But the cuftomary way is, to girt the piece in the middle with a ftring, and take $\frac{1}{4}$ of the girt for the fide of a fquare; which fide multiply into itfelf, and that product by the length, and the laft product will be the content.
If the circumference, or girt, be given in inches (having worked as before) divide the laft product by 144, and the remainder (if any) by 12, and the quotient will be the content in folid feet and inches.
If the circumference and length are given in feet and inches, having reduced them into inches, and worked as before, divide the laft product by 1728 , and the remainder, if any, by 144, and the quotient will be the content in folid feet and inches. Or, (having caken $\frac{4}{4}$ of the girt for the fide of a iquare) the operation may be performed
By \(\left.\left\{\begin{array}{l}Taking the aliquot parts of a foot for the odd <br>
inches, <br>
Crofs multiplication, <br>
Reducing the dimenfions into decimals, <br>
Sliding rule, <br>

Carpenter's rule,\end{array}\right\} $$
\begin{array}{l}\text { As before }\end{array}
$$\right\}\)| taught for |
| :--- |
| fquares. |

This cuftomary way produces a content lefs than the truth by above $\frac{x}{8}$ part; for as
The area of that circle whofe circumference is unity, is ,0795 8 And the fquare of the $\frac{x}{4}$ of the unity is but - ,0625 Therefore the true content is to the cuffomary content as , $0795^{8}$ is to , 0625 , or as 14 to 11 ; fo that, if the cuftomary content be obtained, the true content may be found by proportion.

## M ER

Yet this method is generally practifed, as being a medium between the content of the utmoft cylindric circumference, and the following method of taking the fquare within the circle, which is only mentioned for dernonftration fake.
A third way to meafure round timber is, by rejecting fo much of the cylindric circumference as will reduce it to a parallelopipedon; that is, by taking the fquare within the circular end or bafe, being fuch a fquare whofe four angles will be contained within the circumference.
If the circumference of a circle be unity, the fide of the fquare infribed will be ,2251: therefore, multiply the circumference by the faid ,2251, and the product will be the fide infribed, which fquared, and that fquare multiplied by the length, will produce the content.
Otherwife note, If the diameter of a circle be unity, the fide of the fquare infcribed will be, 707 I : therefore multiply the diameter by the faid, 707 I , and the product will be the fide infcribed, which \{quared, and that fquare multiplied by the length, will produce the content.
The circumference of a round piece of timber being given in inches, to find how much in length will make a folid foot.

The Rule.
Multiply the number 282I by the circumference, which will produce the fide of a fquare equal ; then multiply that fide into itfelf for a divifor, and let 1728 be the dividend, and the quotient will be the length of a foot.

## By the Sidding Rule.

Set the circumference upon D, to 12 upon $C$; and, oppofite to 42,53 upon $D$, will be found the length of a foot upan C.
2. When the circumference is not the fame from one end to the other, that is, when the timber is tapering, as are mafts, \&c.

The rule for the true method, according to the utmof conical circumference.

Having found the diameters of the circumference at each end (as before taught) multiply them together, and to the product add $\frac{7}{7}$ of the fquare of their difference; the total whereof multiplied by, 7854 (the area of a circle whofe diameter is unity) will produce a mean area; which, multiplied by the length, will give the content.
But the ufual way is, to take $\frac{1}{4}$ of the girt in the middle (or rather $\frac{1}{4}$ of the girts at each end, and add them together, and take $\frac{x}{2}$ of their fum) for the fide of a inean (quare throughout, which multiplied into itfelf, and that product by the length, will give the content.-Many of the cuftomary methods of meafuring timber, \&xc. deviate from the true ; but it is our bufinels to give an account of practice. Thofe who would enter into the rationale of thefe things muft be pretty well read in geometry. See the article Mathematics.
MENTZ, an archbifhopric and electorate in Germany. It lies on the banks of the river Mayne, between the electorate of Triers on the weft, the Palatinate on the fouth, Franconia on the eaft, and the Wetteraw on the north. It is about 60 miles in length, from north-ealt to fouth-weft, and about 50 in breadth.
A confiderable part of the elector's revenue arifes from the toll on the Rhine and the Mayne, and from the tax on the excellent wines produced in his country,
The chief towns of any trade are, i. Mentz, on the Rhine, near it's confluence with the Mayne. This city claims a right to che invention of the art of printing, which certainly was firft brought to great perfection here by Fauft, or Guttenburg, about the year 1450 .
Here is a very beautiful kay along the river, defended by feveral works, well fortified with cannon. That part of the city which extends towards the river is moft populous. The beft vineyards for Rhenifla wines being in this neighbourhood, Mentz has a flourilaing trade in that commodity more particularly ; and it's commerce is the brifker, by reafon that all the merchandize which paffes up and down the Rhine ftops in it's harbour, to change bottoms. In this neighbourbood is Hockhem, fo celebrated for good wines, that the beft Rhenifh is from thence called Old Hock.
2. Bingen is a pleafant fmall town, which ftands in the diftrict called Rhingaw, which is fo populous, that it looks like one iatire town, intermixed with gardens and vineyards. The rifing grounds about it produce wines that are efteemed prer ferable to thofe of Baccharac, fo much in vogue heretofore.
3. Elfeld, five miles weft from Mentz, is a ftrong fortified town, on the north fide of the Rhine, and the chief of the Rhingaw.-Kere is Roderhem, a place noted for the growth of the beft wines in thefe parts.
4. Weisbaden lies between fix and feven leagues from Frankfort, and about five or fix miles north of Mentz : it is the metropolis of a councry belonging to the branch of Naffau-Saarbrack, and is famous for it's mineral waters
MERCANTILEACCOUNTANTSHIP, or what is ufually called MERCHAN TS ACCOUNTS, according to the method of double entry, as practifed by the moft eminent merchants throughout the world.

## M ER

Before the reader enters upon what follows, he is defired to confult the following articles, viz. Accountantship, Ac. counting-house, Anonymous, Binking, BookKeeping, Debtor and Creditor, and Ledger, Mercantile Accountantship; all which, confidered together, in the various lights there reprefented, will render what we have further to fay very eafy and intelligible, and make him a complete accountant in any kind of bulinels whatfoever.

## introdyction.

In keeping of mercantile accounts there are three principal books, the watte-book, the journal, and the ledger.

1. In the wafte-book are entered, in the plaineft manner, as bought, fold, received, paid, \&x. alt tranfactions of commerce, with their datès, fums, conditions, and every partisular circumfance relating thereto.
l. The journal is, for fubfance, the fame as the waffebook; but, as this muft be more fairly written, fo it muft be exprefied in a very different manner, more merchant-like, as it is a preparatory for the ledger. In this book the debit and credit are rationally fixed and fettled, according to the principles of accountanthip; and, therefore, this requires the book-keeper's hand: and, becaufe in journalizing the waftebook lies all the difficulty of account-keeping, we have exhibited the nature and reafon thereof upon a fingle fheet, for the ufe of immediate infpection. Suppofe, for example, that you have entered, in your watte-book, Received of A. B. in full 501 . To poit this into your journal, look for the article money received for a bond, or, otherwife, calh is made debtor to the perfon that owed it you: therefore in the journal, after the date, fay, Ca . debtor to A . B. received in full 50 I .
III. The ledger is the grand and principal book of accounts, which, when duly pofted, regulates and adjufts all your concerns with refpect to men, money, and merchandizes, and brings all things under their proper heads, and to their refpective accouncs. And, as this book gives you a comprehenfive view of all your negociations, fo it does a complete balance of the whole year's traffic.
As the wafte-book is pofted into the journal, fo the journal is into the ledger; and, if the walte-book be judicioufly pofted into the journal, with refpect to it's debtors and creditors in the proper journal phrafe, as follows, under the letter (J) it will be very eafy to poft the journal into the ledger, if you remember the following

Directions to poft journal entries into the ledger.
x. In every account there is a debit and a credit part; and, though the journal doth not exprefs the credit.part, yet it is undertood, for the perfon or thing that follows the word ( Ta ) is the creditor, or, inftead of the word (TO) read creditor, Take the inftance above; cath debtor to A. B. received in full 501 - Or thus, debtor calh 501 . creditor A. B. 501. Turn, therefore, to ledger to calh account, as fuppore folio (I) and, in debtor fide, write, Date Jan. (1) To A. B. received in full (fol. g.) gol. then turn to A. B's account (fol. g.) and in credit thereof write, Jan. (1) By calh received of hum in full (fol. 1.) 501 . From hence oblerve, befides the date in ledger-margin, that, after the word ( $\mathrm{T}_{0}$ ) in debit, follows immediately A. B. viz. he that muft be made creditor; and after the date and word ( By ) in the credit-entry, follows cafh, the name of the account that is made debtor; and that debtor and creditor counter-parts refer to each other, and ftand in journal as before margin thus:
(1) Debtor.
(9) Creditor.
2. Obferve, once for all, whatfoever you debit in one place in your ledger, muft have an equivalent credit in another. And notwithftanding in fundry accounts there is one article debtor, and feveral creditors, as in letter ( $V$ ) or feveral debtors and one creditor, as in letter ( $L$ ) be that as it happens; yet debit and credit are always equal, or as much value as you debit you muft credit, before your journal-entry is duly pofted in the ledger.
3. Befides a reference column, another infide column muft be kept for the quantity of goods, as hogheads, pipes, bales, \&c. On the debtor fide muft contain the quantity bought in, and on the credit the quantity fold out, by which you know at any time how much of each you have unfold, \&cc.
Note, Although we have defribed the nature and ufe of thefe three effential books, wherein a merchant's dealings might be all kept, yet, by many claffes of traders, the watte-book may be omitted, and the journal and ledger be fufficient; for the book keeper might jourralize at once every occurrence, without entering them at all in a wafte-book. But, he not being always in the way, nay fometimes obliged to make entries in a hurry, it is proper, in general, to keep a waftebook, from which he may at more lelure correctly and fairly form his journal.
But to prevent thofe books filling up, merchants. by experience, find it neceffary to keep other books fubfervient to them, as a calh-book, book of charges of merchandize, book of houfhold expences, factory or invoice-book, the fale's-book; the nature and ufe of which are as follow :
IV. The
IV. The calh-book. This book is folioed, as the ledger, and kept to eafe the account of calh there, and prevent receipts and payments being entered at all in the journal. On the left-hand fide you make cafh debtor to all you receive, and on the right-hand fide cafh creditor by all you pay.And, at the end of the month, you may poft it directly to the ledger, or, as ufual, make two journal entrances, viz. calh debtor to fundries for all the receipts, and fundries deb. tor to calh for all the payments of the month: fo, by the help of this book, you will have but 12 lines in the cafh-account in the ledger on the debit, and 12 on the credit, for the 12 months. But fome chufe to poft their caih weekly, that they may more eafily recollect any ómiffion or miftake. Note, Á book is faid to be folioed, when, on opening, the right-hand fide and left (though two pages) are but one folio.
V. The book of charges of merchandize is only paged, in which are entered down promifcuoully the charges attending each fort of goods or voyage daily as they occur, whether belonging to yourfelf or others, or for company account. And the refpective goods or voyages are made debtors for their proper thare of charges to account of charges of merchandize. And, at the end of each month, your calh muft have credit for the whole charges of the month.
VI. The book of houmold expences falls under the care of the houfekeeper, who might put down the difburfements, for family provifions, \&c. houfe-rent, fervants wages, fchooling, \&xc. periifhing goods, as earthern-ware (but durable goods, as beds, chefts of draws, \&c. do more properly belong to account of houfhold furniture) this may be caft up once a month, or otherwife; and, having paid your houfekeeper the month's difburfements, credit your calh as before; then add up your month's payments in the cahh-book, which journalized, fundries (and among the reft thefe accounts, charges of merchandize, and houfe expences) will be debtors to calh their refpective fums.
VII. The factory or invoice-book, is paged and ufed to copy out verbatim the invoice of goods you fent abroad, whether for your own or others, or company account.
VIII. The book of fales is folioed as the ledger, into which is copied an exact arcount of fales which you fend your employer; the credit fide whereof contains the fales when, to whom, what quantity and price, whether for cafh, batter, or to M . and S . on time. On the debit the particular charges, abatements, commiffions, and nett proceeds.
But we are far from thinking it neceffary that a learner thould have copies of thefe five laft fubfervient books: fuch a multiplicity of books, would ferve to amufe, rather than to inftruft; when a fpecimen of all thefe might be given him in one fingle fheet of paper. To thefe books might be added, the book for copying letters, the book for copying bills, a remembrancer or pocket-book, and the receipt-book; but, as thefe are generally known, fo their names carry in them a fufficient defcription.
Note, To fave the labour of opening an account in the ledgerfor every perfon, the merchant erects a general account, the debit whereof takes in thofe feveral finall dealers that owe, their refpective names, to what account, and fum. And, as they pay, he difchargeth each, mentioning his name on the credit fide alfo; where the merchant likewife (in pofting his journal) carries thofe little debts he owes, and, as he pays, debits the perfons.
In like manner, the merchant opens an account of merchandize general, into the debit whereof he poits all thofe little parcels and forts of goods he buys in, and not like to deal much in, and for which already he bas no particular account opened in the ledger ; and, as they are fold, he gives the faid account credit, expreffing the name of goods and quantity, in every entry, whether in debit or credit : by which, with a litte trouble, he knows how much of any fort of thefe petty wares are left, as effectually, as though he had kept a particular account for each.
If at any time you make a wrong entry in the ledger, in debit or credir fide, make a crofs in the margin thus $X$, and write in the oppofite fide, To or By an error committed in credit or debit of this account, wrote off the fum, \&ic.

## $\begin{array}{lllll}\mathrm{P} & \mathrm{A} & \mathrm{R} & \mathrm{T} & \mathrm{I} .\end{array}$

A general Rule to be remembered. The Receiver is Debtor: The Deliverer is Creditor. Alfo whatfoever Merchandizes or Money come into your Hands, are Debtors; what go from you, are Creditors.
I. To poft your Wafte-Book into your Journal; for a Foundation, at your Commencement in Trade, you muft begin with the Inventory.

*The tille fock, or general capital, is ufed inftead of your own name.

| Money received. | C FFor a bond, or book-debt, Dr. cafh to the perfon that owed the fame, for the fum received *. |  |  |
| :---: | :---: | :---: | :---: |
|  | D | For a legacy, a wager won, or gains by lotteries, or the exchange of money: $\mathrm{D}^{r}$. cafh to account of profit and lofs. |  |
|  | E | For wares fold: $\mathrm{D}^{\text {r }}$. caih to thofe refpective wares (if more than one fort)each it's value. |  |
|  | F | $\left.\begin{array}{c} \text { Taken up at } \\ \text { intereft on } \\ \text { bond. } \end{array}\right\} \begin{aligned} & D^{\text {r }} \text { accoundry } \\ & \text { accounts } \\ & \text { viz. } \end{aligned}\left\{\begin{array}{l} D^{\mathrm{P}} . \text { cafh the fum took up } \\ D^{\mathrm{r}} . \text { intereft, or profit and } \\ \text { lofs for the intereft } \end{array}\right\} \text { to the lender, for both princti- } \text { pal and intereft. }$ |  |
|  | G | For intereft of money formerly lent, and principal continued : $\mathrm{D}^{\mathrm{r}}$. calh to account of intereft, or profit and lofs, (which you pleafe). |  |
|  | H |  | For freight of a hip, rent of a houfe, or eftate: cafh $D^{t}$. to fuch a hip, houfe, or eftate.-Except the tenant has an account opened in your books, and he made $\mathrm{D}^{7}$, already'to houfe or eftate.-Then cafh $D^{r}$. to the faid tenant's accompt to difcharge him. |
|  | , | As an affurer, or infurer, for infuring another's fhip, or goods at fea, \&c. D' cafh to account of affurance or infurance, or profit and lofs. |  |

- Mention whether in full or in part; alfo in exchanges. Obferve to keep an infide column for the foreign fpecie, and, after having found it's value (by the rule of exchange) in the coin of that country you are in, carry it in the outward column, as in thofe inftances given before under the article Lspage,

| Money paid. | K ( Which was due from you, whether on bond, debt, or goods, formerly bought, \&c. D D' the perfon to whom due, to cafh the fum, \&c. |  |
| :---: | :---: | :---: |
|  | L | For goods juft bought, and paid for at delivery : $D^{\text {. }}$. the wares come in, to the money gone out. |
|  | M | For houfe expences, or with a fon to apprentice, * houfe expences, or profit and lofs $D^{\text { }}$. to calh. |
|  | N | Lent at intereft on bond: $D^{\text {r }}$. the $\left\{\begin{array}{l}\text { to cafh the fum lent. } \\ \text { to profrower to fundries. }\end{array}\right.$ lofs for the intereft. |
|  | 0 | For intereft only, the principal continued: $\mathrm{D}^{r}$. profit and lofs, or account of intereft, to cafh. |
|  | $\stackrel{\mathrm{P}}{\mathrm{Q}}$ | For infurance of goods you fent to fea: $\mathrm{D}^{\text { }}$. voyage, \&c. to calh. As by an infurer for a lofs, $\& \mathrm{c}$. $\mathrm{D}^{\mathrm{r}}$. infurance account to cafl.- But if the lofs is not paid prefently-D. infurance to the perfon infured. And, then when you pay it, $\mathrm{D}^{\text {r }}$. infured perfon to cafh |
|  |  | For another, as in behalf of your landlord, for reparation or taxes of the houfe you dwell in : make your landlord $\mathrm{D}^{\text {r }}$, to eafh. |
|  |  | * Thefe accounts, viz. houfe expences, interef, infuranice, bottomry, profit and lofs, though often kept diftinct, are all of the fame nature with the account of fock; for, whatever you lofe by eithe of thefe, the refpective account is made $D^{r}$. and $C^{r}$. when you gain. For, if you receive money for a legacy or portion, either make Cafh $D^{r}$. to profand lors, or rather to fock; becaufe, on clofing the books, yourll fee by what means your flock is increafed. |

| Merchandizes, \&c. bought and received. | S fFor prefent money: $D^{r}$. goods bought, to calh for their coft and charges, if any, for carriage, freight, \&c. |  |
| :---: | :---: | :---: |
|  | T | For time: $D^{r}$. goods received to the feller; (to pay at fuch a time, if a certain time was agreed on.) |
|  | V | For part money, part time : $D^{r}$. wares come in, $\left\{\begin{array}{l}\text { to cafh, paid in part, } \\ \text { to fundry accounts, } C .\end{array}\right.$ to fller, reft unpaid. <br> To a fhip, houfe, or eftate bought, fuch a fhip, houfe, or eftate (with name or place for defcription) $D^{r}$. to cafh or feller, $\& x$. |
|  | U |  |
|  | W | By my factor A. at one place, per my orders, and fhipped off to my factor B. at another place, voyage to, \&cc. configned to B. Dr. to factor A. My account for coft and charges, \&c. |
|  | X | Received from your factor, for your own áccount: write $D^{r}$. goods received, to factor [my account] current for colt and charges he paid theteon. |

Y [Wares for wares, when of eqgal value: $D^{r}$. wares received to wares delivered.
Z Bought for part money, part wares, of di- $\{$ to the refpective wares delivered, their value. vers forts: $D^{r}$. wares received to fundries. \{ to call, to make up the reft.

You muft draw an Inventory, as at firf, and in your new Journal make all the Money, Perfons, and Merchandize, in Debror-Side of Balance, Debtors to Stock. Alfo make Stock Debtor to all you owe; and this is contained in the Creditor-fide of Balance, not reckoning the laft line, which only fhews your Nett Stock at the Entrance on your New Sett of Accounts; which, for Diftinction Sake, you may mark B. on the Cover of each. The next Sett C. \&c.

## Of ACCOUNTS in COMPANY.

## INTRODUCTION

There are three forts of accounts opened in my ledger, when I keep the accounts of company, and have the difpofal of the goods, viz. An account of goods in company-a particular account current-and an account in company for each partner.

1. Of a general account of goods in company, as, fuppofe wine, \&c. I make wine in company, between fuch partners and mylelf (our parts) debtor for all that comes in, and creditor for all that goes out, as if it were for my own proper account.
II. Partner's account current (by fome called his account proper, for this as any other man's proper account) fhews what is due from him, or due to him.
III. Partner's account in company is only for order and regularity, and contrary to others; forr the credit-fide contains his fhare of Stock or goods (brought into company) and his part of the nett gain, or lofs at the clofe: but the debit accounts, for what (goes out) or balance of what I have remaining in my hand, and his part of the lofs (if any) in the clofe of the company trade.
Note, Though, for brevity fake, I have only mentioned one partner's account current, debtor to, \&c. in moft places, it muft be underftood the fame for every partner, except my-felf.-And in keeping company accounts, promifcuoufly with our own, we do not open a particular account in company, and an account current for ourfelves, as well as for each partner, becaule our own proper accounts keep my part in regulation; for oblerve, when I receive money for goods, fuppofe rool. I debit my account cafh for the whole rool. and, when I pay partner's half, I make his account current debtor for his 50 l . and credit cafh 50l. paid out: whence it is plain, that my cafh remains debtor for my part 50l. I have Atill in hand. In like manner, when I carry partner's fhare of the gain, ariling from goods or voyage in company, to his particular account in company, I carry my part to my own account of profit and lofs, ( $R, S$. ) \&c.
But, in keeping company accounts in books by themfelves I open an account in company, and an account current, for myfelf, as well as for each partner: and then an account of ftock in company, cath in company, profit and lofs company, and balance in company; \&c. As to the method of keeping thefe, it is the fame, only oblerving, that I muft do for myfelf, as for any other partner ; fo my part of the gains

I carry to my account in company, as my partner's to his, or theirs.
The accounts being duly balanced, according to the plain fublequent directions, given for that purpole, every partner's account in company will of courfe, if accurately ftated and pofted, balance itfelf; the debit and credit will be equal to a farthing, which will be an agreeable furprize to the young accountant, as well as prove the truth of the whole company tranfactions, without the trouble of balancing the whole books; and thereby make him amends for his trouble of keeping an account in company for each partner, which fome chufe to omit, and my feveral partners accounts current will exactly thew what I owe them, or they me.
For the third and laft part, we have treated of two other methods, whereby company accounts may be kept by double entry, without a particular account of company for each partner: thefe are fo plain to any one that has but a fmall notion of debtor and creditor, by double entry, that they need very little explication, being much the fame with private and factorage accounts.
As to the firt of them, when I procure the goods, I make partner, as any other buyer, debtor for his part of the goods bought in, or fent to fea; and fuch goods, or voyage, debtor for my part, giving the feller credit by both.
And in the fecond, which I take to be plaineft, I make goods, bought for company or voyage, debtor to the feller, for their whole coft, as in private accounts.-Then I make partner debtor to faid goods or voyage, for his part, which, in effect, he buys of me.
And in both thele ways, when the goods are difpofed of, I give faid account of goods or voyage credit for my part, and partner's account credit for his part, which is illuftrated by example, in the latter part of this Cheet.
Theffe methods are ufed in fhip accounts, and in many other tranfactions; as in glafs-houfes, pot-works, and the like, where there are, many articles to books, or many partners concerned: but the firf method is the way more generally ufed, by frilful and eminent merchants. And the knowledge of this method will qualify a perfon for any countinghoufe whatfoever; whereas, if he only underfood the latter method, and he fhould fall into a counting-houfe, where the accounts were kept by the former, he would find himfelf greatly at a lofs. It is ufeful, however, for an accountant to know all methods of ftating accounts, that he may not be perplexed upon the fight of methods different to what he may have feen.

## M ER

M ER
The BRITISH MERCANTILE COLLEGE, sumbly fubmitted to public confideration.
Novimus novitios quoldam, qui cum femercatura vix dederunt, in magnis mercimoniis fe implicantes, rem fuam male geffiffe. Et profecto imperitos mercatores multis captionibus fuppofitos, multorumque infidis expofitos expe rientia videmus. Mercatores actus fui rationem conficiant, \& calamo non parcant.

Stracch. de mercatura, par. 2. p. 357.
L'ignorance des negocians vient, de ce que dans Jeur com mencement ils manquent d'inftruction, n'ayahs pas fait leur apprentiffage chez d'babiles marchands, qui ayent toutes les qualitez requifes pour bien montrer le commerce. It eft impoffible qu'un negociant réúfife dans fes entreprifes, sill ne fçait parfaitement fa profeffion.

Parfait Negociant de Savary.
Of the neceffity of the eftablifment of a Mercantile Cullege in Great-Britain, for the education of British Mrrchants, with greater advantages than they ufually have.
In order to animate the French nation in general to the vigorous purfuit and cultivation of it's trading intereft, that celebrated ftatefman Monf. Colbert, prevailed on the late bifhop of Avranches, a gentleman well read in antiquity, to write the biftory of the commerce and navigation of the ancients*; which had fuch happy effect in the kingdom, when communicated to the moft diftinguifhed perfons in it, that, from being lukewarm in regard to the national interefts of trade, they became it's ftrenuous advocates and zealous promoters.

* Hiloire du commerce, \& de la Navigation des Anciens. Par M. Huet, ancien evêque d'Avranches.
And, indeed, it appears from the writings of that learned and judicious prelate, that commerce when wifely cherifhed and encouraged, was the firmett fupport of the power of moft of the illuftrious ftates and empires in ancient ftory.
The Phrenicians, the Carthaginians, the Athenians, and Rhodians, acquired immenfe tiealure and power by the induftry and ingenuity of their merchants, in extending their traffic. Nor did the Romans, though chiefly addicted to arms, neglect to carry on an extenfive trade to Sicily, Spain, Egypt, Barbary, and the Euxine Sea; but their perpetual victories, and the rapidity of their conquefts, made them lofe fight of their comnercial interefts; which, if properly cultivated, might have maintained their power, even to the end of time.
Where the people of any ftate or empire depend altogether upon agriculture, and there are few or no traders in a nation, unlefs of the retailing and mechanic fort; and where the farmer and the planter are the moft ufful members of the community; the higheft regard will always be paid to thefe orders of men. Accordingly we find, that in the inland provinces of Afia, they were formerly held in the moft honourable eftimaton; and the nobles of thefe countries treated all traders wich contempt; whillt in ancient Egypt, a country naturally brmed for commerce and navigation; the fhepherd and the farmer were looked on as a defpicable rank of men, and tralers maincamed the principal dignity and fuperiority in the ftate. Among the Tyrians, they had fo great a thare of honour and power, that an infpired writer has told us, their Merchanis wfre Princes.
In frie itates, fuch are the natural and happy effects of commerce, that it contributes at the fame time to aggrandize the prince, and to preierve and extend the liberty of the fubject: and arbirrary governments are fo fenfible of the benefits of traffic, that we fee them earneftly bent on it's advancement, whenever their wifeft and beft minifters have had the management of their affairs. Infomuch that I believe I may vencure to fay, that it is by a rivalfhip in crade, that our neareft and moft potent enemy carries on a kind of warfare againft us, more certainly deftructive than their arms *.
*This is demonftrated in various parts of our Didionary of Commerce.

The peculiar importance of a well regulated and extenfive commerce to the profperity, or rather to the very being of thefe kingdoms, is fo well underfood, that it is now needlefs to carry thefe reflections home to ourfelves. Trade, it is to be hoped, will ever be the chief object of our public care. But the wifeft laws, and the beft concerted encouragements, are not alone fufficient to carry our commerce to it's urmoft extent, or to fupport it in a ftate of health and vigorr: Tometbing will fill be wanting, which lies beyond the reach of laws, and which private perfons mult acquire to themfelves; 1 mean a proper mercantile education: for, unlefs incrichants are fkifful and judicious in improving and cultivating the pradical arts of trade, the beft laws will prove little betrer than a dead letter; it is the intelligent trader who muft give them fpirit, and render them operative and beneficial.

For erudition, in almoft every other branch of fience, it muit be acknowledged, we abound wirh the beft regulated infittutions. I wilh we could fay the like in relation to the morcantile profeffion. But, what well effabliflhed feminaries have we for the accomplifhment of that moft confiderable part of the Britih community? Certain I am that we have none, which are pecperly adapted to the peculiar nature of their province, and it's fupteme uilty to the ftate in general. The caufe to which they may be chiefly attributed, is not difficult to be difcovered. Too many, who fer our in the capacity of merchants, are apt to flater themfelves that they ftand in need of little other qualification, wan a round capital, and an adventurous dilpofition. Buying and felling, paying and receiving, exporting aind importing, as they think, comprehend the whole circle and myltery of mercantile tranfa ${ }^{\text {ations. }}$
When a low idea is thus entertained of the accompliohments neceffary for this employment, it is no wonder that folittle regard, in general, is had to the education of thofe who are intended for it. The confequences hereof are fatal to numbers who rufh headlong into commerce, deftitute almoft of every one of thofe accomplifhments indifpenfibly neceffary, and become a facrifice to their folly and temerity *.

* I knew a confiderable trade rin the city of London, who cou'd neither write nor read; he made fhiff, however, to keep his head above water, for many years, though he fivam with bladders, prepared by thofe who in:ended his drowning at laft; and it is not to be admired that bankruptey was his fate. And numbers of bankrupts, I have known, are Bamefully deficient in the ordinary accomplifhments requifte for the merchant; but, if every one who prefumes to take upon him thls reipectable character, was obliged to pafgan examination by a board of गkilful merchants, before he was admitred to praftice; I anl perluaded, it would have is good an effect in regard to the intereft of trade and traders in general, as the luffering no one to adminifter medicine in any fhape whatever would have upon the lives of his majelty's fubjects, 'till they hed paffed a due examinationi by the Royal College of phyficianis.
We daily fee many, by their fuperior qualifications, from very flender beginnings, accumulate great riches by merchandizing; while others, from commencing with plentiful fortuties, have, in the fame courle, been reduced to the loweft penury. This feems ftrange to the undiferning, but is eafily accounted for; fince they muft have very little knowIedge of the trading world, and lefs acquaintance with the practical atts of commerce, who can form a contemptitle opinion of the qualifications neceffary to the foreign trader.
Without acquaintance in the produce and manufactures of the commercial world, and in the laws of our own and foreign countries relative to general trade; without abilities to obtain the beft intelligence, in order to frike the citical time when and where, exportation or importation from nia. tion to nation, drawing, remitting, and negociating foreigni bills, invite to the beft advantage : without knowledge of the duties, impofts, fubfidies, drawbacks, bounties, and all other charges and allowances at home and abroad, to which crade is fubject, it is impoffible that any previous calculation can be made, whether an adventure will turn to account or not. If the merchant be not thoroughly fkilled in foreign monies and exchanges, as alfo in foreign weights and mealures, and the methods of reducing thofe of one nation reciprocally inco thofe of others, how fhall he be able to judge of furcign lnvorces and Accounts of Sales *? And, if he be not perfectly acquainted with the arts of arbitrating the foreign exchanges with accuracy, he cannot embrace thofe dally benefits by the negociation of them, which their perpetual fluctuation affords. Nor is a knowledge of the intrinfic value of foreign fpecie lefs neceffaty than of the extrinfic par of exchange, in order to deal occafiovally between country and country, in the export or import of foreign coins, and bullion gold and filver to the beft advantage : in fine, the merchant deftitute of this feries of information, and talents to apply it to the moit beneficial purpofes in every fhape, can never hope to reap any confiderable profit from his profeffion; or fuftain the character he bears with any fort of dignity. He muft owe his fuccefs, if he has any, to fortunate hite, and unexpected advantages; things which no prudent man will chufe to depend upon, for the whole profperity of bis life.
* See the articles Invorce, and Account of Sares.

To the ignorant in thefe matters, commerce is but a game of chance, where the odds are againtt the player. But to the accomplifhed merchant it is a fcience, where fuill can fcarce fail of it's reward: and, while the one is waidentry about on a pathlefs ocean without a compals, and dee: ends on the winds and tides to carry him into his port, the ohers goes neadily forwald, in a beaten track, which leads him directly, if no extraordinary accident intervenes, to wealdh and honour.
Whoever turns his thoughts on the ftupendious circulation of paper-property throughout the world, by inland and foreign bills; on the various cuftoms and wiages efablatiod aning

## M ER

traders in their money-negociations, for the fupport of univerfal credit; on the numberlefs different tranfactions, which diverfify the bufinefs of the merchant; as buying and felling, exporting and importing, for proper, company, or commifion account; drawing on, remitting to, and freighting or hiring out hips for various parts of the world at the fame time: whoever duly confiders the ikill in figures and accountantihips *, requifite fo to adjuft and methodize this great variety of tranfactions, whereby fuch trader may always have the true reprefentation of his affairs before him; together with the judgment to conduct fuch a complication of occurrences, and addrefs to maintain a general correfpondence in our own, or the more univerfal languages, cannot but fee the extent of a courfe of education proper to form to diftinguifhed a character.

* See the following Plan of mercantile erudition.

Notwithffanding this, nothing is more certain, than that no gentlemen in the general labour under greater difadvantages in point of erudition. - To trace this matter more minutely. Few, very few, have more than a fmattering of Latin and Greek, and a very fuperficial knowledge of figures and accounts. With this very frall ftock of ufeful literature, our tyro is turned into the practical counting houfe; and, when he is there, the eager purfuits of intereft in the mafter, who has not leifure to attend to his inftruction, will not admit of his making a greater proficiency in mercantile knowledge, than what felf-application fhall lead him to. Here the flower of youth, we find, is oftener ripe for pleafurable impreffions; and the generality of young people of plentiful fortunes are fo far from fpontaneoufly applying to the feverity of bufinefs, that they rather look upon it in the light of hackneydrudgery ${ }^{*}$.

* This has been, and I am afraid daily is, the caufe of the ruin of many gentlemens fons of fortune.
Such indeed is the ftrength of natural difcernment in fome, and fuch fometimes the uncommon attention to bufinefs in others, that they make little difficulty in breaking through every obfacle to knowledge, if they obtain but a glimmering light: the cale of the generality is far different.
But fhould a merchant, or his principal clerks on whom he depends, have both leifure and inclination to inftruct a young gentleman, they may neither of them always have ability fuitable. It is one thing to be capable of carrying on a proportion of bufnees in a narrow branch, a very different, to qualify others for any, much lefs the moft extenfive.
Befides, it is not every one who is acquainted with mercantile, or any other branch of knowledge, is capable of training up others therein, and giving proper inftructions.
It is not the practice of trade that will enable a merchant to teach his apprentice his art, though it furnifhes materials for that purpofe. It is a good general education, a courfe of regular fudy, and a enius for familiar explication, that fit men for the office of inftructors. And to thefe qualifications muft be adjed ftill other arts. During the fire and fprightlinets of youth, there is no fixing the attention, but by wifely amufing it. 'This age is always upon it's guard againft bondage in every thape; and therefore, to give a true relifh for knowledge, the arts of communicating it thould be difguifed under the form of pleafure.
Should it fo fall out, as none will think impofible, that our young trader is bred under thofe, who themfelves are unfkilful; whofe books are never duly ftated, pofted up, of fit for a balance: fhould it be the fortune of a young gentleman to be thus fituated, and to receive the firft impreffions from fo goodly an example, is he not likely rather to take an eternal difrelifh to the profeffion, than fuccefsfully to purfue what has been rendered lo odious and difagreeable? Or, if he happens to be of an adventurous and felf-fufficient turn, he may be rafh enough to hazard his difgrace and ruin, by engaging in an employment he is no way qualified for.
Nor is want of leifure and ability the only caufe of a youth being bred to merchandizing under every difadvantage. Intereft may frequently prove the greateft motive to his obftruction. For, if a young gentleman of confiderable fortune is let into the whole myftery of the bufinefs of the counting-houfe wherein he may happen to be bred, it is cometimes, I am afraid, furmifed, that fuch a one might hereafter prove highly detrimental thereto? And, where there is any interefting inducement to keep him in ignorance, nothing is eafier than to fpread the veil of concealment. It is only chaining our novice to fome appendage to the principal books, fome labouring oar; or artfully fhifting him from one auxiliary book to another, the more effectually to bewilder; and giving him an unwarrantable loofe to his pleafures; and our young merchant hall turn out as completely qualified to be at the head of a counting houfe, as a hackney-writer at the head of the law.
The more extenfive and univerfal the bufinefs may be, with lefs difficulty is every thing, to a ftripling, rendered dark, myfterious, and unintelligible. Provided a youth, fo circumftanced, proves one of ftrong parts and an inquifitive lurn, he will probably, upon the general balance of the

## M ER

books, be attentive to the general profits, from a principle of curiofity only: yet he may only view them in the grofs how, and in what manner thofe profits arofe, or whether they are true or falfe, is eafily obfcured under fome intermediate account to that of profit and lofs; a matter eafily practifed, to blind the eyes of one unacquainted with the niceties of accountanthip en parties doubles *.

* Many have formed filitious. SETTs of AccévNTS, in order to deceive the public, and thofe who have been taken into partnerfhip by fuch villains ; of which I have been informed we have a late inftance in a certain BANKR UPT of the city of London: others keep dounhib Setts of Books, to anfwer double purpofes.

Let the tranfactions of a counting-houfe, therefore, be as important in particular, as infinite in diverfity; let thofe tranfactions be judicioully conducted, and methodically adjufted, according to the niceff arts of mercantile ikill; yet, if a youth is not furnifhed with pre-requifite knowledge to enable him to make the beft advantage of what he fees tranfacted, he cannot be much the wifer for being placed in a counting-houfe of univerfal bufinefs. All that is tranfacted may be no more to him than a regular confufion, who is difqualifed to view the connection of the whole, with an eye of underftanding. Without being thoroughly knowing and expert in mercantile calculations and accountanthip, and duly initiated into the arcana mercatorum ${ }^{*} *_{*}^{*} *^{*} *^{*}$, what advantage can a young gentleman receive?
Every common failor who takes a hare in the toil, will hardly be prefumed fit for command. Being placed in the center of practical bufinefs, and taking fome inferior part in it's tranfactions, is far from being fufficient to qualify a young gentleman to hold the rudder of large concerns hereafter. The mechanic artizan and manufacturer, it is true, may be infenfibly difciplined to perform works of the hands with wonderful dexterity: even children, we know, may be trained to do extraordinary things that way, by reiteration of one and the fame work. In like manner may the mechanical merchant be bred; but where fo general a knowledge, fuch variety of accomplifhments, fo clear a head, and fo nuch real judgment and addrel's are abfolutely neceffary, no man, acquainted with the world, can imagine, that being bred in a parrot-like manner fhould, at this time of day, enable the young merchant to excel in the arts of commerce. We are not infenfible there have been fome gentlemen, who, deftitute of all previous requifite mercantile inftruction, have, from very trifing beginnings, fruck into foreign commerce; and, by the uncommon ftrength of their natural abilities, prompted by great induftry, and favoured by a feries of fortunate events, have acquired great eftates. Such as thefe we have known; and we have known likewife, that where this hath been done, without clandeftine and difhonourable meafures, thofe gentlemen have been of capacity and application as fingular as their good fortune: they bave indeed been perfons rather to be admired than imitated. - But traders, who, without their fuperlative talents, have been daring enough to follow fuch examples, if for a time they have happened to thine in the commercial world, it has been like thofe meteors in the natural ; which, after furnifhing matter of aftonifhment for a while, have foon deftroyed themfelves, and involv́ed in their ruin all who have been unhappy enough to be within the fphere of their influence.
Though we have thus taken the freedom to fignify our difapprobation of the ufual methods of bringing up our 'young Britifh merchants in general, yet we are fenfible, very fenfible, that too many youth, as well among merchants as other ranks of men of bufinefs, reap little advantage by the happy opportunities they fometimes enjoy, of excelling in their peculiar province. The beft examples and inftruction, the moft interefting incitements to attention 'and affiduity, make little impreflion on the defultory and inconfiderate. The diftinguifhed figure in trade fome young gentlemen make, in comparifon to others', fufficiently diferiminates the fuperior benefits they have received from thofe countinghoules, wherein they have been happily bred.
But what advantage can fuch expect to receive, that are unhappy enough to fall into the hands of thofe who are capable, yet not inclined; or of thofe who are incapable, though well inclined, to do them juftice? Inftead of a conttant fucceffion of merchants, eminent for their fkill and ingenuity, may we not rather expect to fee a daily declenfion? And. may not the kingdom be thus left deftitute of a competent number to profecute it's foreign traffic, either with that emolument to themfelves, or that benefit to the flate it will admit of? Under fuch melancholy circumftances, it will be matter of no great admiration to hear woeful complaints and lamentations on the decala and badnefs of trade, when the defect and imperfection may manifeftly lie in traders themfelves.
Without expatiating on a matter fo apparent to every one, who will give himfelf the liberty candidly and impartially to weigh and confider it, we fhall only obferve, That nothing feems more wanted than a proper place, or well regulated inftitution for mercantile education; where the theory and

## M E R

## M ER

pradice of trade might be taught, as near as could be at the fame time, and a general knowledge of commerce, and it's practical arts communicared, as the firt itep towards engaging in any branch of it.
And, as the reduction of the intereft of money witl have a tendency to induce many perfons of mature years to ftrike into trade, as well as a greater number of young people to be trained up for it, in order to fertle either at home or abroad: as the lownefs of intereft will certainly increate the abroad: as Bumber of Britifh traders in Europe, and, it is to be hoped, the trade of the nation proportionably: and, as all other countries are increafing their trade and traders likewife, it follows, that the fkill, adddrefs, and ingenuity of our Britifh merchants, cannot, at prefent, be too great. Whereas, when the trade of our own nation, as well as that of others, was in a very few hands in comparifon to what it is now, and the intereft of money double and treble what it is at prefent: when thefe were the circumftances of public affairs, and the benefits of trading between the Exchange'and the Exchequer were extraordinary, as well as the profits on trade in general, numbers acquired very great eftates, without any great accomplifhments. This great change in the ftate of our affairs, pointing out the reafonablenefs and neceffity of the propofed poing it is humbly prefumed, that it will prove as acceptable to all wife and good men, as the fame is zealoufly intended for the public benefit and utility.

## The General Pifan Delineated

Of the feveral particulars to be taught in the propofed Colifege.
It is propofed to take no young gentleman into this mercantile feminary, under fifteen years of age; nor any but fuch who are qualified in fchool-arithmetic, and mafters of a tolerable current hand-writiog:**

- It is my intention, fome time or other to draw up a plan for the education of the Britifh merchant from his infancy, as preparatory to his admifion into a college of this kind.

A thorough knowledge and expertnefs in mercantile computations being previoufly neceffary to all other accompliifhments, it is propofed to go through every diftinct courfe relative thereunto; and that in fo intelligible and fcientific a mañner, as the rationale of every thing may, very clearly appear *. For as, from the whole of this defign, we have in view the gradual exercife and improvement of the underftanding, and infenfibly ftrengthening the judgment, fo nothing, it is conceived, will be more naturally conducive thereunto, than demonftrating the reafon and foundation of all rules given in the courfes of our mercantile calculations; Kill in figures being founded in reaion $t$, facility of operation in reiterated practice: which the profeffors fhould not be wanting duly to promote.

- See our article Mathematics.
$\dagger$ See our article Arithmetic.
Knowledge in the foreign exchanges being very effential to the qualification of the merchant, this fubject fhould be treated in all it's various lights.
That a clear idea may be formed of our intention with re'gard to this particular, it may be necefliary to obferve:
I. That the moft concife and practical methods of converting the fterling money of England into the monies of exchange and of account of all places throughout Europe be demonfrated, according to the direct courfes of exchange eftablihed for thofe purpofes, and vice versấ.

2. The methods of converting fterling money into thofe of all other places of commerce, wherewith England has no direct eftablifhed courfes of exchange, but is under the neceffity of making ufe of the intermediate exchange of other places: together with the nature of the agios, and the manner of turning their bank monies into current, and the reverfe.
3. The manner of calculating all the foreign monies throughout Europe into thofe of every other diftinct country, eithe by direct or intermediate exchange; which makes a much greater variety of cafes than thofe, who are not thoroughly acquainted with this extenfive fubject, can imagine.
4. The art of arbitrating * the prices of exchange throughout all Europe $\dagger$.

* Les arbitrages, en matićre de change, ne font antre chofe qu'un prefentiment d'un avantage confiderable gu'un commetrant doit reçevoir d'une remife ou d'une traite faite pour un lieu prééérablement à une autre.
Le pair, ou l'égalité des monnoies courantes, ou' le pair des places, qui eft le point le plas délicat, le plas effenciel, \& le plus innocu du commerce de change, \& de banque, fe prend en deux maniéres.
La premiére ell au pair, qui fappofe un jufte rapport \& une valeur exacte de la monnoie d'un païs avec celle d'un autre, comme quand ${ }^{\text {r }}$ rixdale de 50 fels, monnoie courante de Hollande, ou d'Amiterdam, elf comptée en égale valeurde ${ }^{1} \nabla$ (a) de 60 fols Tournois de France, ou de 54 deniers, ou pens, ou $4 \frac{1}{2}$ chelings d'Angleterre, \& ainfides autres places,
Sans cette connoifance, on ne peut pas favoir le profit ou
la perte qu'on fait aux changes, ou fur les merchandifes étrangéres; car comme il y a un pair \& egalitédes mefitics $\&$ des poids da monde, il ell auli néceflire quill y ait an pair \& egalité des monnoies; autrument un négociant ne fauroit ce qu'il feroit, ni fil le prix qu"on lai demanderoit d'une chofe, fût ce en change, ou en macchandife, feroit haut ou bas.
La feconde efpéce d'égalité entre les places, eft tirée des prix courans des changes, par laquelle on entend feulement cetre proportion requife d'une place avec une autre place, parla consoifanced'une ou de plufieurs comparées entrelles. Quelques uns poarront dire que la connorflance du profit \& de la perte qu'on fait, fur des letires de change, dépend du retour des fommes à leur principe, \& que le pair eft une fpéculation inutile. On peut répondre à cela que, fi la connoiffance du profit; \& de la perte qu'on fait fur les letres de change, dépend du retour des fommes à lear principe, $\&$ du liea d'où elles font forties, on ne peur pas dire la même chofe de celles, qui ne retournent point, font qu'elles foient emploiées, \& confumées dans le pails mêtne, foic pour achat de marchandifes, foit pour peniion, ou puor des ffaites paxticulieres.
D'ailleurs, s'il étoit néceffare d'attendre ce retour, pour favojrle profit qui fe fait fur une lettre de change, \& que cette connoiffance dépendit de l'avenir, il faudrott conclure que dans le tems que l'on donne ou que t'on prend de l'argent a change, on ne le fauroit pas, \& s'il on ne le favoit pas, ce feroic négocier fans connoillance de caule \& au hazald, puis qu'on aghoreroit le profir ou la perie quion y fe. roit. Idem.
(a) Le lecteur eft averti que cet ouvrage aiant été fait lorique l'écu de France ne valoit que 60 fols Tournoi, set écu étoit au pair avec la rixdale de Hollande de 50 fols. Mais les monnoyes de France on Change louvent depuis, \& lont lujettes, a des variations concinvelics anné 1 ITz; on le fuppofe tousiours de leancienne valeur de 60 fole Tournois à̀ quoi on fera attention. 'Traité General du Commerce, par Samuel Ricard d'Amfterdam.
$\dagger$ See our articleg Arbitration of Exchanges, Exchanges, England, Homband, Hamburgh, and fuch other heads to which from thefe we refer.
This is a fubject of great delicacy, not only in point of computation, bur in point of application to the purpofes of drawing and remitting money, and negociating biils of exchange throughout Europe, to the beft advantage at all times. And what that advantage is, can never be known to any, except thofe who are fkilled in this important and myfterious branch. Thofe merchants or negociators of foreign monies by exchange, who may be only acquainted with a few places, whole exchanges they are capable of arbitrating, cannot be judges of the profits to be made by other places: and therefore, for want of an univerfal knowledge herein, we will prefume to fay, that daily opportunities, of no inconfiderable benefit, efcape notice.
Although the inftability of the exchange is juftly enough compared to the wind, yet that inftablicy is the very caufe of the profit to be made thereby: and for this plain reaton, becaufe it is fcarce ever poffible, that the courfes of exchange between feveral nations fhould ebb and flow in an equality of proportion.
And whoever trades as a merchant, that is to fay, as an exporter and importer in Europe, mult of necefity have to do with bills of exchange, and with drawing or remitting: and, if fo, he fhould by no means be unacquanted with thofe arts of making the beft advantages by fo doing; but this is not poffible to be done, without being thoroughly ikilled in their arbitration, to a demonftrative exactitude.
The more general the trade of a merchant is, the more univerfal thould his knowledge in this particular be. And thofe who may have views in dealing largely by exchange, will certainly find their account beyond expectation, in being fundamentally grounded in this fubject; for a trader of a good general foreiga correfpondence may, by this means, gain more by dint ot credit and fkill, than others, unacquainted herewith, can do, by dint of hard money *.
* See our articles Arbitration of Exchange, Holland, Hamburgh.
A knowledge allo of the intrinfic value of foreign coins, or fpecie ${ }^{\circ}$, fhould go hand in hand with the knowledge of exchange $t$; the profit arifing upon the exportation or importation thereaf, from one foreign country to another, being prounded on the due confideration of both. To which grounded be added, the nature of dealing in bullion gold and fitver to the beft advantage ; the various çalculations neceffary to that end, and the methods pointed out tbat are proper to be taken, in order to prevent impofition in regard thereunto $\ddagger$.
* That a more lively idea may be obtained of dealing in foreign fpecie to the beff advantage, we would recommend the collection of the feveral coins current throughout Eurove, with the feveral flandards affixed thereunio, for the ufe of the college.
+ See the article Coins.
$\ddagger$ See the articies Assay, Aqua Fortis, Aqua Regia, Bullion Gold and Silver, Flux, Mercury, Metaliurgy, Minerology, Ores, Quartation, Refining, Silyer, Testing.

Mmm
That

That the young merchant may not be deficient in whatever has affinity with exchanges, there fhould be compiled a fuccinct collection of the eflential cuftoms and ufages of Britikh and foreign merchants relating to bills of exchange, together with the principal law-cafes that have been derermined in the courts of judicature in England and Scotland, and foreign countries *; which, with other occafional admonitions, may not a little contribute to prevent his being unwarily drawn ino litigious broils; than which, nothing is lefs compatible with a life of traffic.

* See the article Bills of Exchares.

From the knowledge of thefe particulars, the collegian fhould be led to the comparifon of forergn weights and meafures, and the methods of converting thofe of one country into thofe of any other *.

* See Englati, Hamburgh, Holland, Measures, Weichts.
It is unneceflary to obferve further upon this head, than that there is no poffibility of underttanding foreign invoices *, and accounts of fales, without being capable to reduce the ftandard weights and meafures, as well as the monies of forcign countries, the one into the other. Nor without it can any previous computation be made, whether exportation or importation of merchandize, between nation and nation, will or will ntot turn to advantage.
* See Invoice, and Account of Sales.

Exportation and importation of domeffic and foreign commodities leading to the bafinefs of the cuftom-houfe, the calculation of the duties, fubfidies, drawbacks, and bounties, becomes a qualification not the lealt neceflary in an undertaking of this nature; as it is below the dignity of the merchant to fee wholly with the eques of others, in what fo nearly concerns his own intereft *.

* See the Practical Business of the Custom-House, at the end of each letter.
In regard to points of this nature, all due attention fhould be given to the tariffs, duties, impolts, and other charges, which are laid upon the Britifh produce and manufacture in foreign countries; and to inculcate, at the fame time, the prudential neceffity of obtaining fuch fatisfactory knowledge, by pro forma accounts of fales from foreign parts, before engagements are precipitately entered into *.
* See Account of Sales, Tariffs, Treatirs of Commerce.
To thofe who have not been early exercifed in numbers, and are not become expert in their operation, this variety of calculations may appear fomething laborious. So it would be, if the method of infruction is not fo peculiarly contrived as to render the whole rather an entertainment, than any thing like a difagreeable drudgery.
The minds of young perfons are not to be touched by abftracted ideas; they have need of agreeable and familiar images; they cannot reaion, or be brought to delight in bufnefs, without being pleafurably trained to them; and what is of the greateft moment mult be rendered lovely, and reprefented under fenfible and beautiful forms.
Yet what depends upon practice and exercife, $\mathrm{c} n$ only be obtained by practice and exercife, though the rules and principles of that practice hould be ever fo well comprehended. - I wifh, fays a wife man *, that Paluel or Pompey, the two c famous dancing-mafters of his time, could have taught us - to dance and cut capers by only feeing them do it, without - ftirring from our places, as fome pedants pretend to inform - the underftanding, without ever fetting it to work; or that - we could learn to ride, handle a pike, touch a lute, or fing, - without the trouble of practice; or as thefe attempt to make - us judge and fpeak well, without exercifing us in judging ' and fpeaking t.'
* Monraigne.
t The great Mr. Lacke feeaks to the fame purpofe. We are born with faculties and powers, fays he, capable of almoft any thing; fuch, at lealt, as would carry us farther than can cafily be imagined: but it is only the exercife of thefe powers which gives us ability and fiill in any thing, and Powers which gives us towards perfetion.-A middle-aged ploughman will fcarce ever be brought to the carriage and language of a gentleman, though his body be as well proportioned, and a gentleman, though his body be as well proportioned, and
his joints as fupple, and his natural parts not any way inhis joints as fupple, and his natural parts not any way in-
ferior. The legs of a dancing-mater, and the fingers of a ferior. The legs of a dancing-mater, and the fingers of a
mufician, fall as it were naturally, without thought or pains, mufician, fall as it were naturally, without thought or pains, into admirableand regular mondons. Bid them change their
parss, and they will in vain endeavour to produce like moparts, and they will in vain endeavour to produce like mo-
tions in the members not ufed to them ; and it will require tions in the members not ufed to them; and
length of time, and long practice, to attain but fome degree of a like ability. What incredible and aftonifhing actions do we find rope-dancers and tumblers bring their bodies to Not but that fandry, in almoll all manual arts, are as wonderful; but I name thofe which the world takes notice of for fuch, becaufe, on that very account, they give money
to fee them. All thefe admired motions, beyond the reach, and almolt the conception of unpractifed fpectators, are notung but the mere effects of ufe and induftry in men, whofe bodjes have nothing peculiar in them from thofe of the amazed lookers on.- As it is in the body, fo it is in the mind; practice makes it what it is, \&cc. Locke's Conduct of the Underftanding, folio, page 375 .
That the juvenile mind may not be difagreeably wearied with too continued an attachment to the fame thing, the conftitution of the college fhould be fo modelled as to have interludes, by tranfition to matters of a lighter kind, which do not require that feverity of attention, yet to fuch chichly as bave a clofe connection with practical bufinefs in a real life of trade
Amongt thefe we look upon a facility in writing a plain, ftrong, fenfible letter of bufinefs upon all occafions. As trade can only be carried on by an epiftolary correfpondence, a good mercantile fyle may, perhaps, be as neceffary a part in the ecucation of the merchant as any thing elfe. Thoufands, in foreign trade, correfpond for many years without ever feeing one another; but they can fee the intelligent man of bufinelis as thoroughly by his letters as by his converfation; and fometimes better indeed; for many may get the light knack of prating, who are not able to write a correct and pertinent letter of bufincís.
Letters of trade, wrote with judgment, and language fuitable to the fubject, beget refpect and confidence. We have heard a worthy and ing:nious merchant declare, That his being capable of correlponding in a manner' fomething fuperior to the gencrality, was the means of getting him a very good eflate, from a very fimall begiming; this talent baving brought him very large commifion bufinefs, a branch always deffred, not only as it brings a fecure profit, but as it proves the means of gaining the young merchant, efpecially, experience at the rifque of others.
They muft have little knowledge of language who can imagine, that the mere tranfcription of otber perfons letters, with precipitation, for the fake of copies only, will ever qualify a young gentleman, with a small fhare of literature, to carry on a judicious correfpondence himfelf*. Nothing can effectually do this, but being properly put on the exercife of his own genius, and, from time to time, having his flyle corrected, with fuitable admonition.
* Yet this is the only method taken to infruct them herein; which muft be the reafon why fo few write grammatically or intelligibly; which I could thew by fome thoufands of merchants letters in my poffeffion.

Though it is not neceffary that the merchant hould be a perfon of great learning, yet it is abfolutely neceffary he fhould be capable of writing grammatically, ocherwife his fentiments are liable to be miftaken, which will be attended with confequences either injurious to himfelf or his correfpondents. And young gentlemen of this clafs muft certainly ftand in need of fome affiftance in this refpect, unlefs they can be fuppofed to have a miraculous advantage over other perfons, and to obtain a facility to indite with brevity, fulnefs, and perfpicuity, by inftinct or infpiration.
Having arrived at a tolerable maftery in fyle, as well as computation, the fcene fhould be difcretionally diverfified; variety in applications of the mind being as occafionally requifite as variety in diet to the body. To this end, the young merchant fhould be gradually initiated into a knowledge of the grand books.
That this part of his erudition may be rendered rather familiar and pleafurable than otherwife, we judge it neceffary to commence with communicating a knowledge of every diftinct auxiliary to the principal books, and of the form of every kind of voucher, and of every fort of inftrument practifed among merchants for their mutual fecurity: fuch as Bills of Lading, Charter-Parties, Policies of Insurance, and the like *.

## - See thefe feveral articles.

We would not be underttood to mean the giving only a fuperficial view of thofe kind of writings and inftruments, but to inculcate the nature, legality, and utility of them; and, at the fame time, to enforce the neceffity of fuch writings and inftruments being ftrongly and intelligibly drawn to prevent frife and litigations: as alfo fhewing that, without fuch legal vouchers, the grand books are of no authority, either in cates of arbitration, or in the face of courts of judicature; thefe being no more than an artificial index to the original vouchers and teftimonials.
From thefe inftructions, fo given as to make a proper impreffion, the next flep floould be to proceed, in a natural progreffion, to explain fyftematically the axioms and rational maxims and principles whereupon the whole art of accountantihip, as practifed by the moft fkilful merchants, according to the method of double-entry, is grounded. . At the fame time, the fuperlative excellency of this art, in comparifon to all others that have been adopted to anfwer the like purpofes, fhould be amply illuftrated, by appofite examples; as it always exhibits the true reprefentation of a merchant's affairs:

## M ER

and, provided the books are duly polted, up, this excellent method is preventive of all deftructive confequences, which attend irregularity and confufion in a trader's accounts.*.

- This method of inftruction is widely different from the or dinary one that is practifed.

It is not neceffary, indeed, that a merchant engaged in large concerns fhould keep his own books, as he may probably employ his time to far greater advantage; but it is indifpenfably neceflary that he fhould be capable of doing fo : how is it poffible, otherwife, that he fhould be able to judge when they are kept as they ought to be? Nor can he be capable of fo infpecting them as to be duly acquainted with the ftate of his own affairs *.

There are many who have book-keepers, that are not judges whether their accounts are kept as they ought to be or not, according to the nature of their tranfactions. Is it at all extrabrdinary that fuch thould be unfaccefsful?

It is unbecoming meannefs, not to fay a confummate folly, in any man, whofe fortune is dally at take, to depend upon others to give him what they.pleafe for the ftate of his affairs. It is juftly proverbial among the Dutch, That the man who fails, did not underftand to keep his accounts : and it may be truly faid, a merchant without that fkill, is in as bad a fituation as the mariner on the wide ocean, without chart or compafs whereby to direct his courfe.
This inimitable method of accounts, being 'founded on the principles of realon, will prove a kind of practical logic to young people, when it is rationally and methodically communicated, noc mechanically, and by rules depending on the memory only; which latter does not merit the name of inftruction at all. And even rules, and the principles of reaion whereon they are grounded, being ever fo well underftood, yet without the due application and exercife of thofe rules and principles to ufeful purpofes, they are little better than a dead weight to the memory, and a clog to the undertanding: whereas, when thefe rules and principles are duly applied, and made habitual, by being reduced to practice in matters of ufe, they are a whet to the genius, and Atrengthen the intellectual faculties.*.
-The common way of infruction of this clafs of people is by mere rules, withoat any reafon or demonftration given of thofe rules $;$ which is a mere mechanical and parrot-like way of teaching; whereas, were young people habituated to know the reaton of every rule they go by, in the courfe of their education, it would infenfibly lead them to pry into the reaton of every thing elfe; which would prove of no little aid to their underftandings in general.
In order to apply thefer rules and principles of reafoning to accounts, a concife introductory fytem thould be formed, and that exemplified by tranfactions foreign and domeftic, drawn from real bufinefs. And, that the young merchant may be completely grounded herein, he fhpuld be afterwards exercifed in ftating the real occurrences of fome of the greateft and moit univerfal merchants, from their original books.
Nor will fuch original books of accounts be of ufe only to ground a young gentleman to the utmoft perfection in the art of accountanthip, but will, at the fame time, familiarize to him fo great a variety of interefting tranfactions in foreign trade, conducted with judgment and addrefs, that will qualify him to launch into commerce with great advantage *

To this end, I would propore that the college fhould be fapplied with a great variety of complete fetts of the real accounts of many diffinguifhed and eminent merchants deceafed; they being of no other ufe to executors after being a few years in their poffefion, there would be no great difficulty to obtain a great variety of thefe. If this feminary was furnihed with the genuine accounts and letters relating thereto of the following merchants (a), who trod the Royal Exchange with fupreme credit and dignity, the anexperienced mightreceive great benefit and advantage, by having judicious leaures read upon the fame. For, by having the traniactions of perfons of great experience and difcernmen before us, and their motives nakediy laid open, as appears by their genuine mercantile letters, no, one will doubt but great knowledge may be thereby obtained for the condact of young people; to know only the feveral ways of trading of the kiilful and profperous, is of no little usility; but to be let tinto the motives of their meafures, and the addrefs whereby their many hazardous adventures have been conducted, is of no lefs benefit to the young trader than the genoine hiftory of great ftatefmen and commanders are to thofe who thall aim at-following their examples.
(a) The accounts we mean, are fuch as thofe of a Louvreure, St. Tina pey and Seignioret. Daniel Archur, Brafiey and Smith, Turton and Perer Meyer, Sir Theadore Janfien, Sir JohnWilliams, Sir Randolph Knipe, Sir Peter Delmé, Samuel Sheppard, SirFrancis Eyles, Ialp Milner, -- Olmius, Sir Samuel Clarke, Sir Alexander Carnes, Henry Carnes, Deborah Dunt, widow, Longuel and fons. Sir Henry Furne $\mathrm{fe}_{3}$, Sir James Bateman, Sir James Dollyte, SirWilliam Chap man, Samuel Holden, and many of the orher diffingnified menchants of the Britioh factories in foreign parts, and numbers of others who are now living in the highell credit.

## M E R

About twenty years fince, fome mercantile accounts of no little confequence fell into my hands to audit and liquidate, between the late Samael Holden, Efq; governor of the Bank of England, and fome confiderable merchants of Ruffia. In the examination of thofe accounts, it was neceflary for me to confult the courfe of correfpondence formany years back and I muft confefs it not only gave-me great latisfaction as well as advantage, from the perufal of Mr. Holcien's letters in particular, for they were pensed with great fagacity : in particular, for they were penned with great fagacity.
Cicero himfelf, perhaps, had he been bred a merchant, could not have formed a mercantile epiftle more laconic, could not have formed a mercantile epifle more laconic,
elegant, and perfpicuous; whereas tiofe of many of his elegant, and peripicuous; whereas thofe of many of his
correfpondents were as mean and unintelligible as their correfpondents were as mean and und
bufinefs was injudiciouly conducied.

Thus rationally introduced into this method of accounts, in all it's ordinary forms, as practifed by the moft ingenious and experiepiced, our young traders fhould afterwards be inftructed fo to contract their accounts, as to have much leis writing than is commonly ufed in moft counting-houfes. The auxiliary books fhould not only be contrived in a method far more concife than ufual, but other parts of their accounts kept in a much fhorter manner than is generally practifed, and yet without the leaft deviation from the fpirit and effence of this incomparable art.
The ufefulnefs of the abridgment propoled, in this refpect, will confift in keeping the books al ways duly pofted up; without which it is impoffible the merchant thould, at all times, be fo thoroughly acquainted with his affairs as he ought. But thole who are not complete mafters of this art, although they may perfectly underftand the common mertods, yet have-fo much writing therein, and thereby find it fo laborious, that they frequensly practife lefs accurate methods of accountantthip, only to fave fo much writing ; which is too often attended with nolittle diforder and confufion in their affairs.
That every advantage may be reaped which this art of accountanthip will admit of, the fudent fhould be put alfo into the tnethod of keeping, with very little trouble, an abftract of the fate of his affairs, within the compafs of a pocket-ledger, as a conftant check and remembrancer for the due government of his concerns.
That no point of practice in any counting-houfe whatever may be concealed, the ufual methods of making out accounts of fales, invoices *, \&c. Thould he laid open, together with the nature of all intermediate accounts, which are made ufe of in order to anfwer fuch purpofes as may be thought neceffary by the more fkilful.

* Though many of thofearts are not Arictly juft and honour-able, yet the young merchant thould not be ignorant of them, able, yet the young merchant thould not be ignorantof
left he hould be liable to daily impofition by others.
Method and regularity being the life of the trader's affairs in general, the fame fhould not be neglected in every circumItance relating thereunto. Thus the due arrangement and methodizing of the original vouchers of his tranactions, forimmediate reference, fhould be duly inculcated and exemplified. As the grand books are of no authority without them *, the one ought to be as regularly difpofed as the other, in the way they will admit of. Neglects of this kind, either by mifplacing or lofing thofe teftimonials, being productive of great perplexity and vexation in public bufinefs, order and regularity in all things carinot too early be made habitual.
* Much deceit and knavery have been practifed by fubtle bankropts and ochers, by forging formal wafte-books, journals and ledgers, \&c. feemingly very regularly kept, \&c. which have too often paffed for genuine, becaufe the feveral vouchers have not been duly fcrutinized into from whence thofe accounts have been formed.-This is what thould be ftrictly examined inco by the commiffioners of bankrupts, and counfel int heir pleadings, \&ce and by thofe who enter into partnerfhips, \&c.

Moreover, the trader, whofe whole fortune, or more, is frequently embarked in bufinefs, and whofe anxiety is often fufficiently engaged for the event of his enterprizes, fhould be accuftomed, from his youth, to treafure up all knowledge relative to his profeffion; more efpecially fo, fince it frequently admits of a variety of occurrences, no lefs fingular than interefting. It will, therefore, hardly be thought unneceffary ta familiarize him to keep a well-contrived alphabetical regifter of all fuch effential occurrences, as may be requifte for him to have recourfe to throughout the whole of his life. For it is little to the reputation of the trader to be obliged to ank information of others, in important tranfactions which relate to himfelf; and in fuch too probably, as either paffed through the counting-houfe where he was bred, or perhaps, his own; yet, for want of a proper memento, he may fometimes commit fuch egregious miftakes, as may prove an injury to his eftate, as wellas blemilh to his character
The next bufinefs fhould be to furnifh the young merchant with fome knowledge relating to the funds and focks of this kingdom; negociations of that fort, en the account of foreigners, and orhers, having multiplied with the increafe of the national debt.
We would not be underftood to mean the knowledge of the flock-jobber only, but fuch a knowledge of the funds, in
their

## M E R

their foundation on the public credit, and how they are affected ab extra, as well as ab incra, fo as to diftinguifh the real from the fictitious caules of the fuctuation of their prices. However mankind may have been milled, and infatuated at times, yee doubriefs there are touch-itones, whercby an obferving perfon may pals a very good judgment when there is money to be got or loft, by this our ftanding luttery *.
*There is fo great variety of artifices practifed at certain conjunclures, to raife and fall focks for the private interelt of jobbers, and thofe who are in the fecret of public affairs and great companies, that they would take me up a volume to dray in their proper colo

Provided this hould be no otherwife ferviceable than to prevent a ralh and indifcreet dabbling in flock-jobbing, it may prove the faving, though it thould not the improving of a fortune. The young trader may hereby receive information enough upon this head, to enable him to give fuch feafonable advice to correfpondents, as may be the means of gaining him no inconfiderable commifions in that thape, though his own fortune fhould not admit of his occafionally trading in the ftocks for humfelf.
In the courfe of this mercantile progrefs, the next fep neceffary fhould feem to be to give the young merchant a general furvey of the trade and commerce of the world *.

* See the feveral nations of the world throughout this Dittio. nary, and their principal provinces, countries, duchies, \&cc. for commerce.

However unneceffary fome may imagine this general knowledge of rrade, who look not beyond the circle of thes particular branch, yet we cannot help thinking fuch knowledge may prove of no little advantage to the trader of genius: for it is the nature of foreign commerce to be variable and fluctuating; that branch which fhall afford confiderable profit at one time, may be farce worth engaging in at another; by reafon the greater the advantage is, the greater is the confluence of traders into that branch in particular: multitudes thus itriking into one and the fame trade, foreign markets are glutted, and the Britifh, as well as other produce and manatactures, become a drug.
Other caufes Iikewife confpire to this. All nations are now convinced that trade is the beft fource of wealth and of power: wherefore fome are daily attempting either to fupply themfelves with what they took from others, or other nations are attempting to obtain a fhare in their fupply.
But whoever confiders in what manner the more fkilful merchant profecutes his trade, will hardly difallow the neceffity of a pretty general knowledge therein. As, n. Our national produce and manufacture being more than our confumption, a part is exported; and, in return, foreign goods, or bullion, or both, are brought home. 2. Selling the goods exported at one port, and loading there to fell at another, whereby a larger profit is made than if the goods exported had been carried diredty thither. 3 . Bringing away the produce and manufasiures of other countries, from whence and when they are cheap, to fupply countries when and where the fame fell dear. 4. Bringing home the produce of other countries, and exporting the fatme in manufactures. 5. Freighting and horing out hipping to various parts of the world.
The meichant, by thus knowing how the feveral parts of the world are connected with each other in their mutual intercourfe of commerce, how the redundancies of this country fupply the deficiencies of that, will be capable of foreleeing when any ill confequences threaten either that branch of traffic in which he is particularly concerned, or the trade of his country in general. It will open to his view by what means feveral branches have been acquired; how fome have been ftagnated and loit; and what meafures may be taken by the government, in concert with the prackical merchant, to revive them, or fupply the mifchief, by opening new channels of commerce.
It is too little knowledge of trade, not too much, that will make the merchant rafhly adventurous and projecting, upon weak and groundlefs foundations. A perfon, knowing in more branches than one, woll of courle embrace that which is the more fuitable to his fortune, and the leaft hazardous. As many have been undone by rafhly grafping at a greater fhare of bulinefs than they had either capital or ability to manage; fo, on the orher hand, mony have been ruined by an unaccountable atta=hment to one branch, when common prudence cried aloud for their relinquinhing a ruinous trade, and friking into the profperous.
This part of the inftitution, therefore, it is prefumed, may prove a for ereign prefervative againft each extreme of imprudence ; our intention hereby being to prevent precipitate engagements, and too projecting a turn on the one hand, as likewife too contracted a view, and pufillanimity on the other. It is not by the merchant as by the particular mechanic or artizan. The potter cannot eafily ftrike into the bufinefs of the fhiperight, any more than the later can into that of the watchmaker or the weaver, $\& x$. This is not parallel in regard to merchant and merchant: for the exporter of woollen
goods can as eafily export tin or lead, or hard ware, \&c. and have his returns by exchanee in dollars of Leghorn, or dueats of Venice, as well as in dollars of Spain, or mbllees or moidores of Pontugal, \&c. Or cannor the merchant who fent woollen goods to Spain or to Italy, fend another ípecies of woollen goods to Ruffia, and have his return in robles, Rufia hemp, linen, thubarb, or pot-afh, \&c. as eafily as in spanifh dollars, wines and railins? In fine, the imports and cxports to and from his own nation to all others, together with a knowledge of their monies, weights, and meafures, dutics, impofts, and all cuftomary charges, ought to be familiar to the accomplifhed merchant ; that, upon the declenfion of any particular branch of national trade, he may apply himelf to the more advantageous for the time being.
Or, even if the national trade in general fhould undergo a temporary declenfion, yct the trade of the world will aftord the true-bred merchant eternal opportunities of advantage : fuch a one will find no dificulty to trade in various branches, from one foreign nation to another, as it were independent of his own, whilf all the profits are brought home, and center within himfelf.
We are not unaware it may be objected, that a merchant cannot have that univerfal knowledge in the qualities of commodities, neccffary for variety of foreign markets, \&c. and, therefore, cannot fo eafly turn himfelf from one branch of foreign trade to another. To which it may be replied: were merchants obliged to depend wholly upon their own judgment herein, there would be fome weight in the objection. But this is not the cale. l'or the reputation of manutakturers and warehoufemen, and other dealers, in their negociations with merchants, is not only at ftake in one refpect, but they can fafely depend upon well experienced brokers and packers in others, to prevent impofitions of this nature: fo that there is not that necelfity for the merchant to have fo deep a knowledge in the qualities of goods in general, as if the cafe was otherwife. However, this matter fhould by no means be difregarded in a collegiate eftablifhment; a mercantile mufæum, or repofitory, being indifpenfably neceflary to fuch a defign, which hould be fumifhed with famples* of the unperinable ftaple commodities and produce of the principal trading parts of the world.

- To thefe fhould be joined labels, defcribing the diftinguifhablecharacteriftics of their feveral qualities, according to the degrees of comparifon: this will accuftom a young perfon to form fome jurdgment in the qualities of thole commodities wherein he may be hereaffer anduced to trade. If this expedient thould have no other effect than to make a proper pedient thould have no other effect than to make a proper
impreflion, that the merchant himfelf fhould not be wholly imprefion, that the merchant himielf thould not be wholly regardlefs of the qualities of thofe commodicies wherein he
may happen to deal, it may anfwer a very good purpofe, may happen to deal, it may anfwer a very good purpofe,
but can prove no way detrimental : he may chule whether but can prove no way detrimental: he may chule whether
he will regard any but thofe he may occaliona!ly traffic in, he will regard any but thofe he may occaliona!!y traffic in,
and fuch he cannot be too well acquainted with. See the articles Manufacturers, Machanics, Musifum.

Very far from raifing an uncontroulable adventurous fpirit, in caufelefsly rambling from one branch of trade to another, on the contrary, every meafure fhould be ufed to check it, by throwing in fuch a weight of prudential knowledge as will ballaft the molt towering and extravagant difpofition of that kind.
In view to which, the tutors fhould not be wanting to inftil the neceffity of guarding againft cafualties and injurious events, in every thape, fo far as the extent of human forefight may be prefumed to go in the train of bufmefs. Thus with regard to exportation for proper, or company account, the neceffity of pro forma accounts hould be duly inforced, before adventures are undertaken; as allo the prudence of buying at beit hand, and judicioufly dividing the hazard, by not trufting too large a capital upon one bottom, or in one hand; not to trade beyond themfelves, or leave their concerns too much to others; of prudentially infuring, not only from the danger of the feas, but from the danger of bad debts in foreign parts. For young people fhould be admonifhed rather to be contented with finaller profits, than not to allow the ufual extra commiflion, for a good correfpondent to remain the middle man upon thofe occafions, perfons of experience well knowing the meafures too often taken by factors, provided they have not this extra-allowance.
Thele, and all other fuch-like meafures, fhould be duly regarded by the inftruftors; fince not only the improvement, but the fecurity of the merchant's fortune, as trading in the capacity of a principal for his own account, fo greatly depends. And although, by purfuing meafures fo circumfpect, our young merchant's profits, at firft fetting out for himfelf, may be lels than thole of more bold adventurers, yet he will much fooner grow rich than thofe who make too much hafte to become fo.
Acting like wife in the capacity of a factor does not require lefs precaution: for a juft and honourable regard, had, in the way of trade, to the intereft of others, feldom proves detrimental to our own. Whether this is not one, and cuen the mof effectual means to increafe commifion bufinefs, we lcave tho'e tojudge who aet as principals themfelves. As trading in this

## M ER

Thape is the moft beneficial and fecure, fo it is not the leaft delicate to conduct to the beft advantage. In refpect to a matter of this importance to the young merchant, the beft advice fhould be inculcated. To which end, thofe meafures fhould be pointed out that have been fuccefffully taken by the more judicious to gain commiffions.
No employment requiring a more ready ufe of the principal modern languages than the mercatorial, a collegial inftitution would be judged materially deficient, if deftitute of profeffors to train up thofe Aludents properly therein: wherefore, for whatever branch of trade the young merchant may beintended, he fhould, through the courfe of this education, be able to obtain either a knowledge of the French language, or the italian, the Spanifh, the Portugueze, or even the Dutch, High or Low; and, indeed, a facility in writing of feveral, or all of them, is neceffary for the general merchant: for, although fonie may think that the French alone, from it's univeriality *, fufficient, yet many foreigners will rather prefer a Britifh correfpondent, who writes his native language well, than that of him who only writes the French or the Englifh,

* It has proved no mean froke of the French policy to make their language fo univerfal as they have done. Among their fyften of arts for the propagation of theircommerce, there is no one, perhaps, that has more tefnded to render it univerfal than this, however fame may flightly think of it. Where there is one book in the Englifh language read throughout the world, there are doubtlefs many thoufands of the French; and fuch is the vanity of that nation (a), that they are fuperlatively modeft indecrying moft others, in order to render their own the more fuperh in the eyes of Atrangers. The beft of every thing is fcarce any where to be found but in France; and they as arbitrarily govern the falhions of the world, in what hall be eat, drank, and wore, in other naworld, in what hall be eat, drank, and wore, in other na-
tions, as they are governed at home. Are notalfo the furtions, as they are governed at home. Are notale the fur-
niture, buildings, and even the pleafures of the reft of manniture, build.ngs, and even the pleafures of the reft of man-
kind, in a great meafure, fetted by this grand regulator of kind, in a great meaure, fetted by this grand regulator of
modes and fahhions? How far this, with the univerfality modes and fafhions? How far this, with the univerfality of their language, has contributed to univerialize their com-
merce, I am afraid has never been fufficiently confidered merce, 1 am afraid has never been fufficiently confidered
in this kingdom. This is apparent from many parts of in this kin
our work.
(a) See Mr. Addifon's Freeholder, No. 30. and bihop Spratt's An Wer to that difingenuus French ho Sorbiere

What renders this the more neceffary is, that fuch who are pretty general traders, and not capable themfelves of writing in the modern languages, as their affairs may require, are under the daily neceffity of applying to thofe who make it their bufinefs to tranlate for them, and write anfwers to their foreign letters. Now, befides the meannefs and expence of fuch a practice, do not fuch merchants run the hazard of having the arcana of their bufinefs betrayed, and themfelves therein fupplanted? Nor are hired tranllators themfelves alway's able to give the genuine fenfe of a letter, or to write a pertinent anfwer, with the proper turn of phrafe. How injurious a practice of this kind may frequently prove, we leave thofe to confider whom it may concern. Moreover,
When a merchant has eftablifhed his credit among the trading world for worth, honour, and punctuality, there is no end of his correfpondence. It is the common practice among merchants of honour, all over the world, to make mutual tenders of their fervices upon any natural occafion that offers, which is taken cordial and refpeefful: and, if they meet- with a correfpondent who writes their language weil, and takes their fenfe clearly, it is frequently inftrumental to produce profitable negociations that, perhaps, might never have been the cafe, if the agreeable correfonding language had been wanting.
The moft capital houfes of mercantile trade throughout Europe being generally compofed of feveral partiners, for the greater fatisfaction of foreign correfpondents, it is cuftomary tor the one or the other of thofe partners to travel into foreign countries, in order to make the better judgment of the credit and fortune of their cortefpondents, cement ties of commercial friendhip with others, and extend their traffic in general Where fuch travelling correfpondents meet with traders who fpeak their own language with propriety, it fhould feem to have a tendency to promote more harmony than is cultivated with thofe who do not; in the fame manner as we obfeive ftrangers, who think alike, and between whom there is a fimilitude of manners, fhail, at firft fight, contract permanent and beneficial friendfhips.
As foreign merchants refort to England with this intent, fo the Englifh frequently take the tour into foreign countries. But, to go without language, he may almoft as well be deaf as dumb : he ftands but an indifferent chance to cuitivate advantageous friendfhips, and promote the honour and intereft of the houfe *wherein he is concerned. Few foreigners f'peak Englifh, which makes it the more neceflary for the Englifh to fpeak and writc the language of foreigners with whom they do or are likely to correfpond.
That a knowledge of geography is peculiarly neceffary to the merchant, need not be urged; and that fome fkill in nayigaVol. II.

## M E R

tion is likewife requifite, cannot be lefs obvious, fecing they have conftant concerns with mafters of fhips and infurances, \&zc.
That the merchant fhould make fome farther advance than this into the mathematical literature, will hardly be difputed, when we take a comprehenfive view of the nature of his employment; for, although we fuppofe him to be an expert practical arithmetician; yet, methinks, he fhould not be mechanically fo only: he fhould be habituated from his infancy to know the reafon of all rules by which he works [fee Arithmetic], for then he will apply his fkill in figures pertinently to whatever occurs, which otherwife is fcarce poffible; and it is better tofee with our own eyes than through the medium of others. A man, indeed, may content himfelf with the common theorems for gauging and menfuration, \&c. yet to work only by tine and by rule, illy becomes fo tiigh a character. We cannot therefore but think, that fuch a knowledge in algebra and geometry, as will lead the merchant into the rationale of every calculatory qualification for which he maid have occafion, muft be of ufe to prevent deception. How fär alfo fome knowledge in this fcience may be helpful to the improvement of the underftandings in general of young people of this clafs, may deferve confideration. [See our article Mathematics.] Likewife how ufefully a knowledge in fome parts of philofophy might contribute to his profperity in many branches of trade whercin he may be engaged, appears from . various parts of this work. See the article Philosophy.
The bufinefs of this clafs of traders being not only under the concroul of the peculiar and municipal laws of their country, but to the eftablifhed cuftoms and ufages of the mercatorial, as well as many branches of the civil law, and the laws of nations and commercial treaties; it will hardly be faid, that the merchant ftands in need of no knowledge of this kind. Certain it is, if he is ignorant of the penalties to which he is liable, and the riglits and privileges to which his profeflion entitle him in any refpect, he not only runs the rifque of daily impofition, but of abfolute ruin. It is therefore we have, throughout the courfe of this work, 'pointed out moft of the laws and ufages of every kind, to which this trader is liable.
As the public funds of this kingdom, and the great monied corporations eftablihed in confequence thereof, are chiefly under the management and direction of the moft diftinguifhed merchants of the city of London, does it not become neceflary that they fhould be thoroughly informed in what relates to the fupport of the public credit, when the truft repofed in them is for no lefs than the property of 170 millions of fterling money? We do not intend, by what is here faid, to fignify the crafty fkill of frockjobbing, we having before touched that point; we mean, that in this college fhould be taught, in a proper manner, a perfect knowledge of the public revenue in every branch thereof, all the laws relating thereto, and the feveral variations which the funds have undergone: upon the whole, hare fhould be taught, fcientifically, the real principles to preferve public faith and credit, the foundation on which the property of the monied intereft ftands, at prefent; what meafures may be realonably judged expedient in future, for the due fecurity of fo confiderable a proportion of the wealth of the nation, as well as what are the mbft general eligible ways and means to raife the public fupplies hereafter on all emergencies, the moft for the general intereft and honour of the kingdom. See the articles Debts [National Debts], Credit [Public Credit], Funds, Interert of Money, and Money
The fudy of commerce, as well as that of the public funds and revenue in a national and political view, both in general, and as the feveral branches of it come occafionally under the confideration of the legillature, or the public, by intended regulations, becomes another principal particular to be cultivated in this feminary.
This part of knowledge will, we apprehend, be thought of no little importance to the mercantile proferity, as it has been deemed a great merit in merchants, on public conjunctures, to have afforded fatisfaction to their fellow-citizens, in their affociations in this metropolis upon thofe interefting occafions; and the higheft honour to bave given the legillature fatisfactory accounts in matters of concernment to the traffic of the kingdom.
The memorable defeat of the French bill of commerce, in the reign of the late queen Anne, is fufficient to confirm the truth of this *.

