from other nations; and for which raw materials we pay in the manufac tures of England, Scotland; and Ireland, and thereby the mother-country, as well as our cilonies, become more and more inriched. And this is likely to be the cafe to a very confiderable degres; fince CANADA is antexed to the crown of Great-Britain by the Treaty of 1763 . See America, Canada, Mississippi, Indian Affairs in North-America
Lave Trade. See African Trade, and English African Compant. See alfo Dutch african Company, french african Company, and Portugurze African Company.
SLESWIC, or SOUTH JUTLAND. This ducby is an ancient dependence on the king of Denmark. It has North Jutland on the north, from which it is feparated by a line drawn from the city of $B_{j}$ pen, on the German Ocean, to Colding on the leffer Belt ; on the efit it is bounded by the Baltic; on the fouth by the duchy of Holftein; and on the weft by the Nirth Sea or German Ocean. Its greateft length, from the fouth-eaft to the north-weft, is about 86 miles, and its greateft breadth, from eaft to weff, about 60 . It is watered by a great number of rivers, which render it very fruitful; it abounds with meadows and paftures. The eaftern part of this duchy lies higher than the weftern; and in the latter there are large plains, which produce a great plenty of all forts of corn.
The iflands of North Strand, Fora, Sylt, Amron, Rom, and Manoc, belong to this duchy.
It is divided into feveral bailiwicks.
The whole duchy of Slefwic belungs to Denmark, the king having conquered it, during the minority of the duke of Holftein, in the late war of the North; and the poffeffion has been fecured to him by the guaranty of the kings of GreatBritain and France. The nobility of this province is very powerful, and divided into four circles, which are, thofe of Haderfleben, Tonderen, Flenfburgh, and Gottorp. The chief towns in the duchy of Stefwic are as follow :
Sleswic, or Sleyzwic, the capital of this duchy, is feated on a fmall arm of the fea, called the Sley, at the diftance of about 22 miles from Keil, toward the north-weft, 38 from Gluckftadt, to the north-eaft, and 28 from Lunden, to the eaft.
In 1 roo it was a place of very great trade, and much frequented by merchants from Great Britain, France, Spain, Flanders, \&c. This city was even fo confidorable, that Adam Bremenfis, who flourifbed about the year 1 roo, called it Civitatem opulentiffimam ac populofiffimam, a moft rich and populous city: but its trade is now almoft dwindled to nothing. The foil, efpecially towards the fouth and eaft, is not very fruitful, but the town is fufficiently fupplied with all neceffaries of life from the $n$ ighbouring country, and the Sley affords abundance of fifh. They brew beer here, which is not very palatable, but they import fome from abroad, as well as wine, which is here pretty cheap.
Got torp was the ancient feat and patrimony of the dukes of Holttein, the chief branch of which family, after the royal one, took from thence the title or furname of Gottorp. It is about fix miles diftant from Slefwic, to the fouth-weft, and fands on the Sley, which almoft furrounds it, and carries veffels of fmall burthen to and from the Baltic.
Ecrenford ftands on a little gulph on the Baltic, which makes a very commodious haven, and affords a pretty confiderable trade, it being one of the fafeft ports on that thore; it is about 22 miles diftant from Gottorp to the eaft, and fix from Kiel, towards the north.
Frederickstadt, was thus called from its founder Frederick duke of Holftein and Slefwic, who built it in the year 1621, peopled it with Hollanders, and granted them great privileges. He endeavoured, alfo, to fettle a filk trade there, and, for that purpofe, fent a famous emb-fly to Mufcovy and Perfia, which gave occafion to Adam Olearius, fecreand Perfia, which gave occafion to 9 U of it, to publiih an account thereof, in an excellent book
of
of travels. This town fands on the banks of the river Eyder, and is 42 miles diftant from Slefwic, towards the weft, and 42 from Gluckitadt, to the north.
Toningen is alfofituated on the river Eyder, 10 miles below Frederickftadt, and about 14 from the German Occan. It is not an ancient town, but it has a pretty good trade, which increafes daily, by means of its commodious harbour, formed by the Eyder.
HusUm, the capital of a bailiwic of the fame name, ftands on the gulph of Hover, and is about no miles diftant from Toningen, to the north, and 20 from the German Ocean. It has a harbour capable of fmall veffels; and as the neighbouring country abounds with paltures, they keep bere, every week, a market for cattle; and it has been obferved, that, in time of war, they have fold here above 4000 horfes in a year. In the gulph on the weft of the town, they filh valt quantities of excellent oyfters.
Flensburg, the capital of a bailiwic of the fame name, is fo called from the bay, or gulph of Flens, on which it ftands, and which is formed by the Baltic. The town is about eight miles diftant from Slefwic, to the north, and near 30 from Toningen, to the eaft. The bay, on the bottom of which it ftands, makes here a fine haven, where thips of great burthen may ride fafe, and come up to the very warehoufes, to load and unload. On the land fide it is encompaffed with mountains, which fhelter it from winds, and fupply it with water.
Apenrage ftands on another gulph of the Baltic, and is 26 miles diftant from Flenfburg, to the north-weft, and about 14 from Hufum, to the eaft. It has a port at the bottom of the bay, which is much frequented by the Danih fifhermen, and affords it a pretty good trade with the adjacent iflands: this is alfo the chief place of a bailiwic of the fame name.
Hadersieben is a good fea-port town, near 20 miles diftant from Apenrade, to the north. It is watered on the weft by the lake of Haderlledam, and on the eaft by the canal, or gulph, called Haderflebfoerd, which is fo fhallow near the town, that veffeds of burthen are obliged to anchor at the diftance of two miles from it. That gulph into which the lake runs is very narrow, and about nine miles lower falls into the Baltic Sea. The country about this town abounds with fruitful corn-fields, and excellent paftures, which, together with the filh taken out of the lake and gulph, render this a pretty flourifhing place.
Tunder, or Tunderen, a fmall but well-built town, flands on the fouthern bank of the river $W$ ydaw, abcut 12 miles diftant from Haderfleben to the weft, 20 from Hufum to the fouth, and near 14 from the German Ocean. It lies in a fruitful foil, and had formerly a confiderable trade, which is now loft, its harbour being choaked up with fand *.

* This is an inflance, amongf numberlefs others in this work, to hew that when trade declines, poverty enfues.

The moft confiderable inands adjacent to the duchy of Slefwic are as follow :
Northstrand, in the German Ocean, lies overagainft the bailiwic and town of Hufum, and was, it is faid, feparated from the continent by a violent form. When it became an ifland, it was about 12 miles long, and four broad in fome places, and in others lefs. Its foil is very fruitful, and produced abundance of corn before the great inundation that happened; it had allo very fat paftures, where they fed exceeding good cattle: and they ufed to fend daily to Hufum, and other places, a prodigious number of fheep, fowls, ducks, and geefe, and great quantities of butter.
Amron, of Amroen, is a fmall ifland to the north-weff of Northftrand, from which it is about feven miles diftant. It is in the form of a crefcent, and is not confiderable, but for its oyfter-fifhery.
Fora, Vooren, Focter, or Focber, lies towards the north-eaft of Amron, neareft the coaft of Slefwic, between Northftrand and Sylt. It belongs to the prefectorthip of Tunder, and is of an oval figure, about fix miles in length, and four in breadth. It abounds in cattle and corn, and has about 4200 inhabitants, and feveral villages.
Sylt lies to the north of Fora, from which it is feparated by the Rode Tift, or Red Channel. It is of a triangular form, about 14 miles long. The greatef part of its foil is nothing but fand and heath; but towards the eaft and weft there are fome paftures, where they feed cattil. There are no waods here, and the people are obliged to fetch from the continent what they want for firing. Their number amounts to about 1750 fouls. A great part of the men and boys fet out every year for the whale-fifhery on the coalt of Iceland, Greenland, and Spitzbergen.
Rom, or Roem, towards the north-eaft of Sylt, is about feven miles long, and about four broad, and has about 1500 inhabitants, and feveral villages. The caftern coaft of the ifland has good paftures, and on the weft there are harbours capable to receive middle-fized veflels.
There are feveral other illands on the coaft of Slefwic, but they are fo fmall and inconfiderable, that they do not deferve mentioning.

SLIGO, or SLEGO, a county in Ireland, lies full upon the fea, to the north and north-weft, where it is alfo bounded by the river Trobis; it has Mayo on the weft ; part of that county, and Rofcommon on the fouth; and the county of Leitrim on the ealt. The greateft extent from north to fouth, is 35 miles, and from eaft to weft, 33 ; or, as fome fay, 44, it being very unequal both ways, and runs out in a point to the north, as far as Donnegal-Bay.. It is computed to contain 24I, 550 acres. Geeat part of the country is mountainous and boggy, but its lower grounds and bottoms have a good foil, both for the ploughman and the grazier.
Slego, which lies on a bay of the fame name, is a markettown, and the only town of note in the county. It has a very commodious harbour, and fhips of 200 tons may come up to the town-key. The town is populous, but not large, nor is the trade here conliderable, though much better than in any of the other places beyond it.
S M EL T I N-G, among metallifts, the melting of the metal in the ore, in a fmelting furnace, in order to feparate the metallic from the earthy and other parts. Smelting, in propriety, is reftrained to the large way of working upon ores from the mines, and reducing them to a pure metal, fo as to fit the produce for civil, mechanical, and oeconomical ufes. For the methods of fmelting the feveral metals from their refpective ores, fee the articles Copper, Lead, Tin, Ir on, Goid, Silver, and Mercury. See alfo the articleg Assay, Flux, Metallurgy, Mineralogy, Mines, Minerale, Ores, Refining.
Preparatory to the fmelting of ores, the following operations are requifite.

## EXPERIMENTI. <br> The method of roafting of ores.

We took a pound of the common Cornifh mundic, and breaking it into fmall lumps, expofed it upon the grate of a furnace, whillt the fire was made below, and thus at firft gently heated and terrified the mundic ; but afterwards by degrees increafed the fire, fo as to make the lumps glow, or appear red-hot: in which ffate we kept them for half an hour, or 'till no more fulphureous vapour, or ftench, role from them.

## OBSERVATIONS.

This experiment thews the common method of roafting ores, in order to difcharge their fulphureous, arfenical, or antimonial parts, that might otherwife hinder their fufion, or elfe carry off a confiderable proportion of the truly metallic matter in melting. For fear this metallic matter fhould fly off, we made the fire gentle at firft, but increafed it, by degrees, 'till the lumps became red-hot, otherwife the fulphur would not quit its hold, for fulphur requires a naked fire, and the affiftance of the open air, before it will burn, or go intirely off.
The richer and more tractable ores have no occafion to undergo this previous operation of roaffing, but are ufually committed to fufion foon after being dug up, and feparated from their fone, or mine. However, if they contain any confiderable quantity of fulphur, or arfenic, it is ufual to roaft even there a little.
But fome copper ores are fo refractory, or hold their fulphur fo tenacioufly, as to require many roaftings before they will let it go, being either ftamped or melted after every operation ; fo that all the parts may, at feveral times, be equally expofed to the fire, and have their fulphur difcharged.
In the large way of bufinefs, which is fmelting, this operation is ufually performed in a trench, cut fomewhat aflope on the ground, that the air may have the freer accefs at the bottom ; then they place a layer of billet-wood in the trench, and upon this a layer of the ore, in little lumps; and fo continue, interpofing a layer of wood and a layer of ore, for three or four ftories, when the pile being completed, they fet fire thereto, and make it continue to burn flowly for feveral days together, during which time there arifes a large quantity of fulphureous vapour, that may be perceived to a confiderable diftance.
But when the ore, by repeated roafting, ftamping, and fufing, is become tolerably pure, they now finifh the-operation, by throwing it into a particular furnace, having a fumel to increafe the draught, fo as to make the fire the ftronger, and difcharge the fulphureous fumes in greater plenty. And this furnace is fo contrived, that the open flame of the wood may play directly upon the ore; whence all its volatile part is feparated, and the remainder left fit for the laft wathing and famping.
When the ores contain a large quantity of fulphur, this ufually fweats out, and runs down into cavities made on purpofe to receive it, whence it may be laded out, and caft into moulds. But perbaps the moff frugal method of roafting ores, fo as to fave, or collect, all the fulphur, or arfenic, they contain, is not generally known and practifed: for, in the common way, a large proportion is loft, which may be collected, by means of a proper hood, in the form of flowers; and alfo the rifing fume might, by a particular ftructure of
the furnace, be made to pafs into a large veffel of cold water, and there be condenfed, as we fee in certain chemical diftillations and fublimations.
After the poorer and more ftubborn forts of copper ore have been thus fucceffively rodfed, and come to be quenched in water, or wafhed, they often impregnate the water with a vitriolic matter; fo that fometimes profit may be made, by evaporating thefe waters, and fuffering the vitriol to fhoot: for the acid part of the fulphur, here feparated by the fire, is greatly difpofed to enter the metallic part of the ore, and diffolve it, fo as to form an actual blue vitriol, or vitriol of copper, which fells for a confiderable price.
And here it fhould be remembered, that ores rarely yield the lefs metal for roafting, unlefs the fire were made too ftrong, efpecially at the fift: for when the yield proves fmall, the general complaint of the lmelters is, that the ore, when fent to their furnace, was too little roafted; though indeed the fault is often their own, in neglecting to make the fire fufficiently brikk and ftrong from the firft, which is a very confiderable fecret for increafing the yield of an ore.
There are, however, fome reafons to believe, that many imperfect ores lofe confiderably of their metal by roafting, efpecially when they are mixed with arfenical or antimonial matters, which have a known property of volatilizing the impurer metals, and carrying them off in fume: whence, doubtlefs, it is that fome poor ores and mundics are commonly treated with little fuccers.
The remedy, in this cafe, we apprehend to be the due ufe and application of fome fixing fubtances, wherher of an abforbent, alkaline, or neutral nature ; fuch as quick-lime, kelp, or pot-afh, dry river mud, clay, iron-filings, or the like, mixed, or ftratified, along with the ore. And by certain additions of this kind, we doubt not but the yield of fome poorer ores might be confiderably increaled.
The bufinefs of roafting of ores may be improved, and reduced to a few eafy rules. (I:) We fee it is of two kinds, or fimple and compound; that is, either with or without addition. No addition is wanted when the ore proves rich, or in itfelf nearly of a metallic nature, as fome ores are found to be; but additions are principally required, when arfenical, antimonial, or fulphureous matters are naturally mixed with the ores.
(2.) The fire is to be fo regulated, from the firf, that only the lighter, or more volatile, fulphureous, or at fenical fumes, may go off, otherwife the more metallic part alfo would fly away, and, without fome proper contrivance to catch it, be loft. Yet the ore mult feel the force of an open flame at laft, otherwife all the fulphur, arfenic, antimony, and other immature mineral fubftances; will not be diflodged.
(3.) The more thefe immature fubftances abound in the ore, the gentler the fire hould be at firft; and when the greater part of them is thus exbaled, the fire is to be quickened by a freer admiffron of the external air.
(4.) Laftly; where fuch additions are ufed as are not metalline, for example, lime, mud, \&cc. they ought to be feparated by ftamping' and walbing, before the infufion, which would otherwife be hindered, or ufelefsly incumbered.

## EXPERIMENTII.

The method of ftamping and wafhing of ores.
We took the mundic roaffed in our former experiment, and beat it fine in a metalline mortar; then fearced it ; and now putting it into a budding-difh, we wafhed it in feveral waters, with care to feparate the heavier portion from the lighter, and drying this heavier part, which is al ways the more metallic.

OBSERVATIONS.
Thefe operations of ftamping and wafhing are not neceffary in the richer forts of ores, but fometimes abfolutely required in the poorer and' more flinty kiid's. If a large quantity of mere fony miatter adheres to the ore, it is fometimets knocked off with hammers, fo as to leave the more metallic part free from this barren or fupertuous fubftance.
If fill the ore proves hard' and flinty, it is fometimes foftened by lying, for feveral months, expoled to the open air, which thus renders it fit for the ftampers, though it fometinues alro requires to be ignited, and quenched in water, to fit it for that purpofe: Thus a large heap of hard, and otherwife untractable ore, may be heated red-hot, by interfperfing it with billets, and fetting them on fire; after which it may readily be quenched, and rendered friable, by throwing cold water upon it, or by driving and paffing a fmall ftream of water through it, from fome adjacent river. And fometimes this operation is required to be repeated, before the ore will grow foft and tractable
It is ufual to Atamp moft ores in a ftate of moifure, or wetnefs, to prevent the avolation of their duft, or powder, but efpecially fuch as rëquire much wafhing to feparate thèir barren and lighter earthy parts, which would otherwife ufelefsly encumber the fmelting-furnace. To perform this ftamping the more commodioufly, a fream of water is made to pafs under the ftampers, fo as to make various windings and turnings, and, in part, run into certain cavities, made on purpole to catch and detain the heavier matter, whilf the lighter is walhed awiay to a greater diftance by the current.

But the method of wafhing the ores of the riobler metals is more exact and curious, particularly in wathing of fand for gold, on the banks of the Rhine and Danube, where gold is frequently found, efpecially in fuch places where the fands are rdifed into large heaps, or a kind of mountains, by the rapidity of the ftream.
Thefe fands are ufually wafhed by the hand, in a particular long trough, made with a defeent, or current, for the purpofe, and lined at the bottom with flannel; for thus the fand being artificially agitated with the hand, the lighter and larger ftony matter rifes uppermof, whilft the heavier decends, and is catched in the pores of the woolly cloth at the bottom: in the mean time, the lighter matters are walhed farther off, by a ftream running down the declivity: and when the flannel has thus collected a conliderable quantity of the richer metallic matter, the whole cloth may be eafily taken off, and rinfed in a proper veffel of water, where all the metallic matter, before adhering to it, readily falls off, and ninks to the bottom of the veffel; where, the water being decanted, the metal may be collected alone, and dried. And his is the method of procuring the gold, where the fand is fine, or extremely fmáll.
In the large works, or where the gold is mized with big fand, gravel, or ftones, they make ule of wire fieves, whofe meafh is always of one certain fife; fo as readily to tranfmit the fine fand, or gold dult; and retain the larger gravel and fones bebind: for it is extremely rare to meet with any grain of gold, fo large as a barley-corn; in the fands of rivers. Whence this method by the fieve is highly ferviceable; and conducive to the former operation: for though a large quantity of fine fand, thus preffes the fleve, it may be readily eparated in the trough; after the method already defcribed. And this may fuffice to thew the genetal and particular methods of famping and wafhing of ores. We fee the end of there two previous operations; is to get rid of the thatters which are not metalline ; that fo the furnace may not be ufelefsly employed upon fuch fublances as will themfelves yield to metal in the fire, and only hinder the metalle parts of the ore from coming together, and affording a yield anfwerable to the expence and trouble of the fufion.
After the heterogeneous parts have thus been thrown off, by roatting and wathing, from the proper earth of the ore, the pure metal now remains to be feparated from this earth by fufion.
But there are two difficulties, at leaft one or other of them, always found in this affair. For, (I.) This proper mineral earth, how flexible focver it may prove in gol'd and filver yet fcarce comes up to the fuffbility of the pure metal, bur rather flows thick and fluggih, unlefs the fibre be very intenfe indeed: but 'tis plain, that if this fubftance remain vifcous, the moleculæ of the metal cannot fink through it, in order to form a metalline mafs at the bottom. (2.) bometimes öly, a very friall quantity of pure metal lies con cealed in a valt body of fuch adhering earth, or wrapped up with the matters of other metals; whence one of thele two incon'veniences muft arife, viz. either that the fmall quatntity of metal cannot well, under fo great a load of recrement, come into a little mals; or elle, if it could, it muff of neceffity be fo violently agitated and toffed about by the ftrong fire required to keep fo large a bulk of flag in fution, as in the ebullition to be again involved, as it were, in little drops or bubbles, among the pappy mals of the fcoria*.

* Scoria is the drofs, cruft, or llag, found at the top of a melted metal, or metallic matter; being often in tle form of a vitrous mals, or glafly matter, and proceeding from the flux employed and united with fome ftony recrementitious matter contained there. But when a large proportion of a faline flux is ufed, the fcoria' will diffulve, or give, by the influence of the air.
Thefe two inconveniencies have their two remedies. (I.) The firft is to add fuch fubftances a promote vitrification, and at the fame time caufe a thin flux of the vitrified body. Such fubfances [fee the article $\mathrm{F}_{\mathrm{L}} \mathrm{ux}$ ] are for the large work, Sand, Fluxile Mud, Alkaline Salts', Tartar, Nitre, \&c. and for the fmall; Glass of Lead, a little Borax, or ahy compound flux falt; the baf whereof is commonly tartar and nitre. (2.) The fecond is to add metal itfelf : this is a common way, and feens greatly improveable, if it can be brought to anfwer the expence. In this cafe, as a greater mafs of metal cannot, by the fame fire, be fo much agitated and toffed about, as a lefs; or if it could be agitated as much, yet all irs particles would cohere more be agitated as much, yet all ins particlal one; hence, by fuch firmly, in a large mafs, than in a mall one; hence, by fe be an additional metal, the little mafs that would otherwife be with difficulty collected from the feveral falling particles of the melted matter, is artificially enlarged, fis as to cover the whole bottom of the melting pot; in confequence whereof all the fingle metallic particles chat fall afterwards, are eafily catched and detained below, by the large metalline mafs, which there lies ready to receive them.
The meral ufually employed to encreafe the mats in this manner is lead. but Becher, with great probability of much better fuccers, recommends the ufe of filver in its Atead, where
the perfect metals are expected. For filver, in this cafe, does not only remain unaltered by the fire and flux, but alfo by a fpecific efficacy, not to be known but by tryal, collects together, and fixes the fame potential atoms of the metallis principles that are lodged in an exceeding fubtile form, remot. from one another, up and down in the ore, and actually de duces them to perfect meral. Upon which property of filves it is, that Becher has built his minera arenaria, fand mine, or inexhauftible method of extracting the perfect metals out of fand; where, by ufing filver inftead of lead, he undertakes to produce a ten times greater increafe of the nobler metals.
But as this latter method can only, or principally, be ufed to profit in the feparation of gold from its ore, by fufion; fo lead remains a very convenient addition for the reception of filver, as performing a double ufe in the operation, viz. by imbibing the metal pure, and at the fame time promoting the vitrification of the earth, mixed along with the filver.
Copper being in itfelf of difficult fufion, requires fuch a fire as is able to melt its glafly fcoria fufficiently thin, at the fame time that it is melted itfelf; and this it does, unlefs the flints fhould prove very obftinate indegd. Hence bare fufion, fometimes without any other affiftance, will bring out this metal from its ore, and throw it down into a mals, the fcoria here flowing fo thin, as readily to fuffer the metalline particles to fink through it; but when the ore is mare ftubborn, its feparation may be promoted by metalline, or other additions, as above-mentioned.
In fhort, the difficulty of thus feparating the metal from its proper earth, is principally founded in the ores of filver, gold, and copper; but lead and tin being very fufible bodies, are much eafier melted from their adhering mineral matter.
There are, upon the whole, three things to be principally re garded in the fmelting of ores, viz. (I.) The fuftbility of the metal. (2.) The fufibility of the fcoria. And, (3.) The contact or mixture of the metallic matter, with the inflammable part of the coals.
(1.) Different metals run in different manners from their ores. Thus lead, though extremely fufible in the metal, yet runs with difficulty from the ore, fo as to require a confiderable violence of fire. This itubbornnefs net belonging to the metal muft be attributed to the fony, fulphureous, or other mineral matter, wherewith the ore is mixed; which matter feems to require a degree of heat, capable of vitrifying the lead, before the metal will run: but then, the lead thus vitrified, recovers a metallic form again, by coming in contad with the coals, efpecially charcoal.
Tin runs from its ore with greater eafe than lead, and is therefore fmelted in much lefs furnaces; but copper requires an intenfe heat, or a blaft furnace; and iron, the greateft heat that can be given in a furnace: and both iron and copper abfolutely require immediste contact with the fuel employed. Hence it appears, that each metal muft have its determinate degree of heat, to run it with advantage from the ore or ftone.
In order, likewife, to obtain the metal from the ore, to beit advantage, the fcoria, or llag, muft be neceflarily made to run thin and faid; otherwife it entangles or invifcates the metal, and will not let it feparate fully. And hence we frequently obferve, in the affaying of copper ores, fmall grains of metal interfperfed here and there among the fcoria, that require to be feparated by famping and walhing the whole mafs; which labour might have been prevented, by ufing a proper degree of heat, capable of procuring a thin fufion, and a fuitable fux, fo as to have made all the metal fall to the bottom of the furnace ; which it frequently does, when the operation is well performed, by means of a well-adapted fux. To promote a thin fufton of the flag, in the larger furnace, it is often proper to ufe the more foft and fulible fands as a fux ; and fometimes that loamy fand, which the fmiths employ for the wealding of iron; this fand readily vitrifying, and adhering to the metal in the fire: and, where it will anfwer the charge, even litharge, or drofs of lead, might be ufed for this purpofe in the larger furnace; for fcarce any thing procures fo thin a fufion of the llag as lead.
In the large work, fulphur is found to adhere tenacioufly to copper; .which metal, therefore, feldom comes out pure in the furnace, without repeated fulions. The beft method of leparating of this fulphur, is, to ufe a violent heat, no additional flux at all, and the greatef draught of air that can any way be procured; fo that all things may confpire to burn out, or carry off the fulphur, and introduce in its ftead, a thing of a different nature, viz, the inflammable matter of the wood and coals, and the vitrification of their afhes; whereon ductility appears to depend. But where iron is mixed with copper, no better addition is found than fulphur, and the more culphureous marcafites, or what they, at the fmelting-huts, call marcafite-blocks: for the fulphur which thefe contain, caufes the copper readily to run away from the iron, and leave it behind in the furnace. And here the power which fulphur has upon the feveral metals, is very remarkable : it renders filver almoft as fufible as lead: it alfo greatly increafes the fufibility of iron, and regulus of antimony; but renders tin much lefs fufible than it is of itfelf;
and lead, even refractory in the nires whence certain rules misht be tormed, for the ufe and application of fulphur to metals, for the improvement of metallurgy. And thus the whole art of fmelting feems to depend upon knowing the degree of heat required by every ore; fo as to make the flag, as well as the metal, tun thin, and evaporate or difcharge the fulphureous parts; and laftly, introduce the proper metallic, ductile form, by means of fome unctuous or inflam. mable matter.
It feems principally owing to a defect in the knowlege of fufion, that fo many recrements, or flags of metals, anciently thrown, as ufelefs, from the furnace, have been wrought to confiderable profit, of late, by more fkilful workmen; at leaft, it feems more rational to attribute the fuccefs to this courle, than to any fuppoled growth of metals in fuch flags: fo, likewife, it is currently believed, that lead has grown rich in filver, by lying expofed to the open air, or by lang covering churches, or other buildings; whilf, perhaps, it is rather owing to the unfkilfulnefs of the former workmen, who were not able to feparate all the filver naturally contained in the lead.
And thus it appears certain, that the ancient metallurgits were unacquainted with any way of extracting, to profit, a fmall quantity of filver out of copper ; which is now commonly done by ingenious contrivance: whence the ancient copper, found upon temples, or other buildings, frequentiy contains filver. So likewife, in the foreft of Dean, they at this day work the flag of their old iron works over again to proft.
MOLENSKO, a duchy and palatinate in Mulcovy.
This province is filed the great duchy, or palatinate, and extends about 200 miles from eaft to weft, though not half the breadth from north to fouth, It hath on the north, the principality of Bela; on the weft, Lithuania, unto which it formerly was fubject, 'till fubdued by the Mufcovites; on the fouth, it hath the duchy of Severia; and, on the eaft, that of Molcow.
The river Niepper, or Borifthenes, hath its fpring-head on the north-ealt borders of this province, and runs quite a-crofs it, directly from eaft to welt. As for the territory, it is not over fertile; but abounds with feveral kinds of wild beafts, whofe fkins fetch a good price. It lies from the 55 th to the 56 th deg. 30 min . of latitude. Its chief cities and towns are,
Smolensko, Zuercova-Louki, Gravisk, Dragabusa, and Boglovestine; all of them inconfiderable, except
molensko, capital of the duchy, which is pleafantly fituated on the Nieper above-mentioned, near the confines of Lithuania, and is a large and well-built populous city. It is almoft furrounded with woods, wherein are taken the beft furrs in all Mufcovy.
As it ftands on the frontiers, between Mufcovy and Poland, it hath often fhifted from one to the other, 'till yielded, with the whole province, to the czar, by the treaty of 1686.
SMUGGLER, a cant word for one that illegally evades the payment of the duties, laid by the ftate, on any kind of merchandize.

An Abftract of the chief Laws of England relating to Smugglers.
By ftat. 8. Geo. I. cap. I8. Any perfons found paffing knowingly with any foreign goods landed without due entry and payment of the duties, from any of the coafts, or within twenty miles thereof, and Thall be more than five in company, or fhall carry any offenfive weapons, or wear any mafk or difguife, when paffing with fuch goods, or fhall forcibly refift any officer of the cuftoms or excife, in feizing run goods, thall be guilty of felony, and tranfported for feven years; and if he return before that time, it is felony without benefit of clergy.
And all perfons receiving or buying any goods, wares, or merchandizes, clandeftinely run or imported, before the fame fhall have been legally condemned, knowing the fame to be fo clandeftinely run or imported, being convicted on the oath of one or more credible witneffes, or confeffion, before one juftice of peace, fhall forfeit 201. to be levied by diftrefs and fale, \&c. and for want of diftrefs, fhall be committed to prifon, without bail or mainprife, for three months; the one moiety of the above penalty to the informer, the other to the poor of the parifh where the offence was committed.
All feizures of veffels or boats of 15 tons or under, which Shall be made after the 25 th of March, 1722, by virtue of act, I Ann. cap. 7. fordgranting to her Majefty new duties of excife, \&rc. and of an act for continuing feveral impofitions, \&c. to raife money by loan for the fervice of the year 1710 , or any other act relating to the revenue of cultoms for carrying uncuftomed or prohibited goods from flips inwards, or for relanding certificate or debenture goods from fhips outward-bound; and all feizures of horfes, or other cattle, or carriages whatfoever, for being ufed in the removing, carriage or conveyance of fuch goods, contrary to the faid acts, are to be examined into, proceeded upan, heard, adjudged, and determined, by two or more juftices of
peace, refiding near the place where fuch feizure thall be made, whofe judgment fhall be final, and not liable to appeal or certiorari. Stat. 8. Geo. I. cap. 18.
Any two juftices for London and Weftrinifter, thall have the like power in determining fuch feizures as thall be madé within thofe cities, as any two juftices of any other county or place have. Ibid.
This act to continue for two years commencing from the 25th. of March 1722, and from thence to the end of the next feffions of parliament.
By 6. Geo. II. when any officer of the cuftoms fhall neglect to feize and profecute any veffel, horfes, or carriage, which thall be forfeited for running of brandy, fuch officer being convicted upon the oath of one witnefs, before one juftice of the peace, thall forfeit for every neglect 50 l. one moiety to the king, and the other to the informer, to be levied by diftrefs and fale of the offender's goods, by warrant of fuch juftice; and, for want of fuch diftrefs, fuch offenders fhall be committed to prifon for fix months.
By 9. Geo. II. cap. 35. intitled, An Act for indemnifying perfons who have been guilty of offences againt the laws made for fecuring the revenues of cuftoms and excife, and for inforcing thofe laws for the future, it is enacted, That all his Majefty's fubjeets, their heirs, \&c. who before the 27th of April, ${ }^{7} 736$, have incurred any penalty by clandeftine running of goods, \&c. making falle entries of goods, or abufing officers, \&rc. fhall be indemnified, and may plead the faid aet for their difcharge ; paying only is. 4d. for entering the plea, provided that they ftop all proceedings brought againft officers, or their affiftants, for, or concerning any matter, caufe, or thing, committed by fuch officer, or his affiftants, on occafion of any offences, \&cc. intended by the faid act to be releafed and difcharged; and in cafe any perfon thall claim the benefit of this act, and thall afterward bring an action againft an officer, \&cc. fuch officer, \&c. fhall be difcharged, may plezd the general iffue, \&c. and may recover cofts againft fuch plaintiff.
All perfons taking, or being intitled to, the benefit of the faid act, and hall be afterwards guilty of the like offences, fhall be liable to be profecuted for both the former and new offence, and for fmuggling bonds, 8 cc . The act is not to difcharge any judgment for monies actually levied, nor the informer's part of the penalty; and all perfons liable to be tranfported for any fuch offences, committing the like after claiming the benefit of the faid act, fhall fuffer death as a felon, without the benefit of clergy; and all perfons neglecting to pay compofition money (before agreed to be paid) fhall be excluded from the benefit of the faid act.
Excepted out of the faid act, all feizures of goods, veffels; \&c. money due on entry of goods or bond debentures, fraudulently obtained, and actions depending; and the treafury may compound, in cafes where judgment was given for his Majefty on the 11th of May, 1736, relating to debentures', \&c.
That from and after the 24 th of June, 1736 , upon information, upon oath, before any one or more juftices of the peace, that three or more perfons, are or have been, after the faid 24 th of June, $173^{6}$, affembled together for any the purpofes aforefaid, and are or have been armed with fire-arms, or other offenfive weapons, may grant a warrant for apprehending them, and may (if upon due examination he or they find caufe) commit them to the next county gaol, there to remain without bail or mainprifes, unil difcharged by due courfe of law; and upon conviction of their being aflembled to affift in the running of goods, they thall be tranfported for feven years, as other felons, by the acts of 4 and 6 Geo. I. and returning before the expiration of fuch term, fhall fuffer death as felons, without the benefin of clergy.
Any perfon apprehending any other perfon, guilty of any of the laft-mentioned offences, fhall have a reward of 501 . and the like fum of 501 . fhall be paid to any perfon maimed in the apprehending; and if any one is killed, his executors fhall bave $50 \%$ and an offender difcovering two or more accomplices, within three months after the offence committed, to the commiffioners of the cuftoms, fhall himfelf be difcharged, and fhall be intitied to the like reward of 501 .
That from and after the faid $24^{\text {th }}$ of June, 1736 , if two or more perfons are found paffing together within five miles of the fea, or a navigable river, with horfe, carts, \&xc. whereon thall be laden fix pounds weight of tea, or five gallons of brandy, or other \{pirits, \& c. not having paid the duty, and having offenfivearms, or being maiked, \&c. Thall be deemed runners of foreign goods, within the meaning of the act of 8 Geo. I. and the proof of the eatry, and payment of the duties, thall lie on the perfons found with the goods; fuch perfons, upon conviction, thall be adjudged guilty of felony, and be tranfported for feven years; and, returning before the expiration of the term, hall fuffer death, without the benefit of clergy.
All goods, weapons, cattle, and package of goods, 8 cc . fo found, fhall be forfeited and loft.
The 501 . reward to perfons wounded in apprehending, and to the executors of perfons killed, and to the difcoverers of their accomplices, are to be paid to the refpective receiverstheir accompli.
VOL. II.
general, by order of the commiffioners, on certificate of the judge, of the offender's conviction; and the commiffioners ihall adjuft each perfon's ihare in cafe of difference.
Upon information, on oath, before one or more juftices of the peace, that perfons are lurking within five miles of the fea, or navigable river, and there is reafon to fuppect that they wait with intent to be aiding and affifting in the running, landing, or carrying away, any prohibited or uncuftomed goods, may grant a warrant for apprehending them; and they not giving a fatisfactory account, may be fent to the hule of correction, and be whipped, and be kept to hard labour for any time not exceeding one month; and the commiffioners fhall pay 20s. to the informer, for every offender To taken as aforefaid; yet perfons fo apprehended, defiring time to clear themelves of the accufation, thall only be committed to prifon'till fatisfaction or fecurity be given, not to be guily of the like offences again.
That after the $24^{\text {th }}$ of June, $173^{6}$, perfons offering tea, brandy, \&c. to fale, with or without a permic, may be flopped on fufpicion, and the perfon flopping the fame may proecute in his own name; and, on recovery, hall be intitled to a third part of the produce on fale; and the commiffioners thatl advance one fhilling per pound for tea, and one fhilling per gallon of brandy fo feized, to the profecutor, 'till fale.
That after the faid 24th of June, $173^{6}$, all watermen, carmen, porters, and other perfons wharfoever, found with prohibited or run goods, knowing the fame to be probibited or run, being lawfully convicted, on the oath of one or more credible witneffes, or by confeffion before one or more juftices of the peace, where the offence fhall be committed, or the goods found, fhall forfeit treble the value; half to the informer, and balf to the poor; where, \&c. to be levied by diffrefs, and fale of the offender's goods. by warrant from the juftice or juftices before whom fuch offender thall be convicted; and, for want of diftrefs, the offender to be committed to the houre of correction, there to be whipped, and kept to hard labour, for any time not exceeding three months.
Veffels arriving from forcign parts, with fix pounds of tea on board, or brandy, \&c. in a cafk under fixty gallons, (except for the ufe of the feamen, not exceeding two gallons a man) hovering within a league of the fhore, all fuch guods, with the package, fhall be forfeited.
After 29 Sept. 1736, foreign goods taken in or put out of any veffel, within four leagues of the Englifh coafts, without payment of cuftoms (unjefs in' cale of" apparent neceffity) thall be forfeited, and the mafter, \&c. Thall forfeit treble the value; and the veffel, if not above too tons, fhall be forfeited; and perfons offering to bribe an officer to connivance, fhall forfeit 501 . the forfeitures, one half. to the king, and the other to the informer, who fhall profecute in any of the courts at Weftminfter ; and actions, \&c. for affaults upon officers, may be tried in any county of England.
All goods found concealed, after the mafter's report at the cuftom-houfe, hall be forfeited; and the miafter hall forfeit treble the value; and perfons forcibly obftructing or wounding officers on board, in the execution of their offices, fhall, on conviction, be tranforted, not exceeding feven years; and, upon returning before the expiration of the time, fhall fuffer death as a felon, without benefit of the clergy.
Officers may go on board coafting veffels, and fearch for prohibited and uncuftomed goods, and may continue on board during the veffiel's flay in the port ; and perfons obftructing fuch officers, forfeit rool. and likewife rool. penalty is laid on all houres, men, \&cc. knowingly barbouring any perfon againft whom procefs hath iffued for obfructing officers, \&c. but no forfeiture herein, unlefs public notice thall have been firf given, in two fucceifive gazettes, of fuch perfon's abfconding, and a writing fixed to the door of the church.
Sheriffs, mayors, \&c. on requeft in writing, of a known follicitor for the cuftoms or excife, to grant feccial warrants for apprehending offenders y and the perfons granting fuch warrants, nall be faved harmlefs from alliefcapes.
But, in trials of feizures, judjes are to proceed according to the merits of the caufe, without enquiring into the fact or form of making the feizure; and officers and their affitants, may oppofe force to force, and when carried before a juftice for wounding or killing any perfon, in fuch cafes fhall be admitted to bail.
The faid act fhall not indemnify any perfon profecuted by the Eaft-hodia company.
Any perfon fued for any thing done in purfuance of the faid act, may plead the general iffue, and give the fipecial matter in evidence'; and if found for him, hall have treble coft. Provided, That nothing in the faid act thall extend to reftrain his Majefty's court.of king's-bench, or any of rbe judges thereof, or the court of jufticiary in Scotland, from bailing any perfon committed for feleny, by virtue of the faid act, in fuch manner as they may, by law, do in other cafes of felony.
A warrant to bring offenders before a juftice, upon the aforefaid fmuggling act of 9 Geo. II.
Whereas I have been informed upon oath, that fince the 24th day of June, 1736, A. B. of, \&c. C. D. of, \&c. and E. F.
of, \&c. have been affembled together, for the purpofe of clandeftine landing and running of prohibited or uncuftomed goods, and were armed with fire-arms and other offenfive weapons, contrary to the form of the flatute in that cafe lately made and provided: thefe are therefore to require you to apprehend and bring the faid A. B. C. D. and E. F. before me, or fome other juftice of the peace for this county, to anfwer the premifes, aforefaid. Given under my hand and feal, ssc.
By ig Geo. II. reciting that divers diffolute perfons affociated themfelves to fupport one another, and appeared in gangs, carrying fire-arms, and have been aiding in running prohibited goods, or liable to duties, or in the illegal landing of goods which bave been fhipped or exported upon debenture or certificate; or in refcuing the fame after feizure, or in obftructing the officers of the revenue in their office, and that feveral officers had been killed, \&c. by the faid diffolute perfons; it is enacted, That if any, to the number of three or more, armed with fire-arms, or other offenive weapons, thall, after the 24th day of July, 1746, be affembled in order to be aiding in the illegal exportation of wool, or other goods prohibited to be exported, or the carrying of wool or fuch other goods, or liable to pay: duties which have not been paid or fecured; or in the illegal selanding of any goods which have been exported upon debenture or certificate; or in refcuing the fame after feizure from any officer of his Majefty's revenue, or other perfon or perfons employed by them; or in refcuing any perfon who fhall be apprehended for any of the offences made felony by this, or any other act; or in prevent ing the apprehending any perfon who fhall be guilty; or in cafe any perfons, to the number of three or more, fo armed, thall, after the faid 24th day of July, be fo aiding; or if any perfon fhall, after the'24 th day of July, have his face blacked, or wear any vizard or other difguife, when paffing with fuch goods, or thall forcibly refift any of the officers in theifeizing fuch goods ; or if any perfon, after the faid 24 th day of July, thall maim, or dangeroully wound, any officer of the revenue, in his attempting to go on board any veffel within any port of this kingdom, or fhoot or maim, or dangerouny wound him when in fuch veffel, and in his office; every perion. fo offending, and convicted, thall be adjudged guilty of felony, land fuffer death without benefit of clergy. And every perfon who fhall at any time be convicted of any of the faid offences in Scotland, fhall fuffer death and confifcation of moveables.
If any perfon thall be charged of any of the offences aforefaid, before one or more of his Majefty's juftices of peace, or of the king's-bench, if committed in England; or before the lord juftice-general, or one of the lords of the jufticiary; or any one or more of bis Majefty's juftices of the peace in Scotand, if the offence in Scotland, by information of one or more credible perfons upon oath fubferibed, fuch juftice of the peace, \&c. before whom made, fhall forthwith certify, under his hand and feal, and return fuch information to one of the princibal fecretaries of fate to his Majefty, his heirs or fucceffors, who is to lay the fame before his Majefty, his heirs, \&c. in privy council; whereupon it thall be lawful for his Majefty, his heirs, \&c. to make an order, thereby commanding fuch offenders, 8 cc . to furrender, within 40 days af ter the firft publication in the gazette, to thelord chief juftice, or any juftice of B. R. or to any one juftice of peace, if the offence in England, or to any of the lords of jufficiary, or to any juftice of peace in Scotland, if the offence there, who is required, upon fuch furrender, to commit him or them with: out bail, \&ic. to the county-gaol or prifon of the place where the furrender is, that he may be forth-coming to anfwer; which order the clerks of the privy council thall caufe to be printed in the two fucceffive gazettes, and to be fent to the fheriff of the county where the offente was, who fhall, within I4 days after the receipt, caufe the fame to be proclaimed between ten in the monning and two in the afternoon, in the market-places, upon two market-days, in two market-towns, near to the place where the offence was committed, and thali be fixed in fome public place in the faid towns; and in care fuch offender, $\& e$. fhall not furrender, he efcaping after fuch furrender, fhall, from the day appointed to furrender, be adjudged to be convicled of felony;' and fhall fuffer death, as if attainted by verdic and judgment, without benefit of clergy, if the offence is in England; and Thall be adjudged to be con victed of a capital crimie, and fuffer death and confifcation, as in cafe of a perfon found guilty of a capital crime, and under fentence, if the offence be in Scotland ; and the court of B. R. or the juftices of oyer and terminer for the county or place where fuch perfon is, may award execution againf fuch offender, \&c. in fuch manner as if he, \&c. had been conviffed in B. R. or before juftices of oyer and terminer, if the offence be in England; and the jufticiary, or the lords of jufticiary in their circuits, may award execeution againft fuch offender, \&c. in fuch manner as if found guilty and condemned in the fame court of jufticiary, or in the circuit. Every perfon who (after the time appointed for furrendering) harbours or fuccours fuch perfon, knowing him to be fo charged, and to have'been required to furrender, and who has not, being profecuted for the fame within one year after
the offence, and lawfully convicted thereof, Thall be guilty of elony, and fhall be tranfported for feven years, accordin's to 4 Geo. I. and 6 Geo. I. and if fuch offender thall return into Great-Britain or Treland before the fame term, he fhall fuffer as a felon, without benefit of clergys-
Nothing therein thall prevent any judger or juftice, or any magiftrate or minifter of juftice whatever, from fecuring fuch offender, againft whom mformation thall be made, and fuch order in council fhall be made, by the ordinatity courfe of law and in cafe fuch offender, \&c. fhall be taken, in order to be brought to juftice, before the time required to furrender, in fueh cafe, no proceeding fhall be had upon'fuch order, but he fhall be brought to trial by due courfe of law.
Every offence by this or any other act relating to the revenue ball be determired in any county in Englanidy as af the fact had been committed therein : provided that mo attainder for any offence by this act fhall make any corruption of blood, lofs of dower, or forfeiture of Jands, \&c. That if any off cer, \&cc. or other perfon employed in feizing wool:or other goods, not having paid or lecured the duty, fhatl be beat wounded, maimed, or killed, by any offersder agaiaftehis aet, or if the faid wool, \&c. be refcued by perfons amed as aforefaid, the inhabitants of every rape or lath, or hundred in England, fhall make full amends for fuch beatirg, \&cc. and for fuch lofs of 'goods, and fhall pay 100 l. for seach perion killed to his executors or adminittrators; and fuch officers, their exccutors, \&c. are enabled to fye: and recover the fame, the fum for beating, \&c. not to exceed 40I. The fuin raifed for that purpofe to be proportionably affefed on the initabitants of fuch rape, \&cc. 'for the damages and expences in recovering the fame, in fuch manner as damages and colfs are raifed in hundreds in cafe of robberies, and for paying the expences according to 8 Geo . M. If the plaintiff be nonfuited, the charges of the defence, $8 x c$. to be levited as the faid act directs; and every action fhall be profecated in the fame manner as the faid 8 Geo. II. directs.
No perfon to recover, unlefs notice be given of the offence four days after the commiffion of it unto two inhabitants of fome town, scc. near the place where the fact was done; and fhall within eight days after fuch fact declare, on oath be fore fome juftice of the peace of the county, \&tc. where the fame was committed; which examination every juftict fhall be obliged to take, whether be or they fo examined doknow the perfon, \&ce. who committed fuch fact, or any lof them; and if'it be declared that he or they knew the peffon, \&cc. who committed the fame, or any of them, then he or they fhall be bound by recognizance to profecute laccordtrg to law ; and no fuch perfon or'perfons fhall recover damages by virtue of this act, unlefs he or they, befides the faid notice and recognizance, give fuch notice, and enter into fuech recognizance, as perfons robbed are by the fald $8:$ Geo. Th. d ected to give and enter into.
Provided, That where any offender fhatl be apprehended and conviCled of the offence within fix months after the offence, no buindred, \&c. or inhabitant thereof, thall make any fatisfaction for fuch damages, or pay the faid rool. to the executors, \& 8 c . of fuch killed perfon.
No action to be brought againft the inhabitants of any hun dred, \&cc. unlefs the fame thall be commenced within one year after the offence committed.
All perfons who thall apprehend, or difcover fo as he may be taken, any perfon in England fo adverififed, who fhall not have furrendered within forty days, and caufe him to be brought before the chief' juftice of B.'R.: or any one of the juftices of the faid court, or any juftice of the peace for London or Middlefex (who is hereby required to commit fuch perfon to Newgate for fuch felony), fhall have for every'fuch perfon who llatl be fo apprehended ' 500 l to be paid in one month after execution hall be awarded againft fuct offender, by the commiffioners of the cuftoms or excife refpectively; who are required to receive the applications of fuch'who are concerned, and to determine who are entitled to the faid reward and fhares theteof, and to divide the fäme as they the faid commiffioners; or the major part of them, Artll thinkreaforable. And if any offender, againft whom no order of council thall have been made, thall himfelf difcover try other offender againft whom fuch order haill have been made, he fhall be difcharged of his own offence (if no proffectution commenced) and thall have his hare of the rewarit. And if any perfon lofe a limb or an eye, or be othertwfetmaimed, \&c. in apprehending or making purfuit after fuet offender, every fuch perfon thall receive 50 l. over and abovedny other reward he may be intitled to by this act. And dif any perfon, \&c. Thall be killed in the taking or purfuitye, Bec. then the executors, '8c. of fuch perfon, \&e fhall hate rool. All which, rewards to be paid tby the receiver-generale of the cufa totns, or cafhier of the excife.;
If any of the faid offender or offenders in Englinil thall, before his Majefty's order in council fhall be made; 'difeover two or more accomplices to the commiffoners, \&c. and apprehend them, or caufe them fo to be, fo as they or two of them at leaft be brought to juttice and convieted, the offinder or offenders fo difcevering thall bave 50 l. and every' perfon; \&c. fo difcovering, Arallebedear of his or their offence,
for which no profecution thall have been commenced, to be paid as afotefaid. Provided, that nothing in this act fhal ieftrain B. R. or any of the judges thereof, or the court of jufticiary of Scotland, or any of the -judges thereof,' from bailing any perfon committed on this"act, and not convieted balling anted, in.fuch maniner as they may do by law in other or ates of felony.
Perfons guilty of any of the above offences, tgainft whom no profecution thall have been commenced, or compofition made, before the faid 2.4 th of June, fiall be acquitted on the following terms, viz. That he do, before $29^{\circ}$ Sept. 1746, enter into his Majefty's fleet, and ferve as a failor for one year and before fuch time regifter his name, employment, year and of abode, with the clerk of the peace of, \&c. in a book, which the faid clerk is to keep among the records of the feffions for the faid county; \&rc. and Gall fign fuch pegifter, figniffing that he claims the benefit of this act, and that he has * entered himfelf with a commiffion officer, by name, of his Majefty's fleet, to ferve as a failor; which entry muft be as follows:

* N. B. Though the time is expired for entering failors; yet it is now of ufe to fee whether perfons have entered pur uant to the flatute.
A. B.
claims the benefit of an act of the rgth year of the reign of his Majefty king George II. , and has entered himfelf with a commifionofficer of his Majefty's fleet, and has regiftered his name in the book kept by the clerk of the peace of this county, riding, or divifion, this
rections of the faid act
For which entry fhall be paid to the clerk of the peace 1 s . And the clerk of the peace is immediately after the faid Sept. 29, to tranfmit to the faid comimiffioners, an exact account of the perfons who have by fuch entry entitled themfelves to the benefit of this act.
Perfons who fhall claim the bencfit of this act, and fhall af terwards commit the like offences, or fhall within the faid year procure their difcharge, fhall be fubject to be profecuted not only for the new offence, but alfo be liable to the pains they would have incurred, in cafe the above indemnity bad not been given.
If any officer of his Majefty's navy by any means fuffer fuch perfon to avoid the fervice, fuch perfon fhall lofe the bencfit of the aet, and the officer forfeit 5001
In cafe any information thall be brought to trial on account of the feizure of any fhip as forfeited for illegally carrying goods, or of any wool, goods, wares, or merchandizes as accuttomed, or illegally carried or exported, or intended fo to be, or as illegally relanded after having been shipped or exported, upon debenture or certificate, wherein a verdict Thall ibe found for the claimer thereof, and it fhall appear a probable caufe of feizure, the judge or court Chall certify the fame on the record, and the defendant fhall not be entitled to cofts, nor fhall the perfon who feized the fame be liable to any aetion, \&c. And incafe any fhall becommenced wherein a verdict fhall be given for the defendant, the court or judge fhall certify on the faid record, that there was a probable caufe for fuch feizure, then the plaintiff, befides his fhip and goods, or the value thereof, flall not have above 2d. damages, nor any cofts of fuit, nor thall the defendant be fined above one fhilling: The faid act to continue feven ysarts. See the Bufinefs df the Cuftom-boufe at the end of every Letter

## SMUGGLING.

The following are fome genuine Smugg ling Anecdotes, in relation to the Isle of Man

The Ine of Man is, and has been many years, a common ftorehoufe for all manner of goods and merehandizes that pay high duties in Great-Britain or Ireland, or are prohibited to be imported into thefe kingdoms.
The merchants in that inland have conftant fupplies of large quantities of tobaceo, both in leaf and roll, tea, in chells, with all forts of Eaft-India and Dutch goods from Holland one cargo landed there from Rotterdam, though contrary to law, confifted of 345 chefts of tea : they are likewife fupphed with tobaceo and other things from Dunkirk, Oftend, Norway, and even fome parts in Great-Britain; with tea and India goods of all forts from Gottenburgh and Denmatk; with vaft quantities of brandy and wines from France, and with rum from America: the Scotch and others fend veffels to our plantations on purpofe for that commodity, and land it there, contrary, as is fuppofed, to the act of navigation. Thefe goods are all warehoufed in that ifland, and afterwards put into packages of leffer quantities and weights, fuch as may be moft handy and convenient for running into GréatBritain and Ireland.
There are nine or ten large wherries, and above twenty boats in the inland, conftantly employed in the frnuggling trade, and go weekly from thence, if the weather permits, loaden with high-duty or prohibited goods; the wherries and boats
from Piel-town fupply the eaf and notth parts of Irelane the Highlands'and weft of Scotland ; thofe from Douglas and Derbyhaven, Wales, Chefhire, and Lancamire ; and thofe from Ramfey, Cumberland, and all the country on each fido of Solway Firth; but their chief trade is up the river a Boulnefs, into the Scotch borders near Anneth.
Ten or twelve of thefe boats are almoft every week feen a fleet paffing Whitebaven, all laden, fteering for the faid river, where they land their cargoes at noon-day; the coun try being all ready to affift and protect them, in fuch num bers as no officer dare offer to moleft
Thefe cargoes, which generaliy confift of brandy, rum, tea, and filks, are afterwards brought out of the Scotch border on horfeback in the night, under an armed force of fifteen or twenty men, into England, and guarded by them up into the country, 'till they bave pafled all the preventive officers on the Englifh border:
Thus all the northern counties on this fide Trent; if not further, are fupplied from that illand with thefe commodities at a cheap rate, for the finuggler generally buy's his brandy and rum there at two fhillings the gallon, or under, and othei goods in proportion, and by paying no dutiess is enabled to under-fell the fair trader.
It was feveral years ago made appear, that the clandeftine trade carried on from this ifland, was then above 100,0001 . yearly lof's to the revenue of Great-Britain and Ireland, and it is computed now to be near twice as much, not to mention ifs carrying away the coin, the detriment to the honeft mer chant, landbolder, and even ruin to the labouring people; for being conftańtly fupplied with brandy, rum, and Dürch geneva, at fo cheap a price, induces them to drink fo much as no only weakens their confitutions, but corrupts their morals. Thiere is no other method, it is feared, can be thought on t put a ftop to this great and growing evil fall the laws hitherto having proved ineffectual), but either by lowering the duties, or purchafing the inand of the prefent proprietor. From July 16, 1753, to July 1 1, 1754, a manufacturer of tobacco, with eight working men, manufactured and mipped off to Ireland 166 hogfheads, containing 8397 rolls, 175,358 pounds neat tobacco: There is now in the life of Man feveral workhoufes, in which are employed 50 men and upwards, all workers of Iriih rofl tobacco.--Say but 48 men, that in the fame proportion with the manufactory in England, will be 996 hogfheads, containing 50,382 rolls, $\mathbf{1}, 052,148$ pounds neat tobacco, which munt all be run into Great-Bitain or neat tooacco, which munt airn.
Irifh duties on $1,052, \mathrm{I} 48 \mathrm{lb}$. tobacco, is 1. 24,001 i6 $7 \frac{1}{2}$ Lofs per annum will be Englifh

22,155 109 N:B. The fupply for tobacco to the ifland is chiefly from Dunkirk.
Tobacco imported into the Ifle of Man, makes a confiderable article of the lord proprietor's revenue, who receives half a pound duty on the fame, which is allowied on all hands, to bring him in 15001 : per annum.
One factor only, named W. T. for the merchants and dealers in tobacco in Dublin and other parts of Ireland, actually paid near 1000 l . to the proprietor's collector for tobacco only, in the year 1753. And there are'three or four more factors in that illand for tobacco dealers, who pay leff fums annually. Thefe tobaccoes are moftly manufactured in the iffand into fine pig-tail and coarfe roll, and run into Great-Britain and Ireland.-The working manufacturers were firft procured from Dublin and Glágow, there are not now tef than firty of there hands, and a number of boys employed in feveral workhoufes in the infand.

Further Observations on the prefent fate of Smuggling from the Isle of Man.
The lords of the treafury, confidering the intolerable growing evils arifing from fmaggling, ordered (the beginning of this fummer) the commiffioners of the cuftoms to order the feveral collectors of his Majefty's revenue in Great: Britain; to tranfmit to them the moftaccurate eftimate poffible of the nature and quantity of the clandeftine trade carried on in their refpective diftricts, with their own obfervations thereon, and their opinions of the molt feafible methods of fuppreffing the fame, and whatever elfe might tend to the improvement and better eftablifiment of his Majefty's revenue in the cuftoms and excife, that the fame might be confidered by their lordihips, and laid before parliament, \&c. or to that effect. One of thefe orders addrelied to the collector of the port of by the fecretary of the cuftoms, 1 faw. The faid collector, who is an able and intelligent of ficer, and with whom I have often conferred on thefe mateers, did accordingly actiuit himfelf to his principles. He alfo informed me, that the like orders had finued from the commiffioners of the cuffoms in Ireland to the refpective collectors in that kingdom, with fome of whom, the moft notable, he had kept a clofe correfpondence on this head, as well as with feveral in the ports of Great-Britain. That upon be whole of their informations and eftimates he found, that the fmuggling trade from the Ihe of Man alone to Ireland, could not amount to lefs than a lofs of $200,000 \mathrm{l}$. per ann. to his Majefy's revenue in that kingdom.-And from the faid ifland to England, Wales
and Scotland, at leaft 300,0001 . per ann.- And to the Eaft India company and the fair trader 200,0001 . per ann. more in the whole 700,0001 . per annum, exclufive of the horrid confecuences attending the faid clandeftine trade from the faid ifle; the chief of which are, the deftruction of the health, breed, and morais of the Britifh fubjecis ftretching round the faid ifland. - The death and daggers of their manufactures and agriculture. - The decay and confumption of the fair trader, and the temptation, and almoft neceffity they a: hereby daily brought under, of countenancing and connect hereby daly bes with the faid fmugglers, in order to keep out of a -The inevitable forerunners of the decay and deAruction of his Majefty's cuftoms and excife, if fuftered to cortinue much longer.-Add only one confideration more, the nourifhing and frengthening the trade and commerce of forcign powers, particularly one, our moft dangerous neighbour by dent our own and contanty of our calh, \&c. \&c.
A MEMORIAL or petition of the merchants, owners of fhips, \&rc in the ports of cumberland, has been latcly prefented to \&c. in the ports of fetting forth the grievances they labour inder from the clandeftine trade carried on from the Infe f Man [fee the fequel] to which I could add many more facts ond condide in fupport thereof, very interefting and coniderations in lupport thereo, , bas for feven years paft imported and paid duty for any , , has for French brandy, the county being glutted win the In of Man, the imugghn-boats and though for four years pan, ha hand has berchy fupplich when Collor and is they purchate there at about rod. Eng!in, per gan , and at 8 d Engh pergallon, the duty on importation of the fame d. Eng Pe. g ber 1 d. the Inand being but id. per g.nlon o the lord of the he the freight. This brandy 10 foughent 2 d per he fouth and weft coalfs of allon in great quantitics.
bove 4000 gallons of this brandy were laft year feized at dif ferent times, put up to fale at the cultom-houie at White haven, but it would not fetch even the king's duty. Is no his a pland demonftration that the country about was fupplice with it by the fmugglers at a much lower price? laf year feizures of brandy broug to juft mentioned, fr is ind gling-boat load from hat ind a ruizers or con the begoars oul along the coalt of Cumbers and their brat, if they can Real any tho 5 to purcor. ugar, drink tea once or twice a day, ere in the fed teas imported from. Man, much of which is fold by the fmugglers from thenc or 6 d . or 1 s. per puend, 1 dwindled to nothing along the coaft. By fuch deplorable means, punch, bumbo, rumbo, and dry drams, have uni verfally prevailed among all degrees of people on the coafts of Great-Britain and Ireland lying round the faid ifland, to the inconceivable detriment of both the cuftomis and excife, and it leffens in proportion the confumption of malt liquor, and the neceffary motives of brewing it well
Remarks on the annexing the Ifle of Man to the crown True it is, nolefs than eight fhips arrived in the Ifle of Man in the compafs of 14 days in July laft paft from foreign parts with brandy, rum, geneva, tobacco, arrack, teas, filks, \& c At one town called Douglas, the itreets of which were fafce pafliable for feveral weeks, on account of the hogtheads, all the warehoufes in the rown not being able to contain their cargoes, 'till room was made by running off the fock then in cellar. The fmugglers laft fummer marched in the night in bodies of twenty men armed, and as many horfe-loads of brandy, teas, der into and through fome of the towns in Cumberiad. - Ihere are no toos in the whole country, ept a mall garmen at Canthe on the eaft fide thereof The above mentioned obfervations, together with the follow ing memoriai of the merchants, do truly difcover the prefent ftate of fmuggling from the Ine of Man to the Britifh da minions. - It remains How to examine the utility of fuppref fing the fame effecually, -The piefent ineffectual mean ufed for that ends-mand; bafty, what may effectually and feedily do itow
It is now admitted by all the interifigent, that the abovemen tigned trivial duties to the lord proprietor of the Ine of Main do not amount to lets than 5 or booph per annum, at one penny a gallon upon ferits of all denominations imported rere, a halfpenny a pound on tobacco ditto, and $2 \frac{1}{2}$ per cent. on aindy goods ad valorem. by which, if there were no other lights, a seatonable judgment might be formed of the bulk on the ch nieltime trade carsied on from thence to he britin dominions round them, and the thockitg los it muft be to his Majeity's cuitoms and excile in particular, excluive oi the fata contequences to his fubjects.
fom whis it cannot but be admitted, that the government had beter give the ford proptietor of hat imand, and his heirs for ever, a confideration of 5 , or even 10,cool. a year, for
his fovereignty, than let it remain 12 montis more as it is, it beng ouvous that the fum the government would fave hereby, in a year or two, would more than pay fuch con ideration for ever, at 3 per cent. even exclufive of the annual fair revenue of that illand, which would then belong to the crown, and may be reckoned at 2000 .
Thus much in regard to the propriety and neceffity of purchafing and annexing it to the crown, and making it part and parcel of the realin of England, by act of par lament. See the article Man [isle of Man] and what follows
Is is laid (and I believe with reafon) that the prefent annual experce to the crown, in fupporting cruizers, and additiona coat! officers, all along the coaft of the three kingdoms, round the fuid ildaid, and chiefly on account of the fmuggling from thence, amounts to no lefs than 20,0001 . per annum
How improper! how injudicious thefe lofty mafted and decked floops and cruizers are for the purpofe intended, I fubmit to the cabbin-boy, without repeating any more, than that they do not catch one fmuggling boat in a hundred
I fhall be athamed to repeat, that fuch lofty cruizers muft be difcovered by the fmuggling, open, four-oared boats, with their two low malts and fmall fails, above an hour or two, at leaft, before the cruizer can difcover them; the natural confequence of which is, the boats immediately clap to windward, and fland a wide courfe from the cruizer, by which they are feldom difcovered, except in a fog, when it is always calm enough to give the boats an advantage by their oars. Moresver, fuch cruizers draw too much water to purfue the fmusgling boats in thore, and, before fuch can purfue the with their boats, their cargoes are landed, and numbers of people always ready to convey them away. So much for the infionificance of fuch cruizers!
1 come now to offer effectual means totally to fupprefs the fmuggling foom that ifland.
Ans firft that of purchafing and annexing the fame to the crown, which, indeed, is to be preferred on every account. This world infalicly put a tinal end to fmuggling from that fland; becaufe all fich foreign coods as mentioned above muft then be brought to the inand in fhips of burthen, and anded in one if their four ports, and this coald not be don whout the fnowiege or a king's governor, collector, and he proper officers, in the face of day, the whole coalt of hat illand beinz rocky and dangerous, except their four ports, nd upen buts cannot fupply them with fuch goods from Fance, Holland, Spain, Denmark, and Sweden
But if the lord proprictor hoould decline taking a reafonable confideration for his fovereignty thereof, or afk an unreafonble one for the fame, which I would not fuppofe, except he bould eftimate the growing revenue thereof in proportion it has increafed fince the year $17 \% 6$, when he came to the
 he aforefaid duty, to 5000 l . a year: if this fhould be the cafe, it may properly tall under confideration, as a moft important national concern, whether it be not abfolutely ne effary to have an act of pariament for commiffioners im ediately to inquire into, and afcertain, the value of the faid land and to oblive him to receive fuch valuable confidera ion in lieu thereof, \&c. as in the cafe of the heritable jurif Bions in North Britain.
But if meafures of this kind fhould be thought improper, I oubt not means may eafily be tound to induce him to alte is inclinations in a hort time,-viz, By difmifing the prefent fett of improper cruizers employed for fuppreffing the unning trade from that illand, and employing the annual ex pence of their eftablifhment in fitting out and fupporting balf fcore light open boats, or cutters, carrying 9 or 10 men cach, having two low maits, equal to thofe of the muggling boats, to fail and row fix cars at a time, to be ftationed on proper cruzes round the faid inand.-Thefe mult fee and be een at the fame time; but being light, and better adapted for failing and rowing, and drawing equal water, would foon come up with the fmuggling-boats
Suppofe, alfop the captors were intitled to 40 s . per head for each fmuggler fo taken in the fact; and befides one moiety of the clandeftine goods then taken; the 403 . per head to be paid them out of theyremaining mojety of the goods, or, in cafe of ra deffiegry therein, to be inftantly paid them by the collectar on the porit where the prize and fmugglers are landed, upgndefyguing over to the civil power fuch captive finuggier or fmuggerg who are to be impowered to commit the faid delinquents to gaol, 'till they can be convemiently turned ove to ferve on board the royal navy for the pace of leven years at leaft; fuch cruizers, neverthelefs, to be intitled only to one third of the goods taken, except they deliver over to the civil magiftrate one or more of the imegging delinquents then taken in the fact
If fome people fhould think this punibinent too light for fuch atrocious enemies to the public, they bave my confen and approbation either to tranfpor them to America for lite, or even to exchange them for our Chrimian haves in Barbary all which I think much too favourabie for fuch who promor the deftruction of their fellow-creatures and country at the fame time.

Upon this laft method it muft be obferved, as the reafon of its effectudnefs, that at prefent the fmuggling merchants and factors in the ifland give, for freight to each of the fmugging buats, five guineas, which is paid to the faid crew immediately, upon cheir producing a certificate of their having delivered their fard cargo to their confignment in Scotland, England, W ales, \&c. But as the capcures would be at l-ait England, Wales, the. Ififofition, fo would the danger to the as 20 to I under this difpofition,
boar-crews be, on account of the penalties annexed, which boal-crews be, on account of the penalties annexed, which
would quickly difcourage all freight at any price : this would foon fragnate all fock on hand in the ifland, fop farther importation of fuch goods, and with it che lord's duties. Molt of thefe Mank's boatfimen are very hardy able-bodied fearien, muflly married and wedded to their own home, and to whom fervizude and abfence of feven years, or more, would, I am confident, be a kind of death. In fhort, somethinc mut speedily be done to put an effectual endtorthenormous Smuggling Tradecarried on from that lsland, or all the Evils above mentioned must infaliibly continue.
N.B. No Leeward Ifland rum is now imported into the Ifle of Man, but coarfe, ftinking North America rum, drawn from molaffes, carried there by their lumber hips from the Leeward MIands, particularly French molafles, from St Euftatia. French and Spanilh wines abound in the ifland, and great quantities of Dutch geneva, very coarfe Spanifh filks, Barcelona handkerchiefs. The Liverpool Guinea-men alfo take in fores at the Ihe of Man; and their toys and trinkets imported there from Holland, France, \&c. Horrible!
The Memorial before mentioned, of the merchants and owners of fhips in the port of Whitehaven.-Humbly addreffed to the right honourable the lords commifioners of his Majesty's treafury.
We the merchants and proprietors of fhips in the port of Whitehaven, in the county of Cumberland, beg leave to reprefent to your lordfhips the great damage which this nation in general, (and more efpecially the ports of this county) fuftains from the clandeftune trade carried on from the ISle of Man, to the feveral parts of Great-Britain and Ireland, and humbly fubmit to your lordfhips judgment the means we apprehend to be the moft conducive to remove the fame.
It is well known that this Inand is the great florehoufe wherein the French, and other nations, depofit prodigious quantities of wine, brandy, coffee, tea, filks, and other India goods, which are there admitted upon very low duties, and afterwards fmuggled upon the coaft of Great- Britain and Ireland, in fmall boats and wherries, built for that purpofe; befides the frauds committed in the article of Tobacco, which being firft entered in the feveral ports of Great-Britain, for foreign parts, after receiving the drawback, are frequently landed in this inland, and afterwards run back again in this kingdom and Ireland.
For the carrying on of which clandeftine trade, the fituation of the Ine of Man is extremely commodious, being within feven hours fail of the feveral coafts of England, Scotland, Ireland, Wales.
The lofs, by this illicit trade, to his Majefty's revenues in the kingdoms of Great-Britain and Ireland, bath, by competent judges, been computed at no lefs than Two Hundred Thousand Pounds annually, befides the damage to the fair traders in general, and to the honourable Eaft-India company in particular, which may reafonably be computed at no Less Sum. And if the duties alone upon thefe foreign commodities, thus fraudulently imported, amount to fo exceffive a fum, we may judge, in part, what an immenfe treafure in SPecir is annually drained from thefe kingdoms, and principally from the circumjacent fea coafts, for the purchafe thereof, which, in the fame proportion, tends to the impoverifhing his Majefty's dominions, and the inriching a neighbouring ftate, the formidable rival of our power, as well as our commerce.
But the greatefl lof ${ }^{\circ}$ which the public fuftains by this deteftable trade, proceeds from the alienation of fuch numbers of his Majeft's fubjects from the horieft arts of life, from agriculure, from manufactures, or from lawful commerce, to an employ ment which tends both to the deftruction of their lives, and the debauching of their morals, by the exceffive importation of fpirituous liquors.
Thefe evils, though extending in fome degree to all parts of Great-Britain and Ireland, are yet moft fenfibly felt by the port of Whitehaven, and other neighbouring ports of this county, by reafon of their vicinity to the Ine of Man. We beg leave, therefore, to reprefent to your lordhips the peculiar hardmips which the trade of this port labours under, from the clandeftine practices above mentioned, which, of late, have been carried on to a moft exorbitant height. A confiderable trade hath formerly been carried on from the port of Whitehaven, by the exportation of Britich manufaccures, to Virginia and Maryland, and other of his Majefty's piantations in America, and the importation of tobacco, and ot er products of thofe colonies, and alfo the exportation of coals to Dublin, and other parts of the kingdom of Ireland,
by means whereof the commerce of thefe kingdoms hat bee enlarged, his Majefty's revenues increafed, and great numbers of able-bodied feamen have been raifed ready upon any emergency, to be applied to the defence of their king and country. Both thefe trades are at prefent in a very declining ftate, occafioned chiefly by the exorbitant growth of the fmuggling trade in the Ine of Man: for whereas formerly a profitable branch of the trade of this port confifted in fupplying the Irifh markets with tobacco, this hath been greatly diminifhed by the manufactories of this commodity which have been fet up, and greatly increafed of late in the faid illands by means whereof thofe markets are chiefly fupplied with manufactured tobacco, in a clandeftine way, to the great prejudice of the trade of this place, and the fair trader in general.
We beg leave likewife to reprefent to your lordhips the difficulties which the coal-trade labours under, as it is at ptefent carried on from Whitehaven and the neighbouring ports, to Dublin and other parts of the kingdom of Ireland $_{2}$ arifing from the fanie caufe. And whereas, by an act made in the 12th year of bis lace Majefty George the Ift, No goods or commodities whatfoever, other than fuch that are of the growth, product, or manufacture of the Ifle of Man, are allowed to be brought from the faid ifland, into the kingdoms of Great-Britain or Ireland, on any pretence whatfoever, under the penalty of a forfeiture of fhip and goods; which makes it neceffary that the owners of thips employed in the trade, for the fafety of their property, fhould ufe the greateft caution and circumpeetion, in appointing the moft taithful mafters and failors to navigate them that are to be met with, yet it frequently happens that imall quantities of prohibited goods are taken on board, on the coaft of the faid ifland, where boats are continually plying to fupply them, by reafon whereof, hips of great value are forfeited and fold, to the great prejudice of their innocent proprietors, who are often without redrefs, inafmuch as the nature of the trade will allow only fuch low wages to the mafters of coal veffels, that few perfons who are poffeffed of any confiderable property will accept of that office. By this means, this once-flourifhing trade is now reduced to a very declining ftate, few people being willing to venture their fubftance upon fo precarious a foundation. For the removal of thefe obftacles to lawful commerce, by which the nation in general (and more efpecially the port of Whitehaven, and other neighbouring ports) are greatly affected, we humbly beg leave to mention to your lordfhips the expedient, which, by the wifdom of the legifature, has been judged moft conducive to this end, viz. by,purchafing the fovereignty of the faid Inland of the right hionourable the proprietor, and annexing it to his Majefty's government ; for the carrying of which ufeful defign into execution, your lordfhips have been vefted with a proper authority.
But if this cannot be effected, we humbly defire your lordMips would vouchfafe to take under your confideration the ftate of the fmuggling trade from this ifland, and apply fach further remedies as in your wifdom fhall feem moft expedient, fince it is evident from experience, that the laws now in being are not fufficient to reftrain the illicit practices complained of, which are grown to fo exorbitant a pitch, that the frnuggling boats go publicly in large fleets, and at a common rifk: fo that when any of his Majefty's cruizers fall in with them, it is fcarce poffrble to take more than one at a time, and then the law hath provided no other punifhment but the lofs of the boat and goods, which lofs is abundantly made up by the fuccefs of their confederates. But this feldom happens, for the cruizers employed in the channel are but how failors, and eafily feen at a diftance, and eafily avoided, fo that fcarce one in a hundred of the fmuggling boats or wherries ever falls into their hands.
It feems neceffary, therefore, that a greater number of fmall boats, well manned, hould be employed in apprehending thefe fmuggling veffels, and that fome further provifion ought to be made by law, for the punifhment of thofe who are employed in navigating them, either by tranfportation to the Britifh colonies in America, or by fending them, for a limited time, on board his Majefty's navy, or by fome other way which may be judged more expedient.'

Signed by 40 of the principal mer- 3 chants and owners of Mips.

Teas, India goods, \&c. pay ad valorem $2 \frac{x}{2}$ per' cent.
By which it is evident how great the importation of clandef tine goods into the ifland muft be, to raife annually 4000 l . upon fuch low duties.
But is is now believed thefe low duties amount annually to 60001.

The tobacco alone imported into the ifland brings in to the lord, at a haltpenny per pound, 1500 l. per annum.

Further Remarks on Smuggling.
Although the fmuggling trade carried on by means of the ine of Man is exceeding great, and attended not only with very great detriment to the revenue, but of unipeakable injury to the fair trader, who pays the legal duties for thofe commodities that others fmuggle; yet it is to be wilhed that all the fmuggling in the kingdom centered in this ifland only, for then the annexing the fame to the crown of Great-Britain might prove an effectual remedy againft fo great an evil Certain, however, it is, that this illegal and pernicious prac tice has fpread itfelf too much over the whole kingdom, and calls aloud for an effectual redrefs, if there is a poffibility But while men are weak or wicked enough to perfuade themfelves, that there is nothing criminal in robbing the king of his revenue, or taking a falle cuftom-houfe $\mathrm{OATH}_{\text {a }}$, it is to be feared that thofe evils will never be extirpated from amongtt us. See the articles Affidavit and Oath.
Nor do mankind feem to be fenfible of the confequences to the public of thus robbing the royal revenue: for wharever the revenue is illegally plundered of, occations the raifing of new funds, or taxes, to fupply that deficiency ; and this bas been the occafion of the continuance of the national debts and taxes: for if all thofe fums of money of which the public revenue bas been, fince the Revolution, deprived, by the infamous practice of fmuggling, had been faved, it is to be queftioned whether the nation would have been much in debt at this time of day. So that it may be fard with truth, that fmuggling has beeen one, principal caufe of the contínuance of our debts and taxes; and, therefore, fuch who perpetrate acts of this kind, are the greatedt bane to thefe kingdoms, if the perpetuity of our-debts and taxes is one of the greateft of evils.
Nor does the mifchief thus terminate to the injury and oppreffion of the community in general; it frikes directly at the immediate ruin and deftruction of every individual fair and honourable trader in the kingdom ; for he that evades the phy ment of the legal duties upon the commoditics wherein he traffics, will, as he can well afford it, underfell him who juftly pays the duties; and thus the honourable trader muft either be undone, or turn fmuggler to prevent it. Whence it is apparent, that one fmuggler breeds many, and is the foutce of fo general a depravity in trade, that fmuggling traders are, in a great meafure, become the great inftruments of the ruin of all the reft.
The feverity that has been fhêwn towards the moft outragéous of thefe mifcreants, has, indeed, had fuich happy effects, as to break the knot of thore terrible banditti; yet this bas not ftruck at the root of the mifchief, and in the opinion of moft, it can never be extirpated while the temptation from high duties remains fo great: for where the avoiding them makes the profit great, no rifk, no danger, can prevent mens attempting it; it is throwing out a bait to a gréedy fifh; he will friap at it, though rụin enfues. Befides, it be ing chiefly the articles of luxury that are fmingled, as brandy, tea, French wine, laces, filks, \&c. it fpreads their confumption among the lower clafs of people, who are tempted to imitate, at a lefs expence, the luxuries of their rupeitiồrs ; and the fame frmugglers that bring us thefe fuperfluities, carry off prodigious quantities of raw wool, to the great prejudice of our manufactures, and the nation if gerieral.
High cuftoms prevent the bartering away our manuffectures for foreign goods, not only for our own confumption, but alfo for exportation, which might enlarge the vent of our goods ten times more than it now is ; for if a merchant now exports woollen goods, and would barter them for windes, the duties on them would amount to more than the coft of his woollen geods; fo that he muft have a double capital for fuch an adventure, or let it quite alone, where the fales of great quantities of woollen goods are loft to the nation.

- As high cuftioms enhance the expences of our navigation, the freight muft be raifed accordingly, whereby the prices of the daap, oyl, and dye ftuff ufed in manufacturing our wool, are
advanced to the maker, and the freights on the cloths, of ftuffs, exported, being alfo raifed, are additional clogs upon the fales of pur woollen goods.
High duties prevent the carrying on fifhing trades, the great nurferies of feamen; whereby our failors being few, and their expences raifed by taxes, they have the higheft wages of moft people in Europe, which is another additional advance on the freighters, to the prejudice of our woollen trade, as above.
Great duties taking away fo great a part of our merchants focks, they are thereby deprived of diving that great trade, and purchafing thofe quantities of woollen goods they would otherwife do; befides our merchants rikks in trade being greater than thofe in Holland, and their loffes heavier by our cuftoms, their bankrupries mult be more frequent: this fenfibly affects our manufacturers, who are generally confiderable creditors; for broken merchants may be well compared to ninepins, one of which feldom falls without beating down many others.
High duties recommend foreign manufacturers of fine goods, by making them expenfive, which vanity, on that account foon renders fafhionable; whilft our own are defpifed, though fuperior in goodnefs, and are a great difcouragement to our manutactures.
Large cuftoms are the caufe of the fmuggling of wool; becaufe the gain being great by running tea, brandy, and French goods, on account of the high duties, hath raifed the contraband trade to a great pitch, and the fmugglers cannot make théir returns in any commodity of foquick and certain a vent, or that gives fo good a profit as our wool; for the French being lefs taxed than we, can work cheaper; and their own wool being coarfe, Englifh and Irilh wools are fo much in demand, that they will give great prices for them, for which reafon they receive vaft quantities, to the ruin of our manufactures.
High cuftoms on afhes, bay falt, cotton; copper, coals, drugs, foreign foap, flax, fruit, furrs, hemp, iron, leather, hnens, oil, paper, rice, tobacco, tallow, threads, tapes, frilk, and fugar, being neceffaries of life, or materials of manufacture, molt neceffarily made all our commodities dear, not only to our own people, but to foreigners likewife, (though cur workmen thould have no excife to pay) and fuch difcouragements give opportunity to foreigners to fend their manufactures cheaper to foreign markets, and fonugle them, in defiance of ail laws, into our own country, to the ruin of our manufactures; for all the above cuftoms are as much taxes on our woollen manufacture, as if they were laid on the wool itfll, or more; for the workman muft raife the money on the woollen goods he makes, to pay the duties of what he afes of the above articles, with the advanices, in all the hands they pafs through, before they come to him. 'Tis by thefe high duties that we ourfelves drive away our own manufacturers, and prevent our ever getting more; and foreigners could not rival the people of fo fruitful a country as Britain, if we did not funnifh them with the means, by our high taxes and reftraints, that are always prejudicial to trade, though defigned to amend it, and never effect the thing intended, though fortified with the moff rigorous penal law : of which Mr Locke gives an inftance, in his Confiderations, \&c. p. i16. "Tis death in Spain to export mo-- ney; and yet they who furnifh all the world with gold and - filver, have leaft of it among themfelves: trade fetches it ' away from that lazy and indigent people, notwithftanding ' all their artificial and forced contrivances to keep it there; - it follows trade againft the rigour of their laws; and their - want of foreign commodities, makes it openly be carried 'out at noon-day.'
This feems to be a parallel of the ftate we are coming to, and which fome foreigners may by and by make.
'Tis felony in England to export wool, and yet they who furnith all the world with wool, have leaft of the manufacturing of it among themfelves; thefmuggling trade fetches it away from that excifed and cuftom-loaded people, notwithftanding all their artificial and forced contrivance ta keep it there : it follows the fmuggling trade, againft the rigour of the laws, and their want of taking off the taxes on their manufactures makes it openly be carried out at noon-day.
By this we fee that neither death or banifhment can force trade to an unnatural channel; and it may be compared, in one refpect, to water, which cannot be compreffed within its natural dimenfions; the more force is exerted, the fooner is the veffel broke chat contained it, and the water let loofe never to return.
The great De Wit, in his Memoirs, Ratilbonedit. p. 77, afferts,' That the navigation, the finhery, the trade, and ' mianufactures, which are the four pillars of the ftate, fhowld ' not be weakened or encumbered by any taxes; for' 'is they ' that give fubliftence to the moft part of the inhabitants, - and which draw in all forts of ftrangers, unlefs the necef-- fity was fo great, that the country was threatened with an - incire delfruction, and thefe fundamentals fhould be attached - upon the hopes that thefe taxes would not laft lung; at - leaft hafte fhould be made, as foon as the fterm was over, ' totakethemofis:again, this difinction theuld be made,
- that manufactures fhould not, or cannot be taxed at all, be-- caufe they are not fixed to the country, and we muft fetch - from foreign countries the ftuffs and materials to work - them up.'

Smuggling fends away our feecie.
Britan having no mines of gold or filver, has no other means of getting, or preferving its treafure, but by foreign trade. As cuftoms confine our trade to miere importation, for our own neceflaries or vanities, and at the fame time tuin our manufactures; what we want in exports to balance the imports, muft be paid in fpecie, making the balance of trade every year more and more againft us; for as we raife the prices of our goods fo high, by taxes, that foreighers will not take them, and yet continue to import their fuperfluities, which we now chiefly, and in time mult intirely, pay for with our gold and filver, as appears by the bills of entry in every week we are obliged to do; and our high duties encotrage fmugglers, who have feldom a rettled habitation, or any ftock of our manufactures by them, to carry out vaft quantities of Specie to purchafe their cargoes: fuch large draughts make our mint lie idle; we fee but little new-coined gold, 'and hardly any filver; we find our money difappear, and grow Icarcer every year; our trade decline, and our peopie ftarve. In regard to high duties and their effects, fee further the articles Bonding at the cuftom-houfe, Labour, Tates, Funds, Debts [National Debiss] Ciedit [Públic Credit.]
That the lowering of the duties on fome branches fhoduld feem to be the moft natural and effectual way to fupprefs fmugging; and, indeed, to augment the national revenue, may be judged from the lowering of the DUTY ON TEA; the duty thercupon being very confiderably augmented fince that time, and the fmuggling of that cominodity proportionably diminifhed :and this was obtained by the indefatigable application of the right honourable Stephen Theodore Janffén, Efq; late lord mayor of the city of Londion; to whom I am indebted for there anecdotes, relating to the finuggling carried on by means of the Ifle of Man, athid for many other curious particulars, which I fhall endeavour to render as ufeful to the public as I am able. See Linen and Tea.

## Further Remarics on Smuggling fince the laft War.

Since the Reports on the infamous practice of fmuggling, made by the committee of the houfe of commons, and lately publifhed by Mr. Aldermañ Janfen, now Chamberlain of the city of London, the true idea of thofe practices feems to be revived, and has induced the government, after fo long and fhameful difregard of the proper meafures recommended throughout the Yaid Reports, to put them in execution : and we hear daily of the good effects of the falutary means at length exerted. It is faid likewife that the Ifle of Man will at Last be an$N E X E D$ to the crown of England; that INiand having been reckoned a Pet ty Francée, within this kingdom, it being a capital rendeżvous for French fmugglers, and a prodigious magazine for all forts of French commodities and manufactures. Sce the Isle of Man. The prefent vigilance of the government, in this refpect, is not only manifeft all around the Britifh and Irib coafts, but is exerrted in our American plantations. For the French, under the pretence of carrying on their filhery in North America, purfuant to trèaty, have been taken fmuggling in the river St Lawrence, and as well our Britifh furrs from Cañada as theír owin wärés, among Britifh fubjecès: but his Majefty's cruizers there, being very active at prefent, it is to be hoped, will put a ftop to thefe practices of the Friench in this part of the world.
The goods lately feized by the officers of his majefty's cuftoms, trading to and from the Ifle of Man, and the Ifles of Guerniey and Jêrey, are faid not to amount to fo little as 300,0001 . The Dutch, ño lefs than the French, alfo make their fifheries on the coailts of Great Britain and Ireland fubfervient to their fmuggling practices; and therefore there is no lefs need for the officers of the revenue to be watchful over thefe our good friêds and allies, left we thould be as great fufferters by their fmuggling arts, as ẅèe are by their fifheries on our coafts. England is certainly the belt marke in the world for fuch fmugglers to bring their wares to, they felling here the deareft, and fetching the beft prices, becaufe our own commodities and manufactures fell the dearef to our own fubjects öf äny in the whole world. This, we apprehend, to be the great inducement to fringgling in general in thefe kingooms; and till the caufe is effectually removed, it is to be fearéd, the effect will never greatly ceafe; for the bigh duties heighten the temptation to fome, and the low price of our competitors goods, to others. The immenfity of our national debts, and the tax-incumbrances under which our whole commerce labours, for the payment of intereft only, and a great proportion of that to foreigners alfo, occalions the rmuggling with which wè fo greatly abound in every part of this kingdoun ; and while people can purchafe two or three fmuggled fuits of clothes, for the price of one, and perhaps, not fo gay, we comot fuppofe any great obltruction will be put to fmuggling.

An abfratt of an act made in the year 1762 for the furtief improvement of the revenue of cuftoms; and for the encouragement of officers making feizures, and for the prevention of the clandeftine tunning of goods into any parts of his Mäje'ty's dortinions.
Veffels or goods feized by the officers of the cultoms to be publicly fold, after condemination, to the beft bidder, at fach places as the commiffioners of the cuftoms fhall think proper; one moiety of the produce to go to the faid officers, and the other to be paid into the exchequer. Officers to be allowed; after all charges deducted, two third parts of the produce upon wrought lilks, bengals; ftuffs mixed with filk or herba; of Perfiah òr Indian manufactures, and callicoes, feized and condemned in purfuance of act 11,12 Will III the other third to be paid into the exchequer; and upon wool, and other goods enumerated act 12 Geo. II. the produce after all charges; and upon tobacco and fnuffs burnt, \&ec. purfuant to act 24 Geo. II. 3 d. per Jb. and for tobacco ftalks Id. per 1 b . and for tea, not exceeding 2s. 6 d . per 1 b .
Where the produce of any feizure thall not anfwer the expences of condemnation and fale, or a verdict be given for the claimant, the charges to be paid out of any branch of the revenue applicable to incidents. The king to direct, by order of council, or proclamation, how the ihare of fuct feizures as thall be made by veffels in his fervice, thall be di= vided amongt the officers and men.
Where any foreign brandy, arrack, rum, or other Cpiritss not being for the flip's afe, thall be importert, \&tc in any veffel of 50 tons, or under; the fame; together with the veffel and furniture, fhall be forfeited; and in like manner, where any firits, tea, tobacco, tobacco ftalks; or fnuff, are liable to forfeiture by act 9 Geo. II. or aet 24 Geo. II. the veffel on board which the fame fall be found, if under 50 tons, Shail be forfeited, with her apparel : and the veffets; \&c. feized and condemned, are to be difpofed of as veffels of 40 tons, or under, forfeited for importing foreign brandy; \&c.- No writ of delivery to be iffued out of the exehequer for any fuch veffel, unlefs the officer delay proceedititg to trial and condemnation three terms; and fecurity be given, in double the value, to return the veffel upon condemnation. -Claufes in act 8 Annæ, \& I5, I6 Geo. II. Clámant, upon entering his claim, to give fecurity in 601 . to pay cofts; and in default thereof, the goods and veffel to be condernned. -Claufes in act 5 Geo. I. The recited claufes, refpecting cuftomable or prohibited goods on board veffels of go tons or under, found hovering on the coaft of this kingdorit, extended to all fuch like veffels found hovering on any of the coaits of Ireland; and the faid offences to be tried, and penalties recovered in any of the four courts of Dublin.-Offences in other ports, to be profecuted in the court of admiralty, or other court of record of the place; and the forfeitures to be divided and applied as thefe in Great-Britain.

Remarks fince the laft Edition.
In the Reports of the committee of the honourable houfe of commons, appointed to enquire into the caures of the moft infamous Practice of Smuggling, and lately publifhed by Mr Chamberlain Janffen, late lord mayor and reprefentative of the city. of London, it is obferved, that ' upon the rupture with Spain in 1739, it was' clearly forefeen, that the infidious practices of France would ne'ceflarily involve us in a war likewife with that power ${ }_{3}$ wherefore it became an indifpenfible confideration, what would be the mof effectual methods to fop thofe channel;, through which we were daily pouring in our wealth among the people of that perfidious nation; enriching them with our, fpecie, merely to purchafe fuperfluous commadities; and, at the fame time, impoverifhing and weakening ourfelves; previous to a war which was upon the point of breaking out with them,
The Britifh pailiament, impreffed with a deep fenfe of the mighty evils refulting fom this imprudent and baneful intercourfe, feized the earlieft opportunity of putting a ftop to it. They were fúficiently apprized, that this nation paid annually to France, a prodigious Yum of money for French cambric; and that our Eaft-India company, out of their ftock then in hand, with what they could import, would be able to furnifh a commodity equally fit for every purpofe; and therefore very judiciouny palfed an act, in 174 , for prohibiting the wear of French cambric; and fo general was the fenfe of both boufes, at that juncture, for this prohibition, that feveral members declared in their fipeches, (doubtlefs in hopes that their example would be univerfally followed) that they took it for granted, not a fingle member of either houfe would appear in French cambric by that time twelvemonth. This act, however, not anfwering effectually the purpofe intended, other acts have paffed fince to entorce the intention of the firit; and thefe feveral acts have, at laft, completed the difufe of this pernicious commodity amo:g us; and that we may hope for ever.
But the parliament did not fop bere : for, the next feffion, finding the fmugsling of rea was got to fo exorbitant a height, that the large revenue, which ought to have arifen from it, was finking daily; and in danger of fuffering a much greater diminution, unlefs a fpedy remedy were appilad; and be.
inget the fame time well informed, that one mitlion and a half of pounds weight of the tea so fmuggled in upon us, (together with brandy and other goods) came from France, for all which we paid them our ready money; they palled an a\&t, to commence at Midfummer 1745, for taking off one half (being two 0hillings per pound) of the excife upon that article; by which wife law, the practice of fmuggling was found immediately to leffen; and our fpecie was confequent$y$, in a great degree, preferved from being fent to France. Our India company thereupon increafed their importation of tea very confiderably, and the revenue increafed with a moft furprizing rapidity*; as will fully appear in a large and curious fheet at the conclufion of this treatife. It is computed there have been faved to the nation, by thefe two falutary laws, not lefs than three hundred thouland pounds annually; which exorbitant fum nad been fent in fpecie from hence to France, before the prohibition of the wear of French cambric; and the check put to the fmuggling of French tea.

* For fome years before the paffing this act, the excife and cuftom upon tea (together) produced but little above one hundred and feventy thouand pounds fterling, communibus annis. But fo immenle has been the increafe of this branch of the revenue from that period, that upwards of five mil. lions and a half fterling have been paid into the exchequer, more than would have been, if this act had not palied; whilf the Ealt-India company has, on the other hand, increafed her importation of tea, near fifty-three millions of pounds weight.
The fucceeding feflion, the parliament found, from cuftomhoufe accounts laid before them, that fmuggling fill continued to a much greater excefs than could have been fufpected, when the act of the laft feffion paffed. They were likewife fenfible, that fuch $\dagger$ numerous and defperate gangs of men, fo well mounted and fo well armed, might greatly add to the difturbance $\ddagger$ already broke out in the kingdom. They knew that thefe banditti carried the earlieft intelligence to France, into whofe ports they were freely admitted, although in the time of open war, and an open rebellion; and they alfo knew they were hardy failors and fkilful pilots. All thefe circumfances were fo very alarming, that a committee was moved for, and appointed accordingly, to inquire into the caufes of the moft infamous practice of fmuggling, \&c. which committee made the two following Reports, that now appear in print for the firft time.
$\dagger$ See page 7, to 11 , of the firf Report.
$\ddagger$ The beginning of the winter 1745 , when the rebels were in England.
The reader will find, in thefe Reports and the papers annexed, an abundance of particulars, not only new, but ufeful and curious. He will fee in what manner the laws, for lewying the taxes and guarding againft frauds, have been fuffered for a long courfe of years to be trampled upon, to the manifeft detriment of the fair trader, the very affecting diminution of the revenue, and the utter difgrace of government. He will fee, with aftonifhment, thofe laws violated by avowed and open acts of force. He will fee too many infances of the infringement of thofe laws, through the fraudulent connivance of thofe very officers, who were appointed to fecure the Arict obfervance of them. In a word, he will fee the revenue plundered, in fo barefaced a manner, and in fuch a variety of fhapes, that he will be ftruck with amazement, that practices fo oppofite to all principles of government, and pregnant with evils of fuch fatal confequence, could bave been permitted to reign fo long. And, finally, he will difcover, in the courfe of thefe fheets, very probable methods propoled, (if not very certain ones) for collecting the old taxes, in a due and regular manner; whereby the frequent impofition of new ones, fo oppreffive to our manufactures, and fo deftructive to our trade, might have been fpared; and the lofs of fome important branches of our comnierce thereby prevented.

Jovis, 6 Die Fehruarii, 1745.
Ordered nemine contradicente, That a committee be appointed to enquire into the caufes of the moft infamous practice of fmuggling, and confider of the moft effectual methods to prevent the faid practice, and to report their opinion therein to the houfe.
And a committee was appointed accordingly; and all that come to the committee, are to have voices; and the committee have power to fend for perfons, papers and records.'

Anno tertio Georgii III. regis. Cap. XXII.
An Act for the further improvement of his Majefty's revenue of cuftoms; and for the encouragement of officers making feizures; and for the prevention of the clandeftine run ning of goods into any part of his Majefty's duminions.

* Whereas, by an act paffed in the twelfthyear of the reign of his late Majefty King George the Firf, intitled, An act for the improvement of his Majefty's revenues of cultoms, excife, and inland duties, the commiffioners of thofe revenues are refpectively impowered and directed to caufe all tea, coffee, foreign brandy, rum, or other foreign excifeable li quors, which thall be feized by any officer of the cultoms or excife, alter condemnation, to be publickly fold to the belt
bidder, at fuch places as the faid commiffioners fhall think proper; and to allow the officers making fuch feizures, for their encouragement, one third part of the full fum arifing from the public fale of all fuch tea, coffee, foreign brandy, rum, or other excifeable liquors, free from all charges of condemnation and fale; and to caufe the remaining part of the produce of fuch fales, after paying the reward to the cfficer, and the charges of condermnation and fale for fuch feizures, to be paid into the receipt of his Majefty's exchequer, in leu of his Majefty's moiety, as was then practifed: And whereas, by feveral fubfequent acts of parliament, one moiety of all fines, penalties, and forfeitures, impofed by any act relating to the duties of excife; or any other duty under the management of the commiffioners of that revenue, is given to his Majefty, his heirs and fucceffors, and the other moiety to him or them who fhall difcover, in form, or fue for the fame; in purfuance of which laws the officers of excife feizing any of the commodities herein before enumerated, have been allowed a moiety therenf; but the provifions in thofe fubfequent laws, not extending to fuch feizures when made by officers of the cuftoms, they have hitherto been allowed only one third of the produce thereof, purfuant to the directions of the before-recited act of the twelfth of George the Firft: And whereas the power given by the faid recited act to the refpective commiffioners of the cuftoms and excife, to caufe the goods therein enumerated to be publickly fold, has been found very advantageous to the revenue; and if the like power was extended in general to all forts of goods, it would prevent many frauds and illicit combinations practifed by bidders in the court of exchequer, to the great detriment of the public revenue and the far trader: And whereas it is bighly reafonable and juft, as well as of public utility, that the officers of the cuftoms and excife fhould have equal encouragement to be vigilant in tho exertion of their duty, to fupprefs the pernicious pratice of fmuggling; to which end, may it therefore pleafe your Majefty, that it may be enacted, and be it enacted by the king's moft excellent Majefty, by and with the advice and confent of the lords fpiritual and semporal, and commons, in this prefent parliament affembled, and by the authority of the fame, That from and after the firft day of May, one thoufand feven hundred and fixty-three, it fhall and may be lawful to and for the commiffioners of his Majefty's cuftoms, to caufe ail thips, veffels, and boats, and all goods of what kind foever they may be (excepting only fuch veffels, boats, and goods, as are by law liable to be burnt) which fhall be feized by any officers of the cuftoms, for unlawful importation, or for non-payment of duties, or for any other caufe of forfeiture, and condemned according to law, to be fold publickly to the beft bidder, at fuch phaces as the faid commiffioners fball think proper; and all and every officer who thall feize fuch goods, fhall, for his and their encouragement, be allowed, by the faid commiffioners, one moiety of the net produce arifing by the fale of fuch feizure, after dedocting the charges of condemnation and fale from the whule; and the faid commiffioners fhall caufe the other moiety thereof to be paid into the receipt of his Majefty's exchequer, in lieu of his Majefty's fhare thereof (excepting in thole cafes which are otherwife provided for by this act) any law, cuftom, or ufage, to the contrary notwithftanding.
Provided always, and it is hereby declared and enated by the authority aforefaid, That after deducting the charges of condemnation and fale from the grofs produce of all wrought filks, bengals, and ftuffs, mixed with filk or herba of the manufacture of Perfia, China, or Eaft-India, and all callicoes, painted, dyed, printed, or ftained there, which hall be feized and condemned in purfuance of an act paffed in the eleventh and twelfth years of the reign of the late king William the Third, (intitled, An act for the more effectual employing the poor, by encouraging the manufactures of this kingdom) the faid commiffioners of the cuftoms fhall allow to the officer or officers who thall feize the fame, two third parts of fuch net produce, and caufe the remaining third part thereof to be paid into the receipt of his Majefty's exchequer; and that for all wool, and any other of the fpecies of goods enumerated in an act pafled in the twelfich year of the reign of his late Majelty king George the Second (intitled, An act for taking off the duties upon woollen and bay-yarn imported from (reland to England, and for the more effectual preventing the exportation of wool from Great-Britain, and of wool, and wool manufactured, from lreland to foreign parts) after deducting the charges of condemnation and fale, the remainder of the produce thall be paid to the officer who fhall feize the fame, in fuch manner as by the faid act is directed; and that for all tobacco, to bacco ftalks, and fnuff, which fhall bo burnt or deftroyed, in purfuance of an act paffed in the twenty-fourth year of the reign of his late Majefty king George the Second (intitled, An act for the more effectual fecuring the duties upon tobacco) the officer or officers feizing the fame, thall be paid, in the manner directed by that act, three pence for every pound weight of fuch tobacco and fnuff, and one penny for every pound weight of tobacco ftalks; and that for fuch te as thall be burnc, or otherwife deftroyed, by order of the
refpective
refpective commiffioners of the cuftoms or excifé, purfuant to the laws now in being, the officers making the fcizures fhall be rewarded in fuch manner as the faid commiffioners hall think proper, fuch reward not exceeditig two hillings and fix-pence for each pound weight of fuch tea, in lieu of all other allowances; any thing in this or any other act to the contrary notwithfanding.
Provided alfo, and it is hereby further enacted by the authority aforefaid, That if the produce of any particular feizure, fold in purfuance of this act, fhall not be fufficient to anfwer the expences of condemnation and fale; or if, upon the trial of any feizure, a verdict fhall be given for the claimant, and the thip or goods thall not be condemned; in either of thofe cafes, it fhall and may be lawful for the commifioners of his Majefty's cuftoms, to order the charges attending the feizing and profecuting fuch hip or goods, to be paid out of any branch of the revenue of the cuftoms, which is by law applicable to the payment of incidents; any thing in this, orany other act of parliament to the contrary notwithftanding. And whereas, for the more effectual prevention of the infamous practice of fmuggling, it may be neceflary to employ feveral of the fhips and veflels of war belonging to his Majefty, his heirs and fucceffors, on the coafts of Great-Britain and Ireland, and of the other dominions and colonies belonging to the crown of Great Britain; therefore, for the better encouragement of all the officers and feamen employed in fuch firvice, to do their duty therein, be it enacted by the authoncy aforefaid, That it fhall and may be lawful to and for his ivajelty, his heirs and fucceffors, to direct and appoint the moiety berein before mentioned, or any other part of all and every the feizure and feizures that fhall be made by fuch officers or feamen refpectivety, fo employed as aforefad, to be divided amongft all fuch officers and feamen of fuch hip or veffel of war, who fhall make any fuch reizure as aforefaid, in fuch proportions, and in fuch manner, as his Majefty, his heirs and fucceffors, fhall think fit to order and direct, by any order or orders of council, or by any proclamation or proclamations to be made or iffued, from time to time, for that purpofe; and fuch moiety, or other part of the faid feizure or feizures, fhall be fo paid and divided to and amongft all the officers and feamen of fuch thip or veffel of war accordingly.
And whereas the laws already made to prevent the clandeftine importing and landing of foreign brandy, rum, ftrong waters, or other fpirits, tea, tobacco, tobacco ftalks, and fnuff in fmall veffels, which hover upon the coafts of this kingdom, have been found infufficient for that purpole; be it further enacted by the authority aforefaid, That from and after the firft day of June, one thoufand feven hundred and fixty-three, if any foreign brandy, arrack, rum, ftrong waters, or firits of any kind whatfoever, thall be imported or brought into Great-Britain, or into any port, harbour, haven, or creek thereof, in any fhip, veffel, or boat, of the burthen of fifty tons, or under (except only for the ufe of the feamen then belonging to and on board fuch fhip, veffel, or boat, not exceeding two gallons for every fuch feaman) every fuch thip, veffel, or boat, with all her tackle, furniture, and apparel, and alfo all fuch brandy, arrack, rum, ftrong waters, or firits, or the value thereof, fhall be forfeited and loft ; and where any brandy, arrack, rum, ftrong waters, or other fpirits, or any tea, tobacco, tobacco ftalks or flems ftript from the leaf, or fnuff, is or are liable to forfeiture, by virtue of an act made in the ninch year of the reign of his late Majefty king George the Second, intitled, An act for indemnifying perfons who have been guilty of offences againft the laws made for fecuring the revenue of cuftoms and excife, and for inforcing thofe laws for the future; and by another act made in the twenty-fourth year of the reign of his faid lare Majefty king George the Second, intitled, An act for the more effectual fecuring the duties upon tobacco, or either of them, for being found on board any fuch mip or veffel at anchor, or hovering within the limits of any of the ports of this kingdom, or within two leagues of the fhore, as is particularly expreffed in thofe acts: It is hereby further enacted, That in every fuch cafe the thip or vefiel on board of which fuch goods thall be fo found, with all her tack!e, furniture, and apparel, fhall alfo be forfeited and lof, provided fuch flif or veflel doth not exceed the burthen of fifty tons.
And it is herely further enacted, by the authority aforefaid, That every hip or vellel forfeited by this act, hall be feized and profecuted, and after condemnation be burnt, deftroyed, or ufed in his Majefty's fervice by the officers of the cuftoms or excife, and the tackie, furniture, and apparel difpofed of and divided, and the tonnage alcertained in the fame manner as is directed by the laws now in force, with refpeet to vefiels of forty tons or under, forfeited for importing foreign brandy or other firits.
And it is alfo further enacked by the authority aforefaid, That no writ of delivery fhall be granted out of the coust of exchequer, for any fhip, veffel, or boat, that is liable to be burnt, deftroyed, or ufed in his Majefty's fervice, by virtue of this act, or any other act relating to the cuftoms or excife, unlcfs the officer feizing the fame thall delay proceeding
VOL. II.
to the trial and condemnation thereof for the fpace of tincee terms; and in that cafe, not without good fecurity being given in double the appraifed value of fuch hlip, veffel, or boat, to return the fame upon condemnation, in order to be burnt, deftroyed, or ufed in his Majefty's fervice according to law. And whereas, by an act pafled in the eighth year of thic reign of her late Majefty queen Anne, for granting to her Majelty new duties of excife, and upon feverat imported commodities; and by another act pafled in the fifteenth and fixteenth years of the reign of his late Majefty king George the Second, for further regulating the plantation trade, and feveral other purpofes; it is amonglt other things enated, That every perfon, upon entry of any claim in the court whore any prohibited or uncuftomed goods, or any fhip, veffel, or boat, thall be profecuted, fhall be oblized to aje fecu, or in the penalty of thirty pounds, to atrwer and pay the colts occafioncd by fuch claim; and in default of giving fuch fecurity within the time limited by the courfe of that court, for entering fuch claim, fuch gouds, fhips, vefiels, or boats, thall be recovered: And whereas many perfuns bave, frem the fimallnefs of the penalty, been induced to enter groundlefs claims in fictitious names, with a view to put the officers of the revenue to vexatious trouble and delay, as wath as to deter them from profecuting feizures Icgally made, by putting them to an extraordinary expence, oftentmes niore than the value of the goods feized, which tends very much to the prejudice of the public revenue, and to the difcouragement of the officers thereof, in the execution of their duty: To remedy therefore this inconvenience for the future, be it enacted by the authority aforefaid, That from and after the firft day of May, one thoufand feven hundred and fixtythree, every perfon, upon entry of any claim in the court where any goods, fhips, veffels, or boats, fhall be profecuted, fhall be obliged to give fecurity, in the penalty of fixty pounds, to anfwer and pay the cofts occafioned by fuch claim; and in default of giving fuch fecurity within the time limited by the courfe of that court, for entering claims, fuch goods, Chips, veffels, or boats, fhall be adjudged to be forfeited, and fhall be condemned; any thing in the beforerecited acts, or any other ast of parliament, to the contrary notwithtanding.
And whereas, by certain claufes in an act made in the fifch year of the reign of his late Majefty king George the Firtt, intitled, An act againft clandeftine runnorg of uncuftomed goods, and for the more effectual preventing of frauds relating to the cuftoms; (which claufes have been continued by feveral fubfeguent acts) it was declared and enacted, That where any fhip or veflel, of the burthen of fity tuns, or under, laden with cuftomable or prohibiced goods, fhould be found hovering on the codits of this kingdon, within the limits of any port, and not proc̣eding on her vojage for foreign parts, or to fome other port of this kingdom, wind and weacher permitting, it flould and might be lawful to and for any officer or officers of his Majefy's cuftoms, to go on board every fuch thip or vefiel, and to take an account of the lading, and to demand and take fecurity from the mafter, or other perfon having or taking the charge or command of fuch thip or veffel in that veyage, by his own bond, by him to be entered into, unto his Majefty, his heirs and fucceffors, in fuch fium or fums of money as thould be treble the value of fuch foreign goods then on board, with condition that fuch fhip or veffel, as foon as wind and weather, and the ftate and condition of fuch hip ot veffel permited, fhou'd and would procced regula:ly on fuch voyage, and flould land fuch foreign gonis in and at fome forcign port or ports; and if luch mafter, or other perfon, having or taking the charge or command of fuch ihip or veffel, fhould, upon fuch demand, refufe to enter into fuch bond; or, having entered into fuch bond, thould not depart or procecd rea gularly on fuch voyage, as foon as wind and weather, and the fate and condition of fuch hip or vefiel fhould permit, unlefs otherwife fuffered to' make a longer ftay by the collector, or other principal officer in his abfence, of fuch port where fuch hip or veffel fhould be, not exceeding twenty days, then, and in either of the faid cafes, all the foreign goods fo on board fuch fhip or veffel, flould and might, Ey any officer or officers of the cuftoms, by durecton of the collicetor, or other principal officer as aforefad, be taken out of and from fuch flop or veffet, and forthwith biought on fhore and fecured; and in cafc the faid goots were cuftomable, the cufloms and orber duties hould bepaid for the fame: and as concerning wool, or any prohbit. grods, or other goods liable to forfeiture, which might the goods, or other goods liable to forfeiture, whe of ther un-
found on board fuch fhips or veffels at the time found on board fuch hips or vefics ather by doctaced to be lading as aforefaid, the fame were thereby culoms thould
fubject to forfeiture, and the officers of the cultor fubject to forfeiture, and the offcers of the cutioms hould
and might profecute the fame, as alfo the hip or veffel, in care fhe fhould be liable to condemmation, as in the hanner: theren after mentioned; and that atter fuch goods were fo taken out of fuch fhyp or veftel, and broughe on fhore, and fecured by fuch officer or offices, iuch boids fo to be given as aforefand, thould be void and delivered up, withut any fee or reward for taking or delivering up the fame; and fuch bend, not beng ctherwife cifcharged, fhould, on a proper 9 Z
certifiate,
certificate, returned under the common feal of the chief magiftrate in any place or places beyond the feas, or under the hands and feals of two known Britifh merchants upon the place, that fuch goods were there landed, or upon proof by credible perfons, that fuch goods were taken by enemies, or perifhed in the feas (the examination and proof thereof being left to the judgement of the commiffioners of the cuftoms) fhould be vacated and difcharged: And whereas the extending of the faid claufes to the relt of his Majeity's dominions, may be a means of preventing illicit trade; be it therefore enacted, by the authority aforefaid, That from and after the firft day of July, one thoufand feven hundred and fixty-three, the faid claufes, and every part of them, fhall be extended to all dhips and veffels of the burthen of fifty tons, or under, which fhall be found hovering on the coafts of Ireland, or any other of his Majefty's dominions or territories belonging to the crown of Great-Britain; and hall be of equal force in every refpect, in regard to all fuch thips and velfels found hovering on any of the coafts aforefaid, as fuch claufes now are, or thall be conftrued to be, in regard to any fhips or veffels hovering on the coafts of this kingdom ; and all offences which fhall be committed againft the faid claufes, or any part of them, on the coafts of Ireland, Shall be tried, and the penalties and forfeitures thereby incurred, fhall be profecuted for and recovered in any of his Majefty's courts of record in Dublin in the faid kingdom; and all offences which thall be committed againft the faid claufes, or any part of them, on the coalts of, any other of his Majefty's dominions or territories (except this kingdom) fhall be tried, and the penalties and forfeitures thereby incurred, fhall be profecuted for and recovered, in any court of admiralty, in the dominion or territory on the coaft whereof fuch offence fhall be committed' (which court of admiralty is hereby authorized, impowered, and required, to proceed to, hear, and determine the fame) or in any court of record in fuch dominion or territory, at the election of the informer or profecutor, according to the courfe and method ufed and pracifed there in profecutions for offences againft penal laws relating to the cuftoms or excife; and fuch penalties and forfeitures fo recovered there, fhall be divided and applied in fuch and the fame manner as penalties and forfeitures recovered in Great-Britain for the like offences are, or in purfuance of this act may be, directed to be divided and applied.
SOAP , a fort of palte, either hard and dry, or foft and liquid; ufed in cleanfing and bleaching of linen, and for other purpofes by the dyers, perfumers, fullers, hatters, \&c. See Bleaching and Linen. Some peculiar forts are alfo ufed medicinally.
To make foap requires an intimate union of the falt of potafhes with oil, or any vegetable or animal fut: this union, in the prefent method of foap-making, is procured by a tedious operation, or by long boiling a weak lye of pot-afh and quick lime with the fat, adding a ftronger and a weaker lye occafionally by degrees, 'till the requifite point to the perfection of the foap is hit.

## REMARKS.

It might greatly contribute to fhorten this operation, and eafe the expence thereof, if a mechanical motion or engine were employed inftead of fire, to procure this intimate union of the lye and oil. And that fomething of this kind is practicable, appears from hence; that if, for example, half a pint of the foap-boilers ftrongeft, or capital lye, as they call it, be brifkly thook in a phial, with an ounce or more of oil olive, for half a quarter of an hour, and then the phial be fuffered to reft, there will, in a fiort time after, be found a folid cake of tolerable foap at the top of the liquor, and may be eafily preferved in that form, by breaking the phial, and rendered harder by being expofed to the air.
The art of foap-making depends upon the following particulars. (r.) The nature and quality of pot-afh. (2.) The nature of oils and fats.' And (3.) The reveral ways of uniting them to advantage.
(x.) A due enquiry into the nature of pot-afh [fee the article Pot-Ash, Norway] fhews wherein the fuperiority of the foreign athes, particularly thofe of Marfeilles, Caftle, Venice, and Joppa, confifts; why the foaps, at prefent made in England, fall fhort of the perfection of fome foreign foaps; and will inform us of the ways whereby even Joppa foap might te equalled in England. For fuch an enquiry will trace out the real phyfical differences betwixt one fort of potafh and another, with the ways of converting any one of them into the reft; fo as to fit them for the foap-boiler, glafs-maker, \&c. refpectively : it hews alfo, how the mildeft pot-afh is obtainable, for the more curious foaps ; and efpecially for thofe intended to be ufed medicinally, \&c. And, by the way, there is ronm to fufpect, that a thorough enquiry into this fubject, would fhew the matter of all pot-afh to be the matter of nitre; or that all the vegetables which yield pot-afh by calcination, might be brought to afford nitre by putrefaction; or that pot-afh is nearly the fame thing, both in nature and fubftance, with fixed nitre.
(2.) A due inquifition alfo into the nature of oils and fats,
would fhew likewife, how one fort might be converted into another, or hard animal fats into liquid oils, and liquid oils into folid fats, by digefting oils with certain coagulating acids, \&c.-How all the foreign folid oil foaps might be imitated in England, and how a great variety of liquid foaps might be prepared for many different purpofes; the foundation of the thing entirely depending upon the ufe of a highly fubtilized and thin vegetable oill.
(3.) An enquiry into the beft methnds of uniting fixed vegetable falts with oils, might naturally fuggeft feveral machines for the purpofe; whereby many tons of loap fhould be readily made by means of mills, wrought by the wind or water; and this either with or without fire. It might allo inform us of feveral menftruums, or connesting mediums, which fhould, either alone or with little affiftance, procure an intimate union. SOIL. See the article MANurE, and thofe others from thence referred to.
SOISSONNOIS. This province, in France, is bounded on the north by Laonois, on the eaft by Champaigne, on the fouth by Brie, and on the weft by Valois. It abounds in corn, pattures, and wood.
Sorssons is fituated in a very agreeable and fruitful vale, on the banks of the river Aione. It is feventeen leagues diffant from Paris to the north-eaft, and about eight from Rheims to the weft. It is a large city, well built, and drives a great trade in corn.
SOMERSETSHIRE has Devonfhire on the weff, Dorfethire on the fouth, the Britifh channel on the north, and Wilthire on the eaft, and is about 150 miles in circumference. The air is the mildeft, and the foil, for the moft part, the richeft in the kingdom: it abounds with grain of all kinds, of which it fupplies home and foreign markets with vaf quantities. Its hills afford mines of coal, lead, and copper; woad thrives well here ; and teazles, a fort of thiffles ufed by cloth dreffers, grow fcarce any where elfe; and of lapis calaminaris, without which there is no making brafs, more is dug up here than in all the kingdom befides.
All forts of cloth are manufactured here; as broad and narrow kerfeys, druggets, ferges, duroys, and fhalloons, together with flockings and buttons; and in the fouth eaft parts are made great quantities of linen. The value of the woollen manufacture alone here, in the firft hands, has heretofore been rated at a millión a year.
Bristol, the fecond city in Great-Britain; for trade, wealth, and number of inhabitants, fands on the conflux of the rivers Froom and Avon. As to the trade of 'it, 'tis well known to be the moft confiderable, London only excepted, efpecially to the Weft-Indies, to which its mercliants were the firft adventurers, and always greater traders in proportion, than that metropolis. Liverpool is now faid to vye with them. It was even computed, above 30 years ago, when it employed no lefs than 2000 fail of thips, that the trade, in proportion to the bignefs of the two cities, was above three times as great as that of London. Indeed the Briftol merchants had a very good trade to the Weft-Indies, at the time of the civil war, which they have increafed much more, not only thither, but to all parts of the world, fince the Revolution. Before that, they knew little of the Guinea trade, and hardly any thing of the Dutch, the Hamburgh, the Norway, and the eaft-land commerce; all which bave fince been very flourifhing bere.
In time of peace, 50 Weft India thips, many of them of confiderable burthen, have arrived here in a fleet, or very near one another. The fhopkeepers here, who are in general wholefale men, bave fo preat an inland trade, that they maintain carriers, as the London tradefmen do, to all the principal counties and towns, from Southampton to the banks of the Trent.
Moreover, by means of thofe two great rivers, the Severn and Wye, they have the whole trade of South Wales, as it were, to themfelves; and the greatef part of that of North Wales. And how their trade may be greatly increafed, fee the article Rivers.
The largeft fhips lie at Hungroad, four miles down the river; two miles below which is Kingroad, another fation, in the merchandize brought to the key by lighters.
One of this city's principal branches of trade, and which has been prodigioully increafed fince the Revolution, is that to Ireland; from whence it imports tallow, linen, and woollen, and bay-yarn. The Streights trade, for all forts of fiuit, oil, \&c. is very confiderable.
They have alfo fome confiderable manufactures of woollon ftuffs, particularly cantaloons, which are carried on chiefly by French refugees. Glafs ware is as plenty and cheap here; as in any place in the world, here being no lefs than fifteens glafshoufes, (which are ferved by the Kingfwood and Mendiphills coal-mines) fome for glaffes, others for bottles.
Bridgenater, on the river Parret, has a precty good coaft trade to Briftol, and all down the Severn to Wales for coals, to Cornwall for flate, \&c. Its foreign trade is chiefly to Portugal and Newfoundland. Wool is brought hither in good quantities from Ireland, for a trade to which kingdom, this port lies as convenient as any in the Severn fea. They have, befides, a great retale trade; and for cheefe there are few, if
any, greater markets in thé kingdom, many waggon loads being brought here, on a market day, for Devondhire.
Mineread has a fafe harbour in the Briftol channel, much frequented by paffengers to and from Ireland; from whence alfo abqut 40 veffels come hither yearly with wool, that being its chief trade. Here are feveral rich merchants, who have fome trade allo to Virginia, and the Weft-Indies; and they correfpond much with the merchants of Barnftaple and Briftol, in their foreign commerce. They fhip off alfo about 3 or 4000 barrels of herrings yearly, for the Mediterramean, \&c.
Ta unton, on the river. Thone, is a populous town, the inhabitants being computed at above 20,000 ; fome thoufands of whom are employed in the manufacture of ferges, duroys, Gagathees, Challoons, \&tc. Some of them, indeed, are, of late y years, removed to the neighbouring town of Wellington
Wetinng Ton is chiefly of note for its feven weekly fairs, WELINGTON is chiefly of note for its leven weekly fairs,
for catte from the weft country; and its manufacture is ferges, druggets, \&c.
YEOVIL, or IVEL, is a good large town, on a river of the fame name. Its chief manufacture is gloves, though lome cloth is made here, and it has a confiderable market for corn, cheefe, hemp, flax, linen, fail-cloth, \&c.
CHIDDER is famed for the fineft cheele in the world, except the Parmefan: the parifh is about 23 miles in compafs, a bounding with pafture. 'Tis common here for. 3 or 4 dairies to join their milk, to make one great cheefe of 100 , or 150 lb . weight, value fix-pence a pound on the, fot. There are moreover, fuch great plantations of apples in this parifh, that 3000 hogitheads of cyder have been made in a reafon, and 36 horfe-loads of apples have been fent in a week, for 26 weeks together, to Shepton-Mallet, \&c. for fale; and 200 bags of wool are produced in it every year.
Bruton, on the river Bru, idrives a great trade in ferges and ftockings.
Shepton-Mallet is a populous town, with many very coniderable clothiers.
 facture is fockings.
Frome-Selwood is alfo remarkable for its woollen manu facture. The cloths made here, are for the moft part medleys, of aboat 7 or 8 fhillings a yard.
SOUTH SEA CONPANY.
A fhort History of the South Sea Company
This company was erected by act of parliament, in the ninth year of the late queen Anne, entitled, An act for making good deficiencies, and fatisfying the public debts, and for erecting' a corporation to carry on a trade to the South Sea, and for the encouragement of the fifhery, \&c. The preamble recites, That the debt due to the navy, the army, \&c. amounted to $9,000,000 \mathrm{l}$. and upwards, and thereupon it was enacted, that the duties following fhould be impofed for paying an intereft or annuity, after the rate of 6 per cent. per ann. for all the faid fum, which intereft amounted to the annual fum of 568,279 l. 10 s. The duties conftituting the fund for payment of the faid intereft, were all the impofitions and duties upon wines, vinegar, tobacco, Eaft-India goods, wrought filk, whale-fins, \&xc. granted by an act of the 8th of queen Anne, 'till the year 1720 , continued by this act to the crown for ever, together with the duties on candles, and money given with apprentices.: And the queen was impowered, by letters patent, to form the faid creditors, interefted in the navy-bills, \&cc into a company, who, on their fubferibing their bills, tickets, debentures, \&cc. were to be admitted into the joint-ftock, and become members thereof, in proportion to the fums due to them. And the faid corporation were, by the faid act, to be veited in the fole trade to and from all kingdoms and lànds on the eaft fide of America from the river Oroonoko, to the fouthernmolt part of Terra del Fuego; and on the weft fide thereof, from the fouthernmoft part of the faid Terra del Fuego, through the South Sea, to the northernmoft part of America, not exceeding 300 miles from the continent on the faid weft fide (excepting Brazil, and other places in the poffefion of the king of Portugal, and the country of Surinam in poffeffion of the States-General) the company to be fole proprietors of all iflands, forts, \&c. which they fhould difcover within thefe limits, to be held under the annual rent of one ounce of gold. The crown alfo was impowered, by letters patent, to direct a ftock to confift of 20 s . in every. 100 l . of the capital ftock of the company, to be raifed by the members thereof, and employed in improving, enlarging, and carrying on the fifhery of this kingdom, for the ufe of the company,
In purfuance of this act, the proprietors of the navy-bills, tickets, and any debentures abovefaid, were incorporated, by the name of The Company of Merchants of Great-Britain trading to the South Seas, and other parts of America and for encouraging the Fifhery. And on the peace that followed, anno 1713 , the late queen transferred to the faid company, the benefit of the Assifnto Contract with Spain, which was the furnifhing the Spaniards with flaves for their mines and plantations in America, by which they were alfo entitled to fend a large thip annually with European goods, confifting chiefly of our woollen manufactures, to the

Spanifh Welt-Indies. [See the arlicle Assiento Contract.] By an art of 1 Geo. I. cap. 21 . the fum of 822,032 1. 4 s .8 d . was added to the capital ftock of the South sea company, to make it up juft the fum of $10,000,0001$. With this large capital, we don't find that the company ever applied themfelves to foreign trade, (which feemed to be the principal defign of incorporating them) unlefs in fending the ihip above mentioned with Europearn goods to the Spanifh Weft-Indies, and furnifhing the Spaniards with negroes; nor did they make any attempt to promote the fifhery (another grand delign in eftablifhing this corporation) 'till of late years, and then only by fending a fimall number of thips annually to fifh for whales; but what they chiefly make a merit of is, their being inftrumental to the leffening of the national debt, and rendering fome of thofe debts redeemable, which could not have been redeemed otherwife, without a bieach of the public faith. They boafted-That they had not only added above 50 per cent. to the eftates of all the old proprietors of the ftock; but had been continually promoting the public good, by favings and reductions of intereft.-That it appeared by a ttatute of 3 Geo. T. cap. 9. that the capital of the company then amounted to ro,000,0ool. for which a yearly pany. then amounted to $10,000,0001$. for which a yearly
fund of 600,0001 . was payable to them, after the rate of 6 per cent. and that they fubmitred to accept, after Midfum mer 1718, of an annuity of 500,0001 . being after the rate of 5 per cent, per ann. for their ten millions.- That the company agreed alfo to advance the goveriment the fuither fum of two millions, for the difcharge of lottery-tickets that carried 6 per cent. and accepted another fund to pay them an intereft of 5 per cent. for the faid two millions.
That afterwards the South Sea company procurrd as many annuities, redeemable, and irsedeemable, and other public debts, to be fubferibed into their ftocks, as with their original capital amounted to 33 millions ard upwards, taking an intereft of the government of 5 l. per cent. for the prefent, and fipulated to take 4 l. per cent. for the whole after Midfummer 1727 ; by which reduction of interelt, the nation was provided of a fund ufually called the SINKING FUND; whereby the public would have been enabled to have dif charged the whole debt within the compafs of forty years, or very little more, without laying any new burthens on the Cabjects.
And whereas it was objecled to them, that the change that was made in the long annuities, by the company's redeeming them at twenty years purchafe, had brought the nation in debt three miliions more than it was before, the annuitants not having paid fo much money for them by three millions; the company anfwered, that the nation was in debt on account of the annuities, according to the payment fhe was to make to the annuitants, and according to the time fhe was obliged to continue thofe payments; and if their bargain makes no alteration in that matter, if it neither adds to or leffens thole payments, or the time of continuing them, then it leaves the debt of the nation juft as is found it, neither in creafed nor diminifhed by it: but if it either leffens the annual payments, or fhortens the time of making fuch payment, it muft be fo far faid to leffen the national debt to the annuitants.
In the year 1716, there was publifhed a calculation of the fate of the national debt, in which the long annuities granted at ieveral times were fated and valued, according to the fums paid into the Exchequer for them, which was about eleven years and a half purchafe for thofe in king William's, and under fixteen years purchafe for thofe in queen Anne's, time. This calculation, therefore, ftates the debt of the nation on the account of the annuities according to the fums they were firf granted at.
Becaufe this could neither be reckoned the debt of the nation with regard to the annuitants, nor the value of the annuities. It could not be reckoned the debt of the niation with regard to the annuitants, becaufe the nation had contracted with them not to pay them off at pleafure, by returning them the money they at firf paid intu the Exchequer, but in an abfolute engagement for the payment of fuch annuities for a certain term of years: neither could it be reckoned the value of the annuities, for their value muft be ftated (as the value of every thing elfe muft be) not according to what was given for them at firft, or what they were worth at that time, but according to what they are worth at the time they are pro pofed to be purchafed: for as they then were only of fuch a value, becaufe money bore fuch an intereft, fo if the fate of intereft is altered fince that time, the value of fuch an nuities mult be in the fame degree altered; for their value muft rife in the fame degree that the intereft of money decreafes, which was the reafon that they were worth above 20 years purchate in the year 1720, and therefore could not be purchafed at a lower rate, unlefs a power had been taken in parliament of fixing the price, which was fuppoled to be a ftep inconfiftent with the fafety of the public credit. The ftacing, therefore, the national debt to the annuitant according to the fums firft given for them, was a great mittake. But yet upon this foundation, that the degree of the debt to be thus ftated, an argument is formed, that the buying the annuities by the South Sea company at 20 yea:s purchale,
makes an addition to the national debt, becaure here is $3,000,0001$. 8 cc . more paid for them than they were at firt granted at. This fuppofes that the nation owed the annuitants no more than their firft purchafe money, and could oblige them to take it when they pleafed; and if this had been the cafe, then it muft have been granted that the 3,000,0001. \&cc. given by this bargain, had been fo far an increafe to the national debt.
But if this fuppofition be contrary to the true ftate of the cafe, if the faith of the nation was given abfolutely for the payments of fuch annuities, and for fuch a term of years, then the debt of the nation to the annuitants muft be ftated according to that grant. And then the queftion will be, whether the nation is upon better terms with the annuitants by this new bargain, than fhe was without it: and the only way to fee this clearly, is to fee whether the nation is to be fooner quit of her payments to the annuitants, and therefore to pay lefs to them by virtue of this purchafe, than the muft have paid to them, had they continued unpurchafed in their firft ftate? At the time this purchafe was made, the nation was to continue the payment of the annuities for about 83 years.
If, therefore, this term of payment is by this new bargain reduced to a term of years of about half the time, and this be done not by any farther money advanced by the nation, but only by a change made in the manner of her payments, and a change of the fate of the annuities, then it mult be very obvious how much the nation is relieved in her debts to the annuitants. The change made in the manner of the payment is this; the South Sea company buy 1001 . annuity with zoool. ftock, fo that the nation is to pay intereft for 2000 . ftock inftead of paying an annuity of rool. Was the nation to continue this fame payment to the fock, and for the fame term of years that the was to have continued her payments to the annuities, then it muft have been granted, that the had neither leffened nor increafed her debt by this bargain.
But if by virtue of this new bargain, and by this change in the manner of the payments, that is, by paying intereft for 20001 . ftock, inftead of an annuity of 1001 . the nation has not only a redeemable debt to deal with, but is alfo provided with a fund fufficient for the redeeming or difcharging of 20001 . ftack in about half the time the was to have paid the annuitants, then it muft be equally granted, that fhe has her debt in this great degree leffened and relieved by this bargain, Now what is here only fuppofed as the effect of this bargain, is the true and real nature of it, and fuch as it was fufficiently fitted to produce, which may be thus made plainly to appear. The nation pays intereft for 20001 . flock, inftead of paying an annuity of rool. but it is provided for in this contract, that in the year 1727, there Mould be a reduction of intereft at one percent. So that inftead of the iool. annuity, there will be only 801 . per ann. paid to the 20001. ftock; and this abatement of intereft, or deduction of 201. per ann. from the 100l. annuity, will raife a fund fufficient for the difcharge of the 20001 . fock in about half the time that the payment of the annuities was to have been continued. So that by this meer change of the ftate of the debt, and the manner of the payments, the nation is enabled to difcharge the whole debt in about 34 years fooner than it could have been difcharged had the annuities not been thus purchafed.That notwithftanding all thefe advantages accruing to the nation by the fcheme laid by the late South Sea directors, they had been evicted out of their eftates, however long enjoyed, and by whatever means acquired.
As to the calamities of the year 1720, which altered the eftates of fo many private perfons, they ought not to be imputed altogether to the directors, or to the South Sea fcheme itfelf, but to a more general caufe; for there was not any order of men in the nation, that had not fome fhare in helping forward that general infatuation, and to whom therefore the common calamity ought to be attributed; fo that it might have been juftly expected, that every order of men in the kingdom Chould have been inclined, either to have pardoned or gently punifhed fuch a ftate of things, as they had not been mere fpectators of. - That had the directors been allowed the benefit of a fair and candid trial, they might very juftly have pleaded, that they had done nothing privately, or of their own heads; that they were driven into all the fteps they took, by the irrefiftable temper of men of all orders; that they had acted openly in the fight of the legiflature, and had the orders and authority of general courts for all they did, and their thanks after it wasdone.
Another caufe the late directors affign for the fudden rife of their flocks, which occafioned the calamities in the year 1720, was the Bank bidding againft them. The propofition made to the parliament at firft, fay they, was only for a voluntary fubfcription of the proprietors of the irredeemable and redeemable debts into the South Sea flock, at the beft terms the company could agree with them (which was no more than felling their ftock by fubfription), a method the Bank has often purfued; and as the miniftry knew the ccmpany had gained a fum for their proprietors, by taking in part of the lottery 1710 , the year before, befides what they paid
the government for fo doing, they infifted the company fhould pay a fum of money to the government for the liberty of having the faid debts foblcrbed into their hock.
Before this propofition, the Bank had been applied to for undertaking this matter, but they refufed it, treating it with contempt. But on the propofition being made to the houfe of commons, they became bidders of above five millions and half to the government, by which the fcheme firft propofed was entirely altered, the lame being then put up to the poled bidders; which influenced the minds of all forts of highe.t and was the occafion of the extravagant iffe of flocks, whereby all the mifchievous confequences to private perfons enfued; for it is plain the ration has rcceived a great advantage by it, and therefore the ill conifequence can only be the increafing fome perfons eftates, and decreafing the ef be of others. The fecond reafun of the ill confequences of thes fcheme was owing to the bargain which the Bank folemnly made to the Sourth Sea company, and never performed, whereby fo many perfons were mifsled, and thereby very greatly injured.
The company defire alfo it may be obferved further, that the directors and managers of that fcheme were never ch the with any frauds or embezzlements of the company's effec The late directors allo in their defence, and in order to bhi how inftramental they have been in reducing the interef of money, and putting the national debt in a way of being paid off in a few years, publifhed a treatife, ftiled, A true State of the South Sea Schemie, \&c. wherein they inform us, that the method they firft propofed for executing their fcheme was as follows:
The total of their capital was about

1. Ir,746,000 Total of the annuities and debts to be taken in were about
$30,981,000$ Which would make the total of their capital $42,727,000$
The whole furm to be taken in by the company being fo large, and confifting of annuities and debts of various kinds, it was judged impracticable to take in the whole at one time, and that by taking them in at different times, prices, and proportions, the proprietors, thereof (through apprehenfion of being either entirely left out, or of coming in afterwards at a higher price) would be quickened to make their fubfrciptions, whereby the execution of the fcheme would be rendered more ealy and certain. Though when the fcheme was firft formed, the price of the flock did not exceed 1161. to 18 per cent. yet it was fuppofed, if the propofal was accepted by the parliament, that the acceptance would fo much increafe the credit of the ftock, as the company might be able to take in the faid annuities and debts, at the rates, and in the proportions herein after mentioned: and if the Bank and Eaft-India company, or either of them, would come in, they were propofed to be admitted into the firft fubfcription at 130 per cent. or even lower, which would neverthelefs have increafed the profit to the South Sea company. But as their coming in was uncertain, the calculation was made only upon the other annuities and debts, viz.

6,500,000 Annuities and debts, fubfrribed at 130 per cent. for the fock, would produce flock to the fubfcribers
7,000,000 Ditto, fubferibed at $\grave{1} 40$ per cent. would be ftock to the fubfrribers
Ditto, fubfribed at 150 per cent.
$\left.\begin{array}{r}7,500,000 \text { Ditto, fubfcribed at } 150 \text { per cent. } \\ \text { would be ftock to the fubfribers }\end{array}\right\}$ Ditto, fubfcribed at 160 per cent. would be flock to the fubfribers

Which; by the gràdual felling the flock, and what the company gained on the fubfcription, would have fupplied the fame for above 12 years: before the expiration of which time it was fuppofed, the benefit of their trade to Africa, and the it was suppoited, grants of Noya Scotia, and of the French part of St. Chri-
toopher's, would have been fufficient to have perpetuated the dividend, if not to have enlarged it. But the commons objecting againft giving the South Sea company the African trade, Nova Scotia, and that which was the French part of St Chriftopher's, the South Sea company were prevailed with to leave thofe: advantages out of their propofals, which were the fubftantiali things to have fupported their credit; but fill with affurance from thofe in the Administration, of ufing their utmoft endeavours to obtain them for the company: But the price of South Sea fock, from the time of accepting their propufals to the paffing the act, riling very confiderably, and the Bank and their friends al ways oppofing whatever appeared to be for the benefit of the South Sea company, they could never obtain thofe advantageous grants, which they had much depended on (as folid fupports to the flock) though they frequently importuned and preffed the miniftry for the fame.
The extraordinary rife of the South Sea ftock before the paffing the act, together with the oppofition of the Bank, having defeated the company of thofe grants and fettlements which they had depended upon as the folid fupports of the ftock, as has been already hinted, nothing was left them but the opinion of mankind to enable them to execute the att, which put them under a more than ordinary neceffity of complying with the general difpofition of the people; and, therefore, though their original defigns and intentions were to have no fubferiptions but of the feveral annuities and debts that were to be taken in, yet there being, immediately after paffing of the act, a prevailing notion among many of the proprietors and others without doors (for it did not proceed from the directors) of taking in money fubfcriptions; and this opinion growing univerfal, the directors found themfilves under a neceffity to departfrom the method they had firft intended to proceed in; and to begin the execution of the act with a money fubfcription; to which they were the more cafily induced, finding the method prefcribed by the act would require a great many months to effect the taking in but a part of thofe public debts; and that unforefeen accidents might fo reduce the price of ftocks, as wholly to defeat the execution of the act, and yet the company would remain under the obligation of paying to the public $4,667,000 \mathrm{l}$. though no part of the act fhould be executed.
A further inducement to admit of a money fubfcription was, that they might be thereby enabled to pay off fuch of the re deemable debts, and to offer money to Cuch of the annuitants, as fhall not be inclined to take ftock for the fame, they not being then certain, there would be fuch an univerfal difpofition in thofe proprietors to accept flock for their debts and annuities, as afterwards appeared; but when that difpolition did appear, the directors had no occation to apply the money to that ure. By thefe and the like confiderations, the directors were prevailed on to open a money fubicription at 300 per cent. with diftant times of payment, and without limiting the fum to be taken in, ftocks being then 285 per cent.
The method they proceeded in was, that every director took the names of thofe perfons who applied to them, and the fums for which they defired to be admitted into that fubfoription; which, when brought together, amounted to fo large a fum, and the names were of to confiderable perfons, that though their firft intention was to have had that fubfription for no more than one million, or at molt one million and an half; and though they permitted no perfon to have more than 4000 . and the fums defired were generally reduced, yet the direftors found they could not bring the fubfeription to a lefs fum than $2,250,0001$. without giving fuch difguft, as might prove prejudicial to the company
The firft money fubfription being thus fixed, and the fum it amounted to being $6,750,0001$. of which 60 per cent. being 1,350,000l. paid down, the direGors thought this fubfeription a fufficient fund to enable them to execute the reft of the act, and accordingly came to an unanimous refolution of tak. ing no more money fubfrriptions.
But this fubfription foon felling out at a confiderable profit, it cannot be forgot how impatient perfons of all ranks and degrees were for another money fubfcription, and by their importunity did prevail on the directors to agree the 28 th of April to open one, which was done on the 30 oth of the fame monch at 400 per cent. of which 40 per cent. was paid down; and the fame day refolved it as their opinion, nemine contra-

VOL. II.
dicente, not to take any further Subscriptron in Money. This fubicription was intended alfo not to exceed a million, but the application to get into it was fuch, that when the directors came to examine the names and fums demanded, they ound they could not reduce it under a million and half, without giving the greateft offence.
But the directors thoughts being intent upon executing the act according to their fift defign, by taking in the annuities and redeemables, efpecially the former, on which the par liament had laid fo great flrefs; they (the fame day it was agreed to open the fecond money fub cription) previoully refolved on a fubfcription for the annuities; which met with fuch fuccefs, that in a few days above two-thirds of them were brought in, and on the rgth of May (the price of fock being then 375 per cent.) the directors fixed the price for the fubfcribed annuities at $3^{2}$ years purchafe, to be paid as follows, viz.

For 1001. per ann.
Stock 7001 . at 375 per cent. which amounts to

1. 2625

575
Total for rool. per ann. - 3200
This gave great fatisfaction to all parties concerned, and the frock and fubfeription advanced fo faft, that when the parliament rofe, the ftock was at near 800 per cent. and the fecond fubfeription fold for 500 per cent. profit.
At this time the price of ftock being about 800 per cent. and the fecond fubfeription felling for about 500 per cent. advance, and great numbers of thofe who defired to be admitted into the third fubfcription, having requefted it at 1000 per cent. the directors thought they could not fet it at a lefs price ; but they allowed fuch times of payment, as with the Midfummer dividend reduced it to about 800 per cent, This met with no blame from any perfon at that ume, but, on the contrary, univerfal approbation; as appears by the price this third fubfrription bore, it foon felling at 300 per cent. profit.
When this fubfcription was completed, the directors came again to a refolution of takin $\leqq$ no more money fubfcriptions, and applied themfelves to take in the remainder of the annuities and redeemables. To which end, on the 8th of July they agreed to open their broks on the 12 th of that month, to take in part of them; which was accordingly done, and in a few days, moft of the irredcemables and annuities flanding out were fubfcribed: but fome of the proprietors of thofe debts and annuities, by reafon of their abfence, or other impediments, not having an opportunity to fubfcribe before the books were thut, made great application to the directors to be admitted; who, being unwilling to complete the execution of the act with as muchexpedition as they could, did, on the $27^{\text {th }}$ of July, refolve to open books on the 4th of Auguft following, for taking in the remainder of thefe debts and annuities, and moft of thofe which were ftanding out were then brought in.
On the 12 th of Auguft the price of flock, inclufive of the Midfummer dividend, was ippwards of 900 per cent. which made the flock, exclufive of that dividend, about 820 per cent. The directors agreed to fix the price of the fublcribed long annuities at 36 years purchafe, and the redeemables at 105 per cent. and the price of fook to be given for the fame at 800 per cent. fo that the redeemables, confidering they were taken in at 105 per cent. had the flock at about 60 per cent. under the current price, which gave general fatisfaction at that time.
It farther appeared, that the terms allowed for the annuities and redeemables which were fublcribed, were very fatisfactory, becaufe they were fold at a much higher price than the unfubleribed; and fome timeafter this price was declared in the Gazette, many confiderable proprietors of the unfubfcribed annuities and debts preffed and afked it as a favour to be, and were accordingly admitted to fubfcribe, and particularly feveral foreigners and merchants, intrufted here by them, for their ufe. Although the direators had come to feveral refolutions againft any futher money-fubfriptions, thofe refolutions were not fufficient to ftem the repeated application for the fame, from multitudes of all ranks; ai e' the proprietors of the fock began to clamour at their not being admitted to a fhare of their proportions in the former fubfcription, and fome of them threatened to demand a general court, to order that the proprietors might be admitted to a fubfeription in proportion to their flock; which obliged the directors to take that matter into confideration: and the fame day on which they fixed the price of ffock for the two laft fubfriprions of the annuities and redeemables, they agreed to take a fubfription of 20 per cent. on ftock, for the proprietors only, the ftock in fuch fubfcriptions to be valued at rocal. per cent. which, at that time, gave great pleafure and fatisfaction to the proprietors, and 40 per cent. was offered for the privilege of that fubfrcription.
of that fubicription.
But this did not take off the applications for another moneyBut this did not take off the applications for another money-
fubfeription to all perfons indifferently, to which the directors fhewed a great unwillingnefs; but, by the continued folicitations of multitudes of all degrees; and from all parts, they at length confented to open a fourth money-fubfeription, on 10 A

## SOU

the 24th of Auguft, at 1000 l. per cent. exclufive of the Midfummer dividend (the third fubfcription then felling at about 3001 . per cent. advance) but, to prevent this fubfcription running to an exceffive fum, they agreed that one fifth part, being 2001. per cent. fhould be paid down, and none be admitted but thofe who brought their money that very day The eagernefs for this fublcription was fo great, that not withftanding this precaution, and the directors full intention that this fubicription fhould not exceed a million', yet, in a few hours, there was $1,200,000$ l. fubfcribed, although many were excluded, who preffed very earnefly to come in. Had not the directors taken that precaution in relation to this fourth fubfeription, it would probably have fwelled to a larger fum than the third, as is manifeft not only by the eager filling fo great a fum (as is mentioned) in fo fhort a fpace, and the numberlefs letters the directors received from perfons who defired to be admitted into it, but alfo by a memorable reply that a great minifter of ftate, fince dead, made to them, upon their informing him of the method they intended to proceed in, who thereupon told them, That he himfelf had a lift for above a-million for that fubfcription, and that therefore, if they would proceed in the method they had propofed, without taking in lifts, as they had done in the third fubfrription, he defired that they would publifh an advertifement in the Daily Courant, That it was not in bis power to ferve his friends; that thereby he might clear himfelf of the clamour and charge that would arife againft him for having neglected them.
As to the fubfrriptions for 20 per cent. to be limited to the proprietors only, the fame was afterwards (for feveral reafons) thought fit, by the general court, to be omitted. The fpring of the money-fubicriptions arofe from without doors, and not from the directors themfelves, as already mentioned; and one may venture to fay, thofe fubferiptions were countenanced by the parliament; for that, after the firft money fubfcription was taken in, there having arifen fome doubts concerning the validity thereof, the parliament were pleafed to pafs a claufe in the act, for eftablifhing the two infurance companies, confirming not only the fubfeription taken, but alfo all fuch fubfcriptions as fhould after be taken, and to make the receipts that fhould be given out for the fame affignable in law, which they would not have been without authority of parliament. They obferve further, that by the original fcheme, the higheft calculation of the fock was 1601 . per cent. and that advance fupported by fuch beneficial grants to the company, which, if purfued and ripened into actual execution, would have kept the ftock at leaft to that price, without being detrimental to any. But feveral public advantages would neceffarily have arifen therefrom; as, firft, the bringing the annuities into a ftate of redemption, which had been always thought an infurmountable obftacle to getting the nation out of debt. Secondly, The reducing the intereft of the public debts from 5 to 4 per cent, and thereby increafing the finking fund above 540,0001 . per ann. by which the whole debt of the nation might have been paid off in about 24 years. Thirdly, The lowering the common rate of intereft, which would foon have followed as a neceffary confequence thereof. Fourthly, The trade and revenues of the kingdom would have been increafed, by the peopling and cultivating Nova Scotia, and the French part of St Chriftopher's; and efpecially by enlarging and opening the trade to Africa into the Inland Parts of the Continent, which bas never yet been done, whereby they couldfcarce have failed of difcovering the many rich gold mines which unqueftiomably are there, and from thence an immenfe treafure might have been brought into this kingdom.
The South Sea directors, in the year $\mathbf{1 7 2 0}$, infifted further, that the fcheme was originally formed with a defign of great advantage to the public, as well as to the original propriecors, ard, notwithftanding it received many alterations between its firft formation and paffing into an act, and that the execution of that act has been attended with many misfortunes; neverthelefs there ftill fow therefrom many and great benefits, as well to the public, as to the original proprietors: and yet the directors of the South Sea company are punimed in a manner beyond any precedent known in England, whillt the projec tors and managers of the innumerable Bubbles fet up, even without any legal foundation, and with no other intention than that of fraud and cheat, have not been fo much as called ní queftion. [See the articles Actions and Bubbles.]

This act for the confifcation of their eftates was founded upon the following refolutions of the lords and commons, viz. 2 February, 1720, refolved by the Houfe of Peers, That the South-Sea directors declaring 30 per cent. dividend for the half year ending at Chriftmas, and 50 per cent. per ann. for 12 years after, was a villainous artifice, to defraud and delude his Majefty's good fubjects.
16. February, 1720,

The fecret committee of the Houfe of Commons made their report, from whence it appeared that the following portions of South-Sea fock were taken in for the feveral perfons following, viz.
For the earl of Sunderland, firft lord of the trea- $\}$
1.
fury, at the requeft of James Craggs, fen. Efq. $\} 50,000$
For the duchefs of Kendall
10000
For the countefs of P .
10,000
For the two nieces of the duchefs of Kendall
10,000
For Mr Craggs fenior
10,000
For Charles Stanhope, Efq;
10,000
$\begin{array}{ll}\text { For the Swordblade company - } & 10,000 \\ 20,000\end{array}$
It appeared alfo, that Mr Aiflabie, chancellor of the Exchequer, had great quantities of the Soulh-Sea ftock given him, and that a great deal more had been taken in by the members of both Houfes of Parliament.

## 18 February, 1720 ,

Refolved, That the fetting the ftock to fale by fublcriptions, at high prices, above the intrinfic value, by the directors, was a grofs and notorious fraud, and one great caufe of the finking the public credit, and bringing upon the nation the diftrefs it at prefent labours under.
Refolved, That the advifing the late directors to fet the ftock to fale by fubfcriptions, at high and extravagant dividends abovefaid, by any perfons in the adminiftration, was a notorious breach of the truft repofed in them, to the prejudice of his Majefty's government, and the intereft of the kingdom.

20 February,
Refolved, That the taking in, or holding of ftock, by the South-Sea company, for the benefit of a member of parliament, or perfon in the adminiftration, while the company's propofals, or bill, was depending, without a valuable confideration, or fecurity, for the acceptance, or payment, 'for fuch flock; and the company's paying, or allowing, fuch perfons the difference arifing by the advanced price of the focks, were corrupt, infamous, and-dangerous practices, bighly reflecting on the honour and juftice of parliament, an deffructive of the intereft of his Majefty's government.

The Commons taking into their confideration that part of the report of the fecret committee which related to John Aillabie, Efq; a member of that Houfe, Mr Aillabie was heard in his defence; and it being plainly proved that he had cauled a book of accounts between him and Mr Hawes to be burned, and given him a difcharge for the ballance, amounting to 840,000 1 . it was refolved nemine contradicente (among other things) That the faid John Aiflabie had encouraged and promoted the dangerous and deffructive execution of the late South-Sea fcheme, with a view to his own exorbitant profit, and had combined with the late directors of the South-Sea company in their pernicious practices, to the detriment of great numbers of his Majefty's fubjects, and the ruin of the public credit, and the trade of this kingdom. They refolved, alfo, That he fhould be expelled the Houre, and committed to the Tower, and a bill brought in for refraining him from going out of the kingdom, and from alienating his eftate, as was done in cafe of the directors.

## REMARKS.

The oppofers of the South-Sea fcheme fuggefted, That the confifcation of the directors eftates by the legiflature was far from being unjuft; nay, it is affirmed, that fuch indulgence never was thewn before to people in their circumftances; for though it Chould be admitted that they were the proprietors of the finking fund, that they put the debt of the nation in a way of being paid, and rendered thofe annuities redeemable which before were irredeemable, yet it was done by fuch methods as ought never to be countenanced or encouraged. Had they not given out that they were able to make fuch high dividends, the annuitants had never been drawn in to fubfribe their annuities, and others to purchafe ftocks at thofe advanced rates. There is no doubt but the company had great advantages by the public debts being fubfcribed, and by the high price at which their focks were purchafed; but what was the company's gain, was the lofs of thoulands and ten thoufands; nor does the competition of the bank at all excufe the raffnefs of the South-Sea company, in bidding fo valt a fum for the fcheme as they were confcious could never be paid, by any gains the company could fairly make. They had, it is true, improved their original ftock, by taking in the debts; the bank faw it, and would have been glad to have engroffed thofe debts, for the very fame reafon the company was fo fond of them: but one would think both the one and the other infatuated, as well as the people, to bid fo many millions as they did for the execution of the fcheme. There is no doubt but the feeing thefe great bodies bidding againtt each other, did contribute to the advancing the price of ftock; and if it thould be admitted that the bank had their fhare in abufing the people, and inducing them to part with their fortunes, to purchale what had no exiftence in nature, it is not to be conceived how this ftep of the bank can excule the South-Sea company, who led the way to all thefe extravagancies: and can it be fuppofed that the proprietors of the long annuities could ever have been prevailed on to fubfribe them, or other people to have given 3 or 400 l . for 100 l . ftock, if they had not been affured by the directors it was worth fo much, and that they could make dividends in proportion to thefe prices?
The merit, therefore, of procuring the annuities to be fubfcribed, which before were irredeemable, by giving out that their ftock was worth more than it raally was (fay the adverfaries of the fcheme) was no more than the merit of a hharper; for, had not the annuitants been deceived in the value, they never would have fubreribed, and, though the bringing them in might leffien the national debt, and be a very great advantage to the company, yet, as it was accomplifhed by deceitful arts, has very little merit in it, the government may be very litule gainers by the fcheme, as well as the proprietors of the original ftock: but if this gain has arifen from the loffes innocent people have fuftained, who confided in the veracity and probity of the directors, and who depended upon it that the ftock was of the value they fet upon it, what excufe they can make for their conduct, it is not eafy to fay. That there has been only a revolution of mens private eftates and fortunes, and that what one has loft another has gained, may be true; but the queftion is, by what means the lofers were induced to part with their fortunes, and beggar their families? Whether the annuitants were not deceived in the value of fock when they fubfribed, by the directors fetting a high price upon it, and affuring them they could divide 20, 30 , nay 50 per cent? What fatisfaction is it to a man, that he was tricked into a difadvantageous contract, and not forced into it? How is public credit fupported better the one way than the other?
As to the trade to the Spanifh Weft-Indies, by the South-Sea company, though it appeared at firft view very beneficial, inafmuch as they expored the manufactures of Great-Britain, and received treafure (chiefly) in return; yet this (it is faid) was done with as great advantage formerly, by the way of Cadiz and the flota; and that the fraudulent practices of the company's agents in America have been one principal occafion of the ill ufage we have met with on that fide for many years paft.

The eftablifhing a fifkery, which was another grand motive for erecting the South Sea c mpan*, has been no lefs neglected than traffic: they employed 24 fhips, indeed, for fome years, but their agents and officers managed fo ill, that they brought the company grealy in debt upon that article whereupon they laid it down, though it be one of the moft beneficial fifheries the Dutch are engaged in. Thofe who have their fortunes in South-Sea ffock, content themfelves, at prefent, with the revenues arifing, from the funds fettled upon them; and fome of the $m$.ft wealthy of the proprietors, find means to increafe their fortunes by ftock-jobbing. They feem to have perfectly forgot the original defign of their intitution; namely, their fending colonies to South-America, and putting in for a fhare in the rich traffic of the South-Seas, which has been hitherto monopolized by the Spaniards, which might have been prevenced, if this company had exerted themfelves in commerce, inftead of being made the tools of men in power, who made a facrifice of the directors to fave themfelves. For this really appears to be the cafe, upon an impartial review of this extraordimary affair; and which might be made very apparent from fome anecdotes now before me, which may one day fee the light in another fhape, fince I have not room for them here
True it is, that many of the moft judicious and experienced in commercial affairs, looked upon the South-Sea company; confidered as an inftitution for carrying on a trade to the Spanish Indies, as a romantic and chimerical project, and ruinous, rather than beneficial, to the national trafic, though the projector of it was cried up by his flatterers, as a perfon of uncommon genius; as a perfon remarkable for his learning, experience, and great fagacity in public bufinefs.--This feems to be apparent, from the preamble of the act for erecting this company, which is as follows.