When Great-Britain, under the conduct of the late duke.of Marlborough, had reduced France to the neceffity of fuing for peace, there were two treaties fec on foot, the one of peace, the other of commerce. But the treaty of commerce could not take effect, unlefs the parliament confented to reduce the high duties, and take off the prohibitions fo wifely laid on French commodities. As this would have deffroyed all the bell branches of our trade, and deprived many hundred thoufand of our manufacturers of their fubfiftence, it began to give an alarm; which became general amongt the imerchants and traders, who knew the fatal

Nn\&
confe
confequences of it. Many pamphlets were publifhed, to convince our legillators, that the preferving our looms, and the rents of Great-Britain, were of greater confequence to the nation, than gratifying our palates with French wine. This treaty, however, was to be fupported at any rate; which occafioned feveral ingenious merchants of long experience, and well $\mathbb{k}$ illed in trade, together with the late earl of Halifax and earl Stanhope, to ufe cheir utmont endeavours to defeat it ; which they effectually did, by the fatisfactory accounts thereof they laid before both houfes of parliament, and from what they publifhed from tume to time, under the title of the Britifh Merchant, or Commerce preferved.

Sir Charles Coke, merchant at that time, made fo clear a defence of our trade at the bar of the houfe of lords and commons, that he was afterwards defervedly made one of the lords commiffioners of trade and plantations, and chofe a member of parliament.
Sir Theodore Janfien, Bart. alfo, furnifhed many ufeful materials, which contributed towards the carrying that national point.
James Milner, Efq; merchant, and member of parliament, madeuppear, before the houfe of commons, the great importance of our trade to Porfugal, and of the treaty of commerce which fupports the fame, in oppofition to the French bill of commerce.
Mr. Nathaniel Torriano, merchant, fhewed the confequence of opening the French trade according to the propofed treaty, in fo ftrong and fo clear a light, as to convince even them who difcouraged his fpeaking before parliament, of the deAtruction that muft have inevitably fallen upon our country, hid that treaty been rendered effectual by parliament.
Mr. Johhua Gee, Mr. Chriftopher Haynes, Mr. David Martin, and feveral other very able and diftinguifhed merchants, well acquainted with the interefts of the trade of the nation, were extremely helpful likewife in defeating that pernicious treaty, and therefore lateft pofterity will have their names in honourable remembrance.
But we need go no further than our prefent time for in. Atances of this kind. We had a confpicuous example before us, in one of the late reprefentatives of this great city in parliament; who upon all occafions, manifefted fo fuperlative a knowledge in the general commerce of the nation, as defervedly to be diftinguifhed with the higheft honour and applaufe: which, one would think, fhould animate every young merchant to endeavour, next to his province, to excel in this kind of knowledge.
And, although every one cannot expect to be bleffed with the genius of a Barnard and a Beckford, yet every merchant of diftinction fhould be emulous to exert himfelf in the fervice of his country, in a manner fo confiftent with his profeffion. Every trader having a private interelt in the promotion of the general trade, and practical traders having greater opportunities than others of knowing the true intereft of the nation in that refpect, it feems a duty owing to chemfelves, as well as their country, to turn their thoughts fometimes that way. Befide, in regard to their own particular intereft, if they are not thoroughly acquainted with the political nature of that peculiar branch of trade, wherein they are perfonally concerned, how is it poffible they can duly fupport and defend it on any great exigencies, in the eye of the legiflature?
For the proper initruction of the ftudents in each of thefe branches, it is fuppofed, that the college is provided with tutors well accomplifhed to act their refpective parts with all advantage to the collegians, and credit and honour to them-felves.-It is fuppofed likewife, that the college is provided with a library of the beft authors in all the modern languages, who have treated upon the feveral fubjects before enumerated, and with a complete mathematical and philofophical apparatus for every purpofe intended.
And now, if the reader will take a tranfient retrofpect in his mind of what has been faid, he will hardly fcruple to grant, that merchandizing, and the united qualifications neceffary to form this ikilful Britifh trader, have as good a claim to the appellation of an art or a fcience, as moft that are fo honoured and diftinguifhed: fhould we fay, that commerce is the grand fupport of moft other arts that are folidly ufeful to mankind, it is no more than it deferves; and therefore it will not be thought unreafonable, that Practical Trade, and Mercantile Negociations in general, fhould be reduced to as regular a method of inftitution, as it's inferior and dependent arts.

## Of the Plan of Execution.

If the judicious reader fhould be candid enough to admit the preceding plan of particulars to be unexceptionable, and that there is nothing intimated therein, but what appears indifpenfibly neceffary to train up the merchant fuitably to his great employment; yet it may be faid, this is no great advance towards the carrying fuch a defign to it's defirable height of perfection, in point of execution: it is far eafier to fuggeft the particulars requifite, than to obtain fit and ca-
pable perfons for the office of inftructors in an eftablifhment of this kind. There is more difficulty attending this, perhaps, than there is in any other literary inftitution; for, if the diftinet branches hereof were to be taught in the ordimary fcholaftic way, which is practifed in public fchools and other collegial feminaries, I am afraid it would fruftrate the end propofed, and rather mar than forward the ftudent in his accomplifhments.
The merchant is expected to engage in trade for himfelf, and hazard his fortune therein, by the age of 23 or 24 at fartheft: many are impatient to ftay fo long: whereas the learned profeffions, as they are diftinguifhed, give the ftudent, upon the general, above ten years more in his application, before he is judged capable to make any tolerable figure in life; and that by fubfifting only on the intereft of his fortune, if he has any, but not hazarding the principal money, as the young merchant is obliged to do, before he can raife any fort of reputation in the commercial world.
This being the cafe, and the fkilful merchant fanding in need of fo great variety of knowledge, in order to preferve and improve his fortune, every expedient thould be devifed, every art practifed, that will conduce to give him the greateft fund of ufeful knowledge in the leaft time.
Without entering into a critic upon the ufual methods of education in England, which, indeed, have been fufficiently expofed by leamed men already; we fhall only endeavour to fhew in general, wherein, we apprehend, the method for accomplifment of the merchant ought to differ from that which is commonly practifed, in regard to the more learned claffes of the community.
The life of the merchant being a converfable one, his employment leading him to tranfactions even from the mechanic and manufacturer to the minifter of fate, his method of erudition, methinks, thould be as different from that fcholaftic way, as his profeffion is from all others: the man of bufinefs has not 20 years to devote to the mere ftudy of languages, metaphyfics, and criticifm, \&c. Prudence directs him to apply early to thofe things indifpenfibly requifite to profperity in his employment; and what may adorn the learned profeffions, might fpoil him for his own *. - When the merchants arcomplifhments are equal to, or above his employment, and not his employment fuperior to his accomplifhments, then he may be at liberty to make what advances leifure and prudence will admit, in the belles lettres and the liberal arts; but to aim at this before, is acting as wifely as the peafant, who by turning ftar-gazer got fmorhered in a ditch.

* Sir William Temple gives it as his opinion, that even the men of learning may be fo overladen with learning, as to be weaker in point of judgment than if they had lefs.-So the merchant, if overfocked with that fort of literature which may be above or befide his province, he may be the worfo merchant, though the greater fcholar.- What Sir William fays may deferve attention-' Who can tell, fays he, whether learning may not even weaken invention, in a man that has great advantages from nature and birth'; whether - the weight and number of fo many other men's thoughts - and notions may not fupprefs his own, or hinder the mo-- tions and agitations of them, from which all invention - arifes; as heaping on wood, or too many flicks, or too - clofe together, fuppreffes, and fometimes quite extin-- guifhes a little fpark that would otherwife have grown up to a noble flame. The flrength of the mind, as well as of body, grows more from the warmth of exercife than of clothes; nay, 100 much of this foreign beat, rather makes men faint, and their conflitution tender and weaker than they would be without them.-Temple's Works vol. i. fol. p. 158 . If this obfervation ot Sir William's oould prove true, the merchant with a chare of learnim hould prove true, the merchant, with a thare of learning uitable only to his proteinon, added to his converfable knowledge of the world, and the conltant exercife of his own judgment in active buinefs, may become a much wifer
man; a more ufeful member to the community, than the man, a more ufeful member to the community, than the
profound feholar, whofe underfanding is drowned in the profound fcholar, whofe underitanding is drown
ocean of knowledge borrowed only from others.

Upon the whole, what we would mean to fay is, that there thould feem to be a certain pitch of literature, beyond which it is dangerous for the commercial man to advance; and really the field of knowledge, which the nature of the mercatorial employment requires, is not fo fcanty as fome may be wont to think * nor thould the manner of communication of what is requifite be in the ordinary fcholaftic way, the merchant's time being limited, as before obferved, to fo few years, for the courfe of his erudition.

See our Univerfal Dictionary throughout, in what relates to his accomplifhments.
Nor will a profound knowledge, in every mercantile branch which we have particularized, anfwer the end: there an perhaps, many far more learned divines, lawyers, and phyficians, who live in obfcurity, than thole who gain their thoutands a year, and make a pompous figure in life: fome ftudy the externals, the knowledge of the world, and the craft of rifing without merit, while others itudy only to deferve what they never arrive at.-The merchant muft be the

## M ER

man of the world, as well as kilful in the requifites of his profeffion; but his being immured in a college to converfe only with the dead letter, and the jargon of the fchools, will render him as unfit for his profefion, as Sir Ifaac Newton was for a dancing-mafter.
Wherefore the queftion is, what is the beft method to train up this man of bufinefs? We fay he muft not be deficient in fome of the principal modern languages, nor fhould he be incapable of reading a Latin author at leaft, though it may not be neceflary for him to be a claffical critic. If he enters the college with a childifh fmattering of this tongue only, he hould not leave it, without fuch a fundamental maftery, that he can improve himfelf therein at intervals, even in the eight of his mercantile concerns.
The bufinels of languages, efpecially the learned ones, as they are eminently diftinguifhed, is made an Herculean toil, in the packhorfe road of an ordinary Englifh education; yet no nation has better helps to facilitate their acquifition. We abound with Englih tranfations, both literal and free, of the poets as well as profaic authors, more than fufficient to enable a perfon to read any of the reft; fufficient, however, to capacitate the man of bufineis to read any he may chufe; and he has fcarce ever occafion to fpeak or write that dead language; though why the Englifh, as well as foreigners, hould not be accuttomed to fpeak the Latin, there can be no fubltantial reafon given, perhaps.-The Englifh are remarkable for writing Latin inferior to none; and why they thould not fpeak it equally well, if trained to it, is not eafy to fay. Becaule we can never be able, fay fome, from the change of cuftoms, and the extraordinary difference of idiom, 8y. to fpeak that language with a Roman elegancy, are we therefore not to attempt it all? Would not a converfable ufe in this dead language, from our infancy, greatly expedite the acquifition of the modern, which have a near affinity therewith ? This will hardly be gainfaid *.

- Ifa man could begot, fays our great Mr. Locke, who, him - felf fpeaking good Latin, would always be about your - fon, talk conftantly to him, and fuffer him to fpeak or - read nothing elfe (a), this would be the true genuine way,
- and th th which I would propofe, not only as the eafielt and thit which I would propore, not wherein a cbild might, without pains or chiding * get a language which others are wont to be whipped for - at fchool, fix or feven years together; but alio as that wherein at the fame time he might have his mind and - maniuss formed, and he be inftructed to boot in feveral - fciences; fuct as are a good part of geography, aftronomy, chronology, anatomy, befides fome parts of hiftory, " and all other parts of knowledge of things, that fall under the fenfes, and require litile more than Memory. For thefe, it we would take the true way, our knowledge fhould begin, and in thofe things be laid the foundation; and not in the abftract notions of logics and metaphyfics, - which are fitter to amufe than in form the underftanding - in it's firt fetting out towards knowledge.
- When young men have had their heads employed a while - in thofe abotract fpeculations, without finding the fuccefs - and improvement, or that ufe of them which they expect-
- ed, they are apt to have mean thoughts, either of learn-
- ing or themfelves; they are tempted to quit their fudies
and throw away their books, as containing nothing but
- and throw away their books, as cord words and empty founds; or elfe to conclude, that,
- if there be any real knowledge in them, they themfelves
- if there be any real knowledge in them, they themielves
- have not underfanding capable of it. That this is fo,
- have not undertanding capable of it. That this is fo, other things to be learned by a young gentleman in thys method, whillt others are only taken up with Latin and
- languages, I may alfo fet down geometry for one, having known a young gentleman, bred fomething after this way, able to demonitrate feveral propofitions in Euclid,
- before he was thirceen.
(a) This is the method by which the celebrated Montaigne was tayght Latin, and from which very probably Mr. Locke might borrow the thought. What Montaigne fays of himfelf may deferve regard:-‘' No
doubt but Greek and Latin are very great ornaments, and of yery doubt but Greek and Latin are very great ornaments, and of very
great ufe, but wo buy them too dear : I will here difcover one " great ufe, but we buy them too dear: I will here difcover one - way, which alfo has been experimented in my own Prason, by
- which they are to be had better cheap, and fuch may make ufe of it that will. My father having made the anof precifc enquiry that any mancould poffibly make, amongf men of the greateft learning - and judgment, of an exact method of education, was by them - cautioned of the inconvenience then in ufe, and made to believe that the tedious time we applied to the learning of the languages
of thofe people who had them for nothing was the folecaufe we could not arrive to that thrandeur of foul and perfection of knowIedge with the ancient Greeks and Romans: I do not, however, believe, that to be the only caule : but the expedient my fathen found out for this was, that in my infancy, and before $I$ began to fpeak, he committed me to the care of a German, who fince died a famous phyfician in France, totally ignorant of our language, but very fuent, and a great cricic in Latid.
whom he entertinned with a very great falary for chis onfy, and Whom he enterianed with a very great falary for this only end,
- had me continually in his arms: to whom there were alfo joined two others of the i,me nation, but of inferior learning, toattend me, and fometimes to relieve him, who all of chementertained me with no other language but Latin. As to the reft of his family, it was
an inviolatle rule, that neither himflf, nor my mother, man nor madd, hould fpeak any thing in my company, but fuch Latin worde as every one had learnt only to gabble with me. It is not to be imagined how great an advantage this proved to the whole fa. mily ; my father and my mother, by this means learning Latin enough to underitand it perfeetly wcil, and to fpeak it to fuch a fervants did, whowere mof frequent with me. T T be hort, we
did Latin it at fuch a rate, that it overflowed to all the neighboure - ing villages, where there yet remain, that have eftablithed thém-- felves by cuffor, feveral Lation appellations of artizans and their - tool. As for what concerns myfelf, I was above fix years of age - before I underfood either French or Perigordin, any more than - Arabic; and, without Art, Boox, Gammabr, or Precipt ed to fpeak as pure Latin as my mafter himfelf. ir, for example they were to give me a theme after the college fanhion, they gave - it otbers in French, but to me they were of neceffity to give it in the worft Latin, to turn it into that which was pure and gaod; and Nicholas Grouchi, who writ a book de Commitiis Romanorum, William Guirentes, who has writ a comment upon Arifiotle George Buchanan, that great Scotch poet, and Marcus Antonius - beft orator of his time) my domefic tutors, have all of thed for the told me, that I had in my infancy that language fo very fivent and - ready, that they were afraid to enter into cifcourfe with me; and - particularly Buchanan, whom I fince faw attending the late marefchalde Brifac, then told me, that he was about to write a trea-- tife of education, the example of which he intended to take from
- mine, for he was then tutor to that count de Brifac, who for - mine, for he was then tutor to that count de Brifac, who after-
- wards proved fo valiant and brave a gentleman. As to Greek, of which 1 have but a fmattering, my father alfo defigned to hare - taught it me by a trick, but a new one, and by way of fport tofling our declenfions to and fro, after the manner of thofe, who ( by certain games, and tables and chefs, learn geometry and arith-- metic: for he, amongit other rules, had been advifed to make me
relifh fcience and duty by an unforced will, and of my own voluntary motion, and to educate my foul in all liberty and deligh without any feverity or reffraint.'
Befides the practice of converfation, as recommended by Mr. Locke and Montairne, and indeed by all the learned men of other nations, the next means is tranflation; which, ac cording to the learned Mr. Afcham *, who was preceptor to queen Elizabeth, ought to be double; that is to fay, not only Latin iato Englifh, but the fame Englifh again into the original Latin, whereby learners have the claffical authors to correct themfelves by: which, being of the pure Roman phrafe, is a far better fandard for correction than the judgment of the generality of fchoolmafers.
* See the Schoolmafter : or, A plain and periect way of teach ing children to underftand, write, and fpa. the Latin tongue. By Roger Afcham, Efq; preceptor to her majefty queen Elizabeth, corrected and revifed, with an addition o explanatory notes, by the Rev. Mr. James Upton, A. M ector of Brimton in Somerfethire, and late fellow of King's College in Cambridge. Printed in the year 1711, for Benjamin Tooke, at the Middle Temple Gate in Fleet Street-This I think one of the belt tooks I ever met
with to help youth forward in the Latin tongue, with great with to help youth forward in the Latin tongue, with grea
care and pleafure, and which I my felf have experienced.
- But, if fuch a man cannot be got, fays Mr. Locke, who fpeaks good Latin, and, being able to inftruct your fon in all thefe parts of knowledge, will undertake it by this method, the next beft is to have him taught as near this way as may be, which is by taking fome eafy and pleafant book, fuch as Efop's Fables, and writing the Englifh tranflation (made as literal as it can be) in one line, and the Latin words which anfwer each of them, juft over it in another. Thefe let him read every day over and over again, 'till he perfectly undertands the Latin; and then go on to another fable, 'till he be alfo perfeet in that, not omitting what he is already perfect in, but fometimes reviewing that, to keep it in his memory. And, when he comes to write, let thefe be fet him for copies; which, with the exercife of his hand, will alfo advance him in Latin. This being a more imperfeet way than by talking Latin unto him, the formation of the verbs firit, and afterwards the declenfion of the nouns and pronouns perfectly learned by heart, may facilitate his acquaintance with the genius and manner of the Latin tongue, which varies the ignification of verbs and nouns, not as the modern languages do, by particles fixed, but by changing the laft fyllables. More than this of grammar * I think he need not have, 'till he can read himfelf Sanctii Minerva, with Scioppius and Prerizonjus's notes.
* The abfurdity, fays the late ingeniaus Mr. Clark of Hull, in his New Latin Grammar, ofteaching the Latintongue by a grammar in Latin, is fo very grofs, that one would wonder how it thould ever enter into the head of any perion of common
fenfe, much more how it thould ever become a national fenfe, much more how it thould ever become a national practice. But common cultom, in molt cafes of importance, is fo far from being the rule of right, that it is the very reerfe of it, and in no cafe more flagrantly than this. The impofing of public prayers for the ule of the people in a language they snow not, as fenfelers, and ridiculous a practice as it is, it is not more fo than it is to pretend to teach a language by rules writ in the very language to be learnt, and which confequently the learner cannot undertand, or make any ule of, 'till they are rendered into a language he does know; and then it is the tranlation only, and not the ori-ginal,- that is of afe to him. In fhort, the moft rude and barbaroas nations upon earth cannot furnifh us with any infance of a cuftom that carries more of ftupidity in the front of it. And therefore it is fomewhat ftrange, that a practice fo mifchievous, as well as ridiculous, fhould not long fince have had a flop put to it ty law. Our legillators have almoft all in their turns been confiderable fufferers by it; and, unlefs they pleafe by their authority to prevent it, their pofterity after them are like to fufferon in the fame manner to the end of the world. For public cultom is feldam to be conquered but by authority, efpecially where
people are got into the wrong way, fo perverfe or weak are
the generality of mankind. It is, therefore, very much to be wifhed, the legillature would take the matter under confideration, and, to fave a deal of pain and plague, as well as a miferable watte of time to the youth of the nation, put an effectual ftop to the fenfelers and barbarows cuftom of teaching the Latin tongue by a Latín grammar. They have highly merrted of the people of Great-Britain, by delivering them from a grievance of a like nature, the ufe of the Latin rongue, or doggerel rather under that denomination, in the practice of the law.
Another act of that nature, in pity to the poor fuffering youth of the kingdom, would, I dare fay, be as kindly and thankfully received, by all true lovers of their country and good letters. Whether it may be reafonable or proper for authority to impofe the ufe of any one grammar, I thall not take upon me to determine here; but this I thall be bold to fay, that it is as reafonable to forbid by law the pretence of teaching the Latin tongue by a grammar writ in tence of teaching the Latin tongue by a grammar writ in
Latin, as it is to forbid the ufe of that language in the pubLatin, as it is to forbid the ufe of that language in the pub-
lic worfhip of God. Both praetices are equally ridiculous, lic worfhip of God. Both pratices are equally ridiculous,
though not equally pernicious. For the thing propofed in though not equally pernicious. For the thing propored in
both cafes is utterly unattainable. Youth can no more learn by the help of a language they do not underftand, than the people can pray to God in a language they do not under ftand, which every body fees to be impoffible, and nonfenfe to pretend.-So far the ingenious Mr. Clark:
In teaching of children this too, I think, is to be obferved, that, in moft cafes where they ftick, they are not to be farther puzzled, by putting them upon finding it out of themfelves; as by alking fuch questions as thefe, viz. which is the nominative cafe in the fentence they are to conftrue? or demanding what aufero fignifies, to lead them to the knowledge what abitulere fignifies, \&c. when they cannot readily tell. This waftes time only in diffurbing them; for, whilf they are learning, and apply themfelves with attention, they are to be kept in good humour, and every thing made eafy to them, and as pleafant as poffible*. Therefore, whenever they are at a ftand, and are willing to go forwards, help them prefently over the difficulty, without any rebuke or chiding; remembering, that, where harfher ways are taken, they are the effect unly of pride and peevifhnefs in the teacher, who expects children fhould inftantly be mafters of. as much as he knows: whereas he thould rather confider, that his bufiness is to fertle in them habits, not angrily to inculcate rules, which ferve for little in the conduct of our lives; at leaft are of no ufe to children; who forget them as foon as given. In fciences where their reafon is to be exercifed, 1 will not deny, but this method may fometimes be varied, and difficulties propofed on purpofe to excite induftry, and accuftom the mind to employ it's own ftrength and fagacity in reafoning. But yet, I guefs, this is not to be done to children whilft very young, nor at their entrance upon any fort of knowledge: then every thing of itfelf is difficult, and the great ufe and fkill of a teacher is to make all as eafy as he can. But particularly, in learning of languages, there is the leat occafion for pofeing of children. For languages, being to be learned by Rote, Custom, and Memory, are then fpoken in greateft perfection, when all rules of grammar are utterly forgotten. I grant the grammar of a language is fometimes very carefully to be ftudied, but it is only to be ftudied by a grown man, when he applies himfelf to the underftanding of any language critically, which is feldom the bufinefs of any but profeffed fcholars. This, I think, will be agreed to, that if a gentleman be to ftudy any language, it ought to be that of his own country, that he may underftand the language which he has conftant ufe of, with the utmoft accuracy. See Locke of Education.
* Thefe fentiments of Mr. Locke have induced many to oblige the public with literal tranflations of feveral of the introductory clatical authors, for the ufe of fchools; and which, I doubt not, have proved extremely helpful; efpecially when the learners have been exercifed by Mr. Afcham's method of double tranflation, and the grammar rules have been explained at proper times, in plain Englifh. Many teachers of the dead languages are ridiculous and pedantic enough, to act in defiance of the opinion of Mr. Locke Montaigne, Afcham, and other the moft learned men in Europe, as might be eafily fhewn, and will not fuffer youth to have all thofe helps for which thefe great men have fo wifely contended: yet too many of thefte learned affes are obliged to make ufe themfelves of thefe very auxiliaries, which they deny to children; in which a gentleman and myfelf once accidentally detected his fon's fchoolmafter a bis own houle. - Mult not this be, with defign to make the children believe, that their mafters are fo fuperlatively profound in thefe languages, that they fand in need of no expofitors or annotators, when they really fand in need of them as much as the youths themfelves? Or, muft it not be with intent to lay every obflacle in the way of their improvement, that they may exert their perceptonal tyranny with lefs reltraint? There cannot be too many helps for the acquifition of languages, both ancient and modern; and thofe, I am afraid, who the moft Atrenuounly oppofe them, I fhalt always fufpect, fince the above accident, have the greateft occafion for them.
Monfieur Rollin, than whom few have better underftood the method of training up youth in the learned languages, is of
the fame fentiment: ‘ La premiere queltion, dit-il, qui fe ${ }_{6}$ préfence, eft de favoir quelle méthode il faut fuivre pour " préfente, eft de favoir quelle méthode il faut fuivre pour
= enfeigner la langue Latine. Il me femble qu'a préfent lon - convient affez généralement que les premiers régles que - l'on donne pour apprendre le Latin, doivent être en Fran-- çois, parcequ'en toute Scrence, en toute connoiffance, - il eft naturel de pafer d'une chofe connue \& crafre à une - chofe qui eft inconnue \& obscure. On a fenti qu'il n'é-- toit pas moins abfurde, \& moins contraire au bons fens, - de donner en Latin les premiers préceptes de la langue La-- tine, qu'il le feroit d'en úfer ainfi pour le Grec, 8 pour c toutes les Langues E'trangeres.'
Thofe who would require greater fatisfaction in relation to the method fuggefted for the fpeedy and familiar acquifition of languages, we refer them to confult not only thofe principal authors beforementioned, but fuch alfo who have followed the principles of thofe learned mien, and wrote, fince their time, upon the utility of the plaineft and moft literal tranflations (fornething in the way propoled by Mr. Locke) in order to facilitate the knowledge of the Latin tongue in particular*.And, after the ftudenc is a mafter of thefe feveral authors; by the conftant exercife of the method of double tranlation, and having the grammatical rules familiarly explained to him occafionally in plain Englifh, he will be able of himfelf to read with pleafure feveral of the other claffical authors; efpecia!ly thofe with free and elegant tranflations, fuch as thofe wrore by Guthrie, Melmoth, Dunfter, Dr. Martyn, and divers others; as allo thofe commentators who have wrote in Latin upon the Roman claffics. Upon the whole, however neceffary fome learned men may think it, that the youth of this nation, intended for the learned profeffions, fhould plod on in the old way of gaining a knowledge of the dead languages, it is to be hoped that the parents of thofe who are intended for merchants, will think it the worft method that can be taken for them: and what is the worf method for their attainment of a knowledge in the Latin tongue, can never be the beft to be followed in relation to the modern languages.-They mult be acquired by conftant converfation with fuch who fpeak with propriety; by double tranflation, and by having the grammatical part eafily explained in their native language, from the mouth of the tutor, and not by a multitude of rules got by heart, which only ferve to burthen the memory, render learning difagreeable to youth, and retard their proficiency, - It I remember right, bifhop Spratt, in the Life of Cowley, fays, That he could never be brought to learn the Latin tongue by grammar rules, and yet few of the moderns have wrote that language with greater purity.
* The firf that I remember to have appeared upon this occafion, was Mr. Philips, fub-preceptor to his royal highnefs the Duke. (2.) Mr. Clark, of the public grammar-fchoo of Hull, author of two Effays on Education and Study, o A New Grammar of the Latin Tongue, and Literal Tranflations of feveral of the Introductory Latin Claffics. (3 Doctor Stirling. (4.) N. Bailey, Mr. Wation, and others.

Before we difmifs this point of language, we will take leave to make one obfervation more; which I have never met with in any of thofe authors who have wrote upon the beft methods of obtaining a knowledge of languages. The reader, however; will pleafe to take notice that what we are about to fay is only intended as a requifite addition to what has been already propofed by Mr. Locke, Mr. Afcham, and thofe other authors before quoted, in regard to the ufefulnefs of prepared literal tranilations, \&cc.
Another thing we defire the reader will pleafe to obferve, is, that we take it for granted no youth is admitted into the college before the age of 15 at leaft, and that he has been fomewhat initiated into Latin and French, and can write his native language tolerably, together with a pretty good current hand.
Now, what we would humbly fubmit to further confideration is, in relation to the moft natural method of making ufe of proper literal tranflations in the propofed college, in order to render the fpeaking and underftanding of the Latin tongue, or any of the modern languages, yery eafy and familiar to the mercantile ftudent : and what we have to propofe is comprehended under the few following words:
The contant proper ufe of a Living Dictionary, and a Living Grammar, and proper Literaf Translations. That all literal tranllations may be made a proper ufe of, by the means of a living dictionary, it is propored there thall be a kind of defk, elevated to a pitch proper for the purpole, wherein there fhall al ways be one perfon conftantly trandating, with an audible voice, either Latin into Englifh, or Englifh into Latin; or French into Englifh, or Englifh into French; and the like of any other modern language to be learned; and thofe trannations to be in as literal a manner as the different idoms of the languages will admit of, to as to be perfectly intelligible.-At the fame time fhould be explained, viva voce, the peculiar cuftoms and antiquities of the Romans, when any thing occurs that renders the lame neceffary to the better underftanding the author which is thus publiciy tranflating.

## M ER

1. Let it be fuppofed, that, while fuch a conftant tranhator, during the hours of education, is going on, a profound filence Is preferved, and due attention is given by the ftudents to fuch tranfation.
y. Let it be fuppofed, likewife, that one fingle day only in the fix is allotted for the explication of the rules of grammar, of any author that has been tranilated, in the fame public way, relating to the peculiar language to be acquired.
Thefe fimple exercifes being fuppofed to be fteadily purfued, in regard to any language, what may we reafonably prefume to be the confequence?
In this exercife, the reader will pleare to obrerve, that the ear and the memory of youth only are conftantly employed, with repect to the point of double tranflation; and that the underflanding is familiarly worked upon, in order to imbibe and retain the rules of grammar, without the leaft difagreeable application or fatigue.
It is by the conftant ufe of the tongue, the faculties of hearing and the memory only, whereby mankind obtain the knowledge to (peak, write, and undertand their native languages; and If, in the public way of teaching any other languages, we can fall nearly uponthe like meafures, is it not very reafonable to hope and expect that any other languages may be thereby acquired as familiarly and infenfibly as we do our mother tongues? That this muft be the effect of futh exercifes, we have not only the judgment of fo great a man as Mr. Locke, but the experience of a Montaigne, our great queen Elizabeth, and Madam Dacier.
By thumbing over the Dead Dictionary and Dead Grammar, a youth of 15 fhall, perhaps, make fhift, with Herculean toil, and the help of his fchool-fellows, to hammer out, in a very pitiful way, thirty or forty lines of an adthor in a day, the greatelt part of which he too often as foon forgets as learns : whereas, by means of the conftant exercife of the Living Dictionary, and the Living Grammari, and Literal Translations, he may, with great eafe and pleafure, learn fome hundreds of lines in a day, and retain the greateft part of the words and phrafes in his memory.
Whether thefe exercifes will be attended with advantages fo fuperior to what the ordinary ones are, it may be neceflary to enter into a further eciaircifiement of the plan propofed.-To which end, the reader is defired further to obferve, that
The whole college is fuppofed to confift only, or chiefy, of young ftudents who are defigned for the mercatorial employ-ment.- - That their continuance therein is propofed to be from the age of 15 to 19, and that the whole number of them thall be divided into four or more claffes; that is, thofe of the firft year's flanding thould be of the firft clafs, thofe of the fecond of the next, \&c.
At the firf commencement of this infitution, the frefh men, who enter at 15 , muft be pfifted, as much as poffible, by the means propofed, for the firft year, by the tutors; but, upon their entrance into the fecond year, thofe of the firfy year may, in a great meafure, be inftrueted by the meafures fug gefted, by their fellow ftudents of the fecond year's fanding; and thole of the fecond year's ftanding be inftructed by thore of the third; and thofe of the third by thofe of the fourth rear's ftanding; which will prove of no lefs eafe to the tuturs, than benefit to themfelves.-To explain myfelfy
2. It is prefumed that thofe ftudents who enter into the fecond year have, in the way propofed, gone thiough two, three, or more of the introductory Latin claffical authors, befides two or three French authors * which are proper for the occation. At the fame time, the reader is delired to obferve, that there are ftated times for their improvement in figures, and their mechanical hand-writing, and fomething of geography.

- The plaineft profe authors we judge beft to begin with.

2. That three or four, or more, of the moft expert fudents of the fecond clafa fhould be conitant public tranifarors to thofe of the firft clafs, the tutor always attending 10 explain difficulties, as they occurred. -Thofe of the third clails to thofe of the fecond $y$ and thofe of the founth to thofe of the third clafs, \&c.
3. This will refrefh the memories again of the ftudents with the authors which they had read in their prior clafs, habituate them to a graceful pronanciation and elocution, and prove of great eafe to the lungs of the tutor, whom we carnot prefume to be capable of continuing a public tranflation feveral hours-in the day; But this may be very eafily done by a requifite number of the ftudests of a fuperior clais, in the prefence of the tutor appointed for the infruction of the clafs.
4. By thefe fimple excrifes, fleadily and judicioully purfued, the ftudents cannot trifle away a moment's time of the hours allotted for their inftruction, which they do when Jeft intireby to themfelves, with the ufe only of their dead dictionary and grammar, and without any proper tranlation to affirt them. 5. It is.fuppofed, as before intimated, that there is a profound filence always preferved in the room of public tranlation; that is, nothing is to be heard but the concinued voice of the public tranflator for the time being.-If any thing is capable of Vol. II.

## MER

fixing the aftention of youth, this method feems to bid yery fair for it, becaufe it is not attended with the leaft degree of toil or perplexity, every obftacle to their advancement being agreeably remoyed.
6. In order to judge whether due attention hath been given 6. In order to judge whether due attention hath been givent
by every individual to, the voice of the public tranflators, it by every individual to, the voice of the public trannators, it
fhould be an eftablihed rule for the tutor to caufe, every day, thould be an eftablifhed rule for the tutor to caufe, every day,
fuch as he may fufpect of inattention to mount the defk, and fuch as he may furpect of inattention to mount the defk, and to retranifateral times over by the appointed tranflators; and thofe who prove delinquents, and appear to be remarkably neglectful, will not only be thus ignominioully expofed, bue they hould be punilhed, by being that day confined to fome extraordinary exercifes, while their fellow ftudents, who had extraordinary exercifes, while their fellow ftudents, who had
behaved well, mitted to a table, for their meals, where there was fomething more delicate than at the table of fuch delinquents. - Sorie thing of this kind might be attended with very happy confequences to the youth, and of no little eafe to the refpective tutors.
We fhall fay no more in relation to languages.-The next points are thofe of Figures and Accountantship; and thefe, likewife, and. fuch other parts of the mathematics, and, experimental philofophy, as we have touched upon, we would have taught as much in the fame way as their peculiar nature will admit of; we mean, with relation to the rationale of the rules given for the practical operations of arithmetic, and the principles whereupon the art of accountanthip by debtor and creditor, is founded, \&c. together with proper lectures upon the mathematical and philofophic parts--But, as the utility of the arithnetic and accountantfhip brancties, in particular to the merchant, depends upon the ready and expert practice, the greateft variety of examples fhould not be wanting to exercife the feveral rules and prine ciples, theteof: yet thefe examples, alfo, we would have all performed in a public way, that the ftudent fhould not have it in his power at all to trifle away his time: firr that we judge a very effortial point to be guarded againft throughout the whole of this infitution: but this can never be effectually done, provided a public lecturer, or demonftrator, is not conftantly employed in thofe parts, as well as in the languages, and the filence and attention of the ftudents are, at the fame time, fo diligently engaged as thoroughly to comprehend whatever they are thus publicly inftructed in; and are able, alfo, to exercife the fame in thofe practical ufes which the nature of their employment may occafionally require : yet this cannet be effectually done, unlefs they have great variety of practical exercife in the feveral and refpective branches *. Wherefore,

* That the fundamental principles of every branch may be duly impreffed upon the mind, they fhould, togecher with proper examples, be fairly written, at the proper times appointed for that purpole, into books, by every indivian alphabetical common-place book, wherein to regiter whacever they may hereafter have occafion to refer to.
The reader will pleafe to obferve, that another material and general principle, whereupon we propofe the Plan of Execution to be founded, is, Great Practice and ExERCISE, in every branch of erudition. And, to corroborate our opinion herein, we fhall again appeal to the authority of Mr. Locke:
* No body is made any thing by hearing of rules, fays he, or - laying them up in his memory; practice muft fettle the ha' bit of doing, without reffecting on the rule; and you may - as well hope to make a good painter or mufician extempore, c by a lecture, and inftruction in the arts of mufic and paint' ing, as a coherent thinker, or ftrict reafoner, by a fett of ' rules; thewing him wherein right reafoning confifs.' Locke's Conduct of the Underftanding, vol. iii. p. 395 .
With refpect to the knowledge of the laws, cuffoms, ard ufages relative to the employment of a merchant, thofe likewife, we apprebend, fhould be inculcated not only by Public Lecture, but by Familiar Conversations upón the fubjects of averages, baratries; bottomrees, bankruptcies, charter-parties, demurrages, exchanges [bills of exchange] and all other the variety of occurrences that arife in the courfe of practicat bulinefs, all which will afford a wide field for improvement in matters of real ufe. - In relation to the method of inffruction by public lecture, that is obvious enough to every one.-But what we mean by familiat converfation, may require fome explanation. To which we fhall only obferve, that one or two evenings in the week, after the college exercifes, fhould be fet apart for thofe ftudents, who are competently advanced, to give their opinion in the Englifh language, or any other of the modern, in the prefence of the proper profeflor appointed for this branch, upon any of the before-mentioned fubjects, or any other relating to mercantile affairs; it being fuppofed, that the fubject has been given out fome days beforehand, in order for them to confult the proper books in the college, or their own libraries, for that purpofe.
By this pleafing converfible exercife, the young ftudents will be early inured to reffection, and retention of what they read, when they are under the neceffiry of communicating publicly

O o
what

What authors they have confulted upon the occalion.--Belides, many of thofe points may lead to fome debate; the profeffor may ftart objections, and ank their free opinions, when the fubject is properly opened by him: and, by familiar interrogatories made from the chair, this will naturally draw out fuch anfwers as will fhew who have, and who have not been affiduous in, cheir applications to underftand the fubject from the books of authority.
The great Montaigne $f_{d y s}$, If I was compelled to chufe, I - fhould fooner, I think, confent to lofe my fight than hear6 ing and fpeech. The Athenians and Romans held the ex-- ercife of familiar conference and debate in great honour in ' their academies.' Mr. Locke had fo bigh an opinion of it's utility, as to recommend it in the following words: "That 6 there fhould be propoled to young gentlemen rational and * ufeful quettions, fuited to their age and capacities, and on < fubjects not wholly unknown to them, nor out of their way - fuch as thefe, when they are ripe for exercifes of this nature, they fhould extempore, or after a little meditation upon the - Spot, fpeak to, without penning of any thing: for 1 afk, if * we will' examine the effects of this way of learning to Speak - well, who fpeak beft in any bufinefs, when occafion calls - them to it, upon any debate, either thofe who have ac - cuftomed themfelves to compofe and write down before' hand what they would fay; or thofe, who thinking only on the matter, to underfand that as well as they can, ule 6 themfelves only to fpeak extempore. And he that thall - judge by this, will be little apt to think that accuftoming - him to frudied fpeeches and fet compofitions is the way to - fit a young genteman for bufineis *.

- Cicero, if I may be allowed once to mention fuch a name in a defign of this nature, fomewhere fpeaks of C. Curio, who had never read any books of eloquence, nor made any hiftorical coltections, nor underftood any thing of the public or private part of the law; yet was fo happy in exprefling himfelf, as to be efteemed one of the beft orators of his time. What gained him this applaufe, was a clear thining phiafe, and a fudden quicknefs and fluency of expfeflion, which was acquired purely by the benefits of his private educat on, being always ufed to a correct way of ipeaking in the houle wherein he was brought up.

The fame exercifes of conitant public lectures and public converfations, we allo judge to be the molt naturally adapted to the attainment of the other branches enumerated in the ge neral plan, and, therefore, we fhall only further obferve, 1. The reader will pleafe to remark in general, throughout the execution of every part of the propofed plan, we would recommend a fimilitude and uniformity of practice, viz. the conftant exercife of the faculties of hearing, fpeaking, and ie giftering by writing, the fundamental principles of whatever fhall be taught in the college; and this without any retardment whatever to the progrefs of the ftudent, every difficulty being agrecably romoved as foon 25 it occurs.
2. The variety of capacities among youth, it is to be feared, is commonly ton little attended to in their education: me. thods, fuitably adapted to one genius, mar, blunt, and confound another. To prevent prejudicial confequences of this kind, our plan of execution is fo devifed as to fuit any variety of capacities and dipolitions. The flower genius and milder complexion will here have the faireft play to exert itfelf, with out that awe and perplexity which often nips it in it's tender bud. On the other hand, the ftrongeft and moft nervous capacity, the genius of the greateft fprightlinefs and vigour, will have every advantage to fix it's fire, and agreeably mould and faftion it to application.
Emulation in youth, like ambition in men, exciting to the moft laudable endeavours, no expedient fhould be wanting firft to raite, and afterwards to cherifh and fupport this noble paffion.
One motive of this kind will be peculiar to thefe young gentlemen: which is, their being made fenfible how eafily they may advance each other's credit and intereft in the way of trade: but, with ut fuitable qualifications to play kilfully into each other's hands, they fhould be convinced that they can never hope to reap fuch benefit by their mutual intercourle of friend hips
The experienced well know how merchants properly fituated at home and abroad may promote one another. This is often done by perfons bred in feparate practical counting-houfes in the ordinary way: but, where young people are bred up together, in the like maxims and practices, and where perfonal triendfhips are contracted from their youth, they will more naturally fall upon meafures for their common advantage efpecially fo, when fuch have been properly pointed out to them in the courfe of their collegial erudition, and deeply imprefled in their tender years.
In carrying the whole of this defign into execution, the natural and ordinary practices of men of fenfe and genius thould be made the principal guide. From art hould be only bor rowed fuch helps as will aid and affilt, no way cramp and fupprefs, the intellectual powers and faculties: and how far thofe powers and faculties will carry youth, under an inftitution whofe fole foundation is to render every acquiftion as pleafing
and delightful as poffible, has, perhaps, fcarce ever been duly experimented*. In the common methods of acquiting knowledge, men feem generally toointent upon the dead letter: whereas, if the real converfible practices of mankind, properly regulated and conducted, and improved by natural and engaging arts, were made the principal foundation in every kind of literary inftitution, we might indeed, hãve fewer pedants, but more truly ufeful members of the community.

* Un maitre habile \& attentif met tout en ufage four rendre l'étude aux jeunes gens agreable. Il prend leurs tems: il étudie leur goût : il confulte lear humeur: 11 mêle le - jeu au travail : 11 faroit leur en laiffer le choix: il ne fait point une régle de l'étude : il en excite quelquefois le defir par la refus même, \& par la ceflation, ou plâ-tôt par l'interruption: en un mor, il fe tourne en mille formes, \& invente mille adreffes pour arriver à fon but.' Rollin des Belles Lettres. Du Government des Colleges.
- I would not, fays Montaigne again, have this pupil of our's - imprifoned and made a flave to his learning; nor would I - have him given up to the morofity and melancholic humour of a four, ill-natured pedant. I would not have his fpirit 6 cowed and fubdued, by applying him to the rack, and tor' menting him, as fome do, fourteen or fifteen hours a day, 6 and fo make a pack-horle of him. Nor fhould I think it - good, when, by reafon of a folitary and melanchalic com' plexion, he is djfcovered to be much addieted to books, to c nourifh that humour in him, for that renders him unfit for 6 civil convellation, and diverts him from better employments. c - The place of education, adds he, fhould be painted wiih 6 the pictures of joy and gladnefs, Flora and the Graces, as - the philofopher Speufippus did his; that, where their profit ' is, they might there have their pleafure too.'
We would not have it fignified, that thefe young gentlemen can be expected to arrive at fo great a maftery in every thing we have luggefted, as to become perfect proficients therein. The youth of many, and the fhortnefs of time poopoted for their continuance in the college, cannot well allow of this, But we take upon us to fay, that all who have tolerable natural abilitics can fearce avoid contracting fo good a habitude of attention and application to bufinefs, as will frow up with them throughout the whole of their lives, and, indeed, qualify them ever after to be their own inftructors. "Jt is not, 6 as Mr. Locke obferves, the bufinefs of education, in refpect ' to knowledge, to perfect a learner in all, or any of the fi' ences, but to give his mind that freedom, that difpofition, ${ }^{6}$ thofe habits, that may enable him to attain any part of - knowledge he fhall apply himfelf to, or fand in need of in ' the future courle of his life.'
It having been a difpute among the learned world, whether a public or a private education is to be preferred, it may be ne-, celfary to oblerve, that, according to the propofed infticution, the end of both may be effectually anfwered at the fame time: and that not only in regard to the point of mercantile accomplifhment, but in regard alfo to the morals of young people; for fuch fhould be the difcipline eftablifhed for the conduct of this defign, that every moment of time might be properly regulated, even that portion allotted for diverfions, in order to render them innocent, at the fame time that they are manly, pleafurable, and healthful.
Some of the wifeft men in all ages have been of opinion, that there is no one living to whom nature has not given a capacity to underftand fome one fcience, or to be better formed to excel in one employment or profeffion, rather than in another. Many there are, who, to no purpofe, applying to one branch of knowledge or bufinefs, have made very great proficiency by being turned to a different.
As many, we prefurne, are bred to merchandizing, or, as a learned divine expreffes himfelf upon a fimilar occafion, have run their heads againf a counting-houfe, who might have done, their country notable fervice at a plough tail, the propofed inftitution will ferve as a proper place of trial, in order early to difcover whether a youth has, or has not, a fuitable capacity for the merchant. This will be eafily difcernable in two years time, at furtheft; and if he does not happen to be well turned for that employment, it will not be too late for a parent to think of: fome other, more agreeable to his fon's natural genius and capacity: for, however common it may be, it is never the lefs ridiculous, inftead of adapting the ftudies or profeffion of a youth to his genjus, to aft the reverfe, by adapting his genius to his ftudies or profemion. To this it may be imputed, that many formed by nature to thine in fome principal poft, to be the envy of foreign nations, and admiration of pofterity, and the honour and ornament of the age in which they lived, have been utterly loft to themfelves and their country.
And fo eafy, familiar, and engaging, ought the manner of exercifing, and reducing to practice every branch of the plan, that it will be fcarce poffible for a young perfon to have any latent abilities for a merchant, and thofe not to appear in the moft confpicuous manner. So that our inftitution, confidered in this light alfo, cannot but prove of great public uthlity, it having as happy a tendency to the faving effates, in private families, by keeping thofe out of trade who are unfit for it, as
to the raifing great ones, by throwing athers into it with every ađtantage.
The reafon for propofing the regulation as well of the plan of execution as the general one, is, that, in cafe there fhould be occafion to call in affiftants ander the chief profeffors, the method of execution miay, on no account whatever, be deviated from by fuch affiftants; for that would be leaving them to a random way of inftruction, without any check or controul, and fuffering them to break in upon the féveral parts of the inflitution, as regulated for the acquifition of each branch: which would prove detrimental to the order and connection of the whole. Befide, nothing is more common than for inferior affiftants, who are capable only to aft fome underpart, to have different methods of inftruction, peculiar to themelves; and as the incapacity, or ill-conduct of thofe affiltants, may make it frequenily, neceffary to change them, was the method of inftruction to be changed at the fame time, it would eternally bewilder the young fudents and greatly retard their progrefs. But, by adhering inviolably to a welldigefted plan of execution, as frict an eye will be kept over affifants, that they fteadily perform their duty, according to the method preferibed to them, as is over the young people themfelves; whereby it will not be in the power either of the one or the other to trife away their time, and neglect the performance of what is daily expected of both *.
- Le principal ef comme l'ame, qui met tout en mouvement, \& qui préíde à tout. C'eff fur luy que roule le foin d'étab. lir le bon ordre, de maintenir la difcipline, de veiller en général fur les études \& fur les mours. Rollin des Belles Lettres.

By this feady and uniform difcipline in executing the whole, what may appear very difficult, and even impracticable to forue, will be found quite otherwife to thofe who have a juft idea of the happy and extraordinary effects of order and regularity; for thofe effectually preferve what the contrary abcolutely deftroy.
Merchants coming fo early in life into the bufinefs of the world, have not time for the attainment of what is called a learned education. It is, therefore, our plan is fo devifed, $\mathbf{2 s}$, in a great meafure, to fupply that deficiency. And what the intelligent reader will obferve to be peculiar to it is, without young people who are intended for bufinefs running the hazard of being captivated with fuch refined and fcholaftic fpeculations as might not only prove detrimental, but abfolutely ruinous to their way of life.
Nor is it lefs obfervable, that the utility of this inftitution does not altogether confift in the proper choice of matter, but in the manner of communication; the method of conducting the whole being fuch as will infenfibly engage young minds in the habit of clofe thinkingy fteadinefs, and attention, as well as infpire them with ambition to excel in their peculiar province. Thefe are qualifications that cannot be fet at too high a rate; for, while young people's minds are thus emulowly engaged, their morals will be more effectually preferyed, than by all other meafures, perhaps, that could be taken for that purpofe.
The time propofed for the continuance of thefe young gentlemen in the college, is from 15 to 19 years of age, in which they will be qualifed to enter into any counting houre whatfoever, of the moft extenfive and univerfal trade; and there can be no doubt but their fuperior qualifications will prove an agreable recommendation to she more fkilful and ingenious merchants, though they may be quite otherwife to thofe of the oppolite turn. Such a fund of pertinent knowledge will nur young merchant be furnithed with, and fo expert will he be in every part of the bufinefs of the practical countinghoufe, that he cannot fail to form a right judgment of every thing he fees trandacted during the time of his clerkchip: nor will it be in the power of the ignorant or the arful, in any refpeet whatever, to perplex or mif uide him. From having alfo fuch pripciples inculcaled in his youth as ferve to raife an emulation, excite induftry, and fix the attention to bufinefs, no advantages will efcape his notice, thraugh negligence or want of difcernment. On the contrary, he will be able to break through all obftacles to his advancement, and not only to make the moft of every fortunate occurrence that falls in his way, but, if fuch are wanting, even to frame beneficial occafions for himfelf.
It may be reafonably enough prefumed, that many who are already engaged, will regret their not being bred according to the propofed eftablifhment. Such; however, may receive no little advantage, even by the perufal of thefe papers; at which we fhall heartily rejoice. And if any of thofe gentlemen, after the expiration of their ordinary clerkfhips, thould be inclined to think they might reap any benefit by this infitution, they ghould be adnitted, and treated in the moft gentleman-like manner.
It is far from being the leaft difreputation to any gentleman to be inftructed in what fo nearly concerns his intereft, and whereon the whole happinefs of his life depends; efpecially fo. when he has never had proper opportunities of being fuitably inftructed before: but it is a very deplorable fituation, for the young merchant to he liable to be daily over-reached
and outwitted, If not abfolutely ruined, by correfpondents more knowing than bimfelf in the arts of negociating bufinefs. It is moft certainly, therefore, far more advifeable for fuch, after the completion of their ordinary clerkilhip, to wait a year or two, if needful, for thorough qualification, befors they ralhly hazaid their fortune. It may paffibly too be as requifte for many to unlearn fome things, as to acquire others betore they turn felf-adventurers. Young people, eager and ambitious to make a figure in trade for themfelves, may think it loft time to wait at all for their due accomplifhment. This is a great miffake. Let them confider, that, to fave and im $\rightarrow$ prove their fartunes is gaining time, but to lofe them quite otherwife.

ADVRTXSEMENT,
If the public fhould judge it neceffary to introduce any othet kind of accompliflment into a college of this nature, that may be eafily done, provided any thing of this kind fhould take place: 1 have only intimated thofe qualifications that are indifpenfably neceffary.
That the public may be apprized for whom this inftitution is defigned, it is proper to inform them, that is is calculated chiefly for the following claffes of gentlemen.

1. For the fons of merchants defigned for trade, whom their parents would chufe to have brought up according to the pro* pofed plan; their own counting-houfes not admitting of their being bred in fo methodical and fcientific a manner.
2. 'For qthers, intended for any particular branch of merchandizing whatever; as that of a Portugal, Spanifh,'Ruffia, Hamburgh merchant, \&c. \&c: who, after baving been four year's under this inftitution; will be gualified to enter, either at home or abroad, into any of thofe refpective countinghoufes, with all defirable benefft and advantage.
3. For fuch gentlemen who, having paffed the ufual time of their clerkfhip, think they may reap any advantage from this inftitution.
4. For the fons of American planters.
5. For the fons of fuch wholefale dealers whofe engagements in trade, both at home and abroad, are often as extenfive as thofe of very eminent merchants.
6. For gentlemen of maturity, who are poffeffed of handfome fortunes, and would gladly engage in trade as merchants for thernfelves, or in conjunction with others, could they be expeditioufly accomplifhed in a genteel manner.
7. For fuch genclemen who may have expectation of confulthips, \&c. wherein a knowledge in the practical arts, cuftoms, and ufages of merchants, is abfolutely neceffary.
8. For thofe gentlemen who have views of being fettled in any of the chief branches of the public revenue, or for fuch who would be accomplifhed to fupervife bufinefs they may think proper to carry on, by the means of clerks or agents, wherein a complete knowledge of figures and accountanthip is requifite.
9. For gentlemen who may chufe to carry on foreign trade, by being their own fupercargoes, or for fuch who are intended for fupercargofhips belonging to any of the capital trading companies.
10. Hor fuch young gentlemen of fortune, who may be expected hereafter to take a thare in the government and direction of any of the great trading or monied corparations.
11. For young gentlemen intended to be called to the bar, to whom a knowledge in the practical mercantile arts and accountanthip may prove beneficial, in order to enable them the becter to unravel fuch complicated cafes in mercantile accounss, as may come before them in their pleadings, relating either to the foreign or domeftic tranfactions of merchants *. And

- Litigations amorg traders making fo large à hare in the bufinels of the bar, a ftudenc of the law cannot bave too
minute and comprehenfive a knowled minute and comprehen five a knowledge of the practical arts of merchants, as they relare both to their foreign and domeftic negociations.
To fet this matter in jt's proper light would require a diftinct tract. As chefe learned gendemen, however, are fo thoroughly fenfible of this, we hall only obferve, what a celebrated lawyer, who had entered deeply into the tudy of practical trade, fays upon the fubject of the exchanges; which will be found to hold good alfo, in regard to gither the principal parts of mercanuile tranfactions.
After baving recounted the names of many of his profeffion, eminent for their abilites, wha have written on the exchanges; and having hewn the great importance of the fubject: this writer fpeaks in the following manner:
- This fubject of the exxchanges contains many very knotty - points, and is held among all the lawyers to be dark, d difficult and intricare.
- I. Becaure the method of exchanging, now in ufe, differs - widely from the ancient praclice.
- 2. Becaufe controverfies relating to exchanges are not fo ' common as others, and therefore lefs anderftood.
- 3. Becaufe of the concife abftrufe terms, in which ex-
change-contracts are expreffed, and which lawyers ars - change-contracts are expreffed, and which lawyers ars - quite Arangers to.
- 4. Becaufe of the daily new inventions, by which the - matter has been rendered fo intricate, that, beficies the - negociators themfelves, there are very few, even among
the men of literature, who underfland it. And merchants - have fruck our fo many arts in the negociation of ex-- have fruck out fo many arts in the negociation of ex-- changes, that they exceed the keennefs of moft wits, that * attempt to determine the controverfies relating to them: - and, indeed, the difficulties attending them are to be re.
- So that it is no wonder, that Navar, in his tract of ufury,
- a man of great learning, and efpecially converfant in fub-
- jects of this kind, confefles to have learnt the whole praxis of exchanges, of which he there treats, from the - capital merchants of his city
- Thole who take depofitions in cales of this kind, continues the fame author, are often rerplexed and confound -- ed : wherefore perfons, profoundly fkilled in the practical arts of the exchanges, fhould be appointed to hear - evidence on thefe occations. Lawyers are, for the gene-- ral part, wanting in the firft rodiments and principles of - thefe negociations; and are at a lofs to afcertain facts, - from whence judgment fhould proceed. Intent on looling the knot, whofe texture they are unacquainted with, the more they labour, the firmer the tie. Since, therefore, they - are fo ignorant of the ufages and cuftoms which relate to - merchandizing, wherein merchants themfelves only are - perfectly fkilled, it is not to be admired, that traders in - general, as I have heard many of them declare, had ra-- ther truft to their own judgment, than reft on the opinions " of the ableft lawyers.' Sigifmundi Scaccia Tractatus de Commerciis \& Cambiis.

12. Laftly; For any young gentlemen of bonour and fortune, to whom a practical knowledge of figures and mercantile accountanthip may be of ufe, as well in their private affairs * as thofe which concern them in a public capacity $\dagger$ : as alfo to give them a true idea of the art of merchandizing, in order the more familiarly to initiate them into the ftudies of the national commerce in general. Likewife to initiate young perfons of quality into a well-grounded knowledge in the Public Revenue, the Tariffs in relation to merchandizes in foreign nations, and Treaties of Commerce, fubfifting between the feveral ftates of Europe; for all thefe might be regularly taught in this college.

*     - Merchants accounts, fays Mr. Locke, though a fcience - not likely to help a gentleman to get an eftate, yet poffibly there is not any thing of more ule and efficacy to - make him preferve the effate he has. It is feldom obferved, that he who keeps an account of his income and - expences, and thereby has conftantly under view the - courfe of his domeftic affairs, lets them run to ruin: and - I donbt not but many a man gets behind hand before be 6 is aware, or runs farther on, when he is once in, for - want of this care, or the k ill to do it. I would therefore advife all gentlemen to learn perfectly merchants accounts, and not to think it a $k$ ill that belongs not to cthem, becaufe it has received it's name, and nas been chiehy practifed by men of traffic.
+ Befides, fuch is the excellency of this art, that whoever is fundamentally grounded in it's rationale, will as familiarly apply it to the accounts of the nation, as to his own perfenal affairs. None who are thoroughly acquainted with the extenfive application of this method of account keeping, will think this is faying too much of it. See the article National Accounts. Of what benefit this may prove to the nation, and how ufeful and honourable to themfelves in a public capacity, need not be faid.
Of the dignity of the Merchant, and the confequences of this inftitution to the Public.

The mercantile ftation, it is certain, affords as large a proipect for opulent acquifitions as any other; and eftates got by trade have, perbaps, been far more numerous, than thofe by any other way whatfoever. [See the article Commerce.] As the relation alfo merchants fand in to the community, is not inferior to moft in point of importance, fo neithet have they been behind hand with any, in their zealous attachment to the intereft of thofe countries and princes, that have duly protected and encouraged them in their commerce. Hiftory furnithes remarkable inftances of this. At prefent we fhall take notice of a few only, which are fufficient to endear the character of a merchant to every nation, that depends upon foreign trade for it's fupport.
Charles the Vth, emperor of Germany, being reduced to great diftrefs by the unhappy expedition of Tunis, experienced a powerful fuccour in money from the Fuggers, a fingle family of merchants only, but at that time the moft opulent and diftinguifhed traders of Auxbourgh. For the fecurity and repayment of thofe large fums, wherewith they had fupplied the government, his imperial majefty gave them written obligations, under his royal hand and feal.
Togive a demonftration of their zeal to the intereft of their country, and their inviolable attachment to the perfon of his majefty, thofe merchants requefted the emperor, as he was one day taking an airing by their houfe, to do them the honour to regale himelf, to which his majefty readily condefcended. After the collation was over, thofemerchants defired permiffion of the emperor to burn a faggot of cinnamon in the hall, where the entertainment was made, not on$\mathrm{J}_{y}$ with intent to adminifter all they could to his majefly's delight, but to give further proof of their hearty affection to
his perfon and government. Which they did, by bundling up thofe bonds of fecurity they had taken for their moncs with the faggot, and let fire to them before the emperor's face Another inflance not Jefs remarkable, is that of the memo rable James Cœur, a merchant of Bourges. This gentleman alone, by the wifdom of his couniels and the certainty of his cafh, humbled the houfe of Burgundy, fecured the crown of France to the Jawful heir Charles the V IIth, and by him to the branches of Valois and Bourbon, who luc ceeded.
The conduct of the merchants of St. Malo is another example worthy attention. Thofe gentlemen being highiy exafperated by the demand made at the congrefs of Gertruy denburgh to Lewis XIV. of employing his troops to compel his grandfon Philip V. then king of Spain, to abandon the crown, united all their profits together, which they had made by trade in the Spanifh colonies in America, and generoufly laid thirty two millions in gold at the foot of the throne; and that at a time too, when the finances of France were totally exhaufted, by a feries of unfuccefsful events: which fuccour, being timely applied, vigoroully renewed the war, and anfwered the end of that nation.
Sir Thomas Grefham, our own countrymen, the founder of a college in London, for the promotion of the Jiberal arts, and of the Royal Exchange for the convenience of the traders of this metropolis, is another inftance well deferving our notice, as it manifefts how far it is in the power of merchants, even of one private merchant, to fupport gavernments under the greateft emergency
This worthy citizen of London lived in the time of king Edward the VIth, who was confiderably indebted to the merchants of Antwerp, for money borrowed at intereft to fupply the exigencies of the ftate. Payment of intereft at that time being a great incumbrance to the nation, various expedients had been confulted by the king and his council, to difcharge thofe debts; which, being due to foreryners, brought great contempt upon the crown, and the public credic of England. The mealures which had been fuggeft ed for repayment, were, either to tranfport fo much treafure out of the realm, or te remit the fame by way of exchange.
The kingdom being already greatly exhaufted of its gold and filver, the former was impracticable, without being ruinous to trade; and, the exchange between England and Antwerp being at no more than fixteen fchillings per pound of our currency, negociating the debt by foreign bills would have funk the exchange fill more to our difadvantage. By which means the exportation of our gold and filver in the way of trade, would have been more and more augmented Yet for the nation to continue in debt, was fill increafing the evil; more efpecially fo, as the creditors weve foreigners, and the intereft fent out of the kingdom. Bufide, the credi tors infifted on their money, or a compliance with fuch ufu hous meafures, for a prolongation of time, as would have brought fuch high indignity upon the nation, as to have dif abled them from borrowing more money, but upon the molt fandalous terms.
And yet, more money the government wanted, inflead of being in a capacity to difcharge the old debts. Under thefe circumftances the nation was greatly perplexed, and no meaures could be thought of to extricate the kingdon from thele embarrafments, till Sir Thomas undertook the affair. By whofe great knowledge in trade and fkill in the exchanges, he exonerated the nation from it's weighty incumbrances, without fending any money out of the kingdom.
And, although the exchange was then at fixteen fchillings, he fo wifely managed this negociation, that he paid off the king's debts as they fell due, at an exchange of twenty and twenty-two hillings per pound. Whereby the king faved no lefs than an hundred thoufand marks clear, by this great merchant's knowledge in the exchanges.
By thus raifing the exchange alfo fo much in favour of England, at that critical conjuncture, the price of all foreign commodities fell proportionably *. Which faved the king dom in general, and that, in a very little time, no lefs than between three and four hundred thoufand pounds ferling more : a round fum even at this time of day, but would now be near four times that fum, in proportion to the different values of money.

* Whoever defires to know the fate of our foreign trade,
- or our fituation as to tranfactions in money with other - countries, unlefs where fubfidies are paid to princes a-
- broad, armies or fleets maintained, or the dividends or - ftaie of our ftocks belonging to foreiguers, may have in-- fluence : unlefs in thefecafes, the courfe of axchangeindicates the fate of our commerce, as truly as the pulfe does that of the human body.' Sir Ifaac Newton's Ta bles of the Affays of foreign Coins. See the articles Coin, Balance of Trade, Exchange.
When exchange is againt a nation, the goods exported from that nation are fold for fo much lefs, and goods imported from the other fo much dearer as the exchange is above the par; fo that the exchange, being once againtt a nation, contributes to keep itfelf fo. The exchange with Holland be

Ing generally againft England, in time of peace as well as war, affects this kingdom more than, perhaps, has been fo thoroughly weighed and confidered, as could be defired or 25 Amterdam is made the center of commercial cor refpondence between the feveral parts of Europe, the rate of exchange between us and Fiolland, muft proportionably ffect that between us and other countries with which we have dealings ; mere efpecilly with thofe we negociate bills with always throegt the medium of Hollard. Se the medium of Holland. Se the artigle Hoqkand.

Nor did the advantages to the nation from the eminent ikil of this great Englifh merchant, terminate here only. For as, when the exchange was fo greatly to the difadvantage of England, gold and filver were daily exported out of the kingdom in great plenty; fo by wifely railing it, in the courfe of his money negociations for the fervice of the fate, he caufed the fame to be brought back again, to the general emolument of the whole trading intereft.
Nor did the wifdom of Sir Thomas's counfels prove only of the higheft honcur and advantage to king Edward's reign, but to thole of his fucceffors, queen Mary and queen Elizabeth ; both of thefe princefies having made choice of bim for the management of their money, and their mercantile affairs. With queen Elizabeth he was in fo high efteem, that the not onily knighted him, a matter of very high digbity in thofe days, but honoured him in every refpect; ; and came in perfon to the Exchange, which he had erected for the convenience of the merchants and honour of the city of London, and cauled the fame to be proclaimed by heralds and a trumpet, the Royal Exchange: and Sir Thomas was afterwards honoured with the appellation of the Royal Merchant.
Thomas Sutton, Efq; another renowned Englifh merchant, and founder of the Charter-Houre in London, an act of be nevolence worthy of a great prince, a few years after the death of Sir Thomas Grefham; by being the grand inftrument of getting the Spanifh bills protefled at Genoa, in 1587 , retafded, for a whole year, the failing of the Spanifh armada, deffgned to enflave thefe kingdoms, which proved the bappy means of defeating the invafion.
Thefe are fome of the memorable feats performed by therchants, by private merchants only; and thefe, without paricularizing more, are fufficient to evince the truth of what has been fuggefted to their eternal honour. And, although, great ftatefmen, admirals, and generals, with the aid of the public purfe, and their thoufands and their ten thoufands to co-operate with them, may perform great atchievements yet we find that one family of merchants has been the fupport of an emperor in great diftrefs; that another fingle merchant alone gave the crown to the houfe of Bourboin; that one was a principal caufe of defeating the Spanith armada, and another the reftorer of the public credit of England, and he honour of the crown, when in great contempt amonglt all the princes of Europe: and may be truly faid, in concert with that able minifter Walfingham, to have laid the foundation of all the commerce and navigation we enjoy at prefent.
But it is not needful to go far back for inftances of the eminent fervices that merchants have manifefted to the Britifh empire in particular; it is recent in every.one's memory, that, in the late unnatural rebelion, the fupport of the public credit, and, in confequence thereof, the fecurity of the eftablifhment of the prefent moft auguft, and illuftrious rayal family upon the throne of thefe kingdoms, was owing to that glorious and ever-memorable affociation of the merchants and traders of the loyal city of London.
The merit of perfons of diftinguifhed character in trade cannot, in the general, be meafured, but by thofe who are well acquainted with their trading negociations. As they pafs through life without much eclat, the world is little acquainted with their impartant fervices and utility to the fate; whilft the hiftories of men in great public capacities are tranfmitted to pofterity with all the pomp and magnificence of reprefentation. Yet certainly that is the more profitable admonition, which is drawn from the eminent virtues of men, who move in a phere nearer levelled to the common reach, than that which is derived from the fplendid portrait of the victories and tranfactions of great fatefmen and commanders; which ferve but for the imitation of few, and make rather for the oftentation, than the true inftruction of human life. It is from the practice and example of perfons of private condition, that we are more naturally taught to excel in our private cupacities: and, had we the genuine hiftories of many emnent merchants, giving a lively idea of their rife nd progrefs in bufuefs, and of the important fervice they bave been to their refpective communities, they would naurally incite the trading part of this nation to emulate their ccomplifiments: and this would prove a more effectual means to produce a race of fkilful Britifh traders, than ronantic narratives a race of heroes
Nor has the fecurity of ftates and empires been only owing to the occafional zealous exertion of the wifdom and the power of merchants, but they are in a great meafure the daily and perpetual fupport of all trading countries, For,

V oL. Il.
as nations are at prefent circomfanced, thofe which are fo fituate, as to be obliged to fubfift chielly within themfelves, and without any intercounfe of commerce' with others, can never be able to maintain fo great a fhare of power, as thofe which catry on an extended foreign traffic. Domeftic trade, only thifting property from hand to hand, cannot increafe the riches and power of a nation; whilft foreign trade; under wife laws and regulations, bringing in a conftant balance of treafure in favour of a nation, will proportionably augment it's weight of intereft, and as length give-it the balance of power
Great-Britain being encompaffed with powerful nations, who are earnefly bent on cultivating the arts of commerce and nayigation, with the utmoit ftretch of their addrefs and policy: muit the not foon become a facrifice to thofe neighbouring potentates, if deftitute of a race of ingenious and well accomplifhed merchants? For, as thefe are the only fource of our matitime frength, the could not long continue, but by their means, that happy independent emplie fhe is at prefent.
The philofopher may arrive to a high pitch of improvement in agriculture, arts; and fciences; the hulbandman, the artizan, and manufacturer, may reduce this fpeculative knowledge to practical ules, with the greatef kill and dexterity on their parts; governments may enact the wifeft laws, and give all defirable encouragement for the advancement of commerce, yet what will thefe avail, without the penetration and fagacity of the merchant, to propagate the produce of our lands, and the labour of our artifts and manufacturers into foreign countries, with adyantage to the fate as well as to himelelf?

- It is foreign trade, fays a great lawyer *, that is the main - Theet anchor of us illanders; without which the genius of 6 all our ufeful fudies, and the which renders men famous 4 and renowned, would make them ufelefs and infignificant ' to the public. When man has fathomed the bottom of all ' knowledge, what is it if not reduced to practice, other than empty notion + ? If the inhabitants of this Ifland were learned in all the languages between the, rifing and fetting ' of the fun, did know and underftand the fituation of all $\xi_{\text {places, }}$ ports, and countries; and the nature of all mer6 chandize and commodities, were acquainted with the order and motion of all the ftars, knew how to take the la6 titude and longitude, and were perfectly read in the art of c navigation, to what purpofe would all be, if there were no foreign trade? We fhould have no fhips to navizate to 6 thofe countries, nor occation to make ufe of thofe languages, nor to make ufe of thofe commoditres; what wauld this inland be but a place of confinement to the inchabitants, who, without it, could be but a kind of her' mits, as being feparated from the reft of the world: it is - foreign trade that renders us rich, honourable, and great that gives us a name and efteem in the world; that makes - us matters of the treafures of other nations and countries, c and begets and maintains our hips and feamen, the walls and bulwarks of our country ; and, were it not for foreign trade, what wauld become of the revenue for cuftoms, and what would the rents of our lands be ? The cuftoms would - totally fail, and our gentiemens rents of thoufands per ' annum would dwindle into hundreds.?
* Molloy De Jure Maritimo \& Navali,
t Every ftep that is made in the progrefs of knowledge, wherher it proceed from reading, oblervation, or experi ence, ought to be applied to the affairs and tranfactions of ife; for this is, in truth, the only proper ufe of all kinds of ftudy; which, without it becomes not only an ufelefs, but a troublefome fort of pedantry, more calculated to in errupt and confound, than to ferve and promote a true ge nius. Eflay on the Education of a Noblemann, printed 1736 .

Since then it is fo unexceptionably apparent, that foreign traffic is our grand prefervative both by fea and land, and fince, as lord chancellor Bacon jultly obferves, Merchants and Traders are in a State, what the Blood is TO THE BODY, the abilities and ingenvity of this part of the community is moft certainly of the laft importance to the whole Britilh empire:
From thefe confiderations there naturally arifes the idea of dignity, as infeparably annexed to the character of the merchant; he being a principal party in the fecurity and prefervation, as well as in the conftant fupport of the kingdom: and from hence we may prefume it is, that family alliances have been fo frequently contracted between the gentry and the trading part of the nation. [See the article Commerce.] - Nor, fays the learned bifhop Sprat, ought our gentry to - be averfe from the promoting of trade, out of any little c jealoury, that thereby they. fhall debafe themfelves, and corrupt their blood: for they are to know, that traffic and c commerce have given mankind a higher degrée than any - title of nobility, even that of civility and humanity itfelf, 4 And at this time, efpecially above all others, they have no - reafon to defpife trade as below them, when it has fo great an influence on the very government of the world *.'

* Vide Hiftory of the Royal Society.

## M ER

There are but few who are capable of diftinguining themfelves in any eminent degree, in the grand leading debates of fenates; much féwer of conducting fleets, armies, or the councils of princes. The talents of a Burleigh or a Colbert are very rare indeed, fo are thofe of a Blake or a Marlborough. But every tolerable capacity may make a pretty good figure in trade, by being bred with the advantages of the propofed inflitution. And as amongft thefe there will be, doubtlefs, different degrees of capacities, as well as of affiduity and application, the young perfon who thall happily have an extraordinary turn for mercantile acquirements, may become a Grefham, a Barnard, a Gore, Vanneck, \&ic. whilft the fame genius in the army, the navy, or any branch of the civil government, might have lived and died, perhaps, in obicurity.
As in thefe feveral capacities there is but one path to greatnefs, and few amongft a numerous gentry have opportunity or abilities to become eminent therein, many of the younger branches of our beft families pafs their days in an inglorious eafe, quite loft to themfelves, as well as the public: whereas, if they turned their eyes to commerce, it would furnifh them with a thoufand means, whereby they might promote themfelves, and reflect a luftre on their ancient ftock.
Merchants, it is true, have no exemption from thofe cafualties, to which the whole human fpecies is liable; yet, in the way of trade, thefe are often balanced by profpetous contingencies. When it happens otherwife, the really unfortunate farce ever want fuccour in diftrefs. Even when misfortunes have proceeded from unhappy miftakes in point of conduct, yet, where neither integrity and lkill have been wanting, fuch rarely fail to rife again, in fome reputable channel of bufinefs or ocher, dependent on merchants; of which there are numberlefs inftances. For it is no undeferving encomium on the trading clafs of the community, to fay of them, that no perfons, under the heavens, fhew greater humanity and generofity, towards an unfortunate yet uptight fellow-trader: which confideration is no fmall inducement for the younger branches of our moft honourable families to engage in commerce.
Moreover, when it fo falls out, that any of our noble and honourable families enjoy a numerous progeny, and the patrimonial eftate is greatly diminilhed by fortunes to the younger, wherein lies the indignity for the elder to be privately interefted with a younger brother of abilities bred to merchandizing? Might not fuch meafures contribute to free the family inheritance from too weighty incumbrances? If the fortune of the younger does not happen to be competent, wherewith to carry on that compafs of lucrative commerce that prefents itfelf, an additional capital will enable him to do it: and the elder, having a proportion of the profits for the hazards he runs, will afford him better intereft for money than he can otherwife make at prefent. It is the conftant practice in Holland and Italy, for thofe of the higheft honour to be interefted in this manner with merchants of eminence; and in France this practice has been thought fo beneficial to the ftate, that it has been encouraged and enforced by feveral royal edicts *. And, perhaps, this has not been a ftroke of policy the leaft refined for the advancement of the trade and navigation of that kingdom; fuch meafures frequently' fupplying private traders with as large capitals in trade as they can employ therein, and thofe upon terms quite eafy and agreeable. Engagements of this nature are called by the French Societez en commandites $\dagger$. See the article Anonymous.

* This edict is fo remarkable as to deferve notice.

## EDIT DU ROY,

Portant que les nobles pourront faire le commerce de mer, fans déroger à la nobleffe. Donnéà S.Germain en Laye, au mois d'Aouft 1669.
LOU IS par la grace de Dieu, roy de France \& de Navarre: A tous prefens \& à venir, falut; Comme le commerce \& particulierement celui qui fe fait par mer, eft la fource feconde, qui apporte l'abondance dans les etats, \& la repand fur les fujets à proportion de leur induftrie, \& de leur travail, \& qu'il n'y a point de moyen pour acquerir du bien, qui foit plus innocent, \& plus legitime: aufli a-t-il totijours eté en grande confideration parmiles nations les mieux polies, \& univerfellement bien reçú, comme des plus honneftes occupations de la vie civile, \&c. \&cc. A ces caufes, defirant ne rien obmettre de ce qui peut d'avantage exciter nos Xujets à s'engager dans le commerce, \& le rendre plus floriffant, \& de notre grace fecciale, pleine puiffance \& autorité royale, nous avons dit, \& declaré, \& par ces prefentes fig. nées de nôtre main, difons, \& declarons, voulons \& nous plait, que tous gentils-hommes puiffant par eux ou par perfonnes interpofées, entrer en focieté, \& prendre part dans les vaifeaux merchands, denrees \& merchandifes d'iceux fans que pour raifon de ce, ils foient cenfez \& réputez dé roger à nobleffe, pourvû toutefois qu'ils ne vendent point en détail, \&cc. \&c.
Signé LOUIS, \& fur le reply par le roy, COLBERT. This was frongly enforced again by another edict in December 1701, which is called Edit du roy, qui permet aux nobles, excepté ceux qui font revêtus de charges de magi-

Alrature, de faire commerce en gros, \& qui declare quefo font les merchands \& les negocians en gros.
$\dagger$ Celui qui voudra faire fociete en commandite, dolt jetter les yeux fur un merchand qui foit homme de bien, \& capable des manufactures, ou du commerce qu'il veut entreprendre car ce'fl fur fa fidelité, \& fon induftrie qu'il doit fonder l'ef. perance quil a de profter en lui conhant fon argent, \&ic, Parfait Negociant, Savary.

Perfons of low grovelling minds; and little induftry themfelves, are often frangely chagrined and irritated againft thofe who attempt any thing new in the public fervice, though high commendable in itfelf, and the very attempt bighly meritorious. With fuch fordid and pitiful fpirits, the fhadow of novelty, in any undertaking, is condemnation fuffcient. As fuch deferve rather pity or conternpt, we fhall only comfort them with what that wife and public-fpirited prelate, bifhop Sprat *, has again obferved; who, feaking of the firft eftablimment of the Royal Society of London, fays, ${ }^{6}$ That, if all things which are new be deftructive, all - the feveral means and degrees by which mankind has rifen to the perfection of arts were to be condemned. If fo, to - be the author of new things, be a crime, how will the firf civilizers of men and makers of laws, and founders of go‘ vernments efcape? Whatever now delights us in the works 's of nature, that excels the rudenefs of the firft creation, is 6 new. Whatever we fee in cities or houfes above the firft ' wildnefs of fields, and meannefs of cottages, and naked' nefs of men, had it's time, when this imputation of no' velty might as well have been laid to its charge. It is not therefore an offence to profefs the introduction of new 6 things, unlefs that which is introduced prove pernicious in - itfelf, or cannot be brought in without the extirpation of 6 others which are better.
*Vide Hittory of the Royal Society.
As nothing of this kind can be alledged againft the prefent inflitutign, it's novelty, with the judicious part of mankind, will render it the more praife-worthy; it requiring greater induftry, and different talents to frike out new paths to knowledge, rather than fupinely to plod on in the old, when much better can be found.
And, as there appears to be a glorious fpirit in the legiflature to promote the trade of the kingdom to the utmoft; as his majefty himfelf has, by his royal fpeech from the throne, expreffed his earneft recommendation of, and his hearty concurrence * with, every wife meafure to advance the national commerce; we may reafonably hope, this our humble attempt will meet with the approbation of all true friends to our trading intereft.