- Whereas it is of the greateft confequence to the honour and welfare of this kingdom, and for the increafe of the ftrength and riches thereof, and for the vending the product and manufactures, goods and merchandizes of, or brought into, this kingdom, and employment of the poor, that a crade fhould be carried on to the South-Seas, and other parts in AmeRICA, within the limits herein after mentioned; which cannot be fo fecurely carried on, as by a corporation with a joint flock, exclusive of all others: now, for the better encouragement of all and every the perfon or perfons, who frall be or become members of the faid company or corporation, to be erected as aforefaid; and to the end and intent that a trade to the South-Seas, and other parts of America, within the limits * herein after mentioned, may be carried on and promoted for the advantage and honour of this kingdom; be it enacted, \&a.'
* What the nation was to expect from the fupendous trade that was pretended to be carried on by this company, may be feen in a treatife publiched in the year 171 I , intitled, A Vicw of the Coalts, Countries, and I $\AA$ ands, within the Limits of the South Sea Company, \&c.

It is plain here, that the company by its firft inftitution was to have an exclufive trade, and that our people of Jamaica, by this very act, are deprived of the trade to the South-Sea, which was to the great advantage of themfelves and the whole nation : fo that this act for erecting this exclufive company of traders, deprived the nation of a very beneficial commerce. And, therefore, whatever might be the gain of the company, it could not be all profit to the nation; only fo much could be efteemed the gain of the nation, as the gain of the eompany exceeded that of the Jamaica merchants.
But what the company's gain has been, and what the lofs of the Jamaica merchants has really been, is notorious enough not to need animadverfion. Nor does it appear, that the company could hope for any profit by this exclufive trade. They were to build Forts and Casties in the South-Sea, for their fecurity in countriesalready fertled by ourenemies, at fuch a charge, and at fuch a diftance from this kingdom. They might, perhaps, as well have thought of building caftles in the air : for this reafon, therefore, we might well be allowed to efteem this project as romantic and chimerical. It was giving up the certain profit of the Jamaica trade, to that imaginary one of a company, which was fo far from having any profpect of advantage by it, that they were in a fair way of lofing ftock and block.
It is true, the Jamaica traders were not excluded, but only from Buenos Ayres, fouthwards, and from the South-Sea they had ftill left the places in the Atlantic Ocean for themfelves. But the profit they annually intraduced from the Sourh-Sea was confiderable, and the company's act gave it up for nothing.
This was the cale of the South-Sea project, 'till the peace was made, and 'till the Affento contract made an alteration.
By this the Jamaica traders were entirely excluded from the Spanifh Indies, and the company's caftes in the air were turned into an obligation to fell the Spaniards 4,800 negroes per annum, and a permiffion to fend 500 tons of goods to Porto- Bello; but this, inftead of turning to any account to the company, was fo managed, as not only to be detrimental to

## SOU

them, but highly injurious to the nation, by giving fuch umbrage to the court of Spain, as contributed to occafion a mifunderftanding between Great-Bricain and Spain for many years palt ; and which were not terminated in regard to the company, 'till the treaty concluded and figned at Madrid, the 5 th of October, N. S. 1750, as we fhall prefently fee.
But this Affiento contract, however beneficial it might have been rendered, both to the nation and the company, was, by mifmanagement, fomehow, in carrying into execution, rendered quite otherwife; it was, for many years, like the dog in the manger, it neither traded itfelf, nor would fuffer thofe that would have done fo in the like branch.
The act for erecting the South-Sea company deprived Ja-, maica of trading to the South-Sea; but the Affiento contract fhut them out of the Spanifh Indies; yet their returns of gold and filver from the Spanifh Indies, in exchange for negroes and other merchandizes, were only 2 or $300,000 \mathrm{I}$. per annum. Let the Spaniards have deprived us of this trade; but was it fit for ourfelves to give it up?
Thus there was no profpect of the company's trading under this contract, as the ftipulations of it were contrived, or getting any thing by it if they did. Could their goods, that were often kept three years in the king of Spain's warehoufes, and under his own lock and key, and in fo hot a climate, be brought, in the general, to a good market? Or did not one half of them often perifh? Could the Affientifts hope for profit from their negroes, that were to pay a heavy load of duties to the king? A treaty could fcarce have been contrived of fo little benefit to the nation ; and yet of this kind one might have been fo devifed, as to have proved greatly beneficial to the kingdom, as well as to the company, if it had been wifely and honourably executed.
One would have thought, that after thefe pompous declarations, which we have feen in the preamble to the South-Sea act, fome attempt fhould have been made to accomplifh fo great a defign : but fo far from it, that foon after, and without the leaft trial, they gave up their pretenfions of trading to the South-Seas, or in any other manner, than was ftipulated by the Affiento contract. Thus, by accepting of the Affiento, they excluded themfelves from trading to the SouthSeas; and, by the act for incorporating the South-Sea company, all the reft of the fubjects of Great-Britain were forbid trading within their limits. - This is the more remarkable, fince neither the Dutch nor French, nor any other nation, reftrained their fubjects from trading to thofe parts; nor did they neglect to carry on a trade thither, with great profit to themfelves; whilf thofe of Great-Bricain, by means of the South-Sea company, were denied that*.

- Quere, Whether Great-Britain has not the fame Jiberty of trading to the South. Seas, as they had before the SouthSea company was eftablifhed as a trading corporation, although that company no longer exilts as fuch ?

Had the South-Sea company put their original plan in execution, with vigour and honour, it would, indeed, bave been a benefit to the kingdom, if not to the proprietors of the flock, by the increafe of our exports and navigators; but the fending an annual ihip, under fuch limitations as was done, though a new method of trade, was fo far from being a benefit in point of trade, that it certainly leffened our exports, and confequently the trade of the kingdom, on a general balance with the Spanifh nation. Cadiz, Seville, Port St Mary's, \& c. were, before this trading company was eftablifhed, the places where the merchants, trading to the Indies, informed themfelves what feccies and quantities of goods were fhipped off from time to time; but, on the fending of the annual thips, they were under fuch uncertainties, that they reaily declined dealing in our manufactures by thefe channels; which gradually and infenfibly gave our rivals in this trade an open opportunity to eftablifh houfes of trade at thefe ports, and by exercifing the trade to the Spanifh Indies, in a way the moft agreeable to the court of Spain, have greatly fupplanted us in this once moft ineftimable branch of our commerce : and this may, in a great meafure, be afcribed to the South-Sea company's method of exercifing their contract; for although we apprehend, that an Affiento under different flipulations, and fairly and honourably carried into execution, mighr have proved beneficial, both to the nation and the company; yet, as that we had was conditioned and exercifed, it had quite contrary effects.
Thus we find, that the manner of the South-Sea company's exercifing their trade*, was fo far from being a benefit to the hation, by an increafe of our exports and navigation, that it has been manifeftly inftrumental to leffen them, and has ony turned trade out of its former channel, which was before beneficial to great numbers of merchants and tradefmen, as well as to the nation.

* What is here chiefly meant by the South.Sea company's exercifing of their trade, is that illicit trade with which hey were charged fome years fince by the court of Spain.
If the ammual fhip, all things confidered, was of no advantage to Great-Britain, the company's trade, in general, muft cer-
tainly have been of damage to it, and a confiderable lofs to the proprietors ; for the Affiento, for negroes only, was al lowed, even by the Spaniards, to be aloling contract ; and was on that exprefs confideration, that the king of Spain granted the South-Sea company the liberty of fending an an nual ihip of 500 tons, to the Weft. Indies, If then the one was a cerrain lofs, and the other of no advantage, at leaft not an equivalent, or preferable to the national trade which wo had before, they were nothing more than amufements $w$ ought to be thrown up, as tending to the prejudice of the proprietors, and the nation in general.
If the commerce of Great-Britain to Spanifh America has been interrupted, and turned out of its courfe for fome years, by means of this company, it is no little trouble to afcertain the real lofs the nation has thereby fuftained; befides the dif advantages which the nation has many years laboured under, through the mifunderftandings and heartburnings between this kingdom and Spain. And, as the judicious Mr. Locke obferves, ' When trade is once loft, it will be too late, by a mis-timed care, eafily to retrieve it again; for the current of trade, like thofe of waters, make themfelves CH a nels, out of which they are afterwerds as hard to be diverted, as rivers that have worn themfelves deep within their banks. - This is what has been urged in general gainft the South. Sea company, as a trading corporation.Wherefore, the court of England, we may prefume, experiencing for a feries of years, that the court of Spain was greatly irritated with the South-Sea company's conduct, and the court of England having no lefs reafon, perhaps, to be difpleafed with the South-Sea company for their non-complance with the terms of the late convention between GreatBritain and Spain, which might have prevented the late war: upon thefe conliderations, we apprehend, it feems probable, that the two courss were determined, by the following creaty, to put an end to the trade of this company.

## A Treaty concluded and figned at Madrid, on the 5 th of Oetober, N. S. I75c.

- Whereas by the 16 th article of the treaty of Aix-1a-Chapelle, it has been agreed between their Britannic and $\mathrm{C}_{\text {a- }}$ tholic Majefties, that the treaty of the Assiento for the commerce of negroes, [fee the article Assiento] and the article of the Annual Ship, for the faur years of nonenjoyment, fhould be confirmed to Great-Britain upon the fame foot, and upon the fame conditions, as they ought to have been executed before the late war: and the refpective ambaffadors of their faid Majefties having agreed, by a declaration ligned between them, on the $\frac{13}{7} \frac{3}{4}$ June 1748 , to regulate, at a proper time and place, by a negociation between minifters named on each fide for that purpofe, the eqquivalent which Spain fhould give in confideration of the non-enjoyment of the years of the faid Affiento of negroes, and of the annual fhip granted to Great-Britain, by the roth article of the preliminaries figned at Aix-la-Chapelle, on the $\frac{10}{3}$ April 1748.
Their Britannic and Catholic Majefties, in order to fulfil the faid engagements of their refpective minifters, and to ftrengthen and perfect, more and more, a folid and lafting harmony between the two crowns, bave agrecd to make the prefent particular treaty between themfelves, without the intervention or parricipation of any third power; fo that each of the contracting parties acquires, by vircue of the ceffions which that party makes, a right of compenfation from the other reciprocally: and they have named their minifters pleniporentiaries for that purpofe, viz. his Britannic Majefty, Benjamin Keene, Efq; his minifter plenipotentiary to his Catholic Majefty; and his Catholic Majefty, Don Jofeph de Carvajal and Lancafter, minifter of ftate, and Dean of his council of ftate, who, after having examined the points in queftion, have agreed on the following arricles.

## ARTICLEI.

His Britannic Majefty yields to his Catholic Majefty, his right to the enjoyment of the Affiento of negroes, and the annual Chip, during the four years ftipulated by the 16th article of the treaty of Aix-la-Chapelle.

## A R T I C L E II.

His Britannic Majefty, in confideration of a compenfation of one hundred thoufand pounds fterling, which his Catholic Majefty promifes and engages to caufe to be paid, either at Madrid or London, to the royal Affiento company, within the term of three months at lateff, to be reckoned from the day of the figning of this treaty, yields to his Catholic Majefty all that may be due to the company for ballance of accounts, or rifing in any manner whatfoever from the faid Affiento; fo that the faid compenfation fhall be efteemed and lookedsupon as afuli and entire Satisfaction on the part of bis Catholic Majelty, and fhall extinguifh from this prefent time, for the future, and for ever, all righr, pretenfion, or demand, which might be formed in confequence of the faid Affiento, or annual fhip, directly or indirectly,
on the part of his Britannic Majefty, or on that of the faid company.

## ARTICLE LII

The Catholic king yields to his Britannic majefty, all his pretenfions or demands in confequence of the faid Affiento pred annual thip, as well with regard to the articles already liquidated, as to thofe which may be eafy or difficult to liquidate; fo that no mention can ever be made of them hereafter on either fide.

## ARTICLE IV.

His Catholic Majefty confents, that the Britifh fubjects thall not be bound to pay higher, or other duties, or upon other evaluations for goods which they thall carry into, or out of the different ports of his Catholic Majefty, than thofe paid on the fame goods in the time of Charles II. king of Spain, fettled by the Cedulas and Ordonnances of that king, fettled by of his predecelfors. And althou'gh the favour or al. or thone oflled Pie del Fardo be not founded upon any royal ordonnance, neverthelefs his Catholic Majefty declares, wills, and ordains, that it. Chall be obferved now, and for the future, as an inviolable law ; and all the abovementioned duties fhall be exacted and levied, now and for the fusure, with the fame advantages and favours to the faid fubjects.

## A R TICLE V.

His Catholic Majefty allows the faid, fubjects to take and gather falt in the iland of Tortudos, without any hindrance whatfoever, as they did in the time of the faid king Charles II.

## ARTICLEVI.

His Catholic Majefty confents, that the faid fubjects fhall not pay any where, bigher or other duties than thofe which his Catholic Majefty's fubjects pay in the fame place.

## ARTICLE VII.

His Catholic Majefty grants, that the fuid fubjects ©hall en joy all the rights, privilegcs, fraachifes, excmptions, aud immunities whatoever, which they enjoyed betore the laft war, by virtue of cedulas or royal ordonnances, and by the articles of the treaty of peace and comerce, made at Madrid in 1667 ; [fee the article $S_{\text {pain }}$ ] and the taid fubjects fhali be treated in Spain, in the fame manner as the moft favoured nation, and confequently, no nation fhall pay lefs duties up. on wool, and other merchandizes, which they fhall bring into, or carry out of Spain by land, than the faid fubju $\mathcal{A}$, in pay upon the fame merchanaizes, which they fhail bring in, or carry out by fea. And all the rights, privileges, franchiles, exemptions, and immunitions, w ich fhall oe granted or permitted to any nation whatever, fhall allo be granted and permitted to the faid fubjects ; and his Britannic Majefly confents, that the fame be granted and permitted to the fubjects of Spain in his Britannic Majefty's kingdoms.

## ARTICLE VIII.

His Catholic Majefty promifes to ufe all poffible endeavours, on his part, so abolith all innovations which may have been introduced into commerce, and to have them forborne for the future; his Britaunic Majefty likewife promites to ufe all poffible endeavours to abolinh all innovations, and to forbear them for the future.

## A R T I CLE IX.

Their Britannic and Catholic Majefies confirm, by the prefent treaty, the treaty of Aix-la-Chapelle, and all the other creaties, therein confirmed, in all their articles and claufes, excepting thofe which have been derogated from by the prefent treaty: as likewife the treaty of commerce concluded at Utrecht in 1713 , thofe articles excepted, which are contrary to the prefent treaty, which flall be abolifhed and of no force, and namely, the three articles of the faid treaty of Utrecht, commonly called explanatory.

## ARTICLEX.

All the reciprocal differences rights, demands, and pretenfions, which may have fubfifted between the two crowns of Great-Britain and Spain, in which no other nation whatever has any part, intereft, or right of intervention, being thus accommodated and extinguifhed by this particular treaty; the two faid moff ferene-kings, engage thernfelves mutually to the punctual execution of this treaty of reciprocal compenfation, which Shall be approved and ratified by their faid Majefties, and the ratifications exchanged, in the term of fix weeks, to be reckoned from the day of its figning, or fooner if it can be done.
In witnefs whereof, we the above-mentioned minifters plenipotentiaries, that is to fay, Benjamin Keene, Efq; in the name of his Britannic Majefty; and Don Jofeph de Carvajal and Lancafter, in the name of bis Catholic Majefty, by virtue of our full powers, which we have mutually communivoL. II.
cated to each other, have figned thefe prefents, and have caufed the feals of our arms to be put thereto. Done at Madrid'; the 5 th of October 1750, N.S.

## (L. S.) Josepa de Cárvajac. y Lancaster.

(L. S.) B. Keene。

## His Britannic Majesty's ratification.

George the fecond, by the grace of God, king of Geeat Britain, France, and Ireland, defender of the faith, duke of Brunfwic and Lunenburg, arch-treafurer of the holy Roman empire, and prince elector, \&cc. To all and fingular to whom thefe prefents fhall come, greeting: Whereas a certain treaty between us and our good brother Ferdinand VI. Catholic king of Spain and the Indies, was concluded and faed at Madrid, the 5th day of October laft paft, N. S. by minifters plenipotentiaries, fufficiently impowered with orders and authority on each fide, in the form and words following.
[Fiat infertio.]
We having confidered the above written treaty, have approved, ratified, and confirmed the fame, in all and fingular its claufes, as by thefe prefents we do approve, ratify, and confirm the fame, for us, our heirs and fucceffors, engaging and promifing, on our royal word, facredly and inviolably to perform and obferve all and fingular its contents; and never to fuffer, as far as in us lies, any perfon to violate the fame, or in any manner to act contrary thereto. In witnefs whereof, we have caufed our great feal of Great-Britain to be affixed to thefe prefents, figned with our royal hand. Given at our palace at St James's, the 5 th day of November, in the year of our Lord $\mathbf{1 7 5 0}$, and of our reign the twenty-fourth.

GEORGER.

## His Catholic Majesty's ratification.

Don Ferdinand, by the grace of God, king of Caftille, of Leon, of Arragon, of the Two Sicilies, of Jerufalem, of Navarre, of Granada, of Toledo, of Valentia, of Galicia, of Majorca, of Seville, of Sardinia, of Cordova, of Corfica, of Murcia, of Jaen, of the Algarves, of Algeeira, of Gibraltar, of the Canary Iflands, of the Eaft and Weff-Indies, iflands and Terra Firma, of the Ocean Sea, archduke of Auftria, duke of Burgundy, of Brabant, and of Milan, count of Abiburg, of Flanders, of Tyrol, and of Barcelona, lotd oi Bifcuy, and of Molina, \&cc. Whereas there having been agreed on and figned at Madrid, on the fitth day of Oc tober of this inftant year, by Don Jufeph de Carvajal and Lan:after, knight of the moft illuftrious order of the, Golden Fieece, my gentleman of the bed chamber in ordinary, my minifter of ftate, and dean of this council, governor of the fupreme council of the Indies, prefident of the committee of commerce and money, and fuperintendant-general of the pofts and mails within Spain, as well thofe that go out of Spain or come from abroad; and Benjamin Keene, Efq; minifter plenipotintiary from the moft potent king of GrearBritain to my royal perfon, by virtue of the full powers that have been given to them by me, and by the faid moft ferene king, a treaty upon the equivalent that Spain is to give in confideration of the four years of the Affiento contract for negroes, and of the grant of the annual thip that Great-Britain bas not enjoyed on account of the laft war, and about all the differences that did fublift between our two crowns. The faid treaty is actually as follows :

## [Fiat infertio.]

Therefore, after having feen and examined the faid treaty, it have thought proper to approve of and ratify the fame; as by virtue of the prefent I do approve of and ratify the fame, in the beft and moft ample manner I can; promifing, in faith of my royal word, to fulfil it entirely in the manner as it is therein contained and expreffed: to this end $I$ have ordered the prefent to be difpatched, which is figned with my band, feal d with my privy-feal, and counterigned by my underwritten counfellor of ftate and fecietary of the univerfal difpatch of war, of Indies, marine, and of the revenues. Given at Buen Retiro on the 5 th day of December, one thoufand feven hundred and fifty.
(L, S.) I THE K ING. Cenon Dè Somodevilla.

SPAIN is fituate on the moft weftern part of all the continent of Europe, and is encompaffed on every fide by the fea, except on the fide of France, from which it is feparated by a continued ridge of mountains called the Pyrennees. On the eaft and fouth it is bounded by the Mediterranean, the Streights of Gibraltat, and part of the Atlantic Ocean; on the weft by the fame ocean; and on the north by the fea called the Bay of Bifcay and the Pyrennees. Its fite is in the temperate zone, between the 3 6th and $44^{\text {th }}$ degrees of north latitude, and confequently under the fixt, feventh, andh 10 B and conequenty under the lixt, leventh, aighth
eighth climates; and in length it extends itfelf from the roth degree of weft to the third degree of eaft longitude, that is, 13 degrees from eaft to weft, and nine degrees from noth to fouth.
This kingdom is divided into fourteen provinces, viz.

| 1. Galicia, | 6. Catalunia, | 11. Eftramadura, |
| :--- | :--- | :--- |
| 2. Afturias, | 7. Valencia, | 12. Andalufia, |
| 3. Bifcay, | 8. New Catille, | 13. Granada, |
| 4. Navarre, | 9. Old Cattille, | 14. Murcia. |
| 5. Arragon, | 10. Leon, |  |

5. Arragon, The foil of Spain has been mifreprefented as'dry and barren by feveral writers, who appear to have had no knowlege of it. We may even affirm, that its moft mountainous and barren parts do produce fomething for ufe. Some are covered with ftately trees of feveral forts, either for timber or fuel. The rocky parts abound with wild thyme, marjoram, and other aromatic herbs, which ferve to feed a vaft number of fheep; gats, \&xc. and give their milks and fleh a more exquifite relifh than any that is fed on the richeft paftures; and if thefe happen to be fcorched with too much heat in fummer, the cattle are driven down to the fides of the hills, where they find plenty of thofe berbs, and meadow grounds well watered by the great number of rivers with which the country abounds; fo that at the worff they never want a fufficient quantity of herbage to fupply their numerous flocks. Other mountainous and rocky lands produce quantities of a famed plant called by them efparto, of which they make all kinds of ropes and other cordage.
The Spanifh wheat is inferior to none, if not the very beft in Europe, and the common product of it more tha: the natives can confume. Barley is here very good, and in fuch plenty, that it is the common grain for their borfes and mules, intead of oats, which are here very fcarce; and the fraw of it ferves them likewife inftead of hay, of which they make hardly any through the kingdom.
Wine they likewife have in fuch abundance, that the pooret people drink it ; and as to its goodnefs and the great variety of it, we need fay the lefs, as moft men are fufficiently acquainted with the various forts of it; fuch as the Malaga, Sherry, Galicia, Alicant, Barcelona, and much greater number of others, which feldom, if ever, come among us, though nothing inferior to thofe above named.
As for fruits, they not only have the different forts in much higher perfection, which either naturally grow, or which we cultivate with fo much pains here in England, but likewife many others, which, with all our art, cannot be brought by us to any tolerable ripenefs, and with which we are more eafily fupplied from them; fuch as citrons, lemons, oranges, almonds, raifins, prunes, olives, dates, figs, chefnuts, pomegranates, capers, and a multitude of ochers too tedious to enumerate. The fame may be faid of their herb's, fowers, and medicinal plants, which, though excellent in their kinds, yet grow moft of them wild here, when in other places they could not be produced without great art and induftry.
Their oil, wax, and honey, are allowed to be as good as any in the world. Few countries exceed this for plenty, goodnefs and variety of fowl, both wild and tame. Of four footed game, as deer, both red and fallow, hares, rabbets, and particularly wild boars. As for their tame lwine; all that have had experience of it, allow that the Spanifh bacon exceeds even that of Weftphalia. Their fheep are moft exquifite in tafte, but they are ftill more valuable for their incomparable wool, which all their neighbours, and nobody more than our clothworkers, can teftify to exceed any in more than our clothworkers, can teltify to exceed any in
Europe. Above alt, we muft not forget their horfes, greatly famed for their exceeding celerity, thofe efpecially that are bred in large quantities in Eltramadura, and parts adjacent, are reckoned the fineft and $\{$ wifteft. Other provinces breed, indecd, great quantities of them, an:d equally ferviceable, but neither fo beautiful nor of fo great value. The Spaniards were, from the cariiff ages, very curious in their breeding of good horfes, and very dextrous in the ufe and management of them, efpecially in the field. As for the other fervices of that ufeful creature, fuch as carrying, drawing, plowing, \&rc. they have here their mules in great quantities, which feem much more fitted by nature for fuch drudgery, as well as for going over the moit craggy and mountainous parts of the country; beirg both larger, ftronger, and furer footed, than the horfes, though nothing fo fwift. Many of them are 16, and fome even 17 , bands high, and carry very heavy burthens over fuch rocky parts, and with fuch eafe and fteadinefs, as is quite aftonifling to thofe who are not accuftomed to them.
The filken manufacture is here fo encouraged, that we are told, above a million of people are employed in feeding, gathering, and curing filk-worms, and in fiming, weaving, and making ail kinds of fiks, fuch as fattin, damafk, tabby, velvets, hags, and many other furts. The fame may be faid of their cotton, hemp, and flax, which likewife grow here in lorge quantities, and employ a proportionable number of hands; not to mention their (carlet dye, faffron, fugar, pitch, rofin, and other conmodities, that grow above grourd. If we dive into the bowels of the earth, we fhall find gold, filver, quickfilver, which latter they fend in large quantities,
into the Weft-Indies; their lead, copper, and excellent iron, the beft of which is dug from the mountains of Bircay, and is fent all over Europe, as exceeding any other in goodnefs; they have great plenty of fulphur, allum, calamine, and other minerals; as likewife of ject, agate, cornelian, granates, cryftal, marble, alabafter, jafper, and other fones. With relation to their gold mines, it muft be owned that they have quite neglected them ever fince they have been able to draw fuch immenfe quantities of that metal from America. But anciently they had it in as great plenty, or much greater plenty, out of their own.
The healthfulnefs of this country may be gathered, not only from its excellent fituation and ferene fky , but likewife from the foutnefs and longeviry of its ancient inhabitants, whilf they gave themfelves up to a habit of exercife and temperance ; in which laft they always did, and do fill excel all the other nations in Europe.
Having thus far run through all that need be faid in general concerning this councry, we fhall now take a view of it with refpect to each of its particular kingdoms and provinces, in the fame order as we have before sanged them.
The kingdom of Galicia is wafhed on the weft by the Ocean, on the north by the Cantabrian Sea or Bay of Bifcay, on the eaft it borders upon Affurias and Leon, and on thefouth upon Portugal, from which it is parted next the fea by the river Minbo.
This fmall kingdom produces wheat, millet, all kinds of herbs, plenty of cat le, efpecially hogs, whofe bacon far exceeds that of Weftphalis, ftrong mules, good horfes, though not large; but it is moft famed for its noble wines, particularly that of Ribadavia. They have plenty of firing and of timber for building houfes and thips. They have likewife quarries of fine marble, end fome flax is here produced, with which they make a pretty good fort of linen.
Corunna, a famed ancient fea-port town on the Cantabrian Sea, or Bay of Bifcay, called by our feamen the Groin. It is by its fituation well fenced againft the winds, and againft the enemy by two flrong cafles. It ftands between the two famed promontories of Finifterre and Ortegal, and is wealthy, being a place of confiderable trade.
The principality of Asturias. This principality lies on the north fide, along the Bay of Bifcay, borders on the weft on Galicia; on the fouth it is divided from Caftille and Leon by a ridge of mountains, called the Afturian Mountains, fince they are the boundaries between that and thofe two provinces. On the coafts it reaches to the port Llanes, now Santillana, where it joins a narrow flip of land belonging to Old Caftille, which rurs into the fea between Afturias and Bifcay. The whole length of Affurias is about 135 miles, and 60 in breadth. It is generally divided into two parts or diftricts, the one called Afturias de Orviedo, and the other of Santillana. But it is farther fubdivided into feven merindades, or liberties, befides a little province called Liebana.
This little province of Liebana is about 27 miles long, and 12 broad. It is one of the moft craggy and mountainous parts of Spain, exceffive high, and almoft inacceffible. Thefe mountains are called Europe, and are in full front of the fea, and produce plenty of corn, wine, fruit, cattle, and game.
The lordhip of Biscay. Bifcay, as generally taken, is divided into three provinces, viz. Bifcay properly fo called, Guipuicoa, and Alaba or Alava. The whole is bounded on the weft by that flip of Old Caftille which reaches to the fea, and, as was hinted under the laft article, . parts Afturias from Bifcay on the fouth. The ridge of mountains formerly mentioned as branching from the Pyrennees, parts it from Old Caftille on the fouth-eaft ${ }_{2}$ as the fame mountains part it again from Navarre, and the river Cidarfo from France on the eaft, and all the north fide is wafhed by the Cantabrian Sea, called commonly the Bay of Bifcay.
The country is mountainous and barren, producing neither wheat, barley, 'wine, nor oll, but abundance of millet-feed and fruit, which make cyder in plenty. Some flax is likewife produced in their vallies, and abundance of timber for fhipping on the hills. But their greateft treafure lies in their inexhauftible mines of iron, which is reckoned the beft in the warld, and is tranfported thence into all parts.. Here are whole towns of fimiths, that carry on the fmithery manufactory, and make all forts of iron-work, èpecially fwords and fire-arms, very elegant and in great quantities. There is likewife a great deal of wool hipped off from their fea-ports into foreign parts, but moft of it is brought hither from Old Caffille. Some, however, they have here, but as it is neither fo fine, nor in any quantity, they manufacture it wholly for their own ufe.
Biscay, properly fo called, borders on the weft upon that lip of Old Caftille which extends itfelf to the fea, on the fouth upon Caltille, and part of Alava eaftward upon Guipufcoa, and has the Bay of Bifcay on the north.
BrlboA, thoushocity, is now the capital of Bifcay, it being a place of great tiade, by reafon it has a good poit, fmall veffels coming up to the mole,' and others of greater buik lying farther out. The greateft export here is of their fine woul and exquifite iron, moft of the latter in bars; though great quantities of that wrought me:al alfo are thipped off, fuch as
fwords, fire-arms, horfe-fhoes, and other fuch-like military neceflaries. The town ftands fix miles diftant from the fea on the river Ibaichaval.
Guipuscoa follows next, as it runs along the fame coalfs of the northern Sea or Bay. It borders weftward upon Bifcay, Preper and part of Alava, fouthward on Alava and Navarre, and eaftward on Navarre and France.
St Sebastian, a noted port on the Bay of Bifcay, nine miles from Fuentarabia, and almoft inclofed with rivers, which fall into the fea in the neighbourbood of it, particularly that Which they call the Branco. The mole will receive two ,hundred flips.
Azava borders weftward on Bilcay and Old Caftille, fouthward on Caftille hill, enftward on Navarre, and northward on Guipufcoa and Bifcay.
The kingdom of Navarre. This country is divided from France on the north by the Pyrennees, which alfo cut it into two parts, diftinguifhed into Upper and Lower; the former, much the larger, and on the Spanilh fide, is the kingdon we are now to fpeak of; the other beyond thefe mountains is by much the fmaller, and belongs to France. This we are now upon, borders upon Bifcay and Old Caftille on the weft, on Caftille and Arragon on the fouth, and eaftward upon Arragon. Its length about ninety miles from north to fouth, and about eighty in breadth from eaft to weft.
Navarre is divided into five diftricts, viz. Pampelona, Tudela, Estela, Olite, and Sanguessa, which are parted by prodigious high mountains; yet yielding good corn, and other grain, wine, oil, honey, fruits and herbs, and affording plenty of food and pafture for their cattle, befides an infinite number of fowl, both wild and tame. Thefe mountains produce metals and minerals, and had formerly feveral rich mines of gold and filver, though now either exhaufted or neglected. Here are likewife abundance of fine fprings, hot baths, and other medicinal waters.
The kingdom of Arragon. This kingdom is bounded on the north by the Pyrennees, which divide it from France; on the weft it has Navarre and New and Old Caftille; on the fouth the kingdom- of Valencia ; and on the eaft, part of Valencia and the principality of Catalonia: The whole length from north to fouth is 210 miles, and its breadth between 100 and 120. The country is mountainous, but full of delightful wales, and extraordinary fertile, which produce great plenty of wheat, wine, oil, faffron, and fruits of the moft delicious kind. They breed allo great quantities of cattle, and abound with all forts of fowl, both wild and tame. The mountains are faid to have mines of gold, filver, and other metals; but Jittle is made of any of them, except iron. Here are likewife very confiderable rivers, and plenty of good fifh: the moft remarkable of the rivers is the Turio, which fertilizes a great part of the country, not by an overflow like that of the Nile, but by its flow and gentle courfe, which gives opportunity to the huibandmen and gardeners to cut channels from it to water their lands, infomuch that we are told their frees will bear fruits three, and often four, times a year; and not only in great plenty; but in fúch variety, that they reckon no lefs than 400 forts produced in this kingdom. Their orchards, gardens, and pafture-grounds, are likewife much admired for their continual verdure and fertility. In a word, Arragon is on all thefe accounts, as well as for the extraordinary ferenity of its air, compared to Egypt. The Mediterranean helps very much to enrich the country, both by foreign traffic, and the great quantity of fifh which is caught on thole coafts.
SARAGOSSA, the metropolis of this' kingdom, is an ancient and opulent city, feated almoft in the heart of it on the bank of the Ebro, and in a fertile and delightful plain, watered with three other rivers, viz. the Xalon, Gallego, anid Guerva. It lies in the 41 ft degree of latitude, and in $1 \frac{x}{2}$ degree of weft longitude. The city is of an oblong form. It is rich and populouss and carries on a great commerce, and a confiderable number of trades and manufactures both within and without the walls. "The country round about it is very fertile and beautiful, and produces every thing that is neecellary, comfortable, and delightful ; corn, wine, oil, fruits in great plenty and variety, fiin and fowl of all forts, and all chiely owing to its excellent fituation.
Catalonia is bounded on the north by the Pyrennees, by which it is parted from the province of Rouffillon in France, on the weft by Arragon, and a fmall part of Valencia; from the firft of thefe it is leparated by the rivers Naguera and Mataruna, and a ridge of hills, and from the latter by the river Genia. On the fouth and eaft it is wathed by the Mediterrinean, and has many convenient fea-ports by the Mediterrmean, and has many convenient fea-ports
along thofe fhores. The inland is a mixture of plains and along thofe fhores. The inland is a mixture of plains and
mountains; that part next to France is the moft mountainmountains; that part next to France is the moft mountain-
ous, but farther in, it abounds with delightful and fpacious plains. The climate, which reaches from 41 to 43 degrees of north latitude, and from one degree to 3020 eaft longitude, is therefore neither fo hot as Andalufia, nor fo cold as Afturia, and the north part of Spain, being moreover fheltered on the north by the Pyrennees, and on the eaft by the fea. This temperature, joined to the many ftreams and rivers with which the country abounds, makes it exceeding
fertile and delightful. Its product, which is here in great plenty, is excellent wheat; rich wine, fweet oil, exquifite honey, delicious fruits of all forts, abundance of cattle fwarms of fowl, wild and tame, vaft quantities of deer hares, rabbers, and all other game : good hemp, fine flax faffron, variety of corn, and other grain, herbs, \&xc. a confiderable quantity of filk, fine wook, fifh of all forts; and in the greateft plenty, quarries of inarble, alabaifter, tand jafperftone, coral taken out of the fea; falt, and many other commodities:
BARCELONA is the capital of this province, and is inferior:to few in Europe that are not the courts of princes. It is pleafantly feated on the Mediterranean coaits, a little below the gulph of Lyons, and opens to the fea in a beautiful femicircle, which, together with its eminence and cafte, and the beauty of its churches and other fumptuous edifices, affords a mott delightful profpect to the fhips.thar fail by or to it, efpecially as it flands berween two confiderable rivers, the Lobregat and Bezes, which pay their tribute to that fea on each fide of it. The coaft it ftands upon is a good fafe road, and the port, though rather too fmall, hath yet rendered it a place of great trade, efpecially when Indian commodities were broughe from Turkey and Egypt through the Mediterranean. Its fituation is on a fpacious plain, at the foot of the mountain Monjuyque. Its territory round is fored with all neceffaries for fuftenance and delight, as wheat and other grain, oil, rich wines, fruits of all forts, cattle, fowl, honey, wood, and game of all kinds.
Tartagona, now the fecond city in this province, flands commodioully fituate, near the coaft of the Mediterranéan, on the brink of a pleafant hill, at the foot of which is a fafe and convenient harbour, for fmall ©hips, between the rivers Gaya and Francoli.
The climate here is fo temperate, and the foil fo rich and warm, that the trees bear fruit, and bloffom, in the coldeft months. The territory is adorned with delightful gardens, orchards, and country-feats; the fields abound with corn, wine, oil, flax, hemp, and fruit of all forts, in the higheft perfection, with all kind of fowl and game, and of finh from the fea.
Tortosa is fituate on the bank of the Ebro, not far from the fea, and has a good bay, formed by that river, that comes up almoft to the walls of it. Without the city is a moft beautiful plain, 18 miles long, and 6 in breadth, watered by the Ebro, and producing corn, wine, oil, fruit, timber for fhipping, great quantity of palm-trees, with cattle, fowl, game, and other neceffaries, befides filk in abundance, which is here made in farifenets. Here are likewife a great many curious fprings, which fertilize the plain, and fupply the city with water, befides quarries of marble and jafper, one within two miles of the city, and fome falt-pits.
Vicque is pleafantly fituate, in a kind of peninfula, made by the rivers Ter and Naguerra, which almoft incompats it: It ftands 36 miles north from Barcelona, at the foot of a hill, near a fertile and delightful plain. On the mountain Mofen, about fix miles from the city, are found excellent white and purple amethyfts, and topazes: they are dug out of a fat, reddifh, or yellowihh earth, and the beft fort of thefe laft are thofe of the deepeft violet. In the neighbouring mountains are likewife found fome gold, emerakds, and other precious ftones, but in fo fmall a quantity as not to anfwer the fearching for them.
Cardona ftands about 60 miles diftant from Barcelona: near this city is a mountain of falt, which yields an annual revenue of 30,000 pieces of eight: the falt is tranfparent, and, when powdered, is exceeding white.
The kingdom of Valentia. This kingdom lies, on the eaft, along the Mediterraneain coafts, facing the iflands of Majorca and Ivica, except only a fmall part towards Catalonia, which is parted from it by the river Cenia; on the north it has the kingdom of Arragon; on the welt New Caftille and Murcia; and the fmall track of it which runs toward the fouth, borders upon the laft-named kingdom of Murcia. The greateft length of Valentia is about 210 miles, and its greateft breadth about 48 .
This whole kingdom is fo delightful, as to be compared to an earthly paradife. The air here is evéry whiere fo temperate, that this part einjoys a perpetual foring: the trees are always covered with verdure and blofloms, the air very ferene, and the weather fo moderate and pleafant, as never to be.either exceffively hot or cold, nor diffurbed by immoderate rains;' upon all which actounts it is univerfally allowed to be the mott delightful part of Spain, and, by many, even of all the world. The"furprizing excellence of its foll and climate, is the caure that the whole country is filled with noblemens and gentlemens fears, and covered with exquifte gardens, pleafant orchards, delightful groves, fertile fields, and pafture grounds; and where the land is not employed for delight, it produces immenfe plenty of corn, wine, oil, honey, flax, and all kind of herbage; allo flowers and fruit in great variety. To all which we may add, that the fugar, rice, and filk it produces, one year with another, is reckoned to amount to three millions of pieces of eight. Here are likewife mines of gold, filver, and other metals; befides great quant ty and

## S P A

## S P A

variety of precious ftones, which formerly amounted to an immenfe value; but they are now wholly neglected. Here is alfo abundance of allum, the beft and fineft white lime, and plenty of cochineal.
The earth about Valentia, and other parts of this kingdom, is fo well cultivated, that, by Mr Willoughby's confeffion, they generally have five crops a year, efpecially of mulberryleaves for filk-worms, of wheat, and other grain, grapes, olives, maiz, or Indian wheat, and fugar-canes.
Valentia, the noble and ancient capital of this kingdom, is feated on the fhady banks of the river Turio, over which it has five ftately bridges, and ftands about two miles from the fea. It lies in 39 degrees 20 minutes of north latitude, and about 15 minutes eaft longitude. Its diftance from Madrid, the now metropolis of Spain, is about 180 miles, fouth-eaft; from Barcelona, fouth-weft, about the fame number; and fouth from Saragoffa about I35. Its fea-port, named Grao, which ftands on the Mediterranean, about a mile and a half from the city, furnifhes it with every thing either for conveniency or delight, the fea fupplying it with an extraordinary variety of fifh, the neigbbouring lake of Albufera, or little fea, with great abundance of water-fowl and frefh-water fifh; and the fertile country about with the greatelt plenty of corn, wine, oil, fruits, herbs, and other provifions. It is inriched by the number of quality and gentry which live in it, by its great commerce, and the variety of manufactures that are carried on here, efpecially the woollen, fo that the cloth that is made here is reckoned the fineft in all Spain.
Alicant is a famous city and fea-port on the Mediterranean, diftant from Murcia, towards the north-eaft, 42 miles, 60 fouth from Valentia, and about 210 from Madrid. It is a place of great trade, by reafon of its commodious harbour, and well known to the Englifh, for the delicate wines and delicious fruits, which they bring from thence.
The kingdom of New Castilef. This country is bounded on the north by Old Caftille, from which it is every way divided by mountains, which are only known by the names of the countries they run through; on the eaft it is parted from Eftramadura, by another chain of them, called Guadalupe, and la Sarena; on the fouth from Andalufia, by thofe called' Sierra Morena, and by an imaginary line from Murcia; and on the eaff by the river Segura, and mountains of Almanza and Requena from Valencia; and from Arragon by thofe of Maya, Daroka, and Molina. The length of this kingdom, from fouth to north, is about 180 miles, and pretty near the fame in breadth, where it is wideft, but its figure is irregular in the latter.
The country being all inland, and furrounded with fuch hish mountains, which contract the fun's rays as it were into a focus, and, at the fame time, fupprefs the free paffage of the cooling fea breezes, its climate is confequently hotter in fummer, and colder in winter, than thofe which lie along the fea-coafts, under the fame latitude. It is neverthelefs very healthy, and its foil generally fertile, producing abundance of wheat, and other grain, plenty of wine, oil, fruit, and herbs, feeds a great quantity of cattle, all forts of fowl, wild and tame, and is very well fupplied with variety of fifh and green pafture, by the many rivers that run through it.
Toledo is built on a high, fteep, and craggy rock, almolt inacceflible on all fides, and made much more fo by the courfe of the river Tagus, which encompafles it almoft round, and over which it has two noble bridges. Here are a great num. ber of merchants, tradefmen, and artificers, efpecially in the filk and woollen manufactures, which two branches alone are faid to have employed near 10,000 hands. Toledo is about 36 miles diftant from Madrid.
Talavera de la Reyna is delightfully feated on the river Tagus, 36 miles weft from Toledo, and is much famed for its woollen manufacture of ftuffs, and particularly for an extraordinary kind of fine earthen ware that is made at it.
The kingdom of Old Castilie. Old Caftille was formerly part of the Roman Tarracconenfis, and borders all the way on the fouth to New Caftille, from which it is divided by a ridge of mountains, which change their names according to the places of note they pafs through, as Motina, Siguenca, Segovia, \&c. by that chain of them which is called Sierra de Tablada, and by thofe of Pica and Banos, from Eftramadura, on the weft; and by thofe of Avila and Perina, with the little rivers of Carrion, Pifuerga, and Heban, fromJeon on the north-weft. It is parted again on the north from Afturias and Bifcay by another ridge of hills, branching out from the Pyrennees; only in the center, between thefe two provinces, it hath a narrow llip of land, which reaches quite to the bay of Bifcay; laftly, on the eaft, the Ebro and mountains of Doea, for a confiderable length, part it from Navarre and Arragon. The greateft extent of this province, from north to fouth, reaches from 40 . 10 . to 43. I5. degrees of latitude and from 1. 30 . to 4 , 10. degrees of welt longitude; that is, about 180 miles, and near about the fame number from eaft to weft ; that is, both ways taken where largeft, for its figure is very irregular, and not near anfwerable in other parts. The climate here differs fomewhat from that of New Caftille, on account of the country being more mountainous, which makes the feveral parts vary, according to their fituation, the
vallies being exceffive hot, the upper ground proportionably cold and bleak, and others, according to the proximity of the hills, fend down refrefhing gales, or caufe a greater reflection of the fun. But, upon the whole, the foil is generally good in fome fenfe or other, the plains yielding plenty of all forts of grain, fruit, wine, and other provifions, the fides of the hills good pafture for their numerous cattle, and the tops tim ber for building and fuel. Some of thefe fummits are fo high that they are covered with fnow. all the fummer, which is carried and fold to the towns, as is ufual through all Spain, to cool their wine.
Walladolid fands on the bank of the river Pifuerga, on a pleafant rifing ground, and a noble profpect all round it, as itfelf yields a delightful one to the beholders, from its fine fituation and grand edifices.
This city is populous and opulent- through not only the great number of rich and noble families who make their chief refidence in it, but much more fo by the large commerce, manufaclures, and other inferior trades which are carried on here. The woollen manufacture is here the beft and moft confiderable in all Spain, for here is a valt quantity of the fineft wool produced, from innumerable flocks ibat are raifed in the neighbouring plains; and the cloth that is made here is reckoned the beft in all tre world, and in high efteem both at home and abroad. Here are alfo fundry other manufactures and trades carried on, with great induftry and fuccefs.
The kingdom of Leon. This kingdom, properly fo called, is now bounded by the Aflurian mountains; on the calt it has Old Caftille, from which it is divided by the muuntains of Pernia, and the rivers Carrio and Pifuerga, as far as the Ebro, then by thofe of Heban and Reganno, 'till you come to the mountains Bonilla de la Sierra; on the fouth, the mountains of Bannos, and another ridge, divide it from Eftremadura; and, on the weft, the rivers of Agueda, Duero, and a chain of mountains, part it from Portugal, as does the fame ridge of bills continued, from Gallicia. The whole extent of Leon, from morth to fouth, is about 120 miles, that is, from 42 to about 40 , and from eaft to weft about 90 ; that is, from 4. 20. to 5. 40. eaft longitude. The river Duero runs almoft acrofs the middle of it, leaving one half on the north, and the other on the fouth.
As this kingdom lies in the fame climate and latitude with that of Old Caftille, to which it is contiguous, and is, like it, intermingled with ridges of high hill, capacious vallies, and campaign plains, which occafion pretty near the fame degrees of heat and cold, dry and moift; its foil and temperature differ ver. little from that, and its ground brings forth near the fame productions, fuch as excellent wheat, and other grain, pafture and cattle, fine wines, oil, hotiey, fruit, game fowl, and the like. The natives are bere likewife robuft, hardy, laborious, brave, temperde, and lovers of learning. The mountais have alfo fome minerals, but chiefly quarries of excellent marble, and veined alabater, jafper-ftonec, and fometimes others of greater value, as turquoifes, garnets, amethyits, \&c.
The province of Estramadura. This province is divided from Portugal, or from the Portugueze Eftramadura, on the weft, by the rivers Elya, Caya, and fone others of lefs nete; on the north it joins on the kingdom of Leon, without any noted mountains or rivers to part them; on the eaft, the mountains of Banos, Pico, and Guadalupe, divide it from Old and New Caftille; and on the fouth it is parted from Andalulia by the chain of hills called Sierra Morena. The rivers Tajo and Guadiana running through it from eaft to weft, divide it into three parts; the moft northern is that which is beyond the Tajo, the next is between that and the Guadiana, and the laft is that which is fouth of the Guadiana. The length of the whule province, from north to fouth, is 150 miles, that is, from $3^{3 .}$ to $40.3^{0}$. latitude; and in breadth, from ealt to weft, about 120 , that is, from 4. 40. to 6. 20. weft longitude.

The climate, indeed, is exceecing hict, and fomewhat fultry, being moftly inland, and wanting thofe cooling gales which the hills and the fea communicate to the adjacent provinces; but in all other refpects it may jufly be reckoned the pleafanteft and moft fertile not only in all Spain, but perhaps in the world. For an evidence of which, we need but initance in the moft celebrated plains called La Vera de Plafentia, of which it might fuffice to fay, that feveral of the Ancients placed the elyflan fields in it, as knowing of no place more delicious and beautiful. This noble plain is about $3^{6}$ miles in length, and 10 in breadth, and fo fweetly delightful, that it invites great numbers of the nobility and gentry to fpend the fummer in it. It hath 13 frall towns, or villages, and about 5000 houfes, all beautifully fituited, and neat, and all the reft is either covered with the greateft variety of fruit- tres which Europe affords, or beautifully varicgated and difpofed into olive groves, vineyards, gardens, orchards, meadows, and fields, producing plent, of corn, flax, \&c, and watered with many pleafant fprings and ftreams, yielding befides abundance of excellent fifh, efpccially rrout. Such is, in fine, the product of this valley, that of the territory of only four ineonhiderable villages, out of the $x 3$ that are in it, the pro-
duct is faid to have amounted, in one year, to 150 tons of oil, 550 of wine, 60,000 bufhels of chefnuts, an incredible quantity of wheat, and other grain; whilft other parts of it yielded not only the like, or even larger quantities, in proportion, of the fame produce, befides fruits, flax, \&cc. but like. wife abundance of filk, wax, honey, faffron; and fuch like, befides pafture, and great quantities of catele.
Andalusia province is divided, on the north, from Eftramadura and New Caftille, by the Sierra Morend mountains; on the ealt from Portugal, by the river Chanca, and from Algarve by the Guadiana; on the fouth it has the ocean, the mouth of the Streights, and part of the Mediterranean; and along the fouth-eaf it has the kingdom of Granada.
No province in Spain exceeds this in fertility and commerce the latter is owing to its maritome fituation, and convenient harbour. The great quantity of wine and oil is fo extraordinary; as to be almoft beyond credit. Their cattle, alfo, are numberlefs. Fine oranges, citrons, raifins, almonds, pomegranates, and figs, are the natural growth of this province. They bave great plenty of fine falt and fugar, and celebrated breed of horfes.
Sevilefe, its capital, fituate on the river Guadalquivir, and in one of the mof beautiful plains of Europe.-Here is an In-dia-houfe, for the regulation of their Weft-India trade, a fine exchange, and mint.-The filk and filver ftuffs are the moft confiderable manufactures carried on here, with thofe of foap and pottery-ware.-Without the city are falt-pits, and quarries of marble.-Along the river are many commo dious keys, where fhips of good burthen may fafely lie.
Cordova ftands on a delightful plain : befides the extraordi nary fertility of its foil round about, which fupplies it with plenty of fine wheat, oil, fruits, 8x. it carries on a great variety of trades and manufactures; and, among the latter, the woollen and filken, of the fineft kind, and that of a curiou gilt leather. It is famed alfo for a breed of fine horfes.
Cadiz is next in rank to the royal cities; it is very advantageoufly fituated for commerce; the facioufnefs of the harbour, feated upon the ocean, fo near the Mediterranean, draws thither a concourfe of fhips and merchants, to purchafe the product of Spain, and, of late years, of the Weft-Indies, which are now firft brought hither.
Xeres dela Frontera is well fituate on the fmall river Guadaletta, about fix miles from the fea. Its territory is fo rich and fertile, that, befides great quantities of wheat, fruit, cattle, and other provifions, it yields 60,000 pipes of fherry yearly. It has alfo a good brood of horfes.
Ezija feated on the Xenil, and on a delightful plain, producing immenfe quantities of corn, wine, oil, filk, and cotton.
Gibraltar, a well-known fea-port, on the mouth of the Streights. See our article Mediterranean, for its confequence to Great-Britain, as being now in her poffeffion.
Baeza, fituate about three miles from the Guadalquivir; it is remarkable for the dyeing of very fine fcarlet cloth, and making of rich taffeties.
San Lucarde Barameda, about 45 miles below Seville, and ferves as a port to that famed city; it was much more confiderable than at prefent, before the Spanifh Weft-India fleets were allowed to fet out from, and return to, Cadiz.
Port St.Mary is feated on a plain, at the mouth of the Guadaletta river, and is much frequented, on account of its commodioufnefs.
Carmena fands in the center of Andalufia, and has very fertile and fpacious plains, which produce great plenty of all things.
Lucena is as delightfully fituated as moft cities in Europe, few fpots of ground producing greater plenty of delicious wine, oil, and choice provifions, than this territory does.
Moguer, feated on the banks of the river Azige, or Tinto. Its river is remarkable for its colour, or dye, it being impregnated with fome mineral, which not only gives a yellow tinge, but petrifies all the fand it runs over.- It has no other good quality, except that of curing worms in cattle.
There are in this province feveral towns of fome note, though under the degree of cities; but as they are not remarkable for any confiderable traffic, we fhall pafs them over in filence.
The kingdom of Granada. This kingdom is divided, on the north, from the province of Andalufia, by the mountains of Cazorla, Sierra Morena, Segura, and fome others; on the eaft, another chain of mountains divides it from Murcia; on the fouth it is contiguous again to Andalufia, without any noted boundaries; and on the weft it is bounded and wafhed Ey the Mediterranean. The whole length of it, from eall to weft, is about 210 miles; the greateft breadth exceeds not $77^{2}$; and the whole circumference fomewhat above 500. This country, befides thofe immenfe quantities of corn, wine, oil, fruit, cattle, game, fith, \&c. which it hath in common with the fineft provinces in Spain, we have already taken notice of; here the mof craggy mountains are every where covered with vines, fruit-trees in the higheft perfection, and what would to fome of our readers appear incredible, if not attefted by fo many undoubted eye-witneffes, bere are bunches of grapes, that, like thofe of the promifed land, are obliged $\stackrel{\text { of grapes, }}{ }$ V. II.
to be carried on a pole; between two men; and fome of them; we are alfured from perfons of veracity, have weighed $40^{\circ}$ pounds. Sugar is here likewife cultivated in great plenty, and that which grows here exceeds any in Spain for finenefs. Silk is likewife manufactured in fuch quantimes, and great variety, as to be fifficient to ferve the whole kingdom, befides what is exported.
Thofe fields, bills, and other places which are zeokoned the moft barren, are covered with thyme, marjosann, lavender, and other aromatic herbs, which their catule feed upon, and give their flefh a deficious and exquifite taife; laurel, myrrle, fweet bafll, and other odoriferous fhrubs, grow likewife here, to fuch beight and abundance, that they make their hedges of them: fo that if we confider it either with refpect to its furprozing fer tility and plenty of all things forfood and delight or to the admirable profpect of its bills and dales, or the fragrancy of its fruits and herbs, no country feems to approach nearer to the idea we may bave of an earthly paradife than this. If we add to all thefe, its excellent maritime fituation, number of commodious harbours and ports, and its vaft exports and imports, the number and opulence of its cities, we foal eafily own, that this little kingdom mult have been one of the nobleft and fineft in all Spain.
Malaga is an ancient city, and commedious fea-port. There is nothing but conjecture can be offered about its name; yet, confidering the commodioufnefs of its port, its fituation, both for inland and foreign commerce, we need not doubt but it was built in fome of the earlieft times, and, in ald likelihood, paffed through the hands of thofe trading nations which occupied fucceffively the Mediterranean coafts, in oone of the pleafantef and modt convenient parts of which it stands. As the fituation of this place ss in a foe fertile plain, furrounded with hills, mountaims, and grounds, aH of them covered with vines, and the greatelt variety of fruits, it may be allowed to yield one of the moft beautiful profpects, both from land and fea, of any place on thefe coafts: and how fine their wines, raifins, almonds, figs, lemons, oranges, and other fruits are is well known, from the great quantities of them bronght hither from thence, helides the valt quantities that are exported into other parts of Europe. Its diftance from Madrid is about 260 miles fouth, and a little to the well ; 75 foutheaft from Seville; and about the fame diftance fouth-wef from Granada.
Antequera is pleafantly feated on the banks of the Rio de la Villa, part of the town ftanding on a hill, and the reft on the plain.
Near this city is a famed falt-pit, three miles in length, near two in breadth, which fupplies the whole territory with falt. About eight or nine miles from it is a fpring, that diffolves the fone, and brings it away by urine.
This city fands about 220 leagues fouth from Madrid, 75 fouth-ealt from Seville, 72 fouth-weft from Granada, and about 15 fouth from the fea.
The kingdom of Murcia borders on the north upon New Caftille; on the weft it is parted from Granada and Andalufia, byt the mountains of Segura, and fome others, which fretch themfelyes into the fea, and partly by the kingdom of Valentia. Its greatef length, from north-weft to foutheaft, is about 100 miles, and its greateft breadth, from north-eaft to fouth-weft, about 70 . Its latitude is from 37 degrees 30 minutes, to $3^{8}$ degrees 50 minutes; and longitude 1 degree 40 minutes weft.
The climate here is fomewhat of the hoteft; but the foils, though mountainous, is exceedingly fertile, never failing but through extreme drought, and generally yielding great plenty of wheat, barley, wine, oil, fruits, pafture, and honey, in great abundance: but what makes the chief wealth of it is, the great quantity of filk which is here made and exported, and employs the greateft number of hands.
Murcla, the metropolis of this kingdom, is fituate in a fpacious and delightful plain, fo very fertile, that it often yields an hundred-fold in corn, befides all other grain, wines, oil, mentioned in the general account of the product of the country. Round about this plain are planted an infinite number of mulberry-trees, with whole leaves they feed as many worms as generally make, every year, $210,000 \mathrm{lb}$. weight of filk.
Murcia is computed to be diftant about 200 miles fouth-eaft from Madrid, 20 north from Carchagena, and about 90 fouthweft from Valentia,
Carthagena is feated on the fide of a hill, on the Mediter. ranean coalt, on the mouth of the river Guadalantin, and is a commodious, as well as one of the moft noted fea-ports in Spain. The harbour is likewife well fheltered from ftorms, by a fmall ifland called Efcombrada; it has good plenty of frifh water on the fhore, and exports great quantity of wool for Italy. The air is to temperate in fummer, and fo mild in winter, thit the trees are every where covered with leaves, bloffoms, and fruit. Befides thefe productions of the earth on the furface, its bowels yield likewife amethyfts, garnets, agates, and other fuch precious ftones.
Its diftance from Madrid is about 220 miles fouth-eaft, 27 fouth from Murcia, and 86 eaft from Granada.

Articles of Peace, Commerce, and Alliance, between the Crowns of Great-Britain and Spain, concluded in a Treaty at Madrid, the $\frac{5}{2} \frac{2}{3}$ day of May, in the year of our Lard God 6667.
I.

Firft, It is agreed and concluded, That from this day forward there thall be between the two crowns of Great-Britain and Spain, a general, good, fincere, true, firm, and perfect amity, confederation, and peace, which thall endure for ever, and be obferved inviolably, as well by land as by fea and Irefh waters; and alfo between the lands, countries, kingdoms, dominions, and territories, belonging unto, or under the obedience of either of them : and that their fubjects, people, and inhabitants refpectively, of what condition, degree, or quality foever, from henceforth reciprocally ihall help, affift, and fhew to one another all manner of love, good offices, and friendhip.

## II

That neither of the faid kings, nor their refpective people, fubjects, or inhabitants within their dominions, upon any pretence, may, in public or fecret, do, or procure to be done, any thing againft the other, in any place, by fea or by land, nor in the ports or rivers of the one or the other, but fhall treat one another with all love and friendhip; and may, by water and by land, freely and fecurely pafs into the confines, countries, lands, kingdoms, illands, dominions, cities, towns, villages, walled, or without wall, fortified, or unfortified, their havens and ports (where hitherto trade and commerce hath been accuftomed) and there trade, buy and feil, as well of and to the inhabitants of the refpective places, as thofe of their own nation, or any other nation that fhall be or come there.

## III.

That the faid kings of Great-Britain and Spain fhall take care that their refpective people and fubjects, from henceforward, do abftain from all force, violence, or wrong ; and if any injury hall be done by either of the faid kings, or by the people or fubjects of either of them, to the people or fubjects of the other, againft the articles of this alliance, or againft common right, there thall not therefore be given letters of reprizal, marque, or counter-marque, by any of the confederates, until fuch time as juftice is fought and followed in the ordinary courfe of law : but if juftice be denied or delayed, then the king, whofe people or inhabitants have received harm, hall afk it of the other, by whom (as is faid) the juftice fhall have been denied or delayed, or of the commifioners that hall be, by the one king or the other, appointed to receive and hear fuch demands, to the end that all fuch differences may be compounded in friendihip, or according to law. But if there fhould yet be a delay, or juffice fhould not be' done, nor fatisfaction given within fix months after having the fame fo demanded, then may be given letters of teprizal, marque, or counter-marque.

## IV.

That between the king of Great-Britain and the king of Spain, and their refpective people, fubjects, and inhabitants, as well upon fea, as upon land and freh water, in all and every their kingdoms, lands, countries, dominions, confines, territories, provinces, illands, plantations, cities, villages, towns, ports, rivers, creeks, bays, ftreights and currents, where hitherto trade and commerce hath been accuftomed, there fhall be free trade and commerce, in fuch way and manner, that, without fafe-conduct, and without general or particular licence, the people and fubjects of each other may freely, as well by land, as by fea and frefh water, navigate and gointo their faid countries, kingdoms, dominions, ahd all the cities, ports, currents, bays, difricts, and other places thereof, and may enter into any port with their ibips, laden or empty, carriage, or carriages, wherein to bring their merchandize, and there buy and fell what and how much they pleafe, and alfo at juft and reafonable rates provide themfelves with provifions, and other neceflary things for their fubfiltence and voyage; and alfo may repair their thips and carriages, and from thence again freely depart with their fhips, carriages, goods, merchandize, and eftate, and return to their own countries, or to fuch ether place as they fhall think fit, without any moleftation or impediment, fo that they pay the duties and cuftoms which fhall be due, and faving to either fide the laws and ordinances of their country.
V.

Item, It is likewife agreed, That for the merchandizes which the fubjects of the king of Great-Britain fhall buy in Spain, or other the kingdoms or dominions of the king of Spain, and fhall carry in their own thips, or in fhips hired or lent unto them, no new cuftoms, toll, tenths, fubfidies, or other rights or duties whatfoever, fhall be taken or increafed, other than thofe which, in the like cafe, the natives themfelves, and all other ftrangers, are obliged to pay; and the fubjects aforefaid buying, felling, and contracting for their merchandizes, as well in refpect of the prices, as of all the duties to be paid, Ihall enjoy the fame privileges which are allowed to the natural fubjects
of Spain, and may buy, and lade their flifis with fuch good. and merchandizes; which faid fhips being laden, and cul. toms paid for the goods, Thall not be detained in port, upon any pretence whatoever; nor thall the liders, merchans, or factors, who bought and loaded the goods aforefaid, be queftioned, after the departure of the faid fhips, for any matter or thing whatfoever concerning the lame.
VI.

And to the end that the officers and minifters of all cities, owns, and villages belonging to either, may neither demand, nor take from the refpective merchants and people, greater taxes, duties, ftipends, recompences, gifts, cr any other charges, than what ought to be taken by virtue of this treaty; and that the faid merchants and people may know and underftand with certainty what is ordained in all thingstouching this, it is agreed and concluded, That tables and lifts thall be put up at the doors of the cuftom-houles and regitter of all the cities, villages, and towns of, or appertaining to, one or the other king, where fuch rights, and excifes or cuftoms, are ufually paid; in which, how much, and of what quality, fuch rights, cuftoms, fubfidies, and payments either to the king's, or any of the aforefaid officers, are allowed, fhall be put down in writing, declaring as well the fecies of what is.imported, as what is carried out. And if any officer, or any ther in his name, upon any pretence whatfoever, in public or fecret, directly or indirectly, fhall afk or receive of any merchant, or other perfon refpectively, any fum of money, or other thing, by the name of right, due, 隹ipend, allowance, or recompence (though it be by the way of voluntary donative) more or otherwife than aforefaid, the faid officer or his deputy being in fuch manner guilty and convict before a competent judge in the country where the crime is committed, hall be put in prifon for three monthe, and fhall pay thrice the value of the thing fo received; of which the half fhalt be for the king of the country where the crime is committed, and the other half for the denunciator, for the which he may fue his right before any competent judge of the country where it fhall happen.

## VII.

That it fhall be lawful for the fubjects of the king of GreatBritain, to bring out, and carry into Spain, and all or any lands and dominions of the king of Spain (where heretofore they have ufed trade and commerce) and trade there with all kind of merchandize, clothes, manufactures, and things of the kingdom of Great-Britain, and the manufactures, goods, fruits, and kinds of the iflands, towns, and plantations to him appertaining, and what Thall have been bought by Englifh actors on this fide, or farther on the other fide of the cape of Buena Efperança, without being inforced to declare to whom, or for what price they fell their faid merchandize and provifions, or being molefted for the errors of the mafters of fhips, or others, in the entry of the goods; and at their pleafure to return again out of the dominions of the king of spain, with all or any goods, eftates, and merchandize, to any of the territories, inlands, dominions, and countries of the king of England, or to any other place, paying the rights and tributes mentioned in the antecedent chapters; and the reft of all their lading which is not brought to land they mav detain, keep, and carry away in their faid fhip or fhips, veffel or veffels, again, without paying any right or impofition whatfoever for it, as if therewith they had never been within any bay or port of the Catholic king. And all the goods, eftates, merchandize, fhips, or other veffels, with any things introduced into the dominions or places of the crown of Great-Britain as prizes, and judged for fuch in the faid dominions and places, fhall be taken for goods and merchandize of Great-Britain, comprehended fo by the intention of this article.

## VIII.

That the fubjects and vaffals of the moft ferene king of GreatBritain, may bring and carry to all and firgular the dominions of the king of Spain, any fruits and commodities of the EaftIndies, it appearing by teftimony of the deputies of the EaftIndia company in London, that they are of, or have come from, the Englifh conquefts, plantations, or factories, with like privilege, and according to what is allowed to the fubjects of the United Provinces by the royal cedulas of Contravando, bearing date the 27 th of June, and the 3 d of July 1663, and publifhed on the 3oth of June, and 4 th of July the fame year. And for what may concern both the Indies, and any other parts whatfoever, the crown of Spain doth grant to the king of Great-Britain and his fubjects, all that is granted to the United States of the Low Countries and their fubjects, in their treaty of Munfter 1648, point for point, in as full and ample manner as if the fame were hereIn particularly inferted, the fame rules being to be oblerved, whereunto the fubjects of the faid United States are obliged, and mutual offices of frieend hip to be performed from one lide to the other.

## IX.

That the fubjects of the king of Great Britain, trading, buying, and felling, in any of the kingdoms, governments, iflands, ports, or territories of the fald king of Spain, ihall have, ufe, and enjoy, all the privileges and immunities, which

## S P A

the faid king hath granted and confirmed to the Englifh merchants that refide in Andalufia, by his royal cedulas or or ders, dated the 19 th day of March, the 26th day of June, and the 9 th day of November 1645, his Catholic Majefty by thefe.prefents re-confirming the rame; as a part of this treaty between the two crowns. And to the end that it may be manifeft to all, it is confented, That the faid cedulas (as to the whole fubftance thereof) be paffed and transferred to the body of the prefent articles; in the name and favour of all and fingular the fubjects of the king of Great-Britain, refiding and trading in any places whatfoever within his Ca tholic Majefty's dominions.
$x$.
That the fhips, or any other veffels that fhall belong to the king of Great-Britain or his fubjects, navigating into the king of Spain's dominions or any of his ports, fhall not be vifited by the judges of contraband, or by any other officer or perfon, by his own, or by any other authority; nor fhall any foldiers, armed men, or other officers or perfons, be put on board any of the faid fhips ot veffels; nor fhall the officers of the cuftom-houfe of the one or the other party; fearch in any veffels or fhips belonging to the people of the one or the other, which hall enter into their regions, dominions, or refpective ports, intil their faid flhips or veffels are unladen, or until they have carried on fhore all the lading and merchandize which they declare they refolve to difembark in the faid port; nor thall the captain, mafter, or any other of the company of the faid thips be imprifoned, or they or their boats detained on fhore; but in the interim, officers of the cuftomhoufe may be put on board the faid veffels or fhips, fo they exceed not the number of three for each hip, to fee that no goods or merchandize be landed out of the faid thips or veffels, without paying fuch duties as by thefe articles either party is obliged to pay ; which faid officers are to be without any charge to the fhip or fhips, veffel or veffels, their commanders, mariners, company, merchants, factors, or proprietors. And when it happens that the mafter or owner of any hip fhall declare, that the whole lading of his faid fhip is to be difcharged in any port, the entry of the faid lading fhall be made in the cuftom-houfe after the ufual manner; and if, after the entry made, any other goods be foundfin the faid Thip or hhips, more than what are contained in the faid entry, eight working days fhall be allowed them on which they may work (which fhall be reckoned from the day they began to unlade) to the end, that the concealed goods may be entered, and the confifcation of them prevented. And in cafe that in the time limited, the entry or manifeftation of them fhall not have been made, then fuch particular goods only, which mall be found as aforefaid, though the unlading be not finifhed, thall be confifcated, and not any other ; nor fhall othe trouble be given, or punifhment inflicted on the merchant or owner of the fhip; and when the fhips or veflels are re laden, they may have freedom to go out again.
XI.

That the fhip or thips appertaining to the one or the other king, or to their refpective people and fubjects, that fhall enter into any ports, lands or dominions, of the one or the other, and fhall difcharge any part of their goods and merchandizes in any port or haven, being configned with the reft to other places, within or without the faid dominions, fhall' not be obliged to regifter or pay the rights of any other goods or merchandize, than of that which they fhall unlade in the faid port or haven, nor be conffrained to give bond for the goods they fhall carry to other places, nor any other fecurity, if it be not in cafe of felony, debt, treafon, or other capital crime.
XII.

Whereas the one moiety of the cuftom of all foreign goods and merchandize imported into England, is allowed and returned back to the importer, if the faid goods be exported out of the faid kingdom within twelve months after their firft landing, upon oath made that they are the fame goods which paid cuftom inwards, and that if they be not re-fhipped within the faid twelve months, yet they may at all times be exported without paying any cuftom or duty outwards: it is therefore agreed, That if any of the fubjects of the king of Great-Britain fhall bereafter land any goods or merchandize, of what growth or nature foever they be, in any of the ports of his Catholic Majefty, and having entered them, and paid the cuftom by which this treaty ought to be paid, and fhall afterwards defire to tranfpott them, or any part of them, to any other place whatfoever, for a better market, it Ahall and may be lawful for him or them fo to do freely, without paying or being demanded any other cuftom or duty at all for the fame, he or they making oath, if required thereunto, that they are the fame goods for which cuftom was paid at their landing; and in cafe that the fubjects, people, and inhabi tants of the dominions of either part fhall unlade, or have in any city, town, or village refpectively, any goods, mer chandizes, fruits or eftates, and have paid the cuftoms due, according to what hath been declared, and after that, not being able to put them off, fhall refolve to remit them to fome other city, town or village of the faid dominions, they may not only do it without difficulty or impediment, and
without paying other rights than what were due at their eñ ry, but likewife the cuftom or rights thall not be paid a in any other part of the faid dominions, bringing certificate: from the officers of the cuftom-houfe, that they were paid before in the due form. And the chief farmers and commiffioners of the king of Spain's rents in all places; of fome other officer or officers to be appointed for that purpore, fhall at all times permit and fuffer the tranfportation of all fuch goods and merchandizes from place to place, and give fuffiient certificate to the owners thereof, or their baving paid their cuftom at their firft landing; whereby hey may be carried to, and landed at, any other port or place of the faid jurifdiction, free from all duties or impediments whatfoever, as aforefaid, faving alway the right of any third perfon.
XIII.

That it fhall be lawful for the thips belonging to the fubjects of the one or other king, to anchor in the roads or bays of either, without being conftrained to enter into port; and in cafe they be neceffitated to enter thereinto; either by diftrefs of weather, fear of enemies, pirates, or any other accident, in cafe the faid fhips be not bound to an enemy's port, and carrying thither contraband goods (whereof without fome clear proof they fhall not be queftioned) it thall be lawful for the faid fubjects to return to fea freely when they pleafe; with their fhips and goods; fo that they do not break bulk, or expofe any thing to fale; and that when they caft anchor; or enter the ports aforefaid; they be not molefted or vifited; and it fhall fuffice, that in cafe they fhew their paffports or feapapers, which being feen by the refpective officers of either king, the faid fhips fhall return freely to fea without any moleftatiott.

XIV
And if any thip or fhips belonging to the fubjects and merchants of the one or the other, entering into bavs, or in the open fea, thall be encountered by the thips of the faid ki gs, or of privateers their fubjects : the faid fhips, to prevent all diforders', fhall not come within cannon-fhot; but fhall fend their long-boat or pinnace to the merchant-fhip, and only two or three men on board, to whon the mafter or owner thall Thew his paffports and fea-letters, whereby not only the fhip's lading, but the place to which fhe belongs, and as well the mafter and owner's name; as the name of the fhip may appear ; by which means the quality of the thip, and her mafter or owner will be fufficiently known, as alfo the commodities fhe carries, whether they be contraband or not ; to the which paffiports and fea-letters, entire faith and credit fhall be given, fo much the rather, for that as well on the part of the king of England, as of the king of Spain; fome counter-figns fhall be given (if it thall be found neceffary) whereby their authenticalnefs may the better appear, and that they may not be in any wife falffied.
XV.

If any prohibited merchandize or goods thall be exported from the kingdoms, dominions, and territories of either of the faid kings, by the refpective people or fubjects of the one or the other, in fuch cafe the prohibited goods thall be only confifcated, and not the other goods; neither thall the delinquent incut any other punifhment, except the faid delinquent -hall carry out from the refpective kingdoms or dominions of the king of Great-Britain, the proper coin, wool; or fuller's earth of the faid kingdom, or fhall carry out of the refpective kingdoms or dominions of the faid king of Spain, any gold or filver, wrought or unwrought ; in either of which cales the laws of the refpective councries are to take place.
XVI.

That it fhall be lawful for the people and fubjects of both kings, to have accefs to the refpective ports of the one and the other, and there remain, and depart again with the fame freedom, not only with their thips and other veffels for trade and commerce, but alfo with their other fhips fitted for war, armed, and difpofed to refift and engage the enemy; and arriving by ftrefs of weather to repair their fhips, or furnith themfelves with provifions; fo that entering willingly, they be not fo numerous, that they give juft occation of fufpicion, to which end they are not to exceed the number of eight, nor conitinue in their havens, nor about their ports, longer time than they fhall have juft caufe, for the repair of their thips, to take in provifions or other neceffary things, much lefs be the occafion of interrupting the free commerce, and coming in of other fhips, of nations in amity with either king ; and when an unufual number of men of war, by accident fhall come unto any port, it fhall not be lawful for them to come into the faid ports or havens, not having firft obtained permiffion of the king unto whom the faid ports do belong, or the governors of the faid porrs, if they be not forced thereinto governors of the farefs of weather or other neceffity, to avoid the dan-
int ger of the fea, and in fuch cafe they fhall prefently acquaint the governor or chief magiftrate of the place with the caufe of their coming; nor thall they remain there any longer time than the faid governor or magittrate thall think conventent, or do any act of hottility in fuch ports, that may prove of prejudice to the one or the other of the fald kings.
XVII.
XVII.

That neither the faid king of Great-Britain, nor the king of Spain, by any mandate, general nor particular, nor for any caufe whatfoever, ball embark or detajn, hinder or take for his refpective fervice, any merchant, mafter of a hhip, pilot or mariner, their hips, merchandize, clothes or other goods belonging unto the one or the ather, in their ports or waters, if it be not that either of the faid kings, or the perfons to whom the fhips belong, be firit advertifed thereof, and do agree thereunto; provided that this fhall not be conftrued to hinder or interrupt the ordinary courfe of juftice and law in either country.

## XVIII.

That the merchants and fubjects of the one and the otherking, their factors and fervants, as alfo their fhips, mafters and mariners, may as well going as coming, upon fea and other waters, as in the havens and ports of the one and the other refpectively, carry and ufe all kind of arms, defenfive and offenfive, without being obliged to regiter thern, as allo upon land to carry and ufe them for their defence, according to the cyftom of the place.

## XIX.

That the captains, officers, and marimers, of the flips belanging to the people and fubjects of either party, may not commence an attion, nor hinder or bring trouble upon their own fhips, their captains, officers, or mariners, in the refpective kingdoms, dominions, lands, countries, or places of the other, for their wages or falaries, or under any other pretence. Nor may they put themfelves, or be received, by what pretext or colour fuever, into the fervice or protection of the king of England, or king of Spain, or their arms; but if any controverfy happen between merchants and mafters of fhips, or between matters and mariners, the compoing thereof thall be left to the conful of the nation, but after fuch manner, as he who thall not fubmit to the arbitrament, may appeal to the ordinary juftice of the place where he is fubject. XX.

And to the end that all impediments be taken away, and that the merchants and adventurers of the kingdoms of GreatBritain be permitted to return to Brabant, Flanders, and other the provinces of the Low Countries, under the juridiction of the king of Spain : forafmuch as it hath been thought convenient, that all, and any the laws, edicts and acts, by which the importation of cloth, or any other woollen manufacture, of what kind foever, dyed or undyed, milled or unmilled, into Flanders, or the other provinces, hath been prohibited, be revoked and difannulled; and that if any right, tribute, impofition, charge, or money, hath been, with perminion, or therwife, put upon clothes, or any of the forefaid woollen manufactures fo imported (except the ancient tribute upon every piece of cloth, and proportionably upon every other woollen manufacture, agreeable to the antient treaties and agreements between the then kings of England, and the dukes of Burgundy, and governors of the Low Countries) the fame fhould be altogether void, and no fuch tribute or impofition from henceforth impofed, or put upon the faid clothes or manufactures, for no caufe or pretext whatfoever and that all the Englifh merchants, trading in any of the faid provinces, their factors, fervants, or commiffioners, fhould enjoy from henceforward, all the privileges, exemptions, immunities, and benefits, which formerly have been agreed and given by the aforefaid ancient treaties and agreements, between the then kings of England, and the dukes of Burgundy, and governors of the Low Countries: it is therefore agreed, That deputies thall be named by the king of Great Britain, who meeting with the marquis of Caftelrodrigo, or the governor of thofe provinces for the time being, or any other miniffers of the king of Spain, fufficiently authorized in this behalf, fhall friendy treat and conclude hereupon ; and alfo fuch further privileges, immunities, and neceffary exemptions, fuitable to the prefent tate of affairs, fhall be granted for the encouragement of the faid merchants and ad. venturers, and for the fecurity of their trade and commerce, as fhall be agreed upon in a feecial treaty, that thall be made between both the kings, touching this particular
XXI.

The fubjects and inhabitants of the kingdoms and dominions of the moft ferene kings of Great-Britain and Spain refpectively, fhall, with all fecurity and liberty, fail to and traffic, in all the kingdoms, eftates, or countries, which are or thall he in peace, amity, or neutrality, with the one or the other.

And they fhall not be difturbed or difquieted in that liberty, by the fhips or fubjects of the faid kings refpectively, by reafon of the hoftilities which are or may be hereafter between either of the faid kings, and the aforefain kingdoms, countries, and ftates, or any of them, which thall be in friendfhip or neutrality with the other.
XXIII.

And in cafe, that within the faid fhips refpectively, be found, by the abovefaid means, any merchandize hereunder mentioned, being of contraband and prohibted, they fhall be taken out and confilcated, before the admuralty, or other com-
petent judges; but for this reafon the fhip; and the other free and allowed commodities which fhall be found therem, hall in no wife be either feized or confifcated.

## XXIV.

Moreqver, for better prevention of the differences which might arife touching the meaning of forbiddep merchaidize, and of contraband, it is declared and agreed, That under this name fhald be comprehended all fire-arms, as ordrance, ruwf kets, mortar-pieces, petards, bombs, granadoes, fire-crancels, fire-balls, mufket-refts, bandeliers, gunpowder, match, faltpetre, and bullets ; likewife, under the name of formideden merchandize, are underftood all other arms, as pikes, (worde pots, helmets, backs, and breafts, halberds, javelins, and fuch armour ; under this name is likewife forbidden the tranfoortation of foldiers, horfes, their harneffes, cates of piftols, holfters, belts, and other furniture, formed and compgifed far the ufe of war.

## XXV.

Likewife to prevent all manper of difpute and contantion, it
 and of contraband, hall not be comprehended wheata fye, barley, or other grains or pulfe, falt, wine, sil, and genpeally whatfoever belongs to the fuftaining and noupithing of life; but they fhall remain free, and likewife al! qther mer rishapdizes not comprehended in the preceding article; and the trapr portation of them fhall be free and permisted, althouge is be to the towns and places of enemies, unlefs fuch towns and places be befieged, blocked up, or furrounded.
XXVI.

It is alfo agreed, That whatioever fhall be found ladea by the fubjects or inhabitants of the kingdoms and dominiape of either of the faid kings of England and Spain, aboard the bips of the enemies of the other, though it be not forbididen merchandize, thall be conficated, with all things elfe which thall be found within the faid fhips, without exception or referve.
XXVII.

That the conful which hereafter thall refide in any of the dominions of the king of Spain, for the help and protection of the fubjects of the king of Great-Britain, :hayjl bs napged by the king of Great-Britain, and he fo named, 保 have and exercife the fame power and authority in the execution of his charge, as any other conful hath formerly had in the dominions of the faid king of Spain; and in like manper the Spanifh conful refiding in England, fhall enjoy as mpurh au thority as the confuls of any other nation have hitherte ennjoyed in that kingdom.

## XXVIII,

And that the laws of commerce that are obtained by peace may not remain unfruitful, as would fall out if the fubjepts of Great-Britain, when they go to, come from, or remaia in the dominions or lordihips of the king of Spain, by reazon of their commerce or other bufinefs, thould be molefted for cafe of confcience ; therefore, that the commerce be fecure and without danger, as well upon land as at fea, the faid king of Spain thall provide, that the fubjects of the faid king of Great-Britain hall not be aggrieved contrary to the haws of commerce, and that none of them hall be molefted or difturbed for their confcience, fo long as they give no public fcandal or offence; and the faid king of Great-Britain fhall likewife provide, for the fame reafons, that the fubjects of the king of Spain thall not be molefted or difturbed for their con(cience, againft the laws of commerce, fo long as they give no public fcandal or offence.

XXIX
That the people and fubjects refpectively of one kingdon, in the dominions, territories, regions, or colonies of the other, thall not be compelled to tell their merchandize for brafs-metal coin, or exchange them for other coin or things, againft their will; or having fold them, to receive the payment in other fpecies than what they bargained for, notwithftanding any law or other cuftom contrary to this article,
XXX.

That the merchants of both nations, and their faftors, fervants, and families, commiffioners, or others by them employed; as alfo mafters of fhips, pilots and mariners, may remana freely and fecurely in the faid dominions, kingdoms, and territories of either of the faid kings, and alfo in their ports and rivers; and the people and fubjects of the one king, may have, and with ail freedom and fecirity eajoy, in all the lands and dominions whatfoever of the other, their proper houfes to live in, their warehoufes and magazines for their goods and merchandize, which they fhall poffefs during the time for which they thall have taken, hiled, and agreed for them, without any impediment.

## XXXI.

The inhabitants and fubjects of the faid confederate kings, in all the lands and places under the obedience of the one or the other, hall ufe and employ thofe advocates, proctors, fcriveners, agents, and follicitors, whom they think fit, the which flall be left to their choice, and confented to by the ordinary judges, as often as there flall be occafion ; and they thall not be conftrained to thew their books and papers of
account to any perfon, if it be not to give evidence for the avoiding law-luits and controverfies; neither fhall they be embarked, detained, or taken out of their hands, upon any pretence whatfoever. And it hall be permitted to the people and fubjects of either king, in the refpective places where they Ihall relide; to keep their books of account, traffic, and corterpondence, in what language they pleafe, in Englifh, Spanifh, Dutch, or any other, the which fhall not be molefted, or fubject to any inquifition. And whatfoever elfe hath been eranted by either party concerning this particular, to any other nation, fhall be underftood likewife to be granted here.
XXXII.

That in cafe the eftate of any perfon or perfons flall be fequeltered or Ceized on by any court of juftice or tribunal whatfoever, within the kingdoms and dominions of either pariy, and any effate or debt happen to lie in the hands of the delinquents belonging bonâ fide to the people and fubjects of the other, the faid eftate or debts thall not be confifcated by aby of the faid tribunals, but fhall be reftored to the true owners in fpecie, if they yet remain, and if not, the value of them (according to the contract and agreement which was made between the parties) fhall be reftored within three months after the faid fequeftration

## XXXIII.

That the goods and eftates of the people and fubjects of the one king, that hall die in the countries, lands, and dominions of the other, fhall be preferved' for the lawful heirs and fuccefiors of the deceafed, the rigbs of any third perfon always referved.

## XXXIV.

That the goods and eftates of the fubjects of the king of Great-Britain, that fhall die without making a will in the dominions of the king of Spain, fhall be put into inventory, with their papers, writings, and books of account, by the conful or other public minifter of the king of Great-Britain, and depofited in the hands of two or three merchants that fhall be named by the faid conful, or public minifter, to be kept for the proprietors and creditors; and neither the cruzada, nor any otlier judicatory whatfoever, fhall intermeddle therein; which alfo in the like cafe fall be obferved in England, towards the fubjects of the king of Spain.
XXXV.

That a decent and convenient burial-place fhall be granted and appointed to bury the bodies of the fubjects of the king of Great-Britain, who fhall die within the dominions of the king of Spain.

XXXVF.
If it fball happen hereafter that any difference fall out (which God forbid) between the king of Great-Britain and the king of Spain, whereby the mutual commerce and good correfpondence may be endangered, the refpective fabjects and people of each party thall have notice thereof given them in time, that is to fay, the fpace of fix months; to tranfport their mercbandize and effects, without giving them in that time any moleftation or trouble, or retaining or embarking their goads or perfons.

## XXXVII.

All'goods and rights concealed or embarked, moveables, immoveables, rents, deeds, debts, credits, and the like, which have not with a formal notice of the caufe, and by a legal condemnation, according to the ordinary juftice; been brought into the royal exchequer at the time of concluding this treaty, fhall remainat the full and free difpofal of the proprietors, their heirs, or of thofe who thall have their right, with all the fruits, rents, and emoluments thereof; and neither thofe who have concealed the faid goods, nor their heirs, fhall be molefed for this caufe by the exchequers refpectively; but the proprietors, their heirs, or thofe who fhall have their right, Shall have for the faid goods and rights their action at law, as for their own'proper goods and eftate.
XXXVIII.

It is agreed and concluded; that the people and fubjects of the king of Great-Britain, and of the king of Spain, fhall have and enjoy in the refpective lands, feas, ports, havens, roads, and territories of the one or the other, and in all places whatfoever, the fame privileges, fecurities; liberties, and immunities, whether they concern their perfons or trade, with all the beneficial claufes and circumftances which have been granted, or fhall be hereafter granted by either of the faid kings, to the moft Chriftian king, the States General of the Uaited Provinces, the Hanle-Towns, or any other kingdom or ftate whatfoever, in as full, ample, and beneficial manner, as if the fame were particularly mentioned and inferted in this treaty.
XXXIX.

In cafe any difference or difpute fhall happen on either fide concerning thefe articles of trade and commerce, by either the officers of the admiralty or other perfon whatfoever, in the one or the other kingdom; the complaint being prefented by the party concerned to their majefties, or to any of their council, their faid Majefties thall caufe the damages forthwith to be repaired, and all things, as they are above agreed, to be duly executed; and in cafe, that in progrefs of time any frauds or inconveniencies be difcovered in the navigation and

VOL. IL.
commerce between both kingdoms, againft which fufficient prevention hath not been made in thefe articles, other proprevention hath not been made in thefe articles, other pro-
vifions may be hereafter mutually agreed on, as fhall be judged convenient, the prefent treaty remaining ftill in full force and vigour.

## XL.

It is likewife accorded and concluded, that the moft ferene and renowned kings of Great-Britain and Spain, fhail fincerely and faithfully obferve and keep, and procure to be obferved and kept, by their fubjects and inhabitants refpectively, all and fingular the capitulations in this prefent treaty agreed and concluded: neither fhall they directly or indirectly infringe the fame, or confent that the fame thall be infifinged by any of their fubjects or inhabitants. And they thall ratify and confirm all and fingular the conventions before accorded by letters patent reciprocally, in fufficient, full, and effectual form, and the fame fo formed and made, fhall interchangeably deliver, or caufe to be delivered faithfully and really, within four months after the date of thefe prefents; and they fhall then, as foon as conveniently may be, caufe this prefent treaty of peace and amity to be publifhed in all places, and in the manner accuftomed.

Dated at Madrid, the $\frac{12}{23}$ day of May, in the jear of our Lord, $16677^{\circ}$
The form of letters which ought to be given by the towns and fea-ports, to the fhips and veffels fetting fail from thence. To all to whom thefe prefents fhall come, We the governor, confuls, or chief magitrate or commiffioners of the cuftoms, of the city, town, or province of N. do teflify and make known, That N. N. malter of the fhip N. bath before us, under folemn oath declared, That the ihip N. of tun (more or lefs) of which. he is at prefent mafter, doth belong to the inhabitants of $\mathbf{N}$. in the dominions of the moft lercne king of Great-Britain. And we, defiring that the faid mafter may be affifted in his voyage and bufinefs, do intreat all perfons in general and particular, who fhall meet him, and thofe of all places where the faid mafter thall come with the faid fhip and her merchandize, that they would admit him favourably, treat him kindly, and receive the faid thip into their ports, bays, havens, rivers, and dominions, permitting her quietly to fail, pafs, frequent, and negociate there, or in any other places, as fhall feem good to the faid mafter, paying fill the toll and cuftoms which of right fhall be due, which we will acknowledge gratefully upon the like occations. In witnefs whereof, we have frgned thefe prefents, and fealed them with the feal of our town.

Don Pedro Fernandez, del campo y Angulo.
Will. GODOLPHiN.

## REMARKS.

The foregoing treaty of $\times 667$, was figned May 23, and the next day Si W W. Godolphin, who was fecretary to ourembaffy, and who was the chief contriver of that treaty, wrote thus to lord Arlington: 'The treaty of commerce, I dare pro-- mife your lordfhip, comprehends not only all the privileges < and advantages which this crown bath ever granted to any s other ftate or people, but likewife fome conveniencies 6 which it hath never yet permitted to any other; for the - better fecurity and perfection whereof, 1 bave diligently - perufed all the treaties there people have made with others,

- and all the royal cedulas they have granted in favour of any
' particular factories: and have not received from our facto-
- ries any grievance or propofition of adyantage in their com-- merce to be either remedied or procured for them, which ' we think is not fufficiently provided for in this treaty.' And in another letter to biṣ brother, May 25, he fays, 'I - will only fay to you in general of the treaty of commerce, - That befides all the freedoms and advantages of trade, - which this crown bath granted to any other Itate, we have - thereby feveral conceflions and conveniences, whereof we - find no example in their articles writh any other. And I 6 think they have not made any other thete hundred years, c which I have not learned as my leffon, in order to the < treating and perfection of this.'
Sir William Godolphin might fay this, and the world will believe him, fince after that treaty we paid no more than the moderate duties above mentioned; and fince the privilege of a judge-confervator, without which we cannot trade with any fecuricy in that country, and which was only granted before by royal cedulas to our merchants, and might have been revoked by the king, was confirmed to us by that treaty.
This treaty, and that of 1670 , [fee, Spanish America] being the principal foundation of all fubfequent treaties that have been made between Great-Britain and Spain, we have judged it eligible to take due notice thereof.
In order to judge the more circumftantially of the commerce of Spain, and of the political regulations of that kingdom for exercifing the fame, and the benefits and advantages to which Great-Britain is entitled, and alfo the prefent turn, views, and fpirit of the Spanith court, in regard to the advancement of their commerce and navigation: fee the articles Almoxarisfargo, Andalusia, Biscay, Cas-

tilie, Catalonia, Corsica, Factors, Fiscal, Gratia's, Mediterranean, - See alio the article Spanish America, and the other articles referred to from thence.
Of the Foreign Exchanges of Spain, particularly between Madrid and other principal, trading cities of Europe.
Many errors have been committed by authors, in relation to the monies of Spain, La Banque renduë, facile, upon this fubject, fays, in treating of the monies of Spain, that there is 25 per cent. difference between the Plate Money there and the VEnLon: but if his commerce had led bim to a correfpondence either at Madrid or Cadiz, he would have been acquainted with the two augmentation's that Philip V. made there, and that a rial vellon is worth there $8 \frac{\pi}{2}$ quarts copper money, fo that the rial of old plate of exchange money, is worth 16 vellon, and the effective rial of new plate 12; which makes a difference between thefe two fpecies of rials, as $3^{2}$ is to 17 ; that is to fay, $53 \frac{1}{8}$ per cent. for 100 rials vellon, are worth only $53 \frac{\mathrm{r}}{8}$ rials of old plate: as this is the true ftate of the cafe, it follows, that La Banque rendué facile is miltaken.
By the word plate is meant filver money, whereby muft be underftood the money in which fome merchants' keep their accounts; and it is to that is given the name of old plate, which only is ufed for the negociation of the exchianges with foreign places: it is imaginary, as the excbange crowh of France, or the livres, fols, and deniers Tournois, or as the pound fterling of England ; but as it is requifite in trade to underftand the reduction of one fort of money into the other, we fhall give the inftruction proper for that purpofe.
Ufance is reckoned at Madrid, for bills of exchange, of France, Amfterdam, and all Holland, London, Hamburgh, Leghorn, Genoa, Venice, and almoft of all the trading cities of Europe, 60 days, exclufive of the date; after the expiration of which time there are allowed 14 days grace : Cadiz allows but 6 to bills drawn out of the kingdom of Spain; but to inland bills, there are I4 days grace allowed; after which bills are protefted for non-payment.
The foreign bankers or remittersat Madrid, Cadiz, Seville, \&c. keep their commercial accounts in rials and marvedées old plate.
The fhopkeepers of Madrid, the cuftomhoufes, and the tenants of the kingdom, keep their accounts in rials and marvedees vellon, which are called in France billon.
The merchants of Valentia in Spain, keep theirs in piaftres, fols, and deniers, which are divided intor 20 and 12 , as our pound fterling is into fhillings and pence.
The piffole, or doublon of excharige, is 4 piaftres, or 32 rials exchange.
The piaftre, or pefo of exchange, is 8 rials exchange, or old plate.
The rial is 34 marvedees, or 16 quarts.
The ducat, or ducado current, is 11 rials, old plate, or 374 marvedees.
The ducat of exchange is 20 fols d'or, or, for facility of computation, 375 marvedees, or II rials I marvedee old plate. The fol d'or is $\mathbf{1 2}$ deniers d'or.
The faid piaftre of exohange, is alfo reckoned at 15 rials vellon and 2 marvedees, or 128 quarts. And,
The rial vellon 34 marvedees vellon, or $8 \frac{1}{2}$ quarts, effective copper money, in which a bill of exchange is paid at Madrid, if the foreign drawer, or any other does not take care to ftipulate the payment to be made either in gold or filver, whereby there will enfue a lofs to the bearer of the bill of about $I \frac{1}{2}$ per cent.
The piftole of gold, worth 40 rials of 16 quarts, is in France of the ftandard of 22 carrats, and weighs there 126 grains. The piaftre with two globes, worth 170 quarts, is in France of the ftandard of 10 deniers $19 \frac{x}{2}$ grains, and weighs there 507 grains.

The METHOD
Of reducing rials vellon, into rials of exchange, or old plate; thofe into piaftres of exchange, and thofe again into rials vellon; piaftres effective, into rials of exchange, and thofe into rials vellon; and for underfanding of the reciprocal vaJues of the faid monies between each other.

5005 Rials 16 marvedees vellon, to be multiplied By

40040
$2502 \frac{1}{2}$ for the $\frac{x}{2}$.
4 for the 16 marv. 4 marv. vell. making the quart.
$42546 \frac{1}{2}$ Quarts, to be divided by 16 quart's, the value of the rial, or which is more facile take $\frac{x}{4}$ of $\frac{x}{4}=$ $\frac{1}{16}$, it will give
2659 Rials 5 marved. plate, or exchange : take the $\frac{5}{8}$ thereof, and it will give
332 Piaftres 3 rials, 5 mary. of plate; multiply there
By
$\qquad$ [of exchange.
1660
$\frac{332}{4980}$
5

Of the Exchange of Spain upon France.
To reduce 83 piftoles, 3 rials, 5 marvedees of Spain, into livers, fols, and denier's Tournois, of France, exchange at 15 livres 1 fol per piftole of $3^{2}$ rials of old plate.

## OPERATION.

83 piftoles, 3 rials, 5 marvedees, to be multiplied By 15 livres I fol of exchange,
415
83
4
4 liv.
0

1250 liv. 12 fol. 5 den. for which the draught mult be made upon Paris.

## INSTRUCTION.

Multiply the 83 piftoles, 3 rials, and 5 marvedees, by the price of exchange, and the product 1250 liveres, 12 fols, 5 deniers, will be the fum to receive at Paris.-For the proo of which, reduce the 1250 livres, I fol, by 80 liards, or $\frac{1}{4}$ of fols, the value of the live, and divide the two products, 100,051, and 1204, the one by the other, and you will have a quotient of 83 piffoles, and 19 remaining, to be multiplied by 32 rials, the value of the piftole; and dividing the fame by the common divifor above, it will give 3 rials, and 196 for a remainder, to be multiplied by 34 marvedees, the value of a rial; and dividing again, you will have the 5 marvedecs old plate to receive at Spain.

If I had due at Lyons 83 piftoles, 3 rials, and 5 marvedees, and would reduce then into piaftres, multiply them by 4 piaftres, the value of the piftole, and you will have, as pelow, 332 piaftres, 3 rials, 5 marvedees, to be multiplied by $75^{1}$ fols Tournois, and the product will be 25,012 fols, 5 deniers, and dividing the fame by 20 , it will produce 1250 lipres, 12 fols, 5 deniers.

## EXAMPLE.

In regard to the weights and meafures of Spain, and their conformity with thofe of the principal trading cities of Europe, fee the article England, Vol. 1 .
SPANISHAMERICA. It was in the time of the emperor Charles $V$, the firft king of Spain of that name, that, as the hiffories of that prince obferve, the greateft news arrived to him that ever any one monarch received in a day, fince the creation of the world; namely, the difcovery and conqueft not of a kingdom only, or an empire, but of a new world, which abounded with fuch immenfe treafure, that all the Chriftian world before was not equal to.
In confirmation of this fuprizing news, Ferdinando Cortez, his general, (whom the emperor, as king of Spain, had ordered upon this expedition) fent him two fhips loaded with filver, gold, pearl, emeralds, \& 8 c. to fuch a prodigious fum, that the emperor himelf could hardly give credit to his ears in the report, or to his eyes when he faw the mafs of treafure. Succeeding fhips returning one after another, brought incredible quantities of treafure, as Cortez, the general, being fupplied with more forces, extended his conquefts, "till the kingdom or empire of Peru was added to that कf Mexico, with the inexhauftible mines of Potofi ; after that the kingdom of Chili, rich in gold, as the other in filver, This fuccefs fo

## S P A

increafed both the wealth and dominion of the Spanilh motar. chy, that they have ever fince been lords of America, and of the chiefeft empire and kingdoms in that great part of the world. The Spaniards having fubdued the country, and rooted out the inbabitants, began foon to plant colonies, effabbifh governments, and fecte nations in all that part of the world: and though the Englifi and French have followed their ex. ample more north, and both poffers fome few inlands befides, yet their poffefliohs in Americay compared with thofe of Spain, bear no great proportion to them. As our acquifitions there were in the northern parts, where the air was cold and inclement, the foil over-run with woods, the feas frozen, and the people fierce, the Spaniards thought that part of America not worth taking, having fo great a poffeffiod before in the more temperate, warm, and fruitful parts. Upon the fettlement of the Spaniards in thefe new conquefts, and experiencing fill the increafing wealth out go even their higheft expectations, it foon put them upon eftablifhing laws of commerce, as well as government, in order to preferve not the poffeffion of the country only, for that they did by fending over a competent military force, but to fecure the commerce to themfelves at home, and to prevent any other nation from breaking in upon it, and inriching themfelves by it, at their expence.
To this end, the firf regulation as a law of property (and which all other nations trading to America have fince imitated them in) was, that they would fuffer no fhips from any other nation to trade to their new colonies, or to enter into their ports, hor any fhips from thence to return to any other ceuntry but Old Spain, from whence they came: in a word, that they would have the whole trade to and from their colonits in New Spain center in Old Spain, which it does to this day, except fuch part as is carried on illicitly by other nations. In purfuance of thefe meafures, the king of Spain erected, in the year 1513 , a council of commerce for the Indies at Seville, for regulating this trade; and the king his fucceffor, in the year 1556 , erected a royal court of juftice, for determining all controverffes relating to this traffic.
By virtue of thefe regulations, and their frict obfervance, the ftate of this trade is punctually kept up to the firf intention of the emperor's council to this day, and is, perhaps, the beft-eftabilifhed commerce in the world. Some, among many others, of thofe prudent and politic regulations, are as follow :
I. No hips are allowed to go to any of the king of Spain's dominions in America, without fpecial licence from him, which licences are iffued out at his court, or chamber of commerce at Seville, as above.
II. No foreigner, or frrangef, is allowed to go to the faid New Spanifh dominions in America, in any of the faid licenfed fhips, upon any terms whatfoever, whether to fetile in the faid Weft-Indies, or only to trade there, Irilhmen onlyexcepted, and thote to be all Roman Catholics.
III. No perfon whatever, though he were a Spaniard born, and the king of Spain's fubject, can go to the Spanifh WeitIndia dominions without fpecial licence, to be obtained at the faid Contractation-Office, that is to fay, without lience from the king.
Thefe fundamentals being previoully effatilhed, there are then certain limitations to the numbers of hips, and the quantity of goods, that is to fay, the tonnage, or burthen,
they thall carry, which is always in the breaft of the members of the Cafa de Contractation, becaufe the quantity of goods fent fhould not exceed the demand, and, confequently, glut the markets, and alfo abate the price, and the profits of the trade; likewife it is regtlated there, at what tifites the feveral fleets of 'hips thall go out, and to what feveral places, and when they thall te obliged to come away, in order to their retum. It is alfo regulated, That all the filver, or geld, or jewels, which fhall be brought over, for whofe particular private intercft foever it be, Thall be regiftered and entered in the fhip'ss books of every Mhip, and likewife in a general regifter, in the port from whence the fhip comes; where alfo it is to be feen, and duplicates of which are tranfmitted to the faid council at Seville.
As no perfon is allowed to go to New'Spain without licence, fo no religious, no ecclefiaftics of any kind, are permitted to come back in any of thofe thips, without licence from the fuperior of the order to whom they belong.
Some particular goods are not permitted to be laden in Old Spain in any of the fhips, though thofe fhips are licenfed to go, thofe goods being referved to the king to export thither in bis own name, or to give licence to others' to do it; without which licence the faid goods are not only prohibited, but forfeited, if taken.

## The manner of the fleets going.

The firff feet is called the galleons, or galloons: thefe are generally feven fhips, but may be increafed as the king or the Cafa de Contractation, that is, the Council of Commerce, fee fit; and they go from Old Spain to and from Carthagena and Porto-Bello, and no uhere eife; neither are they al. lowed to go any where elfe, if they could do it. How often
or feldom foever the galleons go out, the next fleet of galleons never go out 'till the laft are returned.
The next fleet is called the flota: thefe go to La Vera Cruz, or Crux; they have no fet time of going out, but the merchants fend them as the Chamber of Commerce directs, and they give their directions as they fee the trade calls for it, and as the merchants by their petition, reprefenting the occafion, can obtain leave.
The fhips to Buenos Ayres are not to be called a fleet, being feldom above two fhips, and never above four; and do not ufually go out above once in two or three years; and they are generally out two, three, or four years, every voyage.
The Azoga chips, vulgarly called the quickfilver thips, are fo called be caufe they carry quickfilver, or mercury, by which the filver is wrought and refined in the mines; but not, as tome think, that they fhould be loaden with quickfilver. They are not, ftriflly fpeaking, to carry any goods but in particular for the king's account; but they are generally full loaden, notwithftanding the firft regulation, and the merchants get feecial licences of the king to load, and they generally pay large fums for thofe licences.
Note, thefe carry quickfilver and fruit, or fpice, for the king's account, and fometimes military fores and, arms for the forces there; as allo iron, which is called the king's merchandize: there are allo petaches, fent at uncertain times. Thefe are generally but two, and are called ad-vice-boats, becaufe they are fent either to give advice to the Weft-Indies of their chips being arrived at Old Spain, or of the departure of the fleets, when they have a fet time determined. Thefe petaches were generally frall veffels and barks, which were difpatched merely for failing ; but now the merchants ftriving to get leave to lhip geods upon them, they are generally about 350 tons burthen each.
N. B. When the fhips to Buenos Ayres arrive there, they are to give notice to the governor of the time they intend to depart for Europe; and being obliged to bring back any goods for the king gratis, the notice they are to give to the governor is for him to get ready the king's goods, and is to be given two months before they are to come away : if he neglects it, they may come without it.
When the hips go out for New Spain, they go directly, the galleons to Carthagena, and the other hips to La Vera Cruz: but, ' when they come back, they go to the Havannah, and ftay 'till they get all together, and then beating through the gulph of Florida 'till they come to the height of St Auguftine, or perhaps to South Carolina, they fteer away together for Old Spain.
All this commerce, under thefe regulations, and nianaged as has been faid, ufually centered atSeville, now at Cadiz; and it is no wonder that Seville, with the weight of fo great an affair tranfacted in it, was become rich and populous; no wonder they have fuch magnificent buildings, and that the exchange for the merchants, asifome tell us, coft king Philip. II. 950,000 crowns in ready money.
Some have attempted to make calculations of the magnitude and value of this great trade to the Spaniards; but it is not eafy to be done with accuracy. If the account taken out of the regifers of the faid council of trade may be depended on, it is a prodigy in itfelf, nor can I venture to vouch the truth of it; but they tell us, that, according to the books of that court, from the year 1519, to the year 1619, inclufive, being the firft hutidred years of the trade, the value entered, or regiftered, befide all private trade, was 5090 millions, in oold, filver, pearl, jewels, and other merchandize, though, gold, inver, pearl, jewels, and other merchandize, though,
for the firft twenty years, very little was brought; fo that it was called eighty years, not an hundred.
There is now paffed above another century, and, if the former account was true, I am perfuaded the amount muit be extremely increafed fince.

A Treaty between Grfat-Britain and Spain about accommodating differences, preventing depredations and fetring a peace in America : concluded at Ma DRID, July $\frac{8}{18}, 1670$.
Forafmuch as the good underftanding and correfpondence between the Englifh and Spanifh nations have been interrupied in America, the moft ferene and molt potent prince, Charles the Second, king of Great-Britain, \&c. in order to re-cftablifh and regulate the fame for the future, hath difpatched Sir William Godotphin his erivoy extraordinary into Spain, with full power and authority to conclude fuch a treaty as Mall be proper and fuitable to thefe ends: and that, in like manner, the moft ferene and moft potent prince, the king of Spain, $\$ c \mathrm{c}$, and the queen-regent, Mary Anne, \&cc. in order to promote fo good a work, and fo advantageous to the public, have, on their part, appointed the count de Pegnaranda, counfellor of ftate, and prefident of the Indies, to confer

VOL. II.
about, treat, and conclude that affair : they have at laft mutually fettled and agreed upon thefe following afticles by wirtue of their commiffions.
I. In the firft place, the faid plenipotentiaries, Sir William Godolphin, and the count de. Pegnaranda, have in the names of the moft ferene kings their mafters agreed, That the articles of peace and alliance made between the crowns of Great-Britain and Spain, at Madrid, the $\frac{5}{2} \frac{3}{2}$ of May, 1667 nor any claufe therein, fhall any ways be revoked or be underftood to be void, or annulled by this treaty, but that the fame fhallalways continue in their former force, virtue, and power ; provided it may be not contrary and repugnant to this convention and asticles, or any thing that is contained in them.
II. That there fhall be an univerfal peace, and a true and fincere friendfhip in America, as well as in other parts of the world, between the moft ferene kings of Great-Britain and Spain, their heirs and fucceffors, and between their kingdoms, plantations, eftates, colonies, forts, towns, illands, and territories, without any diffinction of places belonging to the one or to the other, and between the people and inhabitants in their refpect:ve dominions, which hall for ever endure, and commence from this day, and be inviolably obferved, as well by land as fea, and on frefh waters, fo as that they are to promote the good and profperity of one another, and to favour and affift each other with mutual returns of friendihip, that fo the offices of good neighbourhood and amity may be difcharged and augmented amongft them in all places, as well in thofe remote countries, as in thofe nearer home.
III. That alfo, for the future, all enmities, hoftilities and diffentions between the faid kings, their fubjects and inhabitants may ceafe, and be quite laid afleep, and that both parties do hinder and abftain from all manner of pillaging, depredations, injuries, and annoyances, as well by land as fea, and on frefl waters, be they where they will.
IV. The faid moft ferene kings are to take care that their fubjects do alfo forbear all acts of viclence and hoitility, and to call in all commiffions, letters of marque and reprizal ; and that they do not otherwife give leave to take any prizes, of what nature or kind foever they be, to the prejudice of either of the faid two kings, or their fubjects, whether they have been given or granted by them, to their own fubjects or inhabitants, or to ftrangers; but are to declare them to be null and of no effect, as they are fo declared by this treaty. And whoever hall act any thing to the contrary, fhall not only be punifhed as a criminal, according to the nature of his offence; but fhall alfo be obliged to make reftitution and reparation for the loffes the injured parties have fuftained and require of them.
V. Moreover, the faid kings renounce, and they have by thefe prefents both of them renounced, and do renounce, all leagues, confederacies, capitulations, and intelligence, had in any manner whatfoever, to the prejudice of one another, that is or may be repugnant to this peace and treaty, and every thing that is contained therein; all and every fucti claufes, fo far as they may reach to the faid effect, being annulled and made void, and declared to have no force or virtue in then. VI. The prifoners, of what ftate or condition focver they be, which áre detained by rcafon of any acts of hoftility hitherto committed in America, fhall forthwith be fet at liberty, without any ranfom, or any manner of confideration for their enlargemert.
VII. All cffences, danages, loffes, and injuries, which the nations and people of Great-Britain and Spain may at any time whatfoever, 'till now, have fuffered on either fide in Americ', be the caule or pretence what it will; fhall be utterly effaced and buried in oblivion, in fuch manner as if the fame bad never happened.
Moreover it is agreed, that the molt ferene king of GreatBitain, his heirs and fucceffors, fhall have, bold, keep, and always pofief, in full right of fovereignty, figniory, pofleffion, and propricty, all the lands, countries, flands, colonies, and other places, be they what they will, lying and fituate in the Wett-Indies, or in any part of America, which the fuid king of Great Britain and his fubjects now hold and poffefs; infomuch that they neither can nor ought hereafter to.be contefted or called in queftion for them, upon any account, or under any pretence whatfoever.
VIII. The lubjects, inhabitants, merchants, captains, mafters of hips, and the mariners of the kingdoms, provinces, and territories of each ally refpectively, fhall forbear and abfain from failing to, and trafficking in, the ports and havens that have fortifications or magazines, and in all other places porf feffed by the other party in the Weft-Indies: that is, the lubjects of the king of Great-Britain are not to navigate, nor to traffic in the havens and places that are in the pone firon of the Catholic king in the frid Indies; neither are the fubjects of the king of Spain to navigate, or traffic in the places porfeffed therein by the king of Great-Britain. But if, at any time, either of the kings thall think it proper to grant the other's fubjects any general or particular leave or privileges, to fail to, and truffic in, any of the places under his obedicnce, the faid traffic and navigation thall be cxeaciled and mainIo E
tained, actording to the form, tenor, and effect of the faid permiffions or privileges, given and granted to them ; for the fecurity, guaranty, and authority whereof, this prefent treaty and the ratification of it thall ferve.
X. It is alfo agreed, that in cafe the fubjects and inhabitants belonging to either of the two allies, and their Ships, whether they be men of war or merchants fhips, and fuch as belong to private perfons, fhould at any time be forced by ftorm, purfuit of pirates and enemies, or by any other accident whatfoever, to retire and enter into any of the rivers, creeks, bays, havens, roads, and ports, belonging to the other in America, in order to have protection and refuge, they thall be received and treated there with all manner of humanity and civility; have all the protection and affiftance of friends, and they thall be allowed to refrefh themfelves, and be at liberty, at a reafonable and the common price, to buy provifions and other neceffaries, whether it be for the fupport of their perfons, or for repairing their fhips, and the conveniency of their voyages: and they thall no manner of way be retarded or hindered to go out of the faid ports or roads; but they may do it whenever they have a mind to it, roads; but they may do it whe
without any let or moleftation.
XI. In like manner, if any of the fhips belonging to either one or the other of the allies, their people and fubjects, fhall run upon fand-banks, or be fhip-wreck'd (which God forbid) within the bounds of the coafts or dominions of the other, or fuffer any damage there; the perfons that fhall be lhipwrecked, or thrown a-fhore, fhall by no means be detained prifoners: but, on the contrary, all manner of affiftance and fuccour fhall be given them upon fuch accidents, and they fhall have palfports granted for their return, and free and peaceable paffage of all of them to their own country.
XII. But when it fhall fo happen, that the fhips, either of the one or the other party, as aforefaid, fhall be forced into the ports and havens of the other, through the perils of the fea, or fome other urgent neceflity; in cafe they are three or four-together, and may give juft grounds of fufpicion, they are, as foon as they arrive there, to let the governor, or the chief magiftrate of the place, know the caule of their coming, and to tarry no longer there, than the faid governor or chief magiltrate will give them leave, and that it fhall be neceffary to fupply themfelves with provifions, and refit their Thips; and they are ever to abftain from putting any wares or bales of goods a-fhore, to expofe them to fale; neither are they to receive any merchandize on board, or do any thing that is contrary to this treaty.
XIII. Both parties are fincerely and inviolably to obferve this prefent treaty, and all and every the claufes contained therein ; and they are to be obferved and punctually fulfilled by the fubjects and inhabitants of both nations,
XIV. Particular offences fhall no way be a prejudice to this treaty, and caufe no enmities or diffentions between the two nations; but every one fhall anfwer for what he has done, and be profecuted for contravening it: neither fhall the one have recourfe to letters of reprifal, or any other methods of the like nature, to obtain reparation for the offence of the other, unlefs juftice be actually denied, or unreafonable delays ufed in adminiftering the fame. In which care it fhall be lawful for the king, whofe fubject hath fuftained the damage and lofs, to have recourfe to the rules and ordinary courfe of the law of nations, 'till reparation be made to the perfon that has been injured.
XV. This prefent treaty fhall no way derogate from any preeminence, right, or figniory, which either the one or the other of the allies have in the feas, freights, or frefh waters of America; and they fhall have and retain the fame, in as full and ample a manner, as of right they ought to belong to them; and it is always to be underftood, that the freedom of navigation ought by no manner of means to be interrupted, when there is nothing committed contrary to the true fenfe and meaning of thefe articles.
XVI. That the folemn ratification of this treaty and convention fhall in good and due form be delivered by either party, and reciprocally exchanged in the face of four months, to reckon from this day; and they fhall in the fpace of eight months, reckoning from the day of the excbange of the inftruments (or fooner if it can be done) be publifhed in all the proper places within the kingdoms, eftates, illands, and figniories, of both the allies, as well in the Weft-Indies as elfewhere.
In witnefs of all and every one of the articles contained in thefe prefents, we, the above-named plenipotentiaries, have figned this treaty, and fet our feals to it, at Madrid $\frac{8}{\mathrm{~g}} \mathrm{~d}$ day of July, in the year of our Lord 1670.

The Count de Pegnaranda, (L. S.)

Wileiam Godolphin,
(L. S.)

See Treatifs.
General Remarks, by way of query, on the articles of Spain and Spanish America, as they relate to GreatBritain in particular, before the last War.

1. Whether it is not notorious to the whole world, that Spain for many years, prior to the late war, fo behaved towards

Great-Britain, that the latter was forced into a wat with that crown?
2. Is it not equally true, that to prevent the laft war GreatBritain bore too long with the conduct of Spain, and did ber more good offices, in regard to family eltablifhments in Italy, than Spain has delerved, feeng that the made no other fecompence for the fame, after her own turn was ferved, than that of infult and depredation upon the Britilh fubjects?
3. Whether the firft giving up the trade of the South-Seas to the South-Sea Company, did not prove a great injury to the trade of Jamaica, and thereby to Great-Britain in general; and whether the Spaniards putting us off with the Affiento for Negroes, and an annual thip, was an equivalent to fuch lofs of trade at Jamaica? See the articles South-sea Company, Assiento Contract.
4. Whether our abfolutely giving up the Affiento to Spain, by treaty, in 1750 , for fo trifing a fum as ro0,000l. in order to give that court no umbrage in relation to an illicit trade, laid to the charge of the South-Sea company, in their exercife of the Affiento, doth not indicate the molt cordial difpofition in the court of England to live in frict friendihip and harmony with that of Madrid ?
5. Whether, when the Affiento was fo given up, the Logwood Trade in the bays of Campeachy and Honduras, to which the fubjects of Great-Britain have a right, ought not to have been fo regulated as to have prevented future broils on that head, between the two crowns; fince 100,0001 . was no equivalent for the Assiento? And whether the latter might not have been done, upon conditions perfectly confiftent with the honour and intereft of both nations? See the article LOG WOOD.
6. Whether Spain is not more obliged to Great-Britain for taking off her products of fruit and wines, than the is to any other nation for fo duing; and whether Spain doth not every day leffen her imports of the product and manufactures of Great-Britain, and encourage thofe of our nival nation, in proportion as the difcourages ours?
7. Whether Spain hath ufed Great-Britain well, by deferring, fince the laft peace of Aix la-Chapelle, to regulate the trade of Campeachy and Honduras upon a proper footing; and whether the difpoffeffion of the Britifh logwood-cutters in the bay of Honduras (if this Chould prove true) while the two crowns were in treaty upon that very occafion, is acting confiftent with the honour of nations, and that equity and friendfhip which we have a right toexpect from a nation for whom we have done fo much, and borne fo much for peace fake? 8. Whether there is not too much reafon to apprehend, from the prefent conduct of France towards Great-Britain, that the former is certain of the Friendship and Alliance of Spain to act in concert with her againft our interefts; and whether, notwithftanding the pretended fricndihip of Spain to England, fince the laft peace, France hath not obtained fuch an afcendency over the court of Madrid, as to retard, and at length abfolutely defeat the ratification of any treaty for regulating of the trade of CAMPEACHY AND Honduras between the two nations; and whether fuch regulation hath not been polfponed from time to time, 'till France and Spain had both raifed their marine to fuch a pitch, as to be able to furprize Great Britain, by friking fome notable blow, greatly detrimental to her interefts?
9. Whether the Spaniards winking as they do at the illicit commerce carried on by the French at prefent, from the Mississippi to Mexico, and the Extirpation of the British Logwood Cutters from the Bay of Honduras, and frequently taking our veffels engaged in that trade, doth not fufficiently indicate a ftrict friendfhip between Spain and France, and a great lukewarmnefs between the former and Great-Britain?
IO. Whether the ftrength that the French are daily gaining upon the Mississifpi, and efpecially upon thofe parts bordering on the gulph of Florida; as alfo the abfolute deftruction of the Indian nation, called the Nautches, and other Indian allies of the Britifh colonies of Georgia and Carolina, may not forbode an union between Spain and France on that fide, hurtful to our moft fouthern colonies on the Continent, while France, at the fame time, may attack Nova Scotia, which was formerly called the DUNKIRK of our North American fettlements, while in the hands of France? And will not this be more fo, if the French ever once again polfers themfelves of the whole, or of a part of this important colony, as they are poffeffed of Cape Breton? See the articles British America, Canada, Florida, Louisiana.
15. If there be any juft foundation ftill to fufpect the fincerity and friendfhip of Spain, does it not feem neceffary to have a ftrict eye towards the prefervation of our SUGAR Colonifs and the Neutral Islands, as well as towards Nova Scotia?
12. Whether, if we find once more that there is no faith to be kept with France, nor with Spain, it is not full time to think of aeting upon the offenfive, inftead of the defenfive only, and that by ftriking the BOLDist stroke which we may have in our power?
13. Whether the prefent ftate of the marine of Holland and, indeed, the indifference and coldnefs of that republic to this nation, together with the unfettled fate of their barrier; whether thefe confiderations, and the good plight and condition of the French and Spanifh marine, the death of the Grand Seignior, \&c. have not excited France to their prefent conduct? See the articles Hol land, Flanders, and Netherlands.
How Great-Britain may be able to cope with the enemy, fee the articles Nayal Affairs, Sea. Dominion, Sea British, and Seamen. See allo the article Mediterranean.

## Remarks on the Artiele Spain, fince the laft War, and the

 Definitive Treaty of Peace of 1763 .For the Definitive Treaty of 1763 , the reader is referred to America, where appears the ftate of affairs between GreatBritain, as the fame is fettled fince the laft war. As we had conquered and poffeffed ourfelves of the Havanna, Epain, for the reftitution thereof, has ceded, by article XX, to the crown of England, the Colony of Florida', with Fort St Augustine, and the Bay of Pensacola, as well as all that Spain poffefled on the continent of North America, to the eaft, or to the fouth-eaft of the River MissISSIPPI; and, in general, every thing that depends on the faid countries and lands, with the fovereignty, property, poffeffion, and all rights acquired by treaties or otherwife, which the Catholic king, and the crown of Spain have had,; till now, over the faid countries, lands, places, and their inliabitants; fo that the Catholic king cedes and makes over the whole to the faid king, and to the crown of Great-Britain, and that in the moft ample manner and form.
By the VIIth article of the faid Definitive Treaty, that for the future, the Confines between the dominions of his Britannic Majefty, and thofe of his Moft Chriftian Majefty, in that part of the world, fhall be fixed irrevocably, by a line drawn along the middle of the River Mississippi, from its Source to the River Ibervilee, and from thence by a line drawn along the middle of this river, and the Lakes Maureras and Pontchartrain, to the fea; and for this purpofe, the Moft Chriltian king cedes, in full right, and guaranties to his Britannic Majefty, the River and Port of Mobille, and every thing which he, poffeffes, or ought to poffefs, on the left fide the River Mississippi ; except the town of the New Orieans, and the Island in which it is fituated, which fhall remain to France; provided that the River Mississippi fhall be equally free, as well to the fubjects of Great-Britain, as to thofe of France, in its whole breadch and length from its fource to the fea, and exprefsly that part which is between the faid Island of New Orieans, and the right Bank of that River, as well as the Passage both in and out of its Mouth.- It is further ftipulated, that the Vessels belonging to the fubjects of either nation fhatl not be flopped, vifited, or fubject to the payment of ANY Duty whatfoever.
By the faid treaty it appears, that Great-Britain has obtained for her North American Colonies, the Barrier of the Gulph of Mexico, as far as the fame extends to the River Mississippi from eaft to weft; and alfo the Barrier of the Gulph of Florida on the eaft of her colonies, together with the Ports and Harbours of Morille, Pensacola, and St Augustine, and the Freedom of the Navigation of the River Mississifpi. All which feem to promife a good Security to all our Sou'thern Colonies on the Cuntinent; provided we can alfo gain the uninterrupted friendihip and alliance of the Indians neighburing thereupon; or if that cannot be effectually done, to keep them under due fubjection to the Britifh power and dominion.
To accomplifh which now, there does not feem any great dificulty, in a little time. For we now, as it were, are in a fituation to furround them by our navigation on the eaft, weft, and fouth, by the Gulph of Florida, the Gulph of Mexico, and the Mississippi, on the fouthern part of the continent.-Which promifes fair in conjunction to conflitute a pretty formidable Barrier to our plantations of this fide. And
By the IVth article of the faid Treaty, his Mof Chriftian Majefty renounces all pretenfions which he has heretofore formed, or might form, to Nova Scotia, or Acadia, in all its parts, and guaranties the whole of it, and with all its DEPENDENCIEs, tothe king of Great-Britain.-Moreover, his Moft Chriftian Majefty cedes and guaranties to his faid Britannic Majefty, in full right, Canada, with all its Dependencies, as well as the Island of Cape Breton, and all the othrr Islands and coafts in the Gulph and River of St Lawrence, and in general, every thing that depends on the faid Countries, Lands, Islands, and Coasts, with the Sovereignty, Property, Possession, and all Rights acquired by Treaty or otherwise;
which the Moft Chriftian king and the crown of France which the Moft Chriftian king and the crown of France
have had, till now, over the faid countries, illands, lands,
places, coafts, and their inhabitants ; fo that the Mof Chriftian king cedes, and makes over the whole to the faid king, and to the crown of Great-Britain ; and that in the moft ample manner and form, without reftriction, and without any liberty to depart from the faid ceffion and guaranty under any pretence, or to difturb Great Britain, in the poffeffions above mentioned.
As we have feen the fecurity the faid treaty promifes to our colonies on the fouthern parts of the continent; fo here likewife we fee the fecurity it promifes to our colonies on the northern parts of the continent; which confidered together afford us the profpect of cur Maritime Security and Protection, by the means of the three great gulphs in America, that of St Lawrence in the north, Mexico on the fouth, Florida on the ealt, and the navigation of the two great rivers, the Mrssissippi, and that of St Lawrence, both from the North and from the South; befides the additional fecurity and protection we may derive from the navigation of all the other numerous fine rivers, difperfed throughout this whole American Continent, both large and fmall, in every part thereof, and all fitted by nature for a perpetual commercial navigation.
The whole country, that is now annexed to the crown of Great-Britain, abounds with ve.y large ifvers, which it were endlefs to enter into'a detail of, and for which we refer to the maps of the country for their names, courles, mouths, \&c. and content ourfelves with defcribing a few of the moft confiderable, as that of St Lawrence and the Miffiffippi.
The river St Lawrence is the largeft in all North America, and inferior to few in the world, it being computed about 25 or 30 leagues wide at the mouth, and 200 fathoms in depth, and I 60 leagues in length; and yet by the help of a good fouth wind, and the currents, which are pretty ftrong, may be failed, according to Cbarlevoix, in 24 hours. As to its fource, though the European miffionaries have failed up it above 700 , or near 800 leagues, that is, as far as the Lake of Alemipigon, yet it is fill unknown, unlefs it really fprings from it, which no one hath yet been able to decide. - That Lake difcharges iffelf into that called the Upper or Superior, lately mentioned, and this into that of Huron, and this into that of Erie, or Contr, and this laft into that of Frontenac, or Ontario; all this by means of the sAme RivER, from which it iffues out with a fmooth courfe during the firft 20 leagues; after which it becomes more rapid during another 30 leagues, that is, till it comes to Montreal. From this it refumes its fmooth flow quite to that of Quebec, growing fill wider as it runs, till it empties itfelf into the fea above 100 leagues below it : but, according to the report of the wild natives, this famed river arifes out of another LAKE, farther up, and larger than any of thofe we have mentioned, and which they call the Lake of Assinipolis, or Assibouels; and this laft is faid by them to lie about 50 or 60 leagues above that of Aiemipigon, and is fuppofed to have a communication with the Northern Sea; and it is not improbable but a northern pafage into it may be found by means of this Lake. There are falls or cataracts, fuch as that at NiAgara. The river is, however, deep almoft all the way, and bath a number of pleafant illands in it, the moft remarkable of which are Coud́res, Orleans, Montreal, St John, Miscou, Richlieu, and feveral others. The highland is well wooded, and fome lowlands well inhabited and manured, infomuch that they jeld vaft crops of corn and other grain, befides fruits, pulfe, \&c. The fettlements, which are moftly round the Chores, are alfo well fituated and built, and yield a noble profpect as one fails by them ; the fame may be faid of the reft.
The river St Lawrence receives feveral confiderable rivers in its courfe, the chief of which are called Desprairies, or of the Meadows; the Mons, the Treble River, and the large one of Sanguenay, and St Margaret, near the mouth of it. All thefe, and other lefs remarkable, fall into it on the north fide ; thereare others alfo on the fouth. The River Mississippi runs through the whole province, which the French called Luuisiana, from north to fouth, and overflows, at certain feafons, a vaft quantity of land; it is called by the Spaniards La Pallisada, from the prodigious quantities of Tamber which is fent down upon it in Floats to the fea. It is navigable above 450 leagues up from its mouth. The fpring-head is fill unknown, tho the natives fay, that it flows from a large ftream that comes down from a hill in the country of the Isati, about the 5 oth degree of latitude. We have an extraordinary account of the different nations met with on each fide of the river, and they are reprefented as an hofpitable, civil people, and willing to commerce with Europeans; their names and fituation may be feen in the maps. The French made two fituation may be feen in the maps. The French made two istlements, the one ncar computed about 30 leagues round; the other among the is computed about 30 leagues round; the other among the hood.
The Mississippi ieceives a great many large rivers into its waves; and the country on both fides is fertile enough,
and inhabited by a great variety of nations; for which we refer to Mr Sale's account thereof, who failed down it in the year 1638 , made fome fettlements on each fide of it, and hath marked the diftances between all thofe rivers that fall into it, and of the feveral nations that live between them on each fide of this; the whole amount of which, from -the River of the Initinois, towards which he firft fet out, down to the mouth of it, he computes to be 653 leagues. The river difcharges itfelf into the gulph of Mexrico, by two branches, which form an inand of confiderable length.
Canada Proper has Gafpé, St. John's Ine, Milcou Ine, Richlieu, the Treble River, Montreal, Infe, Frontenac, Conti, St Francois des Anges, St Alexis, St Michael, and St Joreph; all which we hall juft intimate, and not enter into a copious defcription.
Gafpé is chiefly worth notice, for being the capital of a large territory, called from it Gafpefia, extending along the eaftern coaft of this province from Cape des Roffeis, at the mouth of the river St. Lawrence, to another which lies over-againft Cate Breton, which is about rio leagues, and ftretches itfelf much farther inland.
ittelf much farther inland.
St Joun's Ine lies on the Garpefian coafts, and hath a bay of its name, north of the river St. Lawrence, on the way to the Hollow Inland ; about 60 miles long, and in fome places 30 in breadth.
Mifcou Ifland lies on the bay of St. Lawrence; eaft of the fouthern cape, called Des Chaleurs, on the Gafpefian coaft, and is famed chiefly for its fertility.
Richileu Islands lie on the lake of St Peter, about i2 leagues from the town of Three Rivers, where the government of Montreal begins. There are above 100 of them, forming a fmall kind of Archipelago at the mouth of the river St Lawrence.
The Three Rivers, fo called from three rivers which join their currents about a quarter of a mile below it, and fall into the great one of St Lawrence. It was the capital of the French here, and much reforted to by feveral Indian nations, which come down thofe rivers to it, and trade with it in various kinds of furrs. The country about it is plealant and fertile in corn, fruits, 8 cc , and hath a good number of lordfhips and handfome feats, and fine finheries contiguous. --The town is about 30 leagues diftant from Quebec, and the failing up and down from one to the other, exceeding agrecable, and feveral leagues above it.
Montreaf is fituated on an illand of the fame name, in the river St Lawrence, about 14 leagues long, and 4 wide, where broadeft, and very fruitful in corn, vegetables, "cc. The town has a valt trade with the natives. The concourfe of Indians of various tribes is very great, fome of them coming from places diftant fome hundred miles; the fair is kept along the banks of the river,' which lafts near three months. The natives bring thither all forts of furrs, which they exchange for guns, powder, ball, great coats, and other European garments; iron and brafs work, and trinkets of every fort.
Frontenac is a fort on the fame river, about roo leagues above Quebec. The foil hereabout is fo well cultivated as to yield all forts of European and Indian corn and other fruits, according to Hennipin. Near is a good haven for all forts of veffels to ride in with fafety.
Fort St Francis ftands in the ifland of that name, on a bay on the fouth end of St PeTER's Lake.
There are feveral more of thofe inlands under that name, very fertile, abounding with wood, wild fowl, pafture and cattle. A River that comes down into the Lake from NewYoRK, and fplits itfelf into a great number of branches, makes the country on that fide very pleafant and fruitful; and fo we may fay of all the other parts of this country. The Province of Sanguenay is another part of Eaftern Canada. On the northeaft it has the Indian nation Kileftinoas, on the north-weft that of the Efquimaux ; on the fouth eaft it is bounded by the river St Lawrence, and on the fouth-weft by that of Sanguenay; at the mouth of which is the town of Three Rivers before noticed. The river Sanguenay fprings from the Lake St John, and falls into that of St Lawrence at the town of Jadouffac, which, Charlevoix tells us, is navigable by the largeft veffels above 25 teagues up. The haven will contain 25 men of war, and has good anchorage and fhelter from ftorms. This province has good anchorage and ho its foil, climate, and inhabitants,
is much the fame, as to is much the fame, as to its foil, climate, and inhabitants,
witl that of CANADA Proper, before defcribed. It yields the greateff plenty of marble of feveral kinds, infomuch that not only the principal towns, forts, churches, and palaces, but even the houfes of private men are built of it.
QUEBEC, the capital of CANADA, is fituate on the confluence of the rivers St Lawrence, and St Charles; on the north of the former, and about I40 leagues from the fea. The haven is facious, and able to contain at leaft roo veflels of the line. A little above this is the city, fituate on the narroweft part of the river ; but between that, and the ifle of Orleans, is a fpacious bafon, a full league every way, into which the river St Charles empties itfelf, which flows
down from the north-wef, fo that it flands between the mouth of that river; and the Cape Diamant, on that of St Lawrence. The haven faces the town, and is fafe and commodious, and about 25 fathom deep.
The Illinois lindins live near the Lake and River of that name, which laft fprings from LAKE DAUPHIN', and of ter a ccurfe of above 200 leagues, exclutive of irs and ings, falls at length into the great river Miffifippi, The people live in diftant villages, on the plains on both fides of, the river, beyond which are large woods and floping hills, covered with delightful verdure at lealt nine months in the year, whilf the current, which is moftly fouth-weft, is fo fmooth and agreeable, that veffels of a confiderable fize may fail up and down it with eafe and fafety, during a courfe of at leaft 120 leagues, before it falls into the river Miffifippi. The lands on each fide this river Minois afford fuch pleaty of pafture, that we fee them covered with herds of large and fmall cattle, as well as goats, deer, and other beafts. The river allo fwarms with water-fowl of divers forts, fuch as fwins, geefe, cranes, ducks, \&cc. in prodigious plenty. Great-Britain being now poffeffed of all the territory on the eaftward of the Minfiffippi, we fhall take notice of tome other large rivers that fall into it, from Flortion. Mr Coxe fays, that about twelve miles above the mouth of it a branch runs out of it on the eaft fide, which, after a courfe of 160 miles, falls into the north-eaft end of the great bay of Spirito Sancto. That at firft 'tis very narrow and fhallow, but, by the acceffion of feveral rivers, becomes a moft lovely tiver, is navigable by the greateft boats and floops, and forms pleafant lakes, particularly that of Pontchartrain, by which was difcovered a more fafe and expeditious communication with the river Miffiffippi, to avoid the danger and difficulty of failing up that river by its principal mouth ; the navigation of which Great. Britain is now intitled to. From this lake they enter into that of Maurepas; from which they go on, by, means of the canal or river Ibervilie, into the river Miffiffipi. When that cannot be eafily done, they carry goods by land from the bay into the lake Pont Chartrain, which difcharges itfelf quite to the country, of the Oumas, who are feated on the banks of the Miffffippi, a little above New Orleans, and thence purfue that voyage up that river (La Martiniere.)
About bo leagues higher up, on the eaflfide, is the river Yaffoona; which comes into the Miffiflippi, 2 or 300 miles out of the country, and is inhabited by feveral Indian nations. Sizty leagues higher is the river and nation of Chongue, with forme others on the eaft of them. - Thirty leagues higher the Miffiffppi receives a river that proceeds from a lake about 10 miles diftant, which is about 20 miles long, and receives four large rivers: r. The Cufates, the mof fouthern of them, being the river of the Cherokees, a mighty nation, among whom it has its chief fountains. It comes from the fouth-eaft, and its heads'are among the mountains, which feparate the Cherokees from Carolina, and is the great road of the traders from thence to the Miflifippi, and the intermediate places.-Forty leagues above is the Chicazas; this river forms four delicate iflands, which bave each a nation inhabiting them. 2. The river Ouerfpere, which, about 30 leagues to the north-eaft of the lake, divides into two branches, whereof the moft fouthern is called the Black River.- The heads of this river are in that vaft ridge of mountains that runs on the back of Carolina, Virginia, and Maryland, through which mountains there is a thort paffage to the fources of the great river Poromack, on the eaft fide of them, by which the Indians, who are well acquainted with them, might, BEFORE THE PEACE, in conjunction with the Erench from the Miffffippi, have harrafied and annoyed our colonies. 3. The river Ohio, Oyo, or Hohio, which is a vaft river, and comes from the back of New'York, Maryland, and Virginia. It runs through the moft beautiful and fruitful countries in the world, and receives 10 or 12 rivers, befides innumerable rivulets: it is navigable 600 miles. Formerly feveral Indian nations dwelt on this river, who have been totally extirpated by the Iroquois, who made this river their ufual road, when they entered into a war with the nations either to the fouth or weft. 4. The moft northerly river that runs into the faid lake, and which comes, like the reft, from the north-eaft, is Jeremy's river.-Twentyfive leagues above the $\mathrm{O}_{\mathrm{H}} \mathrm{O}$ o is the great ifland of Tamaroas, with a nation over-againft it, that goes by its name ; and another by that of Cobokia, who dwell on the banks of the Chepullo River.-Thirty leagues higher is the river Chicagou, on the river Illinois; which nation lived upon and about this river, in about 60 towns, and confifted of 20,000 fighting men, before they were deftroyed by the Iroquols, and driven to the welt of the Miffifippi." This is a large pleafant river, and, about 250 miles above its entrance into the Miffiffippi, is divided into two branches : the leffer comes from north and by eaft, and its head is within 4 or 5 miles of the weft fide of the great lake of Michigen : the biggeft comes directly from the eaft, and proceeds from a morafs within 2 miles of the river Miamina, which runs into the fame lake. On the fouth-eaft there is a communication be-
tween thefe two rivers by a land-carriage of about two leaǵues, 50 miles to the fouth-ealt of the lake - The courfe of this river Chegogon is above 400 miles, navigable above half way by thips, and moft of the relt by floops and barges. It receives many fruall rivers, and forms 2 or 3 lakes, one efpecially, called Pimeteovi; 20 miles long and 3 broad, which affords great quantities of good fifh, as the adjacent country does came, both of fowls and beafts. Several Indian nations inhabit round about. There is a fort erected here called Crevecoeur, which is about half way betwixt the gulph of Mexico and Canada, and was formerly the ufual road of the French to and from both, till they difcovered a fhorter and eafier paffage by the rivers Ouabacke, and the Нонio, which rife at a fmall diftance from lake ERIE, or fome rivers which enter it.
Fighty leagues higher, the river Miffifippi receives the Misconsiag, a riverrefembling that of thelllinors, in breadth, depth, and courfe; and the country adjacent to its branches is alike pleafant and fruitful. - Sixty miles before it falls into the Miffiffippi, it is joined by the river Kikapouz, which is alfo navigable, and comes a great way from the northeaf. - Eighty miles farther, almof directly eaft, there is a communication by a land-carriage of two leagues with the river Mifcongui, which runs to the north-eaft, and after a paftage of 150 miles from the land carriage, falls into the great bay of Ponkeontamis or the Puans, which joins on the north-weft fide to the great river of the In LiNois.- Higher up the Miffiffippi is the river Chabadeba, above which the Miffiffippi makes a fine lake 20 miles long, and 8 or 10 broad.-Ten miles above that lake is the river of Tortoifes, a large fair river, which runs into the country a good way to the north-eaft, and is navigable 40 miles by the greatelt boats.
The rivers which do not communicate with the Mifliffippi, are only two large ones betwixt it and the peninfula of Florida; viz. the Coza and the Potache.
The Coza or Coussa river, which the French have called Monille, rifes from the Apalachean mountains, with feveral heads, of which the moft northern is at the town and province of Guaxula, at the foot of the mountains. Many rivulets uniting after a courfe of $80^{\circ}$ miles; form a river, with feveral delightful illes, in a country wonderfully pleafant and delightful. - The firft confiderable town, or province, is Chiaha, with a river of its own name, which helps to enlarge the Coza, and which is famous for its pearlfifhing. From thence the river grows larger and deeper, being reiaffrced by others from the mountains and the valleys, till it eqtets the province of Coza, which is reckoned one of the moft fruitful and pleafant parts of the country, and very populous. It confifts of hills and valleys, rjvulets, arable land, and lovely meadows. - Prunes grow naturally in the fields better than can be produced in Spain by culture; and though there are fome vines that creep upon the ground, there are other which mount, in almoft all places near the rivers, to the tops of the trees. The Coza river enters the Gulph of Mexico 100 miles fouth of Manhela, or Mobille, as the French have called it. - One of the rivers that enters the Coza is the Chatta, where inhabit Indians of the fame name. - To the eaft of the Cozas are the Becues; or Abecaes, who have I3 towns, and dwell on divers rivers, which run into the Coza. It is a very pleafant country, confifting of hills and valleys, and its foil is generally more marly or fatter than that of many other provinces. - A little more to the fouth weft, between the Abecaes and Chattas, the Ewemalas dwell on a fair river of the fame name, which coming from the north-eaft, mingles with the Coza. Mr Coxe faya, this great river Coza falls into the Gulph of Mexico, 15 leagues eaft of the great bay of Naffau or Spirito Santo, or north eaft of the cape of Myrtle ifland. - The Ullibalys or Allibamous, Chicazas, and Chattas, who are the mof confiderable nations upon and between the rivers Coza and Miffiflippi, kindly entertained the Englifh who refided among them ieveral years, and CARRIED ON a SAFE AND PEACEABLE Trade withthem, 'tillabout the Yearifis, when, by the lntricues of the French, they WERE EITHERMURDERED, OR OBLIGED TO MAKE ROOM FOR THOSE NEW INVADERS, who HAVE SINCE unjustly possessed and fortified the same Stations, in order to curb the Natives, and to cut off their Communication with the Engligh Traders; whereby they engrossed A profitable Trade for above 500 Miles; of which the British Subjects wereafew Years agothe sole Masters.
The town and fort in the Isle of Dauphine lies about 9 leagues fouth of Fort Lewis, and 10 leagues weft of Pensacola. The diftance between the river Coza, and that of Palache or Spirito Santo, to the eaft, is about r90 miles, and the coaft between them is deep and bold. - The chief harbour betwixt thefe two rivers, and indeed THE best upon all this coaft of the Gulph of Mexico, is Pessacola, belonging by the laft treaty of peace to the crown of Great Britain; it being a large port, fafe from VUL. II
all winds, which has four fathom at the entrance, and deepens gradually to feven, or eight - It lies in leagues eaft of Port Lewis and Mobille, 90 weft from the upper part of the peninfula of Florida, and 158 from the Tortugas islands. - The land here produces pine trees, fit for fhip-mafts, of which many were cut down by the Spaniards, and carried to Vera-Cruz, by a fhip belonging to the Floti, that brought provifions, and returned with timber. There is a communication from hence by land with Apalachy.
APALACHYCOLA is a good harbour, 30 leagues eaft of the former, and as much from what the Spaniards called the river Spirito Santo. This river enters the Gulph of Mexico about 100 miles from the cod of the bay of Potache, at the north-weft of the peninfula of Florida, in about north lat. 30. It is not eafy to find this place, by reafon of the iffes and lakes before and about it, and though a fately river, whofe mouth makes a darge harbour, F R OM W HENCE A Tradewas carriedon to the Havanna, by fmall veffels, yet it has not above two fathom water and a half, or three fathom at moft, on the bar; but when that is pafled, it is very deep and large, and the tide flows higher into it than into any other river upon all the coaft. On both fides of it, towards the fea coaft, live the nations of the Cufhetaes, Talliboufes, and Adgebaches. . This river proceeds chiefy from others, which have their origin on the fouth or fouth-weft fide of the great ridge of hills that divides thig country from Carolina, and is fuppofed to have a courfe of about 400 miles, - All the channel from hence to the Tortugas iflands, is called the Bay of Certos. - Here is a communication from hence by land with the Port of St. Augustine in the Gúlph of Florida.
In the bay of Nassau, or Spirito Santo, there are four illands, which lie from fouth to north-eaft for 50 miles, with openings between them a mile or two over. The moft northerly is that betwixt which and the continent is the entrance of the bay. It is called Myrtle Inland, about 24 miles in length, but in fome places very narrow. Some think it is the fame that the French call L'Ifle des Vaiffeaux, or the Ships. Inland; which, confidering its diftance from Dauphiny ifland, and the convenient fhelter it affords fhips from the wind, is not improbable. - The bay is 15 miles broad from Myrtle Ifland to a row of iflands which run parallel with the main and another bay between them, and tretch 50 or 60 miles to the fouth; as far as one of the fmaller mouths of the Miffiffippi.
Bilocoby BAy, with another fair harbour, is about 15 leagues to the north-eaft of the moft eaftern branch of the Mififfippi, and a fmall river near it, called Paffagoula.
We now thall touch on the Peninfula of Florida, which lies betwixt the Gulph of Alexico on the welt, the Atlantic ocean on the eaft, and the Straits of Bahama on the fouth. It is about 100 leagues in length, but not above 30 where broadeft. The ports and towns of ftrength and convenience, are St. Augustine and St. Matitheo.
St. Augustine, on the eaftern coaft of the peninfula, is about 70 leagues from the mouth of the Gulph of Florida, or channel of Bahama, 30 fouth of the fiver Alatamaba, and 47 from the town and river of Savannah. - The city runs along the thore at the bottom of a pleafant hill fhaded with trees in the form of an oblong fquare, being divided into four regular ftreets, which cut each other at right angles. The town is built thickeft on the north fide towards the caftle, about a mile off, called St John's Fort. - There were 50 pieces of cannon mounted on the caftle, 16 brafs, and fome 24 pounders. It has a covered way, and the town is intrenched with 10 faliant angles, each defended with cannon, and the caftle is fecured on the weft by a morals. The port is formed by an ifland and a long point of land, divided from the continent by a river, which falls into the fea two miles above the fort. The indand is called Euftacia, or Metanzas.
Though this place is of pretty good flrength, every circumftance confidered ; yet Sir Francis Drake took it, 1586 , and it was plundered by Captain Davis in 1665. In 1702, it was attacked by the Englifh and Indians of Carolina, under Colonel Moore, who ruined the villages and farms in the open country, and befieged this town three months; but at the approach of fome Spanifh veffels to its relief, he raifed the fiege, and marched back to Charles town, 300 miles by land, leaving the fhip and ftores he brought with him to the enemy. - It was befieged again by General Oglethorpe in 1740, but to little purpofe.
This port, now belonging to Great-Britain, may be attended with extraordinary advantages to the Englifh, our fouthern fettlements on the continent being hereby fecured againft any future attempts of the Spaniards by Jand; efpecially, when the utility of the other ports in the Gulph of Mexico is conjunctively confidered. - Belides the great fervice this place may be to our trade, in not only depriving the Spaniards of a port from whence they might annoy us on that fide, but alfo by enabling us to annoy them upon occafion, by cruizing on their home-ward-bound hips coming from the Gulph of Florida; and the Streights of Bahama.
$1 \circ \mathrm{~F}$
Another

Another place in the Gulph of Florida, next to St Aucustine, that may be of fervice to this kingdom on an emergency, is St MATTHEO, about 15 leagues to the north. It is the frontier town of Florida next to Georgia., - The Englifh befieged it in 1715, but were obliged to defift with
confiderable lofs.
The fea upon this coaft, and off, as far as the Bahama inands, The fea upon this coaft, and off, as far as the Bahama inlands,
which lie oppofite to it, is termed the Gulph of Florida, which, according to our beft navigators, is reckoned about 16 or 18 leagues over. And here the mighty current, which upon all the fouth part of the Gulph of Mexico fets conftantly in with a flrong ftream to the weft, driving fo all the way to the very coaft of La Vera Cruz, turns away again to the eaft, between the ifle of Cuba, and the fouth coant oi North-America, and finding no vent 'till it paffes by Cape Florida; it then turns from fouth to nortb, and runs through this gulph into the great Atlantic ocean. For this reafon it is that all fhips from Jamaica bound for Englarid come through this gulph to have the benefit of this current, which has fometimes proved dangerous both to the Englifh as well as Spaniards. To avoid which the navigators make an allowance of aboutfive points in the Compass for the current, and keep as near as polffble to the Bahama fide. - But as hazardous as this paflage has fometimes proved for fhips bound to Europe, there remains no other courfe for them to take, except that of the Windward Passage; and in a courle of above 160 leagues from Cape Morant, the eaft point of Jamaica, to the north fide of Crooked Illand, which is what is called the Windward Paffage, the Englifh traders, in time of war, are in continual danger of being taken by the Spanifh guarda coftas, befides the perils of the fea.
Hiere it is neceflary to obferve, from the judicious navigator Mr Atkins, who in his voyage to the Weft-Indies fays, " that fhips and veffels may, and often have failed through " this clannel from the north Side of Cuba to "s the Bay of Mexico, notwithfanding the common "s opinion on account of the current that is againft it; that " they keep the Bahama hore aboard; arid that they meet " the wind in fummer for the moft part of the channel "eafterly, which, with a counter-current on hore, pufhes "' them eafily through it.
He adds two oblervations of the pilots, in relation to this gulph: "f 1. This ftream goes conftantly out to north"ward in the middle channel, its force having fome re" fpect (like tides in other countries) to the moon and the "s winds; with a counter-current, or at leaft a ftillnefs of " the water, on fhore, that will enable a fhip to turn through, "c be the middle fream ever fo ftrong; the fame as in "s the Strait of Gibraltar, where, though the current "c runs continually into the Mediterranean, thips may "" work through, keeping the fhore aboard. 2. The cur"s rent which goes out here fets for mof part into the "Gulphof Mexico, between the two capes of Corientes and "Catoche, with counter-currents on fhore, though not "c always fo, the pilots having obferved them ftrong to the "s eaff at the neww and full moons."
From the preceding fuccinct furvey of our prefent North American fettlements, we conceive the following obvious inferences deducible.

1. That it is not the extent and magnitude of our new poffeftions in America, which would have proved of any manner of advantage to Great-Britain, if they were inacceffible by our Royal Navy and our Mercantile SHipping; or if the whole had not abounded with numerous very large and extenfive inland navigable rivers, whereby we could have an eafy and fafe communication with every part belonging to the crown of thefe kingdoms. They would not have been worth our acceptance ; and it would have been the moft infatuated bad policy to have given up our conquefts, furrounded by the fea, for fuch new continental acquifitions.
2. But as our new territories are reftrained in extent to the confines of the Mississippi, and the freedom of the navigation of that river fecured to us from the fource to the mouth, to the weftward of our ancient colonies: as in confequence hereof, and the poffeffion of all Florid-A, we are alfo intiticd to the navigation in the BAy of Mexrco to the Southward of our ancient colonies, and are beerme poffeffed there of the ports and harbours of the bay of Palache, Pensacola, and Mobilee: as we have alfo fecured to ourfelves the additional ports and harbours of StMattheo and St Augustine on the fouth-eaft fide of our ancient colonies, and thofe too in the Gulph of FloRIDA, through which the treafure of NEW SPAIN pafles: as we have obtained likewife to ourfelves the navigation of the Gulph and River St Lawrence to the nothward of our ancient colonics, and the freedom of navigation in thefe parts is fecured to us by the acquifition of CAPE BreTon; which by good management may render our navigation here no lefs fecure than Gibraltar bas done that of the Mediterrancan: as we have obtained the right of poffefion of Canada, and all its Dependencies, fitll further to ftrengthen us on the northern fide of our
ancient colonies: as we may be faid, at prefent, to enjoy a Maritime Barrier to all our ancient continental co lonies on the North, East, West and South, and a navigable intercourfe, by many very facious and fine rivers among them; whereby we fhall be able to p:otect them in their inland, as well as their extenfive maritime parts, and cultivate an internal as well as a maritime commerce with the whole within the Britifh boundaries; all our colonies will receive greater fecurity than ever they had before; and thercfore we may reafonably enough prefume they will grow more and more profperous, and thereby adminifter greater reciprocal aid, fuccour and fupport to each other, as well as to their mother country. For,
3. It is hardly tobe doubted but Great-Britain will exert every meafure that will tend to produce or compel fuch a union among all our colonies, as will add proportional ftrength to the whole consinent; fuch a united degree of ftrength and powcr, as will, in future, render them a full match for France and Spain, and thofe their Indian Allies who may be perfidiounty infligated to annoy them.-We fhall foon be in a capacity, now the boundaries of Great-Britain and France are afcertained, on the American continent, to manage the $I_{N-}$ diANs, feeing both nations are limited to their refpective fides of the great river Miffiffippi. If we cannot, by every fair, upright and equitable method, which we hope will be firft tried, bring the Indians on our fide the great river to live in perfect friendhip and harmony with us, we muft, for our own fafety and profperity, be compelled to carry fire and fword amongit them, and drive them on the weftern fide of the river: yet we mult further hope, that we fhall not be irritaied too fuddenly to this extremity, left this fhould frengthen the hands of our enemies there, and enable them to have thofe Indians the more under their command, and fubject to their eternal intrigues and machinations to diftrefs us. - If we fhould experience, that the French are not determined to keep the peace, but will fir up the Indians to be our perpetual enemies, and will fecretly fupply them with arms and ammunition to commit ravages and depredations upon our colonifts, we muft be obliged to deprive France of their fettlement at New Orleans, and of their navigation on the Mississippi: this, perbaps, may be much eafier practicable, than preventing the French from exciting the favages to continue in aternal war with us: and 'till the French fhall be totally extirpated from the whole continent, there is reafon to fear, they will never defilt from influencing the favages to our conflant detriment.
4. It does not, therefore, feem at all improbable, that at length what has been fuggefted may foon come to pafs, and that we fhall have the whole continent to ourfelves, be unmolefted either by. France or Spain, and bring the Indians under an amicable dominion. For if Spain fhould interfere to regain Florida, or practife any arts to ftrengthen the Indian nations againft us, for the fafety of all our colonies, We muft be again forced into a rupture with them alfo: and if this fhould be the cafe, on any occafion whatfoever, we are certainly now in a better fituation to carry on a war againft both Spain and France than ever we were before we obtained our new conquefts. - With regard to Spain, in this part of America, fhould we be compelled foon to draw the fword againft them, our prefent fituation in the GuLpH of Mexico gives us juft pretenfions to have as many thips fationed there, when we fee reafon for it, as the Spaniards may have at the Havauna; and what then is likely to become of the Havanna and the treafure from Mexico? If, upon any contravention of the treaty of peace, on the part of Spain, the court of England fhould refolve upon reprifals, will not our prefent fituation enable us to become mafters of the Spanifh treafure from La Vera Cruz? See our articles Mexico, Old Mexico, and New Mexico. Muft not this prove a perpetual alarm to the Spaniards, left their Flota Ghould fall into Britifh hands upon any provocation? Are we not alfo better fituated than before the laft peace, to intercept their Galloons from $P_{\text {ER } U} U$, which are obliged tofail to the Havanna, as well as the Fxota, and from thence pafs through the Gulph of Florida? And are not our fhipping ftationed in the Gulph of Mexico, and that alfo of Florida, more likely to intercept their treafures, both from Mexicoand Peru, before they arrive at the Havanna, and alfo after failing from thence to Old Spain, than they ever were before? Our ftations at the Bastimentos, and Jamaica, for thofe purpofes, we have experienced to have been very precarious. - Next to the Havanna itfelf, we cannot be better fituated than we now are, for fuch important occafions.
In cafe of a freh rupture between England and Spain, of which we are fpeaking, are not the Englifh, fituated in the 'gulph of Mexico and Florida, more likely to reconquer the Havanna than they ever were before? With our fhips fta. tioned at Jamaica on one fide, and in the gulph of Mexico and Florida on the other, with a force fuitable to the occafion, and a refolution in the court of England to take it, we have little reafon to fear fucceff, while, as was faid by a brave Englifh admiral on another occafion, IT WAS OPEN at top, let the Spaniards fortify and fertify again. As
our northern colonies gave all poffible affiftance, at the taking of Cape Breton, for their future fecurity; . fo have we not reafon to believe the like Britifl firit will manifeft itfelf in the fouthern colonies, when we fhall again, befiege the Havanna? On fuch an occafion, may we not expect great aid from Florida, Georgia, and the Carolinas?
The firit of conquelt is not abated in Britons; and if we have occafion to exert it again, we may poffibly carry it farther than the Havanna;. .. Being once again mafters of that, who will hinder us. from carrying our conquetts a ftep further into the bottom of the gulph; of. Mexico, and becoming victors of the Mexican treafure at La Vera Cruz? And will not our domeftic circumftances of Public Debts and Taxes, efpecially upon a frefh war. with Spain, ọblige us to make our enemies contribute as much towards the immediate expence thereof as poffible, and even to enable us to difchargethofe National Debts, which they have occafioned? If this refolution is, not taken in the next war, Ifhould be glad to be informed, how many more fuch wars as we have already been engaged in, we can afford to undertake? Or, to alk this queition in another manner, what degree of further public debts and taxes can this kingdom bear, before fhe arrives at her NE PLUS ULTRA of national incumbrances? Or, will people be fo wild and infatuated as to imagine that we can never be fo loaded with Public Debts and Taxes, as to be unable to raife more money to carry on wars? No man in his fenfes will affert this.- We have feen what may naturally enough prove the confequence of another Spaniff war foon happenirg with Great-Britain. Letus now pleafe ourfelves with the view of the confequences allo of a French war falling out at the fame timel: for the one will bring on the other, efpecially finde the Family Compact has taken place.
It has been ebferved already, that England will find no great difficulty to difpoffefs the French of New Orilean's, and deprive them of the navigation of the Miffiffippi, owing to our prefent fituation for the parpofe. As this feems to point out the fate of France in thefe fouthern parts of the American continent; fo what may we reafonably expect will be their doom in the northern parts, where they have as little to deferid themfelves ffom Britifh powers as they have in the fouthern? We are already in poffeffon of all the territory, and of every place of importance to our fecurity there. We have Cape Breton, which we may render more invinci-ble-than the Spaniards can do their Havanna, as being enwifoned by the united force and aid of allour colonies in this part. Is it poffite that the finall ifles of St Pierre and Miquelon thould enrable France to make head againft the united ftrength of all our coloriffs? If France, therefore, quarrels with us again, we thould, I am perfuaded, meet with little obfruction irf turning them out of the whole Newfoundland fihery: and when they oblige us to do that again, do they not purt it once more in our power' to deprive them for ever of this their chief fiftery, which is their nurfery for feamen? Can they flatter themfelves, that this nation will evermore be their dupes to reftore them to this privilege again? They carnot; becaufe our circumftances will no longer admit of it. The weight of our public debts and taxes, in comfequence of another war, will become fo unwieldy, that our future fafety and prefervation will oblige us to keep what we conquer, or to difpofe thereof, that the fame mult nevet, revert into French hands. See our article WAr. For we are no longer in a capacity to continue the old fyltem, to fight to negociate, and negociate to fight again. SeeCredit [Public Credit].

STAFFORDSHIRE is bounded on the eafl by Warwickflate and 'Derbyhire; on the fouth by Worcefterfhire, on the weft by Shropfhire and Chefhire; which laft joining Derbythire; makes, the north birder. - In compais it is I4 miles.
Irs air is generally good, as is the foil alfo, even the Moorlands, which are mountainous, and therefore reckoned the nott bafrert, procucing a Mort, but fweet grafs', by which thay breed as fine large cattle as thore of Lancaflire.
As to fubterraneous productions, both the Moorlands and Woodlands yield lead, copper; iron; marble, alabafter; mill ftenes, coals, falt; \&ec: befide various forts of ufeful earths and clays.
Lichfirid is a pretty large neat city', within tirree miles of the Trent.
Stafford, the fhire-town, on the river Sow, is well built, and much increafed of late, both in wealth and inhabitants, by its manufacture in cloth.
Newcastle under Line is an antient corporation. The cltief manufacture is hats. The cloathing trade alfo flourifhes here, and the town is furrounded with coal-pits.
Wolverfampton is a populous, well-buitt town. The chief manufaiturers here are lockfmiths, who are reckoned thie molt expert of that trade in England.
Waisal, pleafantly feated on the top of a hill, has a good market, and in and near it are feveral mines of iron', wherewith the townfimen make fpurs, bridle-bits, ftirrups, buckles, \&c. in which they carry on a confiderable trade.

PENKRIDGE is noted for its great horfe-fair; reckoned one of the greateft in the univerfe, efpecially hunters and roadhorfes, which are brought hither from. Yorkthire, and all the horfe breeding counties in England. , 'Tis held the 2gth of September.
BURTON is of moft note for its fine ale, and a manufacture of cloth, which, was carried on formerly to greater advantage than at prefent.

## STOCK-JOBBING.

## Of the Art or Myftery of trafficking in the Public Funds

## The chief Laws and Statutes concerning Exchange-Brokers, and Stock-jobbing

Brokers are thofe perfons that contrive, make, and conclude, bargains and contracts between merchantsand tradefrimen, in matters of money and merchandize, for which they have a fee or reward; and they are called Exehange-brokers in fome of our ftatutes.
By the flatute $8 \& 9 \mathrm{~W}$. III. cap: 32. for reftraining the ill practice of brokers and flock-jobbers; no perfon fhall ufe or exercife thie office or employment of a broker, in London or Weffminfter, \&c. in making or concluding bargains between merchant and merchant, or others, concerning aniy wares and merchandizes, or monies to be taken up by exchange, or tallies or orders, bills, notes, flock of any company of trade, \&c. until fuch perfon thall be admitted and licenfed by the lord mayor and court of aldermen of London. And, upon admittance of any fuch broker, he fhall take an oath, that he will truly and faithfully execute the office between party and party, without any fraudor collufion, according to the purport of the act, \&c. Likewife, he fhall give bond to the Iord mayor, \&c: in the penalty of 5001 . for the faithful execution of his office, without any fraud or corrupt practice. The number of fuch brokers fhall not, at one time, exceed one hundred; and the lord mayor and court of aldermen fhall caufe their names and places of habitation to be publickly affixed on the Royal-Exchange, and other public places: and every fworn broker, after his admittance, as aforefaid, fhall carry about him a filver medal, having the king's arms on one fide, and the arms of the city of London, with his own name; on the other fide; which he fhall produce at the concluding of eyery bargain to the parties concerned, upon pain to foffeit 40 s . for every omifforn.
If any perfon flall act as a broker, not bëifgoadmitted according to this aet, he fhall forfeit 5001 . befides fuch other forfeitures as he may any way's inctur chereby; and in cafe any one fhalt knowingly employ ariy perfon to deal for him as a broker, or fock 'jobber, who is not admitted and fworn as aforefaid, fuch perfon thall forfeit the fum of 501. And if any perfon, not being a fworn broker, according to this fatute, fhall act and deal in difcounting tallies or bills, or in ftock-jobbing, in felling fock, or any fécurity upon any funds granted by parliaitient, he fhatl be liable to the forfeiture of 5001 . and to ftand on the pitlory in fome public place in London, three feveral days, for the face of one hoúr.
Every fworn broker is to keep a book or regifter, and therein enter all contracks and bargains that he fhall make between any perfons, within three days after any conitract made, and for omitting fo to do, he forfeits 501 . And if any fuch broker fhall, directly or indirectly, take above io per cent. for brokerage, he fhall, for every offence, forfeit rol. Alfo, if any fworn broker deal for himfelf, in the exchange or remittance of monies; or buy any tallies, orders, bills, or fhares in any joint flock, for his, own ufe; or fhall buy goods or mérchandizes to fell again, or make any profit in buying or felling any goods, more than the brokerage allowed, he fhall forfeit the fum of 2001 . and be for ever incapable to act as a broker:
All policies, contratts, or agreements, upon which any premium is, or fliall be given or paid, for liberty to deliver, receive, accept, or refurfe any flare in any joint-ftock, tallies, orders, Exchequer-bills, \&ec.' other than fuch policies and contracts as are to be performed within three days from the time of making the fame, fhall be null and void, and every fuch premium thall be paid back: and if any premium be given, contrary to the intent and meaning of this act, with the'privity of a fworn broker; or if any perfor fhall trade therein as a broker, without being lawfully admitted, and the fame thall come to the knowlege of any fwotn broker, in every fuch cafe, furch fworn broker fhall forthwith difcover the fame; and, in default thereof, he fhall be difabled to exercife the trade and office.
And all penalties and forfeitures given by this act, fhall be recovered by action of debt, \&cc. in any of the king's courts of record at Weftminfter, one moiety whereof to go to the king, the other to him that fhall fue for the fame.
By the 6 Geo . I. cap: 18. it is declared, that all undertakings, tending to the common grievance and prejudice of his Majefty's fubjects, or great numbers of them, in their trade, commerce,

## S T O

## S T O

commerce, \&cc. and particularly the adting as a corporatebody, by raifing ftocks, and the transferring or afigning any fhare in fuch fock, without authority by act of parliament or chareer to warrant the rame; and all acting under any charter formerly granted, for particular purpofes, by perfons who thall endeavour to ufe the fame charters for raifing a captalfock, or making transfers or affignments thereof, not intended by fuch charter to be raifed or transferred; and acting under any obfolete charter, \&c. fhall for ever be deemed to be illegal and void.
All fuch undertakings and attempts, and things whatfoever, for furthering, countenancing, or procceding therein, and relating thereto, fhall be deemed public nurances; and the offenders be liable to fines and punifhments accordingly, and alío incui any farther pains, \&c. as are provided by the ftatute of pramunire.
And if any merchant or trader thall fuffer any particular damage in this trade, \&c. by occalion of any undertaking by this act declared unlawful, he may have his remedy for the fame by action, to be grounded on the ftatute, againft the perfon, focieties, or partnerihips engaged in fuch underraking, \&c. and in every fuch action the plaintiff hall recover treble damages with full cofts.
If any broker, or perfon acting as a broker, for himfelf; or in behalf of others, fhall bargain, fell, or buy, or contract for the bargaining, felling, or buying, any fhare or intereit in any of the undertakings hereby adjudged to be unlawful, or in any fock of fuch undertakers, he fhall not only be difabled to act as a broker for the future, but fhall forfeit 5001 . one moiety to the ufe of the crown, and the other to the informer.
By 7 Geo. II. cap. 8. all contracts which fhall be entered into, upon which any premium thall be given for liberty to deliver or receive, accept or refufe any public ftock or fecurities, and all wagers, puts, and refufals, relating to the prefent or future price of flock or fecurities, fhall be void; and all premiums upon fucb contracts or wagers fhall be reftored to the perfon who fhall pay them; who, within fix months from the making of fuch contract, \&c. may fue for the fame with double cofts: and it fhall be fufficient for the plaintiff to alloge, that the defendant is indebted to him, or has received to his ufe, the money or premium fo paid, whereby the action accrued, according to the form of the fratute, without fet ting forth the fpecial matter; and a bill in equity may be preterred for difcovering any contract or wager, and the premium given, which the defendant fhall be obliged to anlwer upon path, \&c.
Every perfon who fhall make any contract, upon which any premium fhall be given for liberty to put upon, deliver, accept, or refufe any focks or fecurities, or any contract in the nature of puts and refufals, or fhall lay any wagers, \&c. as aforefaid, (except fuch perfons who bona fide fue, and with effect profecute for recovery of the premium paid by them; and that flall voluntarily, before any fuit commenced, repay, or tender fuch premium which they fhall have received; and except thofe perfons as hall difcover fuch tranfactions in any court of equity) fhall forfeit 5001 . And all perfons negotiating or writing fuch contract, incur the like penalty and forfeiture; which penalties may be recovered by action of debt, or information, in any of his Majefty's courts of record at Weftminfter.
No money or other confideration (hall be voluntarily given or received, for compounding any difference for the not delivering or receiving any public flock or fecurities; but all fuch contradts fhall be fpecifically executed; and all perfons who thall compound any difference, fhall forfeit rool. And no perfon who fhall fell fock, to be delivered and paid for à certain day, if it be refufed or neglected to be paid for, fhall be obliged to transfer the fame; but it fhall be lawful for fuch perfon to fell fuch fock to any other, and to receive or recover, from the perfin who contracted for the fame, the damage which fhall be fuftained: and any perfon that fhall buy ftock, to be accepted and paid for on a future day, and which fhail be refufed or neglected to be transferred, may buy the fame quantity of fuch flock of any other perfon, at the current market-price, and recover and receive, from the firft feller, the damage fuftained.
All concracts made for the buying or transferring of ftock, whereof the perfons, on whofe behalf the contract fhall be made to transfer the fame, fhall not at the time of making any fuch contrat be actually poffeffed in their own right, or in the name of truftees, fhall be void; and every perfon in whofe behalf, and with whofe confent, any contract hall be fo made to fell fock, of which fuch perfon is not actually polfeffed, \& c. Ahall forfeit the fum of 500 l . one moiety to the crown, and the other moiety to them that thall fue for the fame: and any broker or agent, who fhall negociate fuch contract, and fhall know that the perfon on whofe behalf the contract fhall be made, is not poffeffed of the ftock, fhall forfeit rool. to be divided between the king and the profecutor.
Every broker, or perfon who thall act as a broker, receiving brokerage in the buying or difpofing of ftocks, fhall keep a broker's bouk, in which he fhall enter all contracls that he fhall make, on the day of the making fuch contracts, with
the names of the principal parties, as well buyers as filers; and fuch brokers, who fhall not keep fuch book, or thall wilfully omit to enter any contract, fhall, for every fuch offence, forfeit 501 . one moiety to bis Majefly, and the uther moiety to the perfon fuing for the fame.
But nothing in this act thall extend to any contracts for the purchafe or fale of fock, to be made in purfuance of any decree or order of the court of chancery, with the privity of the accomptant-general of that court : nor fhall any thing in the act hinder any perfon from lending money on fock, or contracts for re-delivering or transferring theieon, fock, or premum be paid for the loan, more than legal intereft.

## REMARKS.

Plain reafons why Stock-Jobbing has been, and ftill con-
tinues to be, detrimental to the commerce of this nation.
I. In relation to Trading Companies, whofe flocks have been jobbed in, without due regard to the advancement of the commerce of the nation, by the means of thofe trading companies, as was the great plea for their primary inftitution. 1. Becaufe, when the African trade was firft eftablifhed by a company, it had fuch reputation, that fhares therein rofe from iool. to 4801 . whereby the artful managers got great eftates in felling fhares; but after they had made their market, by practifing on the pafions of thofe unexperienced in this kind of my fterious traffic, the thares fell from 4801 , to Forty Shilings; which proved not only unfpeakably prejudicial to that valuable branch of commerce, but injurious to many good families, and deffructive to numbers of widows and orphans. This was formerly alfo the fate of the Hudson's Bay Trade, the Whale Fishery, and Spice Trade, \&c.
2. Becaufe ftock-jobbing has been the parent of numberlefs trading bubbles. See ourarticle Bubbles and Actions. 3. Becaufe jobbing in the South-Sea fcheme of the year 1720 , not only ruined thoufands of families; but did great injury to the public credit of the nation. See our article SouthSea Company.
4. Becaufe ftock-iobbing fchemes have had as fatal effects in France as in England. See the article Mississippi.
5. Becaufe, in times of danger and difficulty, the focks of trading companies, which mult be always negociable, are liable, upon every idle rumour, to be raifed and lowered by the jobbers therein, to anfwer their lucrative purpofes, and thereby to hurt the Public Credit of thofe companies, as well as the Puplic Credit of the nation in general.
6. Becaufe companies may act fo imprudently, or unjuftly towards other nations, in the exercife of their commerce, as may involve the nation in Wars and Public Debts, as well as ruin numbers of the ftock-proprietors. See Sou thSea Company, and Spanish America.
7. Becaufe the domeftic traffic in the flocks of companies, fo engrofles the thoughts of the proprietors, that the national commerce often fuffers, for want of that money being employed in a free trade; which might prove much more to the advantage of the kingdom, as well as to that of the ftockhulders themfelves, if they employed the fame property in the general trade.- - TS Thefe confiderations may, perhaps, furnifh the weightieft objections that can be urged againft ail Joint-Stock Companies.
8. Becaufe Private Cremit is greatly injured hereby; for the monies of the opulent being locked up in thefe channels of domeftic bubbling, and the ftock-holders heads whollv engaged in this kind of negociations, induftrious and fkilful traders are deprived of thofe loans of money, which they were wont to have on their Personal Security, at the legal intereft, wherewith to carry on the folid national commerce.Whence private credit has received unfpeakable detriment, for want of a comsetency of cafh to circulate the general trade; whereby dealings for Ready Money, or very fhort credit, which was greatly the cafe before Stock-Trading took place, are quite laid afide, and long credits enhance the price of our commodities, and bankruptcies have fince proved more numerous than ever. See our article Credit [Privatecredit].
II. The injurious Effects of Stock-Jobing, with Regard to the public Revenue Funds. 1. Becaufe the Public Funds, together with companies ftocks, engrofs that ready money that fhould otherwife be employed in trade, either by the proprietors or others; which would prevent that long credit which is fo fatally cuftomary in our trade, that tends to ruin it in all nations where we have any commerce; for, as foreigners know that our manufacturers are obliged to give and take credit at home, fo they have infifted upon long credits abroad. - This prevents all ready money returns, which ruins the merchant as well as the manufacturer.-Whereas, was that money employed in trade, that circulates in the public funds, this practice of long credits would ceafe both at home and abroad, our commodities go far cheaper to foreign markets than other wife they can do, quick returns be made, our traders faved from bankruptcy, and our rivals prevented from fupplanting us at foreign markets, as they now do.
2. Becaufe
2. Becaufe, while people have dpportunity to deal in the fufids, ehey will endeavour, from a fpirit of indolence, to fubfift on their income that way, and fent their backs on all fair national trade.-This finks the trade of the nation, for want of that circulation of money requafite to carry it on to proper advantage; whereby, inftead of increafing in ikilful tradets, we fwarm in fock-holders and fock-jobbers, brokers' and ufurers: and thus there appears to be plenty of money for funding and jobbing, while the trade of the nation, which alone can enable ds to pay the interef and principal, is fantved for want of money to circulate it the moft to the public intereft.
3. Becaufe funding and flock-jobbing can never increafe, but muft daily leffen the commerce of the nation, which muft daily leffen its resl and fubitartial wealth, and augment only that which is indiginary.
4. Becaufe this kind of traffic gives foreigners, who are propriectors in our funds; an opportunity at critical conjunctures, to ufe many artifices, in concert with our domeftic jobbers, to raife and fall flocks as they pleafe, draw the real money out of the kingdom, and prejudice or ruin the public credit, to anfwer fome infamous temporary purpofes. - Wherefore, to damp the fpirit of Stock-Jobsing, wive muft encourage that of Commerce; and to uphold the Pubeic Credtr, we muft either lefien our Public Debts, or ufé a Síunge, with which the gublic creditors have been threatened by fome of late. See the article Money.
SUBSIDY, an aid, tak, or tribute, granted by the parliament to the king upon urgent occafions, and mipofed upon the fubjects, according to a certain rate on lards' or goods.
Subgidy is allo a duty paid at the cuftom houfe upporiforelgn goods imported into this kingdom. There are various Sub sidies gramied by actis of parliament, according to the exigencies of public affairs. The Subsidy Inwards, ofr Old Subsidy. This duty is compofed of a Tonnage and Poundage Doty; whidtromes arife from the different regulations, whereby it is impored and levied. By the act of 12 Car. IL, cap. 4 , it is called andage Doty on wines imported, being thereon regulated by a fom certain on every ton; and it is called a Poundage Duty on other goods and merchandize imported, being thereon regulated by certain portion of a Pound (or twenty Shillings in Money) of a certain Rate or Valuation fixed in the Book of Rates', which fee:
Tonnage is payable (in ready money by 12 Car. II, cap. 4. S. 1. 4. before landing) on all wines imported. 12 Car. II. cap. 4. §. 16. except prifage' wines. See Prisage. And by the 13 and 14 of Car. II. cap. 2. vinegar, períy, rape of grape, fyder and fyder eager, which by the 12 Car. II. cap. 4. were under the common regulation of Poundage, are made fablect to Tonnage for this Subfidy : on all which it is to be refpectively levied and collected arcording to the feveral acts pointed out in the Book of Rates
Another fubfidy is called the New Subsidy. It is to be raifed, levied, and collected, by the fame rules, orders, and methods, and under the fame perialties and forfeitures, as fignified in the feveral acts contained in the Book of Rates. There is a fublidy named the One-third Stubsidy, which is the amount of $\mathrm{O}_{\mathrm{NE}-\mathrm{THIRD}}$ of the preceding fubfidy. This branch, as well as the former fubidies, is compofed of a tonvage and poundage duty, and is payable in all cales where that is due: it is to be raifed, fecured, and paid, by the fame ways and means, and methods, under fuch penalties and forfeitures, and fubject to fuch rules and directiong, as for the New Subsidy. Therefore it is to be computed by taking one-third part of the net New Subfidy of Tonnage and Poundage.
Another fubfidy is termed the Two-thir.ds Subsidy; which branch of the cuftoms; as well as the former fubli. dies, fis compofed of a tonnage and poundage duty, and is raifed, fecired, and paid, by the lame ways and methods, under fuch penalties and forteitures, and fubject to fuch rules and directions, as before directed for the New Subfidy and the One-third Subfidy. It is an additional fubfidy of two third parts of the New Subfidy upon all goods liable to the faid New Subfidy, except in certain cafes excepted, as' per acts of parliament, and contained in the Book' of Rates.
There is allo the SUbsidy of 5747 . This branch is over and above all fubfiftes, additianal duties, impofitions, \&c. a poundige duty of twelve-pence in the poind, to be paid in ready'money, on all goods and merchandize imported, except for tobacco, whereon it may be fecured by bond, according to the feveral particular rates or values thereof, as rated and valued in the Book of Rates referred to by 12 Car. II. and II Geo. I. or by any other act of parliament, 8 c .
This duty is to be levied and collected by the fame ways and means, and under the fame penattics, \&c. as are directed for the Old Subfidy. See the conclufion of Letter A, in regard to the Business of the Custom-house, containing an ENQUIRY whether the merchant-importers of - this kingdom are not intitled to certain Discounts, which they have never yet received.
Subidies on Spirits. By 9 Geo. II. čap. 23. §. 17. VOL. II.
all the dusties arifing by pitits fron September 29, 7736, are united to, and miade part of the aggregate fund; and ftom that time the feveral duties then payable on fpirits imported are accounted for fin one fum, tunder the title of Subsideson Spirits. See Saxity.
Subsidy, and one per Cent. outwards; with the duties on leather, white woollen cloths, foreign goods ufed in dyeing, exported.

## Thë Sǘsidy Oútwards.

By 12 Car. II. cap. 4. §. 2. was granted, as part of the fubfidy of poondage, and continued therewith to Auguft I, $1710-9$ Arti. cap. 6. §. I. revived from March 17ro, for $3^{2}$ yedrs.-3 Geo: I. cap. 7. §. I. continued for ever ; and is made part of the general fund by that act eflatitim-edt--This fubifidy, as well as the Subfidy Inwards, is compofed of a Tonnage and a Poundage, and is to be paid in ready money before thipping off, in order for exportation.

One percent. Outwards.
This duty is payable in ready money, without difcount, upon all goods and merchandizes liable to Subsidy , export ed from any part of Great-Britain, capable of a fhip or veltel of 200 tons upon an ordinary full fea, to any part or place in the Mediterraniean fea, beyond the port of Malaga, in any fhip or veffel that hatt not two decks, and doth carry efs than i6 pieces of ordnance mounted, together with two men fur each guin, and other ammunition próportionable.

- It is undertlöd practically, that for Eion Goods used in
Dyeing, enumerared in the portable Book of Races, are Dyeing, enumerated in the portable Book of Rates, are nor liable to this daty of one per cent.

The Subsidy granted in the year $175^{\circ} 9$, of poundage upon certain goods' and merchandizes to be imported into this kingdom; and by the fame act, an additional inland duty on coffee and chrocolate. This duty is of i2d. in the pound, or 5 per cent. grainted on tobacco, foreign linens, fugar, and other grocery, as the fame is underfood in the Book of Rates, except currafits; Edff-India goods, except coffee and raw filks; foreign brandy and firits; except rum of the produce of the Britilh fugar plantations; and paper, imported-Said fubfidy is granted to be paid on goods, as the fame are valued in the Book of Rates, and to be levied and paid into the Exchequer, as the fublidy of 5 per cent. granted by 21 Geo . II. or of the year 1747 . See the Conclufion of the Letter A, relating to the Business of the Custom-house.-Prize goods are to be charged only with the duties payable by act of Geo. II. unhlefs taken out of the warehoufes for home confumption.Allowance to be made to the importer of tobacco, on paying down the duty.-Bond to be given on non-payment of the duty; and the importers to have the ufual allowances and difcounts.-Drawback of the duty allowed upon the exportation of goods within 3 years'; except for fuch goods as are by former acts declared no drawback thaill be paid or allowed on exportation thereof.-Drawback of the duty al. lowed on paper ufed in printing books in the learned languages in both univerfities, as is prefcribed by act of 10 Annæ.Like drawback allowed on paper ufed in printing books in the learned languages in the univerfities of Scotland.-A *drawback of 3 fillings per bundred weight allowed on fugar refined in Great Britain, and exported.-Refiner to make oath.- Exporter to make oath.-Searcher to certify the fhipping thereof, and all other requifites being performed according to the Book of Rates.
Belides the feveral foregoing fubfidies payable at the cuftomhoufe, there are a variety of other duties paid there, under various circumftances, as the fame are fet forth in the portable' Book of Rates; in all which the merohant fhould be well informed, as follow, viz. The Petty Custonís, or Alien's Duty, Additional Duty, Composition on Petty Seizures, Impost on Wines and Vinegar, Impost on Tobacco, Impost 16go, Impost 1692, Dutiy on Whale-Fins, Duty of 15 per Cent on Muslins; Duty on Spices, Pictures, \&c. Additional Duty on Spicis, Pictures, and Duty on Drugs, \&cc. Second 25 per Cent. on French Goods, Coinage Duty on Wine, and Connage Duty on Spirits, Duty on Pepper, Raisins, and Spice, Dúty on Candles, Additional Duty on Candles, Duty on Coals imported, and on Coals, Culm, and Cinders, brought Coastwise, Additional Duty on Coals importrd, and on Coals, Culm, and Cinders brought Coastwise. Duty on Coals and Culm, för buillding Churches, \&c. Duty on Hós, Duty on Hides, Silins, scic. Duty on Soap and Paper, Additional Duty on Soap and Paper, \&c. Duty on Coais exported, Duty on Sail-Cloth, Duty on wrought Plate, Duty on Apples, Duty on Wine 1745, Duty on Glass, Duty on Linen Yaik, Duty on Gum Senega, Of unrated Goods imported, undervalued, Of Prisage and Butlerage. And the laft additional Duties on Wines, Cyder, and Perry, fee the Business or the Customs, the end of $W$.

10 G
The

The following three branches, though no part of the Revenue of Customs, but being payable on foreign Goods imported, fhould be here taken notice of, as the Excise on Salt imported, Excise on Liquors imported, Inland Duty on Coffee, Tea, and ChoCOLATE.

## REMARKS.

Subsidies, \&cc. at the Cuftom-houfe.
In the firft year after the reftauration of king Charles the IId. * the parliament paffed the act, granting the fubfidy of Tonnage and Poundage, payable on merchandize imported or exported, as alfo the act for encouragement and increafe of fhipping and navigation; and two years after, in order to improve and inforce the execution of thole laws, was paffed the act for preventing frauds, and regulating abufes in the Customs: and thefe three acts eftablifhed the foundation of the prefent fyftem of the cuftoms, which has been regulated and extended by fubfequent laws, as occafions have required.

* Of the cuftoms payable before the reftauration, there yet remains a duty on wine, called Prisage \|or Butlerage, which are ancient duties payable to the crown of England (by prerogative) upon the importation of wines, but are now, and generally have been, granted from the crown by gift or patent.
$\|$ Prisage is a certain taking or purveyance of wines to the king's ufe, out of every thip bringing wines belonging to the natives of England, except the merchants of London, the Cinque Ports, Southampton and Chefter, which are breaking of bulk, or unloading any part of the thip's cargo, according to the whole quantity on board, though there be not more than one ton landed.

This duty is either Single or Doubie.
Singer prisage is one ton, and is due in kind, when the quantity imported amounts to, or exceeds, 10 tons, but is under 20 tons: for if under 10 tons, there is not any pri. fage due.
Double Prisage is 2 tons, and is due in kind, when the quantity imported amounts to, or exceeds, 20 tons, which is the moft due out of any one fhip: one ton to be taken before, and the other behind the maft, at the pleafure of the king's butler or prifage-mafter; who may tatte the whole cargo, and chufe the beft wines, and fill up the calks, or chufe thofe that are the fulleft, and take them away, allowing only $\dagger$ 20s. per ton for freight: but it may be compounded for at a certain price, as is the practice in London, \&c.
But in regard to wines imported into Scotland; on a caure in the court of Exchequer, between her Majelty's attorneygeneral and James Gordon, merchant, it was decreed in the year 1713 , that prifage was not payable thereon.
Butcerage is a duty of two fhillings on every ton of wine BU PLERAGE is a duty of two hillings on every ton of wine
imported by merchants, flrangers, by Charta Mercatoria $\ddagger$, imported by merchants, frangers, in lieu of prifage, to be paid within 40 days atter the wines in lieu of pri

2, 2. Edw. I. cap. 2
I 31 Edw. I. cap. 1 and 2.27 Edw. IIf, cap, 26 .
The fubfidy granted by the firft of thefe acts was, by the wifdom of our anceftors, contrived on very fimple, though comprehenfive principles, being payable by a determinate fum on every ton of wine imported, and every ton of beer exported, and therefore called Tonnage; and on other goods imported and exported, by a certain portion (generally one fhilling in the pound fterling) according to the refpective valuations in a Book of Rates referred to, and authorized by the faid act, and therefore called a Poundage, together with a fmall duty on Woollencloths exported ; fo that all goods liable to cuftoms, except wine import ed, beer and woollen cloths exported, were comprehended under this fimple regulation of poundage ; and this fubfidy, fo far as it relates to merchandize imported, is known by the mame of Cuftoms, or Old Cuftoms.
But this fimplicity of principles was not long adhered to with that care and attention it deferved; for by 15 and 22 of Car. II. the Sublidy on Corn imported was altered from a poundage duty on the Rates of Valuations, to certain fums payable by the quarter, according to the feveral fpecies, and the various circumftances of importation; and by 25 Car. II. whale-fins and whale-oil underwent the like alterations.
In the fhort feign of king James II. two new duties were granted, the Impost on Wine, and the Impost on Tobacco; that on wine was frictly on the principles of Tonnage; but that on tobacco being by a certain fumpayable on each pound weight, no regard was had, fo as to regulate it by a poundage on the valuation thereof in the Book of Rates. There were other duties laid on, but having been temporary, and not continued, it is not neceflary to take notice of them.
The neceffities of the ftate, in order to fupport a war againft France in the reigns of king William and queen Anne, occofioned the laying on many additional duties of cuftoms,
the two firft of which were, Impofitions 1690 , and I . 92 , on merchandizes imported, \& cc . Though, in drawing the acts for thofe duties, due rega was not had to the principle of Poundage; yet it was not altogether unattended to, there being many fecies of goods in both thefe duties, which are regulated by a poundage duty on their refpective valuations in the Book of Rates. Some branches are Itrictly according to the principles of poundage; and fome being on the plan of the old cuftoms, are confonant to the original principles of tonnage and poundage : in other branches, to the number of above 20, Jaid on during, the reigns of king Willam, queen Anne, king George the Firft and king George the Second, thefe priaciples bave been either' not undeiftood, or altogether neglected, except, fays Mr. Saxby, in the lubfidy of 1747 , which being defigned as a poundage duty only, and therefore formed on that fpecies of she principles of the old cuftoms, was conftructed with great judgmene and fimplicity; and the more fo, as it is not incumbered or obfcured with difcounts.
What Mr. Saxby has here obecrved, we think is liable to objection. For however fimple and judicious that fubfidy was conftructed, we cannot apprehend it ever the more fo, by reafon of its being unincumbered with difcount, in favour of the merchant, as the old fublidy, the new fubfidy, the $\frac{1}{3}$ fubfidy, and the $\frac{2}{3}$ fublidies, are not unincumbered wild the al ${ }^{3}$ lowance of difcount to the merchants, on confideration of the prefent payment of the duty. For it is no lefs eafy to compute the fubfidy of 1747 , with a difcount of 5 per cent. than either of the other fubfidies before mentioned. But if the fubfidy of 1747 is unincumbered with the allowance of difcount to our merchants, as in the cafes of the other faid difcount, we fhould be glad to be informed, by what authority the merchants are not intitled to the difcount on payment of the duties purfuant to the act of 1747 ? Is not this fubfidyact of 1747 , tounded on that of 12 Car. II? And does not that act allow the merchants the difcount of 5 per cent. in the 17th rule contained in that act? In what peculiar claufe or part of the fubfidy-act of 1747 , does it deviate from that particular allowance in the act of 12 Car . Il ? Is not alfo the fubfidy-act of 1747, founded on that of the IIth of Geo. I? and is not this latter grounded on that of Car. II. ?. and wherein does that of Geo. I. deviate from that of Car. II. with relation to the difcount allowed to the merchant, according to the 27 rules, figned Sir Harbotte Grimitone, Bart, then fpeaker of the houle of commons? We can dilcover nothing in the act of 1747, which does repeal the faid 17th rule, and thereby deprive the merchants of the difcount legally allowed them. If we are miftaken in this matter, we thall thankfully be fet to rights.-We ftarted our doubts on this point, when we printed the firft edition of this work; but as we did not judge it eligible to oppofe the practice of the cuftom-houfe, left we thould err in our private judgment, we then computed the duty, confiftent with fuch practice. Since that, we bave more deliberately confidered this affair, and confefs, that we have not tound fufficient reafon to diffipate our doubts; and we have given our reafons more fully on this occafion, in the Cuftom-houfe Bufinefs treated of in this edition at the end of our Letter A; and for the reafons there urged, we have declined to make any further tabular computation of the duties of cuftoms, left we thould mifguide the whole mercantile body in a point that materially concerns their intereft.
Another motive to induce us to decline thefe computations is, that we are informed that Mr. Saxby of the cuftom-houfe is about this work already, and has been engaged fome time therein; becaufe, fince his Book of Rates was publifhed, there has been another frelh fubfidy-act of 1759 ; which has rendered his former book out of date, with refpect to the totals of thofe computed duties that render his book confiftent with the laft fubfidy-att of 1759 .
The remainder of the intruduction of Mr. Saxby" Book of Rates is fpent chiefly in animadverting upon the errors of the books of rates that were compofed by others, his predecefloirs; on which fubject it is wifhed he had dwelt longer, as he feems to bave intended; feeing, as he intimates, that he received great affiftance from feveral gentlemen in various departments of the cuftom-houfe. However, for feveral of the judicious obfervations he has made, the public are obliged to him; and we hope and expect that his new Book of Rates will rectify more of the errors of thofe, who treated on the fame fubject before him; and that be will render the whole bufinefs of the cuftoms more intelligible, as well to the merchants as the officers of that revenue.

- The allowances, bounties, and drawbacks payable on Britilh goods exported, Mr. Saxby obferves, and the premiums on other goods imported, \&c. being a part of bufinefs not fo immediately obvious to the officers of the cuftoms, have no been heretofore fo well digefted and collected as they might have been; for though part of them have been extremely well done, others have been but flightly touched, and fom: quite omitted: bur, continues he, as they are now become very numerous, and in regard to bounties and premiums a very extenfive and formidable branch of bufinefs of the cuftoms, it became neceflary that the merchants, as well as

## S U. F

officets, thould be well infructed therein, \&ci.' In thefe particulars Mr. Sabxy's book is more accurate and extenfive than any of thofe of his predeceffors. What we would chiefy intimate here is, that thefe candid acknowlegements, and ufeful impiovements made by that gentleman, will ferve to convince us, that there has been as little infallibility in books of rates wrote by officers of the cuftoms as by others; and therefore it is not impoffible that there may be miftakes therein relative to the fubfidy of 1747 , as well as fo many other points already explained by Mr. Saxby. See the conclufion of our Letter $A$, with refpect to the Business of the Custom-House
Mr. Saxby concludes his introduction, by remarking, ' that it mult not be omitted, that a diftant profpect and hope that the legiflature might fome time undertake to reform and reduce the rates, branches, \&cc. of this revenue, ftrongly pointed out the neceffity of reftoring and preferving the true text of the rates, as it would be in vain to attempr any regulations of that kind, till this were well executed ; and this naturally leads to further fpeculations on the fame fubject; for the book of rates, of 1660, bears the marks of great antiquity, many of the terms therein being fo obrulete as not now to be found elfewhere in the Englifh language; and by comparing it with that of 1642 , it is ap parent to be no other than an old book of rates of former times, revifed and corrected, fo as to fuit the circimftances of import and export of that period;' and when one confider the great alterations and improvements which have been made in every branch of trade and manufactures throughout the world during the laft age, it may be eafily conceived that the names and value of fuch fpecies of goods as were made and confumed an hundred years ago, will in many re fpects but ill fit thofe of the prefent times: but this is a large field to range in : I fhall therefore for the prefent forbear to explain myfelf further on this fubject, and fhall only take the liberty to recommend to the prefent age an aphorifm of a great man in the laft: As time changes things for the worfe, fo thould prudence alter them for the better.'-So far Mr. Saxby, who not only gives us hope of a more correct book of rates than we ever had before, but that a general reform may be made in the cultoms, by the legiflature, with refpect to the rates of goods; which the fooner the fame is done, we think the better it will be for the intereft of the nation. See our Introduction to this edition.
Before we leave this article, we fhall only notice another paragraph in Mr. Saxby: 'The branches of the cuftoms having many of them gone through various alterations of appropriation fince their firf eftablifhment, the detail of fuch alterations is herein purpofely omitted, and no more is inferted than their prefent fituation, that being fufficient for the ufe and inftruction of the officers.' To which we fhall only obferve, that as thofe alterations of appropriation in this branch of the revenue have never proved injurious to the Public Credit ; to we may prefume that the like alterations of appropriation'in other branches of the revenue could not prove fo neither; for if the national creditors are fecure of their intereft by parliament, they do not feem to pay fo much regard to the appropriation of any peculiar duties or taxes for that purpofe.
SUFFOLK is a maritime county in England, having the German Ocean on the eaft, Cambridgeinire on the weft, the river Stour on the fouth, which divides it from Effex, and the rivers Oufe, the Lefs, and Waveney on the north, which part it from Norfolk; and is in compars about 140 miles.
The air is very clear and wholfome, even near the fea-hore, becaufe the beach is generally fandy and fhelly. As to the foil, it is various. Its chief commodities are butter and cheefe, and the principal manufactures of Suffolk are woollen and linen cloth.
PSWICH; the county-town, has a confiderable trade by fea, but not fo great as formerly, when its harbour was more commodious. Its chief manufactures are linen and woollen. Aldborovgh, on the coaft, has a good harbour and trade in the filhery, abundance of fprats, foles, and lobfters, be ing caught in the fea here.
SUDBURY ftands on the river Stour; which almoft furrounds it. They drive here a good trade in perpetuanas, fays, ferges, Kc. The Stour has of late years been made navigable for barges and friall craft, as far as Maningtree in Effex, which is a great benefit to the trade of this place, and no fmall addition to its wealth
Eye is a mean-built town, in the road betwixt Ipfwich and Norwich. Its chief manufacture is bone-lace and fpinning.
Halesworth is a large and populous town on the river Blythe, with a manufacture of linen yarn, of which great quantities are fold here, fpun by the women of this town and the adjacent villages.
Southwold, a fmall corporation on the coaft, has a good harbour. It is a populous town, and drives a confiderable trade in falt, old beer, herrings, fpra:s, \&c. which laft are cured here in the fame manner as herrings at Yarmouth.
Leostoff ftands on the eaftermoft point of England. The chief trade of the inhabitants is fifhing for cod in the North Sea; and for herrings, mackarel, and fprats, at home.

Stow-marketion the Orwel, has a manufacture of tammies and other Norwich ftuffs.
WOODBRIDGE, on the river Deben, which being navigäble by fhips of confiderable burthen to the town, its inhabitaints drive a pretty good trade to London, Newcafte, Holland, \&c. with butter, cheefe, falt, plank, and feveral other forts of meichandize, in their pinks and hoys, which go to and from London every week.
LAVENHAM is a pretty large town on a branch of the rive Bret. It has a cunfiderable manufacture of ferges, fhalloots, fays, fuuffs, and fpinning fine yarn for London; which has flouridhed the more by fetting up a wool-hall, of which many hundred loads are fent from hence in a year. Its fair, which is on Michaelmas-day, is in great repute, efpecially for good butter and cheefe.
Bildeston is noted for its woollen manufacture, but it is a dirty place, and the buildings are mean
Clare is another mean-built, disty town, but has a manufacture of fays
Hadiley is a pretty large populous town, and tolerably well built. It is of fome note ftill, though of much greater for merly, for a manufacture of woollen cloth.
Neyland on the Stour is a large town, and has a manufacture of bays and fays, which alfo was formerly much greater than now.
STRATFORD on the fame river, is a thoroughfare-ftage from Ipfwich to London, of great traffic, and employed in the woollen manufactures. It is faid that 300 droves of turkies have paffed in one feáfon over its bridge towards London, computed at 500 in a drove, one with anothér.
Eastekbergholt is another large handfome village, employed alfo in the woollen manufacture, but not fo much as formerly.

## SUGAR.

The mianner in which Suoar is drawn from the canes.
The Americans having cut their canes above the firl joint, and freed them from their leaves, make them into bundles and carry them to the mill, which is compofed of three rollers of an equal fize, and equally armed with plates of iron, where the canes are to pals. The roller in the middle is raifed much higher than the reft, to the end that the two poles, which are affixed crofsways at the top, and to which the beafts are yoaked, may turn about freely, without being hindered by the machine. The great roller in the middle is furrounded with a cog firl of teeth, which bite upon the fides of the two other rollers adjoining to it, which makes them turn about, grind and bruife the canes, which pafs quite round the geeat roller, and come out dry, and fqueezed from all their juice.
If by accident the Indian, or whoever feeds the mill with canes, fhould happen to have his fingers catched in the mill, they muft immediately cut of his arm, left the whole body thould be drawn in and ground to pieces: therefore, as foon as they fee any one have his finger or hand catched, the perfon ftanding by cuts off his arm with a hanger, and he is afterwards cured, and kept for other fervice. The juice falling into a veffel which is below the mill, and being drawn off, runs by a little channel into the firft boiler, which holds about two hogiheads, where it is heated by a fmall fire, and fet a boiling, in order to make a very thick foum arife: the Weft-Indians keep this fcum to feed their cattle with. This liquor being well fcummed is put into a fecond boiler, where they make it boil again, throwing in, from time to time, warm water, in which they have beat up fome eggs: having been thus purified, they pafs it through frainers; and, after it has done running, put it into a third boiler, which is of brafs or copper, and then again, upon another refining, into a fourth boiler; and when it begins to cool, and they find it rifes to a grain, they pafs a 1 kimmer, or wooden fpatula, underneath if, from the right to the left, to fee what quality the graining is of: the fugar being thus ready, while it remains hot, is caft into moulds, or earthen-pots with holes in their bottoms, yet fhut: at the end of twenty-four hours, which is the ordinary time, the fugar takes to incorporate, the negroes carry their pots into their warehoufes, and after they have opened the holes, and pierced the fugar, they fet the moulds upon little pots, or jars, in order to receive the fyrup or moloffes which runs from it. When the fyrup is run from the fugar, they take it out of the mould, and cut it afterwards with a knife; and this fugar cut in this manner, is called the grey mu?cavado fugar ; which, to be in its perfection, ought to be of a whitifh grey, dry, have the leaft fat, or fmelling of the fire, that may be. This mulcavado is the bafis and foundation of all the other fugars fold among us.
It is but little in ufe, though very proper to make fyrups and coloured comfits.

Of Cassonade, or Powder Sugar.
The caffonade is made from the grey mufcavado run again, and after it has been clarified, ftrained, and boiled, and caft into the moulds, and fo prepared as we have been fpeaking befcre. After the fyrup is drained out, they lay upon th

## S U G

fugar about an inch thicknefs of clay, wetted with common water, that the moifture which is in the clay, may get through the fugar, and take away with it whatever fat or bad matter might remain in it: when it will run no longer, and the clay at the top is dry, they take the fugar out of the moulds, and cut the cakes into three pieces, the top, the middle, and the bottom, which they dry feparately, according to their fine. nefs. The fineft powder fugar is that of Brazil, which is extremely white, dry, and well grained, of a violet tafte and flavour. The caffonade, or powder fugar, is much in ufe among the confectioners; above all, that of Brazil, by reafon that it is lefs fubject to candy, upon which account the confectioners value it the more. The fugar, which we improperly call fugar of feven pounds weight, becaufe it as often weighs ten or twelve, is made of the grey mufcavado, formed nto loaves, as we have defcribed before. The fugar of even pounds is diffinguifhed into three forts, to wit, the white, the fecond, and the laft, which is of a browner colour; the whiter the fugar is, the better ftoved, grained, and dried, the more it is efteemed. The lefs the moulds are, that is, the tefs the loaf is made, and the whiter it is, to muich the dearer it is.
The ufe of this is to make choice fyrups, white confects, and to preferve apricots, and the like.

## Of Sugar Royal, and Demy Royal.

The fugar called royal, from its extraordinary whitenefs, is made from the fmall white fugar, or powder fugar of Brazil, melted and caft into a loaf as the former. This fugar royal ought to be extremely white throughout the whole, that is to fay, as fine at the top as the bottom, of a clear, compact, fhining grain, notwithttanding eafy to break; which is the general obfervation of fugars that are well baked, and of a kindiy fort. We fell, befides, another fort we call demy royal, which is a fmail fugar-loaf, very white, and wrapped in a blue paper, which comes from Holland.
The Dutch formerly brought us fugars of eighteen and twenty pounds, wrapped in palm-leaves inftead of paper; for which reafon it was called palm-fugar, which was a white fat fugar of a good fort, and a violet tafte. We ufed to have, befides, another fugar from the Madeiras; but we have no more of it now, becaufe we have it from feveral other inands much better.

## Of Brown Sugar.

This brown fugar is one fort of the mufcavado, which they turn to powder fugar, and is made of the fyrup of the fevenpound fugar, after the fame manner as the others are made. It ought to be of a greyiff red colour, dry, and not fimelling of burning; for there is fome to be met with fo moift, and with fo much of the burnt fmell, that it is almoft impoffible to ufe it. The ufe of the brown fugar was formerly very confiderable, it ferving to put in clyfters, \&c. Thefe moloffes are better for diffilling rum than the mufcavado fugar.

## SUGAR COLONIES, British.

## Of Barbadoes.

The growing fuccefs of this fugar colony promoted the fettlement of the others, and, as the fugar plantaions increafed, more hands were required to carry on the works than could, at that time, be fpared from home. This gave birth to the Guinea trade, for fupplying thofe colonies with negro flaves; and as the planters flourifhed and increafed, fo did their demands for all forts of Britifh manufactures, and fuch neceffaries of life as they could not produce in thofe climates, which opened another fcene of trade to the Britifh merchants, to furnifh thefe new colonies with wine from Madeira.
Thefe branches of trade were of the utmoft advantage to Great Britain, forafmuch as they drew no money out of the kingdom, but yearly brought in large fums, for Britifh manufactures exported thither. The trade to this ifland was commonly open and free; for, before the civil war in England, the Dutch Thips came hither:to purchafe fugars, as well as the Englifh; but, fince the Reftoration, feveral acis of parliament have been made, to confine the trade of the fugar colonics to Great-Britain, and Britifh hips only; which reffraints foon made London the chiefeft mart in Europe for fugar ; and, as there was yearly more imported than was neceflary for home confumption, the merchants exported the furplus to foreign markets, and, by underfelling the Portugueze, who had confiderable fugar-works in the Brazils, they gradually beat them almoft out of all their fugar trade to the northward of Cape Finifterre.
This trade of re-exporting fugars, was carried on for many years with great luccefs. Mr. Gee fays, that, by this trade only, fuch an increafe of treafure and wealth was brought into this kingdom, as yearly added three or four hundred thoufand pounds to the flock of the nation; which, in thirty years time, amounted to upwards of ten millions fterling.' Others have computed the clear profits accruing to Great-Britain from the fugar trade, and thofe other branches which chiefly
depend upon thore inands, to amount to more than a million a year. A few years fince, it appeared, by the cuftom houfe accounts, that the value of the annual exports from Great Britain to the fugar colonies, was five hundret thoufand pounds ferling; and on importations from thofe illands, more than twelve hundred thoufand pounds per annum. And if the yalue of our exports to Guinea and the Madeiras, whith are the effects of the fugar trade, were added to the former, it would greatly augment the fum, and, confequently, enlarge the profit, which out mother-country received from the fugar colohies, and the feveral branclies of trade depending thereon. Certain it is, that while the fugar tfade flourifhed, both planters and merchants grew immenfely rich, and the trade and havigation of Great-Britain was carried on the much greater height thah ever it was before. And this great fource of wealtli and treafure to their mother-country, arofe from fo frall a beginning as a few families feeking fhelter in à defolate illand
This fhews what may be done by induftry and trade, rightly applied. When the fugar trade was at this height, the flourith ing ftate of Great-Britain alarmed her neighbouts, and put them upon ways to circumvent her in trade, as the only means to put a flop to the growing ffeength of the kingdom, which they feated might become too formidable, from the great increafe of feamen and ithipplng employed in the Weft. India and Güinea trades, both flourithing at the lame tithe. Upon a pariameitary enquiry into the fate of the trade to Africa, in the year 1728 , it appeared to the houfe, that, in three years time only, the number of negrots imported at Barbadoes, Jamaica, and Antigua, amounted to 4.2,000, befides what were carried to St Chriftopher's, Nevis, and Muntérrat.
True it is, however, that our fugar trade in general has, of late years, greatly dectined. The French fpared ho expence or labour to rival Grcat-Britain in this capital article, they well knowing, if that funk, her Guinen and Madeira trades muft fink in proportion; for which purpofe they embraced every opportunity to improve their fugar plantations, which they have done to a very extraordinary height; and fuch has been the wifdom of their councils, that the effect could not be otherwife.-For proof of which, fee our articles French African Trade and Company, and French Ame RICA, where we have laid before the nation the meafures which the French have many years taken for that purpofe. The French having thus put their fugar colonies into a flourilhing condition, the next thing they bad in view, was to beat the Britilh merchants out of the foreign markets for fugar, ásd thereby deftroy their trade for exportation; and this they effected, by giving liberty for their fhips to carry their fugars direcilly to the foreign markets, while oars were obliged to import all into Great-Britain, which enabled them to fell fo much cheäper than our merchants could carry it from Lendon, which almolt put an intire fop to that valuable branch of trade to their mother-country
The firft declenfion of our exportation trade was attended with fuch ill confequenices to the fugar colonies, that it lowered the price of fugar fo much at home, as difcouraged the merchants from fending to purchafe fugars. This obliged the fugar planters to turn merchant-adventurers in adeclining trade, and to hip their fügars upon their own account and rifque. This put a ftop to the currency of cafh, which was betore brought over yearly to purchafe fugars, and laid the whole burthen of freight, duty, and commiffion, upon the plantation, that were formerly paid by the Britifh therchants: and fuppofe but 15,000 hogheads of fugar to be fhipped in a year from this ifland of Barbadoes, on gentlemen's owin accounts, thefe three articles will'amount to upwards of 60,0001 . fterling. Another great evil, that followed from the fame caufe, was, combinations among the buyers, by which the price of fugars funk fo low, as greatly to prejudice the planters, and yet turned to the banefit onlyoof a few private perfons, who were the firft purchafers, and not at all to that of the confumers in general ; by which that illand was greatly prejudiced, and this received very little benefit.
The ifland of Barbadoes is generally efteemed to be little bigger than the Ine of Wight, and to contain 100,000 acres. About the year 1626, this counitry was not only unfertled, but uninhabitable, as affording nothing for the fupport of life, and over-run with thrub wood, which gave a great deal of trouble to the firf planters; yet, in the face of 50 years, this plantation came to an extraordinary height, and peopled with 50,000 whites, of whom 20,000 were able to bear arms, and 80,000 negroes. Within 20 years after the colony was fettled, they muftered I 1 ,ooo horfe and foot, which would be incredible, if we had not fuch proofs of thefe facts as put them beyond doubt.
In fhort, this illand rofe to fuch a pitch in the year $\mathbf{1 6 6 1}$, that king Charles II. created, on the fame day, i3 baronets, in Barbadoes, none of them having lefs than 1000, and fome of them 10,0001 . a year. 'At this time their trade actually maintained 400 fail of fhips; and it was computed that the running cath of the inand was not lefs than 200,000 l. and their annual exportation to Great-Britain, in fugar, indico, ginger, and other commoditiks, at leaft 300,000 . Thefe
facts demonftrate the great value of this ifland, at the time we are feaking of; and, by the gradual increafe of this colony, it has, fince we firf poffeffed it, contributed beyond conteption to the riches of its mother-country.
When this colony was in its moft flourifhing condition, which was in the yeal 1676, there were 400 fail of hhips, of 150 tons, one with another, employed annually in this trade; and if we reckon only that the fea-men, hip-builders, and other trades that live by thefe veffels, amounted, in the whole, to 10,000 fouls, that will be no immoderate computation. The fugas that came from Barbadoes, were either fpent at home, or fent abroad; and I reckon, that, in the manufacturing the fugars, and vending them at home and abroad, there might be 20,000 people more employed. To thefe we muft add, fuch as got their bread by the goods and manufackires yearly exported from hence to Barbadoes, for almoft all that the people cat, drink, and wear there, are the product of England; fo that the computation cannot be thought to rife too high, if we allow, that in this way 20,000 more get their bread, which will make about 50,000 in the whole, all fupported here by the labour and indultry of the whites and negroes in that country. We are riext to compute the money brought into this nation by the export of the commodities imporred from thence, which was that year allowed to be above 200,0001. and it was alfo agreed, that as much, or more, had been gained every year, between that time and the Reftoration.
1 fhall fay nothing of the money arifing to the Exchequer from the duties, though this might be computed at 30,0001 . per annum ; but that, from the year 1536 to 1656 , which is 20 years, this colony produced but half fo much: and, though it may be true, that, before the year 1640 , it did not produce a quarter fo much, yet, in the remaining part of that period, it certainly brought in a great deal more; and therefore we cannot be far from the truth, in computing that this nation acquired two millions in money, by Barbadoes, in that 20 years. In the hext 20 , that is, from 1656 to 1676 , when it is allowed this ifland was in its moft flourifhing condition, there muft have been gained four millions of money; and allowing for the gradual falling off of this trade, by a multitude of unlucky accidents, but more particularly by the fectling the French fugar illands, we fhall compute the laft 70 years, from 1676 to $173^{66}$, at the fame rate'we did the firft 20 years, and the gains will then amount to Six Millions: fo that in the fpace of 100 years, the inhabitants of Great-Britain have received 12 millions in filver, by the means of this plantation, and had 50,000 of her inhabitants maintained by the people of that colony all the time.
I have infifted the longer upon this topic, becaufe it may enable us to form fome notion of what might be made of our plantations, if we attended to them as much as they deferve; for though it may be, and perhaps is, impoffible, to improve any of them in proportion to what has been done in Barbadoes, yet we may well enough difcern from hence, that they might be made inconteftibly more profitable to us than they now are, or, indeed, than the whole trade that we now poffers; and 'if, at the fame time we reflect on this, we likewife confider that there is nothing fo abfolutely in our power as the improvement of uur colonies, it will moft certainly appear to be the point, which, of all others, imports us moft.
We are next to fpeak of the illand of St Christopher, which was difcovered by Chriftopher Columbus. It is fituated in the latitude 17 degrees, 25 minutes, on this fide the Line, and is about 75 miles in circuit ; the Caribbeans inhabited it when Sir Thomas Warner, an Englifh adventurcr, took poffeffion thereuf; and Monf. Defnambue, a French gentleman, who commanded for the French in America, took poffeffion the fame day. Thefe two adventurers fettled this colony harmonioufly, 'till queen Anne's war broke out, when the Englih drove the French intirely from their fettlements; and the ccuntry being yielded to the crown of Great-Britain by the peace of Utrecht, all the French territories were fold, for the benefit of the public, which muft have produced a very large fum, fince out of it there was 80,0001 . paid for the marriage-portion of her royal highnefs the princefs of Orange.
There were fome indeed, who pretended, that notwithftanding the French part of the inand of St Chriftopher's was by far the richelf, we were no gainers by obtaining it, but that, ou the contrary, the Firench received benefit thereby, becaufe it enabled them to people the reft of their illands more effectually; but whoever confiders that the fugars of this ifland are inferior to none in all America, that the plantations were in perfect order, and that the French ventured a war to prevent our fettling it Lucia and St Vincent, will fcarce be brought to believe that they parted with a country ready fettled, and more valuable than both thofe iflands, "with their goodwill. The treaty of Utrecht was fo indifferent a treaty, that I think there is no fort of neceffity for making it appear worfe than it really was. The fame perfons who firft fettled St Chriftopher's, likewife fettled Nevis, about the year 1628 ; and notwithitanding the misfortune of being difpoffefied by
V OL. II.
the Spaniards, in 20 -years time there were at leaf 4000 peo. ple upon the ifland, and they continued increafing in.the fame manner, by a fuccefion of prudent governots, for a confiderable fpace. After the Reftoration, when trade and peace flourifhed, this inle enjoyed its fhare of the benefic, and increafed the inhabitants and riches; the only enemy they had to flruggle with was the hurricane, which generally vifited them once a year.
We are to proceed next to the illand of Montserrat, which name the Spaniards gave to this ifland, from the refemblance it has to a mountain in Catalonia, not far from Barcelona,
This ifland flourithed, at firft, more than Antigua; but fince the lord Willoughby's time, the latter has got, and kept, the fart of it. There were 700 men in Montferrat, 16 years after it was firft inhabited. As to the climate, foil, animals, trade, and productions of this ille, they are much the fame with thofe of the other Caribbee iflands, only this has more mountains, which are covered with cedars, and other trees, that make it a lovely profpect from the fea. The vallies are fruitful, and better tored with frefh water than thofe of Antigua. According to the beft accounts that have been received from this inand of late years, it is rather increafing, both in the number of people, and in the value of their fettlements, than not; as to the former, it is computed there may be about 4,500 white perfons, and about 12,000 negroes, in this country.
The ifland of Barbuda lies in the latitude 17 degrees 30 minutes north, is about 15 miles long, and lies north-eaft from the ifland we were laft feaking of. The land is low and fruitful, and the Englifh began to plant it as early as Nevis, Montferrat, or any other of the Leeward Milands, St Chriftopher's excepted. There are now about 1,200 perfons upon it, and their number is daily increafing. The proprietor is the honourable Chriftopher Codrington, Ef; and he puts in a governor here, having the fame prerogative as the other lords proprietors, in their feveral jurifdietions in America. This ifland has bred great ftore of cattle, and the inhabitants employ themfelves moftly in that fort of hubandry, corn and provifions coming generally to a good market in the fugar inands. There is plenty of almoft all forts of tame cattle, as in Europe; and the Englifh live here much after the fame manner as they do in the counties in England, only their labour in the field is not fo hard as here, the country being fo much hotter.
The next plantation to this, if it may be properly fo called, is Anguilla: it lies in 18 degrees 12 minutes. The country is level and woody, the foil fruitfu], and the tobacco that grew there formerly was reckoned very good in its kind. They have no great quantities of fugars upon the ifland, but add:Ct themfelves rather to farming, in which they have had very good fuccefs; and this it is that enables them to live in the old patriarchal way, every man being a kind of fovereign in his own family, and no other government there is in Anguilla.
We have now gone through the Leeward Iflands, except. ANTIGUA, which we now take notice of, according to the order of time in its fettlement. This ifland lies in 16 . II. north latitude, 63 longitude weft from London: it is about 20 miles in diameter, and 60 in circumference. The climate, though not to be greatly boafted of, yet it is a very confiderable and thriving plantation. It has greater plenty of cattle, and particularly venifon, than any other of the Caribbee illands; the animals whereof are much the fame, as alfo their productions. Their fugar and tobacco were formerly very indifferent, but the planters have fince improved their art, and as good mufcavado fugar is now made there, as in any of our fugar iflands: they have alfo clayed fome fugar, which was unknown in Antigua about 40 years ago.
Though there is not much tobacco planted in this inland, what there is at prefent is far preferable to what it was formerly. After Jamaica and Barbadoes, this has been confidered by fome as the moft confiderable of our illands in A merica; and as there is ftill a great quantity of land capable of improvement, and it is allowed the people there might make a third more fugar than they do; and if we confider what muft have been gained by our commerce with this illand for upwards of eighty years, we cannot but judge that it has been highly advantageous to this nation, and well deferves all concern for its protection.
We have now gone through our chief Leeward Iflands. As to the general produce, or value, of thefe illands, which may ferve to thew of how great confequence they are to GreatBritain, the beft account we have been able to obtain, is to the following effect : St Chriftopher's is the largeft of all the illands, but the middle part of it being extremely mountainous, it is thought that there are not above 20,000 acres of land fit for fugar, in the whole ifland, which produces about 10,000 hogineads of that valuable commodity. Antigua contains about 70,000 acres, and produces 16,000 hog theads of fugar yearly. Nevis is faid to be about 20 miles in circumference, and produces 16,000 hogheads. Montferrat, which is lefs than any of them, produces 2,500 , and fometimes 10 H

3,000

3,000 hos theads of fugar. In Barbuda they breed cattle, and in Anguilla they raife corn.
As to the produce of the ifland of JAMAICA, it is not ealy to give an account thereof in a narrow compals; however, we fhall give the beft idea of it we can, and in as few words. In the firft place, it produces large quantities of cocao, of which there ftill comes more from this than from any of our other plantations; and as it is known to be a very rich and valuable commodity, the reader will probably be pleafed with a particular account of it, See Cocao.
Piemento is another natural production of Jamaica, from whence it is called Jamaica pepper, alluding to its figure, and the chief place of its growth.
The wild cinnamon-tree, commonly called, though falfely, cortex winteranus, grows in this ifland.
It is not doubted but that there are both filver and copper mines in the ifland, though they have not yet been difcovered by the Englifh, as it feems they were by the Spaniards.
But, after all, it is the fugar-cane that is the glory of Jamaica, by which the inhabitants have acquired fuch immenfe riches. It is generally faid, that the fugar from St Chriftopher's is the beft in the Leeward Illands; but I think it is agreed on all hands, that the fugar made in Jamaica exceeds that of all our plantations, though it is made there with much greater eafe, fince it cures fafter in 10 days in Jamaica, than in fix months in Barbadoes. There were, in the year 1670, upwards of 60 mills in Jamaica, which were computed to make about $2,000,000$ of pounds weight of fugar ; but fome writers inform us, they make 10 times as much at prefent: whether that computation be right or not, is impoffible for me to decide ; but this is certain, that there is ground enough unoccupied in that country to make much more, fince it is 140 miles long, and 60 broad; and it contains, according to a moderate computation, $4,000,000$ of acres, of which, though there may be about one fourth in which Englifh fubjects have property, yet, it is certain, that not above a fourth of that fourth is actually planted, and a great deal of this is employed to other purpofes than that of raling fugar. It is impofible to fay precifely what quantity may be made here, becaufe feafons differ, and other accidents intervene: fome have thought they did not rife beyond the truth, in affirming that it has heretofore produced 100,000 hogheads, which, though it appears a prodigious quantity, yet there are many circumftances that concur to render it credible. As for the number of people in this illand, they are computed to be, at this time, 70,000 white people, and 120,000 negroes.
We may from hence judge of the real advantages which this ifland affords to Great-Britain; for as all our hiftories of Jamaica, and almoft every voyage thither that has been printed, fpeaks largely of the luxury and expence of all degrees of people there, which is a plain proof of their great wealth and acquifitions; fo we may reft fatisfied, that, whatever appearance there may be of magnificence among them, yet the real produce of all their labour, and of all their commerce, comes over here to Britain, and maintains and inriches the induftrious part of our people; fo that there can be nothing more abfurd or unreafonable, than to gradge or envy the people fettled there the great fortunes they acquire and poffiefs, or to repine at the pomp and fplendor in which they live, becaufe, whatever it may be in appearance, it is, perhaps, an indilferent reward for their dwelling at fuch a diftance from home, and for the hazards and labours they run through to acquire fuch fortunes; but this will appear much more clearly, if we advert a little to the fituation of Jamaica, and confider the valt benefits that accrue from thence, in all times, and under all ciicumftances, of war as well as peace. There is conftantly, in time of war, a confiderable naval force kept there; and though this be attended with a great expence to the Britifh nation, yet it certainly is, or at leaft ought to be, a great comtort to us, that our money is fpent with our culntrymen, that it inereales the value of their plantation, and, which is fill more to our purpore, that, tooner or later, all that is fpent and circulated there, by fome channel or other, returns hither; fo that, at the long run, the nation lofes nothing by the charge the may occafionally be at in maintaining feets upon this coaft. We ought likewife to reflect, that, in a time of war, there are many prizes taken and carried into Jamaica, which makes an unufual, and almoft incredible plenty of filver, and is the true caufe of the dearnefs and high price of necefliaries in that country, all which, likewife, in time, centers in the mother country: fo that when we hear of great eftates raifed there in a flort face of time, it ought to afford us the higheft fatisfaction, becaufe thofe who make thofe large fortunes, or their immediate defcendants, come over hicher, and either veft their money in our funds, or purchafe lands here. Thus a fate of war, which implies a fufpenfion of trade, produces few of the inconveniencies that ufually attend fuch a fufpention, becaufe in Jamaica the very confequences of war become a kind of trade, and the wealth arifing from them takes the fame courfe, and runs in the very individual channels that any other trade would do; that is, they fimally inrich, and tend to the benefit of, England.
But, in time of peace, befides what we draw from Jamaica, cunfidered barely in the light of a fugar plantation, weare to
confider, likewife, whatever accrues to the inhabitants from their intercourfe and dealings with other people, fince whatever they gain is really our gain.
Before we quit this fubject, it may be neceffary to take notice of another branch of trade carried on from Jamaica, which has been made the fubject of much debate; we mean the cutting of $\log$ wood in the bay of Campeachy. This matter came to be confidered with the utmoft care and circumfpection by the Board of Trade and Plantations, in the year 1717, who folemnly reported, That we had an undoubted right to that trade, in which the fubjects of the crown of England had been maintained and fupported by former kings, his Majefty's royal predeceffors. See the articles Locwood, and Leeward Islands in America.

## Remarks on the Britifh fugar colonies before the laft war.

We have feen, in as narrow a compafs as we poffibly could, the real value and importance of thefe fugar colonies to the crown of Great- Britain; and certain it is, it highly becomes the wifdom of the nation, that all poffible care betaken to give the inhabitants of thofe colonies all manner of encouragement, and relief from any hardfhips under which they may labour; fuch as exorbitant falaries to their governors, large fums le. vied upon them, without being applied to their fervice; and the difficulties under which they too often are, in obtaining fpeedy and effectual juftice, when perfons in public ftations are inclined to extend their power too far, with a view to promote their private intereft. They fhould likewife have all poffible encouragement given them for recovering that foreign trade they heretofore had, and beating out the French, and other nations, who have interfered therein; fince in regard to both thofe points, that the inriching the fubjects of Great-Britain, by the ballance of trade in general, and augmenting her naval power, are the grand particulars ever to be attended to: for if it could be once brought about that either the old markets for fugar were retrieved, or new ones opened, there is no doubt that Jamaica, and other of thofe illands where there are lands fit for the purpofe, uncultivated, would be more fully PLANTED, the inhabitants become more numerous, and their demands for manufactures from Great-Britain confequently larger than they are at prefent. On the other hand, the fame diligence and alacrity are requifite, with regard to the colonies on the continent; and whatever is done to promote the trade of the fugar colonies, muft neceffarily tend to the emolument of our continent plantations, which fupply the fugar illands with lumber and-other things requifite for carrying on their trade: and if, befides this, ways and means could be found to open new channels, for the benefit of thefe colonies alfo, it ought to be done, and the protection of all our colonies fecured by all the power that Great-Britain can poffibly exert, confiftent with her own particular fafety. See our articles British America, Colonies, Plantations.
That the French fugar colonies in America, from a very fmall beginning, are arrived to an extraordinary pitch of profperity, even fince the beginning of queen Anne's reign, is very apparent ; and by what wife and gradual fteps they have been fo highly advanced, deferves the moft ferious attention of this nation. See our article French America.
The illand of Martinico is the chief of thefe French Cettlements: the number of people in this illand, by which we are obliged to compute the reft, is affirmed to be 10,000 whites, and 20,000 negroes. Whence it appears that the French are very numerous in thefe illands, and they make more fugar here than we do in the ifland of Barbadoes.They alfo cultivate here indico, cotton, and cacao, to great advantage, and draw no little profit from the ginger, caffia, and piemento, of which they export confiderable quantities. They likewife manufacture roucou, for the ule of dyers, and fend home variety of medicinal gums, and fweetmeats, The French fugar iflands, befides, produce feveral kinds of very valuable woods, ufed for dyeing, inlaying, and cabinet-work, fuch as rofe-wood, the Indian-wood, and the iron-wood, brazelletto-wood, or fuftic, and ebony, which is ufed as well by the cabinet-makers as the dyers.-We may add to thefe commodities, raw hides and tortoife fhells, and then we may have a tolerable comprehenfion of the wealth of the French Weft-Indies.
Though thefe iflands produce fo many eftimable commodities, yet they ftand in need of fupplies of divers effential neceffaries, without which they could not poffibly fubfift; fuch as horfes, and cattle of all kinds, corn, roots, dry finh, and all forts of lumber, of which they receive fome from Canada, and the reft from our northern colonies, in exchange for fugar, tobacco, indico, and other goods, fent to Canada, and for moloffes, \&c. to our northern colonies.-Sce our article French America, particularly our Remarks on French America.
The inhabitants of this ifland alfo ftand in conftant need of negroes, with which they are now fupplied by the French Ealt-India company, by whom the flave-trade is now carried on with great regularity, and great advantage to the French colonies and nation. The negroes are fent to Martinico, where they are purchafed by the inhabitants of the other illands, at a fetticd price, of fo many hogibeads of fugar a
hoad, as in the Spanifh ports they are bought for fo many picces of eight. See the article French African Trade and Company.-And how our African trade-might be greatly advanced, as well for the intereft of the Britifh colonies, as of the kingdom in general, fee our article East-In dia Company, for what we have there humbly fuggefted. To what degree the French have increafed in the commerce of all their fugar colonies confidered together, fee our article French America.-But of all the fugar colonies that the French poffers in America, there is none of more high concernment to them than that of St Domingo.-And fhould the French once carry their point, and become fole mafters of this illand, we may reafonably believe that, in few years, it would become the richeft and moft eftimable country in that part of the world, efpecially if the French fhould abandon their other illands, and tranfoort their inhabitants thither; and, even in that cafe, there would be no danger of its being over-peopled; and its fertility is fuch, that they would all find room to exercife their induftry, and that induftry would be richly rewarded: befides, this would afford them many advantages ; for whereas their other illands are fubject to many inconveniencies, but more efpecially the want of provifions, thefe would all be remedied there, and it would afford them an opportunity of increafing their ftrength there to fuch a degree, as would put it out of the power of any of their neighbours to give them much difturbance. On the contrary, they would foon become formidable, both to us and to the Spaniards; which is an evil, that, as it has been forefeen in time, it is to be hoped due care will be taken to prevent its ever coming to pals. Can we, therefore, give too much encouragement to our own fugar colonies, when the French may one day prove fo formidatle to us by means of theirs? Nor can we affect the French in a more tender point than in that of their fugar colonies, if a rupture at this conjuncture fhould prove inevitable.
It is not many years fince the principal inhabitants of Jamaica adorefied his Majefty, to fhew him the decay of their trade and planting intereft; whereby they reprefented, ${ }^{\circ}$ That the low value of their produce might be very juftly attributed to the great improvement the French have made in their fugar colonies, by the encouragement given them, particularly in allowing them to export their commodities to foreign markets, without firf introducing them into any of the ports of France ; and from the lownefs of their duties, they could underfel them. That fugar, and other commodities produced in the French and Dutch colonies, were frequently imported into Ireland, without introducing them into the ports of Great-Britain, and paying the duties, and, confequently, thofe foreigners were fupplied with provifions at eafier rates, That the Britilh northern colonies imported into Jamaica great quantities of provifions, and other goods, for which they took no part of the produce of that inand in exchange, a fmall quantity of melafles excepted, but were paid in bullion, which they carried to Hifpaniola, and bought fugar, rum, and melaffes, for their own ufe: which trade was not only unequal and injurious to the inhabitants of Jamaica, but prejudicial even to the northern colonies, and highly fo to their mother country, draining Jamaica of fo much bullion in favour of France, which otherwife might have centered in Great-Britain.'
Though one part of this complaint has been remedied, the other is fill fubfifting: it is true, fugar can be exported from the plantations immediately to forcign countries, but the northern colonies ftill conumue to fupply the French with lumber, which gives them an opportunity of underfelling us both at home and abroad. The cafe is alfo the fame with the Dutch at Curafioa and Surinam, where our northern colonies fend horles, whereby they carry on their fugar-making, which promotes the Dutch colonies in this manufacture: and the Dutch are fo fenfible of this advantage, that it is a law, or order, in Surinam, That thefe northern veffels fhall not be admitted to trade with them, unlefs they bring fuch a number of hories; befides, they import from the colonies dry goods, whereby the confumption from Great-Britain and the fouthern plantations is greatly diminifhed.
The breed of feamen, with the increafe and encouragement of the navigation of this kingdom, principally depend on our plantation trade and Newfoundland filhery; therefore their flate and condition ever deferve the confideration of our beft patriots, for preventing the decay, lofs, or deftruction of the trade and maritime ftrength of Great-Britain : but we may prefume that this is moft effentially to be done by Destroying the French Set trements, infead of encouraging their manufacture: and I wifh that our gallant admiral Vernon had laid• Hifpaniola in afhes, which it was once in his power to have accomplifined,
Should the Englifh be difpofiefled of Jamaica, which they may foon be, if the fugar-trade is ruined; and however fome peopie may believe, we thall not only lofe an ifland of very great confequence to us in point of commerce, but mult never afterwards expect to be formidable by our naval force in that part of the world, as we have been for many years paft, by means of that illand; for, as Dr Davenant has juftly obferved, - The lofs of Jamaica mult probably be followed with the abfolute ruin of our intereft in America.'

It was obferved by a gentleman of Barbadoes in a fpeech to the council and general affembly of that illand, "That their neighbour colonies, fo long kept by foreign fears from improving, were then encouraging trave, increafing their people, enlarging their plantations, and cultivating their lands: that their fertile foil yielded them many crops from one planting, while the foil of the Englifh plantations required the utmoft art, induftry, and manure, and that too annually. We fhall readily grant that the produce of Jamaica has not been lefs in value than 500,0001 . a year ; and a friend to this inland has acknowledged, that it is capable of producing Threr Times what it does at prefent, were but fome laws made to prevent fuch quantities of land being monopolized by particular perfons, obliging fuch perfons as have very great runs of land, and will neither fettle or fell the fame, that they do the one or the other, and to give encouragement for white people to come and sefide in that inand. But it is quite different at Barbadoes, for no country known to Europeans ever exceeded this in agriculture : it had been faid, That if the foil of this illand had not been improved, but dug, and put on board of the fhips and veffels that have traded hither fince the fettlement, they might bave been fufficient to have carried the whole ifland away: for there is fuch great induftry in planting and manuring the fagar-canes, that, the land being poor, the inhabitants are obliged to dung and improve their plantations like fo many gardens: and I with the fame poverty of foil is not equally apparent in the other Caribbee Iflands fubject to Great-Britain.
It is not above 70 years ago that Martinico was the only fet tlement the French were poffefled of in the TVeft-Indies: fince which time, they have fettled Guadalupe, and increafed their fettlements in Hifpaniola ten to one, for which they had an encouragement given them, by the duty laid upon all clayed or refined fugar imported into France; which duty effectually prohibited, or prevented, either the Englifh or the Dutch from fending any thither, and, confequently, caufed an increafe of the French plantations.
About 40 years ago the obfervation was made, That as the French had, withia four or five years, beat us almoft out of our indico trade, fo it could not be much longer time before our condition would be the fame with our fugar trade. The obfervation has been too early verified.
The French endeavoured to ftrengthen all trade in general; and by giving fuch tracks of land on Hifpaniola, as alfo by not permitting any perfon to enjoy more than what he planted and manured, they have become powerful; nay, they did not fcruple faying, That, in a few years, they would have the whole ifland of Hispaniola : on which account, in 1709 and 1710 ; the Britih miniftry were applied to, and it was intended by them that, at the general treaty of peace, it fhould bedemanded for the French to refore to the Spaniards fuch part as they poffeffed, by the ceffion of the whole inland granted by king Philip to his grandfather; however, this ceffion was never put in execution, though it was required by France, for her affiftance to Spain in the Mediterranean engagement, in 1744 , but refufed through the intereft of his prefent Catholic Majefty, then prince of Afturias.
By an order iffued by his Moft Chriftian Majefty, for the better fettling and peopling his colonies in America, every fhip or veffel was obliged, when required, to carry a certain number of people thither, freight free: fo that, by this encouragement to the increafe of their inhabitants, and the fertility of the country in producing materials for enlarging and improving their Sugar-Works, as allo by the great extent of Hifpaniola, it was obferved, that the French colonifts would not only make much greater quantities of fugar than the Britilh colonifts could in their plantations, but at a cheaper price, by being furnilhed with moft materials for doing thereof within themfelves: whereas the Britifh iflands were obliged to be fupplied from the northern colonies, at a great expence, and, therefore, their product mult necefarily be made up at a much dearer rate than the French; whereby the confequence would be, that the French, in a little time, mult beat us out of that moft valuable artucle to the whole kingdom, the Sugar Trade.
Earthquakes, inundations of the fea, infurrections of negroes, blafts in the canes, and other concomitant circumftances, have been great impediments to the profperity of our fugar plantations, which require lenitives, more than corrofives, in their prefent feeble condition. Upon the whole, our Sugar Trade hasreceived a violent blow from the French; our Newfoundiand Fishery has decayed by their encroachments; and our Tobacco Colonies, if proper care is not taken of that valuable branch of trade, may alfo be outrivalled by the French of Louisiana; which muft give every Englifaman a very melancholy profpect, fince it is by our Sugar and Tobacco, and other Colonifs, we have fuch a ballance in trade on our fice with Hamburgh, and other parts of the Eaftland countries, as alfo a profitable trade with the United Provinces; and from our Newfoundland fifhery, great fums have been annually brought into England from Spain, Portugal, and Italy: befides, our northern culonies being dependent on our fugar fettlements to take off their product, and having not whete withal to anfwer the exports to them from Great-Britain, are only valuable as they bear re-
lation
lation to fuch colonies as are furnifhed by them, which ceafe on the decay of the trade from whence it arifes.
Thus fad and melancholy is our prefent condition, as to thefe branches of our trade and navigation; which mult be aggravated, from the confideration of the prefent conduct of the French in America.

Remarks fince the laft war, and the peace of 1763 .
To what degree many of the before-intimated evils, wherewith we feemed to be threatened before the laft war and peace, may be prefumed to be remedied in time, we refer the reader to our articles America, British America, French America, louisiana, Mississip. pi, Canada, Florida, Leeward Islands, Newfoundland Fisheries, Indian Nations, and to the various other articles to which from the preceding we refer.
The Act continued for granting liberty to carry fugars from the Britifh fugar colonies of the product and manufacture of the faid fugar colonies in America, from the faid colonies directly to foreign parts, \&c. \&c.
Whereas the laws herein after-mentioned, which have by experience been found ufefuland beneficial, are near expiring; it is enacted, That anl act made in the twelfth year of the reign of his prefentMajefty, intitled, An act for granting a liberty to carry Sugars of the growth, produce, or manufactures of any of his Majefty's fugar colonies in America, from the faid colonies directey toforeign Parts, in hips built in Great-Britain, and navigated according to law ; which was to continuein force for five years, from the faid twenty-ninth day of September; one thoufand feven hundred and thirty-nine, and from thence to the end of the then next feffion of parlament ; and which, by feveral fubfequent acts, made in the feventeenth and twenty-fourth years of the reign of his prefent Majelty, was further continued the firft day of September, one thoufand feven hundred and fifty-feven, and from thence to the end of the then next feffion of parliament; thall be, and the fame is hereby further continued, from the expiration thereof, until the twenty-ninth day of September, one thoufand feven hundred and fixty four, and from thence to the end of the then next feffion of parliament.
In, the laft war Great-Britain conquered the French fugar colonies of Martinico and Guadaloupe, sic. and upon the conditions ftipulated in the treaty of peace, concluded in the year 1763 , the daid fugar colonies were reltored again to France. See our article America, for the treaty at large. The long fanding difputes, concerning the Neutral Islands in America, are finally fettled in the faid treaty. See our article Leeward Iscands, where the new acquifitions of colonies in America are reprefented. In the year 1758, an act was made for encouraging the exportation of rum and firits, of the growth, produce, and manufacture, of the Bitifh fugar colunies, from this kingdom, and of Britifh firits made from melaffes._-_An abftract of the contents.
The duties of cuftom, payable upon the importation of rum and fpirits, from the Britifh fugar colonies, to be repaid upon the exportation thereof.- And the duties of excife to be remitted upon all fuch as thall be exported before payment is made of the faid duties. - Exporter to give bond for the due exportation thereof. - Upon producing a certificate of fuch bond having been given, the rum or firits mentioned therein, are to be delivered out of the warchoufe, and a certificate of the quantity, and fize and marks of the calks, $\& x \mathrm{c}$. to be given therewith, and p-oduced to the officer attending the fhpping. - Due entry to be made of fuch delivery.Bunds given for the duties are to be delivered up, upon oath made of the intended exportation, and certificate produced, \&c. of the quantity bipped, and that the fame are p oof fpirits; and allo of the delivery the reof from the warehoufes, \&c.-If part only of the rum or fpirits mentioned in the bond are certified to be delivered and fhipped, the quantity is to be indoried on the bond ; and the bond to be delivered up, when the remaining part fhall be certified to be delivered and fhipped; provided the fame be before the time ftipulated for payment of the duties.-All rum and fpirits intitled to the faid drawback, \&c. are to be exported in cafks, containing not lefs than roo gallons, and in veffels not lefs than ioo tons burthen.--The quantity delivered out is to be computed according to the gauge taken upon the importation thereof.--If, afier delivery, any fhall be concealed, or not hhipped within twelve bours, or the calk be opened, or the fame be reduced or altered in quantity or quality; fuch rum or fpirits are forfeited, and the bond is to be put in fuit ; unlefs the commiffioners fee caufe to forbear the fame.- Bonds given for exportation are not to be difcharged, till certificates be produced of the due exportation and landing, and proof made thereof on oath, in manner required by the act for preventing the exceffive ufe of firituous liquors, \&e.-. If fuch rum or firits fhall not be exforted, or fhall be fraudulently relanded, the fame, together with the veffels, cattle and carriages employed therein, are furfited; and the perfons concerned forfeit double the amount of the duties; and the maffer, \&c. if he affift or comive therest, is to fuffer alfo lix months imprifonment :
or if the package be altered before arrival at the place of difcharge, he forfeits 1001 - The rum or fpirits to be exported are to be proof; and the exporter is to give five days previous notice of the thipping thereof; and allow the of ficers to mark the cafks, and take famples, paying for the rame, if demanded; upon penalty of forfeiting icol.-If any rum or fpirits thall be altered or reduced in quantity or quality, after being thipped, the fame is forfeited, and the perfons concerned therein forfeit alfo 1001. and no drawback is to be allowed for the fame.--Penalty of granting falfe certificate, or of counterfeiting, altering, \&\%c, any oath or certificate, is 500 l . one moiety to the crown, the other to the profecutor. - An additional drawback of 31.3 s . per ton allowed on all Britifh-made fitits, drawn from melaffes, exported; oath being made of the truth thereof, and of the duties being duly paid; and certificate produced of the quantity fhipped, and that the fame were proof-fipirits, \&c.The powers, regulations, forfeitures and claufes, \&c. in the recited act, relating to the drawback hereby granted on the exportation of firits; and to the preventing or punifhing frauds, \&c. extended to this act.
SURREY, a county in England, joins on the weft to Berkfhire and Hampllire, on the fouth to Suffex, on the eaft to Kent, and it is parted from Middlefex on the north by the river Thames, and is 112 miles in circumference.
The air, as well as the foil of the middle and extreme parts, is vaftly different.
The chief commodities of this county, befides its corn, are box-wood, walnuts, and fuller's earth, which laft is fold at a 'groat a bufhel at the pits near Ryegate.
Southwark, though it feems a fuburb of London, yet for extent and number of people, and their trade and wealth, \&c. is inferior to few cities in England.
Guildford is a large well-built town on the river Wey, which falls into the Thames. Its market is reckoned one of the greateft in England for wheat. By the navigation of its river, a great quantity of timber is brought to London, not only from its neighbourhood, but from the woody parts of Suffex and Hamphire. It had formerly a confiderable manufacture of cloth.
Kingston upon Thames, is a populous, trading, well-built town. The market is kept in the town, fo large that it might pafs for a fair.
Wandlesworth, or Wansworth, is of note for a manufacture of brafs plates and kettles, fkillets and frying-pans.
Farnham on the river Lodden, is a large and populous town, and one of the greateft wheat-marketsin England, efpecially between All-faints-day and Midfummer, when, one day with another, 250 load of wheat, and fometimes 400 have been fold here in a day. The plantation of hops hereabouts is alfo very confiderable, and faid to outdo the Kentifh hopyards, both in quantity and quality.
Godalming is the moft eminent town in the county for making cloth, particularly mixed kerfies and blue ones, faid to be the beft coloured in the kingdom for the Canaries. It ftands on the Lodden, which abounds with good fifh, efpecially pike, and drives a grift-mill, two paper-mills, and three corn-mills. The beft whited brown paper is faid to come from hence.
Chertsey has a bridge over the Thames to Shepperton in Middlefex. Its principal trade is in malt, which it fends in barges to London.
Croydon is a large handfome town on the edge of Banfeaddowns. Its marker is chiefly for oats and oarmeal for London, though there is a great fale bere too of wheat and barley. The town is encompaffed with hills, well ftored with wood, of which great quantities of charcoal are made, and fent to London.
Dorking is noted for its meal trade, and its market for poultry, particularly the fatteft geefe and the largeft capons, which are brought hither from Horfham in Suffex; where it is the bufinefs of all the country for many miles to breed and fatten them.
SUSSEX is bounded on the weft with Hampfhire, on the fouth with the Britifh Channel, on the north with Surrey, and on the eaft with Kent, and is 170 miles in circumference. Its chief rivers are the Arun, Adur, Oufe, and Rother; the Arun has lately had a new outlet cut from it, to improve its navigation, which carries barges above Pulborough, and fhips of 100 tons as high as Arundel; from whence they carry the largeft and beft timber in England to the docks of Portfmouth and Plymouth, Chatham, Woolwich, and Deptford.
The air and foil of this country are both various, according to the different parts of it. On the fea-coaft are very high green hills, called the South-downs, well known to fuch as deal in wool or fheep, there being great flocks fed here, whofe wool, which is very fine, is too often exported clandeftinely to France by farmers and jobbers, who are called Owlers. The north quarter is maded wi h woods, from which they make abundance of charcoal ; and fuel for the iron-works, there being plenty of ore on the eaft fide towards Kent, and many great forges, furnaces, and water-mills, for both caft and wrought iron; which, though it is faid to be

## S W A

more brittle than Spanifh, yet cannon are caft with it ; and the beft gunpowder is made in this county.
Chichester has a very great market for corn, and every Wednefday fortnight here is alfo one of the greateft cattle markets in England. Its chief manufactures are malt and needles. Here is fome foreign trade, and a collector, with other officers of the cuftoms at Dell Key, a fmall harbour about four miles from the fea.
Lewes is one of the largeft and moft populous towns in the county. It carries on a good trade, and a little river runs through the middle of the town, to which it brings goods in boats and barges from a port eight miles off: on this river arefeveral iron-works.
Shoreham is a populous place, and has a very good harbour for veffels of confiderable burthen; and many thips are built here both for the navy and merchants fervice.
RyE is a pretty populous town. Its trade confifts in hops, wool, timber, kettles, cannon, chimney-backs, \&cc. which are caft at the iron-work at Bakety, four miles from Rye to the north-eaft, and at Breed five miles to the fouth-weft.
Brighthelmston, is a pretty large populous town, chiefly inhabited by filbermen, as is alfo Newhaven. A pretty many fmall veffels bring coals, deals, \&c. from Lewes hither, and load from hence with corn, timber, tan, \&cc. Some fmall craft are alfo built here.
SW ABIA, the circle of, in Germany, is bounded on the north with the Palatinate and Franconia ; on the fouth with Tyrol and Swifferland ; on the weft with Alface; and on the calt with Bavaria.
Its air is healthy, and the foil generally fruitful : for though fome parts are mountainous and woody, yet the hills afford mines of filver, copper, and other metals, and the forefts much pine and fir-timber, befides great ftore of game, and good breeds of horfes, black cattle, and theep; and other parts yield great ftore of corn, wine and flax. The inhabitants are chiefly employed in making linen cloth, of which they export great quantities. Its chief rivers are the Danube and Neckar, but great part of it is allo watered by the Rhine.
The ufual divifion of it is as follows, viz.
The marquifate of Baden. This country, which is one of the fineft in Germany, is extended along the eaftern banks of the Rhine, having the Palatinate on the north, the Black Foreft on the eaft, Alface on the weft, and Swifferland on the fouth. It is very populous, and fruitful in corn and wine, but chiefly in hemp, which they fell to the Dutch and Flemings; they have, alfo, in fome places, agate, which they polifh and export.
The chief towns here are only of note on account of their baths, for which they are much frequented.
Ortnan is feparated by the Rhine, on the weft, from Alface, has the the Brifgaw on the fouth, the margraviate of Baden on the north, and the dutchy of Wirtemberg on the eaft.
The Brisgaw lies on the eaft fide of the Rhine, which divides it from Alface; betwixt Ortnan on the weft, and the principality of Furftemberg on the eaft.
Friburg is a large populous city, on the river Threifem: here are famous lapidaries for polifhing the granates, jafpers, and other precious ftones that are found in Lorrain, and the neighbouring countries.
The territory of Suntgaw has Montbeliard on the weft, Upper Alface on the north, the bifhopric of Bafil, and Mount Jura the principality of Porentru, and the Franche Comte, on the fouth, and the canton of Bafil on the eaft. The country, though mountainous, abounds with vines, and great quantities of its corn are tranfported to Swifferland, Lombardy, Lorrain, \&c. There are no towns of any note for trade, neither in this teritory, nor in the county of Montbeliard, nor the bilhopric of Bafil.
The bifhopric of Constance lies on both fides of the lake of that name, and on the borders of Swifferland.
Constance, the capital, is a populous rich place, and has a confiderable trade, by means of its lake, and the neighbourhood of the Rhine.
Uborlingen fands on the lake of Conftance; it has a good haven, from whence barges are fent with wine and fruits to Conftance, and other cities on the lake, to the great gan of the inhabitants, who are very induftrious and frugal.
Salmansweiler is a fmall town, but has a good trade in corn.
Buckorn has a good trade with the neighbouring countries, by the lake.
Lindaw flands on the north bank of the lake, by means of which, and the Rhine, it lies fo convenient for trade, that it is called the Venice of Swabia. Part of the city is built on an ifland in the lake, to which there is a wooden bridge: this part is moitly inhabited by fifhermen, watermen, and weavers. This place is fo confliderable a faple for goods of divers nations, and its market is fo frequented by merchants for eight or nine leagues round, as well as others from a great number of towns, that it is Caid near 1500 load of merchandize enters every week at the gate next to the main land. The traders both of Swabia and Bavaria amafs great quanti-
VOL. II.
ties of corn, falt, iron, and copper there, which they fell to the Swifs and Grifons; and every Saturday valt fores of wheat and wine are brought hither by the lake, from Hegow and Tergow ; as alfo an incredible quantity of butter and cheefe is brought from Bregent, and the mountains of Swifferland, Appenzel, and the Grifons; beifides filh and fruits of all forts, and variety of other merchandize, from the neighbourhood, and from the northern countries, and which pals through Nuremberg and Aughurg, for Italy.
WANGEN ftands on the river Arg, which talls info the fame lake, and is noted for a trade in paper and flax, and for the beft fickles, which are made here in great numbers, and fent all over the empire.
Bibrack ftands in a pleafant fruitful valley, furrounded with hills. The great trade of this town confifts in fuftians; fo that, of all the trading companies, the weavers are moft numerous.
Leuthirk, on the river Efcach, is a fmall town, but the inhabitants have a good trade in corn, flax, and linen cloth, of which they make great quantities.
Kempten, on the Algow, is one of the ancienteft cities in Germany. The trade of the place is weaving and whitening linen cloth, which, witte its being on the road to Italy, and by the Swiffers bringing falt from Tirol, makes it one of the richeft cities in Swabia.
Memmingen has a good manufacture and trade in linen, cotton, ftuffs, and paper, which laft is reckoned the beft in Germany.
Augsburg, the metropolis of Swabia, fands near the confines of Bavaria, at the conflux of the rivers Lech and Werdach, which fall into the Danube 25 miles below it. It is one of the biggeft and moft beautiful cities in Germany. Its trade, at prefent, befides the bank of commerce, and the Tirol wines, with which it almoft wholly fupplies Germany, confifts in goldfmiths wares, clacks, and ivary, with which, and all kinds of toys, not inferior to thofe of Nuremberg, it furnifhes Germany, Poland, and the north of Europe ; but even in feveral of thofe things, the Englifh artizans bave, of late years, excelled, and ferved foreign countries, to the great detriment of both Aughburg and Nuremberg, which had, for feveral centuries, been in poffeffion of this trade.
Ulm ftands on the Danube, which here begins to be navigable; it is a great and very populous city, bere being a great number of hands employed in the manufactures of ftuffs, linen, cotton, and fuftians; in dreffing leather, and in the iron, and other manufactures, as well as clock-work; by which this is become one of the richeft cities in Germany.
Nordingen, the capital of a county, or divifion, of its name, ftands on the river Eger. The principal trade carried on here is in linen cloth and dreffed fkins. There is a confiderable yearly fair here, the week after Eafter, to which merchants bring goods from very remote countries, and return with the manufactures of this.
Wirtemberg duchy, in that called Lower Swabia, is bounded on the north by part of Franconia, the archbilhopric of Mentz, and the Palatinate of the Rhine; on the eaft by the county of Oetingen, and feveral other petty fates of Swabia; on the fouth by the Danube; and on the weft by the marquifate of Baden, and the Black Foreft. It is reckoned the largeft dominion in the circle of Swabia; and there are few countries in Germany fo fruitful, it abounding with all forts of corn, befides pafture. Its mountains are full of mines and vineyards, and its vallies of cattle; but being furrounded wish the Palatinate, Franconia, and Alface, that are altogether as fertile, the Wirtembergers have bardly any export for thrir commodities.
Eslingen, on the Neckar, is a place of fome trade, and noted for good baths.
Hailbron flands in a pleafant fruitful country, on the fame river, and bas a good trade, and feveral fairs.
The princinal trade of Gemund is in beads, which they fend abroad.
Halle ftands amongftrocks and mountains, on the river Kocher, and owes, its fife to its fpring of falt, which, though not fo white nor piquant as other falt, is carried to Nuremberg.
SWEDEN. This kingdom is bounded by the Baltic Sea, the Sound, and the Categate, on the fouth; by the mountaing of Norway on the weft; by Danifh, or Norvegian Lapland, on the north; and by Mufcovy on the eaft.
The foil, where capable of cultivation, is tolerably fruitful. For want of induftry, they have not a competent fupply of corn, and, therefore, import many forts of grain from Livonia. The cattle are fmall in fize; their theep bear a coarfe wool, fit only to make cloathing for peafants; their horfes are of a delicate kind.-They have plenty of wild beafts, which are hunted for their flefh, as well as their hides and furrs. Fowl, both wild and tame, are in great plenty, and good in their kind. - Their lakes are well fored with variety of fine finh. - Their wo ds and foretts over-fpread great part of the country, and are, for the moft part, of pines, fir, of the country, and are, for the moit part, of pines, fir,
beech, birch, alder, juniper, and fome oak.- ihey have beech, birch, alder, juniper, and fome oak.- hey have
variety of mines, particularly of copper and iron, and one variety of mines, particularly of copper and iron, and one
Io I
of filver, adjacent to which, the woods are much deftroyed for fuel; but that want is. fa well fupplied from diftant places, by the conveniency of rivers and winter-carriages, that they have charcoal above fix times as cheap as in England, though not fo good in quality.
Iron mines and forges are in great number towards the mountainous parts, where they have the conveniency of water-falls to turn their mills. From thefe, befides fupplying the country, there is yearly exported iron to the value of near 300,0001 . but of late years the number of thefe forges has been fo much increafed, that each endeavouring to underfel otbers, the price has been much lowered; and fince the prohibition of foreign manufactures, in exchange of which iron was plentifully taken off, it is grown fo cheap, that it is found neceflary to leflen the number of forges. Neither has that expedient had the effect intended; but, on the contrary, many more are like to fall of themfelves, becaufe they cannot work but with lofs : in which cale, many thoulands of poor people, whofe livelihoodidepends upon thefe forges and mines, will he reduced to a ftarving condition.
What we have been faying in relation to Sweden in general, is, in the main, applicable to Finland, except only that hitherto no mines have been difcovered there. Its chief commodities are pitch, tar, and all forts of wooden ware, cattle, dried filh, train-oil, \&c.
The country of Sweden has no confiderable manufactures, and yet they have a very great trade, and are very ftrong in fhipping ; the reafon is, the produce of their land, notwithftanding it's northern fituation and barren foil, is an immenfe treafure, and, in a great meafure, makes up for their want of manufactures.. This product is not only great, but is inexhauftible in its fund, and is as follows :

## Silver, $\quad$ Tron, $\quad$ Flax, Tar, Furrs,

F. The filver; this they have peculiar to themfelves, it being found in no other place in all thefe parts of the world, except in Norway, and this is the product of one mine only, at a place called Nola. The ore in the mine lies $\mathbf{x} 45$ fathom deep, the working of which has continued near 300 years, and yet, as they relate, is unexhaufted. The mine itfelf is very curious, and ftrangers are often carried down to fee it it brings in a revenue to the king according to the degree to which it is worked.
2. Their mines of copper and iron are very valuable indeed, and are a fund of wealth confiderably greater than the mine of filver, and which will fupport Sweden, perhaps, to the end of time: for as the quantity is inexhauftible, fo the ad vantage of working thefe mines is very great. Without this, Sweden, which is otherwife'a poor and barren place, excepting fome few vallies and flat countries on the fea-coaft, would not be able, on any terms, to import fuch great quantities of the manufactures and product of other countries as they now do: had they not copper and iron to pay with, they could never inport fuch quantities of wine and brandy, wrought filks, and fine linens, from France and Holland; or of broad cloth, fine ftuffs, wrought iron and brafs, clock-work and watch-work, with other things, from England; but their copper and their iron fupply them with all things, and the ballance is always verry much in their favour: which is not to be wondered at; inafmuch as before the laft calamitous war, which drained them both of money and men, the Swedilh nation was a formidable power; and they tell us that Sweden only; without including their provinces in Germany, furnifhed king Charles XH. for his wars, from the time of his firft expedition againtt the king of Denmark, to his death at Frederickfhall, above 300,000 men for foldiers, and 227 tons of gold, either in feecie, or bills of exchange, made good in Sweden, or bills at Hamburgh, when exchange failed from Sweden; and this was always made good in copper or iron.
If this be true, and that we add to this the dreadful havock and deftruction of the mines of copper, and of the ironworks, which the Mufcovites made in their feveral invafions upon them, at the end of that war, and by which the late king of Sweden was obliged to confent to a difadvantageous peace, we need not wonder that the Swedes at prefent are in a low condition, in comparifon to what they were, both as to their real wealth and their trade. The Mufcovites carried away 70,000 tons of iron, befides copper, and did an irreparable damage, by deftroying the copper mines, which had coft immenfe fums to bring to perfection, and by cutting down the woods, which were the life and fupport of the ironworks, and which will require many years growth to be rendered ufeful for the fame works.
Yet notwithftanding all this, we fee the Swredes, by an application never enaugh to be commended, begin to recover, and their government and gentry contributing to the repair of the great copper-mines, and of their iron-works, which had fuffered fo much; they begin to apply themfelves vigoroully to agriculture, and even manufactures, and export great quantities, and to fill their coffers again: and, in a few years, it is not duubted but they will be able to make a
confiderable figure, though, perhaps not quite fo great as before.
I find no condiderable manufactures, at, prefent, in Sweden for exportation, except fuch as are the immediate produch of the netals above; that is, brais-wire, draven from their capper converted intobrafs, alfo fome fteel, and a great quantity of latten-wire, drawn from their iron. Thefe they export in very great quantities', as they do alio deals, mafts, timber, pitch, and tar.
A few years fince they fet up a coarfe manufagure of waollen cloth in Sweden, whith they make, with tolerable good fuccefs, for cloathing theire poofer people, and for their armies; but we do not find they export any of it, except fome into Murcovy and Poland, and that but lately. However, it is of great advantage to them, as it fets their pgor at work, and finds emplayment efpecially for the women and children, who are the moft, uncapable to get their bread in Sweden and Norway of any country in thipe parts of the world.
All the product of Sweden, except as above, finds no work for women, and therefore it is that in the country villages the women manage the plough and the cart, and till the land as much, and perhaps more, than the men.
As for the men, they are taken up in four employments, in which the women can do no fervice at all, viz.
I. In the woods, which makes good a proverb in thofe countries, That the Swedes are born carpenters.
2. In the mines, where they are alfo very fkilfuil.
3. In the army, where they are acknowleged to be pery good foldiers.
4. In the fhips; but here they make not the beft feamen.

It is almoft as natural for the countrymen of Sweden to be carpenters or miners, as it is to children to fuck: they take it juit as a Darchman takes to fifbing, or as a negro to fwim. In the woods their bufinefs is with the ax or the faw, felling timber or fawing deals, extracing the tar, turpentine, 8c. and making the charcoal : all thefe are laborious works, fit only for the men : the like is the working in the mines, or at the forges and fmelting-huts, which the women can do little or nothing at.
But now they bave a woollen manufacture, the women begin to fpin and card, and weave; and the children have the winding and finnimg too, in their degree ; fo that many thoufands get their bread, who could not do it before. it is true, their own waol being very coarfe, they can make no great improvements in this manufacture; but they have wool from Poland, and the cloathing the poor is a trade very advantageous : for,
(r.) It furnifhes their poor with cloaths much cheaper than they were before, when the country people were çloathed chiefly with fheep's--nkins, dreffed with the wool on them.
(2.) It employs their own poor, who got nothing before.
(3.) It keeps all that money at home, which went annually abroad for cloathing for the meaner fort of people, which, notwithftanding their fheep-fkin drefs, was a very great fum. The Swedes have two countrics diftant from their native one, in which they have fill fome intereft; and thefe are Finland and Pomeren.

1. In Finland they bave very few ports left, having loft E1fingvas and Wiborg to the Mufcovites; however, at Abo, and fome other fmall places remaining to them, they drive a confiderable trade-in Swedifh deals, which are very valuable in England and Holland, being of a good durable and uncommon kind of yellow fir.
Alfo they export the beft mafts for thips of any place, except Wiborg, in all thofe feas.' The inland country is famed for good horfes; and the Finlanders horfe were once efteemed the beft cavalry in all Germany.
2. Pomeren: here the Swedes have fill the port of Stralfund, which is a very confiderable rich trading city, and a good port; and the ifle of Rugen is a large, fruifful, and well cultivated inand: and from hence Sweden itfelf, in times of fcarcity, is often fupplied with corn.
This country of Pomeren is one of the moft confiderable in all the feas', for the beft oak timber and plank; and the Dutch fetch great quantities hence every year, efpecially of plank; as alfo from Stetin, an the north of the Oder, which formerly belonged to the Swedes. The Swedes themiclves, alfo, have the greateft part of the oak timber and plank from herice, with which they build their fhips of war at Caselfcroon.
They export from this country alfo great quantities of corn to Holland, and of linfeed for making of oil, and alfo fome linen, fuch as canvas, and other coare linens; but the Swedes having quitted the Oder to the Pruffians, has greatly leffened their trade on that fide.
Though Sweden has for many centuries furnifhed a great part of Europe with thofe neceffary commodities with which it fo plentifully abounds, yet either their warlike temper, the idlenefs, or the ignorance of the inbabitants, has formerly kept them from being much concerned in trade, they baving given the management and advantage of it too much to ftrangers, which was for a long time monopolized by the Hanfe-Towns fituate on the. Baltic Sea, 'till the Seven Pro 5

## S W E

vinces of the Netherlands being erected into a repub'ic, became fharers with them. [See the article Hanse-Towns.] Before that cime, very little iron was made in sweden; but the ore, being run into pigs, was tranfported to Dantzic, and other parts of Pruffia, and there forged into bars. The nation owes the greateft improvements it has made in trade, to the art and induftry of fome ingenious mechanics, whom the cruelty of the duke of Alva drove into thefe parts. Their fuccefs invited great numbers of the reformed Walloons to remove thither, whofe language and religion re-, main in the places they fettled in, where they erected forges, and other conveniencies for making of iron guns, wire, and all other manufactures of copper, brafs, and iron
The Swedifh navigation was 'very inconfiderable'till queen Chiftiva at the conclufion of the wat in 1664 , obtained from Denmark a freedom and cuftom for all fhips anid merchandize belonging to Swedifh fubjects, in their paflage through the Sound [fee the article DENMARK] and eftablifhed in her own dominions that difference of cuftom which ftill fublifs between Swedilh and foreign thips, and is in the propqution of $4,5,6:$ the firft being called whole-free, the Pcond half-free, and the lat unfree: fo that where a wholefree Swedilh flaip pays 400 crowns, a half-free one pays 500 , and a foreign veffel 600 .
But, as great as this advantage was, it häd but lietle effect, 'till the Englifh act of navigation bridfed the Hollanders, and opened the intercourfe between England and Sweden. Since that time, their commerce has been much augmented, as well as ours, that way, and goods tranfported by both, or either party, according to the various junetures of affairs. When Sweden has been engaged in a war, the Englifh llips have had the whole tmploy: bux, in time of peace, the advantage is fo great on the Swediff fide, and merchants fo much encouraged by freedorn in cuftoms, to employ their own fhips, that Englifh botfoms cannot be ufed in that trade, but only, when Sweden is unprovided with a number of thips fufficient for the tranfportation of their own commodities.
The general direction of their trade belongs to the College of Commerce, which confifts of the prefident of the Treafury, and four counfellons, who hear caufes relating to trade, and redrefs any diforders that happen. The bank at Stock holm is of great benefit to trade, as well in regard that the king's cuftoms for that city are paid there, as alfo that the merchants commonly make payments to each other, by bills drawn upon it ; which eafes them of great trouble in tranfporting their money from place, to place, that would otherwife be very difficult and chargeable. This bank is well conftituted, and in good credit, as it has the ftates of the kingdom for its guarantees. See our article Banking. The intereft of England, in the trade of Sweden, may be computed by the neceffity of their commodities to us, and the vent of our's there. Their copper, iron, tar, pitch, mafts, \&sc. cannot be had elfewhere, except from America from whence fuch fupplies may certainly be furnifhed: and if fo, this confideration ought, in reafon, to have an influence on the Swedih councils, and engage them to make the Englifh trade with them as eafy as poffible, left we fhould, in time, ceafe in the importation of their commodities. As to our exportations thither, they farce amount to one third of what we import from thence, and confift chiefly in cloth, ftuffs, and other woollen manufactures; of which there was formerly vended there, yearly, to the amount of 50,000 l. Belides thefe, tobacco, Newcaftle coals, pewter, lead, tin, fruits, and fugar, with feveral other of our own commodities, are fold at this market, as alfo good quantities of herrings from Scotland: fo that, in all, we are fuppofed to vend goods to about 100,0001 . a year; whereof, if any more than one half be paid for, it is extraordinary. But the making cloth in Sweden to fupply the army, \&c., which had formerly been endeavoured without fuccefs, being now encouraged and affifted by the public, and undertaken by fome Scots, and others, has proved of late, and does fill prove, a great hinderance to the vent of our cloth there. And, to favour this undertaking, Englifh cloth is now (unlefs it be fuch fine cloths as cannot be made there) clogged with fuch exceffive duties, as render the importation of it impracticable. The undertakers have got workmen from Germany, and fome from England; and, befides the German wool they ufe, they receive great quantities from Scotland (fuppofed to be had from England) without which they cannot work. Yet as at prefent the Englifh trade in Sweden is of the importance above mentioned, notwithftanding the abatements aforefaid, it is confiderable, and will be fo, while their commodities continue to be neceffary to us.

The Exchanges of Sweden, or Stockholm.

## S W E

As Stockholm negociates by exchange only with Amderdam or Hamburgh, the nimber of days muft be ftipulated for the bill of exchange to rum, after the expiration of which, there are no regulated days of grace.
Merchants keep their accöunts in rixdollars, copper dollars, and runfticks, reckoning 32 runfticks to a copper dollar, and 6 copper dollars to a rixdollar, valued at 3 Polifh florins, or about 43.6 d. -They reckon 8 runfticks to a mark, and 4 marks to a copper dollar.- They have a Ativer dollar, which marks to a copper dollar.- They have a ttver dollar, which
is called the Siwedes fixdollar of Germany, or Poland, worth is called the ewedes rixdollar of Germany, or Poland, worth
about is. 3 d. fterring.-In this fyecie the ciftom of all exported goods muft be puid; and it is divided into 32 ore.The dollar in which the cuftom of all imported goods mult be paid, is the Swedifh coppet-plate dollars, which are of double the value of the fliver dollar, viz. 90 groifhen, or 3 Polifh gilders, or 4 s .6 d . fterling; the copper-plate dollar hay divide into 48 ore.
The exchange with Hamburgh is upon the mark, whereof 20 are reckoned to be par with the fipecte, or rixdollar banco, of Hamburgh, and they give 24 or 25 , more or lefs, of marks, for the fatd rixdollar
To Amferdam they give the fatre for the rixdollar current. To London they moltly exchange by the way of Amfterdam, or Hamburgh, but fometimes exchange may be made directly to London; and then, although they do reckon 30 copper dollars to be par with zos. fterling, yet the courfe is frequently at 28 or 30 of the faid copper dollars for the pound fterling; but this rife and faHl happen according to the courfe of trade.

## WEDISH EAST-INDLA COMPANY.

A fuccinct Mistory of the Swedish East-India Company.

It was the ruin of the late Offend Eaft-India compatity flee the articles Austrian Nethereands, and Ostend East-India Company] that gave bitth to the eftablifh ment of a Swedifh one, of which one Henry Koning poas the chief author, a rich merchant, and one who had a jaft hotion of the Eaft-India commerce. He reprefented to the Swedifh miniftry, that this was a very favourable junclure to undertake a delign of this nature ; that there were a multitude of places in Africa and the Indies neglected by the Europeans,' who had conftantly followed one the orher, and had fcarce ever undertaken to ftrike out of the ordinary road ; that befides, there were numbers of perfons who, by the diffolution of the Imperial company of the Netherlands, were thrown out of bulinefs, and, which was worfe, deprived of the means of returning into their own country, by the fleps taken to hinder the Ofterd company from carrying on their trade; that, confequently, there could be nothing eafier than to procure proper people for carrying this com merce on, and fixing it in fuch a manter as not to be liable to any hazard, either of lofs by trade, or oppofition ftom other powers.
This propofition being maturely confidered, it was refolved to authorize this Henry K,oning to affociate fuch perfons as Thould be willing to contribute to his defign, and to grant them the following privileges, by virtue of a charter, dated June 14, 1731. The king thereby concedes to Henry Koning and his aflociates, the liberty of navigating and trading to the Eaft-Indies for 15 years, from beyond the Cape of Good Hope to the iflands of Japan, wherever they Shall think proper or convenient, with this reffriction ohly, that they fhall not trade in any port belonging to any prince or ftate in Europe, without their permiffion firft had and obtained. The fhips employed in this commerce hall conftantly take in their lading at Gottenburgh, to which port they thall return, with all the merchandize thiey bring home from the Eaft-Indies, and thall there caute the fame to be publickly fold, as foon as conveniently they can. The faid Heary Koning and company fhall pay to the crown of Sweden, during the raid 15 years, 100 dalets per laft for every fhip they employ, the freight of fuch fhips being meafured before their departure from Gottenburgh; which money is to be paid within fix months after the fafe return of the faid fhip from the Indies; and they Chall likewife pay two dalers per laft, in full fatisfaction for the town duties.
The faid Henry Koning and company may employ, equip, and arm, as many vêflels as they fhall think proper, provided that thore veffels are built or bought in Sweden, and whatever elfe is neceflary for equipping and furnithirg them, be had in the Swedifh dominions. But in cale this thould be found at any time impracticable, then the company may provide themfelves with hips, or whatever elfe nall be found requifite for their commerce, wherever they fhall think fit, provided always that they give the preference ro, and pronote, as far as in them lies, the building, manufactures, and produce of Sweden. The faid thips fhall carry the Swedifh flag, and fhall be furnifhed with paffiports under the king's hand, and alfo from the republic of Algiers. The faid company fhall be at liberty to raife what fum they think fit, for the carrying on their commerce, by a voluntary fubfcription,
or otherwife, as they think proper; and fuch as thall become fubfcribers, fhall be obliged to pay in their money at the times prefcribed, on pain of forfeiting their intereft in the faid commerce.
The company may tranfport what ordnance or fmall arms they think proper; as alfo Silver, Coined or Uncoined, Swedifh Money only excepted; and may likewife bring from the Indies what kind of goods or manufactures they think fit, without any reffriction whatever. The veffels of the company, when freighted ready to fail, fhall not be hindered, on any pretence whatfoever; nor fhall they, at their return, be impeded from entering into the port to which they are configned. The goods of the faid company may be tranfported at their pleafure, from place to place within his SwediMh Majefty's dominions, being firft furnißhed with proper paffports, without paying any other duties than thofe before ftipulated. The captains of the company's fhips
then fhall bave the fame power for maintaining difcipline amongft their crews, as the captains of the KING's fhips; and, with refpect to trade, they fhall conform to the inftruction given by Henry Koning and company, provided always, thofe inftructions are not repugnant to the privileges granted by this charter.
The feamen and foldiers entering on board the company's fhips fhall not be liable to be PRESSED into the king's or any other fervice; and, on the other hand, it fhall not be lawful for the company to take into their fervice any who fhall have deferted that of the crown. The feamen and foldiers belonging to the fhips in the company's fervice, and deferting from them, may be apprehended and detained, but according to the ufual forms of laws, and by the hands of the proper officers. The fhips belonging to the company being returned, and having landed the merchandize on board them, the faid goods fhall be duty free, excepting only a very fmall acknowlegement to be paid upon removing them.
The perfons acting under this charter fhall conftantly chufe out of their number at leaft three directors, who fhall be all men of diftinguifhed probity and known abilities, of which the faid Henry Koning fhall be one; and, in cafe of his demile, the members of the company are impowered to make choice of another perfon in his ftead, provided always, that thele three directors hall be natives of the kingdom of Sweden, at leaft naturalized Swedes, Proteftants, and refident in the king's dominions, unlefs neceffarily abfent in foreign parts, for the fervice of the company; in which cafe, the proprietors may fubfitute another director at home. The faid Henry Koning, and his affociates, may make fuch regulations for the management of their commerce as they Thall think proper, provided they be agreeable to this charter. They fhall render a faithful account to all the perfons interefted, as well of the profit and lois, as of the capital of the faid company; but they fhall not be obliged to difcover the names of their fubferibers, or the fums they fubicribed; nor thall they be obliged to produce, or fuffer their books to be infpected, on any pretence whatfoever. In cafe any of the directors thall find that the reft betray their fecrets, or are guilty of any other fraud or mifdemeanor; they may apply to the Board of Trade for juftice and reparation, and, upon due proof, fuch offender fhall be-fufpended from his office of director, and the company thall be at liberty to chufe another in his room.
In like manner, if any of the proprietors fhall find that the faid Henry Koning, and the reft of the directors, betray their truft, or are guilty of any frauds, they may make the fame application, and obtain the fame redrefs. The faid Henry Koning, and company, may employ what number of fupercargoes, officers, mariners, or foldiers, they fhall think fit, either Swedes or foreigners, who, on their being fo employed, fhall enjoy the fame privileges as if they were born Swedes; and the money employed, either by natives or foreigners, in the capital of this company, thall not be liable to any detention or feizure.
Such perfons as are interefted in, or employed by, the company, fhall be naturalized, according to their refpective qualities, upon their applying themfelves to the king for that purpofe. The faid Henry Koning, and company, and fuch as are authorized by them, in cafe they are molefted, or difturbed in their commerce, by any perfon, or in any part of the world whatever, fhall have full power from his Majefty to obtain ample juffice and fatisfaction, by all convenient methods, and fhall be at liberty to oppofe force by force, and to confider fuch difturbers as pirates, and enemies to the public peace.
His Majefty will grant them thefe powers, efpecially in fuch commiffions as their captains thall receive, and in cafe, notwithftanding, they thould be attacked, and fuffer any injury or injultice from any nation whatever, in the carrying on of this commerce, his Majefty, upon due information thereof, will grant them his high protection, and endeavour to procure for them fpeedy and ample fatisfaction, either by way of reprizal, or otherwife. The reft of the fubjects of the crown of Sweden are exprefsly prohibited and forbid to engage in, or interfere with, the trade of the faid company, under pain
of his Majefty's high difpleafure, and the confifcation of their veffels and effects. The king promifes to alter or augment thefe privileges, upon application from the company, as often, and in fuch manner, as thall be found neceffary for promoting the trade to the Ealt-Indies, and the intereft of the perfons concerned therein.

## R E M A R K S.

There were great expectations formed of this company, for various reafons ; firft, becaufe they had all the powers granted them that they could reafonably expect or defite. Secondly Becaufe they were not limited in their capital, but allowed to raife fuch fums, and in fuch a manner, as they thall efterm moft for their benefit. Thirdly, From their being prohibited from interfering with the commerce of other nations, and thereby running themfelves and their country into difficultie and difputes. Fourthly, From their having the king's protection fecured to them, in fuch a manner, and for fuch purpofes, as might ferve to anfwer all good ends, without in volving the crown of Sweden in any controverfies with the maritime powers, or any other of her allies. And, laftly, Becaufe from the nature of the prefent conflitution in Swe den, there feemed to be as high fecurities for the properties of fach as interefted themfelves in this affuir, as in any other country whatever.
Thefe expectations were greatly heightened, by the company's meeting with no diffurbance or oppofition from foreign powers, who neither knowing who the fubicribers were, or to what their fubfcriptions amounted, were the lefs alarmed by this new company; and befides, feeing themfelves fecure from any apprehenfions of their interfering with the trade already eftablifhed in the Eat-Indies, found it more difficult to affign any rational caufe of complant ; to which we may add, that the company going on very flowly at the beginning, and being a long time before they compleated their fublcriptions, or prepared to fit out hips for the Indies, it was generally believed, both in England and Holland that the defign would come to nothing, and the company would vanifh of itfelf.
But though the author of this defign, M. Henry Koning, and his affociates, were not hafty in equipping fhips for the Indies, yet they took care to provide themfelves in every refpect with what might be found neceflary for carrying on their fcheme with fuccefs. They built for this purpofe two very large and ftrong chips, one called after the king, the Fre derick, the other by the name of the queen, the Ulrica Thefe they furnifhed in fuch a manner, as to be equally fit for trade or for defence. They made choice of fuch fupercargoes as had not only eftablimed characters both for honefty and abilities, but were likewife well verfed in the particular bulinefs in which they were to be employed, and men of experience in the trade to China. They proceeded with no lefs caution in the choice of their officers and mariners; and though they fpent full two years in making preparations, yet that lofs of time was well compenfated, by the exactnefs with which thofe preparations were made: fo that at the time their Thips left the harbour of Gottenburgh, they were as well equipped, and in all refpects as compleatly furnifhed for an Eaft-India voyage, as any that were employed in that trade by the maritime powers; and the fame care and diligence they have ufed ever fince : fo that it may, with great truth, be faid, that as fcarce any company was better eftablifhed at firft, fo the affairs of none have been hitherto better conducted.
Their firft voyages, though not attended with fo much emolument as might have been expected, were, however, tolerably fuccersful; and the company eftablifhed their factory on the river of Canton in China, with the confent of the Chinefe, who were very well pleated with their new comers, and well difpofed to favour and promote their trade; fo that they were very foon on the fame footing there with other European nations. At home; indeed, they met with fome difficulties; for the company being obliged to make ufe of a great many foreigners in all capacities, for the better carrying on of their trade, and there being no nation in Europe naturally more jealous of foreigners than the Swedes, this occafioned a great clamour, efpecially among the common people, which, however, was in fome meafure got over, by publifhing an order, that at leaft two thirds of the mariners fhould be, for the future, natives of the kingdom; and as the execution of this order was apparently attended with great inconveniencies, it convinced even the vulgar of their miftake, and that the company had done no more than what they were warranted to do by their charter, and what the circumftances of their affairs, more efpecially at the beginning, rendered not only expedient, but neceflary.
Since that time, the Swedifh company have been very regular, both in fitting out their fhips, and in their returns, which being fold to foreigners, have brought in great fums of money to the kingdom; yet, inafmuch as a great part of this money has been exported again, for the carrying on thes trade, a new complaint has been created thereby, in repect to the filver carried to the Ealf-Indies. We need the lefs

## S W I

S W I
admire at this in Sweden, becaufe, though the trade of the kingdom is not large, yet it produces annually a confiderable ballance in ready money, as is known experimentally here, fince it is certain that two-thirds of the trade we carry on thither is managed with Ready Money only; and it is alfo pretty much the fame thing with other nations who trade thither, the French only excepted, who have a ballance in their favour from the Swedes, which, however, has gradually grown lefs and lets, in proportion as they have taken more naval ftores of them of late years, than they did formerly; and as their fubfidy treaties bring in confiderable fums to Sweden, or at leaft keep the money there, that would otherwife be employed in difcharging the ballance of trade: fo that the Swedes being ufed to fee great fums of money brought in by every other branch of commerce, and being not fo immediately acquainted with the profits ariling from this, are the lefs difpoled to confider it as nationally advantageous.
SWITZERLAND is furrounded by the territories of France, Germany, and Italy: it is feparated from other countries by high mountains. It is divided into various cantons and free provinces, too well known to need a minute defcription here. Every canton, or province, in fummer af fords good pafture to the heep, and in fome of them there are ploughed fields. A confiderable part of the cantons, efpecially that of Bern, the largeft and moft confiderable, is a plain fruitful country, abounding in corn. The largeft rivers in Europe have their fource from thefe mountains, particularly the Rhine, the Rhone, the Danube, the Rufs, and the Inn; and there are many extenfive lakes, as thofe of Conftance and Geneva: bere are alfo abundance of fine woods, efpecially of pine and fir-trees. The foil produces fome corn and wine, though not in great quantity, and the fruits of the earth are frequently deftroyed by forms or cold rains. They abound moft in cattie, wherein they carry on no inconfiderable trade in the neighbourigg countries 3 and their lakes abound with plenty of filh,
A flourilhing trade is not to be expected in a country fituate like this, out of the reach of the fea, and among mountains, paflable only by mules, without native commodities fufficient to export, and without any peculiar genius in the natives to erect manufactures. However, the towns of Zurich, Bafil, Schaff haufen, Geneva, and St Gall, carry on a pretty gemeral traffic; the firlt and laft of which have fome manufactures: and Bafil and Schaffhaufen, being futuate on the frontiers of the empire, are convenient magazines for merchandize to be exchanged between France, Italy, and Germany; dize to be exchanged between France, Italy, and Germany;
which trades bring employment and profit to the inhabitants, among whom are fome confiderable merchants.
The Switzers not having a competency of wine or corn within themfelves, are fupplied with both from the Milanefe, and the circle of Swabia; and the Tirol, Franche Comté, and Bavaria, fupply them with falt. The fovereign of each canton is the general falt-merchant, and profits by retailing it.Their necefaries for apparel and furniture come likewife from abroad.-They make, indeed, fome coarfe ftuffs for cloathing their peafants, but their other people are generally cloathed with the manufactures of other countries. Specie, either of gold or filver, is very fearce in the circulation of theif commerce, from its being locked up in thofe cantons that have
a public treafury, and for want of proper occafiotis to placio it at intereft on good fecurity; which induces monied people, as well as their public treafuries, to put it into foreign funds for intereft fake.-In confequence of their fituation and circumftances, it is no wonder that the ballance of trade is againft thefe people; which has put them under the neceffity of preventing the confumption of foreign commo dities, by fumptuary laws; which prevent the wear of jewels; gold and filver, filk, thread, lace, and what is coftly in apparel ; yet thefe meafures prove no effectual remedy againft their exportation of fpecie: nor can any effectual remedy be their exportation of fpecie: nor can any effectual remedy be
found for this, but by eftablihing manufactures, which was attempted by numbers of French Proteftants, who formerly retired hither from perfecution; but, for want of due pro tection and encouragement, and even toleration by the native citizens, who were weak enough not to fuffer foreigners to exercife their trade in any of their capital cities, they were forced to carry their arts and trades to other countries : and forced to carry their arts and trades to other countries : and
they bsing but very mean workmen themfelves, there is little hopes, from this miftaken policy, of feeing any confiderable manufactures fourifh in thefe cantons. So ridiculounly obftinate are thefe people to their trading interefts, that the poor nobility of the canton of Zurich may not engage it trade without degrading themfelves. See the aftonifhing foliy trace without degrading themielves. See the andonifing folly ficers, and Manufacturers.

## Of the Exchanges of St Gali.

Ufances, in regard to the payment of bills of exchange, is reckoned at 14 days after fight. The days of grace are not regulated there, bills of exchange, according to tigour, being payable $2_{4}$ hours after the expiration of the ufance.
Some traders keep their accounts in florins, kruitzers, and fenings, money of St Gall; or in florins, kruitzers, and fenings, money of the empire. The florin is 60 kruitzers ; and the kruitzer 4 fenings. The effective rixdollar is roi kruitzers, money of St Gall ; the crown of the empire is 2 fiorins, money of the empire, or 106 kraitzers ; money of St Gall. The money of St Gall is regulated, at prefent, at io6 kruitzers. In this money they exchange on the follow ing places:

fatisfaction of the juftice, the property to be in him, or the perfon who employed him, the gepods, by order of the juftice, are to be delivered over to the ule of the owner, upion payment.of reafonable reward for the leizure, to be alcertained by the juftice; who is alfo to commit the perfon whe offered them to fale to gaol for fix months, or until he has paid tieble the value of the goods to the owner. 26 Geo. II. c. 19.0.4. 4.

Any perfon not employed by the mafter, mariners, or owners, or perfons lawfully authorized, who, in the abrence of thofe who are fo, fhall fave any fhip or effects; and caufe them to be carried into port, or to any: cuftom houle near, or other place of, fafe cuftody, immediately giving notice thereof to fome joftice of the peace, magiftrate, or cuftomtroufe or excire officer, or thall difcover to them where fuch effects are wrongfully bought, fold or concealed, thall be entithed to areatonable reward from the mafter or owners, to be adjufted, :in cafe of difagreement, in the fame manner as falvage, 11 Geo. It c. 19. §.5-

Upon oath being made before a proper magiftrate of any fuch plunder or theft, or of the breaking any thip contrary to 12 Ann. feff. 2. c. 18. the examination taken thereupon in writing is to be delivered to the clerk of the peace of the county, \&c. where the fact was committed; or to his deputy, who is to caufe the offenders to be profecuted in that county, or any one next adjoining; or, if the fact is committed in Wates, in the next adjoining Englifh county. The neceffary charges are to be paid him by the treafurer of the county, \&cc. where the fact was committed, and amount to be afcertained by juftices of the peace at the generafor quar-ter-feffions. Such clerk of the peace, refufing or neglecting to profecute, forfeits 1001 , to any perfon who thall fue for it. 26 Geo. II. c. 19. §. 8.
Such indictments may be laid in the next adjoining county by any other perfon. 26 Geo: II. c. 19. §. 8.
$\mathrm{S}_{\text {Hips }}$ Or Goods stranded.-The juftice of the peace, mayor, bailiff, collector of the cuftoms, or chief contable neareft the place, muft forthwith give public notice for a meeting of the fheriff, or his deputy, the juffices of the peace, mayors; or chief,magiftrates, of towns corporate, coroners, and commiffioners of the land-tax, or any five of them, who are required to give aid in execution of this act. 12 Ann. feff: 2. c. 18. and to employ proper perfons in faving the velfels or effects, and to examine perfons upon oath concerning them or the falvage, to adjuft the quantum of falvage, and diftribute it among the perfons concerned in cafe of difagreement; and every one who attends and acts, is to be paid four hillings a day for his expences, out of the goods laved by his care and direction. 26 Geo II. c. 19. §. 6.

- The charges and rewards for falvage not being paid, or lecurity given for it, within 40 days after the fervice performed, the officer of the cuftoms concerned may borrow money to fatisfy the fame, upon a bill of fale under his hand and feal of the fhip and cargo; redeemable, neverthelefs, upon payment of the principal borrowed, and intereft at four per cent. per annuml. 26 Geo. II. c. 19. §. 7.

Perfons affembled to lave any veffel or effects, are, to conform to orders in the following fubordination, as the perfon happens to be prefent. In the firft place, to the orders of the mafter, or other officers or owners, or perfons employed by'them: in the next place, to the orders of officers of the cuftoms; then of the officers of excife; then of the fheriff' or his deputy; then of any juftice of the peace; then of the mayor or chief magitrate of a corporation; then of the coroner ; then of the commifioners of the land-tax ; then of any chief conftable; then of any petty conftable, or other peace-officer. Any perfon wilfully acting contrary to fuch orders, forfeits any fum not exceeding 51 . to be levied by warrant of a juftice of the peace; and for non-payment the offender is to be committed to the houfe of correction, not exceeding three months. 26 Gee. II. c. 19. §. 13.

For affaulking, wounding, or beating any perfon lawfully authorized, on account of their acting in the falvage of any veffel or effects, the offender, upon conviction at the affizes, or the general or quarter-feffions for the county, \&c. where the offence was committed, is to be tranfported for feven years. 26 Geo. II. c. 19 . §. in.

- Juftices of the peace, in cafe of need, may, in the abfence of the high-hheriff, take fufficient power of the county, to repel all unjuft violence, and to enforce the execution of this act. 26 Geo. II. c. 19. \$. 12.

Ships in Distress.- The officer of the cuftoms, who ${ }_{2}$ ats in prefervation thereof, muft, as foon as conveniently may be, caufe all perfons belonging to the fhip, or others who can give an account thereof, to be examined upon oath before a juftice of the peace, as to the name and defcription, the name of the commander and owners, and owners of the cargo, of the part from and to which bound, and the occafion of the diftrefs. The examination is to be taken in writing, and a copy to be delivered to the officer of the cuftoms, with a copy of the account of the goods, who is to tranfmit it to the fecretary of the admiralty, to be publifhed in the London Gazette, for information of the perfons concerned. 26 Geo. II. .. 19. §. 15.

Nothing in this act to extend to Scothand. 26 Geo. II c. 19, \&: 18. - This act not to prejudice any in the right to wrecks, or goods that fhall be flotfam, jetfam, or logan. 12 Ann. feff. «, c. 18. §. 9. \&t 4 Geo, r. c. 12. §. 1. \& 26 Gzo. 'II. c. 19. §. $14,16$.

- Nor to extend to, or any ways affeg the ancient forifdiction and ufage of the admiralty court of the ctinge jorifbut the officers thereof are to have the fame power atots perfons in other ports. 4 Geo I. i. 12. S. 2. \& 26 Geo II. c. 19. $\$ 10,16$.
- Thefe acts to be readim every parih church or chapel of all the fea-port towns of this kingdom, on the Sundays next before Michaelmas-day; Chriftmas-day, Lady-day, and Midfummer day, 12 Anm. feff. 2. c. 18. \%. 8, 10. \& 4 Geo. I. c. 12. §. 1. \& 26 Geo. II. c. 19. §. 16. --ShIPs INWARDS-Arriving in the port of London, from foreign parts, may not be above three days in coming from Gravefend to the place of difcharge, without touching or ftaying at any wharf, key, \&cc. adjoining to cither fhore between Gravefend and Cheiter's key, unlefs : apparently hindered by contrary winds, \&ec, or other juft impediment to be allowed by the principal officers of the cuftoms; and in the out-ports, they muff come directly up to the place of unlading, upon forfeiture of 100 l . 13 \& 14 Car. II. c. ri.

Upon, or befure their arrival, and before any goods are unladen, the mafters ot purfers for that voyage muft, upon oath, make a juft and true entry of the burthen, contents and lading of their hhips, with the particular marks, numbers, qualities, and contents of every parcel of goods on board, to the beft of their knowlege; allo where-laden, of what country built, how manned, whe was mafter during the voyage, and who are owners; and mult anfwer all queftions concerning the fame, that fhall be demanded by the cuftomer, \&c. upon forfeiture of rool. I Eliz. s. In. §. 5. \& 13 \& 14 Car, II. c. II: \$. 2.
--And upon making fuch declaration upon bath before any two principal officers of the port, bulk may be broke in any port allowed by law, and duty paid for no more goods than are entered and landed; but uporrarival at the next port $_{2}$ declaration muff likewife be made upon oath, before the cuftomer, collector, comptroller, or furveyor, or two of them, of the quandity and quality of the goods landed at the firft port, and to whom they did belong.
--No cuftomer, collector, or other officer of the cuftoms, is to clear inwards any fhip or veffel liable to the payment of 6 d , per month towards the fupport of the hofital for feamen, \&c. difabled in the merchants fervice, or grant any warrant or other difcharge, or fuffer fuch thip to go out of port, till a certificate is produced of payment of the duty, and that the mafter is not more in arrear than three months for the fame, or is exempted from payment thereof, on forfeiture of 201 . In cafe the certificate is not produced to the tide-furveyor when he comes on board to clear the fhip, the tide-waiters are to be continued at the expence of the mafter, or owners, till it is produced. 20 Geo . II. c. $3^{8 .}$. $\S .22,23$. -ShIPs of WAR-from parts beyond the feas, having any goods on board, may not unlade them, till the captain has fignified under his hand, to the cuftomer, collector, and comptroller inwards, the names of every importer, with the marks, numbers, quantity and quality of every parcel of gaods, and has anfwered upon oath to fuch queftions as fhall be demanded by the faid officers, upon forfeiture of 100 l . I3 \& I4 Car. II. c. II. §. 3. - Such fhips liable to: all fearcbes and rules as merchantfhips are fubject to; except victualling-bills and entering. And captains refufing to make fuch entries, as well inwards as ourwards, the officers may bring all cuftomable and prohibited goods on thore to the king's ftore-houfe. I3 \& 14 Car. II. c. in. §. 3 .
--Any commander, or other officer of any of his majefty's fhips or veffels, receiving, or permitting to be received, any goods or merchandize, other than for the ufe of the fhip, except gold, filvar, jewels; and except goods of merchants, wrecked or in imminent danger; and except goods ordared on board by the lords of the admiralty; being convicted thereof by a court-martial, to be cafhiered, and rendered incapable of any office in the naval fervice; and moreover to forfeit the value of all fuch goods fo put on board, or the fum of 5001 . one moiety to the informer, or perfon who thall fue for the fame, the other to the ufe of Greenwich hofpital ; to be recovered in any court of record at Weftminfter, or in the high court of admiralty, at the election of the profecutor; and the court where judgment fhall be given againtt the offender is, with all convenient fpeed, to certify the fame to the lords of the admiralty. 22 Geo. II. c. 33. art. 18. S. 24 .
--Shifs inwards.-The mafters of any fhips from foreign parts, or any other perfon, fuffering any package to be opened, and the goods imbezzled, carried away, or put into any other form or package, after the fhip comes into the port of difcharge, are to forfeit $1001.13 \& 14$ Car. 11 . c. II. §. 4 .

## Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE.

- Or knowing of, or confenting to, the unfhipping of any goods inwards, without a warrant, and the prefence: of an officer, are to forfeit the value of the goods. 13 and 14 Car. II. c. II. §.7.
Car. Ships belonging to the fubjects of the French king, fading or unlading any: goods, or taking in, or fetting on fhore, any paffengers, were to pay to the collector of the cuftoms at that port, a duty of five fhillings for every ton burthen, upon forfeiture of 101 . befides the duty: to continue as long as a duty of 50 fols per ton on Britilh fhips was collected in Erance, and three months after. I2 Car. II. a. 18 . §. 17 . and 14 Car. II. c. II. §. 24 .
——W Watermen, \&cc. going out from any port to fetch goods from fuch fhips, were liabie to the payment of this duty, and to forfeit 40 I. 12 Car. II. c. 18. §. 17 . and 14 Car. II. c. 11. §. 24 .

But this duty is made void by the inth article of the treaty of commerce, concluded at Utrecht, 1713.
Ships out wards-Bound for patts beyond the feas, may: not take in any Britilh goods (fifh taken by Britifh excepted)' 'till fuch fhips are entered by the mafters in the book of the cuftomer or collector, and comptroller ouTWARDs, with the burthens, the mafters names, the number of guns and ammunition, and to what places bound. I Eliz. .. II. §.4, and 13 and 14 Car. II. c. II. §. 3 .

- Before departure out of the port, the mafters are to bring to the faid officers a content in writing, under their hands, of the names of every exporter, with the marks and number of the goods; and are, upon oath, to anfwer publickly in the cuattom-house to fuch queftions, as fhall be demanded concerning the fame, upon forfeiture of 1001. I Eliz. c. 1 I. §. 4 . and 13 and 14 Car. II. c. II. §. 3 - If bound to Ireland with certificate goods, the mafters muft take with them a duplicate of their contents in writing, certified under the bands and feals of the collector and-comptroller of the port in Great-Britain, in order to be delivered to the officers of the cultoms in Ireland. 8 Ann. c. I 3 . §. 19.
$\xrightarrow{\text { Q. The matters fuffering the package of any foreign goods }}$ to be opented on boatd, or put into any other form or package, or unfhipped whilft the fhip remains in port, without leave of the principal officers, are to forfeit 100 I , and to fuffer fix months imprifonment, without bail or mainprize. 5 Geo. I. c. 11. §. 7 . and 27 Geo. II. c. 18. §. 4 -
- May not be detained by the officers above three tides after their arrival at Gravelend, and in the O.u t-Por ts not above one tide, after they are ready ta fail, upon forfeiture of office, and rendering tamage to the merchant and owner. See the latter end of letter A.
- Foreign-built Ships trading coastwise, fo employed, bought after the paffing of this act, are to pay at the port of difcharge, for every voyage, 5 s . per ton, one moiery fur the ufe of the cheft at-Chatham, and the other moiety to the Trinity-houfe at Deptford-ftrand, I Jac. II. c. 18. § 2.

## _- But fuch thips bought before the 2 g th of September,

 1689, and not made free, are to pay only 12d. per ton. 1 Jac. II. c. 18. §. 3 .ftoms, To be received and recovered as directed for the cufloms, by 12 Car. II. c. 4. and I Jac. II. c. 18. §. 4. British-built, which any where in the Book of Rates are defigned to entitle the importer or exporters of goods to any abatement or privilege, are to be underftood, fhips buile in Great-Britain, Ireland, Guernsey, Jergey, or the British Plantations in Asia, Africa, or America, and whereof the mafter, and at leaft $\frac{3}{4}$ of the mariners, are Britifh, i. e. his Majefty's fubjectis of Great-Britain, Ireland, or the faid plantations, and have been fo during the whole voyage, unlefs in cafe of ficknefs, death, \&c. 12 Car. II. c. 18. §.7. and $\mathrm{I}_{3}$ and $\mathrm{I}_{4}$ Car. II. c.ir. §. 6.

- But Britifh hips laden with Corn, intitled to the Bounry, may be failed with the mafter, and at leaft $\frac{2}{3}$ of the mariners his Majefty's fubjects. I W \& M. c. I2. §. I. During the prefent war, merchants fhips may be navigated by $\frac{3}{4}$ foreigners, and $\frac{x}{4}$ Britifh; and in any future war his Majefty, by his royal proclamation, may permit them to be navigated in the fame manner. 13 Geo. II. c. 3. §. $r, 4$.
Ships belonging to Great-Britain or Ireland. -Foreign-built fhips are not to be deemed or pals as fhips belonging to Great-Britain or Ireland, 'till the owner has made it appear to the chief officer of the cuftoms, in the port next to his abode, that he is not an alien, and has made oath before the faid officer, that fuch fhips were bona fide, and without fraud, by him bought for a valuable confideration, expreffing the fum, as alfo the time, place, and perfons from whom bought, and who are his part-owners, if any (all which part-owners are alfo liable to the fame oath) and that no foreigner, directly or indirectly, hath any part intereft, or thare therein: whereupon the officer is to grant a certificate under his hand and feal, which he is to regifter, and return a duplicate thereof to the chief officers of the cu-
ftoms in London, with the names of the feller and partowners, and the fum paid. 12 Car. II. c. 18. §. I0. - But foreign-builet Ships, that is, not built in any of his Majefty's dominions of Afia, Africa, or America, are not to enjoy the privilege of fhips belonging to GreatBritain or Ireland, although owned or manned by Britifi (except fuch fhips as are taken at fea by letters of mart or reprifal; and condemned as lawful prize in the ccurt of admiralty) but are to be deemed alien fhips, and to be liable to aliens duties. 13 and 14 Car. II. c. II. §. 6 ;
certatn The Aiiens DuTy, or petty-cuftoms, payable for certann goods imported in fuch fhips. See'Alitins.
fhips the privilege of fhips Britifh-built allew foreign-built fhips the privilege of dhips Britifh-built, or belonging to Great-Britain or Ireland, until a certificate be produced, or proof of the property be made, or until examination whether the mafter and $\frac{3}{7}$ of the mariners are Britifh; nor allow a foreign-built fhip the privilege of bringing in goods of the growth of the country, where it was built, "till examination and proof, upon forfeiture of office. 12 Car. II. c. 18. §. 11. --Governors of the Britifh plantations may not fuffer foreign-built fhips to lade or unlade any goods, ' 'till certificate be produced, and examination be made, whether the mafter and $\frac{3}{4}$ of the mariners are Britifh, upon forfeiture of their government. 12 Car. II. c. I8. §. 1 I.

- No fugars, panelles, fyrups, or melaffes of the product of any of the plantations in America, nor any rum or fipits of America (except of the growth and manufacture of his Majefty's fugar colonies there) may be imported into Ireland, unlefs fhipped in Great-Britain in fhips legally navigated, upon forfeiture thereof, or the value, together with the fhip and all her furniture; - but not to extend to reftrain the importation of fugars of the produce of any of the dominions of the king of Spain or Portugal, from any place from whence they might have been lawfully imported before. 6 Geo. II. c. $13 . \$ 4,13$.

Sugar, tobacco, cotton, wool, indigo, ginger, fur. tick or other dyeing wood, rice (excepr under the regulations in the II. 12. 13. 14. 15.16. 17. 18. art.) melaffes, hemp, copper-ore, beaver-fkins, or other furs, pitch, tar, turpentine, mafts, yards and bowfprits, of the growth, production, or manufacture of any of the Britifh plantations in America, Afia, or Africa, may not be carried from thence, unlefs to fome other Britifh plantations, or to the kingdom of Great-Britain only, to be there landed, upon forfeiture of the faid goods, or their value, with the fhip and furniture. 12 Car. II. c. 18. §. 18. and 22 and 23 Car. II. c. 26. §. 10 , II. and 25 Car. II. c. 7. §. 3. and 3 and 4 Ann. c. 5. §. 12. and c. 10. §. 7. and 12 Ann. c. 9. §. 1 . and 8 Geo. I. c. 15. §. 25. and c. 18. §. 22. and II Geo I. c. 29. §. 4. and 2 Geo. II. c. 28. §. 6. and c. 35. §. 17. and 3 Geo. IL. c. 28 . §. I.

- And if, upon any pretence whatfover, any goods of the Britifh plantations in America be landed in Ireland, without being firft landed in Great-Britain, and the duties thereof there paid, they are forfelted, with the fhip; $\frac{3}{4}$ without compofition to his Majefty, and $\frac{x}{4}$ to the fuer; unlefs Atranded or driven in by leakinefs, \&c. in which cafe the goods muft be delivered into the cuftody of the chief officer of the port, there to remain till re-Chipped for Great-Britain, for which good fecurity muft be taken. 7 and 8 W. III, c. 28. §. 14,15 .

Now to extend only to fugars, tobacco, cotton, wool, indigo, ginger, fpeckle-wood, or Jamaica wood, fuftick or other dyeing wood, rice, melaffes, beaver-1kins, and other furs, copper-ore, pitch, tar, turpentine, mafts, yards, and bowfprits, of the growth, product, or manufacture of the faid plantations. All other goods, of the growth, product, and manufacture of any of the faid plantations, may be imported from thence into Ireland (except hops, which are to continue under the regulations of 9 Ann. c. 12. and I Geo. I. c. 12.) provided it be in Britifh fhipping, whereof the mafter and at leaft $\frac{3}{4}$ of the mariners are Britifh. 4 Geo. II. c. 15. §. I, 2. and ${ }^{5}$ Geo. II. c. 9. §. I.

- Ships coming to the faid plantation to take in any of the following enumerated goods with intent to carry the fame to fome other Britifh plantations, bond not having been firft given to bring the fame to Great-Britain only, there muft be paid for fuch goods the following duties, viz.

1. s. d.

Sugar, brown, and mufcovadoes the Cwt.
Tobacco, the pound
50
16
Cotton-wool, the pound -
Indigo, the pound 01

- weight

Logwood, the hundred weight $\begin{array}{lll}0 & 0 & \frac{1}{2} \\ 0 & 2\end{array}$
ndred weight - - 0 1 0
Fuftick, and all other dyeing wood, the Cwt. $\begin{gathered}5 \\ 0\end{gathered} 0$
Cocoa-nuts, the pound - - . 001

And fecurity muft be taken to carry them to fuch plantatations, or to Great Britain. 25 Car. II. c. 7. §. 3. and 7 and 8 W . and M. c. 22. §. 8. and 1 Gco. I.c. 12. \&. 4. - Bruilh, in Alia, Africa, or America, rum or fpuits, melafles, or fyrups, fugars or panelles, of the product of any plantation in America, not in the poffeffion of his Majefty, imported into any of the Britifh plantations in America, are to pay the following duties in money of GreatBritain, according to the value of 5 s .6 d . per ounce in filver; viz.

|  | - |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Melaftes or fyrups, the gallon | - | $\bigcirc$ |  |  |
| Sugars and panelles, the Cwt. | - | - |  |  | and fo in proportion for a greater or leffer quantity, 50 paid down in ready money before landing. 6 Gec. II. c. ${ }^{13}$ §. $1,2$.

-- Britilh, in Afia, Africa, or America. - Any of his Majefty's fubjects in any veffel built in Great Britain, and belonging to his Majefty's fubjects, of which the major part refide in Great-Britain, and the refidue either in Great-Britain, or in fome of his Majefty's fugar colonics in America, or in any veffel belonging to his Majetty's fubjects refiding in Great-Britain, and navigated according to law, that fhall clear outwards, from Great-Britain to any of the faid colonies, may thip fugars of the growth, produce or manufacture of the faid colonies, to carry to any foreign part of Europe ; provided a licence be firft taken out for that purpore, under the hands of three of the commifioners of the cuftoms, fubject to the regulations, and on the conditions, ftipulated by act of parliament. 12 Geo. II. c. 30. §. 2. and 24 Geo. II. c. 57.§.7. ${ }^{2}{ }^{2}$ Geo. 11. c. 57.8 .7 .
any fugars from the fugar colonies to Ireland liberty to carry any fugars from the fugar colonies to Ireland. 12 Geo. II. c. 3 O. §. 16. and 24 Geo. II. c. 57. §.7.

- Of the growth of the Britilh colonies, exported within a year after the importation, to draw back the refidue of the fubfidy. 6 Geo. II. c. 13. §. and is Geo. II. c. 23.

The allowance on Britifh Refined Sugar exported.
Was granted from 3ift January, By 9 and ro W. III.
cap. 23.§.9.
5 Ann. c. 8. art. 6. 1699, during the contizuance of tho new fubfidy,
5 Ann. c. 8. art. 6. $\left\{\begin{array}{l}\text { Upon fugar refined in } \\ \text { Great-Britain, for every } \\ \text { cwt. exported }\end{array}\right\} \begin{array}{lll}\text { I. } & \text { s. d. } \\ 0 & 3 & 0\end{array}$ cwt. exported ${ }^{\text {Was granted during the continu }}$

 1 Geo. I. - 12.-8. $\left.\begin{array}{l}\text { the fame, for every } \\ \text { cwt. exported }\end{array}\right\}$
6 Geo. II. c. 13. §. Io. Was granted from 24th June, 1753, for five years.
II - 18. - 2. Further continued for feven years.
19 23. - 1. Further continued for feven years.
20 —— 32. - 5. Further continued to 24 June 1756
29 26. - I. Further continued for three years. A further allowance on $\}$ J. s. d. the fame, for every
cwt. exported Was granted from firf March, 1747,
during the continuance of the fubfidy 1747 ,

Total bounty 090
To be paid at the cuftom-houfe to the exporter within thirty days after the demand thereof; oath being firft made by the refiner, that the fugar, fo exported, was produced from brown and mufcovadofugar, charged by the acts of 9 and 10 W. III. c. 23 . and of 2 and 3 Ann. c. 9 . and by 2 I Geo. II. c. 2. (that is to fay, charged with the new fubfidy, onethird fubfidy, and fubfidy 1747.) and that, as he verily believes, the fame was imported from his Majefty's plantations in America, and the duty duly paid at the time of importation thereof, the exporter making oath, that the fame was duly exported, and his Majefty's fearcher alfo certifying the fhipping thereof, and all other requifites being performed according to the Book of Rates. 9 and ro W. III. c. 23. §.9. and 2 and 3 Ann. c. 9. §.3. and 6 Geo. II. c. 13. §. 10. and 21 Geo. II. c. 12. §.8.

## T A P

TA P

TAPESTR Y, a delicate kind of manufacture, ferving to adorn apartments with hangings.