* : Let me earneftly recommend to you the advancement of : our commerce, and cultivating the arts of peace, in which
- you may depend on my hearty concurrenc and encou-
'ragement.' His Majefty's Speech, Nov. 29, 1748.
It is no great honour to the Britifh nation, that there fhould be a neceffity for the younger fons of our nobility and gentry to be fent to Holland and elfewhere out of the kingdom, for mercantile qualifications. But, when we have an inftitution within ourfelves far fuperior to any in other countries, it will be as little credit as advantage to Britifh youth, to go abroad for what they can have much better at home.
And, if a young gentleman is intended to fettle in a count-ing-houfe, abroad, or to travel before he enters into trade for himfelf, his having fpent a few years under this inflitution, will far better capacitate him to reap proper advantage by either, than the crude, immethodical, and narrow way can, in which the generality are bred at prefent.
It is eafy enough to hit blots, and to point out evils highly detrimental to the community. The many wife may difcern the grievance and lament it, but the remedy generally lies deep, and in the hands of few; and to thofe few is the world indebted, for the execution of all defigns of public utility and happinefs. Whether fuch is not the nature of the prefent, is fubmitted to thofe who are judges of it's merit and tendency.
Before I draw to the conclufion, I would defire the reader will pleafe to fuppofe the following plain cafe, viz. that two young perfons, of equal age and abilities, are placed in the refpecting counting-houfes of their own fathers, who are merchants inferior to none for eminence, fkill, and ingenuity in their profeffion, and both equally folicitous that their fons fhould become fo likewife: let it be further fuppofed, that the one of thofe young perfons is bred, previouny to his being taken into bufinefs under his father, a few years under the propofed inftitution, at the age propofed, and the other not, but is turned into his father's counting -houfe as raw and as ignorant as the generality really are; I would appeal to every man of fenfe and impartiality, who is a judge of the ufefulnefs of our plan, and capable of fetting a due value upon a proper mencantile qualification, which of thofe young people is likely to become the beft accomplifhed merchant, and to be the moft profperous in his employment?
Could the experiment be fairly tried, is there not all imaginable reafon to believe, that the one would be better qualified

## M ER

for bufinefs, by being a fingle yeat afterwards only in his father's counting-houfe, than the other would in three, or perhaps in five years? The one would be capable of making a good judgment of all he faw tranfacted without any inftruction, and thereby might naturally delight in bufinefs; while the other, for want of the like foundation, might never underftand his bufinefs as he ought, and therefore take an invincible difrelifh to it ; whereby, inftead of becoming the complete merchant defired, be might, on the contrary, become only an eternal difquietude to the beft of parents.
If this is not unlikely to prove the cafe, when a young perfon is bred, even under the eye of an own father, anxious for his fon's welfare, what may we prefume to be the confequence, when he las not the like happy opportunity of being trained up under a parent? When this is the cafe, is it not the moft advifeable for fuch a young gentleman to lay the beft foundation he can, before he enters into any merchant's counting-houfe whatever? For, if he fails into the bands of a man of honour and fkill, of one who docs not intend only to take his money, but do him juftice, will not a young perfon fo previoufly accomplifhed, as we propofe, be infinitely more capable of reaping the benefit of his fituation, than one deftitute of thofe advantages?
But if, on the other hand, a young perfon is not fo happy as to fall into fuch a merchant's counting-houfe, is it not highly prudential, that he fhould be fecure of a good foundation before-hand, in order to make the belt advantage under the worff fituation?
The reader will pleafe to obferve, that this inftitution is intended to train up the young merchant from 15 to 19 years of age, in order the better to prepare him than he is, by being bred in the ordinary way, for admiffion into any merchant's practical counting-houfe; wherein, if we fuppofe him placed for three or four years more, he may be'then fufficiently accomplifhed to hazard his eftate in trade, and not before. But,
That experienced merchant Sir Francis Brewfter, who lived in the reign of king William the IIld, has propored a different way of breeding up young merchants of condition and fortune to practical commerce; which, as it feems to coincide in fome refpect, with our propofed inftitution of a mercantile college, the reader may not be difpleafed with that merchant's fentiments: and, indeed, if our young merchant was firft regularly trained up in the literary mercantile college we would eftablifh, his entrance into Sir Francis's college, if well regulated for the purpofe, might, perhaps, as well, if not better qualify him for practical trade, than the ordinary way of going apprentice generally does.

- I think it a mortal diftemper, fays Sir Francis, in trade (nor to be cured, becaufe in the firft concoction) that we have fo few men of univerfity learning converfant in true mercantile employments: if were there as much care to have men of the beft heads and education in it, as there is in the law, the nation would fetch more from abroad, and fend lefs in law-fuits at home. We bave it reckoned up by the infallible author, as the glory of a city, That her merchants were princes and nobles; their bufineff: and tranfactions in the world with fuch, is more than belongs to any other fett of men: would it not then be the honour of a nation, as well as profit, to have men of the beft fenfe and learning in the foreign negoce of a kingdom? If fuch had been in the trade of thefe kingdoms, it feems reafonable to believe, we had not loft the moft confiderable navigating trade and employment of our feamen.
It would be an aftonithing obfervation to men of any country but our own, to fee more heads employed in WeftminfterHall to divide the gain of the nation, than there are heads on the Exchange to gather it together. I have forretimes thought, that, if thefe kingdoms lay not under the confufion and unintelligiblenefs of underftanding in trade, as the builders of Babel did in languages, we might, without the fin of thofe arrogant architects, ered fuch towers in trade, as might overtop the univerfe in that myftery.
We fee how all arts and fciences have been improved in this kingdom within the compafs of one century, but amongft them all the merchant's part the leaft: and the reafon is plain, men of fmall learning and moderate underftanding are generally put in it: for, though there are fome excellent parts and clean heads among them, yet the major part are not fo polifhed: I fpeak not this to abate the refpect that I fhall always think is due to the profeffion, and all men in it, but we know it is the vanity of the nation: fcarce a tradefman but if he have a fon that a country fchoolmafter tells him would make a fcholar, becaufe he learns his grammar well, but immediately paffes the approbation of bis kindred, who judge it pity fo hopeful a youth fhould be loft in trade, the univerfity is the only foil fit for him to be planted in.
By fuch difpofition of the youth of our nation, many a good tradefman is loft, and poor fcholars in every refpect made; and, if this humour prevails in mechanics, and men of ordinary quality, much more, and with better pretenfions, it affects our gentry; to be fure the eldett fon is above trade, and if the younger be of a quaint and ftudious temper, they are thought fit for the law, not many for the pulpit, which I confuls likewife think a miftake in ourgentry: had we more of

## M ER

hem in the clergy, we fhould have fewer to defpife, that might be better builders of houfas than of the church
But, to return to what I obferve of the improvement in all the employments in the kingdom, I fee none that have artived to that valt increafe as thofe in the law: this, perhaps, is accounted an evil, but I will not quarrel with that long obe; 1 hope it will be no offence to wifh them among us [the merchants] but not with their bar-gowns; they would, in my opinion, look better in a Counting-House than in the Temple; and, had the humour of our anceftors run that way as much as it did for the law, there might have been as great an enlargement in maritime traffic and navigation, as there is now of the laws: I prefume none will fay, that they began with equal numbers; trade had the primogoniture, and fet forth with the employment of the people, before there could be work for lawyers; and I believe thofe of beft value amongft them do not think their growth and gain contribute to either in the advantage of the nation, though without the profeffion there can be no fecuring property; but, perhaps, the numbers make more work than there would be if they were lefs: Hamburgh, though a place of great trade, allows but two: and, though our foreign plantations are fill ed with men of no better principles than they leave behind them, yet they have few among them who raife their fortunes by the law; for which no reafon can be given, but that there is not a foundation and nurfery for that profefion to breed up men of learning and ingenuity in.
I have been the longer on this fubject, becaufe there feems to me an expedient in this matter; and that is, to make fuch provifion for noblemens and gentlemens children, as may be equally reputable with the inns of court, for young gentlemen to come to from the univerfities, and, with lefs charge than their expence in feven years ftudying the law, become expert in trade.
To be thus managed: in each maritime city and confiderable port of the kingdom, to have a College built, in which there may be fome perfons of experience in trade, to teach and direct in the myftery of, it, to all parts of the world : and, that they may have the practice, as well as theory, that every perfon entering himfelf into the fociety may be obliged to bring in a thoufand pounds flock, which will make a capital perbaps, of 20 or 30,000 l. Aterling, to traffic with in 30 cities, \&c. in the kingdom: they to be obliged to fpend five years in this fociety, and at the end of that term, to receive the principal they brought, allowing the cafualty of profit and lofs, as it bappens: going thus out, they will be entered in trade, and probably, have a fund to begin with; and, by this means, trade will fall into the hands of gentlemen, perfons of learning and confideration in the nation, and likewife preferve from misfortunes numbers that now mifcarry in their fudies of the law, through ill converfation, and having no mployments.
To this project (a word now traduced to contempt, though in itfelf of good fignification both for peace and war) I forefee two objections that will be made againft $i_{2}$ and they are thefe:
Firf, This will make too many merchants.
Secondly, That this will leave no room for younger brothers, that have nothing to prefer them in the world but a fmall fum to put them apprentice to a merchant, by which they offen raife their fortunes in the world.
To the firft I anfwer, That the evil of having too many merchants is in the numbers that are bred up from apprentices, many of which, coming into bufinefs without Fends, ftrain their credit, which to keep above water, they are forced to venture at all ways that have but a probability of fuccefs, to keep themfelves in bufinefs, and then, to comply with their credit, often fell to lofs, which in the end brings them to miffortune, and that begets an opinion that there are too many traders; whereas the true reaton is the want of STOCK, not Number of merchants.
The fecond objection, That this will hinder merchants from taking apprentices, is in part anfwered in the firft, that their number prejudices trade: but there is a farther confideration in this matter, and that is, two forts of youths ftand candidates for a mercantile education, gentlemen with a capital others of lefs quality, with none. I think it will admit of no queftion which fhall be preferred, and that the other may be more profitably employed for the nation and themfelves, in trades that require more labour and lefs fock.
But, afier all I have faid, my wifhes are greater than my expectation, to fee trade thus courted in a kingdom that treats it as fome do their wives, confidering them no farther than to the production of a legitimate pofterity, referving their careffes and delights for a mifs: fo the humour of this age feems to incline, whilft foreign commerce is neglected, and mens thoughts and defigns run after offices and employments in the fate; to pay which, fpider like, the nation fipins out her bowels to catch flies; and the fimile goes farther, fuch food turns into poifon, where it feeds men faulty in their morals; and fuch too often fupplant better men, or find ways to be preferred before them: to fay this will be no offence to deferving men; and, for others, I hall only defire them to fufpend their refentments until the fecond part comes forth, and
then they will have more realon, becaufe it will come in my way to be more particular, when I come to fpeak of the trade of Ireland; in which there have of late been fuch notorious demonitrations how id men in offices ahd places of truft may ruin and deftroy a kingdom, as admits of ho defence. I have for this the authority of both houfes of parliament, in their addrefles to the king: and the infallible author tells us, That he who faith to the wicked, Thou art righteous, the people will curfe,-nations thall abhor him:' Sir Francis Brewfter's Effays on Trade and Navigation, 1695.
And now it may be proper juft to review what we may reafonably expeet to be the obvious and apparent confequences of this infitution to the public, which will be chiefly comprehended under the following particulars, viz.
I. It will raife a noble fpirit of emulation among our young Britinh merchants to excel each other in the arts of merchandizing; from whence the nation in general, as well as individuals, may réap unfpeakably more benefit and advantage by trade and navigation.
II. It will enable our young merchants the better to cope with foreigners, in all the methods of negociating mercantile bufinefs of every kind, which may prevent their being made the dupes of fome of thole fubtle traders who are very artful in drawing young people of good fortunes into fchemes of trade, which always prove beneficial to the one, but very often greatly injurious to the other.
III. It will'qualify fuch young people who may be placed at feveral of the Britilh factories abroad, to promote each other's intereft in the way of trade, in a mannernot fo generally known and underftood, as well as the intereft of thofe who fhall continue at home.
IV. It will capacitate them fo to correfpond with foreign nafions, as to obtain the moft ufefull kirid of intelligence from time to time; whereby they will the better know when and where there is money to be got, by trading between one foreign nation and another, as well as between their own and others.
V. It will qualify them either to be particular or general merchants; or particular ones generally, and general ones occafionally; wherein confifts the judgment, in fome meafure, of the moft rkilful and vigilant merchant.
VI. It may have a tendency to convince the younger branches of our moft honourable families, that the art of merchandizing does not require fuch mean talents as fome of them have been wont to think; but that, on the contrary, there is fcope enough to employ the moft capacious underftanding, and the fineft genius : and that foreign trade affords as large a field for profit and honour as any other employment whatever.
VII. It cannot fail to have the happieft tendency to prevent misfortunes and bankruptcies amongft thofe merchants who fhall be thus regularly bred.
VIII. It may give the young merchant fo good a knowledge of the fundamental principles and maxims of policy, whereupon the true intereft of the national commerce is grounded, as to render them the better capable hereafter to diftinguifh themfelves in the promotion of the fame, upon all public occafions and emergencies.
1X. It may prove of benefit and advantage to the lawyer, the gentleman, and nobleman, in the lights wherein reprefented, to pals a year or two in this college, even after be bas left any other univerfity.
Remarks upon this article of Mercantile College.

1. The reader will pleafe to obferve, by the references we have made throughout this article, that our Dictionary of Commerce is eminently calculated for the accomplifhment of the Britifh merchant in whatever we have pointed out as the moft effentially neceffary for him to be inftructed in, and mav prove as helpful to the profeffors in fuch a college, as to the ftudents themfelves.
2. That an inftitution of this kind will raife the character of the merchant to fuch a degree of knowledge in this employment, as will render him capable of embracing or ftriking out every kind of honourable advantage which the nature of his employment will admit of, and thereby put him above the fcandalous arts of robbing the public revenue, or breaking to grow rich upon the ruin of his creditors: in brief, a collegial courfe of erudition will excite the younger branches of the beft families in the kingdom, with fortunes fuitable, to commence merchants, and, confequently, will tend abrolutely to exclude from this refpectable profeffion all low-bred people; deftitute of fortune as well as education.
3. That this inftitution is adapted to form perfons of worth and quality in general, for the accomplifhed men of bufinefs * of any kind, the better to emable them to preferve and improve their eftates, be they either in land, or in the public funds.

* The lord Verulam touches upon the Doctrine of BusiNEss; which, notwithftanding he has confidered it in a light fomething different to what the judicious reader will obferve we mean by it, from the drift of our Dictionary; yet, having fo near an affinity with what we aim at, that great man's fentiments may well deferve attention in this relpect
- 1. We divide the doctrine of bufinefs, fays lord Bacon,
- into the doctrine of ratious occafions, and the doctrine of
rifing in life. The fret includes all the poffible variety of aftairs, and is as the amanuenfis to common life ; but the other colleets and fuggefts fuch things only as regard the - improvement of a man's private fortune ; and may', thercc fore, ferve each perfon as a private regifter of his uffairs. 4. 2. No one hati hitherto treated the doctrine of buftrefa - Cuitably to it's morit, to the great prejudice of the cha-- racter both of learning and learned men: for from hence - proceeds; the mifchief. which has fixed it as a reproach 4) upon men of letters, that learning and civil pradence are - feldom found together. And, if we rightly obfere throfe - three kinds of prudence which we lately faid belongt to civil life, that of converfation is generally defpifed by * men of learning as a fervile thing, and an enemy to con-- templation; and, for she government of fates, though - learned men acquit themfelves well when advanced to the * helm, yet this promotion happens to few of them: but, - for the prefent fubject, the pradence of bufinefs, upon which our lives principally turn, there are no books ex. - tant about it, exceppafew civitadmonitions, collectedínto a little volume or two, by no means adequate to the 4 copioulnefs of the fobject. Bur, if books were written \& upon this fabject, as apon orhers, we doubt not that - learned men, fursiged with tolerable experience world - far excel the unlearned, furnifhed with much greater ex-- perience, and outhoot them in their own bow (a). ${ }^{\prime}$.
(a) 'This tayy be extended to civil knowledge in general, (o) as to comprehend not only politics, converfation, and bufinefs, but alfo commerce, and thic particular arts of agriculture, navigation, ar \& as the author, or Mr. Boyle, for inftance, mult needs be moré cae pable of improving any particular arts or foiences than a perfor 4 wholly bred up to and employed about one guinefs only." Shaw's note.

4. That, although a method of education, accommodated to the man of bufinefs in a manner fo fuperior to what is generally given him, may be attended with a greater expence yet, it is to be hoped, that will never be an objection againit it's public eftabliflament, it being intended only for fuch people of condition and fortune who can and will chearfully af ford it.
' It is the worfe fort of huibandry, fays the great Mr Locke,

- for a father not even to ftrain himfelf a litile for a fon's education, which, let his condition be what it will, is the beft portion he can give him.
- He, as the fame author continues, that at any rate procures
bis child a good mind, well principled, tempered to virtue and ufefunefs, and adorned with civility and good breedc ing, makes a better purchafe for himfelf than if he had laid - out the money for an addition of acres: fpare it in toys and 6 play-games, in filks; ribbons, and laces, and other ufelefs ' expences, as much as you pleafe, but be not Sparing in fo 6 neceffary a part as this. It is not good hufbandry to make - his fortune rich, and his mind poor; and I have often, with ' great admiration, feen people lavifh it profufely. in tricking ك up their children in fine cloaths, lodging and feediag them c fumptuoufly, allowing them more than enough of ufelefs G fervants, and yet, at the fame time, ftarve their minds 4 and not take fufficient care to cover that which is the moit
Ghameful nakednefs, viz. their natural wrong inclinations
and ignorance. This I can look on as no other than a facrificing to their own vanity, it flicwing more their pride ' than true care of the good of their children : wharfoever 6 you employ to the advantage of your fon's mind, will thew - your true kindnefs, though it be to the leflening of your - eftate. A wife and good man can hardly want either the - opinion or reality of Being great and happy; but he that is foolifh or vicious can be neither great nor happy, whatfoever you leave him. I afk you, whether there be not forne men ' in the world whom you had rather have your fon be, with c Five Hundred Pounds per annum, than fome others "you know with Five Thousand?'

Of the erecting of the propofed College.
Do not the famous univerfities of this pation demonftrate, that there is no people in the world more liberal in their donations towards the building of colleges for every literary kind of inftitution? And fhall we entertain an opinion that a Mercantile College will not one day obtain an eftablifhment in this kingdom, which may enable the nation the better to fupport all others? Shall we be daily very bountiful in' our fubfriptions towards the erection and fupport of infirmaries and horpitals, for the maintenance of the poor; and thall we not think of the erection of a college, which will impower individuals the more generoully to contribute to the fupport of fuch laudable charities? Is there lefs wifdom in the eftablifhment of a feminary to guard merchants againft misfortunes, than to provide a college for them after their ruin? Shall the nation never have another Greșham nor a Sutton? But, if no individual Thould ever think of an eftablifhment of this kind, what is it that the merchants of this kingdom are not able to do from their own purfes? Or, why may not ther application to parliament be attended with the delarable fuecels; if the public fhould be lukewarm to promote this defign in another thape? Will it be lefs honour to the kingdom to build a college for the education of ber merchants, than a fepolitory for the productions of nature and arts? Is it not the induftry and in-
genuity
gennity of the merchant that flamp a value upon thofe productions, and are the great fupport of all art and fcience? Is not the merchant daily called upon to take a thare in the legiflative power, and why thall not fuch a refpectable mem ber of the community be trained up with advantages equal to the other principal claffes of people in the ftate?
MERCHANT-COURT, or COURT.-MER-MERCHANT-COURT, or COURT.-MER-
CHANT, is a kind of judicatory power invelted in merchants, chofen for that purpofe in feveral parts of Europe, in order to decide and determine, in a fummary way, all differences and litigations among themfelves and their dependants.

- Courts of merchants fhould be erected for the fpeedy decid - ing all differences relating to fea affairs, fays the judicious - Mr. Carey, which are better ended by thofe who underfand - them, than they are in Weftminter-Hall, where all things - are tried by the nicc rules of law ; and, therefore, after much - attendance and expence, are often referred by the judges to fuch as are converiant in trade. By this means the mer' chants would foon fee fhort ends to their differences; but no general rules can be given for thefe courts, which mut - be fettled as they fuit the conveniencies of trading cities.' - I afk pardon of the learned gentiemen of the long robe, - fays the remarkable De Foe, if I do them any wrong, ' having no defign to affront them, when I fay, that, in matters of debate among merchants, when they come to be argued by lawyers at the bar, they are itrangely handled. I my felf have heard very famous lawyers make forry work of a caule between the merchant and his factor; and, when
- they come to argue about exchanges, difcounts, protefts,
- demurrages, charter-parties, freights, port-charges, aflur-
ances, barratries, bottomries, accounts current, accounts
in commifion, and accounts in company, and the like, the
folicitor has not been able to draw a brief, nor the counfel
' to underftand it: never was young parfon more put to it to
make out his text, when he's got into the pulpit without
his notes, than I have feen a counfel at the bar, when he
- would make out a caufe between merchants: and 1 remem-
- ber a pretty hiffory of a particular cafe, by way of inftance,
when two merchants contending about a long factorage-
account, that had all the niceties of merchandizing in it,
- and labouring on both fides to inftruct their counfel, and
- to put them in when they were out; at laft they found
- them make fuch ridiculous fuff of it, that they both threw
- up the caufe, and agreed to a reference; which reference,
- in one week, without any charge, ended all the difpute,
which they had fpent a great deal of money in before to no

## - purpofe.

- Nay, the very judges themfelves (no reffection upon their - learning have been very much at a lofs in giving inftruc-- tions to a jury, and juries much more to underftand them ; - for, when all is, done, juries, which are not always, nor © often, indeed, of the wifeft men, are, to be fure, ill umpires in caufes fo nice, that the very lawyer and judge can hardly underftand them.
The affairs of merchants are accompanied with fuch variety - ofcircumtances, fuch new and unufual contingencies, which
- change and differ in every age, with a multitude of niceties ( and punctilio's; and thofe again altering as the cuftoms and
ulages of countries and fates doalter, that it has been fouind - impraticable to make any laws that could extend to all - cales: and our law itfelf does tacitly acknowledge it's own
- imperfection in this cafe, by allowing the cuftom of mer-
- chants to pafs as a kind of law, in cafes of difficulty.
- Wherefore it feems to me a moft natural proceeding, that fuch affair's thould be heard before and judged by fuch as,
- by known experience and long practice in the cuftoms and ufages of foreign negoce, are of courfe the moft capable to determine the fame
- Beffdes the reafonablenefs of the argument, there are fome cafes in our laws in which it is impoffible for a plaimiff to make out his cafe, or a defendant his plea; as, in particu-
lar, when his proofs are beyond feas, for no protefts, cer-- tifications, or procurations, are allowed in our courts as evidences; and the damages are infinite and irretrievable by any of the proceedings of our laws.
- For the aniwering all thefe circumftances, a court might - he erected by authority of parliament, to be compofed of
- fix judges commiffioners, who hould have power to hear
and decide as a court of equity, under the title of A CourtMerchant.
- The proceedings of this court fhould be thort, the trials - fpeedy, the fees eafy, that every man might have immediate remedy where wrong is done: for, in trials at law about merchants affairs, the circumftances of the cafe are - often fuch, as the long proceedings of courts of equity are
- more perncious than in other cales, becaufe the matters to which they are generally relating, are under greater contin' gencies than in other caies, as effects in hands abroad, which want orders, Chips and feamen lying at demurrage, and in pay, and the like
- Thefe fix judges hould be chofen of the moft eminent merchants of the kingdon, to refide in London, and to have power by commilion to lummon a council of merchants
' who fhould decide all cafes on the hearing of both parties, with appeal to the faid judges.
' Alfo to delegate by commifion petty councils of merchants, ' in the moft confiderable ports of the kingdom, for the fame ' purpofe.
'The fix judges themfelves to be only judges of appeals; all a trials to be heard before the council of merchants, by me-- thods and proceedings fingular and concife.
- The council to be fworn to do juftice, and to be chofen - annually out of the principal merchants of the city
' The proceecings bere fhould be without delay; the plain-- tiff to exhibit his grievance by way of brief, and the defen-
- dant to give in his anfwer, and a time of hearing to be ap-- pointed immediately.
- The defendant, by motion, fhall have liberty to put off - hearing, upon fhewing good caufe, not otherwife.
- At hearing, every man to argue his own caufe, if he pleafes, ' or introduce any perfon to do it for him.
- Atteftations and protefts from foreign parts, regularly pro-- cured, and authentickly fignified in due form, to pafs in - evidence; affidavits in due form, likewife attefted and done - before proper magiftrates within the king's dominion, to be - allowed as evidence.
- The party grieved may appeal to the fix judges, before ' whom they hall plead by counfel, and from their judgment to have no appeal.
- By this method, infinite controverfies would be avoided, 6 and difputes amicably ended, a multitude of prefent incon-
' veniencies prevented, and merchandizing matters would in ' a merchant like manner be decided, by the known cuftoms ' and methods of trade.'-So far De Foe.
- Notwithftanding there be in the capital of Spain, fays a ju-- dicious Spanifh author, a board of trade, compofed of mini-
' fters of great merit, I apprehend it would be good policy to
' introduce into it a greater number of perfons of undertand-
- ing and fkill in commerce, either from their own experience - in mercantile affairs, or by being long employed in offices ' that have a connection with trade, or by having made this ' important intereft their particular ftudy. But, to explain
' thefe and other meafures tending to make this board more
' extenfively ufeful, it will be neceffary to confider the thing. - more fully.
- In feveral towns of France, and other kingdoms, there are - confulihips [fee the article Consuls] or courts made up of - private perfons, of good underfanding, as well for the bet-
- ter conduct and advancement of commerce, as to decide
- Sperdily, and at Small Charge, all caufes and difputes
- that may arife in bufinefs; a cuftom which it is our intereft
- to imitate in thofe cities of Spain that have the beft difpo' Fition for trade (as it has been ordered at Burgos, \&cc.) but
' it requires one to enter farther into particulars, in order to
- lay down fuch a plan as will fecure to the public all thofe - advantages it may receive from thence; and I fhall advance - no farther at prefent than to obferve, that thefe courts fhould
- have a conftant correfpondence with the fuperior board or
- council of commerce refiding in the capital, and to which ' they ought to be fubordinate.'

The fubftance of Sir Jofiah Child's opinion in regard to the eftablifhment of a Merchant. Court.

- I have conceived great hopes, fays he, that this kingdom will at length be bleffed with a happy method for the fpeedy, eafy, and cheap deciding of differences between merchants, mafters of hips, and feamen, \&cc. by fome court or courts of merchants, like thofe which are eftablifhed in molt of the great cities and towns in France, Holland, and other places; the want of which in England is, and has ever been, a great bar to the progrefs and grandeur of the trade of this kingdom. For inftance, if merchants happen to have differences with mafters and owners of fhips, upon charter-parties, or accounts beyond fea, \&ic. the fuit is commonly firft commenced in the admiralty-court, where, after tedious attendance and vaft expences, probably juft before the caufe fhould come to determination, it is either removed into the delegates, where it may hang in fufpence 'till the plaintiff and defendant have empty purfes and grey heads; or elfe, becaufe molt contracts for maritime affairs are made upon the land (and ment accidents happen in fome rivers or harbours bere, or beyond fea, and are not in alto mari) the defendant brings his writ of prohibition, and removes the caufe into his majefty's court of King's-Bench; where, after great expences of time and money, it is well if we can make our own counfel, being common lawyers, undertand one half of our CASE, we being amongft them as in a foreign country, our language ftrange to them, ant theirs as ftrange to us. After all, no atteftations of foreign notaries, not even public inftruments from beyond fea, being evidences at law, and the accounts depending, confiffing, perhaps, of an hundred or more feveral articles, which are as fo many iflues at law, the caufe muft come into Chancery, where, after many years tedious travels to Weftminfter, with black boxes and green bags, when the plaintiff and defendant have tired their bodies, diftracted their minds, and confumed their eftates, the caufe, if ever it be ended, is com-

Qqq
monly,

## M ER

monly, by order of that court, referred to merchants, ending milerably, where it might have had at firt a happy iffue, if is had begun right.
it had begun pight.
From whence tollow thefe national inconvenien
I. It is a vaft expence to the perfons concerned.
2. It takes off men from following their callings, to the public lofs, as well as the particular damages of the party concerned, that time being loft to the nation which is fpent in lade-fuits.
3. Ir makes men, after they have once attained indifferent 3. It makes men, after they have once attained indiferent eitates, to leave trading, and, for eale, to turn country gen-
temen; whereas fkilful and experienced men are the only perfons that might match other nations in trade.
4. It is, in my opinion, a great caufe of the prodigality, idlenefs, and injuftice of many of our mafters of fhips in EngJand, and, confequently, a wonderful bar to the growth of our Enolifh navigation; who knowing that their owners cannot legally eject them, efpecially if the mafter have a part of the fhip himielf: but that remedy to the owners will be worfe than the difeafe, which occafions mafters to prefume to do thofe things, and be guilty of fuch neglects as naturally they would not, if they flood more upon their good behaviour. I could fay much more of the damage this nation futtains by the want of a law-merchant; but that is fo evident to all men's experience, that I fhall not longer infift upon it, but proceed humbly to propofe fome particulars; which, being duly confidered, may peradventure by wifer heads be improved towards the cure of this evil, viz.

1. That it be enacted, That there fhall be erected, within the city of London, a ftanding court-merchant, to confift of twelve able merchants, fuch as fhall be chofen by the liverymen of the faid city, in their common hall, at the time, and in the manner herein after limited and appointed.
2. That the faid twelve perfons fo to be elected, or any three or more of them, fitting at the fame time and place, and not otherwife, thall be accounted judiciary merchants, and authorized to hear and determine all differences and demands whatioever, which have arifen, and are not otherwife determined, or may any ways arife between merchants, tradefmen, artificers, mafters and owners of fhips, feamen, boatmen, and freighters of hips, or any other perfons having relation to merchandizing, trade, or thipping, for or concerning any accounts of merchants, freights of fhip or goods, bill or bills of exchange, or bills of bottomry, or for work done upon, or materials delivered to the ufe of any fhip, or money due for fale of goods, or any other things relating to trade or fhipping.
3. That any three or more of them, as the judges did Jately at Clifford's-Inn, may proceed fummarily to the hearing and determining of any fuch differences, and that their fentence Ahall be final, from which there fhall be no appeal or review, otherwife than as is herein after-mentioned, nor any writ of error lie for the removal or reverfal of the fame.
4. That they, or any three of them, may fo iffue out fummonfes for convening all perfons before them, as the judges did, \&e.
5. That they be a court of record, as the judges were, \&c.
6. That they take nothing for their own pains, directly or indirectly, but fix-pence each for figning every final order in every caufe whereof the value of money to be paid does not exceed 101 . and twelve-pence for all caufes not exceeding the value of 1001 . and only two fhillings each for all caufes exceeding the value of 1001 .
The fard fees to be due and payable only to fuch and fo many of the faid judiciary merchants as heard the faid caufes, and figned the judgments or final decrees.
7. That, for rewards to officers, the jufticiary merchants do conftitute a table of reafonable fees, to be confirmed by the two lord chief juftices, and lord chief baron of the Exchequer. 8. That, in any cafe determined by a lefs number than feven of the faid judiciary merchants, there may be an appeal to feven or more, as was lately practifed in the afore-mentioned judicature.
8. That they may have power to levy execution upon eftates real or perfonal, with fuch reftrictions as the parliament fhall pleafe to appoint.
9. That the extent of the jurifdiction of the faid court fhall be to all places within 10 miles of London, or only to the late lines of communication, as the parliament thall think fit. 1:. That the faid judiciary merchants and their officers, before they exercile their authority, do take fuch oaths as the parliament fhall pleafe to appoint.
10. That, if any of the judiciary merchants be profecuted for exercifing any of the powers that fhall be committed to them, they may plead the general iflue, and give the actin evidence for their defence.
11. That no writ or writs of fuperfedeas, certiorari, or injunction, out of any of his majefty's courts, fhall fuperfede or flay execution, \&c.
12. The aft to continue probationarily fo long as the parliament thall think fit
13. That the twelve judiciary merchants fhall be chofen yearly, by all'the freemen that are liverymen of London, in the Gaild-Hall of the faid city, or by fo many of them as

## MER

fhall be preefent at fuch elections, upon every Monday yearly before the feaf of St. Michael, or as the parliament hhall appoint, in manner following.
Every liveryman then prefent to deliver unto any two fuch aldermen and four commoners as the lord mayor and court of aldermen for the time being fhall appoint, to take the view or fcrutiny of election, a paper containing the names of fuch twelve perfons as he thinks beft to be elected for the purpofes aforefaid, fcting his the faid elector's own name on the back fide of the faid paper; and the next Monday after, in the faid Guild-Hall, the faid two aldermen and four commoners, or as many of them as thall have taken the fcruting, fhall publicly declare unto the lord mayor, aldermen, and commoners then prefent, who are the twelve perfons chofen by the majority of votes, and how many votes each of them had. 16. If it happen that any of the judiciary merchants die before the end of the year, or refufe to undertake rhe truft; it be lawful for the liverymen to chufe another or others, toties quoties, and the lord mayor be enjoined to fummon halls for that purpofe.
17. That every year fix of the old judiciary merchants go off in courle, and be incapable of being re-elected, and fix new ones chofen in their ftead, viz. all the twelve to be rechofen, but only fix of the old ones, that had the moft voices, to boid the next year, although more of them fhould happen to be elected for the next year.
Objection I. The objections that I can forefee will be made againft this conftitution are, that it thwarts that mof excellent order of our Englifh juries.
Anfwer I. I anfwer, That I hope there is no Englifhman more in love with juries than myfelf; but it is evident that the common way of trials does not well reach the variety and ftrangenefs of merchants cafes, efpecially in relation to foreign affairs.
Anfwer II. What better jury can a merchant hope for, than twelve able and honeft merchants, chofen by the collective body of the whole city, and fuch as fhall all of them ftand upon their good behaviour, to be turned out with ignominy the next year, if they do not equal right to all men ?
Objection II. The admitting of no appeals from a court merchant feems too arbitrary.
I anfwer; while we chufe our judges ourfelves for merchants cafes, and may remove them ourfelves, in my opinion, they can be no more too arbitrary than too much power can be given to referees, when both parties defire an end of their differences: befides, if their power be not great, the defign of cheap, fpeedy, and fhort iffues, will be loft. But, if it fhall pleafe the parliament, there may be in the act an appeal referved to the houfe of lords; the money condemned to be paid or depofited before the appeal be allowed.'

An edict of Henry II. king of France, concerning the Merchant-Court of the city of Rouen.
The preamble only relating to the eftablifhment of an exchange for the affembling of the merchants, we fhall pafs that over, and only take notice of what relates to the point under confideration.

- And, for the greater eafe and advantage of the merchants of our city of Rouen, and being defirous to gratify them in every thing, as far as it is poffible, that they may not be diftracted, and drawn off from their other bufinefs and aftairs, by being obliged to give their attendance at fundry courts of judicature, by realon of fuits and pleas occafioned by litigations and differences arifing among them in their traffic: our will and pleafure is, that the merchants of our faid town of Rouen, as well natives as foreigners, frequenting the faid place, fhall every year caufe a fociety of merchants to meet in the lodge of the faid bourfe, at what time they think fit; out of which fociety of merchants they fhall chufe three officers, viz. one Prior and Two Consuls, who fhall remain in authority one year, at the end of which new ones fhall again be chofen, by the plurality of voices: which election and nomination being fully ended, the faid prior and confuls fhall have prefent power in them to take knowledge, and to give judgment between all men, of what eftate, quality, or condition foever they be, of all fuits, controverfies, and differences touching matters of Merchandizing, or buying and felling, in manner as the confervator of the fair at Lyons, and the prior and confuls at Thouloufe do, as well for obligations, bills of debt, receipts, blanks, figned bills of exchange, recurities, aflociations, and partnerhips of merchants, either general or particular; alfo of affurances, accompts, tranfports and contracts for matters aforefaid, or any thing belonging thereunto; with all full power, and according to the manner, judgments, and condemnation of the faid confervator of Lyons, and prior and confuls of Thouloufe; and the judgments and fentences, decrees and ordinances, commiffions and commandments of the faid prior and confuls of Rouen, by fpeeches, provifions, or fentences definitive, fhall remain in as much force and effect for any matter judicially determined, as the caufes which the confervator of Lyons, and prior and confuls of Thouloufe, and divers other of our judges do decide : and the fame fhall be executed by our ferjeants and officers, in fuch manner and form as they are in their behalf
above-named, either by committing to prifon, or by inficting other punifhments, if it be fo decreed and ordained; and to that end thall our meffengers and officers be bound to perform the executions, and our goalers and keepers of prifons thall likewife be bound to keep all fuch prifoners in fuch manner as if they were committed unto them by our aboveraid judges, with the like bond and penalty (if any efcape happen) as they are bound to keep the prifoners to them committed by the authority of the faid judges: for fo we have enjoined, and do enjoin our meflengers, and other officers, goalers, and keepers of prifons, upon fuch penalties as the cafe fhall require, and according as by the faid prior and confuls thall be limited and appointed with regard to the demerits of the offenders. Moreover, we have permitted, and do permit, if need be, that our faid prior and confuls do take unto them twenty of the faid merchants, or a greater or a fmaller number, as they fhall think convenient, to affift them in their proceedings and judgments in caufes of merchandize, bills of exchange, affurances and differences as aforefaid, and to caufe to be executed their fentences, judgments, and ordinances of pledges and confignments, provifions, feizing of goods, and all other condemnations, fentences, or appointments, to proceed therein by criers and proclamations, giving notice to the parties concerned themfelves, or leaving notice at their houfes by proof, fales, depofitings, deliveries, and definitive exccution, as the cafe fhall require.
And we likewife give them power to direct the fame procels, and to proceed therein according to the ordinances, as well in matters fummarily as by provifion, as acknowledgment of bills, fubfcriptions, and bills of exchange: and the like in regard to pledges and confignments, upon one only default, duly proved by fummoning the perfon at his houfe, or fixing there a copy of the commiffian, or procefs, in all places where it is lawfully to be done.
And touching other matters, where two defaults thall be made, or perfons twice fummoned, they thall proceed, obferve, and keep their courfe according to the king's ordinances. And for all matters wherein they fhall give fentence of execution to pafs in all places of our court of parliament at Rouen, and in all other places of our kingdom, where need fhall require, without any difturbance or moleftation to be made by any of our judges, juftices, or officers, either againft them or their deputies; neither thall they let or hinder any fummons or arreft, exploit or affignment to be done before them : and to give their affiftance in caufes appertaining to, or touching mitters of traffic, and all things thereunto belonging, againft all merchants trading in our faid city of Rouen, and their factors, agents, and dealers, fent by them into other countries, regions, or provinces, as well within as without our kingdom, countries, and dominions under our obedience for the caufe of traffic, merchandize, and buffnefs of trade, and all things whatfoever thereunto belonging. And we will and ordain, that they may bring their casfes and proof for all matters aforefaid, before the faid prior and confuls for the time being, whether it be for the rendering of account and fatisfaction of part or of whole, or condemnation in penalties, or other condemnations for fines or trefpaffes, and for all other things that thall be requifite, concerning and belonging to trade and merchandize, according as they fhall deferve; in which we have authorized them, and do give them power to ufe the fame forms as the faid confervator at Lyons, prior and confuls at Thouloufe, and others our judges do: and to caule execution to be ferved on the offenders, either by arrefts, attachments, and fale of goods, or by imprifonment of the parties condemned, as they fhall think good: prohibiting all our judges to take cognizance of any matter or plea thereunto belonging; which command fhall be noticed unto them, and unto all perfons to whom it inall appertain, by the firlt of our officers or ferjeants that fhall be required fo to do, whom we enjoin to perform the fame accordingly, to the intent that the Extravagant Charge and Expence that merchants might be otherwife put to in profecuting their factors and fervants before other judges, may be by that means intirely avoided.
And we have further permitted, and do give authority to the prior and confuls to apply all fuch penalties of money as by them fhall be inflicted upon perfons for contempt, and other cffences, the one half to our ufe, and the other half to the ufe of the aforefaid bourfe at Rouen, allowing them, alfo, abfolute liberty and power to chufe and conftitute an advocate and an attorney, who thall by all lawful means labour to procure the benefit and advantage thereof, and defend the fame, and fhall direct all procefles and caufes as well before the faid prior and confuls, as before all other judges. And to the end that merchants may affemble themfelves, as'well to confult of their common affairs as to conftitute and appoint the fidid advocate and attorney, without being fubject to repair to us or our judges for leave, when need flall require: WE will and ordain, That all judgments that fhall pals before the prior and confuls, being fealed with their leals, and figned by a clerk by them appointed, be it for imprifonment, fale, difpoling of goods, or otherwife, thall be held for real and lawful, without any confraint to have our further commifion or liking, according aș was permitted by our mof illultrious father the
king, unto the merchants of our city of Lyons, by their letters patents, given in the month of February, in the year of our Lord 1535 ; referving unto our court of parliament, at our faid city of Rouen, the juridacion and cognizance of the faid difcords and differences, by way of appeal, to our parliament in our aforefaid city of Rouen.
And to the end that all appeals proceeding from the judgments and fentences that hall be given by the faid prior and confuls, may be fpeedily, and without delay, ended and determined in our fald court of parliament: $W_{E}$ have ordained, and do hereby ordain, all our loving and trufty prefidents and counfeliors (holding our faid court of parliament) to appoint to the faid merchants, without delay, one day in every week, fuch as they fhall think convenient, to hear, determine, and decide the faid appeals, as recorded. And, in regard to the proct $f$ s in writing, there fhall another record be made, to the end that the faid appeals may be ended, in the SAME DAY; to avoid the prolonging of fuits, to the Ruining and Conuming of the Merchants.
And to the intent that the faid place for meeting of the merchants twice a day may be intirely quiet, and without any diffurbance, our will and pleafure is, and we do ftrictly command, that none of our ferjeants or officers prefume to enter into the faid place, nor to make any arreft (for any caufe) of any perfon whatfoever, during the time of thofe two accuftomed hours of meeting; and, if fuch arreft hould be made during the faid hours, we have declared heretofore, and do declare by thefe prefents, the fame to be void and infufficient, charging all our judges not to have any regard thereunto.
And as we are informed that the bufinefs of affurance is of late greatly improved by the merchants of the faid city of Rouen, to the manifeft advancement of the traffic and commerce thereof; to the end that the policies of affurance, and all other writings thereunto belonging, may receive full force and vigour, we have permitted, and do by thefe prefents permit, that all merchants frequenting the faid place (either now, or in time to come) may affemble themfelves as often as it Thall be needful to nominate and chufe by the plurality of voices; one trufty and expert merchant amongft them, fuch as they Thall think meet and well underftanding the bufinefs of affurance, who thall make and record the faid policies; which the infurers fhall under-write at all times hereafter, in the faid place and liberties of the faid city of Rouen ; which merchant fo chofen hall likewife (being thereto required) draw out accompts of fuch fums as fhall happen to be due, receiving or his pains and time feent in performing the functions of his faid office, according as hall be thought meet by the faid merchants; of all which infurances he thall keep a perfect and exact record, to which record and copies thereof, and all other acts and writings by him made and figned concerning the matter of infurances, we will and ordain that all manner of credit fhall be given before all judges and others, to whom it fhall appertain: nor fhall any other perfon or perfons whatfoever have any thing to do or meddle in the faid bufinefs of affurances, not being before chofen and admitted thereunto by the faid prior and confuls, and by the faid merchants as aforefaid.
And we do hereby command and give in charge to all perfons holding our courts of parliament, great conitables, admirals, vice-admirals, ftewards, and their deputies, and to all other judges and officers whom it hall concern, that they do caufe to be read, proclaimed, and regiftered this our prefent will, declaration, permiffion, and ordinance, and the fame to be obferved and kept by all perfons accordingly, that the merchants may ufe and enjoy the force and benefit thereof, plainly and peaceably, without any contradiction: moreover, We do charge and command our attorney-general that he do with all diligence caufe all thefe things to be plainly and truly executed, and that he do certify us of his diligence in fo doing. For fuch is our pleafure; and that notwithftanding any ordinances, cuftoms, ftatutes, privileges, prohibitions, \&c. to the contrary; which in this cafe, without doing prejudice to them in others, we have made void, and do make void. And, becaufe fundry perfons may have occafion to ufe this our grant in divers places, our pleafure is, that credit thall be given to all fuch copies thereof as fhall be made by any of our loving and trufty notaries and ferjeants, or underectetaries, 8 cc . in as ample manner as to the original: and, to this effect, we do give you full power and authority, and efpecial charge and commifion by thefe prefents, commanding all our juftices, officers, and fubjects to obey you in this cafe. And to the end that this may remain eftablifhed for ever (our own right in all other caufes referved) we have hereunto caufed our feal to be put.-Given at Paris in the month of March, and in the year of our Lord 1556, and of out reign the tenth.

Signed by the King, then in council, and fealed with green wax, \&c.

## REMARKs。

We have now feen the fubftance of what has been urged in favour of the eftablifhment of a court-merchant in Great-

Britain; and how long fince the fame was firft introduced in. to France, may be feen under the article Consul. The great objection that hath been made againt an eftablifhment of this nature, is, that merchants are not fufficiently 'fkilled in the laws, cuftoms, and ufages, which have relation to their own profeffion ; and, therefore, they can never be eompetent judges in regard to every kind of litigation which may comisbefore them. The experience, however, of ocher nations has fhewn, that the mercantile world is contented ,at prefent, in the general, rather with the determinations of a judicatory of their own fraternity, than thofe of lawyers. But, although merchants; from their.Jong attention to concerus of this nature, and the regiffering the reports of their predeeeffors, may, in time, becope very knowing and judicious in determining differences between their brethren and their dependants, yet at the firf commencement, they certainly mult be very unexperienced.-But, if a mercantile college, as we have propoled, thould ever take place in this nation, this would lay the proper foundation for training up merchants, as well in a knowledge of the laws, cuftoms, and ufages, relative to their emplopment, as in their other effential qualifications. See Mercantile College.
MERCURY, is a mineral, or a ponderous metallic water, agreeable to moft metals, and judged by fome to be the ori ginal matter, whereof all are conftituted ; it more clofely, adheres to gold, than to any other, by it's penetrating and diffolving quality.
Mercury, or quickfilver, is the mot heavy of all fuids, totally volatile in the fire, and incongealable by any degree of cold hitherto known. It's gravity, compased with that of fipirit of wine, the lighteeft of all fuids, is as 14,000 to 866 ; it comes the neareft in weight to lead, to which it is as 14,000 to 11,325 . By bare agitation alone in a glafs veffel, or by being expofed to a fmall heat, it yields a foft black powder, of a charp braffy talte: a greater degree of heat changes merdury into a heavy, Thining, red, friable powder, of a lharp naufeous tafte. The black and the red powder, may be reviyed into fluid mercury, by a more intenfe beat. Quickfilver amalgamates with gold, filver, lead, and tin; with copper not fo cafily; with zinc and birmuth imperfect iy; but has not been yet found to act on iron or the regulus of antimony. It is foluble in mineral acids, but with greater facility in fome than another : vinegar, and the acids extrated from vegetables, have no effeet upon it: neither have alkaline or neutral falts : the nitrous acid readily diffolves it Bnto a pellucid liquor : neither the marine or vitriolic acid acts upon it, unlefs highly concentrated.' It readily joins to fulphur, and fublimes along with it into a red powder; from this it is eafly feparated by abrorbent earths, fixed alkaline Gilts, regulus of antimony, and all metals, except gold.
It is fometimes to be found running in the veins of the earth, in the perfect form of quickfilver, but much the greater quantity of it isi drawn from a mineral fone called natural cinnabar.

Of extracting mercury from the ore or mineral earth.
They firt grind the mineral earth into powder, which done, they pour' a large quantity of water thereon, ftirring the whole brikly abput, 'till the water becomes very thick and turbid. The water having frood 'rill it be fettled, it is poured off, and they throw on frefh, which they agitite as before. This they repeated 'rill the water at length comes away perfectiy clear: after which, all remaining at the bottom of the veffel is mercury, and other mineral matter.
To this mercuial matter is added the fcoria of iron, putting the whole in large iren retorts, and fo didatling it ; by which means all the heterogeneous, mineral, and terreftrial part is feparated therefrom, and the mercury left pure.

The utility of Mercury in working the gofd and silyer mines iñ Spanisti America.
Mercury is of great ufe in the Weft-Indies, becaufe they cannot extract the filver from the native mineral without it, and therefore valt quantities are fent over from Old $S$ pain every year. See the article Silver.
No perfon is allowed to carry over quickfilyer to the Spanih No perion is allowed to carry over quickilyer to the Spaniin punihed with death and forfeiture of goods, which does not altogether deter men from committing this offence. Ard, though his majefty might confiderably increale his revenue, by felling it at a high rate, fince the mines without it wauld turn sa no account, yet it has been always ordered to be fold at the price it ftands in, paying all charges. The quickfilver, taken out of the mine at Almaden, not fufficing formerly to Supply the mines of New Spain, it was ordered, that certain quantities of this metal hould be fent thither from the mines of Grancavelića in Peru, by the South Sea, and about I5,000 quintals, that is, 75 tons, were fent yearly, for three or four years. But this being found prejudicial, becaufe under this pretence they carried great quantities of China and Spanifh commodities from New Spain to Pery, which is very prejudicial to the trade of Spain, and had always been prohibited; therefore no more quickfilver was permitted to be carried from the mines of Grancavelica.

Thefe mines falling in, and therefore yielding no quickfilves for fome years, all the Welt-Indies were fupplied out of Earope, which took up valt quantities; for the kingdom of Perualone requires no lefs than 6000 quintals, that is, 300 tons: abundance was, therefore, brought out of Germany, and all the provinces of the Weft-Indies well ftored; and, in the year 1628, there were 12,000 quintals, that is, 600 tons, in the king's warehoufe, which made it doubtful how to fend over fo great a quantity. The commanders of the biggeft fhips, made a difficulty of carrying above 2000 quintals, that is, 100 tons of quickfllver. Though the ex-- pence in New Spain be not every year fo much,' 6000 quintals have been fent thither in one year. It is ordered, that 200 quintals, that is, fo many hundred weight, be fent yearly to the new kingdom of Granada, and too to the province of Guatimala, but this is not regularly obferyed. This commodity being fo abfolutely neceflary for the plate trade, when the Spanifh flota has miffed being fet out, two galleons have been fent with the quickfilyer. Great intereft has been made, that quickfilver might be fent by the way of Buenos Ayres, on pretence that it was very chargeable carrying that which is tàken out of Grancavelica to the mines of Potoff, but it,was never granted.
The quickfilver from the mine at Almaden, being brought very flowiy to Seville, the commiffioners of the. India-Houfe are often forced to fend officers to haften the carts and horics upon the road, and exprefles to Almaden, to expedite their fetting out. The putting it up for fea has been always left to the care of this court, but more particularly to the factor, which has been practifed feveral ways; but, that now in ufe being the beft, it will not be amifs to give an account of it in this place.
Every halfquintal, or half hundred, is put into a Cheep's 隹的 well bound with hempen cords, and that into a tight cafk, mailed down; and three of thefe cafks, containing a quintal, or an hundred and a half, into a cheft, which being nailed and bound over with hempen ropes, is wrapped with coarfe mats, and bound over again. Upon every cheft is faftened the king's arms, painted on linen cloth, and thofe chefts:are for New Spain, for thofe carry but a guintal that are for the * firm land. It would be proper they fhould not put it up before the galleonis or flota are ready to fail, becaufe, if they lie long, the ikins are in danger of rotting. A commiffary is appointed to go into the fhips that carry quickfilver, who gives bond to the - factor for the delivery of them to the king's officers at the port they are defigned for : and, to make good the deficiencies of the regular conyoy-duty, the mafters are obliged to pay for fuch goods as they take aboard, Thefe commilfaries are appointed by the prefident of the India-Houfe, and, being brought before the chamber of direction, give fecurity; and for their trouble and hazard, are allowed 12 , ducats for every I8 quintals, accounted a ton, which is paid by the king's.officers where they deliver the quickfilver. Thiscommodity pays the duty for convoys, but no other, and is never carried to the cuftom-houfe, butgoes directly to the king's itorehoufe. See the articles Azoga Ships of Spain, and Direction Chamber of Spain.
Mercury is alfo ufed in the gilding of filver, and other metals.
CURIOUSOBSERVATtONS.
That the mercurial principles exift in vegetables.
There is a method, fays a famous Chinefe author, of drawing mercury from wild purflane. For this purpofe you need only take the little leaves of purflane, bruife them in a mortar, with a peftle of the wood of Egyptian thorn; then expofe them to the rifing fun for about three days, and, when they are dry, toaft them fo as not to deftroy their/ nature and virtues; put this mafs' in a well-varnifhed earthen veffel, which you muft clofe well, and bury in the earth 49 days; after which, take out the veffel, and you find quickillver in perfection.
Nothing is more certain than this fecret; and in the fhops of Pekin :they fell two forts of mercury; the one taken from mines, which is called chapchoveir, and the other obtained from plants, which is called tfafchonien.
Thefe different operations of the Chinefe difcover to us; that, in the principles of plants, there is iron, which may induce us to think that there may be mercory in certain plants; and, if we reffect on the nature of plants, and fearch for that which moft probably contains quickfilver, we have reafon to believe that purflane does fo; for; in thort, the Chinefe herbalift, who in this agree with the greatef botanift of Europe, gives to purflane the virtues that are found in mercury: The purflane, fays he, is cold in it's nature, kills worms, and all forts of vermin, and is ufefully employed againft noxious humours, which it diffipates; and becaufe in it's nature it is volatile, it removes obftructions in the vefficls of the human body.
Be this as it will, it is very probable that quickfilver, drawn from plants by the folution and feparation of their primciples, would be free from feveral impurities which naturally attend that obtained from mines; for by being exalted into the minuteft parts of the plants, it mult be freed from the ramous and fulphureous fibres; with which it abounds more or leff, and from which it is feparated by paffing it thorough a fheep's

## M E T

Should this receipt by experience be found true, we may reap from it a double advantage; the firft of which is, that everywhere, and in a'lhort time, we may procure a fufficient quantity of mercury. The fecond and moft confiderable is, that, by the quickfilver extracted from purflane, we may judge better of the different ufes of this plant, and may determine hore certainly for what time, and with what precautions, it may be ufed, according to the different fituations of perfons, whether in health or ficknefs. Befides, it's juice, prepared in a certain manner, might act upon metals difpofed to receive it.
MERIONETHSHIRE, in Wales, is bounded on the fouth by Cardiganfhire, from which it is feparated by the river Dovy; with Montgomeryfhire and Denbighfhire on the eaft; Carnaryonilire and part of Denbighflhire on the north; and the Irifh Sea on the weft, for a length of 35 miles. It is about 35 miles in length, from Abdyvy in the fouth to Llanfanfred in the north-eaft; and about 25 in breadth, from Harlech in the weft to the oppnfite part of it on the eaft.
The air of this country is bleak, and not very healthy, by reafon of the vapour arifing from the Irifh Sea. The foil, being rocky, is generally as bad as the worft in Wales, bearing but thin crops of corn; yet there is pretty good pafture in the vallies for black cattle and fheep, which are the chief fupport of the inhabitants; and it is well furnifhed with deer, goats, fowl, and fifh, efpecially herrings, which are taken on the coaft in abundance.
Harlech, or Harlegh, in the noth-weft part of the county, has a harbour for fhips, but no flips for the harbour.
Dolgelly, at the foot of the mountain Idris, is an ordinary country-town, but of good account for the fale of Welch cottons, and has an indifferent market. Here are pretty commodious inns for travellers.
Bala is the only market-town of the mountains, and is fituate near Pimble Meer
METALLURGY, the art of fmelting, refining, compounding, and working metals from the mineral earth to the utenfil.
Under the articles Allay, Aqua Fortis, Aqua Regia, Assay, Cinnabar, Copper-Mines, Flux, Gold, Silver, and all the other metals, we have diftinctly and amply treated of the divers metallurgical operations; to which we refer the reader. For what has further relation to this opic, fee the articles Metals, Minerology, Mines, Opes Quartation, Smelting
From what is faid under the preceding head's, the following particulars are obfervable.
Remarks on Metalfurgyingeneral.
I. We learn from the foregoing enquiry, that different mineral and metallic matters bear different relations to melted lead in fufion: whence fome of them will not mix therewith, but float on it's furface : that others evaporate, and others vitrify in it ; whilf filver and gold remain unaltered by it, and unimpaired. See the article Assay.
2. That the nobler metals have nearly the fame relation to quickfilver as they have to melted lead; as being readily drank up by them both, fo as thus to be feparated from other heterogeneous matters. See the article Assay.
3. That tefting, in the large way, is improveable by finding a properer matter than bone-afhes, for the making of tefts, by working without bellows; and again by ufing pit-coal, and a well-contrived furnace. See ib.
4. That the art of affaying is hitherto imperfect, but capable of receiving confiderable improvement from chemical and mechanical knowledge. lb.
5. That the troublefome and expenfive method of feparating gold from filver, by quartation, may be advantageoufly fuperfeded, by means of fufion, or a dexterous management of the fire. Ib.
6. That gold and filver are rarely rendered abfolutely pure, or feparated from all other kinds of metallic or mineral matters; and that to purify them in this manner requires the ufe of better methods than thofe commonly ufed for the purpofe, though the thing is ftill performable by art, and a fuitable procefs. Ib.
7. That the particular hiftory of common metallic fufion is wanting, for the improvement of metallurgy. Ib .
8. That, when the ore of an imperfect metal is in immediate contact with the fire or fuel, efpecially if charcoal, it yields the more and the better metal than when contained in a crucible, or kept from touching the coals. Ib.
9. That a languid fire leffens the yield of an ore; but a brifk one, if not too long continued, increafes it. Ib.
so. That the bufinefs of fmelting in perfection depends, (I.) Upon ufing a degree of fire fuitable to the ore. (2.) Procuring a quick and thin fufion of the foria. And, (3.) A clofe contact of the metal with the fuel or coals. Ib,
11. That fulphur has different effects upon the different metals; which effects being well noted, rules of practice might be thence derived, for the farther improvement of metallurgy. Ib.
12. That metalline recrements, or the flags of metals once 12. That metalinc recrements, or the hags of metals once
fimeled, have been wrought over again to profit; on account VoL. II
of the imperfect manner wherein the ores were originally treated for their metals. Ib
13. That the ignobler metals are feparable from each other by the application of proper degrees of heat, fo as to make the more fuible melt away from the lefs fufible, at leaft with the affiftance of lead. Ib.
14. That all metals are reducible, by burning or calcination to terreitrial powders, or calces; which, by being melted with any inflammable matter, aflume their metalline form again. Ib.
15. That the great enemies to ductility, or the true metallic nature, are fulphur, cobalt, and things compounded thereof fee Ores] ; but that all unctuous and inflammable bodies are friendly to metals, and promote or reffore their ductility, when melted therewith. See Assay.
16. That copper may be made to approach the colour of gold, and, at the fame time, not lofe, but increaie it's ductility, by being amalgamated with, and diffiled from quickfilver; and that probably many artificial or compound metals are difcoverable, by mixing various metalline and mineral bodies together, fo as greatly to inrich and improve the art of metallurgy. See Metal.
17. That fteel is made by a proper application of fire to iron, in a clofe place, fo as to prevent the open air from communicating freely with the iron.
18. That metals receive particular alterations in their texture, or confiftence, according to the nature of the folid fubftance, or liquor wherein they are quenched or cooled. See ib.
9. That, in general, ores are no more than a natural loofe mixture of metallic matters, along with earthy and filphureous ones: whence artificial ores, may be readily made, by calcining a metal with fulphur, and mixing it with earth; fo as, with heat, to form folid lumps of ore, refembling thofe dug out of mines. See Ores.
20. That numerous experiments remain to be made, and facts of nature, or obfervations, to be regiffered, or the relation of bodies to be found, before this ufeful fubjects of metallurgy can be brought to it's ultimate perfection. See Assay and Metals.
METALS, are a fpecies of very fubtile, yet opake earth, difpofed to form a tenacious, and, confequently, a malleable, aggregate, which is fluid in the fire, more or lefs fonorous in the air, and of a great degree of ponderofity.
They are commonly divided into perfect and imperfect, and thefe again into complete and incomplete metals.
The perfect metals are fuppofed to be two, viz. gold and filver; and the imperfect ones four, viz. copper, lead, tin, and ron, which are otherwife faid to be complete metals.
The incomplete metals are bifmuth, zink, or fpelter, regulus of antimony, and regulus of arienic: which have weight, appearance, and fulibility at the fire, in common with real metals, but are britte, and all more or lefs volatile.
Yet thefe are not exactly all the fpecies of incomplete metals; for many other fubitances are found thus far metallic, though neglected, either becaufe their manner of preparation and ufe remain unknown, or becaufe they may be indirectly referred to fome of the above-mentioned claffes.
It has been a prevailing opinion, that the imperfect metals differ only by accident from the perfect, on account either of digeftion, or the tenacious adhefion of heterogeneous fubfances.
By digeftion or conccetion we here underfand rather the ef feet of the operation, than the operation itfelf, viz. a clofer combination of thofe very attenuated particles, which in common mercury yet appear, as it were, individually diftinet; whence, as ingle corpufcles, they prove unable to fultain the impulfe of the fire, but are thereby raifed in the form of a fubtile fume into the air. Now, thefe very fubtile and moveable particles may be conceived fixable two ways: firft, by aggregation, fo that feveral particles fhall be tenacioully ag gregated into one molecula. Something of this kind happens in mercury precipitated per fe [fee Mercury]; which, tho it was before exceeding volatile and fluid, fo as to evaporate in a fume of exceeding fine parts, it is now made fomewhat more fixed, and exhibits thore very fubtile atoms joined together into more fenfible corpufcles, under the form of a dry powder. We do not, indeed, from hence infer, that mercury of itfelf is an immature metal, which, without the ad dition or feparation of any other thing, may be reduced to a perfect metal: let it fuffice to have thewn by this phenomenon, that a greater degree of fixednefs may be derived from an aggregative connection of particles.
Nature, according to fome, produces every metal almof inftantaneoufly. If in the bowels of a mountain, fay they, or any deep parts of the earth, a vapour fhould arife from a fubftance, utterly unknown to usà priori, that lay either there before, or is generated on the fpot; or, if this fubftance itfelf, in the form of fuch a vapour, ghould fucceffively rife and creep through the cavernous body of vaft tracks of rocks, the veins and clefts of fints, or the interftices of huge beds of lefler fones, and every-where move about 'till it impinges upon a certain fpecies of a fubtile vitrefcible earth, which is fitted to receive it, or to become one therewith, here it muft lodge as in it's matrix, 'till fome more powerful impulfe difturbs it

R 5

We may the better conceive how this fhould happen, from an example of that mud found at the head of fprings, which, as Becher remarkably obferves *, receives and concentrates the aqueous vapour, notwithftanding the diurnal heat of the fun. And after the fame manner do alkalies receive and tenacioully detain the humid vapours of the air.

* Phylic. Subterran. §. II. cap. 3. \$. 6.

And as vapours of a different kind, fuch as the mercurial, arfenical, fulphureous, \&c. come to mix in certain proportions along with that original vapour, and fix therewith in a proper matrix, hence may proceed the various forts of perfect and imperfect, complete and incomplete metalline bodies: or from any error in the ingredients, as to proportion, \&c. wrong conformations or degenerate metals may arife.
That the metallic principles may thus wander through the earth, in the form of vapour, feems countenanced by the common obfervation of thofe mines which take their courfe near the furface of the earth. For, if a mineral vein lies fhallow, it often gives manifeet figns of being fupplied with fuch a vapour, not only in fummer, by changing the colour of the ftones that lie over it, but allo in winter, by diffolving the fnow that lies along the tracks where it runs.
And this kind of exhalation is by the miners called the form. The like vapours aliof frequently happen by the burrows and caverns of the mine, whilft they are digging the vein for the metal already formed therein, and fometimes make the place very hot, fometimes occafion coughs and hoarfenefs, and fometimes again when they are large, and mixed with other mineral vapours, they prove fuffocative. The workmen bave commonly notice hereof given them by their lights fuddenly burning larger and brighter; upon which they immediately quit the place.
At leaft, therefore, it may more eafily be conceived that metals hhould be thus, asit were, inftantaneoufly generated, than that the imperfect metals hould, as fome fuppofe, be converted into the perfect, barely by a long-continued concodtion in the earth, or by lying therein for fome hundreds of years, without the addition of any new matter, or any diminution of the old. This feems very hard to conceive; but there is nothing abfurd, in allowing, that, upon a due concurrence of the metalline principles, metals fhould be immediately produced: and that, if thefe principles meet improperly, either as to number, proportion, or heterogeneity, they fhould either remain perpetually in that wrong itate of mixture they would then have, or at fome time or other, whether fooner or later, upon the fortuitous or natural acceffion of fome principle that was before deficient, they fhould be actually perfected or deflroyed by the admixture of one that is heterogeneous.
Cales of this latter kind are fometimes met with in mines; where too large a proportion of mercurial, corrofive, faline, arfenical matter or vapour, coming upon and adhering to the truly metallic parts of the ores, efpecially thefe of the imperfect metals; the parts of fuch ores are thereby turned fometimes into running mercury, fometimes into cobalt, arfenic, tutty, cadmia, and fometimes into common fulphur. And if, in fuch a cafe, the mercury thus diffolving and overflowing the metallic parts of thefe ores, be fuppofed to become the true mercuries of bodies, and to contain a quantity of the real metallic earth, fo as fometimes to be nothing but gold overpowered and rendered fluid by too great a proportion of mercury, we have little to object to fuch a fuppofition: efpecially if we confider that it feems countenanced by the increafed fpiffitude and fluggifhnefs of thefe mercuries, their greater fpecific gravity in comparifon of common mercury, and the golden fpot they leave behind, when evaporated upon a filver plate.
The contents of a metallic vein are thus frequently perverted, at the time that a fubterraneal heat comes upon them; when, if the vein be fuperficial, the whole mafs of metallic matter is corrupted, and thrown off into the air: whence the remaining veins are afterwards found to be nothing but an imperfect matrix, containing a rufty red earth, like the lapis hæmatites, that runs therein after the manner of an ore indeed, but yields no metal; whence fuch matter is by the workmen called dead metal.
This evaporation becomes fometimes fenfible, though without flame, or any manifeft odour ; but may be diftinguifhed from far, efpecially in a dewy morning, by the undulation and fuctuation it occafions in the air, over the whole track from which it rifes. And if, after fuch a phænomenon, the vein be found empty of metal, the workmen in their language, fay, the ftorm has carried it away. But, at other times, fuch an exhalation is attended with a violent flame, and the fmell of burning fulphur rcaching to the diftance of a mile; or more; when all the adjacent grafs, and other vegetables, are burnt up, and the workmen fometimes feorched or fuffocated in the mines,
But farther, if the rock, ftones, or other mineral matters dug in the mines, or if the ftamped flag, or powdered fcoria gained in the melting of the metal, be ftrewed upon the track of a vein, they have, after many years lying, been found impregnated with a metallic matter; probably becaufe they af-
forded a commodious matrix for the mineral fumes or exhalations, which every-where breathe out along the track they were laid on.
It muft be obferved, that one kind of heterogeneous bodies either hinders the completion of metals more than another, or obfcures them when they are complete. An example to which purpofe we have in the gold ore that is intermixed with martial flints; where a dry, ftyptic, powdry earth, preventing the fufion, detains the fine fingle particles of the perfect metal and feparates and wears them afunder, when they would aggregate, and fo prevents the ore from yielding it's true quantity of metal by fufion, or all that is by aqua fortis found to contain.
Nor does it, perhaps, appear lefs frange that fome ores which are mixed with fulphur, arfenic, and the like rapacious bodies, fhould afford a lefs quantity of pure metal, when thefe volatile fubftances are firft driven from them by calcination with a naked fire in the open air, than when they are either totally, or very confiderably, detained by corrofivealkalies, quick lime, glafs, \&c. for it is manifeft, that fuch fubftances are not found to touch the fubftance of perfect gold brought into a body, much lefs to raife up or carry off any part thereof. The truth of the cafe appears to be this: that thofe rapacious minerals do not, in the open calcination, fo much affect or carry off the whole individuum, or complete atoms of the gold, as fome one or other conftituent part of fuch atoms, whether it be mercurial, that called fulphureous, or earthy.

## REMARKS.

With relation to the feparation of metals from their various ores, fee the article Metallurgy.

Of the Artificial or Factitious Metals.
The method of making Prince's Metal.
Take fix ounces of copper, and melt it in a wind furnace; add to it an ounce of zink; then, firring the whole well to gether, pour out the metal. The copper and the zink may be put into the crucible together, if firft covered over with the black flux [fee Assay and Flux] which prevents the avolation of the zink, or preferves it's metalline form.

## REMARKS.

This is an expeditious method of making a fine kind of brafs; whereas the common method, with lapis calaminaris, requires a confiderable length of time, and a violent fire: for this purpofe they calcine and powder the calamy, then mix it with a little charcoal-duft, and to feven pounds of this mixture add five of copper-plates, then, giving eleven or twelve hours fire, the copper imbibes about one third of it's weight of the calamy.
It is here remarkable, that the calamy, though no complete metallic body, nor malleable, thould yet concrete along with the copper, fo as not only to increafe it's weight, but alfo to extend with it under the bammer; which zink, in making the prince's metal, does not do, though it appears in all refects of a more metallic nature than calamy.
The agreements and difagreements of thefe two bodies, zink and lapis calaminaris, may deferve to be farther enquired into by particular experiments. The inflammability of zink is very remarkable, for it burns durably of a bluifh-white flame in the fire, and thus refolves into a white calx.
Many curious phænomena and unexpected refults, happen upon mixing metallic and mineral bodies in the fire ; all which deferve to be tried, and noted as Facts that might at leaft direct to the difcovery of feveral new and ufeful mixtures, or componitions of metals. We might be encouraged to profecute this enquiry, from thofe pretty imitations of gold lately introduced, for the making of watches, buckles, cane-heads, fnuff-boxes, \&zc. but, perhaps, a better imitation of gold, for thefe and other purpofes may be obtained by M. Homberg's method of treating copper with quickfilver: for, if an amalgame be made of one part pure copper, and three parts quickfilver, and the amalgame be boiled in river water for two hours, then have the quickilver diftilled off, and cohobated once, the remaining copper, being now fufed, will be found of a beautiful colour, and more ductile than common copper, fo as to become well fitted for watch-work, gilding, and the finer machines and utenfils.
For the methods of extracting metals from their ores, fee Metallurgy.
OLD MEXICO, or NEWSPAIN. This country lies between north latitude 7. 30. and 30. 40. and is bounded on the fouth-eaft by the ifthmus of Darien, or Panama; and on the north-weft by New Mexico. It is divided into three audiences, or fovercign diftricts, governed by a viceroy appointed by the king of Spain.
The three difticts, or courts of audience, are, 1. Guadalajara ; which contains the provinces of Cinaloa, Culiacan, Chamephan, Xalifco, Guadalajara Proper, Zacatecas, and New Bifca. 2. Mexico ; including the provinces of Me choacan, Mexico Proper, Panuco, Tlafcala, Guaxaca, Tabafco, and Ycatan. 3. Guatimala; containing the pro-
vínces of Chiapa, Sonocufca, Guatimala Proper, Vera Paz, Honduras, Nicaragua, Cofta Rica, and Veragua.
'Though it lies for the moft part within the torrid zone, yet the air is very temperate, and generally reckoned extraordinary wholefome. It produces divers forts of grain, fruits, and herbs, rich mines of gold and filver, and good pafturage. It's chief grain is wheat, barley, pulfe and maize; the chief fruits pomegranates, oranges, lemons, citrons, cherries, apples, figs, and cocoa-nuts; and it's principal commodities are wool, cotton, fugar, filk, cocheneal, feathers, honey, balm, amber, falt, tallow, hides, tobacco, ginger, and various medicinal drugs.
The Spaniards, who have long been fole mafters of this country, have taken fuch care to keep all foreigners out of it, that the lawful commerce between this part and Europe is in their hands, and fubject to the direction of their crown.-To thew in what manner the fame is carried on, it may be neceffary to explain what fo often occurs in our news-papers, by the appellations of galleons, the flota, the fotilla, regifer-fhips, and guarda coftas.
A galleon may be termed a very large old-fafhioned man of war, of three or four decks [fee the article Galieons] with a vaft deal of room for merchandizes, which fhould be loaded only on the king's account, but are generally fo much crouded with other goods, as to be in no condition to defend themfelves. This fleet confifts of eight fuch men of war, the five largeft of which have 50 brafs cannon, befides an advicefrigate of 40. There are from 12 to 16 merchantmen which fail with this fleet, with cargoes for the account of private perfons, after having purchafed their licences at a pretty dear rate; and each of them is one half bigger, at leaft, than is expreffed in it's fchedule. The chief intent of the galleons is, to carry warlikes ftores, and other neceflaries, for Peru: and this is what fpecially diftinguifhes the galleons from the flota.
The flota, which is intended for Mexico, confifts of three men of war, which carry nothing but on the king's account; and the merchantmen that fail with them are ufually about 16 , from 400 to 1000 tons burthen. This flota, which fails about Auguft, to have the favour of the winds that reign about November, to facilitate its paflage to La Vera Cruz, commonly calls at Pucrto Rico for frefh water and propifions; and, after paffing in fight of Hifpaniola, Jamaica, and Cuba, according to the feafon of the year, or the nature of the winds, paffes either by the coaft of Jucatan, or higher through the gulph of Mexico, to La Vera Cruz, at the bottom of it. -It's paffage has been computed as follows, viz. from Cadiz to the Canary Ifles 250 leagues, in about 10 days; to the Antilles 800 , in 20 days: to the moft weftern point of the infe of Cuba 500 leagues, in 20 days; to La Vera Cruz 260 leagues, in about 12 days: in all $\times 810$ leagues, in about nine wecks.As the fota is deligned to furnifh not only Mexico, but the Philippine Inands, they are forced to Itay there a good while, and fometimes to winter there.
The cargo they carry back to Europe is not fo rich as that of the galleons, though it is faid to be richer every year than other, becaufe of the increafe of the Spanifh fettements in New Mexico. -The flota commonly leayes La Vera Cruz in May, but fometimes not 'till Auguft; then it fails for the Havannah, from whence it generally returns, efpecially in time of war, with the galleons to Old Spain. See the article Fime of
As foon as the galleons and flota are arrived at the Havannah, the flotilla, or little fleet, fo called, becaufe it confifts of fome of the lighteft and cleaneft Mips is detached to Europe; which, befides money and merchandize, carries an exact account thither of the contents both of the galleons and the flota, that the court may the better judge what convoy is neceflary to be fent for them, as well as to regulate the indulto [fee Indut To] proper to be levied on the merchapts, in proportion to their refpective interefts in the galleons and fota. The flotilla confilts commonly of five flips, from 20 to 44 guns, and is employed to guard 'the coaft from free-booters, as allo to convoy the plate to Panama. The great fleet remains fo long at the Havannah for thefe two reafons chiefly, viz. waiting for a wind, or for the regifter-fhips, which they are to convoy home.
A regufter-fhip has it's name from it's being regiftered, with all the effects embarked in Spain, in books kept for that purpofe in the chamber of Seville. For, when a company of merchants there think that the European goods are much wanted at fome particular ports in the Spanigh Welt-Indies, they prefent a memorial to the council of the Indies, praying permiffion to fend a fhip of 300 tons burthen, or under, to fuch port; and, having obtained it, they pay a certain fum, between 30,000 and 50,000 pieces of eight to the crown, befides prefents of a confiderable value to the king's officers. Then, to prevent any fufpicion of fraud, they regifter their thip and cargo confiftent with their petition and licence: whereas the fame fhip, fo regiftered as under 300 tons, generally carries above 600 tons of goods, befides accommodation for paffengers. - Copies from the regifters are tranfimitted to the governor and royal officers at the port to which the regifterthip is bound; and fuch is their diligence and integrity, that
when the fhip is come to an anchor, they certify after a pretended narrow enquiry, that this fhip of 600 or 700 tons does not carry quite 300 together, and fend back fuch certificate, properly afcertained, with the fhip to Europe, together with a bill of lading, in the fame ftrain of computation *,-By thefe regifter-thips 2 or 300 per cent. is fometimes gained, which enables the owners to pay fo liberally for cheating the king, after having firf got the money by robbing the fub-jects.-Thefe regifter-Ships go yearly to Buenos Ayres, St. Martha, Porto Cavallo, and other places, to which neither the galleons nor flota come; yet they gensrally return with them, as they fometimes go out with them, though, when outward-bound, they leave them in a certain latitude.
What gave rife to the Spanifh guarda coftas, as they are called, or guard fhip, was the illicit trade faid by the Spa $\rightarrow$ niards to be carried on in thofe parts, forme years fince, by the Dutch and Englifh, though notorioully by the former, partly with the connivance of the Spanifh governors, and partly by force.' The guarda cofta, being ftationed at Carthagena, put an end to this mifchief for a fhort time, by finking one of the interlopers, and taking two; the cargoes of which were worth above $100,000 \mathrm{l}$. and by hanging all at once 16 Spanifh merchants, that, on a fignal given, came on board from the fhore to trade with them $\dagger$. But the captains of thefe guarda coftas, inftead of taking real contraband traders, infefted the Englifh commerce foon after, and took what they could, without diftinction, under frivolous pretences at firft and at laft without any at all. The governors reaping valt profit from the prizes which they brought into their ports, they fent fuch fallacious accounts of the captures to the court of Madrid, as produced that obftinacy of theirs which involved them in the late war with Great- Britain:

* If the offlcers belonging to the king of Spain will defraud their own crown of it's revenues, in their concerns with Spaniards themfelves, Spain cannot wonder that their officers thould countenance and encourage an illicit trade with foreigners in the Spanifh Weft. Indies; and, if the great fault lies at the door of the Spanifh officers, the labouring oar to prevent fuch illieit commerce lies chiefly upon the court of Spain itfelf, and not upon thofe courts whofe fubjects are allured by their officers and fubjects to carry on a centraband trade.
$t$ Were the like meafures fteadily purfued, they would not only have put a temporary, but an eternal ftop, to illicit trade. And does not this prove that the Spaniards have it pleafe?

Though the general accounts of New Spain place mines of gold and filver in almoft all the provinces, yet we are affured that both are only found in the Province of Mexico. Of filver, it is publifhed there are no lefs than rooo mines in the Mexican empire ; but gold only is found in Veragua and New Granada. There is an exceeding great quantity of fugar in this country, chiefly on the fide of the gulph of Mexico, Guaxaca, \&cc. fo that here are more fugar-mills than in any part of Spanifh America; but it is chiefly confumed in the city of Mexico, and particularly the monafteries, in chocolate, fweet-meets, preferves, and confectionary wares; of which, nowever, there is a vaft deal fent from Guaxaca, Guatimala, and other provinces, to Mexico and to Panama, from whence it is carried by fea to Lima, Guyaquil, and Baldivia. There is a great home trade in the goods manufactured of it's cotton, They have the beft indico in the world; and the trade in that of cocheneal is managed wholly by the merchants of Mexica and Carthagena, who buy to export them to Europe. Cocheneal is found in the governments of Tafbafco and Guaxca; dgers-wood in the bays of Campeachy and Honduras; and fome pearl at Vera Cruz, and the Pearl Iflands, \&xc. Nicaragua, Campeachy, and Guaxca fend great numbers of black cattle to Mexico. Large quantities of fnuft are brought from the Hawannah to VeraCruz, and there fold to the merchants of Mexico. Cocoa, which is a great article in their merchandize, is chiefly produced at Guatimala, Vera Paz, Sozonufco, Ciudad-Real, and Guaxca (which yield the beft in America) and fent to Los Angelos and Mexico, Panama, Lima, Cartbagena, Porto Bello, and from thence to Europe, The nuns of Guaxaca have the chief manufacture of chocolate from the nut, of which it is thought more is drank in the city of Mexico than all Old Spain.
It is faid the people of Nicaragua and the Honduras employ 30,000 mules and horfes to carry corn, fugar, cocoa, \&c. into the inland provinces, and particularly to the city of Mexico. And, when the galleons come from Old Spain, the numbers of carriages, men and horfes employed to carry their crealure from Mexico, and the country of Pachuca, to La Vera Cruz, are incredible.
The carriage of the European goods that come by the galleons back again to other parts, is a very confiderable article of trade, as is alfo the carriage of tobacco, fugar, and other produce of Guatimala and Guaxaca, which comes from the fouth coalt by fea to La Vera Cruz, all which is faid to employ 60,000 horfes, mules and affes, betides a proporticnable number of men. Cocheneal, in particular, is thus brought over the mountains from the country of Guadalaxara, 320
miles north-weft from Mexico. So much filver it alfo brought from Zacatecas, in the fame province, that it is faid 6000 mules are employed in the carriage.
Of the feveral audiences in Mexico, or New Spain.
I. Guatimala. Jofeph Acofta, who was on the fpot, and gives the beft account of New Spain, in that work called his Natural and Moral Hiftory of the Indies, makes this audience about 300 leagues in length, upon the South Sea; but it is indented by fo many great bays in the North and South Seas, that the breadth is not half fo much, it being in fome places not 30 leagues, though in others 150 . Acofta fays it is in general a fruitful country, efpecially in Indian corn and cocoa, and abounds in cattle and good pafture.
Veragua. This, which is the firft, though the leaft province of not only the audience of Guatimala, but of North America, joins on the weft to Cofta Rica; on the eaft to the government of Parama; and has the North Sea on the north, and the South Sea on the fouth.
Santa $F_{E^{\prime}}$, or Foy, in the middle of the province, is the place where the king of Spain keeps officers for cafting and refining of the goid. It ftands at the head of a river that runs into the North Sea.
Pueblo Nuevo or the New Town, fands in a bay of the South Sea, betwixt Baja Honda and Chiriqui, feven leagues from each, and 60 miles fouth-weft from Santa Fé, according to Moll, though others make it 75 . Here is a large river, that falls into a fandy bay; and on the eaft fide, where the true channel lies, there is a round hill.
Right before the mouth of the river is an ifland of the fame name, about one league from the main. There is a low point juft within, called Renchiera, where the Spaniards ufually build fhips.
It is but three leagues up the fream, and may be feen from the road.
Pueblo has been feveral times taken by the buccaneers.
Chiriquita, or Chiriqui, on the fame coaft, 35 miles weft of Pueblo Nuevo, ftands in a plain of favannahs, furrounded with coppices and farms; and the chief trade of it is in tallow and leather. The harbour lies on a pretty large river, about a league from it's mouth, and three from the town, to which is a pleafant paffage; but there is only one way to enter the river, and that dangerous. This river falls into the bay called Galfo-Dolce, which mult be diftinguifhed from that near the bay of Honduras.
Veraguas, which ftands'on the river of it's name, is a poor place, and drives no other trade than working the mines, where the flaves are compelled to dig and wafh the earth in the neighbonring rivers, wherein bits of gold are often found as big as peas.
St. John De Cueblo, is an illand upon this coaft, which the buccaneers place 24 leagues weft from Panama, and fix from Pueblo Nuevo, and makes 12 leagues in compals. It is defert and mountainous, but full of wood, efpecially maft-timber, and has fine rivers.
Costa Rica Province, or the Rich Coast, is fo called from it's rich mines of gold and filver, thofe of Tinfingola being preferred by the Spaniards to the mines of Potofi: but otherwife it is mountainous and barren. It has Veraguas province on the fouth-eaft; and that of Nícaragua on the northeaft, reaches from the North to the South Sea, about 90 leagues from eaft to weft, and is 50 where broadeft, from north to fouth.
Cartago, the capital, ro leagues from the North, and 17 from the South Sea, on each fide of which it has a port, and is 90 miles eaft of Nicoya. Mr. Gage fays, that in his time there were rich merchants here, who traded by land to Panama, and by fea to Porto Bello, Carthagena, and the Havannah, and from thence to Spain.
Nicoya ftands 30 miles weft of the gulph of Salinas, a large bay of the South Sea, on the frontiers of Nicaragua. It is a pretty town, and the head of a Spanifh diftrict, near the mines, which was taken and plundered by the buccaneers in 1687. It ftands on the river Cipanfo, which is navigable to it by large periaguas. The Spaniards trade from hence to Panama in falt, honey, maize, wheat, fowls, and a purple juice of a thell-finh in the neighbouring bay, with which they dye * their threads and wool, to mix with their Segovia cloth. This filh, which is, therefore, called the purpura, is not eatable. It lives about feven years, but hides itfelf about the rifing of the dog-ftar. The fhells, which the Indians are emdloyed by the Spaniards to gather in the fpring, about Chira, Golfo, Di Salinas, and other parts of this coaft, being rubbed together, produce a flime like foft wax, made ufe of by the dyers: but the chief dye is in the mouth of the finh, and the fineft juice in the white vein. The bay receives fix rivers, has 20 illands, good anchorage and warehoules; and the banks of the rivers are full of villages, farms, and plantations of fugar canes.