Of fome curious improvements that have been made by Monf. Le Blon, on the princtples of printing, in imitation of painting, and of weaving tapeftry; in the fame manner as brocades.
M. Le Blon endeavouring to fix the true harmony of colouring in painting, found that all vifible objects may be reprefented by the three primitive colours, red, yellow and blue; for out of them, all others, even black itfelf, may be compounded. We are beholden to the great Sir I aac Newton for the difcovery of the difference of colours contained in the rays of the fun, and that the union of them all produces a white, which is light itfelf.
For diftinction fake, M. Le Blon calls thofe colours which are comprehended in tre rays of the fun impalpai le colours, and thofe ufed in painting, material colours. In the material colours, a muxture of all three produces a black or darknefs, contrary to what is obferved in the impalpable, which I faid juft now procuce white. M. Le Blon takes this phanomenon to be owing to che body or fubitance of which chofe three material colours confift, and to the particles of them being opake, and not tranfparent; for they only reflect certain rays of light, they Atrike on their furfaces; and therefore, when fmall particles of different coluurs are placed clofe together, if they are fo fmall that each of them cannot be feen feparately by the eye, we do not difcern the colour of each particular atom, but only the blended reflected rays, proceeding from the adjoining particles: thus yellow and red produce an orange, yellow and blue, a green, \&c. which feems to be confirmed by placing two pieces of filk near together, viz. yellow and blue : when, by intermixing of their reflected rays, the yellow will appear of a light green, and the blue of a dark green, which deferves the fargreen, and the blue of a dark gree
ther confideration of the curious.
He hath reduced the harmony of colouring in painting to certain infallible rules built on this foundation. Whereas, according to the common practice of painters, their colouring is the effect of mere chance or guefs-work at firft, but improved by experience, all painters ufually declaring, that there can be no certain rules given for mixing colours. M. Le Blon publifhed, fome years ago, an ingenious book on this fubject, intitled Coloritto; or, The Harmony of Colouring in Painting.
By thefe rules he light on the manner of printing any object in its natural colours, by means of three plates, and the three primitive coours; an art attempted and fought after ever fince the invention of printing, but in vain, and thought impoffible, 'till he put it in practice a few ycars ago. The plates are engraved chiefly after the mezzotinto manner, only the darker Mades, and fometimes the outlines, where they are to appear very fharp, are done with a common graver. Each plate is not completely engraved, but only contrived to take fuch a portion of the colour as is neceffary with the other two plates, to make the picture complete.
This art of printing confifts in fix articles.
r. To produce any object with three colours, and three plates. 2. To make the drawings in each of the three plates, fo as that they may exactly tally. 3. To engrave the three plates, fo as that they capnot fail to agree. 4. To engrave the three plates in an uncommon way, fo as that they may produce 3000 and more good prints. 5. To find the three true primitive material colours, and to prepare them, fo as that they may be imprimable, durable, and beautiful. 6. To print the three plates, fo as that they may agree perfectly in the imprefion.
The firt of which is the moft confiderable, comprehending the theoretical part of the invention; and the other five are fubfervient to bring it into mechanical practice, and of fuch importance, that if any one of them be wanting, nothing can be executed with fuccefs or exaltnefs. Sometimes more
than the three plates may be employed, viz. When beauty, cheapnefs, and expedition require it:
The coffervation of the compounded colours reflected from two pieces of filk of different colours, placed near together, firft gave him the thought of what the effect of weaving threads of different colfurs would be, when all the threads were fo fine, as not to be diftinguifhed at a fmall diftance one from another.
By the fame principles of producing any vifible object with a fmall number ot colours, he arrived at the ikill of producing in the loom all that the art of painting requires. An art likewife often attempted, but as often abandoned, and declared impoffible till now, as well as the other, of printing in colours. And it is probable, many improvements may from hence be made in feveral trades, efpecially in combing of wool; where the mixing of feveral colours may be of important ufe.
The colours ufed in weaving, being only fuperhcial, and fo differing from both the impalpable and the material colours, and $n^{\prime \prime}$ t being to be foclolely joined or incorporated to gether as thofe, will not of themfelves produce a white or black, but only a light cinnamon: wherefore in weaving he hath been ohliged to make ufe of white or black threads, befides red, yeliow, and blue; and thongh he found he was able to imitate any picture with theie five colours', yet for clieapnefs and expedition, and to add a brightnefs where it was required, he found it more convenient to make ufe of feveral intermediate degrees of colours.
There are two ways in ufe at Bruffels, and at the Gobelins in Paris, for making tapeftry after the common manner: one they call the flat way, and the other the upright. In the fiat way, they have the warp ftretched in a frame lengthwife of the piece : it is made of white worfted, and the pattern lies clofe under it, fo that the workman can fee the figures through the warp: he is provided with bobbins of various colours of filk or worfted, as the piece requires: then he takes up with his fingers one thread after another, as they anfwer to any colour in the painting beneath; and with the other hand paffes the bobbin with the fame colour, and ftrikes the threads with an ivory comb. Some of thefe frames are made like a loom, with a warp paffed through the leifhes, and treddles for the feet, with which they open the threads of the warp, to pafs a common huttle through them, when it is neceffary to make a long throw, as is required in grounds, pillars, and tall uprights.
In the upright way the warp runs from top to bottom of the piece; the pattern is placed upright, and clofe behind it, and the outlines are drawn in charcoal upon the forefide of the warp. The workman is placed with his back to the light, by which means he can fee the pattern the better; then he takes up the threads one by one, and paffes the bobbin as in the other way, and ftrikes it clofe with the comb: all which is near as tedious as needle-work iffelf, which is the reafon why the fineft tapeftry comes to fuch high prices, fo that none but princes and perfons of diftinction care to buy it ; and what can be had at a moderate price is always coarfe, and of a low tafte: for workmen who have any good notion of painting, and are capable of adjufting the colours, are not to be had, but for exceffive wages, which much enhances the price likewife : but in M. Le Blon's new way of weaving tapeftry in the loom with a draw-boy, tapeftry may be performed almoft the loom with a draw-boy, tapeftry may be performed almont
as expeditious as fine brocades: for when the loom is once fet and mounted, any common draught-weaver, though not acquainted with drawing or painting; nay, bardly knowing what figure he is about, exactly produceth what the painter hath reprefented in the original pattern. And thus a piece of tapeftry may be woven in a month or two, which, in the common way of working, would, before this invention, the common way of working, would, cormon way, cofts a take up feveral years: and what, in the comaforded finer and thouland po hudred Therefore, it is likely, this woven tapebetter for a hundred. Therefore, in is hikely, this woventapeftry may become a current merchandize, and that many tho
fand induftrious families may be well employed about it.
fand induftrious families may be well employed about it.
The main fecret of this art confifts in drawing the patterns, from which any common draught-weaver can mount the
loom;
loom ; and when that is done, the piece may be made of any fize, by only widening the reeds and the warp, and a reverfe may be made with the fame eafe; which is done by the boy's pulling the leifhes up again, in the fame order in which be pulled them down before; by which contrivance the tapeftry may be fuited to any room, whether the light comes in on the right-hand or on the left.
The patterns are painted upon paper, whereon are printed fquares from copper-plates, and thefe fubdivided by as many linesas anfwer to the threads of the warp, which run lengthwife of the piece; then they try how many threads of the thoot anfwer in breadth to every fubdivifion of the fquares. Every thread of the warp goes through a fmall brafs ring called a male, or through a loop in the leifh, and hath a fmall long weight or lingoe hung, below, to counterballance the packtbreads, which going from the top of the rings or loops, are paffed over the pullies, in the table directly over the loom, and are continued nearly in a horizontal: polition on one fide of the loom to a convenient diftance, where they are all friead on a crols-piece faftened to two ftaples: thefe are called the tail of the mounture; and from each of thefe packthreads juft by the fide of the loom, are faftened other packthreads, called fromples, which defcend to the ground ; fo that by pulling there fimple chords, you raife any of the threads of the warp at pleafure; wherefore they faften a loop or potlart to as many of thefe fimple chords as there are threads of the warp to be pulled up at every fhoot, or every throw of the fhuttle; by which means the fhoot manifefts itfelf on the right fide, where the warp is pulled up: and in ordering this, they are guided by the pattern, on which they count the diftances of the fubdivifions, which contain the fame:colours in the fame line, and can be fhot at once: then they faften potlarts to the feveral fimple chords that draw up the rings, through which thofe threads of the warp run, which are to lie behind this colour; they tie all thefe loops together, and faften a piece of worfted or filk to the knot, of the fame colour that the workman is to throw ; and the boy, when he pulis each loop, names the colour, that the weaver may take the proper fhutte, and fo on for every colour to be thrown.

## Of the upright-way of working Tapestry, with relation to Turkey Carpets,

The carpets which are made at the royal manufactory of La Savoniere, below the Louvre, at Paris, are, in fome refpects, wrought by the upright-way of tapeftry. The two rollers are placed the fame way: the warp is braced from the top downward: the chain, with its loops, keeps all the threads of the warp equally perpendicular: the ftick, which facilitates their croffing, runs through them in the fame manner, and feparates the foremoft threads from the reft: the lizier-pole holds all the ltrings, which ferve to draw the fore threads in their turns, and then the oppofite threads, in order to infert the fpindles of woof. But the method of working in this manufactory differs from the upright way of tapeftry in thefe particulars

1. The warp is divided, both before and behind, into parcels of 10 threads each, nine white, and one blue; which is regularly continued through the whole width of the piece. 2. The weaver works on the fore-fide, and confequently fees what he does.
2. The defign, or pattern, is traced in its proper colours, on cartons, tied about the workman, who looks at it every moment, becaule every ftitch is marked on it, as it ought to, be in his work. By this means he conftantly knows what colours and fhades he is to ufe, and how many flitches of the fame colour.
3. In this he is affifted by fquares, into which the whole defign is divider : each fquare is fubdivided into 10 vertical lines, correfponding with each parcel of 10 threads of the warp: and befides, each fquare is ruled with io horizontal lines, croffing the vertical lines at right angles.
4. The workman having placed his findles of woollen, filk, or other richer thread near him, begins to work on the firft horizontal line of one of the fquares. Thefe lines marked on the carton are not traced on the warp, for this would be endiefs; becaufe an iron wire, which is longer than the width of a parcel of 10 threads, fupplics the place of a crofs line. This wire is managed by a crook at one end, at the workman's right-hand; towards the other end it is flatted into a fort of knife, with a back and edge, and grows wider to the point. The workman fixes his iron wire, or rod, horizontally on the warp, by twifting fome turns of a fuitable thread of the woof round $i t$, which he paffesforward and backward, behind a fore thread of the warp, and then behind the oppolite thread, drawing them in their turns by their leifhes. Afcerwards, if it be neceflary, he brings his woof-thread round the wire, in order to begin again to thruft it into the warp; or elfe he ties it to the wire with a running knot, and lets it hang on it, in order to take another woof, and pals it into the warp. He continues in this manner to cover the iron rod, or wire, and to fill up a line to the tenth thread of the warp, which is the blue one. He is at liberty either to ftop here, or go on with the fame crofs line in the next divifion. According as be paffes the thread of the woof round the iron wire,
and into the warp, the threads of which he caufes to crofs one another every inftant : when he comes to the end of the line he takes care to ftrike in, or clofe again all the ftitches with an iron reed, whofe teeth freely enter between the empty threads of the warp, and which is heavy enough to ftrike in the woof he has ufed. This row of ftitches is again clofed and levelled, by a dweet of blue thread doubled, which the workman puts into the warp, Aliding bis hand over the whole length of the line he has wrought. He croffes the fame threads of the warp, and then ftretches through them another fingle blue thread. He beats in thefe two threads, one after another, with his reed: thefe dweets of crofs thread which are a fupport to each line, will be hid by the pile on the fore fide ; they indeed diminilh the beauty of the wrong fide, but this is of no confequence,
This done, the worknian draws the iron-rod or knife out of the loops of the woof that covered it: and as it is wider towards its end, thefe loops refint its paflage; but being edged at its fore-part, it cuts them through. Then the workman with his left-hard lays a ftrong pair of fhcars along the finilh ed line, cuts off the loofe hairs, and thus forms a row of tufts perfectly even, which, together with thofe before and after it, form the fhag. One line of this fort taking in the row of ftitches and woallen pile, with the two blue threads which fupportthem, fomewhat fufpafs, in thicknefs, the face between the firft and fecond crofs line of a fquare. There muft be eight wires full of woollen thread, and fixteen blue threads, to anfwer to the ten crofs lines of a fquare. By this means the workman always fees what he is doing. He follows "ftitch for ftitch," and colour for colour, the place of his pattern which he is at, and paints magnificently withou having the leaft notion of painting or drawing. It does not appear, that the directors of carpet-work among the Ma hometans, are better draughtfmen than their workmen, for the Turkey carpets have nothing in them but a fymmetry of colours.

## REMARKS.

Under our articles of Artificers, Candidate, Carpet, Cloth, France, Mechanics, ManufacTURERs, and divers other articles, which the reader will obferve from our Genera index, we have fhewn the great national advantages which arife to a trading ftate from manuactories in general, and how requifite it is, from time to time, to improve in the old, as well as to invent, or introduce, new manufactures, in order to fall in with the chargeable tafte of foreign nations, that our rivals may not fupplant us in trade, by their greater vigilance in thefe refpects.--Under the preceding, and various other heads, we have alfo fhewn by what gradations many ftates have increafed in their mechanical and manufactural arts, and how the French, in particular, have arofe to fo great perfection in their manufactures, by faring no enciouragement, rewards, and honours, upon fuch ingenious artifts who have proved the happy inflruments of introducing any valuable New Manufacture into their do-minions.-We there have feen by what wife meafures this politic and ingenious nation firft eftablifhed their woollen and filken fabrics of every fpecies; how they firft fupplied themfelves with the former forts of manufactures, which they were wont to take from England, and by what degrees they afterwards have greatly fupplanted this nation, at moft of their beft foreign markets in their woollen gaods.-And under our article Medals, we hall find how they have commemo. rated thofe happy æras that have been productive of any bleffings that have tended to the enlargement of the commerce and navigation of that neighbouring nations
In the hiftory of this part of the French polity, it will be difs ficult to find a fingle inflance of any capital ingenious arcift, that has propofed to the adminiftration any laudable undertaking, tending to the improvement of the old, or the eftabliming of new manufactories, who has not been gratefully received, and liberally recompenfed, and this even though he may have for a time proved unfuccefsful in his attempt. By this generous treatment of the induftrious and ingenious mechanic and manufacturer, it is not to be admired that they have drawn the moft celebrated artilfs of every clafs into their country, from all corners of the world.-For fuch national munificence towards thefe people, will fpread itfelf among them in all countries; and the glory that fuch a country derives therefrom, will influence thefe artifts, maugre all laws to prevent it, to forfake their native country, where no due regard is bad to their merit.
It would make, I am afraid, but a difagreeable fcene : certain I am, that it would not redound to the honour of GreatBritain, if the hiftory of great numbers of Britifh, as well as foreign artifts, who had great talents, and ftrong impulfes to promote the commerce and navigation of this nation, was properly reprefented, and the difficulties and difcouragements they have too generally met with; and which hath at length either broke their hearts, by Gameful attendance and dependance, or forced them into other nations, where they have been careffed and rewarded, fuitably to their merit: an hifory of this nature, with relation to our own country, compared with a like hiftory in regard to France, would, I am
confident, give great glory to the one, and no lefs ignominy to the other. Nay, was I to give a fhort hiftory of many perfons of this flamp, that have fell within the tether of my own knowlege, and that of fome gentlemen of my acquaintance, it would be a difagreeable talk, becaule it might be thought an invidious one, with refpect to our rulers at difthought an in
ferent times.
Therc is a difference between the idle and defigning projector, and the folid and well-intentioned artif. The former of thefe we have fufficiently expofed, under our article $P_{\text {ROjec }}$ ETORS, in order to guard the public againft fuch impofors, who are as detrimental to the community in general, as ruinous to the private fortunes of thofe who are inchanted into their magic privale of Projectorship.- But how thefe impoftors may be prevented, and how the meritorious artifts may be duly encouraged, and improved in their refpective arts, fee our articles Artificers, Mechanics, Philosophy Experimental, and Royal Society of London.
Nations that abound not with mines, efpecially thofe of gold and filver, or fuch other as will tend to inrich and people the ftate, muft depend upon the productions of their lands, or their manufactories, or both : and the two latter are preferable in moft ftates to the former, as being more permanent, if wifely regulated, according to the wants and the tafte of other countries.
Becaufe Great-Britain and Ireland abound with fuch immenfe quantities of wool, and which is of a quality fuperior to all other in the world for the fabric of general manufactures; and becaufe the goodnefs of our wool has long been, and filll is, a temptation to our competitors in trade to frmuggle it ou $T$ of our nation, and that chiefly in exchange for their commodities of luxury, which are likewife fmuggled into this nation: as our commercial rivals have, chiefly by means of our own wool, greatly fupplanted us in many of the capital branches of this our faple manufactory, it behoves the wildom of the nation duly to cherifh and encourage every manufacture that has a tendency to the confumption of this cummodity amongft ourfelves, if no other end could be anfwered by it than that of fo leffening the quantity, as to deprive our competitors of having fo much out of the kingdom as they at prefent obtain.
As thefe manufactural arts bave an immediate practical tendency to the improvement of thofe of Drawing and PAINTing, this, methinks, fhould be no indifferent motive with us to the effectual promotion and encouragement of fuch manufactories; for when thefe new commercial eftablifhments take place in the kingdom, and will afford a handfome recompence to the ingenious artift in defign and painting, this will induce numbers to breed up their children, efpecially thofe of tender conftitutions, to fo genteel an empluyment, whereby they can obtain an bandfome maintenance. But it does not feem very politic to expect that numbers of people fhould apply themfelves to the arts of Drawing and Painting, without firlt being certain that there will be competent bufinefs, by which they may get a tolerable livelihood. But this is not the care at prefent; for, if I am rightly informed, we have now more artifts already in thefe branches than can well live: fo that if we would increafe the numbers of thefe artifts, who certainly would greatly contribute to the improvement of divers of our mechanical and manufatural arts, we mult previoufly fettle and eltablifh fuch permanent manufactories as will atford them certain bread.
The beauty and delicacy of our woollen, as well as filken manufactures of every kiud, greatly depend on the luft e of their colour:; and as there are no manufactures that require a fuperior beauty and elegancy in this refpect than thofe of Carpets and Tapestry, the promotion of thefe will have an inevitable tendency to improvements in the art of Dye. ING; and every advance towards a further degree of perfection herein is of confequence to our woollen manufactories in general. See our article Dyeing.
Commerce has been confidered as either active or paffive; the latter confifts in purchafing more commodities in value of other nations than they do of us; the former does the contrary, and, by felling more than we purchafe, become the fource of wealth and power. Every new manufactory fetted in a trading nation, either tends to leffen the importation of the fame from foreign fates, or to fupply us with an additional commodity to increafe our active commerce; and it fometimes an'wers both thefe ends.
States, no more than private perfons, fhould lofe fight of that excellent maxim of Cato, Patrem familias vendacem, non emacem, effe oportet: That the Master of a Family ought to bea Seller, and not a Buyer. All the comforts of the head of a family, all the wealth of a city, all the grandeur of a kingdom, depends folely upon felling much, and buying little, or upon felling more than is bought. He that is conttantly buying more than he fells, let him be a fecond Croefus in treafure, mult at length be reduced to the unhappy Itate of a beggar; for his ftock is diminifhed in proportion to the over-ballance of goods bought in. But whoever is conftantly felling more than he buys, let him be poor as Lazarus, muff, by fuch a tranfaction, acquire the happy circumftances of the profperous; for as much as the ballance is in favour of the

[^11]amount of the Sales, juff fo much is added to his capital. This reafon evinces the truth of it ; and we have confirmation here-of in the viglance of neighbouring nations to make provinion' for felling much and buying little.
New Manufactories is the fure and fundamental provifion for the introduction of riches and bappinefs into a kingdom; and, for the want of thefe, and due improvements in' the $\mathrm{OLD}_{\mathrm{LD}}$, will ever occafion the decline or our trade, and introduce poverty.
Further to evince the truth of thefe principles, we may appeal to experience; for what has been the principal cccafion of the decay of our Turkey Trade, but the new-invented wapllen fabrics of the French, which have hit the talte of the Turks, while our's grow more and more out of date among that people? And has not this been caufed by an unaccountable perverfenefs in our Englifh manufacturers not to ftrike our of the ordinary road, and to hit the gout of the Tuiks, as well as the French have done? [See our article Manufactures.] If a Turk can purchare two fuits of cloaths a yea: of the French fabric, for the price that be muft give for one of the Englifh, they will give the former the preference ; efpecially fo, fince it feems he can have them of different, and more beautiful colours, than thofe of England; and although they may be of a dighter manufactory, yet, if the two French-fuits wear as long as one of the Englifh will, and the Turk can have his fancy better pleafed, the Englifhman will ever experience the difadvantage arifng from his adhering to his Old Fabrics, while his rival is daily inventing NEW.
In order to induce our Englifh manufacturers to turn theirthoughts upon emulating the French, in regard to the prefent Turkifh mode, that the French have fo beneficially introduced among them, I have, under the article MANUFACTURERS, earnefly recommended to them the imitation of thefe French woollen fabrics, which are now fo much in vogue in Turkey, and which have been greatly inftrumental in fupplanting us in a confiderable part of tbat once valuable and important commerce; and I have the fatistaction to inform the public, that my zeal is likely to be a'tended with the defired fuccefs: for not long fince I have received letters from a very ingenious Englifh manufacturer, that, in confequence of my recommendation of fuch like manufactures to the tial of our Englifh clothiers, he had chearlully fet about them; and, within this month, I have received an additional pleafure, by feeing patterns of his First Trial, which he has fent me; and which having laid before fome of the Turkey merchants, they have great expectations that this ingenious Englifh artift will not only be able to make as good cloths of this kind as the French do, according to the Turkifh tafte, but to fell them equally cheap, if not aheaper, than thicy do. And if fo, this will enable us once more to get the flart of the French in this commerce, or put us upona level with them in that important branch of trade.
This is the cafe, likewife, with relation to the Spanish Trade: for as to the fine Englifh cloths, no objection can be made to their quality; but the French have got the frart of Britain in all the finer forts of woollen goods, by making them as fine to the eye, and not of half the fuhftance as the Britifh fuperfines; therefore they can affurd to fell them much cheaper than ours. The policy of thefe our commercial rivals is very remarkable, fubtile, and confpicuous to fuch Britons as are difpofed to think on the trade of their country. The French finding they could not make cloth of fo yood a quality as the Britifh, very judiciaufly attempted to outdo them by cheapnefs, which they have effected; and, in order to take off the natural objection againit the French cloths, viz. that they are not fodurable as the Britifh, they are contio nually making improvements in their Colours [fee our article Dyeing] and, as foon as a good approved colour appears, it is more unfafhionable not to be dreffed in that colour, than it would be in England to be dreffed in a fuit made of blanketing. By this artifice the French fubjects in this kingdom, and even the Englifh alfo themfelves in Spain, are inticed into a wear of their cloths, on account of the difference in the price; and the wearers will tell the Spanifh fhopkeepers they can have two French coats for the price of one made of Britifh cloth. The alteration in the fafhionable colours is artfully contrived to return, before a coat of paltry French cloth can be worn out: fo that the fuperlative goodnefs of the Britifh cloth is not regarded by any people of fafhion; and if our countrymen, the manufacturers of cloth in Great-Britain, cannot invent a cloth as cheap as the French, they muft expect to be beaten by their enemiey, not only out of their raw materials (of which the French can have what quantity they pleafe now, and will be cuurted to take more, as the trade of England dechnes) but out of the trade alfo; for there are merchants in feveral ports in this kingdon, who have large quantities of the beft fuperfine Britifh cloths, that have lain by them ever fince the ceffation of afmis previous to the laft peace.
Nor is this lefs the cafe with refpect to our Portugal Trade. For the French have done our commerce in the woollen manufactory with this kingdom an unfpeakable de-
 Io N
which
which they have introduced there. Of this I have been apprized from Portugal by an Englifh gentleman, who has greatly the profperity and honour of his country at heart; and, in confequence of what I have obferved under the article Portugai Trade, he has promifed me that I fhall foon receive patterns of thefe black French Druggets from Portugal ; which Ifhall put into the hands of a celebrated Englifh artilf in this way, who has given me great hopes, that he likewife fhall be able to beat the French in this manufacture, and put the Englifh in Portugal upon a par in this trade with the French; which, when done, the public will be duly informed of.
Thefe things are mentioned, with a view only to fhew that if our manufacturers were to be properly encouraged in making fuch improvements in their refpective branches, as would put this nation in a capacity to vie with its competitors in trade, they would never be behind-hand with them.-But if a ridiculous and unaccountable averfion to the introduction of new Manufactures among us prevails, our manufacturers may ftarve by the old, and the nation be daily impoverilhed, while France is rendered more and more profperous and powerful, by countenancing every valuable NEW invention made in their own, or introduced from other countries.
Manufactures of moderate expence, fays a judicious writer and quick growth, may fafely be left to private adventurers, and run the common chance for fuccefs; the finer arts will never flourif, but under public Protection and noble Patronage; no encouragements in the hands of private perfons, are adequate rewards to the man of genius. MoNEY is the pay of common men, as praife is that of heroes; and Honour will ever be found a much ftronger principle of fine invention, than Gain. We may apply to the artift what Quintillian declares of his young orator-Nolo mih oratorem dari, quanti fint fludiacomputaturum-All that was great and noble in ancient wit and art, was produced by honours as well as rewards, by the countenance of Princes, and the favour and kind influence of great Men. Sometimes, indeed, the ftrength of a warm devotion has ftruck an enthuliafm and paffion into the works of artifts, beyond the power of human motives to infpire. A noble profufion of Honours and Bounty raifed the Gobelines in France to its prefent height; the united influence of thefe two being generally fufficient to call forth whatever human induftry can attain to.
This houfe was the refidence of two brothers, who firt brought to Paris the fecret of dyeing a curious fcarlet, and failed in fetting it on foot. Their buildings went under the popular name of the Folly of the Gobelines for many years,'till the opprobrium was taken off by a Royal Edict, and the name changed by' public authority to the more ho nourable one of the Royal Mansion of the Gobeuines. The fcarlet colour was ordered to be called after the name of the inventors, and the little river Bievre, which runs by the building, received the fame diftinction. Thefe in appearance were trifing matters, but will be fenfibly felt by the man of genius. The fame year the houfe was purchafed by the King, and intitled the Manufactory of the Crown Furniture; and provifion was made bya Royal Charter, to render the place a perpetual School and feminary of the curious arts. Here M. Colbert colleded together, from all parts of the world, the moft able Masters and Designers, as well as inferior artifts in the fine manufactories. Salaries were appointed for the Directors, and Pensions for life to the workmen; thefe were Tapestry-Weavers, Engravers in Etching and Metzotintoes, Goldsmiths, Jewellers, Carfers, and Workers in Ebony. In this place was wrought all the magnificent furniture for fourteen Royal palaces, which has fince been defervedly the admiration of the world. Particular care was taken, that no part fhould be furnifhed elfewhere, much lefs from abroad. All honorary prefents to foreign princes and noblemen abroad, and to the ornament of temples and public buildings at home, were made in their beft performances, inftead of jewels or money. Many of the fuperior artifts invited from foreign countries were made NOBLE, and all of them had various honorary priviluges and royal penfions: the whole number, fuperior and inferior, were comprehended amongt the natives of France, and made free of Paris, with fuil liberty to practife their trades where they pleafed, after working for a certain term in the Gobelines. This indulgence extends to all, who thall at any time hereafter practife the limited time in this foundation. The whole quarter of the Gobelines was exempted from taxes and impoifs, and had a court of judicature peculiar to itfelf, under the title of the court of the Royal Artists.
$B$-fides thefe, there are three other academies in Paris for the polite arts, with various privileges, honours, and penfions, to the members forming the governing part of each fociety. The academy of painting and fculpture, that of architecture, and the military one, of late foundation. Precedents inviting our attention and imitation, if the latter may not be faid to command it. The two former and the academy of
fciences are copted in Sparn, and are all equally liberaten. dowments.
In England, the ftream of public favour and liberality bis turned wholly to the advance of Sciemees; we have few or no inftitutions in favour of ARTs, no place of refidence but for ferculation. The Royal Society are indebted to the public ouly for their name. How ufeful this honourable body has been, and how they may be rendered far more fo, fee our article Royal Society.
An academy for the fine arts above-mentioned, under a royal charter, with diftinguifhing honours and privileges for the higher members, and fmall penfions for the lower, might give us a profpect of fome perfection in the branches of $T_{A}$ pestry-Weaving, Painting, Sculpture, and Statuary, and all the lower trades of elegance depending on fine Design. Without fome fuch public inftutution, they never yet were carried to an height in any country: no private fortune can ftand out the time neceffary to train up hands enough to extend the Art into a Trade : but when once a fufficient number were made perfect in this feminary, pivate adventurers would be found ready enough to take up the bulinefs; for no place ever wanted a trade, that aboundu with working hands well inftructed therein,--In a word, the Theoretical Arts, and PracticalTrades thereon depending, fhould go hand in hand.
AXES. Under the article Revenue, we have given a brief narrative of the methods of raifing money in this king dom, from the Conquest to the Revolution in 1688 under the fame article we have likewife fhewn, that as thi nation enjoyed neither civil nor religious liberty, till the time of our great deliverer King William III. ; fo the whole property of the people was either at the mercy of princes or priefts, or both; the public revenue was raifed in an arbitrary and opprefive manner; and what the civil power did not wreft from the people, the ecclefiaftical did.- We fhall here give a view of the money that has been raifed in this nation, fince the revolution in 1688 to the demife of his late majefty George II. in 1759.

The diftinet years of the fupply continued on the other fide.

The diftinct years of fupply continued from the other fide.

## REMARKS.

We have here a miniature view of the immenfe fums of money that have been raifed in this nation, from the year 1688 to the end of the reign of king George II. 1759, to fupport the four great wars, from the reign of king William to the end of the reign of Geo. II.; but to the conclufion of the fettlement of the peace in the year 1763 , the expence of the laft war coft the nation above 50 millions more than the above total; and we have reafon to be too fenfible of the prodigious weight of our public Debts and Taxes, with which the kingdom is at prefent oppreffed, by suffering the annual Expence to exceed the annual Revenue.
When an increafe in the annual Expence became neceflary for fecuring and vindicating the honour and rights of the nation; had the annual Revenue increafed in proportion, we flould have been at this time unincumbered with Public Debts and Taxes, for the payment of intereft, and redemption of the principal Debt.
Had the Supplies been raifed within the year, this would have been a conftant check upon our annual expence; and we fhould not have been fo wantonly profufe of the public treafure as we have been.
Though our commerce and navigation have been greatly enlarged and extended fince the Revolution; and we have thereby been hitherto enabled to fupport the immenfe expence, under which we have laboured; yet, if effectual meafures are not purfued to maintain and preferve our trade, we fhall lofe our great and effential fupport of the national fabric.
So great, at prefent, are our Tax-incumbrances in general, as to occalion our wares and commodities to come fo dear to domeftic purchafers, that it proves fo great an encouragement to the SMUGGLING into the kingdom fuch prodigious quantities of French manufactures and commodities of almoft every fort, that it will be impracticable, perhaps, for the wifett adminiftration to prevent it; unlefs the great caufe of TAX-INCUM PRANCES is effectually removed, and thercby our native manufactures and commodities are rendered as cheap as thofe of France.
Nor is the article of fmuggling only likely to prove a greatcaufe of unferakable detriment and injury to our commerce, by reafon of our great load of Tax-incumbrances upon it; but the multitude of our taxes occafion our manufactures and commodities in general to come fo dear to foreign nations, that they are not able to purchafe them, as they were wont heretofore; and therefore, inftead thereof, they will import thofe of France, or any other nation whofe commodities they ftand in need of, that will come cheaper than thofe of England ; and this will be a motive to foreigners to evade al ways the bef commercial Treaties that can be made with foreign nations for the greater encouragement of our trade amongtt them.

## REMARKS.

The filver monies of king William and queen Mary were the fame as thofe of king James, crowns, half-crowns, hillings, half-fhillings, groats, and pieces of three pennits, two pennies, and one peany.
The old hammered filver money, which was fill current. though it had been long complained of, on account of is being diminifhed, by the infamous practice of rounding and clipping, was about this time come to fuch a flate, and the ill condition of it increafed fo faft, that there was an abfolute neceffity for the putting an effectual ftop to an evil, which rendered all trade and dealing between man and man precarious, and at laft threatened no lefs than the total deftruction of all our filver coin.
The King accordingly, in his fpeech to the Parliament, on the 22d day of November, 1695, took notice of this calamity, and recommended it to the confideration of both Houles; ' as a matter of the moft general concern, and the greateft ' importance.' The Lords, on the 5 th day of the following December, refolved upon an addrefs to his Majefty, 'defiring - him to iffue out his proclamation, That irom fuch a day, - or days, as he hall think fit, no clipped money of ally - fort fhall pafs in payment as the current coin of thiskinn' dom.' And the Commons, on the roth of the fame month, came to the following refolutions:
came to the following refolutions: - which the nation fuffered b) the currency of clipped monty, - was to recoin the fame:' and, therefore, ' that all clipped - money fhould be recoined, according to the effablifhed fan-- dard of the Mint, both as to weight and finenefs. That - the lofs of fuch clipped money as was filver, and coined at - the lawful mint of this kingdom, Thould be borne by the © public.
c Thas

- Thst a day or days fhould be appointed, after which no clipped crowns or half crowns, thould be allowed in pay' ment, or to pafs, except only to the collectors and receivers 6 of his Majefty's revenues and taxes, or upon loans or payments into the Exchequer.
- That a day or days fhould be appointed, after which no clipped crowns or half-crowns Chould pafs in any payment ' whatfoever.
- That all fuch crowins and half-crowns, as they came into his
' Majefty's receipt, Chould be recoined into milled money.
6 That a day or days fhould be appointed, after which no - money clipped within the ring fhould be allowed in payment, or to pals, except only to the collectors and receivers - of his Majefty's revenues and taxes, or upon loans or paymentsinto the Exchequer.
- That a day or days fhould be appointed, after which no ' money clipped within the ring fhould pafs in any payment whatfoever.
That a day or days fhould be appointed for all perfons to
- bring in their clipped money, to be recoined into milled ;
- after which no recompence hould be made for the fame.
- That a fund or funds fhould be fettled, for fupplying the
' deficiency of the clipped money.'
And an addrefs being preiented, in confequence of thefe refolutions, his Majefty did, by a proclamation of the 1gth of the fame month, reciting the before-mentioned addreffes of the two houres, ' command, that after the firft of January then ' next enfuing, no clipped crowns or half-crowns fhould pafs
6 in any payment, except to his Majefty's collectors and
receivers, \&c. nor after the $3^{d}$ of February, in any pay-
' ment whatfoever, within London, or 40 miles thereof
6 nor after the 22d of February, in any other part of the
- kingdom; and that after the 13 th of February, no Chilling
'clipped within the ring fhuuld pafs in any payment, except
( to his Majeity's collectors, \&c. nor after the 2d day of
- March in any payment whatfoever. And after that the faid 2d day of March, no other money clipped within the ' ring fhould pals, except to his Majefty's collectors, \&c. ' nor after the 2d day of April, in any payment whatfoever.' And by another proclamation, of the 4th day of January, in the fame year 1695 , reciting the former, and an addrefs of the commons in parliament affembled, the receivers and collectors of his Majefty's taxes and revenues were ' ftrictly
- charged and commanded, that, until the faid feveral days ' mentioned in the laft proclamation, they fhould receive in
' payment all clipped money of the feveral denominations ' therein mentioned, that were of fandard filver.'

An Abstract of the Accounts of the Great Recoinage in King Wilifam's Reign.

Of the filver coined in the Tower of London from the 30th day of September, 1695 , to the $3^{1}$ ft day of December, 1699 , there was, in 12 general remains of clipped hammered filver monies, taken in by the lords of the Treafury, melted at Weftminfter into 10,933 ingets, and then fent to the Mint, the weight of

## R E M ARKS.

Queen Anne coined of filver the fame monies and of the fame form as thofe of king William; excepting that the arms of Naffau in the center of the four larger pieces were now mitted, and that in their room the garter ftar was again replaced. In the year 1707, the union of the two kingdoms of England and Scotland being completed, and taking place on the firft day of May, there was chereupon an alteration made in the royal arms, as reprefented on the money: England and Scotland being from that time impaled together in the firf and third of the four crowned fhields, in the fecond of which France was now placed, and Ireland in the fourth. All the old filver money of Scotland was alfo upon the fame occafion recoined into money of Great-Britain, exactly the fame as that coined in England, and only diftinguifhable from it by the letter E. for Edinburgh, flamped upon all the pieces under her Majefty's head.
There was coined in the Tower of.London, during the reign of queen Anne, that is to lay, from the gth day of March 1701, to the Ift day of Auguft 1714,

And in fterling filver, the weight of $66,804 \mathrm{lb} .9$ oz. 15 dwts . which produced in money, at the rate of 3 l .2 s .

207,094 $18 \quad 4 \frac{1}{2}$ The pund weight, the fum of 3 . It may be noted, that it appears by the particulars of the accounts from which the foregoing extract was taken, that in the years 1709 and I7.II, during which the greateft coinages of filver were made in this reign, there was coined out of wrought plate brought in upon encouragement, the weight of $46,156 \mathrm{lb}$. II oz. 2 dwts . 3 . gr. making in value about 144,000l. fterling; which was more than two thirds of all the filver coined in the Tower, from her Majefty's acceffion to her deceafe.
But there was further coined in this reign at Edinburgh upon the Union, and by the Englifh moniers fent down thither, the weight of $103,346 \mathrm{lb}$. making in tale, at the aforefaid rate of 31.2 s . the pound weight, the fum of $320,3721.12 \mathrm{~s}$. fterling money; all which was of their firf coinage, in the year 1707, or the very beginning of 1708 . Befides whith, there was again a fecund coinage foon after, and before the end of the laft mentioned year 1708, when fome filver that could not conveniently be minted before, was alfo like the other, converted into current money of Great-Britain: but of this aft coinage we have met with no particular account.
When the war begun in this reign, nothing could be more menacing than our profpects. The houfe of Bourbon defiling all treaties, and, as ufual, the moft folemn engagement, by feizing territories more extenfive and confiderable, than were ever gained by the moft rapid conquefts. All the powers of Europe were interefted to oppole a monarch thus prepared for their deftruction. No period of time afforded men more eminent for wifdom and abilities, and more difinguifhed by fucceffes equal to their merit. Had not this been the cafe, notwithftanding the ftand that king William made againft France, Europe muft ftill have fubmited to an univerfal monarchy, which would not have indured any remains of civil or religious liberty.
In confederacies, wherein there are a variety of oppofite interefts, misfortunes are inevitable. Notwithftanding the feveral efcapes of the enemy, the duke of Marlborough's progrefs, and the damages the French fuftained ellewhere, reduced them to a fate of diftrefs and terror: notwithftanding their frontiers were impaired to fuch a degree, that we gained a fecure admiffion into the defencelefs parts of France, had his queen and country fupported this great captain; yet we loft by the event every benefit which fuch dvantages would have produced. For the queen unhappily exchanging the able, honef, and fucceffful, for thofe whofe management proved them the reverfe, was the caufe of our then not duly humbling the perfidious nation of France, who are eternally diflurbing the happinefs of manVOL. II.
kind. No one of our monarchs ever had greater advantages of doing lafting good both at home and abroad, nor any reign been diftinguifhed with fuch glorious and important events. Germany faved from deftruction ; the imperial crown preferved on the head of our ally; Flanders rubdued; the exorbitant power of France reduced; the union of England and Scotland obtained, are events which will be had in everlafting remembrance. But by a difhonourable peace, how fruitlefs were thefe important events rendered? How foon again was the power of France reftored to a condition of injuring, oppreffing, and terrifying the world? And has not the power of this reftlefs nation been daily aggrandized fince this period? And do we not now experience the effect of it ? And nothing, perhaps, but the queen's fudden removal, prevented the execution of thofe fchemes in favour of a Popifh pretender, which the peace-makers had-laid.

$8,49^{2}, 876 \quad 36$

And the total value both of the gold and filver amounted to
To It may be obrerved, that , 1 may be oberved, that in the year 1718, and then only, there were coined fome quarter guineas: when the weight of 110 lb . in gold was converted into fuch pieces, of which it confequently produced about I9, 580 in tale.
As fome natural neceffities or difadvantages may be thought favourable to induftry, fo fome have argued that artificial burchens may have the fame effect. Sir William Temple * afribes the induftry of the Dutch entirely to the neceffity, proceeding from their natural difadvantages; and illuftrates his doctrine by a very ftriking comparifon with Ireland, where (ays he) by the largenefs and plenty of the foil, and fcarcity of people, all things neccilary to life are fo cheap, that an induftrious man, by two days labour, may gain enough to eed him the reft of the week. which I take to be a ver plain ground of the lazinefs attributed to the people. For men naturally prefer eafe before labour, and will not take pains, if they can live idle; though when, by neceflity, they have been enured to it, they cannot leave it, being grown a cuftom neceflary to their bealth and to their very entertainment : nor perhaps is the change harder, from condtant eafe o labour, than from conftant labour to eare After which the author proceeds to confirm his doctrine, by enumerating, as above, the places where trade has moft flourifhed, in ancient and modern times; and which are commonly obferved to be in fuch narrow confined territcries, as beget a necceffity for induftry.

* Account of the Netherlands, chap. 6.

It is always obferved in years of fearcity, if it be not extreme, that the poor labour more, and really live better, than in years of great pienty, when they indulge themfelves in idlenefs and riot.
This doctrine therefore, confidered as has been done with regard to taxes, may be admitted in fome degrees; but beware of the abule. Taxes, like necelfity, when carried too far, deftroy induftry, by engendering defpair; and even before they reach this pitch, they raise the Wages of the Labourer and Manufacturer, and heighten the Price of all Commodities. [For proof of which, fee our articles Labour, Duties.] Anattentive difinterefted legiflature will obferve the point, when the Emolument ceases, and the Prejudice eegins: but as the contrary character is much more common, it is to be feared, that the taxes of England are multiplyed to a degree that will prove highly detrimental to art and induftry: and therefore the contenders for more and more taxe:, upon trade, are enemies to our commerce and navigation: were they as zealous for the reduction, or the annihilation of many of thofe we already have, they would thew themfelves advocates for the profperity of the nation.

Remarks on the ftate of Trade and Liberty fince the Revolution in 1688 .

Upon king William's coming to the crown of thefe kingdoms, early application was made to him for feveral regulations tending to the encouragement of trade, and for eftablifhing a great many ufeful manu factories among us, which had been kept under by France and others, underfelling the manufactures made at home. This great prince was ever ready to hear all propofals made upon that occafion, and gave his utmoft countenance to all fuch undertakings; but by the fondnefs of the nation to French commodities fo much countenanced by king Charles and king James, it was no eafy matter to bring the people into a due regard for thofe made at home. However, upon breaking out of the war with France in this reign, and prohibiting French commodities, encouragement was given for erecting feveral of thefe manufactories here, as the luftring, alamode, and other filk manufactures for hoods
and tcarves, which the king's royal confort, the excellent queen Mary, took no fmall pains to eftablifh.; for which articles alone, it is allowed, France drew from us above four hundred thousand Pounds yearly. For the faving of which to the nation, we were indebted to the happy æra of the Revolution, which not only preferved us from the tyranny. of Popery, but proved the falvation of our trade. At the fame time the manufacture of glafs was eftablinhed, which before we ufed to have from France, and alfo that of hats and paper. The manufacture of linen was likewife fettled in feveral parts of the kingdom, particularly in Somer fetfhire, and Dorfetfhire, where they made extraordinary good linen, in imitation of France; and which fo increafed, that in a few years it was computed, in a diftrict of about ten miles fquare, they made to the value of one hundred thoufand pounds worth annually. But upon the peace with France, there were fo many linens run into the weft, the it put that manufaeture under great difcouragement. At this glorious period alfo the manufactures of copper and brals were fet on foot, which are brought to great perfection, and now in a great mealure fupply the nation with copper, kettles, and all forts of copper and brafs ware, which has faved the nation immenfe fums fince that time. The making of fail-cloth, likewife, was begun and carried on to grear perfection; alfo fword-blades, fcilfars, and a great many toys made of fteel, which formerly we ufed to have from France; in the manufacturing of which, it is faid, we now excel all other nations, and not only fave thofe great fums we expended in France, but by means hereof bring in fome hundred thouland pounds a year, by our Birmingham and Sheffield manufactories. 'The fettling of falt-works, and improving of falt-fprings and rock falt, hath proved very beneficial here, and faves a very great treafure yearly, which alfo we heretofore paid to France for falt; and a great variety of other particulars, which have proved of unfpeakable benefit to the trade of this nation; and therefore, thofe who are true friends to our commerce, cannot be enemies to this happy revolution.
The meafures we have mentioned to have been taken in the reign of king William III, in regard to the coin of the kingdom at that time, had all the happy effects that could be expected, in relation both to trade and the public credit: for thereby the greatelt part of the lofs by the ,recoinage was thrown immediately upon the king, though it was afterwards made good to him by a tax ; hereby the lofs was as well divided and equally fpread, as could well have been contrived. When the ill condition of the money, and the neceffity of recoining it, was firft taken into confideration, fome were for changing the nominal values of the pieces, as if they had thought fuch new nominal values would really give to thofe pieces a diffurent and a greater worth than that which they had before. Among thefe was William Lowndes, Efq; who, in an otherwife very ufeful book, intitled, A Report, containing an Effay for the amendment of Silver Coins, prefented to the lords commiffioners of his Majefty's Treafury, on the 12 th day of September 1695 , advanced this fcheme; particularly propoling, that the piece of filver of the fame goodnefs and weight as the undiminifhed crown-piece, fhould, for the time to come, be current for fix fhillings and three pennies. But this was fully anfwered by the judicious John Locke, Efq; in his further confiderations concerning railing the value of money; in which, as well as in his former tradt on the fame fubject, and that of the lowering of intereft, he has treated of this affair, and of every thing that had relation to it, in fo clear, fo ftrong, and fo mafterly a manner, as to carry conviction in every page, and to leave nothing to be afterwards added, by fuch as fhould again attempt to re-confider the fame matters.
And now that we have mentioned thefe two laft pieces; we cannot but take notice alfo of an excellent difcourfe publifhed a little before by the reverend and learned Dr William Fleetwood, afterwards lord bifhop of Ely: I mean his fermon againft clipping, preached before the lord mayor, \&c, at Guildhall chapel, on Sunday the 16th of December, 1694, upon this text of Gen. xxiii, 16 . 'And Abraham weighed to - Ephron the filver which he had named, in the audience of - the fons of Heth, four hundred fhekels of filver, current mo'ney with the merchant.' In which he with great judgment fet before his audience the nature and confequences of this pernicious practice; boldyy inferred, from the vaft increafe of it within a few years, that the avarice of greater and richer men than fuch as commonly fuffered for it, mult have been concerned in it ; and wifely forefaw the calamities that muft. enfue, if the moft prudent and confiderate fteps viere not taken, in the applying of a remedy to fo great an evil. - Who - can tell, faid he, whether every fingle perfon muft not bear * his own burthen, and ftand to the lofs of all that is wantcing of due weight, of all the money he is matter of? And - if he muft, the cry will be like that of Egypt, loud and - univerfal; for every family will be a lofer: but it will fall ' fevereft upon the poor, who from a little can fpare none.' This prince greatly increafed the royal navy.
Thefe are a few of the great things that were done in the reign of king William III, for the intereft of trade and the
public ctedit, and which ought never to be forgot by all true Britons.
This great prince had juft views of the horrid confequences of the unreftrained progefs of the power of France. With great integrity and vigour, therefore, he made it the bufinefs of his life to oppofe all its mifchievous motions; nor did he grow weary in the glorious toil. He had an enemy who was grow well prepared and provided, while he was often embarraffed and difappointed, and rarely attended with triumphant fuccefs: however, the prefervation of Europe from abfolute fubjection may juftly be afcribed to his arduous endeavours. He knew in what a fcandalous and mercenary man ner his two predeceflors had furrendered themfelves to the will and pleafure of the enemy, nor was he ignorant of the weak and corrupt condition of many other ftates. As he proved himfelf a friend to the liberties of Europe, and preferved its free flates from being the oppreffed provinces of an univerfal monarchy, fo equally fincere was his zeal for the religious rights of mankind: he had a jult deteftation of Popilh tyranny and ufurpation on confcience. In his days, and by his means, the firm and confiftent foundations were laid of what is truly valuable in civil or religious affairs. Before his time, avowing the rights of mankind was criminal and difgraceful: as they had power and opportunity, the feveral parties of Chriftians oppreffed each other. To him we owe the afferting and fecuring our moft important immunities and privileges; and to him the intellectual world is indebted for the full freedom of debating all fubjects, and for avowing and defending their fentiments with decency,
His laft work compleated his good defigns, for conveying to us the great and invaluable bleffing of the Proteftant fucceffion. Had he been cut off in any of the periods of his glorious ftruggle for the happinefs of this nation, and the welfare of all Europe, the miferies and mifchiefs which mult naturally have followed, would furely have equalled all the fuggeftions of the moft melancholy imagination. But the unthinking part of the world, becaufe wholly delivered from the greateft of calamities, have not been, nor ever will, perhaps, be duly fenfible.
Queen Anne's miniftry, upon the treaty of Utrecht, too readily granted the French liberty to fifh upon the very beft fifheries on the north coaft of Newfoundland, and there to build flages to dry them. They alfo granted them Cape Breton, which is said to be the very best Spot in all those Seas for Fishing. Thus we fee the French, by their great penetration and knowlege in the affairs of commerce, have gained from us a treafure equal to a mine of gold; and by means of the Newfoundland fifhery, they have raifed their naval power to the height we now experience it. See our article British America, where this matter is put in a full light. In fhort, notwithtanding the fuccefs of our arms in this reign, yet moft of the.advantages we gained in king William's time, in point of trade, were in a great meafure. loft, by the treaty of Utrecht. And thefe advantages the French have not neglected to improve from that period of time; and the effects of their power, in confequence hereof, we have now reafon to dread, unlefs our naval ftrength is fo effectually exerted, as to break their meafures at prefent, and to difable them ever after from deftroying the commerce and the Yberties of Great-Britain; which may now be faid to be the only Barrier that all Europe has left, to withftand the torrent of French and Spanifh tyranny and oppreffion.
The confured fate of the nation at the acceffion of his late Majelty King George to the crown of thefe kingdoms, is well enough known, as are the feveral rebellions that were raifed to dethrone him, in fayour of the Pretender. Notwithftanding all which, we find this our great monarch not only triumphant in his arms, but even careful in promoting the intereft of our commerce, at a time when it could have been the leaft expected. The firft remarkable particular that we meet with in relation to this important point, is
A Convention made at London, July 26, O. S. 1715 , relating to the Duties laid on British Woollen Cloths exported to the Austrian Netherlands.
His Britannic Majefty's minifters having complained that the commerce of his faid Britannic Majefty with the Auftrian Netherlands is very much prejudiced by the high duties of importation laid upon the coarfe woollen cloths fent from Great-Britain to the faid Auftrian Netherlands, the under-written minifter and plenipotentiary of his imperial and Catholic Majefty for the treaty of barrier [fee the arand Catholic Majefty for the treaty of barrier [fee the ar-
ticle Netherlands] at Antwerp, declares by thefe preticle Netherlands] at Antwerp, declares by thefe pre-
fents, that his Imperial Catholic Majefty will confent to the immediate reducing of the duties on the faid coarfe woollen cloths, according to the following feecification: and that, in all other refpects, the commerce of the fubjeets of his Britannic Majefty with the Auftrian Netherlands fhall remain, continue, and fublift, wholly on the fame foot as it does at prefent, without any alteration, innovation, diminution, or augmentation to be made, under any pretext
whatfoever, 'till all the parties interefted fhall agree upon $z$
treaty treaty of commerce.

Extract from the tariff fettied the 14th of November, 1715.
N. B. A difficulty having arifen about the intention of the requifition of the 6 th of November, 1715 , of which mention is made in the 26th article of the treaty of batrier, it is agreed provifionally, to caure the duties of importation on all the different forts comprehended in the above tariff under the denomination of woollen cloths, to be collected according to the tenor of the faid requifition of the 6th of November, 'till his Imperial and Catholic Majefty, and his Majefty the king of Great-Britain, fkall agree upon it otherwife; and, in the mean while, the king's collectors and officers fhall permit the faid manufactures to be imported, giving notice, and taking fecurity for the payment of the overplus duties of importation, on the foot the fame thall be fettled.

A letter from the Imperial envoy, count Volkra, to the lord vifcount Townfhend, principal fecretary of ftate.

## My Lord,

You have acquainted me that complaints are made of contraventions to the 26th article of the treaty of barrier, and I have had the honour to communicate to you what count Koniglegg has anfwered thereupon.
I can declare to you befides, that, for the future, there will be an exact performance of the faid 26th article of the treaty of barrier, of the 15th of November, 1715, and of the convention at London, of the 26th of July, 1715 , as allo of the declaration in the tariff of the I4th of November, I715, that is to fay, that the duties on the petite draperie (or woollen fluffs) of England, will be collected on the foot of the coarfe woollen cloths, according to the diminution expreffed in the aforefaid convention at London, without any alteration, 'till it be agreed otherwife between the emperor and the king, our matters; but, in the mean time, the merchants are to give fecurity to pay the furplus, if the matter fhall be fo determined between the two refecetive courts.

London,
Auguit $\frac{2}{3} \frac{0}{1}, 1716$.

The Count Volkra,

## REMARKS.

In order to judge the better of the merits of this Commercial Convention, fee our remarks on the article Royal Exchange.
The French king having evaded the execution of the gth article of the treaty of Utrecht, about the demolition of Dunkirk, by making a new canal at Mardyke, the next ftep taken by this monarch, tending to the benefit of trade and navigation, was making ftrong remonftrances, by that able minitter, John earl of Stair, in 1715, to the court of France, for the demolition of Dunkirk and Mardyke. The effrects of which were, that, in 1717 , Col. Armftrong, Mr Alworth, and Mr Laffels, were appointed commiffioners to worth, and Mr Lafiels, were appointed commiifioners to
infpect the demolition of the works at Mardyke, purfuant to the treaty with the late regent of France.
Another great point gained by the court of England, in the year 1715, was the figning of the Barrier Treaty at Antwerp, by the Britifh, Imperial, and Dutch minifters.For the importance whereof, fee our Remarks on the articles Flanders, Holland, and Netherlands. In 1715, we find his Majefty was able to conclude a treaty of commerce between England and Spain; and how greatly that proved to the advantage of the commerce of this kingdom, and how greatly this, and the preceding convention, contributed to fupply the defects of the Utrecht treaty, fee our Remarks on the article Royal Exchange.
In Dec. 1717 , it being found by experience that guineas, and other gold coin, being too high in value, thereby diminihhed our quantity of filver coin, and proved very detrimental to our trade, the king iffued a proclamation, declaring, That guineas fhould be current at no more than 21 s . and half-guineas, double-guineas, \&c. proportionably; that broad-pieces of 23 s .6 d . fhould be reduced to 23 s .
and thofe of 25 s .6 d . to 25 s . and fmaller gold pieces in proportion. See the neceffity and reafonablenefs hereaf, and how beneficial this meafure proved to our commerce, under our article Coin.
November 11,1718 , at the meeting of the parliament, the king, in his fpeech, acquaints the Commons, That he had concluded an alliance between the two greateft princes of Europe, wherein they bound themfelves to fupport the fucceffion to thefe kingdoms in his family. - That to vindicate the faith of his former treaties, as well as to maintain thofe which he had lately made, and to protect and defend the Trade of his fubjects, which had in every branch been violently and unjuftly oppreffed by the Spaniards, it became neceflary for his Naval Forces to check their progrefs - And that, inftead of liftening to his reafonable terms of accommodation, that court had lately given orders at all the ports of Spain, and of the WeftIndies, to fit out privateers, and to take our hips, \&cc. Accordingly the Common's approved the king's meafures with regard to Spain, and raifed men and money accordingly. - An arder of council alfo is publifhed, December the 3d, in the fame year, for making general reprizals on the Spaniards, and letters of marque are granted againft them. - See our articles Reprizals, and Marque [Letters of Marque]. - Thus the naval power of Great-Britain being exerted to protect hier commerce, Spain threatens as with the Pretender, and a fquadron fails from Cadiz tawards England, to carry on this defign, under the conduct of the duke of Ormond; but was difabled from purfuing its courfe by a ftorm. - This was cardinal Alberoni's fcheme.
December 22, N. S. A convention between the emperor, the king of Great-Britain, and the States-General, relating to the execution of certain articles of the barrier treaty, is figned at the Hague.
March 18, 17 18-19. An embargo is laid on all fhips outward bound: and a proclamation publifhed, for encouraging his Majefty's flips of war and privateers to take prizes from the Spaniards, by ordering them to be diftributed among the failors.- In July 1719, the city of Meffina furrenders to the Imperialifts, and in the whole fiege admiral Byng gave great affiftance. After the furrender, he lands fome Engliih forces, who took the tower of Faro; and that opening a free paffage for his fhips, he came to an anchor in Paradife-road, and deftroyed the Spanifh men of war that lay there, which for a time ruined the naval power of Spain-Which they have now again recruited, and if not again deftroyed, are likely, in concert with their dear allies the French, to make another attempt to ruin the commerce of thefe kingdoms, and play their Popith tool again upon Great-Britain. - May their fate prove always as it hitherto has done!
In refentment for this treatment againft our trade and $1 i_{-}$ berties, his Majefty formed the project to make himfelf mafter of Perv in America, and accordingly admiral Hofier fails towards thofe parts with a fquadron of men of war, and was to be joined by others; but this expedition was fruftrated by the winds. - A defign alfo was formed by. his Majefty to attack the Corunna in Spain, and viceadmiral Mighells failed from St Helens with fix men of war, as a conyoy to 4000 land forces under the command of lord vifcount Cobham, but they landed at Vigo; and at the firft fummons the town furrenders, as does alfo the citadel a few days after. - They found there above 100 pieces of cannon, above 2000 barrels of powder, and 8000 mufkets defigned for the defcent in England, which they brought away, as alfo feveral other pieces that were at Pont à Vedra. - The Englifh troops being reimbarked at Vigo, the fleet fails back for England with them, and arrives November 14 . - In confequence of this fpirit and vigour exerted by our navy, the king of Spain was compelled to difmifs his prime minifter cardinal Alberoni, as a firft ftep towards a peace with the emperor, king George and the regent of France.
In 17 20 , the unhappy affair of the South Sea company was broached. See our article South Sea Company; which was greatly detrimental to the public credit ; notwithftanding which, from the wifdom of his Majefty's councils the public credit was reftored, and the national debts put into a ftate of redemption. See our articles Credit, [Pubeic Credit] Dests, [National Debts] and Funds.
Auguft 4, 1721, his Majefty puts an end to the feffion of partiament with a fpeech, acquainting both houfes, among other things, that he had renewed all our Treaties of Commerce with Spain, upon the fame foot as they were fettled before the late war.-OEtober 19, the parliament meets, and his majefty in his feech recommends to the nation, To improve the favourable opportunity, which the conclufion of a peace with Spain, and between Sweden and Mufcovy at that time, gave, of extending our commerce, upon which, as his Majefty obferves, the Riches and Grandeur of this Nation chiefly depend: and for that purpofe, to make the exportation of our own manufactures, and the importation of the commodities, ufed in 3
the manufacturing of them, as practicable and eafy as may be, by taking off the duties upon thefe branches, \&c.- And to fupply ourfelves with naval ftores from our plantations in America.-For the importance of thefe points to the commerce and navigation of the kingdom, fee our articles $\mathrm{Ma}_{\mathrm{A}}$ nufactures and Naval Stores.
The moft confiderable acts pafied this feffion in regard to trade, were, 1. For taking off the duty upon falt ufed in the curing of red and white herrings, and laying a proportionable duty upon all red and white herrings confumed at home only.-2. An ad for giving further encouragement for the importation of naval ftires. -3. For encouragement of the filk manufacture of this kingdom; and for taking off feveral duties on merchandizes exported; and for reducing the duties upon beaver-1kins, pepper, mace, cloves, and nutmegs imported ; and for importation of all furrs, of the product of the Britifh plantations in this kingdom only; and that the two corporations of affurances, on any fuits brought on their policies, fhall be liable only to fingle damages and cofts of fuit. See our article Assurance
In May 1722, his Majefty has full information of a confpiracy formed againit him; the firlt intelligence of which came from the duke of Orleans, regent of France. - The apprehenfions of this plot did fo affect the public credit, that South Sea ftock fell from 90 to 77 , and the timorous and difaffected began a run upon the Bank: but the funds foon rofe again to their former value: which ended in the banifhment of Dr Atterbury, late bifhop of Rochefter, and the execution of Chriftopher Javer, \&c.
For the fupport of the trade of our fugar colonies, his Majefty made a grant of the iflands of St Vincent and S't Lucia, near Barbadoes, to John duke of Montague, and a patent paffed the feals for that purpofe. See the importance of thefe places, under our article British AmzRICA.
In December I 722 , the emperor of Germany granted a patent for eftablifhing an Eaft-India company in the Auftrian Netherlands, but the courts of Great-Britain, France, and Holland, made foftrong an oppofition to this defign, that it was afterwards laid afide. See our articles Austrian Netherlands, and Ostend East-India Company. This year the governors of New-York, Virginia, and Penfylvania, in order to fupport an intereft with the Indian nations at Albany, with the SACHIMS, or Kings of the American Natives, called the Five Nations, or River Indians, in which all former leagues between thefe governments and the faid Indians were confirmed. Likewite,
Sir William Keith, governor of Penfylvania, entered into a treaty with the SAsQuegana Indians, wherein thole people agreed to remove back into the woods, and leave a tract of roo,000 acres of land for the ufe of the English Planters.
April 24, 1724.-His Majefty puts an end to the feffion of parliament by a fpeech. The chief acts paffed in relation to trade, were, 1. For repealing certain duties therein mentioned, payable upon coffee, tea, cacao-nuts, chocolate, and ca-cao-pafte imported, and for granting certain inland duties in leu thereof; and for prohibiting the importation of chocolate ready made, and cacao-palte. -2 . For the better viewing, fearching, and examining, all drugs, medicines, \&c. in all places where the fame fhall be expofed to fale, or kept for that purpofe, within the city of London and fuburbs thereof, or within feven miles circuit of the faid city.-3. For encouraging the Greenland Fishary.
May $16,1724 .-K i n g$ George fends a circular letter to the univerfities of Oxford and Cambridge, declaring his intention of appointing two profeffors of modern hiftory and languages, one in each univerfity, with a flipend of 400 l. per annum a-piece.How a knowlege in thefe effentials might tend to enable people of diftinction who are fent as ambafladors, \&uc. to foreign courts, to promote the commerce and the honour of the nation, is too obvious to need animadver-fion.-And this I doubt not but his Majefty had chiefly in view : however that delign has been neglected fince.
In April 30, 1725.-A treaty of peace is concluded at Vienna, between the emperor and the king of Spain; wherein king Philip renounces all the pretenfions to his dominions in Italy and the Netherlands, and they mutually engage for the reciprocal defence and guaranty of all the kingdoms and provinces which they actually poffeffed, and the order of fucceffion, as fetcled in their refpective families, \&c. - They alfo fign a private treaty, wherein the emperor engages to concur in employing force for having Gibraltar reftored to Spain; o ufe means for placing the Pretender upon the Britifh throne; and that his daughter, the archduchers, fhould be married to the infant of Spain. - The next day they figned a treaty of commerce for fettling an Eaft-India company at Oftend, which gave great umbrage again to the Engliih and Dutch. The chief acts pafied this feffion for the benefit of trade, were, r. For encouraging the filk manufadures of this kingdom. 2. For preventing the clandeftine running of goods, \&c. 3. For rating fuch unrated goods and merchandize, as VOL. II.
re uhally imported into this kingdom, and pay difty ad vaorem, upon the oath of the importer; and for afcertaining the value of all goods and merchandize not inferted in the former, or prefent book of rates.
January 20, 1725-6.-The parliament meets. The king acquants both boufes, that the negociations and engagements entered into by fome foreign powers, which feemed to have laid the foundation of new troubles in Europe, and to threaten his fubjects with the lofs of feveral of the moft advantageous branches of their trade, had obliged him to enter into a de fenfive alliance with the moft Chriftian king, and the king of Pruffia, \&c.
February 24, 1725.6.-The convention of the royal burghs in Scotland prefents an addrefs to his Majefty, in which they remonftrated againft the malt-tax, as a burthen too heavy for their country to bear: that it rendered them incapable of carrying on the fifhing trade, and fuch other branches of commerceand manufacture as Scotland was proper for: that their poverty, and want of coin, the great decay of their trade, and the meannefs of their grain, were melancholy truths \&c.-Therefore they piayed relief.- They afterwards petitioned the commons concerning it; as did likewife the fhires of Renfrew, Bamff, \&c.-In confequence of which the commons order; that fome claufes fhould be inferted in the malt-bill, for the fatisfaction of the Scots, namely, That the produce of it in Scotland, after 20,000 1. paid into the Exchequer, thould beapplied towards the encouragement of the trade and manufactures of that kingdom, \&c.-.And king George fends a letter to the royal burghs of Scotland, to put them in mind of improving their fifheries and manufachures, with the money granted them for that purpofe at the Union. See our articles Aberdeenshire and Scotland, for what has been fince done, for the promotion of the trade of that part of the united kingdom.
May 24, 1726. King George puts an end to this feffion of parliament with a fpeech. The chief acts paffed this feffion were, I. For giving encouragement to the Greenland fifhery. 2. To prevent unlawful combinations of workmen employed in the woollen manufadures, and for the better payment of their wages.
The emperor, in confequence of the alliance before mentioned with his Catholic Majeftv, prohibits the importation of the Englifh woollen manufacturres into Siciiy.
Auguft 20, 3726. -The Eaft-India company obtain a charter for incorporating their towns of Madrafipatan, Bombay, and Fort William, to be governed each of them by a mayor and aldermen, who are impowered to make bye-laws, and exercife criminal as well as civil jurifliction, except in cafes of high treafon.
In the latter part of this year, great preparations were made in Spain for war, both by fea and land; and a camp of about 20,000 men was formed at St Roch, near Gibraltar, under pretence of rebuilding the caftle of Old Gibraltar. Upon repeated advices of their real intention, the garifon was reinforced with three regiments, and the Spaniards afterwirds invefted and opened the trenches before Gibraltar; and tho' fome did not fcruple to propagate, that Gibraltar would be given up by the late king; yet we know it was gallantly deended. - For the great importance of this place to the trade of thefe kingdoms, fee our article Mediterranean.
January 17,17267 --The parliament meets. His Ali j:fty opens it with a long and pathetic fpeech, wherein he acquaints both houfes, with the fecret and offenfive alliances concluded between the emperor and the court of $S_{p a i n}$ :- That the placing the pretender upon the throne of this kingdom, was one of the articles of the fecret engagements ; and the giving up the trade of this nation to one power, and Gibraltar and Portmahon to another, was made the price and reward of impofing upon this kingdom a Ponifh pretender, \&c. -The ords and commons refolve, that the meafures he had taken were honourable, juft, and neceffary, for preventing the exccution of the dangerous engagements entered into in favour of the pretender; for preferving the dominions belonging to the crown of Great-Britain by folemn treaties, and particularly thofe of Gibraltar and Minorca; and for maintaining to his people their moft valuable rights and privileges of commerce, and the peace and tranquillity of Eurone.
March 25,1727.-General letters of reprizals are granted againft the Spaniards.- The court of Vienna feeming difpofed to attack the Dutch Barfier in the Netherlands [fee our articles Flanders, Holland, and NeTHERLNDS, for the importance bereof to Great-Britain], king Geurge orders an augmentation of 30 companies of fon, and that the 10,000auxiliaries which England was obliged to fend to the affiftance of the Srates, flould hold themfelves in readinefs for embarkation.
May 15, 1727.-His Majefty puts an end to this feffion of May I5, $1727 .-$ His Majetty puts an endro this fefion oit parliament with a fpeech.- The chief acts pafted this feftion
for the benefit of trade, were, 1. For the better regulation for the benefit of trade, were, i. For the better regulation
of the woollen manufacture, and for prewnting difputes among the petfons concerned therein; and for limiting a time for profecuting for the forfeiture, appointed by an aft of the 32th year of li:s Majefty's reign, in cale of pa, ment of the Ho P
warkmen's wages in any other manner than in money. 2. For preventing frauds and abufes in the dyeing trade. 3. For the free importation of cochineal, during the time therein limited. 4. For the better regulation of the linen and hempen manufactures in that part of Great-Britain called Scotland. 5. For encouraging and promoting fifheries and other manufactures and improvements in Scotland.
The treaty of Hanover having broke the meafures of Spain and the emperor, preliminary articles for a general pacification are agreed upon at Paris, between the minitters of the emperor, his Britannic Majelty, the Mof Chriftian king, and the States-General
By the firft article, the Oftend company was to be fufpended for the fpace of feven years. By the 5 th all hoftilities were to ceafe, immediately after the figning of the articles: and, by the feventh a congrefs was to be opened at Aix-la-Chapelle, in four months from the day of figning.
So inconfiftent have men been in their judgment of this reign, that fome have thought, that our naval power was not fo vigoroully exerted during it, as it fhould have been, and others that it was excrted to too great lengths, by deftroying the Spanifh fleet in the Mediterranean, by Sir George Byng; notwithftanding thefe different opinions, certain it is, that the latter deffroyed, at that time, the growing naval power of Spain, and utterly difappointed the great defigns of an able and enterprizing minifter. And the fleets of admiral Hofier, Sir John Jennings, Sir Charles Wager, and Sir George Walton, abfolutely defeated the Imperial and Spanilh defigns before taken notice of.
The invafion and rebellion in 1718, are lefs remembered than that of 1715 , becaufe not one perfon fuffered death on that account. The rebellion likewife intended by the late king of Sweden feems to have been forgot, though it gave fome uneafinefs to king George's reign; for had that implacable monarch lived, his defigns againf Denmark would probably have fucceeded, and then he would have had leifure for tranfporting his hardy troops into Scotland.
Had the fucceffion of this prince [king George] taken place before the change of the miniftry at the latter end of queen Anne's reign, it would have been infinitely more happy, not only for the nation, but for the lafting tranquillity of the liberties of Europe. France would then have been compelled to give up the Spanifh monarchy. By advantages in trading to the dominions of Spain, in Europe and America, and by fevesal conceffions, we fhould have had ample means of repairing the loffes fuftained by a long and expenfive war. The houfe of Bourbon had been reduced within fuch bounds, as not to have been able to have become the terroi and fcourge of their neighbours, as they feem difpofed to be at prefent.
King George I. came to a people, who had been corrupted both in their political and religious notions, and had been taught an averion to our Natural Aldies, and to all Foreign Protestants, while an efteem and affection for France, and a tendernefs for many doctrines of Popery, had been infufed into them with great fuccefs; and thefe prejudices had indifpofed the nation to fubmit to a Protestant Prince, while the dangers from a Popish One were not attended to. The advantages likewife of a prosperous war, and many valuable branches of commerce; had been given up or neglected, and the revenue was loaded with a very heavy debt; and yet the authors of thefe calamities had the art and affurance to impute the confequences of them to the king and his minifters.
Thefe points feem as neceflary to be inculcated at this time of day, as ever they were.
Notwithftanding the unhappy affair of the South Sea fcheme, yet the wife mealures at length purfued, the reduction of intereft took place, from 6 to 4 per cent. and the National Debrs put into a fate of redemption; than which nothing could have a happier tendency to eftablifh the public credit, after the year 1720 .

## George II.

The reader will oblerve, that confiftent with the plan of this work, we have included in the account before given, called A Summary of the Supplies and the Ways and Means for the raifing all monies from the time of the revolution in the year 1688, to the end of the reign of George II, in the year 1759 , the fum total raifed in each diftinct year, fince the fard year 1688 ; by which the reader will eafily fatisfy himfelf of the whole fum raifed in each reign, by adding the yearly fums together belonging to each reign. We fhall only oblerve, that in the long reign of Geo. II. there was coined as follows, viz.

## By Weight.

$\begin{array}{ccccc}\mathrm{lb} . & \text { oz. dwt. } & \text { grs. } \\ 249,592 & 7 & 12 & 21\end{array}$

TEA is diftinguihed in name as it differs in colour, flavour, and fize of the leaf. The chief of feveral forts are, however, the leaves of the fame tree, only differing according to the feafons at which they are gathered, and the manner of the
drying. To enumerate the feveral fub-diftinctions wicre endlefs: the general divifion is into three kinds; the ordinary green tea, the finer green tea, and the bohea: to one or other of thefe, all the other kinds may be referred. See the article Bohe a, where the nature and qualities of India teas are defcribed at large.

## REMARKS.

Tea being an article of very great confumption in there dominions, and the fmuggling thereof proving an extraordinary decriment to the Public Revenue, a commitee of the honourable houfe of commons was appointed in the year 1745, to inquire into the caufes of the moft infamous practice of fmuggling, and confider of the moft effectual method to prevent the faid practice, and to report their opinion therein to the houfe; and this committee having examined into fome of the caufes of the Caid practice, and confidered of methods for prevention thereof, came to the following refolutions, in confequence of the evidence that was laid before them.
Refolved, That it is the opinion of this committee, That the high duties charged upon teas and other commodities, have been one caufe of the infamous practice of fmuggling.
Refolved, That it is the opinion of this committee, That the act of indemnity paffed in the laft feffion of parliament, for perfons guilty of the infamous practice of fmuggling, was not extenfive enough for the pardon of feveral perfons therein concerned.
Refolved, That it is the opinion of this committee, That the not effectually profecuting owners of veffels ufed in carrying on the pernicious practice of fmuggling, is another caufe of that infamous practice.
Refolved, That is is the opinion of this committee, That the expofing to fale the boats, and other veffels taken from perfons carrying on the practice of fmuggling, by means of which, fuch boats or veffels are often bought by the came or other perfons carrying on the fame pernicious prastice, is another caufe of the continuance, and an, encouragement of fmuggling.
Refolved, That it is the opinion of this committee, That the ealy compofition of the penalties incurred by perfons convicted of running, or being concerned with others in running, landing, or difpofing of uncuftomed goods, is another caufe of the faid pernicious practice.
Refolved, That it is the opinion of this committee, That the want of proper penalties and punifhment to be inflicted upon officers of the excife and cuftoms for neglect of duty, or mifbehaviour in their refpective offices, is another caufe of the faid pernicious practice.
Refolved, That it is the opinion of this committee, That lowering the duties on tea, and other commodities, would be one means to prevent the faid pernicious practice.
Refolved, That it is the opinion of this committee, That a general act of indemnity to all perfons guilty of any crimes againt the laws for preventing the running uncuftomed goods, (except fuch as have been guilty of murder) will be one other means to put a ftop to the infamous practice of fmuggling.
Refolved, That it is the opinion of this committee, That the burning the boats and other veffels belonging to, and taken from perfans concerned in the infamous practice of fmuggling, will be one other means to prevent the faid practice.
Refolved, That it is the opinion of this committee, That the compeling feamen and feafaring men taken on board any fhip or veffel employed in running uncuftomed goads, or otherwife concerned in landing or difpofing of the fame, to ferve for a certain time on board his Majefty's hips of war, would be one other means to prevent the infamous practice of fmuggling.
Refolved, That it is the opinion of this committee, That the giving a reward for the difcovering and apprehending all fuch perfons whohave followed the infamous practice of fmuggling either by fea or land, or as riders, would be another mean for putting an end to the infamous practice of fmuggling. Refolved, That it is the opinion of this committee, That the incapacitating all perfons who fhall hereafter be convicted of running uncuftomed goods, for voting at elections for members of parliament, will be a means of preventing the infamous practice of fmuggling.
Refolved, That it is the opinion of this committee, That the profecuting fuch fubjects of his Majefty as hall refort to the ports of France, and carry with them intelligence in time of war, as guilty of bigh trealon, would be another means of preventing fmuggling.
This committee of the houfe of commons, appointed at the beginning of the feffions 1745 , to inquire into the ftate of fmuggling, was brought about by the inceffant application of the right honourable Stephen Theodore Janffen, Ef; late lord mayor of the city of London, and now chamberlain of the faid city. In confequence of which, an a\&t for the reduction of the tea-duty to one half of what it was before', paffed; and this took place according to the plan formed by that zealous patrigt for this purpofe; which act took phace at

Midummer $\mathbf{x}$.45, to the prodigious increale of the public evenue, as will appear by the following particulars.
The ald for reducing the tea-duty conmenced the 24th of The at for reducing the tea-duty copmenced arifing from Juide, 1745 . Before this period, the revenue ariing from
tena had been gradually finking from 200,0001 per annum; teat had been gradually finking from 200,0001 per annum,
to about 140,000 . which tait fum arofe from about 600000 lb . weight only of tein, which then paid duty.
The prefent ftate of the revenue, from the great effects of thits fith, fands thus:

So that the revenue has been benefited by this act, in eight years, $1,460,0001$. exgepting only the 5 per cent. on dry goods, which took place in 1747-8; befides which, the India company, previous to this act; fold barely the cargoes of three tea-fiips annually, whereas thei now fell the cargoess of feven tea-hips annually, whereas thep now fell the cargoes of feven
tea-hips annually, for the leah; and if the company receives tea-ihips annually, for the lea
no benefit from this, it nuift be; ifdmitted that their navigation is increafed, by fo much, thereby.
The aboveraid faving to the revenue having prevented the laying on of additional taxes, manifefts the important fervices that the late right honourable the lord mayor of London bas really done, in this refpqct, for thefe kingdoms; and which, it is to be hoped, will ņeither be forgot by the kingdom in general, or by the government in particular: and to what this Annual Saving to the nation may amount in a long courfe of years, is mot edfy to hay.
Nor is this the only advantage which has accrued to the nation from the indefatigaple endeavours of this illuftrious magiftrate; it is an experitnental confirmation of the truth of two of the principal relflutions of the aforefaid committee, viz, I. That it is the opinion of the committee, That the High Duties cparged upon teas and other Commodities have been one caufe of the infamous practice of fmuggling: 2. Thert it is the opinion of this committee, That Lowerinc the Duties on teas, and othei commodities, would be one means to prevent the faid pernicious pratice.
What other eminent fetvices this honourable gentleman has really done, and bas atempted ftilt further to do, for the besnefit of the commerce of thefe kingdoms, fee our articles Linen, and Smuggling.

Mr Alderman Janfien having, fince the laft edition of this work, publifhed the Reports of the Committee of the Honourable Houfe of Commons, concerning Smugaling, together with the following account of the Tea-trade, fhewing in one view the whole ftate of the tea importation, confumption and revenue, from Midfummer 1745, (when the reduction of two fhillings per pound took place) to New Chriftmas, $17{ }^{6} 3$; we think it ufeful to introduce the fame as it ftands, viz.

TEA Imported by the East-India Company, for Twelve Years before the Act paffed for the Reduction of Excife upon Tea, commencing at Midfummer 1745 .

Total importation for twelve years before the reduction

TEA Imported by the Eaf-India Company, for Seventeen Years fince the Act paffed for the Reduction of Excife upon Tea, commencing at Midfummer 1745 .

$\qquad$ $\longrightarrow$-_ Do.
$\qquad$

OBSERVATIONS on the above.

'Tkind, experimental trial upon the article of tea, was the firlt of the That the lowering of a hight duty, which was everer made to prove, hath conididerably advanced the produce of the public revenue upon fuch
article, by occafioning the furprifing general increafe of its confumption. article, by occafioning the furpriging general increafe of its confumption.
2. It hews, That a foreign commodity, even of a luxurious nature, may become a general article of confomption, and be rendered fa nhionable and habitual, amongh all ranks and degrees of people, in confequence of re-
ducing a high duty thereon to a moderate one, and thereby augment the zevenue, in proportion to the general augmentation of the confurstion of fuch foreign commodity.
3. It indicates 3. It indicates, the next degree to a demonftration, that duties upon
and commodities may be frained to to high a pitch, as to caufe a general di-
minution in the confumption, and confequently to occafion a proportionable diminution in the public revenue, which afed to arife from the ligh duty,

It excites the unfair trader to act in concert with the fmuggler, and the lat-
ter to hazard his flfe to reap the advantage which fo great a temptation lays before him. It induces the confumer to enter into a clofe connetion with the frauggler, in ordef to come at the commodity, which fanhion and 4. It proves, that the revenue has been increafed, by lowering the former high duty; and that to a fum fo confiderable, as above Five Miblions and a Half Sterling: That the Eaft India Company, computing their profit on teas at one fhilling on the pound, has gained above Two Mri That the nation in general nas been proportionable gainers, by the extra increafe of its navigation.
5. It proves, That the price of teas has fallen fo very confiderably, in
confequence of the government's adopting this confequence of the government's adopting this plan, That the euftom of all degrees of people ; That the fmuggling of this article is greatly abated
nd, That a furprifing increafe in the confumption of fugars has enfued,
the great improvement of the fugar colonies, as well as the great increare of the great amprovement of the fugar colonies, as well as the great increare of
the revenue, by the duty on fugars : and all thefe confequences have na turally attended an increafe in the confumption of teas; chielly and prin
cipally owing to the lowering the high duty thereon. cipally owing to the lowering the high duty thereon.
It muft be obferved, however, That the total incre fing upon tea, from Midfammer 1745 to New Chriftmas 1763 asiab above reprefented, is not wholly to be afcribed to the reducing the excife daty
upon tea at that period, the lat fubfidies of upon tea at that period; the laft fublidies of 1747 and 1759 , which have
taken place fince, to the above increafe; and this fum has been gained by the revenue in the
to additional increare of the confumption of fogars, which has gone hang
in hand with that of teas.- But to the produce of the two laft fub in hand with that of teas. - But to the produce of the two lant fub.
fidies ${ }_{2}$ the proporer of the plan for reducing the excife upon teas in 1715 hines, the propofer of the plan for reducing the excise upon teas in $17 / 4$
lays no fort of claim. London, March, 1763

STEPH. THEOD. JANSSEN.

TIN is a white fhining metal, containing a certain bluenefs; it is of fo pliable a nature, that it may be bent into any form: as to hardnefs, it is between filver and lead, fofter than the former, but conliderably harder than the latter, and is the lighteft of all metals: its weight to gold, by computation, is as 3 to 8 ; and fomething more.

## REMARKS.

For the methods of affaying and fmelting this metal, fee the articles Asfay and Smelting; fee alfo Metallurgy, Ore, Mineralogy.
TOBACCO. The manner of planting and ordering tobacco in Virginia is thus: in the twelve days they begin to fow the feed in beds of fine mould, and when the plants be grown to the breadth of a fhilling; they are fit to replane into the hills: for in their plantations they make fmall hills, about four feet diftant from each other, fomewhat after the manher of our hop-yards. Thefe hills being prepared againft the plants be grown to the forementioned bignefs (which is abolut the beginning of May), they then, if moift weather, draw the plants out of their beds, and replànt them in the hills, which afterwards they keep with diligent weedings. When the plant hath put out fo many leavet as the ground will nourifh to a fubftance and largenefs that will render them merchantable, then they take off the top of the plant: if the ground be very rich, they let a plant put out 12 or 16 leaves before they top it; if mean, then not above 9 or 10 , and to according to the ftrength of their foil: the top being caken off, the plant grows no bigger; but afterwards it will put out fuckers between their leaves, which they pluck away once a week, 'till the plant comes to peffection, which it doth in Augult : then in dry weather, when there is a little breeze of wind, they cut down' what is ripe, letting it lie about four hours on the ground, 'till fuch time as the leaves, that flood flrutting out, fall down to the ftilk; then they carry it on their fhoulders into their tobacco-houfes, where other fervants taking it, drive into the faik of each plant a peg, and, as faft as they are pegged, they hang them up by the pegs on tobacco-ftaiks, fo nigh each other, that they juft touch, much after the manner they hang herrings in Yamouth. Thus they let them hang five or fix weeks, 'till fuch time as the ftem in the middle of the leaf will fnap in the bending of it ; then, when the air hath fo moiftened the leaf as that it may be handled without breaking, they frike it down, ftrip it off the ftalk, bind it up in bundles, and pack it into hog fheads for ufe.
Sometimes they are forced to plant their hills twice or thrice over, by reafon of an earth-worm, which eats the root; and when the plant is well grown, they fuffer damage by a worm that devours the leaf, called a horn worm (an eruca, or can-ker-worm) which is bred upon the leaf; if thefe worms be not carefully taken off, they will fpoil the whole crop. In the year 1667, in Augult, ihere happened all over Virginia 2 gulf, or form, of wind and rain, which continued for three days with fuch violence, that the like was hardly ever heard of. It began, and continued blowing, at eaft, with fuch fiercenefs, that above one half of their crop of tobacco, which was then ftanding in their fields, was blown away, and torn to pieces: the trees in the woods, all over the country, were blown up by the roots, in innumerable quantities; the waters in the bay, in fome places, were drove a great way into the woods, and the greatele part of thofe that houfed tobacco, had their tobacco-houfes blown down, and their tobacco fpoiled: fo that there was not fully one part of three faved of what would have been made that year. The planters houfes are built tall along the fides of the rivers, for the conveniency of fhipping: they build after the Englif manner, whitening the infide of their houfes with mortar, made of burnt oyfter-lhells, inftead of lime.
They have pure and wholefome water, which they fetch wholly from fprings, whereof the country is fo full, that there is not a houle but hath one nigh the door.
The laws relating to tobacco are at the end of Letter $T$; on the Bufinefs of the Cuftoms.

## R E M A R K S.

By a pretty exact computation made a few years fince, there is annually imported into Great-Britain, between 60 and 70,000 hogheads of tobacco: we will fuppofe 66,000, twothirds of which are re-exported to France, Germany, Holland, \&cc. fo that there remain for home confumption 22,000 hogfheads; the duties whereof, reckoned at 15 l. per hogfhead (at which in moft cafes they may be computed) will amount to $330,000 \mathrm{l}$. Now there is not much above one half of that fum which comes annually into the Exchequer; fo that there has been manifeftly loft to the public revenue, about $165,000 \mathrm{l}$. by the frauds at importation, re-exportation, and by bonding the duties.
This is upon fuppofition that no part of the 44,000 hogheads which are exported, was run or re landed from Dunkirk, and the ifles of Guernsey, Jersey, and Man, into Enoland, Scotland, and Ireifand, as has evidently
appeared to have been the cafe. But, if to this we add only $\frac{1}{8}$ part of what is exported to be re-landed or run (as that, a leaft, has been fhewn to be the cafe) there is an additional lof to the revenue of 75,000 l. more, which fums together make 240,0001. See the articles Man [Isle of Man,] Scot* land, and Smuggling.
To prevent fuch difadvantages to the public revenue, which arife from this pernicious and deteftable practice, the expedient which feems the moft eligible is, the fame that has been fucceeffully tried in relation to tea, viz. that of Lowering the Duties [fee the article Tea], for it has appeared with refpect to the article of tea, that in proportion as the temptation to fmuggling has abated, the lefs detriment has the public revenue fuftained. And why the like experiment made upon tobacco may not have the fame good effect, cannot be proved 'till it bé effectually tried. 'Seê our article Scotland.
Tobacco being a bulky commodity, gives great employintent for our thipping, and therefore is a branch of trade that cantiot be too much encouraged and protected; efpecially fib, fince our dear friends, the Fienth feem at prefent to be feized with a wonderful longitg to eafe us of the trbuble and expence of fupporting our tobacco colonies any longer. See our article Plantations, and fuch others as are from thence referred to.

## TRADE.

Some Maxims relating to Trade, that fhould feem to be confirmed in the courfe of this work:
I. That the lafting profperity of the landed intereft depends upon foreign commerce. See our article LAnded In. terest.
II. That the increafe of the wealth, fplendor, and power of Great-Britain and Ireland, depend upon exporting miore in value of our native produce and manufactures, than we intport of commodities from other nations, and bringing thereby money into the kingdom, by the means of freight by fhipping. See our article Ballance of Trade, and Remarks on the artiche Freigit.
III. That domeftic and foreign trade, as they are the meams of increafing the national treafure, of breeding feamen, and of augmenting our Mercantile and Royal Navies, they neceffarily become the means of our permaxient profed. rity, and of the fafety and prefervation of our happy conftitution. See the articles Sea Dominion, Naval AFeairs, Seamen, Shipping.
IV. That the conftant fecurity of the Public Credit, and the payment of intereft and principal of the public creditots, depend upan the-pro(perous ftate of our trade and navigation, and not upon any crafty and chimerical expedients. See the articles Credit[Public Credit], Debts[National Debts], Funds, Monied lnterest.
V. That gold and filver is the meafure of trade, and that they are a commodity, and may be exported, efpecially in foreign coin, or bullion, as well as any other commodity See our articles Buliion, Corn, Money, East-India Tradte in general, East-India Company, Pegu, SiAm, and fuch other articles as we have referred to from the conclufion of the article Silver, as having an affinity with thefe political points.
VI. That the increale of trade and navigation greatly depends, not only upon the increafe of hubbandry and agriculture, but alfo on the increafe of ingenious working artift of every kind, in order to improve the perfection and delicacy of our Old Manufactures, and to difcover fuch New Trades and Manufactures, as will enable us, at leaft, to keep pace in wealth and power with our rival niations, if we cannot go beyond them. See our articles Agriculture, Husbandry, Manure, Landedinterest, Artificers, Mechanical Arts, Manufacturebs, Tapestry.
VII. That the fupport of a conftant fucceffion of Trading Artists amongit us of every clafs, greatly depends upon due public encouragement. See the beforementioned articles, and alfo that of Cloth.
VIII. That the fupport of a conftant fucceffion of ingenious trading artifts, generally depends upon the improvements made from time to time in ufeful philofophy. See our articles Chymistry, Philosophy-Experimental, Royal Society of London, and divers other articles.
IX. That the conftant profperity of our trade and navigation, greatly depends upon the introducing into this nation various wife and neceflary eftablifhments and practices for their regulation and encouragement, that other nations have adopted, and we feem equally to ftand in need of. See our article Chamber of Commerce, with our Remarks thereon, Seamen, for a voluntary regifter of them, fo to encourage this body of men, that the arbitrary and difagreeable practice of preffing thefe brave fellows may be laid alide, and the Royal Navy never want hands upon any fudden emergency. See alfo the articles Candrdate, Asphaltum, Consuls, Factors, Dancing.
master,

Magtex, DirectionChamber;Director of Tra ding Companieg in France, India-House of Spain, Painting, Paprr-Tier, Patents, Porcelain [Remarks thereon], Levant Trade, Frencif Ambpica, french African Tradi and Company, Erance, Medal, Naval Affadrs, Sea Dominion, Sea British, Shipping.
$X$. That the conftant fupport of our trade and navigation, greatly depends upon the judgment, fkill, and addrefs, of our Bitish Merchants and Traders in geheral; and to that end, the courfe of their education, more efpecially of the former, should be no way inferior to that of any clafs of men in the community. See our article of Mercantile college.
X1. That the constant profperity of our trade and navigation, greatly depends upon the knowlege thereof, as founded upon national principles, which the Britifh nobility and gentry Shill obtain, in order wifely to regulate the fame at all times in their legifigive capacity, for the true interefts of the kingdom in general. - See our article Parliament [Member of Parliament.].
XII. That the conftant profperity of our trade and navigakion, greatly depends upon the knowlege therein, that our mimifters abroad as well as at home thall have, in order confantly to communicate to the court of England, fuch matter on commercial affairs, as may procure to their country all advantages in relation thereto, as times and occafions may happily offor. See our articles Consul, Council of Commbrce, Maritime or Marine Affairs, Treatirs of Commerce.
XIII. That as many, and as great eftates and honours and dignities, have been acquired by the practical arts and political knowlege of commerce, as by any other means whatfoever. See our article Commerce.
Sovere. See our article Com MERCE.
XIV. That the conflant profperity of our trade and navigacion, greatly depends on the wife regulation of our TAKES, Money-Affalrs, and the prefervation of the Public Crititr ; and that fuch knowlege cannot be obtained, withoat ardue knowlege of trade, as founded on national principles, See the axticles Revenue and Taxes, and fuch ather heads as we refer to therefrom. See alfo the articles Credit [Pubitc Credit], Debts, [National Debts], Funds, Money, Monied Interest.
XV. That the conffant profperity of our crade and navigation, dopends upon being able to fell our native produce and manafactures as CEEAP, and as good in Quairty, in foreign countries, as eur trading competitors can afford to do; and that this depends upom the due regulation of our TAxes, and the culcivation of LaND. See our articles. Duties, Exportation, Labour, Manurey and fuch other,' as we have referred to occafionally upon this topic throughout our wiork.
XVI. That the conftant profperity of our trade and navigation, depends upon 2 well-grounded knowlege in political arithmetic; and that depends upon a right knowlege in commercialaffairs, the public revenues, and the policy, efpecislly in regard to the trade and money-affairs of foreign nations, and woll-timed troaties of commerce. See our articles Poilifical Arithmetic, People, Poor, Revenue, Taxes, Triatias of Commerce.
XVII. That the profperity of our trade and commerce may be gready pronroted, by encouraging the ftudy thereof at our Universutiess, as has been lately done at Cambiridige, by that eminent patriot the late right honourable lord vifcount Townfhend; and alfo by proper private affociations to promete the fame, as has been fo laudably begun of late in this kingdom. See our article Roxail Socrer y of LonDON, with a brief account there of the Society of ARTs, Manufactures, and Commierce.
XVIIL. That the conftant profperity of our trade and navigation, greatly depends upon the knowlege of our country gentlemen in natural hiftory,' and fuch ufeful philofophy as we have recommended throughout this work. See our articles Bole, Clay, Earth, Farming, Husbandry, Mineraicog y, sac. and divers otber heads.
XIX. That the conftant profperity of our trade iand naviga*ion, and the fupport of the public icredit, gegeatly depends upon the fupprefilion of fmuggling. See our articles MAN [Igliz of Mant], Smuggling, Tea, Tobacicio.
XX. That the conflant profperity of our trade and navigation, greatly depands upon the fuppuefion of the pernicious parts of the bufinefs of flock-jobbing, the difcouragement of bubbles, and the upholding of no exclufive trading companies but fuch as tend to promote navigation, and to bring a tallance of treafure into the mation. See our articles Acmions, Bubbles, South-Sen Company, Stock-Iobbing; fee alfo Companies and Monopoly, and all the chief great foveign trading companies throughout Eusope, whafe hiftories are briefly given in this work, in arder to judge the better how far it may be neceflary for this kingdon to preferve, regulate, or annibilate, particular trading corpo rations
XXI. That the conflant profperity of our trade and navigation, greatly depends upon iucreafing the trade of the nation
to the utmof, beiwen the docher-country and her colonileg and plantations in America... See America, Britain [Grbat-Britain]; Britest America, Naval Stores, french Amertca; Spantsh America, Portugueze America; and all our articles felating to the cominerce of Africa
XXII. That the conftant profperity of our trade and navigation, greatly depends upon reitraming the anti-treaty and unjuitifiable encroachments.of France and Spain on our trade and colony-poffeffions; as well in Europe as in America: See, befides the preoeding articles, thofe of Colonies, France, and Piantationsi; the later of which difplays the perfidy of France to. all. Europe for this century paft; and the article France fhews how fleadily that nation has purfued the point of utiverfat monarchy, and what 'ftrides they bave already made thereto, which feem to be too little attended to.
XXIII. That the conftami profperity of our trade and navigation, greattly depends upon' Great- $B$ itain's preferving a conflantifriendfhip and good underftanding with the United Pro: vinces, and the preferving to them a good barrier againft France. See our articles Flanders, Bisheries, Holitand, NeTherlands, and United Provinees.
XXIV. That the conflant profperity of our trade and navigation, greatly depends upon taking lefs of the produce and manufactures of other nations, as they decline in the importation of our's, and in the taking more of the produce of thofe countries whics indereafe in thetr imports of our produce and manufactures. See the articles Exportatron, ImPORTATION, and SPAEN.
XXV. That the conflan properity of our trade and navigation, greatly depends upon keeping up fuch a naval power as is able to break the meafures of France and Spain, or any other potentates, when they are calculated to injure us ; and the way to do that efeetually, is to deftrby their trade -by lea, and their royal navies, as we did thole of Spain in the year 1718. See the articles NAVAL AFFAIRS, SEA Dominion, Sea britisch.
XXVI. That the confant profperity of trade to our Antiericafa colonies, greatly äedends upon fecuring Nova Scotia in parsicular, as a baritier on one fide to our moft northern eolonics on the comatimene, and to fraititain a dignity and alliance among the Indian nations, as sadfo to take Capti Brerron again out of the hatids of firance, and deprive them of all hare in the Niewtoundiand fifteries r and alfo to fecure and promote, on the other fide, againtt both France and Spain, the colony of GEORGLA. [See our article British America.] Whichbasbeen doneby the Treaty of Peace made in 7763 . See America, Florida, Canada, and Newfoundiand.
XXN II. That the cönitant profperity of the trade of our fugar colontes, greatly depends on their being always, in a condition to prevent a furprize from France, as was attempted in the year 1706; and is likely foon to be fo again. That their prefervation depends greatly on fecuring to ourfelves the poffeffion of the NEUTRAL IsLANDS, and annoying as much as polfible the French Sugar Islands, efpecially Martinicue and Hispanioya. See ous articles Adiertca, Britishamerica.
XXVLI. That the conftant profperity of the trade and navigation of our fugar' illands, greatiy depends upon our deftroying the frencfy Afrigan Trade and fettlements in Africa, and well fortifying our own fettlements and factories in that part of the world, and extending the inland trade of Africa. Bee all ourarticles relating to the Afrycan Trade; and fee alfo that of the EAst-1NDIA Covipany, wherein are fuggefted fome meafures, whereby that company might protiably be made inftrumental to the great increafe of the African trade, and deftruetive of that of France, which is the grand fupport of all he Frencu. Sugar Islands. See out articles English African Company, and French African Company.
XXIX. That the fecurity and improvement of our trade to Asia, and the injury to that of France, would greatly depend upon our difovery of the North-East Passags to China and Japan; and that, as it is currently reported this difcovery is very likely to be made by a worthy fubject of the king of Great-Britain, at a trifing eharge, it is certainly for the intereft of the nation chearfully to .encourage it, at the public expence; or the Eaft-India company Chould do it, for their own intereft. See our article Siberia.
XXX. That che conftant profperity of our trade to IT ALY, Turkey, and the Levant, will ever depend on the prefervation of Gibraltar to the crown of Great-Britain. See our article Mediterranean.
XXXI. That the conflant fecurity of our trade to and from our fugar colonies, and the effectual prevention of the SPAnish Depredations in America, in particular, will depend upon fecuring to ourfelves fome certain Possissions in Ameica, which may prove of as much fervice to the protestion of our trade in that part of the world, as Gibraltar is to our Italian and Turkey trades.-But what poffeffions thefe ore, I have had the tronour to lay before the **********, whom I thought ic my duty to apprize in time of a matter
of fuch confequence to his kingdoms, as being communicated to me from intelligence not to be doubted of.
XXXII. That the conltant profperity of the trade, and the permanent prefervation of the liberties, as well of the United Provinces as of Great-Britain itfelf, would be better fecured than by any other poffible means whatever, perhaps; provided that Great-Britain and Holiand became One Nation and One People, governed by One and the Same Sovereign, according to the conftitution of England, and to poffers and enjoy the fame privileges of trade, navigation, and religion, as England does, and the Dutch to contribute to the fupport of the Britifh crown, in a proportion fuitable to their abilities.
Ler it be uppofed, for a moment, that this was the cafe, the confequence would be, that England and Holland, fo happily united, might increafe their ftrength in Asia to what degree they pleafed, and keep all other European powers, and even the natives, fo in fubjection to them, as to oblige them to take a far greater quancity of our produce and manufactures than they do at prefent, \&cc.-This would give a new turn to the commerce over all Asia.
Thefe united porentates might alfo increafe their power in Africa to what degree they pleafed, and keep the French and Portugueze there in what fubjection they thought proper. This would contribute foon and effectually to the ruin of the French fugar iflands, which would of courfe fall into the hands of the maritime powers conjunctively. - Thus becoming mafters of the fugar trade of the whole world, the wealth and power of both would fo magnify, that the Proteftant ftates might bid defiance to all the oppofition of France, or any united Catholic powers whatever.
The due exertion of the united farength of thefe maritime potentates, would to ftrengthen the power and intereft of both in America, as to give law there to the Spaniard, as well as the French, and ever after prevent their infults and depredations towards the trade and commerce of either. This would tend to prevent war and bloodfhed hereafter, upon thefe occafions. See our article Virginia.
With regard to Europe, likewife, every one will at once fee the weight and influence that fuch a powerful union muft have. Great-Britain and Holland would then be in a capacity to uphold and maintain, at their Own Expence, a fufficient Barrier for the fupport and protection of the United Provinces againft France, and any other combined powers. - Upon this fuppofition, the Proteftant intereft would have fuch a formidable bulwark for its fupport, that the whole Popifh ftrength joined to fubvert it could never effect; and whatever conqueft thefe Proteftant maritime powers made in Popith countries, either in America, Alia, or Africa efpecially, need never be given up, as we are now obliged to do, at the Conclusion of every War, that France might not overrun the United Provinces of the States General.
This, allio, would for ever after fave us the eternal expence of land wars in Flanders and Germany; for when 2 folid and impregnable barrier was once procured to the Dutch, and the marine of England and Holland were united, and conducted by One and the Same Sovereign, for their mútual fafety and benefit, the creft of France would for ever fall, and Popery hate no longer a Chance to extirpate Protestantism and Liberty from the Face of the whole Earth. By this means, the fifheries of Great-Britain and Holland in Europe and America would become common to both powers; the commerce and navigation of both would be daily increafing, and none but fuch Proteftant powers as fhould enter into their Protestant Confederacy, need have any flare ficarce in the commerce of the world: and, as empire follows trade, trade would give the Protestant interest the empire of the globe, and gradually tend to extirpate Popery, tyranny, and flavery, from the face of the earth. And 'till that comes to be the cafe, GreatBritainand Holland, and all the Protestant Powers, will be ever liable to be diftracted, and their governments fubverted, by the machinations of France. See the article France, and the fhocking treachery of that nation, in our Remarks upon the article Plantations.
Meafures of this kind would foon give a new turn to the affairs of the United Provinces; they would then truly become the High and Mighty States, inftead of the Poor and Diftreffed, which may one day be their fate, if fomething is not done to fupport them effectually, againft being overrun by France, when a war thall break out.
And if the Srates-General depend upon the fupport only of Great-Britain, why fhould not their dominions be annexed to the crown of Great-Britain?. They have experienced that their own rapublican conftitution is not built upon fo folid a bafis as that of Great-Britain; the people do not enjoy fo great a thare of liberty, nor fo folid fecurity for their property now, as they would do under their united government. And as to their religon, they will enjoy the fame toleration under thegovernment of the crown of Eng-
land as they do at prefent. What hinders then but the vife and honeft men of both ftates fhould think ferioully of a matter of this high concernment to the mutual intereft and happinefs of both? More efpecially fo, whilft the: Popils Powers are not only making Protestant Princes converts to their relsfion, but daily erecting New Monarchies for their Poprsh Princes, the more effectually to enflave the world. It is, however, enough far me to ftart the hare; let others hunt it, whom it more nearly concerns, and are well paid for fo doing. See our articles Flanders, Holland, Netherlands, Unjeed Provinces, and War.

Remarks on our article Trade fince the laft war, and the Definitive treaty of peace of ${ }_{1763}$.

Our public debts and taxes having encreafed by the laft wat to a degree of incredibility in fo few years, did we not experience it; it becomes incumbent on us; it is indeed now indifpenfably requifite, that we fhould augment our trade, and thereby fo enrich the nation, as to be able to difincumber ourfelves of a great part of our national debts and taxes, if we fhall not be able to get rid of the whole. For if we do not, the immenfe weight of them will $\mathrm{f}_{0}$ impede, clog, and ftagnate our whole commerce and navigation, as to give our competitors the opportunity to engrofs the whole of our foreign trade out of our hands; fince they underfold us at moft foreign markets before the laft war, and are in a capacity to do it far more fo than they were then.
If our domeftic policy is fuch, that we cannot foon leffen the tax-incumbrances upon our whole trade, France in particular will pour in, by fmuggling into Great-Britain, an inundation of their cheaper commodities and manufactures; which will infenfibly deftroy our own domeftic trade, flarve our indultrious manufacturers and artifts; or draw them into their kingdom, to the unfpeakable enrichment of France, and improvement of Great-Britain. The fame likewife will be done in our continental colonies; for while they can have French wares and manufaciures from 15 to 40 per cent. cheaper than Englifh, it is ridiculoufly weak to flatter ourfelves that our coloniffs will purchafe Englifh, when they can by any methods whatfoever obtain French. And it is to be feared, that the urmoft efforts of the government will not be able much to leffen fmugging either in Great-Britain, or in the continent of America; the coafts being: fo extenfive, in both, though far more fo in the one than the other, fince our new acquiftions in North America: much lefs thall we be able to fupprefs the infamous practice of fimuggling in either. So contiguous alfo are our ifland colonits to thofe of France, and fo interwoven with them are our new-acquired ones, that France will moft certainly run away wih a_great thare of the trade, which appertains to the Britifh empire, by the fame means of fmuggling.
TREATIES of COMMERCE and NAVIGATION. Under the article Maritime, or Marine Affairs, we have given the fubftance of the moft effential treaties which have had relation to the trade and navigation of the principal ftates of Europe for above a century paft: and having occafionally cited divers others that have taken place fince, and given the fubftance of them, we fhall here give the reader thofe together that have not been taken due notice of, as the neceffity of our matter, or as the brevity of our articles in the dictionary required.

Treaty of Navigation and Commerce between the moft ferene and moft potent princefs ANNE, by the grace of God, queen of Great-Britain, France, and Ireland, and the moft ferene and moft porent prince Lewis XIV, the moft Chriftian king: concluded at Utrecbt the 31 ft day of March, O.S. ${ }^{1}{ }^{1} 3$.
I. It is agreed and concluded between the mott ferene and moft potent queen of Great-Britain, and the moft ferene and moft potent the moft Chriftian king, That there fhall be a reciprocal and intirely perfect liberty of navigation and commerce between the fubjects on each part, through all and every the kingdons, ftates, dominions, and provinces, of their royal Majefties in Europe, concerning ali and fingular kinds of goods in thofe places, and on thofe conditions, and in fuch manner and form, as is. fettled and adjufted in the following articles.
14. But that the commerce and friendfhip between the fubjects of the abovefaid parties may be hereafter fecure, and free from all trouble and moleftation, it is agreed and concluded, That if at any time any ill underftanding and breach of friendfhip, or rupture, thould happen between the crowns of their royal Majefties (which God forbid), in fuch cafe, the term of fix months fhall be allowed after the faid rupture, to the fubjects and inhabitants on each part, refiding in the dominions of the other, in which they themfelves may retire, together with their families, goods, merchandizes, and effeats, and carry them whither they thall pleare ; as likewife, at the fame time, the felling and difpofing of their goods,
both moveable and immoveable, fhall be allowed them freely, and without any difturbance; and, in the mean time, their goods, effects, wares, and merchandizes, and particularly their perfons, thall not be detained or troubled by arreft or feizure ; but racher, in the mean while, the fubjects on each fide hall have and enjoy good and fpeedy juftice, fo that, during the faid fpace of fix months, they may be able to recover their goods and effects intrufted as well to the public, as to private perfons.
III. It is likewife agreed and concluded, That the fubjects and inhabitants of the kingdoms, provinces, and dominions of each of their royal Majefties, ihall exercife no acts of hofitiliy and violence againft each other, either by fea or land, or in rivers, ftreams, ports, or havens, under any colour or pretence whatfoever ; fo that the fubjects of either party thall receive no patent, commiffion or inftruction, for arm. ing and acting at fea as privateers, nor letters of reprizal, as they are called, from any princes or ftates which are enemies to one fide or the other; nor by virtue, or under colour of fuch patents, commiflions, or reprizals, thall they difturb, infeft, or any way prejudice or damage the aforefaid fubjects and inhabitarts of the queen of Great-Britain, or of the moft Chriftian king; neither fhall they arm fhips in fuch manner'as is abovefaid, or go out to fea therewith. To which end, as often as it is required by either fide, ftrict and expre's prohibition fhall be renewed and publifhed in all the regions, dominions, and territories of each party whatfoever, that no one fhall in any wife ufe fuch commiffions, or letters of reprizal, under the fevereft punifhment that can be inficted on the tran'greffors, befide reftitution, and full fatisfaction to begiven to thofe to whom they have done any damage; neither fhall any letters of reprizal be hereafter granted, on cither fide, by the faid confederates, to the detriment, or difadvantage of the fubjects of the other, except in fuch cafes only as juftice is denied or delayed; to which denial or delay credit fhall not be given, unlefs the petition of the perfon who defires the faid letters of reprizal be communicated to the minitter refiding there on the part of the prince againft whofe fubjects they are to be granted, that, within the face of four months, or fooner, if poffible, he may evince the contrary, or procure the performance of what is due to juftice.
IV. The fubjects and inhabitants of each of the aforefaid confederates chall have liberty freely and fecurely, without licence or paffport general or fpecial, by land or fea, or any other way, to go into the kingdoms, countries, provinces, lands, iflands, cities, villages, towns, walled or unwalled, fortified or unforcified, ports, dominions, or territories whatfoever, of the other confederate in Europe, there to enter, and to return from thence, to abide there, or to pafs through the fame; and, in the mean time, to buy and purchale, as they pleafe, all things neceffary for their fubfiftence and ufe: and they fhall be treated with all mutual kindnefs and favour. Provided, however, that in all thefe matters they behave and comport themfelves conformably to the laws and ftatutes, and live and converfe with each other friendly and peaceably, and keep reciprocal concord by all manner of good underftanding. V. The fubjects of each of their royal Majefties may bave leave and licence to come with their fhips, as alfo with the merchandizes and goods on board the fame (the trade and importation whereof are not prohibited by the laws of either kingdom) to the lands, countries, cities, ports, places, and rivers, of either fide in Europe, to enter into the fame, to refort thereto, to remain and refide there, without any limitation of time; alfo to hire houles, or to lodge with other people, and to buy all lawful kinds of merchandizes where they think fit, from the firft workman or feller, or in any other manner, whether in the public market for the fale of things, in mart-towns, fairs, or wherefoever thofe goods are manufactured or fold. They may likewife lay up and keep in their magazines and warehoufes, and from thence expore to fale, merchandizes brought from other parts; neither fhali they be in any wife obliged, unlefs willingly, and of their own accord, to bring their faid merchandizes to the marts and fairs, on this condition, however, that they fhall not fell the fame by retail in fhops, or any where elfe: but they are not to be loaded with any impofitions or taxes on account of the faid freedom of trade, or for any other caufe whatfoever, except what are to be paid for their fhips and goods, according to the laws and cuftoms received in each kingdom. And moreover they fhall have free leave, without moleftation, to remove themfelves, and, if they happen to be married, their wives, children, and fervants, together with their merchandizes, wares, goods, and effects, either bought or imported, whenfoever and whitherfoever they fall think fit, out of the bounds of each kingdom, by land and by fea, on the rivers and frefh waters, difcharging the ufual duties, notwithftanding any law, privilege, grant, immunity, or cuftom, in any wife importing the contrary. But, in the bufinefs of religion, there fhall be an intirc liberty allowed to the fubjects of each of the confederates, as allo, if they to the fubjects of emaried, to their wives and children; neither thall they are married, to their wives and children; neither that they
be compelled to go to the churches, or to be prefent at thic religious worfhip in any other place: on the contrary, they may, without any moleftaticn, perform their religious exer-

VOL. II.
ciles after their own way, although it be forbid, by the laws of the kingdom, privately, and within their own walls, and without the admittance of any other perfons whatfoever. Moreover, liberty fall not be refufed to bury the fubjects of either party, who die in the territories of the other, in convenient and decent places, to be appointed for that purpore, as occafion fhall require: and the dead bodies of thofe wha are buried fhall be no ways molefted. The laws and ftatutes of each kingdom fhall remain in full force, and thall duly be put in execution, whether they relate to commerce and navigation, or to any other right ; thofe cafes only being excepted, concerning which it is determined in the articles of this prefent treaty.
VI. The fubjects of each party fhall pay the tolls, culloms, and duties of import and export, through all the dominions and provinces of either party, as are due and accuftomed; and that it may be certainly known what are all the faid tolls, cuftoms, and duties of import and export, it is likewife agreed that tables, fhewing the cuftoms, port-duties, and impofts, fhall be kept in public places, both at London, and in other towns within the dominions of the queen of GreatBritain, and at Roan, and other towns of France, where trading is ufed, whereto recourfe may be had, as often as any queftion or difpute arifes concerning fuch port-duties, cuftoms, and impofts, which are to be demanded in fuch manner, and no otherwife, as fhall be agreeable to the plain words and genuine fenfe of the abovefaid tables. And if any officer, or other perfon in his name, fhall under any pretence, publicly or privately, directly or indirectly, afk or take of a merchant, or of any other perion, any fum of money, or any thing elfe, on account of right, dues, flipend, exhibition, or compenfation, although it be under the name of a free gift, or in any other manner, or under any other pretence, more or otherwife than what is prefcribed above: in fuch cafe, the faid officer or his deputy, if he be found guilty, and convicted of the fame before a competent judge, in the country where the crime was committed, fhall give full fatisfaction to the party that is wronged, and hall likewife be punihhed according to the direction of the laws.
VII. Merchants, malters of hips, owners, mariners, men of all kinds, fhips, and all merchandizes in general, and effects of one of the confederates, and of his fubjects and inhabitants, fhall, on no public or private account, by virtue of any general or fpecial cdict, be feized in any the lands, ports, havens, fhores, or dominions whatfoever of the other confederate, for the public ufe, for warlike expeditions, or for any other caufe, much lefs for the private ufe of any one; nor thall they be detained by arrefts, compelled by violence, or under any colour thereaf, or in any wife molefted or in jured. Moreover, it thall be unlawful for the fubjects of both parties to take any thing, or to extort it by force, except the perion to whom it belongs confent, and it be paid for with ready money ; which, however, is not to be underftood of that detention and feizule which fhall be made by the command and authority of juftice, and by the ordinary methods, on account of debt or crimes ; in refpect whereof the proceeding muft be by way of law, according to the form of juftice. VIII. Furthermore it is agreed and concluded, as a general rule, That all and fingular the fubjects of the moft ferene queen of Great-Britain, and of the moft ferene and molt Chriftian king, in all countries and places fubject to their power on each fide, as to all duties, impofitions, or cuftoms whatioever, concerning perions, goods, and, merchandizes, hips, freights, feamen, navigation and commerce, fhall ufe and enjoy the fame privileges, liberties, and immunities at leaft, and have the like favour in all things, as well in the courts of julfice as in all fuch things as relate either to commerce, or to any other right whatever, which any foreign nation, the moft favoured, has, ufes, and enjoys, or may hereafter have, ufe, and enjoy.
IX. It is farther agreed, That, within the fpace of two months after, a law fhall be made in Great-Britain, whereby it fhall be fufficiently provided, that no more cuftoms or duties be paid for goods and merchandizes brought from France to Great - Britain, than what are payable for goods and merchandizes of the like nature imported into Great Britain from any other country in Europe; and that all laws made in GreatBritain fince the year 1664 , for prohibiting the importation of any goods and merchandizes coming from France, which were not prohibited before that time, be repealed; the general tariff made in France the 18 th day of September, in the year 1664, thall take place again; and the duties payable in France by the fubjects of Great-Britain, for goods imported and exported, fhall be paid according to the tenor of the tariff abovementioned, and fhall not exceed the rule therein fettled, in the provinces whereof mention is there made, and in the cther provinces the duty fhall not be payable o:herwife than according to the rule at that time prefcribed. And all prohibitions, tariffs, edicls, declarations, or decrees, made in France fince the faid tariff of the year 1664 , and contiary thereunto, in refpect to the goods and merchandizes of GreatBritain, thall be repealed. But whereas it is urged, on the part of France, that certain merchandizes, that is to fay, manufactures of wool, fugar, falted firh, and the product of wheles, be excepted out of the rule of the abovementioned 10 R
tariff,
kariff, and likewife other heads of matters belonging to this treaty remain, which having been propofed on the part of Great-Britain, have not yet been mutually adjufted, a fpecification of all which is contained in a feparated inftrument, fubfcribed by the ambaffadors extraordinary and plenipotentiaries on both fides: it is hereby provided and agreed, That, within two months from the exchange of ratifications of this treaty, commiffaries on both fides fhall meet at London, to confider of, and remove the difficulties concerning the merchandizes to be excepted out of the tariff of the year 1664 and concerning the other heads, which, as is above faid, are not yet wholly adjufted. And at the fame time the faid commiffaries thall likewife endeavour (which feems to be very much for the intereft of both nations) to have the methods of commerce on one part, and of the other, more thoroughly examined, and to find out and eftablith juft and beneficial means on both fides, for removing the difficulties in this matter, and for regulating the duties mutually. But it is always underftood and provided, that all and fingular the articles of this treaty do, in the mean while, remain in their full force, and efpecially that nothing be deemed, under any pretence whatfoever, to hinder the benefit of the general tariff of the year 1664, from being granted to the fubjects of her royal Majefty of Great-Britain, and the faid Britiih fubjects from having and enjoying the fame, without any delay or tergiverfation, within the fpace of two months after a law is made in Great-Britain, as abovelaid, in as ample manner and form as the fubjects of any nation, the moft favoured, might have and enjoy the benefit of the aforefaid tariff, any thing to be done or difcuffed by the faid commiffaries to the contrary, in any wife notwithftanding.
X. The duties on tobacco imported into France, either in the leaf or prepared, Shall be reduced hereafter to the fame moderate rate, as the faid tobacco of the growth of any country in Europe or America, being brought into France, does or fhall pay. The fubjects on both fides fhall allo pay the fame duties in France for the faid tobacco ; there thall likewife be an equal liberty of felling it ; and the Britifh fubjects Thall have the fame laws as the merchants of France them elves have and enjoy.
XI. It is likewife concluded, That the impofition, or tax, of 50 fols Tournois laid on Britifh thips in France for every ton, fhall wholly ceafe, and be from henceforward annulled. In like manner, the tax of 5 s . fterling laid on French fhips in Great-Britain for every ton, fhall ceafe; neither fhall the fame, or any the like impofitions be laid hereafter on the fhips of the fubjects on either fide.
XII. It is further agreed and concluded, That it fhall be wholly free for all merchants, commanders of fhips, and others the fubjects of the queen of Great-Britain, in all places of France, to manage their own bufinefs themfelves, or to commit them to the management of whomfoever they pleafe; nor fhall they be obliged to make ufo of any interpreter or broker, nor to pay them any falary, unlefs they chufe to make ufe of them. Moreover, mafters of fhips fhall not be obliged, in loading or unloading their fhips, to make ufe of thofe workmen, either at Bourdeaux or in any other places, as may be appointed by public authority for that purpofe; but it fhall be intirely free for them to load or unload their Chips by themfelves, or to make ufe of fuch perfons in loading or unloading the fame as they fhall think fit, without the payment of any falary to any other whomfoever; neither thall they be forced to unload any fort of merchandizes, either into other fhips, or to receive them into their own, or to wait for their being loaded longer than they pleafe. And all and every the fubjects of the moft Chriftian king fhall reciprocally have and enjoy the fame privileges and liberty in all places in Europe fubject to the dominion of GreatBritain.
XIII. It thall be wholly lawful and free for merchants and others, being fubjects either to the queen of Great-Britain, or to the moft Chriftian king, by will, or any other difpofition, made either during the time of ficknefs, or at any other time, before or at the point of death, to devife or give away their merchandizes, effects, money, debts belonging to them, and all moveable goods, which they have or ought to have, at the time of their death, within their dominions, and any other places belonging to the queen of Great-Britain, and to the moft Chriftian king. Moreover, whether they die, having made their wills, or inteftate, their lawful heirs and executors, or adminiftrators, refiding in either of the kingdoms, or coming from any other part, altho' they be not naturalized, fhall freely and quietly receive and take poffeffion of all the faid goods and effects whatfoever, according to the laws of Great-Britain and France refpectively; in fuch manner, however, that the wills, and right of entering upon the inheritances of perfons inteftate, muft be proved according to law, as well by the iubjects of the queen of Great-Britain, as by the fubjects of the moft Chriftian king, in thofe places where each perfon died, whether that may happen in GreatBritain or in France, any law, ftatute, edich, cuftom, or droit d'aubeine whatever, to the contrary notwithftanding. XIV. A difpute arifing between any commander of the fhips of either fide and his feamen, in any port of the other party,
concerning wages due to the faid feamen, or other civil caufes the magiftrates of the place fhall require no more from the perfon accufed, than that he give to the accufer a declaration in writing, withefled by the miagiftrate, whereby he flalil be bound to anfwer that matter before a competent judge in his own country: which being done, it thall not be lawful eithei for the feamen to defert their Thip, or to hinder the cammander from profecuting his voyage. It thall moreover be lawful for the merchants on both fides, in the places of their abode, or elfewhere, to keep books of their accounts and affairs, as they fhall think fit, and to have an intercourfe of letters in fuch language or idion as they fhall pleafe, without any moleftation or fearch whatfoever: but if it fhould bappen to be neceffary for them to produce their books of accounts, for deciding any difpute and controverfy, in fuch cafe they fhall be obliged to bring into court the intire books or writings, but fo as that the judge may not have liberty to infpect any other articles in the faid books; ncither fhall it be lawful, under any pretence, to take the faid books or writings forcibly out of the hands of the ownerk, or to retain them, the cafe of bankruptcy only excepted; neither fhall the faid fubjects of the queen of Great-Britain be obliged to write their accounts, copies of letters, acts, or inftruments, relating to trade, on ftamped paper, in French papier timbré, except their day-book, which, that it may be produced as evidence in any law-fuit, ought, according to the laws, which all perfons trading in France are to obferve, to be fublcribed gratis by the judge, and figned with his own hand.
XV. It fhall not be lawful for any foreign privateers (not being fubjects of one or of the other confederates) who have commiffions from any other prince or fate in enmity with either nation, to fit their thips in the ports of one or the other of the aforefaid parties, to fell what they have taken, or in any other manner whatever to exchange either hhips, merchandizes, or any other ladings; neither fhall they be alloveed even to purchafé vietuals, except fuch as thall be necellary for their going to the next purt of that prince from whom they have commilions.
XVI. The fhips of both parties being laden, failing along the coafts or thores of the other, and being forced by fturm into the havens or ports, or coming to land in any other manner, thall not be otliged there to unlade their go ds, or any part thereof, or pay any duty, unlefs they do of their own accord unlade their goods there, or difpole of any part of their lading: but it may be lawful to take out of the thip and to fell (leave being firf obtained from thofe who have the infpection of fea affairs) a fmall part of their lading, for this end only, that neceflaries, either for the refrefhment or vi\&tualling of the thip, may be purchafed; and, in that cafe, the whole lading of the fhip fhall not be fubject to pay the duties, but that fmall part only which has been taken out and fold.
XVII. It fhall be lawful for all and fingular the fubjects of the queen of Great-Britain and the moft Chriftian king, to fail with their fhips with all manner of liberty and fecurity, no diftinetion being made who are the proprietors of the merchandizes laden thereon, from any port to the places of thofe who are now, or thall be hereafter ac enmily with the queen of Great-Britain, or the moft Chrifian king. It Thall likewife be lawful for the fubjects and inhabitants aforefaid, to fail with the fhips and merchand:zes afore mentioned, and to trade with the fame liberty and fecurity from the places, ports, and havens of thofe who are enemies of both or of cither party, without any oppofition or difturbance whatfoever, not only directly from the places of the enemy, aforementioned, to neutral places; but alfo from one place belonging to an enemy to another place belonging to an entmy, whether they be under the jurifdiction of the lame prince, or under feveral. And as it is now flipulated concerning fhips and goods, that free fhips thall alfo give a freedom to goods, and that every thing fhall be deemed to be free and exempt, which fhall be found on board the mips belonging to the fubjects of either of the confederates, although the whole lading, or any part thereof, fhould appertain to the enemies of cither of their Majefties, contraband goods being always excepted, on the difcovery whereof matters ihall be managed according to the fenfe of the fubfequent articles. It is alfo agreed, in like manner, that the fame liberty be extended to perfons who are on board a free fhip, with this condition, that although they be enemies to both or either party, they are not to be taken out of that free inip, unlefs they are foldiers, and in actual fervice of the enemies.
XVIII. This liberty of navigation and commerce fhell extend to all kinds of merchandizes, excepting thofe only which follow in the next article, and which are figuified by the name of contraband
XIX. Under this name of contraband, or prohibited goods, Thall be comprehended arms, great guns, bombs, with their fuzees, and other things belonging to them, fire-balls, gunpowder, match, cannon-ball, pikes, fwords, lances, fpears, halberds, mortars, petards, granadoes, falt-petre, muikets, mulket-balls, helmets, head-pieces, breaft-plates, coats of mail, and the like kinds of arms proper for arming foldiers,

## T R E

TRE
nufket-refts, belis, horfes, with their furniture, and all othe: varlike inftrumients whatever
XX. Thefe merchandizes which follow fhall not be reckoned among prohibited goods; that is to fay, all forts of cloths, and all other manufactures woven of any wool, flax, filk, cotton, or any other materials whatever ; all kinds of cloaths and wearing apparel, together with the fpecies whereof they re ufed to be made; gold and filver, as well coined as un. coined ; tin, iron, lead, copper, brafs, coals; as alfo wheat and barley, with any other kind of corn and pulfe; tobacco, and likewife all manner of fpices; falted and fmoaked fleh, falted filh, cheefe and butter, beer, oils, wine, fugars, and all forts of falt, and, in general, all provifions which ferve for the nouribment of mankind, and the fuftenance of life. Furthermore, all kinds of cotton, hemp, flax, tar, pitch, ropes, cables, fails, faii-cloths, anchors, and any part of ropes, chors; alfo thip-mafts, plank, boards, and beams, of whai trees foever, and all other things proper either for building or repairing fhips ; and all other goods whatever, which have not been worked into the form of any inftrument or thing prepared for war, by land or by fea, fhall not be reputed contraband, much lefs fuch as have been already wrought and made up for any other ufe; all which thall wholly be reckoned among free goods, as likewife all other merchandizes and things, which are not to be comprehended and particularly mentioned in the preceding articie, fo that they may be tran'ported and carried in the freeft manner by the fubjects of both confederates, even to places belonging to an enemy, fuch towns or places being only excepted, as are at that tume befieged, blocked up round about, or invefted. XXI. To the end that all manner of diffentions and quarrels may be avoided and prevented on one fide and the other, it is agreed, That, in cafe either of their royal Majefties who enter into this alliance fhould be engaged in war, the fhips and veffels belonging to the fubjects of the other ally muft be furnifhed wish fea-lecters, or pafleurts, expreffing the name, property, and bulk of the fhip, as alfo the name and place of habitation of the malter and commander of the faid hip, that it may appear thereby that the fhip really and trulv belangs to thie fubjects of one of the princes; which paffports fhall be made out and granted according to the form annexed to this treaty. This ihal! likewife be recalled every year, that is, if the fhip happens to return home within the lpace of a year. It is likewife agreed, That fuch fhips being laden, are to be provided not only with palfports, as abovementioncd, but alfo with certificates, containing the feveral parriculars of the cargo, the place whence the fhip failed, and whither fhe is bound ; fo that it may be known whether any forbidden or contraband goods as are enumerated in the 19th article of this treaty, be on board the fame; which certificates Thall be made out by the officers of the place whence the fhip fer fail, in the accuftomed form. And if any one fhall think it fit or advileable to exprefs in the faid certificates the perfon to whom they belong, he may freely do fo.
XXII. The fhips of the fubjects and inhabitants of both their mot ferene royal Majefties, coming to any of the feacoafts within the dominions of either of the confederates, but not willing to enter into port, or being entered, yet not being willing to fhew or to fell the cargoes of their fhips, fhall not be obliged to give an account of their lading unlefs they are fufpected, upon fure evidence, of carrying to the enemies of the other confederate prohibited goods, called contraband. XXIII. And in cafe of the faid manifeft fufpicion, the faid fubjects and inhabitants of the dominions of both of their molt ferene royal Majefties fhall be obliged to exhibit in the ports theis paffports and certificates, in the manner before fpecified. XXIV. But in cafe the fhips of the fubjects and inhabitants of both their moft ferene royal Majefties, either on the feacoafts or on the high feas, thall meet with the men of war of the other, or with privateers, the faid men of war and privaters, for preventing any inconveniencies, are to remain out of cannon-fhot, and to fend a boat to the merchant-fhip which has been met with, and fhall enter her with two or three men only, to whom the mafter or commander of fuch Thip or veffel hall fhew his paffiort, concerning the property thereof, made out according to the form annexed to this pre fent treaty: and the fhip which thall exhibit one thall have free paffage, and it fhall be wholly unlawful any way to moleft her, fearch, or compel her to quit her intended courfe. XXV. But that merchant-fhip of the other party which intends to go to a port at enmity with the other confederate, or concerning whofe voyage, and the fort of goods on board, there may be juft fufpicion, fhall be obliged to exhibit, either on the high feas or in the ports and havens, not only her paffports, but her certificates, exprefling that they are not of the ind of prohibited, which are fpecified in the 1gth article. XXVI. But if one party, on exhibiting the above faid cersificates, mentioning the particulars of the things on board, hould difcover any goods of that kind, which are declared contraband or prohibited by the 19th article of this treaty, to be defigned for a port fubject to the enemy of the other, it Chall be lawful to break up the hatches of that hip wherein the fame flall happen to be found, whether the belong to the fubjects of Great-Britain or to France, to open the chefts, packs, or cafks therein, or to remove even the fmalleft par-
el of the goods, urilefs the lading be brought on fhore in the prefence of the officers of the court of admiralty, and an inventory thereof be made: but there fhali be no allowance to fell, exchange, or alienate the fame in any manner, unlefs, after due and lawful procefs has been had againft fuch prohibited grous, the judges of the admiralty refpectively hiall, by a fintence pronounced, have cunficated the fame, faving always as well the Chip itfelf, as the other goods found therein, which, by this treaty, are to be efteemed free; neither may they be detained on pretence of their being, as it were, infected by the prohbited goods; much leff thall they be conficated as lawful prize. But if not the whole cargo, but only part thereof, hall conlift of prohibited or contraband goods, and the commander of the thip thatl be ready and willing to deliver them to the captor, who has difcovered them, in fuch cafe, the captor baving received thofe goods, fhall forthwith difcharge the flip, and nut binder her, by any means, freely to profecute the voyage on which fhe was bound.
XXVII. On the contrary it is agreed, That whatever thall be found to be laden by the fubjects and inhabitants of either party, on any thip belonging to the encmy of the other and his fubjects, the whole, although it be not of the fort of prohibited goods, may be confifcated, in the fame manner as if it belonged to the enemy himfelf, except thofe goods and merchandizes that were put on board fuch fhip before the declaration of war, or even after fuch declaration, if fo be it were done within the time and limits following; that is to fay, if they were put on board fuch thip in any port and place within' the fpace of fix weeks after fuch declaration, within the bounds called the Naze in Norway, and the Soundings; of two months, from the Soundings to the city of Gibraltar; of ten weeks in the Mediterranean Sea; and of eight months in any other country or place in the world : fo that the goods of the fubjects of either prince, whether they be of the nature of fuch as are prohibited, or otherwife, which, as is aforefaid, were fat on board any fhip belonging to an enemy before the war, or after the declaration of the fame, within the time and limits abovefaid, fhall no ways be liable to confication, but fhall well and truly be reftored, without delay, to the proprietors demanding the fame; but fo as that, if the faid merchandizes be contrabaind, it thall not be any ways lawful to carry them afterwards to the ports belonging to the enemy. XXYIII. And that more abundant care may be taken for the fecurity of the fubjects of both their moft ferene royal Majefties, that they fuffer no injury by the men of war or privateers of the other party, all the commanders of the fhips of the queen of Great-Britain and of the moft Chriftian king, and all their fubjects, thall be forbid doing any injury or damage to the other fide ; and if they act to the contrary, they fhal be punifhed, and thall moreover be bound to make fatisfaction for all caufe of damage, andthe intereft thereof, by repara tion under the bond and obligation of their perfons and goods XXIX. For this caufe, all commanders of privateers, before they receive their patents or commiffions, Thall hereafter be obliged to give, before a competent judge, fufficient fecurity by good bail, who are men able to pay, and have no interef in the faid fhip, and are each bound in the whole for the fum of $1,500 \mathrm{l}$. fterling, or 16,500 livres Tournois; or, if fuch fhip be provided with above one hundred and fifty feamen or foldiers, for the fum of 30,0001 . or 33,000 livres Tournois, that they make intire fatisfaction for any damages and injuries what foever, which they or their officers, or others in their fervice, commit during their courfe at fea, contrary to this prefent treaty, or the ediets of either of their moft ferene royal Majefties, publifhed by virtue thereof, under penalty, likewife, of having their fpecial commufion and patents revoked and annulled.
XXX. Both their abovenamed royal Majefties being willing to thew a mutual and equal favour, in all their dominions refpectively, to the fubjects of each other, in the fame manner as if they were their own fubjects, will give fuch orders as thall be neceffary and effectual, that juftice be adminiftered concerning prizes in the court of admiralty, according to the rules of equity and right, and the articles of this treaty, by judges who are above all fufpicion, and who have no manner of intereft in the caufe in difpute.
XXXI. Whenfoever the ambaffadors of each of their royal Majefties above named, and other their minifters having a public character, and refiding in the court of the other prince, thall complain of the unjuftnefs of the fentences which have been given, their Majeffies on each fide fhall take care that the fame be revifed and re-examined in their refpective councils, that it may appear whether the directions and provifions prefcribed in this treaty have been oblerved, and bave had their due effect : they fhall likewife take care that this matter be effectually provided for, and that right be done to every complainant within the fpace of three months. However, before or after judgment given, the revifion thereof ftill depending, for the avoiding of all damages, it fhall not be lawful to fell the goods in difpute, or to unlade them, unlefs with the confent of the perfon concerned.
XXXII. A fuit being commenced between the captors of prizes on one part, and the reclaimers of the fame on the other, and a fentence, or decree, being given in favour of
the reclaimer, that fame fentence, or decree, fecurity being given, fhall be put in execution, the appeal of the captor to a fuperior judge in any wife notwithfanding; which, however, is not to be obferved when judgment has been given againft the reclaimer.
XXXIII. In cafe that either 隹ips of war or merchantmen, forced by ftorms, or other misfortunes, be driven on rocks or fhelves on the coafts of one or the other party, and are there broken to pieces and fhipwrecked, whatever part of the fhips or tackłing thereof, as alfo of the goods and merchandizes, fhall be' (aved, or the produce thereof, thall be faithfuilly reftored to the proprietors, reclaimers, or their factors, paying only the expences of preferving the fame, in fuch manner as it inay be fettled on both fides concerning the rate of falvage [fee SAL $\vee \triangle G E$ ], Kaving, at the fame time, the rights and cultoms of each nation. And both their moft ferene royal Majeflies will interpofe their authority, that fuch of their fubjects may be feverely punifhed, who, in the like accident, fhall be found guilty of inhumanity.
XXXIV. It fhall be free for the fubjects of each party to employ fuch advocates, attornies, notaries, follicitors, and factors, as they fhall think fit; to which end the faid advocates and others above mentioned, may be appointed by the ordinary judges, if it be needful, and the judges be required thereto.
XXXV. And, that commerce and navigation may be more fecurely and freely followed, it is further agreed, That neither the queen of Great-Britain nor the moft Chriftian king thall receive any pirates or robbers into any of their ports, havens, cities, or towns; neither fhall they permit them to be received into their ports, or to be protected or affifted by any manner of harbouring or fupport, by any the fubjects or inhiabitants of either ofthem : but they Mall rather caufe all fuch pirates and fea-robbers, or whoever fhall receive, conceal, or affift them, to be apprehended, and punifhed as they deferve, for a terror and example to others. And all the fhips, goods, or merchandizes, piratically taken by them, and brought into the ports of the kingdom of either, as much as can be found, although they have by fale been conveyed to others, fhall be reftored to the lawful owners, or their deputies, having inftruments of delegation, and an authority of procuration, for reclaiming the fame; and indemnification fhall be made, proper evidence being firtt given in the court of admiralty for proving the property. And all fhips and merchandizes, of what nature foever, which can be refcued out of their hands on the high feas, fhall be brought into fome port of either kingdom, and delivered to the cuftody of the officers of that port, with this intention, that they be delivered intire to the true proprietor, as foon as due and fufficient proof fhall have been made concerning the property thereof.
XXXVI. It thall be lawful as well for the fhips of war of both their moft ferene royal Majefties, as for privateers, to their enemies; neither ihall they be obliged to pay any thing to the officers of the admiralty, or to any other judges; nor fhall the aforementioned prizes, when they come to and enter the ports of either of their moft ferene royal Majefties, be detained by arreft; neither fhall fearchers, or other officers of thofe places, make examination concerning them, or the validity thereof; but rather they fhall have free liberty to hoift rail at any time, to depart and to carry their prizes to that place which is mentioned in their commiffion or patent, which the commanders of fuch thips of war thall be obliged to thew. On the contrary, no fhelter or refuge fall be given in their ports to fuch as have made a prize upon the fubjects of either of their royal Majefties. And if perchance fuch fhips fhall come in, being forced by ftrefs of weather, or the danger of the fea, particular care fhall be taken (as far as it is repugnant to former treaties made with other kings and fates) that they go from thence, and retire elfewhere as foon as poffible. XXXVII. Neither of their moft ferene royal Majefties fhall permit that the fhips or goods of the other fhall betaken upon the coafts, or in the ports or rivers of their dominions, by thips of war, or others, having commiffion from any prince, commonwealth, or town whatfoever; and in cafe fuch a thing fhould happen, both parties fhall ufe their authority and united force, that damage done be made good.
XXXVIII. If hereafter it Chall happen, thro' inadvertency or otherwife, that any contraventions or inconveniencies on either fide arife, concerning the obfervation of this treaty, the friendihip and good intelligence fhall not immediately thereupon be broke off, but this treaty fhall fubfift inall its force, and a proper remedy for removing the inconveniencies fhall be procured, as likewife reparation of the contraventions; and if the fubjects of the one or the other be found in fault, they only fhall be feverely punified and chaftifed.
XXXIX. But if it thall appear that a captor made ufe of any kind of torture upon the mafter of the fhip, the Mip's crew, or others who fhall be on board any fhip belonging to the fubjects of the other party; in fuch cafe, not only the thip itfelf, together with the perfons, merchandize, and goods whatfoever, thall be forthwith releafed, without any further delay, and fet entirely free, but alfo fuch as thall be found guilty of fo great a crime, as alfo the acceffaries thereto, fhall fuffer the moft fevere punifhment, fuitable to their crime.

This the queen of Great- Britain and the molt Chritian king do mutually 'engage thall pe done, without any refpect of peifons.

Form of the palfport [fee the article Passiport ] to be defired of and given by the lord high admifral of Great-Britain, \&c. or by the lords coinmifioners for executing the office of high admiral of Great Britain, \&c.' according. to the directions of the zift article of this treaty.

To all to whom thefe prefents fhall come, greeting: We High admiral of Great-Britäin, \&c
[or we commiffioners for executing the office of high-admiral of Great-Britain; \&c.] do make known and teflify, by the fe prefents, that A. B. of C. the ufual place of his dwelling, mafter or commander of the thip called D. appeared before us, and declared by folemn oath [or produced a certificate under the feal of the magiftrate, or of the officers of the cuftoms, of the town and port of E . dated the day of the month of in in the year of our Lord 17 of and concerning the oath made before them.] that the faid fhip and veffel D. burthen tons, whereof he is himfelf at this time mafter, or cornmander, doth really and truly belong to the fubjects of her moft ferene Majefty, our mofl gracious fovereign. And whereas it would be moft acceprable to us that the faid mafter, or commander, fhould be affifted in the affairs wherein he is juftly and honeftly employed, we defire you, and all and every of you, that wherefoever the faid matter, or commander, thall bring his fhip, and the goods on board thereof, you would cayfe him to be kindly received, to be civilly treated, and, paying the lawful and accuftomed duties, and other things, to be admitted to enter, to remain in, to depart out of your ports, rivers, and dominions, enjoy all manner of right, and all kind of navigation, traffic, and commerce, in all places where he fhall think proper and convenient; for which we flatlalways be moft willing and ready to make returns to you in a grateful manner. In witnefs and confirmation whereof we have figned thefe prefents, and caufed our feal to be put thereunto.

XL. The prefent treaty thall be ratified by the queen of Great-Britain andothe moft Chrifian king, and the ratifications thereof fhall be duly exchanged at Utrecht, within four weeks, or fooner, if poffible.
In witnefs whereof, \&c.
Be it known unto all men, That whereas in the gth article of the treaty of commerce, concluded this day between the moft ferene queen of Great-Britain, and the moft ferene the moft Chriftian king, by their Majefties ambafladors extraordinary and plenipotentiaries, mention is made of fome heads of matters, which being propofed on the part of Great-Britain, have not as yet been mutually adjufted; and therefore it was thought fit to refer them to be difcuffed and determined by commiffioners: we, therefore, the underwritten ambaffadors, that it may certainly appear what are thofe heads of matters which are to be referred to commiffioners, have refolved to give a particular defcription of them in this writing, declaring that they are the fame, and no other than what follow:
I. No manufacture of either kingdom, and the dominions belonging thereunto, fhall hereafter be fubject to be infpected and confifcated, under any pretence of fraud or defect in making or working them, or becaufe of any other imperfection therein, but abfolute freedom fhall be allowed to the buyer and feller, to bargain and agree for the fame, as they thall feegood, any law, ftatute, edict; arreft, privilege, grant, or cuftom, to the contrary notwithftanding.
II. And forafmuch as a certain ufage, not confirmed by any law, has obtained in Feveral towns of Great-Britain and France, that is to fay, that every one, for coming in and going out, fhall pay a kind of tax, called in Englifh Head. Money, and in French Du Chef, it is concluded that neither the fame, nor any other duty on that account, thall any more be exacted.
III. And the Britifh merchants fhall not hereafter be forbidden to fell tobacco to any buyer whom they pleafe; for which purpofe, the letting out the duties on the faid tobacco to farmers, which has been hitherto practifed, fhall ceafe, neither fhall fuch farming be ufed again hereafter.
IV. The following cafe only being excepted, that is to fay, where Britilh fhips fhall take up merchandizes in one port, and carry them to another port of France, in which cafe, and in no ozher, the Britifh fubjects fhall be obliged to pay the duties abrogated and abolinhed by this article, only in proportion to the goods which they take in, and not accordng to the bulk of the Chip.
V. Whereas feveral kinds of goods contained in cafks, chefts, or other cafes, for which the duties are paid by weight, will be exported from, and imported into France, by Britioh fubjects; it is therefore agreed, that, in fuch cafe, the aforefaid duties fhall be payable only according to the weight of the goods themfelves, but the weight of the calks, chefts, and other cafes whatever, fhall be deducted in fuch manner and proportion as has been hitherto ufed in England, and is ftill practifed.
VI. It is further agreed, That if any miftake or error fhall, on either fide, be committed by any mafter of a mip, his interpreter or factor, or by others employed by him, in making the entry, or declaration, of the goods on board his fhip, for fuch defect, if fo be fome fraud does not evidently appear, neither the fhip, nor the lading thereof, fhall be fubject to be confifcated; but it thall be free for the proprietors to take back again fuch goods as were omitted in the entry, or declaration, of the mafter of the fhip, paying only the accuftomed dutiss, according to the rates fettled in the books; neither fhall the merchants, or the mafter of the Thip, lofe the faid goods, or fuffer any other punilhment, if fo be the faid goods fo omitted were not brought on fhore before the declaration made, and the cuftom paid for the fame.
VII. And whereas the quality of the hip, mafter, and goods, will fufficiently appear from fuch paffports and certificates, it fhall not be lawful for the commanders of men of war to exact any other verification, under any tifle whatfoever; but i any merchant-fhip thall want fuch paffports, or certificates, then it may be examined by a proper judge, but in fuch manner, as if it fhall be found, from other proofs and documents, VOL. II.
hat it truly belongs to the fubjects of either of the confederates, and contains no prohibited goods, defigned to be carried to the enemy of the other, it fhall not be liable to confifcation, but fhall be releafed, together with its cargo, in order to proceed on its voyage; fince it may often happen, hat fuch papers could not come to the thip when the was fet ting fail from any port, or that they have been loft by fome chance or other, or have been taken away from the fhip. And if, befides the paffports and certificates, made according to the form of this treaty, other paffports and certificates happen o be found in the fhip, in another form, and perbaps according to the prefcription of treaties made with others, no preence inall be taken from thence of detaining, or in any wife nolefting, either the ihip, or men, or goods. If the mafter of the fhip named in the pafferts be removed by death, or any other caufe, and another be put in his place, the paffiports hall neverthelefs retain their force, and the fhip, and goods laden thereon, thall be fecure.
VIII. It is farther provided on both fides, and fhall be taken for a general rule, that a fhip and goods, althougb they have remained in the enemy's power for four-and-twenty hours, fhall not therefore be efteemed as capture, and be immediately made prize, but, if, on other accounts, they ought to be reflored, they may be reclaimed, and fhall be given again to the proprietors.
IX. It hall be free both for their royal Majefties, for the advantage of their fubjects trading to the kiagdoms and dominions of the other, to conftitute-national confuls, of theit own fubjects, who fhall enjoy that right and liberty which belongs to them by reafon of the exercife of their function ; but as to the places where fuch confuls are to be appointed, both fides fhall afterwards agree between themfelves.

In witnefs whereof, \&c.
Be it known to all men, That whereas in the 9th article of the treaty of navigation and commerce, concluded the 3 Ift day of March, 1713 , between the moft ferene queen of Great-Britain and she moft ferene the moft Chriftian king, by the ambalfadors extraordinary, and plenipotentiaries of their Majefties, certain merchandizes, namely, woollen manufactures, fugars, falt-fifh, and what is produced from whales, are excepted, in general words, from the rule of the tarift made the 18th day of the month of September, in the year 1664, in order to be afterwards referred to the difcuffion of commiffaries : to prevent, therefore, all miftakes and ambiguity, which might, perbaps, arife from fuch general terms, and to make it more evidently appear, what particular forts of goods are to come under the confideration of the aforefaid commiflaries, we the under-written ambaffadors extraordinary and plenipotentiaries, have declared by thefe prefents, and do declare, that the exception of the above-mentioned merchandizes is to be underftood in the manner following:
I. Whalebone cut and prepared, fins and oils of whales, thall pay, at all places of importation in the kingdom, the duties appointed by the tariff of the 7 th of December 1699.
II. Cloths, ratines, and ferges, Thall be likewife fubject to the fame duties of the tariff of the 7 th of December 1699; and in order to facilitate the trade thereof, it thall be allowed to import them by St Valery upon the Somme, by Rouen, and by Bourdeaux, where thefe goods shall be fubject to vifitation in the fame manner, as thofe which are made in the kingdom.
III. Salt fifh in barrels only are to be imported into the kingdom, and at all places of entrance in the kingdom, countrtes, and territories, under the dominion of the king, even at all free ports, the duties of landing and of confumption Ihall be paid, which were appointed before the tariff of 1664 and befides 40 livres per laft, confifing of 12 barrels, weigh ing each 300 pounds, for duty of entry; which entry Hhal not be permitted but by St Valery upon the Somme, Rouen Nantz, Libourne, and Bourdeaux, and fhall remain prohibited at all other harbours or ports, as well in the ocean as in the Mediterranean.
IV. Refined fugar, in loaf or in powder, white and brown fugar-candy, fhall pay the duties appointed by the tariff of 1699.

In confirmation of which, \&c.
At Utrecht, the 28th day of April, in the year 1713.
A Treaty of Nayigation and Commerce between
Great-Britain and Spain, concluded at Utrecht $\frac{\text { Nov. 28, }}{\text { Deceni. } 9,}$ 1713.
I. The rreaty of peace, commerce, and alliance, between the crowns of Great-Britain and Spain, concluded at Madrid on the $\frac{4}{2}$ th ch day of May 1667 [fee the article Spain], is ratified and confirmed by this prefent treaty.
Their royal Majefties mutually promife, that they will faithfully perform and fulfil all and fingular the articles of the faid treaty, and whatever privileges, conceffons, grants, or ad vantages of any kind are therein, or in the cedulas annexed to it, allowed to their refpective fubjects; and that they will take care that they fhall be at all times performed and fulfilled 10 S
by their minifters, officers, and fubjects; that the fubjects of the two crowns may enjoy the full effect thereof (except in thofe things concerning which it is otherwife ordained, to mutual fatisfaction, in the following articles). Moreover, the treaty of 1670 , between the crowns of Great-Britain and Spain [fee the article Spanish America], for removing differences, reftraining depredations; and eftablifhing peace between the fald crowns, is hereby confirmed and ratified, without prejudice, however, to any contract, or privilege, or licence granted by his Catholic Majefty to the queen of Great-Britain, or her fubjects in the treaty of peace lately concluded, or in the Assiento Cont.r act. [ee the artioles Assiento Contract and South Sea Company]; and allo without prejudice to any liberty of power heretofore enjoyed by the fubjects of Great-Britain, either by righr, fufferance, or indulgence.
II. No-higher duties or cuftoms of any kind, on godeds imported or exported, fhall be paid by the fubjects of their royal Majetties refpectively; trading to the dominions of heir Majefties, than are exacted from, and paid by, the fubjects of the moot favoured nation; and if any foreign nation thall hereafter obtan from eitier fide, a diminution of the cuftoms, of any other privileges, the fame fhallimemprocatly be granted to the fubjects of each crown. And as it has been arreed as above, touching the rates of duties; fo: it is ordained as a general rule between their Majeftics, That in all lands and places fubject to the command of their refpective Majefties, all and every one of their fubjects shall ufe and enjoy at leaft the fame privileges, liberties, and immunities, concerning all impolts or duties whatfoever, refoecting perfons, wares, merchandize, thips, freighting, mainers, navigation, and commerce, and enjoy the fame favour in all things, whether refpecting trade, of any other right whatfoever, which is now, or hall be hereafter, enjoyed by the mont favoured nation; as is 'fet forth more at large in the 38 th article of the treaty of 1667 , ipecially inferted in the toregoing article.
III. The third, fifth, and eighth articles, were not ratified as they food at firft in the treaty, but a new draught of them, which was annexed, and filed the explanatary articles. We fhall therefore give our readers only the latter, at the end of this treaty.
IV. The Catholic king confents and promifes, that the fubjects of Great-Britain refiding in the provinces of Bitcay and Guipufcoa, fhall for the'future be allowed to hire houfes or warehoufes for keeping their goods in, and his Majefty will take care, by repeating his orders for that purpofe, that they thall be at liberty to do this in the fame manner, and with the fame privileges, which are enjoyed by the faid Britifh fubjects in Andalufia, or any other-ports or places in Spain, by virtue of the aforefaid treaty of 1667 , or of any edict or ordinance iffued by their Catholic Majefties. The fubjects of Spain fhall enjoy the fame liberty in any ports or places of Great-Britain, with all the privileges belonging to them by the aforefaid treaty.
V. See the explanation at the end of this treaty.
VI. And as the refpective fubjects of their Majefties ought to enjoy an entire, fafe, and unmolefted ufe and liberty of navigation and commerce, whilft the peace and friendfhip entered into by their Majefties and their crowns fhall fubfift, it is provided by their Majelties, that for any little difference that may arife, their faid fubjects fhall not be deprived of this fecurity, but, on the contrary, they fhall enjoy all the benefits of peace until war be declared between the two crowns.
It is further agreed, That if a war fhould break out and be declared between their Majefties and their kingdoms (which God prevent), in that cafe, agreeable to the 36 th article of the above-mentioned treaty of 1667 , the term of fix months after the declaration of fuch rupture, flall be allowed to the fubjects of each party refiding in the dominions of the other, in which they may retire, with their families, goods, merchandizes, hips, and effects, and carry them by fea or land whither they fall pleafe, paying the due and ufual cuftoms: they thall alfo be permitted to fell and alienate their moveable and immoveable effects, and carry away the price thereof freely and without moleftation : nor thall their goodes, wealth, merchandize, and effects, much lefs their perfons, be in the mean time detained or molefted by any feizare or arreft. But rather in the mean while the fubjects on each fide fhall have and enioy good and fpeedy juftice, fo that during the faid face of fix months, they may be able to recover their goods and effects intrufted either to the public, or to pmivate perfons.
VII. It is likewife agreed, that all loffes which the fubjects of either crown fhall duly prove that they fuftained in the beginning of the late war (contrary to the tenor of the 36th article of the above-mentioned article of 1667 ), whether in moveable or immoveable goods, thall be reciprocally made good without delay to them, or to their lawfal attornies, heirs, or adminiftrators; and reftitution fhall be made of fuch goods as were confifcated and remain, whether they confift of lands, houfes, inheritances, or of whatfoever fort they be; and for fuch as cannot be recovered, a juft and
lawful price thall bs paid : and it is agreed and concluded by their faid Majefties, that the faid paymetts (the claims being.fully juftified is aforefaid) Chall be farithfully made and performed by their refpective treafurets.
VIII. See at the end of this treaty.
IX. His Catholic Majefty promifes, that thofe merchandizes which are not particularly fpecified in the table of rates, which is to be drawn up agreeable to the 3 d article of this treaty, fhall be charged with the fame and no higher duties, in proportion to the!r value, than the merchandizes men, tionted; in the faid table of rates are charged with. And if any difurence fhould acife between-the farmers or the officers of the cufom, boufe and the merchants, concerning the value of any goods, it Thall be in the option of themerchant to fell fuch merchandizes to the farmer or officer at the price fet upon them by the farmer; which price thail be immediately paid in ready money, the duty only being deducted. The merchant may ikewife, kepping the reftiof his merchandizes, give a part of them to the farmer or officer, at the rate fet upon them, as hath been mentioned, inftead of the duty.
X. It is agreed, That in cafe any merchandizes chall be brought by the fubjects of Great-Britain from the coaft of Africa into'Spain, and be atmitted to pay the duties, thefe duties being duly paid; the merchandizes fhall not be chatged 'afterwards, either by the captains-general of the coafts or commanders of the ports, or any other perfon, under what name or tille foever, with any further duty, excepting what is payable in general for all merchandizes of the fame kind at the time of fale.
XI. The mafters of merchant-fhips entering into any port of Spain, fhall be obliged; within 24 hours aftertheir arrival, to exhibit two declarations or inventories of their cargoes, or of that part thereof which they 'are' to unlade there, viz, one to the farmer or officcr of the cuftoms,' and another to the judges of contraband: neither fhall they open their hatches, till either the fearchers, come on board, or leave be given them to do it by the farmers of the cuitom-houres.: No merchandizes fhall be unladed with any other view than that of being immediately carried to the cuftom thoufes, agreeable to a permuffion, which fhall be given in writing to that end. It fhall not be lawful, however, for the judges of contraband or other officers of the cuftoms, under any pretext whatfoever, to open any bags, chefts, cafks, or orher package of any goods whatfoever belonging to the Britifh lubjects, whilit they are carrying to the cuftom-houfe, and before they are brought thither, nor unjefs the owner or his factor be prefent, who may pay the duties, and take the goods into 'bis own cuftody. But the judges of contraband, or their deputics, may be prefent when the goods are taken out of the fhip', and when they are declared and opened in the cuftomhoufe: and if there be a fufpicion of fraud, as for inftance, that it is intended to fhew one fpecies of goods for another, it fhall be lawful for him to open all the bags, chefts, or cafks, provided it be done in the cuftom-houfe and no other place, and in prefence of the merchant or his factor, and not otherwife: but when the goods have been hhewn and carried out of the cuftom-houre, and the chefts, cafks, or other package marked with the fign or feal of the proper officer, no judge of coneraband, or other officer, fhall prefume to open them again, or to hinder them from being carried to the merchant's houfe. Neither fhall it be lawful for them, under any pretext whatfoever, to hinder the removal of the faid goods from one houfe or warehoufe to another, within the walls or compaifs of the faid city or place, provided that it be done between the hours of eight in the morning and five in the evening, and previous notice be given to the farmers of the right de alcavalos and cientos, with what intent they are moved ; and if it 'be done in order to their being fold, thofe duties, if not paid before, may be paid there, or at the place of fale ; or, if not to be fold, that the ufual certificate in writing may be given to the merchant. As to the reff, it fhall be lawful to carry merchandizes by land or fea, from any port or place within the king of Spain's dominions to any ether port or place, under the conditions expreffed in the fifth article of this treaty.
XII. The merchandizes imported into, or exported from, the Canary Iflands by Britifh fubjects, fhall be charged with no higher duties than they paid there in the reign of the late king Charles II. or fhall be impofed on them by the new book of rates.
XIII. The fubjects of each of their Majefties, who are in debt to the fubjects of the other, whether the debts were contracted before the beginning of the late war, or within fix months after it began, or during the war under the protection of letters of fafe-conduct [fee the article Passport]; or, laftly, after a truce was made between the two crowns, fhall be bound and obliged faithfully to pay them, in the fame manner as if a war had never broke out between the two crowns; nor thall they be fuffered to raife any exceptions to the juft demands of their creditors on pretence of the war.
XIV. His Catholic Majefty gives the fubjects of Great-Britain leave to fettle and refide in the town called St Andero, on the conditions expreffed in the ninth and thirtieth articles of the treaty of 1667 . See the article Spain.

XV. Asto the judge confer vator; andothers'to be fublituted Wy Whin, 'xfe the privilege of thaving one 'be granted 'to 'anyl other foreign nation, the fatme 'fhall alfo be granted to the fubjects of Great Britain: In the mean time, and 'till fomethitic certäin be determined in this matter, his Catholic Ma fify woing give exprefs orders to all and every judge of his kingdom, 'afid'to all'other perfons what foever to whom the ad miniftitation or execution of fuftice is intrufted, 'and entjoin them, thder the fevereft penatite, to do jultice, and caule
It to be executed, without delay, partiality, or affection, in all caules wherein the fubjects of Grear-Britain are concerned.
The Cathdic king confents, that appeals from fentences
 bafote the tribonal of the codinell of war at Naarid, and no where 'effe.
XVI. If this treaty, or any article of it, be violated by any Horthitititer, or other fubject, of her Britannic Majefty, or of ${ }^{1}$ his Catholic Majefy, he Thall'be anfwerable for an the da ntage thitereby oceationed; and if he be in puble office, he thall, beffots haking fatisfaction to the perfor'injured, as aftreferify be deprived of tis wiffice:
XVIL. The tubjeets "of Great-Britain, having brought by Fea, from fothe ther ports'of Spaih, wine, brandy, dil, foap, dried grapes, or other commodities, it that be lawful for them, oh froducing certifeates that the daffes were paid a the pface whence they fet fail, to lade the fame on board theit fhips'lyitrg at Cadiz; br there to remove fhem from one Thip to another, with confent of the intendants of the tharine, and in prefence of thetr, or of their deptuties, if they chufe to 'be there', to prithent' any fraud, at le Yeafonable time to be appointed by the intendants within 24 hedrs; or to carry them adoxy from therre, without beitrg liable to pay the dufy called hondeaxe, or any other duty bo finport or export.
This treaty finll be ratified by the moft ferene queen of Gyeat-Britain atid by the moot ferene Catholic king, and the ratifications thereof exchanged at Utrecht within two morths, or fooner, if it can be done.