This is an inflance that nature affords matters for dyeing that are little furpected; and it is very likely that we could eafily do without logwood, if we had not an unqueftionable right to cut it in the bays of Campeachy and Honduras.

The province of Nicaragua, or the New Kingdom of Leon, has Guatimala Proper, and the South Sea, on the weft; the North Sea and Honduras on the north and eaft; and the South Sea, with Cofta Rica, on the fouth and weft. The winter here is rainy and tempeftuous: in fummer the air is exceffive hot, but healthy. It is reckoned the moft woody province in all New Spain. It produces good hemp and flax, and the wood ufed by dyers in Europe, called Nicaragua wood, but little wheat. It abounds with black cattle and hogs, but has few fheep. It has plenty of balm, cotton, fugar, axi, which is the American pepper, honey, and wax, liquid amber and turpentine, with which, and filver work the inhabitants drive a confiderable trade to Panama and Nombre de Dios. Whales and fea-monfters are frequent on the coaft, but, as for the country, it is fo pleafant as well as fruitful, that it is, as it were, the garden of America, the hills and rivers being full of gold, the trees and woods perfumed; and, when the Spaniards firft came to it, they called it Mahomet's Paradife.
The other town is Granada, which ftands on the fouthfide of the lake 60 miles fouth-eaft from Leon, where the Spaniards have mills for making of fugar, there being abundance of canes in the neighbourhood. Ir is the moft frequented of any town in North America, for the merchants of Guatimala difpatch their goods from hence by the way of Carthagena, as thinking it fafer than to fend them by the guiph of Honduras, where they are often intercepted, in time of war, by the Englifh and Dutch.
New Segovia, is a city 30 leagues from both the former, to the north.
JAEN, at the mouth of the lake Nicaragua, 30 leagues from the North Sea. Here goods are ufually lodged that come to or from the North Sea by the river, where they unload at the cataracts, and embark them in other veffels.
Realejo, or Ria Leaxa, on a plain a league from the fort called Poffeffion, and 15 leagues north-weft from port St. Juan, ftands on a river which falls into the South Sea 30 miles north-weft from Leon, which city it ferves as a harbour. It is capable of receiving 200 veffels, and the king of Spain's fhips for the South Sea were formerly built here. There are intrenchments to defend the harbour, which is 3 leagues below the town, and very fine docks, but it has fuffered much from the buccaneers. It's chief trade is in pitch, tar, and cordage, for which it is the moft noted place in all Spanifh America; they being exported from bence to Carthagena, Porto Bello, La Vera Cruz, and even to the Havannah. A fine river of the fame name runs into the haven, which is fafe from all winds, and has five illands within it fit for careening thips. The adjacent country is pleafantly watered with rivers, whereof that which runs into the haven has eight branches, whereby goods are carried to and from the villages, farms, and fugar plantations belonging to the inhabitants of this town and Leon. The port is the moft in ufe for hipping of any in all thefe feas, efpecially between Acapulco and Panama, fhips coming to it from all parts of the South Seas. It is fheltered by an ifland at the mouth of it that breaks off the fea, which would otherwife come rolling into the harbour, with waves as high as mountains. The inland, Jying thus in the entrance, forms two channels into it, one to the fouth-eaft, the other to the north-weft, the laft of which is by much the beft for navigation; fo that none but fmall craft go into the former.
The province of Honduras, or Camaiagua, extends eaft and weft along the North Sea above 130 leagues, and in fome places is near 60 leagues over from north to fouth, but it is narrower at both ends. It has the North Sea on the north and eaft, Nicaragua' on the fouth, Guatimala Proper on the fouth-weft, and Vera Paz on the weft. The country confifts generally of hills and deep dales, and has a good air. It is rendered the more fruitful, by the inundations of it's river about Michaelmas, when the natives carry the water by canals to their fields and gardens. In many parts of the country, the foil bears Indian corn thrice a year. It moreover yields European wheat and peafe, and has excellent pafture, with honey, wax, and abundance of all forts of provifions, befides mines of gold and filver. The country was once exceeding populous, 'till it was thinned by the Spaniards, who are faid to have tortured and put many of them to death, to make them difcover their gold and filver; befides many more whom they killed afterwards, by forcing them to work in the mines, and carry burdens beyond their ftrength.
The bay of Honduras, which, as was formerly that of Campeachy, is noted for cutting of logwood, and lies betwixt cape Honduras in north latitude $15 \frac{1}{2}$, and cape Catoche, the eaftermof point of Yucatan, in latitude $2 \mathrm{I} \frac{5}{2}$. The great lake of Nicaragua runs into it, by a river called Rio d'Ansgelos or Angelos, which is only navigable by fmall craft. There are feveral fmall iflands in the bay, of which we have no defcription, particularly the Pearl Inand, a little to the north; but they do not fifh up fo much pearl here as formerly, nor fo large. Into this bay a fmall river alfo runs from the province of Veraguas, which the Spaniards call Rio de Sucre, or the Sugar Kiver, becaufe of the fugar-works here; of which the country is fo full, that, did not the Spa-

## M E X

niards confume fuch quantities of it in the fwect-meats, preferves, conferves, \&xc. which they fpend here, and in thofe they fend home as prefents, befides what they ufe to fweeten their chocolate, limonades, and other Jufcious Jiquors, they might be able to fend many fhip-loads of fugar to Europe from thefe twa provinces.

## REMARK

As it may here be expected we fhould give an account of the cutting of logwood * by the Englifh, \&c. fo much complained of by the Spaniards, and affigned by them as a juft provocation for their depredations on our hips, before the commencement of the laft war in 1740; we thall give it as brief as poffible from Capt. Uring, who was fent over deputyrovernor of the iflands of St. Lucia and St. Vincent, by the late duke of Montague the governor, and from Mr. Atkins, in his Voyage to Guinea, Brafil, and the Weft-Indies.

* Under the article Logwood, we have flated the nature of this trade, and the right that Great-Britain has to the cutung the fame, as well in a certain part in the bay of Honduras, as in that of Campeachy: fince the writing of which, an eminent merchant has obliged me with a map of the river Bellefe ( a , ) in the bay of Honduras, which 1 have particalarly mentioned, drawn by Capt. Uring, who was a relation of his, and referred me to the perufal of the captain's voyages upon the logwood trade. I had, indeed, frequenily met with thofe voyages quoted, and read the whole of hi expedition to St. Lucia, but never before met with his map of the siver Bellefe, nor with the accoun. he himfelf gives of the logwood trade as carried on there. But what the captain fays, upon this occafion, corroborates the informa tion that I have intimated to have received from others and, therefore, as what I have urged, in relation to the be fore-mentioned river Bellefe, proves to be matter of FACT it is to be hoped, that fome attention may be given to the expedient which I have done mylelf the honour humbly to fuggelt, with a view only to reconcile thofe unhappy mil undcrlandings, which fitl fubfift between the crown of Great- Bricain and that of Spain, in relation to the cutting of logwood in the bays of Campeachy and Honduras. The abova was obferved before the lat war, and the Defint tive Treaty of 1763
(a) See Capt. Uring's Voyage from Madeira to Jamaica and the hay of Honduras, P. 354 and 362 .

The country where the Englifh cut their logwood is, fays the captain, all a flat, and great part of it a morafs, with feveral large lagunes, which are very often overflowed. In the dry fealon, when the logwood-cutters have found a great number of trees, they build a hut near. them, where they live during the time of their cutting. When they have cut down the tree, they chip off the bark and lay it in heaps, making paths to each, that, when the rains come in, which overflow the ground, they are fo many channels, where they oo with fmall currents and land them, bringing them fometimes 30 miles to the Barcaderas, from whence the buyers come to fetch it at the price of about 51. a ton Jamaica money. During the floods, the logwood-cutters dwell at the Barcaderas, which are 42 miles up the river, whare they have their huts built upon high banks, to fecure them in the time of the floods. As foon as they have notice of any veffel's arrival at the mouth of the river, they flock down, in order to purchafe what things they want, which are chiefly wine, rum, and all forts of liquors, provifions, and fmatl arms, powder and fhot, cutlaffes or hangers, and ozenbrigs, which is almoft all their apparel, except hats and fhoes; and their pavilions are alfo made of ozenbrigs, becaufe of the multitudes of mufkettoes and other biting and ftinging flies, Mr: Atking obferves, that the logwood-cutters were originally fettled in the bay of Campeachy; but, being difturbed by the Spaniards, removed to the bay of Honduras, where they fupport themfelves 'by force of arms, having, according to late accounts, 1500 mafters and fervants. The river that runs up to the Barcaderas, is not only narrow and full of alligators, but has a flrong current from the land frefhes, and the banks are fo covered with fhrubs, that it is difficult to row the boats which carry the effects. At the feafon for cutting logwood, which is once a year, they remove their tents fometimes many miles from their cinief reffdence to follow the wood, which runs in a vein or line of fome miles, perhaps like minerals in the earth; and they run over as many, perhaps, without finding a ftick of it. They cut it in large pieces, and leave it on the ground 'till the land floods favour their bringing it into the river, from whence the canoes take it and carry it to their grand ftore at the Barcaderas. As they know what they muft expect from Spanifh clemency, they are always provided with good arms to defend themfelves defperately againft attacks, which are always by fea, but feldomer here than they ufed to be in the bay of Campeachy. A fervant, which is the firf ttep with feamen into the trade, is hired at a ton oflogwood per month, and, having one day in feven to himelf, he makes about 10l. a month; fo that, if they are fober fellows, they in time become mafters and join ftocks, or trade independently.
They have a king chofe from among themfelves, and his confort has the title of queen, and they are governed by certain

Vol. If.

MEX
rules of their own making. The hips that come into the bay are on their guard allo, and fetch the logwood down in flat-bottomed boats. The crew of each is, allowed on the voyage a bottle of rum and fome fugar, and they row generally in the night becaufe of the ftinging flies, and reff in the day. See the article Loowood.
Truxillo, or Trugillo, ftands on an eminence in the north fide of the province 45 leagues north-eaft from Valladolid, and one from the North Sea; it is fituated between two rivers, the mouths of which, and fome inands that lie before, form the harbour, which lies at the bottom of a bay called St. Giles, is above two leagues broad, and is defended by a caftle; but it has been plundered feveral times by the buccaneers. It is faid to be the only harbour on this coaft capable of trade, but has very little : the town lies a league up one of the rivers. The harbour is deep and fecure, the country exceeding fruitful, and the foil moilt and rich; and, notwithftanding the hot climate, it is exceeding populous. It produces both corn and grapes twice a year, and the cattle brought from Spain increafe here prodigioully. Gracias a Dios, ftands at the mouth of a river, upon a rocky mountain, which has fome gold mines in it's neighbourhood, and was built the fame year as Valladolid, from which it lies about 27 leagues to the weft, to fecure the miners. Mr. Gage fays, that the neighbouring valley abounds with wheat, which is tranfported for the moft part to Guatimala, and breeds very good mules and horles.
St Pedro, which Laët fays is the refidence of the farmers of the king of Spain's cuftoms for this province, is above 30 miles north-eait from Gracias a Dios. It lies in a hot unhealthy climate, but had a great trade before the difcovery of Golfo Dolce, by which commadities are now carried up into the country. In 1666, the town was burnt by the buccaneers.
Ruatan, or Rattan, is an ifland in the bay of Honduras, which was defert, and only the refort of pirates, 'till a few years ago, when the Englifh began a fettlement on it. It lies 8 leagues from the Mofquito fhore, and about 200 leagues weft by fouth from Jamaica; it is about 30 miles long and 13 broad, naturally fortified with rocks and fhoals, excepting the entrance of it, which is fo narrow, that only a fingle fhip can pafs it at a time, which was to be guarded by two forts. The view of this fettlement was not only to fecure a great trade in logwood, but to traffic with the Spaniards of Guatimala for cocheneal, indico, \&c. For this purpofe, 300 land forces, commanded by Major Cawfield, failed from Jamaica the $13^{\text {th }}$ of Auguft 1742, under convoy of the Litchfield, and five other men of war, and on the 23 d arrived at Port Royal harbour in this ifland, one of the fineft in the world, where 500 fail of fhips may always ride fafe. This ifland is overgrawn with wood, but remarkably healthful, and not near fo hot as Jamaica, there being ftrong eafterly winds here commonly to cool it. It has plenty of excellent water, a great number of wild hogs and deer, ducks, teal, pigeons, and parrots, and the fea abounds with fifh of all kinds, particularly crab-fifh and fine turcle*.

* The poffeffion of this ifland would have proved a great fecurity to our logwood trade in the river Bellefe in the bay of Honduras.
The Mofquito, or Mufquito Indians, are a nation on the continent betwixt Truxillo and Honduras, fo fituate between moraffes or inacceffible mountains, and a coaft full of rocks and fhoals, that no attempts againft them by the Spaniards, whion they mortally hate, could ever fucceed. Neverthelefs they are a mild inoffenfive people, of much morality and virtue, and will never truft a man who had once deceived them. They marry only one wife, and never part with her, unlefs for adultery, which is feldom known among them; and fo great a regard is fhewn to marrimany, that even an elder brother, unmarried, gives precedence to a younger, if married. They have no kind of vice among them, nor any occafion for magiftrates. When the duke of Albermarle was governor of Jamaica, there people put themfelves under the protection of the crown of England, and their king received a commiffion from his grace, under the foal of that ifland, fince which they have not only been fteady in their alliance with the Englifh, but warm in their affections, and very ufeful to them on many occafions. When their king dies, the next male heir goes to Jamaica, to certify that he is next in blood, and he receives a commiffion in form to be king of the Mofquito's, 'till which he was not ackriawledged as fuch by his countrymen; though, after all, unlefs he is at war, he has no revenues nor guards, and very few prerogatives, being obliged, in time of peace, to fifh and fowl for the fupport of himfelf and his family; yet he has prefents fometimes from the government of Jamaica and the Englifh traders, who often toucb there. Nay, fo fond are they of every thing that is Englifh, that the common people are proud of every chrifthan or furname given them by our feamen, who honour their general and other grandees with the titles of fome of our nobility *.
*Thefe people likewife may be rendered very ferviceable to The Englifh in fupport of their logwood trade in the bay of Honduras.

## M E X

The province of Guatimala Proper extends, according to the Sanfons, 150 leagues along the coalt of the South Sea, and 30 or 40 in breadth; but Capt. Cook makes the length only 70 leagues. It has the province of Honduras on the north-eaft, Vera Paz on the nurth-weft, Nicaragua on the eaft, Sanonufco on the weft, and the fea on the fouth. The foil in the vallies is exceeding fruitful in coin, indico, cocheneal, and ocher rich drugs for dyeing, as well as cacao, and other Indian fruits; produces balms, bezoar, liquid amber, choice guns, falt, brimfone ; and has large fine paftures, fo covered, fays Mr. Gage, with cattle, that fome graziers are faid to have herds of 40,000 black cattle, and as many fheep. The cattle run wild in the mountains, where they are hunted by the blacks, and great numbers are fent annually to Spain. Here are alfo feveral plantations of fugar, and mines of filver. But Cook fays, their grain does not hold a year.
The rivers of this province abound with all forts of good firh. Cotton is a ftaple commodity, as is alfo wax; and their bees make honey as white as the comb itfelf.
St Jagu de Guatimala, the chief town and the old city, which was one of the fineft in New Spain, was utterly deftroyed by a dreadful hurricane and earthquake in 1541, when 120,000 Spaniards loft their lives. It was built at the bottom of a volcano, with two tops, from one of which fire iffued, from the other water. The prefent city, which is not only the capital of this province, but alfo of the audience, the refidence of the prefident, and the royal courts, the feat of a rich bifhop, fuffragan of Mexico, an univerfity, and the center of commerce in all thofe parts, ftands in a fine valley on a river, about three leagues from the volcano, and is reckoned one of the largelt cities in North America. It is well built and populous, being thought to contain about 8000 families; and the citizens carry on a great trade, not only through all the provinces of Mexico, but even into Peru, by the ports of La Trinidad and Realejo, the one 25 leagues, the other 46 from it; and it's trade with Spain is from Golfo Dolee, that runs into the North Sea at 60 leagues diftance.
Many vaft eftates are got here by trade, and, when the merchants have left off, they go generally to refide at Mexico. The chief commodities in which they deal, are hides, indico, annatta, filveiter, cocheneal, cacao, \&cc: and, indeed, no city can lie more commodious for an extenfive trade, and be fafer at the fame time from pirates and privateers, for it ftands 8 leagues (which Moll and Sanfons call 40 miles) from the South Sea, and about 40 leagues from the gulph of Mexico, by which it drives alfoa great trade; but it is fill liable to frequent earthquakes as well as to eruptions, from the volcano above-mentioned.
Trinidad, or La Sonsanate, a port town on a bay of the South Sea, 4 leagues from Acaxatla, 65 miles fouth-eaft of Petapa, and 162 from Guatimala, confifts of four or five hundred Spanifh families, befides Mulattoes and Indians, and has five churches and a monaftery. It is the place to which all goods are tranfported that are brought to Acaxatla from Peru and Mexico. It is 3 leagues from the harbour to the town, which is of great refort, it being the chief place of trade betwixt New Spain and Peru, and the neareft landing harbour to Guatimala for Mhips from Panama, Peru, and Mexico, but is a place of no defence. There are three volcanocs in the neighbourhood. The coaft is low, and has good anchorage.
St. Salvador, or Cuzcattan. Moll places it at the head of a river, that runs about 47 miles, and falls into the harbour of St. NVichael, 150 miles eaft from Guatimala. In the bottom where the town ftands, there are manufactories of fugar and indico, and fome farms of cattle.
Vera Paz Province, has the bay of Honduras and the province of Chiapa on the north, that of Guatimala on the fouth, Honduras on the eaft, and Soconufco, with part of Chiapa, on the weft.
The chief commodities are drugs, efpecially medicinal gums, farfaparilla, China root, and mechoacan, achiotte, liquid amber which drops from trees, cacao, cotton, wool, boney, maize, wax, and feathers, of which the Indians make curious works.
Chrapa is an inland province, having Tabafoo on the north, Yucatan on the north-ealt, Soconufco on the eaft and fouth, Veraz Paz on the eaft, and Guaxaca on the weft. Here are great woods of piné, cyprefs, cedar, oak, myrtle, and wal-nut-trees and wood-vines; trees that drop rofin, aromatic gums, balfam and liquid amber, tacamahaca, copal, and others that yield fovereign ballam. Here is no want of corn, pears, apples, quinces, cacao, and cotton, and cocheneal grows wild.
The chief of it's rivers is that of Chiapa, which runs from the north crofs that pait of this country, which is inhabited by the Quelenes, and falls into the fea at Tabafco. It is in fort well watered, and drives a pretty brikk trade with the neighbouring provinces, efpecially in cocheneal and filk; wherein the Indians employ their wives, in making bandkerchiefs of all colours, which the Spaniards buy and fend home. Mr. Gage fays, that, though the Spaniards reckon it

## M E X

one of the pooref countries in America, becaute it has no mines or fand of goid, nor no harbour on the South Seá, yet it is bigger than moft provinces, and inferior to none but Guatimala; that it is a place of great importance to the Spaniards, becaufe the ftrength of all their empire in America depends upon it: and that it ought to be well fortified, becaufe of the eafy entrance into it by the river of Tabafco Puerto Real, and it's vicinity to Jucatan.
The places of chief note are two towns, both called Chiapa. The one is inbabited by the Spaniards, the other by the Indians. It's chief trade is in cacao, cotton, wool, fugar, cocheneal, and fmall pedlars wares. The friars are the chief merchants of European goods, and the richeft men both in the city and country.

## The audience of Mexico.

This, which is the nobleft part of the Spanifl dominions, is bounded on the north with New Mexico, on the eaft with the North Sea, or gulph of Mexico, has the South Sea on the fouth and fouth-weff, and on the fouth-eaft fide it joins the provinces of Chiapa and Soconufo in the government of Guatimala.
It is divided into feven provinces, viz. Jucatan, Tabafco, Guaxaca, Mexico Proper, Mechoacan, Tlafcala, and Panuco. The province of Jucatan, or Yucatan, is a peninfula, furrounded on the weft and north by the gulph of Mexico, betwixt the bay of Campeachy on the fouch-weft, and that of Honduras on the fouth-eaft, and has the little province of Tabafco on the fouth-weft, and that of Vera Paz in the audience of Guatimala on the fouth. Here it is joined to the continent by an ifthmus not 40 leagues in breadth, and runs out into the fea 100 leagues. It is in all refpects a moft noble country. It extends from north latitude if to $21,3 C$, and weft longitude 88 to 92 . The climate is pretry warm in the fummer, which begins in April and ends in September. They have fcarce any rain in the winter feafon, which, however, is indifferently cool, excep.ing January and February, which are almoft as hot $a_{s}$ in the middle of fummer; yet in the main it is a very healehy country, efpecially a mountainous tract, which runs from Salamanca on the weft, quite acrofs it to the eaft. The foil, when duly cultivated, bears plenty of corn, cotton, and indico, and abounds with al! forts of cattle, wild bealts, honey, wax, and fowls, and on the coafts are taken great pieces of amber: but, as no mines were ever found in it, the Spaniards have not been fond of fettling here.
Merida is it's capital city, the feat of a governor, and the fee of a bifhop near the north fide of it, betwixt the gulph of Mexico and Honduras, about 12 leagues from each.
Campeachy, or as it is called by the Spaniards St. Francisco de Compeache, the fee of a bilhop, is 120 miles fouth-weft of Merida
It ftands on the fhore, in a fmall bending of the land, near the mouth of a river, which falls into it's bay on the fouthweft angle of this province; and is the only town on all the coaft to cape Catouche, at the north-eaft point, that lies open to the fea. It makes a fine fhew, the houfes being built all of good ftone. There is a dock and good fort at one end of the town, with a governor and garrifon, which commands both the town and harbour; neverthelefs, in 1659, the Englifh ftormed it and took it with only fmall arms, and it was taken again by furprize in 1678 , by the Englifh and buccaneers. The port is large but hailow. It uled to be a noted market for logwood, as we obferved in Honduras. See our article LOGWOOD.
The chief manufacture of the adjacent country, befides falt and logwood, is cotton cloth, which is the cloathing of all the natives, and even of the poorer Indians. Capt. Dampier gives this account of the bay: it runs in deep within land, betwixt cape Condecedo on the eaft, and St. Martin's cape to the weft, which is 120 leagues, and has many broad lakes that are navigable. From cape Condecedo it is 15 leagues fou:h to Salinas, where is a fmall harbour and a large pond, near the fhore, which yields abundance of falt that is tranfported to the gulph of Mexico. In May or June when the falt kerns, not lefs than 40 or 50 Indian families at a time come and rake it afhore in heaps: then covering them with dry grats and reeds, they fet fire to them, which burns the outtide, giving it a black cruft, which afterwards defend the falt againft the rains.
Tabasco province is bounded with that of Guaxaca on the weft, on the eaft by that of Jucatan, on the fouth by part of the audience of Guatimala, and on the north by the gulph of Mexico, on which it extends from eaft to weft about 40 leagues. It being a narrow flip by the fea-hore, the climate is not very healthy, nor the foil exceeding fruitful, yet the people have good farms, well ftocked with cattle, which yields them confiderable profit; and moreover, they have great plenty of Indian wheat and cacao, which they fend on the backs of mules to Vera Cruz. Moft of the country is flat and moift, has marfhes and lakes, abounding with fifh, fome of thera very large, as manatees and tortugas.

Guaxaca province reaches from the bay of Mexico on the north to the South Sea, having the province of Tlaicala on the north-weft, and thofe of Chiapa and Tabafco on the fouth eaft. It extends near 95 leagues along the South Sea, 50 along the bay of Mexico, and near 120, according to fome, along the fide of Tlafcala, but not above 50 on that of Chiapa. The air is good and the foil fruitful, efpecially in mulberry-trees, fo that it produces more filk than any province in America, except that called the valley of Guaxaca; moft parts of it are mountainous, yet it abounds, with wheat, cattle, fugar, cotton, honey, cacao, plantanes, and other fruits. It has rich mines of gold, filver, and lead, and all their rivers have gold in their fands; caffia, cocheneal, cryftal, and copperas, likewife abound here; fo that were the people induftrious, they might be the richeft in the WeftIndies. But they are habituated to a nlothful life by the ciergy, who have 120 monafteries here.
The vanello, a drug fo valuable for it's perfume, and ufed to give a flavour to chocolate, is the produce of this province. It grows, indeed, in fundry parts of Mexico, but is no where fo plentiful as here.
Gijaxaca, the capital of this province, is a bifhop's fee, and the feat of a governor; 120 miles welt of Spirito Santo, 230 miles fouth of Mexico, in the fweet valley of Guaxaca, which is 40 miles long, and 20 broad, and in the road which leads through Chiapa to Guatimala. It is a middling city, but has a great trade with both the North and South Seas. The river here is not fortified, fo that fmall veffels might eafily fail up, and fubdue the country. The beft chocolate in America is made here by the nuns, and exported to Spain. In the neighbouring valley there are many rich towns, cloifters, and churches, an excellent breed of horfes, and great herds of black cattle and fheep, which afford wool to the clothiers of Los Angelos, and hides to Spain.
St. Ildefonzo de las Zapatecas is a town on a hill, 20 leagues from the former. It's territory is rich in gold, cotton, and Indian wheat; and the river Alvarado, or at leaft a branch of it, is navigable to it by banks.
Spirito Santo ftands at the foot of mountains, on the north coaft, towards the frontiers of Tabafco. The inhabitants trade in cotton, maize, and gold.
Trcoantereque lie at the bottom of a bay, in the South Sea, above roo miles eaft from Guatulco. According to fome, Mr . Gage fays, that fmall veffels traded on this coaft in his time, and that it was the chief fifhing harbour in all this country. It had alfo rich merchants, who dealt not only to Mexico, but to Peru, and the Philippine iflands, and by land, to Guatimala, to which there was a plain road along the coaft.
Tepanateque is a town at the foot of the mountains Quelenos, which, according to Gage, is one of the pleafanteft in the country, and the beff furnifhed with flefh, fowl, and fifh, it lying near the fea and a river, and among rich farms, flocked with, from one thoufand, to four thoufand head of cattle a-piece.
Tlascala province, or Los Angelos, has alfo the advantage of lying both on the North and South Sea, having that part of the former, which is the gulph of Mexico, on the eaft ; the province of Guaxaca, on the fouth-eaft; the Pacific Ocean, on the fquth ; the province of Mexico Proper, on the weft, and that of Panuco, on the north-weft. It's climate, foil, and product, are much the fame with thofe of Mexico Proper.
Pueblos de los Angelos, the prefent capital of the province, and much the fineft place in it. It even vies, for magnificence, with the city of Mexico; and the wealth of the place, or rather of the clergy, may be guefled at, from the yearly revenue of the cathedral and chapter, which amounts to three hundred thoufand pieces of eight.
The beft felts in the country are made in this city, and it has a mint, and a glafs-hqufe, the firft that was known in all New Spain.
La Vera Cruz, the grand port of New Spain, on the North Sea. There was an old town of this name, which falling to decay, by reafon of the badnefs of the port, and other, caules, this new town was builc at about 15 or 16 miles further to the eaft, there being a port, fmall, but fafe, and fo well fituate, that it was capable of being effectually protected by a fort on a rock of a neighbouring illand, which was accordingly built, and called St . John de Ulua.
This new Vera Cruz is not a place of very great extent, being not inhabited by any Spaniards of diftinction, by reafon of it's unwholfome fituation, between vaft tracts of dry land on one fide, and rank bogs on the other; yet, as to trade, this is one of the most considerable places, perhaps, in the world: it is the natural center of the American treasure, and the magazine of the bulk of the merchandize that goes out of New Spain, or is transtorted from Europe... It abounds, in a wodd, with the treasures of both the Indies. It receives a vaft quantity of Eaft-India commodities, overland, every year, from Acapulco. [See the article Acapuico.] At the fame time, the warehoufes are generally full of European goods; and, in fact, the merchants here
carry on as great a trade as it is poffible for the Spaniarda well to carry on throughout America.
This place has not only a very confiderable commerce from Mexico, but by Mexico from the Ealt-Indies; likewife from Old Spain, from Cuba, St. Domingo, Jucatan, and from Peru, by the way of Porto Bello; from Carthagena, and all the illands in the Norrh-Sea; alro by the river Alvarado, which goes up Zapotecas, St. Ildefonfo, and towards Guaxaca, and by the river Grijaiva, running up to Tabafco, Los Zeques, and Chiapa. The goods are fent from hence to Mexico, Puebla de los Angelos, Sacatecas, St. Martino, and other inland places, upon horfes and mules, or in waggons drawn by oxen, and carts drawn by mules. The Barlovento fleet, which is a fmall fquadron, employed to clear the coaft from pirates; and interlopers come hither conflantly in October.
When the flota, which is always obliged to winter here, arrives, and unloads the goods from Old Spain, and takes in thofe of Mexico, as well as the merchandize that comes from the Philippine iflands, by the Acapulco Chips, a fair is opened here, which lafts many weeks; fometimes 'till the fhips are ready to depart: then this place may be faid to be immenfely rich; but the moft wealthy merchants not only refide at the city of Los Angelos, the far grearer part of the year, but alfo keep their plate there, till fuch time as the fota is juft ready to go off, [fee the article Flota, ] which ought regularly to be in May, but is fometimes detained 'till Auguft: therefore, the conftant inhabitants of this place are only Mulattoes and Meftizoes, with a few Spaninh factors, who, after a fhort ftay, make vaft fortunes; infomuch, that he is reckoned an inconfiderable fellow, who is not worth an hundred thoufand pounds. The inhabitants, flaves and all, are computed at about three thourand, and the city is about half a Spanifh league in compafs. The foil is barren, fo that their provifions are far fetched, and dear bought. Vera Cruz having been taken and plundered by the buccaneers, feveral times, the Spaniards have built feveral forts, andkeep centinels all along the coaft.
The old town ftands about a mile from the floore, and was called Vera Cruz, becaule Cortez landed here on Good Ftiday, in 1518.
The new town, which our failors commonly call La Vera Cruz, ftands 12 leagues to the north-weft of the river Alverado, according to Dampier, and 60 leagues fouth-eaft from Mexico, of which it is reckoned the eaftern port, as Acapulco is the weftern. The men are haughty, and fond of ftate and eafe; for which reafon they are flothful, though they underfand trade very well.
Almeria, called Villa Rica by the Spaniards, becaufe of the gold they found here on their arrival, lies on the coaft above 20 leagues north of the former, has an indifferent port, and a better air than Vera Cruz, with a fmall river, good fprings of frefh water, and a dry country behind it; all which are wanting in Vera Cruz. It is faid that a great clandeftine trade is drove here, between fome Spanifh merchants on fhore, and the Frençh of St. Domingo and Martinico.
The province of Mexico Proper has that of Tlafcala on the caft, that of Mechoacan on the weft, that of Papuco on the north, and the Pacific Ocean on the fouth. The climate is very variable, yet both pleafant and temperate. The foil is remarkably fruitful, and all the neceffaries of life extremely cheap. It's commodities are much the fame with thofe of Mechoacan, only the mines yield much more filver, which fometimes alfo hold a very confiderable portion of gold, It is faid to excel all the provinces of America, in corn, cattie, and fruits; and it's lakes and rivers abound with variety of good fifh, fo that the tribute of the lake of Mexico alonc, is above twenty thoufand crowns a year.
The royal city, and archbilhop's fee of Mexico, is the capital of this province, of the audience, and of all New Spain, and the feat of the viceroy; it ftands in the lake of it's own name, on the eaft fide of a valley, at the foot of a ridge of hills; and, according to the Spanifh writers, lies in the latitude of 19,40 . That we may pafs a good judgment of the opulence of this city, it may be offerved, that the tenths, collected from the in fuffragan bilhops, under it's archbilhop, (viz. Puebla de los Angelos, Mechoacan, Guaxaca, Guadalaxara, Guatimaga, Yucatan, Nicaralu, Chiapa, Honduras, and New Bifcay,) are computed at about half a million of pieces of eight, thofe prelates receiving, at leaft, $1,200,000$ pounds fterling a year. Though this may help us to form fume idea of the wealth of the Mexicans, it may be fill farther conjectured, from this obfervation, viz, that there was brought into the king's exchequer here, in 5730 , more than a million of marks of filver, as the king's duty from the mines, which ought to be one fifth of the metal taken out of them. According to this, the whole produce of the mines mult amount to five millions of marks; and a mark being equivalent to eight of our ounces, if we compute this filver at. five fhillings the ounce, then the inhabitants of Mexico reccive ten millions of money per anNum From fheir mfins.

## M E X

## M E X

As to the wealth of the merchants in particular, it may be more eafily imagined than afcertained, confidering that they pay five or fix times more for European goods, than they are to be had for where they are manufactured. Thus, a piece of farlet cloth, worth, in London, twenty-five, or twenty-six shillings a rard, fhall be fold here at sixty and seventy pieces of fight per yard; and it is common for a Spaniard to give frequently A thousand pieces of eight for a new suit of cloaths: fo that when this is confidered, and that the money they return, is in proportion to fuch a valuation, what muft be faid of the wealth of this place? In fhort, the warehoufes of the mer chants fhew it, who, againft the time they go to Vera Cruz, to meet the fota from Old Spain, hire a prodigious number of horfes, mules, and carriages, to carry the filver they have ready to be fhipped there, and to pay for fuch goods as they fhall purchale; fo that it is no wonder the galleons bring off, from fixteen to twenty millions of pieces of eight fometimes from St. John de Ulua. See the article Gakteons.
In the goldfmith or plate-worker's freet here, which is called the Plateria, next to the great fquare or market-place, the fhops are furnifhed with fuch a variety of utenfils and ornaments of gold, filver, and jewels, as is not to be paralleled in any other city in the world; for the very negroe wenches, that walk by the ladies coaches here, wear gracelets of gold, and pearl necklaces, and jewels in their ears; and the black foot-boys arc dreffed in rich liveries, daubed with gold and silver lace. Here they are always making church and family plate, efpecially when the merchants are befpeaking goods againft the arrival of the galleons, at which time the fhops and warehoufes are filled with chefts of plate, defigned for Old Spain, \&ic. piled up to the very cielings. The glaffes, or fafhes, like thofe of our goldmith's fhops, are full of gilt plate in fervices and fetts; the cabinets filled with vaft quantities of rubies; emeralds, and pearls, rings, large jewels, and numberlefs toys, but efpecially gold finuff-boxes enamelled and fet with rubies and emeralds, of which, it is faid, that ten thoufand are fometimes to be feen in this ftreet; and hardly a feet departs for Old Spain, that does not carry off at leaft five thouland of them. The Mexicans have been perfected in the art of working plate by the Chinefe, who come hither every year. Acapulco lies in the fouth-eaft corner of this province, on a bay of the South Sea, and about 210 miles fouth-eaft from Mexico, of which it is the chief port on this fea, as it is the chief mart on the coaft. It is allowed to be an excellent harbour, far fuperior to any on this coaft for it's being fancious, and withal lo fafe, that feveral hundred thips may anchor in it, without the hazard of damaging one another, The mouth of the harbour is croffed by a low inland, about a mile and half long, and half a mile broad, which leaves a good wide deep channel at each end, where fhips may fafely go in and out with the advantage of the winds. They muft enter with the fea wind, and go out with a land wind, which feldom or never fail to fucceed each other, in their proper feafon of the day and night. The weftermoft channel is the narroweft, but fo deep, that there is no anchoring, and the Manilla dhips pafs in that way; but thofe from Lima enter through the fouth-weft channel. This harbour runs in north, about three miles; then growing very narrow, it turns fhort about to the weft, and runs about a mile farther, where it ends. The town ftands on the north-weit fide, at the mouth of this narrow paffage, clofe by the fea; and, at the end of the town, there is a platform with a great many guns. Oppofite to the town, on the eaft fide, there is a high frong caftle, faid to have forty guns of a very great bore. Ships commonly ride near the bottom of the harbour, under command both of the cafte and platform.
The commerce of this place, with Peru, is not, as many writers have miftaken, confined only to the annual fhip from Lima; for, at all other feafons of the year, except that wherein the Acapulco thip arrives, which is about Chriftmas, the trade is open, and hips of Peru come hither frequently, to fell their owa commodities, and carry back thofe of Mexico: but, becaufe the great importance of this place, is owing to the annual fhips of Lima and Manilla, therefore fome writers have been fo miftaken, as to think that thefe are all the veffels which come hither: whereas, the only commerce which the Philippine iflands have with the reft of the world, is by this port of Acapulco. Indeed, 'till within thefe thirty years paft, there never was more than one annual thip, which paffed between Manilla and Acapulco; but now there are two, one a prodigious unweildy galleon, of a thoufand, or twelve hundred tons, and the other a frigate, or convoy, which carries betwixt twenty and thirty guns. This is the effect of that ftrict regulation, whereby the inhabitants aretied down, to fend no more than this fhip every year; which is laden with all the product of the Eaft, fuch as ambergris, civet, bezoar, large oriental pearl, vaft quäntities of piece goods, and gold duft, to the value of one hundred thoufand pounds ferling. This voyage to Acapulco is extremely dangerous; and the longeft, by far, that can be made from land toland; they touch indeed at Guam,
one of the Ladrones infands, and, except a day or two's fay there; pals three thoufand leagues, without feeing any thing but fea or fky ; but no wonder fuch hazards are run, if it be confidered, that the captain of the galleon makes forty thoufand pieces of eight, the pilot twenty thoufand, each of bis two mates nine thoufand, and every common feaman, with prudent management, a thoufand.
They fail generally from Manilla towards the latter end of June, and arrive here always about ten days before, or after Chriftmas. About the fame time comes the annual fhip from Lima, Jaden with the richeft commodities of Peru, as quickfilver, cacao, \&c. and at leaft with two millions of pieces of eight, to be laid out in the purchafe of Indian commodities, at the fair of Acapulco, which lafts fometimes thirty days; at which, fuch as come from the Eaft-Indies, furnifh themfelves with European goods, brought hither over-land from Vera Cruz.
This fhip from Lima frays 'till the Manilla fhip arrives, and then returns. At this fair, Acapulco, which at other times is but a paultry town, confifting of two or three hundred thatched houfes, becomes a populous city, crowded with the richeft commodities of both the Indies, and with merchants from Mexico, Lima, Cufco, and all capital places of Peru, and even from Chili; infomuch that every houfe is then an inn, befides the huts and tents erected without the town; and people pay a dollar per day for their ordinary.
When the fair is over, the goods belonging to the Mexican merchants are tranfported over-land by mules; thofe which are fent to Peru, are laden not only on the annual fhip, but on many others, and the galleon as foon as poffible, prepares for her return to Manilla. It is to be obferved, that heretofore the Lima fhip was only a fmall twenty-gun thip; but fince the Britifh privateers have found the way to the South Seas, this veffel carrics not lefs than 40 guns; and is moregver allowed one tender, fometimes two. The galleon returns from hence to Manilla, in much lefs time than the comes; for in her paffage from latitude 17 to 19 , the runs away before the wind, and pcrforms a voyage of about two thoufand leagues, in ten, twelve, or thirteen weeks at moft. She commonly carries ten millions of dollars from hence, out of which are paid all the king of Spain's garrifons in the Philippine iflands, which amounts to no lefs than two thoufand five hundred pieces of eight. Dampier fays, the two Manilla fhips make the voyage alternately; that in June, when that which fers out in April from Acapulco arrives at Manilla, the other fets out for Acapulco, and Aretches to north latitude 36 , or 40 , 'till the meets with a wind that brings her to the American fhoré. She falls in firft with California, and never fails of a wind to bring her from thence, fouth along the coaft, to Acapulco, and fets her paffengers for Mexico a fhore at Salagua.
The fhips fitted out from Acapulco to Manilla, formerly went one year, and returned the third year; afterwards once in two years; but the trade is fo much increafed fince, and it is managed with fuch difpatch at the Pbilippine iflands, that there are now two fhips fent yearly from bence, which return about the end of the fame year. Thefe carry out no lefs than ten'millions of pieces of eight every year : that is to fay, in money and goods; of which laft they earry great cargoes, both of Euopean and American forts. The goods they bring to Aca, pulco, from the Philippine iflands, are white-and painted callicoes and chints, diamonds, and elephents teeth ; fine mullins, plain, ftriped, and flowered; India romalls, and efpecially atlaffes, taffaties, and damafks; tea, efpecially bohea; cloves, of which they fometimes bring from fixty to a hundred ton at a time; nutmegs and mace, from twenty to thirty ton ; cinnamon, of Borneo pepper, a greater quantity than ever; faltpetre and fulphur, quickfilver, ficklack, and feveral drugs ; china ware, and laquered japan. Thefe goods are difperfed from hence to all the coafts of Peru and Chili, which being fo long, cannot but employ abundance of men, as well as chips, which generally return with gald from Chili, filver from Peru, and corn and fruits from both. See Acapulco.
Port Mareuis is a good harbour, a league to the eaft of Acapulco, where the fhips from Peru generally run in contraband goods.
Pachuca, 60 miles north from Mexico, noted for filver mines in it's neighbourhood, of which Gemelly fays, that in the ppace of 6 leagues, there are not lefs than a thoufand, one of them called the Trinity, at which one thoufand men were employed every day, and from whence, in ten years time, they dug forty millions of filver; but that many of them were worn out, and others dangerous to work. When any perfon difcovers a mine of gold or filver, he has the advantage'of it, on paying the fifth of the product to the king; but if he forfakes it three months, without realons approved by the court; it falls wholly to the king.
Panuco province is bounded on the north, by Neuleon and part of the audience of Guadalajara; on the eaft, by the gulph of Mexico; on the fouth, by the provinces of Tlafcala and Mexico Proper; and on the weft, by that of Mechoacan. It is fituated under the tropic of Cancer, past in

## M E X

the temperate, and part in the torrid zone, about 55 leagues in length, and the fame in breadth. That part next to Mexico is the beft and richeff, abounding with provifions, and having fome veins of gold, and mines of falt, but turns out very little for want of hands. The part adjacent to Florida is wretchedly poor and barren. This country was one of the firf difcoveries of the famous Cortez, who took a great deal of pains to conquer and plant it, though it is a country rather fruitful and pleafant than rich, many of the inhabitants having chofe to retire to Florida, racher than be flaves at home. This province is but indifferently peopled, and little notice taken of it in many authors, though it was a very extended fea-coaft along the gulph of Mexico, with feveral roads and creeks, but no great ports.
It's capital, which is the fee of a bifhop, is of the fame name, and fo is the river whereon it ftands. The city lies about 17 leagues from the fea, and 60 north-weft from Mexico. It was built in the year 1520 , by order of Cortez, and called St. Iftevan del Puerto. It contains about five hundred families. It is faid to have a large harbour, but fuch a bar, that no great fhips can enter; yet the river is navigable within land, by veffels of five hundred ton, which might, it is thought, reach the mines of Zacatecas.
Machoacan province is bounded on the north by part of Panuco, and the provinces of Zacatecas and Guadalajara; on the eaft, by another part of Panuco, and Mexico Proper; on the fouth, by the latter, and the South Sea, which together with Xalifco, alfo bounds it on the weft and northweft. It extends 70 leagues along the fea, and is of a greater length up the land. It lies in an extraordinary good climate, and fertile foil, and is withal fo wholfome a country, that fick people come hither for health, from other parts of Mexico. It has fome medicinal waters, which have reveral degrees of heat, and abounds with rivers and ftreams of clear brackifh waters, which are of admirable ufe; for though she meadows, through which they run, produce a rank kind of grals; yet, inftead of prejudicing their cattle, it makes then exceeding fat and fine. Here is a numerous breed of good horfes, both for the faddle and harnefs; likewife, plenty of honey and wax, and of all forts of fifh. Corn of all kinds grows here in plenty, fo that it has fometimes come up to one hundred fold ; and no country in the world is better furnifhed with trees, either for fruit or timber. It's commodities are farfaparilla, fulphur, indico, caffia, faflafras, cacao, ambergris, vanillas, bides, wool, cotton, filk, fugar, \&c. But the chief commodity of all, is filver, of which here are feveral mines (befides others of gold and copper), and it's roots, called mechoacan, and fometimes white rhubarb, from $i^{t}$ 's colour and effects : which was formerly in very high repute, and fold in Eürope at a great rate ; but by reafon of jalap being found to anfwer all intentions better, it is of late much funk both in reputation and price.
Here are feveral kinds of trees, noted for their odoriferous gums and balfams. Befides their great and fmall cattle, here are herds of fwine, without owners, wild boars, hares and rabbets, and, among others, that fort of goats in which the bezoar is found. And Francis Ximenes obferves, there is a fort of bezoar fourid in the rivers, which he fays, is wathed down from the mountains, where there is a great ftore of bole-armoniac.
Colima is a large rich town, upon the South Sea, and near the borders of Xalifco, in the moft pleafant and fruitful valley in all Mexico, producing much cacao, caffia, and other things of value, befides fome gold. In the neighbourhood grows the famous plant alcacazan, which is reckoned a catholicon for reftoring frength, and a fpecific againft all poilon. The natives apply the leaves to the part affected, and judge of the fuccefs of it's operation by their fticking or falling off.
Nativioad, in this neighbourhood, is faid to be a good port, from whence fhips fail for the Philippine illands; it lies not far from cape Corientes, and ferves as a harbour to Colima. Guadalajara audience, or the kingdom of New Galicia, lies farthef to the north of the three audiences of New Spain, though it is on the coaft of the Souch Sea. It extends betwixt north latitude 20 and 25 . On the eaft and fouth it has Panuco, and feveral provinces of the audience of Mexico; on the north the kingdom of New Mexico; and, on the weft it is wathed by the South Sea and the gulph of California, on whofe coaft it fretches above 200 leagues, from fouth eaft to north-weft; but it is yery irregular within land, and the north part efpecially is very narrow, yet in rome places it is reckoned 500 miles broad.
l's climate differs much, by reafon of it's fituation, partly in the temperate, and partly in the torrid zone; yet it is far more temperate than any other part of New Spain, and in the general, reckoned wholefome; fo that it is common for people to live here to an hundred years of age.
The land, for the moft part is fo mountainous and woody, that the coaft looks like a defert. It is faid the Spaniards have deferted the coaft on purpofe, that if flrangers mould land they may not find any temptation to flay, becaufe, befides the filver mines already mentioned, there have been fome of gold lately difcovered near Compoftella, of very great vaVol. II.

## M E X

Iue: and they chufe to tranfport the ore by mules to Mexico, rather than expofe fo valuable a product to be intercepted by foreigners, if they ventured to fend it in fmall veffiels by fea. The country upon the whole, is precty fruifful, and produces European and Indian grain in fuch plenty, that the ormer yields an hundred fold; though it is often deftroyed by locufts.
Here are moft forts of vegetables, better than ours, plenty of ugar-canes, cocheneal, and bees without ftings.
The paftures abound with all forts of catcle, and the woods with venifon, pines, and oaks, but are infefted by wolves, and fcorpions. Here are pepper, and medicinal herbs, that cure all fores, green ftones, that are a specific againit the gravel, fragrant flowers, valuable drugs, and rich mines of filver, copper, and lead. On the coaft, alfo, there is a good pearl-fifhery, The better fort of spaniards are matters of the filver mines, and fubfift by trade.
This audience is fubdivided into feven provinces, as follow: Guadalajara Proper, which is the principal province, and gives name to the whole audience, is bounded on the eaft and fouth by the province of Mechoacan; on the north by that of Xalifco; and a corner of it is wafhed by the South Sea on the weft. Notwithflanding it's fituation under the torrid zonq, it is healthful, temperate, and fruitful, producing not only good timber, but European and Indian wheat in great plenty, and all fruits of both countries, befides the vaft treafures of filver commonly taken out of it's mines.
Xalisco province, the moff fouthern on the coaft, is wafhtd by the South Sea on the fouth and welt; bounded by the provinces of Guadalajara and Mechoacan on the eaft ; and teparated from Chiamettan on the north, by a narrow llip of land belonging to the province of Guadalajara, and running out to the fea.
It abounds with Indlan wheat and filver mines, but has very little cattle of any fort. According to Herrera, Menardes, and Laet, from this province is brought the oil, as the Spaniards call it, of the infernal fig-tree, which, among other excellent qualities, is good for diffolving tumours, and expelling wind and all cold humours, by anointing the belly, and taking a few drops of it in a glafs of wine, as alfo by clyfters It is likewife of excelient ufe for ulcessin the head, and deafnefs. Though Xalrsco, an ancient city, is the capital, yet that which is the moft confiderable of the province is Composthlla, near the South Sca, about 30 miles to the north of it. It is a rich town, and has feveral mines of filver at St. Pecaque, in it's neighbourhood, where the Spaniards keep many hundred flaves to work in them; but the city is a bad fituation, the foil being fo barren that there is no pafture for cattle.
Chramettan province lies under the tropic of Cancer, one half in the temperate, and the other in the torrid zone, ftretched along the South Sea on the weit; bounded by Zeca tecas on the north-eaft; by Culiacan on the north-weft; and by Xalifco and Guadalajara on the fouth and fouth-eaft. It is a fruitful foil, and yields much wax and honey, befides mines of filver. The river of St. Jago falls into the fea here. t is one of the chief on the coaft, and is balf a mile broad at the mouth, but much broader within, where three or four rivers meet together. It has 10 feet water on the bar at ebb.
The chief town here is St. Sebastian, on a river of the fame name, towards the mines of Zacatecas, a little place, where they purify the filver ore.
Zacatecas province, fo called from it's ancient inhabitants, is an inland country, well inhabited, and abounding with large boroughs. It has New Bifcay on the north; Panuco on the eaft; Mechoacan, Guadalajara, and Chiamettan on the fouth; and part of Chiamettan and Culiacan on the weft. It is, like the former, part in the temperate and part in the torrid zone, is about 100 leagues in length, and 45 where broadeft. The weft part of this province would not be inhabited were it not for it's mines, which are many, and the richeft in America, for in all other refpeds it is of no value, as having no water, and producing no fort of provifion; but the eaft part abounds with frult, corn, and has many woods full of deer
New Biscay province is bounded by New Mexico on the north; by part of Florida, and Panuco on the eaft; by Zacatecas on the fouth; and by Culiacan on the weft. It is about 100 leagues from eaft to weft, and 120 from north to fouth. It's being well watered makes it fruitful; and it's fituation a little above the tropic of Cancer renders it temperate. Though there is a mountainous barren part, called Topia, yet mof of the country is pleafant, abounding with all manner of provifions; and though it has nocommenication with the fea, yet the inbabitants are very rich, not oply in corn, cattle, \&c. but alfo in filver mines and fugar works.
St. Barbara, St. John's, and Ende, are three litile towns; built by the Spaniards for defence of the large filver mines in the neighbourhood, and are therefore well inhabited, particularly the firft, which lies 243 miles north of Zacatecas The fecond lies about 70 miles north of that, and is equally rich in mines and minerals; and the third, which is alforich in mines, lies 70 miles weft of the fecond. Thefe are the mines which Hennepin fays M. De La Salle aimed at, when

T t:

he ranged the coaft of I lorida, on pretence of feeking the mourh of the Miffifippi.
Culacan province has that of Cinaloa on the north; New Bifcay, and the Zacatecas, on the eaft; Chiamettan on the fouth; and the gulph of California on the weft. It abounds with all forts of fruits. The great river La Sal, in this country, is well inhabited on each lide. Dampier fays, it is a falt lake, in which there is good riding, though it has a narrow entrance, and that it runs 12 leagues eaft, parallel with the fhore. There are feveral Spanifh farms and faltponds about it.
Cinaloa province, which is the moft northern of this audience, and ftretches out farther to the weft, has the gulph of California on the weft; the province of Culiacan on the of California on the weft; the province of Culiacan on the
fouth; and the kingdom of New Mexico on the north and eatt. The air is ferene and wholfome, and, befides paftures abounding with cattle of all kinds, the foil bears all forts of fruit and grain, particularly Indian wheat, as alfo cotton, with the manufacture of which the natives cloath themfelves, after the Mexican fafbion.
New Leon, a province between New Bifcay and the gulph of Mexico; but all the account we find of it is in Martiniere. He calls it a kingdom, and bounds it on the north and northeaft by the Rio Brava, or Del Nort, which falls into the gulph abovementioned; on the fouth by the province of Panuco, or the county of Guafteca; and, on the weft, by New Bifcay; but fays it has no towns, nor any confiderable fettlements; yet has many mountains, in which there are mines, whereof the moff known are thofe of Cinaluo to the north, and Guanahate to the fouth.
NEW MEXICO, fo called becaufe of it's being difcovered fince the Old Mexico, or New Spain, which we latt defrribed, is fometimes ftiled by the Spaniards a kingdom, and fometimes a province. It is bounded on the north by high mountains, beyond which is a country altogether unknown; by Louifiana on the eaft; by fome of the provinces of New Spain on the fouth; and, on the weft, by the gulph of California and the Rio Colorado.
But whether the limits on the north and eaft fhould be contracted or extended, is what we fhall not pretend to determine, for there are no people shat we know of to the north of New Mexico, nor is there a twentieth part of the country within the limits fipecified that is either cultivated or inhabited; nor is it any more certain how we might venture to extend the limits of it on the eaft fide towards Florida, no one having attempted to fix the bounds between thefe two countries, except the French, who have introduced Louisiana into their maps, in the room of Florida, bounding it with the Britith plantations on the eaft, and New Mexico on the weft. The extent has not been difcovered: however, this may be faid, that what has been difcovered extends 300 leagues north from New Bifcay; and there is no lefs from the ftraights of California on the welt, towards Florida and New France on the ealt.
As it lies in the midft of the temperate zone, it is a very pleafant climate; the fummers are very warm, and the winters pretty fharp; but then the former are neither fultry nor unwholfome, and the latter are clear, without being intolerable. The weather, upon the whole, is, generally fpeaking, agreeable to the feafon, and refrefhing to an European conititution.
The foil is beautifully interfperfed with rifing grounds, and with rivers well fored with fich; abounds both with fruit and timber-trees: produces turquoifes, emeralds, and other precious fones, and has mines of gold and filver, and feeds all forts of wild and tame cattle, efpecially cows. Here are alfo feveral forts of fowl : and, in fact, it is faid to be as pleafant, plentiful, and rich a country as any in the world. There are few great rivers in it, but feveral littie ones run into the gulph of Mexico ; and there are divers bays and creeks on that coaft, which might eafily be converted into ports.
The greateft part of this vaft country is ftill in the hands of the natives.
Of the various nations in this large territory, mentioned by the Spaniards, the principal are the Apaches. Thefe thinking themfelves. aggrieved by the Spanifh government, about the clofe of the laft century, made a general infurrection, and did a vaft deal of mifchief; but were at laft fuppreffed, and have fince been curbed by ftronger garrifons. Mr. Dampier has more than once mentioned the possibility of penetrating here to the cold mines, by making a descent on the shore, opposite to California; AND, it IS CERTAIN, ALSO, ON THE OTHER HAND, THAT the Spaniards here will run no little hazards from their neighbours, the French, [how the English] if the latter fhould come to have numerous fettements on the river Mississippi. See California, Mississippri.
The particular nations of this kingdom, or province, being not difinguifhed from one another by any certain limits, we cannot give any particular divifion of it into provinces and towns, as has been our method almoft every where elfe, with relation to the principal places of trade; we muft content ourcdves, therefore, with thewing the face of the
country, from the beft general account that we can find of it, which is from the Spanifh travellers.
The following defcription of this country, is taken from the accounts given by father Alonfo de Benavides, printed an hundred years ago at Madrid, with fome fmall additions, from other perfons who travelled here, as well as he, and from later accounts, which may be feen in Laet, Herrera, and others fince them.
The way to it's capital, Santa Fé, (of which we thall prefently fpeak) is through the province of Conchos, which is parted from New Bifcay by the river of the fame name. Next follow the Tobolos, Tarrahumares, Tepoanes, Tomites, Sumas, Hanos, and other favage nations, for 100 leagues north and north-weft. Next follow the Apaches, a mighty nation; and here again we meet the north river, where New Mexico properly commences, and extends 100 leagues north from St. Anthony of Seneca, the firft town of the Biroros, to the town of St. Jerome, in the province of the Taoros. New Mexico, properly fo called, contained feveral nations in this order. At the north river begins that of the Piros, a civilized people, who are clad, dwell in houfes, are fubjects to their chiefs, and have abundance of Indian wheat, other grain, and cotton; the foil being fruitful and the air wholfome. The Tebas are next, inbabiting 15 towns; then the Queres, feven; and next the Tompires, 15; the chief of whom are the Chilifi. Farther to the north are the Tanos, in five towns; and beyond them the Peicis, in one great town. Seven leagues weft of them is the metropolis Santa Fé, where only 250 Spaniards, not above 50 of thern foldiers, kept all this valtgountry in awe, only by the terror of their name; but theif numbers are fince mightily increafed, not only there, but in all the other towns we mentioned. Not far from Santa Fé, towards the north river, live the Teoas, in eight villages, being the firft who embraced .Chriftanity, and moft paffionate lovers of the Spaniards. Weft of them are the Hemes; and to the north of them the Picaries; and beyond them the Taofits. Again, wett of the Queres, is the town of Acoma, above-mentioned; and, 30 leagues farther weft, the Zanis, in 12 towns; and, at the fame diftance, the Moquis: all of thefe are now Chriftians, whofe lands are fruitful, and abounding in cattle and wild bealts, as do their rivers with excellent fih.
All this country of New Mexico, properly fo called, is almoft encompaffed by the numerous and warlike nations of the Apaches, above-mentioned, differing from all the other natives in language, being clad in deer-1kins, and living in tents, which they carry with them wherever they go.
Some geographers divide New Mexico into 15 provinces, many of the Spanifh writers into 18 , of which they give us barely the names; but the lateft geographers feem to divide it only into five. On the other hand, fome writers have fubdivided it into 20 , nay 25 provinces, and furnifhed us with the names of as many towns; but we find no defcription of any, but that which is by all agreed on to be the capital city, viz.
SANTA $\mathrm{FE}^{\prime}$. It ftands 130 leagues from the fea, near the fource of that Rio Del Nort which runs a great way through the country fouthward, and then bending eaft, falls into the gulph of Mexico. It is faid to be a rich city, regularly buile, and is the fee of a bimop, fuffragan of Mexico, as well as the feat of the governor of the country.
California, though reckoned a part of New Mexico, yet we have treated it feparately, for the fake of making fuch remarks which more particularly concern the intereft of GreatBritain. See California.

## Remarks before the laft war, and Deffnitive Treaty

 of 1763.From this view of Mexico belonging to the Spaniards, we may pafs a good judgment of the immenfe treafures of this part of America; and, confequently, how unfpeakably beneficial thefe extenfive territories muft prove to the Spanilh monarchy, when the commercial fyftem which that court has adopted fhall be brought to maturity. See the articles Biscay, CAtalonia, Fisheries, Indian-House of Spain, Spain, and Spanish America, Acapulco, America.
The Spaniards, though an indolent nation, whofe colonies were really fo rich, to great, and fo far extended, as were enough even to glut their utmoff avarice, yet gave not over, 'till, as it were, they fat fill, becaufe they had no more worlds to fearch for; or, at leaft, 'till there were no more gold or filver mines to difcover.
The Portugueze, though an effeminate, haughty; and, as it were, a decayed nation in trade, ye how do they go on daily were, adecayed nation in trade, ye how in Africa, as well on the eaft fide as on the weft? And how do they increafe their commerce in all thofe countries, by reducing the numerous nations in Melinda and Zanguebar, in Congo, in Angola, to the direction, ceconomy, and to the government of commerce? whereby they fubdue whole nations of favages to a regular life, and, by that means, bring them to be fublervient to trade as well as to government.

## M E X

MEX

But how little has Great-Britain done of this kind? How littie have we gained upon the natives of America in all our colonies? How few of them are brought to live among us, how few to be fubject to us? All our colonies feem to be carried on upon the mere frength of our own people, nor can we fay that we bave any one confiderable nation reduced to intire obedience, and brought to live under the regularity and direction of a civil government, in all our plantations; a very few in New England only excepted.
As for new colonies and conquefts, how do we feem intirely to give over even the thoughts of them, though the fcene is fo large, the variety fo great, and the advantages fo many? On the contrary, we feem to forget the glorious improvements of our anceftors, fuch as the great Drake, Cavendifh, Smith, Greenfield, Somers, and, above all, the yet greater Sir Walter Raleigh, upon the foot of whofe genius almolt all the Englim difcovertes were made, and all the colonies and plantations, which now form what they call the Englifh empire in America, were eftablifhed.- Thefe we feem to fit down with, as if we had done our utmoft, were fully fatisfied with what we have, that the enterprizing genius was buried with the old difcoverers, and there was neither room in the world, or inclination in the people, to look any farther.
Whereas, on the contrary, the world prefents us with large fcenes of trade, new platforms for bufinefs, enough to prompr our ambition, and even to glut our avarice; yet we feem to have little fpirit for the adventure: and how fhould we, 'till our men in power are brought to revive this firit? And the parliament, we are perfuaded, will not want zeal to forward laudable endcayours.
Nor is there any want of people amongft un ; on the contrary, here are thoufands of families who want bufinels, want employment, want encouragement; and many that want no ftocks to carry with them, and are ready to go abroad, were the adventuring firit revived, and fome men fired with warmth for the undertaking, and but vigorous enough to make the beginning.
This is the way to raife new worlds of commerce, to enlarge and extend new funds of trade, to open doors for an increafe of thipping and manufacture. The places are fo many, and the advantages fo great, for the making fuch attempts, that nothing is more wonderful of it's kind, than to fee how backward we are to pufh on our own advantages, and to plant in the moft agreeable climate in the world, in a manner fo advantageous as never to be fupplanted, and fuch as thould make the Englifh poffeffions abroad five times as great, as opulent, and as profitable to Old England, as they have ever been yee.
The defcription of thefe places, fo proper for planting, fo fuited for commerce, and fo qualified to enrich and aggrandize the Britifh nation, is thewn throughout the courfe of this work; and, when the trading genius revives, and the adventuring fpirit is reftored amongft us, then it will appear there will neither want encouragement to fuch undertakings, or adventurers to embrace the encouragements which offer. Nothing is to me more evident, than that the civilizing the nations where we and other Europeans are already fettled, bringing the naked favages to cloath, and inftructing barbarous nations how to live, has had a vifible effect already in this very article. Thofe nations call upon us every year for more groods than they did the year before, as well woollen manufacluses as others. The Portugueze colonies in the Brazils, and on the eaft cóaft of Africa, are an unanfwcrable proof of this. The European manufactures now fent to thofe colonies, are above five times as many as were fent 30 or 40 years ago; and yet the Europoan inhabitants in thofe colonies are not increafed in proportion: we might give inftances of the like in other places abroad, and that not a few : fee in particular the articles East-India Trade in general, East-India Company of England, Dutch East-India Company, African Trade, English African Comipany, British America, California.
New planting colonies, and farther improving thofe already fettled, will effectually increafe this improvement: for like caufes will have like effects: cloathing new nations cannot fail of increafing the demand of goods, becaufe it increafes the confumption, and that increafed demand is the profperity of our trade.
Here then is an undicovered ocean of commerce laid open to us; and many fpecimens are humbly fuggefted throughout this work, which, if entered upon with the authority, power, and vigour of the public, would open fuch new channels of traffic among us, as it would be very hard for our manufacturers to overfock the markets, and as no petty prohibitions in Europe could fop the current of it. - This, we conceive, is one effential part of the grand commercial fyftem which this nation ought fteadily and refolutely to purfue.
It is furprizing, that in a nation where fuch encouragements are given for planting and improving, where colonies have been fettled, and plantations made with fuch fuccefs; where we may truly be faid to have filled the world with the wonders of our growing pofieffions, and where we have added not provinces only, but kingdoms to the Britifh dominions, and have launched out to fo great an extent of commerce,

Ince the days of our great Elizabeth: that now we fhould, as it were, put a full ftop at once to all our great defigns, check the humour of increafing, and, from a kind of myfterious unaccountable fupidity, tum indolent in this refpect, when other nations are purfuing the contrary meafures; not as if we found no more room to launch out, for the contrary to that is apparent; but as if we had enough, and fought no more dominions wherein to propagate and extend our maritime commerce:
In all other cafes, and among all other nations, fuccefs encourages men to go on; increafing they endeavour to increafe, Crefcit amor nummi, \&c. fo in trade, the enlarging the bounds of a plantation, the fwelling and thriving of commerce, and the advantages to the merchant and rlanter in all thofe things, certainly increafes the defire of planting, enlarges commerce, and fires the merchant with the defire of extending his adventures, fearching out new colonies, forming new fchemes of trade, and pufhing at new dif coveries, for the increafe of his trading advantages.

Remarks on our article Mexico fince the laft war, and the Definitive Treaty of peacein 1763 ; occafioned by the reported infraction on the part of the $\mathrm{S}_{\text {pa- }}$ niards, of the XVIIth article of the faid treaty, relative to our logwood cutters fettled in the bay of Honduras. Sce our article Logwood

Let any gentleman perufe this our article of Mexico or New Spain; let him confider only that part of it, La Vera Crez, and he cannot but entertain a very bigh and exalted idea of the prodigious trealures of this part of NEw Spain: and mutt it not make the heart of a Briton glad, that he is foon likely to have an eftablifhed near neighbourhood to a place as actually rich as it is reprefented, without exaggeration? Mut not every Englifhman rejoice, that now he is intitled to a fituation in the Bay of Mexico at all; a fituation, thaugh not at prefent in a very wealthy condition; yet from its proximity to millions of Mexican treasures, may prove lucky enough to become inftrumental in fome meafure to put Britons one day in poffeflion of thofe very treafures, which have excited Spain to treat this kingdom fo ill for many years pait. For if the Spanifh dons fhould thew their fupercillious airs againft Englifhmen, and fhall dare to commit depredations upon them as they did in the times of a pacific Britifh adminiftration; fhould our Spanifh neighbours prefume again to cut off the ears of Britons, as they heretofore have done, in the exercife of their rightful navigation to, and from their own colonies, and thall offer to fearch Britifh fhips on the high feas, and moleft our logwood cutters in their privileges of carrying on that trade, which they have fo lately acknowledged our right to do: if the treafures of Spain make them forget themfelves, we hope they will remember, that that very nation who lately difpolfeled them of the Havannaf is able to do fo again; nay, we conceive, that we are in a much better capacity to do it now than we were before the laft war. For can the Spaniards flatter themfelves that, on another rupture with them, we thall not make the beft ufe of our near neighbourhood to that key of the Spanifh Indies? Can they fuppofe that this nation will not render the Ports of St. Augustine in the Gulph of Floripa, as well as Pengacofa and Mobille in the Gutph or Mexico, and alfo the right of navigation to, and from the Mississippr, through that gulph, with their poffeffion of the Eloridas, as beneficial as they will admit of ? The Spanifh miniftry cannot think or fuppofe otherwife And if the court of Spain fhould again refolve upon a frefh rupture with Great-Britain, we cannot doubt but the prefent near neighbourhood to the Havannah, will greatly contribute to enable us to retake the fame, and that both at lefs danger and lefs expence than we were at in the laft war. We may have a good fleet in the harbout of Pensacola, there being water fufficient for fixty gun hips; and even feventy gun thips, the largeft requifite in that country in time of war, if they were built flat-bottomed, like the Dutch fhips, might pafs every where in that harbour. Nor would our fituation a Mobille be ufelefs on fuch an occafion: and as the Floridas are likely to grow populous, and to receive frength from Georgia and South Carolina, \&c. we fhould not be deffitute of conliderable aid of men and provifions to man and viftual a good fleet, at far lefs expence than we have been obliged to do. Our fleets in the gulph of Mexico, together with another from Jamaica, would not find any great difficulty, we apprehend, to become ance more mafters of the Havannab and if that fhould prove the cafe again, we can hardly believe that it would be in the power of Spain, and France aeting in concert with them, to difpofiefs us: and if fo, it is reafonable to think that the court of England will rather be inclined at any future peace, to keep it as a pledge for the future good behaviour of the Spaniards, than to reftore it to them again; for Great-Britain, having for near thele forty years experienced the maltreatment of the Spaniards, who have occafioned the nation to be burthened with Millions upon Millions of Public Debts and Taxes, cannot confiftent with her own fafety and preferyation, be fuppofed
confide in the Spaniards any more after their flagrant violation fo fuddenly of the Demiditive Treaty. Nor would Spain dare to break the treaty, fo foon efpecially, did they fuppofe, that we are not in a capacity to refent their treatment, and retake and keep the Havannah for ever after, with no lefs care than hitherto we have done our European Gibraltar; and if we determine to take and hold this key of the Spanifh treafure, what hinders but we may become abfolute mafters of the whole Mexican gulph, and poffefs ourfelves of the immenfe wealth of this part of America. We could then repoffefs ourfelves of the bay of Campeachy on the one fide of the gulph, as we are poffeffed of the Floridas on the other; and what hope could Spain have to difpoffers us? The Mexicans could not refift the maritime force of England, and when we had the Havannah, France could not affift Spain to wreft it out of our hands; and therefore it feems no way unreafonable or vifionary to fuppofe, that another immediate Spanifh war, would put Great-Britain in the full poffeffion of all the commerce and treafures of Mexico. Was this the cafe, fuch new acquifition of trade and wealth, would put us in a capacity to difcharge thofe public debts, and aminilate thofe burthenfome taxes, which the Spaniards have been inftrumental to lay upon this kingdom: and without we do refolve to make ourfelves amends for the prodigious expence this nation has put us to, fince the peace of Utrecht, what will avail going to war with them more? We may as well fet down tamely with infult after infult, 'till they fhall repeat their depredations as formerly, fearch our fhips on the high feas in their rightful navigation to and from our own colonies, and cut off the ears of Britons as they heretofore have done. We muft expect a repetition of the like fcene over again; and be contented with additional debts and taxes, 'till we can raife no more money to go to war at all, and then farewel the trade and navigation of thefe kingdoms!
After this nation has fuftained the expence of 500 millions of money by the four latt great wars, 'tis full time to think of reaping fome equivalent compenfation for fo immenfe a burthen, which we have bore for fo many years. And who is to intimidate us from pofieffing the treafures of Mexico for our reimburfement?
Our poffeflions in the gulphs of Florida and Mexico, feems to have laid a very good foundation for this further new acquifition; an acquifition, that would amply repay the expence if taken; and if the Spaniards once more, and fo fuddenly, and fo ungeneroufly provoke us to quarrel with them, we are inclined to believe, it will prove of unfpeakable benefit and advantage to this kingdom, by opening to us fuch new fcenes of commerce we flrould never have thought of obtaining.
While this is writing, a letter from our colony of Georgia in North America concludes thus: 'We are certainly informed, that the French have ceded New Orleans, and all their territories on the weft fide of the Mississippi river, to the Spaniards; which is a very favourable event for thefe fouthern provinces, as the latter bave no influence over the Indians, and are by no means that enterprizing people which the French are : and, in thort, we are under no kind of apprehenfion of their difturbing our fettlements. By this ceffion the French have now no poffeffion of any part of the continent of North-America. ${ }^{\text {P }}$
We may therefore, be the more likely one day, to get and keep poffeffion of the Spanifh Mexican treafures, if they provoke the crown of Britain to a frefh rupture with the Spaniards. See our article Logwood.
MIDDLESEX, a county in England, is divided from Surry on the fouth by the Thames, from Effex on the eaft by the river Lea, and the Meere ditch, from Buckinghamfhire on the weft by the river Coln and the Shore ditch, and it has Hertfordfhire on the north. It is not above 21 miles in length, fcarce 15 in breadth, and not above 80 miles in circumference. It comprehending the two great cities of London and Weftminfter, and thofe rich villages of Hackney, Highgate, and Hampftead, on the north-fide of thofe cities and their fuburbs, it is by much the moft opulent and populous county in England.
It's air in general is fweet and wholfome; and, as the whole county is inade rich by the neighbourhood of thofe two fplendid cities, fo it's foil is extremely improved by their compoft. LONDON is the metropolis of England, the capital of all the Britifh dominions, and the moft renowed city in the whole world, as well for the numbers as for the wealth of it's inhabitants: for it's univerfal commerce, it's admirable polity, it's eftablifhments for learning as well as trade. It is fituate on the north-fide of the Thames, with a gentle rife from that noble river, and ftands on a gravelly loamy foil, which greatly conduces to the health of it's inhabitants. It is environed with fine kitchen-gardens, delightful plains, and beautiful elevations, that are adorned with a great number of fplendid country-feats of it's citizens.
The dimenfions of London within the walls, are 3 miles and 165 feet, but, taking in that world of buildings from Blackwall in the eaft to Tothill-fields in the weft, and beyond Grofvenor and Hanover-fquares, they are in length from Knightfbridge beyond Hyde-park corner to Poplar, 7 miles $\underset{\text { x }}{\text { x }}$,
and from Poplar along by the Thames to Peterborough houfe beyond Weftminfter horie-ferry, above 6 miles $\frac{3}{7}$ : and it's breadth, from the ftones-end at Newington-butts in Surry, to Jefferies's alms-houfes in Kingfand-road in Middiefex, 3 miles and 3I poles; though in other places, as from Peter-borough-houfe to Montague-houfe, it is bur 2 miles; and in fome places not half a mile, as in Wapping. It's circumference, reckoning from Peterborough-houfe by Tothill-fields and the fkirts of the town to Limehoufe, is, at leaft, 18 miles. $V$ arious have been the conjectures as to the number of inhabitants. The moft accurate accounts we have, reckon them between 7 and 800,000 within the walls, and it's dependencies without at $\mathrm{I}, 500,000$.
Certain it is, that this city may boaft itfelf to be the largeft in extent, the molt populous, and the beft inhabited, and that by as civil, rich, and fober a people, their number being confidered, as any in the world. And, for a general trade throughout the univerfe, all others muft give her the precedence.
In order to give the reader a more diffirct idea of the general commerce of this city, we fhall fubjoin an account of the feveral companies of the city of London, according to their precedence, beginning with the 12 principal ones, of one of which the lord-mayors have generally made themlelves free at their election, if they were not fo before; for they are not only the moft ancient, but the richeft, many of them having had the henour of kings and princes to be their mernbers, the apartments of their hall's being fit to entertain a monarch.

In 1724, Mr. Betton, a Turkey merchant, left 26,000 I. in truft ; one moiety of the profits of it to be always ap: plied to the ranfom of Britifh captives from Moorifh flavery; the other for the poor of the company, and to the charity-fchools in the city and it's liberty.

They are exempt from ward and parifh offices, and have a facious phyfic-garden at Chelfea; which, in 1721 , was granted to the company for ever by Sir Hans Sloane, Bart. the lord of the manor, on condition of their paying a quit rent of 5 l . and continuing it always as a phyficgarden, and of prefenting every year to the Royal Society 50 famples of different forts of plants there grown, 'till they amount to 2000 .

## M I D

3. The Levant, or Turkey Company, was at firf incorporated by queen Elizabeth, and their privileges confirmed and augmented in the reign of king James 1 . when they were impowered to trade to the Levant, or eaftern part of the Mediterranean, particularly to Smyrna, Aleppo, Conftantinople, Cyprus, Grand Cairo, Alexandria, \&c. This trade is now open to every merchant who pays a fmall confideration. The whole is carried on from the city of London. The goods exported from hence to Turkey are chiefly broad cloth, long ells, tin, pewter, lead, feel, iron, \&c. and the Englifh merchants frequently buy up French and Lifbon fugars to tranfport thither, as well as bullion from Cadiz. The chief commodities imported hither from Turkey, are raw-filk, goat's wool, grogram-yarn, cotton-wool and yarn, dyeing ftuffs of various kinds, rhubarb, galls, and other drugs, leather, cotton, \&c. \$See Levant Trade.
4: Here alfo the African Company is fetted, which has proved more beneficial to this city and our American plantations, than to itfelf. See the article English African Company.
4. The Hudson's-Bay Company, incorporated by king Charies II. They carry on from the city of London chiefly, a profitable trade to all the places with Hudfon's-Bay and Streights, where they have fundry factories, to which the natives bring their fine beaver, and other rich furrs and commodities of the country, and exchange them for the Englifh woollen manufactures, haberdafhery, hard-wares, \&cc. See the article Hudson's-Bay Company.
5. The moft confiderable by much of all the trading companies in this city, was that of the South Sea, eftabilifhed by act of parliament in the gth year of queen Anne, for paying off a debt of $9,177,967$ l. due from the government, and not provided for by parliament, for erecting a corporation to carry on a trade to the South Sea, and for encouragement of the fifhery, \&c.-By another the following year, the company (after the difcharge of the debt due to them from the government) was made perpetual. In the year 1714, the capital of the company was enlarged by act of parliament to 10 millions, for which they received intereft at 6 per cent. - In the never-to-be-forgotten year 1720, an act of parliament paffed, to enable the faid company to increale their capital, by redeeming feveral of the public debts. By the account of fubfriptions upon this occafion, the capital fock of the company was increafed from to to $33,543,2,631.8 \mathrm{~s} .3 \mathrm{~d}$. For the effects hereof, fee the article South Sea Company, and Bubeles.
By the firft-mentioned act, the corporation was vefted in the fole trade to and from all countries on the eaft fide of America, from the river Oroonoko to the fouthermoft part of Terra del Fuego; and on the weft fide thereof, from the fouthermoft parc of the faid Terra del Fuego, through the South Sea to the moft northern part of America, not exceeding 300 miles from the continent on the faid weft fide (excepting Brafil, \&xc. in poffeffion of the king of Portugal, and Surinam in that of the States General) and the company was to be the fole proprietors of all iflands, forts, \&c. which they frould difcover within thofe limis, to be held under the annual rent of an ounce of gold.- By letters patent alfo from the crown, one pound in every hundred pounds capital ftock, was directed to be raifed by the members, and employed in improving, enlarging, and carrying on the filhery of this kingdom for the ufe of the company.-In purfuance of the faid firft act, the proprietors of navy-bills and tickets, and army-debentures, were incorporated by the name of The Company of Merchants of Great-Britain trading to the South Seas, and other parts of America, and for encouraging the firhery.-And, on the peace that followed in 1713 , queen Anne transferred to the faid company the benefit of the affiento contract made with Spain. [See Assiento Contract]
The company's application to trade with ro large a capital, the effects of their traffic both to Greenland and the WeftIndies, and caufes thereof, and how much they might have contributed to the paying off, by the reduction of intereft, the national debt, and eftablifhing the finking fund, will appear under the article South Sea company; where alfo will appear fome fecret hiftory; which will fhew how much the profperity of this company has been regarded, and how greatly the trading intereft of the city of London, as well as that of the whole kingdom, might have been promoted, in conjunction with that of the company. See South Sea Company
We now proceed to, though we mention it the laft, the oldeft of all the incorporated focieties of merchants, who chiefly carry on their trade frona the city of London; that is, the Hamburgh company. They were originally ftiled, the Merchants of the Staple, i. e. of the wool-ftaple, and afterwards merchant adventurers. - They were firft inand afterwards merchant ad I. and, by leave of the duke of Brabant, made Antwerp their Ataple, or mart for the LowCountries, where the woollen manufactures flourifhed more, at that time, than in any other country; for the company's
bufinefs, at firft, feems to have been chiefly the fending of our Englifh wool unwrought.
King Edward III. obferving the prodigious trade of the Netherlands to proceed from that city's being made the ftaple for our wool, and what great fums were paid by England for the cloth that was made there of it's own wool, removed the wool-ftaple, firft to Calais, in his French territories, and then to feveral great towns in England, with a defign to have our wool manufactured at home; but, unhappily for Britain, he was fo deeply engaged in the French wars, that he did not purfue it.
Queen Elizabeth enlarged the trade of this company of adventurers, and impowered them to treat with the princes and fates of Germany, for a proper place for the ftaple or mart of the woollen manufactures they exported, which was at length fixed at Hamburgh; from whence they obtained the name of the Hamburgh company. They had alfo Dort, in Holland, affigned them for another mart. This trade, at prefent, lies open for every merchant, on paying a trifing fum to the company; fo that this fociety now have very litule advantage from their incorporation. See the article $\mathrm{H}_{\text {am- }}$ burgh.
In order to encourage, and render the trade of this great city the more fecure, both to the feparate, as well as the joint adventurers, here is eftablifhed, by act of parliament, two public offices, or corporations, for the infurance of ihips and merchandizes, from hazards by fea, viz. The one called the Royal Exchange Assurance company, which is kept in a part of that building; and the other called the Lonbon Assurance company, kept near the Royal. Exchange.-See the article Assurance.
Befides thefe aflurance offices from the hazards at fea, it may not be amifs to fhew the fplendor of this city, to take notice that there are other public offices eftablifhed, for infuring both houfes, goods and merchandizes, from lofs and damage by fire; which keep a number of firemen in pay, with filver badges of their refpective offices, to affift in quenching fires: there are others again, of infurance upon lives, from which the fubfrribing furvivor very often has a conformable dividend, upon the death of the relation or friend named in the policy, for paying a fmall yearly contribution while the deceafed lived.
We fhall now take a view of the English Shipping, that trade to and from the port of London, from a lift of all the fhips that belonged to this city, which was taken in the year 1732. From the general regifter at the cuftom-houre, it appears, that the total number of veffels is I 417 , and of the men that navigate them, 21,797. And the number of fhips that arrived at forcign parts, as well as from the feveral ports of Great-Britain, in one year from Chriftmas 1727, viz. Britih fhips from ports beyond the fea, $\mathbf{3} 839$, foreign fhips, $213^{*}$, and coafters, 6837 ; in the whole, 888 g . It is obferved, that this number, prodigious as it is, has been confiderably increafed in divers years fince: for in that part of the Thames, which is poperly the harbour, and where the hips ufually deliver and take in their cargoes, viz. that which is properly called the Pool, from Limehoule-reach to the cuftom-houfequav, \&cc. there have been fometimes computed 2000 fail of all forts, that really go to fea, befide barges, or lighters and yachrs. And in the river, from Londonbridge to Blackwall, are three wet-docks for repairing ther, and 33 yards for building them; including the buildng of lighters, hoys, \&c. but excluding all boat-building, wherry, and barge-building above-bridge.
*The average of the burthen of foreicn Ships has been pretty accurately computed at 86,094 tons, annually employed by ENGLAND (exclufive of thofe carrying provifions from Ireland). And the tonnage of Britifh hhips, belonging to England, in the foreign and coaling trade, at ing to England, in the foreign and coaling, trade, at
320,000 tons; which, if actually emploged, does not $3^{20,000}$ mount to four times the quanticy of foreign tonnage; and amount to four times the quantity of foreign tonnage; and
hence a calculation may be formed, of the natural growing hence a calculation may be formed, of the natural growing
flrength of our neighbouring maritime powers, fo far as frrength of our neighbouring maritime powers, orar as
particularly. relates to cheir trade carried on with England. particularly relates to their trade
See the article Navigation.

Upon an eftimate made of the fhare which London has in foreign trade, with regard to the reft of the kingdom, it has been judged to have about one fourth of the whole, at leaft, if a computation may be made by the produce of the cuftoms, which are about three to twelve.
How confiderable a figure this city makes in the government of the kingdom, appears by the influence her inclinations and aetions have had upon the affairs of the whole nation, in paft ages, as well as they have in the prefent. It is eafy to perceive, that this city muft have gradually arifen, from it's firft beginning to it's prefent grandeur, through a long tract of fucceffives times and ages, by the benefit of traffic, with the concurrence of the favour of princes, and likewife the convenience and advantage of it's fituation
The number of people in London, render this city the center of foreign commerce; here a great quantity of goods, from all foreign countries, are brought in, becaufe here is al ways a
market, and here they can be confumed; wheaeas, take all the other ports of England, many of them can fend fhips loaden out, but few can bring them loaden home; for example:
The city of Briftol is the moft capable of this next to LonThe city of Briftol is the mot capable of this next to Lon-
don, and even Briftol cannot always difpofe of the loading of fhips home; Yarmouth can fend, perbaps, 8 or 10 large fhips out to the Streights, viz. to Cadiz, to Malaga, to Leshorn, to Venice every year, laden with red-herrings. But if thefe fhips load back with currants fiom Zant, oil from Gallipoli, filk and linen, raifins and oil from Meflina, filk and wines, fine oils, anchovies, capers, \&c. from Leghorn; filks, and pepper, and fulphur, and blocks of marble from Genoa, what fhall thay do with thofe at Yarmouth? They mult all unlade, and deliver their cargoes at London, and in like manner of the relf; fo that the bulk of London makes the trade of England, and thofe people are greatly miltaken, who imagine that the growing magnitude and fplendor of this city, is too much for the whole country; alledging, that the nation is liver-grown, and mult die of a pleura. The city, fay they, drawing away the nourifhment from the country, as a droply fwells the body, but draws the nourifhment away from the extreme parts.-But this fhould feem to be a mif take; the fimile will not hold; for this fwelling the body of the city, makes it the grand center of nourifhment to the whole nation; and, as every part of the kingdom fends up hither the beft of their produce, fo they carry back a return of wealth : the money flows from the city into the remotelt parts, and furnifhes them again to increafe that produce, to improve the lands, pay rent to their landlords, taxes to their governors, and fupply their families with neceflaries; and all thin is the apparent effects of trade, derived from the metropolis.
Nor fhould we know any thing confiderable of this trade, if the greanefs of the city did not caufe it; here the manufactures, as well as produce of the leveral counties, are an alted for fale, as well for the circulation of commerce at home, as the exportation to councries abroad.
Here thips from all parts arrive, and feveral of the moft confiderable branches of trade are confined to this city by law : the Eatt-India trade is all fettled here; the Greenland trade delıver all here; the Italian thrown filk is confined to be imported here, and here only, and at no other port in England: here the African company import a confiderable part of their gold, as the South Sea company did alfo their filver when they carried on trade: in a word, London is the great gulph of the Britifh trade; and, as it comes in here, fo it goes out again from hence to all parts of the nation, circulating in home trade from the merchant to the confumer. Nor let us fuppofe that the infuence of this city is fmall, at the remoter diltances of the country, but jutt the contrary; for multitudes of people are employed in the extremelt parts of England, for the fupply of London, either with food or fuel, or manufactures, and that to a degree almoft beyond credibility: for example:

Coals.
What a prodigy of trade does the bare bringing coals, from the north to lyondon, keep up in the nation? Certain it is, that no lefs than 30,000 people are always employed underground, in digeing them at Newcaltle upon Tyne; a thoufand fail of thips are employed in carrying them, and ten thoufund feames, lightermen, keelmen, and boatmen, in the loading, carrying, and unloading the coals.

## Provisions in general.

The trade carried on, with refpect to the article of provifions only, is not the lealt confiderable; the butter trade in YoikThire and Suffolk; the cheefe trade in Wilts, Gloucefter, Warwickihire, and Chefhire, all remote from London, and all employed for the fupply of London; where (according to the moft moderate accounts) above fifty thoufand tons of cheefe is confumed in a year, and as much butter; with this difference only, that the butter is moft of it made near I, ondon, that is to fay, within 42 or 50 miles, the cheere generally from 70 to 150 miles.
The multitudes of people concerned in, and employed by the multitudes of people concerned in, and employed by not to be conceived, much lels calculated, but by thofe who underftand the particular funds of provifions, and the places where they are made: how many lands do they caure to be cultivated and improved, by the valt hocks of cows fed on them? How many, by the numbers of black cattle fed in the fartheft parts of England, every way, as in Lancafhire and Weftmoreland, the North riding of Yorkanire, the counties of Lincoln, Norfolk, Suffolk, Kent, and Suffex? And fuch cattle too, as are to be feen in no other parts of the world. Again, the prodigious extent of grounds, in the wilder and remoter parts of Scotland one way, and $W$ ales another, and the mountains of Yorkfhire and Durham another; all employed in breeding, as the other are in feeding the ftores of black cattle for the market in London.
The like may be faid of the theep, which take up whole coun-
ties and tracts of lands in feveral parts of the country; as in Leicetter and Lincolnthire, Northampton and Bucks, the bank of Tees, and Rumney-marfhes in Kent, all theie for large theep: Salifoury-plain, Dorchefter, and Winchefter, and Marlborough downs, and all the open country between, for near 50 miles fquare, for middling-fized theep; as likewife the Cats-would-hills, Leominfter-fielels, the fouth downs in Suffex, Banfted-downs, Newmarket, and Lincolnheaths, whofe numbers are numberlefs, and all for the fupply of London.
What an infinite number of people do thefe employ? what millions of acres of land do they improve? and how do they create and propagate trade, even in the remoteft corners of the inand, all moved, fupplied, and the trade fupported by the prodigious demand of all thefe things at the capital city ? not half of which would be felt, if the capical city and it's adjacent multitudes were feparated, and dwelt in ten or fifteen feveral cities, remote from one another, and every one fubfifting, as it were, by itfelf; I fay, though there would be the fame number of people to feed, there would not be half the trade or bufinefs occafioned to feed them.
It is ordinarily faid, that there are 30,000 higlers, and travelling market folks, as we call them, about this city, a poor fort of people that are wholly employed to bring butter, eggs, pigeons, and poultry, \&c. to the London markets, and bring veal, pork, and fmaller things up and down, from houfe to houle, and every one of them almof have a horfe, fome more, fome carts, \&c. - The like of gardeners, whole number is prodigioufly increafed, and who now keep carts, and whole teams of horfes, or large luggage boats upon the river, and employ an incredible quantity of land, for 10 miles round the city.
Thefe are fome of the benefits of a capital city, as to trade: we might give a great many examples of other advantages, which a conflux of people neceflarily brings with it; but the magnitude of the Englifh inland commerce is a teftimony of it ; the influence of the city upon it all has evidently been, not the fupport only, but the very birth and foundation of the trade itfelf.
The article of malt, and malt-liquor, affords another extenfive branch of trade in this city. The number of inns, and public drinking and eating-houfes, which are to be feen in London, and the parts adjacent, is even fo fcandaloufly great, that, fhould it be made public, Atrangers would hardly think it credible: but if we alfo confider the number that depend upon them, fuch as maltfters, malt makers, brewers and their fervants; horfes, carriages, farmers, plowmen, \&c. who all get their bread by the drinking trade in this city; reckoning from the fowing of the barley to the confumer of the liquor; how many thoufands more would there fti !l be, that would have their bread to leek, and new employments to look out for, if the drinking of malt-liquor was to be taken wholly out of trade, and the practice of it at once left off?
The city of Roftock, in the duke of Mecklemburg's country, is famous for it's brewery, and for the great quantity of beer they brew there, and export to other countries; and, indeed, it is the principal trade of the whole port; yet I am informed, that there are two brewing offices in London, that brew a greater quancity of beer than all that city: and, if it is true, that there are two brewers in London, who brew each of them 1000 barrels a week, which make 104,000 barrels a year, I believe Roftuck cannot go beyond it.
From the beer and ale, let us pafs to the diftillers of maltfirits, who, in this city, do not confume lefs than 200,000 quarters of malt every year, befides 15,000 hogheads of cyder, in the diftilling or drawing fpurits. Add to this, all the feveral quantities of fpirits extracted from melaffes, from eager, and damaged wines, and bottoms; whofe number we cannut eafily guels at.
Confider, likewife, the wines, brandy, rum, cyder, and other liquors confumed in this city, which, according to fome, is not lefs than 50,000 tons of wine, and 10,000 tons of brandy, cyder, and all other liquors.
The quantity of the woollen manufactures, confumed and trafficked in within this city, is immenfe. The wool and the oil ufed, are the great principles of this manufacture in general, and are brought from different channels to the hands of the manufactuiers; and, indeed, pals a long way in the ordinary courfe of trade, before they meet at the clothier's houfe. - The oil chiefly comes from Gallipoli, a city in the gulph of Otranto in Italy, and in the kingdom of Naples, as likewife from Seville and Cadiz in Spain, and from Faro, Figuera, Lifbon, and Oporto, in Porrugal.-We need not add, that th $s$ is imported by the merchant, bought by the tradefmen, and fold to the manufacturer.
The wool has many channels, as weil from abroad as at home.-W ool from abroad makes only two articles. I. Spar nith wool, of which we need fay no more than is faid of oil; it is moftly imported in large quantities fromSpain, by London merchants, is bought by London tradefinen, fold again to the clothier; being moftly worked up with the Englifh wool, and mixed together, the Spanich being too fine and thort, to ufe by itfelf, except in fome particular goods. 2. Inith wool,

5
admitted
admitted to be imported.-We have fometimes, and in fmall quantities, a good fort of wool from Barbary, the African wool being of good fubitance, a long full ftaple, and not very coarfe.-We have alfo fometimes Carmenia wool imported from Turkey, which is very good, but the quantity very fmall.-3. The Englifh wool is the principal article of this manufacture.
The weavers of Spittlefields, London, fend exceeding great quantities of wool into remote counties, to be fpun; they particularly employ a great part of the poor of the whole counties of Cambridge, Bedford, and Fertford; nay, they even fend large quaintities into the north, as far as Weftmoreland, to be fpun, and the yarn is brought back in the fame manner to London.
Befides the great confumption of the woollen manufactures in general, in London, the exports from thence to foreign nations is not lefs than three quarters of what is fent out of England.
The filk manufacture of Spittleficlds is arrived to a greater degree of perfection, than that of any other nation. France long furpaffed all countries in the world, and, indeed, engrofled a great part of the trade in Europe, in this general article of apparel; but, as we now vie with them in quality, it is to be hoped we may Jikewife do fo in the cheapnefs; and then we cannot fail greatly to increafe our exportations herein.
The hard-ware manufacture, and the trade in metals in general, within the city of London, and from that port to foreign countries, is an article of no little confideration. Our Birmingham hard-ware has arrived at fo great perfection, that it beats that of the whole world, not only in the excellency of workmanflip, but in point of cheapnefs alfo.-And, with regard to the quantitics of tin and lead, thefe are not found in greater plenty, than they are in Great-Britain, in any ftate of Europe; and our exports, in thefe articles, from our metropolis, tend greatly to inrich the whole kingdom in general, as well as the citizens of London in particular.
The quantity of corn confumed in the city of London, and parts adjacent, is fo great, and the way of it's being brought thither fo different, that it is'fcarce poffible to make an accurate computation of it: it is our felicity, in England, that, how great and grievous foever taxes have been, we are not yet come to a gabelle, or tax upon corn; as is the cale of Italy, and many other countries, and may in time become our cafe, if wars and public perplexities increafe upon us.' Were that our cafe, an evil of this kind would have enabled us to have calculated, exactly, the quantity of corn brought to the London market, as well as to all the reft of the great corn markets in England.
It may fuffice, at prefent, to obferve, that befides the prodigious quantity of corn and meal, and malt, brought by fea, and by the navigation of the Thames, and other rivers; fuch as the Medway, the Lea, and feveral fmaller rivers, to London, the like of which is not to be feen in the world; there is alfo a very great quantity, efpecially of meal and malt, brought by land-carriage, from the counties of Surry, Kent, Suffex, and Hamphire; for the wheat is carried by land, even beyond Winchefter, to Farnham market, and from thence to the mills about Guildford, and all the adjacent country, and then to London by water.
In like manner wheat is brought from Northamptonfhire; nay, from Harborough in Leicefterfhire, and from Bedford, to the great markets of Hempftead, St. Albans, and Hitchin; and being then ground at innumerable mills, in the county of Hertford chielly, which abounds with fuch mills, is brought to London by land-carriage.
This valt carriage of corn and meal to London is a branch of trade, and is to be reckoned as fuch; for there are many farmers, and others that are not farmers, who keep teams of horfes, on purpole to let them out, for the bringing of corn and malt to London; and generally thele carriages return laden with coals, "grocery, wine, falt, oil, iron, cheefe, and other heavy goods, for fhop-keepers, and tradefmen of the country, and it is a very great return'they make for the mere expence of this carriage.
By the computations of the burials and chriftenings in this city, one may be enabled to compare the bignefs and populoufnefs of it'with other'great cities in the world. As, for example, in the year 1707 , the chriftenings in the imperial city of Vienna, amounted to 3,963 , and the burials to 4,354 ; whereas the burials in London, the fame year, were 21,600, and the chriftenings 16,066
Yet farther, to fet forth the furpaffing eminency of this city, on account of the valt numbers of people it confifts of, Sir William Petty makes a comparifon under divers heads, bewetn that and Paris, now one of the molt flourifhing cities in Europe, and to exceed it in all thefe particulars following: I. In the wealth and great eftates of the inhabitants, the number of their fervants, and greatnefs of their equipages. II. In the wholefomenefs of the air. III. In the cleanly and more convenient way of living. IV. In the preference of the river Thames to that of Seine, both in pleafantnefs and navigablenefs, and in the wholefomenefs of it's waters, and the great bridge of London built over it. V. In the fhipping and foreign trade; London therein incomparably exceeding both

Paris and Roan. .VI. In the cheapnefs of all the moft ne ceflary forts of food, and the great variety and plenty of al orts of drink. VII. In the cheapnefs, likewife, and good nefs of fuel, and conveniency of stowage. VIII. In the mag nificence of the churches; none at Paris being fo great as St. Paul's hath been and now is, none fo beautiful as king Henry the Seventh's chapel. IX. In the courts of inns and chancery and the lawyers chambers. And, laftly, in the horpitals, $6_{0}$ many and fo richly endowed, and for the relief of multitudes of miferable and diftreffed people of all forts.
Collected bodies of people are alfo a particular affiftance to trade; and, therefore, to have one great and capital city in a kingdom is a very 'great advantage to trade, and much nore than if the fame number of people dwelt in feveral places. For example:
Suppofe the city of London, and it's fuburbs, to contain 1,500,000 people, as fome have computed, though we believe that number to be much too large, it feems far more to the advantage of the whole kingdom, in refpect to it's commerce, that it fhould be fo, than that the fame number of people were divided equally, and lived in 15 feveral cities, remote from one another.
It is the fame as to navigation : it is much better that they have herd one commanding port, one noble navigable river than that they had, in their divided and remote fituation, as above, I 5 navigable rivers, one to every city.
Spain is a remarkable inftance of this : there is no capital city, except that, or rather the village of Madrid, where the court refides, which is fuppofed to contain 300,000 people; but it has neither fea-port or inland navigation, no navigable rivers being near it; the nigheft is the Tagus, or Toledo, which is not only diftant 12 leagues, at leaft, but does not open into he fea in the fame dominions, but in Portugal; fo that it is no navigation at all as to Spain.
Spain has abundance of other populous cities and fea-ports in it, difperfed and remote from one another, as Seville, Granada, Valencia, Toledo, Cordova, and feveral others
Seville has at leaft 300,000 people in it alfo, and feveral of he reft from 100,000 to near 200,000, at Cadiz, Barcelona Malaga, Saragoffa, Valencia, Granada, which laft city our beft geographers reckon to be very near as populous as Seville or Madrid; the beft accounts we can meet with from the paniards themfelves are as follow:

1. Madrid, 24,000 families, half of which are of nobility and quality, having from 20 to 30 and upwards in family, the reft being of the ordinary rate.
Befides eftimating the king's houfhold at the Pardo, which, including the ordinary guards, is faid to contain always 12,000 rouls. 2. Seville, containing 60,000 families, at fix in a houfe, 360,000 fouls. 3. Granada, 50,000 families 4. Malaga. 5. Cordova. 6. Valencia. 7. Barcelona. 8. Saragolla. 9. Cadiz. Io. Majorca; each of thefe 15,000 families; which, with the poor and the religious houfes, make far above 100,000 in each city.
The reafon of naming thefe cities will appear prefently: put them all together, they are not fuppofed to contain more people than the city of London, and thofe adjacent towns to London which depend upon their fupply of provifions from the city, including alfo the fhips in the river
Now as thefe cities ftand all remote from one another, and moft of them in the molt rich and fertile foil, or near the feacoafts, or on the banks of navigable rivers, their fupply of provifions, fuel, cloathing, equipage, furniture, and take it of as many kinds as you pleafe, does neither come with difficulty, call for multitudes of hands to be employed in raifing, procuring, fetching, or carrying them; nor does it influence the country to any perceptible degree, except, perhaps, for 20 or 30 miles round them. But were all thefe cities, that is to fay, the number of the inhabitants included in them, all joined in one capital, fuppofe Madrid, and though you were to fuppofe Madrid had a noble navigable river coming up to it, fuch as the Tagus, or the Ebro, or the Guadalquiver, it is evident the whole kingdom of Spain, large and facious as it is, for it may be reckoned almoft 500 miles fquare, would be engaged and influenced, more or lefs, in fupplying that one city with provilions.
All the fea-coafts, and all the cities and ports upon thofe coafts, would be bufied, and fleets of hips employed to furnifh wine, corn, oil, fruits, and foreign importations of every kind, all to the capital port of Madrid
All the inland provinces would be engaged and employed in ploughing and fowing the lands, to raife corn, planting vines and groves of olives, to make wine and cil for this great metropolis.
All the rich meadows and paftures would be improved to feed and fatten the black cattle, to nourifh the cows, fuckle the calves, and furnith beef, veal, and milk, butter, cheefe, \&c. and all' the mountanis, the forefts, and plains, for breeding the black cattle and horfes before they come to thofe rich paftures; alfo the plains muft be covered with flocks of fheep, which are now difperfed and feattered a fow and few together: and thus, as it is in England, every province would be providing fomething for the capital.

Nor is it a juft objection to fay, the fame number of people will confume the farme quaritity of provifions, in whatever fituation they may be placed ; for, though the quantity fhould be the fame, yet the influence upon trade, occafioned by it's being all pointed to one center, is fuch as quite alters the cafe, and would put the whole body of the people into motion, as it is in Engtand. What fleets would there be employed to bring oil from Seville and Majorca, wine from Cadiz, Malaea, Alicant, Barcelona, and Galicia, \&ic. fifh, wrought iron and fteel, all forts of weapons, fre-armis and artillery, from Bilboa and St. Antonia, and filk and wool from Segovia and Valencia, and the jike from other parts?
What an infinite number of horfes, mules, and carriages, and carriers, mult be employed by land from all the inland provinces, to carry the product of the earth directly to Madrid, or, if too remote for that, to carry them to the feveral fea ports where thore fhips and fleets were to take them on board! How is this the caufe of employing a thouland fail of fhips, and, perhaps, three times as many in Enigland, to bring the coals trom one place, falt from another, cheéfe from another, lead from the north, block-tin from the weft, corn from Huil, from Lynn, and from all the coafts of Norfolk, Suffolk, Effex, Kent, Suffex, and Southampton; fifh from all the feas on the eaft and fouth fides of the ifland, and fo of the reft?
How many thoufands, I might fay hundreds of thoufands, of men and horfes are employed in the carrying and re-carrying to and from London the growth of England, and the importations of foreign countries? And how many of thefe would Itand ftill and wart bulinefs (nay, want bread; perhaps) if this reat clty was divided into is cities; as above; and they were ituated in fo many different places, remote from one another, where the country within 20 or 30 miles round them would be fufficient for them, and able to fupply them, and where every port would import their own goods from abroad. In a word, we thould have a general want of buifnefs; where as now all the world (in this city) are in a hurry, and fully employed, in carrying out and fetching in.
Particulanly obferve another article, the number of people at Lohdon makes this city the center of foreign commerce: here a great quantity of goods fromall foreign countries are brought in, becaufe here is always a market, and here they can be confumed; whereas, take all the other ports of England, nany of them can fend fhips loaden out, but few can bring hem loaden home, as before thewn.
To bring this to our fubject: all thefe provifions expended at Madrid, what do they for the country as to trade? Some benefit they are, it is true, to the neighbouring provinces; fo is our city of Briftol to it's counties: but how far in the country from them does that employment extend? How far do they feel the influence? Perhaps in Spain the country may be concerned in furnifhing corn 20 or 30 miles, and cattle 40 or 50 ; but, after that, we find little or nothing of it.
At Briftol, indeed, they carry corn a great way, by water down the rivers Severn and Avon, out of Gloucefferthire and Worcefterfhire, and from the vale of Evehham; they likewife bring cyder from Herefordhire, down the Wye, Chelhire cheefe by the Severn, out of Shropfhire, and butter from South Wales, by fea: and to Brittol may, in fome degree affect all thofe counties.
But their black cattle are fupplied from Somerfethire and Wales, and their mutton and corn, cheefe and bacon, from Wilts and Gloucefterfhire, all counties juft adjoining; and, after 20 miles from them, even in thofe counties, you fcarce find any mention of Briftol: nay, one way, there are other cities and great towns that intercept the provifions; fo that very little comes that road, except beef; I mean Somerfetfhire, where there are the city of Wells, the city of Bath, and the towns of Bridgewater and Froom; the later more populous, perhaps, than both the two former put together, though cities.
Thus trade receives but little influence from fuch places as Madrid in Spain, or Briftol in England, except it be juft in the adjacent counties, and within 20 or 30 miles of the place.
But bring this back to the great city of London, and confider the multitudes of people there, and the exceeding numbers which are gathered fouth ward into the counties and towns for 30 or 40 miles round London, almoft every way ; how all the country round is made populous by the vaft run of bufinefs occafioned by the neighbourhood of the city; infomuch that it is fuppofed, if there is a million and a half of people in London and it's fuburbs, there is at leaft half a million more in Middlefex, and in thofe parts of Eflex, Surrey, and Kent, which lie to adjacent to London as to be within about 10 miles of it: now, for the fupply of thefe two millions of people, we find the whole kingdom more or lefs engaged, and the wheels of trade are fet a-guing by it almoft all over the inand.
We take this propoftion about great cities, and the number of people collected roguther making trade, to agree in fome meafure with what you may obferve in the fpring of the year, from the variety of the feaions; take a time of drought, and, when the earth, for want of rain, is dried, hard, and parched up, cemes a light flying thower, and wets the furface a little,
and goes off; then comes a hot gleart from the fur, and licks It up; and by and by comes another dafh of wet, and thien more funchine: and fo on fucceffively and alternatcl;, feyend! times a day, and for a week or a fortnight together.
Thefe light flying fhowers anfwer no end, do litile or no good; the fundries it up as faft as it wetted; and, by the long intervals between, all the benefit is loft; the grourid remains hard, fterile, and barren fill; it is all one as a drought. But would the fame quantity of rain fall all in one fhower, was there a weight of water fufficient to fet nature at work, fink down to the root, and duly moiften the plants, give drink to the thirfty eartli, and fet the prifoners free, (I mean the feeds, which lie baked and blocked up in the earth, and cannot get out) then the earth is refreihed, and every thing thrives and flourilhes as it fhould do.
I think the fimile is pretty juft : a fmall body of people do nothing as to this article of trade; they do not influence trade, even in proportion to their numbers; like a fmall ftream of water to a mill, it not only will not make the wheel go at a proportioned rate, but it runs by, or under it, goes off in wafte, and does not make the mill go at all; it Funs all away to no purpofe.
Here is a fmall city, and there a large town; they are good to depend upon the capital, and to have the capital, in many things, depend upon them; but they are not able to fubiftitute a capital, and to ftand in the room of it: whien they come to have the general body, the whole nation's trade depend upon them, inftead of a capital city, then they are nothing at all, they are of no importance.
They tell us France is fo lituated by the affiftance of navigable rivers, that there are two and forty large cities which have all a communication with the great city of Paris by water, eicher by fea or river navigation; and what is the confequence? Not that there eities make Paris grcat and rich, but that all thefe cities ate made rich and great by the city of Paris.
We fay the fame of London, though nor as to river-navigation; but the whole kingdom of England, by it's communication with London, is the fame; it is not the kingdom makes London rich, butthe city of London makes all the kingdom rich. The country correfponds with thecity, but the city correfponds with all the world; the country fupplies the city with corn and cattle, that is to fay, wirh provifions; yes, and if there was not fuch a city to take off and confume them, what would the councry do? How muft the product of the land be fold? How the rents paid? The land mult lie wafte and uncultivated, the cattle would run wild, and devour the country, or be ftaried and die: the country fends up their corn, their malt, their cattle, their fowls, their coals, their fifh, all to London; and London fends back fpice, fugar; wine, drugs, cotton, linen, tobacco, and all foreign neceffaries to the country; and, above all the reft, that uffeul drug called money: fo that ftill it is the capital city that is the life of the country, and keeps them all in motion.
Again, the countrymen fheer their fheep, fell their wool, carry it from place to place; the manufadurers fet it to work, to combing, carding, fpinning, winding, twifting, dyeing, weaving, fulling, dreffing; and thus they finifh their numberlefs manufactures. But what muft they do with them? What could a Madrid or a Briftol do for them? Briftol could take off forre, indeed, and does export a proportion with it's neighbours; but London is the center of the grofs body of manufacture; London aniwers the end of every trade abroad, and of every manufacture at home ; be it Manchefter for cotton ware, Yorkhire for coarfe cloth, kerfies, \&ic. Wilts and Gloucefter for fine cloths; Norwich for fluffs; Wales for flannels; all goes to London, and all have their money in return from London.
London confumes all, circulates all, exports al!, and, at laft, pays for all; and this is trade: this greatnefs and wealth of the city is the foul of the commerce to all the nation; and, as there is the greateft number of tradefmen in this city that are to be feen in any place in the world, fo they again fupport and fupply an innumerable number of ihopkeepers and tradefmen of every kind in the country, and in every part of the country.
It may be thought a little affuming to fay, the city fupports the tradefmen of the country, but the fact is plain; you cannot go to a fhopkeeper of any note in the remoteft town in England, but he holds fome correfpondence at London; or elfe tie mult be a mean tradefman, that buys his goods of fome of his better-furnimed neighbours, and they buy at London: fo that the other may be faid to buy at London too, only he does it at fecond-hand.
Nor is this all; but, as all thefe country tradefmen buy at London, fo they all are in debt at London more or Jefs; they all owe the London fiopkeepers money; fo that the whole country may in fome refpects be faid to trade upon the city's fock, the London tradefmen giving them all credit.
It is, indeed, a little remiote from the fubject of inland trade, or elfe it is very remarkable and worth our obferving, that the city of London trades with fuch an immenfe ftock, that it may be faid they give credit to all the world more or lefs; all the trades they carry on abroad, almoft in every part of the world, are carried on by the ftrength of their ftocks; they
$\mathrm{X} \times \mathrm{x}$
do not reccive the grods from abroad, and fo make the returns back to the feveral countries from whence they come, but they fend their own gonds firlt out, and receive the goods of other countries back in payment.
Thus in all the ports of Spain, Portugal, Italy, and Turkey, the merchants of London have their houles (as they call them) there; the warenoutes are piled full up to the cielings with Englifh bales; Englith focks carry on the trade; in a word, we give credit to all the woild.
Not a fleet of Portugueze fhips from the Brazils, not the galleons or flota from New Spain, but a thare of the gold of the firit, and the fitiver of the lait, is the product of Englifh ftocks, and belongs to London merchants, whofe goods, fold upon credit at Lifbon and Cadiz, went firf out to America to purchafe that gold and filver.
Not a Turkey fleet, or a hip from Leghorn, Meffina, or Genoa, how rich foever freighted with the finelt raw and thrown filk, the choiceft drugs and gums, but it is all the effects of the merchants of London, and in return for credit firft given by the city of London.
It is the like in the plantation trade; all the New England trade, the Jamaica trade, the Barbadoes trade, it is all carried on by the ftocks of the Englifh merchants.
The fugars, the tobaccoes, the furrs, the turpentine, the cacao, the indico, and ail the reft of the produce of our colonies, come home in return from all thofe illands for the goods long before configned to them chiefly from London; fo that, in fine, almoft all the plantations are managed upon the ltock and fubftance of the citizens of London.
To bring it all back to what we have obferved before: as this vaft correlpondence abroad is thus carried on by the city of London upon it's own fock, and they give credit to all the world ; to, when thofe returns come back, they difperfe all thole goods again among the country tradefmen, and give them credit too; and this is the effect of a capital city: a capital city carries on a capital trade, and enriches and emplovs the whole country; which, if the fame people dwelt in a divided and feparace capacity, would not be the cafe at all.
So many deductions muft be made from the home trade, that thoulands, nay hundreds of thoufands of people now em ployed in collecting the commerce thus to one place, would then be left without bufinefs, and by confequence without bread; as in the country, if the fheep fed all about the farmers houfes as the fwine do, or were domeftics like their dogs, and not in focks, requiring to be tended and directed, there would be no employ for all the Chepherds, which in the weft and northern parts of England are maintained by keeping, and waiting upon, and folding them; fo the neceflary attendance upon the trade, as it all goes up to, and comes back from London, how many thoulands of people does it employ?
Moreover, this capital city is the grand fource and fupport of the public credit of the whole ftate, as hath been experienced upon numberlefs occations.- Here the circulating power of all the public funds, and the public revenue is conitantly exercifed, for the benefit of the kingdom in general, and for the convenience of its traffic.-T This is the center of paper circulation, by the means of that national and noble eftablifhment the bank of England, and the high credit of it's eminent and opulent bankers, who are not interror, in point of wealth, honour, and lagacity, to thofe of any fate or empire in the whole world.
What numbers of the greateft and moft illuftrious nobles of this kinydom have iprung from the city of London [fee our article COMMERCE] and what fome of the merchants of this capital have done for the fupport of the kingdom in general on the moft critical emergencies, fee our article Mercantile Culege. Hawever, to add another inftance to what I have cllewhere faid:-- The parliament granted, fays Rapin, king Richard II. a fubfidy for the maintenance of the wat: but it was clugged with this condition (which fhewed they were refolved ta be upon their guard during the minority) that the moncy fhould be lodged in the hands of Philpot and Walworth, two very noted Aldermen of London, who were ordered to take care that it fhould be expended only in repulfing the French and Caftillians, in league againft England.-In the mean time the duke of Lancafter, who wos vexed to fee money, granted the king by the parliament, in the hands of two citizens of London, haftened not the哭tting ready the hips neceflary for the defence of the coafts. This affected negliyence gave occafion to a great many complaints. But he pleaded in his excufe that he could not furm any project, left is fhould not be approved of by thofe who had the management of the money. In fine, he importuned fo the other regents upon that forere, that the two aldermen were ordered to put into his hands the fums they had in charge. He promiled, for his part, that the coafts horuld be better guarded, and the merchantmen protected. However, it was a good while before he fent a feet to fea, becaule he expected from Bayonne fome fhips which were to join thofe he had equipped.
Whilt the fleet was getting ready, the earls of Arundel and Salibury had orders to go to Normandy and take poffeffion
of Cherbourg, which the king of Navarre had promifed to deliver up to the Englith. Hardly were they got to fea, when théy met fome spanifh men of war, who fiercely attacked them, and did them fome damage. Notwithftanding this, they put a garrifon into Cherbourg, which opened the Englifh an inlet into Normandy, as Calais did into Picardy. Before the fleet defigned to guard the coatts was ready, a Scotch pirate, one Nierier, feeing that the Englifh neglected the northern feas, entered the port of Scarborough, and carried off the merchantmen that lay there.. This fuccefs having infpired him with greater hopes, he cruized a long time in thofe parts, and took coniiderable prizes. The damages the merchants fuftained, on this occafion, caufed frefh complaints againft the duke of Lancafter, who fo ill performed his promife.
Philpot, whom I mentioned before, full of indignation to fee the Englifh merchants expofed to the ravages of this pirate, undertook to do, at his own Expence, what the duke neglected to do with the public money. He fitted out fome fhips, on board of which he put a thousand Soldiers, and, having found the Scotch pirate, he defeated him, took him prifoner, and rerurned in triumph to London. This action, which gained him the applaufes of the people, offended the regent, who thought it of dangerous confequence to fuffer a private perfon to undertake a thing of that nature without the government's leave. But he vindicated what he had done, with fuch good reafons and with fo much modefty, that he was acquited.-This, among many others mentioned throughout this work, is a memorable action of a LONDON Merchant to preferve the commerce of the nation!
As king Richard the IId of England was very fond of pomp and magnificence, his expences far exceeded his revenues, fo that he was forced to make ufe of feveral illegal methods to fupply his occafions. Hehad a mind once to try the affections of the city of London, by defiring them to lend him only a thoufand pounds fterling: but, though it was no great fum, they bluntly denied him *; which fo mortified him, that not long after, there being a tumult $\dagger$ in the city, occafioned by a baker's boy,' he deprived the city of it's privileges, turned out the mayor, eftablifhed a warden in his room, and removed the courts of judicature to York; and it afterwards coft the city no lefs than 10,000 l. to recover it's charter.

* It is faid that an Italian merchant, who offered to lend him that fum, was mobbed, and, according to Rapin, cus to pieces.
$\dagger$ Our hiftorians tell us, that this was the occafion of the tumult; a baker's boy, pafing through Fleet-Areet with a bafket of bread, a fervant belonging to the bihop of London, as Caxton Cays (but, as Sur John Hayward fays in his Life of Henry IV. to the bilhop of Salifoury, wherein he agrees with Hollingthead and others) took out a loaf, and abufed the boy, who demanded it, in fuch a manner as raifed a mob, that threatened to fire the bithop's palace, in-
to which he retired for thelter, 'till the magifter to which he retired for thelter, 'till the magiftrates came and fuppreffed them.
An order to the courts of juftice at Weftminfer, to remove to York, dated at Stamford, March 13, 1392.
The eftablinment of a warden of London, in the room of the depofed mayor, dated June 25,1392 , at Nottinghamcaftle *. A receipt for 10,000 I. fterling, paid to the king by the city of London, to regain his good-will, dated Fcbruary 28, 1393, at Weftminiter.
* This warden was Sir Edward Dalyngrugge, who, being thought too favourable to the citizens, was quickly removed, and Sir Baldwin Baddington, a perfon of a rougher temper, put in his place, who by his prudent conduct pleafed both the king and the city. It appears by the account we have of chis reigo, in the Compleat Hittory of England, vol. i. and in that called the Life and Reign of King Richard II. and in that called the Life and Reign of King Richard II. compiled by a perfon of quality, and from the accounts of
Knighton and Walinghan, that the bilhop of Saliifiury, having an old grudge againft the citizens, who were generally reckoned favourites of Wickliff's doctrine, took the opportunity of the ritt before-mentioned, to ftimulate and heighten the king's difpleafure againft the city to that degree, that he threatened to raze it to the ground; but, at the mediation of fome of the nobility, fent for the mayor, fheriff, aldermen, and 24 others of the ableft citizens to his court, then held at Nottingham; where, impeaching one another in hopes to curry favour with the king, the mayor was committed to Windfor-caitle, and the eff to other goals. Mean time, the queen, the duke of Gloucefter, the bifhop of London, and other perfons of ditinction, interceding with the king heartily for the city, he was fo pacified that he fet out for London, being met from the city by 400 men on horfeback, clad all in one livery, and innumerable multitudes on foor, a folemi proceffion of che clergy, and 500 boys in furplices, the balconies being hung with tapeitry and pittures, the conduits fowing with wine, \&c. Betides, they prelented the king with a crown of gold of great vaa, and another of the fame metal to the queen, together with a picture of the Trinity worth 800 I. and evera other great gifts, by which means they obrained all their old privileges: but, after all this, they were forced to pay 10,0001 . or elfe they muft have ventured the effeets of the king's

M I D
frefh difpleafure. The bifhop of London, who had fuch a great hand in the reconciliation, was not only highly honoured by the citizens all his life, but after his death; the nayor, aldermen, and companies, made nine proceffions a mayor, aldermen, and companies, made nine proca for his
year to Weftminter, where he lay buried, to pray for year to Weftmintter, where he lay buried, to pray for his
foul. Mr. Rapin oblerves, that Richard lived to repent his loul. Mr. Rapin oblerves, that Richard hived to repent his
fevere treatment of this city, by which he entirely loft the fevere treatment of this city, by which he entirely loft the
citizens hearts, who afterwards conviiced him, how dancitizens hearts, who afterwards convinced him, hew dopolis gerous it is for a king of England to
for his enemy. Rymer's Foedera.
And, how zealous the citizens of London were in bringing about the revolution, upon the abdication of the late king Janes, appears from what follows *:

* See the Revolution vindicated ; in anfwer to the two memorials, and the proteflation againtt the peace of Ryfwic, and other papers publifhed in king James's name. State TraCts of 1707 , folio.
- About ten o'clock, the lords fpiritual and temporal about the town, came to Guildhall, and, fending for the lord mayor and aldermen, agreed on a declaration, which among other things bears-" That they did reafonably hope that, the king having iflued out his proclamation and writs for a free parliament, they might have refted fecure under the expectacion of that meeting: but, his majefty having withdrawn himelelf, and, as they apprehended, in order to his departure out of the kingdom, by the pernicious councils of perions ill affected to the nation and their religion, they could not, without bcing wanting to their duty, be filent under thofe calamities, wherein the popith councils which fo long prevailed, had milierably involved thefe realms; they did therefore unanimoully refolve to apply themfelves to his highnefs the prinie of Orange, who, with fo great a kindnefs to thefe kingdoms, fo valt expence, and fo much hazard, had undertaken, by endeavouring to procure a free parliament, to refcue them, with as hittle effufion of Chriftian blood as poffible, from the imminent dangers of popery and flavery; and declare, that they will, with their utmoft endeavours, affitt his highnefs in the obtaining fuch a partiament, in which their laws, and Jiberties, and properties, and religion, might be fecured, and the proteftant religion and intereft over the whole world fup ported and encouraged, to the glory of God, the happinefs of thefe kingdoms, and the advantage of all princes and ftates in Chriftendom that may be therein concerned. - And fuch a parliament they would endeavour to have with all fpeed, they fay, and fo it feems were refolved not to wait 'till king James's return.
It was figned by $3^{1}$ lords and birhops, and fent to the prince by four of their number.
This declaration of the lords was followed the fame day by two addreffes to the prince, one from the Lord Mayor, Court of Aldermen, and the Common Councle, and the other from the lieutenancy of London. The firft bears thanks to God almighty for having bleffed his higtnefs's endeavours with miraculous fuccefs, and thanks to his highnefs for appearing in arms to refcue thefe kingdoms from havery and popery, and to eftablifh, in a free parliament, their religion, laws, and liberties, upon a fure and lafting foundation. That they had hitherto looked for fome remedy for thofe oppreffions and imminent dangers from his majefty's concefions, and concurrences with his highnefs's juft and pious purpoles expreffed in his declaration. Bur, herem, finding themielves finally difappointed by his majefty's withdrawing lamelf, they prefumed to make his highnefs their refuge, and, in the name of the capital City, they implored his protecion, and begged that he would repair to the city, where they affured him he would be received with univertal joy and fatisfaction, as quickly after happened. The lieutenancy or militia of the city, in their addrefs, exprefled the deep fenfe they had of what they owed to him. That without his undertaking they had been undone; that it was their firm refolution to venture all that was dear to them, to attain the glorious ends of his declaration: that they had put themfelves into fuch a poiture, as with the blefling of God was fufficient to prevent all ill defigns, and to preferve the city in peace 'till his arrival; which they defired he would haften, for the perfecting the great work which he had fo happily begun, to the general joy and fatisfaction of them all. How well this lieutenancy flood affected to the late king, and had proved firm to him 'till now that he abandoned them, is known.'

## Further Remarks.

That the reader may entertain a juft idea of the importance of this city to the commerce of the kingdom, we fhall give him the defeription of the Royal Exchange of London, from our countryman, that inimitable writer Mr. Addifon; for authorities have often more force than the ftrongeft reafoning, or the cleareft demonftration.
-There is, fays he, no place in the town, which I fo much Jove to frequent as the Royal Exchange of London. It gives me a fecret fatisfasion, and, in tome nealure, gratifies my vanity as I am an Enclifhman, to fee fo rich an affembly of my countrymen and foreigners confulting together upon the private bufinefs of mankind, and making this metropolis a
kind of emporium for the whole earth; I mun confers, 1 look upon high change to be a great council, in which all confiderable nations have their reprefentatives. Factors, in the trading world, are what ambaffdors are in the poitic world. They negociate affairs, conclude treaties, and maintain a good correfpondence between thofe wealthy focieties of men, that are divided from one another by feas or oceans, or live on the different extremities of a continent. I have often been pleafed to hear dilputes adjulted between an inhabitant of Japan and an alderman of London; or to fee a fubject of the Great Mogul entering into a league with one of the Czar of Mufcovy. I am infinitely delighted in mixing wih thefe feveral minifters of commerce, as they are diftinguilhed by their different walks, and different languages. Sometimes I am joftled among a body of Armenians, fometimes I am loft in a crowd of Jews, and fometimes make one in a group of Dutchmen. I am a Dane, Swede, or Frenchman, at different times; or rather fancy mylelf like the old philofopher, who, upon being akied what countryman he was, replied that he was a citizen of the world.
Though I very frequently vifit this bufy multitude of people, I am known to nobody there but my friend Sir Andrew, who often fmiles upon me, as he fees me buffling in the crowd, but at the fame time connives at my prefence, without taking any farther notice of me. There is, indeed, a merchant of Egypt, who juft knows me by fight, having formerly remitted me forne money to Grand Cairo; but, as I am not verfed in the modern Coptic, our conferences go no farther than a bow and a grimace.
This grand fcene of bufinefs gives me an infinite variety of folid and fubftantial entertainments. As I am a great lover of mankind, my heart naturally overflows with pleafure at the fight of a profperous and happy multitude; infomuch that, at many public folemnities, I cannot forbear expreffing my joy with tears, that have ftolen down my cheeks. For this reafon, I am wonderfully delighted to fee fuch a body of men thriving in their own private fortunes, and at the fame time promoting the public ftock; or in other words, raifing eftates for their own families, by bringing into their country whatever is wanting, and carrying out of it whatever is fuperfluous.
Nature feems to have taken a particular care to differminate her bleffings among the different regions of the world, with an eye to this mutual intercourfe and traffic among mankind, that the natives of the feveral parts of the globe might have a kind of dependance upon one another, and be united together by their common intereft. Almoft every degree produces fomething peculiar to it. The food ofen grows in one country, and the fauce in another.
The fruits of Portugal are corrected by the products of Barbadoes, the infufion of a China plant fweetened with the pith of an Indian cane. The Philippic Mands give a flavour to our European bowls. The fingle drefs of a woman of quality is often the product of an hundred climates. The muff and the fan come together from the different ends of the earth. The fcarf is fent from the torrid zone, and the tippet from beneath the pole The brocade petticoat rifes out of the mines of Peru, and the diamond neeklace out of the bowels of Indoftan.
If we confider our own country in it's natural profpeet, without any of the benefits and advantages of commerce, what a barren, uncomfortable foot of cath falls to our fhare? Natural huforians tell us, that no fruit grows originally among us, befides hips and haws, acorns and pig-nuts, with other delicacies of the like nature; that our climate, of itfelf and without the affiftance of art, can make no farther advance towards a plum than to a hoe, and carries an apple to no greater perfection than a crab; that our melons, our peaches, our figs, our apricots and cherries, are ftrangers among us, imported in different ages, and naturalized in our Englifh gardens; and that they would all degenerate and fall away into the trafh of our own country, if they were wholly neglected by the planter, and left to the meicy of our fun and foil. Nor has traffic more enriched our vegetable world, than it has improved the whole face of natue among us. Our thips are laden with the harveft of every climate. Our tables are fored with, (pices, and oils, and wines. Our rooms are filled with pyramids of China, and adorned with the workmanfhip of Japan.
Our morning's draught comes to us from the remoteft corners of the earth. We repair our bodies by the drugs of America, and repofe ourfelves under Indian canopies. My friend Sir Andrew calls the vineyalds of France our gardens, the Spice Iflands our hot beds, the Perfians our filkweavers, and the Chinefe our potters. Nature, indeed, furnihes us with the bare neceffries of life, but traffic gives us a great variety of what is uitiul. and at the fame time fupplies us with every thing that is convenient and ornamental. Nor is it the leaft part of this ou: happinef, that, whilf we enjoy the remoteft products of the north and finuth, we are free from thofe extremities of weather which give them birth; that our eyes are refrefled with the green felds of Britain, as the fame time that our foldres are featted with fruiss that ne between the tropics.

Fior thefe reafons, there are not more ufeful members in a commonwealth than merchants. They knit mankind together in a mutual intercourfe of good offices, dittribute the gifts of nature, find work for the poor, add wealth to the rich, and magnificence to the great. Our Englifh merchant converts the tin of his own country into gold, and exchanges his wool for rubies. The Mahometans are cloathed in our Britilh manufacture, and the inhabitants of the frozen zone warmed with the fleeces of our fheep.
When I have been upon the change, I have often farcied one of our old kings ftanding in perfon, where he is reprefented in effigy, and looking down upon the wealthy concourfe of people, with which that place is every day filled. In this cafe, how would he be furprized to hear all the languages of Europe fpoken in this little fpot of his former dominions; and to fee fo many private men, who in his time would have been the valfals of fome powerful baron, negociating,' like princes, for greater fums of money than were formerly to be met with in the royal treafury? Trade, without enlarging the Britifh territories, has given us a kind of additional empire. It has multiplied the number of the rich, made our landed eftates infinitely more valuable than they were formerly, and added to them an acceffion of other eftates as valuable as the lands themfelves.'
It is faid of England, by way of diftinction, and we value durfelves upon it, that it is a trading country: and king Charles 1 I . who, though he was not the beft governor, was the beft acquainted with the world of all the princes of his age, ufed to fay, That the Tradesmen were the only Gentry in England: his majefty fpoke it merrily, but it had a happy fignification in it. For
Our tradefmen, efpecially thofe of the great city we have been defcribing, are not as in other countries, the meaneft of our people: fome of the greateft and beft families among not the gentry only, but even the nobility, have been raifed from trade, owe their beginning and their eftates to trade : and we may add, that thefe families are not afhamed, as they bave no rearon, of their original. See our atticle Commerce. no reaton, of their original. See our asticle COMMERCE.
We have in England a numerous and an illuftrious nobility and gentry, and it is true, alfo, that, not fomany of thofe families have raifed themfelves by the fword as in other nations, though we have not been deftitute of military heroes.--But trade and Iearning have been the true principal channels by which our gentlemen have raifed their fortunes and fplendor to the prodigious height we now behold them. As fo many of our noble and wealthy families are fprung from trade, fo ir is true, that many of the younger branches of our gentry, and even of the nobility itfelf, have defcended again into the fpring from whence they flowed, and have become tradefmen: whence it is that we faid above, our tradefmen in England, efpecially in' London, are not, as in other countries, always of the meaneft of the people. Nor is trade in this kingdom a mean employment: is is on the contrary, the readieft way for men to raife their fortunes and families: and, therefore, it is a field for men of figure and diftinction to enter upon. It reflects, therefore, not a little upon the underftandings of thofe refined heads who pretend to depreciate that part of the nation, which is fo infinitely fuperior in wealth to the families who call themfelves gentry, and fo infinitely more numerous. The wealth of the nation lies chiefly among the trading part of the people; though there have been a great màny families raifed by the late wars, by great employments, and by renowned actions abroad, to the honour of the Englifh gentry; yet how many more families among the tradefmen have been raifed to immenfe eftates, even during the fame period, by the attending circumftances of the wars? fuch as the cloathing, the paying, the victualling, and furnifhing, \&c. both army and navy? And by whom have the prodigious taxes been paid, the loans fupplied, and money advanced upon all occafions? By whom are the banks and companies carried on? On whom are the funds levied, and by whom the public credit upheld? Have not the trade and tradefmen borne the burthen of the wars? Is not trade the inexhauftible fund' of all funds, and upon which all the reft depend?
As is the trade, fo in proportion are the tradefmen; and how opulent are tradefmen in almoft all the feveral parts of England, as well as in London? How ordinary is it to fee a tradefman go off of the fage, even but from mere fhopkeeping, with from 10 to 40,000 l. efate, to divide among bis family? On the contrary, take the gentry in England in general, what with high living, which is grown fo much into a difeafe, and the other ordinary circumftances of families, we find few of the lower gentry, that is to fay, from 6 to 700 l . a year downwards, but they are in debt, and in neceffitous circumftances, and many of much larger eftates alfo. How are the ancient families worn out by excefs and family misfortunes, and the landed eftates poffeffed by a new race of tradefmen, grown up into families of gentry, and eftablifhed by the immenfe wealth gained in the hhop, the warehoufe, or the counting-houfe? How are the fons of traders now ranked among the prime of the gentry? How are the daughters of London traders at this time adorned with the ducal coronets? Nay, many of our trading gentlemen at this time refufe to be ennobled, foorn being knighted, and content themfelves
with being known to be rated among the richeft commotiets in the nation? And it muft be acknowledged, that, what ever they may be as to court-breeding, and the external politefle, they, generally fpeaking, are inferior to none of the gentry in the knowledge of the world.
In how fuperior a port or figure, as we fay, do our tradefmen live to what the middling gentry either do, or can fupport? An ordinary tradefman now, not in the city of London only, but in the inland counties, as well as the out-ports, fhall fpend more money by the year than a gentleman of 4 or 5001 . a year can do; and fhall increafe his fortune every year too: whereas the gentleman dhall, at the beft, ftand ftill, juit where he began, nay, perhaps, decline; and as for the lower gentry, from 1001 . a year to 300,1 . or thereabouts. though they are often high in their appearance, yet a Choemaker in London fhall keep a better houfe, fpend more money, cloath his family better, and yet grow rich too: is it not evident, therefore, where the difference lies? An eftate is a pond, but trade is a foring.
This being the cafe in England, it is no wonder that our tradefmen fill the lifts of our nobility and gentry; no wonder that the gentlemen of the beft familes marry tradefmens daughters, and put their younger fons apprentices to tradefmer. And how often do thefe younger fons come to buy the elder brothers eftates, and reftore the family, when the head of the houle, proving unhappy in his conduct, for want often of employment, has watted his patrimony, and is obliged to make out the bleffing of Ifrael's family, where the younger fon bought the birth right, and the elder was doomed to feive him?
Trade is fo far from being inconfiffent with a gentleman in this kingdom, that it makes gentlemen, and has peopled this nation with gentlemen, and will continue fo to do, while it fhall be fupported in proportion as it may be in neighbouring countries; for, after a generation or two, the trade/mens children, or at leaft their grand-children, become as good gentlemen, ftatefmen, parliament-men, privy-counfellors, judges, bifhops, and noblemen, as thafe of the higheff birth and the moft ancient families. See the article COMMERCE, and various other parts of this woik.
They tell us a tory of the old lord Craven, who was afterwards created earl of Craven by king Charles II. that, being upbraided with his bcing of an upftart nobility, by the famous Aubery, earl of Oxford, who was himfelf of the very ancient family of the Veres, earls of Oxford, the lord Craven told him, that he [Craven] would cap pedigrees with him [Oxford] for a wager: the earl of Oxford laughed at the challenge, and began, reckoning up his famous anceftors, who had been earls of Oxford for a bundred ycars paft, and knights for torie hundreds of years more. But, when my lord Craven began, he read over the family thus: I am William lord Craven, my father was Lord Mayor of London, and my grandfather was the LORD KNOws who; wherefore I think my pedigree as good as yours, my lord (meaning the earl of Oxford.) The thory is to my purpofe: for, let the grandfather be who he would, his father, Sir William Craven, who was lord mayor of London, was a wholefale grocer, and raifed the family by trade; and yet no body doubts but that the family of Craven is, at this day, as truly noble as moft.
In laly, and efpecially at Venice, we fee every day the fons of merchants, and other traders, who grow in wealh and eftates, and can advance, for the fervice of their country, a confiderable fum of money, viz. from 60,000 to 100,000 dollars, are accepted to honour by the fenate, and tranlated into the lift of the nobility; and in all ages the beft princes have thought fit to reward the extraordinary merit of their fubjects with titles of honour, and to rank men among their nobility who have deferved it by great and laudable actions, whether the dignity of their birth, and the antiquity of their families, intitied them to it or not.
The word traderman, in England, does not found fo defpicable as it does in other countries; and to fay a gentlemantradefman, is not fo great an impropriety as fome people are wont to think; and, indecd, as trade is now flourifhing in England, the wealth of our tradefmen increafing, it is very probable a few years will thew us flill a greater race of tradebred gentlemen than ever England yet had.
The very name of an Englifh tradefman will, and does already obtain in the world; and as our foldiers, by the late wars, gained the reputation of being fome of the beft trocps in the world, and our feamen are at this day, and very juftly too, effeemed the beft failors in the world: fo the Englifh tradefmen may, in a few years, be allowed to rank with the beft gentlemen, in Europe; and, as the prophet Ifaiah faid of the merchants of Tyre, That her traffickers were the honourable of the earth. lfa. xxiii. 8.
In the mean time, it is evident their wealth, at this time, out-does that of the like rank of any nation in Furcope; and, as their number is prodigious, fo is their commerce; for the inland commerce of England (and it is of thofe tradefmen and traffickers that we are now feaking of in particular, who carry on trade from the metropolis to the moft remote parts of the kingdom) is certainly the greateft of it's kind of any of the globe; the confumption of all forts of goods, both of our
thatufacture, and of foreign growth being fo exceeding great All this confirms, that trade in England neither is or ough o be levelled with what it is in other countries, or the tradel men depreciated as they have been in fome nations, and as fome of our gentry would pretend to in England; but that, many of our beft families rofe from trade, fo many branches $f$ the bef families in England, under the nobility have aeen put apprentices to tradefmen in London, and fet up and fol put apprentices to tradefmen in London, and fet up and fol-
lowed thofe trades, when they have come out of their times and have thought it no dimonour to their blood.
If I might be permitted, not only without offence, but with a moit refpectful intention, thefe obfervations might not injudicioully or farcaftically be applied to the ladies of this kingdom, many of whom are fo fcandalized at that mean ftep, as they call it, of marrying a tradefman, even a London tradefman it may be modeftly told them, for their humiliation, that, however they think fit to act, fometimes thofe tradefmen come of better families than their own; and oftentimes, when they have refuled and contemned them to their lofs, thofe vey tradefmen have married ladies of fuperior fortune to them, and have raifed families of their own, who, in one generaion, have been fuperior so thofe nice ladies, both in dignity and eftate; and have, to their great mortification, been ranked bove them upon all public occafions.
The whole glory and greatnefs of England then being thus raifed by trade, and in a great degree, by that of it's metropolis, it muft be unaccountable folly and ignorance in us to leflen that one article in our own efteem which is the only founin from whence we all, take us as a nation, are raifed, and by which we are inriched, and maintained with dignity and fplendor. The fcripture fays, fpeaking again of the riches and glory of the city of Tyre, which was, indeed, at that time, the great emporium of the world for foreign commerce, and from whence all the filks and fine manufactures of Perfia and India were exported all over the weftern world, That her merchants were princes; and in another place, By thy traffic thou halt ory riches Ezck xxuii 5 . Certain it is that our traffic has increafed our riches and our power ; and it is alfo certain, that one principal foundation of all our traffic is he grandeur and magnificence, as well as the wealth, the honour, and fagacity of it's renowned citizens of London. And here, in juftice to the well-intentioned and judicious writer, I would beg permiffion te recommend to candid peufal a performance * lately publithed, which does no lefs honour to the author, than he zealoufly intends glory and advantage to the city of London.

* An Effay on the many advantages accruing'to the commumity from the fuperior Neatness, Convenirnce, Decoations, and Embellishments of great and capital CiTIBS ; particulatly applied to the city and fuburos of LoNbon. Addreffed to Sir John Barnard, Knt. fenior alder. man and fenior reprefentative in parliament of the faid city. Printed for Mr. Whitridge, at the Royal Exchange, 1754.
6 The decorations and fine embellifhments of cities, fays this - ingenious gentleman, more efpecially of great and capital ones, whilf they reflect honour, fate, and dignity on their ' fovereigns, their country, and their own particular magifrates and citizens, will ever be found productive of per-- petual acceffions of wealth and commerce, of people, power, and influence ; feeing a general refort to, and refidence at, ' fuch finely adorned cities, by perfons of high rank and - opulence, will neceffarily occafion much money to be - brought thither, and will as neceffarily bring much em-- ployment to their people *, --And again: 'A feafon like ' the prefent, fays he, of profound peace and tranquillity, is undoubtedly the only proper one for the fubject of this ef-- fay; a fubject, as herein peculiarly applied to our great metropolis, not before handled by any, as far as I know. Whilft almoft every confiderable city beyond fea, and many - of our own at home (as Dublit, Edinburgh, Briftol, Gloucefter, Bath, \&c.) are diligently embellifhing and adorning, juftly perceiving the fubftantial benefits arifing therefrom, © thall the city of London remain any longer fupine and inactive, until it be rivalled, and in fome manner eclipfed by cities both abroad and at home, not even fo confider-- able as one of her fingle wards

## * See page 2.

- Since the laft general pacification, almoft every nation in Europe is pufhing into commerce, manufactures, and fifheries more than ever was known before. It therefore behoves us, who ftill hold the fuperiority in trade and navigation, not only to keep the ground which we gained by per-- feverance and induftry, and have folong held, but which we are in no fmall danger of lofing, by the indefatigable application of our mof dangerous rivals in both; but likewife to ftudy every means in our power to attract the rich and noble to refort to us, from every corner of Europe; whereby our commerce, manufactures, and hipping, our wealth and our penple, would be greatly increafed. Thefe, and fuch-like confiderations induced me to fall into this ' hitherto untrodden path*.'
- See Intraducion.

In the application of thefe fentiments to the city of Lonjoit in particular, the gentleman gives a fummary view of the benefits which would refult to the city from his defign; which are comprized under the following particulars.
I. Reputation, fingly confidered, is queftionlefs beneficial: but although the completion of our fcheme be ex' tremely well calculated for advancing our reputation and glory beyond feas, this would neverthclefs be the leaft of it's good confequences.

- II. By the fuppofed general refort of forcigners to our mie6 tropolis, it is eafy to conceive how great the additional de-- mand would be for all the various neceflaries, conveniencies and fuperfuities, whether for nourihment, cloathing, equipages, plate, jewels, pictures, books, toys, medals, \&c. fo all which London would then undoubtedly be the general mart and ftaple.
III. Very confiderable, alfo, would the additional employ: ment be of our manufacturers, artizans, farmers, hop-- keepers, labourers, \&e.
- IV. All which would neceffarily tend to the profperity and increafe of our foreign commerce, navigation, and planta' tions, and, confequently, of our feamen, as well as of all
' the various occupations dependent on commerce, fhipping, and plantations
V. Another obvious confequence from the premifes would
- be a proportionable increafe of the public revenues, of cuftoms, excife, \&c. whereby cur heavy national debt would 6 be the fooner difcharged.
VI. The increafe of the rents of houfes (as well as of their number and goodnefs) in London, and even of the rents and improvements of lands in the country, would be alfo ano-- ther neceffary confequence
- VII. And, as our manufacturers, artizans; farmers, and labourers, would find fuller employment, both in town and ' country, this would neceffarily leffen our poor rate, at pre-
fent fo exorbitant, and fo grievoully burthenfome to the ' bulk of our people.'

## REMARKs in 1764

Since the public fpirited writer of the before-mentioned effay wrote the fame, the city of London bears a different and more fplendid afpect than what it did. The taking down the city gates has proved very ornamental; and the alterations about making to the Bank of England, are likely to add no little luftre to the center of our metropolis. Wheher the firft intimation hereof was derived from what the udicious gentleman obferves in his eflay, I cannot fay but it looks fomething like it. He fays, "The Bank is a good houle, but fituated in too narrow a fireet; where ' a perpetual conflux of wheel-carriages of all kinds, occafions very frequent obftuctions to bufinefs. This ' might in a good degree be remedied, if that prudent corporation would purchafe and demolifh four houfes fronting their great gate ; whereby a good coach and footway might be opened directly from thence into Cornbill, which would likewife open an advantageous view of the fine front of that ftructure,
I cannot pafs this effay over without noticing one thing this ingenious gentleman mentions, concerning - A Mercan-
stile Library being placed in the Mansion-House to be confulted by all the citizens as occafion may require. I could wifh that this our labour, might fall into the hands of this gentleman, and that he would turn to our article Mercantile College, where he will find fuch a Mercantile Library as he recommends, might be of far more public utility than at the Mansion-House
The duchy of MILAN in Italy. The Milanefe is one of the fertileft provinces of Italy: it is bounded on the welt by Piedmont, Savoy, and Montferrat, on the fouth by the Appenine mountains and the territory of Genoa, on the eatt by the ftates of Venice, Parma, and Mantua, and on the north by the territory of Valois, the Grifons, and Switzerland.
The whole country is well watered and very fruitful, Befides the rivers Tefino, Po, Adda, and Seffia, are many fmaller, and feveral great lakes which furnifh it with plenty of fifb.
This duchy is commonly divided into the following 13 territories, viz
The Milanese, properly fo called, having the Comafoo on the north, the Lodefan on the eaft, the Paviefe on the fouth, and the Navorefe on the weft.
Milan, the capital of the duchy, is not only well peopled, but is one of the moft trading cities in Italy. It's principal manufactures are thofe of the filken and woollen, fteel and iron work, prodigioully neat, efpecially fword hilts, fnuff and tobacco-boxes, buckles, and the like. They likewife work very neat on a fort of rock-cryftal, which is brought hither from the Alps, and Glacuris of Savoy, fome pieces of which are large enough to be worked into fine looking-glaffes of about 12 inches by 13 : but this laft kind is very difficult to work. The citizens here are very rich, and the gentry numerous.

## M I N

II. The Paviese hath the Milanefe Proper on the north, the country of Bobbio on the fouth, the Lodiefe on the eaft, and the Laumelinere on the welt; and fo fertile, that it is commonly ftiled The garden of the duchy of Milan. But here are no towns of any trade.
III. The Lodesan lies along the river Adda, between the Cremonefe and Comafoo. It hath Milan Proper on the north, the Paviefe on the welt, and the Placentine on the fouth, and is a very fertile and well-peopled diftrict.
New Lodi is a rich and populous town on the river Adda.
They breed a vaft quantity of cattle in the territory about it, and it is famed likewife for making excellent cheefes, and of a monftrous bignefs, fome of which weigh above 500 pounds, and far exceed the Parmefan in tafte, as alfo for dried neats tongues, and a fine fort of earthen-ware, not inferior to the Dutch Delft.
IV. The Cremonese has Parmefan on the fouth, the Mantuan on the eaft, Lodefan on the weft, and the Brefciano on the north. It is fertile in good wines and fine fruits.
It's only place of note is the city of Cremona.
V. Comasco, or the territory and county of Coma, lies between the Bergamefe, the Grifons, the Valteline, and the four Italian bailiwicks belonging to Switzerland.
VI. The county of Anghiera is fituate at the foot of the Alps,' between Switzerland and the territory of $V$ alais on the north, Aoita on the weft, and the Vercellefe and Novarefe on the fouth. It is fmall, but very fertile and well inhabited.
VII. The Novarese lies between the Milanefe Proper, Yiedmont, Seffia, and the Vigevenefe, and is a fertile and pleafant country.
VIII. Vigevanese. IX. Laumellinese. X. The Alexandrino. XI. The Tortonese. XII. The vallies of Sessia. XIII. The Bobbiese, or territory of Bobreio, in none of which are any trading towns worth mentioning. MINERAL is a compound foffil, wherein there is fomething difcoverable like metal, but not malleable; it being joined or compounded with fome other foffil, as falt, fulphur, carth.
To write of metals and minerals, intelligibly and with tolerable perfpicuity, is a talk much more difficult than to write of either animals or vegetables. For thofe carry along, with them fuch plain and evident notes and characters, either of difagreement or affinity with one another, that the feveral kinds of them, and the fubordinate fpecies of each, are eafily known and diftinguifhed, even at firft fight; the eye only being fully capable of judging and determining their mutual relations, as well as their differences.
But in the mineral kingdom the matter is quite otherwife. Here is nothing regular, whatever fome may have pretended: nothing conftant or certain. Infomuch that a man had need to have all his fenfes about him, to ufe repeated trials and infpections, and that with all imaginable care and warinefs, truly and rightly to difcern and diftinguifh things, and all little enough. Here is fuch a vaft variety of phænomena, and thofe many of them fo delufive, that it is very hard to efeape impofition and miftake. Colour, or outward appearance, is not all to be trufted. A common marcafite or pyrites fhall have the colour of gold moft exactly, and thine with all the brightnefs of it ; and yet upon trial, after all, yield nothing of worth, but vitriol and a little fulphur; whilft another body, that hath only the refemblance of an ordinary pebble, fhall yield a confiderable quantity of metallic and valuable matter.
So likewife a mafs, which to the eye appears to be nothing but mere fimple earth, fhall, to the fimell or tafte; difcover a plentiful admixture of fulphur, allum, or fome other mineral.
Nor may we with much better fecurity rely upon figure, or external form. Nothing more uncertain and varying. It is ufual to meet with the very fame metal or mineral, naturally fhot into quite different figures, as it is to find quite different kinds of them all of the lame figure. And a body that has the hape and appearance of a diamond, may prove, upon examination, to be nothing but cryftal, or fenelites: nay, perhaps, only common falt or allum, naturally cryfallized and fhot into that form
So likewife, if we look into their fituation and place in the earth, - fometimes we find them in the perpendicular inter.vals, fometimes in the bodies of the frata, being interfperfed amongft the matter whereof they confift, and fometimes in both. Even, if I may fo fpeak, the gemmeous matter itfeif, with this only difference, that thofe gems, e. gr. topazes, amethyfts, or emeralds, which grow in the fiffures, are ordinarily cryftalized, or fhot into angulated figures: whereas, in the flrata, they are found in rude lumps, and only like fo many yellow, purple, and green pebbles.
Not but that even thefe, that are thus lodged in the ftrata, are alfo fometimes found cryftalized, and in form of cubes, rhombs, and the like. Or if we have refp-ct to the terreftrial matter, wherein they lie in thofe ftrata, here we fhall meet with the fame metal or mineral embodied in fone, or lodged in coal, that elfewhere we found in flarl, in clay, or in chalk.
As much inconftancy and confuison is thare in their masures
with each other, or their combinations amongft themfelves. For it is rare to find any of them pure, fimple, and unmixed, but copper and iron together in the fame mals: copper and gold, lilver and lead, in and lead, yea fometimes all the fix promilcuoufly in one lump.
It is the fame alfo in minerals, nitre with vitriol, common falt in allum, antimony with culphur, and fometimes all thefe together, Nor do metals only fort and berd with netals in the earth, and minerals with minerals, but both indifferently and in common together. Lead with fpar, with calamme, or with antimony: iron with vitriol, with allum, with fulphur: copper with fulphur, with vitriol, \&c. yea, iron, copper, lead, nitre, fulphur, vitriol, and, perhaps, fome more, in one and the fame mafs.
In a word, the only ftanding teft and difcriminative characteriftic of any metal or mineral mult be fought for in the conftituent matter of it; and it muft firft be brought down to that, before any certain judgment can be given. And, when that is once done, and the feveral kinds leparated and extracted each from the owher, the homogeneous mafs of one $k$ ind is eafily diftinguilhable from any other; gold from iron, fulphur from nirre, and fo of the reft. But, without this, fo various are their intermixtures, and fo different the face and appearance of each, becaufe of that variety, that fcarcely any thing can be certainly determined of the particular contents of any fingle mafs of ore by mere infpection.
I know that by experience and converfation with thefe bodies, in any place or mine, a man may be enabled to give a near conjecture at the metallic or mineral ingredients of any mafs commonly found there, but this merely becaule he hath inade trial of other like maffes, and thereby leamed what it is they contain. But, if he remove to another place, though perhaps very little diftant, it is ten to one but he meets wuh fo different a face of things, that he will be there as tar to feek in his conjectures, as one who never berore $f_{d} w$ a native ore ; until he hath here made his trial as befure, and fo further informed himfelf of the matter.
Metals being fo very ufeful and ferviceable to mankind, great care and pains hath been caken, in all ages, in fearching after them, and in feparating and refining of them. For which reafon it is, that theie have been accurately enough diftinguilhed and reduced to fix kinds, which are all well known.
But the like pains have not been taken in minerals, and therefore the knowledge of them is fomewhat more contufd and obfcure. Thefe have not yet been well reduced, or the number of the fimple original ones rightly fixed; fome of which are only compounds, the matter of two or more kinds being mixed together, and, by the different propurtion and modulation of that matter, varioufly difguifed and diverfified, having been reputed all different kinds of minerals, and thereby the number of them unneceffarily multiplied. Of this we have an inftance of the gem kind: where of all the many forts reckoned up by lapidaries, there are not above three or four that are originals; their diverfities, as to luftre, colour, and hardnets, arifing from the different admixture of other adventitious metallic and mineral matter. It is fufficient for my prefent defign to remark in general, that thofe minerals, and ores of metals which are repofited in the bodies of the frata, are either found in grains, or fmall particles, difperfedly intermixed with the corpufcles of earth, land, or other matter of thofe frrata: or elfe they are amafied into balls, lumps, or nodules. Which nodules are either of an irregular and uncertain figure, fuch as are the common pyrita, flints, agates, onyx's, pebbles, cornelians, jafpers, and the more like: or of a figure fomewhat more regular and obfervable, fuch as the belemnites: the feveral forts of mineral coral, of the Itelechites, and of the lapis mycetoides *: the aftroites, or ftarry ftone, as well that fort with the prominent, as that with the plane, and that with the concave flars: the fenelites, the echinated cryftalline balls, with many more analogous bodies.

* Vulgarly called fungites.

Thofe which are contained in the perpendicular intervals of the ftrata are, either fuch as are there accumulated into a rude heap, without any particular form or order, being only included betwixt the two oppofite walls or fides of the faid intervals, which they wholly or partly fill, as there is a greater or lefs quantity of them ; in which manner fpar is ufually found therein, and other minerals, as alfo the common ores of lead, tin, iron, and other metals, or elfe fuch as are of fome obfervable figure. Of this fort are the fparry ftirix, iceycles, called ftalactite *: the native faline iceycles, or fal ftalacticum: the vitriolum ftalacticum nativum: the vitriolum capillare: the alumen ftalacticum, and capillare : minera ferri ftalactica, which, when feveral of the cylindric ftirize are contiguous, and grow together in one fheaf, is called brufh iron-ore: and, lafty, therargentum arborefcens \& capillare.

* Or rather flagonitz.

Hither alfo ought to be referred the cryftallized ores and minerals, e. gr, the iron-rhombs: the tin grains: the mun-
dic grains: the teffellated pyrita, or ludis Paracelfi: cryftallized native falt, allum, vitriol, and fulphur. As like wife the gems or fones that are found in thefe perpendicular intervals, fhot into cubes, into pyramidal forms, or into angulated columns, confifting fometimes of three, but moft commonly of fix fides, and mucronated, or terminating in point, being either opake or pellucid: or partly pellucid, and partly opake and coloured, black, white, grey, red, purple, blue, yellow, or green, e. gr. cryftal, the pleudoadamantes, the Cornifh fones, the Bratol Itones, cryitallized fpars, the amethyft, the fapphire, the topaz, the emerald, and feveral others.

REMARKS.
With regard to the tokens and characteriftics upon the furface of the earth, of fuch places as may be reafonably prefumed to contain fome kind of mineral or metalline earths of value, fee the article Minerology.
MINERAL WATERS. Thefe are chiefly of three kinds. Some are corporeal (we want a better word for it) others ipiriuous, and the refl both corporeal and firituous. Thofe we all corporeal mineral waters, contain fixed and folid particles of minerals and foffils, which may be feparated from the water, and feen with the naked eye; fuch as thefe are of two forts: fome carry large particles of minerals and foffils, which may be eaflly perceived in the wateritfelf; nor are they, properly feaking, mixed with the water, and fome have in hem grains of gold, filver, \&c. and, therefore, are called ariferous, argentiferous, \&ce but fuch are not properly termed mineral waters, becaufe they have not thofe particles nixed with them, but feparate; neither do they receive any property from them: yet, becaufe men admire fuch rivers and their explication hath a great affinity with the defcription of mineral waters properly focalled, we thought fit to mention hem under the fame heads; to which may be added bituminous fountains, \&c
Corporeal mineral waters are fuch as contain folid particles of fofils, but fo minute rhat they are intirely mixed, and cannot well be diftinguifhed by the fight, unlefs they are made to [ubfide by art, or a long fpace of time, or by concretion are brought to a vifible mafs; fuch as falt and fulphureous fountains, \&x. and chemical waters, in which metals are diffolved.
Spirituous waters are thofe that contain only fuch a volatile fpirit as is found in minerals, but have no fixed particles in them; and, therefore, their compofition can never be made vifible.
We call thofe waters both corporeal and firituous which contain not only fixed and folid particles of minerals, but alfo volatile and fpirituous; of all which we fhall give examples.

## How mineral waters are generated

I. If the water be carried under-ground with a rapid courfe, among metalline and mineral earths, which is eafily loofened, it is evident that it wathes particles from it, and may carry along with it grains of thefe minerals: and this is the geng ration of thefe corporeal mineral waters that hold grains in them.
2. If the mineral waters are imperfect, and not fo clofely joined as vitriol, fulphur, \&c. or even falt, which, of their own nature, eafly mix with water; and, if a rivulet of water runs through beds or mines of fuch minerals, or be ftrained through them (without a channel or duct) the water, when it breaks out at the fountain, will have fmall particles of thefe minerals mixed with it, and will be corporeal mineral water, of a fubtile compolition, according to the fmallnefs of the atoms. Now, whether the water can in like manner diliolve or unite with itfelf the particles of metals, is to be queftioned becaufe they are hard and folid, and, therefore, are not eafily blended with water This may be done, but not with fimple or common water, but by vitriolic and falt fpirituous water, like aqua fortis [fee Aqua Fortis] for that diffolves metals into atoms, and eafily unites them with itfelf, fo that they do not fubfide at the bottom, unlefs they be feparated by art in like manner, when fuch water runs through a metallic earth, it may difolve the metalline particles, and unite them with itfelf; and thus are the corporeal mineral waters of the fecond fort accounted for and explained.
3. Before metals are formed in the bowels of the earth, fteams and vapours are condenfed about the extant corners of the rocks, to which they adhere, being at firft but of a foft fubftance, and afterwards hardened by degrees; if, therefore, the water fhould gleet through the places where fuch vapours are in commotion, it becomes impregnated with them: and thus firituous mineral and metalline waters are produced. Imperfect minerals alfo make mineral waters of their own nature, after another method, viz. when, being beated by a fubterraneous, or their own proper heat, they fend forth fpirits and vapours, as fulphur, vitrio, fatt, coal, \&e. and fuch ex. halations is always ftirred up, where there are fuch minerals, among which the permeating water is impregnated with the fpirit. Some think thefe fpirituous waters may be generated by being only carried through a metallic earth, or by having their receptacles in it, or in their mines; but it is found to
the conträry by experience, that water receives no quality from metals and minerals, though they fhould be immerfed in it a great many years. Therefore, rejecting this opinion it is moft reafonable to fuppofe, that thefe waters receive a certain fpirit from the firft priaciples of metals, as we may call them; or we may fay, that fuch waters are impregnated with the fubtile fpirits of vitriol, falt, \&cc. by the help of which a fpirit is extracted from hard metals; but we do not lay fo great frefs upon this latter caufe, for a queftion will arife again, about the generation of this fpirituous, mineral, vittiolic, and falt water
From thefe together it appears, how mineral waters, both corporeal and fpirituous, are generated.
There are innumerable kinds of mincral waters, according to the diverfity of the particles they receive from different minerals.
Wehave explained how mineral waters receive thefe particles, from which their extraordinary qualities arife. Now, becaufe there are divers kinds of minerals, it hence follows, that mineral waters are various, and almoft infinitely different in their qualities, not confifting of one kind of water impregnated with only one fort of mineral, but of various kinds, mixed with various forts. Wherefore mineral waters are either fimple or mixed; and the mixed have two, three, four, or more forts of foffils in them
Hence are, s. Metallic waters, as of gold, filver, copper, tin, lead, iron, 8 c .
2. Salt waters, as of common falt, nitre, allum, vitriol, \&c. 3. Bituminous waters, fulphureous, antimonial, as of coal, ambergris, \&c.
4. Waters proceeding from various kinds of earth and fones, viz. as lime-ftone waters, chalk, oker, cinnabar, marble, alabafter, \&c.
5. Mercurial waters, \&ic.