## In witneds whereof, \&c.

We having feen and confidered the above-witten treaty, have approved, ratified, and confirmed the lame, as we do by thefe prefents, for ourfelves; our heirs and fucceffors, approve, watify and confirm it, excepting only three articles thereof, viz. the third, fifth, and eighth, oopclutled at Utrecht, which are to be obferved and undentood in the manner and form following.
III. © Whéreas by the late treaty of peace it is agreed and eftablifhed as a bafis and foundation, that the fubjects of Great-Btitain, in what regards' commerce, fhall enjoy the rame liberties and privileges, which they enjoyed in the reign of king Charles 11 . in all parts of the king of Spain's dominions; which rule is what ts alfo to ferve for a báfis and fóundation of the prefent treaty of conimerce, and is to be underHood reciprocally in favour of fhe king of Spain's fútjects trading in the dominions of Great-Bittain: and as nothing can contribute more to eftablith the cominerce to a mutual benefit, than a fixed, clear, and eafy rule in paying the duties, elpecially on a moderate footing, and proportionable to the value of the merchandize, in order to prevent the frauds that otherwife would be practifed to the prejudice of the revenue of either crown, which has beĕn often experienced in Spain, where the eftablifhed dưties by the antient books of rates are exceflive; in conifederation whereof hit Catholic Majefty, bing deffrous to avoid the like confequences, and to favour, augment, and facilitate, in all that depends upon him, the commerce, in as ample a manner as ber brítannic Majefty defres, hath confented on his part to fuppiefs and make void the different duties payable upon tmpbrtation and exportation, contained in che antient books of rates, as alfo thofe that have been impored fince, under any name or prerence whatfoever, and content himfelf with obe only duty to be paid upof all goods and merchandize, after the rate of 10 per cent. of their value; and the like duty upoil all goods and merchlandizé, whith fhall-be exported out of his dominions, whether the value be made by weight, meature", piece, or ad valurem. And the fame duty hall be coflected in all the ports of entry in Spain, comprehending thofe of Arra gon, Valencia, and Catalonid, excepting out of ehis geñeral rule, Bifcaya and Guipuifoa; whofe dutiés of importation and exportation are to remain as they were in the time of Charles II. And that the faid to per cent: being once paid, the farmers or officets of the cuftom-houles where thefe goods thall be entered, (hall be obliged to mark the fame with the proper feals and marks of their office, and allo give the requifite dilpatches; by virtue of which the proprietors of the goods may Ireely tranfport them to all the other parts of Spain, where they plcale, without being liable to pay any other du-ty, impofition, or charges, to the ute or benefit of his Catholic Majelty, in any ports or parts of Spalif whattoverer, in reipect of tranfporting the faid merchandize, over and above what they have paid in puifuanice of this niew arancel, provided in default of which they thall be efteemed to be fraudu-

Tenily tranfported. But it is to be underfood, that this is rot to extend to the alcavalos, cientos, and millones, in relation to which provifion is made in the fifth and eighth articles of this treaty
And forafmuch as the ambuffador of England hatth reprefented that, to avoid alldifferences and difputes top the future, it abely neceftary'to eftablifh a certain valuation or rate of the feveral forts of merchandize, by which the faid duty of 10 per cent. Thatlalways be paid, and not altered, either by means of the augmentation or diminution of the price of the faid merchandize, mbich may hereafter happen in the commerce, in any time, or in any part of the kingdom: it is agreed by their Catholic and Britannic Majenties by their ambafladors, that ing the term of three months from the ratif cation of this treaty or fooner, if poffible, commiffaries, named by both their Majefties in due form, fball neet at $\mathrm{Ma}_{2}$ drid or in Cadiz, who, without lofs of time, thall proceed to the forming a new book of rates, in fuch a manner as to fix and timit what fhall be paid for the future on all forts of merchandize, as well upôn importation as exportation; and fo a that all the different duties which were payable, either before or in the time of Charles II. or fince, unider thatfoever name or pretence, or collected in different cuftom-houfes or offices, hall be comprehended in this frly duty, payable in on SUM, whether upon importation or exportation, in all the peris of Spain, and fhall extend to the kingdoms of Arra gón, Valericia, and principality of Catalonia, and their dependencies, excepting only the Frovinces of Guipufcoa and Bifcaya, of which niention has been already made. And Whereas great intauces thave been made by the ambalfador of Great-Britain, that directions begiven to the faid commif fanies'that they take care, and above all do obferve as a fixed rule, that this diyty be laid equally and generally in all the ports and cuitoureboufes of Spain, :upori the impontation and exportation of all goods and mérctiondize, after the rate of io per cent. of the value, which fuchigoods and merchandize bear in the courie of trade between the merchants of Cadiz and port: St Mary's, to which the ambaffadors of Spain bave comfented; , always, provided that the" goods and commodities which ीall be imported into the kingdom of Spain, by the ports of. Bifcay and Guipufcoa, and afterwards tranfported into the other provirces depending on the kingdoms of Cantille:and Arragon, thall be obliged to pay, at the firft cuftom-houfe of entry into the fald kingdoms, the duties which fhall be eftablifhed in this new book of rates,
V. To prevent the abufes that may be committed in collecting the duties called alcavalos and cientos, his Catholic Majefty conrents, that the fubjects of her Britannic Majefty thall not be obliged to pay thefe duties, during fuch time as they think fit to let their merchandize remain in the magazines of the cuftom-houfes:appointed for that purpofe; but when they fhall think fit to take out the faid goods- either to be tranfported fartier into the country; to be fold in the Yame place, or carried to their own houles, it Mall be permitted them fo to do, upon giving bond with fufficient fecurity to pay the aid duties of alcavalos and cientos for the firt fale, in two months after the date of his bond; upon which he fhall have receipt given him for the faid duties, and the goods thall be narked with the proper mark and fal of the farmers of the faid alcavalos and cientos where fuch bond and fecurity fhall be given for the firft fale ; after which the faid merchandize may be tranfported and fold by wholefale, iṇ any port or place belonging to the king of Spain in Europe; and no obftruction or binderance fhall be made upon account of the faid duties nor the proprietors liable to pay a fecond time in refpect of the firft fale, provided thofe who carry the faid merchandizes produce the receipts and marks of the farmer or propet officer concerned in the collection of the fe duties, or making fuffcient proof of theit hot being fold before. But if, on the contrary, any merchant do fell his goods by retale, he fhall be obliged to pay the faid duties of aitcavalos and cientos a fecond time, under the pains eftablifhed by the laws. And bis Catholic Majefty declares, that if any officer of the alcavalos and cientos thall exact a fecond time the faid duties on the fame merchandize when the faid receipts and marks have beeh produced, or fhall otftruct their paifage or tranfportation, or occafion the leaft impedimert, fuch officer hall be flied $200^{\circ} 0^{\circ}$ crowns to the benefit of his Majefty's revenues: aind the officers of the cuftom-hcufe thall not demand or take for making fuch receipts or certificates more than 15 real vellon [ree the article Spain], unlefs it be otherwife fettled in the new book of rates.
VIII. His Catholic Majelty conifents, that the duties commonly called millones, which are payable upon firh and other forts of domeftic provifions, fhall not be demanded in the firft ports or cuftom-houfes of entry in Spain, during fuch time as the proprietors will let them remain in the warehoufes appointed for that purpofe. But in cafe the owners thall defire to, take them out, either to fend into the country, fell them in the place, or carry them to their own houfes, they are then to give bond, with good fecurity to pay the raid duty of millones, in the two months after date of the haid bond, upon which the neceffary difpatches are to be given them. And the faid merchandize fhall be marked with the feals or mark
of the farmers of the millones, where the faid duties were fecured; after which the faid goods may be tranfported to, and fold in, the places where they are to be confumed, without paying any duties of millones. His Catholic Majefty alfo declares, that if after the receipts are produced, any officer, belonging to the farmers of the millones, fhould exact a fecond time the fame duties on the fame goods, or fhould oppofe their paflage, tranfport, or fale, or occafion the leaft impediment, the faid officer thall be fined 2000 crowns for the benefit of his Majefty's revenues.'
Anne, by the grace of God, queen of Great-Britain, France, and Ireland, defender of the faith, $8 x c$. To all and fingular to whom thefe prefents fhall come, greeting. Whereas the right reverend father in God, our right trufty and well-beloved counfellor, John birhop of Brittol, our ambaffador extraordinary and plenipotentiary, dean of Windfor, and regifter of our moft noble order bf the garter, did on our part, together with the plenipotentiaries of the moft ferene Catholic king, conclude and fign at Utrecht, on $\frac{\text { Nov. 28, }}{\text { Decem. }}$ 1713 , a treaty of commerce between the crowns of GreatBritain and Spain, and at the fame time a feparate article was concluded, made between the faid plenipotentiaries, who were feverally furnifhed with fufficient authorities, and is as follows:

Separate ARTICLE.

- By the prefent feparate article, which fhall be altogether of the fame validity, as if it was inferted word for word in the treaty of commerce, this day concluded between their royal Majefties of Great-Britain and Spain, and fhall for that end be ratified as well as the faid treaty; his Catholic Majefty confents that it thall at all times hereafter be lawful for the Britilh fubjects, who fhall live in the Canary IIlands for the fake of their trade, to nominate fome one perfon being a fubject of Spain, who fhall execute the office of judge-coniervator there, and fhall take cognizance, in the firft inftance, of all caufes relating to the commerce of the Britifh fubjects; and his royal Majefty promifes that he will grant commiffions to fuch judge-confervator fo named, together with the fame authority and all the privileges which the judges-confervators have formerly enjoyed in Andalufia. And if the Britifh fubjects thall defire to have more judges of that fort there, or to change thofe that are appointed every three years, it thall be aliowed and granted them. His Catholic Majefty confents likewife, that appeals from the fentences of the faid judgeconfervator, fhall be brought before the tribunal of the council of War at Madrid, and no where elfe. In witnefs whereof, we the underwritten ambaffadors extraordinary and plenipotentiaries of her facred Majefty of GreatBritain, and of his facred Catholic Majefty, have figned and fealed thefe prefents at Utrecht, $\frac{\text { Nov. 28. }}{\text { Decem, } 9 .}$ in the year of our Lord 1713.

> Joh. Bristol. (L. S.)
> Duc. de Ossuna. (L. S.)

El Marque de Monteleon. (L.S.)
We having feen and confidered this feparate article, tave approved, ratified, and confirmed, as we do by thefe prefents approve, ratify, and confirm the fame, promifing and engaging ourroyal word that we will faithfully and inviolably keep all and fingular the things therein contained, and that we will not fuffer any thing to be done contrary thereunto. For the greater teltimony and validity whereof, we have figned this inftrument with our royal hand, and caufed our great-feal of Great-Britain to be affixed thereunto. Given at our cafte at Windfor, the 7 th day of February, $17 \frac{13}{4}$, in the 12th year of our reign.

The Measures taken by our fovereign the late king George I. to remedy fome of the defects of the treaty of Utrecht, taken notice of under our articles Revenue and Taxes.

Treaty of Commerce between Great-Britain and Spain, concluded at Madrid the 14th of December, 1715.
Whereas notwithftanding the treaties of peace and commerce, lately concluded at Utrecht the $13^{\text {th }}$ of July, and the $9^{\text {th }}$ of December 1713, between his Catholic Majefty, and her late Majelty the queen of Great-Britain, of glorious memory, there remained ftill fome differences about trade and the courfe thereof; and his Catholic Majefty and the king of Great Britain being inclined to maintain and cultivate a firm and inviolable peace and friendfhip, in order to attend to this good end, they have by their two minifters under written, mutually and duly qualified, caufed the following articles to be concluded and figned.

1. The Br:tih fubjects thall not be obliged to pay higher or other duties, for goods coming in, or going out of the feveral ports of his Catholic Majefty than thofe they paid for the fame goods in king Charles the IId's time, fettled by fchedulas and ordinances of the faid king, or his predeceffors : and although the indulto, commonly called pie del fardo, be not grounded on any royal ordinance, neverthelefs his Catholic Majefty declares, wills, and ordains, that it be obferved,
now and hereafter, as an inviolable law; which duties fhai be exacted and raifed, now and for the future, with the fame advantages and favours to the faid fubjects.
II. His Majefty confirms the treaty made by the Britifh fubjects, with the magiftrates of St Andero in the year 1700.
III. His Catholic Majelty permits the faid fubjects to gather falt in the ifle of Tortugas, they having enjoyed this liberty in the reign of king Charles II. without interruption.
IV. The faid fubjects fhall pay no where any higher or other duties, than thofe paid by the fubjects of his Catholic Majefty in the fame places.
V. The faid fubjects fhall enjoy all the rights, privileges, franchifes, exemptions, and immunities whatfoever, which they enjoyed before the latt war, by virtue of the royal fchedulas or ordinances, and by the articles of the treaty of peace and commerce made at Madrid in 1667 [fee the article SPAIN], which is hereby fully confirmed; and the faid fub jects thall be ufed in Spain in the fame manner as in the mof favoured nation, and confequently all nations fhall pay the fame duties on wool and other merchandizes, coming in and going out to fea. And all the rights, privileges, franchifes, exemptions, and immunities, that thall be granted, and allowed to the faid fubjects, the like Mall be granted, obferved, and permitted to the fubjects of Spain, in the kingdoms of his Majefty the king of Great-Britain.
VI. And, as innovations may have been made in trade, his Catholic Majefty promifes on his part to ufe his utmoft endeavours to abolifh them, and for the future to caufe them to be avoided: in like manner the king of Great-Britain promifes to ufe all poffible endeavours to abolifh all innovations on his part, and for the future to caufe them by all means to be avoided.
VII. The treaty of commerce made at Utrecht, the gth of December, 1713 , fhall continue in force, except the articles that fhall be found contrary to what is this day concluded and figned, which are hereby abolifhed and rendered of no force, and efpecially all the three articles, commonly called explanatory. And thefe prefents thall be approved, ratified, and exchanged on each fide, within the face of fix weeks, or fooner, if poffible. In witnefs whereof, and by virtue of our full powers, we have figned thefe prefents at Madrid, the Ifth of December, in the year 1715.
M. de Bedmar. (L. S.) George Bubb. (L, S.)

Treaty of Commerce betwixt Anne queen of Great Britain and Peter king of Portugal, concluded at Lifbon the 27 th of December, 1703.
Whereas the league and ftrict friendfhip, which is between the moft ferene and moft potent princefs Anne queen of Great-Britain, and the moft ferene and moft potent Peter king of Portugal, requires that the commerce of both the Britifh and the Portugal nations thould be promoted as much as poffible; and her facred royal Majefty of Great-Britain, hath fignified to his facred royal Majefty of Portugal, by the moft excellent John Methuen, Efq; member of the Englifh parliament, and ambaffador extraordinary in Portugal, that it would be very acceptable to her, if the woollen cloths, and the reft of the woollen manufactures of Britain, might be admitted into Portugal, the prohibition of them being taken off: that this matter may be treated and tranfacted, they have given their full powers and commands; that is to lay, her facred Majefty of Great-Britain to the abovefaid moft excellent John Methuen, and his facred Majefty of Portugal to the moft excellent Don Emanuel Telles Silvius, marquis of Alegrete, \&c. one of the three directors of the treafury, and one of the firft gentlemen of the bedchamber, and counfellor of fate to his facred royal Portugueze Majefty: who, by virtue of the full power to them refpectively granted, having maturely and diligently conlidered the matter, have agreed upon the following articles.
I. His facred royal Majefty of Portugal promifes, both in his own name, and that of his fucceffors, to admit, for ever hereafter, into Portugal, the woollen cloths, and the reft of woollen manufactures of the Britons, as was accuftomed till they were prohibited by the laws, neverthelefs upon this condition.
II. That is to fay, that her facred royal Majefty of GreatBritain fhall, in her own name, and that of her fucceffors, be obliged for ever hereafter to admit the wines of the growth of Portugal into Britain; fo that at no time, whether there Thall be peace or war between the kingdoms of Great-Britain and France, any thing more fhall be demanded for thefe wines by the name of cuftom or duty, or by what foever other title, directly or indirectly, whether they fhall be imported into Great-Britain in pipes or hogfteads, or orher caks, than what fhall be demanded from the like quantity or mealure of French wine, deducting or abating a third part of the cultom or duty. But if at any time this deduction or abatement of cuftoms, which is to be made as aforefaid, fhall in any manner be attempted and prejudiced, it thall be juft and lawful for his facred royal Majefty of Portugal, again to prohibit the woollen cloths, and the reft of the Britifh woollen manufactures.
III. The
III. The moft excellent lords the plenipotentiarics promife and take upon themfelves, that their above-named matters Chall ratify this treaty, and within the fpace of two months the ratification fhall be exchanged.
For the faith and teftimony of all which things, I the plenipotentiary of her facred royal Majefty of Great-Britain bave confirmed this treaty, by the fubfcription of my hand, and by the feal of my coat of arms. And the moft excellent lord the plenipotentiary of his facred royal Majefty of Portugal, for avoiding the controverfy about precedence between the two crowns of Britain and Portugal, hath fubferibed another inftrument of the fame tenor, clanging only what ought to be changed for that reafon.

Given at Lifbon; the 27th of the month of Decem. 1703. John Methuen. (L.S.)
A. Declaration and Engagement concerning the rights and privileges of the Britifh merchants in the kingdom of Sicily, made at Utrecht the 8th of March, N. S. $17 \frac{12}{23}$.
Whereas by feveral treaties of peace, alliance, commerce, and navigation, formerly made between the kingdoms of Great-Britain and Spain; and at this time fubffiting, but more particularly by the treaty concluded at Madrid, the $\frac{1}{5} \frac{3}{3} \mathrm{~d}$ of May, in the year 1667 , and the cedulas antiexed thereunto, provifion was made for the freedom, fecurity, and perfect eafe of the commerce of the Britilh fubjects trading in the kingdoms and provinces of Spain; the obfervance and ufage of which treaties have bitherto been received in the kingdom of Sicily, in the fame manner as in any other the dominions of Spain, and have remained there in full force, except fome variations which have been introduced in the courfe of time; for the rectifying whereof, according to the rule of thofe treaties, Great-Britain has juftly infifted hitherto.
Wherefore, on occafion of transferring the kingdom of Sicily to his royal highnefs the duke of Savoy, hier facred Majefty of Great-Britain, being watchful to preferve the rights and privileges of her fubjects trading in the faid kingdom, and being likewife willing to preferve to the Sicilians the privileges they have in Great-Britain, which are fo very dear to the moft ferene the duke of Savoy, hath been gracioufly pleafed to give inftructions to her underwritten minifters plenipotentiaries, to agree with the minifters plenipotentiarics of his royal highnefs of Savoy, about making declarations mutually upon this fubject. In purfuance thereof, the faid minifters plenipotentiaries of his royal highnefs, in the name of their moft ferene mafter, do moft folemnly declare and promife, that during the reign of the aforefaid muft ferene duke in Sicily; as likewife of his heirs and fucceffors, the Britifh inerchants are henceforward to have, and fhall effectually have, ufe, and enjoy, all thofe rights, privileges, liberties, and entire fecurity, as to their perfons, goods, fhips, feamen, trade, and navigation, in the faid kingdom of Sicily; which, by virtue of the treaties made between Great-Britain and Spain, they have hitherto enjoyed, or ought to enjoy; and, to that end that all abufes which deviate from the tenor of the faid treaties thall be forthwith removed, and the rights and privileges acquired to the Britifh fubjects, by virtue of the aforefaid treaties, fhall not on any occalion, or under any pretence, ever be violated or leffened. And if hitherto any more favourable privileges have been granted, or fhall hereafter be granted, to the merchants of any other foreign nation any way relating to the perfons of the traders, their fhips, goods, duties, or the bufinefs of merchandizing, the Britifh merchants hall likewife in all refpects, and in the fulleft manner enjoy the fame.
And in like manner, the minifters plenipotentiaries of GreatBritain do, in the manner of her Majefty, confirm that the Sicilians fhall hereafter enjoy the fame privileges and liberties, which they have hitherto enjoyed, or ought to have enjoyed, as fubjects of the king of Spain, by virtue of the aforefaid treaty of the year 1667 .

In witnefs and confirmation whereof, \&c.
Treaty of Amity, Commerce, and Navigation, between Great-Britain and Ruffia, concluded at St Peterf: burgh, December 2, ${ }^{17} 34$.
I. The peace, friendflip; and good correfpondence, which happily fubfift between their Ruffian and Britannic Majefties, fhall be confirmed and eftabliihed by this treaty, fo as from henceforward there fhall be between the crown of all the Ruffias on one fide, and the crown of Great-Britain on the other, as likewife between the flates, countries, realms, dominions, and territorics, which are under their obedience, a crue, firm, and perfect peace, friendhip, and good underftanding, which fhall endure and be inviolably maintained for ever, as well by fea as by land, and on all frefh waters; and the pecp'e, fubjects, and inbabitants on both fides, of what ever cuncition or degree, fhall behave with entire on a will towards each other, and give each other all poffible
and afiniance, without doing or offering the leaft wrong
$\eta$ ige wnatfower.
. II.
II. There fhall be an entire freedom of navigation and com merce throughout all the dominions of the two contracting parties in Europe, where navigation and commerce are at this time permifted, or fhall be permitted hereafter, by the contracting parties to the fibjects of any other nation. IIl. The fubjects of boib concracting parties may enter af all times into all, the ports or towns of cither of the contracting parties, with, thetr foips; velfels, or carriages, into which the fubjects of any other nation are permitted to enter, to trade or abide there; and the mariners, paltengers, and velfels, whether Ruffian or Englifh, even though there be any fubjects of any other flrange nation amorig the crew; fhall be received and treated in like manner as the moft favouted nation; and the mariners and paffengers hall not be forced to enter into the frrvice of either of the contracting parties; which may have ofcafion for their fervice: And the fubjects of both contracting parties may buy all kind of necefaries which they thall ftand in need of, at the current price ; and repair and refit theit hips, veffels, or carriages, and furnifh themfelves with all manuer of provifions for their fubfiftance and voyage, abide and depart at their pleafure, without moleftacion or impediment, provided they conform themfelves to the laws and ordinances of the, refpective ftates of the faid contracting powers, where they fhall fo arrive or continue. IV. The fuljechs of Great-Britain may bring by fea or by land, into all or any of the dominions of Ruffia, wherein the fubjects of any other nation are permitted to trade, all forts of goods and mcrchandizes, whereof the importation and trafic are not prohibited; and in like manner the fubjccts of Ruffia may bring into all or ahy of the dominions of Great-Britain, wherein the fubjects of any other nation are allowed to traffic, all forts of merchandizes of the produce and manufacture of the dominions of Ruffia, whereof the importation and traffic are not probibited, and likewife all merchandizes of the produce or manufacture of Afia, provided that it is not actually prohibited by any law now in force in Great-Britain; and they may buy, and export out of the dominions of Great-Britain, all manner of goods and merchandizes, which the fubjects of any other nation may buy therein and export from'thence, and particularly gold and filver, wrought of unwrought, excepting the filver coined money of Grent- Britain.
V. The fubjectis of Great-Britain, if they happen not to have rixdollars to pay therewith the cuftom, and other duties payable on the gouds they enter, may pay in current money; at the rate of 125 copyks for one rixdollar.
VI. Englinh hhips that come to load or unload merchandizes belonging to the fubjects of Great-Britain, fhall be ufed with all kindnefs and difpatch, according to the regulations, without being detained in any manner whatfoever, on pain of the penalties mentioned in the regulations : and fhould the fubjects of Great-Britain enter into any contract with any chancery, or college, for the delivery of any goods or merchandizes, on their giving notice that the fame are ready to be delivered, they fhall be received, agreeable to the time appointed in the contract, after which, the account fhall be adjufted and fettled, in fuch a time as it was agreed upon in the contrak between the chancery, or college, and the Englifh merchants.
VII. It is ftipulated, that in any town or place of Ruffia, where any other nations are admitted, the fubjects of GreatBritain may pay for goods bought the fame currency as has been received for goods fold, undefs there be any particular agreen: nt to the contrary.
VIII: It is flipulated; that the fubjects of Great-Britain may bring to Ruffia all forts of goods or merchandizes, and cariy them through the dominions of Ruffia, the fhorteft or moft convenient way, to Perfia, paying 3 per cent. in rixdollars; ad valorem, for duties and tranfit of the faid goods, and no more, under any pretence whatfoever. Neverthelefs, the Englifh merchants fhall be obliged to agree with the Ruffian fubjects for the carriage charges, either by water or by land; making them a reafonable allowance for the fame; and the moft ftriet orders fhall be given, that the Englifh merchants may meet with all difpatch and eafe upon the road. They likewife may bring from Perfia any goods or merchandizes; and carry them through Ruffia with the fame liberty and eafe, paying only 3 per cent. in rixdollars, ad valorem, for duties and tranfit, reckoning the rixdollars as ufual in the Ruffian cuftoms. And in order to prevent all frauds of Englifh fubjects, and all vexation and delay of Ruffian officers, Englifh merchants fhall declare the goods defigned to be carried through Ruffia, either to or from Perfia, at the firt Ruffian place they arrive, which fhall be received and admitted on the bill of lading, policy, or regifter, according to the value declared, on which a duty of 3 per cent. Thall be pid, without opening or unpacking the merchandizes, any more than is ablolutely neceffary to fatisfy the Ruffian officer that the merchandizes fpecified in the bull of lading, policy, or regifter, and no other, or others, are contained in the bale in which the merchandizes are packed. But in cafe the Ruffian officer have any grounds to fufpect that the goods are not declared to their right value, within 20 per cent. then the Ruffan of ficer, paying to the merchant the value declused, and 20 per Io $\mathbf{T}$

## T R E

TRE
cent. over and above it, without any deduction, may take the goods and difpole thereof. After the Ruffian officer's infpection, which is to be done without vexation or detriment to the goods or package, he fhall fix leaden Teals to the packs, or bales, that contain the goods, number and mark them, and deliver to the merchant a certificate of the payment of the duties; and by virtue of that certificate, feaden feal, mark, and number, they thall have a free paffage through Ruffia, either going to or coming from Perfia, without any obftacle or moleftation: but thould the merchants not carry any or all the bales through Ruffia, according to the declaration, or fhould the feals be taken off, and any goods taken out in Ruffia, if there is any reafon to fufpect fuch a conduct, in oppofition to the true fenfe and meaning of this article, fuch merchant thall be fined, and pay the whole value declared of the pack, or bale, that fhall be wanting, or to which the feal thould not be found.
IX. It fhall be permitted to the fibjects of both contracting parties reciprocally, in all accuftomed places of export, to load on board their own fhips, veffels, or carriages, or any other, all merchandizes bought by them, excepting only fuch as are prohibited to be exported, and freely to end or carry away the fame, provided they have paid the duties, and fuch fhips, veffels, or carriages, have been cleared according to law.
X. The fubjects of either party hall pay no more cuftom or duties, on the importation or exportation of goods, than what the fubjects of any other nation pay for the fame goods. And in order to prevent any frauds in the duties on either fide, the merchandizes which hall be found to have been fmuggled in without paying the duties, faall be confifcated, and no other punifhment inflicted on the merchant of either fide.
XI. The fubjects of either party may freely pafs, repafs, or travel, in all countries which now are, or hereafter thall be at enmity with the other of the faid parties, places actually blocked up or befieged only excepted, provided they do not carry any warlike fores or ammunition to the enemy: as for all other effects, their hips, paffengers and goods fhall be free and unmolefted.
XII. Cannons, mortars, fire-arms, piftols, bombs, granadoes, bullets, balls, fuzees, flints, matches, powder, faltpetre, fulphur, cuiraffes, pikes, fwords, belts, pouches, cartouche-boxes, faddles and bridles, in any quantity beyond what may be neceffary for the fhip's provifion, and may properly appertain to, and be judged neceffary for, every man of the fhip's crew, or for each paffenger, fhall be deemed ammunition of war; and if any fuch be there found, they may feize and confifcate the fame according to law: but neither the veffels, paffengers, or the reft of the goods, fhall be detained for that reafon, or hindered from purfuing their voyage.
XIII. In cafe of a rupture between the contracting parties, (which God forbid) effects or veffels of the fubjects of either party thall not be detained or confifcated, but there fhall be the fpace of one year at leaft allowed them, wherein they may fell, difpofe, carry off, or fend away their effects, and tranfpor their perfons.
XIV. The merchants, mariners, veffels, or effects of either party, fhall not be arrefted or forced into fervice, without their own confent, under any pretence whatfoever; and if any fervant, or mariner, deferts his fervice or veffel, he fhall be delivered up: but nothing contained in this article is to be fo underftood, as to tend to the hinderance or obftruction of the ordinary courfe of juftice on either fide.
XV. In cafe of wreck on any part of the dominions of the contracting parties, all forts of affiftance fhall be given the unfortunate ; no violence fhall be done them, nor fhall their effects, faved either by themfelves or others, or drove afhore, be hidden or detained from them; neither fhall they be hurt, under any pretext whatfoever, but they thall be preferved for them, and they fhall pay what is reafonable, for the affiltance given to their perfons, hips, or effects.
XVI. Englifh merchants may buy, build, or rent houfes, and fell or difpofe of them, either at St Peteriburgh, Mofcow, in the German Slabod, Aftracan, and Archangel; and in thole places their houfes thall be exmpted from lodging foldiers; in all other places they may likewife buy, fell, or rent houfes, but there they fhall be fubject to quartering foldiers, equally as other inhabitants. Ruffian merchants may alfo build, buy, or rent houfes in Great-Britain or Ireland, and fell or difpofe of them, provided they qualify themfelves for that purpofe, in the like manner as the fubjects of any other the moft favoured nations are obliged to do, and they fhall be free of lodging foldiers, and have a free exercife of the Greek religion, either in their houfes, or any place appointed for that purpofe.
XVII, Paffports Thall be given to all Englifh fubjects that might have a mind to retire from Ruffia, two months after having given notice thereof, without obliging them to give any recurity, if in that time there appear no juft caufe to detain them, without obliging them to apply for their paflports any where clfe than to the college of commerce, or any other that may hereafter be fubfticuted for the fame. The fame care and difpatch to depart, the Ruffian fubjects fhall have in
the dominions of Great-Britain, according to what is cuffomary in that country on fuch occafions.
XVIII. Englifh merchonts that take into their fervice, or hire any fervants in Ruffia, with fuch pallports as the court of juftice thinks proper to regifter, fhall afterwards not be abliged to pay for the fame to the mafters of thofe fervants, any more than what the Englifh merchants and the fervants agreed between them; but the Englifh merchants fhall not keep the fervants longer than the time allowed them by the palfports of their mafters, and without poker mefnoys no fer vant fhall be taken into fervice, or hired: and if the merchants take a fecurity for the honefty of the fervant, and it happen that the fervant do not behave well, and cheat fome body, the merchant fhall not anfwer for it, but the fecurity. Ruffian merchants fhall have the fame reciprocal fecurity and juftice in the dominions of Great-Britain, for the fervants they may there hire, agreeable to the laws of the land
XIX. All affairs of Englifh merchants in Ruffia fhall be der the cognizance only of the college of commerce, or any other court that may be appointed hereafter, in lieu of this college, to take cognizance of foreign merchants affairs, and no other. Ruffian merchants in the dominion of GreatBritain thall be under the protection of the laws of that kingdom, as all other foreigners are, and fhall be treated as the moft favoured nation.
XX. Englifh merchants fhall not be obliged to produce their books or papers to any body whatfoever, unlefs to bear witnefs in courts of juftice; nor fhall their books or papers be taken away and detained from them, neither 'hall their effecis be diftrained or fold, under any pretence whatfoever, except in cafe of a bankruptcy, and then only by decree of the college of commerce, or any other court that may be hereafter appointed, in lieu of that college, to take care of the affairs of foreign merchants ; and Rufian merchants in Great-Britain fhall be protected by the laws, as the precedirg article directs.
XXI. In cafe of a law fuit, four reputable perfons among the foreign merchants fhall be named by the college of commerce, to infpect into the books and papers of the plaintiff, if the cafe require it, and their report to the college of commerce fhall be a fufficient evidence.
XXII. The cuftom-houfe fhall take care to examine the Ruffian merchants fervants, when they fign bargains, whether they have orders or powers of their mafters for fo doing : if not, they fhall not be trufted. The fame fhall be obferved in regard to the Englifh merchants fervants, and the bargains thall be for the mafters account, who, if they have given orders or powers to their fervants, 'fhall then be anfwerable as if they had made the bargain themfelves. All Ruffian fervants employed in fhops fhall alfo be regiftered, and their tranfactions.
XXIII. If any Ruffian merchants indebted to Englifh merchants, quit the place where they lived, and retire into the country, and it happen that during their ablence, petitions be brought againft them, proving the debt, then the college of commerce inall fummon them thrice, allowing a fufficient time for their appearance before the college; but fhould they not appear, the college fhall condemn them, and fend an exprefs, at the charge of the plaintiff, to the governors, with orders to put the fentence in execution, obliging the debtor to pay his debt.
XXIV. The Ruffian merchants that come with their goods thall enter them as foon as poffible at the cuftom-houfe, and, when fold, fhall write down the quantity', weight and meafure, as the regulations diredt.
XXV. The bracks thall be equitably effablifhed, and fet in good order; the brackers thall be anfwerable for the quality of the goods, and falfe package, and fubject to pay the loffes, on proof being brought againft them.
XXVI. Regulations fhall be eftablifhed for removing abufes which there may be in the package of hides and threads; in the interim, if any difpute arife between buyer and feller, in regard to the tare of any goods, the cuftom-houfe fhall decide it, according to reafon and equity.
XXVII. For a greater convenience and encouragement of the trade of Great-Britain, it is agreed that the following Eng lifh woollen goods thall hereafter pay no more duty than what is fet down in this article, viz. Englifh cloth for foldiers fhall pay no more than two copyks, in rixdollars, for each archine; the coarfe cloth of the county of York, known in the Ruflian tariff by the name of koftrogi, fhall pay no more than two copyks, in rixdollars,' for each archine; broad fannels only one copyk, in rixdollars, for eacharchine; and narrow flannels, but three quarters of a copyk, in rixdollars, for each archine.
XXVIII. It is agreed and concluded that the fubjects of both parties fhall be refpected and treated, in their refpective dominions, in like manner as the moft favoured nation; and the fubjects of Ruffia which fhall come into England, in order to learn arts and commerce there, fhall be protedled, fa voured, and inftructed:' likewife, if any Ruflian veffels fhall be met with out at fea by any Englifh veffels, they fhall in no wife be hindered or molefted by them, provided they com-

## T R E

port themelves in the Britilh Seas in the accuftomed manner but on the contrary, they fhall be favoured by them, and that in the very ports or havens belonging to the dominions of Great-Britain.
XXIX. Peace, amity, and good underitanding, fhall continue for ever between the contracting parties; and as it is ufual to limit treaties of commerce for a certain fpace of time, it is agreed between the contracting parties that this fhall con tinue for the fpace of fifteen years, to be computed from the day of figning this prefent treaty: and that before the expiration of the faid term, they fall come to a further mutual agreement for renewing and prolonging the fame.

Articles of Peace and Commerce between the mof high and renowned prince George II, \&c. and the moft high and clorious, mighty, and right noble prince, Muley Hammet Dahebby, Ben Muley Ifmael, Ben Muley Zeridh, Ben Muley $\mathrm{Aly}^{\prime}$, king and emperor of the kingdom of Fez and Morocco, \&c. January 14, 1728.
I. That all Moors or Jews fubject to the emperor of Morocco fhall be allowed a fiee traffic, viz. to buy or fell for 30 days in the city of Gibraltar, or inand of Minorca, and not to refide in either place, but to depart with their effects, with out let or moleftation, to any part of the faid emperor of Morocco's dominions.
II. That the king of Great-Britain's fubjects refiding in Barbary fhall not be obliged to appear before the cadi, or juftice of the country; but bnly the governor of the place, and his Britannic Majelty's confuls, are to take cognizance of, and adjuft the differences they may have with the natives of the ountry.
III. That the menial fervants of his Britannic Majefty's fubjects, though natives of the country, either Moors or Jews, be exempt fromitaxes of all kinds.
IV. That all his Britannic Majefty's fubjects, as well paffengers as others, taken by aniy of the emperor of Fez and Mo rocco's cruizers, on board any foreign fhip or veffel what ever, fhall immediately be fet at liberty, and fent to the city of Gibraltar
V. That there be permifion for buying provifions, and al other neceffaries, for his Britannic Majefty's fleet, or city of Gibraltar, at any of the emperor of Fez and Morocco' fea-ports, at the market prices, and the fame to be fhipped off without paying cuftom, as has been extorted lately, contrary to the treaty of peace fubfifting.
VI. All the orher articles, being fifteen in number, concluded, agreed, and adjufted, by the honourable Charles Steward, Efq; on the behalf of his Britannic Majefty, and by his excellency bafhaw Hamet Ben Aly, Ben Abdalla, and his imperial Majefty's treafurer, Mr Mofes Ben Hatter, a Jew, on behalf of the faid king of Fez and Morocco, fhall ftand good, and be of the fame force, as in the reign of the moft high and renowned prince George $I$, king of GreatBritain, \&rc. of glorious memory, and the high and glori ous, mighty and right noble prince, Albumazer Muley IF mael, late emperor of Morocco. And it is farther ägreed, That all the articles aforementioned, as well the fifteen, as thefe additional ones, fhall, in twenty days after the date hereof, be publifhed in the Arabic language, and affixed on the gates of all tire fea-port towns in his imperial Majefty' dominions. Signed and dated at the court of Mequinez. January $14,17 \frac{27}{2} \frac{7}{8}$.

A Treaty of Peace and Friendship between the king of Great-Britain and the emperor of Morocco, in 1751.

George the Second, by the grace of God, king of Great Britain, \&ic. duke of Brunfwic and Lunenburg, arch-trea furer, and prince elector of the Holy Roman Empire, \&c. to all to whom thefe prefents thall come, greeting: Whereas a treaty for eftablifhing peace and friendfhip was concluded and figned on the 15 th of December, 1734, and copied the 15 th of Rabbei the Firt, in the year 1164 , which is, in Englifh file, the 15 th day of January, 1750 , O. S. and the additional articles of peace and commerce, concluded and figned at the court of Fez, on the ift of February, 1751, N.S. between us and the high, glorious, potent, and noble prince, Mulay Abedela, Ben Mulay Ifimael, Ben Mulay Seriph, Ben Mulay Aly, king and emperor of the kingdoms of Fez , Morocco, \&cc. by William Petticrew, Efq; our conful-general, on our part, and by the alcaide Habed Lohah Ben Hamed Limury, firt minifter, on the behalf, and by order of, the faid king of Fez and Morocco, in the words and form following :

The Treaty of Peace between his Majefty George the Second, king of Great-Britain, \&c. and Mulay Abedela Ben lfmael, king and emperor of Fcz, Mequinez, Morocco, \&c.
I. For eftablifhing peace and friendifhip, it is agreed and concluded for firm and valid, both by land and fea, in all the dominions of both powers, that the Englifh in general

## TRE

fhall and may, now, and at all times hereafter, enjoy and continue in peace and friendihip with the emperor and his fubjects, and be well ufed and refpected by the emperor's fubjects, agreeable to the order and commands of the emperor.
11. That fuch number or quantity of palforts as may be neceflary, be tranimitted to the emperor, indented in fuch manner as fhall tally with the paffports that fhall be received by the Englifh merchants in England; and if an Englif wa meets with any merchant hhips belonging to he emperor, fuch merchant fhips hall be oblized to to uce and fhew their paffiorts, lifh conful.
II. If any difpute fhall happen between the Englifh and the emperor's fubjects, the fame not to be determined by a judge but ended and adjufted by the Englifh conful and the coyed, that is, the mayor of the town where fuch difpute chall bappen.
IV. That none of the emperor's fubjects fhall, at any time, forcibly enter the boufes of the Englifh, or any place belonging to them, or take and carry away any of their goods and effects, unlefs they have leave and authority from the emperor fo to do: that if any of the emperor's fubjects the emperor fo to do: that if any of the emperor's fubjects
fhall hire any Englifh fhip to carry and convey gocds from one part of the emperor's dominions to another, and fhall happen by ftrefs of weather, or any other occafion touch at any place or places in the voyage, fuch hip or fhips fhall not be obliged to pay any thing for the flhelter or affiltance they may receive; and that no Englifh whatever or any of their fervants (though not Englifh) fhali be liable to pay the tax impofed upon the emperor's fubjects, called the poll-tax.
V. That the fifteen articles of peace made and concluded between king George the Firft and Mulay Ifmael, are hereby agreed to and confirmed, with his Majefty king George the Second, as good and valid, and fhall Be faithfully kept and obferved, together with the aforefaid four articles.
Treaty of Peace between his Majefty George the Second, king of Great-Britain, \&c. and Mulay Abedela Ben
Ifmael, king and emperor of Fez , Mequinez, Morocco, \&c.

1. That if any Englifh fhall happen to be on board any thip, or hips, enemies to the emperor, that may be taken by the emperor's fhips, fuch Englifh fhall be well treated, delivered into the hands of the Engliftic conful, and have liberty to go where they pleafe: this article to continue in force for fix months from the conclufion of this peace; in which time, it is required that notice fhall be given by the king of Greatbritain to all the Englifh fubjects," not to embark on board any of the emperor's enemies fhips; for after that time, if the Englifh fhall fo embark, the blame muft be their own, as no regard will be had to them more than the emperor's enemies.
II. If any of the emperar's fubjects fhall be made flaves, and efcape to an Englifh man of war, or to Gibraltar, Port Mahon, or any of the Englifh dominions, that they fhall be protected, and with all convenient fpeed fent to their refpective homes. 'The like treatment to be given to the Englifh who fhall be flaves, and efcape to any part of the emperor's dominions.
III. If any Englifh fhall contract any thing to be paid to the emperor's fubjects, notes thall be given for the fame; and in like manner the fame to be obferved by the emperor's fubjects in the Englifh dominions; and if it fhall happen that fuch fubjects of either power cannot write, to get fome perfon to write fuch notes for them.
1V. That no excufe be made, or ignorance of this peace pretended, the fame fhall be publifhed and declared to all the fubjects of both powers, both what is now agreed on, and the articles concluded with king George the Firft; which declaration fhall be figned by each power, and by them kept, to prevent difputes. This treaty was concluded the 15 th of December, 1734, and copied the 15th of Rabbei the Firft, in the year 1164, which is, in Englifh Atile, the 15th of January, 775 .
Additioná Articles of Peace and Commerce between the moft high, illuftrious, and moft renowned prince, George the Sécond, 8 cc . and the high, glorious, mighty, and moft noble prince, Mulay Abedela, Ben Mulay Ifmael, Ben Mulay Seriph, Ben Mulay Aly, king and emperor of the kingdoms of Fez , Morocco, Taffilete, Sus, \&cc.
I. It is agreed on and concluded, That from henceforward there fhall be, between his Majefty of Great-Britain, prince and elector of Hanover, \&ec and the king of Fez and Morocco, their heirs and fucceffors, a general, true, and perfect peace for ever, as well by land as by fea and frefh waters; and alfo between the lands, kingdoms, dominions, and territories belonging to, or under the juriddiction of his Britannic Majefty in Germany, and thofe appertaining to the king of Fez and Morocco; and their fubjects, people, or inhbbitant refpectively, of what condition, degree, or quality foever, from henceforth reciproca!!y thall owe the other all friend

Ship; and that all fips, veffels, paffengers with their effects, trafficking voluntary, or compelled by enemies, difaaters of the feas, or any accident whatfoever, to the coafts of the eniperor of Fez and Morocco's dominions, being his Britannic Majefty's subjects in Germany, fhall from henceforth be treated according to the faid regulations, as fpecifed by the treaties of according to the fatid regulations, how Britannic Majefty and the peace now fubfifting betwe
king of Fez and Morocco.
II. It is agreed that all fhips and veffels belonging to his Britannic Majefty in Germany, fhall carry a proper pafs, and that a copy of fuch pafs, with the heads of the faid paffes, Thall be fent to his Britannic Majefty's conful refiding in Barbary, to the end that he may deliver the fame to the commanders, or captains, of the king of Fez and Morocco's fhips of war, or cruizers, to the end that due regard may be had to this peace, and that no commander or captain may offend turough ignorance; and all commanders or captains of Chips or veffels belonging to his Britannic Majefty's fubjects in Germany, meeting with any fhip or veffel belonging to the king of Fez or Morocco, or his fubjects, if the commander of fuch fhip or veffel produce a pars, figned by the governor of the city they belong to, with a certificate from the Englifh conful, and, in cafe of his death or abfence, from the major part of the Eaglih merchants refiding in the faid place, in fuch cales, the faid fhip or veffel fhall purfue freely her voyage, without hindrance or moleftation.
III. It is agreed that the king of Great. Britain's fubjects fhall not be obliged to appear before juftices of the country in any caufe, but that only the governor of the city, and bis Britannic Majelty's conful, 'hall take cognizance of, and adjuft the difference or fuits they may have with the Moors, or other inbabitants in the dominions of the king of Fez and Morocco. IV. It is agreed that no governor or officer under the king of Fez and Morocco thall, without the king's fpecial order, vifit or regifter the dwelling-houfes or magazines of any of his Britannic Majefty's fubjects refiding in Barbary ; and that all Britifh fhips taking freight in any port of the king of Fez and Morocco, to carry to, other ports of the faid kingdom, thall be exempted from all port-charges, as ufual, in whatever port they may put in; and that the conful, and the other Britifh merchants, fhall be freely allowed to bave Moors, or Jews, as their interpreters and brokers, who thall be exempted from all taxes, as likewife all their domeftic fervants.
All the other articles, being fifteen in number, concluded, agreed, and adjufted, by the admiral Charles Stewart, on the behalf of his Britannic Majefty, and by his excellency bafhaw Hamet Ben Alay Ben Abdalla, and his Imperial Majefty's, treafurer, Mr Mofes Benatar, on bebalf of the faid king of Fez and Morocco, fhall fland good, and be of the fame force, as in the reign of the moft high, illuftrious, and renowned prince, George the Firit, king of Great-Britain, \&c. of glorious memory, and the high, miohty, and moft noble prince; Mulay lfmael, late emperor of Morocco, as likewife the other articles, being three in number, agreed and concluded by John Leonard Sollicoffiee, Efq; on behalf of his Britannic Majefty, and his, excellency bafhaw Hamet Ben Aly Ben Abdalla on behalf of the king of Fez and Morocco.
It is agreed on and concluded, that all the articles aforementioned, being eighteen in number, with thefe additional ar-, ticles, that are tranflated into the Arabic language, copies thereof be fent to all his Imperial Majefty's alcaides, and officers of all the ports in his dominions, there to be read by the cady or chief juftice, in public affembly, and afterwards to remain depofited, either in the bands of the judge, or the alcaide of the port, that recourfe may be had thereto on all occafions which may occur; and that the ratifications of the faid articles fhall be made within the term of fix months, or fooner, if poffible, in Spanifh, which fhall be received, and be of equal force. Dated and figned at the court of. Fez, on the ift of February, 1751, N. S.

Signed Abdelhovaf Aly Moory.
Treaty of Peace between his Majefty George the Firf, king of Great-Britain, \&c. and Muli Ifmael, fon of Muli Alli Sherife, king of Fez, Mequinez, Morocco, \&ic.

1. In order to eftablifh peace between the powers, both by land and fea, and all their refpective dominions, it is'agreed on, that the Englih may now, and always hereafter, be well ufed and refpected by our fubjects, agreeable to the orders and commands of the emperor.
II. That all Englifh men of war and merchant-fhips, that thall come to any part of the emperor's dominions, to trade or otherwife, and fhall have on board a cargo not proper for vending in the place where they fhall come, may depart with the fame to any other part of the emperor's dominions, and thall pay duty but once for the fame; and that no duty at all fhall be paid for any war implements, fuch as fire-arms, fwords, and any thing belonging to the army, as alfo for materials of all kinds for thip-building; and if any Englifh fhip Shall arrive at any of the emperor's ports, with any merchandize deftined for any other part of the world, that no duty fanall be paid for fuch merchandize, but fhall depart with the fame, without any manner of moleftation. If any Englifh

Thip fhall be thrown upon the emperor's coafts. by Aret weather, or otherwife, the fame fhall be protected, and moy fafely depart, wsithout any ill ulage or interruption. In like manner thall be treated the emperor's fubjects happening to be thus thrown on the coaft-of Great-Britain, or the dominions thereto belonging.
III. That all the Englifh fhips and emperor's fhips may pafs and repafs the feas without hinderance, interruption, or moleftation, from each other; nor fhall any money, merchandize, or any demand be made or taken, by the thips of either power from each other'; and if any fubjects of any other nation thall be on board either the Enghinh or the emperor's thips, they flall be fafely protected by both parties.
IV. If the emperor's men of war meet withany Englith hips, and thall want to fee their paflports, they are to fend a boat, with two men of fidelity, to perufe the faid paffiporte, who, are to return without any farther trouble, and then both fides to proceed quietly on their refpective voyages; the fame ufage to be received by the emperor's merchant-fhips from the Englifh men of war, who Chall allow the paffports made out by the Englifh conful, and, if the confulf fhall not be prefent to make them, then the paffports made out by the Einglifh merchants to be good and valid.'
V. If the Englifh men of war, privateers, or letter of marque fhips thall take prizes from any nation with whom the: fhall be at war, they fhall have liberty to bring and difpoie of the fame in any of the emperor's dominions, without any duty or charge whatfoever.
VI. If any Englifh fhip fhall by ftorm, or in flying from ber enemy, come upon the emperor's coafts, the fame fhall be fafely protected, and nothing touched and taken away, but fhall be under the direction of the Englifh conful, who thall fend the goods and people where he fhall think* fit.
VII. It is the mutual agreement of the king of Great-Britain and the emperor, that the emperor do iffue out orders to all parts of his dominions, for the well ufing of all the Englifh fubjects, and that particular places be appointed for the burial of their dead; that the confuls, brokers, fhall freely go on board any fhip, without interruption; that the Englifh confuls, merchants, and other fubjects of Great-Britain, may fafely travel by land with effects, without any bindrance whatever; and if any Englifh fettled in the emperor's dominions fhall be defirous to return home, that they may fo do, with their families, goods, and effects, without interruption: if ahy Englifh die, the effects of fuch to be taken under the care of the conful, to be difpofed of as directed by the will of fuch perfon, and, if no will, for the benefit of fuch perfon's next heir; and if ariy debts fhall be owing to fuch deceafed perfon, the fame to be paid by order of the governor, or any other perfon in power, where fuch perfon thall die; and that a fubject of the emperor's be appointed to demand and receive the fame, and depofit the fame in the hands of the Englifh conful, for the aforefaid ufes. If any Englifh thall contract debts in the emperor's country, and remove from thence without farisfying the fame, no other perfans fhall be liable to pay fuch debts. The like ufage and treatment the fubjects of the emperor are to receive in the king of GreatBritain's dominions'; and that the king may fend as many confuls'to the emperor's dominions as he thatl think neceffary.
VIII. That no Englifh merchant, captains of flips, or other perfon or perfons whatfoever, that are Englifh fubjects, fhall be forced to fell any of their goods for lefs than the real value; and that no captain, mafter, or commander of any Englifh thip thall be compelled, without their own will and confent, to carry any goods or merchandizes for any perfon or perfons whatfoever; nor fhall any failor be forced away from any Englifh fhip.
IX. If fany quarrel or difpute fhall happen between any Englifhman and a Muffulman, by which hurt to either may enfue, the fame to be heard before, and determined by the emperor only; and if an Englifhman, who may be the aggreffor, thall makehis efcape, no other Englifhman fhall fuffer upon his account; and if two Englifhmen thall quarrel, to be determined by the Englifh conful, who fhall do with them as he pleafes : and if any quarrel or difpute fhall happen between Muffilmen in England; or in any of the Englifh dominions, by which hurt may enfue, the fame to be heard before one Chriftian and one Muflulman, and to be determined according to the laws of Great-Britain.
X . If it fhall happen that this peace, by any means, thall be broke, the conful, and allothier Englifh, hall have fix months time to remove themfelves, wh their families and effects, to anyplace they pleafe, withour interruptions and that all debts owing to them fhall be jufly paid to them!
XI. If any Englifh in the emperor's dominions, or the emperor's fubjects in the Englifh dominions, fhall maliciounly endeavour to break the peace, fuch of them who thall be proved to fo intend, fhall by each power be punifhed fur fuch offence, each power to take cognizance of their own fubjects.
XII. If any of the emperor's fubjects thall purchafe any commodity in the Englin dominions, they fhall not be impuid on in price, but pay the fame as is fold to the Englifh.
XliI. That

## TRE

TRE
XIII. That not any of the Spanifh, whether captains, failors, or other perfons, under the Englifh government in Gibraltar or other pert-Mahon, fhall be taken or molefted, failing under Enelifh colours, with paffiports.
XIV. 'I hat no excufe be made, or ignorance pretended, of this peace, the fame flall be publifhed and declared to all the fubjects of each power, u hich declaration hall be figned by each power, and kept by them to prevent difputes.
XV. If any man of war fhili be on the emperor's coafts, that are enemics to the Euglih, and any Englifh men of war, or other Eriglifh Chips, flall happen to be, or arrive there alfo, that they fhall not in any manner be hurt, or engaged by their enemv; and when fuch Englifh chips fhall fail, their enemies fh:ps fhall not fet fail under forty hours afterwards.
And if, after the conclufion of this peace, any fhip fhall happen to be taken by either powers, within fix months after the proclamation of the peace, that the fame, with the people and effeets, fhall be reftored. Made and declared in the prefence of the emperor's fervant, Ahammad Balha, fon of Alli, fon of Abdalla, by the authority given to him by the emperor. Dated this 23 d of January, in the ycar 1721, Englifh ftile. Wrote and given to Charles Stewart, Efq; the Englifh ambafliador, in the feventh year of the reign of our late royal father, king George the Firft.
We having icen and confidered the above- written treaty, with the additional articles, have approved, ratified, and confirmed the fame, in all and fingular their claufes, as by thefe prefents we do approve, ratify, and confirm the fame for us, our heirs and fucceffors, engaging and promifing, on our royal word, facredly and inviolably to perform and obferve all and fingular their contents, and never to fuffer, as far as in us lies, any perion to violate the fame, or in any manner to act contrary thereto. In witnefs whereof, we have caufed cur great feal of Great-Britain to be affixed to thefe prefents, figned with our own royal hand. Given at our court at Kelfington, the thirty-firlt day of July, in the year of our Lod 175 , and of our reign the 25 th.

## GEORGER.

Articles of Peace and Commerce between the moft ferene and mighty prince Charl.s II. by the grace, \&c. and molt illuftrious lords the fiafha, dey, and aga, governors of the famous city and kingdom or Algiers, \&c. concluded by Arthur Herbert, E/q; admiral of his Majefty's fleet, April 10, O. S. 1682. - With the few alterations made and included at the renewal thereof in 1686 : all which are, for diftinction, in a different character.
I. In the firt place it is agreed and concluded, That from this day, and for ever forwards, there be a true, from, and inviolable peace between the moft ferene king of Great Biitain, France, and Ireland, \&c. and the moft Nluftrious lords the batha, dey, and aga, governors of the city and kingdom of Algiers, and between all the dominions and fubjects of either fide; and that the fhips, or other veffels, and the fubjects and people of both fides, fhall not henceforth do to each other any harm, offence, or injury, either in word or deed, but fhall treat one another with all poffible refpect and friendfhip; and that all demands and pretenfions whatfoever, to this day, betwcen both parties, hall ceafe and be void.
II. That any of the fhips or other veffels, belonging to the faid king of Great-Britain, \&c.- or to any of his Majefty's fubjects, may fafely come to the port of Algiers, or to any other port or place of that kinglom, there freely to buy and fell, paying the ufual cuftoms of 10 per cent. as in former times, for fuch goods as they fell; and the goods they fell not, they fhall freely carry on board, without paying any duties for the fame: and that they flall freely depart from thence whenfoever they pleafe, without any ftop or hinderance whatfoever. As to contraband merchandizes, as powder, brimftone, iron, planks, and all forts of timber fit for building of fhins, ropes, pitch, tar, fufils, and other habiliments of war, his faid Majefty's fubjects thall pay no duty for the fame to thofe of Algiers.
III. That all thips, and other veffels, as well thofe belonging to the faid king of Great-Britain, or to any of his Majelty's iubjects, as thofe belonging to the kingdom or people of Algiers, fhall freely pafs the feas, and rraffic, without any fearch, hinderance, or moleftation, from each other ; and that all perfons or paffengers, of what country foever, and all monies, goods, merchandizes and moveables, to whatfoever people or nation belonging, being on board any of the faid thips or veffels fhall be wholly free, and fhall not be ftopped, taken or plundered, nor receive any harm or damage whatfoever from either party.
IV. That the Algiers fhips of war, or other veffels, meeting with any merchant fhips, or other veffels, of his faid Majefty's fubjects, not being in any of the feas appertaining to his Majefty's dominions, may fend on board one lingle boat, with two fitters only, befides the ordinary crew of rowers; and that no more fhall enter any fuch merchant-fhip, or veffel, without exprels leave from the commander thereof, but the two

VOL. If.
fitters alone ; and, upon producing a pafs under the hand and eal of the lord high admiral if Engl nd and lietilit, ur of the lord high admiral of Scotland, for the faid kir gdem. refpectively, or $u$ der the hands and fuals of the cominifioners for executing the office of lord high admiral of anv of the faid kingdoms, that the faid thip fhill proceed tout, on her 'oyage; and that, altho', for the pace of fiteen munths next enfuing after the conclufion of this peace, the fa dommander of the merchant fhip, or veffel, produces no fuch pals, yet If the maj ir part of the feamen of the faid fhip, or veffel, bo fubjects of the faid kiug of Gieat Briain, the faid brat ihat fubjects of the fard kiog of Gicat Britain, the faid brat ihal
immediately depart, and the faid merchant- hip, or vefet, fhail mmediately depart, and the faid merchant-fhip, or $v \in f \in l$, thail
freely proceed on ber voyage : but that, after the faid fitieen months, all merchant-fhips, or vellefs, of his foid Ahas fy , fubjects, fhal! be obliged to prodace fuch a pal: as afurifid And any of the dips of war of his faid Majefty, merting with any fhips, or other veffels of Algiers, if the commander of any fuch thip or veffel fhall produce a pafs, confirmed by the chiefgovernors of Algiers, and a certificate from the Eiglinh conful there refiding, of if they have no fuch pafs, or certificate, yet if, for the face of fifteen monthe next enfuitg the conclufion of this peace, the major part of the fhip's company be Turks, Moors, or flaves belonging to Alsiers, then the faid Algiers fhips or veffels fhall proceed !recty; but that after the faid fifteen months, all Algiers thips or velfels fhall be obliged to produce fuch a pal" and certificite as aforefaid. The only Alteration in this regards the Fif teen Months Term allowed fer Passes, \&
V. That no commarder, or cther perfon, of a"y hip ner veffel of Algiers, fhall take out of ans fhip or v Ifl uf his fand Mäjefty's fubjects, any perfon or perfuns whalfoever, to carry them any where to be cxcminct, or ip.n any uiler pretence; nor flall they ufe anv torture or violence to any p:r'on, of what nation or quality, foever, being on boadd any fhip or $\mathrm{v} \in \mathrm{ffcl}$ ot his faid Majefty's fulj. Ets, upon any pretence what fuever.
VI. That no fhipwreck helonging to the faid king of GreatBritain, or to any of his fubjects, upon any part of the coalt belonging to Algiers, fhall be made, or become prize; and that neither the goods thereof thall be feized, nor the men made flaves, but that all the fubjects of Algiers thall ufe therr beft endeavours to fave the f.iil men and beir goods.
VII. That no thip, or any other veflel of Algiers, thall have permiffion to be delveted "p, or go $t$. Sallee, or any place in enmity with the faid king of Great-B:Hann, to be made ufe of as corfairs, or fea-rovers, againft his fand Majefy's fubjects.
VIII. That none of the thips, or other frialler veffels of AIgiers, fhall remain cruifing near, or in fight of his Majefty's city and garrifon of Tangier, or of any other his M.jefty's roads, havens, ports, towns, and places, nor any way difturb the peace and commerce of the fame. Tangier now omitted.
IX. That if any fhip, or veffel, of Tunis, Trip ly, or Sallee, or of any other place, bring any fhips, veffels, men, or goods, belonging to any of his faid Majefty's fuljects, to Algiers, or to any port or place in that kingdom, the governors there lhall not permit them to be fold within the territories of Algiers.
X. That if any of the fhips of war of the faid king of GreatBritain do come to Algiers, or to any other port or place of that kingdom, with any prize, they may freely fell it, or otherwife difpofe of it at pleafure, without being molefted by any: and that his faid Majefty's fhips of war thall not be obliged to pay cuftoms in any fort; and that if they fhall want provifions, victuals, or any other things, they may fretly buy them at the rates in the market.
XI. That when any of his faid Majefty's fhips of war fhall appear before Algiers, upon notice thereof given by the Englifh conful, or by the commander of the faid fhips, to the chief governors of Algiers, public proclamation fhall be immediately made to fecure the Chriftian captives : and if, after that, any Chrifiians whatfoever make their efcape on board any of the faid thips of war, they thall not be required; nor fhall the faid conful or commander, or any other of his Majefty's fubjects, be obliged to pay any thing for the faid Chriftians.
XII. That from and after the time that the ratification of this treaty by the king of Great-Britain, fhall be delivered to the chief governors of Algiers, no fubjects of his faid Majefty thall be bought or fold, or made flaves in any part of the kingdom of Algiers, upon any pretence' what foever. And the faid king of Great-Bitain hall not be obliged, by virtue of this treaty of peace, to redeem any of bis fubjecls now in flavery, or who may be made flaves before the liaid ratification; but it fhall depend abrolutely upon his Majefty, or the tion; but it thall depend abolutely upon his Majery, withour friends and relations of the faid perfons in invery, withour
any limitation or reftriction of time, to redeem fuch, or fo any limitation or reftriction of time, to redecm fuch, or fo
many of them, from time to time, as hall be thought fit, many of them, from time to time, as fhall be thought fit,
agreeing for as reafonable a price as may be, with their paagreeing for as reafonabte a price as may be, with their pa-
trons or mafters, for their redemption, withour obliging the trons or mafters, for their redemption, without obliging the
faid patrons or mafters, againft their wills, to fet any at liberty, whether they be flaves belonging to the beylic (or public), the gallies, or fuch as belong particularly to the bafhd, 10 U
dey,
dey, aga, or any other perion whatfoever. And all flaves, being his Majefty's fubjects, Shall, when they are redeemed, enjoy the abatements of the duty due to the royal houfe, and of the other charges, by paying fuch reafonable fums as any flaves of other nations ufually pay when they are redeemed. XIII. That if any fubject of the faid king of Great-Britain happen to die in Algiers, or in any part of its territories, his goods or monies thall not be feized by the governors, judges, or other officers of Algiers, who likewife flall not make any enquiry after them: but the faid goods or monies thall be received and poffeffed by fuch perfon or perfons, whom the deceafed thall, by his laft will, have made his heir or heirs, in cafe they be upon the place where the teftator deceafed. But if the heirs be not there, then the executors of the faid will, lawfully conftituted by the deceafed, thall, after having made an inventory of all the goods and monies left, take them into their cuftody without any hinderance, and fhall take care the fame be-remitted, by fome fafe way, to the true and lawful heirs; and in cafe any of his faid Majelty's fubjects happen to die, not having made any will, the Englifh conful thall poffers himfelf of his goods and monies, upon inventory, for the ufe of the kindred and heirs of the deceafed.
XIV. That no merchants, being his majelty's fubjects, and refiding in or trading to the city and kingdom of Algiers, fhall be obliged to buy any merchandizes againft their wills, but it thall be free for them to buy fuch commodities as they fhall think fit : and no captain or commander of any fhip or veffel belonging to his faid majefty's fubjects, thall be obliged, againft his will, to lade any goods to carry them, or make a voyage to any place whither he fhall not have a mind to go. And neither the Englifh conful, nor any other fubject of the faid king, fhall be bound to pay the debts of any other of his Majefty's fubjects, except that he or they become fureties for the fame, by a public act.
XV. That the fubjects of his faid Majefty in Algiers or its territories, in matter of controverfy, fhall be liable to no other jurifdiction but that of the dey, or the divan, except they happen to be at difference between themfelves, in which cafe they fhall be liable to no other determination but that of the conful only.
XVI. That in cafe any fubject of his faid Majefty, being in any part of the kingdom of Algiers, happen to ftrike, wound, or kill a 'Turk, or a Moor, if he be taken, he is to be punifhed in the fame manner, and with no greater feverity than a Turk ought to be, being guilty of the fame offence ; but if he efcape, neither the faid Englifh confut, nor any other of his faid Majelty's fubjects, flaall be in any fort queftioned and troubled therefore.
XVII. That the Englifh conful now, or at any time bereafter, refiding at Algiers, fhall be there, at all times, with entire freedom and Cafety of his perfon and eftate, and Shall be permitted to chufe his own terjiman (interpreter) and broker, and freely to go on board any fhips in the road, as often and when he pleafes, and to have the liberty of the country; and that he fhall be allowed a place to pray in, and that no man thall do him an injury, in word or deed.
XVIII. That not only during the continuance of this peace and friendhip, but likewife, if any breach or war happens hereafter to be between the faid king of Great-Britain and the kingdom of Algiers, the faid Englifh conful, and all others his faid Majefty's fubjects, inhabiting in the kingdom of Algiers, fhall, always and at all times, both of peace and war, have full and abfolute liberty to depart and go to their own, or any other country, upon any fhip or veflel, of what nation foever they thall think fit, and to carry with them all their eftates, goods, families, and fervants, without any intersuption or hinderance.
XIX. That no fubject of his faid Majefty, being a paffenger, and coming or going with his baggage, from or to any port, fhall be any ways molefted or meddled with, although he be on board any fhip or velfel in enmity with Algiers: and in like manner, no Algerine paffenger, being on board any thip or veffel in enmity with the faid king of Great-Britain, fhall be any way molefted, whether in his perfon or in his goods, which he may have laden on board the faid fhip or velfel. XX. That at all times, when any hip of war of the king of Great-Britain's, carrying his faid Majefty's flag at the main top-maft head, thall appear before Algiers, and come to an anchor in the road, immediately upon notice thereof given by his Majefty's conful, or fome officer from the thip, to the dey and regency of Algiers, they fhall, in honour to his_Majefty, caufe a ralute of 21 cannon to be fhot off, from the caitles and forts of the citv, and that the faid fhip thall return an anfwer by fhooting off the fame number of cannon. XXI. That prefently after the figning and fealing of thefe articles by the baiha, dey, aga, and chiefs of Algiers, all injuries and damages, fuftained on either part, thall be çuite taken away and forgotten, and this peace fall be in full force and virtue, and continue for ever : and for all depredationsand damages that fhall be afterwards committed or done by either fide, before notice can be given of this peace, full fatisfaction fhall immediately be made, AND WHATSOEVER remains in Kind shallee instantly restored. XXII. That in cafe it fhall happen hereafter, that any thing is done or committed contrary to this treaty, whether by the
fubjects of tie cne or the other party, tle treaty notwit fanding thall fubfift in full force, and fuch contravention Shall not occafion the breach of this peace, friendihip and good correfpondence, but the party injured thall amicably demand immediate fatisfaction for the faid contravencions, before it be lawful to break the peace: and if the fault was committed by any private fubjects of either party, they alone Thall be punifhed, as breakers of the peace and difturbers of the public quiet. And our faith fhall be our faith, and our word our word.

Confirmed and fealed, in the prefence of Almighty God,
April 10, of Jefus 1682, of the Hejira 1093, Abrir 11 .
'This is the treaty which remains ftill in force, and has been ever fince referred to when any renewals, with additional articles have been made by our fucceeding fovereigns. It was (mutatis mutandis) renewed and confirmed, April 5, 1686, by Sir William Soame, Bart. when be was going ambaffador extraordinary fromking James II. to the Grand Signior, with fcarce any alterations, except literals, and what elfe has been obferved. In 16gr, Thomas Barker, Efq; fent for by Shazban Hojia, then dey of Algiers, renewed and confirmed the fame, without alteration or addition.
In 1700, Capt. Munden, jointly with Robert Cole, Efq; then conful for our nation at Algiers, renewed and confirmed the fame, with the following additional articles.
I. We the moft excellent and moft illuftrious lords, Mufafa dey, Ali bafha, and Muftafa aga, governors of the molt famous and warlike city and kingdom of Algiers, do, by thefe prefents, renew and confirm the peace we fo happily enjoy, with William, king of Great-Britain, France, and Ireland, defender of the Ciriftian Faith, and his fubjects, made in the year of Jefus, 1682 (of the Hejira 1093, and renewed four years after) in every part and article, more particularly that of the eighth, wherein it is expreffed, that no fhip or veffel belonging to our government of Algiers, fhall cruize near, or in fight of, any of the roads, havens, or ports, tuwns, or places belonging to the faid king of Great-Britain, or any way difturb the peace and commerce of the fame: and in c.mpliance with the faid eighth article of that treaty, we do fincerely promife and declare, that fuch orders fhall for the future be given to all our commanders, that under a fevere penalty, and our utmoft difpleafure, they fhall not enter into the channel of England, nor come, or cruize in fight of any part of his Majefty of Great Britain's dominions any mote for the time to come.
II. That whereas it had been declared, that all hips and veffels belonging to the fubjects of the faid king of Great-Britain fhould have paffes, \&c. by the laft day of September, in this prefent year of Jefus 1700: we do by thefe declare, at the defire of Capt. John Munden, commander in chief of bis faid Majefty's thips in the Mediterranean, and Robert Cole, Efq; his Majefty's conful, now refiding at our city of Algiers, on behalf of their great mafter, that no paffes fhall be required or expected from any of the Englifh thip or verfels, in any part of the world, but that they fhall proceed on their voyage, without producing, or fhewing a pals to any of our cruizers, 'till the laft of September inor. And after that time is expired, and any fhip of England be feized, not having a pafs, we do hereby declare, that the goods in that hip thall be prize ; but the maller, men, and hip, thall be reftored, and the freight immediately paid to the faid mafter, to the utmoft value as he fhould have had, if he had gone fafe to the port whither he was bound.
III. That whereas Capt. Juhn Munden has given us good aflurance that he had a great affront fome years paff, from fome of our rude failors at our mole, we do berebv promife, that, at all times, whenever any of the king of Great-Britain's fhips of war thall come to this place, order fhall be intmediately given to an officer of the government who fhall attend at the mole, all the day-time, during their ftay here, to prevent any fuch diforders for the future, that no mifunderftanding may happen between us: and in any fuch cafe, the officer at the mole fhall fecure the perfon or perfons fo offending, who thall be punifhed with the utmoft feverity. By the help of God, and it he pleafe, thefe articles, now made between us, fhall be maintainede To the truth whereof, we have hereunto fet our hands and frals, Algiers, in the year of the Hejira 1II2, which is in the Chriftan account Augult 20, 1700.
In 1703, admiral Byng, afterwards lord vifcount Torrington, renewing the peace for queen Anne with the fame Multafa dey, inferted the two new articles, which are as follow : the preliminary one being only a confirmation of the foregoing, for which reafon it is omitted.

1. That whereas, by the faid articles of peace, made and concluded by admiral Herbert in 1682 , it was agreed, that the fubjects of England Chould pay 10 per cent. cuftom for the goods they fould fell at Igiers, or in the dominions thereof; now, for the better fettling and maintaning a good commerce between the fubjects of England and thofe of Algiers, it is agreed and declared, that, from henceforwards, the Englifh fhall pay but 5 per cent. cuftom ; and that contraband goods, as is deciared before, fhall not pay any cuffom.

## T R E

## T R E

II. And it is farther agreed and declared, that all prizes taken by any one of the lubjects of the faid queen of GreatBritain, and all fhips and veffels built and fitted out in any of his Majefty's plantations in America, that have not been in England, fhall not be miolefted; in cafe of their not having paffes: but that a certificate in writing, under the hands of the commanding officers who fhall take any prizes, and a certificate under the band of the governors or chiefs of fuch American colonies or places where fuch fhips were built or fitted out, fhall be fufficient paffes for either of them. . And our faith fhall be our faich, and our word our word.

Algiers, confirmed and fealed, in the prefence of Almighty God, OCtober 28, in the year of Jefus 1703, of the Hejira 1115.
This was again renewed in the reign of his late Majefty king George I. when, in 1716, admiral Baker bad orders to vifit Tripoly, Tunis, and Algiers. With the two firt, as will appear in the enfuing pages, he confirmed our former treaties in perfon; but to Algiers he deputed the Argyle and Chefter, two of his Majefty's fhips, to whofe commanders, Capt. Coningfoy Norbury, and Capt. Nicholas Eaton, in conjunction with Mr Thomas Thompfon, then acting as conful in the abfence of his brother Samuel Thompfon, Efq; he gave a full power to ratify and confirm all the above treaties, wiit thefe following new articles.-After the preamble, the firft article concludes thus:
I. If any demands or pretenfions fhall be now left depending, between the fubjecis or others of either party, they fhail te amicably relrefled, and full fatisfaction fhall be made to each cther, according to the truth and juftice of their claim: nor fhall any of the fame be cancelice, or made void by this treaty.
11. That as the inland of Minorca in the Micditerranean Sea, and the city of Gibraitar in Spain, have been yielded and annexed to the crown of Great-Britain, as well by the king of Spain, as by the feveral powers of Europe engaged in the late war, it is now hereby agreed and fully concluded, that from this time forward for ever, the faid ifland of Minorca and city of Gibraltar, Chall be efteemed, in every refpect, by the government and people of Algiers, to be part of his Britannic Majefty's dominions, and the inhabitarits thert of be looked upon as his Majefty's natural fubjects, in'the fame manner as if they bad been born in any other part of the Britifh territories: and they, with their hips and veffels wearing Britifh colours, and being furnihed with proper paffes, fhall be permitted freely to trade and traffic in any part of the dominions of Algiers, and fhall pals without any moleftation whatfoever, and fhall have the fame liberties and privileges that are ftipulated in this, and have been made in any other treaties in behalf of the Britifh nation and fubjects; and therefore none of the cruizers of Algiers fhall, at any time, cruize within fight of the faid ifland of Minorca and city of Gibraltar.
III. That if any Englifh fhip fhall receive on board any paffengers and goods belonging to the kingdom of Algiers, the Englifh fhall defend the faid Algerines and their goods, fo far as lies in their power, and not deliver them to their enemies. And the better to prevent any unjuft demands being made upon the crown of Great Britain, and to avoid difputes and differences that may arife, all gouds and merchandizes that fhall from henceforwards be dhipped by the fubjects of Algiers, on board the fhips or veffels of Britifh fubjects upon freight, fhall be firt regiftered in the office of cancellaria, before the Britifh conful refiding in the port where they are fo fhipped; and the quantity, quality, and value thereof hall be expreffed; and the conful is to manifeft the fame in the clearance given to the fhip or veffel before it fhall depart, to the end that, if any caufe of complaint fhould bappen hereafter, there may be no greazer claim made on the Britifh nation, than what by this method may be proved juft and equitable.
IV. That if any of the Algerine cruizers fhall meet with Thips provided with fcallop paffes, of either thips or fatias, that fhall fit with thofe delivered to them by the Britifh conful, they fhall pafs free and unmolefted. Algiers, October 29, 1716.
Articles of Peace and Commerce, between his moff facred Majefty George, \&c. and the moft excellent lords, Ali bafha, Haffain Ben Ali bey, Cara Muftafa dey, the aga, and the divan of the moft noble city of Tunis, and the whole body of the militia of the faid kingdom. Renewed and concluded, A. D. 1716, by John Baker, Efq; vice-admiral, \&c.
I. That all former grievances and loffes, and other pretenfions between both parties, fhall be void and of no effect; and from benceforward a firm peace for ever, free trade and commerce, fhall be and continue between the fubjects of his molt facred Majefty George, king of Great-Britain, \&cc. and the people of the kingdom of Tunis, and the dominions thereunto belonging. But that this article fhall not cancel or make void any juit debt either in commerce or otherwife, that may be due from any perfon or perfons to others of
either party; but that the fame fhall be liable to be demanded and be recoverable as before.
II. That the fhips of either party fhall have free liberty to enter into any port or river belonging to the dominions of either party, paying the duties only for what they fhall fell, tranfporting the reft without any trouble or moleftation, and fretly enjoy any other privileges accuftomed: and the late exaction that has been upon the lading and unlading of goods at Goletta and the Matine, fhall be redaced to the ancient cuftoms in thofe cafes.
III. That there fhall not be any feizure of any fhips of either party, at fea or in port, but that they fhall quietly pafs without any moleflation or interruption, they difylaying
their colours: and for prevention of all inconveniencies that may happen, the fhips of Tunis are to have a certificate under hand and feal of the Britifh conful, that they belong to Tunis: which being produced, the Englifh Thip fhall admit two men to come on board them peaceably, to fatisfy themfelves they are Englifh; and, although they have paffenger; of other nations on board, they fhall be frec, both they and their effects.
IV. That if any Englifh fhip fhall receive on board any goods or paffengers belonging to the kingdon of Tunis, th. . thall be bound to defend them and their goods, fo far as lies in their power, and not deliver them unto their enemies; and the better to prevent any urjuft demands being made upon the crown of Great Britain, and to avoid di'putes and differences which may arife, all goods and merchanuizes that fhall, from henceforward, be thipped by the fubjects of this government, either in this port or any orher whatfoever, on board the fhips or veffels belonging to Great-Britain, fhall be firt entered in the office of cancellaria, before the Britifh conful refiding at the reipective port, exprefling the quantity; quality, and value of the goods fo fhipped; which the faid conful is to certify in the clearance given to the faid fhip or veffel before ihe departs, to the end that, if any caufe of complaint fhould happen hereafter, there may be no greater claim made on the Britifh nation, than by this method fhall be proved to be juft and equitable.
$\checkmark$. That if any of the fhips of either party fhall, by accident of foul weather, or otherwife, be caft away upon the coaft belonging to either party, the perfons fhall be free, and the goods faved and delivered to their lawful proprietors.
VI. That the Englifh which do at prefent, or fhall at any time hereafter, inhabit in the city or kingdom of Tunis, fhall have free liberty; when they pleafe, to tranfport themfelves with their families and children, though born in the country. VII. That the people belonging to the dominions of either party fhall not be abufed with ill language, or otherwife ill treated; but that the parties fo cfferding, flatll be punifhed feverely according to their deferts.
VIII: That the conful, or any other of the Englith nation, refiding in Tunis, fiall not be sorced to make their addrefles, in any difference, unto any court of juftice, but to the Bey himfelf, from whom only they fall receive judgment; this in cafe the difference mould happen between a fubject of Great-Britain, and another of this government, or any other foreign nation; but if it fhould be between any two of his Britannic Majelty's fubjects, then it is to be decided bv the Britih conful only.
IX. That the conful, or any other of the Englifh nation; thall not be liabie to pay the debts of any particular perfon of the nation, unlefs obliged thereunto under his hand.
X. That as the illand of Minorea, in the Mediterranean Sea, and the city of Gibraltar in Spain, has been yelded and annexed to the crown of Great-Britain, as well by the king of Spain, as by all the feveral powets of Europe engaged in the late war; now it is hereby agreed and fully concluded, that from this time forward for ever, the faid illand of Minorca and city of Gibraltar, fhall be efteemed in every reepect by the government of Tunis, to be part of his Britannic Majefty's own dominions, and the inhabitants thereof to be looked upon as his Majefty's natural fubjects, in the fame manner as if they had been born in any part of Great-Britain; and they with their fhips and veflels wearing the Britifh colours, Thall be permitted freely to trade and traffic in any part of the kingdom of Tunis, and fhall pafs without any moleftation whatoever, either on the feas or elfewhere, in the fame manner, and with the fame freedom and privileges, as have been ftipulated in this and all former treaties, in behalf of the Brituh nation and fubjects.
XI. And the better and more firmly to maintain the good correfpondence and friendibip, that hath been fo long and happily eftablifhed between the crown of Great-Britain and the government of Tunis, it is hereby agreed and concluded, by the parties before-mentioned, that none of the thips or veffels belonging to Tunis, or the dominions thereof, fhall be permitted to cruize, or look for prizes of any nation what-
foever, before or in fight of the aforefaid city of Gibraltar, foever, before or in fight of the aforefaid city of Gibraltar,
or any of the ports of the iffand of Minorca, to hinder or moleft any veffels bringing provifions and refrethments for his Britannic Majefty's troops and garrifons in thofe places, or give any difturbance to the trade or commerce thereof; and if any prize hall be taken by the fhifs or veffe's of Tunir,
within the fpace of ten miles of the aforefaid places, it thall be teftored without any difpute.
XII. That all the fhips of war belonging to either party's dominions, hall have free liberty to ufe each others ports, for wafhing, clcaning, or repairing any their defects, and to buy and to flip off any fort of victuals, alive or dead, or any other neceffirics, at the price the natives buy at in the marker, without paying cuftom to any officer : and whereas his Britannic Majefly's hips of war do frequently affemble and harbour in the port of Mahon, in the ifland of Minorca, if at any time th:y, or his Majefty's troops in garrifon there, fhould be in want of provifions, and fhould fend from thence to purchufe fupplies in any part of the dominions belonging to Tusis, they fhall be permitted to buy cattle alive or dead, and all other kind of provifions at the prices they are fold at in the market, and fhall be fuffered to carry them off, without paying duty to any officer, in the fame mamer, as if his Majeits's fhips were themfeives in the port.
XIII. That in cafe any thips of war belonging to the kingdom of Tunis, fhall take, in any of their enemies fhips, any Englifhmen, ferving for wages, they are to be made flaves; but if merchants or paffengers, they are to enjoy their liberty and effects unmolefted.
XIV. That in cale any flave in the kingdom of Tunis, of any nation whatfoever, fhali make his efcape, and get on board any thip brfonging to the dominions of his facred Majefty the king of Great. Bititin, \&e. the conful hall not be liable to pay the ranfom, unlefs timely notice be given him to order that none fuch be entertained; and then if it ap. pears that any flave has fo ght away, the fuid conful is to pay of his patron the price for which be was foid in the market; and if no price be fet, then pay three hundred dollars, and no more.
XV. And the better to prevent any difpute that may hereafter arife between the two parties, about Calutes and public ceremonies; it is hereby agreed and concluded, that whenever any flag-oficer of Great-Britain fhall arrive in the bay of Tunis, in any of his Majetty's thips of war, immediately upon notice given thereof, there fhall be 25 cannon fired from the caftle of Goletta, or other the neareft fortification be lunging to Tunis, according to cuftom, as a royal falute to his Britannic Majefty's collours, and the fame number thall be returned in andwer thereto by bis Mijefty's fhips; and it is hereby ftipulated and agreed, that all ceremonies of honour thall te allowed to the Britih conful who refides here, to reprefent in every refpect his Majefty's perfon, equal to any other nation whatfoever, and no other conful in the kingdom to be admitted before him in precedency.
XVI. That the fubjects of his facred Majefty of GreatBritain, \&c. either refiding in or trading to the dominions of Tunis, fhall not, for the time to come, pay any more than three per cent. cuftom on the value of goods or merchandize, which they fhall either bring into or carry out of this faid kingdom of Tunis.
XVII. It is moreover agreed, concluded, and eftablifhed, that at whatfoever time it fhall pleafe the government of Tunis to reduce the cuftums of the French nation no lefs than they pay at prefent, it fhall always be obferved that the Britifh cuftoms thall be 2 per cent. lef's than any agreement that fhall for the future be made with the faid French, or that thall be paid by the futjects of France.
XVIII. It is moreover agreed, concluded, and eftablifhed, that in cafe any Britith thip or hlips, or any of the fubjects of his Majefty of Great-Britain, fhall import at the port of Tun's, or any other port of this kingdom, any warlike ftores, as cannons, mufkets, piftuls, cannon powder, or fine powder, bullets, mafts, anchors, cables, pitch, tar, or the like; as alfo provifions, viz. wheat, barley, beans, oats, oil, or the like; for the faid kinds of merchandize, they fhall not pay any fort of duty or cuftom whatever.
We the natties before mentioned, having feen and perufed the preceding articles, do hereby approve, ratify, and confirm, the leveral particulars therein mentioned; and they are to remain firm for ever, withouit any alteration. In teftimony of which we do hereunto fet our hands and feals in the prefence of Almighty God, in the noble city of Tunis, the 3oth day of Augult, old it le, and the year of our Lord Jefus Chrift, 1716, being the 26th day of the moon Ramadam, and the year of the $\mathrm{H}_{\mathrm{t}} \mathrm{jira}$ II28.
(L. S.) J. Baker. (L. S.) (L.S.) (L. S.)

Articlff of Peace and Commerce, hetween his moft facred Majefty George, by the grace, \&c. and the moft excellent lords Mahomet bey, Yufouf dey, Shaaban rais, the divan, and the reft of the officers and people of the city and kingdom of Tripoly, renewed, concluded, and ratified, this 19th of July 1716, by John Baker, Efq; vice admiral, \&c.

1. In the firft place, it is agreed and concluded, that from this time furward for ever, there fhall be a true and inviolable peace, between the moft ferene king of Great-Britain, and the noft iliuttrious lords and governors of the city and kingdom of I ripoly in Barbary, and between all the dominions
and fubjects of either fide: and if the thips and fubjects of either party fhall happen to meet upon the feas, or elfewhere, they fhall not moleft each other, but fhall fhew' all poffible refpect and friendmip.
II. That all merchant-fhips belonging to the dominions of Great-Britain, and trading to the city or any other part of the kingdom of Tripoly, fhall pay no more than three per cent. cuftom for all kinds of goods they fhall fell ; and as for fuch as they fhall not. fell, they fhall be permitted freely to embark them again on board their fhips, without paying any ort of duty whatfoever, and fhall depart without any hinderance or moleftation.
nl. That all fhips and other veffels, as well thofe belonging to the faid king of Great- Britain, or to any of his Majefty's fubjects, as thole belonging to the kingdom or people of Tripoly, fhall freely pais the feas, and traffic where they pleafe, without any fearch, hinderance, or moleftation, from each other: and that all perfons or paffengers, of what country foever, and all monies, goods, merchandizes and moveables, to whatfoever people or nation belonging, being on board any the faid Thips or veffels, fhall be wholly free, and fhall not be ftopped, taken, or plundered, nor reccive any harm or damage whatfoever, from either party.
IV. That the Tripoly thips of var, or any other veffels hereunto belonging, meeting with any merchant-fhips, or other veffels of the king of Great-Britain's fubjeCts (not be ing in any of the reas appertaining to any of his Majefty's duminions) may fend on board one fingle boat, with two fitters, befides the ordinary crew of the rowers; and no more but the two fitters to enter any of the faid merchant fhips, or any other veffels, without the exprefs leave of the commander of every fuch thip or veffel: and then, upon producing to them a pafs under the hand and feal of the lord high admiral of England, or the commiffioners for executing of the faid office, the faid boat thall prefently depart, and the merchant-fhip or fhips, veffel or veffiels, hall proceed freely on her or their voyage. And though the commander or commanders, of the faid merchant-hhip or thips, veffel or veffela, produce no pafs from the lord high admiral of England, or \&c. yet, if the major part of the thips or veffels company be fubjects to the faid king of Great-Britain, the faid boat fhall prefently depart, and the merchant-fhip or thips, veffel or veffels, fhall freely proceed on her or their voyage : and any of the faid lhips of war, or other veffels of his faid Majefty, meeting with any thip or fhips, veffel or veffels, belonging to Tripoly, if the commander or commanders of any fuch thip or fhips, veffel or veffels, fhall produce a pafs, figned by the chief governors of Tripoly, and a certificate from the Englifh conful refiding there; or, if they have no fuch pafs or certificate, yet if the major part of their thips company or companies be Turks, Moors, or flaves belonging to Tripoly, then the faid Tripoly fhip or fhips, veffel or veffels, flall proceed freely.
V. That no commander or other perfon, of any thip or veffel of Tripoly, fhall take out of any fhip or veffel of his faid Majefty's fubjects, any perfon or perfons whatfoever, to carry them any where to be examined, or upon any other pretence, nor fhall ufe any torture or violence unto any peron, of what nation or quality foever, being on board any fhip or veffel of his Majefty's fubjects, upon any pretence whatfoever.
VI. That no fhipwreck belonging to the faid king of GreatBritain, or to any of his Majefty's fubjects, upon any part of the coaft belonging to Tripoly, thall be made or become prize; and that neither the goods thereof fhall be feized, nor the men made flaves, but all the fubjects of Tripoly fhall do their beft endeavours to fave the faid men, and their effects. VII. That no fhip or any other veffel of Tripoly, ihall have permiffion to be delivered up, or to go to any other place in enmity with the faid king of Great-Britain, to be made ufe of as corfairs at fea againft his Majefty's fubjects.
VIII. That if any fhip or veffel of Tunis, Algiers, Tetuan, or Sallee, or of any other place being in war with the faid king of Great-Britain, bring any fhips or veffels, men or goods, belonging to his faid Majefty's fubjects, to Tripoly, or to any port or place in that kingdom, the governors there fhall not permit them to be fold within the territories of Tripoly.
IX. That if any fubject of the king of Great-Britain happens to die in Tripoly, or its territorities, his goods or monies thall not be feized by the governors or minifters of Tripoly, but fhall all remain with the Englifh conful.
X. That neither the Englifh conful, nor any other fubject of the faid king of Great-Britain, fhall be bound to pay the debts of any other of his Majefty's fubjects unlefs they become furety for the fame by a public act.
XI. That the fubjects of his faid Majefty in Tripoly, or its territories, in matter of controverfy, fhall be liable to no other jurifdiction but that of the dey or divan, except they happen to be at difference between themfelves, in which cafe, they fhall be liable to no other determination but that of the conful only.
XII. That in cafe any fubject of his Majefty, being in any port of the kingdem of Tripoly, fhall happen to ftrike, kill,
or bound a Turk ar Moor, if he be taked, he is to be putilhed io the fame manner, and with no greater feverity, than a Turk ought to be, being guilty of the fame oftence: but if he efcape, peither the faid Englith conful, tor any other of his laid Majetty's fubjects, fhallbe in any fort queftioned or troubled an that account.
Xil. That the Englifh conful now, or at any time héreafter, relidingat Truply, Shall be there at all times with indire freedom and fately of his perfon and effates, and flatll be pemitted to chufe his own interpreter and broker, and freely go on boadd any hif in the road, as often and when he pleafes ; and to have the liberty of the country; and that he Gall be allowed a place to pray in, and that noman mall do hm any injury in word or decd.
XIV. That not only during the continuance of this peace and frigadhip, but dikewile if any breach or war happen to be hereafter, between the-faid king of Great-Britain and the gity and kingdom of Tripoly, the faid conful, and all other his. Majefty's fubject, inhabiting in the kitigdon of Tripoly, fhall always, and at all times, both of peace and war, have full, and abrolute liberty to depart, and go to their own counry, or any other, upon any thip or veffel, of what nation fuever they thall think fit, and carry with them all their eftates, goods, families, and fervants, though born in the country, withoujany interruption or hitidèrance.
XV. That no fulject of his faid Majefty, beirg a paffenget from or to any port, hall be any way molefted and meddled with, ihough be be on board any thip or vefiel in enmity with Tripoly.
XV1. That if any thips of war of the faid king of GreatBritain come to Tripoly, or to any other port or place of that kingdom, with any prize, they may freely fell it, or otherwife difpofe of it at their own pleafure, without being molefted by any : and that his Majeft's faid fhips of war fhall not be obliged to pay cuftoms in any fort; and that, if they Gall want provifions, victuals, or any other things, they may freely buy them at the rate in the market.
XVII. That when any of his Majeety's fhips' of war fhall appear before Tripoly, upon notice thereof given by the Englifh conful, or by the commanders of the faid fhips, to the chief governors of Tripoly, public proclamation Rall be immediately made, to fecure the Chriftian captives; and if, afuer that, any Chriftians whatioever make their efcape on board any of the faid thips of war, they fhall not be required back again, nor hall the faid conful or commander, or any other his Majcity's fubjects be obliged to pay any thing for the faid Chrifitians.
X VIII. That all merchant fhips coming to the city or kingdom of Tripoly (though not belongin'g to Great-Britain) fhall have free liberty to put themfelves under the protection of the Britifh conful, in felling and difpoling of their goods and merchaudize, if the fhall think proper, without any hinderance or moleftation
XIX. That at all times, when any fhip of war, of the king of Great-Britain, \&c. carrying his fald Majefty's flag, appeals before the fald city of Tripoly, and comes to an anchor in the road, immodiately after notice thereof given by his faid Majetty's conful, or officer from the thip, unto the dey and govermment of Tripoly, they flall, in honour to bis Majefty, caufe a falute of twenty-feven cannon to be Fred from the cattle and fort of the city; and that the faid fhip thall return an anfwer, by firing the fame number of cantion.
XX. That no nerchant-hip belonging to Great- Britain, on any oher nation under the protection of the Englifh conful, berg in, the port of Tripoly, fball be detained from procted ing to fea on her yoyage longer than three days, under pretence of arrning out the flips of war of thisgovernment, or any other whatfoever.
XXI. That no fubject of the king of Great Britain, \&c. thall be permitted to turn Muffulman in the city and kingdom of Tripoly (bcing induced thereunto by any furprize whatfoever) unlefs be voluntarily appears before the dey or governors, with the Englifh conful's interpreter, thrice in twentyfour hours fpace, and every time declare's his refolutions to hecome a Mulluinan. $\qquad$
XXII. That the moft ferene king of Greatabritain's conful, sefiding in Tripoly aforefaid, thall have liberty, at all times when he pleafes, to put up his faid ferene Majefty's flay on

 liberty of puting up and fpeadro the Yiald atg fithis'boat, when he pafles on the water's and na' frath whafuver to op pore, milef, wiflurl, or injure him thetein, either by woid or deed.
XXIII. That whereas the flland of Minotca, in the Mediterranean Sea, and the city of Gibraltar, in Spain, have been yielded up and annexed to the crown of Great Bitain, as well by the king of Spain, as by all the feyeral powers of Europe engaged in the late war: now it is hereby agreed and fully concluded. That from this time forward, for ever, the faid inand of Minorca, and city of Gibraltar, thall be effeemed, in every refpct, by the government of Tripoly, to be part of his Britannic Majefty's own dominions, and the inbabitants thereof to be iouked upon as bis Majefty's natural fub-

VOL. II.
jects, in the fame manner as if they had been boin in an' patt of Great Britain; and they, with their fhips and vefiel wearing Botifh colours, fhatl' be permitted freely to rend raffic in any part of the kingdidn of Tripaly and fian and without any moleftation whatrever, either on the feas or elfewhere; in the fame manner, and with the fame freedom and privileges, as have been fitpilated in this atid all tormer treatics, of behalf of the Britifitiation and ciljects.
XXIV. And whereas in the treaty of peace concluded in the reign of king Charles II, in the year 1696 , by Sir John Farborough, Kirt. an article was inferted, by which the thop and veffels of Tripoly were not permitted to ciuze or in fight of, the port of Tangier, then belongine to GreatBritain: now it is hereby concluded and ratified, That, in the fame manner, none of the flips or veffels belonging io Tripoly fliall cruize, or look for prizes, before or in ifist of the ports of the ifland of Minorca, and the city of Gibral ar or to difturb or moleft the trade thereof, in any manner whatfoever:
XXV. That all and every the articles in this treaty fall be inviolably kept and obferved between his moft facred Majefty of Great-Britain, and the moft illuftrious 'lords and governors of this city and kingdom of Tripoly, and all other mat ters not particularly expreffed in this treaty, and provided for in any former, fhall full rematin in fill torce, and fla. Il be efteemed the fame as if inferted here. Dated in the preferice of Almighty God, in the city of Tripoly, this Igth day of July, 1716, according to the Chriftian computation; and of the Muftulman Hejira, the reth of the moon Shaaban iI28.

Whitehall, Decenber 10, 1751 .
Addittonal Articles to the antient treaties fubfifting between his Majefty and the dey and government of Algiers, agreed to by the prefent dey Mahomet, and his Majefty's plenipotentiaries, the honourable Auguftus Keppel, and Ambrofe Stanyford, his Majefty's agent and con-ful-general at Algiefs.
That all packet, or exprefs-boats, bearing his Majefty's commiffion, which fhall be met by any of the cruizers of Algiers, Shall be treated with the fame refpect as his Majefty's (hips of war, and all due refpect hall be paid to his Majefty's commiffion ; and both at meeting and at parting thiey fhall be treated as friends; and if any of the Algerine cruizers commit the leaft failt or violence againft them, the captains, or raziers, fo offending, fhatl, on their arrival at Algiers, and proper complaint being made of thiem, be moft fevercly punifheds without admitting of their excufes. Dated at Algiers; the $3^{d}$ of June, 1751; and th the year of the Hegeira 1164, the zoth day of the moon Regil.
By the KING, a $P_{R O C L A M A T I O N, ~ r e q u i r i n g ~ p a f f e s ~ f o r m e r l y ~}^{\text {a }}$ granted to fhips and veffelstiading in the way of the cruizers belonging to the governments on the cuafts of Barbary, to be returned into the office of admiralty of Great-Britain, and other paffes, of different forms, to be iflued.

## GEORGER.

Whereas by our proclamation bearing date the 31ft day of December, in the third year of our reign, we did charge and command all our lovigg fubjects, who then were, or fhould be poffedied of any paffesfor hips and veffels belonging to our fubjects tradingito Portugat, the Canaries, Guinea, the Indies, into the Mediterranean, er elfewhere, in the way of the cruizers of the government of Algiers (except fuch paffes as had been granted to dhips gone, or going to the Eaft-I dies, or other remote voyagest, where they could not he timely furnifhed with new paffesf that they flould, wxithin the fpace of twelye months, to, be computed from the firt day of March then next, return the fame, and furnifh themfelves with paffes of a new form, under the hands and feals of our commiffioners for executing the office of high admirad of Great-Britain and Ireland, in lieu thereof, fon their feveral hips and veffels, in fuch manner as by the faid recited priclamation was directed. And whereas it hath been humbly reprefented unto, us, That it may have happened that, duting the late war, feveral pafies granted purfuant to the faidrecitec proclamation, may, either by accident or aundue means, haye ffatlen into the hands of foreigners, who, by colour of fuch paftes, may carry on their trade: We, taking the premifes into our royal confideration, and judging it, neceffary to put a focedy fop to all fuch indirect practices, which do not only tend to the prejudice of our tradingfubjects, but may occafion a mifunderflanding between us and the governments on the coalt of Barbary, for preventing thereof, have thought fit, by the advice of our privy-council, to publifh this our royal proclamation, and do hereby declare, that all fuch paffes of the prefent form now in being, fhall not continue in force longer than'till the ift day of April, 1752 (except fuch' paffes as have been granted to thips gone, or going to the Eaft-Indies, or other remote voyages, where they cannot be timely furnifhed with new paffes). And we do hereby ftrictly charge and command all our loving fubjects, who are or dhall be pofieffed of any fuch palfes, that they do before the it day of April, 1752, return the fame (except fuch as are before excepted) into the office of the admiralty of

## T R E

Great-Britain, or to the refpeative collectors of our cuftoms at the out-ports of Great. Britain and Ireland, or to the governois of fome of our foreign plantations or dominions, in order to their being cancelled, and that they do furnifh themfelves with paffes of a new form, under the hands and feals of our commiffioners for executing the office of high-admiral of Great-Britain and Ireland, in lieu thereof, for their feveral hips and veffels, according to the treaties fubfifting between us and the faid governments on the coaft of Barbary, and the regulations made by our royal father of glorious memory, by order in his privy-council, on the 14th day of June, in the year 1722, and our inftructions given to our aid commiffioners for executing the office of high admiral of Great-Britain and Ireland touching the fame. And whereas many hips and veffels belonging to our loving fubjects, continue feveral years trading from port to port in the Mediterranean, without returning home, whereby they cannot fo conveniently procure their paffes to te exchanged, we do hereby, for the eafe of our trading fubjects, publifh and declare our pleafure, That upon the application of any owner of any hhip or veffel, or other fubftantial merchant, to the office of the admiralty of Great-Britain, and oath made by him of the property of fuch fhip or veffel, and that three-fourths of the company are our fubjects, according to an act made in the twelfth year of the reign of our royal predeceffor, king Charles the Second, (intitled, An Act for encouraging and increafing of fhipping and navigation;) and upon entering into the ufual bond for the return of fuch pafs at the end of the voyage, it fhall and may be lawful for our commiffioners for executing the office of high admiral of Great-Britain and Ireland, or our bigh admiral of Great-Britain and Ireland for the time being, and they are refpectively impowered to make out a new pafs for fuch thip or veffel, and fend the fame to fuch of our confuls in the Mediterranean as the faid owner or merchant fhall defire, with directions to fuch conful, that, upon application to him from the mafter of the fhip for which the pafs is made out, and furrendering up his old pafs, and entering into a like bond for the return of fuch new pafs, he fhall deliver out the faid new pafs to fuch mafter, and tranfmit the old one, with the bond, to the office of admiralty of GreatBritain. And in order more effectually to hinder, for the future, any abufes that may be attempted by foreigners, relating to the new paffes to be iffued as aforefaid, we do hereby further declare our royal will and pleafure, That all fuch new paffes to be hereafter iffued, for any fhips or veffels belonging to any of our fubjects of the ifland of Minorca, or Gibraltar, hall be made out in a particular form, different from the form of the new palfes to be iffured for thips and veffels belonging to any other part of our dominions, and that fuch paffes fhall be lodged with the refpective governors, lieu-tenant-governors, or commanders in chief, for the time being, of the faid ifland of Minorca, or Gibraltar, and iffued out only by them, according to the regulations made by our faid royal father in council, as aforefaid: and the faid refpective governors, lieutenant-governors, and commanders in chief, are hereby charged and required not to iffue or deliver out any fuch paffes to any perfons whatfoever, other than fuch a's are really our fubjects, inhabiting in the faid ifland of Minorca, or Gibaltar, refpectively, and frictly to conform themfelves to the regulations and inftructions made and given as aforefaid. And we do hereby further publifh and declare, That, by our orders made this day in our privy-council, we have ordered and directed, That the proper officers of our cuftoms, in the feveral ports of our kingdoms of Great-Britain and Ireland, do demand of the matters of all merchanthips, fo foon as they fhall return into port from a foreign oyage, all paffes granted as aforefaid, which fhall be in heir poffeffion, to be produced to the faid refpective officers of our cuftoms; and that, if the fame fhall appear to be of an older date than twelve months, for fhips and veffels trading on this fide the Streights Mouth, or for fhips and veffels trading to a greater diftance, in cafe the voyages of fuch laft mentioned fhips and veffels fhall be determined, then fuch paffes all be delivered up to the faid refpective officers of our cuftoms, and be by them returned to the office of the admiralty of Great-Britain: and in cafe the mafter of any fuch hip or veffel fhall refufe to produce or deliver up fuch paffes, according to the true intent of our order, then the faid officers dhall certify the name of every fuch mafter, and of the hip or veffel, to our commiffioners for executing the office of high admiral of Great-Britain and Ireland, or our high admiral of Great-Britain and Ireland for the time being, to the end that directions may be given for putting the bond, entered into on the granting any fuch pafs, in fuit." And all our governors, lieutenant-governors, and commanders in chief of any of our illands, colonies, or plantations, confuls refiding in foreign parts, and all orher our officers and minifters whatfoever, and all our loving fubjects whom it may concern, are hereby exprefsly required and commanded to yield due obedience unto, and ftrictly to obferve all the orders, inftructions, regulations, and directions before mentioned, on pain of our high difpleafure.

Given at our court at St James's, the 2gth day of March, 1750, in the twenty third year of our reign.

## GOD fave the KING.

At the court at St James's, the 2gth day of December, 175 I prefent the King's Moft Excellent Majefty in council.

Whereas his Majefty was pleafed by his proclamation, bearing date the 20th day of March, 1750 , to declare, That all paffes of the prefent form now in being, which had been granted for thips and veffels belonging to his Majefty's fubects trading in the way of the cruzers of the government of Algiers, fhould not continue in force longer than until the in day of April, 1752 (except fuch paffes as had been granted to fhips gone, or going, to the Eaft-Indies, or other remote voyages, where they could not be timely furnihed with new paffes) and his Majefty did thereby ffrictly charge and com mand all his fubjects, who were or fhould be poffeffed of any fuch paffes, that they fhould, before the faid Ift day of A pril, 1752 , return the fame (except fuch as are before excepted) into the office of the admiralty of Great-Britain, or to the refpective collectors of the cuffoms at the out-ports of Great-Britain and Ireland, or to the goverpors of fome of is Majelty's plantations and dominions, in order to their being cancelled ; and that they Should furnifh themfelves with paftes of a new form, under the hands and feals of the commiffioners for executing the office of the lord high admiral of Great-Britain and Irand, in lieu thereof, for their feveral hips and veffels, as by the faid recited proclamation is di-rected:-And whereas, fince the iffuing the faid proclamation, it has been agreed by and between his Majefty and the dey of Algiers, that the paffes of the prefent form fhould not expire fo foon as the Ift day of April, 1752, but be continued, and remain in force, until the 30 th day of October, $\mathbf{1}_{1}-52$, at which time the paffes of the new form are to commence, except only in the cafe of fhips going to the Eaft-Indies, or other remote voyages, whofe paffes are to consinue good for the fpace of three years, from the 3 oth day of October,' 175 I . His Majefty, with the advice of his privy-council, doth therefore hereby declare and order, That the paffes of the prefent form do continue in force until the faid 3oth day of October, 1752: upon which day, the paffes of the new form fhall commence and take place, except in the cafe of dhips going to the Eaft-Indies, or other remote voyages, whofe prefent paffes are to remain good for three years from the faid 30 th day of October, 1752. And his Majefty doth hereby charge and command all his fubjects who fhall be porfeffed of any fuch paffes, that they do, before the faid 30th day of October, 1752, return the fame (except fuch as are before excepted) into the office of the admiralty of Great-Britain, or to the refpective collectors of the cuftoms at the out-ports of GreatBritain and Ireland, or to the governors of fome of his Majefty's plantations or dominions, in order to their being cancelled; and that they do furnifh themfelves with paffes of a new form, under the hands and feals of the commiffioners for executing the office of lord high admiral of Great-Britain and Ireland, in lieu thereof, agreeable to the requifites of his Majefty's afore-mentioned proclamation of the 2gth of March, 1750 .-Whereof all perfons whom it may concern are to take notice, and conform themfelves to his Majefty's pleafure, hereby fignified,

William Sharpe.
The Privileges of an Englishman, in the kingdoms and dominions of Portugal. Contained in the treaty of peace coneluded by Oliver Cromwe.l. And various laws, decrees, \&c. at fundry times, and on divers occafions, made by the kings of Portugal, in favour of the English Nation. To which is added the king of Portugal's new law, concerning the diamonds found in the Brafils.

Six Preliminary Articles, treated of and agreed upon between the ambaffador extraordinary from the king of Portugal, and the fate counfellor of pariament; in the name of the republic of England. Done in London, in the year 1652.

## ARTICLE.I.

That between the abovefaid, by the one and the other party it is agreed, and likewife the faid ambaffador has thought fit to give bis word, in the name of the king, that all thofe Englifhmen who by any means are held in cuftody, either upon account of fecurities, or pledge, or by any other means whatfoever, occafioned by the controverfies arifen between the one and the other people, in any of the dominions of Portugal, who by prince Rupert have been carried from hence, or put into its port of Lifbon, fhall be delivered and fet at liberty, and their fecurities difcharged, or made of none effect.

A R T I C L E II.
It was agreed with the faid ambaflador, wha gave his word in the name of the king, to deliver immediately the fhips, monies,

## TRE

monies, and goods belonging to the Englifh, which are retained in any of the places in the dominions of the king of Portugal, that they fhall be delivered without any farther delay, in the fame fpecie, in cafe they remain in the fame goodacis and value, as they were in when they were taken and retained; and if they are become worfe, or of lefs value or goodnefs in fpecie; or if, by reafon of the detention, they are any ways decayed, and become of lefs worth; or if they are loft ; in thefe cafes they fhall be paid for, and fatiffaction thall be given for them, according to the juft price or value they bore at the time they were taken. And as touching the reparation of the damages, it fhall be ordered in the manner as the council have declared their fentiments, by letter bearing date the 15 th of November 1651. And the faid ambaffador obliged himfelf to give fatisfaction for the whole.

## ARTICLE III.

It was agreed upon by the one and the other party, That all thofe who were the authors or helpers to kill the Englifhmen mentioned in the petition, which the counfel exhibited to the faid ambaffador, who have been found or taken in any places in the dominions of the king of Portugal, or who may be found for the future, hall be punifhed by the faid king, according to the merits of their crimes!; or they thall be penally delivered with their accufations to the parliament, to be by them chaftized; and the fame, being fubjects to the faid king of Portugal, thall be punifhed for their malefactions, as alfo thofe who were their accomplices or abettors, and the reft of the above-mentioned of any degree or condition whatfoever ; and alfo fuch as after this treaty fhal be named by the parliament of the republic of England, and if they abfcond, or run away to the ports of the faid king, they fhall be punifhed. And the faid ambaffador gave his word, in the name of his king, to obferve this article.

## ARTICLE TV.

It was agreed upon between the abovefaid on both parts, That the king of Portugal, in the name of, i. e. in lieu of thofe expences made by this republic, the which the counfel declared to the faid ambaffador, they might, in right of this nation, liquidate from the goods of the Portuguefe that were occupied or taken by reprifal,' which amounted to 14,2461. IIs. fhall pay to the parliament 50,0001 . in good and lawful money of England, in the manner herein after declared, that is to fay, 20,0001. or as much Portuguefe money as is equal to it in value, which fhall be paid to that perfon whom the parliament or council of fate may appoint to receive it in Lißbon, on the firft of March next enfuing after this treaty, or within the fpace of one month, as it Chall appear by a writing under the faid ambaffador's hand, wherein it fhall be expreffed, that the faid fum fhall be paid in Lifbon; and afterwards fhall be paid 15,0001. of the fame good and lawful money of England, on the laft day of the month of July, 1653, O. S. and in like manner the laft 15,000 I. (which makes the fum of $50,000 \mathrm{l}$.) on the firft day of the month of November, $1653, \mathrm{O}$. S. and that the two laft payments fhall be made here in the city of London.
In the fame article it was agreed upon, that as to the fum which by agreement is to be paid in Lifbon money, if any thing fhould be wanting of the intire fum, the whole fhall be made good, and paid by the faid king of Portugal; becaufe it is to be underfood, that all that entire fum and quantity ought to be returned to the parliament in good and lawful money of England; and the faid ambaffador, in the name of his king, obliged himfelf to pay the 50,0001 . in the payments and monies above declared and reprefented.

## ARTICLEV.

It was agreed upon between the one and the other parties abovefaid, That all the fhips and goods of the Englifh, which have been brought to Portugal by Rupert and Maurice, or by any of their fhips, and there made ufe of, or are any-where there detained, left, or by their order carried from thence, fhall immediately be refored to their owners; or inftead thereof full fatisfaction and reparation fhall be made. The which above-mentioned things the faid ambalfador has given his word, in the name of his king, to obferve and perform.

## ARTICLE VI

Between the abovefaid of the one and the other parties, it was agreed upon, That as well the fhip called the Converfion, as all other hips belonging to this republic of England, and all whatioever veffels of this republic, that by Rupert, or by any of the fhips of his fleet, have been carried to Portugal, and are in poffeffion of the king of Portugal, or any of his fubjetts, or before this have been taken
and applied to ufe, or which by any authority:have beeni taken as prize, Chall be reftured again, with all their apt parel, preparations, guns, and inftructions; and juft reco pence Chall be made for the retention of them; to which the laid ambaffador gave his word, in the name of his king, to perform the contents of this article: in faith and teftimong whereof, the faid ambaflador has figned thefe fix preliminary articles with his own hand, and fealed them with his feal.

Given on the 2gth day of December, in the yeat of our Lord, 1652.

Articles of Peace, Alliance, and Commerce, concluded between the moft ferene lord protector of England, Scotland and Ireland, on the one part; and the moft ferene king of Portugal, and of the Algarve., or the other part. Done at Weftminfer, on the Ioth of July, in the Year 1654.

## ARTICLEI.

In the firft place, that there fhall be a good, true, and firm peace, between the republic of England, and the moft ferene king of Portugal, and between the regions, countries, dominions, and principalities, under the empire of the one and the other, and the people, fubjects, and the inhabitants of both of any condition, rank, or dignity whatfoever, as well by land as by fea, in rivers and frefh waters; in fuch mianner that the people and fubjects fhall favour and fuccour one the other, with reciprocal good will, and honeft affection; and that neither of the faid parties, nor their people, fubjects, or inhabitants, fhall commit, or attempt any thing againft the other, in any place, either by land or fea, or in the harbours or rivers of either; nor fhall they confent to, or affift in any war, council, or treaty, to the prejudice of the other party; nor fhall either of the faid parties houfe or harbour the rebels or fugitives of the other in any of theit countries, kingdoms, dominions, ports, of frontiers.

## A RTICLE II.

That between the republic of England and the king of Por* tugal and their people, fubjects, and inhabitants, as well by land as by fea, in rivers and frefh waters, in all and every one of the regions, countries, dominions, tecritories, pro vinces, inlands, colonies, cities, towns, villages, ports and frontiers, there fhall be free commerce in thofe places, in which there is at prefent, or has been commerce in time paft; in fuch manner that without permit or other licence, general or feecial, as well by land as by fea, in rivers and frefh waters, the people, fubjects and inhabitants, of either of the parties, may go, enter and navigate in the faid dominions and kingdoms, and in all their cities, towns, harbours, coafts, bays, and places, with carriages, horfes, packs, and Chips, as well loaden as to be loaden, carry merchandizes, buy, fell, and at the current prices to procure pro vilions, and what neceffaries they may want for their ftay and voyage, to repair their fhips and carriages, whether their own or fuci as are bired or borrowed, and with the fame liberty to depart from thence with their goods, merchandizes, and all other things whatfoever, either to their own or foreign countries, as they thall think fit; and that with out any bindrance or impediment, faving, however, all the laws and ftatutes of each place.

## ARTICLE III

That the people and inhabitants of this republic fhall be as liberty to buy up all forts of wares, goods and merchandizes, and the fame to ufe and enjoy in the kingdoms, provinces, territories, and iflands of the king of Porrugal, at the firft hand, either in fmall parcels or by wholefale, in whatfoever number and fize, when and wherefoever they pleale; neither fhall they be compelled to buy them of the farmer of the cuftoms or monopolifts, nor fhall they be obliged to buy at any fixed price. They may alfo at difcretion fell, traffic, and freely carry away, any forts of goods, wares, and merchandize, whatfoever, from the fald kingdoms and dominions, paying only the duties and cuftoms in the confulado due on the goods they carry out, as they were paid the Ioth of March, 1653.4, O. S.

And, as to their buying and felling by the intervention of brokers, the faid people of this republic, thall enjoy and ufe the fame liberties, privileges and exemptionsas the Portuguefe themfelves; nor thall they be treated with more rigour than the fame inhabitants and natives; and that which is called the ancient charter, and all the privileges and immunities that heretofore have been granted to the Englifh at any time, by all or any of the kings of Portugal, hall be confirmed by edicts, to the end that the people and natives of the faid republic may enjoy them, pogether with all other privileges and immunities which at tredy grated or fall be granted from the time to coms, to already granted, or hall be granted from allance with the faid any nation, Eingd.
king of Portugal.

ART

## ARTICJE IV

That, whenever the people and natives of this republic artive with their fhips in the harbours of the king of Portugah, the fiid people and hatives fhall not be contrained, by the muniters; officers, and fubjects of the faid king of Portugal, to load, or put on board their thips, any other forts or quantities of goods and merchandize, but only fuch as thall be bi them approved of: neither, while tey ftay in the faid harbours, fhall there be put on board their hips, any more than two guards, or cfficers, at moft; and in the unloading their ihips, there hall be no unneceffary delays. And if the fard hips, which are loaden with dry goods, fhould not be unloaded within the face of ten days, and the fhips loaden with fifh and provifions, within the fpace of 15 days, after their entrance into the port, they fhall not, however, be obliged to pay any flipend, or fum of monty, or any talary to the faid guards, or officers, nor upon their account be at any farther expences, more than for the faid ten or fifteen days refpectively.

## ARTICLE V

If it thould fo happen that the fubjects of the moft ferene king of Portugal, or others, within the kingdoms and dominions of the faid king, thould be imprifoned, and their goods and merchandize feized, ftopped, and detained, by the office of the court of inquifition, or by its judges, or minifters, or by the king's exchequer; and fhould owe any money, or come to be indebted to any of the people of this republic, the faid debts fhall be fully and intirely paid out of the above-faid goods, and merchandize, within fix months next enfuing after the imprifonment, and feizure of the goods as abovefaid, without hindrance, or any moleftation, from the faid tribunal, or its judges, or minifters; but, if amone the faid goods and merchandize, fo feized and held, there fhould remain in being, any goods and merchandize belonging to the faid people and natives, the fame fhall immediately be reftored to them.

## ARTICLE VI.

That the captains, mafters, officers, and mariners of the Thips of this republic, or of any of its people, fhall not attempt to fue, or in any wife moleft, the faid fhips or people of this republic, within the faid kingdoms and dominions of Portugal, on acceunt of their wages, or falary, under pretence of their profeffing the Romifh religion; nor hhall they, under this or any other pretence, apply themfelves to the fervice of the king of Portugal, or by any other means leave the fhips whereunto they belong; and if they become delinquents, and offend in this point, their names being taken account of, they hall be chaftifed by the magiftrates and officers of the place, and compelled to return to their thips; and if they cannot be found, it thall be lawfill for the mafters of fuch hips, or vefiels, to detain their cloaths, goods, or wages, for the fatisfaction of damages.

## ARTICLE VII.

That the confuls, who fhall hereafter refide in any part of the dominions of Portugal, for the afliftance and protection of the people of this republic, fhall be trom henceforward mominated, and maje by the fand lord protector; and when fo nominated, they fhall have and exercife the fame authority, as any conful, of this or any other nation whatfoever, doth now, or fhall hereafter exercife in the dominions of the faid king, although they do not profefs the Romifh religion. And, for the judging of all caufes, relating to the people of this republic, a judge confervator fhall be deputed, from whom no manner of appeal fhall be granted, except to the Senate of Rellacao, where the law-fuits commenced, and appealed to that court fhall be determined within the face of four months.

## A R T ICLE VIII

That if any of the people of this republic fhall die within the kingdoms and dominions of the moit ferene king of Portugal, he books, accuunts, goodkand affets, belonging to them, or to others of the people of this republic, hail not be feized or pofieffed by the judges of the orphans and perfons abfent, or by their minifers and officers; nor fhall they be liable to their jurildiction; but the fame goofs, merchandize, and accomis, fhall be delivered to the Englifh fastors, or proculsons refing in that plice, who are nominated or deit ed by the deceafed: but, if the deiunct, whilf living, did not neminate any, then the faid goods, merchandiz: and account, thall, by the authority of the judge confervator, be deivered to two or more Englifh merchants refiding in the plece, an i sporwed of by the Englith confuls after havanr given f curity by unexceptionable bondimen (who fhall ato be aproved by the fame Englifh conful) for reftoring the :ad gouds, machandize and accounts, to the right
owners, or to their true creditors; and the goods which thall appear to have been the deceafed's, fhall be delivered to his heirs, executors or creditors.

## ARTICLE IX.

That neither the king of Portugal, nor any of his minifters, fhall detain or arreft any merchants, mafters of fhips, captains, or mariners; or their hbips, merchandizes, or other goods which belong to this republic, or any of its penple tither for war, or any other ufe whatfoever, unlefs the lord tither for war, or any other ufe whatfoever, unlefs the lord
protector, or thofe to whom fuch fhips and goods appertain, protector, or thofe to whom luch ihips and goods appertain,
are firft apprifed thereof, and give their confent; ; but thar the faid fhips, men, and goods, may freely, and without bindrance or impediment from the abovefaid king or his minifters, depart from the harbours and dominions of the faid king, at their own pleafure; and that the fales of the merchandize and goods belonging to this republic, fhall not be hindered, or delayed, under pretence that the king has occafion for them, or for any other reafon whatfoever; nor fhall they be taken for the king's ufe, nor for any other ufes whatfoever, if the perfons who are concerned in the goods do not confent thereto.

## ARTICLEX

That the people of the republic of England may freely carry in their fhips all forts of goods, merchandize, and things of what kind foever, even arms, provifions, or other fuch like from the harbours and dominions of the faid republic, or any other harbours or dominions whatfoever, provided they are not taken immediately from the harbours and dominions of Portugal, to be carried directly to any ports and territories whatfoever of the king of Spain; and that neither the moft ferene king of Portugal, nor any of his fubjeets, thall hinder the faid fhips, goods, or men, by feizures, reprifals, or any other means whatfoever, from navigating fecurely to the harbours and territories of the faid king of Spain, and from trading therein; and that the people of this republic may freely carry arms, corn, fifh, and all other forts of merchandize, into the kingdoms, ports and territories of the king of Portugal, and fell the fame at their pleafure, either by retale or wholefale, to any perfons whatfoever, and for whatever price they can get; and they fhall not be prohibited, circumfcribed, or incapacitated by his faid royal Majelty, or his minifters, governors, farmers of the revenue, or monopolifts, or by any chamber or jurifdiction of any tribunal whatfoever, either public or private: and that fuch goods and merchandize as have once paid the cuftoms or clearances in any port or harbour whatfoever, belonging to his Majefty, may be freely carried into any other ports or places whatfocver, of his faid Majefty, without paying any farther duties, clealances, or fums of money, befides what the Portuguefe merchants fhould pay, if the goods and merchandize did belong to them.

A R T I CLE XI.
That the people and natives of the republic of England fhalif trade and traffic freely and Cafely from Portugal to the Brazils, and the other conquetts of the faid king in the WeftIndies, and from the Brazils and the faid conquefts to Portugal, in all forts of goods and merchandize whatfoever (except meal, fifh, wine, oil, and Brazil wood, which ara prohibited by the king, in purfuance of his contract with the Brazil company) paying the duties and culloms which others pay who trade into thofe parts; and it is to be underftood that the Englifh thips hired by the Portuguefe are to fail in company with the Portuguefe fleet; and that the faid peopla and natives arriving from any of the harbours and places in Brazil, and the faid conquefts, at any of the dominions of the faid king whatfoever, fhall not be compelled to unload their fhips, or to put out any goods belonging to the Englifh; but the officers of the cuftoms thall caufe the goods to be weighed while they are on board the fhips, to the end that the cuftoms and tributes due on them may be paid; and that no heavier duty or impof, nor greater fum of money, or expence, fhall be demanded by, or'paid to, the king's officers, than if the goods were put on fhore; nor fiall there be any delay in difipatching and difmifing the faid fhips. And after they are arrived at any of the dominions whatfoever; of the faid king, and have paid the cuftoms and duties above mentioned, they hall freely proceed to any other harbour or place whatfoever; and the goods put on board the Englifh fhips, either by the fubjects of the faid king, or by others, to be tranfoorted to any part whatioever of the dominions of Portugal, fhall by no means pay greater cultoms, or any other different duties, than if they were put on board Portuguefe fhips. And likewife, that the people and natives of the republic of England fhall have the liberty of navigating to the colonies, illands, regions, ports, diftricts, towns, villages, and dominions, belonging to the king of Portugal, in the Eaft-Indies, Guinea, Bengal, the illand of St Thomas, or to any other part whatfoever, on the coafts and fhores of Africa; and there to flay

## T R E

or refide, negociate, trade, and traffic, by land or by fea, on the rivers and frefh waters, in any goods and merchandize whatfoever; and to tranfport all kinds of merchandize to any place or region, with the fame freedom as formerly; and alfo with the fame that was ever granted, by any treaty heretofore, or fhall hereafter be granted, to the natives of any other nation, in alliance and friendifip with Portugal: and as to the cuftoms and duties to be paid in thofe regions, they fhall not pay more or heavier than thofe which are paid by any perfon or perfons trading in any of the faid places or regions. And likewife the king of Portugal, and his fubjects, as well the Brazil company as all others, as often as they have need of foreign hips for carrying on their trade and navigation to the Brazils, or for the regions and inlands above mentioned, or elfe-where, fhall hire the flips of this republic, and its people, at the ufual and ordinary rates, as many as they pleafe, and no other fhips of any prince or republic; provided the number of Englifh thips to be hired be fufficient to fupply their wants: excepting that the Brazil company (as is contained in the charter of liberties granted to them by the king's letters patent) may hire, of what nation foever they pleafe, twoflyps of war, and four others, to be fent with fifh to the Brazils; and that as well the faid Brazil company, as all other the fubjects of the faid king, who follow the bufinefs of merchandizing, may freely hire as many Englifh Chips as they pleafe, and fait therein to the Brazils, and the other conquefts of the faid king, in the Weft Indies, without any licence, general or pecial, firft to be obtained for that end; and the ftipend agreed upon to be charged with the intereft, fhatl run on, and an account thereof lhall be kept till the whole is paid, though it fhould exceed the ftipend on the time contracted for.

## ARTICLEXII

That, whereas the moft ferene king of Portugal, by his refcript fealed with his leal, and dated at Lifbon, the twentyfirft day of January, in the year of our Lord, 164I, granted to the natives of the lands under the dominion of the ftates of Holland, \&sc. free liberty of importing and exporting all forts of merchandize to and from bis kingdoms, dominions, and territories; the people of the republic of England fhall ufe and enjoy the fame liberty in the kingdoms and dominions of the faid moft ferene king of Porlugal.

## ARTICLE XIIII.

That none who are commonly called Alcaydes (i; e. Bailiffs) or any other officer of his royal Majefts, fhall leize or arreft any of the people of this republic, of what rank or condition foever, exeept in a criminal caufe, being detected in any flagrant fact; unlefs he be firft impowered in writing by the judge confervator; and that the aforefaid people, in all other refpects, as to their perfons, domefticks, and dwell: ings, books of accounts, interefts, merchandize, and all other goods belonging to them, thall enjoy equal and the fame immunity, within the dominions of the moft ferene king of Porcugal, from imprifonment, arrefts, and other moleftations whatioever, as already is, or fhall hereafter be, granted to any other prince or people whatfoever, in alliance with the king of Purtugal; nor fhall they be hindered, by any permit or protection to be granted by the faid king to his fubjects, or others frequenting his dominions, from recovering their debts; but they fhall have a right to fue any man to juftice for the recovery of any juft debt, although he be cheltered under the patronage or prorection of any perfon whatfoever, or fecured by any alvara, or written law, or whether he be a farmer of the revenues, or invefted with any other privilege.

## AR.TICLE XIV.

And forafmuch as the rights of peace and commerce would be null and ufelefs, if the people of the republic of England Thould be difturbed for confcience fake, when they pals to and from the kingdoms and dominions of the faid king of Portugal, or refide there for the fake of exchanging their merchandize: That commerce may therefore be free and fecure both by land and by fea, the faid king of Portugal fhall take effectual care, and provide, that they be not molefted by any perfon, court, or tribunal, upon account of the fard confcience, or for having with them, or ufing, any Englifh Bibles, or other books; and that it thaill be Iree for the people of this republic to obferve and profers their own religion in private houfes, together with their families, within any of the dominions of the faid king of Portugal whalfoe er; and the fame to exercife on board their hips and vefficts, as they thall think fit, withour any trouble or hinderance; and finally, that a place be affigned them for the burial of their dead. But withal, the Englifh are cautioned not to exceed
what is writen in this article.
VOL. II.

## ARTICLEXV.

If it 隹ll happen hereafter, that any controverfies or doubts do arife between the faid republics, which may endanger the interruption of commerce between the one and the other nation, public nutice fhall be given to the people and fubjects of both parties; through all the kingdoms and provinces of both, and the fpace of two years, after fuch notice, allowboth, and the pace of two years, after fuch notice, allow-
ed for tranfporting themfelves, goods, fhips, merchandize, ed for tranfporting themfelves, grods, ©hips, merchandize, and any other fubfance whatfoever, without any moleftation, impediment, or damage, offered, in the mean-time either to their perfons or goods. And it thall be lawful for the faid people and fubjects on both fides, to whom any debts may be owing at the time of fuch public notice, legally to demand the fame within the faid two years, in the places and dominions where they are owing; and from thence-forward uninterrupted juftice fhall be done them, in fuch manner, that in effect thofe creditors may be able to obtain their own within the time prefcribed.

## A R TICLE XVI.

If it fhall happen, that while this treaty, friendfhip and fociety; are fubfifting, any thing be committed or attemp ed by any of the people or natives of either of there partics, contraty to this treaty, or any part thereof, by land or by fea, on the rivers or frefh waters; the friendfhip, confederacy, and intercourfe betwixt thefe nations, fhall not for this caufe be interrupted or broken, but fhall rather entirely fubfift and fuftain its full force; and thofe onily in particular who violate the faid confederacy, thall be punifhed, and none elfe; and jultice fhall be done, and fatisfaction given, to all thofe concerned, by all thole who by land, fea, on rivers, and freth waters, thall act or commit any thing contrary to this confederacy, in any part of Europe, or in any other place within the ftreights of Gibraltar, or in America, or along the coafts of Africa ${ }_{j}$ or in any of the lands, inlands, feas, creeks, bays, rivers, or in any places on this fide the Cape of Good Hope, within the fpace of one year after juftice fhall be demanded; but in all places as above, beyond the faid cape, within eighteen months after juftice be required in the manner above mentioned. And if the violators of the faid confederacy do not appear, nor furrender themfelves to trial, nor give fatisfaction within this or that fpace of time now limited, according to the diftance of the place, they fhall be deemed as enemies to both parties; and their goods, fubftance, and revenues, whatfoever, fhall be feized, condemned, and applied to the making of full and juft fatisfaction for the injuries done by them; befides which, the offenders themfelves, when they happen to be in the power of either of the parties, fhall be liable to the punifhments which their refpective crimes deferve.

## ARTICLE XVII.

If it happens, that any controverfy does arife between the faid king's infpectors, officers, or minifters, and the faid merchants, concerning the goodnefs of fifh, or any other forts of provifions whatfoever, which fhall be carried to any of the faid king's dominions; the fame flall be determined by the arbitration of good men, provided they are Portuguefe, who fhall be equally chofen by the magiftrate of the place, and the conful of the Englim nation; and they thall determine the bufinefs in fuch a manner, that no damage may accruc to the owner in the mean time, while the matter is in difpute.

## ARTICLE XVIII

That it Mhall be lawful for the people and fubjects of either party, to go to the ports of the other, there to refide, and from thence to depart, with the fame liberty, not only with merchant fhips and tranfiports, but alfo with convoys and men of war, equipped for repelling the force of the enemy, whether they are driven there by ftrefs of weather, or come in for refitting their hips, or for victualling them, provided they do not exceed the number of fix men of war, if they come there of their own accord; nor fhall they ftay, or continue, any longer time than may be neceffary to refit their fhips, or to purchafe fuch neceffary things as they want; that peradventure they may not be the caufe of interrupting the commerce of other nations which are allied in fruendfhip. And if at any time any unufual number of thios fhould chance to come to fuch harbours, it number not be lawful for them to enter, without fift having leave from thofe in whofe jurifdiction fuch harbours may be, unlefs they are conftrained to do it againft their will, by the force of tempeftuous weather, or other urgent neceffity for avoiding the danger of the fea, and hhipwreck; the which, if it fhould happen, they thall immediately thew the caufe of their coming thither to the prefident, or chief magiftrate of that place ; nor dhall th y ftay there any longer 10 Y
time than they are allowed by the prefident or magiftracy of that place; nor thall they commit any hoftilities in the faid harbours, which may be detrimental to the faid republic or king.

## ARTICLE XIX.

That neither the faid republic, nor king, fhall fuffer the fhips and goods of either of them, or of their people, which flall at any time be taken by the enemies or rebels of the other, and brought to any ports or places of the other's cometries, to be cinveyed away from the right owners, or transfer the property; but the lame thall be refored to them, or their attornies, provided they lay clain to fuch fhips before they are fuld and unladen; and either prove their right, or exbibit teftimonies to make appear their property in them, within three months after the faid hips and goods are fo brought in: in the mean time, the proprietors themfelves fhall pay and difcharge the neceffary expences for the prefervation and keeping of the fald hiips and goods.

## ARTICLE XX.

That the people and merchants of the republic of England, who frequent the kingdoms, dominions, and countries of the faid king, upon account of trade, er who arive at this. harbour with their lhips, fhall not pay for anchorage, or other poit charges, or any other duties, or fums of money, more than thofe which were cuftomarily paid to the king, and the chamber of Lifbon; but if any ill cuftom thould introduce others for the future, they fhall not be paid.

## ARTICLE XXI.

That no manner of tribute fhall be demanded from any of the people of this republic, either in Lifbon, or in any other place, to be expended in the chapel of St George; nor fhall they be compelled to hold any perfonal offices, or to wear any fort of arms, or to furnifh others therewith.

## ARTICLEXXII.

That the merchants of either of the aforefaid parties, and their factors, fervants, negotiators of their families, or other fervitors, mariners, mafters of fhips, and people of the navy, may fecurely and freely pafs to and fro in the dominions, territories, and countries of the faid republic and king; as alfo in their harbours, and on their out-fkirts: and the people and fubjects of the one may have and poffers dwelling. houfes of their own in any of the dominions of the other; and alfo warehoufes for keeping their goods and merchandize, as long as they hire them, without being molefted by any body. They may alfo wear fwords, and carry with them both offenfive and defenfive arms, according to the ufance and cuftom of the place, that they may the better be able to defend themfelves and their goods.

## ARTICLE XXIII.

That all goods and merchandizes of the faid republic or king, or of their people or fubjects, of both parties, loaden on board the fhips of the enemies of either, being there found, fhall be made prize, together with the fame flips, and fold at public fale. But that all the goods of the enemies of either, or merchandize loaden on board the fhips of either party, or of their people and futijeets, fhill be untouched.

## ARTICLE XXIV.

That all juft dehts owing to the Englith by the king of Portugal, on account of merchandize taken or bought, or finally of hhips luaden etther before or after putting their goods or fequeltration to this time, hall be paid and difcharged immediately, within two years next following: and that all recognizances, bonds, and furety-fhips, given and entered into by the Englifh, on account of any thips hitherto laden by the king of Portugal, or any of his fubjects, for the ports of Brazil or Angola, and afterwards detained in any of his Majefy's harbours, or feized and occupied by prince Rupert and prince Murice, or hindered in any wife by the faid king, or by any of his officers or minifers from being able to perform their contracts, fhall from this time forward be canceiled, brown, and made null: and that neither their per1.ns, nor their fhips ner goods, fhall be put under arreft, or in any wife molefted by the faid king, or by any of his fubjucis, on account, and by reafon, of the faid contracts.

## ARTICLE XXV.

Whereas there was a convention between the new parlian:ent, and the ambaffador extraordinary from the king of 1 neugal; and the faid ambafiador,' in the fecond of the fix peliminary articlus, which were agreed to on the 2gth of December, 1652 , obliged himielf, that all the fhips, goods, monies, and debte, aipertaining to any Englifhmen whom-
roever, which were taken and detained in the dominions o the king of Portugal, fhould immediately be freely reftored in fpecie, provided they were ftill of the fame value, and remain in the fame good condition they were in at the time when they were firft detained; but if they are grown worfe than they were, then fatisfaction fhould be given for them, according to their true price or value when they were firt detained. But as to the compenfation of the damages, they being afcertained by a declaration of the council, in their letter bearing date the 15 th of November, 1652, and therein declared by the council, that it was not their intentions to prefs and demand reftitution by vigour of law, but only in fuch manner as fhould be conformable to equity and reafon, and that the ambaffador might witnefs his inclinations to procure a peace; upon this fuppofition he obliged himfelf, that the damages fhould be made good. In the fifth article of the faid preliminaries, the faid ambaffador farther took upon him, or engaged, that all the fhips and goods of the Englifh, which by the princes Rupert and Maurice, or by any fhip whatfoever under their command, have been carried to Portugal, and there difpofed of, or are ftill remaining, or either by them or their command, have been carried again from thence, fhall either immediately be reftored to their owners and proprietors, or reparation and fatisfaction fhall be given for them. And becaufe fome controverfies are fill remaining concerning the petitions or demands of the merchants and others, touching fatisfaction; to the end thefe petitions or demands, thefe complaints of right and equity, may be judged and determined, it was by both parties contracted, concluded, and agreed upon, that the faid petitions, or demands, about the damages and fatisfactions, fhall be referred, as they are by thefe prefents referred, to the judgment, award, and fentence, of Dr Walter Walker, John Crowther, Dr Henry da Sylva; fecretary of the embafly, and Francis Perreira Rebella, agent in the affairs of the faid embalfy, indifferent perfons, and chofen as well on the part of the king of Portugal, as of the lord protector; who by thefe prefents are made and conftituted recognizers, arbitrators, and judges, to hear and examine all and every one of the demands and complaints of every one of the merchants and mafters of fhips, and others who claim a right to all or any of the fhips, monies, debts, merchandizes, and all other goods whatfoever, mentioned in the faid preliminary articles: which arbitrators fhall meet and fit in the city of London, on the 2oth day of July next, O. S. and the fame day they Thall take a folemn oath before the judges of the high court of Admiralty of England, that they will renounce all favour or refpect to either party, and all private intereft in judging the matters to them referred; and, by thefe prefents, they are inftituted and authorifed to fummon any perfons whatioever, and to order fuch depofitions and papers to be laid before them, as fhall bave any relation to the bufinefs referred to them ; and, whether they take the faid oath or not, they fhall, in a fummary way, examine and enquire into the truth of all thefe petitions and complaints, and alfo all and every one of the damages which were occafioned by the faid arrefts and detainers. And the faid arbitrators are authorifed by thefe prefents to finith all the caufes above mentioned, and to liquidate, adjudge, and finally determine, the damages or lofles, as they, or the major part of them, in their difcretion and confciences, fhall judge to be juftice and equity, and to publifh their final rentence in writing under their hands; which fentence, fo publifhed, hall bind and oblige both parties, without any appeal, revifal, or redemption whatfoever. And the faid king binds himfelf effectually to perform, keep, and obferve the fame, in all its members and articles, as alio to pay, or caufe to be paid, fuch fum or fums of money as fhall be adjudged him as aforefaid. And befides which it is agreed, that if the faid arbitrators do'not agree and finally determine upon the faid things to them referred, before the firft of September next, O.S. then the raid petitions or demands, which are left undetermined by the faid arbitrators, fhall be fubmitted, as they are by thefe prefents fubmitted, to fuch perfon of the faid lord protector's council, as the faid lord protector fhall nominate, within any time whatfoever, after the firft of September next: for which end the faid lord protector thall, by his mandate, authorife fuch perfon fo nominated, finally to determine upon all and every one of the petitions or demands aforefaid. And if, before the pronunciation of fentence by the faid counfelior, any papers fhould arrive from Portugal, or any procurator to follicit about any of thore caufes, the faid counfellor thall give them a new hearing, and the fentence which hall be given by fuch perfon fo inflituted under his hand and feal, hhall conclude and bind both parties, and the fame fhall be duly complied with and executed. And for the greater caution and fecurity that fuch fum of money, as fhall be adjudged by the faid arbitrators, or arbitrator, may be honeflly paid, it is agreed and concluded, that one moiety of the duties and cultoms of Portugal, arifing from all the goods and merchandize whatfoever, of the natives and populace of this republic, who trade to Portugal, fhall, immediately after the date of this treaty, be applied to the faid payment. Which moiety fhall, from time to time, be paid to that perfon which the lord

## T R E

protector fhall nominate; thereby giving fatisfaction to the m rchants, mafters of fhips, and proprietors; for their loffes or damages.

## ARTICLE XXVI

It was concluded and agreed upon, that this prefent peace and confederacy fhall not be broken by any other league or confederacy either already made, or that fhall be made, by the mool ferene protector of Eugland and king of Portugal, witls any other princes or republics whatfoever; but this peace and contederacy fhall be intirely kept, and its effects always remain in full force.

## ARTICLE XXVII

It was agreed and concluded, that both parties fhall truly and firmly obferve, and put in execution, the prefent treaty, and all and every one of the things therein contained and comprehended, and caufe the fame to be obferved and performed by the people and fubjects of the one and the other party.

## A R TICLE XXVIII.

It was agreed and concluded, that the prefent treaty, and all and every one of the things therein contained and concluded, fhall be ratified by the faid lord protector and king, by the letters patent of both parties, adorned with the great feal in due and authentic form, within fix months next enfuing; and within the faid time mutual.inftruments thall be delivered on both fides: and alfo, this peace and confederacy thall immediately (after the delivery and exchange of the inftruments) be proclaimed in the ufual forms and places.
In truth and teftimony of all which, we the commiffioners of his highnefs the lord protector, and the mbafladers extraordinary of the moft ferene king, by virtue of our refpective commifions and full powers, have figned the prefent treaty with our bands, and fealed it with our feals.

Done at Weftminfter, the roth day of July, in the year 1654.

A Secret Article between the lord protector of England, Scotland, and lreland, on the one part; and the moft ferene king of Portugal, and of the Algarves, on the other part. Agreed on with the lord high chamberlain, his Majefty's ambaffador extraordinary in London.

That the people and inhabitants of England, trading (as has been already mentioned) in the kingdoms, dominions, ports, or territories of the faid king, fhall not pay more duties and taxes, but only in the manner following, viz. That the Englifh goods, merchandize, and manufactures fhall never exceed 23 per cent. on their valuation for the payments of the duties; and they fhall be favourably valued, according to the regimen of the cuftom houfe, and the ancient laws of the kingdom: and fuppofing there flould be any motive for raifing the valuation, by reafon of a rife in the real value of goods or merchandize, it thall not be done but by the confent and in the prefence of two Englifh merchants who refide and dwell in Portugal, and are chofen by the Englifh conful; and granting that the merchandize fhould fall from its prefent or future exact value, the valuation and doubt fhall be determined by difinterefted perfons, who thall be chofen by the Englifh conful, and the officers of the cuttom-houfe; and the abovefaid inhabitants of the faid kingdom trading in the faid dominions and lordfhips of this republic, fhall pay the prefent taxes and duties as they are newly impofed and fettled in this prefent month of May 1654, according to the ufance and laws of the place, both parties obferving the laws and ordinances of each place refpectively. And thus it was agreed upon and concluded, that the abovefaid article, and every thing contained therein, fhall be confirmed or ratified by the faid king, and by the faid lord protector, by the letters paent of the one and the other party, fealed with the great fral, in due and authentic form, within fix months next following; and within the faid time inftruments fhall be paffed or exchanged by the one and the other party.
In faith and teftimony whereof we fign: the commiffioner of the faid moft ferene king, by the force, vigour, and virtue of our commiffions relpecting this act, and we fign this fecret article with our hands and firms, and we feal it with our manual feals.
Done at Weftminfter the roth day of the month of July, 1654.

A Chartir of the Privileges and Liberties of the Englifh; confifing of various ancient provifional laws alvaras, and decrees, granted by feveral of the kings of Portugal, in favour of the Englifh, and others.

Don John, by the grace of God, king of Portugal, and of the Algarves of this fide, and beyond the feas in Africa, lord
of Guiney, and the conqueft, navigation, commerce of Ethiopia, A rabia, Perfia, and the Indies, \&c. To all juftices; comminioners, auditors, judgers, judges, officers of juffice and perfons uf my kifg̀dom and dominion of Portugal ; where, or before whom, this my prefent charter of privileges may be prefenced, and to whom the acknowlegement thereof by right may belong: know, that in this my very noble, and always loyal city of Lifbon, in the court of the cuftom-houfe thereof; to me, and to my auditor, who at that time was doctor Nicholas Dias Tinoco, as judge confervator of the Englifh, a perition was made, in the t.ame and behalf of all the Englifh nation then refiding in this city; wherein they fer forth, that among the laws, charters, and decrees which the fovereign of thele kingdoms had granted in their favour, it was provided, that no bailif, or conftable, fhould enter their houfes, to execute any warrants, or mandates, on their perfons, or goods; nor fhould it be done in any other place, or by any other perfon, but by their judge co fervator, or by his mandate, urder the penalty of tiventy crufadoes forfeiture to their ufe; except the officers of juftice fhould be going in purfuit of a malefactor, detected in fome flagrant fact : and that alfo they were excufed, or exempted from paying any manner of rates, taxes, and loans, or per forming any perfonal fervices, or holding any offices of charge whatfoever. And likewife, that they thould not be imprifoned, or detained in prifon, even in a criminal cafe, otherwile than by the mandate of my faid auditor, their judge confervator, without homage, according to the provifional law of the king, Don Emanuel; who, we hope, is taken into glory; and that likewife they were authorifed to carry arnis, offenfive and defenfive, in all this kingdom, as well by night as by day, before, or after, the ringing of the eveningbell, etther with light, or without light, and enter with them into the prohibited places of all chis kingdom. And, in like manner; they informed me how they had been vexed and difturbed by the fcavengers, officers, who ufed to perfecute them, notwithrtanding, in order to excufe any differences, they ufed to fend them one hundred reis, which they would not accept of; but from the Portuguefe they accepted of forty reit, and lefs; but, becaufe the petitioners were ftrangers, they cond murd them in 1000 reis, or, at leaft, in 500 reis. And, likewife, when they went out of this city about their bufinefs, the juftices of the country villages ufed to vex and difturb them; and they would not keep, or have any regard to, thic faid privileges, but rather put different and wrong contructuns upon them, in order to vex and trouble the faid petitivners; and they took away their arms, which they carred, and were authorifed to carry.
They begjed of me, and of my faid auditor, their judgeconfervator, to declare by his difpatch, that they were authorifed to ufe the faid arms, and that; if any officer of juflice bad a mind to impeach them, it fhould be done before their judge-confervator, and no other judge, or juftice, whatfoever, under penalty of being fufperided from their offices, and falli, g under the lafh of their privileges; and they would thankfully receive the favour done them. - This was the contents of the faid petition : together with which, Thomas Boftock, an Englifhman, prefented the charter of the liberties and privileges of the Englifh nation, in which were inferted the fubfeque:st papers and articles, viz.
Don Ferdinand, king of Port:gal, \&c. to thee Fernando Rodriguez, by my authority, judge of the caufes relating to my cuftom houfe of Lifbn, or to anv other, who after thee fha! occupy thy place, halch, \&c. Know thou, that it being my pleafure to fav ur the Englifh merchants, natives of the kingdom of England, and the dominions of the prince of Wales, I give thee to them for their judge in the law-fuits they have, or myy have, with any perfons of my dominions, on account of merchandize bought or fold by them, to or from fuch perfon, or perfons, of my dominions.
I thee therefore command, that thou (or whoever may be in thy place) take cognizance of the law-fuits and caufes, that between the partics abovefaid may happen, either by complaint of the one, or the other, upon account of merchandize, as is above already expreffed. And, I command, that henceforward no others hall take cognizance of the faid law-fuits, befides thee, the faid Fernando Rodriguez, or any nther perfon, that by my authority may fill thy place, as judge of my faid cuftom-houfe; and thou fhalt not do any thing to the contrary, or beyond this my command. In witnefs whereof, I have commanded this my grant to be given in Lifbon, the 2gth day of October, 1450, written by Stephen Armes, for the king Don Ferdinand.

The King.
Don John, by the grace of God, king of Portugal, and of the Algarves, \&c. To all to whom this letter fhall come, we by it mike known, that whereas we are gracioufly pleafed to favour all the Englifh merchants of the kingdom of England, who come to the city of Lifbon, or other places whatfoever of the kingdom, it is our pleafure and commands, that they fhall henceforward have and enjoy all the privileges and liberties that are granted to the Genoele, and other merchants, who at this time come to, or refide in, our king-
doms, either in the city of Linbon, or in any other places whatfoever, within our faid kingdoms. We therefore command all judges and juftices of the faid kingdoms, and all general receivers of the revehues, fcriveners, and all others whatfoever, to whom this may be prefented, that they look into the faid privileges and liberties, which the faid Genoefe, and others, frequenting our dominions, have obtained from thefe kingdoms, and have been heretofore confirmed by us; and fee that they keep, oblerve; and fully comply with the fame, in favour of the Englifh merchants, for the fame caufe and reafon as they frictly obferve them in the favour of the faid Genoefe, and other merchants, at prefent refiding in our kingdoms, it being a new favour we thew to the faid Englifh, having before given them privileges and liberties. In teftimony whereof we have commanded this our letterpatent to be given in their favour, in the city of Coimbra, the ioth of Auguft, 1400 . Writen by James Paes, for the king Don John,

The King.
Don Alfonso, by the grace of God, king of Portugal, and of the Algarves, \&xc. To all to whom this our letter fhall come, we by it make known, that we privilege all the Flemings, Germans, French, and Britons, who come to refide in our kingdoms; and, forafmuch as Michael Arman, a German Thoemaker, and a dweller in our city of Lifbon, is a fubject of one of the faid nations, which we fo privilege, and he humbly imploring our favour; that we command our privilege to be given hirm, and confidering his requeft, we have thought fit to fhew him our grace and favour; therefore it is our royal pleafure and will, that from henceforward he fhall not be conftrained to pay any of our demands, rates, taxes, or loans, whatfoever ; nor thall he do any fervices, or take upon him any charge whatfoever, or fervitudes that are, or have been, occafioned by us, or by our councils, upan any account whatfoever : they thall not guard either prifoners, or monies, nor thall they be tutors, or preceptors, to any perfons whatfoever, nor fhall they be obliged to hold any manner of offices, or fervitudes, under us, or our councils, againft their will. In like manner they fhall not be obliged to go into our fervice, either by fea or tand, in any parts or places whatfoever; nor fhall they be obliged to keep horfes, arms, or mules for our fervice, notwithftanding any law or cuftom to the contrary. In the like manner we command that no perfon, of what ftate or condition foever, fhall be fo prefumptuous as to take from them their dwellinghoufes, or cellars, or fables; nor thall they quarter thereinn ; neither Thall their bread, wine, cloaths, or any other thing what foever of theirs, be taken from them againft their will. We give them leave to hire and ride on beafts of burden, with faddle and bridle, all over our kingdoms and dominions, notwithftanding the prohibition and ordinance made about this to the contrary. And we command our harbinger, the harbinger of the queen our confort (whom above all we prize and love) as alfo of the princes and lords of the faid city, that in cafe all and every one of us fhould have occafions, their faid houfes fhall not be taken from them for the ufe of us, or any other perfons, in any mannier, or by any means whatfoever. Such is our royal favour, upon pain of our dirpleafure, and the forfeiture of fix milreis to be paid for our ufe by any perfon whatfoever, who thall act contrary to this our mandate; the which we command our collectors and receivers to levy, and receive for our ufe, and the fcriveners of their offices, fhall enter it in their books, that a good and true account thereof may be kept under the penalty of paying double the fum for their neglect.
We therefore command all our juftices, judges, officers of juftice, collectors, receivers, and all other officers, and perfons whatfoever, to the fight or knowledge of whom this may come, that they thall acknowlege, and hold the faid Michael Arman, German thoemaker, for relieved; and excufed from the abovefaid things ; and he hall not be obliged, or contrained to any of them : therefore fee that you comply with, and caufe this our letter to be well and truly complied with, and kept and obferved for the caufes and reafons therein contained ; nor fhall ye do, or confent that any thing thall be done to the contrary hereof, in any manner, or by any means whatfoever; for fuch is our grace and favour, that it fhall fo be done, and let neithor one nor the other do any thing to the contrary. Given in the city of Evora, the 28 th day of March, 1452 . Written by Loupo Fernandes for the king Don Alfonfo.