All thefe kinds of waters are to be underfood three ways, viz 1. Some of them are corporeal, either fenfibly fo, or by a refined and fubtile commixture. 2. Others are fpirituous. 3. Others are both corporeal and fpirituous.
Thefe differences may be applied to the feveral kinds of mineral waters. For example: there are golden waters, which are, 1. Corporeal, that carry grains of gold of fuch magnitude, that, with fmall trouble, they are difcernible, by reafon of their grofs or coarfe mixture. 2. Corporeal, that carry very minute particles of goid, well mixed with them ; and, though the fmallett particles of gold do, of their own nature, fink to the bottom of water, yet that there are fuch, appears from the aqua regia [fee AQUA Regia] in which gold is diffolved into atoms ; but this aqua regia is not a fimple water, neither dees any water carry atoms of gold in it, unlefs it be before impregnated with other mineral particles. 3. Spirituous golden waters, that have engendered a fpirit and vapour in the earth, from which gold is produced. 4. Golden waters, that are both corporeal and fipituous, viz. that have both atoms of gold, and the firit that produces it. Thus we are to apply this four-fold variety to all forts of mineral waters, whether fimple or mixed (from whence innumerable fecies are produced); for either the bodies of foffils, or their (pirits, or the body of one foffil with the fpirit of another, are mixed or engendered in the water: fo leaden waters are of four kinds, viz. ı. Vifibly corporeal. 2. Corporeal by a fubtile mixture. 3 . Tinctured by the fpirit of lead. 4. Impregnated both with the body and fpirit of lead. And thefe four participations of minerals are to be applied to mercurial waters, \&c. and more efpecially to falt, vitriolic, and fulphureous waters, becaufe in thefe nature itfelf difplays a four-fold variety; though it is to be doubted whether there be corporeal particles of a fubtile grain in metalline waters. Spirituous metallic waters are alfo very rare; but the water of falt, fulphur, \&e. both corporeal and fpirituous, is very common, becaufe thefe foffils are found in greater plenty, and their particles are alfo fooner adapted to atoms, and diffolved by the water; befide, they frequently emit fteams and vapours.
Let us explain this four-fold variety of participation by one example of gold.
In the country of Tyrol, and the neighbouring places, there are feveral rivers that carry grains of gold; and the Rhine, the Elbe, the Danube, and leveral other great rivers, do the like alfo, as other rivers do other metals and minerals. The Rhine carries grains of gold, mixed with clay and fand, in many places, but efpecially at thefe, viz. I. Near Coire, in the Grifons country. 2. At Mayenfield. 3. At Eglifan. 4. At Soking. 5. At the town of Aught, not far from Bafil. 6. At Newburg. 7. At Saltz. 8. At Worms. 9. At Mentz. io. At Bacherach. is. At Bonn, \&c. The auriferous rivulets which the Rhine receives, the reader may fee in Thurnheuferus, and alfo thofe that run into the Danube and Elbe. Small grains of gold are found in the Elbe in thefe places: 1. At Lotomeritz in Bohemia. 2. At Purn. 3. At Drefden in Meifen. 4. At Torgaw. 5. At Magdeburg. 6. At Lawenburgh tower, about five miles from Hamburgh. Several other auriferous rivers are given an account of in the forecited book of Thurnheuferus; and fuch as carry other metals and minerals. And thefe are auriferous corpo-

6
real waters of the firft kind, carrying vifible grains, which are not fo properly called mineral, or golden waters, becaufe the golden grains are not mixed with the water, but only carried in it by it's rapid motion, the water infelf being uncompounded with it.
2. Corporeal zolden waters of fine mixture, whofe atoms are united with the atoms of gold, like the chemical aqua regia which diffolves gold, and unites it by atoms to itfelf: for fince it is poffible that there may be in nature fuch water as this of the chemifts, which may run through golden earth, or gold mines, it is reafonable to fuppofe that it eats out particles, and diffolves them into atoms, and unites them to itfelf; and from this caufe proceed thofe (or fuch-like) goiden rivulets as are defcribed by Thurnheuferus, in his account of the Danube; Rhine, \&xc.
3. Spirituous golden waters are but very few, fome of which, perbaps, are enumerated among the reft by Thurnheuferus; but thefe are not fo much known, becauife golden earch and gold mines are very fcarce; befides, where there are fuch mines, there is fuch a mixture of other minerals, that they are not perceptible. Neverthelefs, there are fome rivulets in the high Alps of Bohemia, that are faid to participate of thefe golden fpirits, as in the Frichtelberg mountains in Silefia. The hot baths allo in the bifhopric of Caire are believed to be impregnated with this kind of firit; yet, becaufe of the mixture of other minerals in a greater quantity, this quality is rendered lefs perceptible.
4. Golden waters that carry both the atoms and fpirit of gold, are fome of thofe rivulets mentioned by the abovenamed Thurnheuferus.
Let us allo give an example of falt waters

1. Corporeal falt waters, which carry grofs and undigefted particles of falt, are found in many places, and fufficiently known, as fountains, whofe waters produce falt, and feawater, from which falt is extracted by boiling.
2. Subtile corporeal falt waters, which contain falt diffolved in the minuteft atoms, are fuch as are very falt, and yet very clear, as many falt fountains are, and fea-water that is thin and fine; though there is a great difference in this fubtile mixture. Hereto may be referred the urine of all animals.
3. Spirituous falt waters, which do not contain the particles of falt, but only the fpirit of it, are of fuch a nature, that, if feveral tons be ever fo much boiled, they will not yield any falt. There are a great many of thefe in Germany, and other places, but they are feldom withour mixture.
4. Corporeal and fpirituous falt-waters, which contain the particles and firit of falt. Almoft all corporeal waters have fome fmall portion of faline firits in them, but few of them any quantity. Thus the fountains about the city of Saltzinge, near the Rhine, are falter than other falt fprings, and yet yields lefs falt, becaufe their fharp and brackifh tafte is heightened by a fpirit or volatile falt.
Hence it appears how this four-fold variety of participation is to be applied to the feveral kinds of mineral waters, viz. to vitriolic, allum, and lead waters, \&c.
To enumerate the moft remarkable varieties of mineral waters. In the foregoing propofitions we have explained the kinds and differences of mineral waters, taken from their nature, which confift in having mineral particles in them, which they carry, or with which they are impregnated; but, becaufe thefe varieties are not fo perceptible to the fenfes, and there are feveral mixtures of minerals that caufe various, and almoft unaccountable properties in the waters, therefore they are not fo eafily known and diftinguifhed by the vulgar; for waters (and other bodies) become famous among mankind, and receive their names from their manifeft qualities, which frike and affect the fenfes, whole caufe and explication are to be deduced from their compofition and participation. There are, therefore, ten fpecies of waters, or liquids, that flow out of the ground, which are commonly taken notice of by the vulgar: I. Acid waters. 2. Bitter. 3. Hot. 4. Very cold. 5. Fat and oily. 6. Poifonous or deadly, 7. Coloured. 8. Boiling. 9. Waters that harden bodies, change their colour, or otherwife alter them. Io. Saline. 11. To thefe may be added fuch as are invefted with other uncommom properties. All kinds of waters defcribed by authors may be referred to one or other of thefe heads.
MINEROLOGY, that previous part of metallurgy, which teaches the ways of finding, judging, and digging of mines. Minerology is an art that requires a confiderable compafs of knowledge, before it can be practifed to advantage: for, as this art includes the difcovery, finking, and working of mines, it requires a competent fkill in the nature, effluvia, and effeets of mineral matters, whether earths, falts, fulphurs, fones, ores, bitumens, gems or metals. It likewife requires a knowledge of the internal flructure of the earth and it's various frata, with a competent fill in fubterraneous architecture, menfuration, hydraulics, levelling, an'd mechanics; without which, we can never judge what mountain, plain, or valley, is proper to be dug; in what manner to dig it; how to difcharge the water that may flow in upon the works; how the beds of ore and fone will dip or run; how the various kinds of earths, marble, and other mineral or metallic matters, are to be cut through or broken; or how the gene-
ral procefs of mining thould be conducted, in order to procurc, with the leaft expence, or bring to open day, the principal matter or ore required.
And, tven when all there difficulties are conquered, no more than half the work is effected; and the cnd can fill be never obtained, without a tolerably exact knowledge of feveral che. mical operations, viz. trituration, torrefaction, lotion, calcınation, cementation, fufion, amalgamation, and the like: whence it may be laid $d$ wn as a rule, that every directing metallift fhould not only be colerably verfed in the feveral parts of natural philofophy, but particularly be well acquainted with chemiftry.
And, perbaps, it may not be improper to intimate, that many metallurgical attempts have mifcarried, merely for want of a competent ikill to conduct them. The under workmen, in this way, are generally a head ftrong ignorant people, that cannot be managed without the ufe of fome good political rules, and a knowledge much fuperior to their own. Yet, how little foever the art of minerology may have been underftoad, hiftory affords us numerous examples of plentiful fortunes and immenfe treafures raifed from mines, as well by private perfons, as particular fates and kingdoms But the vulgar, and even philofophers not verfed in trade, generally efteem the bufinefs of mining precarious, uncertain, and unprofperous; efpecially when compared with agriculture, or other arts, exercifed more in the open day.
The truth is, mines are liable to many contingencies, being fometimes poor, fometimes foon exhauftible, fometimes fubject to be drowned, efpecially when deep, and fomerimes hard to trace. Yet there are many inftances of mines proving highly advantageous for hundreds of years: the mines of Potofi are, to this day, worked with nearly the fame fuccefs as at firft: the gold mines of Cremnitz have been worked almoft thefe thoufand years, and our Cornifh tin mines are extremely ancient: in general, the profit of mites, compared with that of agriculture, is immenfely greater in the fame time, fo as to compenfate largely for their want of certainty. Even lead mines generally yield twice or thrice the returns of the richeft foils, improved in the ordinfary manner, either by nature or art. What then thall we fay of the mines that are rich in the nobler metals? The nett proft of the filver alone, dug in the Mifnian filver mines of Saxony, in the face of eight years, is computed at a thoufand fix hundred and forty four millions, befides feventy -three tons of gold*.

* See Pet. Albin. in Chronic. Mifn. Miner. German.

Many mines have been difcovered by accident: a torrent firt laid open a rich vein of the filver mine at Fribourg in Germany. Sometimes a violent wind, by blowing up trees, or overturning the parts of'rocks, has difcovered a mine. The fame has happened by violent thowers, earthquakes, thunder, the fring of woods, or even the ftroke of a plough-fhare, or a horfe's hoof.
The art of mining does not wait for thefe favourable accidents, but directly goes upon the fearch and difcovery of fuch mineral veins, ores, or fands, as may be worth the working for metal.
The artificial invefligation and difcovery of mines depend upon a particular fagacity, or acquired habit of judging, from particular figns, that metallic matters are contained in certain parts of the earth, not far below it's furface
The principal figus of a latent metallic vein feem reducible to general heads; fuch as (I.) The difcovery of certain mineral waters. (2.) The difcolouration of the trees or grals of a place. (3.) The finding of pieces of ore on the furface of the ground. (4.) The rife of warm exhalations. (5.) The finding of the metallic fands, and the like. All which are fo many encouragements for making a ftricter fearch, near the places where any thing of this kind appears. Whence rules of practice might be formed, for reducing this art to a greater certainty.
But, when no evident figns of a mine appear, the kilful mineralift ufually bores into the earth in fuch places as, from fome analogy of knowledge, gained by experience (or by obferving the fituation, courfe, or nature of other mines) he judges may contain metal.
This method of boring confifts in the ufe of a fett of froopingirons, made with joints, fo as to be lengthened at plealure; and thrult down to a confiderable depth below the furface of the earth, fo as, when taken out again, to bring back famples of the earth, or mineral matter, from the depth whereto the iron defcended; much after the manner that famples of fugar are taken by the inftrument called a REST, out of the hogthead.
After a mine is found, the next thing to be confidered is, whether it may be dug to advantage. In order to determine this, we are duly to weigh the nature of the place, and it's fituation, as to wood, water, carriage, healthinefs, and the like; and compare the refult with the richnefs of the ore, the charge of digging, ftamping, wafhing, and fmelting. This is a matter of oeconomical prudence.
Particularly the form and fituation of the foot fhould be well confidered. A mine muft either happen ( I ) In a mountain. (2.) In a bill. (3.) In ávalley, or (4.) In a flat. But moun-

## M I N

tains and hills are dug with much greater eale and convenieence, chiefly becaufe of the drains and burrows, as the miners call them ; that is, the adits, or avenues, may be here readily cut, both to drain of the water, and to form gangways for bringing out ore, \&c.
In all the four cafes, we are to look out for the veins, which the rains or other accidental things may have laid bare; and, if fuch a vein be found, it may often be proper to open the mine in that place, efpecially if the vein proves tolerably large and rich : otherwife, the moft commodious place for fituation is to be chofe for the purpofe, viz. neither on a flat, nor on the tops of mountains, but on the fides: for the mineralift is always to exercife his judgment, in due choice of a place to begin the work.
The befl fituation for a mine is a mountainous, woody, wholefome foot, of a fafe eafy afcent, and bordering upon a navigable river. And, fuch a place as this being the fandard of goodnefs, all others may be judged of as they approach to, or recede from it.
Wood is indifpenfibly neceffary for making the neceffary inftruments, engines, and huts; as alfo for fencing the pits, or avenues, and fupporting the rock, where large caverns are made, by digging away the ore: and again, for fupplying fuel to the melting works, unlefs where pit-coal will lerve the turn. But, though no wood or coal hould grow upon the foot, it may often be fupplied by means of a navigable river, or cheap carriage. And thus there are fome rich mines in the hotter climates, without fo much as a thrub growing near them.
Plenty of water fhould never be wanting, and is beft fupplied by a river; whence it may be commodioully derived by pipes, into the lavadero's, fmelting-huts, \&c. or even brought into the burrows themfelves, and made to work the fubterraneous machines. Thefe are conveniencies not conftantly to be expected from cafual rains, or the torrents of the moun. tains.
The roads and conveniencies of carriage, to and from the adjacent parts, mult be likewife regarded, as well for the fale of the metal produced, as the conveyance of goods, and the neceflaries of life to the workmen: for it rarely happens, that provifions are afforded upon the fpot where metals are found.
The places abounding with mines are generally healthy, as ftanding high, and every way expofed to the air: yet fome places, where mines are found, prove poifonous, and can upon no account be dug, though ever fo rich. The way of examining a fufpected place of this kind is, to make experiments upon brutes, by expofing them to the effluvia or cxhalations, to find the effect.
But a confiderable advantage may fometimes be made, without the labour and expence of digging: for, as fprings and rivulets are frequently the outlets of mines, it may happen that the fand of fuch waters thall be worth the wafhing for metal, in which manner large quantities of gold-duft are often procured: and hence it appears to be, that the fands of many rapid rivers contain gold; and even the fand of the fea in fome places, though the latter in fo fmall a proportion as feldom to be worth the walhing. But the fand of fuch rivers wherein ftamped ores are continually wafhed, may frequently deferve to be affayed.
The veins of a mine greatly differ from each other, in depth, length, and breadth. Some ftretch obliquely from the furface towards the central parts of the earth, and thefe are called deep veins: others lie fhallow and circular, fo as to encompafs a large fpace; thefe are termed fpreading veins: others poffers a great part of the fpace they lie in, both in length and breadth, and thefe are called accumulated veins, being no more than a fpace poffeffed by a group of foffils of one certain kind. But to give the hiftory of veins, and fibres, which are fmaller veins, their differences, their direcions, their interfections, their different goodnefs, their difcontinuations, their rifing, falling, \&c. would be a large work. Let it, however, be obferved, that thefe things feem to proceed in a certain order, though the laws of them have not been well obrerved, fo as to afford the fure rules of practice: whence it Cometimes happens, that, after a vein has been fuccefsfully tried for fome time, it dips, breaks off, or takes a different courfe, leaving the workmen as it were at fault.
When a vein of ore is found, and all things prepared for the work, if the vein be of the deep kind, it is firft to be taid bare and a pit to be funk upon it, at the mouth wheleof a fhed is to be raifed, and a crane, or barrel and winch fixed, for craning up the ore. The pit is to be funk either perpendicular or oblique, according as the vein happens to run.
It is alfo ufual, in this cafe, to cut a burrow or adit, into the fide of the hill. This burrow is ufually cut twice as high as wide, that the workmen may commodioully pafs along it with their barrows and burdens, being for that purpofe ufually about feven feet and a half high, and almoft four feet wide. If this fide pit reaches to the firft pit, it becomes a true burrow, open at both ends, and thus renders the work more facile and commodious, as the ore may be now wheeled out in barrows, inftead of being craned up to the mouth of the pit. After the fame manner it is ufual to dig many caverns into
Vol. II.

## M I N

the fides of the mountain, in order to fcoop out the ore; fo that fometimes there are thus feveral burrows made, to the eafe and advantage of the work.
The art of digging the veins varies according to the nature of the vein, or according as it is foft or hard. The foft vein is generaly dug with the fpade, and turned out into wooden trays, placed underneath to receive it: but the hard verins are knocked out with a gad, or kind of chiffel and hammer.. But, if the ore is fo hard as to be incapable of breaking in this manner, they ufually foften it with fire, which bas the power of rendering the hardeft and moft finty ftones brittle and friable. But a ftill more expeditious method is the working with gunpowder, by means whereof much of the hardeft rock may be fhivered and fplit in a very little time; a fmall parcel of powder being laid in a long hollow cut for that pupore, after the nature of a gun-barrel, and fired as it were at a touchhole ; a fmall vent, where the quick-match is applied, being left for the purpofe, and the orifice being otherwife hard ftopped up with clay.
The manner of purfuing and digging all forts of veins, the ways of under-propping and difcharging the water from the works', the finking of air-fhafts, curing of damps, and the like, to the beft advantage, requires more philofophy than the generality of mere workmen, or the common miners have, though their experience may as much affift the theoretic philofopher, as the difcernment of the latter may that of the former.

## Remarks ot Minerology.

We learn from the preceding enquiry, that, to practife minerology and metallurgy to advantage, a confiderable knowledge in natural philofophy, as well as in the operations of chemiftry, in relation to the point of metallurgy, is required. That many mifcarriages, in mineral attempts, have been owing to the want of a competent pkill of mechanics, bydraulics, and chemiftry.
That the profit attending the fcientifical working of mines is generally greater, and upon the whole more confiderable, than that of agriculture or merchandize.
That there are two ways of difcovering mines, viz. by accident and by art: the latter whereof belongs to the incelligent mineralift.
That the art of difcovering mines depends upon a certain fagacity, which may be acquired by ufe and practice; or upon the obfervation of particular figns, that generally denote a mine; and again upon the method of boring, according to fome analogy of knowledge, gained by being converfant with the common appearances, fituations, and other phrenomena of mines.
That the art of difcovering mines is reducible to rule, fo as not to be mere conjeCture, or guefs-work.
That, in general, mines are to be firft opened where a vein is, by accident, or otherwife, laid bare, efpecially if it prove large or rich: but, where no fuch encouragement appears, the fide of the hill is principally to be chofe for the opening. That a deliberate confideration, and a competency of oconomical prudence, are ufually required to determine beforehand, whether a mine, after it is difcovered, may be wrought to profit.
That the molt perfect fituation of a mine is to be mountainous, woody, ealy of afcent, healthy, bordering upon a navigable river, and good roads.
That metals may be fometimes obtained to advantage without digging, or barely by walhing the fands of certain fprings and rivers.
That mineral veins differ greatly from each other, and accordingly require different methods of digging, which may be reduced to ftandald rules of practice.
That the bufinefs of mining is improvable, by difcovering better methods of preventing or curing the damps in mines, rendering poifonous mines wholfome, or defending the bodies of the workmen againft their ill effects; as alfo by dif: covering better methods of raifing or difcharging the waters, following the veins, breaking the rock, getting up the ore.
Before we take leave of this article, what the learned Dr. Edward Browne fays, with regard to the miner's compals, in his Travels through Hungary, 'Theffaly, Macedonia, \&ic. may deferve the attention of thofe, who may become adenturers herein

- They [the miners] fays he, work, towards one, two, or three of the clock; for the miner's differs from the mariner's compafs, being not divided into 32, but into 24 points.This is very true, not only in regard to the Hungarian and German miners, but with refpect to our own coal miners : where, if you afk any of the workmen about the courfe of the veins, they anfwer you, that it dips towards fix o'clock, which is utterly unintelligible to common people. The truth of the matter is, that the miner's and mariner's compars is founded upon different principles, though it is to be doubted, whether a method might not be found of ufing the mariner's compafs to great advantage in mines; but at prefent we have not room to infift upon this, and thall therefore content ourfelves with obferving, that in the miner's compais the upper twelve o'clock anfwers to the meridian of the place
$Z_{z z}$
where

## M I N

where the mine is, and from thence the hours are marked on each of the femicircles; fo that fix o'clock makes a quadrant on each lide, and each of the hour lines is diftant from the other is degrees; fo that, in fact, the miner's compals is a kind of dial; and, when they fay they have worked to fuch an hour, they, mean that they work to fuch a point as the fun bears from them at the time of the day which they mention.

- Kircher, in regard to this difcovery of mines, fays, we muft allow, that all the figns for the difcovery of mines, here mentioned, are founded on a weak bottom, and that there is none of thofe fuppofed marks, whereby one can be fure and certain, after you have difcovered the place that con tains ore, neither what quantity nor what kind it holds; or thefe figns will direct as well to fulphur, antimony, falt, mercury, lead, iron, copper, tin , as to filver and gold. But, by virtue of the Winchel-Rod, we may with conGidence diftinguifh the one from the other, and know what kind of ore the mines contain: for, by holding in each hand a piece of gold, the rod which thereby attracts the atoms of the gold, will beat or move to no other metal ; with filver it will do the fame, as thofe who profefs themelves profeflors of that art affirm:' which we are afraid is a grofs impolition, and that Kircher herein might be deceived by fome of the artifices of miners, which leads us to take fome notice of them.
6 The operation with the virgula divina, fays Mr. Gabriel Plattes *, is thus to be performed: fome obferve a fet day and hour, with certain words and ceremonies at the cutting up of the fame, which I have found to be little to the purpofe. Thus I worked about Midfummer, in a calm morning: I cut up a rod of hafel of the fame fpring's growth, almolt a yard long; then I tied it to my ftaff in the middle, with a ftrong thread, fo that it did hang even, like the beam of a balance: thus I carried it up and down the mountams where lead grew, and before noon it guided me to the orifice of a lead mine; which I tried, having one with me with an hatchet of iron, and a rpade; and within two hours, we found a vein of lead ore, within lefs than a foot of the grafs: the fign that it fheweth is to bow down the root-end towards the earth, as though it would grow there, near unto the orifice of a mine: when you fee it do fo, you mult carry it round about the place, to fee that it turneth in the fpring ftill to the place, on which fide foever you ftand.
* See his Difcovery of Subterranean Treafures, p. 4. 5.

The reafon of this attraction, continues he, I conceived to be of kin to the loadfone, drawing iron to it by a fecret virtue, inbréd by nature, and not by any conjuration, as fome have fondly imagined.
And the reafon of this my opinion was, becaufe that, in divers of my practical experiments, I have obferved an attraction betwixt feveral things, like that of the loadfone and iron; and, if it were to good purpofe, I fuppofe that I could Thew more experience of that kind than any man in England. - But the truth of the fure difcovery of valuable mines or minerals by fuch-like means as here pretended, has not yet been made experimentally appear to the fatisfaction of the learned world.

Further Remarks on Minerology.
Of the deceits and impositions of miners, and others in league with them, in order to guard THE PUBLIC AGAINST THEM.

1. After the practifing every art to induce adventurers to hazard their money and give the miners employment, they uphold the adventurer's ipirit, from time to time, by fair promifes and plaufible appearances : and, when they find that people begin to be quite wearied out, they then think it time to produce fome ore; which they frequently have conveyed under-ground from fome other mine, to engage the adventurers fill to keep them employed.
2. But, when no more ore appears, then they amufe people with the notion, that what they had difcovered was only a leader to fome vein, and that the vein could not be far off: thus they lead their dupes on, 'till, perhaps, they do at length really difcover a vein of ore: but, that they may make the moft of it to their own advantage, they will then tell the adventurers, that they find it is in vain for them to go on in that place any longer, for that they fee no likelihood of reaping any advantage. - Thus the firft adventurers are impofed on to defift, when they might carry on the work to profit, as they were drawn in to continue it, when there was not the leaft view of advantage.
3. The miners fixing their private mark upon the furface of the earth where the vein was difcovered draw others in, for a time, to hazard their money in other places; and at length apply to fome perfons to work where the real mine is, for a fortnight, three weeks, or a month, for nothing; for that they are, by certain fecret figns, known only to themfelves, convinced, that there is a good vein there; and, provided they fhall have fuch an extra-confideration, if they, in that
time, difcover a mine, and have the fole working théreof, they will engage gratis. This naturally draws adventurers, the mine is really found, and thofe reap the fole advanitage of it, who never hazarded one fhilling in it's difcovery.
4. Artful and villainous projectors alfo are frequently in combination with the miners, to deceive people by the following arts :
r. Thefe projectors prevail on the miners to give out that a valuable mine is difcovered; famples of the ore are produced, and affays made by aflay-mafters of credit, who pronounce the ore to yield fo much metal. This being confirmed by divers aflays, numbers are feduced to hazard their money, in concert with the projector's emiffaries, when the whole is funk in the pockets of the infamous fehemers and miners.
5. It has been faid, that, in order to draw people into thofe adventures, fome tons of ore have been often purchafed from other mines, carried to places where there was none, and pretended to be there difcovered. A wealthy gentleman, and of experience in mining in Cornwale, was thus egregioully impofed upon by thofe villains, though he had the circumfpection to go down into the mine himfelf, and fee with his own eyes; and was, as I have been well informed, greatly reduced.
6. Another att faid to have been practifed by thefe deceivers is, the making of an artificial mineral, abounding richly with gold and filver.- This they do, by melting a portion of gold and filver with forne fulphureous marcafite or mineral, and break the fame in fuch a manner as to appear like a na tive mineral; by which, upon the allay's yielding real gold and filver, people are impofed upon.
Thefe are the fhameful impolitions to which perfons are liable; fo that unlefs they live in the neighbourhood of places that abound with mines, can depend upon the fidelity of the miners, and have fufficient judgment themfelves, and will venture thier perfons down into the mines from time to time, there is no great dependance to be made upon the report of others.
Certain it is, that many have got great eftates by mining ; and if they refide upon the fpot, and have competent fkith to guard themfelves againft fraud and delufion, people may often ftand a good chance of great gain for very little hazard.
MINES, are places in the earth, out of which metals, miaerals, and other kinds of earth are dug.
So many different kinds of foffils as there are, fo many various names have their mines, viz. gold-mines, filver-mines, copper-mines, iron-mines, coal-mines, falt-mines, and fuch as produce gems, \&c.
The moft celebrated gold and filver mines, are
7. Thofe of Pfru and Castella del Oro, which are the richert in the world, yielding gold and filver in abundance, and not being deftitute of other metals; infomuch that the natives of Peru and the Spaniards ufed to boaft, that this kingdom was founded upon gold and filver. [See the article PERU.]
Girava, a Spanifh writer, affirms, that there were formerly mines about the cown of Quitto, which produced more gold than earth. And, when the Spaniards made their firt expedition into this golden country, they found feveral houfes, efpecially in the regal city Cufco, which were all covered over within and without with plates of maffy gold. And the officers of the Peruvian forces not only wore filver armour, but all their arms were made of pure gold. The moft rich and advantageous mine of filver is in the mountains of Potofi, where 20,000 labourers are daily employed to dig it. Thefe mines produce that valt quantity of gold and filver which the king of Spain receives out of America every year, to the mortification of other kings and petentates; and which he therefore keeps fortified, with ftrong forts and garrifons.
8. There are excellent rich mines of filver in the Japan Islands, whence they are called, by the Spaniards, the Silver Iflands. There are alfo fome mines of gold found there, but thefe are not fo rich as formerly.
9. There were more plentiful gold-mines formerly in Arabia, than at prefent.
10. In the mountains of Persia, and in China, there are fome filver-mines.
11. In Guinea there are feveral mountains that produce gold, but they are remote from the fhore, and the gold duft that is brought from thence, is not dug out of the ground, but gathered up and down by the natives. Their inland kings are however faid each to poffers his mine, the product of which he fells to the neighbouring merchants, and they again to others, 'till it reaches the fea-coaft, where it is exchanged with the Europeans.
12. In Monomotapa, there are found rich mines of gold and filver, and alfo in Angola, both of which are thought to be parts of one continued vein.
13. Germany excels the reft of the kingdoms of Europe for plenty of mines, of which fome produce fmall quantities of gold, others abundance of filver, and a great many of them copper, iron, lead, vitriol, antimony.
14. Sweden

## M I N

8. SWEDEN is enriched with the beft copper-mine of any hitherto difcovered, it is in a valt high mountain, which they call Kopperberg, out of which as much copper is dugr as makes up a third part of the king's revenue. Here are alfo and fome filver-mines, bur the latter fcarcely defray the expence of digging them.
9. There are mines of precious ftones found in the ifland of Ceylon, and alfo in Congo (where there is a filver-mine, and fo much marble, that the earth under-ground is thought to be all marble) and in Peru, about Portovigo, in Smaragdina, and in Guiana, near the coait of which there is a fmall iffand called Sr. Maria, which yields a pretty deal f gold, if we may believe the Dutch. In the kingdom of Golconda, there is a mine which yields precious ftones, particularly diamonds in abundance, but it is not now dug. 10. In Chill there are mines yielding gold, filver, and gems, bat the warlike inhabitants, fetting more by ironweapons than gold or filver, have partly killed, and partly driven away, the Spaniards, and demolithed the mines that were but newly begun.
10. The illand of Madagascar abounds in iron and tin, with a moderate quantity of filver, a little gold, but no lead. Wherefore the natives value leaden foons above filver ones. 12. In the ifland of Sumatra it is reported, that there are rich mines of gold, filver, brafs, and iron, and that the king in one year, (viz. in 1620) received into his treafure 1000 pounds weight of gold.
11. In the Philippine Islands, and in Java, Hispanola, Cuba, and others, there are found mines of gold, filver, copper, and iron; and, in the mountains of SiAm, there are got gold, filver, and tin.
12. There are mines of falt in Poland at Pochnia, four miles from Cracow (where large lumps of tranfparent white falt are cut out of the ground) in Transylvania, in the county of Tyrul, and in places near the Casplan Sea, not far from the river Wolga, aver-againt the ifland Kasrowat, where the Rulfians dig their falt and boil it to a more pure fubftance, and afterwards tranfport it to all parts of Rufia. In Cuba, there is a whole mountain of falt All the mountains in the illand of Ormus, at the mouth of the Perfian gulph, are of [alt, which may be gathered in any part of them, in fuch great quantities, that the very walls of their houfes are built of cryftalline falt. In a valley in Perd, about eighteen miles from Lima to the northward, are found deep and large pits of falt, where every one may take away what quantity he pleafes, becaule it continually increafeth and feemeth impofible to be exhaufted. In Africa there is no other falt ufed, but fuch as is dug out of pits or quarries, like marble, of a white, greenifh, or alh-colour. All India fetch their falt from the great falt-mines of Bagna gar in Coromandel, \& Xc.
In Derbyshire, Yorkshire, Flintshire, in Engt.AND, there are confiderable lead-mines, and fome copper. Cornwall abounds with tin-mines. Sussex, Somersetshire, with iron, \&c. Scórland and lrejand allo, and the British Plantations in North Amprica, have numerous mines, many of which are wrought to great advantage.

## Of the Generation of Mines

Mines are commonly found in high mountains, becaufe the heat does concenter and unite better there than in low grounds, and confequently there is a Atronger fermentation'for the production of metals.
The hardief, the weightieft, and moft compact mecals, are generated, when by fermentation there has been an entire feparation of the grofs parts; for they are only a coagulation of very fubtile particles, and a ftrict union of thefe very fmall pores.
Metals lie in mines very often like great trees, which fpread their branches towards all fides; whence it is, that many have thought they were nourighed as plants and animals, by juices which run and circulate in the veins or veffels fuppofed to be within them; but, if the thing be examined narrowly, it may ealily be conceived, that thefe branches of metals (which are called veins by thofe who deal in mines) happened only by the running of the metallic matter through ieveral fmall canals, before it was coagulated; which may have been oc cafioned by the fermentation that fwells the matter, and forces it to open the circumadjacent earth in divers places., This fermentation allo raifes very often (even to the top of the mountain where there is any metal) ftrings of fome marca. fite or metalicearth, which is taken as a great fign of metals by thole who learch atter them.
Becaufe it would be a very laborious and unpleafant work to dig for metals, without fome reafonable affurance of finding them; therefore fome have ftudied to know the feveral characteriftics, by which it may be concluded, that fuch and fuch places do afford mines.
There are, indeed, fometimes mines, whofe veins appear in the very furface of the earth, fo that none can doubt of finding them. [See Africa.] But, if none others were fought after, we fhould not have fuch abundance of metals. Some
therefore of the following marks may be added to thofe al ready given for difcovering mines.
Firlt, It is to be confidered whether the ridges and tops of mountains, their chinks, cavities, or pits digged in them, do yield any marcafices, or pieces of metal; for that is a fign there is a mine fomewhere about : and, to find out the place, you muft follow the ftring, or track, of thefe marcafites. Another fign of a neighbouring mine is, when there are found, in the fand of any rivulet, or fpring, fmall pieces of marcafites; for thofe have been carried off by the waters, which commonly come out of mountains; and fo, by tracing the rivulet or water to it's head, you may come at laft to the mine itfelf.
A third mark of a mine is, when abundance of hot waters, or waters which have a mineral tafte, flow from a mountain, or any other place: for the places where metals are generated are always invironed with thefe waters, which is the occafion of no frall trouble and difficulty to thofe who dig in mines. A fourth fign of a mountain's having a mine in it is, when it is bare and barren, without trees, and having very few plants upon it; or when thofe that grow there are pale, and without any frech colour: for the mineral vapours which arife through the pores of this mountain, burn the roots of thefe plants.
Indeed, fometimes metals are found in very green and fertile mountains, where there are many trets, and other plants; for the metallic vapours do either arife there in a lefs quantity, or are of a different nature, and fo do not hinder the growth of plants in thefe mountains: or, perhaps, the mines lie at the bottom of them, or may be covered with fome hard ftone, which intercepts the exhalation of the vapours from the plants. Finally, fome very fkilful in mines pretend to know, whether there be any in a mountain, by adverting to the reflection of the fun-beams. There being fo much water in mines, which neceffarily mult be drawn off, therefore they commonly rather begin at the foot of the mountain than at the top, becaule the waters may this way be more eafily drained.
Then they dig a vault near to the foot of the mountain, which ought to be continued, in a ftraight line, the neareft way to the body of the mine ; but many do often amufe themfelves with the fmall veins of the metal which they meet with, and upon that account leave the right way, and fo both lofe their time, and fooil their work: befides that, they expofe themfelves to great danger ; for they thake the foft ftones, which, by this means, fall down in great quantity, filling up what they had digged, and fometimes crulhing the very workmen. To avoid this accident, they ufe to prop the roofs of their vaults, or rooms which they dig, with great rafters of wood, to prevent the falling of the loofe earth and fones, and then they work by proper inftruments for loofening the metal itfelf.
Metals differ from other minerals in being malleable, which the others are not.
They are accounted feven, gold, filver, iron, tin, copper, lead, and quickfilver; this laft is not malleable of itfelf, but is fo mingled with the others, that it is thought to be the feed of metals.
Aftrologers have conceived that there was fo great an affinity and correfpondence between the feven metals beforenamed and the feven planets, that nothing happened to the one but the other fhared in it; they made this correfpondence to happen through an infinite number of little bodies, that pafs to and from each of them; and they fuppofe the corpuicles to be fo figured, that they can eafily pals through the pores of the planet and metal they reprefent, but cannot enter into other bodies, becaufe their pores are not figured properly to receive them; or elfe, if they do chance to get admittance into other bodies, they cannot fix and ftay there to contribute any nourifhment; for they imagine that the metal is nourifhed and perfected by the influence that comes from it's planet, and fo the planet again the fame from the metal.
For thefe reafons they have given thefe feven metals the names of the feven planets, each according as they are governed: and fo have called gold the fun, filver the moon, iron Mars, quickfilver Mercury, tin Jupiter, copper Venus, and lead Saturn.
They have likewife fancied that each of thele planets has his day apart to diftribute liberally his influence on our hemifphere: and fo they tell us that, if we work upon filver on Monday, iron on Tuefday, and fo of the reft, we fhall attain our end much better than on other days.
Again, they have taught us that the feven planets do every one govern fome particular principal part of our bodies; and, becaufe the metals do reprefent the planets, they muft needs be mighty fpecific in curing the diftempers of thofe parts, and keeping them in good plight. Thus they have affigned the heart to gold, the head to filver, the liver to iron, the lungs to tin, the reins to copper, and the fpleen to lead. 'I his you fee, in fhort, what fome of the moft fober aftrologers do fancy concerning metals; and they draw confequences from hence which it would be too long here to relate. I have told you what the fobereft among them fay; for nothing can be fo abfurd as what fome of them would have us believe.But this has been judged by the molt efteemed philofophers mere whim and enthuliafm.

Never-

## M I N

Neverthelefs, if we could be fatisfied that experience confirmed what thefe perfons have offered to maintain, we might then have reafon to think there were fome likelihood in their doctrine, although their principles were found to be altogetmer falfe; but in truth there is nothing to confirm their opinion, and we find it every day plain enough, that the faculties and virtues are utterly falle which they attribute to the planers and metals. The metals, indeed, are of good ufe in medicine, and excellent remedies may be drawn from them ; but their effects may better be explicated by caufes near at hand than the ftars.
Working in metal is very ancient, even from the firt age of the world; in the time of Tubal Cain, according to the teftimony of Mofes, they had got the art of working with a hammer, and they knew how to make utenfils of tin and iron. It is very probable that, in the time of that lawgiver, they practifed chemiltry, becaufe of the children of Ifrael, under Aaron, made themifelves a golden calf; and Mofes, after he came down from Mount Sinai, in a great wrath againft the people, reduces this calf to athes; which was, we may reafonably fuppofe, done by diffolution and precipitation, and mercury. See the articles Metals, Metallurgy, Minerals, Minerology.

## Remarks.

As land produces more or lefs corn according to it's goodnefs or fertility, and the labour employed in manuring it; fo the mines of iron, lead, copper, coal, tin, filver, \&cc. produce more or lefs according to the richnefs of the veins, and of the labour of digging, drawing off the waters, melting, refining, \&c. The labour of the filver miners is the deareft, by reafon of the danger and mortality attending it; and the filver miners are efteemed to live, at a medium, but five or fix years in that labour.
The value of metals is like every thing elfe, proportionable to the land and labour that enters into their production; and the price of them varies according to the demand and confumption, which depends principally on the fancy and manner of living of the proprictors of land.
If all the tin that is drawn annually out of the mines of Cornwall, and which commonly fells at London for about 100,0001 , has every year a conftant confumption and vent, the land and labour that enter into it's production are equal to the land and labour that produce any other quantity of commodities which fell for 100,0001 .
But if every body rejected the ufe of tin, and made ufe of earthern ware inftead of it, it would ceafe to be in efteem, and to have a value, and the tio adventurers would difcontinue the work of the tin mines.
Let us fuppore in a ftate without foreign trade, that a regular and uniform quantity of copper is annually dug out of the mines for the common ufes of life, as pots, kettles, pans, and kitchen ware, to replace the quantity' of copper which is yearly confumed by fire, or worn away, and then that copper is begun to be made ufe of as money; this additional demand of copper will make it dearer, and encourage the digging out of the mines more of it than ufual, and there will be more copper yearly required to replace that which is confumed.
All ordinary metals, as iron, lead, tin, copper, coals, \&c. are confumed by fire, the computation of the land and labour that goes to their production. See the article Labour. But filver and gold are not confumed by fire, and they wear out fo flowly by friction and attrition, that they may be efteemed permanent metals in this regard, as well for their other qualities, as their volume, fubdivifion without watte, the impofibility of fallifying them, \&c. They feem beft fitted of any metals or commodities to ferve for money.
If there were conftantly an equal demand and confumption in a ftate of corn and wool, there would be alfo a conftant proportion of value between them, fuppofing alfo an equal quantity of each to be conftantly produced.
In this cafe, a meafure of wheat would always bear a conftant proportion of value to a pound of wool; and an accomptant might, by imagining aliquot parts, find out a common meafure to know how much wool is worth fo much wheat.
But, in regard the confumption of thefe and all other commodities, as well as their quantities in a flate, vary frequently, or rather conftantly, no accomptant or algebraift can fix any proprortion of value between them.
Money alone (I do not here confider what is ufed for money) naturally finds out this proportion, and the quantity of money which is brought to market to barter for each kind of commodity, readily fixes the proportion of value that is between them all, Qux eadem uni tertio funt eadem inter fe. Every body who brings his money to market knows what money he has to lay out, or, at leaft, what he intends to lay out for the expence of that day.
The working of mines is undertaken either by private perfons, or by companies of fuch, or by corporations endowed with certain privileges, as the Mine-Adventurers, \&c.

Further REMARKs.
The fubftance of what has been fuggefted for the advancement of mining, feems to be reducible to what follows, viz.

## M I N

There is not any method that appears fo conducive towards effectually carrying on works of mining and fmelting, as that which is eftablifhed in'Sweden; there the whole bufinefs is under the direction and management of commiffioners, in the fame manner as there is in this kingdom a board of trade and plantations, where the principal branches are under the niceft regulations imaginable: they have two perfons who are principally employed, and under whofe direction are put all the machine works belonging to their mines; thefe again bave mechanics under them, who are very induftrious, and continually aiming at fome improvements; then, in order to promote difcoveries, they appoint people in every province and county, who are called minor metal fearchers ; becaufe their daily employment and conftant bufinefs, is to furvey the grounds, and examine the mountains, for all kind of metalline ores, minerals, veins, beds, \&c.
Whatever difcoveries happen to be made by thefe, they are inftantly reported to the grand board; to which, if they feem likely to prove beneficial, orders are iffued out immediately, and miners are fet to work in the moft advantageous manner: after the fame method are all the other branches of this fcience carried on, in which the fame fpirit prevails.
In order to facilitate and accomplifh the perfection of this fcience, and to range it's laws in fuch a juft order, fo as to render the whole into a compleat body of mining and fmelting, the following method, we apprehend, will not appear irrational or impracticable.
I. Both mining and fmelting fhould be treated in an hiftorical manner: a juft account of them fhould be brought down from the earlieft ages to this prefent time, in which particular notice fhould be taken, what improvements have been made, and what declenfions and decays it has fuffered, and in what ages and in what nations, they have happened.
2. A true theory muft be eftablifhed: the fymptoms, which by experience have been confirmed to be characteriftics, whether good or bad, fhould be laid down in their proper order; the rationale of them be given; thofe that are equivocal ranged under one clafs, and thofe that are univocal or pathognomnic under another: it fhould be fhewn likewife, how they are dependent upon each other, or how one is the neceffary confequent of the other : taking care, that the whole be demonftrated in fuch a plain and eafy manner, that it may juftly be faid to be adapted to the meaneft capacity, though founded upon an exact fyftem of natural philofophy ; fo that a proper regard is to be taken, that nothing is afferted, but what may, and is made evident from the fame principles.
3. All the branches of the mechanical part of mining, or the various ways of working under-ground, fhould be familiarly particularized, and made as clear as poffible; the different methods of different countries be faithfully reprefented ; for from every one of them fomething may be collected, towards improving our own: wherefore we mult not forget to mention the tools, which, with all curious under-ground fructures, thould be delineated in a lively and intelligible manner upon copper-plates.
4. Draughts of all machines appertaining to mine-works, fhould, in like manner, be exactly exhibited upon copperplates: in this branch we need not be ahmamed to borrow from foreigners; amongft thofe that have been invented by the Swedes, we fhall find a great many worthy of our obfervation; for they have excelled all other nations, particularly in one, which, in all refpects, anfwer the end in a very furprizing manner, without the affiftance of ropes; as $\mathrm{is}^{3}$ particularly defcribed by Mr. Swedenborg, in his Regno Subterraneo.
5. As the mineral veins of one country differ from thofe of another; for inftance fake, we will mention two of the moft material: veins on the continent are in long ranges and rakes, they are not there liable to bars or out-cuts; they, therefore, 'moft commonly run pretty ftrait and certain, for as many miles as the courfe of the mountains will admit of; they are entirely unacquainted with beds and bellies in their mines, which are moft commonly called Pipe-works: fo on the contrary, in all iflands, the ranges or rakes are feldom found to run in ftrait lines; their veins are very uncertain, feldom continue long; they are frequently impeded with bars or outcuts of the rocks, and the ore is too often found in bellies and pipe-works: in fine, they have fcarce any thing alike or common with thofe on the continent, except the underfets, which are generally the fame in moft places.
The fame uncertainty and irrregularity holds good, and extends iffelf even to the very rocks and mountains, which in this kingdom are different, in different counties; thofe in Flinthire are moft commonly foft, thofe in Montgomerythire Fhanthire are mott commonly loft, thofe in Montgomerymire
hard, and hofe in Cardiganfhire are in no refpect like thofe of either place; thefe differences are ever to be cautioully weighed and confidered, for they occafion a different method of frrutiny and examination, as well as a different one of working ; nor can we borrow any light from our neighbours into this affair, the picture muft abrolutely be taken from the original : therefore, if any author thould attempt to write a diftinct treatife of this art, and defcribe the particular method of working which ought to be purfued in a particular county or foil, before he can pretend to render fuch an under-

5
taking
taking complete and beneficial to the inhabitants, and prof cients of the place be defigns it for ; he ninuit furvey the mineral mountains very carefully, that he may be able to compofe his Geographia Subterranea in a correct and fkilful man ner; for, if this is not done, how can he be fuppoled to form his maps exacly true? How will he be able to defcribe the labouring part? How will he be capable of ditinguifhing the promifing fymptoms from thofe that are otherwift? How will he manifeft the product of the mountains, and point out the way by which they may be worked to the beft advantage? Yet all thefe things muft be diligently obferved, and punctually profecuted ; thefe rules mult be ftrictly regarded by every writer that defigns his labour to benefit the nation, to ferve the proprietor, and to inftruct the ignorant. In fine, he muft follow the example of the accurate coaltfurvcyor, that not only points out the fafeft roads and harbours, but likewife manifefts the dangerous thoals and rocks; therefore, let the fubterranean geographer defcribe the barren, as well as the fertile mountain, for by that he will give us to underftand the promifing ore-bearing figns, and vice verfa; for a good guide ought not only to be acquainted with the main road, through which he is to conduct his traveller, but he fhould alfo know the bye ones, that he may not be at a lofs to get into the main one, if by any accident he fhould happen to be thrown out of it.
6. When he comes to the fimelting part, he muft lay down a general hiftory of the produce of nature in the caverns of the earth; he mult give us a defcription of the various forts of ores and minerals, by fhewing us not only the different properties which effentially diftinguifh one fecies from another, but likewife the diverfity that may be found in each fpecie; thefe, according to their feveral degrees and natures, are to be diftributed into proper claffes, divided and fubdivided under proper heads; giving to each it's infeparable characteriftics, whereby to diftinguifh it from the reft; telling us how and where they are commonly found, what appearances they afford when analyzed, what principles they are compofed of, what mixed bodies they are incorporated with, what compofitions and fluxes are moft fuitable to them, to free them from other heterogeneous mixture, and fet at li. berty their pureft contents: in fine, it mult be fet forth after what manner they are to be treated, and what difcoveries have been made in this refpect in different ages; exhibiting exact draughts of furnaces that are and have been ufed in foreign countries as well as in our own, that choice may be made of thole that are the beft adapted for the purpofe ; pointing out their perfections and imperfections, that they may be farther improved, as the artift thall have occafion.
7. The mine and mineral manufactures are fully to be treated of, the materials that all are compofed of be regiftered; how they are produced, and after what manner they are obtained in foreign countries, even in the common way of fmelting, muft be clearly fet forth: thefe would make a confiderable article in the trade and manufactures of this kingdom; for the materials of thofe commodities are to be met with in great abundance, in feveral parts of this country.
8. The whole work muft be concluded, with giving compleat inftructions on the art of affaying metalline and mineral ores in [mall quantities [fee the article AssAy]; nothing here Thould be omitted, which can in any fhape be conducive to this purpofe, for it is of very great and material concern. If a treatife fhould be executed, that laid out a plain plan, founded upon a folid theory, the whole confirmed and eftablifhed by experiments, it might reafonably be expected, that mining and fmelting would undoubtedly raife their head ; it might jufly be concluded, that thefe two arts would foon come into a flourilhing fate in this kingdom; that they would in a few years gain the afcendancy, even over thofe where the mines are worked to the greateft perfection yet known.
MINORCA, an illand in the Mediterranean Sea, fituate about 100 miles fouth of the coaft of Catalonia in Spain, and about 20 miles eaft of the inland Majorca, and is 30 miles long and $\mathbf{1 2} 2$ broad.
The foil of this illand is of feveral kinds; that of the hills and upper grounds, is of a colour nearly approaching to black. It is light, fine, and extremely fertile; and, though it is very thinly fpread over the face of the rock, it yet pro duces tolerable crops with very little cultivation. It has a fmall intermixture of fand, which difpofes it to feparate freely before the plough; a quality very advantageous to the Minorquins, as it faves them a world of labour as well as expence.
The foil of the plains is-far lefs fertile than that of the rifing grounds. It is cold and clayey, and equally unfit for agriculture and pafture ; and produces only a four herbage, that is exceffively diftafteful to cattle, great plenty of fpart (a kind of rufhes) in many places, a variety of weeds. The vallies, Indeed, have been enriched by the earth that has been wafhed on them from the adjoining hills to a great depth: but the hills have been impoverifhed by the fame means, and in the fame proportion. However, we frequently fee ftone-walls, that have probably ftood many ages, run acrofs the fides of the hills to detain the foil; and fuch hills yield good crôps to
the very fummit, which muft otherwife have had thei, toncis entrails laid bare, as is vifibie, wherever this ciution !? s beern incglected.
Iron ore is fo plentifully difperfed over the whole face of $\cdot t_{13}$ earth, that it is not furprizing we find it in Ninorea lis ferruginous colour and great weight diftinguith it, in many flat maffes, of from four to cen inches dameter, in moit paris of the ifland. But it is not converted to any ufe here, either on account of in's unfitne is to make iron alone, the farcity of fuel, or the want of fill in the natives.
But of lead ore here is a mine at St. Puig, which has been worked to advantage within thefe 40 years, and the ore lent into France and Span, for the ufe of the poteries of thofe councries. The proprieror difcontinued his work on fome fmall difcouragement; and it mult be owned, that thef people are of all mankind the mone eafll; put out of conceit with an undertaking, that does not bring them in mountains of prefent gain, or that admits of the flighteft probability of difappointing their moft languine expectations: nor wifl their purle admit of many difappointments; and thus their poverty co-operating with their natural defpondence and love of eafe, is the principal caufe of their backwardnefs to engage in projects, though never fo promifing, for the improvement of their private fortune, and the advantage of the commerce of their country. This lead ore went under the name of Vernis among the natives, as it was wholly ufed by the potters in varnifhing and glazing their earthen veffels. There are few exports of any account, and they are obliged to their neighbours for near one third of their corn, all their oil and aguardiente, and fuch a variety of articles of lefs confideration, that nothing could preferve them from a total bankruptcy, but the Englifh money circulated by the troops, which is exchanged for the daily fupples of provifions, increafed by the multiplication of vineyards, the breeding of poultry, and the production of vegetables, in a proportion of at leaft five to one fince the ifland has been in our poffeffion. It will not require many words to enumerate ther exports: they make a fort of cheefe, little liked by the Englifh, which fells in Italy at a very great price; this, perhaps, to the amount of eight hundred pounds per annum. The wool they fend abroad may produce nine hundred pounds more. Some wine is exported, and, if we add to it's value that of the home confumption, which has every merit of an export, being nine parts in ten taken off by the troops for ready money, it may well be eftimated at fixteen thoufand pounds a year. In honey, wax, and falt, their yearly exports may be about four hundred pounds; and this comes pretty near the fum of their exports, which we eftimate together at eighteen thoufand one hundred pounds fterling per annum.
A vaft balance lies againft them, if we confider the variety and importance of the articles they fetch from other countries, for which they muft pay ready cafh. Here it may be neceffary to withdraw fome things from the heap, fuch as their cattle, fheep, and fowls, on which they get a proft; for the country does not produce them in a fufficient abundance to fupply them, efpecially when we have a fleet of men of war ftationed there.
Their imports are, corn, cattle, meep, fowls', tobacto, aguardiente, oil, rice, fugar, fpices, hard ware, and tools of all kinds, gold and filver lace, chocolate, or cacao to make it; tobacco, timber, plank, boards, mill-ftones, tobacco-pipes, playing cards, turnery ware, feeds, foap, faddles, all manner of cabinet-maker's work, iron fikes, nails, fine earthenware, glafs, lamps, brafiery, paper, and other ftationary wares, copperas, galls, dye ftuffs, painters brufhes, and colours, mufical inftruments, mufic, and ftrings; watches, wine, fruit, all manner of fine and printed linens, mulins; cambrics and laces; botiles, corks, ftarch, indigo, fans, trinkets, toys, ribbands, tape, needles, pins, filk, mohair, lanthorns, cordage, tar, pitch, rofin, drugs, gloves, firearms, gunpowder, fhot and lead ; hats, caps, velvet, cotton; ftuffs, woollen cloths, fockings, capes, medals, veftments, luftres, pictures, images, agnus Dei's; books, pardons, bulls, relicks, and indulgencies.

## Remarks on Mrgorca:

The Spanifh dons hete ate above trade, and the reft of the natives are unable to exercife it to any purpofe. Yet if this infatuated people would fet themfelves ferioufly to make the moft of their native produce; a few years induftry would enable them to traffic with their neighbours to advantage, and even to provide exports of confiderable value fur an Englifh market. To infance in a few: the cotton fhrub has been tried here, and fucceeds to admitation: they have fpart growing in many places, in fufficient plency to make all their own cordage, and to pare. The tunny fin abounds on their coaft, and they might eafily fall into the method of curins it : by this the French of Languedoc and Provence, their neighbours; make à vaft advantage.
They have abundance of olive-tiees, yet they make no oil of thie fruit, and are utterly ignorant of the righe method of pickling it.
Some capers they pickle; and might, from the frequency of the plant, improve this into a veiv valuable export.

Hear

Hemp and flax do extremely well, and might be increated, and manufactured for exportation. Their canes and reeds are of ufe in the clothiers trade, but they export none; and they have great plenty of excellent fate, but do not work it. It might poflibly anfwer to fend their cantoon ftone to England as ballaft; but certainly their marble would be a valuable commodity with us, of which no country can boaft a greater quantity in proportion, nor of greater beauty or variety, than this poor illand.
squills they have in abundance, maftic, aloes, and fome other drugs, which they neglect.
Their bees thrive well, and hould be carefully managed, and increafed as much as poffible; their wax is inferior to none, and their honey cannot fail of being extremely delicate and fine in a country abounding with fuch a variety of aromatic plants, and is, therefore, in high efteem every where.
They raife a little tobacco, but feldom half the quantity they confume; and they make a kind of fnuf, in fmall quantities, which is in no refpect inferior to that of Lifbon.
Their neighbours of Majorca make good advantage of their plantations of faffron, which thefe people ufe in their cookery, and yet will not take pains to raife it.
Their palm-trees, for want of a proper cultivation, produce ao dates; and they fend none of their fruit abroad, though they have it in their power to fupply us with as good figs, prunes, almonds, raifins, pomegranates, oranges, lemons, and feveral other kinds, as any country in Europe.
But we will clofe thefe hints of what an induftrious people might do to inrich themfelves, and this indolent generation of men carelefsly overlook, with the mention of falt, a ready-money commodity every-where, and of which they might eafily make a thourand times the quantity they now do. Their tnethod requires little trouble. There are a great many places on the coaft of the ifland, where the rock is but little higher than the furface of the fea, and is flat for a great way together. In gales of wind the fea is beat all over thefe levels; and the falts have, by degrees, corroded the fofter parts of the ftone, and reduced it's face to an infinite number of fmall cavities, divided from each other by the more folid veins, which have refifted their impreffion.
Thefe cavities they fill with water from the fea, by means of fcoops, and one day's fun fuffices to evaporate the water, and leaves the concreted falt dry in the cells. The women and children gather it in the evening, and carry it home; and the cells in the rock are filled as before.
Having inftanced fome of the natural produce of this ifland flighted by the inhabitants, which yet are capable of being improved into very valuable articles of commerce; we will attempt an eftimate of the charge they are at in their importations.
From authentic papers, which contain an exact account of their harvefts for chirty-feven years, it appears, that there are annually raifed here 53,50 I quarters of wheat, and, 22,683 of barley, one year with another.
Wheat is their only bread-corn, all their barley being given to their beafts. Of the laft they. feldom import any; but they bave occafion for 35,000 quarters of wheat every year; which, at nine fhillings each, amount to 15,750 l. They import cil yearly to the value of 10,0001 .
By an exact account of their aguardiente for 14 years, we find they import annually of this fpirit a quantity that coffs them 9250 . allowing only 1.0 per cent. for the profit of the faimers; and this, at fix-pence a quart, makes their yearly confumption of this fpirit to be upwards of 1540 hogheads. They import tobacco to the amount of 12001 . a year.
We may compute that their imports in linen and woollen goods of all kinds do not come to lefs than 15,0001. It is not polible to make a nice calculation of the value of all the refidue of their imports, but we may reafonably fet them at 20,0col.
So that here we bave an annual expence of 71,2001 . from which if we deduct 18,100 l. the amount of their exports, the remainder, 53,1001 . fterling, is a clear balance of trade againft them
To enable thefe people, in fome meafure, to fupport the charge of this great balance, we are to reckon the large fum of money yearly brought into the ifland, and fpent among them by the troops; a fum that falls but little fhort of their whole balance ; the greatelt part of which goes to market for the common neceffaries of life.
Every vintage produces 18,000 hogheads of wine; and, if we allow for the clergy 2000 hogheads, and for all the reff of the natives 1000 , the remaining 15,000 hogheads are fold, to the Englifh, for 27,825 I. in ready money, the price of a hogthead, taken at a medium, being 35 fhillings.
This is a very confiderable article in their favour; and they are fo fenfible of the advantage they draw from their vineyards, that they are continually enlarging them and increafing their number, notwithftanding they are taxed to near half their value.
They are, indeed, tied down to a fet price for their red wine, and the aforacion, or rate, is fettled the beginning of the year; but, for the little white wine they make, they are at liberty to drive their bargain as advantageoufly as they can.

It is certain this people can never berich, unlefs they beconie induftrious; the fea is open to them, as well as to their neigh bours, on every fide, who thrive by a foreign commerce, and yet not one of them can victual or navigate their veffe!s near fo cheap as thefe flothful Minorquins, who lie in the center of fo many trading ports, that it is amazing how they can have fo long overlooked their true intereft, and fuffered themfelves to be fupplied with fo many of the neceffaries of life in foreign bottoms.
The Minorquins are naturally liftlefs, and, if they contrive the means to keep their families from poverty, they are but ittle folicitous to enquire into the arts and manufactures by which fudden fortunes are acquired on every fide of them. Tell them the Maltefe are inriched by the quantities of cummin and annife-feed they export; remind them that the plant which produces the canary-feed grows fpontaneoully all over the ifland; or that a gum is produced from the maftic-tree, of very great value abroad (and though this tree is an incumbrance which they eagerly root out of their grounds) they treat you as a vifionary, and, with a fhrug of contempt, feem to thank heaven that they have no turn to whims and projects, but are contented to jog on in the plain track which their fathers trod before them.
MISSISSIPPI, MESSASIPPI, or MESCHASIPPI, a country of North America, bounded by Canada on the north; the Britifh plantations on the eaft ; the gulph of Mexico on the fouth; and the principality of New Mexico on the weft. Mifflffippi river, which gives the name to the country, rifes in Canada, and runs to the fouthward, 'till it falls into the gulph of Mexico. It is a large navigable river, faid to run above 2000 miles; to which, as well as the adjacent country, the French lay claim, and have poffeffed themfelves of part of the country ever fince the year 17 i2, giving the river the name of St. Louis, and the country the name of LouisiANA, and have made great efforts towards planting it, as it is a moft fruitful and defirable country, of vaft extent; though the eaft part of it, in reality, belongs to Great-Britain [fee Louisiana,] and the weft to the Spaniards, who have planted part of thefe countries long fince, and are every day extending their fettlements into it. The French raifed the expectations of their people fo high in relation to the immenfe riches that were to be acquired by planting it, and being fettled fo contiguous to the Spanifh mines in Mexico, in the year 1719, that every one was ready to throw his money into the ftocks, which the company fold at upwards of 2000 per cent. But the government feized moft of the money, and the adventurers were ruined; whish put a fop to the planting this country at that time : but it has been encouraged fince; and, if the Englifh do not oppofe their encroachments, before they are too powerful on that fide, they are like to be very troublefome neighbours to the Britifh plantations.

## Remarks on the Mississippr before the laft war.

This French Miffiffippi fcheme, as well as the Englif South Sea fcheme, tending to the deftruction of fair and honourable commerce, and to the ruin of the public credit of nations, it will be expected that we fhould not Iligbtly pafs over a matter of this nature, in order to guard pofterity againf the like enormous bubbles.-See the articles Bubbles and Actions. The fhort hiftory of this remarkable fcheme is as follows, viz.
The regent of France having nothing more at heart than to difcharge the ftate-bills, which amounted in value to fome hundreds of millions, bethought himfelf, among other expedients, of erecting a company that fhould have the fole privilege of the trade of Miffiffippi, a large fruitful country in North America. Mr. Law, a Scotch gentleman, whofe genius always carried him to the ftudy of trade and money, contrived the plan of this eftablifhment, which was made in 1717, of which he was appointed the principal director.
Every body was admitted to fubfcribe to this company; and the fock firft propofed to be raifed, was only fixty millions of livres, to be fubferibed in ftate-bills. Neverthelefs, though this was no great fum, and though the fate-bills might be bought at between 60 and 70 per cent. difcount, and were received at par, or without any lofs-in the company's fubfriptions; yet, at firft, people were not forward to fubfrribe, becaufe they were fill ignorant of the advantages which might accrue to them from the company.
The fixty millions being at length completed, the fate enlarged the capital to a hundred millions, and granted the company the farm of tobacco, which produced four millions per annum, for the paying the intereft of the faid hundred millions, at the rate of 4 per cent.
The grant of this farm gave fuch a fudden credit to the fubfribed bills (fince called actions, or fhares) that their price rofe to a hundred and twenty, Mr. Law having fo well managed the farm of tobacco, that the company made thereby confiderable profits. Some time after the actions fell even to par, but they rofe again in a few days.
After this, a new creation of actions was made, for the fum of 25 millions, which were delivered at 110 . The companies of India and China were incorporated with that of Mir-

Gffippi in 1719; whereupon the price of the actions rofe from Ioo to'200. About that time, the Miffiffippi company affumed the name of the India company.
When it appeared that the people of France took a relith to thefe actions, 'till then unknown in that kingdom, and that they were eager to lay out their money this way, being perfuaded the company would make great profits, which would be divided among the owners of thofe actions, Mr. Law, in concert with the regent, formed a mighty project for enlarging the credit and profits of this company. An arrêt of the council of fate was publifhed for circulating bank bills to the value of 25 millions in the Mifliffippi company. To this advantage the ftate Chortly afterwards added a grant of the coinage for nine years, and other fpecious encouragements.
Thefe privileges made the actions immediately run up to 500 ; but they fell afterwards to 445 , only upon the news of Mr . Law's being taken with a flight indifpofition. After this, the actions role again in a few days to 610, and foon fell to 560 . All this happened a little after Midfummer, 7719.
The company finding their credit fo well eftablifhed, propofed to advance to the king a loan of 50 millions, in 15 monthly payments; and, in order to raife this fum, they obtained an arret of council for the creation of 25 millions of actions, upon the foot of 200 per action. But, as there was a confiderable time allowed for the payments, and that the actions fold for three times that price, the company referved to themfelves a power to difpofe of them, at what times they thought fit: whereby they kept in referve a fund fufficient to buy merchandize, to build neceffary lhips, and fettle good colonies in Miffiffippi; for thus the proprietors expected to receive very great fums from the fale of part of thofe actions, made at different times; the other part thereof having been at firft delivered to the chief proprietors of the old ones, according to the purport of the arrêt.
About the end of Auguft, the company propofed to the king to make another loan of 1200 millions of livres, at 3 per cent. intereft; and, at the fame time, to take the five great farms, paying to the fate three millions and a half more than was given by the perfon who then held the leafe, that is, $52 \mathrm{mil}-$ lions yearly, for the face of nine years, the term of the leafe granted to the company. - Out of this fum, they were every year to receive 36 millions, for the fpace of 25 years, for the intereft of 1200 millions they had engaged themfelves to advance to his majefty, in order to reduce to 3 per cent, the intereft of the ftate debts upon the town-houfe of Paris, and others, which ufed to carry 4 per cent. .which reduction faved the king 12 millions of livres yearly. The company's privileges were then prolonged to the year 1770 .
The French fondly hoping that the company would get immenfe profits by trade, and principally by the direction of the general farms, which,' 'till then, had been very illy managed, ran more than ever into thefe actions; fo that, in a few weeks, they advanced to 1200 .
Every thing at Paris then affumed a fmiling countenance; money grew fo common, that people did not know where to put it out at 3 per cent; the public fecurities, which before were at great difcount, now fold for IO, nay, 15 above their par; the tradefmen had a greater vent for their goods; the workmen were better paid for their work; the value of land about Paris rofe to 50 , and even to 60 years purchafe; many noblemen repaired their broken fortunes, and others grew very rich, by the great advantages they made in dealing in the adtions of this new company.
Numbers of people never known in the world, and who fprung from nothing, were all of a fudden feen riding in their coaches, ond: by ftriking into this trade, by which, in a very few muir.ss, they had gained vaft fums.
As the company had undertaken to lend.the king 1200 millions, they found it neceffary, in the month of September following, to raife 500 millions, by the fale of 50 millions of actions, at the rate of 1000 per action, which was ten times the original value of the actions.
The fubfcriptions were filled in a few hours; nay, they were obliged to return a third part that was fubferibed above the fums, which amounted to 775 millions. The fubferibers were not obliged to pay the whole fum all in at once, but in ten monthly payments; which, however, was afterwards altered for their convenience.
The firft payment of thefe new fubferiptions was fold the very next day at cent. per cent. profit.
In a few days afterwards, books were again opened to take in fubfriprions for the like fum, upon the fame conditions and reftrictions as the former; and they were filled in as fhort a time.
The company's cafhiers were forbidden, by an arrêt of council, to receive for thofe fubferiptions, or in the nine payments remaining to be made for the latt, any money or bank bills, but only Itate bills, or other the king's debts therein fpecified; which greatly raifed the value of the effects royaux, or public fecurities.
This way of borrowing money, or rather of bringing into the company near 1000 millions of livres of the king's debts, having fucceeded perfectly well, the company again opened their books for 500 millions more, and with the like fuccefs.

About that time, every adtion was divided into two patts each valued at 5000 livers; for the reft, the actions were on paper, payable to the bearer; fo that the owners might at any time exchange them for ready money, or bank notes, which were altogether as good, and more convenient than money.
The firft payment of thefe three fubferiptions, far from falling, rofe confiderably, that it quickly went at 1,2 , and even 300 per cent. profit; fo that fuch fubferibers as were willing to transfer their new fubfcriptions to other perfons, did, in a few weeks, double and tripple, nay quadruple the money which they had advanced for that firft payment.
Neverthelefs, thefe laft fubfcriptions funk the price of the old ones, though the old ones were of the fame nature, and as good as the laft. The old fubrcriptions fell almoft at once to 760 , becaufe the fubfcribers to the laft wanting money to anfwer the fecond payment, which was fo near, were forced to fell their firft fubecriptions.
The company, in order to put a ftop to this fall, caufed notice to be given at the bank, that they would repay them at 900. This advertifement gave fuch a fupport to the credit of thofe old fubfcriptions, that, in lefs than a month, they went at 1200 , as before, and even rofe higher, while the new actions fluctuated about 1300 .
But, what contributed to it moft, was, an arrêt of the council of fate, allowing a longer term for the firft payments that were to be made upon the new fubfcriptions. The whole fum borrowed by the company in thefe three new fubferiptions being 1500 millions, they reprefented to his majefty, that the loan they were to make to the fate amounting to 300 millions more than they at firt propored, it was reafonable the company fhould be allowed an annual intereft of 45 millions, after the rate of 3 per cent. inftead of the 36 millions already granted: to which his majefty confented.
Upon the whole matter, the fums of the feveral fubleriptions made at different times, are as follow :

60 Millions of the firft fubfcription,
40 Millions of the fecond,
25 Millions of the third,
25 Millions of the fourth,
so Millions of the fifth,
50 Millions of the fixth,
50 Millions of the feventh,
300 Millions, the total of the actions.
When thefe actions fold at 1000 , their total value amounted to 3000 millions of livres, of which furn the king did not owe the company much above half, which made the real and intrinic value of every action to be 550 .
We fhall now give you an eftimate of the fums which the company were faid to have in their power to divide yearly, by which the fubfribers were made to expect very good dividends. The company were to receive every year,

Out of the king's revenue
Millions.
Out of the king's revenue
45
By the management of that farm
By the profits of the five great farms - $\quad 30$
By the coinage - 30

By the timber and Miffiffippi trade fome years after
106
Without reckoning what fome other branches were to produce, as the fifhery, the refining and parting of bullion of gold and filver, the traffic of ingots of the fame bullion, which the goldfmiths and merchants were obliged to buy of the company, and fell at a certain fpecified ftandard. So that the profits fchemed to arife from all this, were to have been above 25 millions: for the ftate were to fupport the credit of the company, though at the expence of yielding up the profits of the bank, and feveral other privileges.

The advantages propofed to accrue to the king from the eftablifhment of the India company, were fet forth as follow:

The eftabiffment of the India company in France, fay the memoirs of thofe timies, has not only been of infinite advantage to the fubjects of the kingdom, by opening the purfes of the rich, that ftrove who fhould put their money in firft, but the king alfo has gained by it very confiderably ; fince all the branches of his revenues muft bring fums into his coffers, infinitely beyond what was ever known before, by reaton of the circulation of the fpecies, which is certainly three times greater than ever, as is manifeft from the price of provifions, land, and merchandizes. The regent has found in the fubfcriptions of this company a fource almoft inexhauftible, whereby he has made large gifts in actions to the officers of the army, and the king's houfhold, and to a number of private gentlemen, by which means they are grown rich. Mr. Law on his part, has done fervice to yaft numbers of people,

Pren to his enemies, in puting them in a way to make ther fortunes. Since the circulation of the fecie has been reftored, the regent has taken off feveral taxes in Paris, and the provinces, fo that all France fhares the advantages of his happy adminiftration.
By this fcheme, the revenues of his moft Chriftian majefly will increafe 40 or 60 millions a year, and yet the people will be eafed of many taxes, and of the burden of many ufelels officers, who have been actually paid back the money they gave for their places.
Now, if a judicious man will impartially judge of what hath paffed, and what is now doing in France, in relation to commerce and the revenues, he muft own, that from the remotelt ages, hiftory does not record any thing fo inconceivable. One cannot reflect on this, without being brought to confefs, that the prince who is at the head of affairs, knows how to make ule of the readielt and moft agreeable means of fetting France in the molt flourifing ftate it ever was in. Has not the world always faid of him, that he had a fuperior genius, and fir for every thing? Befides the arts and fciences, to which he all bis life devoted himfelf, he is a perfect mafter of accompts, without which he had never carried the affairs of France to the height they now are. Mr. Law's fcheme had-not fucceded fo well under the reign of a prince, whofe natural and acquired parts had been inferior to his who is now guardian of the royal authority.

The eftablifhment of the royal bank of Paris.
Mr. Law fet up the bank at Paris by the royal authority, fome time before the eftablifhment of the Miffiffippi. It was governed much like the bank of England, the regent having referyed to himfelf the infpection of their accounts: there was at firt fome difficulty in eftablifhing it's credit, the French having no notion of the convenience of an eftablinhment fo advantageous. But, as the regent was convinced of the great benefic that would accrue to the public from it, his royal bighnefs took all the care imaginable to make them fenfible of it. In a fhort time there were feveral arrêts in favour of the bank, the chief of which was that which required the officers who levied the king's taxes, to receive the bank notes in payment of the revenues. The French, feeming at length to be fenfible of the conveniency of making payments in notes payable to the bearer, it was ordered in the beginning of the fummer 1719, that the bank bills fhould be increafed to the fum of four hundred millions. It was permitted by the fame arrêt, to the royal bank to fet up bank offices in all the mint-towns of the kingdom, except Lyons, which declared againft receiving any; yet foon after the merchants of Lyons, of their own accord, very earneftly folicited to obtain the privilege of a bank in their city.
The increafe of bank bills to the fum of 400 millions of livres not being fufficient, a larger quantity were delivered out about the clofe of the fame fummer for 120 millions of livres, each bill being for the fum of 10,000 livres.
But even this was found infufficient to anfwer the demands that were daily made, which moved the regent to iffue out an arret in Ollober following, ordering the bank to give out to the value of 120 millions more, and that the notes fhould be likewife for 10,000 livres each.
The fum total of all the bills which the bank had iffued out at the end of the year I7I9, amounts to fix hundred and forty millions, which exceeded the value of the bills circuJated by all the other banks in Europe put together.
It will not be amifs to obferve, that there were bank notes for finall fums as well as great; fome of ten, fome of a hundred, and others of a thoufand livres; thofe of ten thoufand amounting but to two hundred and forty millions of livres. Likewife a new addition of three hundred and fixty millions was ordered in bank bills, which, with the fix hundred and forty millions before, amounted to a thoufand millions of Luvres, making then above 38 millions of pounds Aterling, upon the par of exchange; for the crown in fpecie of France, which was then current in that kingdom for five livres and two fifths, or an hundred and eight of their pence, was worth in weight and finenefs but four fhillings and three balfpence Englifh money.

An 'Arret, ordering in what manner payments fhall be made, as well in Paris as in the provinces, and regulating the difference between bank money and the current coin, December 21, 1719. Extracted from the regifters of the council of fate.

The king having caufed the feveral arrêts iffued concerning the bank and the lowering of the coin to be laid before him, his majefty judged, that it would tend to the good of the ftate, and the benefit of his fubjects, as well as to the adrancing of the public credit, to put his people in a way to avoid the loftes which are ordinarily occalioned by the variation in the currency of the coin. To which end, his majefty being in council, by the advice of the duke of Orkeans regent, has ordered, and orders,
I. That the bank money fhall be and remain fixed at five per cent. above the value of the current coin, at which price
ant bills thall be delivered out as well at the gencral offe in Paris, as at the other offices in the provinces; the beaters of the laid bills, after they fhall be given out by the bank, being lett at liberty to negociate them at fuch higher rate as they fhall find convenient.
II. It is his majeity's will, that beginning from the day of the publication of the prefent arret in the city of Paris, from the fird of March next, in thofe towns where are offices of the mint, and from the firft of April following in the other towns and places of his kingdom, the gold and filver coins, as well thofe ftruck purfuant to the edica of May 1719, as thofe ftruck this prefent month of December, fhall not be offered nor received in payments; that is to fay, the fulver coms, but for payments under the fum of ten livres, and the gold coins but for payments under the fum of 300 livres; and that the payments above the faid fums thall be made in bank bills, on the penalty to the offenders herein of conffication of the amount of the payments, and of a fine of 300 livres.
III. It is his majefty's intention, that the India company pay in bank bills the produce of the impoits and duties which they fhall receive; and as to the payments that they fhall make in money for fums under ten livres in filver, and 300 in gold, which their officers may receive, the faid company fhall pay five per cent. augmentation; his majefty authorizing them to reccive the faid five per cent. from the perfons liable to thofe duties, upon payments of fums under ten livres in filver, and 300 in gold.
IV. It is alfo his majefty's will, that reckoning from the day of the publication of the prefent arrêt, the payments of foreign bills of exchange, Thall be made in bank bills; and this notwithftaading the arrêt of the 27th of May laft, from which his majeaty derogates.-Done in the king's council of ftate, his majefty therein prefent, held at Paris the 21 ft of December, i7ig.
The grand fupport of this fcheme was the great territory of Louifiana, otherwife called Miffifippi. See the article Louisiana.
That we may have a jult notion of the nature of this remarkable project, the following further account of the proceedings in France, for raifing a Paper Credit, and fettling the Miffifippi ftock, may not, perhaps, be thought altogether ufelefs.
It was many years ago, fay the writers of thofe times, fince the French court regretted the height of the public credit in England. They looked upon it as the great, and perhaps, the only advantage we had over them in war; namely, that by the eftablifhed reputation of the public funds here, and the authority of parliamentary credit, whatever fum of money was voted in England, though the funds did not produce it many years, and though the loans were prodigioufly great, yet the public could command the money in a few days, peraps, in a few hours.
This was as much the terror of our neighbours, as it was the honour and advantage of England; and foreigners have been heard to fay, That there was no getting the better of England by battle, no, though vietory was always on their fide. That, while we had thus on inexhauftible ftorehoufe of money, no fuperiority in the field could be a match for this fuperiority of trealure; for money being the finews of the war, it had long fince been a received maxim, that the longeft purfe, not the longeft fword, would be fure to conquer at laft.
It was in vain that the late king of France, though he had an abfolute command of the greateft, and, at firf, the wealthieft nation in the world, tried all the arts that human wit could invent to raife a fund of credit in his kingdom; the whole council of France could never dictate to him the method how it fhould be done; this coy miftrefs, called Credit, could never be wooed; the more he purfued her, the fafter he fled from him ; and he had the continual mortification to ee his national credit fall, even by the fame methods which made our national credit rife; and our credit here grew daily, and at laft increafed to fuch a height, that from paying 12 and 14 per cent. for money, and ftruggling with infinite difficulties to get it brought in, we came to reducing the inte reft from 6 to 5 per cent. and after to have the public command of what money we pleafed at 4 per cent. and had it brought in fafter than we had occafion for it.
It is not poffible to reprefent the projects, and infinite arts and practices, which the king of France ufed to command credit ; all which were difappointed by the frequent exigencies of his affairs, forcing him to violate the faith and honour of his edicts: whereas in England, one parliament always voted the making good deficiencies, and no mifapplication of money could be made, but every fund was kept facred to it's peculiar fpecial appropriation : fo that no man whatever having lent his money to the government on the credit of a parlidmentary fund, has been defrauded of his property.
Thus the arbitrary government of the king of France, deftroyed the very nature and fundamental principle of public credit; and the limited power of the crown of Great-Britain (the ftrings of the purfe being in the hands of the parhament) has been the reafon and toundation of fuch an immenfe boundlefs credit, that nothing can hurt or deftroy it,
unlefs the parliament frould invert their way of acting, and take into their hands the fame abfolute power, which it is their bufinefs to reftrain, and wound and injure themfelves; that is to fay, the people whom they reprefent.
But fate and the fortunes of France, at the period we are fpeaking of, turned the tables, and we faw the fame arbitrary power that in the late reign in France plunged them into an infuperable debs, and into an irrecoverable ftate of deficiency and difcount, raifed an inconceivable fecies of mere air and fhadow, realizing fancies and imaginations, wifions, apparitions, and making the mere foeculations of things, act all the parts, and perform all the offices of the things themfelves; and thus in a moment their debts were all vanifhed, the fubfance was anfwered by the fhadow, and the people of France marle the inflruments of putting the chat upon themfelves: the name of the thing is made an equivalent to the thing itfelf, tranfonfing the debts from the king to themfelvçs, and being contented to difcharge the public, owe the money to one another.
As this is the mere confequence of a boundlefs power in the king, by which he is made able to put every fcheme, however impracticable in other places, in a courfe of operation there; fo that every limitation of power, which is, in other cales our glory and advantage, is the reafon why, let our credit be what it will, our debts remain, and muft be diminifhed by the flow fire of parliamentary proceedings, and by no other way.
And thus for once in the world, tyranny has the whip-hand of liberty, for nothing can be done in England like this; even the parliament itfelf is limited, and there are it's redeemable and unredeemable funds, the laft of which are a burthen, nothing but the number ninety-nine (years) * can put an end to: but in France they have an unbounded liberty to act as they pleafe.

* The reader will obferve, that this was the fate of our funds at the time we are fpeaking of.
Let no man miftake me here, fays our author, as if I were bewailing the incumbrances of national privileges, and fuggeft, that it was pity we Chould be a nation of liberty with fuch a burthen of debt; on the other hand, let us be, fay 1 , a free nation deep in debt, rather than a nation of flaves owing nothing; and, indeed, even in this the condition of France and England ftands in a pofture much to our advantage when compared together; namely France, a kingdom immenfely rich as a government, wretchedly poor as a people; England, a goverument embarraffed in debt, exhaufted of funds, and nor abie eaflly to get out of debt; but as a people immenfely rich, rich in the particular and private wealths of the fubjects; poor, that is to fay, encumbered in debt, fpeaking of the public ftate of things, as a government; and yet with all this, while the public credit is upheld, we can never be faid to be poor.
It remains now, that we look into this flagrant delufion of paying a nation's debts, as it is practifing upon the ignorant people in France: never, in my opinion, was any number of people fo hooked in to put a fham upon themfelves, and then call it paying of the king's, or the public debts; for it is no more than a parcel of fools difcharging the king of his debts, and owing it to one another. And this is another reafon of this piece of magic in France; for the very want of credit in France, has been the reaion of their obtaining the credit of paying their debts. This paradox fhall be unriddled immediately, thus: had not the public credit been bad, had not the ftate bills, that is to fay, the public credit, run at 60 to 63 per cent. difcount, the people would never have brought themfelves to part with them for the bonds, or fhares in a new company, a brat of fate, which has it's life in the king's breath, and muft die whenever that breath pleafes to determine it.
Mr. Law, being firf acquainted with the folid immoveable ftate of credit in England, and feeing the fluctuating manner of things in France, plamly faw alfo, how eafy it was to puth there things there, which he could not fo much as think of in England, without apprehenfions of being pulled in pieces by the rabble. He wifely concluded, that a foundation of credit mult be laid, before any fufficient project could be founded upon it, and fo the firit thing he did was' the raifing of a royal bank in France, by the concurrence of the king, whofe fanction there, as the parliament would be here, was abfolutely neceffary for fuch a work.
Now let the fchemes engrafted fince, or then defigned to be engrafted upon the foot of this beginning be what they will, it is evident Mr. Law made a right judgment, and that nothing could be projected for the public fervice of any kind, without an eftablifhed credit to center fomewhere.
It was imponfible this thould be grafted upon the government, the endeavours to bring it to pafs before having been rendered abortive, by the frequent exigencies of that fate, forcing them to break in upon royal edicts and royal promifes; by which means the few men that had any money were made cautious, and were grown too wife to put it into hands, which they could not depend upon for the demand of it again, when it fould be wanted.
Vol. II.