The King.
Don Emanugle, by the grace of Gad, king of Portugal, and of the Algarves, 8icn To all to whom thefe our letters may come, healch, and defire of love. And whereas we are accuftomed to bonour fuch as are worthy, and with liberal beneficence tread in the paths of honour: and whereas our approved of fubject, Simon Lopes, having applied to us with his accuftomed humanity, we have heard him; and liberally granted his requeft, as will appear by thefe our letters, wherein may be feen our gracious favours in behalf of, the efteemed gentlemen Anthony de Belver and Conrado Selim
in their owri names, and in the names of their company of noble merchants of the augult and imperial city, and othe towns of Germany ; wherein they fignified to us their defue of fettling a houfe of their company in this city of Lifbon, in order to negociate, trade, and merchandize in our king doms, if we approved of granting them fome favours and liberties, which they requefted of us, conformable to fuch as were given them in other countries; and as we have under ftood their requeft, and confidered how much honour and humanity is due to fuch gentlemen, as well upon account of their perfons, as being worthy of all favour', as on account of their commodious trade, which according to our opinion will be advantageous for our people; as alfo on accuunt of their being imperial citizens of the augaft emperor of the Romans, Maximilian qur beloved coufin. For which rea fons we confent to their petition with very good will, grant ing them the liberties and privileges they defire, the which have never been granted to any others, or even to our own fubjects, as in thefe letters will appear and be contained at large, viz
In the firft place, we make over a freedom to the faid noble merchants, whereby they may freely négotiate, trade, fell, and buy, in all our kingdoms and dominions, eitber by their own proper perfons, or by their factors and fervants. It is our will, and we command, that whenfoever their merchandize arrives in any fhip or veffel before, or in the port of, or near this city, at the time of unloading, before any thing be unladen, our difcharging officers fhall firf acquaint them of the time they intend to go on board, that if they pleafe they come and bring boats with them, ard therein fee thei goods unloaden; but if they do not come; or fend within three hours; a little more or lef, then the faid officers may unload, although the owners of the goods are on fhore in the city.
It is our commands, that as foon as their goods are brough into the cuftom-houre, they fhall immediately pay the decima and fiza, except for woollea cloths, of which they Ohall pay the fiza at the time of fale, according to the prefent practice, and as it is. contained in qur articles; which fizas hall be paid to the officers of the tables, whereutito fuch du ties do belong, and they hall enter the fame in their books as paid, that all doubts about the payment may be avoided for the future. And fo foon as they have paid the duties, and received the faid goods in their own poffeffion, they may carry them where they pleafe, all over our kingdoms and dominions, without being obliged to acquaint any body of their moving from place to place, or of the fales they make of the faid goods; much lefs fhall they be obliged to enter or take out a permit from any of our offices of inland duties: nor fall they, incur any penalty, or be deemed as fmugglers on account of their not entering the fame, or taking out a permit for moving their merchandize from place to place, according to the method ordained by our charters, articles, and laws: and this is to be underfood of fuch goods and merchandize as have paid our duties, and have cleared, of which they thall have certificates from our officers, that by virtue of the fame they may carry and fell their merchandize all over our kingdoms, without paying any thing more; and hey flall be treated in the fame manner as the Flemings, as is contained in their privileges.
It is our will and pleafure, that no officer, nor farmer of the duties, nor any other perfon whatfoever, fhall enter into their houfes to fearch, nor fhall they in any wile opprefe them, except by mandate of our accomptant-general: he firft having information from fome unfufpected perfon, or perfons, making it appear, that they have in their houfes fome counterband or run goods; and when fuch an occafion thall offer of fending to their houfe, it thall be done by one frivener of the cuftom-houfe, and one of the farmers of the duties, if there be any; and without the faid friyener they Chall not go to their houfes to fearch for the faid counterband goods.
It is our will and pleafure, that they fhall not pay any duties, either for the provifions, or the furniture they import for the ufe of their houle, much lefs chall they any duties for the woollen cloths they import for cloathing their factors and fervants, allowing them two fuits a year for each perfon ; alfo canvafs' and wrappers of hemp for bags, and crocus for their merchandize, they depofing'on oath, that they import all thofe things for their own private ufe, and not for fale; becaufe, if they are for fale, they fhall pay the ufual duties. It is our will and pleafure, and we command, that none of our officers of juftice prefume to enter into their houfes, except the faid corregidor, or fuch as thall be 'fent by him, and no other, under the penalty of twenty crufadoes forfeiture to their ufe; except the officers of juftice are in purfuit of fome malefactor detected in any flagrant crime; in fuch cafe they may enter into their boufes.
It is our will and pleafure, that they fhall carry arms not only themfelves, butt alfo their domeftic fervants and attendants, to far as fix of them in number, which arms they may carry by night and by day, all over our kingdoms and do minions, as well before the ringing of the evening-bell, as afterwards, with or without light, provided, however, that
they do not nfe them otherwife than they ought to do; and this notwithftanding our laws to the contrary: the which fervants, however, fhall not be Spaniards, for none of that nation thall enjoy this liberty.
It is our will and pleafure, and our order, that any perfon whatfoever, who will not obferve, keep, and comply with there their privileges, or doth any thing contradictory to them, fuch perfon fhall incur the penalty of 50 crufadocs, in which he fhall be condemned for the ufe of the hofpital of All Saints in this city; and by thefe prefents we command our accomptant-general, that he knowing of any perfon who will not keep and comply with thefe privileges, according as is therein contained and declared, fhall immediately caufe execution to be made for levying the penalty on the faid perfon, which fhall immediately be delivered to our generalreceiver of the faid hofpital, and charged in the books for every time they violate thefe privileges, or do any thing contrary thereunto; befides which we command all other juftices and officers of juftice whom it may coneern, that they obferve this declaration, and fee that it be intirely kept and complied with, together with all other privileges they have obtained of us, effectually putting the faid penalty in execution; forafmuch as it is our will and intention, that the grace and favour we fhew them fhall in all things be underfrood to redound more to their advantage than to their prejudice; and beeaufe our pleafure is fuch, we have commanded this our alvara, or law, figned by us, to be given in their favour ; the which fhall be as valid as if it had been our letter, regiftered in the court of chancery, notwithftanding any law or ordinance there may be to the contrary. Done in Almeyrim the 7 th day of February, in the year 1411 . Written by Andrew Pireo.
By the faid privilege which we have granted them, they may load their merchandize in any thips they pleafe, as well Portuguefe as ftrangers, trading and lading from the inlands: and befides this, we make them our natives; and we are juft now informed, that at the Caza do Vero Pezo, the officers put doubts and difficulties to them, when they loaded their goods in foreign fhips, as our faid natives are wont to do: from whence it follows, that it is of damage to them to be privileged perfons, which was not our intention, but rather we intended to do them all favour and honour. Therefore, for the declaration of which it is our will and pleafure, that as well in this cafe, as in any other whatfoever, which they have a mind to enjoy as ftrangers, they may do it ; becaufe we will not have it fo that their privileges fhall leffen any favour granted them as ftrangers, if it be poffible to avoid it. And therefore they have for their privilege, that no of ficer of juftice whatfoever can enter into their houles, without an order from their faid judge; under certain penalties; and we are informed that fome officets and perfons have meddled with them, and with things belonging to them, and have ufed them ill; and, in order to provide againft this, it is our will and pleafure, and we require, that no officer of ours either difturb or meddle with them, or any thing that belongs to them, except their faid judges, or any by their order. And if any fuch cafe fhould happen, wherein their perfons and their factors ought to be'taken into cuftody and imprifoned, it is our will and pleafure, that they fhall be conducted to the caftle by their faid judge, or his bailiff, in perfon, and not by their fervants or followers; and if the caufe of their imprifonment be fuch as will admit of bail, we command that immediately, without other delay, the faid bail may be taken. Thus ftands the cafe, wherein it is fo largely contained and declared, and was contained and declared in the faid privileges and petition; the which being prefented to me, and by me conlidered, as alfo by my faid auditor Dr Nicholas Dias Tinoco, I therein pronounce my difpatch as followeth, viz.
Let them make ufe of arms as is exprefled in their privileges; and, for this end, the charters and mandates they petition for fhall be granted and drawn out for them in authentic form, wherein fhall be included the article that fpeaks of arms, and that other juftices cannot enter their houfes without an order from this confervatory; and all bailiffs, conftables, and all other officers of juftice, that thall do any thing to the contrary, thall immediately be notified by the fcrivener of the faid confervatory, that without the approbation of this court, they meddle not with thefe privileged perfons, under the penalty of being fufpended from their offices, and falling under our difpleafu:e. Lifbon, the IIth of May, 1645 .
ins limTinoco.
And this difpatch being put to the faid petition, by virtue thereof this prefent charter of privileges was paffed or drawn out in authentic form, for all in general, and every one in particular ; by which I command, fo foon as this fhall be prefented to you, being firft regiftered in my chancery, you compiy with it, and keep it, and caufe that it may be very intirely complied with, and kept, in the manner as is therein contained; and in complying therewith, ye fhall not hurt, moleft, nor vex the faid Thomas Boffock, nor his fervants and factorrs; nor fhall ye do, or caufe to be done, any act
or acts, as ferving writs, warrants, \&c, upon himi, of h:s houfe, except it be done by the mandate of the fuid my aiuditor, his competent judge confervator, and not by the mandate of any other judge, without approbation of this confervatory; it being fo decreed them by a chatter granted in favour of the Englifh, by the king Don Emanuel (who fahope is taken into glory.) But rather ve fhatil (who caufe to be rendered him all favoral let one and another fo comply with; and nothing to the contrary fhall ye do, nor fhall ye put any doubt or delay to thobfervance of it; left the penalty of 50 cruifadoes be levied upon you, and ye fall under the lafh of the faid privileges, and of being fufpended, \&c.

Given in this very noble and always loyal city of Liffion, and court of the cuftom-houfe, and confervatory thereof, the 4 th day of the minth of Navember, from the year of the birth of our Lord Jefus Chrift, 1647.
The king our lord fent this by Dr Anthony de Fariz Machado; his judge-adrocate, and his auditor, \& cc . \& c . \&c.

A Decree about Englifhmen's not being ferved with any executions, without an order from their judge-confervater.
On the part, and in behalf of the Englifh nation, it uras reprefenced to me, that it being granted them by the I 3 th ard ticle of the treaty of peace, that no judger, or other officer of juftice, could order to be feized, or taken into cuftody, any fubject of the king of Great-Britain, my good brother and coufin, for any caufe, either civil or criminal, without firft having an order for fo doing from the judge-confervator the faid article is fo little regarded, that Englifhmen are every day feized and taken into cuffody, without the precedency of fuch order from the judge-confervator; fo that the faid article is by no means oblerved, or complied with; and becaufe, according to the wording thereof, it is faid, that only in flagrant crimies the Englidh could be imprifoned by any of my minifters, and in otber cafes recourfe ought to be had to the confervator, or that he fhould write his confent to the orders of other judges before they fhould be valid;
1 recommend to the lord chief juftice of the houfe of fupplication, that he caufe the faid article to be obferved in its due form. In Lifbon, the $23^{d}$ of Auguif, $166 \%$.

King。
Wheat, which is brought from the inlands, or from any any other parts beyond the feas, may be imported free of duties in any parts or places of this kingdom.
I the king make known to whom this my alvara, or law, may come; that by the courts, which I held in this city of Libon, on the 28 th of January, 164 I , a reply to which 1 commanded to be given, in the year 1642, it was requetted of me by the ftate, in chapter 55 , that I would pleale to exempt all wheat imported from the illands, and other parts beyond the feas, from paying any duties in this kingdom, if being a provifion abfolutely neceffary for the inhabitants thereof: and, as $I$ have maturely confidered the convenience an't good of the common-weal of the kingdom, and other fubjects, and for other reafons, for which I am accuftomed to grant what is requefted of me by temporal taws, and by their means to thew grace and favour; it is my will and pleafure, that the wheat which comes to this kinedom, as well from the iflands as from any other parts beyond the feas; Thall not pay any manner of duty; from which it fhall be exempted, and free for ever. I therefore command the infpectors of my treafury, judges, juftices, commiffioners, and all other officers of juttice, and other perfons of thefe kingdoms and dominions, to whom this my alvara, or law, may be prefented, and to whom the acknowlegement thereof doth belong, that they comply with it and keep it; and caufe it to be entirely kept, obferved, and complied with, according as is therein contained, without putting the leaft doubt or contradiction to it; becaufe fuch is my grace and favour: and it hall be regiftered in the books of my treafury, and of the cuftom-houfe, and its regimens, and all other places where it may be neceffary, that it niay come to the notice of every body; and it fall be valid, as if a law made in court, and a charter given in my name, and fealed with the feal-pendent, notwitbftanding the ordinance in the fecond book, title the 40 th , to the contrary. Anthony de Morais writ it in Lifon, the 25th of May, 1647 .

King.
Of the things which owe no duties in this city of Lifbon; taken from the 12 th chapter of the Book of Rates of the Cuftom-houfe.

All wheat, barley, rye, Indian corn, and pulfe that are brought into this city from any foreign parts whatfoever, thall not pay any manner of duties in this cuftom houre; nor flefh-meat, cheefe, or butter; forafinuch as I have thewr favour to the chamber and people of the faid city, to free the 10 Z
faid things from duties; and, in the fame manner, arms, powder, horfes, gold, filver in lump, or in coin, and books, fhall not pay any duty whatfoever in the faid city and cuftomhoufe thereof. But all other things, and any kinds of merchandize, of what fort or quality foever, which belong to this cuftom-houfe, and are brought thereto by fea or by land, as is already faid, although exprefs mention fhould not be made in the faid books of rates, of every fpecies of goods in particular, yet they fhall pay the faid duties of 10 per cent. for the decima, and 10 per cent. for the fiza; and this, becaufe the faid merchandize and things thall pay the fame duties of 20 per cent. in all and every one of the cuftomhoufes of this kingdom, illands, and dominions hereof; and the people who bring them to the faid cuftom-houfe of Lifbon, fhall bring with them certificates from the officers of the other cuftom-houfes from whence they came, to make appear that they have paid the duties, forafmuch as otherwife they will be obliged to pay the duties in this city for any goods that are brought to the cuftom-houfe thereof. This is all that was expreffed in the faid 12th chapter, which, by order of the commiffioner of the cuftom-houfe, James Soares, the Notary Luis da Coffa has taken this copy of, in authentic form, the ad of Auguft, 1668.

## A Provision, or Law, whereby the Englifh are exempted from paying decima on their fock, and from being obliged

 to take upon them any charge in war.I the king make known, to whom this alvara, or law, fhall come, that as I am defirous to oblige the Englifh nation with particular marks of my royal favour, on account of the ancient friendfhip or alliance which I have had with that crown, and now in particular, in refpect of fome motives which induce me to it ; it is my will and pleafure to thew grace unto the Englifh merchants, and others of the fame nation, refiding in thefe kingdoms and dominions of Portugal, who have not been therein naturalized, by exempting them from paying the decima on their ftock, which all the other dwellers in this kingdom pay: and I grant them liberty, that they thall not be obliged to keep horfes; and if they have any for their own fervice, they fhall not be taken from them againft their will, nor fhall they be obliged to any other charge of war. And becaufe the publication of this privilege may be followed with great inconveniences, this alvara, or law, thall remain in all fecrefy; and for the better keeping it fo, it fhall not go out of the hands of the Englifh conful, for the time being, refiding in my court; nor thall it be regiftered in any other book but in that of fecrets, in the fecretary's office, in the expedient or original writing from whence this was tranferibed in Alcantara, the 2gth of May, 1656. And I Peter Severinde Noronha wrote this by particular command of his Majefty, whom God preferve.

King.

## Of fuch things as owe no duties whatfoever ; which are as follow, viz.

Pulfe from England, Scotland, and Ireland, New-England, and its dominions ; that is to fay, beans, peafe, lentils, wheat, barley, Indian corn large fort, ditto fmall fort, rye, butter, cheefe, gun-powder, horfes, gold, filver, in lump or in coin, books, flefh-meat of any fort whatfoever ; concerning which there is a fentence againft the contractors or farmers of the inland duties on flelh, obtained by Henry Bomelman, in the years 1645 and 1646 , pronounced in court, the faid farmers being plaiptiffs, and the faid Bomelman defendant; wherein it was decided, that the things in difpute owed no more than 40 reis for the entry, and 200 reis for the guard; which fentence lies in the office of the efrivener, Chriftopher de Campos. Alfo no duty fhall be paid for bifcuit, or any other fpecies of bread, cannon-fhot of iron or bell-metal, bandeliers, pikes, and mufkets. But, however, thefe things ought to pais through the cuftom houfe, and the accoutrements of war be offered to the fervice of the king; and, if he has no occafion for them, then the owners thereof may carry them where they pleafe.

Alvara, or a Law, in favour of the English; allowing them to repute their fhips as Portuguefe, which pay no duties going from Lifbon to the Weftern Iflands, and other conquefts belonging to the crown of Portugal ; which are word for word in the manner following; viz.

I the king make known, to whom this alvara, or law, may come, that the Englifh merchants refiding in the Weftern Iflands, fent to acquaint me by their petition, that I had been pleafed to command, among other agreements and refolutions of the treaty of peace lately concluded with the lord protector of England, that they might tranfport and carry any fort of merchandize, which had paid the duties in any one port, to any other ports or places, without paying any more duties, or any manner of tribute, befides what is paid by the native Portuguefe themfelves, for the goods that belong to them; and that, having once paid their duties in this city, they
thall not pay again any fort of tribute in any other port and that the Englifh hips which are freighted by Portuguefe thall not pay more duties than is paid for the goods nuguere, in Portuguefe veffels, as will appear by the tenth and eleventh articles of the treaty, the authentic tenor whereof was by them prefented: and whereas the faid articles were not duly obferved and complied with in the faid iflands, but, on the contrary, the Englifh were vexed and difturbed with doubts and moleftations, and that the natives of the iflands had unjuftly extorted a great deal of money from them, fince the haid articles of peace were made and publifhed; whereas, in the obfervance thereof, due regard ought to bave been had to the exemptions I granted to the Englifh, becaufe the royal mandates ought always to be effective, and the tranfgreffors of them punifhed:
Therefore they requefted of me, that I would pleafe to favour them with my provifional law, to oblige the minifters of the faid illands, to whom the obfervance of what is contained in the faid articles doth belong, that they comply with the fame, and obferve and keep them in the manner as is therein expreffed; and that they fhould not confent to the moleftation of the petitioners, nor take from them more than they ought to pay, and that reftitution thould be made of what they had hitherto been unjuftly obliged to pay. Confidering what they alledged, and the form of my orders, which bad been given on fuch like matters, they hoped I would grant their requeft, and with all humility they would thankfully receive the favour.
I, having feen and confidered the faid petition, did thereupon fend my decree, dated the firft of June of this prefent year, wherein it was written, that a provifional law fhould be prepared and paffed by the council of my treafury, in favour of the faid petitioners, conformable to the articles of peace; and if it fhould appear to the faid council, that there was any thing in the matter, neceflary to be reprefented to me, they fhould do it immediately. And in compliance with this my order, the council gave their difpatch, that the faid provifional law thould be made and pafied, in the form ordained by my faid decree, and that the articles of peace mentioned in the faid petition, fhould be requefted from the fecretary of fate's office, which was accordingly complied with; but, as the faid articles are written in Latin, they were tranllated into the Portuguefe language, and are as follows, viz.
[Here follow articles the tenth and eleventh, which are wrote in full length, in folio II.$]$
Wherefore I command the commiffioners of my treafury, and all other minitters and officers thereof, and the juftices of the faid inands, and all orher perfons to whom this my provifional law may be prefented, and the acknowlegement thereof doth belong, that they comply with it, and kcep it intirely; and that they caufe it to be obferved, complied with, and kept, in conformity to the articles herein tranflated, without any manner of doubt or contradiction; becaufe fuch is my will and pleafure: and it fhall be valid, though its effect thould laft more than one year, notwithtanding the ordinances or regimens that may be to the contrary; the which thall be regiftered in the books of the cuftom-houfe, that it may be publickly known to all people. Anthony Vellofo Eftafo writ it in Lifon, the $4^{\text {th }}$ of July, 1657 ; and John Pereira Bitancur ordered it to be tranfrribed.

Quefn.
Alvara, or a Law, to exempt the Englifh from paying brokerage againft their will.

I the king make known, to whom this alvara, or law, may come, that having a regard to what the Englifh merchants, refiding in the ifland of Madeira, fent to inform me of by their perition, requefting that I would pleafe to order my provifional law to be paffed, in order to prevent the brokers from obliging them to pay brokerage, unlefs they, of their own accord and free-will, thought fit to employ them, according to the third article of the laft treaty of peace with England: and having feen what they allege, and likewife the information given by Dr Manoel da Cunha, confervator of the Englifh, together with the anfwer given upon this by my attorney-general, it is my will and pleafure, and command, that the brokers fhall not oblige the Englifh to pay brokerage; except the faid Englifh fhall freely, and of their own accord, employ them, as they requeft in their petition b having confidered the articles of peace, and likewite the faid anfwer of my attorney-general. And this alvara, or law, fhall be duly complied with, in the manner as is therein contained; and it fhall continue in force, though its effect may laft more than one year, notwithftanding the ordinance in the fecond book, title the 40 th, to the concrary. Emanuel de Couto writ it in Lifbon, the 27th of January, 1661, and fent this by two conveyancers. Jacinto Facundes Bezerra ordered it to be tranfcribed.

Alvara, or a Law, which the king, Don Alphonsus VI. granted, at the requeft of the Englifh merchants,' on account of fucb cafes in law that may take place in the confervatory, even with fuch perfons as are privileged.

I the king make known, to whom this alvara, or law, may come, that the merchants of the crown of England reprefented to me, that notwithftanding the confervatory, which by an article of peace I have granted them for their caules, they are obliged to litigate in other courts, under pretence that the words of the general conceffion do not abrogate the privileges granted in law, and are enjoyed by their contenders, which is a great hindrance to trade, they being obliged to attend various courts, and delay their caufes, with trials about preferences: and becaufe, in all things which are not repugnant to juftice, I defire to favour the fubjects of the king of Great-Britain, my good brother and coufin, I have ordered this matter to be examined with all due confideration; and it has been my pleafure to refolve, that the faid confervatory fhall take place, even with fuch as are privileged, and with privileges which are incorporated, in law, either upon account of perfons, or upon account of things; fuch as officers of the mint, of the court of India, and mines and other fuch like; that every body, in caufes which proceed from trade, fhall be obliged to anfwer, or litigate, whether they are plaintiffs, or defendants, in the faid confervatory, notwithftanding any laws or ordinances whatfoever to the contrary: therefore, for this effect, it is my will and pleafure to annul them; but, however, with the declaration it is not my intention, by this conceffion; to alter any thing whatfoever belonging to the judge or court of my exchequer, upon account of the quality of the matters and things therein tranfacted; and it is always to be underftood, that appeals are to be made from the faid confervator of the Englifh, to whom they belong, as has been hitherto practifed. And this alvara, or law, thall be complied with, in the manner as is therein contained; and it fhall be valid, though its effect may laft more than one year, notwithftanding the ordinance in the fecond book, title the 40th, to the contrary. Emanuel de Couto writ it in Lidbon the 16th of September, 1665. Jacinto Facundes Bezerra ordered it to be tranfcribed.

King.
The fuperintendant of the collectors of the $4 \frac{1}{2}$ per cent. of the parifh of St Paul in this city, notwithftanding the order given him in this junto or council, fhall not oblige the fubjects of the Catholic King, the French, Engliin, and Hollanders, who are not naturalized, to pay what was charged to them on their flock; and thofe who have lands in this kingdom, and are not naturalized, thall pay only what is charged on the faid lands, his Majefty having declared it fo by his decree of the $g$ th of the prefent month of July. And all other ftrangers of other nations ought to pay what is charged them on their flock; becaufe, in order for them to enjoy this privilege, it is neceffary they fhould fhew what they have to entitle them to it, that it may be obferved and kept accordingly. And this difpatch thall be recognized in the office of the accomptant-general of war. Lifbon, the 18th of July, 1699 , with four firms of the minifters of the junto of the three fates, Regiftered, folio 106.

## Transcript of the Resolution about the Tax on Stock.

In the book of advices from the counties and hundreds, which ferves in this office of the accomptant-general of war and the kingdom, in folio 211, is regiftered the order given to the auditor of the town of Crato, about the particular things mentioned in this provifion; of which tenor, other orders have been given to all the reft of the minifters and fuperintendants of the parifhes of this city, and its diftricts; of which the following is a tranfeript.

## Provisional, fol. 211. of the Book, Number XII.

Don John, by the grace of God, \&c. I make known to thee, auditor of the hundred of Crato, that I am informed by the confultations of the junto of the three States, that the fub jects of feveral different nations dilpute the payment of the tax on their ftock, which they were charged with, under pretence that they are privileged by the articles of peace, which free them from paying the faid tax. I was pleafed to refolve, on the 28 th of April laft, that the French, and the fubjects of other nations, ought to pay the tax on fock, which was charged to them according to their trade, and that the fubjects of the Catholic king, my good brother and coufin, and thofe of England and Holland, ought to be exempted from this contribution; but, however, fuch as are naturalized, notwithftanding the privileges of England and Holland, ought to pay the tax on flock, in the fame manner as the natives of this kingdom do. And I fend you this advice of my faid refolution, that thou mayeft obferve it in that hundred, in the part which concerns thee; and due no-
tice fhall be taken of this order in the office of the accomptantgeneral of war. The king our lord fent this by Don Philip de Suuza, captain of his royal guards, and by Francis de Mello, forrefter general of the kingdom, both deputies of the junto of the three flates. Lewis Simeons de Azevedo writ it in Lifbon, the 7 th of May, 1708. Gafpar Salgado, who ferves as recretary, ordered it to be tranfcribed. Accordingly, thefe are the contents of the faid privileges, which in every thing fhall be duly complied with, according as is therein conained; and by virtue hereof, they fhall be obferved and kept, and every one fhall comply with them, and nothing to the contrary fhall ye do, \&sc. And this is regiftered in my chancery of the accounts of the kingdom and palace. Given in this city of Eaft Lifbon, the 8th day of the month of February, from the year of the birth of our Lord Jefus Chrift, $17{ }^{17}$.

A Treaty of Commerce betwixt the moft ferene lady Anne, queen of Great-Britain, and the mofl ferene lord Dun Peter, king of Portugal, and of the Algarves, \&c. Agreed upon and concluded in Libon, the 27 th of December, 1703.

## P R O L O G U E.

Whereas the league and ftrict friendfhip which is between the moft ferene and moft potent princefs Anne, queen of Great-Britain, and the moft potent Peter, king of Portugal, requires that the commerce of both the Britifh and Portuguefe rations fhould be promoted as much as poffible; and guere facred toyal Majefty of Great-Britain, hath fignified to his facred royal Majefty of Portugal, by the moft excellent John Methuen, Efq; member of the Englifh parliament, and ambaffador extraordinary in Portugal, that it would be very acceptable to her, if the woollen cloths, and the reff of the woollen manufactures of Britain, might be admitted into Portugal, the prohibition of them being taken off: that this matter might be treated and tranfacted, they have given their full power and commands; that is to fay, her facred Majefty of Great-Britain to the abovefaid moft excellent John Methuen, and his facred Majefty of Portugal to the mont excelient Don Emanuel Telles, marquis of Alegrete; Conde da Villa Major, knight profeffed in the order of Chrift, \&c. \&c. \&c. who, by virtue of the full powers to them refpectively granted, having maturely and diligently confidered the matter, have agreed upon the following articles, viz.

## ARTICLE 1.

His facred royal Majefty of Portugal pronifes, both in his own name, and that of his fucceffors, to admit for ever hereafter into Portugal, the woollen cloths, and the reft of the woollen manufactures of the Britons, as was accultomed till they were prohibited by the laws; neverthelefs upon this condition, that is to fay,

## ARTICLEII。

That her facred royal Majefty of Greas-Britain fhatls, in hes own name, and that of her fucceffors, be obliged for ever heteafter to admit the wines, of the growth of Portugal, into Britain; fo that at no time, whether there fhall be peace or war between the kingdoms of Britain and France, any thing more fhall be demanded for thefe wines by the name of cuftom or duty, or by any other title whatfoever, directly or indirectly (whether they fhall be imported into Great-Britain in pipes or hogfheads, or other cafks) than what fhall be demanded for the hike quantity or meafure of French wine, deducting or abating one half of the cultom or duty. But if at any time this deduction or abaterient of cuftoms, which is to be made as aforefaid, fhall in any manner be attempted and prejudiced, it thall be juft and lawful for his facred royal Majefty of Portugal, again to prohibit the woollen cloths, and the reft of the Britilh woollen manufactures.

## ARTICLE HI

The moft excellent lords the plenipotentiaries promife and take upon themfelves, that their above-named mafters fhall ratify this treaty, and within the face of two months the ratifications thall be exchanged.

For the faith and teftimony of all which things, $I$ the plenipotentiary of her facred royal Majefy of GreatBritain, have confirmed this treaty by the fubfrciption of my hand, and by the feal of my coat of arms: and the moff excellent lord the plenipotentiary of his facred royal Majefty of Portugal, for avoiding the controverfy royal Majerty of Portuga, about precedence, between the two crowns infrument of and Portugal, hath fubfcribed another infrument of
the faid tenor, changing oilly what ought to be changed for that reafon.
Given at Lifbon, the 27 th of the month of Decem. 1903 . John Methuen. (L.S.)

A Nem

## A New Law, concerning, the Diamonds, found in the

 Mines of Brasil.Don John, by the grace of God, king off Portugal, and of the Algarves, on this fide, and beyond the leas in Africa, lord of Guinea, and the conqueft, navigation, commerce of Ethiopia, Arabia, Perfia, and the Indies, \&c. I make known to whom this my law may come, that as the mines of diamonds, which are found in my dominions, do belong to me in the fame manner, and by the fame title, as all the mines of metals, I have therefore a right to make fuch referves of them as I may think proper; and as, by the cuftom of thofe dominions in which diamonds are found, fuch as are of a fpecial greatnefs, are referved for the fovereign; therefore it is my will and pleafure, that even in the countries in which, by my permiffion, diamonds are extracted (befides the other precepts and regulations prefcribed by the laws, and fuch as I have been pleafed to givē) all diamonds that are of the weight of twenty carats, or upwards, fhall be referved for my ufe; and the perfons who find them, or take them out of the mines, fhall deliver them immediately, within thirty days (to be counted from the time of their finding or taking them up) into my mints, or to the next neighbouring minifters, that they may remit them to the mints; of which delivery an entry thall be made by the fcrivener, who ba's the charge of that office, whigh he chall be obliged to remit to the governor. And fuch diamonds being manifefted and delivered by any flave whatroever, that flave fhall be made free, and he fhall have his charter of freedom granted him, and drawn out in my name by the fuperintendant of the mint, or by the minitter to whom he made fuch delivery; and to his owner fhall be given four hundred milreis for the value of the faid flave, which thall be paid him in the faid mint where the faid diamond was delivered or remitted to. And if the delivery be made by a freeman, to him the faid freeman haill be given the fame four hundred milreis. And all the diamonds, of the weight of twenty carats, or upwards, which may be found henceforward, and not delivered in the manner above mentioned, it is my will and pleafure, that they fhall be forteited to my ufe, whofe hands foever they may be found in; of which all, or any perfons, may impeach, inform, or denounce; and their denunciation being proved, and the diamond taken into cuftody, they fhall receive four hundred milreis as a reward, to be paid them only out of my treafury. And if the informer be a llave, that llave fhall have his liberty given him, and his owner fhall receive four hundred milreis for the value of him, except the information of the llave be, given againft his mafter; for then in: fuch cafe the flave thaill be free, and two hundred milreis hhall be given him, and both the freedom and the premium fhall be paid and complied with, after the denunciation is adjudged to be good; and the mafter fhall have nothing for the value of his flave, but he fhall incur the penalties here-under declared. And, in the fame manner fuch may be informed againft, who finding, or taking out diamonds, of the weight of twenty carats, or upwards, do clandeftinely hide, frnuggle, or fecret them, and not manifeft and deliver them in the manner above prefcribed; which perfons, befides the lofs of the diamond, or its value, I command, fhall incur the penalties eftablifhed againft thofe who finuggle, fecret, or run gold; and, being a flave, he fhall undergo the punifhment of being whipt and confined to the gallies during his life. In like manner fuch perfons may be informed againf, who fend fuch diamonds out of the, kingdom ; which perfons, befides the lofs of the value of the diamonds, hall incur the penalty of being banifhed ten years to Angola, and confifcation of all their goods; and thofe informations being given by the flaves of fuch delinquents, the faid flaves fhall have their liberty given them as a reward. But if the information be given by a flave belonging to another perfon, then, befides the flave's being fet at liberty, his mafter fhall receive four hundred milreis for the value of him, as is declared above. And becaufe it is not my royal intention to comprehend the diamonds that have been taken out of the mines to the time of the publication of this refolution, it is my pleafure, that all perfons who have diamonds in their poffeffion, that weigh twenty carats, or upwards, which were taken out of the mines before the publication of this refolution, do manifeft them within two months (to be counted from the day of the publication hereof) before any of my auditors of the fate of Brafil, and the other minifters of this kingdom, and in all my dominions where fuch diamonds are; and that they deliver them to the faid minifters to be remitted to this court, and delivered into the mint thereof, in order that they may be purchafed for my ufe, at the juft valuation that lhall be put upon them. And fuch as are not manifefted and delivered within the faid fpace of time, fhall be reputed as difcovered or found after the faid publication ; and they fhall be irremiffibly loft or forfeited to my ufe in any hand whereinfoever they may be found: which perfons may be impeached, informed of, or deniounced againft, and the informers Chall have the fame reward, and the delinquents the fame punifhment, as above mentioned ; and in the fame manner
may be impeached fuch as are accomplices or abettors in the fmugglings here probibited: and on them fhall be executed the fame punifhments in this refolution eftablifhed, and the informers thall bave the fame rewards.
Wherefore I command the lord chief juftice of the house of fupplication, governor of the high court of king's -bench, and the houfe of Oporto, vice-king of the ftate of whoever fills that place, judges of the faid courts, governors of the conquefts, and all juftices, commifioners, auditors, judges, officers of juftice, and perfons of thefe my kingdoms and dominions, that they obferve, comply with, and keep and dominions, that they obrerve, comply with, and keep this my law, and caufe the fame intirely to be obfenved,
complied with, and kept, as it is therein contained. And that it may come to the notice of every body, in order to cut off the allegation of ignorance, I command my chancellorygeneral of thefe kingdoms and dominions, or whofoever fills his place, that he caufe it to be publifhed in the chancery, and fend tranfcripts thereof, under my feal and his firm, to all the juftices of the counties and hundreds of thefe kingdoms, and to the auditors of the donatory countries, in which the juftices do not enter into vifitation; whom I command to proclaim it immediately in the places whe they are, and caufe it to be proclaimed in all their hundreds and tithings; and it fhall be regiftered in the books of my difembargo, and boufe of fupplication, and of Oporto, and in the Ultramarine council, and all other places where fuch like laws are ufed to be regiftered; and this original fhall be depofited on the Tower of Records. Given in Weft Lifbon, the 24th of December, 1734 .

## King.

Copies of the twelfth and thirteenth Articles of the Treaty made betwixt the Crowns of England and Portugal, at the Marriage of Charles the Second, June 23, 1661 . Taken from fol. I. of the regifter-bobk, by petition made by conful Poynxz, to his Majefly Don John, December 12, 7716 . Tranllated.

## ARTICLE XII.

In order that the fubjects of the king of Great-Britain may enjoy greater advantages in trade and commerce in all the doininions of the king of Portugal, it was agreed, that if the merchants and factors (befides the privileges which were granted to them by the firft treaties) afk, in virtue of this, to refide in all places where they have a mind efpecially, they may inhabit and enjoy the 'fame privileges and immunities, as far as relates to trade, as the native Portuguefe, in the cities and places of Cochim and Dio, provided that the fubjects of the king of Great-Britain, that are to refide in the above places, do not exceed the number of four families in each of them.

## ARTICLE XIII.

The fame privileges, liberties, and immunities, fhall be enjoyed by the fubjects of the king of Grear-Britain, in the place of Bahia de todos os Santos, Pernambuco, and Rio de Janeiro, and in all other the dominions of the king of Portugal in the Eaft-Indies.
For the Definitive Treaty of if63, fee the article America.

TURKEY COMPANY and TRADE. Under the article Levant Trade, we have fhewn that the French, in the year 1535, were the firft nation that made Treaties of Commerce with the Porte: we have likewife there fhewn, by what wife meafures and regulations that neighbouring nation firf eftablifhed, and has fince advanced, this branch of commerce to a greater extent and advantage than is now done by any other European power. And if thole wife meafures and regulations are duly weighed and confidered, we cannot be at atl furprized, that the effects; thereof hould prove more lucrative and fucceffful to France than the meafures taken by other nations, with regard to that trade, have proved to them. - Likewife,
Under the article Orient al Trade, we have refumed this fubjeet, and given an hiftorical view of the conduct and proceedings of our own Turkey company, and the care of thegovernor and this company of merchants trading to the Levant Seas, as laid before the parliament by the Turkey company in the yeary 753 , in order to prevent the trade being laid abiolutely open, as was then aimed at, Under this arricle, alfo, I have given an abftract of what has been argumentatively urged, in oppofition to this company, in order to laythat trade open to all his Majefty's fubjects. - Thefe particulars we have judged neceffary to ftate before the public, as preliminary to the determination of the expediency of opening this trade.
But as this matter was depending before the parliament, when Idrew up what has been faid under Oriental Trade, and it being then doubtful what meafures would be taken with this company, I thought it more eligible to poitpone what I had further to obferve in relation hereunto, 'till the determination of the legillature fhould be known. And that the reader may
have before him what th: parliament bave done upon this occafion, we fhall here infert the laft act made with regard to this company, anno vicefimo fexto Georgii II. regis, intitled, An act for enlarging and regulating the-trade into the Levant Seas, which is as follows:
Whereas king James the Firft, by his letters patent, bearing date the Isth day of December, in the third year of his rejgn, did grant to feveral perfons therein named, and to theirfons, and fuch other as fhould then after be admitted, or made free, that they fhould be one fellowthip, and one body corporate and politic, by the name of The Governor and Company of Merchants of England, trading into the Levant Seas; and, Merchants of England, trading into the Levant Seas; and,
by the fame name, fhould have perpetual fucceffion; and did direct, that all perfons, fubjects of this realm, being mere merchants, which then were, or after the date of the faid letters patent hould happen to be, under the age of twenty-fix Fears, or not out of his or their apprenticemips, fhould be admitted into the freedom of the faid company, if he or they fhould demand the fame within one year next after he or they thould attain the age of twenty-fix years, or within one year after the end of his or their apprenticelhips, and hoould offer and pay to the faid governor and company, for his or their admittance, the fum of twenty-five pounds; and did further direct, that all perfons, fubjects of this realm of England, being mere merchants; above the age of twenty-fix years, fhould be admitted into the freedom of the faid company, upon paying a fine of fifty pounds; and did alfo direct, that all and every the fons of fuch as were or Thould' be free of the faid company, and alfo all their apprentices employed in that trade for the fpace of three years, or upwards, within the limits of the faid letters patent, hould, after thee end of their apprenticefhips, be admitted to the freedom of the faid company, on payment of the fum of 20s. only. And whereas king Charles the Second, by his letters patent, bearing date the 2d day of April, in the thirtenth year of his reign, did ratify and confirm the faid letters patent of king James the Firft, and did further direct, That no perfon refiding within twenty miles of the city of London, fhould be admitted into the freedom of the faid company, or have any benefit of the privileges thereof, unlefs he be made free of the faid city. And whereas the trade into the Levant Seas has very much decreafed, and the taking of lefs fines for the admiffion of perfons into the freedom of the faid company, and the not reftraining the freedom thereof to mere merchants, and to fuch perfons as, refiding within twenty miles of the city of London, are free of the faid city : and the fecuring to all perfons admitted into the faid company, the liberty of exporting, at all times hereafter, all forts of goods and merchandizes (not prohibited by law to be exported) to any port or place within the limits of the faid letters patent, from what parts of Great-Britain, and at what time, and in what quantity, and on board what Chips (navigated according to law) they hall refpestively think proper ; and alfo of importing, in the like manner, from any port or place within the limits of the faid letters patent; raw filk, or any other goods or commodities purctafed within the faid limis. (not prohibited by law to be imported) are the moft probable means of recovering and extending the faid trade, for the benefit of this nation: may it therefore pleafe your Majefty that it may be enacted, and be it enacted, by the king's moft excellent Majefly; by and with the advice and confent of the lords firitual and temporal, and commons, in parliament affembled, and by the authority of the lame, That from and after the 24 th day of June, i 754 ; every fubject of Great-Britain, defiring admiffion into the faid company, of merchants of England, trading into the Levant Seas, commonly called, or known, by the name of the Turkey Company, fhall, upon requeft for that purpofe, made by him felf or any other perfon in his behalf, to the governor, o deputy-governor, of the faid company for the time being, be adinitted into the faid company, within the fpace of 30 days after fuch requeft thall be made, and thall have, ufe, and enjoy ail the liberties, privileges, jurifdictions, franchifes, power, and authorities, granted to the faid company by the faid letters patent, as largely, fully, and amply, to all intents, conAructions, and purpofes, as any member of the faid company could, can, or may have, ufe, and enjoy the fame, by virtue of the faid letters patent, fuch fubject paying or teadering, or caufing to be paid or tendered, for fuch his admiffion, for the ufe of the fald company, the fum of 201. and no more, any thing in the faid letters patent, or either of them, to the contrary in any wife notwithltanding.
And be it further enacted, by the authority aforefaid, Tha from and alter the 24th day of June, 1754, the fullowing oath, in lieu of the oath heretofore taken by perfons, upon their admiffions to their freedom in the faid company, thall be taken by every perfon, upon his adm'ffion to his freedom, either before the governor or deputy-governor of the faid company, or before two of his Majefty's juftices of the peace (who are hereby refpectively impowered and required to ad minifler the (aid oath) which juftices are hereby required to certily, under their hands and feals, that the faid oath was takeh by day of takeh by
before us, two of his Majen $y^{\prime}$ 's juftices of the payce in and before us, two of his Majeft's jultices of the peace in and
for

You lwear to be góod; faithful, and true, tô ouf be oberedient king George, his heirs and :ucce frors: you fhall be obedient and affiftant to the governor, his deputy, and
affiftants, of the company of merchants of England, erading affitants, of the company of merchants of England, erading
into the Levant Seas, in ail lawful matters: you flaall tuly into the Levant Seas, in afl lawful matters: you flaall truly
hold and keep to your power (having no fingular regard to hold and keep to your power (having no fingular regard to yourfelf, to the hurt and prejuoice of the common-weal of the faid company) all fatutes, acts, and ordininces, which have been duly made, according to the grant of privileges granted to the faid company, and confiftent with aif act of parliament made in the 26 thy yeaf of the reign of king George the Second, intitled, An act for enlarging and regulating the trade into the Levant Seas: the fecrets of the fand company you thall not difclofe; and, if you fhall know any perfon or perfons, that intend any hurt, harm, or prejuctice, to our aforenaid lovereign lord the king's Majefty, his heirs, of fucceffors, or to the faid company, or the privileges of the faid company, you thall give knowlege thereof to the faid governor, deputy, or affiftants, or to fome of them; and you fhall not colour or free any goods belonging to any one not free of the faid company.

## So help you God.'

And be it further enacted, by the authority aforefaid, That from and after the faid 24th day of June, 1754, it fhall and may be lawful to and for all and every perfon and perfons, being free of the faid company as aforefaid, feparately or jointly, to export, or caufe to be exported, from any port or place in Great-Britain, to any port or place within the limits of the faid letters patent, in any Britifh or plantation-built Chips (navigated'according to law) at any time, and to any perfon or perfons whatfoever, being freemen of the faid company, or fons or apprentices of freemen (fuch freemens fons or apprentices being bis Majefty's Chriftian fubjects)folong as fuchperfon or perfons thall, remain under, and fubmit to, the protection and direction of the British Ambassador and Consuls respectively, for the time being, any goods, wares, or merchandizes whatfoever, not prohibited by law to be exported ; and alfo to import, in like manner, from any port or place within the limits of the faid letters patent, raw filk, or any other goods, wares, or commodities, purchafed withor any other goods, wares, or commodities, purchated with-
in the faid limits (not prohibited by law to be imported) upon in the faid limits (not prohibited by law to be imported) upon
paying or fecuring the cuftoms, and other duties payable for the fame to his majefty, his heirs, and fucceffors, by virtue of any law now in force, or hereafter to be made; and, upon paying fuch impofitions or fums of money as fhall be iffeffed and charged upon all goods; wares, or merchandizes, to be exported or imported as aforefaid, or upon any fhips laden with the fame, for defraying the neceflary expences of the faid company, any thing in the faid letters patent, or either of them, or any ordinance, conftitucion, or bye-law of the faid company; made, or to be made, to the contrary; in any wife notwithftanding.
Provided always, That the exportation of gold or filver, either in foreign coin or bullion, fhall remain fubject to the bye-laws of the faid company, made or to be made in that behalf.
And be it further enacted, by the authority aforefaid, That it fhall and may be lawful for the faid governor or deputygovernor, and company, in general court affembled, to make fuch rules, ordinanices, or bye laws, for the good government of the faid company, as the major part of the members prefent at fuch general court hall think neceffary ; but no fuch rule, ordinance, or bye-law, fhall be valid, or of any force or effect whatfoever, uniefs the fame be confirmed at a fubfequent general court, to be held at leaft one calendar month after the general court at which fuch rule, ordinance, or bye-law was made; and if any feven, or more, of the freemen of the faid company; fhall think themfetves aggrieved by any rule, ordinance, or bye-law, made or to be made, it fhall be lawful for them to prefent ana appeal, in writing, againft the fame, to the commiffioners for trade and plantations, who are hereby impowered and required, with all convenient fpeed, to hear fuch appeal, and to approve or difapprove fuch rule, ordinance, or bye-law, and in fuch manner as to them, or the major part of them prefent, fhall appear fit and reafonable. Provided, alfo, That in cafe any fuch appeal fhall be brought againt any future rule, ordinance, or bye-law, to be made by the faid governor and company, fuch appeal fhall be brought within twelve calendar months after fuch rule, ordinance, or bye law, fhall be fo made and confirmed as aforefaid; and if any fuch appeal fhall be brought againft any rule, ordinance, or bye-law of the faid company now in force, fuch appeal Chall be brought within twelve calendar months after the faid 24th day of June, 1754 .
Provided, alfo, That the perfons appealing againft any fuch rule, ordinance, or bye-law, fhall, at the fame time, give notice in writing of fuch appeal, to the governor, deputy-goveinor, or fecretary of the faid company, for the time being. Provided, neverthelefs, That no fuch rule, ordinance, or byelaw, fhall be of any greater or other force or validity, than the fame wculd or ought to have been if no fuch appeal had beengiven by this act.

Provided

## T U R

T U R

Provided always, and it is bereby further enacted, That whenfoever any general courtof the faid company thall be appointed to be held, for the making of any rule, ordinance, or byelaw, public notice thereof fhall be given in the London Gazette, at leaft 20 days before the time appointed for the holding of fuch general court.
Provided always, and it is hereby enacted, That all rules, orders, and regulations made for preventing infection, fhall be and remain in full force and virtue, as if this act had never paffed. See our article Quarantine.
And be it further enacted, by the authority aforefaid, That no goods or merchandizes liable to retain the infection of the plague, and coming from the Levant, without a clean bill of health, fhall be landed in any part of Great-Britain or Ireland, or of the ifles of Guernfey, Jeffey, Alderney, Sark, or Man, unlers it flall appear to the fatisfáction of his Majelty, his heirs, or fucceffors, or of his or their privy-council, that the faid goods or merchandizes bave been fufficiently opened and aired in the lazareto of Maltí, Ancönä, Vehice, Meffina, Leghorn, Genoa, and Marfeille's, or one of them*.

* Before the making of this act, it was obferved, by a judicious advocate for laying the trade intirely open [fee $\mathrm{b}_{\mathrm{RI}}$ ental Trade] and which may deferveattention, as the trade is now circumftanced, viz. \& That all fhips returning from the Levant in times of infeetion, might performin quarantine either at Port Mahon or Gibraltedr, as thefe places are directly in their voyage homewards, and might be made very convenient for fupplying them with proper ftores and refrefhments; fo that is would be, in fome meafure, the intereft of fhips on a long voyage, to call at one or other of thefe places, efpecially if they were made Free Port's. Moreover for the greatter fecurity, all fifips returning from the Levant inight be obliged, under the penalty of forfeiting fhip and cargo, to touchi at one or other of thele poits, and obtain bills of health from the magiftrate ees, before they pro. ceed to England. Thefe cautions are very practicable in themielves, and yet much fricter than have been ufually required either of the Turkey company, or of the merchants trading to Barbary and Morocco.'

## REMARKS.

The preceding act of parliament having obviated fome; if not moff, of the principal objections that have beeri made againft the company, and in favour of laying the trade abfolutely open [fee our article Oriental Trade], we fhall only obferve, that it mult be left to a few years experience to fhew whether the general permiffion of trade to the Levant, given by the aforefaid act, will tend to enlarge this commerce, according to the intent and title, or not.-But, to have rendered this act ftll the more effectual, it is to be wifhed; we humbly prefume, that the heavy charges that neceffarily attend the Turkey trade (as the fupport of the ambaffador, confuls, \& \% c.) were burne by the ftate inftead of the company.-I am not unapprized of the unprecedented munificence of his prefent moft gracious Majefty, to our ambaffador at the Porte*, in order to give more weight to our minifter, and to render our mercantile intereft in Turkey the more refpectable; and yet it fiems the French have, by the meafures they take, more in fuence than we, and have rapidly advanced their commerce in the Turkifh empire, while ours has been many years upon the decline. When this trade was firft eftablihed, there might be many good reafons why the Turkey company was charged with the fupport of the ambaffador at the Porte, together with their confuls, \&c. and the fame reafon might exift for a number of years, but things bave now taken a very different turn. It has been proved to a demonflation that our Levant trade hath declined; it has indeed languifhed to that degree, that our Turkey merchants, who fome years fince figured at the top of the commercial world, now bow their diminifhed heads. Yet is not the trade intirely funk; on the contrary, we import annually from Aleppo above 600 bales of raw filk. This alone is a great national object ; for if thefe 600 bales of raw filk contain 180;000 fmall pounds $t$, what a benefit do we not receive by the manufactory of this qik, in the article of labour ?

* As this may be a piece of fecret hiftory to moft; yet. in juflice to the king's liberality, I think the public fhould know, that, befides the appointments allowed by the company to our ambaffador at the Porte, his Majety, out of regard to the merit of Mr. Forter, white commimaire d af-
faire at the court of Vienna, and to induce him the more farre at the court of vienna, and to induce him the more earnefly to promore the interett of his kingdoms at the Porte, has allowed him ont of his privy. purle, which tional appointment, as commiffaire d'affaire, of tocol.fterling per annum, with this mementó' 'that it is not to be ling per annum, with
+ A bale of 25 batmans, or 300 fmall pounds, produce $180,000 \mathrm{lb}$.

In regard to the laying the Turkey trade intirely openin England, it will give great light into this fubject to apprize the reader of what has been urged pro and con, with relation to
the laying open the Levant trade in France; nor will it prove ufeful fo to do upon this peculiar occafion only, but it will give us a lively idea of the ineafures taken in France, in order fo thoroughly to canvals all commercial topics, that the refolutions of the ftate may terminate in the promotion of the general profperity. And this 1 am the more difpofed to do, as it may, fome time or other, determine us to make eftablifhments of the like kind.
What I fhall prefent to the reader upon this occafion, is an extract from fome Memorials prefentedby the Deputies of the Councilof Trade in France, to the Royal Council, in 1701, being the year after the eftablifhment of the faid councll of trade by king Lewis XIV.

A Memorial of the deputies of the trading towns in the weff of France, concerning the commerce with the Levant, the goods ufed in that trade, and why Marfeilles alone has the privilege of trading thither.

Experience teaches us that the Englifh carry on [in 1701 ] the trade of the Levant with much greater advantage than our nation; their woollen cloths are better made, are better and cheaper than ours, and, therefore, are more in requeft, and have a greater vent. They carry thither lead, pewter, copperas, $\log$ wood, which are goods that they are mafters of, together with a great deal of pepper: and, that they may not drain their country of its gold and filver, the fhips which are freighted with thofe goods are laden likewife with dry filh, of their own catching, fugars from their colonie, and other goods of their own product, which they fell on the coatts of Portugal, Spain, and Italy, and receive the produce in pieces of eight, which they carry to the Levant, to add to the frock neceflary for purchafing the merchandizes which they take in there, and carry to England.
This way of trating is very beneficial to the Englifh, fince by fupplying themfelves with coin from foreigners, they draw fo much the lefs from home; and befides, they make a profit by the goods they fell-in their paffage upon the coalts of Portugal, Spain, and Italy; which contributes to render this a good trade, and enables them to fell the merchandizes of the Levant much cheaper than any other nation.
Upon the like plan it would be more advantageous to France to permit the towns of the weft to carry on this trade in the fame manner directly.
We have, as well as the Englifh, woollen cloths, fluffs, paper, filks, tobacco, fifh of our own catching, and linen cloths, which they have not; we can, like them, make up our cargoes of difterent forts of goods, fome for the Levant, and others for Spain, Portugal, and Italy; we may fell thore goods by the way, and carry the produce in money to the Levant to help make our purchafes.
Thus the towns of the weft might carry on this trade without fending our money abroad, our manufactures would be confumed in greater quantities, as far as the competition with thofe of the Englifh would permit, and we might bring back in our fhips all the merchandizes of the Levant that are wanted in the weftern parts of France, which would then come much cheaper to us than now they do.
Since the towns of the ocean have been obliged to go and unlade their goods at Miarfeilles, inftead of endeavouring to continue and increafe that trade, they have been forced to relinquifh it abfolutely. And indeed, how can it be expected they fhould come from the extremity of the Levant to pay their refpect to Marfeilles? fubject themfelves to confume a fourth or a third more of victuals than ufual? pay greater wages to feamen, and higher rates for infurance? lie at heavy charges while they are unlading and relading their goods; and by this long delay, and that of making a roundabout voyage, run the rifque of being fill at Marfeilles, when they might have been at home?
The pretence of contagious diffempers, ought not to be made ufe of againft the towns of the ocean to exclude them from this trade; fince every body is taught by felf-prefervation to guard againtt them, there being likewife proper places appoiated for quarantine on fuch occafions; befides, the paffing of the Streights, and the change of climate, purifies the malignant air; for which reafon, the Englifh and Dutch returning from the Levant have no need of fuch precautions; and there's hardly any inftance, that this trade has introduced among them any peftilential diftemper, which fome would put us in apprebenfion of.
By the arrêts, none but the towns of Dunkirk and Rouen can receive goods from the Levant directly without touching at Marfeilles; nor they without paying 20 per cent. for entry; the other ports complain of being excluded : this extraordinary duty has been laid on but fince the year 1685, whereby the throwing up of that trade has not only been continued, but it has likewife given occafion to the farmers to be very vexatious in extending that duty to merchandizes which are not fubject to it, as allums, oils of Italy and Bar-bary, manna, alues, afflafeetida, wax of Camenice, mufk, fal armoniac, gum fenegal, nay, even to fublimated mercury, which is prepared at Amfterdam, and to other the like goods
that they could impute to this trade; which lias occafioned the exceffive dearnefs of all drugs that are ufed in our manufactures.
Confequently, our manufactures have laboured under this dearnels: which is contrary to the views we ought to have, of increafing the export and vent of them to foreign parts, and putting them, as much as poffible, upon an equal foot with foreign manufactures.
The town of Marfeilles, which is folely impowered to manage the Levant trade, thrives by the exclufion of the other maritime towns, to the prejudice of the public: that city oughe not to oppofe the liberty demanded by the ports in the ocean, to drive the faid trade directly, and to bring home their returns without paying the 20 per cent.
Marfelles, by being a free port, by its near fituation to the Levant, and the fettled correfpondence of its merchants there, will always have fufficient advantage over the ports and towns of the weft. Marfeilles is not excluded from any commerce permitted to the towns of the weft (or ports of the ocean) ; therefore; what juftice is there in appropriating the trade of the Levant to that city alone?
Beftes, the manner in which Marfeilles carries on this commerce cannot be approved, fince it is manifeft, that the goods which it fends thither, of the growth or make of the kingdom, being in moderate quantitios, and of little confideration, the merchants of that town make the greateft part of their remittances in pieces of eight and in other forts of coin; winich confumes a good part of the returns from Cadiz and the Indies, and greatly contributes to make bullion more fcarce throughout the kingdom.
The merchants of Marfeilles lay out a great part of fuch remittances in linen cloth and ftuffs of the Levant, which, whatever precaution be taken, do not fail of being difperfed about the kingdom, to the prejudice of our own manuiactures. It would be proper to prohibit, not only the importation, but likewife the wear of them in France; and that nothing were brought from the Levant, but drugs and unwrought materials proper for our maniufactures, fuch as galls, cotton, hair, fugar, filk, wool, and the like.
The privilege which the merchants of Marfeilles bave, of enjoying this trade in exclufion of the other towns of the kingdom, joined to the 20 per cent. which is charged on the fame forts of goods, and the fixing particular ports for inporting of goods into the kingdom, give thofe merchants an opportunity to ftarve the trade of the kingdom, and to enrich themfelves fo much, that notwithftanding the 20 per cent. the charges of carriage, comimifion-money, duties of export, and the difadvantage of the exchange, which may together be reckoned at above 35 per cent. we find our account better in fetching thofe goons from foreigners, than from the merchants at Marfeilles; who, being favoured fo much, do not give themfelves the trouble to fend them into the provinces of the kingdom.
They fit fill for us to come' to their market, that they may have an opportunity of impofing what rates they pleafe: nor are they ever fufficiently ftocked to fupply all our demands. And fince the drugs which they bring to Marfeilles from the Levant, come thither from the eaft in caravans, which en hances the price of them confiderably, and that the fame drugs which come directly from the Eaft-Indies to the ocean, are not fubject to the 20 per cent. for entry, no more than is cotton, the deputies conceive, that it would'be a piece of juftice to forbid the farmers to exact the duty of 20 per cent. upon the faid drugs fo brought from the Levant.

## The Reply of the deputies of the weitern ports of France to the preceding ANswer.

1. We muft own that the liberty which the towns of the ocean demand, may fomewhat diminifh the commerce of Marfilles in the Levant: but the benefit which it will procure to the ftate and to the public, by the abundance of mer chandizes and the increafe of navigation, is of much greater weight; befides; Marfeilles may extend its commerce into the ocean, to make itfelf amends for the diminution of thei Levant trade: our colonies are a fair field for them to exer cife theit navigation in.
2. This article is exaggerated, and it were needlefs to anfwer it: however, we fhall fay that there is not any merchandize of the Levant comprized among thofe fpecitied in a lift by - the deputy of Marfeilles, that has not a confumption in the weft; except afhes for the glafs manufacture, which are but of fmall confumption.
3. If from the year 1669 to 1685 , the fea-port towns of the weft in general have not carried on the trade to the Levant, it is becaufe at that time our nation had not mariners, fhips, [kill, nor emulation, for improving all forts of commerce : it is however true, that the towns of Rouen and Bourdeaux had correfpondence there, and fent fhips thither.
The depaty of Marfeilles makes a wrong interpretation of the decree of 1685 . The duty of 20 per cent. takes its rife from 1669 , and was laid upon the Levant merchundiz.s from 1669 , and was laid upon the Leve firft landed in Italy, England, and Holland: and which were firft landed in Italy, England, and Holland: and
the effect of the decree of 2685 , has been only to debar the
king's fubjects from fetching the merchandizes of the Levant diructly to Rouen, where, before that decree, they were ex empt from the duty of 20 per cent. to which they are now fubject, whether they come directly from the Levant, or whether they have been firft landed in any other country This is an effect of the powerful protection which Marfeilles has had, to the prejudice of the ftate and of the public. I is to avoid taking from England and Holland the Levant merchandizes, that we demand liberty to trade direflly to the Levant.
4. If the traders of $M$ arfeilles are fuffered to fet againft us their citles of prefcription, it is to no purpofe to propofe any thing; but the councia bas thought fit to give leave to lay bé fore them the grievances of fuch arrêts as are prejudicial to commerce in general.
5. We own it is good to guard againft running of goods: it belongs to the 'general farmers to take the necelfary precautions, but the 20 per cent duties are more likely to favour than binder it.
6. We agree we have not fpices as the Englifh and Dutch have; but Marfeilles has them not any more than we; and as to all other merchandizes, it is beyond contradiction true; that we get them more commodiounly than Marfeilles, and cheaper ; becaufe the commerce of the Ocean being of much greater extent than that of Marfeilles in particular, procures us all things with greater eale, and in greater plenty.
7. This article is not maintainable ; and it is indıfputable that the fale of our fifh in Portugal, Spain, and ltaly, will produce feccie for the Levant, as it does antually fupply the Englifh therewith.
The commerce which the towns of the ocean maintain in Portugal and Spain, by linen cloths and other manufactures of the kingdom, is a perpetual fund to furnith them with fpecie, which Marfeilles has not, nor ever can have. The deputy of Marfeilles contradiets himfelf, in faying that there is no carrying fugars and tobacco into Italy and the Levant, fince he him elf puts fugars into his account of what merchandizes are proper for the Levant; and as fur tobacco, it is well known that Genoa, Leghorn; and other towns of Italy, confume confiderable quantities of Clairac and St Domingo tobacco: and the towns of the ocean are willirg, for the good of the ftate, to bind themfelves not to fend abroad any coin of the kingdom either to ftrangers or others, and to carry to the Levant only the product of thofe merchandizes which they fhall fell in foreign countries, provided Markeilles fubmits to the like law.
If an account be taken of the goods fent from Marfeilles to the Levant, and of thofe which are imported at Marfeilles, communibus annis, it will be feen what difference there is in the value, and how much fpecie muft have been carried out to purchafe the overplus.
The ballance which has been produced upon two forts of Levant merchandizes effential to our manufactures, proves the truth of what the deputies of the weft have advanced concerning the prices during the months of October, November ${ }_{;}$ and December, when the commerce was in the greatef tranquillity, and upon the foot of the prefent time, when the prices of merchandizes of the Levant are very high in England and Holland, through the fear of a war. Which has a counter-effect favourable to Marfeilles, fince by her ficuation flue is free from that fear, and fhould not be fenfible of the like change; and therefore the deputy of Marfeilles fhould not bring his comparifon upon the foot of the prefent time, becaufe it would be a falle rule.
8. This reafon is in favour of the towns of the ocean, fince Marfeilles by its fituation will always have great advantages over them; and as for the merchandizes proper for the Levant, the towns of the weft will have them in our provinces as commodioufly as at Marfeilles.
9. If it is true, as the deputy of Marfeilles afferts, that the Dutch fetch from Marfeilles the merchandizes of the Levant, they will fetch them from the ports of the ocean much more willingly and commodioufly.
10. All the preceding articles fhew, that the intention of the merchants of the weft is perfectly oppofite to fuch views; and that it is purely and folely to avoid fetching from England and Holland the merchandizes of the Levant, that they now aik the liberty of trading to the Levant directly.
11. The merchants of the weft reckon they fhall confiderably augment their fifheries, and by that means have wherewithal to furnifh in abundance this kingdom, Spain, and Italy.
12. It is agreed, that Marfeilles is the natural poit of the city of Lyons for commerce; but it does not at all fuit the towns of the weft, who have ports and Mips of their own for trading; and if the merchandizes of the Levant come dea.er to the towns of the weft, they give fo much the lefs umbrage to Marfeilles; therefore that city ought not to oppofe the liberty that is defired.
13. Since we propofe a general liherty for all towns to follow the Levant trade, there would be no inconveniency if the town of Sette Should enjoy it: the competition which the deputy of Marfeilles is apprebenfive of, cannot but be advant geous to the fate, on account of giving greater vent to the king-

## T U R

## T U R

dom and its manufactures, ay likewife occafioning a more plentiful importation of the goods of the Levant, which will make the market better for the public: if hereby: fome private men are lofers; the fate ftll gains; and inftead of having any fear, left fuch permifion when, granted to the towns fhould enable the Englifh, Dutch, and Italians, to make us aban don that commerce ; on the contrary, feveral towns united may, better than Marfeilles alone, rival thofe nations.
15. The ports of the welt have places appointed for performing quarantine, and it is eafy to take the fame precautions as are taken at Marfeilles to defemy ourfelves from the plague; befides, it is undeniable, that the paffage of the Streights to come to the north, and the change of climate; purifies that infectious air, and the Englifh and Dutch for that reafon are exempt from fuch quarantine.
16 . It muft be allowed that the gth article of the treaty of Ryfwic, gives to the Dutch the fame advantage as to the king's fubjects, in point of trading to the Levant; but we need not fear their coming from the Levant directly into our ports, with cargoes of 50,60 , and 100,000 crowns to fubject themfelves to the humour of the buyers. That nation folely applies itfelf to make marts of goods at home, and to -fix fuch a price upon them as they think fit, and then to furnifh retailers therewith. It is the lefs to be feared that they fhould bring to France the merchandizes of the Levant directiy, if it be true what the deputy advances in his with article, that Marfeilles will furnifh that nation with them. Befides, the Dutch being almoft continually at war with the nations of Barbary, cannot carry on that trade without great convoys, which enhances very much the merchandize, and hinders them from carrying the fame to France, where they would be lofers, and renders their navigation to the Levant very inconfiderable. To conclude, The towns of the weft have actually the liberty of going to the Levant; : and, in a word, they want only to free themiclves from the fubjection of going to unlade and lade again at Marfeilles, which is equivalent to a formal exclufion, and has obliged the traders of the weft to quit that commerce.
17. Whatever memorial may be given upon this head, it will fall of itfelf.

A Memorial of the deputy of Marfeilles, in anfwer to the foregoing ; fetting forth the grounds and reafons of the privilege which that town enjoys of trading to the Levant.

It is a very difficult tafk, when a fingle man is obliged to anfwer fuch knowing and acute perfons as the depuies of the ports of the weftern fea; and if I bad not a juft caufe to defend, a caufe in which the intereft of the flate, as well as that of the town of Marfeilles in particular, is concerned, I hould difruft my ability, through want of practice, in drawing up memorials fo well put togetber, and fo politely turned as thofe given in by thofe gentlemen: but as the prefent difpute is about facts, and that the trade of the Levant has ever been allowed to be the moft beneficial to the flate, the council will pleafe to permit me to lay before them my reafons in the beft manner I can, without being too follicitous about purity of filie, which is not my talent.
x. The pretenfion of thefe gentlemen is not new ; they have often endeavoured at the fame thing, though without effect, becaufe it is againft the good of the general trade of the kingdom, as I thall prove in the fequel of this memorial. This proof is founded upon the ancient courfe and practice of trade, which they themfelves take notice of'; and, upon the information and infight which the king has had of the prejudice refulting from this propolition to the general commerce of his dominions, for this seafon his Majefty has fixed things in the condition they have been fur a long time, and are in to this day.
2. It is certain, that the permifiin which they require of driving a trade to the Levant, is not proper to be granted them; becaufe neither in their own towns, nor among their neighbours, can they find a confumption of divers grofs commodities, which they would be forced to take in to make up the dading of their lhips, as does Marfeilles which enjoys this advantage.
3. One fure proof that this trade is not proper for them, is, that it does not appear, they ever fet about it, notwithftanding the permiffion which all the ports of the weft had to drive this trade, before and after the eftablifhment of the free port of Marfeilles, which was in 1669 until 1685 . For the ports of Rouen and Dunkirk had this permiffion, becaufe the conveniency of their having the merchandizes of the Levant by the way of Holland and England, more eafily than by fetching them from thence directly, which they find very difficul:, always put them upon that prejudicial praAtice of giving their profits to thofe foreigners and enemies, to the damage of the king's fubjects' and, if bis Majefty had not put a fop to it, by his decree of the 15 th of Auguft, 1685 , which lays a duty of 20 per cent. upon the merchandizes of the Levant which fopuld come from England or Holland into France, in orderto exclude them for the good of his fubjects, it is certain that by this time thofe nations would have fupplied, France
with all the Levant goods, and the king«s fubjects would haite utterly loft that trade, fo important to the fate.
This is fo true, that the experience of it puts the thing out of doubt. I afk thofe gentlemen, the deputies, whether it be not true, that after 1669 , while they brought in by their ports the commodities of the Levant from Holland and England, when ho duty was laid to hinder thofe merchandizes from entering otherwife than by Marfeilles, France was filled with thofe goods; whereby the trade of the Levant by Marfeilles was reduced to the laft gafp, as not finding any longer a confumption, but only in Provence and the parts adjacent? This is what occiafioned the king's paffing the faid artet of 1685 , wherein the feecialcaufes moving him thereto are inferted; without the paffing of which arrêt, it is evident, that thefe two foreign pations, who have long fought to deftroy our Levant trade, as well by their ambaffador at the Porte, as by their intelligence and fecret practices in France, had entirely cut us our of it.
4. His Majefty, and all his minifters, who fince the eftablifhment of this free port, which was done upon due cognizance of the matter, and mature confideration, have ever fince done their utmoft to fupport this important crade ; forefeeing, fome years after the faid arret, that they could not fo foon root out the inteiligence whichichole nations had fettled in France by their dealings with the Fsenchmerchants, who continued to let them bring in their merchandizes, by the facility which they found in compounding the 20 per cent. with the general farmers, or by counterballances, very frequent and common; his Majefty tenewed his arrêt of prohibition, by that of November I, 1688 , confirmative of that of 1685 . And becaufe, even after that, the abufes in fome meafure continued, and he found more and more the neceffity of putting a ftop to them, he made another arrêt of the 3 d of July, 1692 , containing the fame prohibitions, and fitl confirmative of the edict which made Marfeilles a free port, and fettled the duty of 20 per cent.' Sinceir692, things have gone on according to the intention of the king, who has continually caufed orders to be given to the intendants of the provinces, to fee to the execution thereof; and there has likewife paffed a confirmative arrêt in relation to Dunkirk, the 30th of January, 1700.
5. How, after all this, can it be expected, that bis Majenty hould alter this eftabilifhment? And how can the leaft part of it be difpenfed with, either for their carrying on the trade themfelves directly to the Levant, or taking in goods at Leghorn, as they propofe? Is it not alike mifchievous to our trade? And if the king, inftead of granting fuch permiffion, fhall not be pleafed to put a ftop to the abuifes which are ftill practifed, both by compounding the duty to almoft nothing at all, and by the doily pouring in of prohibited goods, through the ports and upon the coalt of the weft, to the prejudice parcicularly of the king's farms, (as it happened nut long fince with ' 4 or 500 bales of goat's-hair, which were imported on the coaft of Picardy, whereby great quantities of the like gouds which were in France, belonging to the king's fubjects, became of no value, becaufe it is a perifhing commodity;) in all likelihood our trade, which is of confequence to the flate, will be extremely diminihed. It is well known what cardinal Richlieu faid to the advantage of this trade, and what was done by M. Colbert, after mature confideration, and upon the particular enquiries he made into it, and generally all that has been done in favour of it by the minifters, who have fucceeded them to this time: how can men, after this, think of procuring any change in this eftablifhment? It is well known, trade is fo nice a thing, that it is often loft by endeavouring to change the management of it, as may be proved by many inftances.
6. All the artful fubtilties, with which the memorials of the faid deputies abound, in order to prevail upon the council to grant them this commerce, are founded much more upon private defigns, to the prejudice of the general intereft, than upon reaton; and all the comparitons which they make from the Engliifh and Dutch touching in their way upon the coalls of Spain and Italy, there to fell their goods, are fallacious, and bear no fimilitude; for thofe nations have part of the merchandizes which are any wife proper to fell on thofe coafts, from the Indies, or elfe they are the product of their own country, with neither of which thefe gentlemen of the wertern ports of France are ftocked.
7. The fifheries of the Englif or Dutch have no relation to this commerce: 1 affirm that the hips of thote nations trading to the Levant, do not carry any fifh, and that the gentlemen of the weft could not do it; that the, very lame fhips which are emploted by the Englifh or Dutch in fifhing, carry them from the places where they catch them, to thofe coafts, and that they do this bur once a year; that therefore their propolition of going and exchanging their merchandizes for pieces of eight in Spain, and carrying that money to the Levant, to avoid thereby the exporting of French money, is not real, it is only a pretence; fince; even though they had anv merchandizes to carry to Spain, which they have not, except fome linen cloths, thefe are goods that are long in going off, and this length of time would fubject them to great charges; and it is exaggerating to fay, that they can
carry to the coafts of Spain and Italy, fugar and tobacco from the French colonies, fince Lifbon furnithes them with both, in greater quantities than they have occalion for ; and it is beymd difpute true, that they cannot carry on this trade it is almolt wholly by money, of which (whatever they fay) the Englinh carry great quantities from Holland and Germany. 8. As to what they object concerning their manufactures, that they can get materials from England with much moreadvantage than by Marfeilles, 1 defy them, and am perfuaded that they have not computed rightly: that may irdeed happen in fome of the materials, but I lay it down for fact, that they will very often, and almoft always, draw what is nethey will vety often, and almort Marfeilles, cheaper than from foreign countries, or by their commerce directly, or at leaft as cheap.
9. Marfeilles bis a very particular and advantageous fituation and proximity to the Levant ; fhe has in her town, her province, and in thole of Languedoc and Dauphiné, her neighbours, all forts of manulactures proper for the Levant, and has had fettled correfpondence, and been ufed for fome ages to this trade, which by experience fhe manages with perfect oconomy; and it looks as if God had endowed her with thefe advantages for the good of the fate, to carry on by her means this fo important commerce from France with the Levant, and from the Levant with all France.
10. It is fo apparent and fo true, that Marfeilles is always filled with all affortments of merchandizes (whatever they fay) and even more than Holland and England; that Marfeilles often furnifhes the Dutch with goods which they have not, and would do the fame to the Englinh, if it were permitted to carry any thither; but they have taken due care of tbat by a vigorous prohibition, and the merchandizes which thould be carried thither would be burnt, and perliaps the fhips too; fo watchful are they to preferve the trade to themfelves, to which they are the more ftimulated by an inbred batred which they have to the French: under what colour of juftice, therefore, fhould France permit her natives to go fetch the merchandizes of the Levant from them? Which forms another principal reafon againft the pretenfion of thefe deputies; and it is certain, that even though it were permitted them, there would not be that correfpondence with the Englifh as is imawined; nor would they come, either more or lefs, to fetch the commodities of our kingdom; for they who come for wines and brandies are only dealers in thofe goods, and not Levant merchants; and fo would not have occafion to exchange their mercbandizes for ours.
1I. They ought to be the lefs indulged in this permifion, becaufe they ank it for no other reafon but to have a pretence of carrying on their old clandeftine trade with thofe two nations, as from paft example it is evident they ufed to do. 12. It is an idle pretence to fay, that fome of their hips going to Italy with their fifh, might find means to touch there for Levant merchandizes at Leghorn, whither there go fo few of them, that they may always for their filh have ready money; by which means they conftantly relade with oil and allum on the coaft of Italy, which are merchandizes of greater ufe to them. It is to Marfeilles whither almoft all the flips of their filhery come, to the number of 30 or 40 every year, where they find their commiffion favourable, and in return take foap, oil, merchandizes of the Levant, and fruits of Provence, whereby the greateft part of them have an opportunity of making great freights homeward. This is very convenient for them, and gives them a profit which they would not have, if Marfeilles were not able to furnifh them with all thofe things; there would be no need of going fo far if they defired to truck their fifh for Levant merchandizes, they might do it much more eafily and advantageoufly at Marfeilles than at Leghorn.
13. If they will carry on the Levant trade by Marfeilles, as Lyons and other cities of the kingdom do, no body binders them; ; they may thereby have the fame advantages which they fancy the Marfeillians have, without difturbing, by their vain pretenfions, an order eftablifhed for trade fo long ago; it being certain, that if they went to fetch the Levant merchandizes directly, they would coft them much dearer than if they took them at Mareilles. They cannot oppofe to this any thing, but fome charges of infurance, which they pay from Marfeilles to the ports in the ocean; but this expence is fo moderate, that it bears no comparifon with the extraordinary charges they would be obliged to be at, in going directly to the Levant, and in returning home; and before they could well bave fettled their correfpondence there, they would fuffer confiderable loffes, which has always been the caufe why they have not undertaken it.
If the general farmers make them pay the duty of 20 per cent. for fuch goods as are not fubject to it, it is their bufinefs to obtain juftice againft them, and the deputy of Marfeilles will gladly enter into meafures to affít them.
14. There is another principal reafon which that deputy has 14. There is another principal realon which that deputy has
to offer, viz. If this permiffion be given to the ports of the ocean, it muft likewife be given to the port of Cette, which would demand it; and that could not poffibly be done, without entirely deffroying the Levant trade in France, by an infallible decay which this diforder would occafion, it not be-

VOL. II.
ing poffible to reconcile all thefe feveral competitors; the ra. ther, becaule it is known' that Marfeilles itfelf, by order of M. Poutchartrain, has been obliged (for the prefervation of this trade, though they bad it folely) to make a regulation of the number of Chipping employed in it, to aveid the too great concourfe of them, which was very pernicious, as well at their arrival in the Levant, as at their return: this hinders the Dutch from driving this trade, as they were this hinders the treaty of Ryfwic. If thefe gentlemen we:e allowed this permiffion, how could we poffibly avoid a general diforder, which would bring this trade to decay; and which, the Englifh, Dutch, and lalians, would take advantage of, and put us, perhaps, in danger of lofing it entirely? it being uat-
doubtedly true, that thefe gentlemen, who have a doubtedly true, that thefe gentlemen, who have always had a good intclligence with thofe two nations their neiglibours, would make no other ufe of this permiffion, but to lend their names to the Englifh to drive this trade under the flag of France, and for a fmall private intereft, would not value ruining that of Marfeilles. We may further infift upon the inconveniencies that would affect all the payments which Marfeilles makes for all the confuls; the averages of the Levant, the penfion of the ambaffador, and other extraordinary cafual expences, which could never be wetl adjufted: this diforder would likewife infallibly bring the plague into France, and we thall hear what work it has very lately made in a thip. of St Malo.
I cannot believe, that after fo many obftacles, and fo many regulations, fo well concerted, and continually inforced to this prefent day, counter to this propofition, and made to preferve in its perfection this important trade, which is the greateft and moft profitable one of the kingdom, the government will deftray it by a permiffion which will produce nothing good and fertled; as may be gathered from what has already happened in the kingdom, which by the like novelties has loft feveral trades and manufaçures.
15. Whatever they fay to diffipate the apprehenfion of the danger of bringing the plague into France, it is almoft certain they could not avoid it; and there is no doubt to be made, but this would be the greateft calamity which could befal the kingdom. The deputy of Marfeilles affirns, that the contagious diftemper never ceafing to be in the Levant and Barbary, fometimes in one part, fometimes in another, becaufe in thofe countrics they take no precaution to aroid it, thefe gentlemen having neither experience, nor proper places for purging the merchandizes from that evil which cleaves to them (as is found true at Marfeilles, where oftentimes feveral die of the plague during the quaral.tine), would infallibly give the plague to France, which they of $\mathrm{Ma}_{\text {a feilles avoid, }}$ by rules which are more rigoroully oblerved there than in any city in the world. This fecial experience in the Marfeillians is fo well known every where, that the Italians, though an ingenious people, and who have proper places for thefe precautions, fo dread the plague, that, when there come into their ports any ihips from a place where it is known to be, they drive them away, and their afylum is at Marfeilles, which receives them, with their wonted precautions; and oftentimes thofe fhips and merchandizes, by endeavouring to guard againft the plague, would communicate it to the king. dom. Muft the king put it to the veriture, among men who have neither experience, nor proper places for the purpore, whether they will bring in the plague or not?
It is in vain for them to fay, That the climate they inhabit, and the length of the paffage, would ftifle this evil, and hirder the communication of it; and to fuppofe that the Englifh and Dutch never had it. This cannot be infifted on, fince both the one and the other have had it oftener than once, though the coldnefs of their country, which really ferves in fome meafure to preferve them from it, is beyond comparifon greater than in France; and I have been informed for cortain, that, not above 30 or 40 years ago, Holland and Flanders had it to a great degree, and that Picardy was afflicted with it likewife, as allo Rouen, Dieppe, and other places, where it made great havock: and there is no doubt but it came from the Levant: and though it might have been there but once, yet we may have it often in France, efpecially if opportunities be given of introducing it: and as this would be one of the moft dreadful evils that could happen, people ought to be very apprehenfive of it.
16. Over and above all that I have been faying, there is an article, which of it felf ought to deftroy the pretenfions of thefe gentlemen to this trade, as a memorial which was communicated to me on their part has very reafonably forefeen. By the $9^{\text {th }}$ article of the treaty of commerce at Ryfwick, the Dutch are permitted to drive this very trade in France, and under the fame advantages with the king's fubjects. In this cafe, they would not enjoy the permifion they afk, and it would be the Hollanders who would ingrofs the whole trade, by their ports, which would entirely ruin ours; and though by their ports, which would entren a lith the Dutch, they will there be a likelhood now of a war with the Dutch, they whl
not fail, in the next treaty of peace, to flipulate and obtain not fail, in the next treaty of pe
the confirmation of that article.
17. It ought likewife to be obferved, that Mareeilles, by means of thistrade, caufes infinitely more money to be brought

11 B
into France than the caules to be carried out ; which I fhall take another occafion to prove.

The rejoinder of the deputy of Marfeilles, to the foregoing reply.

1. Firft, He reprefents that they formerly deny the principle of his firft memorial, by every article of which it is plainly proved, that fuch permiffion would ruin the commerce of the Levant, and the navigation of the king's fubjects, and totally transfer it to ftrangers, and that all his Majefty has done fince 1669, by every fucceffive arrêt'till this day, to avoid this miffortune, would be in vain; that his conduct and wife precaution herein, leaves no room to doubt that this propofed competition was not found fuitable to this trade, but rather that it would caufe a general diforder in all the fcales or marts of the Levant, which would confiderably raife the price of their goods; and this would foon bring on the total ruin of that commerce; and the farme would befal that of the weftern ports of France, if there were the like concourfe: and therefore it is for the intereft of the ftate and of the public, to preferve both the one and the other, as bath wifely been practifed hitherto.
2. The gentlemen of the weftern ports cannot be ignorant that they are unable to confume all the merchandizes which they fhould be obliged to take in to fill their fhips, and which, confequently, they would be overftocked with; among others, there are four forts of very cumberfome commodities, and which al waysmake three-fourths of a fhip's lading, viz. coarfe wool, hides in the hair, alhes in great quantities, and flax ; all which are merchandizes proper for the manufactures fet up in Provence, Languedoc, and Dauphiné, and which the provinces of the weft are without.
3. He perfifts in affirming, That no town in the welt, not even Bourdeaux and Rouen, ever drove the trade of the Levant, though they were better able to do it before 1685 than fince; and I do not believe that Rouen, which is the principal town on that coaft, has any fhips to carry it on, nor Bourdeaux neither, except fome fmall veffels which ferve them to go up the river. The deputies cannot deny the truth of this.
The ediet of 1669 , and the fubfequent ordinance, laid a duty of 20 per cent. on fuch merchandizes of the Levant as fhould be imported into Marfeilles, after having been firft carried into foreign countries; but it left the port of Rouen, and that of Dunkirk, free to carry on the Levant trade directly, without paying the 20 per cent. yet they never did it, becaufe it was not a fuitable trade for them. But they made ufe of that permiffion to get the Levant merchandizes by the way of England and Holland: fo that, by that means, they filled France with thofe merchandizes, and this brought the trade of the French in the Levant to almoft nothing: which gave occafion to his Majefty (in order to remedy fuch a misfortune) to pars the arrêt of the 15th of Auguft, 1685, commanding, That all fuch commodities of the Levant as fhould enter by the faid ports of Rouen and Dunkirk, which had not firft been landed at Marfeilles, fhould pay 20 per cent. The caufes are inferted in the faid arrêt; and, were it not for that arrêt; which hinders that evil practice with thofe nations, it is to be feared it would have gone on ftill.
4. The council may indeed allow things, which are really grievances, to be redreffed : but thefe gentiemen of the weft need not trouble themfelves; they will never perfuade the council to deffroy edicts, pafled with fo thorougb knowlege of the caufe, and fo often ratified until this prefent time; that were to contradict all that the king has done, and is what the deputy of Mareiiles is in no apprebenfion of. 5. It was, as we juft now faid, to hinder the dealings with the Englifh and Dutch, that his Majefty was pleafed to lay on that duty of 20 per cent. and, notwithftanding the faid duty, fuch dealings are frill carried on, either by compounding the duty, or by running the goods: and it is on this account that the deputy complains, becaule of the mifchief it does to commerce in general ; and the farmers are obliged, for the intereft of the ftate, to keep a watchful eye upon this matter.
5. They do not give a direct anfwer to the queftion in this article ; for they not only have not all that the Englifh have to carry on this commerce in Spain and Italy (which they take for granted), but hardly any of the manufactured goods proper for the Levant, which Marfeilles is provided with, either in her city or province, as well as in her neighbourhood of Languedoc and Dauphiné, and fuch as they cannot poffibly have.
6. He affirms it to be fact and true, That the fhips laden with their filh do not go into the Levant; they go from the place of their fifhing to the Mediterranean, and chiefly to Marfeilles, and this but once a year: that the greateft part of the product of fuch finh, and all that they prefuppofe to carry with them in the courle of their pretended voyage, would ferve for no more than to pay feamens wages, victuals, and the charges of the voyage; and what is over and above is not fufficient for a fund for that trade, and therefore they ought not to recken
it. Tobacco abounds in the Levant, and as for fugars, they are both of them articles of fmall confideration.
It is in vain for them to compare themfelves to the Englifh, whofe thips with fifh go not to the Levant, and who ufe other Chips wholly for that voyage, and have a great many goods proper for rale on their way, and in the Levant, which the gentlemen of the weft have not. As for linen cloth, it is agreed that a great many of them are fent to Cadiz for the Indies; but this is not a fund for them to reckon upon, to be made ufe of in the fame voyage, no more than are the other linen cloths that they may vend in fome places of the coafts of Spain, which are long in going off, and which they fell at a very long credit; and Marfellles, in this particular, has a greater advantage than they, by means of large quantities of imported manufactures, proper for that councry, which the fends thither generally all the year round, and which go foon off, almoft all for ready money, which brings her pieces of eight, and thefe fhe makes ufe of partly for the Levant; and fhe has the further advantage of making ufe of affortments of goods, which fhe draws to herfelf, by means of uttering divers commodities and merchandizes to the Dutch, which the gentlemen of the weft do not, for want thereof.' Marfeilles therefore, which confumes a great deal lefs money than is thought, does not make ufe of that foreign coin which the acquires by means of the permutation of her wares and commodities; and it argues great ignorance to fay, That the weftern gentlemen can carry on the Levant trade without money, efpecially fince they have not the wares and manufactures which Marfeilles has.
7. The deputies of the weft were pleafed to pitch upon that time, and upon two particular forts of merchandizes, in order to make a calculation their own way; and it is obferved they are continually taking advantage of every thing, and this occafions their calculation (under favour) to be falfe; and the deputy of Marfeilles. proves by his, that it is fo far from being true, that thofe gentlemen buy the merchandizes dearer at Marfeilles than in England and Holland:: that the fame merchandizes are bought at Marfeilles much cheaper than in thofe countries, and that it is generally fo. He has added to his calculation divers other merchandizes, for one and the fame proof, to fhew the difference there is between Marfeilles and England and Holland. He proves what he advances by certificates from the royal brokers; and, to fatisfy thefe gentlemen as to the difference of the time, the deputy of Marfeilles, in felecting that time, has taken a medium, which is the month of April; though the fame merchandizes can never increafe in a neighbouring country, but they mult increafe, by means thereof, in another, whatever they pretend to the contrary.
8. It is upon account of her advantageous fituation, that the king has chofen Marfeilles to preferve this commerce to the flate: for this reafon likewife it is, that all the manufactures proper for the Levant are fet up in abundance about Marreilles; and the gentlemen of the weft cannot have them unlefs they go for them in that place. It was for all thefe reafons that the king, to preferve this important trade, did grant his edict of franchife to Marfeilles, and made all the other fubfequent edicts to this day, and efpecially to hinder the towns of the weft from abufing the liberty heretofore granted them.
9. That the Hollanders draw fometimes from Marfeilles certain merchandizes which are convenient for them, and which they have not at home, and which they find among the affortments at Marfeilles, where the warehoufes are always full of them, and which the gentlemen of the weft cannot have, becaufe, though they were to be let into this trade, they would carry it on but poorly: whereas Marfeilles, when it abounds, can, by reafon of its nearnefs, fend fuddenly to the Levant for fuch merchandizes as the may want, and much cheaper than they who are forced to be at extraordinary expence, by reafon of the length of their voyage. 11. If the gentlemen of the weft had formerly carried on this trade, and if, during the time that they were permitted to do it, they had not made ufe of this permiffion to introduce the merchandizes of the Englifh and Dutch into France, what they advance might poffibly be true; but the ill ufe which they made of it in times paft, notwithftanding all the edicts and orders of the king to reform the abufes, is apt to make us fufpect the contrary.
10. They have increafed their trade hitherto as much as they could, and they cannot hope to increafe it more: were it not for Marfeilles, which confumes the greateft part of their filh, they would be forced to leffen their fifhing; and this is what will certainly happen, if the leaft blow be given to her trade by this permiffion.
11. The port of Marfeiles was not chofen folely for the fake of the city of Lyons, but for the fake of the whole kingdom, as a door through which the chiefeft trades are carried on, and particularly that of the Levant, which is of the greateft importance, and which cannot be well managed but by the port of Marfeilles; and it is proved by divers memorials which the deputy of that city has to prefent, that it would be intirely loft by dividing it, and would fall into the hand of
it tangers.

Arangers. For this reafon, his Majefty has always thought fic to preferve it to Marfeilles.
14. It is evident, and beyond all queltion, that a general opening of the Levant trade would entirely, in a fhort time, deftroy it. The conftituting Marfeilles a free port, was not done without good grounds, and to put an end to that diforder which a general permiffion had caufed; and all tha has been done from that time to this, to correct the abufes that had crept in, is it not a certain proof that fuch a per miffion would deftroy ft infallibly? fince even Marfeilles could not hold up her head without regulating the number of hips that are to fail to each port of the Levant, and which was done by order of M. de Pontchartrain, within thefe three years, otherwife it had been ruined. What then would become of this trade, if every body were let into it, and crouded in upon one another? The vent of manufactures at Marfeilles is as great as can be wifhed, for fuch manufactures which fhe has, and the weft has not; and the pretended cheapnefs at which France would have the Levant merchandizes, would laft but a little while, becaufe competition would make them dearer in the Levant, and cheaper in France, which would difable the merchants from continuing that trade, without ruining themfelves, and fo it would pafs to foreigners. As for the permiffion demanded for the port of Sette, Marfeilles has laid memorials before the council, with reafons for not granting it, and defires the council to caft their eyes over them ; and then they will be convinced that the gentlemen of the weft ought not to have it neither.
15. The deputy of Marfeilles has made fufficient anfwer to this article, by the memorial which he has given in, whereby he fhews plainly, that the plague would not fail to enter into France, as it did heretofore, by means of the Englifh and Dutch. But this being a very important article, the deputy will give an anfwer more at large, by a fpecial memorial. r6. It is difguifing the truth, by their favour, to maintain that the Dutch would not carry on this trade in France. They demanded that article in the treaty of peace for no orher end or purpofe; and it would be very fuitable to that nation, who would drive that whole trade by the ports, which would help them to deftroy that of Marfeilles: and are thofe gentlemen ignorant that the Dutch go thither continually, with feveral fhips which private men fend thither, and feldom with convoys? It is true that they, like us, are Cometimes at war with the nations of Barbary, but commonly they are at peace, as now. And all the reafons and moplies of thefe gentlemen of the weft, have no other foundation but their fondnefs to drive that trade with thofe nations, rather than to carry it on themfelves: and we repeat it again, That they are not excluded this trade, fince they may carry it on by Marfeilles, as Lyons and fome other cities of the kingdom do; and even though they were permitted to do it by their own ports, they could not poffibly do it, confidering the war we are going into at prefent.
17. The memorial given in by the deputy of Marfeilles, con-cerning the money the makes ufe of for her trade, proves the truth of what he advances; and his memorial is clear upon that head, which is an abftract of all his reafons, and evi-1 dently demonftrates, that there is no poffibility of granting this Levant trade to other ports befides Marfeilles (confider-
ing the difficulties that occur) without intirely lofing it to foreigners.
For the ufefulnefs and excellency of thefe inftitutions in the kingdom of France, fee our article Chamber of Commerce and Remariss thercon, and Levait Irade; fee alfo our articles' 「rade.

## REMARKS.

In order to come at the truth, in relation to commercial affairs, we find that the Royal Council of France promote altercations between the DEPUTiEs of the refpective provinces: by which means, all the pertinent matter that can be urged pro and con, upon interefting points, by the mercantile people, comes before the Royal Council the mercantile people, and were any repugnances or fallacies feem to Council; and where any repugnances or fallacies feem to appear, from different and contradictory reprefentations, the Royal Council is excited to make the feverer inquifition into the matter, whereby they are the better enabled to come to fuch refolutions as tend moft to the general emolument of the ftate.
Thole who have applied themfelves to thefe kind of fudies, have allowed, that there cannot be brought before the legiflature of this kingdom any points more difficult in themfelves, more entangled with a multiplicity of relations, or more perplexed with diverinty of circumitances, than thofe which re late to the concerns of trade; concerns on which the molt experienced often difagree, and on which the molt fagacious may deceive themfelves with erroneous conjectures. There are no queftions which require fo much perfonal knowlege of the fubject to which they relate, nor is there any fubject with which fo few gentlemen in our parliament have had opportunities of being acquainted : there are no queltions which their variety of relations to different perfons expofes to be fo eafily mifreprefented without detection, nor any in which the oppofition of particular interefts fo much incites a falfe reprefentation. In all thefe cafes deceit is eafy, and there is a frong temptation to deceive.
The methods we fee from the preceding example (which I have introduced on purpofe) that are practifed by the French, have certainly a very happy tendency to the difcovery of truth, and to prevent the royal council from being perplexed and milled by private interefts, in oppofition to the general : for it is no little difcredit to the contending deputies to attempt to impofe upon each other, and far more fo to aim at any barefaced impofition upon the royal council: whereby all matter foreign to the point in queftion, all perfonal altercations and fophiftry, impertinence and verbofity, are laid afide. But whoever has attended to occafional controverfies of this nature in our nation, both without doors, and too frequently elfewhere, have too much reafon to think they are feldom untainted with fuch matter, and fuch unbecoming warmth and animofity as can tend only to eclipfe, inftead of illuminate the truth; and this we fear has too often occafioned the public interefts to be miftaken, overlooked, or mifreprefented, to the great injury of the ftate.-How far thefe ill confequences might be prevented, by an inftitution bearing fome fimilitude to that in France, is humbly fubmitted to thofe whofe duty it is to take thefe things into their deliberate confideration.

## Chief Laws with respect to Tea.

TEA-counterfeited, adulterated, manufactured with Terra-Japonica, or any drug, or mixed with any ingredients, is forfeited, with the ingredients, and 100 l . 1 I Geo. I. c. 30. §. 5 . -May not be imported but from the place of its growth, nor upon any other pretence, upon forfeiture. II Geo. I. c. 30 . §. 7 .

TT he importation from any foreign parts, by licence, repealed. 6 and 7 W. III. c. 7. §.3. 3 and 4 Ann. c. 4. §.6. 6 Geo. I. c. 2 I. §. $45,46.7$ Geo.I. c. 2 I. §. 12. -- Seized, which cannot be fold at a public fale for 5 's. per pound, may be burnt, or otherwife deftroyed; and the feizer rewarded as the commiffioners thall think fit, not exceeding 18 d . per pound. 12 Geo. I. cap. 28. §. 3. - Any dealers in tea, who fhall dye, fabricate, or manufacture any dloe leaves, liquorice leaves, or leaves of tea that have been ufed, or of any other tree, flrub, plant, in imitation of tea, $\& \mathrm{cc}$. are to forfeit rol. for every pound weight. 4 Geo. II. C. I4. §. 1 I.

- Every perfon, declared at the company's public fale of tea the beft bidder, is, within three days, to depofit with the
company 40 s . for every tub or cheft; and on neglect to make fuch depofir, forfeits fix times the value, and rendered incapable of bidding for, or buying, any teas there for the future. 18 Geo. II. c. 26. §. 7.
- The Eaft India company, if tea imported be not fufficient to anfwer the confumption in Great-Britain, and to keep the price upon an equality with the neighbouring countries of Europe, may, with licence from the commiffioners of the treafury, import, from any part of Europe, in Britifh fhips legally navigated, what they thall think neceffary; to be entered at the cuftom houfe, and fubject to the fame fubfidies and duties, rules, \&c. as tea imported from the EaftIndies. 18 Geo. II. c. 26. §. IO, 12.
-- Upon negleat of the company to fupply this market fufficiently at reafonable prices, the commiffioners of treafury may grant licences to any other perfon, or body corporate, to import tea from any parts of Europe, fubject to fuch duties, \&c. as if imporred by the faid company, to be lodged in warchoufes at the charge of importers, approved of by the commiffioners of the cuftoms till publicly fold and duties paid-Notice of fale to be given fix days in the Gazette. 18 Geo. II. c. 26. §. I $1,12$.
$T_{F A}$,

## Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE.

Tea, exported to Ireland; or his Majefty's plantations in America, the bond entered into, not to be difcharged without a certificate under the hands and feals of the collector comproller, or furveyor of the port where landed, teftry ing the landing; the certificate, if from Ircland, to be pro duced in 6 months; if from America, in 18 months fion the date thereof, otherwife the bond to be put in fuit. 21 Geo. II. c. 14. §. I
-- To be exported as above, the permit received upon de. livery of the tea from the warehoufe, muft, before fhipped, be delivered to the learcher, or proper officers, of the port where entered for exportation, who muft, upon fufpicion of a deficiency in quantity or quality, open and examine the package, and whether it has been duly entered outwards, and endorfed on the entry; and if it does not agree in quantity and quality with the Permit and Endorsement, or is entered under a wrong denomination, it is forfeited. with the package, and may be feized and profecuted by any officer of the cuftoms.-If otherwife, the officer to caule the fame to be repacked at his own charge, which is to be allowed him by the commiffioners of the cuftoms, if thought reafonable. 21 Geo. II. c. 14. §. r.

- Not to be exported to Ireland, or the Britifh plantations, in any package but that in which it was imported, or in any quantity lefs than the entire lot in which it was fold, on forfeiture. 21 Geo. II. cap. 14. §. 2.
_ـ_ Entered for exportation as above, the package to be marked by the fearcher in four different parts on the outfide, as the commiffioners of the cuftoms hall direct; and if found again on thore, is forfeited, and may be feized and profecuted by any officer of the cuftoms or inland duties. 21 Geo. II. cap. 14. §. 3 .

All tea, above the quantity of fix pounds", found in any Britifh fhip arriving in Great-Britain from foreign parts (except fhips employed by the India company) forfeited, though intended to be reported for exportation. 28 Geo . II. c. 21. §. I.

The chief Laws with regard to Tobacco.
TOBACCO-Not of the Britifh plantations.-The import having been fecured at importation, if the importer is afterwards defirous to difcharge his bond before the expiration of the 15 months, he is allowed a difcount after the rate of 101 . per cent. per annum, for fo much of the faid 15 months as remain unexpired. 12 Ann. feff. 2. c. 8. §. 3. 5 Geo. I. c. 7. §. I.

- Of the Britif plantations.-The importer may, if he is not willing to pay ready money, become bound with one or more fufficient fureties, (to be approved by the collector and comptroller of the port of importation) in one or more bonds, for payment of the additional duty, new fubfidy, fubfidy 1747 , one-third fubfidy and impoft, within 18 months, to commence at the end of 30 days after the mafter's report of the fhip, or from the merchant's entry within thofe 30 days, which fhall firft happen. 9 Geo. I. c. 2x. §. 3 . 21 Geo. II. ©. 2. §. 5
If, after fuch fecurity be given for payment of the duties in 18 months, the importer be defirous to difcharge his bond in ready money, any time before the expiration thereof, he fhall be abated upon fuch bond, fo much as the difcount, at the rate of 7 l . per cent. per annum fhall amount unto, in proportion to the time unexpired. 9 Geo. I. c. 21. §. I2. 24 Geo. II. c. 4 I. §. 3 I.
- Upon payment of the old fubfidy, and fecurity of the other duties by the importer's own bond, may be put into warehoufes, provided at his charge, and approved by the commiffioners of the cuftoms; if deftroyed in fuch warehoufes by fire, the duties to be allowed. 12 Ann. c. 8. §.5, 6. 5 Geo. II. c. 7. §. I. 24 Geo. II. с. 4I. §. 32
-- Damaged or mean, is not to have any allowance, either at the fcale or otherwife; but upon the merchant's refufing. to pay the duty, be may feparate fuch damaged tobacco, by cutting off, from the hogheads, fo much as he fhall refufe to pay or fecure cuftom for; and any three or more of the principal officers of his Majefty's cuftoms fhall caufe fuch tobacco to be burnt or deftroyed, without making the importer any allowance for freight or charges, except as follows; viz. If any Britifh plantation tobacco hath received damage on board any Thip at fea, or by the dhip's being forced on fhore in any part of Great-Britain ; or after arrival, by the fhip's bulging on an anchor, or by the lighter into which the tobacco is put, in order to be landed; the merchant refuting to pay, or fecure the duty for the fame, hath liberty to feparate fuch tobacco as afore obferved, and to receive for every pound of damaged tobacco, fo feparated, the merchant is to be allowed one half penny-The fame to be paid by the commiffioners or collectors, or other chief officers of the cuftoms. - But fuch allowance is not to exceed 30 fhillings on any one hoghead. 9 Geo. I. c. 21. §. 13.

The 1talks may not be reparated from the leaves, on pretence that the fame is damaged or mean tobacco. 9 Geo. I. c. 21.§.5.
——Allowance for draught at the fcale, to be only 8 lb . upon every hogithead of 350 lb . or more; which allowance is not to be deducted upon exportation. 9 Geo. I. c. 21 . §. 15 .

- Only tobacco of the Britifh plantation, that has paid the duties, and been manufactured in Great-Britain, may be confumed on board Britifh Chips of war in any part of Eurnpe, upon forfeiture of the refpective places of their commander or purfers, aid 3 fhillings per pound weight. 6 Ann. c. 22. \$. 13.
- Shipped at any place in the Britifh plantations in America for Great-Bricain, after the 25th of March, 1752 , the collector or comptroller, or other chief officer of the cuftoms there, or any two of them, are at the clearing out of the veffel to deliver to the commander, or perfon taking charge ot her, a manifeft under their hands and feals of office, concaining a true account of all the tobacco taken on board, the number of packages, the quantity, marks, numbers, and tare of each package; and at the fame time tranfmit a duplicate thereof to the refpective commiffioners of the cuftoms in Great-Britain, on forfeiture of 200 l . to be recovered in any court of record at Weftminfter, or court of admi ralty in the plantations, where the offence, is committed. 24 Geo. II. ᄃ. 4I. §. I.
- The perfon having charge of the veffel, upon her arrival at his port of difcharge in Great-Britain, and at the time of making his report, muft deliver the faid manifeft to the collector of the cuftoms there, on forfeiture of 1001. and the collector is to deliver it to the land-waiters appointed upon the fhip. 24 Geo. II. c. 4 r. §. 2.

The land-waiters are, from the manifeft, to enter in their books (before any tobacco is landed) the marks, numbers, weights, tares, and contents of the feveral packages, under the penalty of 501 . and to caufe fuch landing mark, as the commiffioners of the cuftoms fhall direct, to be fet upon every package, and aye to enter every fuch landing mark in their books, on forfeiture of 50 l. 24 Geo II. c. 41 . $\S .3$. - May not be imported into Great-Britain, otherwife than in cafk, cheft, or cafe only, each containing 450 pounds weight of net tobacco at the leaft, on forfeiture of all the tobacco, together with the package. 24 Geo. II. 2. 4 I. . 20.

- Imported from the Britih plantations on the continent of America in bulk, or otherwife than in cafks, chefts, or cafes, containing each two hundred weight, or 224 lb . at leaft, is forfeited, and 6 d . per pound weight, except fmall quantities for the crews froaking ; $\frac{2}{3}$ to his Majefty, and $\frac{1}{3}$ to the feizer or fuer. 10 and II W. III. c. 21 . §. 29. - Exported.-No debenture to be made out after the 29th of September, $\mathbf{1}^{\prime} 75 \mathrm{I}$, nor any drawback to be allowed upon tobacco imported after that time, unlefs it is chipped and exported from the fame port where it was originally im ported, and (if unmanufactured) in the original package, with the fame marks in and with which it was imported, no other tobacco being put therein, nor any taken out, except io pounds, which thall be allowed to be taken ou't of each package after the fame is weighed at importation, as is now the practice. The penalty for entering unmanufactured tobacco for exportation, from any port but the port of importation, or in any other package, or without the fame marks as imported, is forfeiture of the tobacco, and 200 . by the perfon who enters it, or caufes it to be entered, befides of drawback; and whoever knowingly exports any package of tobacco, out of which more than 10 pounds has been taken, forfeits 201 . for every package exported. 24 Geo. II. c. 4I. §. 4.
-- But if, upon landing, the tobacco in any hogheat or cafk, by cutting off the damaged pari, is under the weight of 450 pounds; the importer may, in the prefence of the land-waiter, caule the found tobacco to be put together into. one or more hogfheads, out of which the damaged was taken; and the land waiters are to enter in their books the exact weight of the tobacco, with the marks and numbers of each fuch hogfheads, and note that they were refilled in their prefence; then fuch tubacco (provided the quantity in each hogithead is 425 pounds weight or more) may be exported from the port of impo:tation, as if the package had not been altered. 24 Gea. II. c. 4 r. §. 5 .

The perfon who enters unmanufactured tobacco outwards, muft, before thipping it for exportation, indorfe upon the cocket and bill the plantation or manifeft mark and number, the landing mark and number, with the weight of each package at the time of landing; alfo the exporter's mark and number, with the weight of each at the time of entry for exportation; and write off the weight of each package from the identical entry thereof at importation. Every perfon sefufing, or neglecting fo to do, foreits 51 . for every package, befides ofs of drawback; and the fearcher is not to admit any cocket, unlefs marked as aforefaid. 24 Geo. II. c. 4 r. §. 6. _-Unmanufactured, may not be loaden in any velfel in Great-Britain, with intent to be exported, but in cafks, chefts, or cales only, containing 425 pounds weight or more of tobacco in each, on forfeiture of the tobacco and

## Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE.

caik, \&c. containing the fame; except packages containing famples fhipped and exported at the fame time and place with the cafks, \&c. out of which they were taken. 24 Geo . II. c. 4 I . §. 2 I .

- Exported (though manufactured) in any package but calks of three hundred weight or more, is not to be allowed any drawback, except tobacco cut or rolled, 9 Geo. I. c. 2 I. §. 14 .
e alined with rubbinh or dirt, or ary other thing, hall or thip fuch for expack; and er caufe it to be done, or who fhall enter any thing as tobacco for exportation, which, upon examination by the proper officer, appears not to be fo, fhall forfeit all the goods and the package; and 501. for every package. 24 Geo. II. c. 4 I. 8. 24 .
- Manufactured or unmanufactured; may not be entered or fhipped for exportation in any veffel, not of the burthen of 70 tons or upwards, except to Ireland; and if exported thither in any veffel under the burthen of 20 tons, it is not to be allowed any drawback. 24 Geo. II. c. 4I. §. 25. 8 Ann. c. 13. §. 20.

Any officer of the cuftoms apprehending a veffel out-ward-bound with tobacco on board, not of the burthen of 70 tons or upwards, he may ftop and detain her, and the whole cargo, 'till he is admeafured, as directed by 6 Geo. I. c. 2 I. and if fhe proves to be of that burthen, he fhall not be fubject to any áction for damages; but the mafter of fuch veffel entering and clearing her out as of that burthen, when he is under it, forfeirs 100 l . for every fuch offence. 24 Geo .
II. c. 4 I. §. 25.8 Anni c. 13. §. 20.

Tobacco exported to Ireland.-If; upon producing a certificate, lefs appears to be landed there than chipped from hence, an allowance not exceeding two per cent. may be made for wafte during the voyage. 6 Geo . I. c. $2 \mathrm{I} . \S .48$. - Entered for other foreign parts, if landed in Ireland, is forfeited, and double the drawback; and the debenture for the drawback is to be void. 6 Geo. I. c. 21. §. 49.

Entered out for any other place than Ireland, the exporter is to fwear that the fame is not landed in any part of Great-Britain or Ireland. 6 Geo. I. c. 21. §. 50.

- Imported from the British Plantations in Ame-rica.-The importer manufacturing it, or delivering it out to be manufactured upon his own account, muft firt deliver to the collector, or chief officer of the cuftoms, at the port of importation, an account in writing, figned by himfelf and the manufacturer, or their known agents, with their names and places of abode, containing the plantations or manifeft mark and number of each package, with the name of the Chip, and time when imported, the landing mark and number, the weight at importation, and the weight at the time of delivering it out ; and the importer muft write off the weight from the entry at importation. The penalty for neglecting to give or fign fuch account, or knowingly giving or figning a fraudulent one, is 301 . for every package, by each perfon concerned. $2_{4}$ Geo. II. c. 4 I. §. 7.

The importer felling or delivering fuch tobacco out of his poffeffion, muft, within 14 days after delivery, give to the collector the fame account in writing, figned by himfelf and the purchafer, or their known agents, and write off the weight from the entry in the fame manner, and fubject to the fame penalties, as in cafe of delivering it out to be manufactured. 24 Geo. II. c. 41. §. 8.

Removed by Land.- Tobacco or Tobacco Stalks, exceeding 24 lb . weight, or Snuff exceeding iolb. weight, may not beconveyed from the place of importation to any other place in Great-Britain, without a certificate from the collector and comptroller, or chief officer of the cuftoms, at the place of importation; and if unmanufactured, with the importer's oath thereto (if the importer applies for it) that the duties were paid or fecured at importation, by whom, when, and in what thip imported; or with the purchafer's oath thereto (if he applies for it) attefting the marks and numbers of the hogheads, out of which it was taken, from whom purchafed, and when: if Tobacco-Stalks or Snuff, or manufactured Tobacco, are foremoved, then the certificate muft have the importer's oath thereto (if he applies for it) that fuch ftalks were ftripped, or fuch fnuff or manufactured tobacco was made, from one or more hogfheads, for which the duties were by him paid or fecured at importation; or the purchafer's oath thereto (if he applies for it) that fuch ftalks were ftripped, or the fnuff or manufactured tobacco was made, from one or more hogheads, which had been delivered and received according to the direction of this act ; which certificate fuch officers are to grant, and after entering in their books, to deliver to the perfon applying for the fame, without fee or reward for cer: pericn applyang, or forfeiture of 10 l . for every offence. 24 Geo. II. c. 4I. §. 9.
Товассо.-The proprietor, factor, or agent of the tobacco, \&c. (before it is removed) is to infert on the back of the certificate the names of each package, with the marks and numbers, and the weight of each fpecies of goods in each package, the place from whence delivered, and to which they are to

VOL. II.
be conveyed; and by whom, or the name of the ina frot whence carried, and the name of the perfon to whom con figned; and to which he muft fubferibe his name, and mak oath to the truth thereof. The certificate rauft exprefs the number of days it is to continue in force, and accompany the goods to the place to which they are to be catried; and he perfon there receiving it, murt caufe it to be delivered to he chief officer of the cintorns there; or if there is no office f the cuitoms, to the officer of excife for that divifion, who is to examine the fame with the goods; which, if they agree therewith, are to be taken away by the perfon to whom they belong; and fuch officer is to enter the certificate in a book kept tor that purpofe. 24 Geo.II. c. 4I. §. 10. 26 Geo. II. c. I3. §. 4
-- Such groads, in the quantity above-mentioned, removing by land without fuch certificate, are forfeited, and the packages, together with the cattle and carriages; and the carrier, or perfon employed in removing the $f_{\mathrm{m}} \mathrm{me}$, is to be committed to the county gaol for one month, by a juftice of the peace for the county where the offence is committed, or the offender found.- And any perfon, who fhall counterfeit, forge, eraze, or alter fuch certificate, or the duphcate thereof, or procure the fame to be done, flall forieit 501. for every offence. 24 Geo. II. c. 41. §. I2.

- Sot goods, in the quantity above mentioned, may not be conveyed by land from any place in Great-Britain to any other, unlefs the package is marked on the outfide with the refpective words Tobacco, Tobácco-Stalks, or SNUFF, in letters not lefs than three inches in length, on forfeiture thereof, with the package, and alfo is. Fer pound weight to be paid by the owner thereof. 24 Geo. II. C. 41. §. 23.
Tobaccoremoved by Water.-No Tobacco, To-bacco-Stalks, or SNUFF, may be fhipped on board any veffel to be carried by water from any place in Great-Britain to any other, until every part thereof is entered at the cuftomhoufe, at the port neareft the place where they are fhipfed; and if unmanufactured, it muft be fipped in the original package in which it was imported, preferving the fame marks and numbers, but not without a certificate from the collector or comptroller, or chief officer of the cuftoms at the port of importation, that the duties thereof were paid or fecured at importation; by whom, the time when, and in what veffel imported: if it is Tobacco-Stalks, or Snuff, or other manufactured Tobacco, it is not to be fo ihipped without a certificate from the faid officers, that the duties were paid or fecured at importation, for the tobacco from which they were ftripped, made, or manufadured; which certificates the faid officers are required to grant to the importer, or his known agent, applying for the fame, without fee or reward, on forfeiture of 1ol. for every offence. 24 Geo. II. c. 4 I. §. 13.
- Before fuch goods are fhipped, the proprietor muft infert on the back of the certificate the names of each particular package, with the marks and numbers, the weight of each particular fpecies of goods in each package, and the place from whence brought, and to which they are to be carried, 24 Geo. II. c. 4I. §. 14.

The certificate muft, before fhipping, be delivered by the proprietor to the perfon taking charge of the vefiel, who, immediately upon his arrival in any port or place in GreatBritain, muft deliver it to the collector or chief officer there who muft examine the goods with the certificate; and if they agree therewith, the goods are to be difcharged, and may be taken away by the perfon to whom they belong. ${ }_{24}$ Geo. II. c. 4 I. §. 15 .

- Such goods found un board any veffel before fuch certificate is obtained, or without its being on board therewith or if it is forged, or does not agree in all refpects with the goods, then all fuch goods are forfeited, togesher with the päckages, and may be feized and profecuted by any officer of the cuftoms; and the perfon taking charge of the veffel fhall forfeit 6 d . per pound weight; and any perfon who Thall counterfeit, forge, eraze, or alter fuch cestificate, fhall forfeit 1001. 24 Geo. II. c. 4 I. §. 16.
Tobacco, or Tobacco-Stalks, exceeding 24 pounds weight, or SnUfF exceeding ro pounds weight (which has been removed by water from the place of importation to any other place in Great-Britain) may not be removed afterwards from thence by land, without a certificate from the collector and comptroller, or chief officer of the cuftoms, at the place to which they were carried by water, that it ap pears to them by the entry of the certificate, which came by the goods from the place of importation, that the duties thereof were paid or fecured there, and in what vefiel they were brought by water, and when, and that the perion were brought by warer, and when, and the truth thereof which certificate fuch officers are required (after writing it in their books) to deliver to any perfon applying for it. 24 Geo. II. c. 41. §. 22.
- The proprictor of the goods, or his factor or agent (before they are removed) muft infert on the back of the certificate the names of each package, with the marks and If C
numbers,

## Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE.

numbers, the weight of each fpecies of goods in each pack$a_{2} e$, the place from whence brought, and to which they are to be carried, and the name of the perfon to whom they fhall be fent, which he muft fubfcribe with his name, and make oath to the truth thereof.-And fuch goods found fo $r \in$ moving without fuch certificate, or if the certificate appears to be forged or counterfeited, are forfeited, and the package, together with the horfes', cattle, and carriages employed, and may be feized and profecuted by any officer of the cuftoms: the carrier or perfon employed in the removal allo forfeits 10 ]. and is to be committed to the county-gaol for one month by any juftice of the peace for the county where the offence is committed, or the offender found. And any perfon who fhall counterfeit, forge, eraze, or alter fuch certificate or duplicate thereof, or procure it to be done, fhall forfeit 100 l. for every offence. 24 Geo. II. c. 41. \$. 22.
Tobacco. - The fecond purchafer of an intire boghead of unmanufactured tobacco, is intitled to the benefit of a certificate on removal by land or water, in like manner as the firft purchafer from the importer; but in this certificate the name of the importer or feller may be omitted, provided the feller to the fecond purchafer has delivered to the collector, or chief officer of the cuftoms at the port of importation, fuch accounts as the importer is required to give by 24 Gco. II. c. 4 I. 26 Geo. II. c. 13. §. 6.

Any certificate for removal of tobacco, tobacco-ftalks; or fnuff, by land or water, is to be deemed a proper one, though the name of the importer is not inferted therein, provided bis name is exprefted in the bill from which the certificate is prepared. 26 Geo. II. c. 3 . §. $5 \cdot$
—— Any perfon who fhall put out, alter, or deface any mark or number fet upon any package of tobacco in America, or in Great-Britain, at.importation or exportation, fhall forfeit 20 l. for each package. 24 Geo. II. c. 4I. §. 19.

- Tobacco-italks and fnuff, feized and condemned, are to be burnt in the prefence of the collector and comptroller of the cuftoms at the place where the goods are at the time of condemnation; or, for want of fuch, in the prefence of the collector or fupervifor of excife for that diftrict. 24 Geo. II. c. 47 . §. 27,28 .

The officers who feized and profecuted, are to be paid (if it is tobacco, or tobacco-fouff) at the fame rate as if it was fold for 6 d . per pound, which by 12 Geo. I. c. 28. 3. 10. being one-third of the grofs fale clear of all charges, amounts to 2 d . per pound: if tobacco-ftalks, or damaged tobacco, they are to be paid Id. per pound, in lieu of all other allowance, by the receiver-general of the cuftoms at London or Edinburgh refpectively, or by the collector of the out-ports where feized and burnt, out of any duties applicable to incidents; provided the officers, before whom it was burnt, certify to the refpective commiffioners of the cuftoms the exact quantity burnt, who are thereupon to grant their order for payment. 24 Geo. II. c. 4I. §.27, 28.

The following particulars are to be tranfmitted to the regifter of tobacco by the perfons under mentioned, viz. an account of the certificate received with the goods by the officer of he cuftoms or excife refpectively ; and duplicates of original certificates for removing by land, by the officers who granted them at the port of importation ; and certificates for removal by water by the chief officer of the cuftoms at the port where the goods were landed, within one month after he receives it, provided the goods agree therewith; and duplicates of certificates for removal by land, after the firft removal by water, by the perion who granted it; and once in every calendar month, one of the land-waiters book of the landing and difcharging of tobacco imported from the Britifh plantations in America, and copies of every entry chereof for exportation, with the endorfements, and copies of every account of tobacco intended to be manufactured and copies of every account of tobacco fold by the importer, to be tranfmitted by the collector and comptroller, or chief officer of the cuttoms, of every port in Great-Britain where the bufinefs was tranfacted: which feveral accounts are to be by him entered in fuch manner and form, that the marks and numbers of every hoghead, cafk, or other package, and their weights at importation, may be compared with the marks, \&c. refpectively at exportation, or delivery for home-confumption, or to be manufactured, in order to preferve the identity thereof; and the faid regifter is to tranfmit to the commiffioners of the cuftoms, at London and Edinburgh refpectively, an account in writing of any thing which appears to be done contrary to the meaning of this ct ; and once in 6 months he is to lay before the lords of the treafury, a copy of fuch his reprefentations made to the faid commiffioners. Any collector, or chief officer, neglecting o tranimit any of the accounts before-mentioned, to forfeit 5ol. for every fuch neglect. 24 Geo. II. c. 41 . §. 10, II, 15, 17, 22.
Tobacco imported from the Britifh plantations in Ame-rica.-The importer is every year, between the Ift and $24^{\text {th }}$ of June, to deliver to the collector, or chief officer of
the cuftoms, at the pert of importation, an account in writing, under his hand, of all tobacco in his cuftody, power or polleffion, which has been entered 18 months or more that time, containing the number of packages, with the refpective marks, numbers, and weights of each, and the place where lodged; upon receipt of which, fuch officer is to caufe the goods to be examined thereby, and then to tranf mit the account to the regifer of tobacco. 24 Geo. II. c. 4 I . §. 18.

Any importer neglecting fo to do, or if the account proves fraudulent in any refpect, forfeits 50 l . for every offence, Ditto act of parliament.

Any veffel, under the burthen of 70 tons, having on board roolb. weight of tobacco, or any tobacco-ftalks, of 50 lb . weight of fnuff, found at anchor, or hovering within the limits of any port, or within two leagues of the fhore, or difcovered to have been within the limits of any port and not proceeding on her voyage, (unlefs in cafe of unavoidable neceflity and diftrefs of weather, of which the mafter, purfer, or perfon taking charge, muft give notice, and make proof before the collector, or chief officer of the cuftoms, immediately after arrival) all fuch goods are forfeited, with the package, or the value thereof, whether bulk thall have been broke or not; and the mafter, or perfon taking charge of the veffel, forfeits 1001.

- And it any veifel, above the burthen of 70 tons, having fuch goods on board, fhall be found hovering as aforefaid, and no notice of diftrefs is given, the mafter, or perfon taking charge of it, forfeits 100l. 24 Geo. II. c. 41 . §. 26.
Tobacco-Stalks, or Snuff, removed from one place to another in greater quantities than by 24 Geo. II. ©. 2 I allowed, and not attended with the certificate required may be feized and profecuted by any officer of the cuftomit or excife; and the proof that it was removed from the port of importation with a proper certificate, and that the du ties thereon were paid or fecured, is to lie on the claimer, and not on the officer who feized it. 26 Geo. II. c. 13 . §. 2
Tobacco.-All bonds for payment of duties on tobacco thall be deemed to be due and payable upon the day of payment, mentioned in the condition of the bond, and interef to be computed from the faid day whereon the bond thall be paid off in money, or the day the fearcher certifies on the debenture, that the tobacco is hhipped for exportation; and no fecurity to be vacated till all intereft be paid thereon 24 Geo. II. c. 4 I. §. 29 .
- The chancellor, or either of the barons, of the Ex. chequer, to grant a fiat for iffuing procefs of immediate ex. tent againft any perfon bound for the duties on tobacco be fore the bond becomes due, on affidavit laid before him by one of the fecurities, or the executor or adminiftrator of fuch fecurity, that the perfon bound is decayed in circum fances, and fetting forth the danger of lofs to the crown unlefs fome more fpeedy method of recovery than ufual be made ufe of: if the money is recovered before the bond becomes due, the obliger is to be allowed therefrom the ufual difcounts. 24 Geo. II. c. 4 I. §. $3^{\circ}$
-- The penalties and forfeitures by this act are to be, one moiety to the ufe of his Majefty, \&c. and the other moiety to the ufe of fuch perfon as fhall inform, profecute, or fue for the fame; and the faid penalties and forfeitures may be fued for, and the caufes arifing by this act may be tried and determined in any of his Majefty's courts of record at Weftminfter, if fuch offences are committed in England, or if the offender be in England at the time of commencing the profecution; or in the court of Exchequer at Edinburgh, if the offence be committed in Scotland, or the offender be in Scotland at the time of commencing the profecution, at the election of the commiffioners of the cuffoms for England and Scotland refpectively. 24 Geo. II. c. 4 I. §. 33 .
Tobacco, of the growth of Europe, or mixed therewith, may not be fold or delivered to the feamen on board any of his Majefty's thips of war. 6 Ann. ᄂ. 22. §. 12
——. The ftalks or ftems, ftripped from the leaf, may not be imported; and upon feizure and condemnation, the commiffroners of the cuftoms may caufe them to be publickly burnt, allowing the feizer I d.. per pound weight, clear of all charges of condemnation. 12 Geo. I. c. 28 . §. 13. --The Stalks or Stems, when feparated from the reft of the leaf, and exported by themfelves, are not to have any drawback. 9 Geo. I. c. 2 r. §. 20.
- May not be planted in Great-Britain, Ireland, Guern fey, or Jerfey, upon forfeiture thereof, or the value, and 40 s . for every rod or pole of ground planted; half to the king, and half to the fuer; and alfo iol. more; one-third to the king, one-third to the poor of the parifh, and onethird to the fuer.-Except in phyfic-gardens, and not ex ceeding half a rod in any one garden.- Sheriffs, juftices, $8 x$ within ten days after information, are to caufe fuch tobacco to be deftroyed. - Juftices, a month before each general quarter feffions, are to iflue out warrants to the conftables \&c. to fearch for fuch tobacco, and to make a prefentatio

## Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE.

upon oath, at the quarter-feffions.-Conitables, within 14 days after fuch warrant, may call affiftance, and deftroy fuch tobacco; upon neglect, are to forfeit 5 s . per rod.-Affiftance refufed, the forfeiture is 5 s .-Refifting, the penalty is imprifonment for three months, or to forfeit 5 l. and imprifonment, till a recognizance of 101 . penalty, with two fecurities, be entered into, not to offend again. 12 Car. II. 34. \& \& 25 Car. II. c. 7. 5. 18, \&x. 22 Car. II. c. 34 . 1, \&c. 15 Car. I. c. 7.5 .18 .

Leaves of Walnuts, hops, fycamore, or any other Leaves of Wainuts, hops, fycamore, or any other
leaves, herbs, plants, or materials, may not be cut in the leaves, herbs, plants, or materials, may not be cut in the form, or in imitation of any of the ufual fizes or cuts of tobacco of the Britifh plantations, or coloured or cured, to refemble fuch tobacco for fale, or knowingly fold or offered to fale as fuch tobacco, upon forfeiture of 5 s . per pound weight. The charges of profecution to be borne by his Majefty. I Geo. I. c. 46. §. I.
-- Such leaves, \&c. may not be exported with intent to obtain a drawback, as for tobacco, upon forfeiture of 5 s per pound weight, befides former penalties. I Geo. I. c. 46. §. 2.
-- May, with atl engines, utenfils, and tools, be fearched for, and feized by the officers of the cuftoms, at feafonable hours, and with a warrant from the juitices; who, at their quarter-feffions, are to determine fuch feizure, and after condemnation, caufe them to be burnt. I Geo. I. c. 46 . S. 3, 4.

Servants employed in cutting, manufacturing, \&cc. or felling, upon conviction before two juftices, may be committed to the houfe of correction, there to remain, not exceeding fix months. I Geo. I. c. 46 . §. 5 .
Wobacco-pipe Clay. See the conclufion of letter W, Wool.
TURKEY.-Currants, and all goods of the growth, product, or manufacture of Turkey, muft be imported only in fhips belonging to Great-Britain or Ireland; except fuch fhips as are of the built of the country whereof the faid goods are the growth, production, or manufacture, or of fuch port where the faid goods commonly, or moft ufually, are firft Chipped for tranfportation, on forfeiture of thip and goods. 12 Car. 11. c. 18.8 .8.

## V E N

## VEN

VENICE. This ancient republic may be divided into three parts: thefe are the dominionsin Italy, called Terma Firma; thofe in Dalmatia, and thofe in the Ionian and Egean Seas ; called the Levant. The Terra Firma dominions are again fubdivided into the following territories, viz. the Dagado of Venice, the Padnano, Vicentino, Veronefe, Brefciano, Bergamafco, Friuli and Aquilegio, Iftria, Cremefco, Polefin de Revigo, Marcas Trevigiana.-The coafts of Dalmatia contain the towns of Zarig, Nona, Spalato, Sebenico, Trau, Clifia, and Cattara; and the ifles of Charto, Otero, Vegtia, or Vegia, Arbe, Pago, Ifola, Longa, La Barza, Leffan, Curzola, and fome few more of fmall note.-In the Levant, the ines of Ce phalonia, Corfu, Zant, La Praga, Millo, Cerigo, Tine, Kimolo, or Argentaria, and the Morea.
The Venetians have little produce of the country, or manufacture of the people, except the filk, and the filken manufactures: the former refpects the land part, the latter the city, where many of the filk manufactures are made: but yet the fate is very opulent, becaufe they abound with univerfal merchants ; and this is owing to an univerfal correfpondence, by which, as the Dutch are to thefe northern parts, fo are the Venetians to all the flores of the Adriatic gulph, the ifles of the Arches, and the fea-coafts of the Turkifh dominons; for to all thefe places they fend their fhips, freighted with the growth and manufactures of other countries, as England, Holland, France, New Spain, \&c. in return for which they bring but few goods, except from Turkey, whence they bring large quantities of filk, which they fell again, among their own manufacturers in the city, as alfo in their Terra Firma dominions, and likewife to the duchies of Milan and Mantua.
By their inland commerce they convey their filk into the feveral countries as well of their own dominions, as thofe of the emperor, and into all the countries between the gulph and the river Danube; through all which the Venetians have a great and flourifhing commerce, partly by the help of canals, and partly by fmall navigable rivers.
The trade which may be called their own, and which is more confiderable, is by the navigation of thofe great rivers the Po , the Adige, the Adda, the Mincio, and others, by which they carry all the heavy goods they import from foreign parts, into. the rich and populous provinces of Lombardy, and have a communication even with Milan and Turin.
By thefe rivers, alfo, they have a correfpondence with the country of Trent and Tirol, and even with Bavaria itfelf; as alfo, by the lower branches of the Po, and the canal de Ferrara, they have with all the fouthern provinces of the papal dominions, as Ferrara, Bologna, Urbino, and Parma, and as far into the country weftward as Modena, \&c.
As they have the fole commerce of moft of thefe countries, and in fuch a manner as not to be interrupted by any rival nations, it is not to be wondered that the Venetians have a very thriving and gainful trade, and that they can advantageoufly difperfe the large importations they make from almoft all parts of Europe, as from Spain, Portugal, England, and Holland, they having a confiderable call for goods from them all.
Nor do they bring any valuable returns back from their inland countries, for they have few productions in thofe provinces, except corn: neither have they metals or minerals, iron excepted; nor wool, cotton, or hair, or any confiderable manufacture for employing their people: fo that the Venetians are faid to drive the mof ready-money trade of any of the Mediterranean countries, becaufe they export fuch great quantities of goods to countries which have no returns to make them but money.
However, they receive lirge quantities of other merchandize from the Turkifh dominions; it is thought more than any one nation befides. The particulars are,
Raw filk, directly from Smyrna and Scanderoon. Coffee, from the Red Sea, by the way of Alexandria. Spices, fiom India, and by the fame way.
D. ugs, \&c. $\left\{\begin{array}{l}\text { Galls, from Aleppo. } \\ \text { Maftic, and } \\ \text { Turpentine, }\end{array}\right\}$ from Scio.

Drugs, \&c. $\left\{\begin{array}{l}\text { Senna, } \\ \text { Balm, } \\ \text { Mummy, } \\ \text { Dates, and } \\ \text { India cotton, }\end{array}\right\}$ from Egypt.
Cotton, and cotton-yarn, from Cyprus.
Greek wines from the illands.
Though the Venetians may have mines of iron and lead in the territories of the Vicentine and Friule, and in other parts, yet we find Englifh lead and Swedifh iron have a good market at Venice, as alfo Englifh block-tin, and moft kinds of wrought iron and brafs: nor have we yet had any fufficient proof of thofe metals being found there in quantities, except fome iron, as far off as Stiria and Carinthia.
The Venetians were formerly the principal glafs-makers in Europe, and furnifhed all this part of the world with lookingglafles, and other glafs wares of all forts, which were in high efteem. But they have been excelled by the French, and the French by the Englifh, who, without flattery, do now make the beft glafs wares in the world; and the Englifh plateglals and drinking-glaffes are carried not to France only, but even to Venice itfelf.
They have a very confiderable filk manufaeture, as before noticed, not only in the city of Venice, but in the countries of Brefcia, Verona, Bergamo, and other parts; and they carry their fine brocaded filks, velvets, fattins, and Mantua filks, as alfo figured damafks, to Conftantinople one way, and to Vienna the other way: and this trade is very confiderable, and it brings them great returns in money, and employs multitudes of their people.
The Venetians have another trade, which is of no Jefs concernment, it being almoft peculiar to themfelves; it confiffs in naval fores: for the provinces of the Vicentine, the Trevigiana, and part of Friuli, are full of firs, and thofe fo well grown and large, that they cut mafts there, even for their biggeft fhips of war : they have likewife good oak for building. In confequence of their fir woods, they have pitch and tar; and the fame countries produce great quantities of hemp and flax : fo that they have deals, timber, mafts, fails, hemp, flax, pitch, and tar, all of their own; which none of the princes or ftates in the Mediterranean can boaft of in the fame manner.
Nor is this folely beneficial to them in regard to their own navy, and to fill their own magazines, but they furnifh all thofe materials, in great quantities, to the other ports of Italy, as Genoa, Naples, Meffina, and Palermo, or to any other places where they build fhips, efpecially thofe of force; and the knights of Malta fetch moft of their naval fores from hence. Were the countries this way furnifhed for trade, and with wealth fufficient to carry it on, they would fend bither for fhips, and Venice would be the arfenal of the Mediterranean, as Holland has been of other parts of Europe:
They are poffeffed of a very large coaft on the other fide of the Adriatic gulph, called Dalmatia, where they have fome good ports, though no city of any confiderable commerce; neither does the country produce any thing extraordinary for merchandize: it fupplies the city of Venice with corn and mutton, in great quantities; and, in return, the Venetians fupply the people with their foreign merchandize.
Yet the Venetians want many things which their own territories cannot fupply them with, and which, fince they loft fo much of their dominions to the Turks, they are obliged to purchafe from them, and from the Greeks under the Turkifh government : and thefe are as well neceffaries as merchandize.
They have no wine ; the mountainous countries to the north of the city are, like the Alps, too cold for the vines, nor do they pretend to make any : and therefore they are fo meanly fupplied by the Greeks, who mix water with their rich wines, 'till they reduce them almoft to water: yet the Venetians, taking care to reduce the price in proportion, are content with the liquor, though they know it is fo fpoiled.
They are fupplied with wines from feveral of the iflands, as paricularly from

## V E N

Skyros, where the wine is very good and rich, anid bought very cheap.
Negropont : here the Venetians buy very good wine alfo, and railins of the fun, or dried grapes: but the wine is dearer here than at Skyros.
ANDROS: from bence the Venetians fetch both wine and oil, alfo good oranges and lemons; and pomegranates they bring thence in fuch plenty, that they make a kind of vinegar of their j jice.
Tinos: here the Venetians fetch the beft wines they drink, except that of Florence, of which we have fooken already; and, as this illand is their own, they encourage the trade very much. Alfo the Venetians fetch a great deal of filk here, of a meaner fort than the Italian and Turkey filk, which they fraudulently mix with it fometimes in their manufactures, but principally ufe it in making tapeftry, and other fubfantial manufactures.
Mycone : here is that wine, which, though excellent welltafted, and rich and ftrong in its natural original as a juice, is fo greatly adulterated by the Myconians, before they bring it to Venice.
The Venetians bring cotton-yarn, alfo, and goat's-hair, from The Venetians bring cotton-yarn, alfo, and goat's-hair, from
thefe iflands, and feveral kinds of filk, fome worfe than that of Tinos, and fome better. The cotton and hair they work into feveral ufeful manufactures, which fupply the place of woollen, for they bave very little wool, and what they have is of little ufe in any kind of manufacture : wherefore they import confiderable quanrities of Englifh, and other woollen manufactures.
They have fome refining-houfes for fugar, they purchafing large quantities of mufcavado fugars in England and in France, which they boil and refine, as is done in England; they allo refine the Brazil fugars, though very white before.
Their manufacture of bone-lace is ftill confiderable, as well for the ufe of the city, as for the trade of the cuuntries ad. jacent; but is fo much outdone by the Flanders manufacture, that very little, if any, is brought into thefe parts of the world.
It fhould not be omitted, among their importations, that they fetch a great quantity of wax from all thofe illands above named; which they generally confume in the city of Venice, where the quantity they ufe is very great, almont all the perfons of figure burning none but wax candles, and the poorer fort lamps, for they have but little tallow.
It may be obferved here, that the cities of Venice and of Rome are, of all the cities of Europe for their bignefs, the moft noted for pomp and hew, the confluence of ftrangers to both being fcarce conceivable. At Venice, the diverfions of the carnival, the magnificence of the buildings, among which are 400 noblemens palaces, with the fplendid appearance of ladies richly attired, \& cc.
This caufes a prodigious trade in things otherwife of no great moment, as equipages, coaches, gondaloes, liveries, habits of ceremony, and fuch things; as alfo in furniture, paintinge, and other extraordinaries of that kind. Hence there are more taylors, upholiters, gold and filver lace-makers, embroiderers, and, to fum up all, footmen and pages, and you may allow me to add fiddlers and ftrumpets, than in any other city in the world, Paris and London excepted.
At Venice, the numerous throng of gentry, and perfons of the firft quality, to the carnival, is fuch, that they frequently number 20 or 30 fovereign princes there at a time, befides others of lower rank, without number: and the noblemen of Verice themelves, though they are very numerous, and affect splendor and magnificence in apparel and jewels, as alfo in their furniture, yet they do not entertain fo many valets, and other domeftics, as is the cuftom at Rome: and becaufe they cannot keep coaches and horfes in Venice, yet their grandeur the other way is equally expenfive, and occafions abundance of thofe trades before enumerated.
Nor, indeed, does any thing conduce more to the promoting commerce, than the gay and fumptuous drefs of the people, efpecidlly where the humour once becomes national, as it is at Venice, as well as at Rome.
The Venetians trade with the Turks in the Morea, and the gulph of Theffaionica, and to fome of the illands, as before obferved. And as thofe countries are full of Greeks, and other Chriftian inhabitants, they carry them proper manufactures, fuch as wrought filks, fine linen, bone-lace, and all forts of haberdaikery for the women, who love to go fine, efpecially in the iffes. What they carry back in return is difficult to enquire, but is from all parts according to the production of the place, fuch as currants, raifins, figs, drugs, rice, corn, oil, wine, cotton, filk, \&c. and this is the reafon why Venice is the magazine for the fcarceft drugs, and from whence they are fent over the whole Chriftian world. As for money, they take little in the illands; the iflanders rather carry fome money from the Venetians.

Of the Foreign Exchanges of Venice.
The ufance of Venice with refpect to the following places, viz.
To Amfterdam, two months after date.
VOL. I.

After the expiration of the time of thefe different ufances, bills of exchange have fix days of grace to run.
It is forbidden to pay or accept bills of exchange endorfed, if not by the procuration of the laft enderfer. All bills of exchange drawn upon any place or fair whatfoever muft, under pain of being void, be paid in bank, and the bank keep their accounts, and almoft the whole republic alfo, in ducats and gros.
There are particular perfons who keep their accounts in livres, fols and deniers gros, whofe fubdivifions are by 20 and $\mathbf{1 2}$; and others keep them in ducats current.
The lira, or livre $=10$ ducats bank, or 240 groffi.
The ducat of bank imaginary money, which is ufed in the exchanges, $=24$ groffi, or 124 foldi, or $6 \frac{2}{3}$ lires.
The gros $=5 \frac{\frac{\pi}{6}}{6}$ foldi banco, or 32 piccioli.
The foldo banco $=12$ gros, or $\frac{1}{2}$ ducat banco.
The lira, or livre banco, $=240$ gros, or 10 ducats banco $=$ 12 ducars current, or 74 lires 8 fuldi piccioli.
The ducat bank $=7$ lires, 8 foldi, $9 \frac{3}{5}$ piccioli, or $148 \frac{4}{5}$ foldi current, or piccioli.
2s. The word piccioli fignifies a denier, or a penny, and it is alfo called current money, piccioli or current being fynonymous words.
The fequin of gold $=20$ lires current money, and is of the ftandard of $23 \frac{14}{3} \frac{4}{2}$ carats, and it weighs 66 grains.
The Venetian crown, or ducaton, $=8$ lires ro foldi of the faid money, of the ftandard of $11 \frac{7}{4}$ deniers, and it weighs 600 grains.

The reduction of ducats bank money into current, and the latter again into the former; and alfo of lires bank into lires piccioli, and lires piccioli into lires bank.

800 duc. 12 fols d'orban. ${ }^{*} 960$ duc. 14 rol. 5 den. d'or cur. $\frac{7}{5} 160 \quad 25$ to beadd. $160 \quad 2 \quad 5$ the $\frac{7}{6}$ to be fub.

* 960 duc. $14 \underset{\text { den. cur. }}{ } \mathbf{5}=800$ duc. 12 fols d'or in banco.
6 lires 4 foldi
6 lires 4 foldi

Befides the bank money of the prince, there is another current money, which gives a fur-agio from 15 to 20 per cent. according to particular conjunctures.
Befides the abovefaid bank and current monies, there are lires piccioli, which is the money with which merchandizes are ordinarily bought, and thefe are reduced into ducats current, of 6 lires 4 foldi, by multiplying the lires by 20 foldi, and by dividing the product by 124 foldi, the value of the ducat current.
The lira, or lire, $=20$ foldi piccioli.
The foldo, or fol, $=12$ piccioli, or bagattini.
We flall now touch upon the feveral operations of the exchanges, in order to know for what fums bills muft be made, that I would remit to my correfpondents of the undermentioned cities, in their feveral and refpective monies.
Before we enter into thefe operations, it is proper to apprize the reader that, for the fame reafons given under the article Holiand, in relation to the exchange between that republic and Spain, with regard to the reduction of the parts of the ducat of 375 marvedees, in like manner we fhall, f,r facility of computation, fubdivide the ducat banco of Venice into 20 fols d'or, and 12 deniers d'or, although the ordinary fubdivifion is into 24 gros, or 124 marchetti; and, in conformity hereto, we will fupp fe that I owe the following fums, ir ducats, fols, and deniers d'or, bank moncy, to my feveral correfpondents.

## CASEI.

Of the Exchange of Venice upon Holland.
To reduce 1060 duc. 17 fols 3 deniers banco of Venice, into florins, fols, and penings banco of Amfterdam, exchănge at $88 \frac{1}{4}$ den. per ducat as above.

## ÓPERATION.

1060 Ducats, 17 fols, 3 deniers, multiplied By the $88 \frac{1}{4}$ Deniers gros of exchange.

$$
\begin{aligned}
& 8480 \\
& 8480 \\
& 265 \text { for } \frac{2}{7} \text { of } 1060 \\
& 44 \frac{1}{8} \text { for ro fols, the } \frac{1}{2} \\
& \left.\begin{array}{r}
22 \text { for } 5 \text { fols, the } \frac{\pi^{2}}{4} \\
8 \frac{6}{8} \text { for } 2 \text { fols, the } \frac{10}{50}
\end{array}\right\} \text { of the exchange. } \\
& 1 \frac{8}{8} \text { for } 3 \text { fols, the } \frac{8}{8} \\
& \text { 9362|x Deniers gros. }
\end{aligned}
$$

the $\frac{8}{4} 12340$ florins, 10 fols, 8 penings banco, for which the draught muft be made upon Amiterdam.

## INSTRUCTION.

Multiply the 1060 duc. 17 fols 3 den. by the price of exchange of $88 \frac{1}{4}$, and divide by 40 deniers gros, the value of a flotin, and the quotient will be 2340 florins, 10 fols, 8 penings banco, tö be received at Amfterdam ; the proof of which you have under the article Holland, in the exchange of Holland upon Venice.

> C A S E II.

Of the Exchange of Venice upon Antwerp.
To reduce $600 \frac{x}{2}$ ducats banco of Venice, into livres, fols, and deniers gros, permiffion money.: of Antwerp, exchange at $9^{2}$ per ducat.

* It mult be oblerved, that Antwerp, and all Brabant, exchanges with moft places in exchange or permifion-money, as it te called, which differs $8 \frac{1}{3}$ per cent. from the current money; that is, 100 livres gros exchange money, make $108 \frac{4}{3}$ liveses gros current money ; thus the crown of 48 palais exchange money, makes 52 palais, or fols, current money.

OPERATION.
$600 \frac{x}{2}$ Ducats banco, to be multiplied By 92 Deniers gros exchange.

1200
5400
46 for the $\frac{x}{2}$.
55246 Deniers to be divided by 240 , give 230 livres, 3 fols, 10 deniers gros, money of exchange, or per-miffion-money, for which fum the draught muft be made upon Antwerp.
Multiply the $600 \frac{1}{2}$ ducats by the price of exchange of 92 deniers, and divide the product 55246 by 240 deniers gros, the value of a livre gros, and the quotient will be 230 livres, with a remainder of 46 to be multiplied by 20 fols, the value of the faid livre, and dividing by the fame it gives 3 fols, with another remainder of 200 , which being multiphed by 12 deniers, the value of a fol, and divided again by the fame divifor, you will have 10 deniers gros to be received at Antwerp. - The proof of which mult be ealy to thofe who underftand the operation.

C ASE III.
Of the Exchange of Venice upon London.
To reduce 1459 ducats, 18 fols, I denier d'or, bank money of V'enice, into pounds fhillings, and pence fterling of England, exchange at $52 \frac{3}{4}$ pence flerling per ducat.

## VEN

OPERATION.
1459 Ducats, 18 fols, I denier, to be multiplied By $\quad 5^{2 \frac{3}{4}}$ pence fterling, the exchange.

$$
\begin{aligned}
& 2918 \\
& 7295 \\
& \left.\begin{array}{r}
729 \frac{4}{4} \text { for } \frac{x}{2} \\
364 \frac{6}{8} \text { for } \frac{\pi}{4}
\end{array}\right\} \text { of } 1459 \\
& 26 \frac{3}{8} \text { for } 10 \text { fols, the } \frac{x}{2} \text {. } \\
& 13 \frac{}{\frac{8}{8}} \text { for } 5 \text { —he } \frac{1}{4} \text {. }
\end{aligned}
$$

$$
\begin{aligned}
& \begin{array}{l}
\frac{5}{8} \text { for } 1 \text { the } \\
\frac{3}{6} \text { for } 1 \text { denier. }
\end{array}
\end{aligned}
$$

77010 pence fterling, to be divided by i2 and 20, give 3201. i 7 s. '6d. fterling, for which the draught muft be made upon London.

## INSTRUCTION.

Multiply the 1459 ducats, 18 fols, 1 denier, by the price of exchange of $52 \frac{3}{4}$ pence fterling, divide the product 770 Io pence by 12 and 20 , and you have pounds, fhillings, and pence fterling. Note, The proof of this muft be fo eafy to thofe at all acquainted with arithmetic, that we think it needlefs to fay more.

CASE IV.
Of the Exchange of Venice upon Hamburgh,
To reduce 552 ducats, 10 fols; 4 deniers banco of Venice, into marks lubs of banco of Hamburgh, exchange at $86 \frac{2}{3}$ gros of Hamburgh, per faid ducat.

OPERATION.
552 Ducats, 10 fols, 4 deniers banco, to be multipled By $86 \frac{7}{8}$ gros exchange.
3312
4416
276 for $\frac{4}{8}$ the $\frac{x}{2}$
$\left.\begin{array}{l}138 \text { for } \frac{2}{8} \text { the } \frac{\frac{1}{2}}{\frac{1}{4}} \\ 69 \text { for } \frac{1}{8} \text { the } \frac{1}{8}\end{array}\right\}$ of 552 .
$43 \frac{3}{8}$ for 10 fols.
$4 \frac{5}{8}$ for 4 deniers.
48000 Gros, to be divided by 32 , gives 2500 marks lubs banco, for which the draught mult be made upon Hamburgh.

## INSTRUCTION.

Multiply the 552 ducats, 10 fols, 4 deniers, by the price of exchange, and divide the product 48000 gros by 32 gros, the value of the marks lubs, and the quotient will produce 1500 marks lubs to be received at Hamburgh. For the proof of which fee the article Hamburgh, Vol. I.
CASEV.

Of the Exchange of Veenice upon Genoa.
To reduce 373 ducats, 15 fols, 9 deniers d'or, bank money of Venice, into lires bank money of Genoa, exchange at 103 marchetti of Venice per crown of 4 lires of Genoa.

OPERATION.
373 Ducats, 15 fols, 9 deniers, to be multipled By 24 marchetti.

1492
746
746
373 for 10 fols, the $\frac{3}{2}$
62 . of 124
3 for 5 fols, the $\frac{3}{4}$
5 for 9 deniers, the $\frac{\pi}{6}$. of 5 fols.

$$
5 \text { for } 9 \text { deniers, the } \frac{1}{6} \text { of } 5 \text { fols. }
$$

46350 marchetti, to be divided by ro3, gives 450 crowns of 4 lires bank money, for which the draught muft be made upon Genoa.

## I NSTRUCTION.

Reduce the 373 ducats, 15 fols, 9 deniers, into marchetti, by multiplying them by 124 , the value of a ducat, and dividing the product 46350 marchetti by 103 marchetti, the price of exchange, and you will have a quotient of $45^{\circ}$ crowns of 4 lires, which being multiplied by 4 , make 1800 lires banco to be received at Genoa; for the proof of which fee the article Genoa, Vol.I.
If any thing after the firft and fecond divifions fhould remain, it muft be multiplied by 20 and 12 , and by dividing the fame by the exchange, it will give fols and deniers d'or to be received at Genoa, with the crowns.

CASE

To reduce t' 330 ducats banco of Venice, into crowns mark of Novi, exchange at 193 of the faid ducats per 100 mart faid crowns of Novi.

## OPERATION.

If 193 ducats give 100 crowns, what will 1930 ducats?
100
193) 193000 ( 1000 cro mark, for which the draught muft be made in the Eafter fair upon Novi.

## Of the Weicurs and Measures of Venice.

Their meafure for linen and filks is the brace, and that is of two forts, viz. 5 braces for filk make fomething lefs than 3 Englifh ells; or 100 braces make about $57 \frac{1}{2}$ ells in London, 98 in Holland, $1 \frac{1}{7} \frac{1}{2}$ in Hamburgh, $122 \frac{1}{2}$ in Brellau, 104 in Dantzic, 117 in Leipfic: and the brace for linen is about half an Englinh ell.
Their weights are diftinguifhed in grofs and futtle weights. Their grols quintal, by which they weigh brafs, metal, feathers, and other lumbering commodities, is roolb. grofs. The other, by which they weigh filk, fpices, and drugs, is 100 lb . futtle.
Now 100 lb . grofs weight makes 158 lb . futtle weight, or 106 lb . in London avoirdupoire weight.
And 100 lb . futtle weight makes about $63 \frac{2}{3} \mathrm{lb}$. of their grofs weight, or about $65 \frac{3}{4} \mathrm{lb}$. in London.
And 100 lb . futtle weight of Venice has been found to make about $6 \mathrm{I} \frac{3}{4} \mathrm{lb}$. in Hamburgh, $65 \frac{3}{4} \mathrm{lb}$. in London, 60 lb . in Amfterdam, 59 lb. in Frankfort.
Their gold and filver weights are as follow, viz. 4 grains is I carat, 9 carats (or faliques) is I quarta, 4 quarta's I ounce, and 8 ounces is one mark; and 100 lb . Troy weight has been found to make about $116 \frac{1}{2}$ of the above marks : and the fame in Verona.
Their wine meafure is the amphora, of 4 bigorza's; each bigorza is 4 quarts, and each quart 4 fachies, and each fachie is 4 lera's; but, by wholefale, the amphora is 14 quarts, and the bigorza $3 \frac{1}{2}$ quarts.
Oil they fell by weight and by meafure; the mizaro is 40 mero, and the mero is about $3 \frac{1}{3}$ pints by meafure, but hy weight it is more.
Corn is fold by the ftaro, and is in quantity about one fextier of Paris.

## The Bank of Venice.

This is commonly called Banco del Giro : that is, properly, a public depofitum, for the reception of the calh of merchants and traders, \&c. It was eftablifhed by an ediet of the republic, which declares, That the payment, for merchandizes by wholefale, and bills of exchange, is to be made in bank; and that all debtors and creditors fhall be obliged, the one to carry their money to the bank, and the other to receive their payment in bank, by making a transfer from one account to the other.
An excellent memoir received from Venice remarks, That none are obliged to pay for merchandize in bank, every one being free to do fo, or otherwife: and with relation to bills of exchange, if it is expreffed Value in Bank, i. e. the value to be paid in bank, fuch bills are to be paid in bank; but when it is expreffed in Current Money, that is to fay, in ducats, or livres current, or in fequins, philippines, or other fpecies, they muft be paid in thefe refpective monies, unlefs the parties agree to negociate the affar in bank; bur, in fuch cafe, the concerned mult previoully agree upon the agio. See the article Agio.
It is allowed fometjmes to make real payment, particularly in retail trade, or when frangers defire ready money, or when others fhall require current money for the tranfaction of bufinefs by bills of exchange, or otherwife to difpoie of it.
The neceffity that there fometimes is of making thefe effective, or money payments, has occalioned a ready money bank-account to be opened, for the accommodation of thofe whofe affairs require it.

It has been experienced, that this cafh account has not caufei any fenfible diminution in the funds of the bank; thislibert) of trawing for ready cafh has, on the contrary, occalioned an augmentation thereof.
By means of the bank, the republic, without cramping the freedom of trade, and without paying any intereft, has made herfelf miftrefs of five millions of ducats, to which the fund of this bank is fixed: whereby, on preffing emergencies, the Venetians bave rarely occafion for extraordinary taxes. The regularity alfo exercifed in the adminiftration of the affairs of the bank, for which the flate is guaranty, has rendered this eftablidhment fo permianent, that there is great realon to judge its duration will be equal with that of the republic itfelf. The accounts of the bank are kept in livres, fols, and deniers gros: the livre is to ducats bank, or 240 gros, the ducat being equal to 24 gros.
Money of exchange is always underftood to be that of ducats Money of exchange is always underitood to be that of ducats
in bank, which is imaginary, roo whereof make 120 ducats current money: fo that the difference between bank and current ducats is 20 per cent. brokers being prohibited to raife the fame higher.
The memoir before cited illuftrates this matter as follows: 100 ducats bank make 100 effective, which have befides another agio upon the ducats current, or upon the current money; and this agio, like the other, is called an agio of bank, which is always fixed at 20 per cent. and, on the contrary, the other agio is uncertain, and varies more or lefs: for example, fuppofe this variable agio to be 29 per 100, if we would know how many 100 ducats bank will produce cur. rent, we muft firft add the fixed bank agio of 20 per cent. and afterwards upon the 120 ducats muft be added the value, of 29 per cent. thus 100 ducats bank will make 154 ducatand 19 gros currenc.
The bank is chut four times a year, viz. the 20th of March, the 2oth of June, the 2oth of September, and the 20th of December; and it remains lhut every time for the fpace of 20 days. During this time, bufinefs is not obftructed, the money payments go on, and what is tranfacted in bank, is transferred upon the openiag thereof.
The faid memoir likewife informs us, That the precife times of opening and floutting the bank have been fettled, by an uterior decree of the fenate, of the 20th of February, 1730 , as follows : (I.) That it flall be fhut the Saturday before PalmSunday, and opened again the Monday after the Octave of Eafter. (2.) From the $23^{d}$ of June to the fecond Monday in July. (3.) From the 23 d of September to the fecond Monday in OQober. (4.) From the 2 gd of December to the fecond Monday in January. The bank is alfo fhut on all ordinary holidays, and every Fridays when there is no fuch holiday; but at prefent the bank is not that on lawcourt holidays, nor on the Fridays of the month of March, as heretofore.
There are, befides, other extraordinary times of fhutting up the bank, which is for eight or ten days, during the Carnival, and as many for the Paffion Week. It is hut likewife every Friday of the week, when there is no holiday, for the ballancing of their accounts.
Bills of exchange for places and fairs are paid in bank. A feller cannot refufe payment in bank for bis merchandize, when there is no agteement to the contrary.-Bills of exchange, from the expiration of their time to run, have fixdays of grace, or Rispetto bi Banco; and, in default of payment, you are not obliged to make proteft, but the fixth day, after which you run the hazard, if not done.
From the moment that the bank is fhut, a debtor is not obliged to the payment of bills of exchange in cah, nor in any other manner ; nor can a proteft be made 'till the opening of the bank, and that only after fix days of grace, according to cuftom, excepting, neverthelefs, in the cafe of a failure, and, when this happens, frict meafures may be taken, provided the time of urance, with regard to bills, is expired. Bills of exchange endorfed cannot be paid in bank: the perfon to whom the bill is payable, muft fend a letter of attorney to his correfpondent at Venice, to receive it for him; other-1 wife it is neceffary that the bill be made payable to fuch correfpondent.
Contracts for goods and merchandizes are made for current money, and not in bank, except thofe for oil and quickfilver, which are always dealt for in bank money.
As the accounts of the priblic bank of exchange are kept in Jivres, fols, and deniers, when transfers are therein made, it muft be done by reckoning ro ducats banco per livre: for example, if you have occafion to write in bank, ducats $1246: 8$, it is not Tpecified in ducats and gros, but in liv. $124: 12: 8$, which make the faid fum of ducats banco. To give an idea with what facility and convenience parties may be paid in bank, the following is the method practiled.

Afdrubal is indebted to fundries for fundry particulars :
To Berentio, for a billof exchange remitted from 7
London upon faid Afrrubal, of the fum of du- $\mathbf{K}_{2689: 4}$ cats banco
To Cafimiro, for a bill of exchange, remited to $\}$ Adrubal upon Anufterdam

VOLi, 1 .

Brought over
$6536: 13$
To Eomitian, for the value remitted to faid Afd. 4754:17 To Emilio, for baliance of an account current, $\}$
fettled with Afdrubal 1589: 5

## '「otal ducats

12880: 11
To difcharge thefe feveral fums in bank, when Afdrubal has the fum in bank requifite fo to do, he appears befure two of the book-keepers of the bank (who write uniformly, at the fame time, in two feparate bank books) and he fays or dictates to them as follows:

By Afd. to Barentio, for a bill from London 1. $268: 18: 4$ to Cafimiro, for one from Amfterdam 384. 14 : 9 to Domitian, received Amitan $475: 9: 5$ to Emilio, for ballance

Livres bank
1288: 0: II
In this manner the whole is regulated, without need of any receipt, declaration, or acquittance, between the parties. It is not even neceflary for the creditorsto be prefent when the.e articles are wrote off, except Emilio, becaufe when he fettles the ballance of an account, the creditor muft be there, and affirm, by a fimple Aye, to the writer, that fuch furn makes the ballance, an act of this kind being more valid than any other acquittance that can be required by the paper. And fuppofe that Afdrubal has not, by his credit in bank, a furn fufficient to pay what he owes, or that he has none at all; in this cafe be muft carry into bank fo much current money as the faid fum amounts to, upon the footing of 29 per cent. agio: or, by the means of a broker, he muft find fuct who will lend him that fum (after has ing agreed for the faid agio, perhaps at $\frac{1}{8}$ difference) and transfer the fame in bank, to the credit of Afdrubal's account: fuppofe that Flammio is the perfon who receives the value thcreof, he goes to the bank book-keepers, and orders them to write as follows:
By Flammio. To-Addrubal, 1. 1288:0: Ir. In this manner the difpofition thiat Afdrubal has made in bank, is juttly regulated for the value of the feveral beforementioned fums. By thefe examples, the great conveniency of this bank may be judged of, particularly in a city where fuch latge tranfbe judged of, particularly in a city where
V IR G IN IA. We having fooken fo largely already throughout this work, in relation to the high importance of the colonies to this kingdom, it cannot be neceffary to urge that matter further; nor is it needful, we apprehend, to fay more than we have done, with refpect to the precarious flate wherein our plantations on the continent of America feem to be at prefent, from the unjuftifiable conduct of the French. What we have faid upon thefe points, is to be met with under the articles British America, Canada, Colonies, Florida, Louisiana, Map, North Carolina, Pensylvania, Plintations, Sugar Colonies, Trade.
And as this is the laft time that we fhall have occafion in this work to fpeak of our colonies in America, it may not be unacceptable to give a fummary of the meafures taken by France to protect and extend the commerce of their colonies and plantations in this part of the world; whereby it will appear, in a narrow compa/s, by what means they are at prefent enabled to figure it fo powerfully in the American world,

Remarks on the article Vizginia, before the laf way.
The Measures taken by France to promote and extend the Trade and Commerce of their Colonies and Plantations in America.

The meafures taken by the French to people their colonies, are,

1. To people them with a number of $\mathrm{W}_{\text {Hites }}$ proportionate to that of Blacks, that the latter may not be an overmatch for the former, and raife infurrections*.

- The eafe is otherwife with regard to our colony of Jamaica. See an Enay concerning Slavery, and the danger Jamaica is expofed to from the too great number of faves, 8 ic .
II. They fend over French workmen, fo articled as fervants, to render labour cheap, and to inftruct the negroes in fuch things as may render them more beneficial to the French planters.
III. They regularly infruct the people in the ufe of arms, as well to defend their colonies at the leaft expence to the crown, as to train them to hunting, not only for food, but to enlarge the peltry trade in New France $\dagger$. See our article French America.
$\dagger$ We have not been fo careful in regard to either of thefe ma terial particulars.

11 E
IV. There
IV. Thofe who are bred up in the horpitals in France (where there is a prodigious number) are fent to America for planters, and every fingle man of thefe is obliged to marry an Indian woman. And to enable them to trade among themfelves, they bad a fupply of $25,000,000$, in bank bills, granted them, by an arrêt of the 16 th of July, 1719. See the article Canada.
V. The French king gave the clergy coniderable grants of V. The French king gave the clergy coniderable grants of
lands in Canada, and fent thither a great number of mifionaris and Jefuits to Quebec, who are difperfed among the Indians, fall in with their cuftoms, and thereby have greatly extended their trade and influence among them.
V1. They have taken effectual meafures, from time to time, to eftablifh formidable colonies from Florida and the Miffrifippi, to Canada, upon the back of all the Britifh colonies on the continent of America, and have erected many Atrong forts in the moft advantageous fituations, and deftroyed feveral nations of our Indian allies, and drawn others off from our intereft, and added them to their own *.-See our articles British America, Florida, Louisiana, North Carolina, Pensylvania, Plantations, \&c.

* Can any meafures prove more effefual to reduce the Indians to their obedience?
VII. The negro-trade, for the benefit of their illand colonies in particular, is regulated upon wifer principles than that of any other nation.- Their great Eaft-India company, with all its privileges, \&ic. is the fupport of their Africar trade. See the articles France, and French African Trade and Company; fee, in particular, an account of the bounties, exemptions, privileges, and.encouragements, given by the French to their African Company, \&ic. See allo the article French America, in regard to the trade of their ifland and continent colonies in America, where we have treated of this matter very fully, extracted from the regifters of the council of fate. See further, Le Code Noire, ou Recueil des reglemens rendus jufq'uà prefent [17.42] concernant le governement, l'adminiftration de la juftice, la police, la difcipline, \& le commerce des negres dans les colonies Françoiles. Et les conreils \& compagnies établis à ce fujet $\dagger$.
$\dagger$ By thefe means they have peopled their inand colonies cheaply with negro flaves, and can thereby afford the produce of their colonies cheaper than we can that of ours.
VIII. For the further regulations of the commerce of France, fee the article Chamber of Commerce, and my Remarks thereon. See alfo the article Turkey Trade and COMPANY, in the conclufion, for an exemplification of the methods of proceeding of the Deputies of ComMERCE or council of trade $\|$, in order that nothing effential may be omitted to be laid before the Royal Council, for the government of their refolutions in regard to points of trade. See alfo the article Consul, with our Remarks thereon.
\|. This council it is which overfees the manufactures of the -kingdom, and procures to them thofe encouragements, that; liberty, and thofe immunities which gave birth to them, and preferves them. It directs the mutual commerce be-: tween France and its colonies, to their befl common ad vantage. Well informed of the fite of the national trade, by a comparifon of the annual imports and exports, it obby a comparion of the annual imports and exports, ot ob-
ferves the branches of it which want protection. From this knowlege it is thai they govern opporitunèly their follicitaknowlege it it sthat they govern opportunely their follicita-
tions to forefgn powers for new advantages; that they detions to foreggn powers for new advantages; that they de-
fend thofe which dhey poffets, or profit of thofe which prefenc them relves., It is from the reprefentacions of this board fent themielves, it is from the reprefentations of this board
that thofe treaties of commerce are projected which comthat thofe treaties of commerce are projected, which com-
monly accompany treaties of peace. In fhort, this council monly accompany treaties of peace. In fhort, this council
is a center of union for trade, the marine, and the revenue, to furniff one another with reciprocal and neceflary occafional affiltance.
IX. After eftablifhing the faid council of commerce, ordonnances' were iflued for regulating the conduct of the gavernors, fur-intendants, \&c. in America, and a fovereign council was appointed in each colony, confifting of 12 counfellors, and the intendant as prefident. - This council is the fupreme judicature, in all caufes, without appeal, in the colonies. Here every one pleads his own caufe, viva voce, or by memorial, follicitors and barrifters being not to appear there : thus lawfuits are quickly determined $\S$.-Befides thefe, there is in each colony a lieutenant-general, both civil and military, an attorney-general, the great provoft, and a chief juftice in eyre. -T The chief officerstare fuch checks on each other, that few abufes, injurious to the crown or fubject, are committed without fpeedy redrefs. -The French bave a governor general $\ddagger$ of Louifiana, or Mifflifippi, refiding at New Orleans,
$\$$ Does not this prevent the planters and traders being diftracted with law-fuits, which unfit them to exert their rrading indaftry?
$\ddagger$ Oar colonies being differently conffituted among themfelves, and having no governor-general, \&c. to direct their affairs
upon one fleady plan of conduct, for the fafety and pro fperity of all, are liable to great difadvantages and daugers -We have many difficulties to encounter in relation to ours charter-governments, which require the redrefs of parlia-
ment.
and the lieutenant-governor at Mobille. See the article Louisiana.
X. The revenues arifing in the French colonies are accounted for in the chamber of accounts, and all officers give fecurity for the due performance of their duty; whereby there is a conftant fund for the ufe of the colonies, applied as advifed by the council of trade*.
* We have no fuch competent fund for the conifant fupport of our colonies.

Of the Due Execution of the Ordonnances, Edicts, and Arrets, in relation to Trade, iffued in France, concerning their Plantations.
I. The council of commerce is the channel of convevance, in regard to matters of trade, to the royal council.-The former examines and difcuffes, as we have fhewn before, all propofitions and memorials, and the fecretary keeps an exact regifter thereof: thefe are laid before the royal council.With fuch fteadinefs and independency does this council of commerce act, that they have frequently oppofed and overruled the determinations of the regal council. By this means the council of trade guards againft encroachments; as well on the rights of the crown as on the property of the fubjects, and the ordonnances or arrêts of the crown fcarce ever fail to be duly executed: for the council of fate is fo conftituted, that it may be truly faid to be (as a late judicious writer obferves) the eyes, the ears, and the hands of the king, as there is no act done but what may be redreffed, by applying to the king in this council of ftate: if the officers of the crown are aggrieved by acts of power in their fuperiors, they may, and often do, meet with redrefs on that head: which regulation hath a wonderful effect in the foreign concerns of the French nation, whereby all channels of information are left open to the view of the crown, the officers of the lower clafs not being debarred accefs to the crown, nor liable to oppreffion of their fuperiors without redrefs. Thus care is taken for the fecurity of the fubjects in America, fo as not to leave them a prey to governors, and other officers in the plantations. And in order the more effectually to inforce the execution of the royaledicts, arrêts, and ordonnances, the penalties for the violation thereof are vigilantly inflicted. See our articles before referred to $\dagger$.
$\dagger$ This point certairly deferves due attention in this kingdom.

## The French Management of the Indians in North

 America.I. We have feen how the French intermarry with the Jndians, and of what ufe their miffionaries and Jefuits are among thofé people.
H. The French who carry on the fur-trade in Canada do it by licence : but they employ great numbers of Indian traders, whom they call Coureurs de Bois, who are expert in that trade, and go in canoes, and trade with moft of the favage nations $\|$ round the government of Canada. The coureurs de bois are, at prefent, become very numerous, being computed, at leaft, at 1500 men, who are often employed as a kind of flying corps, and joined with the French Indians, either to attack the ENGLISH, or fuch Indians as are in friendflip, with them.

IV Is not this far more judicious than our methods of traffic with the Indians?
III. The French for many years being prevented, by the Five Nations in our intereft, from difcovering the great lakes, carrying on trade, and forming alliances with the Indians who lived to the fouthward and weft ward of them, they prevailed with our Cbarles II. to forward a peace between the French and thofe nations.-This gave them a power to extend their lines, and build 'Forts to the foutioward, by which means the Five Nations have been much galled, ever fince the building of Fort Frontenac, Niagara, and others.
IV. The French have cut off many of them, by treachery and open force, when the Englim have neglected to fupport them; fo that thofe warlike people are fo reduced, as to be unable to withftand the French, which has been owing to our engaging them in wars with the French, and then leaving the buirthen of the war on them §. See Louisiana.
§ This difregard and treachery on our fide towards the Indians, will hardly be thought to cement their friendfhip towards us.
V. The French alfo have built a Fort near the water-fall of Saut St Marie, and erected another of confiderable ftrength at Crown Point, on the lands of the Five Na-

## V I R

Tions, which is of more fervice to the French, and, confequently more hurfful to the Englifh, than any of the forts the French have built from Quebec to the river Ohio. By this fort they keep the Five Nations under conftant alarms, and diftrefs them and their allies in their huntings; and by Crown Point, Fort Frontenac, Niagara, \&c. hey keep open a communication with the weftern Indians. VI. They likewife prevent the Englifh from making a proper ufe of the Five Nations againft the eaftern Indians, who live in the province (as the French call it) of Gasspessie, which is part of Nova Scotia: by this means, the Indians to the eaftward of New England are left at liberty to make continual inroads upon the Englifh fertlements of No-Va-Scotia: though this might be prevented, if the Frive Nations could, with fafety, attack the eaftern nations in the province of Gasspessie, in the back parts of Nova Scotia.*

* Upon what plan, on our fide, the ill confequences of thefe meafures may be greatly prevented, if executed in time, fee our Remarks on the article Louisiana.
VII. Crown Point is near to the branches of Hudson's River, which runs by Albany to New York: therefore, from the fituation of this fort, the province of New York may be brought into imminent danger; and, indeed, may endanger the fafety of the whole Britifh continent of America; for if the French take us at an unguarded hour, and make themfelves mafters of New York, they may cut off the communication between our Northern and Southern Colonies, and, by the aid of their Indians, they might have it in their power to deftroy the Englifh fettlements.
VIII. Though the Englifh have above ten times the number of fettlers which the French have in their colonies on the continent of America, yet the Englifh frontiers making near 1500 miles in length, and the French having now moft of the Indians in their intereft, it is not eafy to guard againft the Indians in their fudden attacks; for before the Englifh can collect a force to oppofe them, the Indians may retire and fhelter themfelves behind the French Forts; and in fuch an extenfive foreff, thiough fwamps and thickets, it is fcarce poffible to purfue them with any profpect of advantage, or to fupply an army with neceflaries in fuch an enterprize $\dagger$.
$\dagger$ Should not all imaginable ways be taken to fecure the Indians ever after in our interefts?
IX. The defign of the French, in taking the great lakes, was to fecure the Indians and the fur-trade to themfelves. The building of Crown Point was to awe the Five NaTions, or bring them into the meafures of $\mathrm{F}_{\text {RANCE. }}$-The treaties with the Eastern Tribes of Indians, anderecting the province of Gasspessie out of Nova Scotia, was to enlarge their territories on the Sea-Coast, and extend their Fisheries.- Thefe encroachments, added to thofe made at the OHIO, mult render them very formidable. X. If the French furrender to us the For t s which they have lately taken at OH ro , and yet continue to extend their Sou th Line, they would shereby take in a great part of Virginia, and of North and South Carolina, and leave us wholly expofed to the excurfions of the Indians in all our frontier fettlements; therefore the ENGLish ought not only to demolifh the Forts which they have lately built on the branches ol the river Ohio, but to take Crown Point and Nifgara, and allo to erect Forts inftantly, for the protection of the Five Nations, and for enlarging our trade and commerce with the Indians§.
§ How our Indiantrade and affairs have fuffered by the hand lers at Albany, fee our Remarks on the article Louisiana.
XI. If the French come to a Drvision with the Englifh on the continent of America, their intention apparently is to include our Indian Allies within their limits, and to turn our own weapons againft us.
XII., Many of the Indians to the weft of the Apalachitan Mountains have acknowleged themfelves. fubject to the crown of Great-Britain, and, were we to determine their territories to be within the $\mathrm{F}_{\mathrm{RENCH}}$ limits, it would be throwing them into the arms of $F_{\text {rance, }}$ deflructive of all our frontier fettlements, and put an intire fop to the trade and commerce which hath bitherto been carried on with them; and, in fuch cafe, the French; doubtlefs, would erect divers Forts within their territories, and compel our pretent indian Friends to make war on us.
XIII. The Ulibalys, Chicanes, and Chattas, who were the moft confiderable nations upen and between the river Coza and the Misissippi, kindy-entertained the Englifh, who refided among then feveral years, and carried on a fafe and peaceable trade with them, 'till about the year 1715 , when, by the intrigues of the French, they were either Murthered, or obliged to make room for thofe New Invaders, who have fince unjuftly poffeffed and fortified the fame fations, in order to curb the natives, and to cut off
the communication with the Englifh traders; wherehy the French have ingroffed a profitable trade for above 500 miles of which the British Subjectis were a few years ago the fole mafters. See our article Florida.
XIV. But if fuch Limits were determined between the Enclish and the French, thofe who fettle on our frontiers would not be more fecure in refpect of their lives or polfeffions, as it has always been, and always will be, the policy of France to ftir up their, friendly Indians to annoy our frontier fettlements, and afterwards difavow every act done by them.
XV: What has greatly contributed to the fuccefs of the French affairs in America, and has given them fich weight and influence with the Indians, is the appropriation and due application of a fund for thofe purpofes.-How thefe evils may be, or might have been, we moft humbly conceive, happly prevented, fee our aiticle Lovisiana [Remarks thereon] and fuch other articles as we bave referred to oc cafionally on our American Affairs.

## Of the French Island-Colonies in America.

I. In a memorial of the French deputies of commerce, liaid before the royal council in the year 17or, the faid deputies reprefented, That the French had then 8,850 white men, and 45,600 blacks in their ifland-colonies *; but, by a calculation made in the year i751, the French had then, in the faid colonies, upwards of 51,500 white men, fit to bear arms, indtpendent of many thoufands of failors employed in the trade of the colonies, and 364,800 flaves of both fexes; and, fince the increafe of their colonies, they have incroached upon the English, in ferting of St. Lucia, Tobago, Dominicue, \&c. By what mears thefe things have come to pals, fee the articles beforementioned, particularly France, French African Trade and Company, and French America. See Leeward Islands.

* It is proper to remark here, That the deputies of commerce do not make any mention of the illands of St Vincent, St Lucia, or Tobago. See our article British America. The colonies fpecified by the faid deputies are, CAYENNE, Grenade, Martinico, Guadaloupe, Marigalante, St Cruce, Hispaniola, or St Domingo, Petit Guave, La Dominique, Les Xanties, St Martin, and $\mathrm{St}_{\mathrm{t}} \mathrm{Bartholemy} \mathrm{(a.)}^{\text {a }}$
(a) Vide Memoire fur la compagnie de Guinée, fur Te commerce des colonies Francois de l'Amérique, \& l'érat prefent des ifles que la. France y occupe, les moyens de s'y conferver, \& s'y étendre,
$\& \in$ leurs fentimens fur les ports $\&$ commerces exclufifs, en particular fur les partys du tabac $\&$ dafucre.
II. Bya calculation made from the year 1737 to 1744 , it appeared, That the amount of the produce of the French fettlements on the continent of America, and alfo of their fixhery on the coaft of Newfoundland, \&c. was 820,0001 . fterling per annum, and upwards-That the faid freight, in time of peace, amounted to 220,000 l. ferling, and upwards, which, inclufive of their fifhery, annually employed 9000 feamen.
III. And it appears, by the beforementioned French memorial of the deputies of commerce in Ijor, that the French did not employ above ioo fail of fhips in the WEST-INDIA Trade, and thefe fhips were not near the fize, dimenfions, or burthen of their flips at prelent employed therein; neither were their commodities of equal goodnefs or value of thofe which they now produce; but, by a calculation miade of the amount of the produce of their Weft-I ndia colonies, from the year 1737 to 1744, the French Iflands have, in fugar, rum, molafles, indigo, pimento, cotton, pepper, ginger, coffee, \&c. \&c. produced to the value or amount of $2,400,000$. fterling per ann. and upwards, indépendent of an extenfive and profitable trade carried on from St Domingo with the Spaniards in America. Moreover, that in the French West-India Commerce, 120,000 tons of fhipping, with I r,000 feamen, are annually employed; the freight of which (as computed) amounted to 480,0001 . flerling per annüm:-Thefe are the effects which thofe regulations, arrêts, edicts, and ordonnances iffued in France; with relation to their colonies, and exhibited throughout our work, have produced.

The Strady Measures taken by the Frfnch to. Protect and Extend their American Colonies.
I. It has always been the conduct of France, in relation to the Spanifh depredations committed in their American trade, to check them, by impowering their governors to grant privare ocheck them, by impower inips of force, to rreat their guardes comminitions, and employ hips of force, de cofta as pirates; and they avow or difavow the conduct of
their governors therein, as the circumftances of their affairs their governors therein, as the circumftances or their affairs
require. When the Spaniards havecomplained of the French governors making reprizals, or treating the Spanilh guardes coftes as pirates, the anfwer of the French hath geneially been, That it was the duty of their governors to protect the $\begin{array}{r}\text { king's }\end{array}$
king's fubjects, but if they found their conduct blameable with refpect to the fubjects of Spain, they would grant them fatisfaction therein. However, it has always fo happened, that the French have found fufficient caufe to throw the blame on the Spanifh governors, and the guardes de coltes commiffioned by them $\dagger$.
$\dagger$ Might not the like meafures have preferved our logwood. trade to us, from which, it feems, we are now ablolurely exc'uded by the Spaniards, notwithlanding our undoubted right to the fame? See our article Lo wood.
II. In the fettlement of St Domingo, the French did not appear openly to fupport the buccaneers who firlt fettled there, but only fupplied them with arms and ammunition, 'till they ftrengthened themelelves and got poffefion of a great part of St Dumingo.
III. The French have, for fome years fince, carried on a very lucrative, though illicit trade, from the Miffifippi to Mexico, and we have not heard of any complaints on that head from the Spaniards, or their guardes de coltes, committing any depredati ns on them on that account. They have alfo carried on an extenfive fmuggling trade from St Domingo to the Spanifh fettlements, which has fomehow been winked at by the Spaniards: and yet fome are willing to flatter themfelves, that there is not fo good an underitanding between the French and the Spaniards, as between the latter and the Englift *.

* Is it any indication of friendihip on the part of the Spaniards, owards the Englifh, when they have thus long fuf. fered the Fiench to carry on an illicit trade, and have lately extirpated the Englifi logwood curters from their rightful poffeflions, while they pretended to te negociating a treaty with us, to fettle that matter amicably i Moes not the Spa add's prefent attempt too upon the Dutch colonies of IsEQUese and Bersice, hew as bigh regard for thet republic, as their honourable treatment of us does to Great-Britain? Will the Dutch be blind, as long as the Englifh have been, to their true interelts, and faffer themfelves to be lalled into a lechargy i Sure the Proteftant maritime powers will at length be roufed, and never fuffer Popifh perfidy to be triumphant.

That the French have, by the groflett fallhoods and perfidy, endeavoured to make fhameful and unjuftifiable encroachments upon the Britifh colonies and plantations in America, has been fhewn in various parts of this work, as may be feen by the various articles befcre referred to.-We fhall, at prefent, only add a word more upon this occafion.
Nova Scotia being the only province in America, belonging to the crown of England, that can be made a fufficient barrier to cover any of our plantations from the invafions of the Frency, and check their motions on that fide of the continent, by fea and land : the French tiave practifed every art of deceit and treachery to encroach upon this colony. In my Remarks upon the article Map, I have taken occafion to fhew, that there is an cffice in the Freach marine for depofiting charts and plans, to be mate ufe of for the benefit of their navigation; nor is this nation lefs follicitous in regard to geagraphy than hydrograpty ; for it too frequently appears, that their geographers are directed to adapt their maps to the views, fchemes, and pretenfions of their ftatefmen, however unjuftifiable they may be : nay, we have all imaginable reafon to believe, that thofe Machiar ellians have fet even their hiftorians to work, to affert and maintain thofe things for truth, with refiect to their Possessions, that from them their map-makers may the more plaufibly defcribe upon paper, thofe fhameful encroachments upon the dominions of other ffates, to the end that their fatefmen may the more plaufibly fupport them by artiul negociations.- This we have hewn to be the cafe, in variety of inftancees throughout this work, which we bave often referied to ; and the truth of this charge maint the French has been lately unanfwerably corroborated, with great judgment and accuracy, in a tréatife intitled, The Conduct of the French with refpect to the British Dominions in Americá, particularly Nova Scotia. - In a letter to a member of parliament.-Pribted for T. Jefferys.

An Extract from Dr Mayeew's remarkable Political Sermon, preached lately before the Governor, Council, and Representatives of Massachusets Bay in New England, on the interefting circumfances of Noith America before the laft war.

- What horrid fcene is this, which reflefs, roving France, or fomething of an higher nature, prefents to me, anil fo chills my blood! Do I behold thefe territomies of freedom become the prey of arbitrary power! Do I fee the motly armies of French and painted favages taking our fortreffes, and erecting their own, even in our capital towns and cities! Do I behold them fpreading defolation through the tand! Do I fee the flaves of Lewis, with their Indian athies, difportefling the free-born fubjects of king George, of the inheritance received from their forefathers, and purchafed by them at the
expence of their eafe, their treafure, their blood! To ageravate the indignity beyond human toleration, do I fee this goodly patrimony ravifhed from them, by thofe who never knew what Fr aperty was, except by feizing that of others for an infatiable lord! Dol fee Chriftianity banifhed for Popery! the Bible for the mals-book! the oracles of truth for fabulous legends! Do I fee the facred edifices erecled here to the honour of the true God and his Son, on the ruins of pagan fuperflicion and idolatry, erected here, where Satan's lear was! Do I fee thefe facred edifices laid in ruins themfclves, and others rifing in their places, confecrated to the faints and angels! Inftead of a train of Chrift's faithfuI, laborious minifters, do I behold an herd of lazy monks and Jefuits, and exorcifts, and inquifitors, cowled and uncowled impottors! Do $I$ fee a Proteftant there ftealing a look at his Bible, and, being taken in the fact, punifherl like a felon! What indignity is yonder offered to the matrons! and here to the virgins! Is it now a crime to reverence the hoary head! and is he alone happy that taketh the little ones, and datheth them againft the thones! Do I fee all liberty, property, religion, happinefs, changed, or rather tranfubftantiated into flavery, poverty, fuperfition, wretchednefs ! And, in fine, do I hear the iniferable fofferers (thofe of them that furvive) bitterly acculing the negligence of the public guardians! and charging all their calamities lefs upon the enemies, than upon the fathers of their country! O difhoneft, prophane, execrable fight! O piercing found! that entereth into the ears of the Lord of Sabbath! Where, in what region, in what world am I? Is this imagination (its own buly tomentor), or is it foimething more divine? I will not, I cannot, believe 'ris prophetic vifion, or that God has fo far abandoned us.
And how different a fcene is now opening upon me, with clearer indications of truth and reality! There infolence and injufice punified! Here, "the meek inheriting the earth!" Liberty viatorious! Slavery biting her own chain! Pride brought down! Virtue exalted ! Chriftianity triumphing over impofture! and another Great-Britain arifing in America! But I muft not declare the whole- The Lord God omnipotent reigneth! Juft and true are all thy ways, $O$ thou king of raints! And them that in pride thou art able to abafe, 'What ' has pride profited, or what good has vaunting brought you,' ye rettlefs difturbers of our peace? What good your maffes? your relics? your croffings? your Ave Marias? and to which of your faints will you now turn?
But we are not, my honoured fathers, to prefume on God's protection, much lefs on his giving us any fignal advantages over them that are ever either planning or executing mifchief againft us, without ufing the proper means for obtaining that protection, and thefe advantages: as the apofle faid to the matiners, after affuring them of deliverance from the impending danger, ' Except thefe abide in the flip, ye cannot be faved;' fo it may be faid to our Britifh colonies, Ye cannot be faved from the florm ye are now threatened with, yea, which is already begun, except ye are at union among yourfelves, and exert your fremgth together, for your common intereft. Upon this condition you are fafe, even without a miracle: otherwife, nothing fhort of one can fave you. And can you, without the utmoft indignation, think of becoming a prey to thofe who are fo much inferior to you in all refpects, merely for want of unanimity, public fpirit, the manly refolution of your fortfathers, and a little expence?" For a difplay of the matchlefs perfidy of FRANCE, fee our articles America, British America, Canada, Flomida, France, louisiana, North Carolina, Plantations, Indians in North-America.

Remarks on this article Virginia, fince the laft war, and the treaty of $1_{7} 63$.

Under our article America, we have given the treaty of peace, concluded in the year 1763, at large. By the prefent as ell as the various articles we have above referred to from this, and alfo from divers others referred to from them, it appear's that the fulnefsiofitime was come, before the laft war, that Great-Britain muft either extirpate the French out of NarthA MER ICA, or that the French would extirpate the fubjects of Britain from thence. By the laft treaty of peace, we leem now to have fecured, from the power of the French, the whole range of our Britifh colonies from north to fouth of this extenfive continent, by the ceffion of CANADA and all its Derendencies, and more particularly the ceffion of Cape Breton, tothe crown of Great-Britain. Sec Canada, Mississippi, Newfoundland.--By the faid treaty we have alfo obtained the ceffion, from Spain, of Eatt and Weft Florida ; fo that, at prefent, our North American colonies are fecured to this kiagdom by divers maxitime barriers; we mean, on the moft northerly parts, by the Gulpg andRiver St Lawrence, and by Ca.pe Breton; by the extended ocean, on the eaft, from Cape Breton to Florida; by the Gulph of Mexico on the fouth, by our polfefions theiein, as the Bay of Apalache, Pensacola, and Mórille; and on the weft, by the Britifh right of navigation to and from the River Mississi pri : ? fothat now we thanl be able to exert the full force of our maritime frength to
maintain

## U N I

## U N I

maintain and preferve to the Britifh crown thofe eftimable colonies. The fmall poffeffion of New Orleans, which the French enjoy on the eaft of the Mississippi, does not feem to put it in their power, any more than their other poffeffions on the weft of the river, to endanger thofe colonies from that power; elpecially if we attach the INDIans on the eaft thereof to our intereft ; which now it appears that we can hardly fail of doing effectually, and foon. For by a letter from Oswego, dated Auguft the $7 \mathrm{th}, 1764$, to colonel Burton, at Montreal, we have an account, that " Matters are entirely fettled with all the Indian nations who attended the meeting at Niagara; the greateft ever known, being about 2000 lndians. Some reports fpreading prevented the Chenussios coming for a long time: $:$ at length they came and delivered up the prifoners, \&c. \&c. and gave to his Majefty and his fucceffors, for ever, the land on both fides the ffreights to Lake Erie (or Carrying Place) four miles on each fide, and liberty of a port on the north fide of Lake Erie, \&c. So that his Majefty will be poffeffed of all territory from Lake to Lake; a ceffion of near 300,000 acres. They have alfo given two Sencea hoftages, for the Shawneese and Delaware king, whom the Chenussios engage to deliver up at this part, with all prifoners amongft them. There were 22 different nations at the congrefs, eleven of which were weftern Indians; all behaved well, and were difcharged in the beft humour. The Michillemakinac Indians have engaged to protect the garifon which may be fent there. The Cognawagoe warriors are gone with the army, and behave well. Peace is fettled by a folemn treaty, in writing, with the Hurons of Detroit: the treaty of peace and alliance with the Chenussios is alforatified and confirmed in writing; fo that every thing is done that could be wifhed for, or expected." And
Before this goes to the prefs, we have the following accounts from Philadelphia, dated September 6, 1764.
«Ten deputies from the Delawares, Shawanefe, Hurons of Sandulky, and other Indians of the countries between Lake Erie and the Ohio, met Col. Bradfreet at Prefque Ine, on his way to their country, with the forces under his command, and in the moft fubmiffive mauner begged for peace, which he granted them on terms to the purport following:
*I. That all the prifoners in their hands fhould be delivered to him at Sandulky in twenty-five days.
${ }_{6}{ }^{2}$ 2. That they ihould renounce all claim to the pofts and forts we now have in their country; and that we fhall be at liberty to erect as many more as we think neceffary to fecure our trade; and that they fhall cede to us for ever, as much land round each fort as a cannon-fhot can ly over, on which our people may raife provifions.
" 3 . That if any Indian hereafter kill any Englifhman, he Thall be delivered up by his nation, and tried by the Englifh laws, only to have half the jury Indians. And if any one of the nations renew the war, the reft fhall join us to bring them to reafon.
"، 4. That fix of the deputies fhould remain with him as hoftages, and the other four with an Englifh officer; and one of our Indians thould proceed immediately to acquaint thofe nations with thefe terms of peace, and forward the collecting of the prifoners, to be ready at the day appointed.
"It is faid that the colonel bas told them, that if this peace is not coufismed by their chiefs', no other will be granted them; and that, if they continue the war, they fhall find xheir country filled with warriors immediately, who will cut them off from the face of the earth.
" It feems the motion of the two armies at once towards their country, viz. that under Colonel Bradfreet, from Niagara, and that from this province, under colonel Bouquet, has greatly intimidated thofe people, who at firft haughtuly ftood out, and refufed to meet Sir William Johnion at the congrefs of Niagara. See the article Indian Nations.
UNITED PROVINCES of the STATESGENEral. Under the articles Flandeetis, Holiland, Netherlands, Dutch America, Dutch Wegt-India Company, Dutch-Company of the North, dia Company, Dutch-Company of the North, Dutch Levant Company, Dutch East-India
Company, we have confidered the ibature of the commerce of this republic; to which we have fubjoinedifuch REMARKs as we have judged requififte to fuppoit the power anid dignity of the States-General of the United Provinces, whofe intereft we look upon to be infeparable from that bf Great-Britain.? We have more particulariy the wn the illiconfequences which foon attend this republic, for want of the barfier being duly fettled for her prefervation, as well as our own.
From this principle it is, that, in all our wars in Flanders, we have fought for the Dutch as for ourfelves, and that it has been the repeated fenfe of the parliament, That a ftrong barsier for the Dutch in Flanders, againft France, is neceffary for the fafety of England, as well as Holland. This we have endeavoured to demonfrate from reaion and authority, under the articles above referred to. [See Flanders and NetMERLANDS.] LaNDS.]
VOL. II.

If we make a calculation of the forces of France in time of war, we thall find that they have not amounted to lefs than 100,000 horfe, and 300,000 foot; nor is there any other potentate in Europe, if in the whole world, able to bring fuch an army, and fo well appointed, into the field On the other hand, we know very well what an averfion both the parliament and people of Great-Britain have to a ftanding army, as a thing deftructive of their liberty and freedom; nor need we be told how unable an undifciplined rabble is to withftand a body of regular troops: fo that our fecurity chiefly lies in being mafters at fea. This is what we, in conjunction with the United Provinces, may ftill be, if the Dutch will increafe sheir marine, and exert their naval power, as they have heretofore glorioully done. But fhould the French king be once poffeffed of Flanders, he may eafily furprize and conquer Holland: nor is it poffible for that fmall republic to withftand him. Being once poffeffed of the Dutch towns and harbours, he is, by confequence, not only mafter of all the fhips znd naval ftores that are laid up in them, but may augment them to as great degree as the Dutch have formerly done. And having once united the ports and fleets of Holland with his own, it is a vain thing for us to pretend any longer to the dominion of the fea: for if this fhould ever come to pafs (which God forbid!) and the fleets of Spain fhuuld join thofe of France, as is too likely to be the cafe, we muft fubmit to the yoke of France: for they may then pour in above roo, 000 veteran troops upon us, from all quarters ; nor will it be poffible for us, without a miracle, to withftand them. So that in truth we are as much concerned to hinder the French from over-running the United Provinces, as he that dwells at one end of a ftreet is to quench thofe flames that are raging at the other: for, as Sir W. Temple very well obferves, 'If France ' were once mafter of Flanders, the body of that empire would - be fo great and fo entire, fo abounding in people and riches, - that, whenever they found or made an occafion of invad-- ing the United Provinces, they have no hopes of preferving ' themfelves by any oppofition or diverfion + .'-And if they be ruined one year, we are undone the next.
$\dagger$ Temple's Oblervations on the United Provinces.
The neceffity of a BARRIER, or a chain of ffrong towns in the Low Countries, to hinder the French from furprizing Holland, has been the fenfe of our parliament from the time of king Charles II. and is at prefent the fenfe of the wifeft men in the nation, and of the trueft friends to our confitution. In the year 1713, the parliament, in their humble reprefentation prefented to her Majefty, and printed by the Speaker's order, they affirm, in direet terms, "That - the evccession and Barrier are two points of the 'Greatest Jmportance to both nations,' i. e. to Beitain as well as Holland.
The prefent infecurity of the United Provinces, for want of a good barrier being fettled, we may reafonably enough piefume, has been nione of the leaf incentives', with France to act fo barefacedly as they do at prefent againft Great-Britain, imagining that it will not be in her power, without the aid of the Dutch, to right herfelf, efpecially if they fhould bring Spain into their meafures (of which I make no doubt but they were certain before they ftruck any ftroke in America); and, however omnipotent fome people are fanguine enough to think this kingdom alone, yet we have had the experience of three long wars to convince $\mu s$, that the ffrongeft confederacies which can be formed, are fearce a match for France; and, therefore, they that are for trufting to the Single Strengithof Engiand, in oppofition to a force fo much fuperior, muft certainly very much miffake the true intereft of their country. Our conftitution will not confift with a ftanding army : the French king, on the contiary, can never be whthout one: therefore it is our bufinefs to fecure the affiflance of fuch as have always a flanding force, ready to oppofe to his; ;and by their fiects at fea, as well as their armies on the continent, may, in conjunction with us, either deter him from invading England, or, if he does, foon find him fo much work at home, as may oblige him rather to think of defending his own dominions than invading his Neighbours.
Certain it is, that there is no alliance fo ufeful to us as that of the States-General, in order to fecure the Proteftant fucceffion: whether we confider their fituation, their ftrength, (which I am, grieved to think is far inferior to what it was in queen Anne's war) their religion, or indeed, their intereft; for the fafety of each country depends upon that of the other for as, on the one hand, fhould Hollan dfall under the dominion of France, Britain would be entirely cut off from any minion of France, Britan wontinent (which, joined to the great acceffion of naval ftrength which France would acquire by acceflion of naval frength whish conqueft, muft bring immediate ruin upon Britisin); fo, on the orber hasd, Holland muft inevitably lofe both its religion and liberties, the moment that France, or any Popifh prince under the inflence and direction of France, gets pof feffion of Britain. From whence to nect flarily follows, that the mutual defence and prefervation of each other ought to
be one of the chief maxims of government to both NaTIONS.
This is fo plain, that the only handle which the emiflaries of France have made ufe of to divide Us and the DUTCH, has been the point of Trade, in which they bave always endeavoured to reprefent them as dangerous rivals. Although we have occafionally fpoken to this point, under the articles of Fisheries in particular, yet it may be ufeful, at this juncture of affairs, to urge this matter farther.
juncture of affairs, to urge this matter farther. depend entirely upon Trade, and that therefore neither we nor they can be too careful and tender in that matter; but the world is wide enough for us both, and if the pains and expence that have been employed in the quarrels we have had with one another, upon the pretence of trade, had been applied to the keeping a watchful hand over our enemies, and preventing the encroachments they have made upon us both in this valuable article, and alfo the ftrides they have made, and are daily making, to univerfal dominion [fee our article FRANCE], it is evident the commerce of both nations would have been much more extenfive and flourifhing than it is at this time ; nor fhould we now have reafon to dread the ill confequences that may attend the United Provinces, upon the breaking out of a frefh war in Flanders.
We are far from allowing, that the trade of the two ftates engages them in fuch a rivalfhip and competition with one a nother as has been generally pretended by thofe who are enemies to both: for all that have any infight into the affairs of Holland muft acknowlege, that their trade is chiefly founded upon their carrying goods cheaper than any nation of the world: the hard and penurious way of living they are inured to, enables them to perform the longeft voyages with much lefs confumption and expence than other nations: by this means they are become the common carriers of the product of other countries, having none of their own, except what arifes from their fettlements in the Indies. Our trade, on the contrary, confifts almoft inticely in vending and difperfing the product and manufactures of our own country and the plantations, while our freight is dearer than that of any other nation. See the article Freight, Remarks thereon.
The main branch, therefore, of the Dutch commerce, no way affects or interferes with ours; neither, if they were to lay it down to-morrow, would any fhare of it devolve to Great-Britain, but to the French, the Danes, the Swedes, the Hamburghers, and the other Hanfe-Towns [fee the article Fisheries particularly] who all both can, and actually do, fail much cheaper than we. And were the Dutch at this time to lofe the plantations in the Indies, would not thefe fall into the hands of France? France, therefore, is our moft formidable rival, and the proper object of jealoufy to both nations, who, by fomenting animofities and quarrels between us, has had the addrefs to weaken us at our own expence, and to make herfelf powerful under favour of our folly and connivance. The divifions between England and Holland firf gave France the courage and opportunity to increafe her naval Atrength, to extend her dominions in both the Indies, to drive the Englifh out of the trade of HUDSON's-BAY, and of great part of NEWFOUNDLAND; to lay fuch high duties on our refpective commodities as amount to a prohibition, and thereby to encourage, and even force her own fubjects to eftablith our manufactures in France, and by that means to run away with a great part of ours, as well as the Dutch trade to Spain, the Levant, and other countries. Thefe are part of the fruits of our former quarrels with the DuTch, which, one would hope, might have that effect, as to make us wifer for the future, by teaching us that the only way to retrieve our paft follies, is by uniting, in order to recover thofe valuable branches of our refpective trades which France has taken from us; to preferve a ballance of power in Europe, which now feems in great danger, that peace and trade may fourifh; to provide jointly and zealoully for the fecurity of the feas, and fafety of our commerce; and to deftroy that growing naval force that otherwife may foon prove our deftruction.
That fuch an happy and indiffoluble union may inftantly take place, I hope it will not be judged unfeafonable to endeavour to remove thofe prejudices againft the Dutch, which too many, by the wiles and artifices of the partizans of France, have caufelefsly imbibed.
A popular objection againft the Dutch, in relation to thofe wars wherein we have been allies and confederates, is this, viz. That though we have come generoufly into the wars, to help them in their diftrefs, yet they have thrown all the burthen upon our fhoulders, which they themfelves would farce touch with one of their fingers; that they have rooked us of our money, but done little or nothing to promote the common caufe. This is that prejudice which has made the deepeft impreffion on the minds of the common peopie. Profit and lofs are things by which they are moft fenfibly affected: do but confidently affirm, that they have been cheated of their money, by fuch or fuch great men, their rage is prefently kindled, without waiting for a proof, or expecting evidence.

Thus, in the reign of king William, the impatience of the people under taxes, together with a groundlefs clamour againft the prince, as it he had tranfported the treafures of the nation into Holland, conftrained him, contrary to his own fenfe of things, to precipitate a pace with France; whereas the carrying on the war till the king of Spain's death, and expending eight orten millions T'HeN, would have faved the nation Fifty Milifons fince.-This was the cafe, allo, at the conclufion of queen Anne's war, as well as of the laft great war.
But I would afk, Was not England as much concerned to enter into thefe wars as the Dutch? Are we not highly indebted to the Dutch, for their affiftance to bring about the Revolution? Nay, could it have been poffibly brought about without them? Or what figure could this kingdom have made in queen Anne's war, without the did of this our old and natural ally? The moft groundlefs, falfe, and inveterate clamours were raifed againtt them by the French partizans, in this reign, as if they had not brought into the field thcir qu:ota's of men, arms, and ammunition, according to the ftipulations agreed upon: whereas it was demonftrated, to the confufion of their enemies, that they had greatly exceeded what was required of them; and yet were fo infamoufly treated by the Utrecht treaty-makers, that it is to be admired they were fo ready to affilt us in the laft war, which was chiefly ouk war, and not theirs; for the depredations the Spaniards committed on us, gave birth to the war; and yet they were flamefully afperfed and belied, in regard to their conduet upon that occafion, which I could fhew at large, if the limits to which I am confined did not fo reftrain me as not to admit of it at prefent.
However, that people may not be mifled by the artful and wicked infinuations of the enemies of the Dutch (whon I fhall ever look upon as the enemies of Great-Britain), it may not be altogether unferviceable to obferve, in the general, That, if we confult any book of geography, or any map of Europe, we fhall find that the dominions of his Britannic Majefly are twenty times as large as thofe of the StatesGeneral; their Sevien Provinces are commonly reckoned no bigger than our four weftern counties: it is true, thefe provinces are fuller of towns and villages than moft counties in England, but then the city of London is three times as populous as that of Amsterdam, the greateft city belonging to the States. This is evident by the bills of mortality, which, in the former amounts, in the moft bealthy years, to about 20,000 , whereas, in the latter, they feldon amount to more than between 6 and 7000: without doubt, the Dutch muft unite many of their biggef cities, before they can equal his Majefty's metropolis in number of inhabitants, and many more to equal it in wealih. What reafon, therefore, can we have to think hardly of the Dutch, as if, in any degree, they withdrew their fhoulders from the burthen, when the truth of it is, they actually have maintained more foldiers againft the common enemy than we, though the wars have been as neceflary for our fafety as for theirs, and though their territories bear no manner of proportion to thofe of his Britifh Majefty?
This will appesr yet more evident, if we confider that-their taxes are incomparably beavier than ours. This was the cafe in Sir William Temple's time, king Charles the Second's ambaflador at the Hague, a moft accomplifhed featerman; and fince his time their taxes have greatly increafed, alithough their trade and their treafure have not in the like proportion. Sir Willam tells us, in general, 'That they are oppreffed - with the moft cruel hardhips and variety of taxes, that was - ever known under any government: that the excife [upon - all commodities] is fo great and general, that he hath beard - it obferved at Amfterdam, That, when in a tavern a cer-- tain difh of finh is eaten, with the ufual fauce, above joex6 cifes are paid for what is neceflary to that fmall fervice §ु." In queen Anne's time, befides what we call the land-tax, which is heavier with them than with us in the general, they pay, fays my author, excife for every thing they eat, driak, ufe, or enjoy.
§ Obfervations on the United Provinces.
The impoft upon all corn ground in the mills of Holland, which every body pays without exception, amounts to 51 . 5s. per quarter of wheat, to half as much for sye, to 35 s . for barley and oats: in a word, it is generally computed there, that the duty on all bread-corn is equal to the prime coft.
The excife on beer is as follows : firft, the brewer pays 12 d . a barrel, private families pay 20 d . more, ast victuallers, or tetailers, pay another 20 d . French wines pay 6 d . a ftoup, other wines twice as much. Butter pays 6 s. a barrcl, tobacco 10d. a pound, fifh 20 d . a pannier, and foap ins. a barrel. Every horfe above three years old pays 2 d . a month; barrel. Every horfe above thre years old pays 2 d . a moner
every horned beaft above that age 3 d a month. Every coach pays 10 s. a year, and every litele bark 20d: All cattle, fheep, or hogs, that are killed, pay one penny in feven of the money they are fold for. All wood made ufe for fuel, pays one penny in eight of what it conts. Every mafter pays 20 d . a head yearly for each fervant that he has in his family,

## UN I

male or female. All hips, lands, and houres, that are fold by one man to another, pay to the government a fortiech penny of what they are Cold for : hapgings and houfholdftuff pay one penny in nine, and woollen cloths a fourth part of meir value. In one word, the Dutch pay excife for falt, candles, lead, lime, coals, ftones, there is not a turf or log of wood in their chimies, not an herb or onion in their gardens, but what pays a duty, more or lefs, to the States. Our author affures us, that a cow of nine years old, if it be fold for 51 . will pay above 61. to the States; and that there is never a difh cames to table but has paid excife above twenty titnes,
Thefe are the impofitions that our neighbours are fubject to in times of peace, which, in war, are raffed to a degree hardly to be believed: at fuct times, land and houfes have paid ro or ins. in the, pound of their intrinlic value.
To fuch a degree are thefe our fruendly provinces taxed, that they are under the neceffity to lay impofitions even upon the dead: but thefe, indeed, may be termed voluntary behevolence; for from noon 'rill two oclock you may bary your dead, without paying any other cofts than only the charges of the burial : but they who bury half an hour after two are obliged to pay a forfeiture of ioo fous, which doubles every half-hour: for example; at threto'clock the forfeiture is 10 livers; at four, 20 ; at five, 40 ; at fix, 80 ; at feven, 160 ; at eight, 320 ; and at nine, 640 ; which is the highelt, for after thai hour no body is permitted to bury.
The reader may be apt to a 1 k , perchance, how it is poffible tor people to bear up under fuch beavy preflures, fuch loads, that even the Enghifh would certainly fink under? To this it is anfwered, That their extracrdinary induftry and parfimony enables them to fupport fuch prodigious taxes. A burgher of Amflerdam will dine contentedly on a red herring, when a citizen of London, of the fame condition, will foorn to fit down to table without a furluin of beef or :couple of capons béfore him. Sir William Temple again tells us, that it is a common rule among them, for every man to fpend - lefs than what he has coming in, be that what it will; and ' that, if a man's expence equals his revenues, it difcredits a - man among them, as much as any vicious or prodigal extravagance does in other countries: fo that frugality is be-- come honourable amonglt them.

Another thing that reconciles them to thefe exceffive impofitions, is that confidence which they have, that their money is laid out for the good of the community. The falary of a burgomafter of Amiferdam is but' 500 gilders a year, whioh amounts not to 50 l. ferling: nor was it ever known that they who have the difpofal of offices in that republic, took any, money on that occafion. The prime minifters of ftate are obliged to no fort of expence more than ordinary modeft citizens, in their habits, their attendants, their tables, or any part of their domeftic affairs. Sir William never faw the two greateft officers belonging to their ftate, the vice-admiral $\mathrm{DE}_{\mathrm{s}}$ RUYTER, and the penfioner DE W ${ }_{I T}$, with above one fervant a piece in their train, but molf ufually on foot, and alone in the freets, like common burghers: and this was the general faftion among all the magitrates. This has made the people part chearfully with their money, when it is not made ufe of to fill the coffers, or maintain the pompous equipages, of the fervants of the public.
Upon the whole, when we reflect upon the fmail extent of this republic, their mainaining more men confiderably than we have done, at an average, during the three great wars, in compariton to the extent of their territories, sic. with thole heavy taxes which they fubmit to, we cannot doubt but they are the braveft people in the world; and it is certain that they bave made the moft prodigious efforts for the common liberties of Europe, that ever any flate of the like dimenfions did: and do they not deferve our utmoft aid and afiffance, when meedful, as well as our pralfes and encomiums?
Another art practifed by the French intereft in this kingdom, to divide England and Holland, is the malevolent infinuation, That, in times of war in Flanders, the Dutcu in particular have drained us of our money. We cannot difallow but, on thefe occafions, a great deal of gold and filver have been exported to pay our armies in Flanders, though nothing comiparable to the clamour that has been raifed about it; but this could by no means be avoided in carrying on the wars, which bave been always abrolutely neceffary in the defence of both ftates, finee a tolerable under ©tanding has happily fubfifted between them. But in regard to this matter the cafe is plainly thus; we muft, on thefe unhappy occafions, fpare fome of our money, or lofe all aur lands. However, it hould be oblierved, by thofe who would know the truth of things, that the armies have, for the moft part, been paid by bills drawn on merchants in Amfterdam, and other places: and the Dutch purchafing of us many bundred thoufand pounds worth of Bri thilh manulactures § every year, brings back the money again
\$ Holland takes from Engegland; broad cloths, druggets. long ells, fuffs of a great many forts, leather; corn, coals, and fomething of almolt every thing that this kingdom produces; befides all forts of India and Turkey re-experted goods, fugars, tobacco, rice, ginger, pitch, and tar;, and fundry
other commodities of the produce of out plantations. Ëng land imports from Holland, tine Holland linens, threado tapes, and incles; whale'fins, brafs battery, madder, argol, toys, clapboard; "wainfot, \&e.
that has been exported on thofe occafions: that is to fay, The ballance of our trade by means of Holland, has far more than compenfated for the occafional expences upon the con tinent, which our mutual fafery feems to bave rendered ne cellary. And, perhaps, upondur that after thofe wars, and the expences among all the con tending parties have run high in Flanders, the trade of Eng land with Holland, Flanders, Germany, \&cc. has been tem porarily augmented, in proportion to the money fpent by England on thofe military atchievements.
It would, without doubt, be better for both fates, provided they could contend with the enemy wholly in a maritime way upon the fuppolition that they could fupply themfelves with all-thips and naval ftores for the purpofe, becaufe fuch ex pences would circulate and center within thenfelves. But while France is able to fupport fuch formidable armies, and their territories fo adjacent to the United Provinces, it is to be feared that the exertion of the maritime ftrength of Eng land and Holland alone will not all times abfolutely prevent a war upon the continent; for it fhould feem; that while the affairs of France are fo circumftanced to enable them to uphold fo great a military force, England and Holland, in conjunction with the houfe of Auftria, and fuch other allies as can be brought into their meafures, muft somehow have a land force capable of looking France in the face, and fopping the progrefs of her arms.
That it is not in the power of the Dutch alone to do this, has been apparent beyond all doubt *: Nothing can effectually do this but another Grand Alliance; and England muft, for her own fecurity, contribute to a part of the military expence and this may be more eligible, perbaps, than to fend our foldiery abroad on thefe occafions, as has hitherto been our practice. There is, indeed, fome doubt to be made in relation to the repofe of confidence in allies and confederates, when they do not fight, as well as act, in concert $:$ however, experience has fhewn what troops and what general officers are to be trufted, when the caufe of Great-Britain is at ftake, al though fome people are too backward in our giving affitance to the Hanoverians, notwithflanding they are our natural ally and have behaved gallantly in the common caufe of England and Holland, notwithftanding they fhould be drawn into quarrels upon our account. And if the exigency of public affair fhould require Great-Britain to take into her pay any troops to ferve in Flanders againft France, conjundtively with other confederates, willit not prove advifeable to put confidence in our tried, trufty', and natural friends and allies, the Ha noverians, who are fubjects of the fame fovereign? It has been faid too, That if a war fhould break out, his Britannie Majefty, as Elector of Hanover, will augment his troops ; if e, ought not this to prove a further inducement to us to take an additional body of thefe troops into Britilh pay ?

* If we confider France and Holland, as to the extent of their dominions, the Dutch can make no head. If we will confider the length and breadth of each province in the United Netherlands, and then multiply one by the octher, we may know how many fquare miles there are in the whole, and fee what proportion this bears to the kingdom of France.

Square Miles
Holland is computed 80 miles long, 40 broad, making 3200 Zealand, 30 long, 17 broad
Utrecht, 30 long, 25 broad 750 Guelderland and Zutphen, 50 long, 48 broad .. 2400 Overyfiel, 60 long, .40 broad 2400
Groninger, 46 long, 24 broad
1104
Weft Friefland, 40 long, 25 broad - 100
Dutch Brabant, 55 long, 35 broad 1705
Dutch Flanders, 3 : long, is broad
403
So that the whole comprehends, of fquare miles - 13472
There are all the dominions the States.General have in Eu rofe; except two or three fearteting towns, which have no territories belonging to them worth regarding. Let us nex fee the dimenfions of the kingdom of France. France is computed to be, in length and breadth, 200 leagnes, or 600 miles. This number, maltiplied by itfelf, prodace 360,000 fquare miles. Now if you divide 360,000 b $13,47 \mathrm{x}$, the quorient is 27 : 10 that the king iom of trance $h$. 27 umes bigger That France is not in all places 6 co miles brond the fame may be faid of each of the United Provinres thius we have reckoned Holland 40 miles broad, when in many places it is not above 25 ; and you can confulc in many placeshich the difproportion between the two flates noill nor, feff, were France like the parched defarts of Arabia, or the frozen lakes of $L$ apland a wild uncultivated wilderners, our argument would conclude very litele; bur France is a ouptious country, full of preat towns and villages, and a rich and fruitful. foil, containing above 36,44 : parithes,
bove three times as many as there are in England and ScotFind; nor has the greateft city in Holland half fo many inhabitants as that of Paris: fo that you may as well fuppofe habitants as that of Parls: fould fwallow a camel, as that the Dutch republic fhould devour the French monarchy, or alone make public thould deyour the fation.
any head againft that nation.
We will nextconfider the revenues of thefe two ftates, which We will nextconfider the revenues of thefe two ftates, which are not improperly ftiled, the nerves and finews of war. Sir William Tempie informs us, that, in his time, the revenue of the Seven Provinces amounted commonly to 21 millions of gilders, which is fomething lefs than two milions flerling. It is true, in time of war, they have raifed five millions; but this is little, compared to what the grand monarch collects within his fpacious territories; his revenues, in 1695, amounted to more than 15 millions and a half of our money; and they have increafed very confiderably fince that time. Of the number of their forces we have taken notice before.

It has been urged by fome, That the whole empire is concerned to keep the United Netherlands out of the hands of FRANCE; and why fhould we be at any expence for them? This is certainly the intereft of his Impetial Majefty, nor is any queftion to be made, but he will do all that he is able, to prevent fo great a mifchief to his family: but then the emperor may be involved againft the Turks, \&cc. and fo not able to belp them, at leaft not to any tffectual purpole. The German princes may be quarrelling one with another; or fome of them may be bribed to take part with FRANCE againft their own country, which has too often been the cafe of thefe perfidious princes. This was actually the cafe of the Durcer, in 1672 , when their two neighbours, the bifhops of Cologne and Munster, joined with the French in invading their dominions, and that with fuch fuccefs, that their deliverance from utter ruin was next to a miracle. Thefe things confidered, I hope it will be allowed by all true friends to the Protestant Interest, that we did not, in our late wars, fight barely for the Dutch, but for our OWN fecurity, as well as theirs.
Notwithftanding the unhappy differences which heretofore, by the machinations of the common enemy, fubfifted between England and Hólland, and by means whereof France firft raifed their naval power; yet I cannot but look upon thefe mifunderftandings as fatal to both ftates, as even civil wars would be in the hearts of their nations; becaufe I cannot but look upon them in the light of one and the same People, and that every meafure ought to be purfued by both, to render their reciproca! interefts compatible in every refpect; fo that they may be jontly and harmonioully enabled to extend their commercial interefts, and their maritime ftrength, in perfect concert and unanimity, in order to curb the growing formidable power of thofe who will ever be perfidious enough to attempt the deftruction of both.
Another prepoffeffion which the common enemy fudioufly endeavours to raife among us againtt this ftate, is their form of government, which is republican, and therefore cannot fo well'accord with ours, that is monarchical. Have we any reafon to be angry with them on this account? Friends to this conititution mult determine in the negative, when it is confidered that their cafting themfelves into fuch a model was the effect not of choice, but abfolute neceffity.
It is not confiftent with our brevity to enter into a detail of the rife, progrefs, and conclufion of the Low-Country wars; let it luffice to obferve for' the prefent occafion, that the United Provinces were once fubject to the king of Spain:That the invafion of their civil liberties, and the inhuman cruelties which thofe of the reformed religion fuffered, provoked the diftrefied inhabitants to take up arms in their own defence, and to withitand thofe inftruments of cruclty that were made ufe of to opprefs them. - After many tumults and confufions, there was a convention of the eftates at Antwerp, in the year 1581 , in which it was determined, That Philip king of Spain, by invading their privileges, and overthrowing their conftitution, had forfeited bis right to govern thofe provinces, \&c. and' the throne was become vacant.-But, inftead of moulding themfelves into a commonwealth, they, at the fame time, elected the Duke of Alençon, younger brother to the king of France, to be their fovereign §. This primce accepted their invitation; but being influenced more by humour and caprice than by the maxims of policy and wifdom, he quickly loft the affections of his new fubjects.When he perceived this, he retired into France, and quickly after died there. The provinces being once more without a fuprome governor, they offer next to transfer their allegiance to our renowned Queen Elizabetht. She refufed, indeed, to accept of this propofil, but afforded them a very generous affiftance, and continued their friend and patronefs to the day of her death. Whence we may difcern, that when the Dutch formed themfelves at firf into a commonwealth, it was becaufe they could nut obtain a King or QUEEN of their own, who was able and willing to protect them; and their erecting a republic was a matter rather of neceffity than
§ Vide Stradam de Bello Belgico. Bentivoglio's Hift, of Flanders.

+ Camden's Hill. of Queen Elizabeth.
choice. This feems plainly to demonftrate, that men in be born and bred in a commonwealth, and under go vernment as anti-monarchical as Holland may appear to be. and yet the wifeft part of the ftate may be zealous friends to a limited monarchy, efpecially fuch an one as that of GreatBritain, becaufe there is no other nation that has the fame conftitution that we have, nor fo well adapted to the happinefs of the people.
Nor ought the religion of the Dutch, which is Prefbyterian, to give either of the nations a prejudice againft each other: the Dutch never attempted to obtrude their model upon us they do not look upon their particular difcipline as abfolutely neceflary to falvation, nor do they condemn thofe that differ from them ; they look upon the church of England as a fifterchurch, and pay a due regard to her. An inftance or two may be neceffary to intimate, in order to what may be touch'ed on in the fequel.
In the reign of king James I, when the peace of their provinces was very much difturbed, by the Arminian controverfies, they fent to the king, defiring that fome of our Britifh divines might be permitted to come over, and confult with thole of other reformed churches, in order to compofe thofe unhappy differences. Accordingly, the then bifhop of Landaff, with the doctors Davenant and Hall, afterwards bifhops of Sarum and Exeter, were fent over by the faid prince with other eminent men $\oint$. Thefe met with the divines of Holland and Germany, at the famous fynod of Dort, where they gave their fuffrages with the reft. So that the churches of England and Holland looked upon each other as members of the fame body; nor have the latter, to this very day, receded from that charitable temper.

## § Vide Acta Synodi Dordrect. pag. 10.

When the eftablifhed church of England was really in danger, under the adminiftration of king James II. when her bifhops were imprifoned; when an illegal commiffion was fet up, prepared to execute the vengeance of enraged Papifts upon all the clergy in the kingdom; in that diftrels, did we not implore the affiftance of the Durch? Were they not the inftruments (under God) of refcuing our ecclefiaftical and civil liberties, whillt the FRENCH offered their troops to enlave us? Before I leave this matter, it may not be improper to mention one or two inftances more of the refpect which is fhewn in Flolland to our Common Prayer. The Dutch confented to the erecting of a ftately church in Rotterdam, in which the Englifh Liturgy is read to fuch Britifh merchants and traders as refide in that town. When the bifhop of Briftol arrived at Utrecht, as her Majefty queen Anne's plenipotentiary at that peace, the fate offered his lordfhip the ufe of one of their public churches in that city, for the celebration of divine fervice, according to the right and ufage of the church of England: was not this paying a grat deference to thofe forms of devotion ufed by his lordfhip?
We have not room to enter into the nature of the civil conftitution and ftadtholdermip of this ftate, and to compare it with that of England: which if we were to do, it would be eafily difcernable that the conftitution of Great-Britain is infinitely preferable, as being better calculated for the prefervation of liberty and property, and the extenfion and enlargement of the commercial interefts of a maritime nation. True it is, that the United Provinces have fplendidly and gallantly figured it under their ftadtholders; but if they had been governed, fince their thaking off the Spanifh yoke, by monarchs, limited as thofe of Great-Britain are in all refpects; if, in a word, the conftitution of the UNited Provinces was modelled upon the plan of that of this kingdom; it would, in all human appearance, have increafed the trading interefts and glory of that ftate, to a degree far fuperior to what it ever was, and have eftablifhed the fame upon fuch a foundation, as would have contributed unfpeakably more to the prefervation of the Proteltant and the commercial interefts both of Great-Britain and the United Provinces, than a difference in conftitution has done; provided that one and the fame fovereign had governed both powers, and that a ftadtholder was only a viceroy, deputed from the crown of England, as the Earl of Leicefter was in our queen Elizabeth's time, or as a lord lieutenant of Ireland now is, And what hinders but this may one day be the cafe?
We have feen from a very brief comparifon of the effential particulars relating to both fates, that thefe provinces have no averfion toour monarchical government : on the contrary, they have frequently manifefted a high regard to the Britifh conftitution in general ; and they, as well as we, have experienced the ill confequences of the intereft of borh ftates not being bottomed and cemented upon the principles of an infeparable union, as well with regard to trade and navigation, as to every other material point.
That I may not be mifunderftood upon this occafion, the candid reader is defired to obferve, that all that is here neant and inteaded is, that if the Dutch hould ever thints proper to agree to adopt the conftitution of England, and make her fovereign their fovereign, they hould poffers and enjoy all the privileges of commerce and navigation as Englithmen,

## U N I

U N i
without any reftriction whatfoever: for although we have compared a ftadtholder, or viceroy, deputed from the crown of Great-Britain, to a lord lieutenant of Ireland; yet it is not thereby intended to infinuate that, in fuch cafe, the Dutch ought to lie under any reftraints of trade whatfoever, as the Irifh do, which is what alfo we difapprove, as well in regard to Ireland, as we fhouid do in regard to Holland, if any fuch happy union could ever be brought about. And what would be the confequence hercof to both nations, we have briefly fhewn under our article Trade, to which we refer the reader.
But if England and Holland Chould never judge it advifeable to become one nation, and governed by one and the fame conftitution, the next beft thing to be done, for the mutual fecurity and intereft of both, feems to be, to cement the ftricteft union between them that can be upon all other occations. Nor can any thing more apparently evince the neceffity foreof, than the furprizes to which they are both liable, from the machinations of France, their common enemy. This we have repeatedly experienced, to the unfpeakable lofs of the blood and treafure of both; and this we are likely too foor to experience again: and, therefore, does it not become the duty of the wife and honeft men, and thofe in authority in both nations, to think ferioully and expeditioully upon the beft meafures to fecure and preferve themfelves from thofe imminent dangers to which they are both liable by their difunion? For however fanguine fome may be, that our fecurity may be fufficiently provided for by our fleet, (which, indeed, is in a condition that gives glory to the nation) yet do we not know, that when the fleet of Holland was almoft as powerful as our own now is, and theirs and ours were united, they with difficulty withfood the common enemy? It is a very fond opinion to imagine that we, who, in conjunction with Holiand, have beretofore been infulted on our own coaft by the fieets of France, and another time had probably been ruined by them, had not the beavens been favourable to us, fhould be able, without the affiftance of the like degree of ma-
ritime frength, to fecure us from a power fo exorbitant as that of France and Spain may be in conjunction. The fecurity of England and Holland does undoubtedly chiefly depend upon a powerful fleet; but does it not become the wifdom of both to be certain of that degree of naval power that will overmatch and defeat that of our enemies which may be united againft us? But without the Dutch will inftantly exert their maritime itrength, and aet zealoufly in concert with GreatBritain, we do not feem to have that degree of maritime ftrength, ready to at for the effectual fecurity of both ftates. We have been repeatedly informed that the Spaniards have actually made, or apparently intend, an attempt on the Dutch colonies of ISEQUebe and Berbice, which are greatly affiftant to our fugar colonies of Barbadich ard Chriftopher's, in fupplying them with timber for their fugarworks, of which it feems they muft be deprived, if thofe colonies fal! into Spanifh hands: and if the French alfo get poffeffion oi the Neutral Islands, thofe fugar colonies muft be greatly hurt, if not abfolutely ruined and undone, for want of thofe needful fupplies. If it fhould prove matter of fact that the Spaniards have made, or foon intend to make, fuch an attempt on thofe Dutch colonies, under th:: pretext of preventing illicit commerce with the Spanifh cclonies, does not this look with an afpect that Spain intends the like infults and cncroachments on the Dutch, as they have fhewed to us in our logwood fettlements, from whence, it feems, (hey have quite exsirpated the Britifh logwood cutters? Does not fuch conduct in the Spaniards appear too fignificantly deciarative, that they intend as little good towards England and Holland, as France does? Do nut thefe things feem to forebode a conjunction between France and Spain, that we both ouglit inflantly to guard againft by proper alliances, and by the due exertion of our maritime, as well as military ffrength? And as this nation has at prefent a very able and vigilant minifter in Holland, we have good reafon to expect as bappy fuccefs from his negociations Abroad, as we have from the wifdom and councils of his honourable family at Home.

## Of the PRACTICALBUSINESS of the CUSTOM-HOUSE, continued from the End of Letter T .

UNION of Engiand and Scotland.-After the ift of May, 1707, united into one kingdom, by the name of Great-Britain (art. I.) 5 Ann. cap. 8. §. I.All the fubjects to have full freedom and intercourfe of trade and navigation, within all the dominions thereunto belonging (art. 4.) ditto act of parliament.-_All ports of the united kingdom to be under the fame Laws and Régulations of Trade, liable to the fame Customs and Duties, entitled to the fame Allowances and Drawbacks as in England; except the exemption of private rights. 5 Ann. cap.8. art. 6, 7,14, 18.) 6. Ann. cap. 26. \$. 17. But after the Union, an equivalent was to be paid by England to Scotland for the improvement of the duties; to be ap-
plied towards fatisfying private loffes by the red ction of the coin, and to the payment of the capital fock and intereft of the African and Indian company of Scotland; and the overplus towards the public debts of Scotland, and the encouragement of the fifheries, and other manufactures and improvements; which faid equivalent was to be under the maniagement of particular commiffioners: but in lieu and full difcharge of fuch equivalent, after the 24 th of June, 1719 ; there was eftablifted one yearly fund of $10,000 \mathrm{l}$. and one other, of 2000 l . payable cut of the revenue of cuftom, excife, \&c. arifing in Scotland, by the refpective commiffioners. 5 Ann. c. 8. §. ı. 6 Ann. c. 24. §. 1. 5 Geo. I. c. 20; §. $1,14,18$.

## W A R

As this article ftood in our former editions, begun in the year 1751, when France feemed again to be meditating a frein war, foon after the treaty of peace concluded at Aix-laChapelle in the year 1748 .

WA R. If Great-Britain thould enter into a war in the prefent conjuncture of affairs, we have endeavoured to demonftrate, throughout this work, that the is compelled to to do for the defence of her rightful Trade and Possessions, and not from any unjuftifiable motives, or attempts made upon the commerce or poffeffions of any other nation. 'A man may - be forced to kill another, in his own neceflary felf-defence, 6 and then the fin is not in the flayer, but in him that is flain - for in all cafes of force, not he who is compelled to trike the - ftroke, but he who is the caufe of the evil, bears the whole ' guilt, If a thief be found breaking, fay our facred oracles, ( and be fmitten that he die, there thall no blood be fhed for chim. For the fame realon, enemies may be flain in a juft sand neceffary wat: and it is no crime, but an honour to - be fucceffful in deftroying them : but W.ARS of mere Am'bition are direct Murders.' See Dr Samuel Clarke's Works.

Some Princtples relating to the Conduct of War.
I. To deal with murderers of this kind then, it is not necerfary only to be in a capacity to protect our trade and commerce, our poffeffions and our liberties, for the prefent, but we muft endeavour to put it for ever out of the power of a perfi= dious nation to injure us again. See the article Plantations [Remarks thereon], fhewing the deteftable perfidy of France for above a century paft.
II. Nothing can effectuate this but the due exertion of our Naval Power, as well Mercantile as Royal, to deftroy their trade and navigation, which is the great fource of their treafure and ftrength. See our articles Naval AFfairs, Sea Dominion, Sea British, Seamen.
III. If we fuffer their trade and navigation, and, confeqưently, their maritime firength, to grow to a greater pitch, and do not put a fop to that career of filendor and power which they aim at, we fhall be no longer a nation: vaffalage and havery muft be the inevitable doom of Britons.
IV. To defend ourfelves againit any invafion, we mult have a competent number of land forces; nor fhould we be deftitute of a well-regulated and Disciplined Militia, to contribute to the defence of our extended fea-coafts; for our fleets alone may not always be capable to prevent the landing of the enemy.
V. Left our own force fhould not be amply fufficient to put it out of the power of the enemy to difturb our peace, and diftract Europe again, the moft powerful alliances, both OFfensive and Defensive, fhould be entered into that can be, with fuch powers whofe intereft it will be, as well as ours, to deffoy the Enemy's Trade and Navigation, and to take and divide their most valuable Trading Possessions amongst us, according to the Degree of Strength which the Confederates shall contributetothat End, and the Success that shale attend them. See United Provinces, Flanders, Holland.
VI. If the Marine of Holland could be raifed equal to that of Great-Britain, their united royal navies, together with their mercantile maritime Atrength, would certainly prove fufficient to anfwer this great end in the four parts of the world. See our article United Provinces.
Vil. If the United Provinces cannot be brought, or are not able, perhaps, to raife their marine and their military force to the height defired, and to act vigoroully, in concert with Great-Britain, as ore nation, Great-Britain mult do the next beft thing that the is able: ©he mult make fuch alliances as will afford her the greateft addition of Maritime Strength; and, if needful, the mult not be backward in aiding, with her purfe, fuch confederacies on the continent as may prevent the French from over-running the United Provinces; for as the intereft of Great-Britain and thofe provinces are infeparable, as we have endeavoured to hhew under the article United Provinces, it will be impolitic
for us to truft their whole fecurity and protection to any other power or powers, without contributing any thing thereto. Befides, there may be other powers befides France, that might be glad to poffers themfeives of this republic, and who might not prove lefs detrimental to the trade and navigation of Great-Britain, than France would be, if the United Provinces were annexed to that crown.
VIII. If the United Provinces are reduced to fo low an ebb, that they are rendered incapable of exerting themfelves againft France, in concert with Great-Britain, as they have heretofore done, it will neverthelefs be for the intereft of England to enter into an alliance with them, both Offensive and Defensive; and England muft, for her own fafety, do all in her power to preferve Holland from deftruction: for if England enters into fuch alliances with the United Provinces as will make their Interests one, and if they both zealoufly exert their maritime power, and ruin a great part of the French trade and navigation, and possess themSELVES OF THE SAME, this will make them both an ample compenfation for the expence of sUch A WAR: and such a War as wileruinthe TradeandNavigation of France, and advantace that of Great-Britain and the United Provinces mutually, is the only $W_{\text {AR }}$ that thofe powers ought chielly to profecute.
IX. The Dutch can never be fo poor, as a fate, but they are aole ftill to lend themfelves many millions, and are ftill able fo to exert their maritime ftrength, in conjunction with England, as to deftroy a great part of the French commerce and navigation, and to draw the fame into their own fcale: wherefore it muft be very defireable to the well-wihhers of both ftates, that fuch offenfive and defenfive alliances are inftantly entered into, that may for ever fecure the poffeffions of both, and fo enlarge and extend the trade and navigation of both, as to give and preferve to them the dominion of the feas: for, without this, England and Holland will be no more, and Britons and Dutchmen muft tamely fubmit to the French yoke.
X. So happy an union between Great-Britain and the United Provinces, would foon raife the maritime power, and the trade and navigation of both ftates, to what pitch they pleafed; for if they jointly exert themfelves, upon the coaft of Africa, the French might foon be extirpated from all commerce in that part of the world, becaufe the Dutch and the Englifh united there, are now ftronger than all the other powers who have fettlements in that part of the world; [fee English African Company, and Dutch African Company;] and if the Englifh and Dutch deftroy the French African Trade, and poffefs themfelves of their fettlements for ever, will not this prevent that nation from fupplying their fugar-illands with negro-flaves? and what then will become of their fugar-colonies? which, as they have proved the means of greatly extending the commerce of that nation, it is to be hoped that Great-Britsin and Holland will have a watchful eye upon them; for if thefe were in Engish and Dutch hands, and proper Treaties of Commerce wereentered into between thofe two powers, in relation to their trading acquifitions, they would enjoy the SUGAR-TRADE of the whole Worid; and this, and their African commerce, would amply recompence them for the expence of a war of fome years.
XI. Upon fo happy a maritime and commercial union of interefts between England and Holland, how long could the French figure it in Afia? Would not the united power of the Dutch and Englifh in the Eaft-Indies, foon lower the creft of France alfo in that part of the world?
XII. If once Great-Britain and Holland poffeffed themfelves of the French African Settlements, and their Sugar Islands, this would give a great blow to the French commerce between Canadaand thofe iflands, and increafe that between the Britifh northern colonies and thofe iffands. XIII. In regard to the Britifh affais in North-America, we have urged that point largely, from the beginning to the conclufion of this work; but as every thing that throws a new light upon a matter of this high concernment to the nation, may have its ufe, I thall cite a late ingenious writer upon this occafion*.

- See the State of the Britifh and French Colonies in North. America, \&c. In two letters to a friend.

## W A R

- If we would fecure, fays that gentleman, our American dominions againft the French, we muft out-fort them, as well as OUT-SETTLE them. Our colonies are in a worfe condition by far than is generally believed, or can well be conceived, unable to hurt their invaders, or defend themfelves, while the French have Forts every where, and we have For ts , in a manner, no where.
The number of forts neceffary to be built for fecuring the colonies, muft be eftimated by the number of forts already built by the French on our frontiers, and the places proper for fortifying, which they have left unoccupied, which are indeed very few, fo induftrious they have been to anticipate us in an article of fuch infinite concern to our plantations. As the country of the OH 10 is in fo much danger of being wrefted from us, and its being well fecured of fo much importance to all the colonies in general, north, fouth, and middle, as hath been already fet forth; if ever it comes into our hands again; it ought to be well fortified, by building forts in convenient places, along the river, efpecially at each extremity; that is, one at the mouth of the OHro, on the Mississippi, and anether at Niawgra, near the lake Ontario: this laft will prevent the communication of Lovisiani with Canada, by that lake and the lake Erie, and oblige the French to abandon their forts on the foutheaft fide of this laft lake, by rendering them ufelefs, as well as fave us' the expence of erecting afort at Tierondognat, on the lake of Ontario, about 60 miles to the eaft of the Niawgra ftreight: a place which they have long had their eye upon for building a fort, and which we might be under a neceflity of fortifying, in cafe the French remain at Nia wGRA, in order to prevent their taking poffeffion of it, as they did once already, in 1687 ; although it was but for a fhort time : and this, doubtief $f_{\text {, }}$, was the reafon which made governor Clarke of New York fo earneft tờ have that place fortified.
In effect, a French fort there would prove no lefs dangerous to New York, than that at Crown Point, as it would give them admiffion into the country of the SENNEKAs, the moft powerful of the Six NAT ions, among whom they have already gotten fome footing, by means of the Niawgra fort, and their priefts; and whofe defection; confidering their influence, might be a means of our lofing the friendibip of the other five.
The fort at the mouth of the $\mathrm{O}_{\mathrm{H} 10}$ ought to be frongly built and garrifoned, and a confiderable fettlement made about it : after, this fettlement might be gradually carried on, between the Mississippi, and the Alliganey mountains, backwards and forwards at the fame time. Nor can too much encouragement be given to fettle this country', efpecially on the fide of the Mississippi, as quick as pofible, by allowing people liberty to fettle how and where they pleafe, without making large grants to any company; an obftacle which has hindered fettling more than any other thing, and, on many accounts, proved greatly detrimental to the colonies, by raifing the price of land to an exorbitant degree; which, befides the dangerous evil of enriching a few, and impoveriihing many, has been attended with one ftill more pernicious, that is, of weakening the colonies, by leaving near half OF SOME OF THEM UNPEOPLED.
This fort and fetlement would effectually exclude the French from paffing into the weftern parts of Virginia, by the Ohio and its branches : but as they have two forts on the WABISH, ons at its mouth on the Ohro, and another about the middle of that river, it would be proper to have two others built, in oppofition to them : the fecond, in the part where it draws near the river of the llonois, or Chiktaghiks. Should we go a little farther, and erect another on this laft river, in the neighbaurhood of the former, it would intirely cut off their communication this way, between Louisiana and Canada, and oblige them to go fo far about, as to difcourage them, with all their fanguine views and perfeverance, from ever hoping to compafs their fo-much-defired project of joining their two colonies on this fide of the Miffiffippi.
The country to the fouth of the Ohio would be in good meafure fecured, by the fort built at the mouth of it, which will hiader their paflage into the HOG HEGE, or river of the Chbrokees, dividing the country of thefe Itidians on the north from Virginia. However, more defectually to fecure it, and, at the fame time, cover the country of the Cherorees, it would be proper to build one as the Faels, a little below the place where the Pelesipit, or Ciinches river joins it, in the north-weft borders of the Cherokees; and another efpecially in the heart of the country poffeffed by thofe people, who have long applied with great earneftnefs to the governor of Carolina for that purpofe, reprefenting the danger which otherwife there was of the French doing the fame; and it is well if, through this unpardonable neglee, the Frcnch, in cafe they fhould be forced our of the back parts of Virginia, [fee Virginiat] do not, in their return to New Orleans, put that defign'in execution as to be fure they will, in cafe they keep polfeffion of what they have already ufurped, in order to prevent any attempts on our fide to fecure that country to us. .By a like pernicious remiffiefs, or fomething elfe, were they fuffered, fince the
year 1715, to build the fort Tou louse, on the river Arlybampus, not far from the country of the Creek Indians, and the borders of Georgia ; which frontier, though not yet fufficiently fortified, has balked their views of carrying on their Chain of Forts, on that fide, to the Atlaric Ocean, which, before that colony was founded, they thought themfelves fure of effecting, whenever they pleafed, and, therefore, made the lefs hafte to accomplifh it.
Thefe FOR Ts might ferve, at prefent, to fortify the fwothern rovinces of our American dominions. With regard to our orthern, the firft thing that demands our attention is the facurity of New York, and its Province. This will be, in good meafure, done by the Fort to be built at Ntaw, GRA, and that already built at Oswego, in the country of the Six Nations, at the fouth eaft end of the lake Kada* RAKAI, or on Ontario, almof due fouth of the $\mathrm{F}_{\mathrm{RENCH}}$ fort of Frontienac, on the north-eaft corner of the fame lake, about 70 miles diftant. But this fort, which is the only one we have for defence of our back fettlements for many hundred miles, 'till we come to Grorgia, ought to be much enlarged, frongly fortified, and furnifhed with a pretty numerous garrifon, and is of great confequence, by its fituation, to both the fecurity and trade of qur northern colonies; it being our north-weftern frontier, and the only place, or opening left, by which the Indians can come to us with thei furrs. For this reafon, 'till fuch time as our neighbowrs thal be obliged to allow them a free paffage through the LAKEs, it will be neceffary to build a veffel or two, capable of mounting guns for the conyeniency of carrying them backwards and forwards, acrofs the lake; which expedient will go a great way to fruftrate the defign of the French, and recover our trade.
And here it is worth obferving, that this fort of Oswe Go, built by governor Burnet in 1727, by fayour of the Indians flood unmolefted all the laft war; and although the garrifon ufually confifts of no more than an officer and 23 men, has been of more fervice and benefit than all the reff, although now it mult be in imminent danger. This is a demonftra tive proof of the great importance and advantage of fuch Forts, on the number of which and frnall garrifons, properly placed, the intereft and fupport of the French almolt wholly depend
However, more effectually to fecure. NEW YORK, a ffrong Fort ought to be built in view of the French EORT at Crown Pqint. By means of this poft, they may be enabled to intercept, or at leaft difturb, the trade from Alba NY up to the Mouok's river, a branch of Hudson's, to the Six Nations, by fending a force on that fide; and could they deftroy the commerce of thefe Indians with the province of NEw YORK, they would oblige them to depend wholy on CANADA, a thing which they threatened to have done in 1732 .
During the late French war, from 1744 to 1748, CRONWN $^{\prime}$ Point was the rendezvous of the Canada French and their Indians, from whence they attacked NEW York, and the north weft corner of Massachusets. Bay. From this place, in 1745, they deftroyed SARATOGA tettlement, on Hudfon's river, about $3^{\circ}$ miles above Albany: in which parts, during that and the two following years, they killed and captivated above 300 of our people ${ }^{*}$, deftroying moft of the inhabitants and plantations on the north-eaft branch of that rivér. In former wars, the attack on New England was from the north-eaftward; in the war of 1746 , it was from Cröwn Point. New, York government, in former French wars, did not fuffer, but in this laft they fuffered moft $f$; that is, they were-punithed for fuffering that fort to be built. Befides building this, counter fort, Albany ought to be put in the beft pofture of defence imaginable, in order to fecure it againft any attempts on that fide. This quarter' requires the ftrongeft barriers, becaufe the French have declared it to be the chief object of their views; and it lies fo near Quebec, the center of all their ftrength in CANADA, from which they have a moft convenient paffage all by water, excepting a fimall fpace of about 12 miles by land.

Douglas's Summary of North America, vol. ii. p. 246.

+ Ibid. vol. i. p. 326.
Monf. Callieres, who firft propofed the project for the conqueft of this city, to induce Lewwis XIV, to comply with bis defire, fays, in his Memoirs to the French minifters, 'That - this conqueft would make the king maffer of one of the - fineft ports in AMERICA, which they might enter at all times, and a moff beautiful country, in a mild and fertile 'climate!' No wonder fo inviting a defcription as this fhould fet the French at Canada a longing for New York : but ought not that longing of theirs to make us more earneft to preferve it?
By thefe fortifications, New England will be pretty well fecured on the weff fide, as it will on the eaft by thofe already built, and the two now building on the river Kenneвеск, one by the province, the other by the proprietors of the Kennebeck purchafe; whofe generous example, it is hoped, will animate others to do the like, and not let them
flop, 'till they have erected a fortrefs on the very banks of $\mathrm{ST}_{\mathrm{T}}$ Laurence River, which is within their limits. Mean time, as the laft of the two forts has been founded fo high as the Takonnek Falle, and the north part of New England lies wholly expofed to the ravages of an enemy, it is not doubted but that they will not delay to build a third, at the head of the Kennebeck itfelf in the Carrying-Place, not above four miles over, where it locks with the river called by abe French la Chaudiere, which falls into the St LauRence, four or five leagues to the fouth-weft of Quebec. This fort fhould be ftrongly built, and furnifhed from Britain with a garrifon of 500 ftout men: unlefs this be done, the building thore two forts will only ferve to put the French in mind of doing it. And from their conduct it may be judged, that a fmall occalion would ferve them for a pretence.
The building a fort here is the more neceffary on three accounts;' (I.) As it will bridle the Abenakio Indiains, in the intereft of the French, and hinder them from ever attempting any thing againdt New England, this having always been the place of rendezvous for both, on fuch occafions. It will alfo prevent their going on the $\mathrm{O}_{\mathrm{H}}$ о expedition; and thofe reftraints, by degrees, be a means of their coming over to our intereft. (2.) As it lies near the heads of the rivers St Francis and St John, as well as of the Kennebeck and La Chaudiere, before mentioned ; fo that it will have the command of four very important rivers, two of which fall into the St Laurence, the Chaudiere towards Quebec, and the St Francis towards Montreal. (3.) As it will help to cover not only the northern borders of New England, but allo thofe of New York, from which it will not be far diftant. I may venture to fay, that the good effect of this fort will extend as far as Annapolis Royal, and the town of Halifax in Nova Scotia, by cutting off all fupplies of men and fores to the French in that country, by St John's Riyer, which will oblige them to abandon their forts lately built at the mouth of it. The Kennebeck company, in full expectation of this defirable event, have already given land to $10^{\circ} 0$ men, and their families, to fettle the country thereabout, under protection of the two forts newly built upon that river.
How different is the practice of fome colonies, to this generous public-fipirited conduct of the Kennebeck proprietors! The affembly of New York, in their addrefs to governor De Lancey, the 2oth of Auguft laft, complains, "That other * colonies make themfelves ftrong and defenfible, by fettling - in townfhips, or fome other clofe order, while our frontier - lands are granted away in patents almoft without bounds " or number, regardlefs of fettlements, or the public welfare.' And in a State of the Britilh fettlements, now in view, we are told, that ' even the lands beyond New York itfelf and c Albany, on both fides of Hudfon's river, by an abufe which - ought to be remedied, viz. the old exorbitant grants, are - but thinly inhabited, although lands for fettlement in that - colony are extremely wanted: and thofe tracks would foon " be purchafed, if they could be had at any tolerable rates.' This unpeopled ftate of the country is of fo much the worfe confequence, fince, in cafe the French fhould attack Al bany and New York at the fame time, one by $S_{\text {ea }}$, and the other by LAND, conformably to their plan, from whence could Albany be reinforced? The country has not men to fupply it, nor could New York, in fuch a cafe, be able to fpare any. On this occation, the memorial of 1732 oblerves, - That when the prefent fate of New York, and the puwer of thofe neighbours (the French) is well underftood, it will too evidently appear, that they will, on a rupture, be under unhappy circumftances; and with them the other colonies muft be deeply involved.' Suchenfeebring Grants, therefore, are of pernicious tendency every where, but no where fo much as in the province of New York; which being the key of all the other colonies, and moft expofed to our northern neighbours, who, for thefe reafons, cover it, all means which can be thought of, conducive either to its improvement or fecurity, ought to be applied, and every the Jeaft obffacle to either ought to be removed.
After the words cited from the affembly's addrefs, they juftly remark, ' We can erect Forts and Block-Houses; but - to what end? Woods and uncultivated tracks are not the - objects of fecurity; induftry is to be protected, and mens - perfons to be defended, otherwife little good will accrue to - the public, be the expence what it will.' It is true, there can be no profpect of fettling a country, while fuch difcouraging grants are in the way: but were thofe obftacles removed, under the protection of fuch forts as bave been propofed, in a very fhort time we might hope to fee this part well inhabited, and, confequently, the ftrongeft barrier (as it ought to be) in the English American dominions againf the French. With regard to Nova Scotia, including the country to the eaft of Kennebek River, it will require feveral Forts and fettlements to fecure it, not only at the mouths of the three principal rivers, Penobskot, La Croix, and St John's, at which laft there are two French forts, but alfo at certain pofts along thofe rivers, particularly this laft; which beginning not far from the head of the Kennebek, and paffing with a circular courfe, encompalieth the greater and molt va-
luable part of all the country ; fo that thofe forts will keep both French and Indians in awe, as they will bave an eafy communication by water among themfelves, and with the fettlements on the other rivers, travelling only a little way by land. Above all, care muft be taken to build a flrong fort at Shegnikto, on fome elevated ground, to the north of the French fort, which may both command, and exceed it in force; for the prefent fort is fo weak, and ill fituated, that the garrifon would be obliged to furrender almoft at the firt thot: fo that, in cafe of a war; we fhould have no chance there. Nor will this be enough : it will be neceflary for fecuring it, to have two forts more, one at Bay Verte, to prevent our neighbours from invading the country at pleafure, that being their landing-place from Canada, and one of the two ways by which they enter and correfpond with Nova Scotia: St John's River, as before mentioned, is the other, by which (fays La Hontan) the inhabitants of thofe two countries may hear from each other in 16 or 17 days, though not in a month by fea.
The fecond fort ought to be erected at the entrance into Shegnikto bafon, or harbour ; for hould the French build one there, they would exclude all accefs to it by fea.
But as the erecting fo many forts at once in this province (of Nova Scotia) may be thought too expenfive a work, it may be fufficient, for the prefent, only to build fome along the river $S_{t}$ John, and thofe at Shegnikto.
By fuch a number of forts and fettlements as 1 have mentioned, may the British territories be effectually fecured, the french kept at a diftance, and our trade in good meafure recovered, by paflages opened for the Indians to come and trade with the colonies; which will likewife be at liberty to extend their fettlements on all fides, in fite of any oppo fition which the French can give them, or rather without danger of any from them : for, by means of thefe forts, a much ftronger line of circumvallation will be formed againft them, than they at prefent have againft us.
You will fay, perhaps, that I have cut out a fine expenfive work for the colonies. It will be expenfive, there is no doubt of that ; but what can be done, fuppofing fewer forts will not be fufficient to fecure them?' If, therefore, the burthen fall heavy, they may thank their own mifmanagements. Had Forts been gradually built on their frontiers, and as they extended their out-fettlements, after the example of the French, a thing which ought to have been done, the charge would not have been felt. As this has been neglected, that muft be done at once which fhould have been done at different times : befides, the expence is greatly augmented, by their having fuffered the French to build upon them every where. At firft, a few forts erected in proper places, would have ferved the purpofe, and their neighbours finding the poffeffions fecured, might neiver have thought of difturbing them: but feeing the countries lie open, and the colonies carelefs through a vain fecurity, or worfe, covetoufnefs, they were invited to enter, and punifh their neglect in the manner they have done.

Remarks before the laft war, and peace of $17^{6} 3$, in our firt edition began in the year 1751.
If America fhould again become the feat of war, as it was in the laft, (and this it certainly will, if the Spaniards join the French) it will prove of unfpeakable detriment to thefe kingdoms, as things are at prefent circumftanced, provided it hould be conducted as the laft war there was, and if there fhould be fuch unhappy mifunderftandings between admirals and generals, as was between Mr Vernon and Mr Wentworth, \&xc.-I have now the mifconduct of this whole affair before me; which would prove very difagreeable, and, indeed, very hhocking, to reprefent in its true colours. But we will hope for better conduct in the next war, in that part of the world, or our all, I am confident, will be loft there.It appears to me, that there are opportunities enough in America greatly to diftrefs the Spaniards, if it fhould become neceffary, as well as the French; and, after having provided effectually for our affairs in Europe, we cannot have too great a fleet to act in America, and elfewhere: but, unlefs we ftrike fome capital and effectual Stroke, the war will only be prolonged for the benefit of the officers, from year to year, and turn to the difhonour and ruin of the nation, inftead of its glory and profperity.
We have not the leaft reafon to be difcoutaged at the expence of a much greater Fleet than ever this nation bebeld. If we had a fleet as powerfulagain as we have, we thould fcarce feel the expence of it: nay, I could almoft prefume to affirm, that the greater our Royal Nayy is, the richer, instead of the poorer, will thenation BE; AND THEREFORE WE CAN SCARCE SPEND TOO much upon our Maritime Force.
Exclufive of what we expend for naval fores with other nations, the refidue of our naval expences is raifed within ourfelves, and centers and terminates within ourfelves. 1. Our royal navy is victualled among ourfelves, and this inriches the landed gentleman, as well as the farmer and grazier. 2. Our fhips are built and mafted with our own timber, and built by Britifh artificers. 3. Though we take hemp from Ruffa,

## W A R

yet our cordage and fail, eloth and iron are chiely manufactured amongt ourfelves, for the employment of our manufacturers and artificers. 4. Our Chip;chandlery particulars, great in number; are produced among ourfelves; and opur chips are fupplied with liguors by our own brewery, and our own diftillery. 5. Though we ufed formerly to be obliged to take our pitch and tar from Sweden, yet at prefent we have, the bulk of it from our own plantations; and fo we may, in time, have all our hemp from thence: and whateyer adds to the circulation of commerce between England and her colonies and plantations; tends to augment the opulence and power of both. 6. The appointmerts paid to our fea officers, and wages of our mariners, alfo revert again into our own hands. 7. The great eftates frequently obtained in time of war by our admirals, and other chief officers; as well as by privateering, generally make the nation more than an ample recompence for the mercantile lofies we fuftain by fea in thofe calamitous times. 8. The prizes which we commonly make of the enemies fhips of war and naval ftotes, can fcarce fail to be equivalent to thofe we may happen to lofe of our own.
Upon the whole, if we compare the national expence raifed upon our Royal NAvy, when it thall be exerted to its fulleft extent in times of war, with the national Returns, as the necefiary confequence thereof, according as cur affairs are now happily circumflanced ; we need not be at all apprehenfive, that a war carried pn by SeA can ever impoverifl or hurt the kingdom at all. For let it be fuppofed that $3,000,0001$. a year, or even more, was raifed aninually above the ordinary expence, for the fupport of the royal navy, it will not be eafy for any one to fhew, that nearthe whole expence raifed would not return into Great Britain again. From paft experience in relation to the three laft great wars, the expence of our naval affairs, conlidered in the fcveral lights before intimated, did the nation no great injury, and would have done much lefs, if we could then have provided ourfelves, as we now can, with fo great a part of our naval ftores.
Nor could it do us any detriment, if the expence was confiderably greater, provided the money was conftantly RAISED within the Year; for the greater our naval power is, if exerted as it ought to be, the greater might, and very probably would, be our advantages by fea over the enemy, and therefore the RETURNS of treafure into the kingdom would be equivalent to the EXPENCERAISED: and this would be almoft all gain to the nation.
But fuppofing the neceffity of our affairs hould oblige us to ruin annually threb Milifions, or more, into debt, on ac count of our Naval Expences, let us confider how- i would affect the wealth of the nation.
Who muft be the public creditors to whom this money will be due? Does it not every fhilling (except what I have before excepted) arife from the product of our land, and the labour of our workmen ? And while the Principal Money is due only Amongst his Majesty's Subjects, as I have zealouly pleaded for in this performance, and the Interest paid to them only, fuch debts will fit light upon the nation : but when any proportion of fuch debts becomes due to foreigners, by transfer or otherwife, and the intereft mopey goes out of the nation, this is reckoned a difydvantage in the like degree, which is the realon that. I have fuggefted how defireable it would be, if it hould ever be found practicable, that all the public Debts the Nation shall be gbliged to incur, fhould be contraetedamongst Britons only ; in which cafe, no interelt-money would go out of the nation, and, confequently, the burthen of our national incumbrances would be the lefs fenfibly felt. See our articles Credit, [Public Credit], Debts, [Nafignal Debts]; Funds, Monied-lnterest.
Although a part of the interell money paid on account of the principal debt contracted for our naval affairs, fhould be remitted to foreigners out of the kingdom, in virtue of their becoring our public creditors, yet it frould not be forgot, that the Principal Value arofe from the produce of ou Land and our Labour, and that we have taken fuch foreigners Prinecipal Money, thougb they take away our Interest Moniy. This abates the evil in fome degree: but when a great proportion of the principal money due to Foreigners has been pentinfokeign Countries, and never returned in any flape to us again ; when this is not only the cafe, but the intereft money is fpent put of the nation likewife ; this magnifies tiee evil of fuch debts.
But when our native lind and labour hall have prim arily received the benefit and advantage of our $\mathrm{NAval}_{\mathrm{A}} \mathrm{V}$ Expence, it may be a quere, whether thofe benefits and advantages, confidered upon the Whole, may not be equivalent to the difadvantages fuftained by paying intereft to foreigners for a PART only
Certain it is, however, that let thefe our Naval Expen. Certain it is, however, they had a tendency rather to inrich the nation, than any how to injure or impoverim it: for fo much of the money expended this way, in time of war, is really fomething like extracting fo much Gpldand Silver out of our Mines; and what is the common produce of our Lands and ous Labour, are

VOL. III.

## W A R

Mines of the greateft utility to the fate. Neither fhould it be forgot, that our Royal Navies, built and equipped with fuch money, become really PERMANENT RICHES for many years, of which we enjoy the benefit; and the fervice and glory which the kingdom derives from thefe her NAVAL TREASUREs, far more than compenfite the the pence of the intereft of the money they colf; be that confidered in what light it may.
In a word, it fhould feem, however paradoxical át firft glance it may appear, that our very NAYAL EXPENCES are creative, under the reffrittions we have confidertd them, of Natidnal Wealth; and if our whole public incumbrances had been made up of fuch fort of expences, and raifed within the year, and the whole intereft money had centered within ourfelves, as perrhaps might liave been the cafe, our debts would have proved very little burthen to us. There another confideration, notwithftanding, that ought to alleviate, in fome meafure; the thoughts of the burthen of the Inter est Money paid to foreigners who are our public creditors; which is, that the chief of our foreign public creditors being the fubjeets of the United Provinces, and the author of this work looking upon the intereft of thofe' provinces in a light abfolutely infeparable from that of Great-Britain, thinks that the intereft money paid to them ought to be looked upon, in fome degree, as rcally paid to ourfelves: and what ought to be fome additional motive with us to have a riatural tie and affection towards that nation, is the chearfulnefs they ever fhew to aid and affift us with their money-fubforiptions, upon all emergencies, and in all other fhapes; $I$ am willing to think, according to their powerf unlers k hern fome wicked men at the helm bave prevented it. And is not this the cafe of all nations at one time or other? But the contrary is the genuine fenfe of the wife and upright men in that fate; and 1 hope that we fhall foon happily experience a perfect union and good underftanding between GreatBritain and Holland, notwithftanding all the wiles and machinations of our common enemies, towdivide and diftract us, in order to fubvert the power of borh. - To this end, I have zealoufly endeavoured to remove the prejudices which too many in this kingdom are at prefent taught to have againft the Dutch, by the emilfaries of France. See our articles United Provinces, Holland; Trade, Flanders and Nethrelnads.
Thefe confiderations, we humbly hope; will animate the nation tofpare no Expence upon their Naval Power, if the neceffity of affairs, as I fear will be the cafe, Thouldmake it requifite even to treble the Fleets we at prefent have more efpecially if we exert ourfelves to raife the whole of our naval fores in our plantations.
Remarks on our article $W_{A R}$, fince the laft war, and the Peace of 1763.
Under our article TAXes, there appears an account of all the money that has been raifed fince the year of the $\mathbb{R}_{E} \downarrow 0-$ LUTION in I688, to the conclufion of the reign of this late Majefty George II. If we caft an eye upon the incredible expence of the laft war, it would certainly have proved utterly impracticable to have raifed fuch fupplies within the Year as were raifed to carry onthat war Since the reign of queen Anne, our PUBiIC Debts are nearly trebled to what they then were, although a great parade has been made, fince that period, to leffen them. And if the examples of carrying on $W_{\text {A RS }}$ by this, nation at the expence we have hitherto done, are to become permanent precedents, and effeemed worthy the fanguine imitation of pofterity; it requires no extraordinary prefcience to prodict, that fuch expenfive wars mult at length prove the inevitable Ruin and Destruction of this commercial empire. For to fuch a degree muft our Taxes in generral be neceflarily augmented, to pay the Interest of our encriased public Debts, that the Necessaries of Life, the Prices of Labour, and the prices of all oyr' Commodities and MaNUFACTURES, WILL EE SO GREATLY RAISED AND INhanced, that the general domestic Consumption of all oug natine Commodities will decrease AMONG OURSELVES; OUR GOODS WILL BECOME SO dear, that Foreggiffs rineither can nor will purchase them : And what; will be the Conse-
 NATIVE COMMODITIES DIMINISHES; WHAT WILL BECOME OF THE REVENUEOF EXCISES? WILL NOT that be figeduged proportionably? And when we shall not be in a Condition to export our own Goods, because no Foreigner can or will buy them, while he can buy those of other Nations, our trading Competitors, considerably cheaper, how long shall we be able to IMPORT the foreign Goods of other States and Empires? Not long, most certainly. Ane when that comes, to be our Case, what likewise will become of the REVENUE of CUSTOMS? Will not that be reduced as our Imports shall be? Where then shall we find the Funds to pay the Interest for our public Debts? Will not the II H

Fund:

Funds vanish also, for the Payment of the King's Civil List Revenue; for the Support of his Houshold, and the Honour and Dignity of his Crown? Will not the very Existence of the Singing Fund, now mortgaged as a collateral Security to the Public Creditors, be annihilated; and instead of the National Creditors having any Security for the Discharge of their Principal Money, how will they come by their Interest? When this shall come to be the State of Public Credit, and the Monied Interest shall be undone, what will become of our Traders? Will not our Merchants fly to foreign Countries, and there exercise their Skill and Industry, to improve the Commerce and Navigation of those Countries, whose greater Cheapness of their Commodities will induce them to trade therein throughout the whole World? When we have lost our Merchants and our Monied Men, what a Figure will our Landed Gentlemen make? When our British Land shall be of as little Worth as that in Siberia, wili the raising Four Shillings in the Pound upon such Land, raise again the British Splendor?
It would be eafy to carry on this ftrain of obfervation to a much greater pitch; but the idea of a bankrupted and ruined nation is a melancholy fubject to dwell upon; efpecially when men are too apt to judge it vifionary. I heartily wifh it may never prove otherwife; the author had rather have his memory eternally ftigmatized, than fuch a cataftrophe thould ever come to pafs. His motive is not to alarm with falfe fears; but to guard Britons againft that danger that appears to him impending, unlefs fome mafterly ftrokes of policy are flruck, to reduce the tax-incumbrances on our trade in general, in order to reduce the Prices of our Commadities and Manufactures in general as low as thofe of any Rival Nation in Europe. 'Till this is done, and moft effectually too, we deceive ourfelves in imagining, that we fhall be able to preferve our trade and navigation. The wifef Treaties of Commerce with nations will not effect it; they will eternally be evaded; fuch ftates and empires with whom we fhould make them, and become even upon a better footing with them in trade than any other nation is, cannot be compelled to purchafe our goods, when they can have others from 15 to 30 and 40 per cent. cheaper. Nor fhall we ever be able to put a fop to the infamous practice of fmuggling in Great-Britain and Ireland, and the Britifh plantations, while they thall be able to buy French and other foreign commodities fo much cheaper than they can Englifh. I could heartily wifh and rejoice that thefe things were confidered by our Rulers as they ought to be, and this great work was fet about in earneft; for if it is deferred, the malady will grow fo malignant as to become abfolutely incurable. It has proved a misfortune to both ftates, that Great-Britain and the States General, have not been happily cemented in their interefts; we mean more particularly in their commercial interefts; for nothing but a union founded on fuch a bafis, can influence them to act in concert heartily for their reciprocal fupport and prefervation, againft France, or any confederacy the court of Verfailles may form againft them both.
But while the Dutch experience it more for their benefit and advantage, to traffic in French commodities and manufactures, in preference to thofe of Engliif ; while the Hollanders find it turn more to their account to engage large capitals in the French trade, and carry the wares of that kingdom for fale to every part of the world, by reaton of their greater cheapnefs and readier vent than Englifh, 'tis no wonder, that thofe ftates are more united than England and Holland; but it is more aftonifhing, that the great men in England and Holland have not yet fallen upon fome meafures to accomplifh a defireable commercial union, as previoufly neceffary to a total union of all their mutual interefls. For till this is done, and effectually done, they will always be liable to be plunged into wars; which their hearty conjunction would often prevent.
However beneficial the Dutch may have found their neutrality when Great Britain has been engaged in wars with France, the States General may at length carry this maxim too far; for it is to be feared, that France will never lofe fight of attempting to annex the United Provinces to their crown, however they may temporize with then. The Dutch may alfo have reaion, and that, perhaps, not long firft, to dread the machinations of another great and intriguing power, whofe great aim feems to be to erect himfelf into a confl derable maritime and commercial power; to which end be may have his eye no lefs upon the United Provinces than fome other, and that acquifition would not a littie contribute to his extenfive views. Nothing might have a happier tendency to render abortive fuch fchemes of power, either on the fide of France, or others, to fwallow up Holland, than a perfect harmony and good undertarding, in all refpects, between

Great-Britain and the States General ; and this upon principles prefervative of the being of both ftates, and tending to the increale of their commerce and navigation. See United Provinces, Flandres, Holland.
WARWICKSHIRE is bounded with Worcefterfhire on the weft; Gloucefterfhire and Oxfordibire on the fouth; Derbythire and Staffordfhire on the north; and Northamptonfhire on the eaft : in circumference it is computed at 122 miles Its air is excellent, the foil rich, and its principal commodi ties are corn, malt, wool, wood, iron, coal, and cheeff. The molt confiderable of the many rivers and brooks it plentifully watered with, are the Avon and the Tame.
Coventrev is a large, populous, and rich city: the chief employment of the inhabitants, at prefent, is in the manufacture of tammies, and weaving the ordinary forts of ribbons, ef pecially black.
Tamworth is a fine pleafant town, noted for its good ale the river Tame parts it in the middle, fo that one half of this town is in this county, and the other in Staffordmbire. Here is a confiderable trade in narrow cloth, and fome other manufactures.
Birmingham is a large populous town; multitudes of the meaner fort of people are employed here in the iron-works, in which they are fuch ingenious artificers, that their performances in the fmall wares of iron and fteel are admired both at home and abroad.
Stratrord has a ftone bridge on the Avon, which is navigable to it by barges. It is a populous town, and its chief commodity is malt, which it makes in great abundance.
The navigation of the river Avon is obferved to be of va advantage to this county, and to the particular commerce of the city of Briftol; for by it they drive a great trade in groceries, iron, lead, and all heavy goods, which are ufually carried by water almoft as far as Warwick; and, in return, the corn, and efpecially cheefe, are carried back from Glocefterfhire and Warwickihire to Briftol.
Atherston, on the Stour, is famous for its cheefe fair, the greateft in England, on the 8th of September. Here the cheefe factors buy valt quantities, which they carry to Stourbridge fair.
Nuneaton is a pretty large well-built town, and has a manufacture of woollen cloth.

## WEIGHTS.

The foreign Weights of feveral of the chief trading parts of Europe compatéd.
The weights for heavy Goods may properly be divided into three forts. i. Great Weights, 2. Pounds, and, 3. Their Fractions, or fmall weights.

The great weights are the Schip pendt, which makes 300 or 400 pound, according to the different places ; the Load compofed of two bales, making likewife 300 or 400 pound weight; the Wage, about 165 pounds; the Quintal, making $100,104,105,110$, and fometimes 112 pound, or more, according to the cuftom of each place.
The hundred, which is divided into Quarterons; the Arob, between 25 and 32 pounds.
The Lispendt, 15 pound, more or lefs; the Stone, in fome places of 8 , in fome of 15 , and in fome of 16 more ; in others, more; the Pound confifts in fome places of 12, in fome of 14 , in others of 16 , which is moit common; and in fome of 40 ounces. And thofe Fracitions are varioufly fubdivided, according to the goods that are weighed, and the cuftom of the place.
The fractions of the Pound are the Mark, confiffing of 8 ounces, or half a pound; the Ounce, of 8 Gross, or Drachms, or 24 Deniers, or 20 Engels; the Gross, or Drachm, of 3 Deniers; the Denier, of 24 Grains; the Engel, of 32 Aces, or 30 Grains. In weighing of precious Stones, \&c. the Ounce confift of 576 Grains, but they reckonit 600 . Four Grainsmake a Carat.
The Silversmiths divide their Mark, which they call Ounce, into Octayes, Carats, and Grains. The Mark, or Ounce, contains 8 Octaves; the Octave, 20 Carats; and the Carat, 4 Grains.
In Holland, and particularly at Amsterdam, they make ufe of two forts of weights, to weigh all forts of goods and commodities fubject to be weighed by the town-weights, viz. The Mark, or Troy weights, and the Antwerp weights. The Mark, or Troy Weight, is that which is known all over Europe, and which is ufed by the goldfmiths in weighing gold and filver, confifting, as I have already faid, of 8 ounces, or half a pound; fo that, tol make the hundred weight, there muft be 200 Marks, which hundred weight, or 200 marks, makes $105 \frac{1}{2}$ pounds of Antwerp weight, or a little lefs; and the huudred weight of Antwerp makes but $94 \frac{4}{5}$ pounds weight of Amflemdam.

## W E I

As for Antwerp weights, they are only ufed there to weigh certain forts of filk, cochineal, fome drugs, and other things of that nature.
Nor is it of the Antwerp, but of the Amfterdam hundred of 200 marks, that the fchippendt is compofed ; by which weight the Holland cheefe, Riga hemp and flax, and many other fuch goods, are commonly fold. At Amfterdam the fchippendt is reckoned but 300 weight, and not 400 , as in divers other places.
The pound mark of Spain and Portugal is held to be about $\frac{1}{2}$ an ounce lefs than that of Amfterdam. However, thiey make ufe, in thofe countries, of feveral fmaller weights.
In France they ufe three different forts of weights in buying and felling of goods, viz. mark-weight, table-weight, and king's-weight, or cuftom-houle weight.
It is not neceflary to give further account of the markweight, of which I have faid enough. What they call tableweight, is that they make ufe of in feveral provinces in the kingdom, and particularly in Provence and Languedoc; which weight is between I8 and 25 per cent. fmaller than the mark-weight; though at the fame time the pound tableweight is compofed of 16 ounces, becaufe thofe ounces are fo much fmaller than the other. And though that diverfity of weight, in almoft every town in Provence, and High and Low Languedoc, occafions a great inconvenience to trade, the inhabitants of thofe towns cannot be prevailed with to alter their ancient weights and meafures.
Though fome who have wrote upon that fubject, have not taken notice of the difference between the weights of Touloufe and thofe of Marfeilles, 'tis certain that the latter are $5 \frac{1}{4}$ per cent. or thereabouts, fmaller than the former; fince 100 weight of Touloufe renders about $105 \frac{1}{4}$ at Marfeilles, and 100 weight of Marfeilles renders only about 95 at Touloufe.
Nor are they lefs miftaken, who reckon the weights of Marfeilles equal to thofe of Rochelle ; for, on the contrary, they differ almoft 25 per cent. as fhall be fhewn.
In fome places of france they reckon by the quintal, and in others by the hundred, and in fome places, both by the one and the other. And in that cafe, frangers muft take particular notice of making contracts, clearly to exprefs which of the two they mean.
By the hundred is meant barely 100 weight, and no more. And by the quintal is commonly meant 104 ; and in fome places much more, as we fhall fee hereafter. And even at Touloufe they add I pound to the 104, to make it good weight as they call it.
At Lyons they have two forts of weights. By the townweights all forts of goods are weighed but filks; and they reckon 14 ounces mark to the pound.
By the others nothing is weighed but filks; and the pound confifts of 15 ounces.
At Rouen they have likewife two forts of weights; thofe of the Viconté, and the mark-weight.
The weight of the Viconté is taken to be about 6 per cent. better than that of Paris, or the mark-weight, in weighing of wool; but in other cafes it is only 4 per cent. greater than the other. And fo it is divided into fractions of $5^{2}$, 26, and 13 pounds.
There being no Viconté weights lefs than 13 pound, all fine goods that are fold by fmaller weights are weighed by the mark-weight.
Of the Weights of Holland, and their conformity with thofe of other Countries.
We have already obferved, that the weights ordinarily ufed in Holland, and particularly at Amfterdam, are thofe called mark-weights; and though fome people make them equal to thofe of Paris, Straburgh, Befançon, and Bourdeaux, it is certain, there is fome difference between them.
Of the Weights of Brabant and Flanders, compared with thofe of Holland.
The difference between the weights of Amfterdam and thofe of Brabant, is about $5 \frac{3}{2}$ per cent. exclufively: fo that 100 pound of Amfterdam make $105 \frac{1}{2}$ of Brabant, Antwerp, \&c. and 100 pound of thofe places make $94 \frac{4}{5}$ of Amfterdam. As for the reduction of the one into the other, nothing is more ealy, fince you need only make the plain opesation of the rule of three, and fay,
If 100 pound of Amfterdam make $105 \frac{1}{2}$ of Antwerp, \&c. how many will $90 \frac{4}{3}$ make? And you will have juft roo-And on the contrary,
If 100 pound of Antwerp, \&c. make $94 \frac{4}{3}$ of Amfterdam; how many will $105 \frac{1}{2}$ of Antwerp make? And you will likewife have 100.
And fo you may make the reduction of any quantity whatfoever, of the weights of one of thefe places, into thofe of the other.
You may comprehend, under the name of thofe of Antwerp, the weights of more of the other towns of the fame province, and likewife of Flanders; though indeed there is fome fmall difference between them, as it has been calculated, according to the following account, viz.

## W E I

The fchippendt of Antwerp is 300 pound
The load - - 400
The wage
165
8
Of the Weights of Paris, compared with thofe of Am-
STERDAM.

Though there is but an inconfiderable difference between the weights of Amfterdam and thofe of France, we did nor think fit to pafs it by without notice. According to the trueft calculation, we reckon the weights of Paris 1 r per cent. heavier than thofe of Amfterdam. That is to fay, 100 pound of Amfterdam make $92 \frac{2}{3}$ pound of Paris; confequently 100 pound of Paris make $101 \frac{1}{3}$ pound of Amfterdam. The reduction of the one into the other is made in the manner mentioned above for the weights of Flanders and Holland, which is very plain.
The Weights of Rouen, compared with thofe of Am. sterdam.
For making the reduction of the weights of thofe two places, you need only to take notice, that
100 pound of Amfterdam make 96 pound $2 \frac{5}{2}$ ounces, Viconté weight'of Rouen; and
100 pound Viconté weight of Rouen make 104 pound of Amfterdam.
The Weights of Lyons, compared with thofe of HouLAND.
We have obferved that at $L$ yons they ufe two forts of weights, viz. the pound of 15 ounces mark for filks, and that of I4 ounces for other goods; and the latter being the townweight, obferve, that
Ioo pound town-weight of Lyons make 86 pound of Amfterdam, and roo pound of Amfterdam make 116 pound town-weight of Lyons, or thereabouts. Obferve alfo, that the weight for filk is $\frac{\mathrm{t}}{\mathrm{T}}$ greater than the town-weight: fo they reckon, that 100 pound filk-weight make 108 pound townweight, and roo town-weight make but $98 \frac{1}{2}$ pound filk weight, and a little more。
The Weights of Bourdeaux, compared with thofe of Amsterdam.
Though a certain miftaken author has averred, that roo pound of Amfterdam make ixs of Bourdeaux, the fame having been exactly compared, the difference was found to be only $\frac{1}{2}$ a pound or thereabouts, that the weight of Amfterdam proved beavier than that of Bourdeaux; fo that the difference being fo very fmall, it will not be necefiary to trouble the reader with further notice thereof:

The Weights of Rochelle and Nantes, compared with thofe of Amsterdam.
The difference between the weights of Rochelle and thofe of Amfterdam, is fo inconfiderable, that fome writers have afferted that they are equal; but upon a more exact enquiry, it appears,
100 pound of Amfterdam make 99 pound of Rochelle; and 100 pound of Rochelle make ior pound of Amfterdam, of very near - The weights of Nantes are equal to thofe of Rochelle, or but a very trifing difference.
The Weights of Toutouse, compared with thofe of Amsterdam.
The weights of Alby, Cartres, Lavour, and other towns of High Languedoc, are the fame with thofe of Touloufe. roopound of Amfterdam make it 8 pound of thofe places; and ico of thofe places make 84 pound $\frac{3}{4}$ of Amifterdam.
The Weights of Marseilies, compared with thofe of Amsterdam.
Though it is commonly faid that 100 pound of Amfterdam make only 120 pound of Marfeilles; upon an exact enquity mote thater, it appears that 100 pound of Amfterdam make $123 \frac{t}{2}$ pound of Marfeilles; and
make $123 \frac{1}{2}$ pound are reckoned 300 pound of the weight of that town; and by that they commonly fell the Levant and Turkey goods.
The Weights of Geneva, compared with thofe of A:ssterdini.
Monf. Sebaftian Peters, an author of Bremen in Germany, in a bcok he publined, fays, that roo pound of Geneva make $113 \frac{1}{2}$ of Amfterdam, and tiat 100 pound of

Amfterdam

Amflerdam make 88 pound of Geneva; but Mefieurs Marcet, brothers, and natives of Geneva, late merchants of Amfterdam, fay that
roo pound of Geneva make $112 \frac{3}{8}$ pounds of Amfterdam, And 100 pound of Amfterdam make 89 pound of Geneva.
The Weights of London and Dublin, compared with thofe of Amsterdam.
They make ufe of three different forts of weights at London, for weighing of goods and filver, viz. The great hundred, the hundred, and the weight of Venice.
For what they call the great hundred, they give 112 pound; and in fome forts of goods, only 104 pound, and that only to citizens of London; the ftrangers, and fuch Englifhmen as are nqt citizens, having only 100 .
But for ficiceries, drugs for dyers, and fome other fuch things, ftrangers and citizens promifcuoufly have 112 for 100 .
When flrangers fell their goods, they muft deliver them by the king's weights; but when they buy, they muft ufe the merchants weights, which are lefs than the king's weights. They weigh filver by the weight called the weight of Venice; 12 ounces of which make the mark.
According to the beft computation, 100 pound of London make $9 \mathrm{I} \frac{1}{2}$ pound of Amfterdam; and 100 pound of Amfterdam make $109 \frac{1}{2}$ pound of London.
The weights of Ireland are the fame with thofe of England.
The Weights of Scotland, compared with thofe of Amsterdam.
The weights of Scotland being about 4 per cent. greater than thofe of London, the reduction muft be made accordingly.

The Weights of Bremen, compared with thofe of Amsterdam.
The weights of Bremen being 3 per cent. lefs than thofe of Amfterdam, roo pound of Amiterdam make 103 pound of Bremen, or a little more; and ico pound of Bremen make $9^{6}$ found of Amiterdam.
The Weights of Hamburgh, compared with thofe of Amsterdam.
At Hamburgh they fell feveral forts of goods by the fchippendt of 300 pound, or 30 ftone of 10 pound each, to the fchippendt; which renders at Amfterdam 294 pound.
It is to be obferved, that at Hamburgh, retailers have the privilege to fell any goods, not exceeding 10 pound, by the weight of Cologne, which is 2 per cent. lefs than that of Hamburgh; but wholefale merchants muft fell by the weight of that place.
They have but one weight at Hamburgh, by which all goods are to be weighed; and the weighers, at their admiffion, take an oath before the fenate, and keep a record of all goods they weigh.
Ioopound of Amfterdam make ioz pound of Hamburgh; and 100 pound of Hamburgh make 98 pound of Amfterdam, or thereabouts.
The Weights of Lubeck, compared with thofe of Amsterdam.
There is about 5 per cent. difference betweeen the weights, of Lubeck and thofe of Amfterdam. For
Loo pound of Amfterdam make 105 pound of Lubeck; and 100 pound of Lubeck make $95 \frac{1}{4}$ pound of Amfterdam.
The fchippendt of Lubeck is sompofed of 320 pound;
The ftone, of ro pound; and,
The lifpends, of 16 pound.
The fchippendt renders at Amfterdam about 305 pound.
The Weights of Copenhagen, compared with thofe of Amsterdam.
The fchippendt of Amfterdam is compofed of 20 lifpendts, or 32 pounds; and 100 pound of Amfterdam make $101 \frac{1}{4}$ pound of Copenhagen; and 100 pound of Copenhagen make $98 \frac{3}{4}$ pound of Amfterdam.

The Weights of Bergen in Norway, compared with thofe of Amsterdam.
The weights of Bergen are by fome reckoned equal to thofe of Copenhagen, but upon fcrutiny it has been found that there is fome difference. For
100 pound of Amfterdam make $95 \frac{1}{5}$ pound of Bergen; and 100 pound of Bergen make 105 pound of Amfterdam. Some reckon the fchippendt equal to 300 pound of Amiterdam, but it is commonly reckoned 315 .

The Weights ofS.tockholm, compared with thofe of Amsterdam.
The fchippendt of Stockholm, for copper and fuch goods, conififs of 320 pound ; but that ufed for other commodities is reckoned 400 .
The firit renders at Amfterdam $273 \frac{1}{2}$ pound ; the laft, 342. 100 pound of Amfterdam make 1 I7 pound of Stockholm; And Ioo pound of Stockholm make $85 \frac{1}{2}$ pound of Amfterdam.

The Weights of Dantzic and Revel, compared with thofe of Amsteruam.
They weigh fine goods in thofe places by the Stone of 24 pound.
Almonds, rice, wax, and fuch other goods, are weighed by the Great Stone of 34 pound
Brafs, tin, lead, and other fuch goods, are weighed by the great hundred, of 120 pound.
I 6 pound, mark-weight, make 1 lifpendt.
20 lifpendts make the fchippendt of 32 pound.
But the fchippendt of Revel is reckoned 400 pound.
100 pound of Amiterdam make II2 $\frac{x}{2}$ pound of Dantzic ; and ioo pound of Dantzic make 89 pound of Amfterdam.
The Weights of Stetin, compared with thofe of AmSTERDAM.
See what has been faid of the weights of Copenhagen; to which thofe of Stetin are reckoned equal, or within a very fmall matter.
The weights of Koningłberg confift of 400 pound, or Io ftone of 40 pound each; and it renders at Amfterdam 306 or 307 pound.
When burghers of Koningiberg buy of Atrangers, they allow $4 \frac{x}{2}$ or 5 per cent. good weight.
roo pound of Amtterdam make 125 pound of Koningfoerg ; And 100 pound of Koningberg make 80 pound of Amfterdam.
The Weights of Riga, compared with thofe of Amstrer* DAM.
The fchippendt of Riga confifts of 20 lifpendts, and renders at Amfterdam about 330 pound.
100 pound of Amfterdam make r2I $\frac{x}{2}$ pound at Riga; and 100 pound of Riga make $82 \frac{1}{2}$ pound of Amflerdam.
The Weights of Frankfort and Nuremburgh, compared with thofe of Hollann.
The ordinary cuftom of Frankfort and Nuremburgh, is to allow 120, and fomerimes they allow the length of 132 , to the hundred.
100 pound of Amfterdam make 98 pound of Frankfort and Nuremburgh; and
100 pound of Nuremburgh make 102 pound of Amfterdam.
The Weights of Bern in Switzerìand, compared with thofe of Amsterdam.
The weights of Amilerdam are about in per cent. greater than thofe of Bern; for
roo pound of Amfterdam make iry pound of Bern; and Ioo pound of Bern make $9^{\circ}$ pound of Amiterdam.

The Weights of Leipsic compared with thofe of Amsterdam.
The difference between the weights of thefe two places is not fo confiderable as fome authors have made it, viz. 8 per cent.; for upon enquiry it appears, that
100 pound of Amfterdam make 105 pound of Leipfic; and 100 pound of Leipfic make $95 \frac{x}{4}$ of Amfterdam.

The Weights of Naumburgh and Hall, compared with thofe of Amsterdam.
There being but a very inconfiderable difference, if any at all, between the weights of thefe two places, and thofe of Leipfic, I refer the reader to what is faid thereof before.

The Weights of Breslaw in Silesia, compared with thofe of Amsterdam.
The difference between the weights of thofe two places is very confiderable, being, according to the exacteft computation, no lefs than 25 per cent. So that
roo pound of Amfterdam make 125 pound of Breflaw; and 100 pound of Breflaw make 80 pound of Amfterdam.
The Weights of Cologne, compared with thofe of Amsterdam.
The weights of Amferdam are 4 per cent. greater than thofe of Cologne. So that
100 pound of Amfterdam make 104 pound of Cologne ; and 100 pound of Cologne make 96 pound of Amfterdaim.
The Weights of Liege, compared with thofe of AmsterDAM.
The weights of Amfterdam have likewife the advantage of thofe of Liege, about 5 per cent. or little more; for 100 pound of Amfterdam make $105 \frac{1}{4}$ pound of Liege; and. 100 pound of Liege make 95 pound of Amfterdam.
The Weights of Genoa, compared with thofe of Amsterdam.
At Genoa they ufe five different forts of weights in buying and felling goods.
The firft they call the Great-Weichts, which are ufed in the cuftom-houfe,

## W E I

## W E S

The fecond they call Cash-Weights, being what they weigh the piaftres, and other filver fpecies, with. The third they call Quintero, which is the common hundred, ufed for bulky goods.
The fourth they call the Great Balance, by which the $\dot{y}$ weigh raw and unwrought filks. And
The fifth they call the Small Balance, for weighing fine goods.

They reckon that $90 \frac{4}{5}$ rotoli, great-weight, or $66 \frac{2}{3}$ rotoli, cafh-weight, or 100 rotoli, common-weight, or 144 pound, great-ballance, or 153 pound, fmall-ballance,
make 100 pound of Amiterdam.
The Weights of Leghorne, compared with thofe of Amsterdam.
The pound of Leghorne confifts of i2 ounces, markweight. They commonly fell goods by the quintero, which in fome cales is reckoned 150 , in fome 151 , and in fome cafes 160 pound.
And formetimes they fell by the thoufand.
Wool and fifh are fold by the quintero, of 160 pound.
100 pound of Amfterdam make 145 pound of Leghorne; and 109 pound of Leghorne make 69 pound of Amfterdam.
And you may likewife obferve, that
noo pound of Legborne make 85 pound of Marfeilles; and 100 pound of Marfeilles make $1 \times 7 \frac{3}{4}$ pound of Leghorne.

The Weights of Milan, compared with thofe of Amsterdam.
The pound of Amfterdam makes I pound II ounces of M:lan, or a little more.
The pound of Milan makes $9 \frac{x}{2}$ ounces of Amfterdam, or a little more. So that
100 pound of Amfterdam make 168 pound of Milan; and 100 pound of Milan make $59 \frac{1}{2}$ pound of Amfterdam.
Some authors have made the difference greater, but this account is conformable to the exacteft computation.
The Weights of Venice, compared with thofe of Amsterdam.
At Venice they ufe two forts of weights, one for wholefale bargains, the other for retail; and the difference between thefe weights is very confiderable.
For 100 pound, wholefale grofs weights, make 158 pound, retail weights; and
Ioo pound fmall or retail weights, make but $63 \frac{1}{2}$ pound, grofs weights.
Ioo pound of Amiterdam make 166 pound, fmall weights of Venice; and
100 pound, fmall weights of Venice, make 00 pound of Amfterdam.
They allo commonly reckon that 100 pound of Marfeilles make 134 pound, fmall weights of Venice.
The mark of Venice, both at the mint and among the goldfmiths, is reckoned 8 ounces, and the ounce 144 carats. They likewife divide the ounce into 4 quarters, and the quarter into $3^{6}$ carats, 1152 of which compofe the mark. Gold and filver thread is weighed by the ounce of $13^{\prime} \mathrm{ca}-$ rats; whereas the fimall ounce confifts only of 120 ; and the carat is compofed of 4 grains: for though one of thofe weights be heavier than the other, they are both divided in the fame manner.
Spiceries are fold by the load of 400 pound, fmall weights.
The weights of Naples and Bergen, compared with thofe of Holland.
As there is little or no difference at all between the weights of Naples and Bergen, I have comprehended them both in one article.
100 pound of Amfterdam make 169 paund of Naples, 8 cc .
And 100 pound of Naples, \& cc. make 59 pound of Amfterdam.
The Weights of Spain, compared with thofe of Amsterdam.
The arobe of Seville and Cadiz confifts of 25 pound, and 4 arobes make the quintal, the pound being reckoned of 17 ounces.
But the quintal for iron is reckoned at Bilboa and St Sebaftian's 155 pound, the pound confifting of 16 ounces.
100 pound $\quad\{106$ pound of Seville and Cadiz,
Amft. make $\left\{\begin{array}{c}\text { and } \\ 108 \text { pound of Alicant; and }\end{array}\right.$
100 pound of Seville and Cadiz make $94 \frac{1}{2}$ pound of Amfterdam, or a little more.
And 100 pound of Alicant make $92 \frac{x}{2}$ pound of Amfterdam, or a little more.

The Weights of Portugal, compared with thofe of Amsterdam.
The arobe of Portugal confifts of $3^{2}$ pound, which render VOL. II.
betwern 28 and 29 pound of Amfterdam; and 4 arobes make the quintal.
100 pound of Amfterdam make $154 \frac{x}{2}$ pound of Libion, or a litte more: and
100 pound of Lifbon make $87 \frac{1}{2}$ pound of Amfterdam, or a little more.

The Weights of Constantinople, Smyrna, Leyda; Aleppo, and Sicily, compared wilh thofe of Amsterdam.
100 rota's of Conftantinople and Smyrna make ri4 pound of Amiterdam.
100 rota's or damarquins of Leyda, make 380 pound of Amfterdam.
100 rota's or acres of Leyda make 486 poünd of Amfterdam. 100 rota's of Aleppo, for coarfe goods, make 455 pound of Amfterdam.
roo rota's of Aleppo; for Perfian filks, make 430 pound of Amfterdam.
Ioo rota's of Aleppo, for white filks, make 440 pound of Amfterdam.
100 rotolo's of Sicily make 162 pound of Amiterdam'.
See our article Measures.
WESTMORELAND is an inland county, and has Lancafhire on the fouth and fouth-weft; Cumberland on the weit and north-weft; and Yorkfhire and the bifhopric of Durham on the eaft and north-eaft; and is about 120 miles in compits.
Its air is fweet, healthful, and pleafant, but fomewhat fharp in the mountainous parts; the vallies are pretry fruitful, efpecially in the meadows near the-rivers; and the northerri parts afford plenty of arable land, which bears good ftore of corn.
Among the mountains, in the fouth part of the country, lies Winander Mere, faid to be the greateft lake in England: it is about 10 miles in length, and laid to be of a vaft depth in fome parts of it, and well ftored with the chare, a fort of fifh rarely found, except among the Alps, and is reckoned a fort of golden Alpine trout; it is baked in pots, and fo fent to London, and other parts.
The Ulles-Water is another lake well ftocked with fifh; and has fome chares too, but not in fuch plenty as the other.
Appleby is the county town, but is neither rich nor beautiful. It has the beft corn market in all thefe northern parts.
Kendal, upon the river Can, is much fuperior to Appleby in trade, buildings, and the number and wealth of the inhabitants, and is indeed the largeft town in the county; being inriched by the induftry of the townfmen, and the woollen manufacture, with which they have drove a trade throughout England for fome ages. It is of note, alfo, for the manufactures of cottons, druggets, ferges, hats, worfted and yarn flockings, \&c.
Kirkby Lonsdale, the chief town of Londdale, i. e. a vale upon the Lone, is a pretty large town, with a woollen manufafture.
Kirby Stephen, on the river Eden, is noted for weaving yarn ftockings.
Ambleside is another town noted for a manufacture of cloth. It ftands on the upper corner of Winander Mere.
Milthorp, at the mouth of the Can, is the only fea-port town in the county, commodities being brought hither in fmall veffels from Grange in Lancafhire.
WESTPHALIA in Germany. This circle ftretches along the weft fide of the Wefer, from the German Ocean on the north, to Heffia on the fouth, and between Lower Saxony on the eaft, and the Netherlands on the weft. The air, efpecially in the north part, is very cold, and great part of the foil marfhy and barren; however, it has plenty of corn and pafture, but the fruit is very ordinary, and ufed chiefly to feed the hogs, which are numerous, and of an excellent kind; fo that the bacon they fend abroad is very much efteemed. It is divided into feveral dominions or provinces.
Osnabrug, which is the capital of the bifhopric of that name; is a neat well-built city : the inhabitants, who are very induftrious, not only breed abundance of hogs and other cattle, but have a confiderable trade in making linen, in brewing a palatable, though thick fort of beer, called bufe, and in baking the beft white bread in Weftphalia.
Oldenburg has a good trade by barges, which come up froms the Wefer to its bridge.
Pyrmont, famous for its mineral waters, lies on the borders of Hanover. It is the capital of a county. There is a great refort of German and other nobility hither to drink the waters, which are preferred even to thofe of the Spa, and exported far abroad from Bremen, to which they are carried by the Wefer.
LUDE is of note alfo for its medicinal fountain, for which it is much frequented: this commonly goes by the name of Pyrmont water.
Hoxter, on the fiver Wefer, is a fair confiderable trading town.
Soes $\mathrm{S}_{\text {is }}$ a populous city on the river Arfe, but having nio trade, is not very rich.
DORTMUND, though a fmall place, is rich and populous, havII I
iny a pretty good trade, and communication with the Rhire by its river Empler.
Ceeve, the metropolis of the duchy of that name; is fo called Cleve, the metiopolis of the diffs, and on the declivity of a bill, between the R hine and the Mace, is one of the fineft countries of Germany. It is now friall, büt well bult and peopled. The river Hel, which runs by the foot of is caftle, is navigible by fmall vefiels to the Rhine.
EMMERICK is a large, rich, beautiful town, pleafantly fituate on the caff fide of the Rhine, and has a pretty good trade.
CALCAR, on the river Men, which falls into the Rhine, foon after it was built grew populous and rich, by a trade in lifien; but fince one of its dukes built a vaft granary here, for the buors to bring their corn to, it has been more confiderable for making malt and beer.
esel, called Nether Wesel, to diftinguifh it from $\mathrm{U}_{\mathrm{p}}$ ESEL, Called NETHER Wefel, in the electorate of Treves, ftands on the caft Side of the Rhine, near the mouth of the river Lippe. It is not only a large and well-built town, but populous, and well feated for trade. It grew rich by the concourfe of merchants, who fled hither from the perfecution in the Spanifh Netherlands:
Duisburg is a fmall city on the Roer, which falls a little lower into the Rhine. Fairs were held in the town formerly, which brought a great trade to it, but are fince removed to Frankfort.
Dusseldorp has its name from the little river Duffel, that here falls into the Rhine. The town is large and well built. Here are three weekly markets for corn, which is imported hither from the Low Countries, and exported in great quantities to Cologne, and other parts of Germany.
Solingen, a fmall city on the river Wipper, is only noted for making good cutlers ware.
Aken, by the French called Aix la Chapelle, is of chief note, and greatly frequented on account of its baths.
The adjacent country abounds with corn, fruit, and pafturage. They havealfo rich coal-mines, befides others of iron, lead, vitriol, fulphur, and lapis calaminaris, and are well fupplied with neceflaries by the Rhine and Maefe.
WETTERAW in Germany. This is the general name of the county that lies between Heffe on the north, the river Nayne on the fouth, the Rhine on the weft, and the county of Keineck on the eaft. The principal dominions of it are,
The county of Nassau, which is bounded on the north by Weftphafia; on the weft by Berg, Triers, and the Rhine; on the eaft by Heffe and Solms; and the electorate of Mentz on the fouth. The foil and product of it is various. In feveral parts they have good mines of iron, lead, copper, and other metals.
Dilemberg on the river Dilla, has a good trade in cattle and woollen goods.
Sigen, near which there is a very good iron mine, ftands on the river Siega.
Embs is noted for its baths.
Herborn, upon the river Dilla, is a dity of a pretty good trade in cotton and woollen cloths.
$W_{\text {ISBADEN }}$ is an ancient large town frequented by reafon of famous hot baths in it, from whence it has the name.
Hanau, the capital of a county or divifion fo called, ftands pleafantly on the river Kintz, and is reckoned one of the neateft and moft regularly built towns in Germany: it is much frequented by merchants of feveral nations, particularly the French and Dutch. The Walloons here have eftablifhed fiveral manufactures, viz. woollen ftuffs, fnuff, 8cc.
But the chief of the imperial and free cities in Wetteraw, of which it is the capital, is FRANKFORT. It is a large, populous, and rich city;, it has a great trade by the Mayne and the Rhine, and feveral other rivers which fall into them, and is very well fituate for bringing corn and wine in abundance from the Palatinate and Franconia. It has two annual fairs, frequented by merchants with all forts of commodities, particularly books from molt parts of Europe, of which they diftribute printed catalogues; fo that there is greater choice here than in any other town in Chriftendom, during their mart, which lafts three weeks.
On the north lide of the city is a fpacious horfe-fair or market, where a valt number of good horfes are fold to the French king, and the neighbouring princes, particularly the former, who büys fome thoufands in a year to remount his cavalry. The Jews are the chief jockies.
WILTSHIRE is bounded on the weft with Somerfethire, on the ealt with Lerkfhire and Hamphire, on the north with Glouceflerfhire, and on the fouth with Dorfethire and part of Hamphire, and is 140 miles in circumference.
The air is very fwect and healchy. The foil of its vales is very fruitful, and affords grear quantity of as gocd cheefe as ariy in England; and though that of the hills is in fome places chalky, and barren enough, yet its cheapnefs makes it benef̌icial to the neighbouring farmers, fome hundreds of acres having beein sented at a groat an acre. But the numerous flock: of dheep fed there, turn much more to the profit of the proprietors. And the abundance of wool thereby produced, invited the inhabitants to fall very much into
the clothing trade; and the bcft broad cloths; both white' and dyed, in England, aie made in the weft and north purts of this county, and indeed in the fouch and eaft purts too, but not in fuch quantities.
SAlisbury is a large, well-built, pleafant city. Befides the manufacture of flannels, druggets, and the cloths in particular, called Salubury, whites, for the 「urkey irade, bere is a confiderable trade in bone-lace; and parts thofe commodities, and by its markets, fairs, \&c. it may be looked upon as flourihing a city as any in the kingdom, that depends entirely upon a home trade.
Hindon is a fmall old borough towards the borders of Dorfethire. Its market is chiefly for cattle, and its manu-- facture a fort of fine twift, which employs even the children.of the poor.
WeSTbuty is another fmall borough: Its chief manufacture is coarfe broad cloth.
Calne is a fmall, but populous well-built town. Its chief
manufacture alfo in cloth manufacture allo is cloth.
Devizes is an old-bult town. Its chief trade, befides malting, is the woollen manufacture, efpecially druggets, and its market is much frequented for corti; wool, horfes, and all forts of cattle.
Chippenham, on the fiver Avon; isa large, populous, weilbuilt town. The chief manufacture here is cloth; but its main fupports are, its marker, and its thoroughfare between London and Briftol.
Malmsbury is a neat town; and carries on a confiderable trade in the woollen manufacture.
Mariborough is an ancient borough; but the chief tradefmen are fhopkeepers, there being few manufachurers.
Trowbrdge is alfo an-ancient town, in the weft part of the county. The chief manufacture is broad cloth, and, for moft part, of the fine fort, made with Spanifh wool; and fome clothiers have formerly got great eftates.
Bradiford is alfo noted, as well as Trowbridge, Melkrham and other adjacent towns, for the fineft broad cloths, of which fo many were made about 40 years ago, when the trade was in its mof flourifhing ftate, that it was no extraordinary thing for clothiers hereabouts to be worth from 10,000 to 40,000 . and many of the gentry of thefe parts have been originally raifed from this truly noble manufacture.
Cosham is a pleafant village. The woollen manufacture is the chief employment and fupport of this place, here being fome confiderable clothiers.
Warminster has a flouriming market for corn, and the malt trade here is greater than in any other town in the weft of England; Briffol, and many places in Somerfethlire, being fupplied with it from hence. Here is alfo a confiderable trade in wnol and cloth.
WINE is made of the expreffed juice of the grape, which immediately after the preflure is called muft, and being fermented, becomes wine *. The fermentation caufes a feparation of the grofs tartar, and the vifcous part of the muft from the pure fuphureous and oily ones, in which are the fpirit and effential falt. The folid part of the tartar adheres to the fides of the veffel, and the vifcous fall to the bottom.

* The difference of flavour, tafte, colour, and body in wines, is, perhaps, as much owing to the different manner and time of preffing, gathering, fermenting, \&c. the grape, as to any difference in the grape itfelf. In Hungary, whence tockay, and fome of the richeft and highelt flavoured wines come, they are extremely curious in thefe refpects: for their prime and moft delicate wines; the grape is fuffered to conprime and moft delicate wines; the grape is suffered to con-
tinue upon the vine, 'till it is half dried by the heat of the fun ; and if the fun's heat fhould not prove fufficient, they are dried by the gentle heat of a furnace, and then picked one by one from the ftalks. The juice of this grape, when prefled out, is of a fine flavour, and fweet as fugar: this, after due fermentation, is kept for a year, and then racked from the lees, when is proves a generous, oily, rich wine, and is fold at a very high rate.
The Hungatians prepare a fecond fort of wine, by collect. ing together the better kind of grapes, carefully picking the fruit from the ftalks, and then prefing out the juice: this is extremely fweet, and is made richer by infufing in
it, after it bas fermented for fome days, a fufficient quanit, after it bas fermented for fome days, a fufficient quanitty of half dried grapes. This wine is very fweet, oily, of a gratefal tafte, and retains there qualities for a long time. There is a third fort, made from the pure juice of the fame kind of grape without any addition. This is a more brifk and lively wine, and far lefs fweet. They likewile prepare a fourth fort, from grapes of different goodnertheis an excellent wine. Thefe Hungarian wines are remarkable for preferving their fweemeff, and for the delicacy of their tafte and imell: they likewife do not grow cafily vapid, and hay be kept in perfection for many years.
The practice of the Hungarians, which we have extracted from Hoffman's obfervations, fairly points out a method of improving munf, or the juice of the grape, fo as to make it of any alfignable degree of richnels and ftrength; make it of any affignable degree of richnels and emen' and the celebrated Dr tahin has give to make them ftrong of improving poor, thin wines, loas to make their natural and full bodied, without any ways alkring this
flavour or tafte.

This he effets by expofing a quantity of the ligure, in pro jer vefuls, to the eclion of a cold, freezing arr, which foon congealtng the watery patts alone, fuffers the richer to te roured from them. Fy. this means, the product of our own couniry, cyier, may be made of luch a degree of ftrengh nod richnefs, as to cqual, if not to exceed, the ftrongeft bodud woucs, and to Hand the allernatives of the winter's cold, and the fummer's fun, without alteration; and if as medi care was t..ken in the cul ure, choice, and manugement of the fruit, and particularly in the proffute, and now wary fermentation of the juice, there is good reaton to expedi, that the flavour and tatte would not fall far fhort even of the more excellent wines., See Stahiii Zymotectin. tund. Opurc Phyfico-Med. Schediafma commendans concencrationem vini aliorumque, and Dr Shaw's Comment on this Tract, in hijs third Effay in artificial Phiiofophy. Miller's Gardeners D.thonary.
The tharp fprightly wines, Champaigne; Burgundy, Nants, Bourdeaux, \&c. being moft impregnated with effential falt, yield more firit than fweet Spanifh and Mufcate wines; becaufe they are more loaded with a vifcous fubftance *.

- The priaciples of wines are, an inflammable fpirit, a phlegm or watery liquor, an arid falt or tarcar, and a fulphureous oily fubflanice. Wines, therefore, greatly differ in their tafie, frell, and virtue, according to the various proportions and manner in which thefe princtples are combined. There is in fome wines another principle, which is a foft, oily, mild, vifcid, fweet fubflance; and is particularly obfervable in fack, Frontiniac, and the more generous kinds of Hungarian wine. The fulphureous, oily principle, is more fubtile and grateful in fome wines, than in others: thus Rhenith and Hungarian wines yield a far more delicate ard fubtile fpirit, than chofe of France and Mifnia : the very fmell of good old Rhenifh wine, has a remarkable effect in refrelling the fpirits. Nor is the acid principle, or tartar, ice's different in wines: fome abound with it, while others have it more fparingly, but of a more fubtile kind, as the Spanifh wines: the tartar of fome wines, particularly that of Molelle, has a bitterifh, nittous cafte, whence they are held to be lax tive and diueé..c.

## R E M A R K S

The great expence to which this nation is put for foreign wines, fhould induce us, methinks, to make our utmoft efforts to try whether we cannot amply fupply ourfelves with this commodity, of which we are fo fond; efpecially fince fome of thofe countries from which we take great quantities of wine, bave begun to take léfs and lefs of our Britifh manufacture: wherefore, to retaliate upon them in their own way, may not be impolitic.
It is commonly objected againft this attempt, that our climate will not admit hereof to any confiderable degrec. I am afraid, that has never been effectually tried; but if it has not, for want of proper management, fucceeded upon the grape, I am inclined to believe, that we have many other productions in Great-Britain, that will afford exceeding good wines. It has, however, been reported for thefe twelve months paft, that feveral gentlemen in different parts of England, are going on in the planting and improving of vineyards, fome wines having been made in this kingdom of good ftrength, and of a more delicate flavour than the beft growths of France. It is greatly to be wifhed they may meet with fuccefs, fince The nation pays fuch fums for thofe liquors, as tend to impoverifh us, and augment the ftrength of our rivals. A nother, and a greater conlderation is, the health of the drinkers; for moft forcign wincs are fophifticated; whereas it will not be she interelt of the Englifh planter to fophifticate his wine, $: s$ he would thereby lofe his credit, and the fale of it.
Bue if Great-Britain nor Ireland fhould be found to afford good wines fufficient for our own confumption, might not our own plantations anfwer the end effectually? Certainly they might; but we have not room to thew how that may be effectually done. Some other opportunities may poffibly hes eafter offier.

WÍSBUY LAWS of Commerce and Navigatión.
Before we reprefent the laws of Wifbuy, we fhall give fome account of Guthland, and that city, the capital of it, once famous for trade above all the cities in the north. The ifle of Gothland is futuated by the Gothic Sea, in the diocefe of Licopen. It formerly belonged to the king of Sweden, but was afterwards annexed to the crown of Denthark.
According to Juhannes Magnus, a Gothic hiftorian, book 23. chap 2. it was fo called for the gordnefs of the country; for Goth fignifies GOOD: and Olaus Magnus, bock 2. fays: It deferves that name for many reafons. There ate feveral very fine ports in it, whofe entrances are fafe and eafy: it is rich in catule, of which it fecds prodigious numbers; abounds in venifon, fifh, fortfts, woods, pitch, tar, and fine marble. In the north-eait part of the inland, was a very fair and noble fia-port town called Wiftuy, built by foreigners, who came to live in the country: upon which account the citizens of Wifbuy had frequent quarrels with the Gothlanders, or inhabitants of the ccuntry, of whom they made a terrible flaugh-
ter in the year 1283. After which the citizens, to deferd themfelves azainft their enemies, obtainel a perminion, frund Magnus king of Sweden, to wall therr city, and erect ballions, and other fortifications. They flourifhed more and more, and grew great by their trade ares navigatiw, to wheh they entirely gave themfelves up: infomuch that this town was a long while the axis and moft colebrated masket of Europe, there being no city fo full of merchants, and fo famous for its commerce. Hither came Swedcs, Euffians; Danes, Pruffians, Livonians, Germans, Finlanders, Vandale, Fiemings, Saxons, Englifh, Scoes, and French, to tiake. Each nation had their quarter, and particularly ftreeis for their fhops and warehoufes. All ftrangers were fafe and welcome there, and enjoyed the fame privileges as the townfmen themfelves. The magiftrates of this city had the juridiction, or rather the arbirrament, of all caufes of fuits relating to fea affairs. Their ordinances were fubmitted to in all fuch cafes, and paffed for juft on all the coal.s of Europe, from Mufcovy to the Mediterranean. Thus much we have taken from Olaus Magnus, lib. 10. cap. 16. and baron Herbeilain In Rerum Mufcovitatum Commentario; p. 118. In the courfe of time, this town was entirely deftroyed, except the citadel, which ftands to this day. The Gothic hiftorians do not teil us when nor how its ceffruction came upon it, only that it was through civil diffenfions which arofe from trifles, but ocfioned great factions; which fet thern fo againft one another, that it ended in the entire ruin of them all, city and citizens. The ruins of it are now to be feen, and under them are often found tables of marble, porphyry, and jafper, witneffes of the ancient fplendor and magnificence of the citizens. The houfes were covered with copper, the windows gilt with goid, and all that is faid or that is difcovered of it, fhews the ineftimable riches of the inhabitants in times paft. The citizens who furvived the ruin of the city, retired to the country of the Vandals and Eaftern Saxons, who were enriched with the wealth of thefe refugees. Albert king of Sweden rebuilt it , and granted great privileges to all that fhould come and inhabit it : but it never could recover its trade and former magnificence.
It was in this city of Wifbuy that the fea laws and ordinances, which the Swedes brought into credit, were compofed; they were received as righteous and juft, and are kept in the Teutonic language till now. The Germans, Swedes, Dancs, Flemings, and all the people of the north obferve them: but none have been fo curious, as to preferve the date and the remembrance of the time whien they were compofed and publifhed.

ARTICLEI.
Whatever mariner, whether pilor, mate, or failor, binds or hires himfelf to a mafter, if he afterwards leaves him, he fhall refund what wages he has received; and befides that, pay balf as much as the mafter had promifed him for the whole voyage. And if a mariner has hired himfelf to two feveral mafters, the firft that hired him may claim him, and force him to ferve him. Neverthelefs, he fhall not be obliged to pay him any wages at all for the whole voyage, unlefs he does it of his own good-will.

## A R T I C L E II.

Every pilot; mate, or mariner, that does not undeffand his bufinefs, Mall be obliged to repay to the mafter whatever wages be had advanced him, and be befides bound to pay half as much more as he had promifed him.

## ARTICLE.III.

A mafter may turn off a mariner, without any lawful caufe given, before he fets fail, paying him half what he bad promifed him for the voyage. After he has fet fail, and is gone out of his port, that mafter who turns off a mariner without lawful caufe given, is obliged to pay him all his wages, as much as if he had performed the voyage.

## ARTICLEIV.

No mariner mall lie or ftay a night afbore without the malter's leave, on pain of forfeiting two deniers, nor fhall be unmoor the hip's boat in the night, under the fame penalry: By deniers here are underftood, thofe of which 24 make an ounce of filver. The double deniers are now called carolus's, or grand blancs, by the French and other nations.

ARTICLEV.
The mariners thall have three deniers a laft for loading and three for unloading, which is to be reckoned ofly as their wages for guindage or hoifing *. Thefe dutiss are never fixed on account of the dearnefs of provifions and the value of mo-ney, which changes and increafes daily. The rate of guindage or reguindage, is commonly in France five fuls a laft, which is two fols fix deniers Tournois a ton.
${ }^{*}$ i. e. Loading or unloading.
ARTI.

## ARTICLEVI

It is not lawful to arreft or imprifon the mafter, pilot, or masiners of a fhip, in an action of debt, when they are ready to fail; but the creditor may feize and fell any thing he finds in the fhip, that belongs to his debtor. L. I. de Naviculariis, lib. iv. cod.

## ARTICLE VII.

A fhip being freighted for all the fummer, the feafon thall end on the feaft of St Martin, or the inth of November.

## ARTICLE VIIT.

Whoever fhall make ufe of another man's lighter, without his leave, fhall pay the owner four fols a day, unlefs it was in a cafe of neceffity, as of fire, or the like.

ARTICLE IX.
If any one has occafion to have a debt witneffed, he need not carry ftrangers aboard, but may make ufe of the people in the fhip. The fame he may do in all acts where witnefles are neceffary, lib. ıo. cod.

## ARTICLEX.

It is not lawful to fell or mortgage a veffel let out to freight, but it is lawful to freight it or underlett it to others for the fame time, and the fame voyage. The words of this article are, de la frotter ou fous louer a dautres pour le mefme temps, \& pour mefme voyage: which we think we have rendered right, notwithitanding the difficulty there feems to be in the fenfe, or the equity of this law.

## ARTICLEXI.

If a fhip that was freighted for a voyage is fent upon another longer than that, or upon feveral voyages, if there's no proteftation or diffent entered againft it, the freighter fhall pay but half the damage that may happen to the fhip in fuch longer voyage or voyages.

## A R T I C L E XII

If a maft, fail, or any other tackling is unfortunately loft when the Chip is under fail, or otherwife, the lofs fhall not be brought into an average. But if the mafter is obliged to cut his maft by the board, or fpoil any of his tackling for the prefeivation of the fhip, the bottom and the cargo ihall make good the damage by an average.

## ARTICLE XIII.

The mafter thall not fell the fhip, nor any part of her tackling, without the confent of the owners; but if he wants victuals, he may pawn his cables and cordage, always obferving to have the advice of the mariners.

## ARTICLEXIV.

The mafter being in port, ought not to depart and fet fail without the advice and confent of the major part of the mariners: if he does, and there happens any lofs, he is bound to make fatisfaction.

## ARTICLEXV.

The mariners are obliged, to the utmoft of their power, to fave and preferve the merchandize, and for doing it ought to be paid their wages, but not otherwife. It is not lawful for the mafter to fell the fhip's cordage, without the confent of the owners or factors; but he is bound to preferve all, as much as in him lies, on pain of making fatisfaction.

## ARTICLE XVI.

The mariners are obliged to fave as much as they can, and the merchants may take away their goods, paying the freight, or fatisfying the mafter: otherwife the faid mafter may fit out his fhip, if he can do it in a little time, in order to accomplifh his voyage: if he cannot do it, he may relade his merchandize upon other veffels bound for the port to which he was to carry them, paying freight.
There is fome difficulty in this article alfo, and, perhaps, the error is in the French verfion; we not underftanding the Teutonic, which is the original, and making ufe of the tranfJation printed by authority at Roan.

## ARTIGLE XVII.

The mariners fhall not go out of the fhip without leave of the mafter, on pain of paying the damage that may happen in tibeir abfence, unlefs it is when the Chip lies afhore, moored
with four cables: in fuch cafe, they may go out of her for a little time, taking care not to trangrefs in it.

ARTICLE XVIHI.
A mariner being afhore in the mafter's or the fhip's fervice, if he fhould happen to be wounded, he Ghall be maintained and cured at the charge of the fhip: but if he goes afhore on his own head, to be merry and divert himfelf, or otherwife, and happens to be wanded, the mafter may turn him off, and the mariner fhall be obliged to refund what be has received, and, befides, to pay what the mafter fhall be forced to pay over and above to another whom he fhall hire in his place.