It remained then to refolve, that credit could now be oniry saifed upon the forming focieties of private men, who were mafters of cafh, and able to fupport the credit they took, with whom it might be fafe to venture the depolit of money, and who, by an exast currency of payments, might in confequence and by degrees, obtain the name and title of a fafe fund, and become the bafis of proper credit for the whole kingdom; a thing at that time greatly wanted, for the advantage of trade in France, as wiell as for the purpofe defigned by Mr. Law. This almoft, by the nature of she thing, would be called a Bank, and would be managed by the firit adventurers, in their own right, and independent of the king, or of any branch of the government; fo that except by mere plunder, even all one as by rifling the city of Paris, the king could never lay his hand upon any thing, which was put into their keeping.
This was a well laid defign, had there been no more projected than was pretended. For, upon the credit and capital ftocks of the firf fubferibers, there was immediately a clear profpect of a running calh, eftablifhed upon juft foundations, and fufficient to anfwerall the bufinefs of France. When this fcheme was thewn to the regent, he was penetrating enough not to fee immediately, that it was too beneficial a thing not to be encouraged, as well for the credit of the nation in general, as for the ufe of the government in particular; and, therefore, received it with open arms, and aflured Mr. Law of his favour and protection: and, as they found his firft fcheme capable of great improvements, he was encouraged to employ his thoughts effectually to thofe improvements, that fomething might be brought to pafs for the public good, and efpecially to reftore credic to France. In profecution of this confidence, the bank was eftablifhed, the patents were expedited for it's foundation; the king begins the fubfeription, the duke regent follows, and innumerable others; they are impowered to take in a hundred millions original ftock, and to give out bills for current calh payable at demand, and to the bearer, juft after the manner in England. They lent money upon jewels, plate, and things of real value, and upon mortgage of lands at 3 per cent intereft; they difcounted bills, and took in money, iffuing bills of credit payable at demand'; and it is inconceivable the mighty increafe of bufinefs they had upon their hands in fo little time, and the immenfe fums of money they had by them in fpecie.
Mr. Law having thus fuccefsfully finifhed this great affair, was at lelfure to enquire what further projects might be founded upion this of a royal bank: he was too knowing not to have in his bead the general idea of all thofe things which have happened fince: but he knew, that fuch a fund of credit being once well eftablifhed, nothing could mifcarry that was founded upon it; for, as half the projects in the world become abortive, for want of ready money. and credit, fo when once a good project was fupported with a fufh of ready cafh, they mult be weak managers indeed, if they mifcarry.
The firft thing of moment he went upon, was the planting a colony in the Weft-lndies, or in North America. He knew, indeed, that the planting the Louifiana, or the country on the river Miffiffippi, would not produce any great effeets, at lealf in his time: for the fetting a colony, however profperous in it's beginning, is a work of time, and muft take up ages. But Mr. Law, like a man of penetration, knew that two things would be abfolutely neceffary for this defign : 1. To have the king approve it ; and, z. To make his fcheme popular, to have fomething in view beyond not only what he could manage, but even beyond what he ever intended in the propofal. Having ftarted the project of Miffiffippi, he branched ir out in a different manner from all projects; for he did not defcend from the Miffiffippi fcheme as the general to the fubfequent things as the particulars, but he afcended from the Mifliffippi fcheme as a particular, to a Weft-India company as the general.
His next work was to propofe the foundation on which the company was to be eftablifhed, viz. a fubfeription of ftock; and here he fhewed his firlt mafterly ftroke, and that he had concerted all the fteps and meafures of his management from the beginning.
The public credit in France was ftill low, nor did the rifing credit of the royal bank add any thing to it, but rather diminifh it, and let the world fee that private credit in France might revive, but public credit could not: the ftate bills, and annuities on the town-houfe loans, and all the paper circulation, were, at this time, exceeding low, namely, from 57 to 63 per cent. difcount; it was, therefore, the cafieft thing in the world to eftablifh a fund for any new undertaking that was but tolerably promifing, where the fubferibers could be allowed to fublcribe thefe dying credits at a par, and put that into ftock at 100 livres, which coft the purchaler but 37 to 40 livres per cent. and this thing alone filled his firft fubfription.
We fee the credit of the company rifing to an immenfe height, by the affiftance of the government, and the management of Mr. Law, their director; we fee the following myiteries, or, indeed, miracles, wrought in the compafs of a few weeks, things as incredible as the greateft impombility in nature

## M I S

could be thought to be; things which, when done, were as a dream, even to thofe that faw them; even the people who have the money in their hands, and who have received their ancient debts, fo long given over, look amazed, and confider again and again, whether they are awake or afleep; the particulars are as follow:
Firt, we have feen them bring the people to refufe or decline payment, of what they would before bave given half the debt to be fecured of.
Secondly, The ftate bills, that were before little better than wafte paper, made worth 10 and 20 per cent. above par.
Thirdly, We have feen them gain 1350 millions of money in lefs than a month's time, by felling the air, and putting a real value upon an imaginary value.
Fourthly, We have feen the king's revenues augmented to millions a year, by abating the taxes on the people.
Fifthly, We have feen the general farms raifed four millions a year to the king, and yet 12 millions a year paid lefs by the people.
Sixthly, We have feen them pay 1500 millions of debt for the king, without one penny of money.
Seventhly and laftly, We have feen a private gentleman raife himfelf, by the dexterity of this management, to be the greateft fubject in the world; to have all the nobility, the princes, the public miniters, and even the government itfelf, at his beck, and above 300 coaches in a monning at his levée, himfelf behaving with all the modefty imaginable; not elevated by his good fortune, nor difcompored by the application to fo much bufinefs, but calm and ferene, and always prefent to himfelf, anfwering briefly and pertinently to every new difcourfe, receiving 6 or 700 gentlemen in a morning, difpatching every body's bufinefs with a readinefs inimitable, and every day producing new wonders in the great affair of the public, which was upon his hands.
As the advantages of public bufinefs thus flowed in, the credit of the flock neceflarily advanced; and we were furprized in England, to find that every poft the price ftarted up whole hundreds in a day, 'till at length we faw the fock up at 1150 and 1200 per cent. and, after that, to 2050 per cent. Now was the time for Mr. Law to give the blow he had in view. The multitude of people who came every hour to Paris, and run their money into the ftock, made this project not rational only, but natural, viz. that they might enlarge the capital ftock, by engrafting a farther fubfcription; and, that the new fubfcribers might have encouragement to fubfcribe, they fhould be allowed to fubfcribe at 1000 livres each, original ftock. Purfuant to this refolution, an arrêt was publifhed, empowering the company to take new fubfriptions, upon the firlt foot of the ftock for 50 millions, the fubfribers paying 10,000 livres each ; for which they had credit in the company's books, for one action, or Chare, of 100 livres original ftock. Thus the company, receiving 1000 millions of livres for 50 millions original ftock advance, were clear gainers by the fubfcription no lefs than 450 millions of livers; and this doubled by the fecond fubfcription of 50 millions, made the company's gain amount to 900 millions of livres; add to that a third, it made it 1350 millions.
Add to this, that the firf fock of the company was much of it fubfcribed by the government itfelf, by the king, and by Mr. Law, as in the company's name; and, being fold afterwards at 1000 and 1100 per cent. put above 200 millions into their pockets, befides what Mr. Law was faid to have gained for his private account.
From this time forward, the ftock is grown up to a prodigy of 2050 per cent. It is true it funk a little on the approach of the time of payment for the firf three months, which was to be paid on the Ift of January, viz. 300 livres per thare, and this, for want of money, funk the ftock to about $185^{\circ}$; but Mr. Law, who never wants a remedy for thefe difeafes, immediately calls a meeting of the directors, and agrees to declare a dividend of profits, to amount to 6 per cent. upon the ftock, which, though it be a trifle on the prefent advanced price, yet was really confiderable in itfelf, and amounts to a very great fum, no lefs than fix millions and upwards: however, it was agreed that the company really gained near 100 millions extraorditiary, by felling her own fubferiptions, and buying and felling her own ftock; fo that they were able very eafily to divide 20 per cent. on the firft fock, which would have been I per cent. upon the after-advance.
This is a brief account of the prodigious rife and greatnefs of the French India ftock, to which we fhall only add, that all the world ran to Paris; the prodigious fums ftrangers laid out in the flock, and the numbers that reforted to negociate there, filled that city with money and people, and, confequently, with trade; and they tell us, there was nothing to be feen but new coaches, new equipages, new liveries, and buying new furniture; innumerable families were inriched by this furprizing advance of ftock: in a word, there were no lefs than 1200 new coaches fet up, and half a million of people more than was before; fo that no lodgings were to be had; and they built new houfes and ftreets in every place where they had room.
On the zoth of December, N. S. there was a general meeting of the India company, at the royal bank, at which were
prefent the duke of Orleans, regent of the kingdom, the duke of Chartres, and the duke of Bourbon. The company having firft approved and confirmed what had been dune in it's name by the directors, fince the laft meeting, took into confideration feveral articles before them, and refolved, that the dividend for the year 1720 fhould be 40 per cent. upon the 300 millions of actions; and that the fubfcriptions, which mide part of the 200 millions, fhould be intitled to the dividend of the years 1718 and 1719 , at the rate of 4 per cent. perann. as foon as they were full, and converted into actions: They likewife refolved, that, for the good of the public, and to give countrymen and foreigners an opportunity of buying and feling thefe actions, an office fhould be erected, wherein the company would buy and fell actions at fixed prices; which office was accordingly erected, the 2 d of January, $N$. S. five days after, Mr. Law was fworn comptroller-general of the finances of France. But, whether his head turned giddy upon this ftupendous elevation, it appeared foon after, by the various arrets of council which he caufed to be iffued out, in relation to the coin, that he was not a little embarraffed.

Remarks on our article Mississippi, fince the laft War,
and the Definitive Treaty and the Definitive Treaty of Peace, 1763 .
Under our article of Louisiana, particularly in our Remarks fince the Definitive Treaty of 1763 , we have fhewn the dicidvantages, which our Britifi colonies in Nerth-America were under, in refpect to their "ant of a fufficieat quantity of good lands there, wher y u planters might raile variecy of taple commodities, which we are, at prefent, obliged to take at a great expence from divers other countries, provided our people were fituated in thore frefh and good lands on the Miffififppi for that purpole. Under this article, we fhall continue the thread of our intended ob fervations upon this material point.
Our article Louisiana is concluded, with obferving, that if the prefent flate and condition of our North-American colonies is not foon changed, by being put upon the planung and cultivation of fuch faple commodities as we are now compelled to take of other nations, we fhall force thefe colonifts into the arts of farming, manufactures, trade, and commerce, which would interfere with the commercial interefts of Great-Britain.
Some of our colonies, perhaps, may imagine, they cannot fubfift with thefe employments; which, indeed, would appear to be the cafe in their prefent flate: but that feems to be as contrary to their true intereft, as it is to their condition of Britifh colonies. They have neither fkill, materials, hor any other conveniencies, to make manufactures; whereas their lands require only culture to produce a faple commodity, provided they are poffeffed of fuch as are fit for that purpofe. Manufactures are the produce of labour, which is both fcarce and dear among them; whereas lands are, or may and chould be made, both cheap and in plenty, by which they may always reap much greater profits from the one than the other. That is, moreover, a certain pledge for the allegiance and dependence of the colonies; and at the fame time makes their dependance to become their InteRest. It has been found by frequent experience, that the making of a Ataple commodity for Britain is more profitable than manufactures, provided they have good lands to work. It were to be wimed indeed, that we could fupport our intereft in America, and thofe fources of navigation by countries that were more convenient to it, than thofe on the Miffifippi. But that we fear is not to be done, however it may be defired.
We wilh we could fay as much of the lands in Florida, and on the bay of Mexico, as of thofe on the Miffilfipi: but they are not fo good, any thing contiguous to the codits, however convenient they may be in other refpects to navigation.
The moft convenient part of thofe countries feems to be about Mobille and Pensacola; which are, as it were, an entrepôt between our ancient fettlements and the Miffifippi, and fafe fation for our fhips. The port of St. Augustine in the Gulph of Florida, will alfo be of no little utility tolour navigation in thefe parts; and what the lands may be deficient in, in many refpects, near the coalt, the firuation of the above-mentioned ports may jointly contribute to fupply.
As the harbour of Pensacola will appear to be a confiderable acquifition to Britain, it may be of fome ufe to give the following account of it from F. Laval, royal profeffor of mathematics, and mafter of the marine academy at Toulon; who was fent to Louifiana, on purpofe to make obfervations in 1719; and had the accounts of the officers, who took Pensacola at that time, and furveyed the place. - The colonies of Penfacola, and of Dauphin illand, are at prefent on the decline, the inhabitants having removed to fettle at Mobille and Bilexi, as New Orleans, where the lands are much better; for at the firft the foil is chiefly fand, mixed with little earth. The land, however, is covered with woods of Pines, Firs, and Oaks; which make good timber as well as Ship-Mand. The road of Pensacola is the only
good port thereabouts for rarge Ships, and Ship-Island for fmall ones, where velfels, that draw from 13 to 14 feet water, may ride in fafety, under the illand, in 15 feet, and a good holding ground; as well as in the other ports, which are all only open roads, expofed to the fouth, and from weft to eaft.
Penfacola is in north latitude $30^{\circ} 25^{\prime}$, and is, the only road in the Bay of Mexico, in which chips can be fafe from all winds. It is land-locked on every fide, and will hold a great number of fhips, which have very good anchorage in it, in a good holding ground of foft fand, and from 25 to 34 feet water. You will find not lefs than 21 feet water on the bar, which is at the entrance into the road, provided you keep in the deepeft part of the chanrrel. Before a thip enters the harbour, fhe fhould bring the fort of Penfacola to bear between north and fouth $\frac{3}{4}$ eaft, and keep that courfe till the is weft, or weft $\frac{1}{4}$ fouth, from the fort on the inland of St . Rofe ; that is, 'till that fort bears eaft, and eaft $\frac{1}{4}$ north. Then fhe mult bear away a little to the land on the weft fide, keeping about midway between that and the ifland, to avoid a bank on this laft, which runs out to fome diftance weft-north-weft from the point of the ifland.
If there are any breakers on the ledge of rocks, which lie to the weftward of the bar, fas often happens; if there is any wind, that may ferve for a mark to fhips, which feer along that ledge, at the diftance of a good mulket-hhot, as they enter upon the bar, then keep the courfe above-mentioned. Sometimes the currents fet very ftrong out of the road, which you hould take care of, left they fhould carry you upon thefe rocks.
As there is but half a foot rifing on the bar of Penfacola, every hip of war, if it be not in a ftorm, may depend upon 19, perhaps 20 feet of water, to go into the harbour, as there are 21 feet on the bar. Ships that draw 20 feet muft be towed in. By this we fee, that fhips of 60 guns may go into this harbour; and even 70 guns thips, the largeft requifte in that country in time of war, if they were built flat-bottomed like the Dutch hips, might pafs every where in that harbour.
In 1719, Penfacola was taken by Mr. Champmellin, in the Hercules man of war, of 64 guns, but carried only 56; in company with the Mars, pierced for 60 guns, but had only 54 ; and the Triton pierced for 54 guns, but carried only 50 ; with two frigates of $3^{6}$ and 20 guns *.
*The admiral was on board of the Hercules, which drew 21 feet water, and there were but 22 feet into the harbour in the higheft tides, fo that they defpaired of carrying in this thip. But an old Canadian, named Grimeau, a man of experience, who was perfectly acquainted with that coaft, boafted of being able to do it, and fucceeded; for which he was the next year honoured with letters of noblefie. Dumont (an officer there at this time,) vol. ii. p. 22. Brllin, from the French admiralty chefts, makes but 20 feet of water on the bar of Penfacola. The difference may arife from the tides which are very irregular and uncerfain on all that coaft, according to the winds; never rifing above three feet, fometimes much lefs. In 24 hours the tide ebbs in the harbour for 18 or 19 hours, and flows 5 or 6 . Laval.

This road is fubject to one inconvenience; feveral rivers fall into it, which occafion ftrong currents, and make boats and canoes, as they pafs backwards and forwards, apt to run aground; but as the bottom is all fand, they are not apt to founder. On the other hand, there is a great advantage in this road; it is free from worms, which never breed in frefh water, fo that veffels are never worm-eaten in it.'
The many advantages that would enfue, from the well peopling of thofe fouthern parts of the continent with proteftant fureigners, are hardly to be enumerated. We might thereby people and fecure thofe countries, and reap the profits of them, without any lofs of people; which are not to the fpared for that purpofe in Britain, or any of her dominions. This is the great ufe and advantage that may be made of the expulfion of the French fromthofe northern parts of America. They have hitherto obliged us to frengthen thofe northern colonies, and have confined the people in them to towns and townthips, in which their labour could turn to no great account, either to themfelves or to the nation; by which we have, in a great meafure, loft the labour of one half of the people in our colonics.
But as they are now free from any danger in their borders, they may extend their fettlements with fafety, difperfe themSelves on plantations, and cultivate thofe lands, that may turn to fome account, both to them and to the whole nation. In fhort, they may now produce faple commodities for this nation, on which the intereft of the colonies, and of the kingdom in them, chiefly depends; and which we can never expect from thofe colonies in their prefent fituation.
The commodities which thefe fouthern parts of NorthAmerica promife to afford us, are Hemp, Flax, and Silk, thofe great articles and neceflary materials of very valuable manufictures; for which alone this nation pays at leaft a Milliovani a Half a Year, and could never get them
from all the colonies we have. Cotton and Indico in plenty, are alfo eftimable. Not to mention Copprr, Iron; Pot-abh, which with Hemp, Flax, and Silk, make a breat balance of trade againft the nation, and not a jittle concribute to drain it of "ic's treafure; when we thight cer:tainly have thofe commodities from our colnimies for tnanufactures, and both fupply ourfives, and others with thems Wine, Oil, Raisins, and Currants, \&c. thofe products of France and Spain, on which this nation expends fo much of her treafure, to enrich her enemies and rivals in trade, might likewife be had from thofe her dominions, and export in return her manufactures for them, equivalent ind time to what the does to France and Spain.
Britain thereby might cut off thofe refources of her reflefs enemies, fecure her colonies for the future, and prevent fuch calamities of war as we have experienced, and cultivate the arts of peace.
Some have faid that Louisiana, \&cc. is never likely to turn to any account, becaufe the French have made fo little of it. But that objection, however common, will appear to proceed only from the ignorance of thofe who makeir. No country can produce any thing without labourers; which it is certain, the French have never had in Loursiana, in any numbers fufficient to make it turn to any greater account than it has hitherto done. The reafon of this appears not to be owing to the country, but to their proceedings and mifconduct in it. Out of the many thoufand people who were contracted for by the grantees, to fend to Louisiana in 1719, there were but 800 fent; and of thefe the greateft part were ruined by their idle fchemes, which made them and others abandon the country entirely. The few again, who remained in it were cut off by an Indian maffacre in 1729, which broke up the chief promifing fettlements they had in the country, thole of the Natches and Yasons, which were never afterwards re-inftated. Inftead of encouraging the colony in fuch misfortunes, the minifter, Cardinal Fleury, either from an ill-judged fpirit of reconomy, or becaufe it might be repugnant to fome other of his views, withdrew bis protection from it, gave up the public plantations, and muft thereby; no doubt, have very much difcouraged others. By thefe means, they have had few or no people in Louisiana, but fuch as were condemned to be fent to it for their crimes, women of ill fame, deferted foldiers, infolvent debtors, and galley-flaves, 'who looking on the country only as a place - of exile, were difheartened at every thing in it; and had ' no regard for the progrefs of a colony, of which they were - only members by compulion, and neither knew nor con' fidered it's advantages to the ftate. It is from fuch people, ' that many have taken their accounts of this country; and ' throw the blame of all mifcarriages in it upon the country, ' when they have been only owing to the incapacity and " negligence of thofe who were intrufted to fettle it *."

## * Charlevoix's Hift. N. France, Tom. iii. p. 447.

## Remarks on the Mississippi Scheme.

That we may judge more fully of the effects of this extraordinary fcheme, it will be neceflary to confult the following French arrêts.

- The king having caufed to be examined in his council, the condition to which the kingdom was reduced before the eftablifhment of the bank, that he might compare it with it's prefent condition: it has appeared to his majefty, that the high rate of money had done more damage to the kingdom than all the expences which the late king had been obliged to be at during the feveral wars: the avarice of the lender having rifen to that height, as to demand more intereft for a month than the laws allowed for a whole year.
This ufury had even fo weakened the kingdom, that his majefty's revenues were not paid, but by multiplying compulfions on thofe who were liable to pay them. The price of the products of the earth being bardly fufficient to pay the charge of the culture and the taxes, the propritors received nothing for their lands. This general mifery forced part of the nobility to fell their eftates at a low price, to maintain themfelves in his majefty's fervice; and the other part of the nobility had their lands feized. The king's favours were their only refource, and his majefty was not in a condition to grant them, and even could not pay the falaries of officers, and the penfions which had been granted for the reward of fervices. The manufactures, commerce, and navigation, were almoft at a ftand; the merchant and trader were reduced to bankruptcy, and the artificer compelled to abandon his native country, to feek employment among foreigners. Such was the condition to which the king, the nobility, the merchants, and the people were reduced, while none but the lender of money lived in plenty; and the kingdom was like to fall into a general diforder, had not his majefty applied a fpeedy remedy to thefe evils.
By the eftablifhment of the bank, and of the India company, the king has reftored things to good order: the nobility have found, in the increafe of the value of their lands, means to make themielves eafy: manufactures, commerce, and navigation, are re-cftablifhed: the lands are cultivated, and the
artificer
artificer works. But, notwithftanding the vifible advantages which thofe eftablithments have procured, there were perfons malignant enough to form a defig'n to deftroy them : and this obliged his majefty to iffue an arret of his council, of the 5 th of March iaft, for fupporting, by the decrying of money, the credit of thofe fo ufeful and neceffary eftablithments. By that arret his majefly reduced the different fpecics of the India compiny's bills to one fort, and ordained that actions (or fhares in the ftock of that company) might be converted into bank notes, and thofe notes into actions, according to the proportion, which at that time was reckoned to be the moft juft with tion, which at that time was reckoned to be the molt jult with
refpect to the value of the coin. This decrging of money, and favouring of actions, empowered debtors to clear themfelves. It remained for his majeify to find an expedient for employing the fums which were io be paid back to minors, to hofpitals, to communities, and others the moft privileged creditors: and, at the fame time, for re-cftablifhing the value of the coin in fuch proportion as might fuit foreign commerce, and the vent of the products of the country. His majefty has provided for thefe feveral things by his arrêts, and particularly by his declaration of the if th of March laft, which orders the reduction of the value of the coin: but, as that reduction muft neceffarily produce a diminution, not only of the price of commodities, and of moveable goods, but alfo of the vaJue of lands, and other immoveable eftates, his majefty has judged the gencral intereft of his fubjects required, that the price, or nominal value of the India company's actions, and of bank notes, fhould be leffened, for maintaining them in a juft proportion with the coin and other commodities of the kingdom, for hindering the too high value of coin from finking the public credit; for giving, at the fame time, to the privileged creditors, means for employing to the better advantage the fums which might be repaid to them; and, laftly, for preventing the loffes which his fubjects might fuffer in commerce with foreigners. And his majefty has the more willingly refolved upon this deduction, becaufe it will. be even beneficial to the proprietors of the India company's actions, and of bank notes, for the dividends on them will be more to their advantage, and will be convertible into money of intrinfie value, which will produce at leaft 50 per cent. more in real coin, or bullion, after the reduction, than at prefent. Upon all which, the Sicur Law, the king's counfellor in all his councits, comptroller general of the finances, having made his repnit, his majefty being in his council, with the adivice of Monl. the duke of Orleans, regent, has ordained and ordains:
Article I. That the actions of the India company fhall be reduced, that is to fay, beginning from the day of the publication of the prefent arrêt, to 8000 livres; on the ift of July to 7500 liveres; on the if of Auguft to 7000 livres; on the aft of September to 6500 livres; on the ift of October to 6000 livres ; on the ift of November to 5500 livres; and on the ift of December to 5000 livres.
II. That the bank notes fhall alfo be reduced, fo that they fhall not be reccived in payments, that is to fay, from the day of the publication of the prefent arrèt, thofe of 10,000 livres bur for 8000 liveres; thofe of 1000 lives for 800 livres; thofe of 100 lives for 80 liveses; and thofe of 10 lives for 3 lives: that, on the ift of July next, the faid notes fhall be reduced, viz. thofe' of 10,000 liveres to 7500 livres; on the Jft of Auguft to 7000 liveres; on the firt of September to 6500 livers; on the firft of OCtober to 6000 Iivres; on the firft of November to 5500 liveres; the leffer notes in like proportion; and, on the Ift of December of the prefent year, the faid notes fhall remain reduced and fixed, viz. thofe of 10,000 livres to 5000 lives; thole of 1000 liveres to 500 livres; thofe of 100 livres fir 50 lives ; and thofe of to lives to 5 liveres. III. His majefty forefeeing that thofe of his fubjects who are prifeffed of confiderable fums in bank notes, may convert them with advantage into the India company's actions, and being $w^{\prime}$ lling to favour fuch perfons as have not fortunes fufficient to employ them that way, his majefty ordains, that, during the courfe of the prefent year, and 'till the aft of January, 1721, tho bank notes fhall be received by the receivers of the tallies and other taxes, at the office of his majefty's farms, and even at the falt warchoules, at the full value the faid notes were at before the reduchons ordained by the prefent arret, yet without the abatement for the future of the 4 fols per livere, or of the ro per ceat. granted by the arrêts' of the 29th of January, the 5 th of March, and the 28 th of Aprill laft. The faid bank notes flull likewife be received for their full value, at the offor appointed for the diftribution of contracts for annuities for life, purfuant to the arret of council of the 16 th of the preient month.
IV. His majefty's will is, that all bills of exchange drawn or endorfed in toreign countries to be paid in France, thall be paid in bank notes, according to the currency and value of the faid notes, known in foreign countries the day of the date of the faid bitls of exchange : and, for avoiding abufes and difputes which might arife, becaule the greateft parts of the endorfement made in foreign countries are without date, bis majeny's intention is, that the bills of exchange made and pryable in France, and which thall be endoried in foreign rountios, Chall be likewife paid in bank notes, according to
the currency and value of the faid notes at the time of the date of the bills. Done in the king's council of flate, his majefty prefent, held at Paris the 21 if day of May, 1720 .'

Signed Phelypeaux.
Remarks.
The ftile and contents of the preamble of that arrêt thew, that the council of France thought their fcheme beyond the poffibility of mifcarrying; and, therefore, begun to execute the laft part of it, viz. to lower or raife their bank bills and actions of the company as they pleafed, which they had fubftituted in the room of gold and filver. This did not fucceed according to their expectation; for people refufed to take bank notes; which occafioned fo much difturbance and murmurings, that, on the 25 th of May, the government was obliged to poft guards in the market places, to prevent tumults. The parliament met extraordinarily, and fent deputies to make remonftrances againft the arrett aforefaid; and fome of their deputies were appointed to confer with fome counfellors of ftate, in the prefence of the regent, to concert meafures for preferving the public peace, and preventing the intire ruin of trade.
The firft thing that was judged proper to be done, was to revoke the fatal arrêt of the 21 ft , which was accordingly declared void by an arrett of the 27 th, whereby the bank notes were declared to be current, as before the former arrêt. Commiffaries were appointed to examine the books and cafh of the bank; and the accounts of the India company; and, to proceed therein, payment was flopt at the bank the 2gth of May, but they began to pay again the ift of June.
On the 31 Ift of May another arrett was publifhed for proroguing, to the ift of July next, the lowering of the new feecies, which was to begin the Ift of June, purfuant to the declaration of the Ith of March, inferted above, and making current, for that time, the old fpecies of gold and filver. By the fame arrêt his majefty permits al! his fubjects, and others, to import gold and filver fecies bullion into the kingdom, which before was only permitted to the company. By another arrêt of the uft of June, the prohibition publifhed fome time ago, forbidding people to keep by them above 500 livres in fpecie, and allowing the company to fearch all houfes whatever, was taken off.
Thefe difpofitions removed, in part, the uneafinefs of the people; and, in order to recover and fupport the public credit, which had been deeply wounded, the following arrêt of the council of ftate was publifhed:

- Upon the petition preiented to the king in his council, by the general directors of the india company, in the name of the faid company, fetting forth, That, by the accounts they have delivered, it appears, that, by their feveral operations, and the actions they have called in again, and have now in their poffeffion, they have a fund of above 300 millions of livres : that, in refpef to their commerce, they have undertaken great things, advantageous for the proprietors and ftate: that they have increafed their fhips alseady fent out, or ready to fail to 105, without including brigantines and frigates, and have fent rich cargoes; and that, notwithftanding the multiplicity and quicknefs of their operations, their books have been found in the moft exact order: that as to the adminiftration of the truft committed to them within the kingdom, they have increafed, beyond what could be expected from them, the produce of the farms, and the general rece: of the finances, by the good order they have eftablifhed tierein: but that, in order to render more and more the eftablinment of the faid company folid and advantageous to the proprietors, they are of opinion, it is neceffary to leffen the number of the actions, and reduce them to 200,000, inftead of the 600,000 , which were created purfuant to the edicts of. December 1717, and May 1719, and of the arrèts of the 27th of July, $13^{\text {th }}$ and 28 th of September, and 2 d of OEtober following: that the company having called in near 300,000 actions, and being in a condition to re-call what is wanting to make up that number, there remains nothing to be done for the execution of this project, but to fupprefs as well thofe 300,000 actions belonging to the company as the 100,000 belonging to his majefty; which faid 100,000 actions being a profit made by his majefty, the company hope his majefty will give them this new mark of favour and protection, which will enable the company, by new operations, to difcharge what they owe to his majefty and the bank, to call in, by thefe means, a confiderable number of bank bills, and reduce them to the number his majefty fhail think neceffary for maintaining circulation and commerce : that with chefe views, and to fecond the intentions of his majefty in relation to the creation of rents or annuities on the town-houfe of Paris for $12,500,000$ livres, making a capital of 500 millions, the faid company offers to yield and make over again the 12,500,000 livres, part of the forty-eight millions which his majefty has affigned to the company on the aids and gabels, in deduction and for difcharging the engagements contracted by the faid company with his majefty: that the faid company defire sis majenty to authorize them to demand from
the proprietors, a fupplement of three thoufand livres per action, which Cupplement is to be voluntary; but fuch proprietors who thall pay the fame, fhall have a dividend of 3 per cent. at the rate of 12,000 livres per action; and that fuch who fhall not think fit to pay that fupplement or additional fum, fhall have only the dividend of 200 livres per action, which was granted by the refolution of the company of the 30th of December latt: that the condition of the company is fuch, that they may look upon the dividend of 3 per cent. as a fixed and certain revenue; and, that the public may be fure of it, the directors and many of the moft confiderable proprietors, who have joined them, humbly defire his majefty to give them leave to form a fociety of infurance, which thall have a ftock of 20,000 actions, amounting at the rate of 12,000 livres each action, to two hitndred and forty millions, the profits of which are the principal, and fhall be anfwerable for the dividend of 3 per cent. to be paid to the proprietors; who Thall advance the fupplement aforefaid, and fhall infure the dividend on the foot aforefaid of 3 per cent, and likewife for the 200 livres per action to thofe who do not furnifh the faid fupplement; upon condition neverthelefs, that the overplus of the profits of the company, beyond the 3 per cent. and 200 livres per action incurred to the owners of the faid actions, fhall belong to the fociety of infurance.-That to perfect and put that plan into good order, and give all the fecurity that can be defired, it would be neceffary, that an exaft account be taken by fuch commiffaries of the council as his majeity thall be pleafed to appoint, of all the fubfcriptions, premiums, and actions, called in by the company, and now in their poffeffion, to be burnt at the town houle, in the prefence of the faid commiffaries, the provofts of merchants and efm chevins.- That two hundred thoufand bills, each of one action, with the dividends of three years, be made out, to be numbered from number 1 to number 200,000 inclufive; figned by one of the general directors and one of the commiffaries appointed by his majefty, and realed with the real of the company, and that within a certain term, which thall be prefcribed by his majefty, all the actions, in the hands of the public, be brought in to beconverted into new actions, and that the old be afterwards burnt with the formalities aforefaid. For which his majefty being willing to provide, the report being heard, the king being in his council, with the advice of Monf. the duke of Orleans regent, has ordained and ordains.
This arrêt contains fix articles, which are in fubftance as follow:
I. The king appointed commiffaries to take an account of the number of the fubferiptions, premiums, and actions, of the India company, which they have called in or converted into bank notes.
II. His majefty accepts the offers made by the faid company, to make over again unto him the hundred thoufand actions his majelty yielded to them by the arrêt of the 24 th of Fe bruary laft, and in confequence thereof difcharges the company from the nine hundred millions they had obliged themfelves to pay to his majefty in ten years, for the ceffion of the hundred thoufand actions aforefaid. And his majefty being willing to contribute, on his part, to the leflening, of the number of actions, in order to reduce them to two hundred thouland, the number propoled by the company, ordains that the faid hundred thoufand actions thall be burnt, as alfo the three hundred thoufand which the company propofed to fupprefs.
III. His majelty fixes the number of actions of the company to two hundred thoufand, and declares they fhall not be aug. mented upon any pretence whatfoever; and, to make up that number, orders two hundred thoufand bills, of an action each, to be printed, with the dividend of the years 172 I , $\mathbf{1 7 2 2}, 1723$, numbered, figned, and fealed, as above, and all the old actions, premiums, and fubmiffions, to be burnt in the prefence of the commiffaries of the council, provoft of merchants, \&e. Declaring farther, that all actions, fubicriptions, or premiums, which thall not be brought in before the rit of September next, fhall be null and void by virtue of the prefent arrêt.
IV. The actions that are in the hands of the public, and thofe depofited and regiftered in the books of the company, are to be converted within that time into new actions.
V. The company is allowed to demand from the proprietors a fupplement, or additional fund of three thoufand livres per action, to be paid in fix months; that is, five hundred livres per month; but fuch proprietors, who fhall not think fit to furnifh that additional fum, thall continue to enjoy their dividend of two hundred livres per action.
VI. His majefty approves and authorizes the fociety of infurance, propofed by the directors, to confilt of the faid directors, and as many proprietors of ftock, as fhall be willing to concern themfelves therein: that the fock of the fociety be for twenty thouland new actions, which fhall be forthwith depoficed, for fecuring the payment of the dividend of fuch proprietors as will enfure the fame therein, and the overplus of the faid dividend is to belong to the foVol. II.
ciety of infurance. Done in the council of fate, June 3; 1720.

Signed Phelypeaux.
This reduction of two thirds of the actions, and the fociety for infuring the intereft, thereof, was regarded as the l,kelieft means to retrieve the public credit; but the people had beeri fo frighted, that they would not meddle with bank notes, except in payment for their goods, which they raifed fuur times above their real value, or upon a very great difcount: but what effect this project had, we faall fore giccount: but
 toll hotice, that Mr. Law refigned his office of comp-troller-general of the finances on the 19th of May, and two officers of the Swifs guards were fet upon him; but on the 3 , of June they were ordered to leave him, and the duke D'Antin was fent to acquaint him, that he was to continue at the head of the bank, and of the India company: but, on the 7 th of that mionth, the feals were taken from Mr. D'Argenfon, and reftored to the chancellor Dagueffau.
Soon after this, the government, finding that the public affairs did not take the curn they expected, feemed to be undoing by degrees what had been fol lately done; and, at the fame time, fell to ufing very extraordinary methods to oblige thofe who had remitted any money abroas, to re-call it into France, as will appear by the following unexampled ordinance.
The king's ordinance, requiring all his fubjects who have remitted money into foreign countries to re-call the fame, dated the 20 th inftant, is as follows:
His majefty being informed, that many of his fubjects, who, in thele latter times, have got confiderable fortunes, forgerting what they owe to their country, inftead of laying out their money in purchafes in the kingdom, or promoting commerce and manufactures, have fent the greateft part thereof into foreign countries, and have concerned themlelves in their trading companies; and that fome others of his faid fubjects keep in the faid foreign countries confiderable furns in fpecie, with a defign to place the fame there, which bas kept up the courfe of excbange to the advantage of forcigners, and has occafion ed the exporting out of the kingdom a confiderable quantity of fpecie: and his majefty, confidering how much it is important to remedy an abufe fo contrary to the laws of government, and at the farne time fo prejudicial to the ftate, and the neceffity of providing againft the fame, however, without conftraining the liberty of commerce, to which his majefty is always refolved to continue his protection; his majefty, with the advice of Monf. the duke of Orleans regent, has ordained and ordains, That in general, all tis fubjects, of what quality or condition foever they be, who are concerned in companies of commerce in foreign countries, fhall be obliged to re-call their funds, and caufe the fame to be brought again into the kingdom within two months at the fartheft, reckoning from the day of the publication of this prefent ordinance, which thall be likewife obferved by thofe who have depofited any money out of the kingdom, excepting, neverthelefs, the funds of bankers, which merchants and traders bave there for their commerce, or for their own account, or the particular focieties they have in the faid foreign countries, upon a penalty to fuch as thall act contrary thereunto, of double the fum they have remitted into foreign countries: which penalty, whereof one half is to belong to his majefty, and the other to the informer, fhall not be remitced or reduced, or moderated upon any pretence whatfoever. His majefty forbids, moft exprefsly, all his `ubjects, of what quality or condition foever they be, to intereft and concern themfelves in any trading companies in foreign countries, or to place any money therein without his feccial leave; requiring the lieutenant-general of the police of Paris, the intendants of the feveral provinces, $\& \mathrm{xc}$. to caufe thefe prefents to be obferved, and to be read, publifhed, and affixed, where occafion thath require, \&xc. Done at Paris, June 20, 1720.

## Signed <br> LEWIS,

And lower, Phelypeaux.
Mean while the affairs of the finances fell into fo great diforder, that the court, feeing little hopes of rerrieving them, applied to the parliament, whofe deputies and the minifters of flate had feveral conferences together. But the parlizment refufing to come into the meafures the court bad projected, this produced an open rupture between them, and the parliament was removed from Paris to Pontoife in the following manner. On the ift of July, by three in the morning, the mufqueteers, the hife-guards, the French and Swifs guards, and the archers of the marthallea were in arms; and a ftrong detachment was fent to the palace where the parliament meets, with orders to fuffer no afiembly there; and about the fame time letters, under the royal fignet, were fent by mulqueteers to all the prefidents and other members of the parliament, requiring them to repair to Pontoife (a place within fix leagues of Paris) in forty-eight hours.
Upon the whole, this remarkable fcherne created far more confufion in France, than there is at prefent, and proved the moft grofs and enormous cheat and impolition upon the pub-
lic, that ever was hatched; nor is it to be parallelled, ex rept by the famous ara of the South Sea year in England. This tampering with the public credit, under colourable pretexts of raifing mountains of treafures, always terminates in nought but empty bubble and chimæra, to the ruin of com merce and induttry, and the ufeful arts, and therefore cannot be too much guarded againft in all wife fates: for which reafon we have taken due notice of it. See the articles Ac tions, Bubbles, Credit [Public Credit], Debts [National Debts], Funds, Monied Interest.
MODENA, a duchy in Italy, compofed of feveral principalities, viz. the duchy properly to called; thofe of Reggio, of Mirandola, and Coreggio ; the principality of Carpio; the feignories of Salfuola, Trigalla, and the greater part of that of Carfagnano - It is bounded on the north by the duchies of Mantua and Mirandola; on the eaft with the Bolognefe, and the territories of the Church; on the fouth with Tufcany and the republic of Lucca; and, on the weft, by the duchy of Parma.
This country is fertile and delightful, produce's plenty of corn, wine, and other valuable commodites, fufficient noc only to maintain, but to inich it's innabitants, were they not fo grievoufly loaded with taxes. But the misfortune is, that the dukes of it keep a court too fplendid and magnificent for thei income; fo that they are obliged to rack their fubjects, and reduce them almoft to beggary, in order to vie with other princes in grandeur.
The duchy, or tervitory of Modena, properly fo called, has ie's name from it's capital; and, befides that and the dependencies of it, contains the country of Frignano, and part of Carfagnano. The chief towns of it are Modena, the capital, Baftia, Final, Frignano, Seftola, and Carfagnano.
Modena is feated in a fpacious plain, on a fine canal, between the rivers Panaro and Secehia, and is of a fmall oblong figure, nearer to a round. The city has norbing that fhews the inhabitants to be rich, or to carry on any confiderable com-
merce. fantly fituated on an ifland formed by the river Panaro, about 16 miles below the city of Modena.
Final, or Finale, is likewile fituated on an illand made by the fame river, on the north-eaft of Modena, and upon the confines of Mantua. It is often called Final Modenefe, to diftinguifh it from a famed fea-port of that name on the coaft of Genoa.
Frignano, or Frigano, is a little city and territory in the fame duchy, at the foot of the Apennines, on the frontiers of the Bolognefe, near the fpring head of the Panaro.
Carsignano, Carfeniano, Grafienano, the laft territory in the Modenefe Proper, fituate at the foot of the Apennines, and between that duchy and the republic of Lucca. The territory runs on each fide of the Secchia.
It's chief town, of no great note, is called Castel Novo De Carsignano, with fume other villages, part of which belong to the republic of Lucca.
Carpi, a city and territory in the duchy of Modena, with the title of principality; is fortified with a good cafte, and did formerly belong to the houfe of Pio, who were lords of it. It is feated in a beautiful fertile plain, upon a canal cut from the river Secchia, about II miles north of Modena, and four from Correggia.
Sassuolo, Sassuolr, is fituated on the river Secchia, and gives name to a lordihip fituate between Reggio, Modena, and Correggio, and is in the poffeffion of a prince of the houfe of Elte, who is commonly ftiled marquis De St. Martino.
The principality of Reggro takes it's name from the city of that name, called Regium Lepidi, to diftinguifh it from Reggio, another famed town in Calabria. It is fituate in a very fertile plain, is well inhabited, and very rich, though it's air be not fo wholefome as other parts of Italy.
The duchy of Modena, properly fo called, comprehends one of the faireft and moft fruitful countries in Italy, abounding with corn, wine, oil, and fruits, is very populous, and inhabited by an ingenious and induftrious people. The fmall country of Frignano, bordering on the Bolognefe, is annexed to it on one fide, and part of the country of Carlagnano on the other, the reft belonging to the republic of Lucca. It is very mountainous, 'but far from being defpicable, fince in thefe mountains there are mines of great value; and the inhabitants are a race of people robuft, hardy, and brave, as any in Italy. The duchy of Reggio lies weft from that of Modena, and is by fome accounced the more confiderable duchy of the two, and, indeed, fo it is, if we confider it's dependencies, fuch as the principalities of Correzgio and Carpi, the former heretofore pollefled by princes of the fame name, and the latter belonging to the family of Pio. In the north-weft corner of this duchy fands Bercello, upon the Po, formerly a place of great trength, yielded by the late duke of Modena, in 170 , to the imperialifts, to faclitate their military operation in Italy, and, for that reafon, befieged, taken, and intirely demolifhed by the French in J 705 ; nor has it been ever fince refored to it's ancient condition.
The duchy of Mirandola, including that of Cuncordia, is about 20 miles in length, and five in breadth; it is a very
beautiful and a very plentiful territory, full of villayes, and the country round about them thoroughly cultivated.
Mirandola is ftrong by fituation, and has been formerly well fortified.
The city of Concordia ftands on the Secchia, at the diftance of fix miles from Mirandola; between which cities there is a fine canal, called the Navilio, which facilitates the commerce of both.
Thefe duchies were very great acquifitions to the family of Efte, fince their revenues are moderately computed at 100,000 crowns a year.
The whole eftates of the duke of Modena have the duchies of Mantua and Guaftalla on the north ; the grand duchy of Tufcany on the fouth, together with the territories of the republic of Lucca; the Bolognefe, and the duchy of Ferrara, on the eaft; and the duchy of Parma on the weft. The extent of thefe countries, from fouth to north, is about 56 Englifh miles, and they are about 50 miles in breadth, from weft to eaft. The duke of Modena, in time of peace, enjoys a revenue of about 100,000 . Aterling a year at leaft, with which he maintains a very fplendid court, and when his circumftances renders it requifite, can keep up a body of 8000 regular troops. The greateft inconvenience in the fituation of his country is, that he has no communication with the fea; which might be eafily removed, if he could recover, either by treaty or force, the duchy of Ferrara, which lies upon the gulph of Venice.
MOGUL EMPIRE. See Indostan
MOLDAVIA, a principality of European Turkey, bounded by the river Neitter, which divides it from Poland, on the north eaft; by Beffarabia on the eaft; by the Danube, which feparates it from Bulgaria, on the fouth; and by Walachia and Tranfilvania on the weff; being 240 miles long, and $150^{\circ}$ broad, fituate in a good air and fruitful ioil, producing corn, wine, rich paltures, a good breed of hories, oxen, and fhee'p, plenty of venifon, game, fib, and fowl, and all European fruits, and is weli watered with the rivers Danube, Pruth, Neifter, \&c.
The capital city is Jassy.
MOLUCCA ISLANDS. See Indian Islands.
MOMBAZA, a fubdivifion of Zanguebar, on the coaft of Africa, a country fubject to the Portugueze, which furnifhes them with llaves, gold, ivory, rice, flefh, and other provifions, with which they fupply their plantations in Brazil, \&ec. MONEY.

## Of the Origin of Money.

In the moft early ages, when trade was carried on, as there was no money, men ufed to barter one commodity for another, a cuftom that itill obtains among the favage unpolifhed nations of Chili on the South Sea, in the land of Jeffo in the Eaft-Indies, and other barbarous countries. But, as fuch a method of bartering commodities was, on many occafions, attended with great difficulty, and always inconvenient, men agreed to make choice of one commodity, which being in general and conftant efteem, an equivalent quantity of it might always remove the difficulty of bartering in kind.
The fame opinion concerning the origin of money we find expreffed very much to our purpole, in the firlt book of Ariftotle's Politics, ch. 6. 'As all ufeful things; fays he, could ' not, without great difficulty, be tranfported from place to ' place, it was refolved, by common confent, that, in bar-- tering commodities, they fhould reciprocally give and re-- ceive fome fubltance, which, being in it's nature applicable ' to the purpofes of life, might, at the fame time, be eafily car' ried about.' From which words of Ariftotle it is very plain, that the introduction of money was owing to the difficulty of bartering, as human fociety could not fubfift without the exchange of neceffaries, nor could this matter be managed without the ufe of money.
Todetermine, therefore, this fubftance that fhould be in univerfal and conftant efteem, they made choice of gold and filver, not only becaufe they were more valuable than other metals, but alfo becaule, in the various ufes to which they might be applied, they were particularly adapted to the fupport and improvement of human life. But, becaufe there was a confiderable difference in the nature of thefe two metals, and gold was more precious than filver, both by it's intrinfic worth and greater fcarcity, and alfo far exceeded the other in the expence that was neceflary for working it, as appears by the tax that is paid to the fovereign lords of mines, who require no more than five in the hundred of gold, whereas they exact twenty in the hundred of filver; therefore a greater value was afcribed to gold. And, becaufe the bafer metal ought to be given in greater meafure, that what was wanting in value might be made upin quantity; for this purpote it was neceffary to fix the proportion between them, by a certain determinate rule: whence it is, that in the practice of commerce, though formerly the proportion of gold to fiver was fettled as ten to one, yet at prefent the matter is fo regulated almof all over Europe, that one ounce of gold is reckoned equal in value to 15 of filver, or thereabouts. See the article Coin.

## M O N

When this fubftance was agreed upon at firft, as we have obferved, the particular quantities of it were originally determined by their bulk and weight only; but afterwards, to fave the trouble of proving this weight upon every occafion, it was coined into a certain form by public auchority, and imprefled with a mark of difinction, expreffing the quantity each piece contained, fo that it fhould always have the fame determinate value, and be every where the fame, both for matter and weight.
In order to inquire more particularly into the nature of money, and the betrer to illuftrate what we have further to of fer concerning the effects it produces in trade, and the various advantages and difadvantages of one kingdom in refpect of another, arifing from money; it muft be confidered, that we are to diftinguifh two forts of value in money; the one intrinfical, founded in the rate or value according to which it ufes to pafs : and though, in different places, on feveral preffing occafions, the extrinfical value of money may be raifed higher, at the difcretion of the fupreme power, fuch is the nature of commerce, that in it money is never eftimated but as to its intrinfic value; fo that, in the courfe of trade, money can have no higher value than a mafs of the fame metal and quantity would have, if given in barter for any fort of goods. We muft alfo obferve further, that fuch is the cuftom of wellregulated kingdorss, that, when foreign money is fuffered to pafs current therein, fo much is deducted from the extrinfical value as is neceffary for defraying the charge of coining, and it never paffes for more than it's intrinfical value; and the intention of this regulation is, that the money of the ftate itfelf, which bears the ftamp and authority of the prince, may always have the preference. From all which confiderations it is extremely plain, that it is a matter of the utmoft confequence that the fyftem of money be fettled under fuch fixed regulations, as that it may conftantly keep pace with the courfe of trade, and never in the leaft deviate therefrom ; it being certain, that no variation can ever happen in this refpect, but it will, at the fame time, produce a remarkable alteration in commerce.
After all, however certain it may feem that money is that which alone conftitutes the riches of a nation, and it cannot be denied that, confidered in itfelf, it has this prerogative, yet it will never difcover it's effects, if it is not put in motion by commerce; fo that, as the body of a planet, being in itfelf opaque, would never difcover to us it's form and figure, if (according to that hypothefis) it did not revclve round the fun, whofe light prefents it to our view, we muft form the very fame judgment concerning money; which, it is certain, has in itfelf no power at all to increafe and multiply, and thereby to form the riches of a kingdom, or even, on the contrary, to reduce it to poverty; for, if a profperous or unfavourable motion were not communicated thereto by commerce, we fhould never be fenfible of if's effects. And, hecaufe we can no otherwife arrive at a clear and diftinct knowledge of thefe effects but by a fixed and certain rule, which can fhew with accurate exactnefs the fituation of any kingdom, with regard to it's internal and,external commerce, that is, whether the balance of trade ftands in equilibrio, or is inclined to either fide: and feeing there is not a more infallible rule by which this knowledge can be attained than the courfe of exchange, fee the article Exchange.

## Remarks on the article Money.

Of the Increase and Decrease of the Actual Quantiry of Real or Hard Money in a State.
Let us familiarly confider the land eftate of a country, where the general circulation is carried on by 2000 ounces of filver: this money paffes through feveral hands, and always returns into thofe of the undertakers, whom we fuppofe the proprietors of it.
L.et us likewife fuppofe, thefe undertakers have received 2000 ounces more for a prefent from Americans, fo as that each undertaker has double the quantity of money he had before, and that the quantity of money in all becomes 4000 ounces of filver.
Each undertaker will endeavour to enlarge and augment the quantity of his bufinefs: fo the farmer's commodities will grow dearer in the altercations, by the greater demand made by the undertakers : but, perhaps, this will not immediately double the price of things, becaufe fome of the farmers will at firft be latisfied with a greater price than ufual, but afterwards the price will double in the altercations; each undertaker will defire to live better than he did before, fince he has got his additional fum, and, confequently, he will confume in his family more wine and mear than ufual; therefore wine and meat will grow proportionably dearer than bread ; and the farmers will endeavour to have more of thefe kinds the next feafon, fince they yield in proportion a better price than corn, and, confequendly, the corn will become fcarcer, and grow dearer alfo.
This increafe of confumption of the produce of land, which, This increate of confumption of cerne produce of introduced, cannot mainain all the inhabitants, will make it neceflary for fome of them to feek therr fivelihood elfewhere. Thefe will be chiefly turned away

## M O N

by the proprictor of the land, who, having but 6000 ounces per annum for his eitar?, cannot maintain his famile as before, fince all commodities are grown dearer. The labouters and journeymen, remanting, not being able tos fubfit upon their ufual wages, mult have an augmentation, as well as tine remaining fervants of the proprietor: and, in ail the changes this new quantity of money produces, the farmers feem to be the only gainers, and the proptieturs the only lulers. The undertakers, who buy their commodities and materials dearer, will be for turning the lofs upon the confumers: but, as they are themfelves confumers with refpect to one another, they will find the expences in their farnilies increate beyond the additional confumption of meat, wine, \&c. they intended; and, when the money introduced into barter fhat gradually have doubled the price of every thing, they will be obliged to tetrench the faid additıonal confumption, fince their double quantity of money carries on but the fame undertakings their fingle quantities carried on before; otherwife they will turn bankrupts, and be ruined, which is commonly the cale, in regard people do not often care to retrench their expences; and then others, who have favcd money, will fet up in their places.
The proprietor, at the expiration of his leafe, will demand 12000 ounces for his rent, inftead of 6000: fince the price of the farmers commoditics is doubled; and, if he returns to his former manner of living, he will call back his fervants, whom he had fent away, or have others in their place; and the new undertakers will live upon the fame footing of confumption as the firft, the farmers will have the fame profics out of the lands that the furmers had at firt, and all the difpofitions of this eftate will turn nearly to it's primitive ftate, with this difference only, that the farmers, who faved money are richer, and the undertakers, who ruined themfelves, are forced to turn journeymen to others, who are fet up in their room, and that 4000 ounces circulate initead of 2000 .
Thefe changes, or fomething like them, commonly happen in a flate, when a fudden quantity of money is introduced into the general barter; but, becaufe money moft commonly in creafes but flowly and gradually, commodities rife in their value infenfibly.
Let us again fuppofe there are filver mines on this eftate, that an undertaker farms them from the proprietor, or from the farmers, that the veins are fo rich that he fhall quickly get out of them the additional quantity of 2000 ounces on our hypothefis.
This new quantity of money will caufe much the fame variation in the price of all commodities, as we obferved in the preceding example. The undertaker, or mine-adventurer, will increafe his expence, and give great encouragement to the miners and others he employs. The facility wherewith he gets money will make him generous, and he will more chearfully than before beftow money on the poor. The doucturs he gives to thofe he employs will encourage them alfo to fpend more than ufual. All that are concerned under him feel the influence of his opulence, and confequently confume more commoditics than ulual. They will enhance the price of them in the altercations; and, which way foever thefeadditional 2000 ounces of filver come into barter, they will raife the price of things. The circulating money will be $4 c 00$ ounces inftead of 2000, and the price of commodities will be double. It may be worth while to obferve here, that we may diftinguifh reveral channels and walks of circulation at market. The corn, or bread market, is proportioned to all the inhabitants in general, fince the meanelt workman mult have bread, as well as the greateft lord. The wine market correfponds to a fmaller number of inhabitants, but yet is very confiderable, fince not only the proprietors of land and money penfioners and officers, but likewife feveral middling undertakers, tradefmen, and workmen, drink more or lefs wine. The butchers, or meat-market, is much the fame. The wild fowl market, and that of rarities and delicacies, correfponds to a fmaller number of inhabitants, as lords, wealthy proprietors, and others.
So that, if the additional money which is brought into a ftate is at fint all in the hands of the wealty fort, the price of wild fowl may very well rife, and continue high, without influencing the price of bread; and the price of wine and meat may rife long before bread grows dearer : but it will, at the long-run, affect the price of bread alfo.
Whenever the additional quantity of money decreafes, it will create an additional expence proportionable, mediately orimmediately, and enhances, confequently, the price of commodities.
If we fuppofe that 10 perfons increafe the expences of their family on the eftate we mentioned before, that they raife the price of wine, meat, \&cc. in the altercations, without much affecting that of bread: the farmer will have another year more cartle and wines, and, confequently, lefs corn, and io corn will then grow alio deater.
There is generally a fuck of every commodity in a nation excceding the yearly confumption; which anfvers the fudden and extraordinary confumptions and, as that wattes, the commodities grow dearer, and the deannefs again, if it continues, makes feveral families diminifh their confumption, i. 1

## MON

things return to their primitive fate as to the confumption. But the dearners of the commodities continues, fince the quantity of money in barter correfonds to it, and a double quantity of money in the hands of undertakers, when the price of things is doubled, has bur the fame effect the fingle quantity had before.
If the additional quantity of money belongs to money-lenders, it will diminifh intereft, and at the fame time increafe the undertakings, which confequently will enhance the price of commodities, by an additional demand. The money-lenders will increafe their expence and confumptions, and the additional undertakers will do the like; the demand for workmen in the feveral undertakings will raife the price of their wages ; the price of things will keep up in batter, fince the quantity of money continues to anfwer the advanced price, though feveral of the undertakers fhould break.
But, if an additional Quantity of Credit * fhould by the acceleration of circulation, and barters by evaluation, make the 2000 ounces anfwer the fame circulation as 4000 , it will have pretty much thic fame effect as 2000 ounces increale of money. It will occafion an additional number of undertakers, who will increafe the price of commodities, which will grow dearer in the altercations. Thefe will enbance the confumption, \&c. but, when fome of them come to break, their example will ftagnate circulation, and the ready money only will carry it on as before; and confequently money will grow fcarcer, and commodities will grow cheaper, and the difficulties in circulation will make the un* dertakers fell cheaper than they bought, and feveral of them will break and diminifh their conlumption, \&c. So that a fudden augmentation of credit may for fome time anfwer the fame ends and purpofes, as the fudden increafe of the quantity of money, but will not continue to keep up the price of commodities, as the real quantity of additional money does: but, when a quicknefs of circulation is gradually introduced into baiter, and continues naturally in the manner and methods of carrying on the undertakings, we don't fee why it may not have conftantly the fame effeet in keeping up the price of things.

* This fhews how injurious the effects of long perfonal credit are to trade in general. See the article Credit [Private Credit.] I cannot but think that a cuitom fo injurious to trade in general, might and fhould be prevented.

I have enlarged upon thefe particulars and circumftances, to Thew by what methods and Aeps in the detail of barter, an additional quantity of real money in- a ftate increafes the price of all commodities. As to the fact itfelf, it feems fufficiently proved by experience, and agreed upon by all hands. Mr. Locke lays it down as a principle, and frequently infinuates, that the price of all commodities is proportionable to the actual quantity of circulating money. But he feems to have clearly loft the view of this fubject, when he fuppofes, neverthelefs, that the profits and advantages made in a ftate increafe without bounds, with the increafe of the quantity of money: whereas it follows from his own principles, that, if the money is doubled, the price of commodities is alfo doubled, and confequently that a double quantity of money will buy but the fame quantity of commodities, if they are doubled in their value. "For what occafions the rife of labour and commodities, fee the articles Duties, Debts, [Public Debts], Taxes, Labour.]
Let us now examine how things find their proportion in a flate, when the price of commodities rifes, either by an additional quantity of money introduced into barter, or by the fcarcity of commodities and bad years.
When there happens a great demand for any kind of commodities, feveral families will confume lefs of it than ufual, by reafon of it's dearnefs : a man who commonly eats three pounds of bread in a day, will fubfift if be has but two pounds; and a ftate which maintains $1,000,000$ of inhabitants, will, with little difficulty, and without any fenfible hardfhip, maintain $1,100,000$, and even $1,500,000$ with difficulty and famine: but things will afterwards find their own proportion, and the inhabitants will proportion them-- felves in number to the means they find to fubfift on, according to the manner of living of the place.
Hitherto we have not any where confidered foreign trade; but, by a commerce with foreigners, a fate may maintain a greater number of inhabitants than the land can maintain. For example :
The inhabitants of Provence may buy wool of the Spaniards, and pay the value of it with about a quarter part of the fame wool manufactured; and export the other three quarters of it manufactured to Barbary, and bring home, in exchange for it, more corn than will anfwer the maintenance of all the workmen, undertakers, exporters, and importers, concerned in the whole commerce in queftion.
The little ifland of St. Dennis near Paris contains three parifhes, the bufinefs of thefe inhabitants is monly tanning of leather: the ifland produces nothing for their fuftenance: they fell their labour in exchange for the produce of the lands of the continent, which maintains them: their tanned leathér is moftly confumed at their doors [at Paris]. If it were
to be trantported, and confumed in Italy, it would fcarce maintain them, becaufe of the expence of the remote carriage.
But the Dutch find means, by the cheapnefs of their navigas tion, to exchange their labour with remoter parts, where the produce of their labour is not voluminous; their manufactures of linen, their bleaching, their herring and whalefilhery anfwer the charge, and fo does their fawed timber and thipping to fome places; for their faw-mills, one with another, fave the labour of 25 perfons. See the article Labour. That circumitance contributes to the cheapnefs of their fhip. ping, as well as the timber of the countries adjacent to the Meufe, Mofelle, and Rhine, which falls down thefe rivers to them with little expence of carriage. So it is not furprifing there are more inhabitants in' Holland than their lands are able to maintain, but this cannot be increafed in infinitum ; but thefe latter confiderations have infenfibly carried me fomething from my fubject.
The value of money, as well as of other commodities, arifes from the quantity of, and demand for it. The quantity of filver, by the opening of the mines of Peru and Mexico being greater than gold, gave an extraordinary value to gold; and hence it was that in the 11 th of king James I. the unity piece of gold was raifed from 20 to 23 s . On the contrary, a few years ago the demand for filver was fo great, that we were obliged to lower the value of gold ; and, in all probability, in a little time we fhall think a farther diminution abfolutely neceffary. But it is not alone the quancity of gold and filver that leffens the demand for them, but the circulation too; a great trade, making a greater demand for induftry and commodities than money, leffens it's value, and confequently raifes the price of the other two.
Trade and credit, as they are infeparable in themfelves, fo they are the parents of circulation: money without thefe would be but a dead treafure in few people's hands, and confequently the community little the better for it. France is to England as 8 to 3, their pecie perhaps proportionable, yet there is a greater thew of money in England than in France; but, if the circulation of France were equal to that of England, then the would appear of courfe fo much the richer.
For more matter on this fubject, fee the articles Banking, Bartar, Cash, Circulation, Coin, Gold, Silyer, Bullion, Exchange.
MONIED INTEREST, or MONIED PROPERTY. The chief fubject of what is now meant by the monied intereft in this kingdom, is the national debt, fee Debt [NAtronal Debt], and it is called monied property, only in oppofition to the landed, and becaufe of the facility of turning it into money; not that any body is weak enough to imagine, that there does exift, or that it is neceffary there fhould exift, money enough in the kingdom to anfwer what is due to the public creditors.
That we may give a juftidea of this debt, we fhall confider, (1.) What the public debt is. (2.) To whom it is due. (3.) Whence came the money lent to the public. (4.) How fur the public is affected by it. (5.) How and where that money was employed before it was lent the public. (6.) What has become of it fince. (7.) What would be the confequence of paying it off. And, laftly, What will be the confequence of increafing it.

1. The public debt is a hare out of the profits and expences of every inhabitant of Great-Britain; whicls he is bound to pay, without receiving any benefit or advantage for it, 'till the public fhall be rich and honeft enough to pay out of it's favings no lefs than eighty millions fterling.
Where a revenue confifts in land, the owner feels, that, at two fhillings in the pound, he gives away one tenth of his income; but does' not fo eafily perceive, that he muft fill contribute out of the nine parts that remain: and a day-labourer is not fenfible, that he gives a groat at leaft towards the public debt, out of his hard earned fhilling. He muft pay for his fhocs, his light his drink, his wahbing, \&e. and, becaufe he keeps no account with the excifeman, he never dreams that he contributes to his collections.
This tribute is fqueezed out of the bowels of the people in the fhape of taxes; and, befides what is applied to the national debt, like the wretch that is caft at law, they muft pay for the expence of raifing it, and muft maintain a fwarm of tax gatherers; who, though they are, perhaps, as neceffary as jack catch, as an anonymous writer fays, cannot fail to be looked upon as the inftruments of oppreffing the very country, which had a right to the benefit of their honeft induftry.
The public debt. then, is an abfolute alienation, with privilege of redemption, of a confiderable part of the means of fubfiftence of every individual in Great-Britain; which he would have a right to polfefs and beftow on himfelf and family, was it not for fuch debt, and which he is now obliged to pay to another becaufe of that debt.
2. As to the fecond point, one mut diftinguifh betweenthofe to whom the public debt is due at prefent, and thofe to whom it was originally contracted.
King William's war having involved this nation in an exa pence unknown 'till then, every invention was exerted to
find out new methods of raifing money. After every tax that hiftory or fpeculation could fuggeft was impofed on the peo ple, it was fo contrived, that the money raifed came vaftly flort of the demands for it; and the government had recourfe to anticipations, and delivered over the nation to the mercy of ufurers. Clerks, agents, brokers, money-feriveners, commiflaries, Jews, and mernbero ôf parliament, were allowed 30 or 40 per cent. for pretending to advance the public the very money they had already received, or juft robbed it of.
In thofe times, it was ufual to contract with the public to perform a certain fervice, fuppofe for 30,0001 . one third down, and the reft payable at two different terms. The contractor, after receiving his 10,000 . down, either fold his contract to great advantage, or perbaps performed the whole fervice on credit. When the remaining payments became due, he, by another hand, advanced to the public, at 30 per cent premium, the very money it had paid him a few months before. Thus, without being one fhilling out of pocket, he contrived to make the public xo or 55,000 , in debt to him: to abundant a harveft drew reapers and gleaners from every quarter. Things were contracted and paid for that never were furnifhed. Falfe mufters were winked at by fea and land. Every one aimed at his fhare of the plunder: no man pretended to check another, and to eftablifh a precedent that might make againft himfelf: the maxim was, Tolive, and let live ; and the nation, like a town taken by ftorm, was given up to plunder. It was at this time that the word PerQuisire grew into vogue. Thofe who did the real fervice, were forced to be content with their wages; but fecretaries, paymafters, clerks, \&ć. had their perquifites.
The firft proprietors, then, of that chare of the profits of the induftrious called public debt, were originally fuch who took advantage of the public folly; and, by furnifhing them their own money at an extravagant premium, got annuities affigned them for it at 7 per cent. intereft. Thefe underftood their trade too well, to fpare ready money to thofe who had done real fervice. Inftead of money, all fuch were obliged to receive debentures, which their neceffities forced them to part with to ufurers at 50 or 60 per cent. difcount.
As foon as they found themelves poffefled of there, they claimed all the merit and compaffion due to the unhappy old foldiers, failors, and other wretches they had ftarved out of them : and, inftead of money, of which they knew they had left none unfqueezed out of the prefent generation, they were fo very obliging, as to content themelves with having pofterity delivered over to them in fecurity for 7 per cent. intereft, to be paid 'till the principal, which they never advanced, thould be refunded.
After the peace, thefe gentlemen had got too high, and the people of England too low, to admit of enquiries. Public credit grew a cant word, and the law being debarred from enquiring into their titles, their fecurities were preferred to land, and found real purchafers; who actually, and bona fide, paid a new premium for what had coft the fellers very little.
The money lent the public came from ourfelves, the very people whofe induftry it was employed to purchafe, furnifhed the price that bought it.
The notion that money was brought from abroad to purchafe our taxes, is lefs true than imagined. Where could it come from? Not from Holland, France, Spain, or Portugal. Happy for us, the three firfinations were drove to the fame extremity, and were felling themfelves as faft as we were, and the Portugueze had not then difcovered the mines of Brazil. V aft fortunes have been made in England by foreigners,' as well as natives; but it will be difficult to inftance many confiderable ones that have been imported. When the public funds were eftablifhed, the certainty of gain might tempt fome foreigners to lay out their money here ; and fo much the worfe for us, fince for every fhilling they brought in, they were fure to carry out two. The different nations in Europe have run in debt, or borrowed, as they term it, near five hundred millions sterling, since king William's war. No body can be fo unreafonable as to imagine, that that money was lent them from abroad.

## Remarks on Monied Interest.

Whoever has frequented the Groom-porter's, will be at no lofs to conceive, how a few money-lenders, with 2001 . of borrowed money, mult infallibly pick up all the money played for, and muff, in time, get into the eftates of every conftant gamelter.
My lord duke A flall play againf my lord B. They fhall bring each 1000 . in their pockets. On Monday the run fhall be againft his grace : he lofes all his ready money: his moncy lender C is at hand, to fupply him with a rouleau of 50. The run continues; C has t'other and t'other rouleau at his fervice. The luck turns; $C$ receives back his 1501 . with thanks, and three guineas due to his kindly fuccour. On Tuelidy, lord B comes to be in the fame fituation. He too has recsurfe to bis money lender D. This traffic is repeated every day through the year. Nothing fo equal as luck: on calting up atcounts, it will be found, that his grace and
my lordare each 5 or 60001 . out of pocket, and that C and D have got it. His grace gets at latt into fo bad a sun, that he is out 100 rouleaus to $C$; and finds good natured $C$, not only willingt accept of a mortgage on his grace's eftate for the 5000 l . borrowed, but ready to lend him $5 c c o l$. mote on the fame fecurity. Thus his grace has loft all his ready money, and mortgaged his effate for re,ocol. Has my lord B got it? No ; he is in the fame fituation. But $C$ and $D$ have got all the others have lof, though they have found no treafure, difcovered no philofophers ftone, nor imported a fingle farthing frem abroad.
We know there were at leaft fourteen millions of fpecie in England, when king William's war broke out. Molt of that money muft have been employed in trade, there having been then no more profitable way of difpofing of it. When the public demands took place, there was more to be got by fupplying them; and of courfe evcyy wife man would take his money out of trade, and carry it to the Treafury, as the better market. There was at that time at leaft 20 or 30 per cent. to be got fairly, by fupplying the government ; the money paid was fure to return again in a few years, and, being lent again on new fecurities, it can be no wonder, that fo profitable a traffic has, from a moderate ftock, produced even eighty millions in fixty years.
In fhort, the people, who had no conception that it was poffible to grind above two millions a year out of them, were now taught to pay fix, befides the fums annually borrowed; and thofe who received that fix millions, or rather thofe with whom it fopped, brought it back again to the Treafury, and it then became public debt. So far were we from receiving money from abroad, that it can, perbaps, be demonftrated from the conftant courfe of exchange, that the expence of beaten armies, fubfidies, and, above all, the interruption of trade, occafioned the fending vaft fums out of the kingdom.
The public debt is attended with every dreadful confequence that can accompany any national calamity, of which we fhall hint only at the molt obvious of fuch as diftinguif it. If it was payable only out of the rents of land, and of fuch as live on their means, it might be pretended, that fince the induftrious farmer muft pay his rent, it is the fame thing to the nation, whether it is wholly poffeffed by the efquire, or if one half of it is enjoyed by a ftock-jobber. Even in that cafe, there would be a wide difference. But the rents of land are not in queftion: our taxes are chiefly paid out of the confumption of the induftrious; and the farmer muft pay his fhare out of his own particular profits, independent of what the efquire pays out of his effate.
A tax of 5 per cent. on any commodity, mult raife the price of it above 8, [fee the article Duties; ] and, as our tradefmen work under the difadvantage of paying taxes for almoft every thing they confume, they cannot afford their labour fo cheap as thofe who pay confiderably lefs, and of courfe muft be underfold in the foreign market. In other words, if an Englifhman confumes to the value of 6 d . a day, and muft pay 3 d . for the privilege of doing fo, he cannot live fo cheap as the foreigner, who enjoys that privilege for a penny.
We inhabit the moft plentiful fpot in Europe, our people are allowed to be naturally induftrious, yet our poor want employment. We have not mouths at home to confume our produce. Foreigners can afford to fmuggle our wool at a vaft expence, and to underfell us even in that manufactory. If we have ftill fome trade left, thanks to the provident care of our anceftors, who fettled our colonies, and to the fingularity of our tafte, that can accommodate itfelf with Portugal wine, which has fecured to us a part of the trade of that country; which, however, daily declines at prefent. See the article Portugal.
To judge fairly of the bad effect of our taxes, let us fuppofe ourfelves releafed from them, or let us fuppofe all the money paid to the focks and finking fund given back in bounties to the manufacturers and exporters, and then let one imagine how many hands would be fet to work at home, and whether we fhould not underfell all the world abroad.
The public debt has, in a great degree, intailed immorality and idlenefs upon the people; and the civil magiftrate, whole chief office ought to be to reffrain vice, is forced to connive at it. The revenue cannot be fupported without encouraging idlenefs and expence, and licenfing numberlefs public houfes; moft of which are to be confidered as fo many academies, for the acquiring and propagating the whole fcience of iniquity. It is from thefe academies that Newgate is peopled, and $\mathrm{T}_{\mathrm{yb}}$ burn fupplied; but it is likewife from thefe, that a great part of the revenue arifes. Pulpits may thunder againht vice, and juries may hang criminals to eternity, while etery means of corrupting the morals of the people is thrown in their way, it is in vain to look for reformation.
The public debt has opened the iniquitous traffic of ftockjobbing, and introduced a fpirit of gaming amongtt all degrees of men. The attention of the merchant is too much taken off from folid trade; he engages in what he fancies the more lucrative bufinefs of Exchange-alle!, and leaves export and import to fuch as have patience to follow it.

## M O N

## M O N

The trade of the Alley, confifts too much in confpiring to pick the pocket of every body not in the fecret. Thufe who pick the pocket make focks uife and fall at pleafure, and pocket the difference. A has 50001 . to lay out. India thock is at 180 . $B$ transfers rool. to $U$. at 179. Next morning be transfers another 1001 . at $\mathrm{t}-8$. The price is fet, and A buys 50001 . at 178. In a week or two a wants to fell. If the object is confiderable, an artucle in the Hague Gazette is made 10 confirm, thas the emperor of Monomotapa defires to be compreheaded in the alliance of Peterfburgh. C transfers his 2001 . back to $B$ at 180 ; the market is fetted again, and $A$ fells out at 180 . Thus their induftry brings 2 per cent. in a few weeks. But who do they get it from: From women, younger brotheis, and all fuch of the well-meaning people of England as will dabble in ftocks, without being in the fecret. It is from this fcandalous commerce, that numbers of thefe meer money-jobbers have, in a few years, acquired millions among them; and, what is moft provoking, they have the impudence todub themfelves merchants, and fome real merchants have the micannefs to fuffer them to affume that title. One would imagine, that nothing but our necefities could make us wink at a practice fo iniquitous and detrimental; yet there are fome men abfurd enough to fancy, that we are extrenely beholden to thele jobbers, for condefcending to fet up their trade annongtt us.
The city of Briftol, or Birmingham, might, with equal reafon, think ittelf obliged to a fett of tharpers, who fhould bring a fum of money along with them, and fet a Faro bank for all the citizens to pont at. Nor would it be more ridicu Jous in a countly efquire to think to improve his carp, by thowing in a parcel of pike amongtt them. We can only increafe our people as we do our game, by difcourajing poachers and deftroying vermin.
There is an inconveniency attending the public debt, not inferior to any mentioned, which has efcaped the notice of mott people. The public debt has produced a difference of interelts in this country, that we have lately fuffered by, and, if not remedied, can have no end.. It is the intereft of the ftockholders to involve the nation in war, becaufe they get by it: it is the incereft of landed men and merchants to fubmit to many evils, rather than engage in war, fince they mult bear the chief burden of it: and, however contemptible one may think the weight of the former, in comparifun of that of the latter, it was their fuperior influence that involved the nation in the late frivolous war with Spain. The greater the debt, the greater the weight of the public creditons, and the louder their cry. And we may expect, that thefe worthy patriots will, on every proper occafion, renew their endeavous to keep us in the thraldom.-Deplorably precarisus mult the ficuation be, where one fett of men muft be undone, even by a neceflary war, and another, of perhaps equal influcnce, impoverifhed by the beft peace.
Amonglt the bad effects of the public debt, we mult not omit the particular lofs the nation fuffers by the fhare of it belonging to foreigners refiding abroad. If they poffefs 20 mil lions of it, there is a dead lufs to the kingdom of $600,000 \mathrm{l}$. a year. If Eurland was obliyed to pay a tribute of that amount to France, or any other foreign country, every body would pronounce that we could not hold it long without being undone: and yet that tribute flands on a footing at prefent ltill more deftructive to the nation, becaufe there is no probability of getting free from it, but by paying above 35 years purchafe, and becaule the foreign ftockholders have a temptation to increafe the tribute due to them, by applying their dividends to buy up more fuek; of which, that we are to pay the dividends is CERTAIN: but the benefits we are to recelve from letting their money rerrain with us is DOUB'rFut. Men not ufed to think of thefe fubjects, talk of money like a vegetable, as if it were the nature of it to grow and increale. No doubt the particular man, who lends it out at intereft, feels himfelf grow richer, and, perhaps, the perfons who borrow it may lay it out fo as to bring in a return. But it mult fop fomewhere; and, confidered in itfelf, it does not grow, but wears. More of it than what is fufficient for ihe circulation and commerce of a nation is of no ufe, and brings no profit to the nation in general.
The fifh point to be enquired into is, how and where the money was employed before it was lent the public. It has already been explained, that the money fuppofed to be lent came chiefly out of the pockets of the very people who now pay intereft for it: the public debt being an annuity out of the profirs and confumption of every individual, befure it was eftablimed, every body poffeffed and enjoyed all his gains. There was then no Exchange-Alley: thofe who frequent it had no exiftence; and, had there been no opportunity of exercifing their genius that way, their neceffities would probably have pointed cut to them fome other branches of induftry, in which many of them might have been of ufe to the public, which shany of them mon prey upon. The ready money which circu1utes in the Allcy, and, by being toffed backwards and for wards, is found fufficien, in fuch hands, to draw into it all the wealth of the kingdom, was, and, without our debts, would be emploved in crade, in improving and extending our colunics, in public works, for ufe as well as omament, and
might then draw in the wealth of other countries, where now it operates only on cur own.
As to the fixth article, if money was brought from abroad to fupply our demands, to 1 admit, that none has gone out on that fcore, further than fo far as foreigners have taken advantage of our fituation lince that time, by buying in cheap, and felling out dear; for few of them fhared in our general plunder: or, as our debt was contracted to fupport foreign wars, and to pay foreign fubfidies, a great part of the money laid out that way may have remained abroad. Our debt affects us not fo much by carrying our moncy abroad, as by putting it out of our power to work our goods cheap enough to get money for them in the foreign market. What makes it likely that our fpecie is greatly diminifhed within thefe 60 years is, that ten parts out of eleven of all the filver in circulation is either of king William's coinage, or before it; but paper currency makes a little money to do the bufinefs of a great deal; and it is certain there remains fecie enough in the kingdom for all our occafions.
It follows, from what has been faid, that, if the, public debt was paid Of , the profits of the manufacturer would be all his own. He would be exempted from paying at leaft qo per cent. out of his gains. It would be equal, in every refpect, to a bounty to that amount on all our productions, and of three-pence a day to the day labourer, and fo in proportion. With that advantage, we fhould be able to underfell our neighbours: our people would of courfe multiply: our poor would find employment : even the aged and difabled might earn enough to live upon: new arts and manufactures would be introduced, and the old ones brought to perfection: our mof barren lands would be cultivated, and the produce of the whole infufficient to fupply the d ©mands of our people. See the article Manure.
The ftcck-jobber, when paid off, would find employment for his money in trade and manufacture, and would fird that turn to better account than their preying on the vitals of their country. He would then become an ufeful member of rociety. Rents would rife, and the country gentleman would be able to provide for his younger criidren. We fhould be able to reftore morality amongt cur people; and the immente increafe of trade would furnihh employment For every induftrious man. Our colonies would thare in the benefit; and many caules of jealuufy between them and their mothercountry would vanifh. We thould become formidable to our neighbours; for, befides the increafe of our naval power, in cafe of a juft caufe of war, we fhould be able to advance much more money within the year than we have ever done by anticipation. Such of our blood-fuckers as had no tafte for honeft induftry, would probably go with their millions, and prey on our enemies, to our great emolument, and their perdition. It may probably be objected, by men of narrow conceptions, that there was a time when we owed no debt, and yet this country was never richer, nor had it more trade than at prefent. Let fuch men recollect the fate of this nation 60 or 70 years before king William's war, with refpect to numbers, trade, Chipping, wealth, and manufacture; and let them compare it with our fituation when that war broke out, and then let them give a reaton why we have not increafed in tix tame proportion fince that period. Trade was then in it's infancy; our colonies were hardly eftablifhed; thofe times had all the expence of them, and we all the profit; Ireland was then but litele better than our fettements in America are now; we had no union with Scotland, and Portugal afforded but little money; each of thefe has opened a new fource of wealch to us; and, with fuch advantages, ought we not to have throve in the lame proportion we did in the former period? Had it not been for the public debr, there can be no doubt but our improvements for the laft 60 years muft have furpalid thofe of the 60 years preceding.
If our debt does not diminifh it muft increafe; and, if it does, one may pronounce with certainty, that nothing can preferve us but our neighbours being in the fame unhappy fituation, and that we fhail only continue a great nation as long tuation, and that
as they are fo.
The fock jobbers have the words Public Faith and Pub lic Credir conftantly in their mouths; and want to eftablifh it as a maxim, that they are both engaged to fupport their monopoly, at the expence of the whole body of the people. The advanced price of ftocks is more a proof of the folly, than of the faith of the public; and, if people did not depend more on the firt than the laft, a redeemable annuity could never rife above par. The exceflive premiums are owing to an opinion, that we want either the means or inclination to pay off our debts; fuch an opinion would not add to the credit of a private man; and how it fhould increare that of the nation, is difficult to be comprehended by thofe who do not clearly difcern the confequences of there chings.
Some people tell us too, that paying off ourdebts is annihilating fo much property. On the contrary, it is purchafing at par, for the national benefir, what is fuppofed to be worth a great deal more ; and the fubjcat is not annihilated, but orly transterred to the public from a private man, who might bave employed it to the public detriment.

## M O N

When the art of funding was firft introduced, the common talk of mankind was, that the people of England muft be undone. Some tell us, that the event has proved the vanity of that apprehenfion. The prediction has been veified, perhaps, in the ftricteft fenfe. All that could be meant by the affertion was, that the then poffeffors, and their pofterity, muft be undone, and their inheritance given away from them, and become the property of other men. It could never be their meaning, that the land would run away, or ceafe to be occupied by fome body. At prefent, that is, 60 years after the Revolution, one tenth of the land of England is not polfelled by the pofterity or heirs of thofe who poffefled it at that time; and if the extermination (as it may be juitly termed) is not univerfd, it is only becaufe there were a few overgrown eftates, fuch as the Devonfhire, Bedford, Curzon, \&ic. which were proof againft the wafte of luxury and taxes. Suppofe the Turks were to over-run England, it might certainly be affirmed with propriety, that, if we did not drive them out, England muft be undone; and yet, if they mould prevail, the land would fill remain, would fill be occupied and culivated, and poffibly the trade of England would receive fome adyanta, es fiom the favour of other Mlahometan nations, who are all great cuftomers for the woollen, and moft other manufactures: and it is more than probable, that a greater proportion of the property of the country would remain in the poffefion of the original inhabitants 60 years after fuch a con queft, than is now to be foind in the pofterity of thofe to whom ir belonged at the Revolution. As the caufe, I mean the public debt, ftill fubfifts, the prefent poffeffors muft not expect a more durable eftablifhment. Was the plague to rage in a city, and ail the rich to perifh, the poor would get pof feffion of the houies and effects; but, if the infection continued to pretail, they would foon make way for others in their tuin.
Let no body imagine that the people of England will fuffer things to come to extremity, without making fome effort to relieve themfelves. If they have made no attempt of that fort hitherto, it has only been from the hopes that their burden would foon be made lighter, and from the juft confidence they have had in thofe at the helm.