## ARTICLE XIX.

If a feaman falls ill of any difeafe, and it is convenient to put him afhore, he fhall be fed as he was aboard, and have fome body to look after him there, and, when he is recovered, be paid his wages; and, if he dies, his wages fhall be paid to his widow or heirs.

## ARTICLE XX.

If, by ftrefs of weather, it is thought neceffary to throw any goods overboard, to lighten the fhip, and the fupercargoes or merchants aboard will not confent to it, the merchandize fhall neverthelefs be thrown overboard, if the reft of the people aboard think it fafeft to do fo: in fuch cafe, as foon as the Ihip puts into port, a third part of the mariners mult go afhore, and purge themfelves by oath, that they were forced to do it for the prefervation of their own lives, the fhip, and the reft of the cargo. The merchandize fo thrown overboard thall be brought into a grofs average, and be rated at the fame price the other merchandize of the fame fort that was faved was fold for.

## ARTICLE XXI.

Before the mafter throws any goods overboard, he is bound, in the abfence of the merchant, to afk the pilot and mariners advice; and the lofs fhall be made good by contribution, the fhip and cargo being accountable towards it.

## ARTICLE XXII

The mafter and mariners are obliged to fhew the merchant the cordage that is ufed for hoifing his goods in and out of the fhip; if he does not do it, and there happens any accident, they fhall ftand to the lofs; but if the merchant has feen and approved of it, the damage he fuftains thall be borne by himfelf.

## ARTICLE XXIII.

If a fhip is ill trimmed, and it happens that the wine fhe has aboard is loft, through the mafter's ignorance or negligence in governing her, the faid' mafter is bound to pay for it : but if the mariners clear him upon oath, the leakage or lofs fhall be borne by the merchant.

## A R T ICLE XXIV

No man fhall fight, or give another the lie aboard ; he who offends in this kind, fhall pay four deniers; and if the mariner gives the mafter the lie, he fhall pay eight deniers: but he who frikes him fhall pay 100 fols, or lofe his hand. If the mafter gives the lie, he fhall pay eight deniers; if he frikes, he ought to receive blow for blow.
Lofe his hand: this was a common punifhment among the Scythians, and the people of the north. Lucianus de Toxari. And alfo among thofe in the eaft. Harmonopulus de Poenis.

## ARTICLE XXV.

The mafter may turn off a mariner for a lawful caufe; but if the faid mariner compenfates for his fault, and the mafter neverthelefs refufes to admit him again, the mariner may follow the fhip to her deftined port, and he fhall be paid his wages as much as if he had made the voyage in the fame fhip: if the mafter hires a lefs able feaman in his place, and there happens any damage by it, the mafter is to make good the lofs.

## ARTICLE XVI.

If a fhip riding at anchor in a harbour is Aruck by another Thip which runs againft her, driven by the wind or current, and the fhip fo fruck receives damage, either in her hulk or cargo, the two fhips ihall jointly ftand to the lofs. But if the fhip that fruck againft the other might have avoided it, if it was done by the mafter on purpofe, or by his fault, he alone fhall make fatisfaction. The reafon is, that fome mafters who have old crazy fhips, may willingly lie in other fhips way, that they may be damnified or funk, and fo have more than hey were worth for them: on which account this law provides, That the damage fhall be divided, and paid equally

## W I S

by the two fhips, to oblige both to take care, and keep clear of fuch accidents as much as they can.

## ARTICLE XXVII.

A fhip being at anchor in a harbour, where there is fo little water that the touches, another fhip comes and anchors near her; if the fhip's company of the former veffel require thofe of the latter to take up their anchor, becaufe it is too near them, and they do not do it, the former may take it up themfelves; and if the latter hinders them, they fhall make fatiffaction for all the damage that may happen by that anchor.

## ARTICLE XXVIII.

No mafter of a fhip fhall lie at anchor in a haven without fattening a buoy to his anchor, to give notice to others where it is: if he omits to do fo, and any damage is fuftained by it , he is obliged to make it good.

## ARTICLE XXIX.

In any voyage, where wine is the trade, the mafter is obliged to find the feamen with it, and then he may give them but one meal a day: but where it is not to be had, and the mariners drink water, he fhall give them two meals a day.

## ARTICLE XXX.

When a hip is let out to freight, the mafter ought to affign and fhew the feamen where they are to have the ftowage that belongs to them; and they muft declare whether they will load it themfelves, or will let the mafter freight it with the reft of the fhip, and be paid for their proportion.

## A R T I C L E XXXI.

A fhip being arrived at her deftined port, thofe feamen who would be paid their wages there, if they have no cheft nor bedding, or other moveables aboard, equivalent to their wages, they mult give the mafter fecurity that they will ferve out the reft of the voyage, and fee it compleated, or he may refufe to pay them before.

## ARTICLE XXXII.

Thofe feamen who bargained for a certain proportion of the thip's freight, inftead of wages in money, in cafe freight is not to be had for her when the arrives at the port for which the was bound, and fhe muft go further in queft of it, they muft go with her: but thofe feamen who agreed to be paid in money, thall have their wages there.

## ARTICLE XXXIII.

When a fhip is fafe at anchor, the feamen may go afhore, one after another, or two together, and carry fufficient meat and bread with them for one meal, but no drink: nor muft they ftay any longer time athore; for if, through their abfenç, any damage happens to the fhip or goods, they are obliged to make fatisfaction. And if any one of the crew is wounded, or comes by any other ill accident in doing the merchant's bufinefs, the merchant is bound to cure him, and indemnify the mafter, pilot, and mariners:

## ARTICLE XXXIV.

A thip being let out to hire, to a merchant to freight her, and he agrees to load her in a certain time, if he fails, and exceeds that time fifteen days, or more, and by this means the mafter lofes his opportunity to freight his thip, the faid merchant fhall make him fatisfaction for his delays, and pay his damages and intereft, a quarter of which belongs to the mariners, and three quarters to the mafter.

## ARTICLE XXXV.

If the mafter, being upon his voyage, wants money, he mult fend home for it, but ought not to lofe a fair opportunity of proceeding ; if he does, he fhall fatisfy the merchant for all the damage he may fuftain by his delay: but, in cafe of great neceflity, he may fell part of the merchandizes, and, when he arrives at his deftined port, he fhall pay the merchant for them, at the fame price the reft was fold at, and the merchant fhall pay freight as well for the merchandizes the malter fold, as for thofe he delivered him.

## ARTICLE XXXVI.

When the mafter arrives in a port, he fnould be careful to place his lhip well, to moor her well; for if, by his neglect in this, the merchandize aboard receives any damage, he is obliged to make it good.

## ARTICLE XXXVII.

If a thip has been in a form, and the merchant, mefter, or crew, think fle ought to be refitted, to enable her to conVOL II.

## W I S

tinue her voyage, they may do it, and then proceed: however, the mafter thall be paid his freight for the goods faved, which are for the merchant's profit only. If the merchant has no money, and the mafter will not give him credit, he may take his merchandize in payment, at the market-price.

## ARTICLE XXXVIII.

The mafter fhall not throw any goods overboard, without firft confulting the merchant; and if the merchant wiil not confent to it, yet if two or three of the moit experienced mariners think it neceflary, they may be thrown overboard, but the mariners muft fwear they thought it was expedient fo to do. If there is no merchant or factor aboard, the mafter and major part of the mariners may lawfuly refolve fter and major part of the mariners may lawfully refolve upon what is fit to be done.

## A R T I CLE XXXIX:

The merchandize thrown overboard fhall be valued in the average, at the price the reft was fold for, freight only de-

## ARTICLE XL.

The mafter, in the average, fhall pay his proportion for the goods thrown overboard, either by calculating what the fhip is worth, or what the freight amounts to, at the choice of the merchant ; and the merchant thall pay his, according to the value of the remaining mercbandize: it flall be left to the merchant to leave or take the fhip af the price the mafter rated her at.

## ARTICLE XLI

If any one has plate, or merchandize of great price, in his cheft, he is bound to declare it beforehand, and fo doing, he fhall be paid for his merchandize according to its worth, and the plate after the rate of two deniers for one.
There is fomething a little dark in this article; but it is as we find it in the French verfion, as is alfo what is obfcure in others; and we excule the tranflator, confidering the Teutonic is an untoward language to turn into French: we wifh our readers may have as much tendernefs for us.

## ARTICLE XLII.

If any one has money in his cheft, let him take it out, and carry it about him, and he fhall pay nothing.

## ARTICLE XLIII.

If a cheft is thrown overboard, and the proprietor does not declare what is in it, it hall not be reckoned in the average, but for the wood and the lock, if it be locked, according to their value.

## ARTICLE XLIV.

If it be thought convenient in any river, or off any dangerous coaft, to take aboard a pilot of the country, and the merchant oppofe it, yet, if the mafter, the fhip's pilot, and the major part of the feamen, are of another opinion, he may be hired, and the pilot fhall be paid by the fhip and cargo, as averages are calculated for goods thrown overboard.

## A R T I CLE XLV.

If a mafter wants money or victuals, and for that reafon is forced to fell part of his merchandize aboard, or borrow money at bottomry, he ought to pay, within 15 days after his arrival, for the merchandize, at a reafonable price, neither the higheft nor the loweft ; and if he does not, and the fhip befold, and another mafter put in her, the merchant to whom the merchandize belonged, or the creditor that lent the money on bottomry, hall, at any time within a year and a day, have a good right to the fhip, 'till fatisfaction is made for the goods fold, or money borrowed.

## ARTICLE XLVI

A thip being loaden, the mafter ought not to take in any more merchandize, without leave of the merchant: if he does, and there happens any occafion to throw goods overboard, he fhall pay as much as he took in goods over and above the fhip's loading: wherefore be ought, when he is loaded, to declare how much goods he has, and vught to have aboard.

ARTICLE XLVII.
The feamen are obliged to keep and match the merchandize, at the requeft of the merchants, mafter, and pilot.

A R TICLE XLVIII.
If, for the prefervation of the commodity, the feamen turn If, for cornaboard, they fhall be allowed a denier a laft for up the corn aboard, they will not do it, they are liable for the each time; and if they will not do it, they a are lable for the damage that comes to it for want of it: they thall allo be al-
II K lowed
lowed a denier a laft for unladings, and fo for other merchándize.

## ARTICLE XLIX.

The mariners ought to reprefent to the mafter what condition their tackling for lading and unlading is in, that if the cordage is out of repair, or any other part of it, it may be mended; and if the mafter does not do it , he fhall be accountable for whatever damage happens by that means; but if the mariners do not make their reprefentation, the accidents that befal the merchandize fhall be indemnified at their expence.

## ARTICLE L.

If two fhips ftrike againft one another, and receive damage, the lofs fhall be borne equally between them, unlefs the men aboard one of them did it on purpofe; in which cafe, that fhip thall pay all the damage.

## ARTICLELI.

To prevent all inconveniencies, all mafters of thips are required to faften buoys to their anchors, on pain of making fatisfaction for all the damage that may happen for want of

## A R T I CLE LII.

When a fhip arrives at her port of difcharge, fhe ought to be unladen with all poffible difpatch, and the mafter to be paid in eight or fifteen days at fartheft, according to the circumftances of the voyage.

## A'R T I C L E LIII.

If a fhip, freighted for one port, enters another, the mafter, together with two or three of his chief mariners, ought to clear themfelves upon oath, that it was by conftraint and neceffity that they went out of their way: after which he may proceed in his intended voyage, or fhip the cargo aboard other fhips, paying freight for the goods, which the merchant fhall allo pay him, and what elfe is due on account of the merchandize.

## ARTICLE LIV.

It is forbidden to any mariner to go out of the fhip and leave it;, after the voyage is done, and the fhip difcharged, unlefs her fails are all in, her furniture taken away, and fhe is fufficiently lightened of her ballaft.

## ARTICLE LV.

If a hip ftrikes, the mafter may take out part of his cargo, and relade it aboard other fhips, and the charges of it thall come into a general average upon thip and goods: however, the mafter, and two or three of his feamen, thall purge themfelves upon oath, that they were forced to do it to fave the fhip and cargo.

## ARTICLE LVI.

When a thip arrives at the mouth of any river or harbour, and the mafter finds fhe is too heavy loaden to fail up, he may put part of the cargo aboard hoys, lighters, or barges, and an average thall be made for it, of which the matter fhall pay two-thirds, and the merchant one-third ; but if, after the fhip is intirely difcharged, the fhip draws too much water, and cannot fail up, then the mafter fhall pay all the charges.

## ARTICLE LVII.

The'merchandize being put aboard lighters, in order to be landed, if the mafter has any jealoufy of the merchant's ability or honefly to pay him, he may ftop it at his Thip's fide, and refufe to let it go, 'till the merchant has paid him in full for his freight and charges.

ARTICLE LVIII.
All lighters, open or clofe, thall be difcharged in five days.

## ARTICLE LIX.

When a fhip is at anchor before an harbour, with which her pilot is not well acquainted, the mafter ought to hire one at the place, to carry his hip into it, who hall be paid by fhip and cargo.

## ARTICLE LX.

When a fhip is in an harbour or river, and the mafter does not know the coaft nor the river, he ought to take a pilot of that country to carry her up the river or harbour, which pilot fhall be maintained by the mafter, and paid by the merchant.

## A R T ICLE LXI.

If a feaman deferts his Ahip, and carries away what he has received of the mafter, and the mafter apprehends him, the
faet being proved upon him, by the depofitions of two othei feamen, hè fhall be condemned to be hanged and executed.

## A R T I C LE LXII.

If a mafter difcovers that a mariner is infected with any contagious diftemper, he may put him afhore on the firft land he makes, without being bound to pay him any wages pro vided the cafe be proved by the atteftation of two or thre of the other mariners belonging to his fhip.

## ARTECLEXIII.

If a pilot or mariner buys a fhip, or is made mafter of one, he fhall be difcharged from his own mafter, paying him back what he received of him; and it thall be the fame if he
marries.

## ARTICLE LXIV

If the mafter, merchant, and owners have any difference and the owners will not furnifh their quota of the charge of the outfet, the mafter may neverthelefs proceed in his voyage or voyages with the faid fhip, paying the feaman what he thinks reafonable.

## ARTICLE LXV.

If the mafter lays out any money in repairing or refitting his fhip, or buys any tackling, or any thing elie for her ufe, he Shall be reimburfed, and every owner pay his part.

## ARTICLE LXVI:

If the merchant obliges the mafter to infure the fhip, the merchant fhall be obliged to infure the mafter's life again? the hazards of the fea.

## A R TICLE LXVII.

If two thips ftrike againft one another, and one of them unfortunately perifhes by the blow, the merchandize that is loft out of both of them thall be valued, and paid for pro rata by both owners, and the damage of the thips fhall alfo be anfwered for by both, according to their value.

## ARTICLE LXVIII.

In cafe of neceffity, the merchant may fell part of the merchandize, to raife money for his fhip's ufe, and the hip happening to be loft afterward, the mafter hall, however, be obliged to pay the merchant for the faid merchandize fo fold, without pratending to deduct any thing for the freight.

## ARTICLE LXIX.

When the mafter is forced to fell any of the merchandize, he is obliged to pay the fame price for them as the fame goods were fold for at the market for which they were defigned, and the mafter thall be paid his freight for what goods are fold.

## ARTICLE LXX.

If a fhip under fail does damage to another, the mafter and mariners of the fhip doing the damage, mult fwear they did not do it defignedly, and could not help it, and then the damage fhall be borne by both hips, in equal proportion; and if they refure to fwear, the damage fhall be paid by the hip that did it.
WQOL, and WOOLLEN MANUFACTORY. Under the articles Biscay, Castille, Catalonia, Factors, India-House of Spain, and France and Spain, we have fhewn the extraordinary progrefs that both France and Spain have made, and are daily making, in the woollen manufactories, and which muft rieceflarily tend to the greater and greater injury of our branches of trade in the like way. We have too long experienced the unfpeakable detriment that Francealone has done to this nation in this article only; and if Spain is determined to fupply her owndominions with what they took from us in this kind of manufactures, we muft foon renfibly feel the effects of this policy; and more efpecially fo, if the Portugueze alfo fhould betaking meafures to encourage our competitors more and more in this capital article: and this I am affured, by my correfpondence from Portugal, is the real cafe.-There are feveral other ftates too that are ftriving for fome fhare in this the grand Britifh ftaple of commerce. In a word, we are lofing ground in moft parts of the world, in this branch, where we had long got footing, as has been fhewn throughout the courfe of this performance.-It is, therefore, certainly full time to think, without delay, of every meafure that is in our power to fave and preferve ourfelves from the calamitous confequences that muft refult herefrom.
In the courfe of this undertaking, we have endeavoured alfo to point out the CAUSES of thefe things, and have occafionally fuggefted what we humbly apprehend to be the moft rational and practicable ways and means to retrieve what we have loft in this effential particular.

## W O O

As the running of wool from Ireland has, among many other things, been attributed to be one principal caute of tio before-intimated misfortunes to our trading intereft, whatever bids fair to remove an evil of this nature, cannot be too often inculcated, nor too ferioully weighed and confidered Many very judicious and well-intentioned gentlemen have endeavoured, by variety of fchemes, to prevent this practice of fmuggling wool. The great difficulty that feems to attend this matter is the reafon, perhaps, why many good propofals have been rejected, and why, indeed, none of our laws hitherto have been effectual to the purpofe intended.
Among others who have attempted this great work, the judicious Mr Bradhhaw has lately obliged the public with fomething that feems to merit great regard, and, therefore, a fhort abfrract of what this gentleman has offered, may have its ufe, if any thing of this fhould ever be attempted in earneft.

- Long experience has fhewn us, that no laws hitherto made have prevented the running of raw wools from Ireland to France, and their manufactured goods to foreign countries, and that nothing can put a ftop to this evil, but making it the intereft of Ireland to difcourage that practice.
The importation of Spanifh wools into Ireland, and their clothiers making Spanifh cloths therewith, inftead of working up their own wool, is the reafon why they have the more of their own wools to fell to France: wherefore let Spanifh wool be prohibited in Ireland, and their manufacturers will work up their own wools, and then there will be the lefs for France to purchafe.
Let fuch woolleri goods made in Ireland be exported to GreatBritain only, not to be confumed in Englảnd, but exported from thence to foreign countries.
To prevent the Irifh from injuring the Englifh woollen manufactures, let a DUTY be laid on all Irifh woollen goods imported into England, and drawn back upon exportation to foreign countries, \&c. This duty would prevent their wear in England, andalfo hinder the Irifh from running their wools to France.
To induce Ireland to lay afide the manufacture of Spaniih cloths, and take to the working upon their own wools, the ingenious gentleman hews the lrifh the advantage of the one to be far fuperior to that of the other, thus:
The Spanifh wools imported into Ireland, from the 25 th of March, 1743, to the 25 th of March, 1744, were 128,086 futtle pounds;-which 1 compute to be about 570 bags.
I fhall fuppore each bag of wool fufficient to make four pieces of Spanifh cloth : then the cloths manufactured were 2280, which, upon an average, being worth 201. each cloth; the produce of the year's importation of Spanifh wools will amount to 45,600 l.
It is computed that, in woollen manufactures, four-fifths of the value of the goods, when finiffed for fale, are given to the labour of the people; therefore I Chall fuppofe, that, of this 45,6001 .
There was paid to the labour of the people, - 1. 36,480 And to Spain for the wool, \&c.

36,480
9,120
To make one piece of Spanifh cloth, compleatly finifhed for fale, will take up three months; it is feldom finifhed in lefs time: the manufacture is fo tedious, that fome of the people employed are often obliged to wait for work, while others are finifhing their parts, as may be fuppofed by the following table, which I received from an eminent clothier, on whofe veracity I can depend.
To make one piece of Spanifh cloth will employ

By this table it appears, in how many days lefs than three months the poor employed in this manufacture finifh their feveral parts; and fevetal of them are often idle for want of work.
The fame people employed in this table, in manufacturing one cloth made of Spanifh wool, are requifite in manufacturing a clath made of Irihh; and they can finifh fuch a cloth in rWo months, as compleatly as they can a cloth made of Spanifh in Three; therefore, if fully employed, can work up half as many more yards of cloth in one year, as an equal number can do who are wholly employed in manúfacturing of Spanifh. Befides, as coarfe wools may be worked up into goods of various kinds, and the wool fo difpofed of as to give employment, at any time, to a greater number of hands than the like value of Spanifh wools can employ; all manufactures of coarfe wools can be finifhed with greater difpatch. Therefore, fince the wealth of a nation is increafed by the
number of the poor it employs, and the quantity of the pro ar of the lands they confume, let it be confidered what number of the poor of Ireland 9,120 I. value in Spanish wools will employ, and what number of poor the wools of Ireland, valued at i2s. the great flone containing i6 Ib . will employ and fubfift.
I have made the beft enquiry I was capable of, and find that the wools Ireland yearly produces are computed at 480,000 ftones, of r6lb. each; fome think they are lefs', but no accounts that I have received from any part of that kingdoun ay more.
I fhall therefore confider the wools of that kingdom under the higheft eftimation that I have received, and hew what that quantity of wool would produce, if worked up for their own confumption, or for exportation to England, and what lofs that kingdom fuftains yearly, by neglecting the what facturing her own wools, encouraging the manufacture of Spanilh, and fmuggling her raw wools to France.
I fhall likewife fhew the gain that would arife to that kingdom, if their own wools were fully manufactured by their own people.

I fhall fuppofe the medium price of the wools of Ireland to be 12 s . the ffone of 16 lb . then 480,000 ftones, at 12 s . the flone, are
If 101 . value in wools, when compleatly manufactured for fale, is worth 501 . the value of the yearly wools of Ireland, when worked up, muft be
If $\frac{4}{5}$ of this fum be paid to the working people for labour, and the temaining $\frac{1}{5}$ be paid to the rents of the kingdom, for the produce of their Theep, the earned money of the poor of that country, in working up the yearly produce, will amount to
And they will work up as much of the product of the kingdom as amounts to
Conlequently, Ireland will gain yearly, by the manufacturing of her own wools
importation importation of Spahifh wools; the can only - gain

To earn which fum, the muft yearly pay to Spain
And have numbers of her poor idly fupported by high wages, to make them amends for the many days the manufacturing of Spanifh wool leaves them unemployed.
It is very difficult to compute the exact number of poor that the wools of a country, if worked up among themfelves, would employ and fubfilt : but, as moft working people carn no more than what is fufficient to maintain them comfortably; I am of opinion, that the finding out the quantity and value of any kind of goods manufactured in a country, and the value of the common annual fubfiftance of a manufacturer, is the beft way of judging of the number of working people fubfitted by that manufacture.
I fhall therefore fuppofe, that the annual fubfiftance of working men, women, and children, in Ireland, may bepurchaled, at a medium; for rol. per annum, and that 480,000 ftones of wool, when fully manufactured, are worth $1,440,000 \mathrm{l}$. Then the number of poor fubfifted by the manufacturing the yearly preduce of the wools, will be 144,000 people. I hall conlider next how many of the poor of Ireland are fubfiffed by the manufacturing Spanifh wools, admitting that they are not, during the whole year; one day unemployed, and that they manufactured the whole importation of Spanifh wools in the year 1743 , which was much larger than any quantity they ever imported in one year into that kingdom. I computed that $570^{\circ}$ bags of Spanilh wool, when fully manufactured for fale, would amount to $45,600 \mathrm{l}$.
By that computation, the poor employed can be no more than 4,560 perfons.
It is therefore obivious, that Ireland Jofes immenfely every year by encouraging the manufacture of Spanifh cloths, difcouraging the manufacturing her own wools, and felling her unmanufactured wools to France. To thefe caules we muft afcribe the number of poor that are now in the places of manufacture in France, where, on account of religion, as well as fkill, they have met with protection and encouragenient. If the induftrious poor are compelled to quit their country for want of employment, the gentlemen of Ireland muft lofe their former markets for the product of their lands. The lofs will be greater to the landed than the trading intereft; genthemen mult abate of their rents: for it is the employment of the poor that muft keep them up to their value. And while the Irith encourage the manufacturing Spanifh clotbs, which has obliged numberlefs poor to quit that country, or come to the lands for their maintenance, the price of their beef, butter, \&ic. will be low ; but the value of their lands muft rife, as the manufacture of Irifh wools is encouraged; and as the greater numbers of their poor are employed. Therefore a trade with England for fuch woollen goods as Ireland may manufacture more than are requifite for her own confumption muft be of the greateft advantage to that kingdom. it
will encourage them to work up early their furplus wools, and employ the number of the poor already mentioned. Therefore, if encouragement to manufacture Irifh wools will keep up the price of the product of the lands of Ireland (as confumption of all commodities neceffarily caufes the advance of prices); if it will bring home numberlefs manufacturers, who have found employment in other countries, and enable their poor to maintain themfelves, who are now a public charge : it muft be the intereft of Ireland to manufacture her own wools, prohibit the importation of Spanifh wools, and prevent the running their raw wools to France, which muft ever be detrimental to the woollen manufactures of both England and Ireland.
If the union propofed between England and Ireland, with refpect to a liberty of exporting to England fuch woollen goods 'as Ireland fhall manufacture, fhould be agreeable to both king. doms, I am convinced no gentleman in Ireland will confent to the running of raw wools to France. If he is able to procure but a nurfery of fpinners upon his eftate, the produce of their labour (though of all labour on wools the moft fparingly paid for) will keep up the price of the product of his lands, which will be much more advantageous to him than what he can gain by permitting the wools that grow on his lands to be fent to France.
If this union hould not be agreeable to both kingdoms, and that the people of Ireland fhall be obliged to wear (as they now are) what woollen goods they manufacture, I am of opinion it appears that it is not the intereft of that kingdom to wear Spanifh cloths, if manufactured in Ireland, which muft bring fuch numbers of their poor to the parifh for fubfiftence, or oblige them to quit the country for want of employment, who might be fubfifted by their labour on Irifh wools, without any charge to the landed intereft.
For iffuch of their poor as could not be employed in manufacturing their wools fully, were encouraged to fpin their furplus wools for exportation to England, their poor might be employed and fubfifted, fince it is evident, by the price we have paid them of late for their finning, that the labour of the comber and fpinner is equal to the firft coit of the wool; and as England has taken upwards of 80,000 ftones of their yarn, (as fhall be fhewn in its place) the poor of Ireland have earned 48,0001 . for their fpinning, and we have paid them the like fum of $48,000 \mathrm{l}$. for their wool, which will appear from the following computation. A ball of wool confifts of one pound and a half of combed wool, which, at 12 s . per ftone of 16 lb . cofts $13^{\frac{1}{2}} \mathrm{~d}$ : when fpun into 1 kains of yarn, is fold from $2 \mathrm{~s} .3^{\mathrm{d}}$. to 3 s . per ball, according to the number of fkains into which it is fun. I fhall take the loweft price for my valuation: if, therefore, a ball of wool that cofts but $13 \frac{5}{2} \mathrm{~d}$. when fpun into yarn, is fold for 2 s .3 d . it appears that the money earned by the fold for 2 s . 3 d. it appears comber and pinner is if Ireland were employed to manufacture their furplus wools, no farther than through the hands of the combers and fpinners, numbers might be maintained, and Ireland would become a nurfery for England (but never can be fo, while her poor are engroffed by the high prices now given for the fpinning of Spanifh woots) and the landed intereft of Ireland would be confiderable gainers by their poor being fo far employed, fince it muft benefit a nation to be faved from the charge of maintaining its poor.
The gentlemen of Ireland may imagine they receive their rents from their tenants; but it is the confumer that pays them both the price of their wools, and of the product of their lands.
If their artificers and manufacturers are obliged to quit the country for want of employment, the confumption of the product muft be greatly leffened: therefore all prudent ways ought to be tried, to keep thofe at home that are willing to work, and to induce them to return who have been obliged to feek for their fubfiftance abroad.
Every one who lives in that country, and wears the manufacture of Irifh wools, ought to be confidered, for what he wears, eats, and drinks, as a tenant to the lands and a paymafter to the workmen.
How many fuch tenants the gentlemen of Ireland may keep in that country, and how many old ones they may prevail on to return, by preventing the running of their wools to France, encouraging the manufacturing their own, and prohibiting the importation of Spanifh, I have endeavoured to fhew; which I fhall fubmit to the confideration of, the gentlemen of that kingdom.
I hall next confider the advantages England will have, by confenting to the importation of fuch woollen goods as Ireland fhall fend us, under a duty at importation to be drawn back only on exportation to foreign countries.
The accounts that were publifhed the year after the peace of Utrecht, of the great quantities of Irifh wools that were run out of Ireland, and imported in one year into France, fo alarmed our manufacturers and landed gentlemen of England, that we have ever fince endeavoured to make the moft effectual laws to prevent the exportation of the wools of that country, and are now at a great annual expence by the many thips fationed on the coafts of Ireland for that purpofe; but not-
withftanding we have been unwilling to receive any propofals, that have been offered to the confideration of parliaments to prevent this evil, if fuch propofals had the leaft tendency to a free liberty of exportation of the woollen manufactured goods of that kingdom.
However juft our àpprehenfions were thirty years ago, there is not the leaft room for them now ; fince Ireland does not produce, at prefent, two-thirds of the wools that were fuppofed to be the growth of the country at that time.
The decreafe of their fheep has been owing, not only to the very great danger and difficulty the people of Ireland found in fending their wools to France, under the fevere laws we made to prevent it, but to feveral achs of parliament, which have been made in that kingdom fince the year 1714.

By the act to encourage tillage, every farmer in Ireland is obliged to plow a certain number of acres, in every hundred, which he holds by leafe. This obligation, together with the great difficulty and rink in fending their, wools to France, obliged many people to plow up their pafture grounds, which leffened their fheep throughout the kingdom; for they found a certain market for their corn, inftead of an uncertain one for their wool.
The feveral acts for encouraging the linen manufactures of that kingdom, have been another caufe of leffening the growth of their wools; fince it is well known that they have no more theep in the north of Ireland, where that manufacture is eftablifhed, than are fufficient for the neceflary fubfiftance of the people.
Thefe confiderations fhould entirely remove our former ap. prehenfions, and convince us, that the Irifh cannot have the quantity of wools, which they had before thefe acts of parliament were made.
We ought to examine what the wools of that country are at prefent, and what we have to fear if the wools, which their own people cannot confume in apparel, were fully manufactured and exported to us, and-from hence exported to fuch foreign countries as we trade to.
Weare very certain that we may grow lefs confiderable in foreign markets, but cannot be more fo, while the French contifiue to procure the wools of Ireland; and fince we have made fo many laws to prevent it, and that it is evident they have been ineffectual, we fhould try other ways and means to ftop the evil we have fo long complained of. For fince by long experience we fund that the people of Ireland are not, by any laws, to be forced from this pernicious practice of felling their wools to France, and that neither punilhments nor penalties can prevent it; I am clearly of opinion, our condition cannot be worfe than it is at prefent, if we permit them to fend us fuch woollen goods as they fhall manufacture for exportation, which will effectually put a fop to their fending to France; becaufe they. will then find it more their own intereft to prevent it, than it is now their intereft to connive at and encourage it.
The many creeks and by-places on the coaft of Ireland are fo well known to the French, that their agents, notwithftanding the many difficulties that attend it, will be always able to procure a loading of wool; for the farmer, whofe lands lie contiguous to the fea, will be as ready to fell as the French are to buy. But thefe temptations will ceafe, if the farmer finds that he can have a market near his own home for his wools, when fpun only; becaufe the French can give no price for the fmall quantity of wool that he has to fell, that can be equal to-the advantage the farmer will have by its being fo far manufaftured.
Since the laft dectaration of war againft Spain, the wools of Ireland have fold at a much higher price than they were ever known at before. When they exceed ten fhillings per flone of fixteen pounds, our manufacturers cainot afford to purchafe them. But as the prohibiting the importation of Spanifh wools into Ireland, will occafion a greater plenty of their fpinning, we may be certain of having more of their furplus wools fo far manufactured, and thereby leffen the quantity, they would otherwife fully manufacture themelves. We do not buy their fpinning for its finenefs, (our own people fpin much finer) but on account of its nature and quality. It is very ufeful to our weavers, in mixing with our own fpinning, and making feveral forts of goods for foreign markets; and on that account only we buy it. But if we cannot take from them in fpinning, fuch wools as they have more than are requifite for the cloathing of their own people, we muft give them leave to export, fully manufactured, what they cannot confume, or the French will certainly take from them their wools unmanufactured.
They are not (as we are) limited by price; for by the help of one pack of Irifh wools, France manufactures two of her own, without which they are ufelefs to her for foreign markets, notwithflanding the wool fhe procures from Germany, Portugal, Barbary, and Turkey.
The wools of France are fhort and coarfe; they are not (to fpeak in a manufacturer's phrafe) fo fine in the thread, or fo long in the ftaple, as thofe of Mreland: for which reafon, Fiance can ever give double the price that we can afford for the wools of that country, which I fhall hew more fully
hereafter. This proves how dangerous an enemy we have to encounter, and that nothing can prevent France from buying them, but making it the intereft of Ireland to manufacture their wools; which engages me to think, that the beft law that can be made, to prevent France from procuring the wools of Ireland, will be, to permit the people of that country to fend their manufactured woollen goods to England, under a duty at importation, to be drawn back on exportation to foreign countries.
I have already fhewn the quantity of wool, by eftimation, that Ireland yearly produces, and what value thefe wools may be manufactured into by their own people, if the importation of Spanifh wool is prohibited. I hall now confider what number of people there are in that kingdom, what their own confumption muft be of the wools they may manufacture ; what quantity of wool we have taken from them laft year, how much in woollen yarn, and how much in worfted yarn, and to what value the furplus wools of Ireland, if fully manufactured, will amount. The exportation to England of this laft articlc, is the whole we have to fear from the union propofed, which I Chall fhew cannot be manufactured into fuch a quantity of cloth, or other woollen goods, as will prejudice England to receive, for exportation. On the contrary, I am of opinion, the encouragement to manufacture and export it, will be the means of increafing and extending our commerce.
The people of Ireland are computed at $1,666,000$ : I fhall fuppofe the one half of their people to be men and boys, and the other half women and girls; and that every man and every boy in Ireland wears, or is the occafion of confuming, the value of 20s. of woollen goods yearly; and that every woman and every girl wears, or is the occafion of confuming, 5 s . in woollen goods yearly.
Then 833,000 men and boys, at 20 s . per ann. confume in Irifh woollen goods
And 833,000 women and girls, at 5 s . per ann. Therefore, the amount of woollen goods, wore in apparel and confumed in furniture of fuch houfes as they inhabit, will be As the richer kind of people in Ireland are buried in woollens, according to act of parliament, I fhall allow for burials in woollen
1.

833,000
208,250

1,041,250

20,000
1,061,250
Then, if all the wools Ireland yearly produces were fully manufactured, and that England took from them neither raw wools, worfted, or woolIen yarns, the value of the furplus wools fully manufactured would be

378,750
1,440,000
I find we have imported fromIreland from March 25, 1743, to March 25, 1744,

| In raw wools, great fones | - | - | 19,993 |
| :--- | :--- | ---: | ---: |
| In worfted yarn | - | - | 68,622 |
| In woollen yarn | - | - | 15,224 |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

If we take yearly the fame quantity of unmanufactured wools, worfted, and woollen yarns, that we have done laft year, which I fhall compute only at roo,000 great fones, we fhall prevent their fully manufacturing as much of the wools of Ireland as I have computed, when fully manufactured by themfelves, would amount to 300,0001 .
Therefore, admitting there is no objection to the value in woollen goods, which I have computed to be the yearly confumption of the people of Ireland, not only in apparel, but in bedding, houfe-furniture, and burials, all the woollen goods Ireland can fully manufacture for exportation, will amount to no more than 78,7501 .
In order to remove the apprehenfions that may arife in our' clothiers and manufacturers, that this value in Irifh woollen goods, if exported to England for re-exportation to foreign cauntries, may hurt the fale of our manufactures abroad, I hall confider, what value in woollen goods France will be prevented from vending at foreign markets, which the now fupplies, by procuring the furplus wools of Ireland, that may be manufactured into that fum.
I fhall fuppofe, that France has been able to procure yearly no more Irifh wools than, when fully manufactured, I have computed would produce this 78,7501 . which I calculate at 1750 packs, of 240 pounds weight each.
I fhall likewife fuppofe, that what France purchafes are the I hall likewife fuppofe, that what erance purchafes are the
beft lriih wools, for which fhe pays 16 s . the grear ftone (at which price the fine wools of that country were fold laft year), and that all rifks, hazards, infurances, and freights, being accounted for, thofe wools, when landed in France, coft the manufacturer 20 s . per ftone.
By the beft information I could get in France, I bave learned that their people manufacture two packs of their own wools

VOL. II.
by the help of one pack of Irith. I flall therefore fuppofe their own wools worth 5 s . the great ftone, and when mixed France has three 20 s . the ftone; that the manufacturer in rrance has three packs of wools, at ios. the flone, a me-,
dium price.

I have computed that the furplus wools of Ireland, which France now procures, are 1750 packs, which make in great ftones of 16 pounds to the
ftone ftone
To which I thall add double that quanitity of
French wools, which the manuf French wools, which the manufacturers of France work up by the help of this quantity of Itifh

Stones.

26,250

52,500

## Total flones $\quad 78,750$

Therefore the French manufacturers, by the help of 26,250 ftones of Irifh wools, have 78,750 ftones of wools proper for fuch manufactures as wecarry on ; which wools, on an average, will coft them only 10 s.per ftone. Then 78,750 fones, at ios. per ftone, coft the manufacturer in France 39,375 l. And when fully manufactured for fale, allowing for labour, as I have done on the like value of wools manufactured in England, the amount will be ig6, 8751 .
If thefe calculations are juft, it plainly appears, that we have nothing to fear from giving Ireland a liberty of exporting to England fuch manufactured woollen goods, as her own people cannot confume; fince, by encouraging Ireland, wefhall prevent France from procuring her wools, who thereby is enabled to fupply the foreign markets with goods of her own manufacture, to the value of 196,8751 .
If France can fend to foreign markets fuch confiderable quantities of woollen goods, by procuring 1750 packs of Irifh wools, of what confequence ought thofe wools to be to England! and fince we know that fuch a quantity, and a much greater, may be fent yearly out of England, we fhould endeavour to prevent the running of it from England as well as Ireland, which I am far from thinking an impoffible fcheme. If the preventing the running of this quantity of Irifh wools, will enable us to fend to foreign markets as much woollen goods, as will, when manufactured, be worth 196,8751 . more than we now export, 1 am humbly of opinion, we ought to make a new experiment, and confent to the people of Ireland's fending theit manufactured woollen goods to England; for we may be certain of manufacturing and vending more cloth, and other woollen goods, as the French are deprived of the means of fupplying the foreign demands. And as all the goods that the furplus wools of Ireland can be manufactured into, will not amount to one-half of what France will be prevented from fupplying, we mult furnih t'e reft from our own manufactures. Andif France has been able to procure a larger quantity of Itifh wools yearly, than I have fuppofed, we fhall be able to manufacture fo much the greater quantity for foreign markets, as fhe is obliged to manufacture the lefs.
We have nothing to fear from any encouragement we give Ireland to manufacture, if we can prevent the French from procuring the wools of that country; for when the plague raged at Marfeilles, the demands for woollen goods from foreign countries were fo large, that the wools of both England and Ireland were infufficient to fupply them; which plainly fhewed how largely France had been concerned in the markets abroad, and what a quantity of her own coarfe wools the muft have worked up, by the help and affiftance of the wools of that kingdom.
The camblets of Ireland are goods the Portugucze have been a long time accuftomed to wear, and that they will have, and do procure thefe goods from Ireland, appears from the fhips we have already taken, bound with fuch goods to Portugal ; and the Irifh will continue that trade, notwithftanding our guard-fhips, and the encouragement our commanders of men of war have to fearch, unlefs we make it their own intereft to difcourage it.
All that our manufacturers have been able to do, has not been fufficient to prevail with Portugal to approve of the camblets we make. I am convinced, the confumption of that article would be greatly increafed there, if the people of Ireland were permitted to export thofe camblets to us, under a duty at importation, to be drawn back on exportation from England ; their profit would be more certain than it can be at prefent, and it would put a fopp to all attempts to run fuch goods for the future, and be a great encouragement to their working up more of their furplus wools, and confequently of leffening the temptation of felling them to France. Our merchants would have a commifion on receiving and formerching, perhaps on fales; our packers would have the bewarding, perhaps on fales; our packers would
nefit of re-packing, and our thips of carrying.
nefit of re-packing, and our inips of carrying.
If it be objected, that the exportation of fuch other woollen goods, as Ireland may fend us, will interfere with the exportation of our own, I am of opinion it cannot. For if $F_{1}$ ance be prevented from procuring the wools of Ireland, there will be a demand in foreign markets, not only for the fame quantity of woollen goods which we now fupply, but for as much a L
more
more as France did formerly fupply; and we fhall fell, not only to the amount of what I have computed the furplus wools of Ireland may be manufactured into, but alfo near double that value, which France, would have been able to fell of her own manufactured wools, by the help of the-furplus wools of that kingdom.
If it be objected, that when the duties laid on the Irifh woollen goods at importation, are drawn back on the exportation from England; the Irifh woollen goods can be fold cheaper in foreign markets, than goods of the fame kind manufactured in England, by reafon of the cheapnefs of provifions and low price of labour in Ireland; I anfwer, that we fhall have in our own hands a remedy, when it is convenient to ufe it, by permitting fuch goods to draw back only a PART of th Duties paid at importation, as we find can befold cheaper in foreign markets. By which we fhall bring the value of fuch Irilh woollen goods upon a par with our own, on exportation from England, fo that there will be no temptation to the buyers for exportation to take the one before the other.
If it be objected, that the people of Ireland will increafe their fheep, when they have liberty to export what they manufacture, and that they may fend us too great a quantity of their woollen goods for re-exportation; I anfwer, That it muft be fome years before they can effect it ; and if they fhould fo increafe their theep, as to be able to export double the quantity that I have computed their prefent furplus wools may be manufactured into for exportation, that quantity will not exceed what France now fells, by the help of the furplus wools of that country; therefore we muift continue to fell the lame quantity we now fend abroad.
Again, if it be objected, that fhould the people of Ireland have liberty to export what they manufacture, they will fell us no more of their wools, or woollen and wortted yarn; and that inftead of their having but 78,7501 . value to export, they will export the wholle value that I have computed their furplus wools might be manufactured into ; I am of opinion, we have little to fear from this objection; for there will be always in England and Ireland, as many people on the trade of buying the wools and yarns (for which we pay ready money) as there will be purchafers of their wools', fully manufactured; which, if fent here to be fold for exportation, mult be on long credit; and if fent abroad on their own accounts, will be fubject to uncertain fales, and as uncertain payments. Befides, if there fhould be occafion, their wools may be made cheaper to $u s$, and their woollen goods loaded with a duty at exportation from Ireland to England.
We pay for licence (together with fees) to the lord lieutenant of Ireland, for every thoufand great ftones of wool ex ported to England, about 231. If the Irifh wools are exported to us free of this charge, our manufacturers might purchafe the wools of Ireland at all times, near 5 per cent. cheaper than they now can, or hitherto have done; and in ean of this income which belongs to the lord lieutenant of Ireland, the parliament of that kingdom may fix a duty on all woollen goods, fully manufactured, on exportation to Erigland.
This would, in fome meafure, prevent their fending us too much of their wools fully manufactured; and enable us to purchafe more of their. raw wools.
New experiments muft be made; the people of Ireland muft find a market for their furplus wools, manufactured or unmanufactured, or we cannot effectually diftrefs France, enlarge our foreign woollen trade, or indeed be certain of fupplying them ourfelves with fuch goods as we now manufacture. I will admit, that from the cheapnefs of provifions, and low price of labour in Ireland, their poor are able to work cheaper than ours. They are not in Ireland bound by any parlia mentary laws to provide for, and maintain for life, reduced and decayed houfekeepers, and difabled and fuperannuated fervants, as the people of England are, which obliges their poor to work for lefs prices than ours.
Notwithftanding, I am of opinion we have little to fear from their being able to underfel us abroad; for though moft of the goods they manufacture are worked up cheaper than ours, yet the advantages we have of them in dyeing better colours, preffing, tilleting, and packing our goods, will ballance, in moft foreign markets, the advantage they may have of us, with refpect to their low price for labour.
Befrdes, the freight of their woollen goods from Ireland to England, the infurance, the inland carriage toproper places for ale, the charge of warehoule room, reception and forwarding the charges of unpacking and'repacking, will aftect fuch woollen goods as they can fend us, io per cent. on the loweft computation I can make; which ought greatly to leffen the apprehenfions of our manufacturers; and if the woollen goods they fend us are to be dyed, prefled, and packed here, fo as to be fent abroad, equally finifhed with the like goods of our own manufacture, they will be fubject to a much greater expence,
What we fuffer Ireland to gain by the export of her woollen manufactured goods from England, can be no lofs to us; in many inftances we fhall be gainers. By encouraging them to manufacture their wools, they will find it their own intereft
to fell none of them to France, by which we fhall be tempted to manufacture the more of our own.
By prohibiting the importation of Spanifh wools into Ireland their manufacturers will be obliged to work upimore of their own wools, and their people to wear more of their own ma nufactutes, by: which we fhall have the lefs to fear froin what they may be able to export.
By leffening the numbers of their fine fpinners, we falli increafe the fpinning of fuch worfted and woollen yarn, as we want and take from them; which are fo ufeful and neceffary in our manufacturing feveral kinds of coarfe goods, fur bur confumption as well as exportation:
By allowing them to export their woollen goods to Great Britain, manufactories will be eftalifhed in Several counties in Ireland' ; their nobility and gentry will have fuch advantages by the fettlements of workmen on their eftates, that they will find it their own interett to difcouitage the running of wools, and to forbid their tenants to be alding and affitiong. By making Lreland a Nurseri y of fpinvers for England, we fhall have plenty of their fpinning; and by making England a Magazine for Irifh woollen goods, fuilly mapufactured, our'merchants will have a commiffion ion reception and forwarding; our dyers, a profit on fucb, whitergoods as they Thall fend us; our preflers, the benefitiof packing, and dur Chipping have bettor employment.a By aigood hinderftandipg between England and Ireland, our manufactures will be brought into greater efteem abroads swie then fhall have nothing to fear from the low price: of tidbour:in France, wish refpect to coarfegoods, which has. ablifed us for years paft to; manufacture fuch goods as would:fell, although they brought difcredic to our country.
By our woollen goods being, demanded abroad, in proportion as France is unable to fupply, our landed gentlemen will find their rents. better paid, and their lands lett at a higher value. The increafe of our woollen manufditures will keep up the price of the product of the lands; as demands for goods not only employ our poor, but caufe the advance of the price. The product of the lands of England is'a confiderable part of every manufacture; our rents are but the value paid for the product of the lands; therefore all the additional labour we encourage, which pays to the product of the lands, io fo much added to the rents of the kingdom.
By preventing France from procuring the raw wools of Ireland, we thall not only underfel her, but feeedily put it ou of her power to anfwer the demands of thofe foreign countries, which fhe has for many years paft been able to fupply. By permitting Ireland to export fuch goods, as fhe may manufacture of her own wools, the gentlemen of that kingdom may be prevailed on to wear no Spanifh cloths, but fuch as we manufacture. The advantage of which I fhall hew.
I bave already computed, that the Spanifh wools Ireland imported laft year, might be manufactured into 2280 pieces of cloth; which, fuppofing each cloth 26 yards, would be 50,000 yards. I find that from the 25 th of March 1743 , to the 25 th of March 1744, the importations of Spanifh cloth into Ireland were $20,98 \mathrm{r}$ yards and one quarter; therefore the yearly confumption of Spanifh cloths in Ireland, feems to me to be 77,98 I yards one quarter. We cannot prevent France from fupplying foreign countries with their Spanifh cloths; by thëir fituation they always will have the Spanifh wools cheaper than we can; and the low price of labour, and cheapnefs of provifions in thofe provinces of France where Spanifh cloths are manufactured, will ever enable them to vie with, if not underfel, us in that mannufacture. . Their colours are as good as ours, and their wools as fine. But we have advantages peculiar to this nation, which they cannot take from us. Their cloths want the firmnefs in their texture and milling, that our cloths have, without which they never can drefs them as we do; and if a fmatl encouragement, by bounty on exportation, was given by parliament, on fuch Spanifh clotbs, as we export to the Levant only, I am humbly of opinion, we fhould wholly fupply both the Turks and the Perfans.
Therefore, fince we have fo powerful a rival as France in our Spanifh wool manufacture, which of all our manufactures deferves our greateft attention; we fhould endeavour, by all prudent ways, to encourage and fupport it at home. Our filken manufactures greatly depend on it. A bale of Spanifh cloths amounts to a large fum of money; confequently, it is a means of increafing our ballances againift thole countries, from which we receive a ballance by our commerce, and, on the other hand, of preventing a ballaince being too heavy againf us with thofe countries, which, by our large imports, may have a ballance againft us.
By the modern drefs of our nobility, gentry, and merchants, this manufacture appears daily decreafing among ourfelves, I am convinced, that the new-fafhion goods we wear, have leffened our confumption of Spanith cloths.two fifths of what it was a few years ago. If we fuffer this manufacture to decay, the French and Dutich will foon procure the hands we employ; our poor muft quit the country, or come to the lands for a maintenance ; fince it is well known, that a woman, who has fpent the befl of her days in fipining fine

## W O O

wools, cannot bring her fingers to make good work by fininning of coarfe. I bave already thewn, that if we confent to the people of Ireland's exporting their furplus wools, fully manufactured, the value of them cannot exceed 78,7501 And though we may think it our intereft, that no Spanifh cloths thould be manufactured butin England, and to probibit the importation of Spanifh whols into Ireland, yet I am of opinion, the gentlemen of Ireland would wear but little of our Spanifh cloths, if we prevented their manufacturing (though it is demonftrably their own intereft) without giving them, in lieu thereof, a liberty of exporting fuch woollen goods as they could manufacture of their own wools.
The confumption of Spanidh cloths, in that country laft year, appears to be 77,981 yards; and we may expect they will yearly confume an equal quantity; which, at 16 s . per yard, will amount to 62,385 .
Therefore, if they wear no Spanifh cloths but what we manu facture, and we agree to their exportation of fuch woollen goods as they may manufacture, more than are requifite for their own confumption, the ballance we fhould yearly pay them would be but a trifle', if they took no woollen goods from us but Spaniifh cloths; whereas we'do now, and always may, depend on fupplying them yearly, with all new-faftion woollen goods thatare worn here, fincealldependent kingdoms take their fathions from the place where the court refides. We have had no reafon to repent of the encouragement we bave given to their linen manufactures; it has greatly enriched that country, which has been thereby more improved; within thefe 30 years pait, than in 100 years before. We take from theni in linens 500,000 I. value per ann. befides what they fend directly to our plantations, and other countries; whereass, according to Dr d'Aveniant's report, in the year:17i3, their whole exports of linen were computed at only $: 80,001$ value. We continue to give their linens the preference of moft others, and fince we contribute fo largely to fupport and encourage that manufacture, they ought in gratitude to fupport (as far as in their power lies) a manufacture, that is of as great confequence to England, as the linens are to that kingdom.
Therefore I am lbumbly of opinion, that a union between England and Ireland, with refpect to their woollen manufactures, muft be advantageous to both kingdoms, and wil be the means of effectually preventing FrANCE from procuring the wools of that country.'

## R EMARKS

As the Irifh are not allowed to carry their woollen manufactures to foreign markets, nor to export them to England, whilft the. Englifh may export fuch goods to Ircland, it naturally follows, that the wool of that nation muft be fmuggled to the French and Dutch, or any nation that will bid higheft for it. Some regulations might, perhaps', be framed, to prevent the running of Englifh wool to France and Holland, and this. nation might poffibly be induced to try dangerous fchemes, in order to retrieve fo important a branich of trade as the woollen manufactory. But if this great end can be as effectually anfwered for the reciprocal benefit of both nations, without introducing any fuch fchemes which may prove dangerous to the liberty of the fubject, it will certainly prove far more eligible, and that is what the preceding propofal feems to bid very fair to do.
It is a maxim in equity and the law of nature, that every nation has a right to make the moft of its own products. Where one nation is fo far fubject to another as to be debarred from that right, it muft be for confiderations refpecting the ntereft of both; the chief of which may be, that the more powerful of the two may be maintained in a condition to afford protection and fupport to the other. Where that natural right is not fuperfeded on this principle, the weaker nation will be apt to look upon it as an oppreffive act, or, at beft, as an abfurdity equally pernicious to both parties.
So long as the Irifh are not allowed a free vent for their woollen manufactures, it will be in vain to think of effectually preventing the running of their unwrought wool to France and other foreign parts; and even part of their manufactures will be run to England and elfewhere, in fpite of all the laws the Englifh can make to obftruct it. Commerce claims freedom: where it is e.ampt, it either decays, or is carried on clandeftinely. To take all the wool of Ireland into the government's hands, in order to fell to the manufacturers juft enough for the inhabitants of that kingdom, and export the reft to England at a lower price than foreigners offer for it, would, by the Irifh, be confidered as an act of injuftice: at leaft, to make them view it in a favourable light, Englifh woollen goods ought to be prohibited in Ireland. For though England's profperity is of fo much importance to Ireland, that if ever the former Ahould be ruined, the latter would of courfe fall under a foreign yoke; yet the welfare of both ought, as far as is poffible, to be promoted by equitable meafures and fair regulations, fuch as no reafonable man in either kingdom would object to.
It has been apprehended by fome, that if the Irifh were allowed a free trade in the woollen branch, they would greatly
urt England; but, perhaps, it would produce the contràry effect, by what has been urged in the foregoing reprefentation. It might occafion, for fome time, the removal of many manufacturers from England to Ireland; but is not this much beter than their removing to foreign parts, going to feek bread among our enemies, and helping them to ruin the trade of the three kingdoms? If Ireland increafes in commerce and wealth, one may fafely conclude, from the genius and character of that nation, that its riches will chiefly center here at laft. That country produces fewer mifers than England : the Irifh covet money, perhaps, as much as any people in the world ; but not io much with a view to hoard it, as to make a figure and fpend freely: and experience proves, that in all ftates and monarchies, the riches of diftant provinces and colonies infenfibly flow to the mother country, or to the metropolis.
It may be objected, that Ireland's taxes bear no manner of proportion with thofe of England; and therefore, to grant them a free trade, would be putting them in a condition to leave the Englifh far behind them, as they could carry every thing to foreign markets fo much cheaper than this nation can do. In anfwer to this it has been alked, Whether it is not fafer to let the Irish thrive, than to fuffer our enemies the French, to take advantage of their miferable condition, and thereby ruin Britain as well as Ireland? The Irim, in their prefent circumftances, cannat be taxed like England: yet to grant Ireland the fame privileges as ENGLAND enjoys, and to tax it in Proportion to its wealth, would be fair and equitable, fatisfactory and beneficial to both nations Let us therefore think.in earneft of a folid and permanent union, before it be too late: let us lay afide unreafonable, partial, and felfifh principles; give them encouragement to become induftrious, put them upon a fair and equitable footing; make all trifing diftimctions ceafe; and let us not fuffer our moft dangerous competitors to :un away with that trade, that England and Ireland may obtain, upon a wife and folid union made between the two nations.

An act for permitting the exportation of wool and woollen, or bay yarn, from any port in Ireland, to any port in Great-Britain

Whereas the permitting of wool, and woollen or bay yarn, to be exported only from certain ports in Ireland, to certain ports in England, is not of fo great and extenfive advantage to the trade of this kingdom, as it would be if all the ports in Great-Britain and Ireland were opened for that purpofe; be it therefore enacted by the king's moft excellent Majefty, by and with the advice and confent of the lords fisitual and temporal, and commons in this prefent parliament affembled, and by the authority of the fame, That from and after the fifth day of June, in the year of our Lord 1753, it fhall and may be lawful for any perfon or perfons, to export from any port in Ireland, any wool, or woollen, or bay yarn, wool fells, fhortlings, mortlings, wool flocks, and worfted yarn, to any port in Great-Britain, any act or acts of parliament to the contrary notwithftanding.
Provided always, and be it enacted by the authority aforefaid, That all fuch exportations and importations of wool, and woollen or bay yarn, wool fells, fhortlings, mortlings, wool flocks, and worfted yarn, from any port in Ireland, into any port in Great-Britain, fhall be made under the fame reftrictions and regulations, and in the fame manner in all refpects, as wool or woollen yarn is now by law permitted to be exported from Dublin, Waterford, Youghall, Kinfale, Cork, Drogheda, New Rofs, Newry, Wèxford, Wicklow, Sligoe, Limerick, Galway, and Dundalk, and imported into the feveral ports of Biddeford, Barnftaple, Minehead, Bridgewater, Briftol, Milford-Haven, Chefter, Liverpool, Lancafter, and Great Yarmouth, or any of them. See Ireland.
WORCESTERSHIRE, has Herefordhire and Shropfhire on the weft, Glouicefterfhire on the fouth, Staffordhire on the north, and Warwickfhire on the eaft, and is 1 3o miles in circumference. The air and foil of this thire are inferior to no other, either for health or pleafure; the former being fweet.all over the county, the latter rich both in tillage and pafturage, the hills being covered with flocks of fheep, and the vallies abounding in corn and rich meadows. It is in all parts watered with very fine rivers, as the Severn, Stour, A von, Teme, \&cc. which alfo furniik it with plenty of the moft delicious fifh. Its commodities, befides corn, cattle, checfe, wool, cloth, ftuffs, cyder, lampreys, \&c. are perry and fait, which laft is in a peculiar manner. Hops are lately very much cultivated in this fhire, which commodity and their falt are fent down the Severn in a fort of veffels called troughs, of which at leaft 20 are conflantly employed to Briftol, Bridgewater, and other places, Somerfet and Dorferfire being chiefly fupplied with the latter by this traffic.
WORCESTER, which is the capital of the county, is a large flourithing city. The chicf manufactures of it are broad cloth and gloves, efpecially the former, in which it is incredible what a number of people are employed here and hereabouts.

## W R E

Droitwick is of fecial note for its falt fprings, by which it is much enriched; the quantity of falt made being fo great, that the taxes annually paid to the crown amoun
$50,000 \mathrm{l}$. a year, at the rate of 3 s .6 d. a bufhel.
Evesham is a neat town, with a gentle afcent from the river Avon. Its chief manufacture is woollen ftockings.
Bewdiey, or Beaulieu, is fo called, from its pleafant fituation on the declivity of a hill on the weft bank of the river Severn. It is a place of confiderable trade; for by means of the Severn, great quantities of falt, iron ware, glafs, Manchefter goods, \&c. are put aboard barges here, and at Gloucefter aboard troughs, for Briftol, Bridgewater, and other ports, which renders this a populous thriving town and corporation: but its chief manufacture is caps, which the Dutch feamen buy, called Monmouth caps. The town is well fupplied with corn, malt, and leather, and every Saturday has a market for hops.
Kidderminster on the Stour, not far from the Severn, is a compact town, where the inhabitants, who are at leaft 2000, drive a pretty good trade in cloth, and weaving linfey woolfeys, \&xc.
Stourbridge is a well-built town, the name of which fhews its relation to the river, over which it has a ftone bridge. It has been much enriched by iron and glafs works. There's about half a fcore glafs-houfes near it, where glaffes, bottles, and window-glafs are made, together with fine flone-pots for glafs-makers to melt the metal in, alfo crucibles, $8 x \mathrm{c}$. the clay of which they are made, being peculiar to the place. Here is alio a manufacture of fine freeze cloth.
BROMSGROVE, near the rife of the river Salwarp, drives a confiderable trade in clothing.
Pershore is a pretty large old town. Its manufacture is ftockings.
WRECK is where a fhip is broke to pieces, or loft on the fea, and fignifies in our law fuch goods as, after a fhipwreck, are caft upon the land by the fea, and left there within fome county, for they are not wrecks fo long as they remain at fea, in the jurifdiction of the admiralty.
In matters of wreck it is obferved, that there is, as it were, a contract between the perfons that have loft their goods by fuch misfortune, and thofe upon whofe lands the goods and merchandize are driven, that the fame be reftored to them, or thofe that claim under them: and therefore, by the civil law, no man thall meddle with fuch goods as are wrecked, nor Shall they be feized by the king, or any other by virtue of his grant or royal privilege; for that fuch goods, being caft on land and recovered out of the fea, remain ftill his who was the firft owner thereof, and fall go to him or his fucceffor; and if it be proved that any thing be ftolen out of the wreck, the takers fhall be deemed robbers.
Here we fiad what is worthy to be followed and imitated in all trading countries; and the reafon why the laws were fo frictly declared by the Romans was, becaufe by the Rhodian laws [fee Rhodian Laws], if any fhip had become wreck, though all the perfons were faved and alive, yet the fhip and goods became feizable by the lords: but the fame being barbarous and inhuman, it was afterwards repeaied and abrogated, as well by thofe emperors in their territories, as here in England; and firf by the naval law of Oleron [fee Oreron's Laws], which provided in fuch misfortune, that if the merchant or mariners, or any of them came fafe to land, it was not to be accounted wreck.
And the emperor Conftantine the Great fays, If any fhip at any time by fhipwreck be driven unto the fhore, or touch at any land, let the owner have it, and let not my exchequer meddle with it ; for what right have I in another man's calamity, that I hould hunt after gain in fuch a woeful cafe?

## REMARKS.

The laws of Oleron well deferve attention, on account of the great and juft fpirit of them; and this barbarity is now rarely ufed in any nation in Europe, unlefs it be againft the enemies of the ftate, infidels, or pirates. See Oleron Laws.
There are feveral other excellent provifions in the laws of Oleron, to fecure Thipwrecked goods to the diftreffed owners; and by other fea laws and ordinances, if any man fhall prevent affiftance to fhipwrecked perfons, he fhall be punifhed as a murderer: and the like punifhment hath been ordained for thofe who fhall, by treachery, put forth any light, with intention to fubject them to danger or fhipwreck; and hence it is that fifhermen are forbidien to finh with lights in the night. By the laws of France, fuch as during the night light falfe fires upon the fhore, in dangerous places, to decoy thither, and occafion the lofs of dhips, thall be put to death, and their bodies hung up upon a maft, which fhall be fet upon the place where the fires are made.
If a fhip and goods perifh in the fea, and the owners abandon her, fo that dhe becomes a mere derelict, in fuch cale, the firft perfon that takes poffeffion of her, and recovers any part of the lading, gains a property therein, by the laws of nations. And where any fuch wreck happens by any fault or negligence in the mafter or mariner, the mafter muft make good
the lofs; but if the fame was occafioned by the act of God, or done to avoid an enemy or pirate, then he thall be excured The mafter, \&cc. Chall fuftain the damage, where he, or any of his mariners, lie afhore, and the fhip, during their abfence, perifheth, whether by gight or by day, \&c. See Rhodian Laws.
By the French laws, all fhips and perfons belonging to them that thall be caft afhore by tempeft, or otherwife, upon the coafts of that kingdom, and every thing that has efcaped fhipwreck, is declared to be taken into the protection of the king and all fubjects are injoined not only to do their utmoft endeavours to fuccour all perfons in danger of hipwreck, but alfo, till the arrival of the officers of the admiralty, to fave the hhipwrecked goods, and prevent their being rifled, under pain of being antwerable for all loffes and damages, of which they thall not be excufed, without producing thofe that are guilty and fuch as make an attempt upon the lives or goods of thipwrecked perfons, fhall be punifhed with death, without any poffibility of a pardon.
In ancient times, all wrecks in England belorged to the crown; and where a fhip perifhed at fea, and no man doth efcape out of it, the wrecked goods being brought to land by the waves, by the common law belong to the king, by his prerogative, or to the lord of the manor: and the flatute de Prerogativa Regis, 17 Edward II, ordains, That the king fhall have wreck of the fea, whales and great furgeons, taken in the fea and elfewhere, throughout the realm, except in places privileged. But it was formerly ufual to feize wrecks as forfeited to the king, only when no owner could be found; for, in fuch cafe, it muft of confequence belong to him, as lord of the Narrow Seas [fee Sea Dominions and Sea British], which he is obliged to fcour of pirates, \&c. and the product of wrecks was ordained to contribute to the charge. Bract. lib. ii. cap. 5.
And by ftat. 3 Edw. I. cap. 4. called the ftatute of Weftminfter the firit, it is enacted, That where a man, dog, or cat, efcapes alive out of the fhip, neither the chip, nor any thing therein, fhall be adjudged a wreck; but the goods thall be faved, and kept by the fheriff, coroners, or king's bailiffs, and delivered to the inhabitants of the town where they are found; fo that if any perion, within a year and a day, fue or apply for thofe goods, and prove that they were his property at the time of the hipwreck, they fhall be reftored to him without delay: but if not, then they fhall be feized by the faid Cheriffs, coroners, or bailiffs for the king's ufe, and fhall be delivered to the inhabitants of the town or place, who fhall anfwer before the juftices for the wreck belonging to the king. Alfo where the wreck belongs to another, he thall have the fame in like manner; and if any one be convicted to have done otherwife, he thall fuffer imprifonment, make fine to the king, and likewife yield damages: and bailiffs to lords acting contrary, fhall anfwer for it, if they have wherewith to do it; and if they have not, the lord fhall deliver his bailiff's body to the king to be anfwerable.
The owners claiming a wreck, muft make fufficient proof of their title within the year and day; and they are to do it by their marks or cockets, by the cuftom-houfe books, or the teftimony of reputable men; and if the wreck be taken by the king, or feized by perfons having no autbority, the owner may have a commifion to inquire, and hear and determine it, by the oaths of 12 men; or be may bring an action at law, and make his proof by verdict. The year and day fhall be accounted from the feizure; and if the owner of the goods dies within the year, his executors or adminiftrators may make proof: and when fuch goods wrecked are perifhable, the fheriff may fell them within the year, and the fale fhall be good; but he muft difpofe of them to the beft advantage, and account with the owners. Fitz. Nat. Br. 12. 2 Inft. 167 If a fhip is ready to fink at fea, and all the men therein, for prefervation of their lives, quit the fhip, and afterwards the perifhes, if any of the men are faved, the goods fhall not be loft. A thip on the fea was chafed by an enemy; the men in it, for the fecurity of their lives, quitted the fhip, which was taken by the enemy, and fpoiled of her goods and tackle, and then turned to fea: after this, by ftrefs of weather, fhe was caft on land, where it happened ber men fafely arrived: it was refolved that the hip was no wreck by our law. 5 Co. Rep. 2.
Where goods are wrecked on thore* and the lord having power takes them, he fhall not pay cuftom, neither by the common law nor the ftatute law; for at the common law, fhipwrecked goods could not be charged with.cuftoms, by reafon the wreck was wholly the king's, and he could not have a cuftom of what was all his own: and wines, or other goods, coming or brought into the kingdom by wreck, are not imported by any body, but by the wind and fea; nor can fuch wrecked goods, fo caft afhore, be faid to be brought into the kingdom as merchandize for fale. Hill. 23 and 24 Car. II.
If a man have a grant of wreck, and goods are wrecked upon his lands, and another taketh them away before feizure, he Shall have an action of trefpafs, \&c. to recover them; and before they are feized, there is no property gained, to make it felony, I Hawk. 94.

## W R E

In cafe a perion lofes his goods at fea, by piracy or tempeft, and not by wreck, ifthey afterwards come to land, and he can make proof that they are his goods, they are to be reftored by the king's officers, or the lords there. Stat. 27 Edw. III. cap. I 3 .
The ftatute of 12 Ann. cap. 18. hath ordained, That the theriffs and juftices of the peace of every county; or of a city or town, and all mayors, bailiff, and other head officers of corporations and port towns near adjoining to the fea, and all conftables, tithing-inen, and officers of the cuftoms, in all fuch places, upon application to them made on behalf of any commander of a hip in danger of being ftranded, or run on fhore, thall command the conftables near the fea-coaft where fuch thip fhall be in danger, to call together as many men as mall be neceffary, to the affiftance, and for the prefervation of fuch fhip; and if there thall be any fhips of war, or other hhips, lying at anchor near the place, the officers of the cuftoms, and coniftables, \&c. are to require the affiftance of the fuperior officers, by their boats, and what hands they can fpare: and if fuch officers thall refufe or neglect to affilt, they thall be liable to the penalty of 1001 . to be recovered by the chief officer of the fhip in diftrefs.

## W R E

No perfons fhall enter into fuch fhips in diftrefs, without leave from the commander, or a conftable, \&c. and the mafters and conftables may, by force, repel perfons who thall prefs on board the faid Chips without leave. And if any goods are carried off from any fuch fhip; and found on any perfon, if they are not delivered to the owner on demand, fuch perforif Thall pay treble the value of the goods, recoverable by the owner in an action at law. Alfo, if any officer of the cuftoms, or his deputy, abufe the truft repofed in him by this act, and fiall be convicted thereof, he fhall forfeit treble damages to the party grieved, and be incapable of any employment in the cuftoms.
If any perfon makes holes in the bottom, fide, or in any parit of a fhip, or feals any purmp, or does any thing tending to the lofs of the fhip, he fhall be guilty of felony. And by this flatute, thips and goods are to be preferved for the benefit of the owners, paying the falvage, \&uc. [fee Salvage.] But this act fhall not extend to deprive the crown, or any grantee of any right or claim to any wreck or goods that Jhall be jetfam, flotfam, or lagan. See Flotsam.

# Of the PRACTICAL BUSİESS of the CUSTOM-HOUSE, continued from the End of Letter U. 

## The chief Laws relating to Wines.

WI N E, oil, and honey, the ton muft contain 252 gatlons, the pipe or butt 126 gallons, the hogfhead 63 gallons, the barrel $3 \frac{1}{1} \frac{1}{2}$ gallons, the rundlet $18 \frac{1}{2}$ gallons. --imported, are difcharged from the impofition of excife. 12 Car. II. c. 4. §. 15 .
of vinegar, landed before payment and fecurity of the impoft duty, are forfeited, or their value, and the importers are to pay the faid duty notwithflanding. x Jac. II. c. 3: §.5.
firt inded in the out-ports, and carried afterward to fhort of the duties due in London.

- No winc exceeding the quantity of io gallons, imported into any of the out-ports, to be brought from thence to London, or within 20 miles of the Royal Exchange, without paying the out-port and London duty. And if any quantity of wine, exceeding in bottles three dozen, or in calks 10 gallons, is brought in the fame carriage to London, or within 20 miles of the faid Exchange, without a certificate of the faid refpective duties being paid, \&c. it is to be forfeited, \&c. 26 Geo. II. ᄂ. 12. §. I, 2.
-- Every hoghead run out, and not full feven inches, or above, and every pipe or butt not above nine inches left therein, are to be accounted for outs, and no duty is to be paid for the fame.
—— of the growth of Hungary, may be imported from Hamburgh, paying duty as R beuifh wines, I Ann. .. 12. §. 112.
- imported, 12 per cent. to be allowed for leakage. Gedamaged and corrupt, the allowance repealed. 6 Geo. 1. c. 12 §. I.
- damaged, corrupt, or unmerchantable, upon the importer's refufing to pay or ficure the duties, may, at the landing, be delivered up into the cultody of the officers of the cultoms, in order to be publicly fold to be diftilled into brandy, or made into vinegar: and that they fhall not be ufed for any other purpofe, fecurity muft be taken; which may be difcharged upon a certificate (within three months after delivery) that they have been fo ufed. 6 Geo. I. c. 12. §. 3. 12 Geo. I. c. 28 . §. 20.
- The produce of fuch fale is to be paid to the importer, by certificate, as a compenfation for the freight, \&c. but fuch allowance muft not exceed 41. for every ton of wine of the growth of France and Germany, and 81. for every ton of all other wines fo delivered up: and if there be any overplus beyond the faid allowance, it muft be placed to the duties out of which the charges have been paid. 6 Geo..I. c. r2. §. 4. 12 Geo. I. c. $28 . \$ 20$.
4.- But no allowance may be made for fuch wines, unlefs they be imported in cafks on board a merchant-fhip directiy from the place of their growth, or the ufual place of their firft flipping. 8 Geo. I, c. 18. §. 1g. I I Geo. I. c. 29. §. 4. Except faved from thips Atranded, which are to enjoy the fame allowances, as ifimported in the thip wherein they

VOL. II.
were firft laden. 8 Ged. I. c. 18. §. 20. if Geo, I. c. 2 . §. 4.

- Txcept of the growth of the dominions of the great duke of Tufcany, in open flafks, or of Turkey, or any other parts of the Levant Seas, may not be imported in flafks or bottles, or in veffels, or calks, which fhall contain lefs than 25 gallons, upon forfeiture thereof, or the value: to be fued for in any of the courts of record in Weftminfter, or in the court of Exchequer in Scotland, or by the laws of excife: I Geo. II. c. $17 . \$ .7,8$.
-- exceeding in quantity to gallons, which have been imported from foreign parts into any of the out-ports, may not be brought from any place, either by land or water, into the port of London, or members thereof, or within 20 miles of the Royal Exchange, before the proprietor has paid to the coljector, or proper officer of the cuftoms, neareft to the place from whence the wine is intended to be removed, the duties payable in any of the out-ports, and alfo the difference between the duties payable there, and in the port of London on importation. 26 Geo. II. c. 12. §. I.
-- in bottles, exceeding three dozen, and in cafks ro gallons, at the fame time, and in the fame carriage, fo removed, without a certificate from fuch collector or proper officer, expreffing the quantity and quality, and that the duties have been paid as above, or that the fame was wine fold for fal vage, or has been compounded for or condemned, is forfeited, together with the caiks or veffels containing it, and may be feized by any officer of the cuftoms, and profecuted in the fame manner as any uncuftomed wines.
_工 If after removal, and payment of the duties as above ${ }_{3}$ it is ftaved, loft or perifhed before its atrival as aforefaid, the commiffioners of the cuftoms, or any three of them, upon proof thereof upion oath to their fatisfaction, are to caufe'repayinent to be made to the proprietor of the difference between the duties payable in the out-ports, and in London, out of the duties payable on wines.
Befides the duties before mentioned, an act of parliament took place in the year 1762, intitled, An act for granting feveral additional Duties upon Wines imported into this kingdom, and certain Duties upon all Cybrr and PerRY , \& tc .
WINES.--The additional duties on wines to take place after the 3 ift of March, 1763 , without any Discounti or Deduction inward, or drawback on re-exportation afterwards, viz.
——On French wine and vinegar, 81. per ton; and on all other wines and vinegar imported, 41. pur ton.
- Damaged and unmerchantable wines exempted from there additional duties.
--The faid duties to be under the management of the commiffioners of the cuftoms.
- No allowance to be made for Leakage, but upon wines imported directly from the country or place of their growth, \&c.
- Madeira wines imported from the Britifh plantations in America excepted.

## Of the PRACTIGAL BUSINESS of the CUSTOM-HOUSE.

## Chief Laws relating to Wooi

Woox.--The owners of wool, fhorn or lodged within 10 miles of the fea-fide, in the counties of Kent or Sulfex, muft, within three days after fheering, give an exa $\mathcal{E}$ t account, in writing, of the number of fleeces, and where lodged, to the officers of the next port.

- The like notice muft be given before removal, expreffing the number of fleeces, and weight, the name and abod of the buyer, and the place to which it is intended to be carried, and a certificate taken from the officer, who firt entered it, upon forfeiture, and 3s. per pound weight.
:- Such certificàtes muft foecify the names of the owners and buyers, and be limited to fuch times and places to be removed; for which certificate the officer is to receive 6 d .9 \& Io W. III. c. 40. §. 3 .
- Perfons refiding within 15 miles of the fea, in the counties of Kent and Suffex, may not buy wool before they have entered into a bond, with fureties, that all the wool they buy, fhall not be fold by them to any perfons within 15 miles of the fea
- found carrying towards the fea-fide, in the aforefaid counties, unlefs entered, and fecurity be given, is forfeited, and 3 s . per pound weight. Ditto act, §. 4.
-- removed from the place where firft lodged after fheering, within to miles of the fea, may not be lodged, after the firft removal, within 15 miles of the fea, in the aforefaid counties, upon forfeiture thereof, if found, or 3 s . per pound weight by the owners, if carried away. Ditto act, §. 5 .
- laid or hid within 15 miles of the fea, and not entered, is forfeited.
——The claimer of fuch wool, fo feized as forfeited, muft give fufficient fecurity in the court of Exchequer, to pay treble cofts, if caft, over and above the penalties and forfeitures. Dittoact, §. 6

One third part of the aforefaid forfeitures and penalties is to be to the ufe of his Majefty, and the other two-thirds to the ufe of the feifer or fuer. Ditto act, §. 8.

- coaftwife, defigned to be carried to any place on the fea-coafts, with an intention to be conveyed to any other port or place on the fea-coaft, from whence it may be exported, muft, before loaded, or carried within five miles of the place, be entered at the port from whence it is to be conveyed, mentioning the exact weight, mark and numbers, upon forfeiture thereof, with the horfes, \&c. and perfons concerned in carrying, driving, \&cc. are hable to the forfeitures inflicted on the exportation.
_. But to hinder the conveyance of wool from the place of fheering to the proprietor's dwelling houfe, though within five miles, or lefs, of the fea; provided that within 10 days after the fheering, and before the removal and difpofal, he certifies under his hand, to the officers of the next port, the number of sfleeces, and where lodged, and does not remove or difpofe thereof, without certifying his intention, at leaft three days before removal; fuch certificates are to be kept, and regiftered by the officers. I W. and M. c. $3^{2}$. §. $2,3.9$ and 10 W. III. c. 40 . §. I.
- A regifter of all wool fent coaftwife, with the particular weights and numbers, the Chip-mafter's name, and to whom configned, muft be kept at the cuftom-houfe, London. I W. and M. c. 32. §. ir. and 9 and io W. III. c. 40. §. 1 .

Wool-fells, mortlings, fhortlings, yarn made of wool, wool-flocks, fuller's earth, fulling-clay, and tobacco-pipeclay; the cockets for the cariage thereof coaftwife muft be written upon paper, and not parchment, exprefling the exact weights, marks, and numbers, and be figned by at leaft three of the chief officers in whofe prefence they are to be weighed I W. and M. c. 32. §. 4. 7 and 8 W. III. c. 28. §. 7. 9 and 10 W. IM. c. 40. §. I. 5 Geo. I. c. 1 I. §. 14.

The return or certificate of landing the wool mult' be written on paper, not parchment, the quantity not obli; terated or interlined, and muft exprefs the exact weights, marks, and numbers, and be fygned by at leaft three of the chief officers, in whofe prefence it mult be weighed. Ditto acts.

- Officers not performing their duties, are to be deemed aiders and abettors of the eranfportation, and thall fuffer the penalties contained in 12 Car . II. ᄂ. $3^{22}$. and 14 Car . II. c. 18. I W. and M. c. 32 . §.5. and $g$ and ro W. III. c. 40 . 1 .
- Wool, fheep, \&c. as above, may not be exported, nor packed, or loaded upon any horfe, \&ic. nor laden on board any fhip, with intent to be exported, unlefs as hereafter excepted, upon forfeiture, and 20 s . for every fheep, and 3s. for every pound weight of the reft. 12 Car . II. c. 32 . §. 1, 2, 3. and 14 Car. II. c. 18. §. 2, 3, 8. and 7 and 8 W. III. c. 28. §. 2, 3, 4. and 9 and IO W. III. c. 40 . §. $1,2$.
-Owners of the fhips, knowing thereof, are to forfeit their intereft therein. 12 Car. 11, c. 32 . §. 3 .
- And if the owners be aliens, or natural-born fubjects not inhabiting within this kingdom, fuch thips are forfeited wholly to his Majefty. 12 Car II. c. 32. §. 9.
- Mafters and mariners, knowing therecf, and affifing therein, are to forfeit all their goods and chattels, and to fuffer three months imprifonment. 12 Car. Ii. c. 32 . §. 3 . -The exporter, befides other penalties, is difabled to require any debt, \&c. 12 Car. II. c. 32. §. 4 ,
within three months after knowlege of the of upon oath, within three months after knowlege of the offence, or after their return into Great-Britain, the number, quantity, and quality of the goods exported, \&ce. are to be difcharged of all penalties, and to have the benefit of an infurmer's part. 14 Car. II. c. 18. §. II. and I W. \& M. c. 32. §. 8. and 9 and to W. IIT. c. 40. §. i.
- Sheep, wool-fells, mortlings, fhortlings, yarn made of wool, wool-flocks, fuller's earth, fulling-clay, or tobac-co-pipe-clay, the exportation declared a common and public nufance. 14 Car. II. c. i8. §. in.
- Offences may be tried and determined at the general quarter-feffions, in the county where committed, or where the offenders fhall be apprehended, or the goods or Chips taken. 12 Car. II. c. 32. §. 5. i4 Car. If. c. 18. §.4,

12. and 10 and it WII. c. ro. §. 12 .
—— Offences muft be profecuted within three years. Ditto acts.
Such goods fhipped or found on the fhore; at or near the fea, or any navigable river, or packed or loaded on any horfe, $\& x$. with intent to be exported, may be feized by any perfons; but fuch perfons may not be evidence againft the offender. ${ }_{8} 2$ Car. II. c. $32 . \$ .7,8$. and I.W. and M. c. 32 . §. 8, 9 . 'and 9 and 16 W:III. c. 40. \$. f.

- But the aforesaid Prohibition is not toexTEND to-lamb fkins ready dreffed and prepared for furs or linings-nor to wool-fells, or pelts, or beds ftuffed with flocks, or whether fheep alive, or the wool growing therenn, taken on board for the ufe and food of the fhip and pariengers. 12 Car. M. c. $32 . \S$. 10 , 11 . and 14 Car. II. $\ell .18$. §. IO.-Nor to the exportation of uncombed wiol, out of the port of Southampon, into the following ifland, and not exceeding the following refpective quantities yearly, iz.
\(\left.\begin{array}{lr}To Jerfey \& 4000 <br>

## Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE.

Oath muft be made by one of the owners, before the collector and comptroller of the cuftoms, at the port to which the belongs, as follows:
Jurat. A. B. That the Chip of
whereof is at prefent mafter, being
$\left.\begin{array}{l}\text { built of tons, was built at } \\ \text { year and that and }\end{array}\right)$ an
$\begin{array}{ll}\text { year } & \text { and that } \\ \text { of } & \text { are at prefent owners thereof; and that no }\end{array}$ foreigner, directly or indirectly, hath any fhare, part, or intereft therein. 12 Geo. II. c. 21. §.7.
A certificate of which oath, attefted by the collector and comptroller, under their hands and feals, is (after having been regiftered by them) to be delivered to the mafter of the thip, for the fecurity of her navigation ; and a duplicate of the regifter to be immediately tranfmitted to the commiffioners of the cuftoms in London, in order to be entered in a general regifter to be there kept for this purpofe. Ditto act.

- No fhip's name, after regiftering, may be changed, or the property transferred to any port, without regiftering her again, and delivered up to the former regifter to be cancelled, under the fame penalties as before directed. And in cafe of any alteration of property in the fame port, by fale of any fhare, fuch fale muft be acknowleged by indorfement on the certificate of the regifter before two witneffes. 12 Geo. II. c. 21. §. 8.
Wool, Wool-Fells,Mortlings,Shortlings, Wool Flocks, Worsted, Bay, or Woollen Yarn, may not be packed up in Great Britain or Ireland, in any other package but packs or truffes of leather, and pack-cloth, and marked on the outhide with the refpective words W OOL or YARN, in large letters, not lefs than three inches in length, on forfeiture of the goods and package, and 3s. for every pquad weight, to be paid by the owner or packer of it. 12 Geo. II. c. 21. §. 10
- Wool, coverlids, waddings, op other manufactures of wool lightly worked or put together, fo as they may bereduced to, or made ufe of as wool again, or matrafles, or beds ftuffed with combed wool, or wool fit for combing, may not be exported from Great-Britain or Ireland, under the like penalties and forfeitures, as for being concerned in the exportation of wool. 12 Geo. II. c. 21. §. 9.
Wool, Wool-Fells, Mortlings, Shortilngs, combed Wool, Woollen or Bay-Yarn, Worsted, Yarn-Cruel, or Wool slightly manufacturED, may not be laden on any veffel bound to parts beyond the feas; nor laden, in order to be carried coaftwife, from one port of Great-Britain or Ireland to another ; unlefs notice be firft given to the commifioner of the cuftoms, or to the cuftomer or collector and comptroller of the port from which they are intended to be fent or exported, of the quantity, quality, and package, with the marks and numbers, the thip and matter's name, the name and place of abode of the owner of the goods, and the port into which they are intended to be imported, and to whom configned; and bond be entered into, in treble the value of the goods, that they Thall be landed accordingly. (notice whereof to be tranfmitted from the cuftomer or collector of the port from whence the fame is intended to be exported, to the cuftomer or collector and comptroller of the port into which the fame is intended to be imported) and unlefs a licence be taken out under the bands of three of the commiffioners of the cuftoms, or from the cuftomer, or collector and comptroller, where fuch bond is given for landing and carrying thereot as aforefaid, on forfeiture of the goods, together with the vefle, or boat, and furniture, on which they are laden. The licence to be granted without any charge to the perfon demanding it. is Car. II. c. 21. §. ir
--The faid bond not to be difcharged, but by a certificate under the hand and feal of the cuftomer or collector and comptroller of the port where they are landed, of the quality, quantity and package, the marks and numbers, with the name of the hip and mafter. And bonds not fo difcharged after fix months, are to be tranfmitted to the commiffioners of the cuftoms in Great-Britain, or to the commiffioners of the revenue in Ireland, who are to put them in fuit immediately. Ditto act.
- No other fecurity, now required by law, for goods carried coaftwife, to be hereby leffened; or law in force for preventing the exportation of wool, or other goods aforefaid, to be repealed or made void hereby, 12 Geo. II. c. 21. §. 12. - None of the goods before mentioned, imported from Ireland, or carried coaftwife within this,kingdom or Ireland, may be fhipped or landed, but in the prefence of the proper officers, and at the lawful keys, without leave from the commiffioners and officers of the cuftoms, on forfeiture of the goods, or value thereof, and 3 s . for every pound weight; to be paid by the proprietor of the goods, or any perfon concerned in the fhipping or landing thereof. 12 Geo . II. c. 21. §. 13.

Wool, Wool-Fells, Wool-Flocks, Mortifngs, Shortrings, Worsted, Bay, or Woollen-Yarn, Fuller's-Earth, Fulling Clay, Tobacco-Pipe-

Clay, or any fcouring-clay or earth, tranfported out of Great-Britain, or any of the faid goods, or Cloths, Sergee, Bays, Kersies, Says, Frizes, Druggets, Cloth-Serges, Shalloons, or other DraperyStuffs, or Woollen Manufactures, made up or mixed with Wool; or WOOL-FLocks, illegally tranfported out of Ireland.

- Information of feizure of any of the faid goods, as forfeited by this or any other act, are to be entered by none but officers of the cuftoms, excife, or falt-duties; and informations againft any perfons, for recovery of the penalties and forfeitures, on account of the illegal traniportation of the faid goods, to be filed, and profecuted only in the name of the attorney-general, or in the name of fome officer of the cuftoms, excife, or falt-duties.

But this act is not to take away the power given by any law to the commander and officer of fhips of war, or the armed floops, appointed by the admiraly to guard againft the tranfportation of wool out of Great-Britain or Ireland 12 Geo II. c. 21. \$. 14.

- Any officer making a collufive feizure or information of the faid goods, or any fraudulent agreement, whereby the perfons concerned may avoid the penalties and forfeitures incurred, forfeits 2001 . and is incapable of ferving in any office of the revenue; and the exporters, importers, and owners of the goods, forfeit treble the value, to the ufe of the perfon who informs or fues for the fame in any court of record at Wefminfter or Dublin, or the court of Exchequer in Scotland. 12 Geo. II. c. 12. §. 16.
--Any perfon concerned therein, firf making a difcovery fo as one of his accomplices be convicted, is to be cleared and difcharged thereof; and, not being an officer of the revenue, or owner of the goods, to have the whole money recovered on conviction of the offender, the charge of profecution being firft deducted. 12 Geo. II. c. 12. §. I7. Wool, Wool-Fells, Wool-Flocks, Mortlinges, Shortlings, Worsted, Bay or Woollen Yarn, Crurle, or Wool shightly Manufactured, or Mattrasses, orBeds stuffed with combed Wool, or Wool fit for combing, Fuller's-Earth, Ful-ling-Clay, Tobacco-Pipe-Clay, or any other Scouring.Earth or Clay, exported from Great-Britain, or any of the faid goods, or Cloth, Serges, Bays, Kersies, Frizes, Druggets, Shalloons, Stuffs, Cloth-Serges, or any other Drapery made or mixed with WOOL manufactured in Ireland, and illegally etported from thence. Actions, fuits or informations upon this, or any other act, may be profecuted (except where by this act is otherwife directed) in any court of record at Weftminfter, or in the court of Exchequer in Scotland, or at the quarter-feffions of the peace, or before two juftices of the peace, in a fummary way, at the election of the feizer or informer, or by any law relating to the revenue of Ireland in that kingdom; and if the property be claimed, the Onus probandi to lie upon the owner or claimer. I2 Geo. II. c. 2I. §. I8. - All penalties and forfeitures before mentioned in this act (except where otherwife directed) to be for the ufe of the perfon who fhall feize, inform, or fue for the fame. 12 Geo. II. c. 2I. §. 19
On condemnation of the aforefaid goods, the refpective commifioners may caufe them to be fold publicly to the hef bidder; and the charges of condemnation and fale being firft paid, the remainder is to be paid to the perfon who mall feize, inform, or fue for the fame, 12 Geo. II. c. 21 . §. 20.
- 20. But if an officer makes a feizure, or carries on a profecution to effect, by the information of any other perion, fuch perfon is to have half of what is recovered by the officer. 12 Geo. II. ᄂ. 21. §. 21.

If any perfon who may become liable to the payment of the 3s. per pound weight by this or by any former acts, is not able to pay it, the refpective commiffioners may caufe is. per pound weight of the goods, for which the offender is convicted, to be paid to the informer or profecutor by their receiver-general, out of any public money in his hands. 12 Geo. II. c. 21. §. 22.

- Any mafter, mate, or mariners, belonging to any the goods aforefaid, from Great-Bitain or Ireland, giving an account, within fix months after the fhipping, the fame, to the commiffioners of the cuftoms in England or Scotland, or the commiffioners of the revenue in Ircland, of the name of the fhip, the fpecies and quantities of the goods, the name of the owner, exporter, or perfons who act in their aid and affiftance, fo as they may convicted, is to be indemnified, difcharged of all penalties and forfeitures, and receive ${ }_{4}$ of what is recovered, clear of all charges, the other $\frac{1}{4}$ to be applied to the ufe of his majefty, afrer deducting the charges of profecution and condemnation. 12 Geo . II. c. 21. §. 23 .
- Every perfon appointed by deputation, commiffion, or other inftrument, under the hands and feals of the commiffioners of the cuftoms, excife, or falt, to act as an officer

## Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE.

of Cervant under them, in putting this or any act; againft the tranfportation of wool, in execution, is to be efteemed an officer of the cuftoms, excife, or falt refpectively. 12 Geo. II. c. 2I. §. 24.

- Offering or promifing to bribe an officer to connive at the faid illegal practices, the penalty is 300 I . 12 Geo. II. c. 21. \$. $25^{\circ}$
- Perfons obftructing an officer, or his affiftants, in making feizures, by virtue of this act, or who being armed or difguifed, attempt to refcue any of the aforefaid goods after feizure, are to be tranfported for feven years. 12 Geo. II. c. 2 I. §. 26 .

Wool, Wool-Fells, Wool-Flocks; Mortlings, Shortlings, Cruels, Worsted, Woolien and Bay-Yarn, Matrasses, and Beds stuffed with combed Wool, or Wool fit to be combed, exported from Great-Britein or Ireland, and Woollen Manufac-

TURES exported from Ireland; infured to parts beyond ite feas; the perfon infuring, his aiders, abettors, and affitanss; forfeit 5001 . over and above all other forfeitures and penalties they are liable to; and the perfon infured forfeits 5001 : to the ufe of the informer, or perfon who fues for the fame: to the ure of the informer, or
12 Geo. II. c. $2 \mathrm{I} . \$ .29,30$.
The infurer firft making difcovery within fix months after fuch tranfaction, fo as the perfons concerned with himi be convicted thereof, is to be acquitted of the offence, receive the whole forfeiture recovered, deducting charges of profecution, and likewife retain the money given him for infurance. Or the perfon infured firft making difcovery as aforefaid, is to receive back what was paid for the infurance, aforefaid, is to receive back what was paid for the infurance,
and alfo to have the whole forfeiture impofed on the infurer, and alfo to have the whole forfeiture impofed on the infurer,
deducting the charges of profecution, and to be difcharged of the forfeitares incurred. 12 Geo. II. c. 21. §. 31.

YEAST.

A Method of curing Yeast, the Flower of Wine, and Wine-Lees, for the fervice of diftilling, wine-graking, vinegar-making, \&c.
Take a quantity of common ale-yeaft, and put it into a clofe canvas-bag, and gently fqueeze out the moifture in a fcrewprefs, till the remaining matter is • left as hard as clay; in which ftate, being clofe packed in a tight cafk, and well fecured from the air, it will keep frefh and found for feveral months, as has been often experienced.

## REMARKS.

This is an experiment of confiderable ufe to brewers and diftillers, who in England, though they employ very largequantities of yeaft, feem to have no good method of preferving it, or raifing nurferies thereof, whereby they fuffain a confiderable lofs: whereas the Brewers in Flanders make a gireat profit, by fupplying the male-diftillers of Holland with yeaft, which is rendered lafting and fit for carriage, after the manner of the prefent experiment.
The fame method is practicable to much greater advantage, in the yeaft of wine and wine-lees, if they could be imported into England: for by this means we might eafily imitate the wines and brandies of foreign growth ; the lees and yeaft of wine readily affording an effential oil, by diftillation, a fmall proportion whereof will flavour a large one of wine or brandy. But a fhorter and more perfect way, is to let any taftelefs, or other proper wine, fret, or ftand for fome time, upon fuch lees, or wine-yeaft, whereby it will, to great advantage, acquire the natural tafte and flavour of the wine whereto the lee or yeaft belonged. See the article Brewing.
YORKSHIRE. As this is by far the largeft county in England, fo it is variouny fituated, and confequently, has great variety of ground, that is, high and low, rich and poor, marfhy and heathy. On the weft it is bounded by Lancafhire, and a part of Chemire ; on the fouth by Derbyfhire, Nottinghamfire, and Lincolnhire; on the north by Durham and Weftmoreland; and on the caft by the German Ocean ; and contains 360 miles in compafs.
The commodities are, in a particular manner, allum, jet, lime, liquorice, horfes; its manufactures, knives, bits, fpurs, ftockings, \&c. but the greateft of all is cloth, with which it in a good meafure fupplies Germany and the North. The corn and cattle, with which it abounds, are not mentioned, becaufe thefe are what they have in common with other counties. Iron and lead mines have been in more plenty than of late years, though no lefs than 40,000 perfons are employed in the iron manufactures, under about 600 mafter cutlers, who are incorporated by the file of the cutlers of Hallamfhire.
It is divided into three parts, or ridings, each as large, if not larger, than any ordinary county, which are diftinguimed by weft, eaft, and north, from their fituation with refpect to the city of York.
The West Riding, which is the moft confiderable of the three, for its fertility and number of inhabitants, is feparated by the Oufe from the Eaft Riding; it has the North Riding on the north ; part of Lancamire, and Chelhire on the weft and fouth-weft ; and Lincolnfhire, Nottrighathinire, and Derbythire, on the fouth-eaft and fouth. Its chief rivers are the Ure or Oufe, Don, Calder, Are, Ribble, and Wherfe. Its air, though fharp, is generally reckoned more healthy than that of the other two ; and the foil is various. They have a fone here, which being calcined, is made into allum, by various percolations and boilings: it is noted alfo for jet and liquorice, for fine horfes and goats, for making and curing legs of pork into hams, like the Weftphalian, and for the manufactures of cloth and iron.
YORK, the capital of the county, and heretofore the fecond city in the kingdom, is pleafantly fituate, in a large plain, or valley, on the river Oufe, which, though 60 miles from the fea, bring fhips to the city that are of 70 tons burthen. A
cotton manufacture was lately eftablifhed here, which is brought to very great perfection.
Knaresborough is only of note for its medicinal fprings, but not fo much frequented fince Scarborough fpa came in vogue.
Rippon is a large, pleafant, well-built, and populous town, between the Ure and little river Skell: it formerly flourifhed by the woollen manufacture, which it has fince loft, though it is fill a ftaple for wool, which is bought up here every week, by the clothiers from Leeds, Wakefield, Halifax, \&c. It has two annual horfe-fairs, viz. one the Monday before the roth of March, the other cn the Monday after Lammas-Day, and is noted for making the beft fpurs. Tanned leather is fold in great quantities, as alfo cattle of all kinds, at its fairs.
Boroughbridge is a borough and poft-town on the Ure; it is reckoned that 7 or 8000 l. is laid out yearly here in hard ware, which is the chief fupport of the town.
Sheffieid, on the borders of Derbyfhire, is an ancient, large, thriving, and populous town, on the river Don, having beêh noted feveral hundred years for cutlers and fmiths wares, particularly for files and knives, or whittles: the firf mitls in England for turning grindfones were fet up here. The fmiths manufactures were encouraged and advanced here, by the neighbourhood of the iron mines.
Doncaster, on the river Don, is a noble, fpacious, and populous town; the manufactures of which are knit waiftcoats and petticoats, gloves and flockings.
Bautre, fituate near the Idle, which parts this riding from Nottinghamfhire: it is of chief note for its trade in millftones.
Barnesley is a well-built town, noted for its trade in wire and hard-ware.
Wakerield is a large well-built town, in a thriving fate, and very populous. Its Friday market is for woollen cloth, like that at Leeds, but not quite fo confiderable, though abundance of it is made in and near this town: it ftands on the Calder, which has been made navigable by acts of pariiament, firft to this town, and continued from hence to Ealand and Halifax.
Huthersfield is the firft town of note that the Calder comes to from Halifax, and is one of the five towns in this county that have the greateft fhare in the cloathing trade.
Snath is a fmall town, but has a pretty good trade, the river being navigable to it by boats.
Halifax ftands on the Calder, extending from weft to eaft, on the gentle defcent of a hill : it is a parifh, the moft populous, if not the moftextenfive, in England. The trade of this town has greatly increafed of late years, efpecially as they have entered into the manufacture of thalloons, of which few, if any, were ever made in thefe parts before; fo that it has been calculated that 100,000 pieces are made in a year in this parilh only, at the fame time that almoft as many kerfies are made here as ever; and it has been affirmed, that one dealer here has traded by commiffion for 60,000 1. a year, to Holland and Hamburgh, in the fingle article of kerfies.
It is remarked, that this and the neighbouring towns are all fo employed in the woollen manufactures, that they fcarce fow more corn than will keep their poultry, and that they feed very few oxen or fheep : fo that the provifions they confume come chiefly from the Eaft Riding, and neighbouring counties. Their markets are thronged by futh prodigious numbers of people, to fell their manufactures, and buy provifions, that none are'more crowded in the north of England, except thofe of Leeds and Wakefield.
Leeds, which ftands on the river Aire, has been a long time famous for the woollen manufacture, and is one of the largeft and moft flourilhing towns in the county.
Its cloth market was formerly on the bridge; but, on the great increafe of that trade, it has been fold in that called the High-Street, or Bridgate-Street, where every market-day in the morning numbers of treffels are ranged, and covered with boards, and, upon ringing of the market bell, at fix in the fummer, and feven in the winter, the clothiers in the ians bring out their cloth. When the bell ceafes, the chapmen come

## Y O R

into the market, where they match their patterns, and treat for the cloth in few words, and with a whifper, becaufe the clothiers ftand fo near each other; and perhaps 20,000l. worth of cloth is fold in an hour's time. The bell rings again at half an hour after eight, upon which the fcene is changed; the clothiers and their chapmen, with their treffels, difappear, and make room for the linen-drapers, hardwaremen , fhoe-makers, fruiterers, \&c. at the fame time the fhambles are well fored with all forts of filh and fefh; and of apples 500 loads have been counted here on a day. There is a magnificent hall in the town, where they alfo fell great quantitics of white cloth: it has a cupola and bell at top, like Blackwell-Hall in London, to give notice when the fale begins. The river Aire being navigable here by boats, opens a communication from the town with Wakefield, York, and Hull, to which places it exports other goods befides woollen, and furnifhes the city of York with coals.
Bradforth is another town eminent for the woollen manufaature.
Aberforth is of note only for its manufacture of pins
Selby is a populous, though fmall town, with a good trade on the river Oufe, which brings up large veffels to it, fo that it is inhabited by feveral merchants.
Wetherby is a notable trading town on the river Wherfe. Burstale is a little town, noted for the manufacture of broad cloth, fo called to diftinguifh it from kerfeys, druggets, \&c. though the cloths of this county areall called narrow at London, when compared with the broad cloths made in the weft of England. At this town is alfo made a fort of cloth in imitation of the Gloucefter whites, which is of as good a colour as thofe, if not as fine.
The East Riding, which is the fmalleft of the three, is bounded on the north and weft by the Derwent and the Oufe ; on the fouth by the Humber; and on the ealt by the German Ocean. The air and foil are various, according to the different parts of it. Its rivers are the Oufe, Derwent, Fowlwy, Shelfeet, and Hull.
Beverley, on the river Hull, has a trade in malt, oatmeal, and tanned leather, which are its principal manufactures; but the poor people fupport themfelves monly by weaving of bone-lace, which of late has met with particular encouragement. Here was formerly a cloathing trade, but long fince decayed. Its moft remarkable fair is that which begins about nine days before Afcenfion, and is kept in a ftreet leading to the Minfter-Garth, called Londoner-Street, becaufe then the Londoners bring down their wares and furnifh the country tradefmen with them by wholefale. The trade of this town is very much increafed fince the creek, or cut, called BeverleyBeck, from the town to the river Hull, has by act of parliament, in $\times 727$, been cleanfed, deepened, and widened, and thereby rendered navigable for veffels of large burthen.
Kingston upon Huxi, as it is denominated in all authentic writings, but commonly called Hule, is a large, clofe-built, and exceeding populous town, and not only the moft confiderable in this part of England, for its inland traffic, but has a foreign trade equal to that of moft out-ports in the kingdom ; and bas as many merchant-fhips belong to it, as to any port in England, except London, Briftol, Liverpool, and Yarmouth. Indeed more particular circumftances concur to render it rich in trade, than moft towns on our coafts can boaft of. One thing has contributed efpecially to its increafe in trade, and to its being the center of the navigation, and that is, the great number of large rivers which fall into the fea near it, by which it carries on a commerce and

## Y O R

navigation with a very great part of England, particularly the inland counties, that have no foreign trade by any other canal; all the heavy goods of which counties, fuch as lead from Derby and Nottinghamflires, iron ware from Sheffeld, cheefe from Warwickghre, Staffordhire, and even Chelhire, are brought down to this port; and here exported to Holland, Hamburgh, and the Bultic, as alfo to France and Spanand whence they make large returns in iron, copper, hemp, flax, canvas, Ruffia linen and yarn, befides wine, oil, fruit, li nen, \&cc. from Holland, France, and Spain. But what is more than all is, the valt quantity of corn brought down cut of thofe counties to Hull, as makes it, without exception, the greateft port in England for exportation of corn, fometimes exceeding even London itfelf. The trade, on the other hand, betwixt this port and London, efpecislly for corn, and butter, and the trade between this pott and Holland and France, not only for all thofe commodities, but for the cloth kerfeys, and other manufactures of Leeds, Halifax, and other great and populous towns of the Weft-Riding, is fuch, that they not only employ fhips, but fleets, which are gencrally from 50 to 60 fail together, and in war time often 100 fail, or more. They who have feen the greateff ports abroad, fay there is more bufinefs done at this, in proportion to its bignefs, than in any other port in Eurcpe.
Bridiington, which ftandsnear the bay fo called, is of late years become a place of good trade, and has a great corn marker. The key, which is near two miles from the town, is chiefly inhabited by feafaring people.
The North Riding extends along the coaft, from Robin Hood's Bay, as far as Whitley, being bounded on the north with the river Tees; it runs from the fea, in a narrow track of near 60 miles, as far as Weftmoreland, and is bounded on the fouth and weft with the Derwent and Ure, which part it from the Eaft and Welt Ridings. The foil in many parts is very indifferent, it being rocky and mountainous, but the bottoms and vallies are not unfruifful. The hills afford great ttore of lead, pit-coal, and lapis calaminaris; and in fome places it produces marble, allum, jet, and copperas. The chief allumworks here were carried on by the late duke and ducheis of Buckingham, at Whitby, where was the greateft plenty of its mine. The jet is found in feveral places by the fea fide, in the chinks and clefts of the rocks.
Scarborough is an ancient borough, fituate on a fteep rock, has a good trade, and a commodious key, with a good number of veffels, which are chiefly employed in the coal trade between Newcaftle and London. From the middle of Auguft to November, herrings are taken bere in great numbers, with which they fupply the city of York, as alfo with feveral other kinds in their feafon. But the wealthy condition of this town is chielly owing to the number of perfons of all ranks that flock hither every year, in the feafon, to drink the waters of its chalybeat fpring.
Malton is a populous borough, and its Saturdays market is the beft in the county for horfes, black cattle, and other commodities, efpecially tools for hurbandry.
Northallerton has a good market alfo for horfes, and other cattle, corn, \& cc. and its beaft fairs the moft thronged in England.
Richmond has a good trade in flockings and failors woollen caps.
YARUM is a corporate, though a fmall town, and carries on a pretty trade with London by water, for Jead, corn, and butter. Midlam is noted for a manufacture of woollen cloth.
Masham has alfo a cloth manufacture.

## Chief Laws Relating to Yarn.

YARN, linen. See the end of letter I. and the end of letter W. for Wool. Brown or raw linen-yarn made of Flax may be imported in Britifh fhips legally navigated, free of duty, from the 24th of June 1756 , for 15 years, and to the end of
the then next feffion of parliament, if duly entered and landed in the prefence of the proper officers.
-_ If any doubt arifes whether fuch yarn is made of Flax or not, the Onus probandi to lie on the importer or claimer. - 29 Geo. IF. c. 15. \$. 13, 24.
or Mohair. See end of letter G.-Yarn worted. See end of Wool.

## Z I N

## Z I N

ZAFFRE, or SAFREE, is a mineral of a blueifh, or partridge-eye colour, which the Englifh, Dutch, and Hamburghers bring from the Eaft-Indies, and efpecially from Surat.
Molt of the zaffre we have is in a grey powder; like afhes, from which it fo little differs in appearance, that we are forced to confult the workmen who ufe it, to know, by trials, whether jt is what it ought to be.
There are, however, two forts of zaffre, the fine and the common: the former is in a bluifh, or cineritious ftone; the latter in powder, and very often fo bad, that it is hardly good for any thing, and being fo very weighty, muft needs be maxed with fome ftony fubftance, the other being much lighter. This matter is muchufed by Delft-ware and glafs-makers, to give a blue colour to both forts of ware: it is alfo with zaffre that they colour calcined pewter, in order to make a fort of falfe ftone; and with zaffre it is that the azure colour of glafs is produced, as is before obferved, and of which is made the counterfeit fapphire, according to Pomet.
Monfieur Lemery fays faphre, fafre, zafre, or fapphire, is a mineral whereof there are two kinds, one called fine fapphire, and the other common: the fine fapphire is a pretty foft flone, of a blueilh colour ; the common fapphire is a greyilh heavy powder: both forts come from India. The fine fapphire is ufed to give a blue colour to enamel, to earthen ware, and glafs; they likewife colour counterfeit fapphires with it, whence it takes its name.
ZINCK, called ZINCHUM, ZINCTHUM, and MARCASITA PALLIDA, by fome, is a metallic, fulphureous, heavy fubftance, refembling lead in colour, fufible
and ductile to a certain degree, very hard to break, inflammable, and volatile. It feems to have been quite unknown to the ancients; and even the moderns knew very little of its nature and origin, 'till Mr Stahl explained it, in his Metallurgia. It is extracted from a kind of the lapis calaminaris, and from the lead ore of the mines of Goffelar, which ore is very hard to melt, though it appears rich and fhining. Three fubftances are feparated from it, lead, zinck, and a kind of cadima fornacea, which, melted with copper, makes a Bath metal, or prince's metal, fo called from prince Rupert, who is faid to have invented it: but the fineft metal of this kind is made of zinck and copper melted together. In the melting this Goffelar ore, the lead remains at the bottom of the furnace, and the zinck and cadima ftick to the fides. The cadima is to be long expofed to the air before it is fit for ufe, and the zinck is purified by careful meltings, and calt into moulds.
The zinck at this time is much in ufe, for the pewterers have found it more proper to cleanfe their pewter than pin-duft and rofin. It is wrong to believe that zinck is mixed with pewter to increafe its weight, for unto a fount of five or fix hundred pounds of it they put but one pound of zinck, and, which is wonderful, the zinck has the quality of purifying and whitening the pewter, and acting upon it as lead does upon gold, filver, or copper. This zinck is ufed to give copper the colour of gold, efpecially when mixed with turmeric, and works upon copper as arfenic does, that turns it of a filver colour; or the lapis calaminaris, that makes it yellowifh; or, laftly, as Hungarian vitriol, that turns iron into copper colour, as hath been obferved in the Philofophical Tranfactions of the Royal Society at London.

## A Conctse Explanation of the Contentis of Mr. SAXBY's Portable Boox of Rates, referred to in this Work, in relation to the Business of the Customs, and the Chief Acts of Parliament contained therein. See the Conclufion of Letter A, and that of every other Letter. See alfo our article Subsidy.

UNDER any peculiar articles, where it is necefflary, we have given fuch an idea of the practical bufinefs of the cultoms, both as the fame refpects the out-ports, as well as the port of London, that the reader will eafily judge from thence, what further knowlege may be occafionally requifite for him to obtain, relative to that particular branch of trade he may be incerefted in; and he will be able to obtain the fame from his own enquiry, when he has been duly introduced into the fyft:m of our cuftoms.
At the end of the letter A, we have alfo communicated, in an intelligible manner, it is apprehended, the principles and rudiments upon which the computation of the cuftom-houre Duties are grounded, as the fame have relation to Britifh fubje cts and ftrangers; and allo to the cuftomary draw backs, bounties, and premiums, as they are computed in Mr Saxby's book of rates.
In order to render the fame the more eafily comprehenfible to our readers, which it really requires, we have fhewn, that the Reference Figures, affixed to the Right-hand .Side of the columns of that ready-calculated book of rates, are the keys whereby fuch computations are to be underftood. To this end, we have reprefented the peculiar Table and List, made ufe of thereen, invented firft by Mr. Edgar, in the year 1714, fince followed by the late Mr. Crouch, and row by Mr. Saxby. For the faid Table and List, contained in pages 73,74 , and 75 of Saxby, indicate,
with all pofible brevity, the feveral branches of duties, to which the refpective goods, contained in the book of rates, are liable, by the various acts of parliament that are now in force. At the end of our letter A, we have alfo given the Rules, Orders, Directions, and Allowances, for the advancement of trade, and Encouragement of the MerCHANT, as alfo for the regulating as well of the merchant in making of due entries and juft payments of their cuftoms, as of the Officers in all the ports of this kingdom, in the faithful difcharge of their duty; referred to in the act of tonnage and poundage, paffed anno 12 Car. II. Which Rules, \&c. are figned by Sir Harbottle Grimftone, fpeaker of the houfe of commons.
We have alfo noticed the Rules, Orders, and Regulatrons, annexed to the additional book of rates, referred to in an act paffed anno in Geo. I. c. 7.
Upon the before-intimated rules and regulations, we have made fome remarks that we judged necefflary, in relation to the Discounts allowed to merchants, upon the payment of the divers fubfidies at importation; to which we refer the reader; we judging what we have there urged may require confideration.
If'the reader likewife confults our article Subsidy, he will find a fuccinct account of thofe duties to which various fpeciea of goods are fubject, purfuant to act of parliament; with fome obfervations thereon, which may not be altogether ufelefs to

## Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE.

thofe who would well weigh the conditions whereon fuch fubidies are paid.
Befides the feveral fubfidies noticed under our article SubBefides, Mr. Saxby's book of rates contains, in the firft part of it, the various impofts, and other kind of duties, payable on goods and merchandizes imported into, brought coaftwife, or exported out of Great-Britain; all which are enumerated in the above-mentioned List of Duties, conjoined with the Table before obferved, except thofe that have arofe fince.
This part of Saxby contains an abftract of the feveral acts referred to, and the particular conditions upon which the faid impofitions are paid ; all which are neceffary to be confulted by thofe who would comprehend the TABLE and List.
The fecond part of Saxby contains the Rates of Merchandize: that is to fay,
The fubfidy of tonnage; the fubfidy of poundage ; and - the fublidy of woollen cloth, or old drapery; as they are - rated and agreed on by the commons houfe of parliament,

- fet down and expreflied in that book, to be paid according

6 to the tenor of the act of tonnage and poundage from the

- 24th day of June, inclufively, in the 12th year of the reign
- of his Majefty (Charles the Second) and fubfrribed with
- the band of Sir Harbottle Grimftone, Bart. fpeaker of the
'houfe of commons.' Likewife,
- An additional book of rates (referred to by II Geo. I.) of - goods and merchandizes ufually imported, and not parti-- cularly rated in the book of rates referred to in the act of - tonnage and poundage, made in the 12 th year of the reign of king Charles the second ; with rules, orders, and re-- gulations, figned by the right honourable Spencer Compton, \& Efq; feeaker of the honourable houfe of commons.' Together with
The feveral additions and alterations which have been refpectively made by any fubfequent act of parliament; every of which is diftincty pointed out and explained. To which are added,
The total Amounts of the riet duties to be paid on each fpecies of goods imported, exported, of brought coaftwife, and of the net Drawbacks to be repaid on any of them when duly exported; with proper References, fhewing the feveral refpective Branctes which compofe the faid total Amounts, 8 cc . and commencing from page 79 to page 266 of Saxby; on goods InWards, or imported.
Then follows the Subsidy of Tonnage, uponall Wines to be brought into the port of London, and all other ports of Grat-Britain, and dominions thereof, by British; and alfo the Drawback thereof to be repaid upon due exportation, which begins at page 267, and continues to page 275.

## R EMARKS

With refpect to the Wines mentioned in Saxby, page 267 , it muft be obferved, that all merchant-Atrangers, bringing in any forts of the wines there enumerated, are to pay thirty Thillings in the ton, over and above the rates there fignified, which the natives pay; including twenty fillings the ton formerly paid to his Majelty, by the name of Southampton duties for mufcadels, malmfies, and all other wines of the growth of the Levant.
For which fort of wines, the franger is allo to pay to the ufe of the town of Southampton, for every butt or pipe, the fum of ten fhillings.
Moreover, the flranger is to pay the ancient duty of butlerage, which is two fhillings upon every ton.
Note, that fuch wines as chall be landed in any of the outports, and cuftom paid, and afterwards brought to the port of London by certificate, fhall pay fo much more cuftom, as they paid Mort of the duty due in the port of London. For the explanation of which fee pages 7 and 274 , and 275, of Saxby - And for the other duties on wines, fee the refpective branches contained therein.
N. B. All wines imported into the port of London, are to pay for the ufe of the orphans of the faid city, for every ton, as by 5 and 6 Will. and Mary, cap. 1o. §. 7. 4 hillings. And
Alfo, if imported by ftrangers, the ancient duty of butlerage, which is for every ton 2 fhillings.
Wine-Lees imported into any port, are to pay the fame duties as wine; but are exempted from drawback upon exportation. I Geo. II. cap. 17.
N. B. No wines, except of the dominions of the Great Duke of Tufcany, in open flafks, or of Turkey, or any other parts of the Levant feas, may be imported in flafks or bottles.
Though part of the duties on wines may be fecured by bond; yet, as that does not frequently happen, all the duties, as computed in Saxby, are as if paid down in ready money; therefore, when bond is to be given, you muft confult the Additional. Duty, Impost on Wines, and Impost 1692, Saxby.
Wines may not be brought in any other than Britilh or Irifh fhips, or lbips of the built of the country of which vo L. II.
they are the growth, or of the port where they can only; of are moft ufually firft fhipped; nor from the Netherlanes or Germany, except Rhenish or Hungary Wines from Hamburgl. 12 Car. II. c. 18. §. 8.
For other regulations refpecting wines, fee our article WINE, and the end of letter $W$. where the laft duties on wines are obferved, fince the publication of Saxby: And if the duties are underfood, as they are calculated in Saxby's prefent book, it will be eafy to make any after-addation thereto; that may happen.
The tonnage duty comprehends the duties payable on wines imported (and the old fubfidy on perry, rape of grape, fyder, fyder-eager, and vinegar, the impofts on vinegar, and the coinage duties) being regulated by the fum certain on the ton theafure.
All the duties on wintes are explained in Saxby, under each refpective branch in chap. I. wherein are fhevin the gross Duties, the Discounts thereon, and the net duties to be paid or fecured (for one ton, or one gallon) according to the feveral circumftances of entry and importa tion; therefore, when the branches, to which any fort of wines are liable, are defired to be known, that fort (obferving the particular circumftances of entry and importation) muft be fouqht for in Saxby between the pages beforefaid, of 267 and the page 275; and oppolite thereto will be the Refrence Letter, as contained in the preceding Ta bie, reprefenting the particular branches, as is explained in the following example.
One ton of Spanifh wine, unfilled, for fale, imported inito the port of London, by Britifh, in Britifh fhips qualified, all duties paid down:
Upon recourfe had to page 269, Saxby, in the Referenee Column, directing to the faid Table and List, at the end of our letter A, or Saxby 74, 75, oppofite to the fort of wine above defcribed, will be found the Referring Letters $Z b$, which letters (being found alfo in the $T_{A}$ ble) refer to the Branches contained in the List No. 1. III, $2,3,4,7,16,34$; each of which branches mult ted confulted, that the refpective fums due thereon may be exactly charged; which from the above example will be found to ftand thus. viz

Total duty to be paid - $-\quad \begin{array}{llll}25 & 18 & 3\end{array}$ As the fame ftands at prefent in Saxby, page 316, before the laft further duty on wines took place in the year 1762 , viz. on French wine and vinegar, of 81. per ton; and on all other wines and vinegars imported, 4 l . per ton. See the end of letter $W$, for the Business of the Customs. So that there muft be added to the faid fum in Saxby, of ${ }_{2} .51 .18 \mathrm{~s} .3^{\mathrm{d}} . \frac{13}{2} \frac{3}{8}$, the further additional duty of 4 l . per ton, which makes the duty 29 l. $18 \mathrm{s}$.3 d. $\frac{1}{2} \frac{3}{6}$ per ton, on the wine above.
But as the duties on wines bear fo many branches of duties; for the greater eafe and difpatch in computing them, it is the practice of the cuftomsto work by tables, wherein each branch is computed nee, according to all the refpective circumftances of importation, difcount, $\& \mathrm{cc}$. from a gallon toa ton.
However, with relation to wines, the computations in Saxby, from page 26 to page 275, may be confulted; and then the laft additional duties mentioned before mult be added thereto. The next part contained in Saxby concerns the rates of merchandize Outwards, referred to by the act of TqNnage and Poundage, Anno 12 Car. II. c. 4. §. $2,7^{\circ}$ with the net duties payable on each fpecies of goods and merchandize (fubject thereto.) by that or any fubfequent act of parliament; together with the fubfidy of poundage, of fix-pence in the pound, to be paid on the exportation of foreign goods ufed in dyeing, \&c. This extends from page 279 to 306 , including directions for the payment of the fubfidy upon woollen-cloths, or old drapery; the former of thefe being mighty eafy; the Reference Letters directing to the Table, being Ib, which point to page 48 in Saxby, with directions for the computation
The following part of Saxby contains the total net duties payable upon goods brought Coast Wise from port to port of Great-Britain; and allo to be repaid on duc exportation, which confifts only of the fingle page 307, and is under flood by the Reference Letters to the Tabie of $\mathrm{H}_{\mathrm{A}}, \mathrm{V}_{\mathrm{B}}$. the former directs to pages $5^{2}$ and 53 , in Saxby, and the latter to page 54 , where the duties are plain enough. after follow strain Rules, Orders, Direc After this foll merchant, as alfo for the regulating as well of the merchant merchant, as allo forme Payments of in making of DUE ENTRIEs and their cuftoms, as of the officers in ant the por poundage paffe. dom, referred to in the act of tonnage and poundage paffe

110

## Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE.

anno 12 Car. II. - Alfo, the Rules, Orders, and Regurations, annexed to the Additional book of Rates referred to in an act paffed anno 1 i Georgii Primi, c. 7.-All which ought to be deliberately confulted by merchants for their own intereff. See what we have faid thereon at the conclufion of our letter $A$, refpecting the Business of the Customs, and alfo under our article Subsidy.
Chapter the 3 d of Saxby begins at page 315 , and ends at 388 , and contains to the time that gentleman wrote. I. Inftructions for the computation of the feveral branches compofing the total duties to be paid on goods and merchandizes imported, exparted, and brought coaftwife; illuftrated by examples adapted to the refpective circumftances of importation, \&c. II. The feveral allowances and bounties payable out of the duties of cuftoms, the bounties and drawbacks on Britifh excifeable goods exported, and the premium on naval flores imported.
In regard to the former of thefe, the reader is defired to confult the end of our letter $A$, upon the computation of the duties, \&cc. together with what we have here faid, and alfo under our article SUBSIDY: and for the variety of examples given in Saxby we refer him to the before-mentioned pages; recommending to him the confideration of the fubfequent acts of parliament, that have been made fince Mr Saxby wrote; efpecially that which concerns the fubfidy of 1759 and that of the further additional duties on wines, cyder and perry, made in $17^{62}$.
With relation to the feveral Allowances, and Bounties payable out of the duties of the cuftoms, the bounties and drawbacks on Britifh excifeable goods exported, and the premium on naval ftores imported; together with inftructions in regard to the performance of the refpective regulations required by law; thefe concerning the intereft of merchants fo materially, we fhall give them at large at the end of thefe fhort obfervations on the book of rates in general.
The fourth chapter of Saxby begins at page 389 , and ends at page 433 , and contains, I. Lift of the ports of Great-Britain, with their members and creeks. 2. The names of the lawful keys, wharfs, \&c. for fhipping and landing goods in the port of London. 3. Fees and allowances due and payable to the officers of his Majefty's cuftoms in the port of London. 4. The grant to the city of London of the duties of fcavage, package, \&rc. 5. The fcavage table of rates inwards. 6. The package table of rates outwards. 7. The balliage duties outwards. 8. The packers water-fide porters table of duties and rates for landing and fhipping out ftrangers goods.
The contents of this chapter are known as foon as perufed, and require only to be duly noticed, that traders may be informed when they bave jultice done them according to the laws of the land fill in force.
The fifth and laft chapter is an index, containing an abftract of the laws now in force for collecting, and otherwife regulating the cuftoms, digefted and difpored in alphabetical order; with references to the refpective acts, and to the material circumftance throughout the book.
This index ferves to give fome idea of the multiplicity of our laws relative to the revenue of cuftoms only, yet a very faint one of their full bulk andextent; for, was every trader obliged to confult them all at large; and we had given them in their full length from the ftatutes, in this work, we might have eafily filled up our volumes even with thofe laws, and more efpecially fo, if we had had added thereto thofe appertaining to the excife, and other branches of trade alfo. 'Tis no little misfortune to this kingdom, that the prefent conffitution of the public revenives, particularly, fhould occafion fuch a body of numerous. laws, which concern our commerce and navigation only; for it requires more application to become mafters of thofe laws than traders have to fpare, or even our profeffed lawyers either to reconcile: yet what adds to our misfortune is, that we have no hopes of thefe voluminous laws being leffened to any confiderable degree, till the whole ftate of our revenues is changed; and when that will be, fince we are in the way of encreafing our laws concerning it every feffions, we do not prefume to fay, notwithftanding there is nothing of fo much importance to thefe kingdoms. But who will attempt what he will never be recompenfed for in this nation?
At the end of every letter of our work, we have given an abfract of many materials of the laws relating to the cuftoms, and have occafionally interfperfed others throughout this performance. Yet we the rather refer our readers to confult the Statutes at Large, upon any peculiar branch of trade wherein they may be concerned, than to depend wholly, upon our abifracts, or thofe of any other. Even thofe publifhed by the officers of the cuftoms themfelves, who are daily concerned in the practice of the cuftom laws, we have found to be very imperfect, of which Mr Saxby has complained largely in the introduction to his book of rates; and perhaps it may not be long before the imperfections of his book may be fhewn by others : and it is, perhaps, more ow-
ing to the laws themfe'ves than to thofe who may enide: vour to explain them, as might be fhewn in many mftances if neceffary. Atprefent I fhall only obferve, in the words of Mr Saxby, that ' the allowances, bountics and draw backs payable on Britifh goods exported, and premiums on other goods imported, \&e. being a part of bufinefs not fo ocher goods imported, ac. being a part of bufinefs not fo
immediately obvious to the officers of the cuftoms, (and it immediately obvious to the officers of the cuftoms, (and will add, not to the traders themfelves, though for other reafons than he has affigned perhaps, ome of them being within the province of the excife and falt dutios) have not been heretofore fo well collected and digefted as they might have been; for though part of them have been extremely well done, others bave been but nightly touched, and fome quite omitted: but as they are now become very numerous, and in regard to bounties and premiums a very extenfive and formidable branch of the bufinets of the cu foms, it became neceffary that the merchants, as well as of ficers, fhould be well inftructed therein; therefore great cars and diligence have been ufed to conftruct them in fuch manner, as that every regulation for the obtaining the feveral bounties and premiums is properly inferted under the re fpective heads; and in regard to the payment of all other allowances, 8 cc . the inftructions for the performance of the refpective regulations required by law, are fo particularly and extenfively defribed, that the officers will fcarcely be at a lofs in any circumftance."
As we efteem this one of the moft material improvements in Mr Saxby, for the benefit of the trader, we fhall give the fame as it is therein contained.

SECTION II.
The feveral allowances and bounties payable out of the duties of the cultoms, the bounties and drawbacks on Britifh excifeable goods exported, and the premium on naval ftores imported ; together with inftructions in regard to the performance of the refpective regulations required by taw.

1. Bounty on corn exported.
2. Bounty on Britifh refined fugar exported.
3. Bounty on Britilh-made falloloth exported.
4. Bounty on fpirits drawn from barley, malt, or other corn exported.
5. Bounty on Britifh manufactures of filk exported.
6. Bounty on Britilh made gunpowder exported.
7. Bounty on Britifh thips employed in the whale-fifhery.
8. Bounty for encouragement of the Britifh white-herring fifhery.
9. Bounty on fhips built for, and employed in the Britifh white-herring fifhery.
io. Bounty on Britifh and Irinh linens exported.
II. Bounty or premium on Britifh plantation indico imported.
10. Allowance on damaged tobacco imported.
11. Allowance or drawback of the duties of coals uled in copper or tin mines.
12. Allowance on damaged or corrupt wines imported.
13. Allowance of portage.
14. Drawback of the excife duty on Britifh-made candles exported.
15. Drawback of the excife duty on hides or calve-fkins rough or tanned; hides or calve-fkins, dreffed ot curtied; heep fkins and lamb-fkins, tanned, tawed, or dreffed, exported.
16. Drawback of the excife duty on Britifh-made fope exported
17. Drawback of the excife duty on Britifh-made paperexported.
18. Drawback of the excife duty on filks, filk' handkerchiefs, callicoes, and all linens and ftuffs printed, Itained, painted or dyed in Great-Britain, exported.
19. Drawback of the excife duty on Britifh made flarch exported.
20. Bounty or allowance on gold and filver thread, lace or fringe, made in Great-Britain, exported.
21. Drawback on boots, fhoes, and other manufactures of Britifh-tanned leather, exported.
22. Drawback of the excife duty on Britilh-wrought plate exported.
23. Drawback of the excife duty on glafs made in GreatBritain exported.
24. Drawback of the excife or inland duty on Britifh made falt exported.
25. Bounty on fifh and flefh exported.
26. Premium on naval ftores imported.
27. Drawback of the excife duty on ftrong beer, ftrong ale, mum, cyder, and perry, made in Great-Britain, exported. I Will. and Mar. cap. 22, \&cc.
28. Drawback of the excife duty on fpirits drawn from corn in Great-Britain, without any mixture of other materials, exported. 6 Geo. II. cap. I 7 .
3I. Drawback of the excife on fpirits exported. 19 Geo.
II. cap. 8 .
29. The

# Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE: 

I. The bounty on Corin exported

|  | Price per quarter Winchefter meafure. | Bounty per quarterWinchefter meaf. |

* When the above forts of corn, either ground or unground, do not, at the port of exportation, exceed the refpective prices in the firft column, and thall be flipped on board any Britifh fhip, whereof the mafter, and at leaft two-thirds of the mariners, are Britifh fubjects, in order to be exported to parts beyond the feas, the exporter is to be allowed the refpective bounties in the fecond column; provided a cerrificate in writing, under the hand of the exporter, containing the quantity and quality of the corn, be firft brought to the collector of the port, and the truth thereof confirmed by the oath of one or more credible perfon or perfons; and bond be given by the exporter, in the penalty of rol. for every ton of oatmeal, or forty buhhels of beer, alias bigg, and 200l. at leaft for every 100 tons of all the other forts (i. e. eight fhillings per quarter) that the fame faall be exported into parts beyond the feas, and not be relanded in Great-Britain, or the illands of Guernfey or Jerfey.
* Will. and Mar. cap. Iz. §. 2. 5 Ann. cap. 29. §.10. 3 Geo. Il. cap. 7. §. 15.
$\dagger$ In order to adjuft the quantity for which the bounty is to be paid, the corn is to be admeafured by the proper officers of the cuftoms, who, for the greater expedition, may make ufe of a tub or meafure containing four Winchefter buthels; or if the faid corn be intended to be exported in facks, they are to choofe two out of any number not exceeding twenty facks, and fo in proportion, and shereby compute the whole quantity'; but if exported from London, may be meafured by the fworn meters, from whofe certificate the fearchers may certify the quantity hipped for exportation.
$\dagger 2$ Geo. II. cap. 18. \$. $4,5$.
$\ddagger$ But with refpect to malt, the bounty is to be allowed after the rate of thirty quarters, and no more, for every twenty quarters of barley, or other corn or grain entered and made into malt, for exportation; as chall appear by a certificate from the proper officer, with whom the corn or grain, in tended to be made into malt for exportation, was entered
$\ddagger 3$ Geo. II. cap. 7. §. 14, 15.
§ And with refpect to wheat meal or other ground corn or grain, the fame bounty, and no more, is to be allowed for 224 pounds weight thereof, as is allowed for 4 bufhels of the fame.kind of corn or grain, unground, and fo in proportion And if it is brought to be fhipped off in facks, the proper officer may choofe and weigh two facks out of any number not exceeding twenty facks, and fo in proportion for any greater quantity, and thereby compute the weight of the whole. And the bounty money is to be paid to the exporter accordingly, upon producing a certificate from the proper officer of the cuftoms, attefting the quantity, quality, and weight thereof.

$$
\$ 2_{4} \text { Geo. II. cap. 56. \$. ו. }
$$

If The aforefaid bounty to be paid by the collector of the port, upon demand made by the exporter, unlefs he has not fufficient money in his hands; and then (except for bigg, and oatmeal) he is to certify the fame to the commiffioners of the cuftoms, who are to caufe the money to be paid by the re-ceiver-general within three months
$\begin{aligned} & \| \text { I Will. and Mar. cap. 12. §. 2. } 12 \text { and } 13 \text { Will. III. } \\ & \text { cap. 10. \$. } 9 \mathrm{I} . \\ & \text { \& Ann. cap. 29. }\end{aligned}$
cap. 7. f. 15.

TI When the certificate above mentioned, annexed to the debenture for corn exported, is produced to the commifioners of the cuftoms at London, they are immediately to caufe
( 26 Geo. II. cap. 15. 9.6.
an indorfement to be made on the back of the debenture, of the day when it was produced, and as foon as conveniently may be, fign their order to the receiver-general for payment.

* If any fuch debenture remains unfatisfied more than fix months after the day it has been produced to the commiffioners of the cuftoms at London, intereft, at the rate of the per cent. per annum, is to be allowed thereon, from the end of the faid fix months to the time of payment, or to the time of proper notice given thereof.
* 26 Geo. II. cap. 15. §. I.
$\dagger$ The receiver-general, when he has fufficient money in his hands, is to give notice in writing, to be affixed on thre or more doors of fome public place in the cuftom-houfe, London, and to be advertifed in the London Gazette, that on a certain day therein limited, and on the four days following (fo as fix days intervene between the date of the notice and the day folimited, and fo as Sundays and holidays be not included in fuch four days) he fhall be ready to pay the principal and intereft of fuch debentures, which have remained unfatisfied above fix months from the time of their being produced as above, or principal of fuch debentures, which bave not exceeded the faid fix months; after the ex. piration of which five days, all intereft is to ceare, though the money due fhould not then be demanded.
$\dagger 26$ Geo. II. cap. 15. §. $z$; 4.
$\ddagger$ Thefe debentures are to be paid by the receiver-general; without fee or reward, in courfe, refpect being had to the times when they were produced to the commifioners of the cuffoms, without any preference, and are affignable by indorfement thereon.

## $\ddagger 26$ Geo. II. cap. 15. §.5, 7, 8،

§ The fame allowances are granted, and rules to be obfetved with refpect to debentures for corn exported from Scotland; with this difference, that the certificate is to be made to the commiffioners of Edinburgh, and notice of payment to be publifhed in the Edinburgh Courant, and affixed in the cuftom-houfe, Edinburgh.
§ 26 Geo. II. cap. i5. §. 9, io, if, 12.
|. The aforefaid bond, given for the exportation, may be delivered up to be cancelled, upon producing a certificare under the common feal of the chief magiftrate in any place beyond the feas, or under the hands and feal of two known Britifh merchants, teflifying that the corn was there larided, or upon proof by credible perfons, that it was taken by enemies, or perifhed in the feas.

## H. The bounty on Britifh-made Gunpowder exported:

By 4 Geo. II. cap. 29. §. 1. was granted from 24 June, 1731, for five years,
By 10 Geo. II. cap. 27.§. 3. further continued to 24 June, $173^{8}$,
By 16 Geo. II. cap. 26. §. r. further continued to 24 June, 1750,
By 24 Geo. II. cap. 52. §.4. further continued to 24 June, 1757,
And from thence to the end of the then next feffion of parliament,

Gunponder of the Manufacture of
Great-Britain, exported by way of mer-
chandize, for every barrel containing one hun-
dred pounds net weight, and fo in proportion
for greater or lefs quantities
$\ddagger$ To be paid to the exporter on a debenture to be made forth by the collector of the cuftoms (with the privity of the comptroller) at the port of exportation, and the ibipping thereof teftified by the fearcher; the exporter making oath that it is of Britifh manufacture, and to be exported by way of merchandize, and not relanded, or intended to be relanded in Great-Britain ; that it is not for the ufe of the fhip in her voyage; and alfo giving fecurity, in the penalty of 51 . per barrel, that no part thereof Mall be relanded in Great-Britain.

## $\ddagger 4$ Geo. II. cap. 29. §. I.

§ To be paid out of cuftoms, or other duties on goods imported.

## § 4 Geo. II. cap. 29. §. 4.

* But may not be exported, when it exceeds the price of 5l. per bairel.
* 12 Geo. II. cap. 4. §. 12.
$\dagger$ Fraudulently relanded (over and above the penalty of the bond) forfeited, and treble the value.
+4 Geo. I. cap. 29 9.3.
VII. Bounty on Shifs employed in the Whale-Fishery.

By 6 Geo. II. cap. 33. 8. F. was granted, dur-7 1. s. d. ing the continuance of the act 5 Geo. II. cap. 28. for every Britifh hip of 200 tons and upwards, manned and navigated accord. ing to law, which fhall proceed from Great- $\}$ I 0 Britain on the whale-fifhery to the Greenland feas, Davis's Streights, or the adjacent feas, a bounty, according to the admeafuremont of the fhip, for every ton thereof
By ${ }_{1} 3$ Geo. II. cap. 28. §. 3. continued to 25 December, 1750.
By 22 Geo. II. cap. 45. §. 2. continued to 25 December, 1757.
And by this laft-recited act a further bounty for every ton

## 100

And the whole extended to fhips built in any of his Majefty's domminions in America.
By 28 Geo. II. cap. 20. the whole enntinued to 25 December, 1764; and from thence to the end of the then next feffion of parliament, and extended to ihips under 200 tons.

Total bounty
$\ddagger$ To be paid to the mafter or owners, or their affigns, on the return of the flip to Great-Britain, by the receiver-general of the cuftoms of that part of Great Britain from whence fue departed, out of the ord fubfidy; but if he has not fufficient money on that branch, then out of any money arifing from any duties under the management of the commiffioners of the cuftoms re'pectively, it the following regulations are complied with.
$\ddagger 6$ Geo. II. cap. 33. §.3. 28 Geo. II. cap 20 §. 4.
© Every thip, of the burthen of 200 tons, or under, mult have on board 40 fifhing lines, 120 fathoms each, harVOL. II.
poon-itons, four boats, with feven men to each boat (including a barpooner, a fteerfman, and a line-manager to each boat) making in the whole 28 men, befides the mafter and furgeon, with fix months provifion at leaft ; and every hup of larger burthen, an increafe ofix men, one boat, 10 fuch lines, and to harpoon-irons for every 50 tons.
§ 6 Geo. II. cap. 33. §. z. 28 Geo. II. cap. 20. §. 8.
${ }^{*}$ After 25 December, 1757, every fhip employed in this fifhery is to have on board an apprentice, indentured for thisee years at leaft, for every fifty tons burthen, otherwife the wners are to lofe the bounty; but fuch apprentice is to be accounted as one of the number of men, which by law ought to be on board fuch fhip.

* 28 Geo. II. cap. 20. §. 5.
$\dagger$ After 25 December, 1757, no Ihip above the burthen of 400 tons fhall be intitled to a larger bounty than a fhip of 400 tons; nor the owners obliged to fit out, equip, or man any fuch Ihip, otherwife than is required for a fhip of 400 tons.
$\dagger 28$ Geo. II. cap. 20. §. 6, 7.
$\ddagger$ The fhip, before the proceeds on her voyage, mult be vifited by the proper officer of the cuftoms at the port from whence fle proceeds, who is to examine the above qualifications, and take an account of her tonnage, \&c. and certify the fame to the commiffioners of the cuftoms. And if it appears, by the oath of one of the owners and the mafter of the fhip, made before the collector and comptroller of the port, at the foot of the certificate, that it is really and truly their firm purpofe, and determined refolution, that fuch fhip thall forthwith proceed, fo manned, furnifhed, and accoutred, in a voyage to the Greenland feas, or Davis's Streigh's, or the feas adjacent, and there to ufe their utmolt endeavours to take whales, and other creatures living in the fea, and on no other defign, and to import the whale-fins, oil and blubber, into Great-Britain (naming the port to which it is their intention to return). And if the mater alfo becomes bound wich two fufficient fecurities, in treble the value of the bounty (which bond is to be taken by the colleCtor, with approbation of the comptroller, and is to be in force for the term of three years againft them, for the faithful dealing of the mafter and thip's company, in regard to the fhip and voyage) then any three of the commiffioners of the cuftoms for England or Scotland, refpectively, upon receiving fuch certificate and oath, with a certificate that fufficient fecurity has been given, are to grant to the mafter and owners fullicence to proceed on fuch voyage.

## $\ddagger 6$ Geo. II. cap. 33. §. 1.

$\|$ On return of fach fhip to the port mentioned in the oath of the mafter, the proper officers of the cuftoms are to go on board and view her condition and lading, and take a fchedule of the names of the mafter, mate, and other perfons on board, diftinguifhing the harpooners, and perfons more immediately employed in the fighery, and certify the fame, with their obfervations thereon, and alfo the real tonnage of the fhip; and the mafter and mate muft make oath before the collector and comptroller, on the back of, or annexed to the licence (which is then to be delivered up) that they did in purfuance thereof (mentioning the day of their departure) proceed in a voyage directly to the places aforefaid, and have not fince been on any other voyage, or purfued any other defign or view of profit; and that they had there (mentioning the time of their ftay) ufed their utmoft endeavours to take whales, and other creatures living in thofe feas; and that all the whale-fins, oil and blubber, imported (if any) in fuch thip, was truly, and bonâ fide, taken in the faid feas by the crew of fuch fhip only. This fcheduie, certificate, licence, and oath, are to be tranfmitted to the refpective commiffioners fur that part of Great-Britain from whence the fhip departed with her licence, who being fully fatisfied of their farthful dealings are, on demand, to caufe payment to be made of the bounty, as above.
\# 6 Geo. II.'cap. 33. 5. 3.
§ Ships fitted out from any of his Majefty's dominions in America, to be under the fame regulations as thofe fitted out from Great-Britain, except that they are not to be more than two years old from the firft building, which is to be inferted in the oath; and that the cerificate is to be returned to the governor or naval onticer, who are to adminifter the oath, take the bond, and grant the licence.
§ 22 Geo. II. cap. 45. §. 5,
II $P$

XI. Premium or Bounty on Britifh Plantation made Indico imported.
By 21 Geo. II. cap. 30. 8. I, 6, 8. was granted for feven years, from March 25, 1749;
years, from March 25, 1. 19; By 28 Geo. Il. cap. 25 . If further continued to March 25,1763 ; and from thence to the end of the then hext ferfion of parliament,
For every poind weightit of good and merchantable Indico, frec from any falfe mixture, and fit for dyers ufe, imported direetly frum any of the Britifh colonies or plantations in America, in a fhip which may lawfully trade thither, manned as by law required, and being of the growth or product of the plantation from whence imported, and being worth 3 s. per poind weight, when the beft French, or other indico equal with the beff Fiench, is 4 s . per pound weill.t, and fo in proportion

## Of the PRACTICAL BUSINESS of the CUSTOM-HOUSE.

To be paid upon demand to the importer by the collector of the port of importation, out of the cuftoms; but if he has not money fufficient in his hands, he muft certify the fame to the commiffioners of the cuftoms, who are to caufe it to be paid by the receiver-general of the cuftoms in England or Scotland refpectively, according to the place of importation.

* But to intitle the importer to this premium, the perfon who fhips the indico in America muft, before the hlip is cleared out, produce to the governor, lieutenant-governor, collector and comptroller of the cuftoms, and naval officer of the colony, or any two of them, a certificate figned and fworn before a juftice of the peace by the planter, or his known agent, and attefted by the juftice, "that a quantity " of indico, expreffing the weight thereof, had been fent "from his indico-work to be fhipped off, or was fold to " the perfon therein named, and was of the growth of his "s plantation, fituate in the diftrict, divifion, or parith of ", w, within the ifland or colony of ; "and alfo fign a certificate himfelf before the faid officers, "t that " the indico fhipped by him is the fame mentioned in the "s planter's certificate;" upon which they are to deliver to him a certificate, under their hands and feal of office, of " having received fuch certificate, and that as the fame time "the planter's certificate was produced and left with them." This laft certificate muft be produced to the chief officer of the cuftoms at the port of importation, together with a certificate from the commander of the veffel importing the.indico, " that the fame was fhipped on board his veffel, within fuch Bri".tifh colony in America, as mentioned in the faid certificate;" and alfo a certific tee figned by the furveyor, land-waiters, or fearchers of the cuftoms of the port where landed, or any two of them, fpecifying " the weight, and that it is good and mer" chantable, free from falfe mixture, and of fuch quality as to " be intitled to the premium;" which certificate they muft grant within ten days after landing, unlefs they can affign fufficient caufe for refufal. Upon producing the feveral cer-
tificates to the proper officer, the premium is to be paid.
* 21 Geo. II. cap. 30. §. 2, 3, 4 .
$\dagger$ The officers of the cuftoms, before making out the certif.cates, are to examine the indico, by opening the package, and fhifting it fo as to fee the whole contents, and if it is good and merchantable, and free from falfe mixture, and of the value required.
† 21 Geo. II. cap. 30. §. 7, 8.
|| In cafe of any difpute about the quality of the indico, if in the port of London, the commiffioners of the cuftoms may call two or more dyers, dry-falters, or brokers, or others well ikilled in it, who are to declare upon oath, if required, their opinion as to the quality, and whether it is intitled to the premium : if in the out-ports, famples are to be fent up to the commiffioners of the cuftomsin London or Edinburgh refpectively, to be infpected and adjudged there.
|| 21 Geo. II. cap. 30. §. g.
$\ddagger$ No fee, gratuity, or reward, to be taken by any officer of the cuftoms, for examining, viewing, or delivering fuch indico, or for figning any certificate, or paying the premium , on forfeiture of rool . lofs of office, and being incapable of ferving his Majefty.
$\ddagger 21$ Geo. II. cap. 30. §. 10.
§ Certificates and debentures, made out in purfuance of this act, are not chargeable with the famp duties.
\$ 21 Geo. II. cap. 30 . §. 11 .
* No perfon may enter, or caufe to be entered, any foreignmade indico, under the name of Britifh plantation-made indico, on forfeiture thereof; or mix, or caufe to be mixed, any foreign indico, or other falfe mixture, with that made in the Britifh plantations, in order to obtain the premium, on forfeiture of the whole, and double the value thereof.
* 21 Geo. II. cap. 30 . \$. 5.
+ Any governor, lieutenant-governor, collector, or comptroHer of the cuftoms, naval officer, merchant, trader, or factor, or malter, or commander of a fhip, or any other perfon, falfely making a certificate of the produce or manufacture of any indico, or counterfeiting any certificate by this act required, in order to obtain the premium, is to forfeit 2001. and, if an officer of the cuftoms, alfo to lofe his office, and be incapable of ferving his Majefty.
+21 Geo. II. cap. 30. 5. 15.
+ If any indico, made in the Britifh plantations in America, fhall be exported after the 25 th of March, 1749 , the

[^12]exporter, before entry thereof, is to pay the collector of the cultoms, at the port of exportation, 6d. for every pound weight, allowed as a premium by this act, over and above any other duty it is fubject to pay on exportation, on forfeiture thereof, and double the value; and in care of a dif pute, whether it is of the growth, product, and manufacture of the Britifh plantations in America, the ouus probandi is to lie upon the owner or claimer.
$\ddagger$ Penalties and forfeitures, by this act, may be profecuted in any of his Majefty's courts of record at Weftminfter the court of exchequer in Scotland, or any of the courts of admiralty, in his Majefty's plantations in America refsec tively; and are to be divided, if in Great-Britain, repec ety to his Majefty, and the ocher to the perfon who thall fue for the fame; if in his majefty's plantations in America one-third to his Majefty, one-third to the governor of the plantation, and one-third to the perfon who thall fue for the ame.
$\ddagger$ 2: Geo. II. cap. 30. §. 16, 1\%.

## XII. Allowance on damaged Tobacco imported.

§ If any Britifh plantation Tobacco hath received damage on board any thip at fea, or by the thip's being forced on fhore in any part of Great-Britain; or after arrival, by the fhip's bulging on an anchor, or by the lighter into which the tobacco is put in order to be landed; the merchant refufing to pay, or fecure the duty for the fame, hath liberty to feparate fuch damaged tobacco, by cutting it off from the hoghead or other package.
§ 9 Geo. I. cap. 21. §. 4, 13 .
$\left.\begin{array}{l}\| \text { For every pound of damaged Tobacco fo } \\ \text { cut off, the merchant is to be allowed }\end{array}\right\} 0$ o $\frac{x}{2}$ To be paid by the commiffioners or collectors, or other chief officers of his majefty's cuftoms.
But fuch allowance not to exceed thirty fhillings on any one hogihead.

॥ 9 Geo. I. cap. 21. §. 13.

* Such damaged tobacco cut off, to be burnt and deftroyed.
* 9 Geo. I. cap. 2I. §. 4.
XIII. Allowance or drawback of the duties on Coals ufed in melting copper or tin ores within the counties of Cornwall and Devon, or in fire-engines for draining tin or copper mines in Cornwall.
$\dagger$ All Coals ufed in either of the above works, and for which the duties have been firft anfwered, upon proof, by oath made before the cuftomer or collector of the faid duties, that they have been fo ufed, thall have a drawback of all the duties; to be repaid by the collector of the duties to the perfon making fuch proof.
† 9 Ann. cap. 6. §. 54. 14 Geo. II. cap. 4 I . 5. 3.
XIV. Allowance on damaged, corrupt, or unmerchantable Wines imported.
$\ddagger$ If any merchant, finding his wine on importation to be damaged, corrupt, or unmerchantable, fhall refufe to pay or fecure the duties for the fame; the commiffioners of the cuftoms may caufe fuch wines to be received into the cuftody of the proper officers, and to be publicly fold, in order to be diftilled into brandy, or made into vinegar, taking fufficient fecurity that they be not made ufe of for any other purpofe whatfoever; and fhall caufe the produce of fuch fale to be paid to the merchant, as a compenfation for the freight and other charges; not exceeding the allowances following.
 $\ddagger 6$ Geo. I. cap. 12. §. 3, 4. 12 Geo. I. cap. 28. §. 20.

The fecurity to be difcharged, on a proper certificate that the wines have been fo made ufe of within three months the wines have been fo made ufe
after delivery out of the warehoufe.
The overplus, if any, to be replaced to the duties, out of which the warehoufe rent, and other charges attending the fale, have been advanced.
§ But no allowance to be made for any wines, unlefs imported in cafks, on board a merchant fhip, directly from the place of the growth, or the ufyal place of firft hipping.
\$ 8 Gea. I. cap. 18. §. 19.

* Except as to flips ftranded; in which cafe, the wines falved may be put on board any other fhip or veffel, and carried to any lawful port of this kingdom, and be intitled to the aforementioned allowance.
* 8 Geo. I. cap. 18. 5. 20.

Levant*

Levant-Trade, its trade in general. The firt eftablifhment of the Chriftian powers therein. The regulations and polity of France with refpect to the Levant-trade. An arret of the king's council of ftate, ordaining that the French fhips trading to the ports of the Levant, fhall not be liable to thofe averages which may be neceffary to be laid on the payment of the debts and other charges of the nation, but in proportion to the value of the merchandizes wherewith they are loaded, and not according to the tonnage and ftrength of the flipping. A royal ordonnance, permitting the fheriff, and deputies of the chamber of commerce at Marfeilles, to deliver certificates of refidence of the children and relations of the merchants of the province, who chule to fettle in the Levant, provided they were 18 years of age; and alfo to fuch women and girls whofe hufbands or fathers are eftablifhed in the faid ports, to live there with them, 1716. An arret of the royal council in times of war ordains, that upon the merchandize of the Levant, arifing by the prizes made during the prefent war, (1705) and carried into the port of Toulon, there fhall be levied io per cent. on the value of the faid merchandizes over and above the ordinary duties paid on importation. A royal ordonnance, excluding from all public truft and adminiftration, and from the affemblies of the body of the French nation in the ports of the Levant, fuch French merchants, who thall there marry maids or widows born in the dominions of the Grand Senior ; and excludes, likewife, all thofe who are under 30 years of age, from all public trufts of adminiftration, who fhall marry, without the confent of the parents, even any French young women, A royal ordonnance, forbidding all the fubjects of France, and others trading in Turkey under their protection, to purchafe any thing taken from the Turks by the Maltefe corlairs, or by any other, 1718. A royal ordonnance, forbidding all captains of French fhips and veffels to embark in the Levant any Frenchman or foreignet, without permiffion firt had and obtained; in writing, from the king's ambaflador at Conftantinople, or the confuls of the ports, 17 19. An arret of the royal council of ftate, in relation to the eftablifhment of a duty in favour of the chamber of commerce at Marfeilles laid upon merchandizes coming from the Levant, charged with the payment of the appointments of the confuls, ${ }^{1} 72 \mathrm{I}$ : An arret of the royal council of fate, laying a penalty upon the captains and owners- of fhips, coming from the Levant to Marfeilles, who fhould mifreprefent the weight and quality of the merchandizes wherewith they are loaded, or thould not reprefent them at all, 1722. A royal ordonnance, regulating the appointments that the firit deputies of the French Nation are intitled to in the ports of the Levant and Barbary; if, in cafe of the death or abfence of the confuls, they perform the cffices of the confular power, 1723. A royal ordonnance, revoking thofe of the year 1689,1713 , and I 7 I 9 , and the prohibitions therein contained; in confequence whereof, it permits all Frenchmen refiding in the ports of the Levant, Barbary, and Italy, to load merchandizes for their account upon foreign bottoms, 172\%. A soyal ordonnance, regulating what fhould be regarded in the ports of the Levant and Barbary; on the part of the Jews, and other foreigners, who fhall enjoy there the protection of France, 1727. A royal ordonnance, excluding from the liberty of trading in France, and from the privilege of the body of the nation, fuch French who fhall marry in the ports of the Levant, and the fons of Frenchmen born'in the faid ports, whofe mothers áre foreigners, 1728. A royal ordomance, concerning the patent of health that the captains and malters of hips ihould take, who traffic in the ports of the' Levant and Barbarys 1730. The French king's declaration, fignifying that no cabbin-boy fhall be left in the ports of the Levant and Barbary, 1730. A royal ordonnance concerning the depofits, in the chanceries of the confulthips of the Levant and Barbary, 1731. Regulations for the imports of confuls and vice-confuls of the ports of Negropont, Covelle, Rhodes, Meteleme, Scio, Milo, lme, Micona, 1732. General regulations of the French trade of all the fid ports. An arret of the council of ftate, relating to the merchandizes in pacotilles, as the French term them, which the captains, fupercargoes, and paffengers carry into the Levant, as well for their own account as for that of the freighters, 1733. A royal ordonnance, forbidding the French merchants to confign directly, or indirectly, merchandizes, fruits, or provifions, to forcigners eftablifhed in the ports of the Levant, 1735. An arret of the council of ftate, concerning the impofition of a duty of average of I per cent. for 3 years, upon the merchandizes which hall be carried to the ports of the Levant, $173^{6}$. A royal ordonnance, permitting French fhips to be configned to merchant frangers eftablinhed in the ports of the Levant, in cafe they are entirely freighted by foreigners, 1737. An arret of the council of ftate, eftablifhing, to commence the 1 it of April, 1739 , that the duty of averages at importation, the raifing of which was ordained by the arret of the 25th of February, 1736, thall be fuppreffed in all the ports of the Levant of $\mathrm{D}_{\mathrm{c}} \mathrm{c} .1738$. On the 18th of January, 1749, an arret was iffued for the regulation of policies of infurance paffed before the figning
the preliminaries of peace, with regard to Chips employed in the commerce of the ports of the Levant, and regulating the premiums to be allowed to the infurers, in thefe cafes menloned in the arret of the 12 th of July, 1748 . A royal or donnance, forbidding all fubje the Levant and Barbary to poffefs themfelves of any real eftates, 1749 ; with remarks, fhewing that the above are the principal royal arrets, edicts, ordonnances, and declarations iflued in France, from the year 1665, by authority, for the occafional regulation of the Levant trade, and the confequences thereof.