## Remarks on the Monizd Interest before the laft War.

This is the ftrain of reafoning of many, in relation to the public debts of the nation, and particularly fo in a late enquiry into the original and confequences of the public debt, faid to be drawn up by a perfon of diftinction. This piece being drawn up with too much feverity againt the public creditors, we have ftripped it of a great part of its malignity, and yet have thought proper to retain fo much of the fubftance thereof, as may give an idea, how obnoxious the monied intereft is in the fight of fome.
Suppofe, however, that all, and much more in the like ftrain, might be true, with refpect to the proprietors of the public fock; it can never be confiftent with the genera! intereft of the nation, to annihilate at once, as that writer propofes, the whole 80 mullions of properties, which now belongs to the public creditors of the nation, This would be of infinitely worfe detriment to the public, than the Miffiffippi or South-Sea fchemes were; and would for ever after difable the nation from borrowing more money on the moft preffing exigency, by giving fuch a blow to the public faith.
There is fome ufe and advantage, notwithttanding, to be made of this gentieman's fuggeftion; and that is the only reafon for our taking notice of it : the public creditors may be hereby forwarned of what may poffibly enter into the heads of fome other people, as well as into that of the author of this piece'; and therefore this ought fo to alarm the public.creditors, as to excite them to think of every meafure to obtain the leffening of the public debts, in a manner the leaft datgerous and oppreffive to them; for, if they continue to increafe, and remain undiminithed, the taxes occafioned thereby, upon the trade and navigation of the kingdum, may one day be thought to render their property fo bighly detrimental to the public interefts, that men in power may take it into their heads to relieve the nation from the weight of it's taxes and incumbrances, by an abfolute annihilation of all the monied property in the kingdom, occafioned by the funds. For, the writer before-mentioned ftrongly excites to a conduct of this kind, when he fays, - That in a like extremity, when the clergy had engroffed - too large a fhare of the property of the country, Henry - VIII. was obliged, for the relief of the people, to feize - on their temporalities; and had the approbation of every - lover of his country. That the grievance was by no - means fo intolerable at that time as now; becaufe the - clergy contented themfelves with poffefions in land, with-- out pretending to a fhare in induftry.

- That as to violation of laws and public faith, it is in vain - to urge thcle in cafes of neceflity. The firf of all prin-- ciples is Celf-prefervation; nor could the ties of law and - public faith be ftronger in favour of ftack-jobbers now, - than of the clergy at the Reformation. That, as to public - credir, we fhould have no more occafion for it; fince the
people, relieved from fo heavy a burden, would, on an emergency, by fubmiting to the former raxes, be better able ' to raile money withan the yar, than can now be brought in - by anticipating. And rhe greatelt advantage of abolithing the debt would be, that it would fewre as againt running 6 in debr for the future.
' It may be faid, continues this writer, in objection to this - fcheme, that it would be dangerous to drive fo powerful - and to rich a body of people, as the owners of eighty mil' lions, to defpair. True it is, they are powerfui at pre-- fent, and their cry is loud, becaufe they are poffeffed of ' eighty millions: bur, when fripped of that, as would then be the cale, they would be as inconfidtrable, and as little - liffened to, as any other fett of beggats. I co not fay it ' would be wife or juft in a prince to act this part. I only 'imagine it would be popular.'
How the public debts may be equitably and honourably difcharged, without ever being obliged to come to fuch extremities, as what this author propoles; fee our articles Credit, [Puilic Credit], Debts, [National Debt], Funds, Interest.
This gentleman's way of rèafoning may be made ufe of, fome time or other, to reduce the intereft of the public creditors, filll lower than it is : unlefs they co-operate with the public, not only to prevent the further increafe of the public debts, but the gradual diminution of the greateft part, if we cannot ger rid of the whole of thefe we have; left the oppreffive taxes occafioned thereby, fhould one day ftir up a fpirit in the nation, to make ufe of a Spunge inftead of a Sinking-Fund.

## Remarks on the Monied Interest fince the laft War, and the Peace of 1763.

The laft war having increafed our Public Debrs, from about 80 Millions to upwards of 140 Mililions, and multiplied Taxes in proportion thereto, the Monifd Interest have in confequence augmented their ftock property in the public funds. Were the taxes of the kingdom mortgaged to ourfelves only, and the public debts comratad folely amongft the fubjects of this realm, the whole of the interelt money annually paid for our debts, would be property of his majefty's fubjects, and, would circulate amongft ourfelves. Were our affairs fo happily circumftanced, it would prove an extraordinary alleviance of our weighty incumbrances; tho' was that the cafe, is would be no reduction of the weight, which our whole commerce and navigation at prefent fuftain: and if the circulation of the intereft money in Great-Britain increafed the fpending money of the nation, and that increafed our imports proportionably from foreign countries, the nation would be never the richer than it is, whilft we pay intereft to foreigners for a proportion of our debts due to them. For however fainionable it may be for fome people to magnify the increafe of our trade, from the increafe of the Revenue of Customs, this is no fure criterion thereof; fuch people deceive themfelves and others too, unlefs that they can demonftrate the great increafe of that branch of the revenue proceeds from the greater increafe of our exports, rather than our imports. If, on the contrary, it fhould appear that we expend more money in the purchafe of foreign wares than we receive by the fale of ours to foreigners, the kingdom grows annually poorer and poorer; and the higher the duties of imports fwcli, the greater confirmation it will be that we really do fo.
Indeed, the advantages we receive from the article of freight, and the employment of hipping, will be fome diminution of the evil, when our own fhipping is engaged in our imports, purfuant to the aft of navigation, and confiftent with all our laws made for the encouragement thergof. But provided our exports decreafe, thefe advantages may not be an equivalent compenfation for our imports; we may ftill buy more than we fell upon the whole, and when what foreign goods are fmuggled into the nation, are added to our legal imports athat pay duties, our purchafes are thereby ftill augmented, and the domeflic confumption of our native commodities diminifhed.
Thefe difadvantages under which our trade labours, are molt certainly owing to the excefive pitch to which our tax-incumbrances are arrived; for the heightening the price of the neceflaries of life, and the labour of our induftrious poor in general, occafion fuch a fuperiority in the prices of our native commodities and manufactures in general; and while this continues to be the caie of thefe kingdoms, our exports muft diminifh, while thofe of our rival nations, who can afford their goods in general confiderably cheaper than we can ours, will nereafe. Such are the effects of increafing the public debts and taxes; and as fome people, and thofe no bad judges, are of opinion that foreigners have not fo little as one quarter part of our national debes divided amonglt them, and that they do not drain off fulittle as a Million a year for intereft money; this is a great diawback upon the national profits of our trade.
The only provifion we bave at prefent made by parliament for the difcharge of the public debts, and the reduttion of

## M O N

our taxes, in that of the Sinking Fund. But as this fund, which, was to have been the redeemer of all others, is become mortgaged, and is now a collateral fecurity for new contracted debts, fince the year 1716; our hopes of the efficacious operation of that fund are blaffed, and that whole fund may be funk for interelt of new debts, inftead of finking the principal of the old, as was originally intended: fo that this facred fund, which was defigned to redeem others, ftands in need of redemption itfelf, before the public can experience it's long wifhed for effecls.
In the year 1733 , fuch was the fate of public credit, that the national creditors dreaded nothing more than to be obliged to receive their money from the finking fund; interent was made to the adminiftration by our monied corporations, which of them fhould be paid the laft. Of which the miniftry took advantage, and applied 500,000 l, out of the finking fund: and this may be the cale again, perhaps, fhould we be in a condition to difcharge rwo ur three Millions a year of the public debts. So that if we may judge from paft experience, we ought to think of more effectual means to reduce our taxes, and not to wait the flow and precarious operation of the finking fund See INTerest. That this is practicable, the author of this work is of opinion; and may be effected in lefs than hall a dozen years, and that without any detriment to the public credir, without any alarm given to the public credicors, and with very great benefit to trade: and if his other avocations will admit of his turning his thoughts to a defign of this nature, without perfonal injury to his private affuirs, he may one day communicate himfelf upon this interefting occafon: otherwife he leaves thofe things, to thofe who are fure of being well recompenfed for their application, the author of this performance never having been fo; which will not be thought an encouragement to any one to concern himfelf about the public welfare, but to attend to his own.

Some Maxims relating to the Funds, and the Public Credit, by Sir John Barnard, Knt. publithed juft before the Peace of Aix la Chapelle.

I conceive that the prices of the funds do not in the leaft depend on the quantity of them, either taken in the grofs, or any particular fort of them; that if they were double to what they are now, it would neceffarily follow, that the prices would be lower; nor yet; if they confifted but of half what they do now, would the price be from thence increated.
It is therefore the quantity brought to market, compared with the purchafers; which rifes or falls the prices of the funds.
T'ins, if the quandity be fo fold, exceeds the money to be laid out, the price may fall, until that fall produces purchacis, who would not be fuch at higher prices.
So, likewile, if the purchafers exceed the quantities to be fold, ftocks muft rife, until that rife produces fellers, which hr fore were not fellers.
When the, government have a neceffity to create new funds, they mult difpole of them at fuch prices as buyers may be found; and fhould ule fuch methods in the fale, as are moft likely to invite the greatelt number of fuch purchafers as defira to keep them.
When funds are fold directly, by the government, to perfons who defign to keep them, they are immediately out of the market, and aftect the price no more than all that quantity of the public funds, which remains in the hands of perfons who never think of felling them.
When funds are fold by the government to traffickers in ftocks, who defign t. fell them again, the market continues in agitation, zuntil the funds, by degrees, become fettled in the hands of buyers, who keep them.
Thofe traffickers who buy to fell again, will have more encouragement, than is neceffary to be given to thofe who buy with a defign to keep: or elfe there would be no profit arifing to them.
If, therefore, the government fhould deal directly with perfons who buy to keep the funds, a good part at leaft of that immenfe protit, which is now made by thefe traffickers, would remain to the govermment.
There mult be found, at leaft, buyers with an intention to keep; or eile the traffickers could not get rid of what they buy.
Purchafers, with a defign to keep, would much more willingly buy of the government, at any certain price, than they would buy of the traffickers at fuch price; becaufe they would have a reafonable expectation, that it would be the loweft price that year.
If timely notice were given every year, there would probably come in buyers, with a defign to keep, fufficient to take off all the funds created that year, provided they may come in freely at the original price.
If new-created funds were thus taken off cvery year, they would but very little affect the prices of funds at market.
One or two per cent. under the market-price, together with fome cale in payment, may be fufficient to induce buyers,
with a defign to keep, or take off all the funds to be created in a year.
It is not proper, that any of the payments fhould be fixed too near the end of the year, becaufe it will interfere with the money to be raifed the next year.
How many foever the payments may be, or whatever the times of payment, it is proper to allow a reafonable difcount to thofe who will pay in any money before the times fixed; which difcount may be faved, by not ifliuing of tallies on the * land and nalt.
It is more for the interff of the public, to have the money paid at fuch times as beft fuit the purchafers (which will be done, if a difcount be allowed), than to have it remain to be paid at certain fixed times.
When the purchafers are not allowed a difcount, they are unwilling to pay their money long before the prefixed days; and fo lay out their money in fomething to bring intereft in the mean time.
When, by this means, large fums are to be paid at certain times, if any accident happens, which cafts a damp on public credit, people being under a neceffity of bringing fomething tomarket to raife the money; this contributes greatly to hurt public credit.
There will be always large fums to be laid out in the funds, and more efpecially when they are lower than they have been at former times; which fums aifife, in part, from the following caufes:
Amongit people who live on their income, whether by eftates in land, or in the funds, or in mortgages, there will be many who are always faving part of their income, and want tolay. it out.
People, who thrive in trade, are willing, as they can fpare money, to lay it out in fomething to fupport them more at their eafe.
As war neceffarily contradicts trade, and confequently fo much money cannot be employed therein, as in times of peace, thofe who have large eftates in trade, muft have money gradually coming in; which, when the funds are reafonable, they may choofe to lay out therein; and fome, from this beginning, go on to draw all their money out of trade, to place it in the funds.
What is mentioned relating to people in England, holds the fame with regard to people abroad; who, if the particular 'friends, with whom they correfpond here; can procure for them new-created funds, on the original prices at which the government fells them, will give orders to thofe friends to purchafe for them fuch funds.
The raifing the rate of intereft on new funds, occafions the fall in price of the old funds; which is a great prejudice to thofe who happen to be under a neceffity of felling out.
It likewife raifes the rate of intereft between private perfons, and alfo lowers the value of land; fo that the whole community fuffers thereby.
No money fhould be raifed on the fubjects, but what is abfolutely neceflary for the public good.
As the neceflary money cannot now be raifed without borrowing, the higher rate the intereft is at, the more muft the people pay.
If a higher rate of intereft fhould ever be given to traffickers in ftocks, than it might be raifed at by open fubfcription, the people will receive a double injury, both by paying more taxes than are neceffary, and alio by being deprived of their juft right of purchafing funds on the fame terms with their neighbours.
The credit of the public depends much on the opinion of the people, and therefore great regard fhould always be had to preferve in the people a good opinion. EEconomy in management, and impartially in letting all perfons alike into the purchafe of the funds, will be the beft-means to keep up a good opinion in the people.
All people love to have a liberty of being purchafers at the original prices, whether they make ufe of it or not.
As ail are partakers of the burden of new taxes, fo none ought to be deprived of fharing in whatever benefits the public may find it neceffary to give, to raife money on them.
Nothing contributes more to the revolutions in the prices of ftocks, than the methods of late ufed, of contracting, with a few perfons, for raifing the fupplies in a lump; and thofe perfons having the fharing it out as they pleafe.
Thofe revolutions, in the prices of ftocks, make the proprietors uneafy, and out of humour, to fee their property bandied about, for particular perfons to get great eftates.
This uneafinefs begets a difguft in people to ftocks: they fee them yearly falling, and from thence apprehend greater falls; from whence many fell their ftocks.
Thofe who are in a fort of poffeffion of bargaining for new funds, at their own prices, whillt they can depend on having a good bargain every year, can have no intereft to keep up the prices of the funds, any longer than until they fell good part of their bargain; and, as for the remainder, it may ferve them to throw down the prices, againtt the time of a new bargain.
What cannet be done ty barely felling out their focks, they have other ways to bring about.

## MON

Let the price at market be never fo low, although it may be by their own management, whilft they can make perfons believe the money cannot be raifed without agreeing with them, they will be fure to agree much under the marketprice, and confequently run little or no rifk of boling, and have a ftrong probability of exceffive gains.
Some remaining part of what the traffickers purchafe, being fold out at proper times, to lower the prices of ftocks, likewife gives them a pretence to fay, that the bargain was not fo good as it was taken to be.
If money be raifed by a lottery, large enough to let in every one, or by fubferiptions open to every one, on the beft terms for the public, all mankind will be on a level.
Thofe perfons who keep their focks, let the price be higher or lower, certainly act the moft for the public good, and ought to receive the greateft encouragement.
Thofe dealers in ftocks, who have large fums of money in hand, have certainly acted againft the public good, by felling out their property in the funds; and yet. are often the perfons moft favoured, and admitted to a ninual bargains.
The beft way of fupporting the prices of the funds will be, to let the people know, that for the future the money wanted fhall be raifed on the lowelt terms poffible, with an equal liberty to all perfons to be purchafers.
If this method be conftantly practifed, fuch perfons who fell their funds, in hopes to come in again cheaper, may find themfelves miltaken.
This is certain, that the public felling new funds too cheap, tends to make all mankind have a worfe opinion of the funds in general, than they would otherwife have.
If a perfon who has goods to fell, does not put a value on them himfelf, how can it be expected that others will value them? Whenever the government Thall have no occafion to create new funds, the money which will neceffarily come to market to buy ftocks, will inevitably raife the prices of all, let the quantity in being be never fo large.
Therefore, it muft be cheaper for the government, at any time, in compliance with the neceffity of the times, to give a higher intereft redeemable, than an intereft fomething lefs with any part of fuch intereft irredeemable; becaufe, in the firft cafe, they may reafonably expect, in a very few years, to reduce the intereft on a level with the other funds.
If any 乌hould be of opinion, that giving a high intereat for new funds will reduce the other funds in price, in proportion to the different rates of interett, I conceive it to be a great miftake.
If there were different funds, at the rates of 3,4 , and 5 per cent. all irredeemable, they would generally fell in exact proportion one to the other.
But, fuppofe the fame funds all redeemable, they will never fell in proportion one to the other ; becaufe people will have in view the reduction of intereft.
Suppofe any quantity of new funds to be created, and fold in any one year, it will not occafion there being lefs money the next year, than if no fuch funds had been created; becaure as the government iffues out all the money received, the rame quantity of money will fill be in private perfons hands, as the year foregoing.
As the fame quantity of money will be in being one year as the former, although it have mifted hands, the queftion with the poffeflors of it will be, 'what'is the' beft ufe that they can make of it? And probably there will be perfons enough difpofed to come into the purchafe of funds, to take off any new-created quantity, if it be free for evecy one to purchale at the government's price.
It is a very great hardhip on merchants, who have foreign correfpondents, when they cannot execute fuch correfpondent's orders for new funds, on the fame terms with their neighbours here; as by that means they are in danger of lofing their future commiffions, even in other affairs.
If the intereft of the nation, in it's public capacity, the intereft of the creditors of the nation, and the intereft of the individuals of the nation, are all promoted by open fubfcriptions, it mult appear very ftrange, that the intereft of a few perfons, who have been acting againft all three, fhould be preferred:
If the government fhould think it neceffary to give advantageous terms for taifing of money, equity would require, that it fhould be given to thofe who fuffer moft thereby; and, confequently, that the prefent proprietors of the funds thould have the pre-emption before thofe who have fold their funds, and thereby contribute to create that necefficy.
If no-body fold their property in the funds, but out of neceffity, the prices would keep up very well, notwithttanding the annual creating of new funds.
Thofe perfons who fell their property in the funds may be eafily known, and whatever pretence they may make of zeal for the govérament, their actions fpeak the contrary: and although it would not be right to hinder any perfon from felling their property in the funds, in a fair way; yet furely there is no reafon to reward them for fo doing, by giving them frefl funds, immoderately under the market-price. I think thofe perfons who were large fubfribers to the bargain, for raifing the money for the year 1745, fhould have
made it appear, that they were in pofefion of their fubi fcriptions, before they were admitted to be large fubferibers for the year 1746.
If perfons are admitted to fubferibe largely one year, when they are known, or might have been known, to have parted with the fums fubfribed for the former year, what is this but encouraging them to go on with a traffick highly detrimental to the nation?
Whenever, by any means, there happens to be a run on the Bank, it occafions many perfons, although well-affected, to join in the run, for fear of lofing their money; and gives an alarm to the Bank: and, if the Bank call on their fubfribers for circulation, it adds to the difficulties.
I am of opinion, that as the Bank is now conftituted, it is fcarce poffible for them to be drained of their money: many of their notes are fo difperfed; that they cantot come in for paymerit for a good while; and men of fenfe, and affection for the government, will always do what lies in their power to fupport them: which, in forie time, will put a flop to the run.
If the Bank find it neceffary, they may give intereft to thofe who will bring in money voluntarily, to be paid at a fixed time: which method will not affect credit, like a call to the fubicribers; many of whom are not able to pay their money; or they may, at laft, allow interef on their cafh-notes, which I have feen practifed with fuccefs.
But if, at worft, the Bank fhould be forced to ftop payment, the inconvenience to the public would not be fo much as forme may imagine; becaufe the debt owing by the government, is a fufficient fecurity to their creditors, for the principal and intereft, which, in that cafe, it be reafonable to allow; and would give fucb a currency to their notes, as few perfons would refufe to take them in payment; which would, by degrees; reffipre their credit.
A proper quantity of exchequer-bills might be every year iffued on the land and malt taxes, at a reafonable intereft, to be funk, in courfe, by the produce of the taxes on which they were iffued.
The ifluing fuch exchequer-bills, would fupply, in fome degree, the want of money; and could never occafion any run on the exchequer, not being payable on demand.
The inconvenience which arofe, in former times, from iffuing exchequer-bills, proceeded from the quantity being too large, and there not being a fund to fink them in a reafonable time.
People would be glad to take fuch bills in payment; becaufa thereby they would be enabled to make intereft of their running cafh.
Thofe who contract with the government, would be glad to agree to have their payments in fuch bills; which would keep navy and victualling bills from being at difcount; and, confequently, the government would buy their goods cheaper than when the contraciors are at an uncertainty what they Thall be paid in. See the articles Monifd Interest, Debts, [National Debts,] Credít, [Public CreDIT, $]$ FuNDS.
MONEMUGI, a kingdom in the fouth of Africa, has Zanguebar on the eaft, Monomotopa on the fouth, Motamba and Makoko on the weft, and Abyffinia on the north, and partly to the eaft ; though it's boundaries that way cannot be exaetly afcertained. It is divided into the following parts, viz. Mujaco border's on Congo wetward, on Nubia northward, on Abyflinia, and on Makoko fouthward. That the extent of this monarchy is very great, appears by the diftant countries it's confines extend to, and the fovereign's great power, by his being in continual war with his neighbour the king of Makoko. The people of Congo travel hither for elephants teeth.
Мakoko, otherwife called Anzico. It's boundaries northward, eaftward, and fouthward, cannot be well afcertained. The people here do not till the ground, have no property, nor any fettled habitation; but, like the Arabs, they wander from place to place, and fubfift by plunder. They traffic in the kingdom of Angola, whither they carry flaves from their own country; and from Nubia, which they exchange for falt, glars- beads, filk, knives, and other wares. See the article Barbary, and my Remarks particularly.
Gingiro, a potent kingdom, lies between Narca, the moft fouthern kingdom of Abyffinia, and Makoko, and Cambate; north and eaft of the firft of them, and weft of the latter. The great river Zebee, that runs down to Makoko, almoft invirons it. When the kirig bere purchafes any thing of foreign merchants, he pays them in flaves, and thefe are the fons and daughters of any family, which he takes at plealure, without contradiction.
Cambate joins to this kingdom on the weft, has Abyfinia on the north; Alabà, or the country of the Galas, on the ealt; and Makoko on the fouth. The country pays fome acknowlegements to the emperor of Ajsfinia, which is only voluntary.
Alaba, another large kingdom, fill to the eaftward of Cambate, inhabited by a cruel people, called Galas, and reaching to the coait of Zanguebar.

Monemugi Proper, fo called, lies in the torrid zone, and about the equinoctial line fouth of Makoko, weit of Zanguebar, north of Monomotopa, and, eaft of Congo, and of the northern parts of Monomotapa. To afcertain it's extent, is too difficult a tafk, being a country folittle frequented. The country known, abounds with gold, filver, copper mines, and elephants. The natives clothe themelves in filks and cottons, which they buy of Atrangers, and wear collars of tranfparent amber-beads, brought them from Cambaya, which beads ferve alfo initead of money; gold and filver being too common, and of little value among them. Their monarch always endeavours to be at peace with the princes round about him, to keep an open trade with Quitoa, Melinda, and Mombaza, on the eaft, and with Congo on the weft, from all which parts the black merchants refort thither for gold. The Portuguefe merchants report, that on the eaft fide of Monemugi there is a great lake full of fmall illands, abounding with all forts of fowl and cattle, and in habited by negroes. They relate alfo, that on the main land eaftward, they heard fometimes the ringing of bells, and that one could obferve buildings, very much tike churches; and that from thefe parts came men of a brown and tawny complexion, who traded with thore iflanders, and with the people of Monemugi.
This country of Monemugi affords alfo abundance of palmwine, and oil, and fuch great plenty of honey, that above half of it is doft, the blacks not being able to confume it. The air is generally very unwholiome, and exceffively hot, which is the reafon why no Chriftians undertake to travel in this empire. De Life gives the divifion of this country as follows: 1. The Maracates, the Meffeguaries, the kingdom of the Buengas, the kingdom of Matti, and that of Mara-vi.-But we are not acquainted with any particulars relating to thefe nations or kingdoms.
MONMOUTHSHIRE, in England, is bounded by part of Herefordhire on the north, Gloucefterfhire on the eaft, Glamorganfhire on the weft, and is walhed on the fouth by the Severn, and is about 84 mile; in circumference.
It's air is temperate and healthy, and the foil fruitful enough in general, producing as good wheat as any county in the kingdom, great quantities of which are chipped by the Briftol merchants for Portugal, and other countries. Coals are fo plentiful here, that a horfe-load cofts but two-pence at the pit's mouth. The principal manufacture of the county is flannels.
Monmouth, the Chire town, is a populous, handfome, and well bult town. It's principal traffic is with the city of Briftol, by means of the Wye.
Chepstow is the port for all the towns that fland on the rivers Wye and Lug. Ships of good burthen may come up to it, and the tide comes in here with the fame rage as at Briftol, it rifing commonly 6 fathoms, or more, at the bridge.
Abergavenny, on the river Gavenny, is a handfome, well-built town, and drives a great trade in flannel.
Pontipole, is a fmall town, noted only for it's iron mills.
MONOMOTOPA, a country in Africa, has the maritime kingdom of Sofala on the eaft, the river del Spiritu Santo on the fouth, the mountains of Caffraria on the weft, and the river Cauma on the north, which parts it from Monemugi.
The air of this country is very temperate, the land fertile in paftures, and all the neceflaries of life;' being watered by feveral rivers; on the banks of which grow many fine trees, and fugar-canes, without any culture: and yet this fine country is not peopled throughout.-The inhabitants are rich in black cattle, which they value more than gold. There are here no beafts of burthen, but a vaft number of elephants, as appears from the great quantity of ivory that is exported from this country.
There are here a great many gold mines; and the rivers that run through their veins, carry a great deal of gold duft along with their ftreams. The inhabitants dive to the bottom of the rivers and lakes, take up the fand, and carry it on the banks to feparate the gold from it.
The negroes here, are tall, well-fhaped, ftrong and healthy. They are much more lively than the people of Mozambique and Mcliada. They are lovers of war, which is the trade followed by all thofe who do not apply themfelves to commerce.
This country is divided into 7 provinces, or petty kingdoms, vaffals to the king. They are Monomotopa Proper, Quiteve, Manica, Inhambana, Inhemior, Sabia, and Sofala. The places where there is any thing of trade, are
Manica, which has Quiteve on the north, Sabia on the eaft, the river del Spiritu Santo on the fouth, and Caffraria on the eaft. The capital town is alfo called Manica, and to the fouth of it are gold mines.
Sofala kingdom has Sabia on the fouth, Monomotopa Proper on the ealt, the river Cauma on the north, and the gulph of Sofala, which is part of the channel of Mozambique, on the eafl. From the mouth of the river of the Holy-Ghoft, to cape Corientes, the foil is very even, barren, and defert : but from that cape to the mouth of the river Cumena, the country is fruitful, and very populous. The coaft is very
low, and matiners difcover their approach to it, hot fo mich by their fight as by their imell, it abounding wish fragraut flowers. Here are elephants, lions, and other wild beafts. The inhabitants affert, that their gold mines yield above 2 millions of metigals per annum, each amounting to 14 livres French money; that the fhips from Zedein and Mecca, carry off above 2 millions a year in time of peace, and that the governor of Mozambique, whofe office latts but three years, has above 300,000 crowns revenue, without reckoning the foldiers pay, and the king of Portugal's tribute : from hence Moquet concludes this to be the Ophir, whither Solomon fent fhips every three years from Eziongeber to fetch gold; Eziongeber being thought to be Suez, a sea port on the Red Sea. This conjecture is fupported by feveral edifices, which feem to have been built by foreigners. Some think this to be confirmed by the authority of the Septuagint, who tranilate the word Ophir (2 Kings ix. 28.) by the word Eipergx [Sophira]. And, fince liquids are often put one for another, Sophira. does not differ much from Sofala. Befides, Thomas Lopez, in his Iudia voyage, relates, that the inhabitants of this country boaft that they have books which prove, that in the time of Solomon, the liraelites failed every third year towards thefe parts to fetch gold. The inhabitants of Quitoa, Mombaza, and Melinda, come to this country in little boats, called zanibues, with fuffs of blue and white cottons, filk flufis, yellow and red ambergris, which they exchange with the people here for pold and ivory, and there fell them again to the fubjects of Monomotopa, who give then goid in refurn, withour weighing it. It is faid, that when the $S$ c.falele tee fhips coming, they light up fires, to fignify that they thall be weicome. They know how to make ftuffs of white cotton, bur cannot dye them; and when they would make party-coloured fuffs, they unravel the dyed cloths of Cambaya, and mix them with white thread
The capital city here, and the only one of note, is alro called Sofala. It ftands on a river of the fame name, about 6 leagues from the fea-coaft. The Portuguefe are mafters of this town, and built a ftrong fortrefs there, ever fince the year 1500 . Their chief trade here confifts in ambergris, gold, $A_{1}$ ves, and filk ftuffs. The Portuguefe likewife take care to indve thofe mines worked, which lie to the fouth of the town.

## Remarks.

This is a fpacious country, and little known to any but the Portuguefe; and they appear to be wifer in relation to the conduct of their trade in Africa than any other of the European potentates, they having not contented themfelves with erecting a few forts and factories, but have fettled themrelves upon the continent in great numbers, and brought the natives to clothe according to the European mode; which has created a confiderable and profitable commerce to them. See the articles Africa, English African Company, and Portuguese African'j rade.
MONOPOLIES are allowances of the king by grant, or otherwife, for the fole dealing in any thing, by which others are reftrained from any freedom they had before. Though a monopoly may be more truly defined a kind of commerce ufurped by few, and lometimes but by one perion, to his or their private gain, and to the detriment of others.
Thofe ufed in this kingdom have been diftinguilhed by three claffes; firft, realonable, of trifes, as cards, or the like; unreafonable, as of fleth, fifh, butter, or other things needful for man's fuftenance ; indifferent, of velvers, filks, fpices, and other delicacies indifferent to be ufed or not. But all monopolies are contrary to the ancient and fundamental laws of this realm, and againtt the freedom of trade, \&c. Wherefore it hath been held, that the king's grant to any corporation for the fole importing any merchandize, by our common law, is void.
Some are fatisfied if it be by act of parliament; as when a fociety of private merchants have a privilege, by that authority, to fell or import certain commoditues, and all others are excluded: but if by the king's prerogative, they take it to be a monopoly. Others would have all things at large in the courfe of trade, and no focieties for any places of trade; for, by way of partnerfhip, merchants might, fay they, affociate to make any voyages, without any regard to our trading companies, fome of which are of great antiquity. And others make a difference between companies dealing in a joint flock or apart;' affirming the management of a joint ytock to be within the compafs of a monolopy; yet would be content to tolerate it for the employment outward, but for returns would have a particular divifion of the goods they receive. Judge Vaughan fays, That, if the export or import of a commodity, or exercife of a trade, be prohibited only generally, by parliament, and no caufe expreffed, the king may grant a licence to one or more perfons to export or import, or exercife the trade: for, by fuch general reftraint, the end of the law is no more than to limit the over-numerous exporters, \&c. in that kind, by obliging them to procure licences; which, therefore, fhall not be accounted monopolies; the law im-

## M O N

plying it, as well as if the prohibitory law had been, that no fuch exportation, \&c. fhould be without the king's licence Vaughan's Rep. 345.
Having given the fubftance of various opinions concerning what is monopoly, or not fo, we fhall now take particular notice of the great cafe of monopolies in the regn of Q. Elizabeth, as delivered by Sir EdwardCoke. Queen Elizabeth intending that her fubjects being fit for hulbandry, fhould be exercifed therein, and not in making playing-cards, by which card-playing was become more frequent, and efpecially among fervants, apprentices, and poor artificers; by her letters patents of the $13^{\text {th }}$ of June, in the 3oth year of her reign, granted to R. B. Efq; full power, by himielf, feryants, \&cc. to provide and buy in any foreign parts, all fuch play-ing-cards as he thought good, and to import and fell them in this kingdom, and to enjoy the whole trade for 12 years. On an action of the cafe brought by the patentee againt one for importing and making cards, contrary to thefe letters patents, notwithfanding the glorious preanble and pretence, it was refolved that this grant was void: for it is a monopoly, and a a ainft the common law, and divers acts of parliament ; for all trades which prevent idlenefs (the bane of the commonwealth) and exercife men and youth, for the maintenance of themfelves and cheir families, and for increafe of their fubftance, to ferve the queen when occafion fhall require, are profitable to the realm : and the fole trade of any mechanic art, or any other monopoly, is not only a damage to thofe who exercife the fame, but to all other fubjects, the end of them being the private gain of the patentees: and there are three infeparable incidents to every monopoly, the price of the fame commodity will be raifed; it is not fo good and raleable as it was before; and it tends to the impoverifhment of divers artificers, and others.
And it is evident, by the aEt of 3 Edw. IV. cap. 4. that the importation of foreign cards was prohibited, at the grievous complaint of the poor card-makers, whocould not live at their trades if fuch cards fhould be imported; and the faid act provides remedy for maintaining the trade, becaufe it maintained many families by their labour and induftry ; and the like provifion is made in : Rich III. cap. 12. and perfons may not be reftrained from exercifing any trade but by parliament. Now, when the wildom of the parliament has reftrained, for public good, the importation of foreign manufactures, that the fubjects may be employed therein; to grant the fole imuaration or them to one for private gain, or to divers withou limitation is a monopoly againft the common law : and, ther fore, : he licence to have the fole importation and trade of cards, notwithltanding the act 3 Ed. IV. is utterly againß law. Aljudes Trin 44 Eliz. in. Co. Rep. 84,85 .
King Edwaid III. by letters patents, granted to one John Peeke the fole importation of fweet wines into London; which grant, by ftat. 50 Ed III. was declared void. And queen Elizaheth having granted to certain patentees the fole coin.se and tranfportation of all the tin in Cornwall and Devon, for 25 year, under a large yearly rent to be paid at the Exchequer, it was adjudged that this patent was a monopoly, anno 13 Juc. 1.
In an action the plaintiff fet forth, that, in the reign of Henry IV. there was a fociety of merchant-adventurers in England, and queen Elizabeth did incorporate them by that name. with privilege to trade to Holland, Brabant, Flander's, \&c. prohibiting all others not free; and that the defendant did trade there with ut their leave, and imported goods to their damage, \&c. To which the defendant pleaded the ftat. 15 E.A. III. That the feas fhall be open to all merchants to pafs with their merchandize whither they pleafe: the queftion was here, whether the king could reftrain bis fubjects from trading to particular places? This cale was not determined ; but the befter opinion was, that fuch a grant was void, it agreeing with lord Coke's definition of a monopoly: it is againft the ftat. of Ed. HI. and exprefsly againft the fatute 21 Jac. I. The cafe of the Eaft-India company is not like this, becaufe that patent reftrained the fubject from trading with infidels, without leave; if it had been to reftrain them from trading with Chriftians, it had been void. 3 Mod. from tradi
Rep. 126.
By ftar: 21 Jac. I. cap. 3. all monopolies, grants, letters patents, \&ic. for the fole buying, felling, and making of goods, and manufactures, fhall be void: and perfons grieved by the puttin; them in ufe, to recover treble damages and double cofts, by action on the flature : ard perfons caufing fuch action to be fayed before judgment, by any order, warrant, \&c. except of the court where depending; or, after judg ment had, caufing execution to be ftayed, by means of fuch order, \&cc. Cave only by a writ of error, incur a premunire. But this act extends not to grants confirmed by aet of parliaruent, nor to any charter to any corporation, company, \&c. nor to grants of new manufactures, made to the inventors by patents for 14 years, nor to any grant of privilege for printing, or making falt-petre for gun powder, or for cafting ordnance, \&cc. and certain patents granted to divers perions are excepted.
And patents heretofore made for 21 years, or under, to the inventors of any new manufactures, not contrary to law, or
hurful, by raifing the price of commodities at home, are excepted.
All matters relating to monopolies, grants, \&cc. fhall be examined and determined by the common law of the realm ; and the ufing or procuring any unlawful monopoly, is punifhable by fine and imprifonment at common law. 3 Co. Int. 18 I .
It is held, that a new invention to do much work by an engine, is contrary to the Itatute, as turning many men to idlenefs. [See the article Labour.] And, concerning inventors of new manufaclures, \&c. on this fatute it hath been determined; that they muft be fubftantially New, and not barely an Improvement of any old one, to be within the flatute. 3 Inft. 184.
A grant of a monopoly may be to the firt inventor, by the 2xft of Jac. I. and, if the invention be new in England, a patent may be granted, though the thing was practifed beyond fea before; the act being intended to encourage new devices ufeful to the kingdom, whether acquired by experience and travel abroad, or by fludy at home. a Salk. 447.
A perfon had a grant by patent from king Charles II. for the fole printing of blank writs and bonds, \&cc. for the term of 30 years; and one Dorrel, a ftationer, having printed 500 blank bonds, an action was brought againft him, who pleaded, That the company of ftationers, for 40 years laft paft, had contantly printed thent, and fo made a general conclufion. It was argued, That the king hath a prerogative in printing, and may grant it exclufive to others; and that fuch grants had been made ever fince printing was invented, of which feveral inftances were given. Now the fatute againft monopolies, doth not reach this cafe, becaufe of the provifo to exempt all grants of fole printing; and the king's inherent prerogative herein, when exerted, binds up all who were at liberty before. To this was anfwered, That the king hath fuch prerogative, but it muft be in cafes where no others can claim'a property in it. On confidering printing as an art exclufive from the thing printed, this patent is not good; for, if a man invents a new art, and another learns it before he obtains a patent, if afterwards granted, it is void: and this confidered in relation to the blank bonds printed, it is not a new invention, and therefore the patent is void; for, where the invention is not new, trade fhall not be reffrained. And fole printing is a manufacture, an art the king cannot reftrain; but, where it is of public concern, the prerogative may interpofe.
The court of King's-Bench made a difference in this cafe, between things of a public ufe, and thofe public in their nature ; and the court inclined the patent was not good. 3 Mod. 75, 76, 78. 2 Nelf. Abr. 899.
It is agreeable to our common law, and the fundamental laws of all nations, to grant inventors of ufeful things privileges for $21,14,11$, or 7 years; and as to the time granted, the thing itfelf fhould make the difference. But the general intention of all grants for manufactures, fhould be to fet people on work, to recompenfe the inventor of the art, and that things may, in fome refpect, be cheaper to the fubjects.
Patents may begranted to reward a projector, and be no monopoly, though the public liberty may feem reftrained by it, but rather a common diftribution, whenever it brings a general good to the nation. The ftatutes reftraining from exercifing divers crafts all who have not ferved an apprenticefhip to the art they would exercife, do it to no other end, but that thofe arts might be brought to better perfection, and the things be good and ferviceable.-Thefe are the chief principles of law in relation to monopolies.

- Remarks.

Under the article Companies, we have fhewn the origin of thofe, which have related to our foreign trade; and, under the refpective articles of fuch of thofe companies which are now in being, we have endeavoured, with all candour and impartiality, to fate the reafonablenefs, or otherwife, of their being endowed with any fort of exclufive privileges. [See the aricle Assiento] particular Remarks.
In regard to the cafe of the Eaft-India company, in particular, we have, in general, confidered the conftitution of that corporation; and, although we have urged the neceffity of fupporting that company, yet we have alfo thewed, that, if they do not trade to all places within their charter, where it may be done to the advantage of the nation, private people Thould not be excluded from fuch traffic: they fhould, on the contrary, be encouraged therein to the utmoft. See the articles East-India Company, and Companies; fee alfo the other particular companies that fubfift.
It has been faid, if that trade were enlarged, it would increafe fuch a demand for woollen goods, for iron ware, and for every other branch of bufinefs in England, as would employ all the manufacturers, who are now flarving, and theicby relicve the poor, by making them no longer fo. - This might be demonffrated, by the many places that are not yet traded to by the Englih. The company trades in the Red Sea but to one port, that is, Mocha; but the Habazines empire, or that of Echiopia, which lies on the weft fide of that fea, is not attempted to be traded to, although it is inhabited by many

Chriftiane,

## M O N

Chriftians, and abounding with gold, myrrh, fena, aloes, civet, and numbers of rich dyeing and medicinal drugs, and other commodities; and they have no iron nor woollen goods but what are carried to them over-land from Egypt or Turkey, and which is moftly manufactured by the French, or at Damafcus.
The company doth not trade to Siam, a rich and great kingdom ; nor to Pegu, a kingdom that produces rubies, gumlac, gum-dragon, and all the materials of the fine Indian varnim. : the inhabitants are very induftrious, and great trade might be made there. Tonquin is allo a kingdom full of indultrious people; and the kingdom of Cochin-China would give vent to a great number of commodities. The kingdoms of Japan and Corea are amongt the richert in the world; and with thefe the Eaft-India company are fald to have no commerce ; and yet they abound in raw filk, gold, filver, £pice goods, tea, porcelaine, japan, \&c. nor need the company ftrive to gain accefs, fince they have more trade already than they can turn their hands to.
The many fpice inlands unpofiefled by the Dutch, and Mindanao', and other inlands near the Philippines, unpoffeffed by the Spaniards, are a glorious field for the Englifh commerce; numbers of adventurers might make their fortunes by fuch a trade, and hundreds of fhips might beemployed therein, to the great national emolument.- It is neceffary for us to think of thefe things; for, if we do not, the Pruflians, or others, will', the gain being fo great; and the company cannot ufe their charter againft forcigners, who are fo faucy as not to obey an Englifh act of parliament. - It has been further faid, upon this occafion, That, if Scotland and Ireland had the liberty of trading to all parts of the globe, they, by the cheapnefs of their labour, and the number of their hardy and induftrious people, among the former in particular, would un-der-trade foreigners, and open many markets, that are, at prefent, unthought of; and that this would increafe the hipping and wealth of Great-Britain to an immenfe degree.
The attempts of the Scots nation before the Union, 10 open a trade to the Eaft-Indies and America, particularly their fettlement at Darien, were glorious; and the barbarous treatment they met with will ever be ignominious; for, had the Scots maintained the ifthmus of Darien, and a free paffage between the North and South Seas, within a colony of their own, Britain might, by this time, have been fo powerful in America, as would have prevented the French from breaking the treaty of Ryiwick, and, confequently, have prevented thofe wars which have been attended with fo weighty an incumbrance on our whole trade. Thefe difadvantages have been attributed to monopolizing companies; for, while the South Sea company fubfifted as a trading corporation, they had a monopoly, though, perhaps, not fo nationally injurious as fome others, if we confider all the peculiar circumftances thereof. See the articles Assiento, and South-Sea Company.
But if the Scots, as well as the Englifh, are excluded by the court of Spain from trading directly to Spanifh America, it has been doubted whether our own Ealt-lndia company have it in their power to exclude any fhip trading to Japan from Edinburgh and Glafgow. It feems, that the company have never traded to Japan fince their charter was confirmed by act of parliament; and, furely, if they thought it within their charter, they would have certainly attempted that trade, which is, perhaps, much more advantageous than any they now carry on. Certain it is, that trading to thefe countries would highly tend to the benefit of Scotland; and, therefore, it has been thought reafonable to require an explanation of what parts of the globe the people of North Britain are debarred trading to, by charters granted before the Union, or by aCts of parliament made before or fince; or whether the fubjects born and dwelling in North Britain and Ireland, are bound by any aet, unlefs it thould mention thofe counties particularly.
The fubftance of what has been further urged in this kingdom againf Monopolies in general.
Befides the misfortunes arifing from our taxes, we have fome monopolies very deftructive to a trading nation, and inconfiftent with a free one, which encourage idlenefs, villainy, and extravagant demands for wages; whereby the many are deprived of their rights, without having committed any crime to forfeit them, and for the benefit of a few only: a country that fuffers them cannot fend it's goods fo cheap to a foreign market as it's neighbours who thould not, for never yet was a monopolized trade extended to the degree of a free one; therefore any country abounding in monopolies muft decline in trade.
To apply this to Britain.
The trade of exporting woollens, and fome other forts of goods, with the trade to fome particular countries given to companies, we monopolize to ourfelves, and, in our abundant wifdom, pay all the charges of government; our fellowfubjects in Scotland pay but a trife to the general fupport; in Ireland and the plantations nothing at all; thefe trade under the protection of fleets that coft them not a farthing: our land wars to maintain the ballance and liberties of Europe, at the rifque of our own, cofl them not a doit; all that we en-
deavour is, to farve them wihout expence, and ourcidy with ; for that is the cale, we drive one part of our paple out of trade by monopolies, and the other by taxes. We bleed ourfelves almoft to death, and think to secruit our fipirits by devouring three milhons of flarved Irith and Aniericans, and, by excefs of cunning, make the ruin general. Exclufive companies prevent the increafing the vent of our manufactures abroad, confequently they ftarve our poor, as will appear by the following reafons:
By being all of them confined to London, the prices of the wooflens they export are enhanced by long land-carriaes up to town, with the addiional charges of comminion, ware-houfe-rent, porteraze, $8 i c$. much to the prejudice of their fale ; and what materials of manufacture they import are difperfed over many parts of the kingdom, by the like expenfive conveyance, to the great difadvantage of the nation in general.
It is not the intereft of the Eaft India company to increafe the quantities of the woollens they export, but rather to contract them, (which we fuppofe was the reafon for cbliging them by their charter to export woollens to a certain value) for at all markets where there are any demands for goods, the fn a'lneifs of the quantity natuially enhances the price; and, if the company can gain as much on 5000 cloths as on $10, \mathrm{cCC}$, is it not their intereft to prefer the lefier quantity, on accoune of the lefs difburfement and rifque? Though it is plain the nation would lofe the fale of one half of the manufactures capable of being vended; whereas private traders pufhing againft one another, fludy to increafe the vent of their goods, by felling at moderate profts, and making the quantities anfwer to thermfelves and their country.
The large charges the Eaft-India and South-Sea companies, when the latter traded, are forced to be at for the falaries of the directors, governors, fupercargoes, \&c. befides what may Dip through their fingers fometimes, muft make thefe compenies negleçt all trades that will not yield extraordinary profis to defray them; which trades priva e merchants would be glad of, and turn to good account for themfelves and their country, were they not debarred by exclulive charters. See a difinction, with regard to the South-Sca Company in particular, under the articles Assiento [Remaris], and Souta-Sea Company.
Exclufive companies buying at home by directors, and felling abroad by fervants, who may have an ege to their own or friends intereft, and the foundation of all being the company's money, they cannot naturally te fuppofed to be fo induftrious, as thofe who trade only on their own flocks; therefore companies can never extend trade like private dealers, but it muft decay where interlopers are admitted, of which our late Royal African company was a ftrong inftance. What confirms the whole, is the prohibition of the Eaft-India company againft their fervants carrying out cloth, which would be needlefs, did they not know that their fervants can underfell them, for the company wanis no money to fupply all the cloth that can be vended with the ufual profit. In the year 1741, a feizure was made in one of the out-ports of a large quantity of cloth defigned for India, belonging to one of the company's fervants, when at the fame time, by the decay of our woollen trade, the poor's rates were at 8 s . in the pound, in fome of our clothing towns; from whence this abfurdity arofe, that whilft our clothiers were flarving, the exportation of cloth was thereby made a contraband trade. It is impoffible to make any enquiry into our companies, without taking notice of their valt villainies; which, as they have been made fufficientiy public, few can be ignorant of; therefore the bare mention of them is enough, fuch as the fatal South-Sea fcheme, that ruined thoulands of families.See the articles Acitions, and Bubbles.
We need not to mention former directors, receiving falaries from companies, and, though contrary to law, being notwithftanding concerned in the Oftend trade to India,-whereby they were cutting the throats of their benefactors; the felling goods by falfe lamples, and buying them for their private accounts; carrying on private trade contrary to treaty and bribing officers to wink at them with the company's money, and charged to account by the genteel name of prefents, fubjecting thereby the company's effects to feizures, and their country to perpetual jars. The rapacioufnefs of governors abroad, who, by engroffing goods, nay, even the governors abroad, who, by engroming goods, nay, even the
neceflarics of life, have oppieffed the people by arbitrary prices, and drove away our trade. Supercargoes, cheating by falfe invoices. Captains, quitting or lofing fhips, to defraud infurers and bottomry lenders: are not thefe things written in the books of their chronicles? But the greateft milchief of all is, that the honery of the people hath been corrupted, by having prefented to their eyes roguery lightly punifhed, if not triumphant.
Thefe companies have prevented the increafe of our navigation, by their exclufive charters, deharring us from a free trade to $\frac{4}{4}$ parts of the known world. The duminions of the Grand Seignior, in Europe, Afia, and Africa, were, 'till Jattiy, confined to the Turkey company. All South, and part of North America, from Vera Cruz to Carthagena, from Buenos Ayres round Cape Horn to California, that valt ex-

## M OR

kent of coaft, were alfo, 'till lately, the portion of the South Sea company. Yet we have not found, that the nation is any thing the better for the annihilation of this latter monopoly it is hoped, however, we fhall in time, fome how experience the benefit of it.
All the coafts of Africa, Afia, from the Cape of Good Hope to Japan, are the lot of the Eaft-India company. And, what a fmall number of ports did they all trade to, and what a trifing navigation did they all maintain? There is a greater quantity of fhip tonnage employed in the trade of the free port of Leghorn only, than all thefe three companies ever employed in their monopolies to $\frac{3}{4}$ parts of the world; like the fable of the dog in the manger, not eating themfelves, but preventing thole who would. For more matter, having an affinity herewith, fee the article Patents.
MONTFERRAT, a duchy in Italy, is bounded on the north by Savoy, on the eaft by the Milanefe, ort the fouth by the territory of Genoa, and on the weft by Piedmont. It is computed to be 26 miles in length, and 48 in breadth, and was formerly divided into the Mantuan and Savoyard Montferrat. Both countries are very pleafant and fertile, though hilly; and befides the great plenty of all neceffaries, afford vaft quantities and variety of game. It abounds in filk, corn, wine, and oil, wherein it has a pretty confiderable trade.
MONTGOMERYSHIRE, in Wales, is bounded on the eaft with Shropfhire and Radnorfhire, on the fouth with Cardiganfhire and Radnorfhire, with Merionetbmire on the weft, and with Denbighfhire, and part of Merionethihire and Shropthire on the north. It is computed to be in length from eaft to weft 30 miles, in breadth from north to fouth 25 miles, and it's circumference 94 .
The air is fharp and cold on it's mountains, but wholfome and pleafant in the vallies. On the north and weft fides, where the former are moft predominant, the foil is ftony, and not very fruitful, except in the vallies between them, which are very pleafant, and afford corn, and plenty of pafture; but the fouth-fouth-eaft and north-eaft parts, which are more level, are exceeding fruitful, efpecially thofe parts that lie on the banks of the Severn, and are fometimes overflowed by it.
It's chief commodities are corn, cattle, horfes, finh, and fowl. It has been long remarkable for a peculiar breed of horfes, which are fill larger here as well as their black cattle, than in fome of the neighbouring Welfh counties, and are much valued in England.
It's principal rivers are the Severn, the Tanat, and the Turgh.
Montgomery Town ftands in a healthy air, is large and handfome, but the buildings are generally very indifferent, except a few falhionable houfes that belong to fome confiderable families.
Llanidlos lies near the head of the Severn, and it's parifh, which is noted for mines of lead and copper, belongs to the diocefe of Bangor: it has fairs in July and September.
Machinleth, an ancient town in the diocefe of St. Afaph, and has fairs on June 27, July 25, Sept. 29. and Nov. 13.
Llayelling, or Lhen Vyilyn, a confiderable town, and has a good market for cattle, coney-wool, and other provifions, but ftands low. It's fairs are in June, July, and September.
Welshpole, a large well built corporate town, where is a noted manufacture of flannel. It has a fair in Auguft. Upon the whole, there is fcarce a finer county in England, than thefe parts towards the Severn fide.
M ON TSERAT, one of the fmalle it of the Caribbee Illands, in the Atlantic Ocean in America, fubject to England. See British America.
MORAVIAMARQUISATE, a principality of the kingdom of Bohemia, bounded by Silefia and Poland on the north and eaft, Auftria and part of Hungary on the fouth, and Bohemia on the weff. The north and weft parts are woody and mountainous, but the reft is fair and champaign good foil, yielding much corn of all forts, with wine, both red and white, and abounding with fpacious towns and villages. The paftures are filled with hories, black cattle, fheep, and goats; and the woods with hares, foxes, wolves, and beavers. It's rivers abound with trout, crayfif, barbels, eels, jack, perch, and many other forts of fifh.
Olmutz, it's metropolis, is 20 miles weft from the borders of Silefia, 28 north caft of Brin, 80 notth of Vienna, 45 fouthweft of Tefchen, and 94 fouth of Breflaw. It is a fmall, but neat, well built, ftrong, and populous city; and has a trade, by means of it's river Morawa, with Bohemia, Hungary, Poland, Silefia, and Auftria.
Brin is a pretty large well built town, and is held by fome to be the capital.
Glaw, or Ghilawa, is a pretty large, ftrong, well built, and populous town, on the borders of Bohemia. It's priñcipal trade is in beer and coarfe woollen cloth, which they make and drefs themfelves.
Znalat, or Znogmo, on the river Taya, not above 5 miles from the borders of Auftria, has a pleafant foil and wholefome air; and being on the road from Prague to Vienna, trings a tolerable trade to it. There are many vineyards in he neighbourhood, which afford a pretty palatable wine.
Vol. II.

MOROCCO and FEZ EMPIRE, in Africa, comprehending the kingdoms of Fez and Morocco, is bounded by the Mediterranean Sea on the rorth, by the river Fulvia, which divides it from Algiers on the eaft, by Bildulaerid on the fouth, and by the Atlantic Ocean on the weft, being about 500 miles long and 200 broad. It is a fine country, conftting of mountains and vaft extended plains, none of them unfruitfut : of the mountains, thofe of Atlas are the chief, extending from Algiers is the eaft to the orean in the weft which from them has obtained the name of the Atlantic Ocean. Their foil produces good wheat, lice, and barley, and would yield a great deal more, if well cultivated, but only the Jews plant the vire; the olive alfo thrives here, and yields excellent oil. They have alfo dates, figs, almonds, emons, oranges, pomegranates, and a varity of other fruits; nor do they want flax or hemp; but wood, efpecially timber, is fearce here. They have'no fhips of war, only fome fmall piratical veffels, which they croud with men, and take great prizes fometimes, efpecially the Sallee rovers; but as for merchant-fhips, or foreign trade, they carry on none on their own bottoms.

## REMARKs

No flourifhing trade or improvements can be carried on under a government fo defpotic, oppreffive, and rapacious The land is judged capable of producing a hundred times more than the inhabitants can confume, yielding three crops a year; yet, except within 3 leagues of a town, it has no proprietor ; there is generally corn in the emperor's poffeffion underground to ferve the whole country five years. They who have a little money, are afraid to let it out upon intereft, left they thould be reputed wealthy, and confequently become a prey; o they bury it with any furniture of value, nothing being feen in their houfes but a mat or two tolie on, and a few ordinary things. Their traffic is of a piece with their agriculture ; befides, the Moors having no immediate commerce with any foreign nation, nor any trading veffels of their own, the navigation is by European thips, and the Jews are the chief traders and factors, and by their immenfe profits make themfelves amends for the exorbitant impoft with which they are loaded.
The chief exports are tin, copper, wax, hides, wool, cordovans, honey, dates, raifins, olives, almonds, indico, gum arabic, gum fandric, elephants-teeth, offrich feathers, and fine mafts. The exportation of corn is abfolutely prohibited, as contrary to Mahomet's precept, though it is encouraged at Algiers and Tunis.
The duties on goods exported, are on wax, per hundred weight, twenty-five ounces; old copper, twelve; red Morocco fkins, per half dozen ; one ditto other colours, two blanquilles. Hides tanned or raw, each two ditto ; wool, dates, almonds, gums, foap, per quintal, three ounces, tallow fix ounces; mats per bale; tix goat- kins in bair per bale; fix calve-fkins dreffed or raw, one blanquille; fheepfkins per half dozen ; two blanquilles are two-penny pieces, and four, when full weight, pafs for an ounce; but they are fo thin, clipped, and cracked, and the people fo fraudulent that a ftranger fhould provide himfelf with a pair of their fcales, to weigh all he receives.
The moft ufual imports are linens, cloths, iron in bars, hard ware, brimfone, gunpowder, arms, and lead, which pay a duty of about ten per cent.
Their inland trade chiefly confifts of caravans, two of which fet out every year from Fez to Merca and Medina, viz. one every fix months, carrying woollen manufactures, of which they make fome exceeding fine and beautiful, indico, cochineal, fkins, and oftrich-feathers.
The Englifh might put a fop to this trade from Mecca, by tranfporting filks from 'Turkey to Barbary by fea; and the emperor would certainly countenance the fcheme, on account of the ten per cent. cuftom, on the importing thefe goods in European bottoms, and likewife as it would prevent fo many people going to Merca, where they often fettle, accounting the Turks milder tyrants, and fo of two evils prudently chufing the leaft.
They likewife fend caravans to Guinea every year, confifting of many thoufand camels, which the difficulty of the paffage through deferts, without fodder, provifion, or water, renders ir neceffary that every other camel be loaded with thofe neceffaries. They carry to Guinea, falt, cowries, woollen manufactures, filks and oil, which they exchange for gold-duft, ivory, oftrich-feathers, and negroes. Some Turks of Algiers and Tunis trade thither in filks, cottons, ftriped ftuffs, and fine fahes, from the Levant, and grow rich, as their birth exempts them from the common exactions. The tyranny of the government is faid to be the motive of the Arabians continuing a wandering life, left by lising in fixed habitations, they fhould forfeit all property and liberty by the rapacioufnefs of the officers
The fhips trading to the Morocco dominions, pay one barrel of gunpowder for entrance, with twelve for loading and anchorage, and twelve to the captain of the port; veffels trading to and from Gibraltar, pay but half this dutv, by in-
dulgence of Muley IChmael, who, though fo favage that he could neither read nor witc, had a particular kindnefs for the Englifh, on account of their franknefs and bravery. Englifh and French comfulage is eight dollars. A French or Spanifh veffel likewife, pays three dollars to a fraternity of Spanifh friars, who aflift them in fpiritual offices.
Their whole navy confifts of but three or four fhips, mounting fixteen or twenty frall guns, and a few row-boats; accordingly about thirty years aga, a fingle Englifh fmall frigate, with an active commander, by taking fome, and running others afhore, ffruck fuch a terror, that, as is related of ocher formidable warriors, the Sallee women ufed to quiet their untoward children, by telling them Delgarnowas coming for them: yet the Chiltian powers, though the Barbary pirates are fuch a detriment to their commerce, are kept from exerting themfelves with due force againft theic enemies, left their fuppreffion foould be anover-balancing advantage to any particular Itate. It is a happinefs that all the Morocco dominions do not afford one tolerable harbour; that of Sallee, which is the beft, being almoft dry at low, and not twelve feet deep at high water, befides a very inconvenient bar: better ports might be an inducement to their making a figure at fea, and become a greater annoyance.
The policy in the Moors is, that they will trade with any fhip (though of a fate at war with them) which comes to their ports. A convent of Spanifh friars is likewife tolerated at Mequinez, for a yearly acknowledgement.
The emperor has a tenth of all corn, cattle, fruits, and produce of the foil; likewife the tenth of prizes, and all the captives. His whole revenue, ordinaries and extraordinaries, is computed at five hundred quintals of filver, each worth 385 pounds fterling: If the tevenue of a monarch can be ftated, who holds not his fubjects lives and fortunes by the tenure of unmeaning addreffes, or the good-will of a parliament, but frequently confirms his abfolute prerogrative, by the rain and death of the moft dignified perfons in his dominions:

## Of the union of the Chriftian powers, to extirpate thefe piratical fates.

In speaking of Africa as it once was the feat of commerce for the whole world, we muft look back as far as to the flourifhing ftate of the Carthaginian government, but it fhall be as thort as can be defired.
It is true, as has been obferved by a well informed writer on this fubject, that the Romans (like the Turks in our time) were no friends to trade; they carried on their war for glory; like mere foldiers, they fought to conquer, and conquered to plunder, not to plant and people the world: fo far were they from encouraging or improving the commerce and wealth of the nations they fubdued, that they overthrew and deftroyed the greateft trading cities in the world: fuch as Corinth, Syracufe, Carthage, and all the cities of Egypt and Africa: inftead of encouraging trade and navigation, they murdered the merchants, burnt their thips, and carried away the people, which are the life and fupport of manufacture and trade.
On the other hand, the Carthaginians, as they had the richeft foil and a numerous people (for Africa was then infinitely populous) they improved the firft, and employed the laft, to the utmoft: their people were as rich as they were numerous; they carried on trade to all the parts of the world, planted colonies, built cities abroad, and hips at home: and wherever they came, whether by conquelt or by confent, they planted the country not deftroyed it, carried people to it, not away from it; and, in a word, made them rich, not plundered and ftarved them. Carthage and Corinth at that time, were the two great emporiums of the world; this carried on all the commerce of the weft, and that of the eaft: Corinth managed the commerce of Afia, Perfia, and India, and brought the wealth of the Eaft-Indies, the fpices, the filks, the callicoes, the gold, the diamonds, and, in a word, the whole Indian and Perfian trade in caravans; part from Ormus and the gulph of Perfia, to Baffora and Bagdat by water, and thence by caravans to Aleppo and Scanderoon; and fo by fea to the gulph of Cenchrea and Corinth, another part of Trapezond in Armenia, and by the Euxine Sea through the Atraights of Bofphorus and the Hellefpont, and through the Archipelago to the fame gulph, and fo to Corinth. Carthage, on the other hand, planted colonies, and extended their poffeffions upon the coaft of Spain, as well within as without the Straights ; built cities from New Carthage, now called Carthagena in Spain, to the Groyne, as well in the Mediterranean as in the occan, and from Tangier, then a populous city of 100,000 inhabitants, to the Cape de Verde on the weft fide of Africa, and from thence into America it felf; which, there is no roorn to doubt, was difcovered, if not peopled, from Africa, by the indefatigable Carthaginians; and had never been loft and forgotten to this part of the world, if the Romans, thofe deftroyers of commerce and navigation, had nor fo utterly ruined Carthage, not the city only, but the very nation, as not to leave them a name under heaven, and fo of courfe caufed all their remotef rettlements to be abandoned, and, in confequence, at laft for-
gotten; but that, by the way, it requires, and, indeed, deferves too long a digreffion for this place.
Now, when thefe two cities of Corinth and Carthage fell, (for they were dettroyed by the Romans withon a year of one another) the trade of the whole world received a mortal wound; and, as thofe cities never recovered, fo the trade which was fixed among them, was divided and fcattered, and, in effect, loft, for it never fully recovered itfelf.
The colonies which the Carthagınians planted, funk and died away, and many of them lie in ruins to this day, efpecially on the fide of the ocean from the Straight's mouth to cape None; for, as the Carthaginians planted colonies for trade, the trade being loft by the overthrow of the merchants in the mother-city Carthage, the new planted cities, and the fea-ports, were ruined of courfe, and perifhed, as a child farves when a nurfe is taken from it.
It is true, the city of Carthage was rebuilt, and recovered itfelf in fome degree, under the government of the weftern emperors; and efpecially as thole emperors were Chriftians; and were encouragers of the induftry and application of their fubjects: then, indeed, the trading genius revived very much, efpecially in Africa; and the climate and foil of that country being particularly productive of many valuable things, and thofe things adapted to trade, the African merchants carried on a very confiderable bufinefs; navigation alfo being their peculiar talent, they traded by fea to all the known parts of the world, but nothing like what they did before.
The principal branches of their commerce in thofe times, as we gather from the hiftories of the neighbouring countries, conifited, firft, in exporting the growth of their country, and the manufactures of their people, juft as it is with us in Britain: for the nature of commerce is ever and every-where the fame. And, fecondly, in importing again the produck of other countries, either for their own conlumption, or for reexportation to remoter parts, which had not the fame product. Their own product confifted chiefly in corn and cattle, and among the laft, chiefly horfes, of which they furnifhed great numbers to mount the Roman cavalry; for the Numidian horfe were then, as the barbs and jennets (which are the fame) are now, famed for their beauty, fwiftnefs, and fine fhapes, through all the Roman empire.
But above all, their products the molt valuable were their wax and copper, in both which they ftill excel the whole world; alfo their corn, fruit, drugs, and rich gums, all which remain to them.
For manufactures, we do not, indeed, read much of their woollen manufactures: but the Carthaginians as well as the Egyptians (and both were Africans), are famed for the product of fine linen; and, it is to be fuppofed, the foil produced a very fine kind of flax, which, as the fund of that manufacture, they improved to great advantage, but that part is now loft.
As to their importations, we are alfured they fetched tin and lead from Great-Britain, gold and wine from Spain, for Old Spain ever produced much gold; filks and fine Eaft-India goods from Corinth and Alexandria; what trade they had with Gaul (France) we do not find, but the other was very confiderable, and is fufficient to our purpofe. Thus ftood their condition, flourifhing in wealth and commerce, when the Romans, to the eternal infamy, nat glory, of their very name, deftroyed them all.
As by that the trade of the world received a mortal wound, fo when it revived under the Roman and Grecian emperors, it was apparent all their recovery and increafe, was owing to their commerce; that alone reftored them, and enriched them; and they were, in Juftinian's time, the moft valuable branch of the weftern empire, with refpect to the taxes they paid, and the many regiments, or rabser legions, they raifed, for recruiting the Roman armies under Belifarius, and other generals; and this contiuued long afterwards, even in the mott declining times of the weftern empire.
But this rifing wealth of Africa was too rich a bait for the times; the deluge of barbarous nations, which overthrew the Roman empire, broke in upon them alfo; and the Vandals over-running Spain, fpread themfelves into Africa, wafted and over run the fruitiul plains, and deftroyed the populous caties; and, in a word, trade funk a fecond time, under the unfupportable burden of war, the Vandals, over-running all, ruined and poffeffed the country.
As the Vandals came in over the bellies of the native inhabitants, fo fome ages after them, the Saracens, Arabians, and Mahometans, came in over the heads of the Vandals.
With thefe, not the old Africans only were rooted out; not only religion, but at laft trade too, funk quite out of the country; for, as the followers of Mahomet are, wherever they come, like the Romans, the deftroyers both of commerce and cultivation, fo it was here.
Trade being thus, as it were, tootsd out of Africa, the Moors fpread themfelves, by a rapid and irrefifible torrent, over Spain and Portugal; and as for Africa, they have, by a ftrong hand, kept polleffion there ever fince.
To apply this to our prefent purpole: Thefe Mahometans, as we have faid of the Turks, have very little inclination to trade; but, dwelling on the fea-coaft, and being a rapacious
and tyrannical people, void of induftry or application, neglecting all culture and improvement, it made them thieves and robbers, as naturally as idlenefs makes beggars: they difdained all induftry and labout; but being trained to rapine and fooil, when they were no longer able to plunder and deftroy the fruitful plains of Valentia, Granada, and Andalufia, they fell to raving upon the fea; they built fhips, or rather feized them from others, and ravaged the coafts, landing in the night, furprizing and carrying away the poor country people, out of their beds into flavery.
This was their firit trade, and this naturally made pirates, of them; for, not being content with mere landing and plundering the fea-coaft of Spain, they, by degrees, being grown powerful and rich, made bold and audacious by their fuccefs, they armed their thips, and began to attack, firft the Spaniards upon the high feas, and then all the chriftian nations of Europe, wherever they could find them: thus this deteftable practice of roving and robbing began.
What magnitude they are fince that arrived to, what mifchiefs they have brought upon the trading part of the world, how powerful they are grown, and how they are erected into frates and governments, nay into kingdoms, and, as they would be called, empires, (for the kings of Fez and Morocco call themfelyes emperors) : and how they are, to the difgrace, even of all the chriftian powers, treated with as fuch, is matter of hiftory, and we fhall meddle no more with it here, than is neceflary to our prefent occafion.
The firft chriftian prince, who, refenting the infolence of thefe barbarians, and didaining to make peace with them, refolved their deftruction, was the emperor Charles $V$. He was moved with a generous compaffion for the many thoufands of miferable chriftians, who were, at that time, kept among them in flavery : and, from a benevolent principle of fetcing the chriftian world free from the terror of fuch barbarians, he undertook fingly, and without the affiftance of any other nation, to fall upon them with all his power.
In this war, had he been joined by the French and Englifh, and the Hanfe-Towns, (as for the Dutch, they were not then a nation) he might have cleared the country; at leaft he might have cleared the fea coafts of the whole race, and have planted colonies of chriftians in all the ports, for the encouragement of commerce, and for the fafety of all the European nations.
But Francis the firft, king of France, his mortal and conftant enemy, envied him the glory of the greateft and beft enterprize that was ever undertaken in Europe; a thoufand times beyond all the cruiladoes and expeditions to the HolyLand, which coft Europe a million of lives; an immenfe treafure, during one hundred and twenty years, to no purpofe. Though the emperor was affifted by no one prince in Chriftendom, the Pope excepted (and his artillery would not go far in battering ftone-walls); yet he took the fortrefs of Goletta, and afterwards the city, and the whole kingdom of Tunis; and, had he kept the poffeffion, it might have próved a happy fore-runner of farther conquefts; but mifcarrying in his attempt againft Algier, and a terrible form falling upon his fleet, the farther attempt was laid afide, and the kingdom of Tunis returned to it's former poffeflors, by which means their piracies are ftill continued.
There feems to be a neceffity, therefore, that all the powers of Europe, efpecially the maritime powers, hould unanimounty determine to free themfelves from the infolence of thefe rovers ; that fo their fubjects, may be protected in their perfons and goods, from the hands of rapine and violence; their coafts fecured from infults and defcents, and their fhips from capture on the fea.
But this cannot be done effectually, but by rooting out thefe nefts of robbers on the coaft of Africa, or at leaft driving them from the pofferfion of any of the towns, ports, and harbours, fo that they may have no more fhip's to appear upon the fea.
The conqueft, it has been apprebended, could not be attended with any great difficulty, if the Englifh, Dutch, French, and Spaniards would unite to join their forces and fleets, and fall upon them in feparate bodies, and in feveral places at the fame time.
The general benefit of commerce would immediately follow, by fettling the government of the fea-coaft towns, in the hands and pofferfion of the feveral united powers; fo that, every one chould polfefs the leaft in proportion to the forces employed in the conquefts of it. The confequence of the fuccefs would foon be fenfibly felt by the interefted parties. For, certain it is, that the coaft of Africa, fome few places excepted, is a fruitful rich country; and though by it's, latitude it muft be exceeding hot, and that (efpecially on the eaftermolt parts of it) there are many deferts and walte places given up to falt and fand, and fit only for the retreat of wild beafts; \&c. yet, even in that part, there are valleys and plains interfperfed among the wildeft deferts, and which are fruitful, yield corn in abundance, and cattle, with feveral fruits and other productions, fitted not for the ufe of the inhabitants only, but for merchandize, and in quantities alfo fufficient for both.
The general product of the country, and in which the chief
wealth conlifts, and upon which a trade with them might be fettled, if the country was in the hands of chriftians, is as follows; corn, halt, wool, horfes, wax, honey, coral, copper, fkins of bealts, drugs and gums, almonds, pomegranares, oftrich feathers, lions and leopards, provifions of fundry kinds. If the quantity of all thefe is fo confiderable as we find it to be, even now, under the indolence and floch of the moft barbarous people in the world; how may we fuppofe all thofe valuable things to be increafed in their quantity by the induftry and application of the diligent Europeans, efpecially the French, or Dutch, or Englufh; all which nations joint ing in the conqueft, we might reafonably fuppofe, fhould have their feveral and feparate allotments of territory upon the coat, and in the country adjacent.
We might alfo reafonably fuppole, that the Moors being, in. the confequence of fuch a conqueft, driven up farther into the country, (for we have not been propofing the rooting them out as a nation, but only the fupplanting or removing them from a fituation, which they bave juftly forfeited by their depredations upon other nations) and being obliged to feek their fubfiftence by honeft labour and application; we may reafonably fuppofe, that even thefe may be taught to apply themfelves to the cultivation of the earth, by the necelity of their circumftances, and be brought to increafe the product, by their labour, for all thofe chrifian nations.
As the product of the country would thus be increafed, and multicudes of people, encouraged by the advantages of the place, to go over and fettle upon it, the manufactures and merchandizes of Europe would foon find a great additional conlumption, and the many new ports and barbours, where thofe chriftian nations might fettle, would be fo many new markets for the fale of thole manufactures, where they bad little or no fale or confumption before: and the finding out new markets for the fale or vent of merchandize, where there were none for thofe goods before, is the great principle whereon to found the general advancement of commerce.
It may be faid, indeed, that to vend our goods at new, or different ports only, may be no increale of commerce; or to tend them to new and differeut places, becaufe they may fill be fent from thence to the fame people, and to the fame nations as the laft confumers, who confumed them before.
Thus fending our Englifh manufactures to Jamaica, to be fold there by the floup trade; that is, by clandeffine commerce with the Spanifh fmugglers, or to the Spaniards of Carthagena, and the coaft of Caraccas, is no new confumption, though it be a new market; becaufe it is only felling to the lame people, who would otherwife call for the fame manufacture, and óther goods from Old Spain, and they from England; fo that it is as water iffuing out of the fame fountain, and running into the fame gulph or pond, only by new channels.
Thus likewife the Eaft-India company fending Englifh broad cloth to the gulph of Perfia, to be fent from thence to Ifpahan, to Georgia, and othe'r places in that country, to be fold to the Perfians, and others, as the laft confumers, is only fupplying the fame psople, who were fupplied before, with the fame goods from Aleppo and Scanderoon; fo that it is only taking the trade from the Turkey company, and transferring it to the Eaft-India company, which is no increafe of commerce, the laft confuncers being the fame.-
But this would not prove the cafe of the Barbary trade: it is true, we have fome trade there now, and fome places might, in fome refpects, be called the fame markets: but, fuppofe thefe barbarians to be removed as above, from the populous cities and provinces of Algiers, Tunis, Tripoly, \&cc. and driven up the country, in order to fupprefs piracy and robbers; and fuppofe thofe cities, \&c. peopled with a new nation, or new nations made rich by commerce, and the country adjacent cultivated and peopled after the manner of Europe, and thofe people living, cloathing, furnifhing their houfes and equipages, and feeding after the manner of Chriftian nations, let it be anfwered, what kind of commerce would there be then? Would it not be twenty times what it is at prefent? Befides, would not the fuccefs hereof be delivering Etrope from the depredations of powerful thieves, and their commerce and navigation from the rapine of a mercilefs crew, who are the ruin of thoufands of families, and in fome fenfe the reproach of Chriftendom. The propotal is great, but far from impracticable: it is worthy being undertaken by the princes and powers of Europe, and what would bring infinitely more glory to the Chrifian name, than all theirinteftine wars among each other; which are the fcandal of Europe, and the only thing that ar firff let in the Turks, and other barbarians among them. See Algiers, Tunis, Tripoly.
MORTALITY [BILLS of MORTAITY.]
Under the articles Annuities, Leases, Interest, Lives, we have confidered the doctrine of annuities, according to the principles and computations of the learned Dr. Halley, De Moivre, Lee, \&c. and others, who have treated the moft judiciouly on this fubject. But, as the ingenipus Mr, Simpfon fiace their time, has confidered this matter in anothes light, we think it neceflary to add hisfenuments alio to what

## M OR

we have already faid; all which together, will comprehend in mintature, the fubitance of what bas been communicated upon this head.
The value of an annuity for life, fays be, depends upon the intereft which money bears, and the probability of the life continuing a longer or fhorter time; the former of which is generally fettled by law, but the latter muft be determined from obfervation
Of all that has been hitherto offered for eftimating the probability of the duration of life, nothing feems deduced with greater judgment and exactnefs, than the tables publifhed by Dr. Halley and Mr. Smart for this purpole; which neverthelefs, are both liable to feveral objections.
The doctor's table, being grounded on obfervations at Breflau, a place where the generality of people live to a greater age than at London, (as appears by comparing the bills of mortality here with thofe obfervations) can be no juft meafure of the probability of life in this place; and as to that of Mr.
Snart, though it is indeed free from this objection, and founded on a very large number of obfervations, yet the great and continual afflux of people from all parts up to town, renders the deductions from thofe obfervations confiderably different, in one part of life, from what they would otherwife be; and this Mr. Smart feems not, in his table, to have confidered, or made any allowance for.
For thefe reafons, though I had determined to depend on, and make ufe of, this laft gentleman's obfervations, in the enfuing pages (as, undoubtedly, the beft for the city of London and parts adjacent); yet have I deemed it neceflary to make fome alterations, in the table of the probability of life from thence derived.
In doing this, I have fuppofed the number of perfons coming to live in town after 25 years of age, to be inconfiderable, with refpect to the whole number of inhabitants: and therefore the probabilities of life, for all ages above 25 years, the fame as this author has made them; but they have increafed the numbers of the living, correlponding to all ages below 25 ; fo that they may, as near as poffible, be in the fame proportion one to another, as they would be, were they to be deduced from obfervations on the mortality of thofe perfons only, that are born within the bills. Which was done, by comparing together the number of chriftenings and burials, and obferving, by help of Dr. Halley's table, the proportion which there is between the degrees of mortality at London and Breflau, in the other parts of life, where the ages are greater than 25. I fhall here fubjoin the table, altered as above, then proceed immediately to the ufes thereof.

A Table, thewing the probabilities of Life, from obfervations.
Note, The numbers marked * are fuppoled to die off yearly, and are what, in the fucceeding pages, are called the decrements of life.

## M O R

Now, in order to thew the ufe of the foregoing table by an example, let it be required to find the probability, that a perfon of 36 , lives 30 ycars longer, or attains to the age of 66 years; look in the table againft $3^{6}$ years and 66 years, and correfponding thereto, you will find the numbers 33 I and 93 refpectively; fhewing, that out of 331 perfons living of 36 years of age, only 93 of them arrive to the age 66 : therefore, feeing the whole number of perfons living at the beginning of this term, is to the number remaining alive at the end of it, in the ratio of 331 to 93 ; the number of chances that a perfon of 36 years of age has to live 30 years longer, will be to the number of all the chances, that he has both to live beyond, and die within 30 years, in the fame ratio of 33 r to 93 ; and therefore $\frac{93}{33}$ is the meafure of the probability required; the probability of the happening of any event, being always to be confidered as the ratio of the chances which that event has to happen, to all the chances which it has both to happen and fail.
This being underftood, fuppofe it were now required to find the value of an annuity of 1001 . for a life of 20 years of age, intereft at 4 per cent.
Becaufe the prefent value of rool. due at the end of one year (difcount being allowed) is 96,15 , it is plain, that fo much would be the value of the firit year's rent, was the purchafer fure to receive it; but the probability of his living one year, appearing from the table to be only $\frac{455}{482}$, the aforefaid fum 96,15 , in order to make a juft deduction out of it, for the contingency of his dying before the end of one year, ought to be diminifhed in the ratio of 462 to 455 , or multiplied by $\frac{455}{48 \frac{5}{2}}$, which will reduce it to 94,70 , equal to the true value of the firft year's rent. After the fame manner may the value of the fecond year's rent be calculated; for, fince the probability of receiving this rent, or living two years is $\frac{448}{482}$, let this be multiplied into 92,45 , the prefent value of 1001 . to be received at the end of two years, and the product 89,65 , will be the true value of the fecond year's rent. And, by a like way of proceeding, the value of the 3d, $4^{\mathrm{th}}, 5$ th, $8 x \mathrm{c}$. years rents, to the utmoft extent of life, may be determined; and the fum of all thefe will be the required value of the annuity, which will be found to come out 14801 . very near.

Here follow the practical folutions of feveral problems, depending on the foregeing tahles.
$4 G$
PにOBLEに

## M O R

## Problem VIIt.

To find the value of an annuity for an affigned life.

## Solution.

Look out the given age in Tab. I. and againft it, towards the right-hand, under the propofed rate of intereft, will fand the number of years purchafe, which an annuity upon that life is worth.

> EXAMPLE.

Let the given age be 18 years, and the rate of intereft 4 per cent. then looking againt 18; under 4 per cent. I find 15.2 , equal the number of years purchafe required.

$$
\text { Problem } 1 X \text {. }
$$

'To find the value of an annuity upon two affigned joint lives.

$$
\begin{gathered}
\text { SOLUTION. } \\
\text { CASEI. }
\end{gathered}
$$

If the two lives be equal, fee Tab. II. with the commonage, and againft it you will have the value required.
Case II.

If the given ages be unequal, but neither of them lef's than 25, nor greater than 50 years, take half the fum of the two for a mean age, and proceed as in Cafe -I., *

* This and the following folutions are fo contrived, as to be always depended on to lefs than $\frac{1}{4}$ of a year's parchafe.
Case III.

If one or both ages be without the limits above-mentioned, but fo that the difference of the values corpefponding to thote ages, be not more than $\frac{1}{3}$ of the leffer; let $\frac{4}{\mathrm{~T}}$ of that difference be added to the faid leffer value, and the fum will be the value fought.
Generally, be the difference of the values what it will, multiply it by $\frac{1}{2}$ the leffer of the two values, dividing the product by the greater; then the quorient, added to the leffer value, will give the true anfwer very near.

Example of Case I.
Let the two given ages be each 18 , and intereft at 5 per cent. then in Tab. II. againft 18, under 5 per cent. is 10.5 years purchafe.

## Example of Case II.

In which the rate of intereft is fuppofed as above, and one of the two ages 34 , the other 48 , therefore the half fum of the age is 42 , againft which ftands 7.1 .

## Example of Case III.

Where one age is fuppofed to be 15 years, the other 29 ; here againft 15 years will be found 11.0 , and againft 29, 8.8, the difference of which two values is 2.2 , and $\frac{4}{40}$ thereof, equal to 0.88 ; this therefore, added to 8.8 , gives 9.68 , or 9.7 , for the anfwer.

Example of Case IV.
Let the rate of intereft be 4 per cent. and one age 11 years, the other 68. The values correfponding to thele ages, are 12.9 and 4.6 , their difference is $8: 3$, which multiplied by 2.3 , will be 19.09 , this divided by 12.9 , quotes 1.5 , which therefore, added to 4.6 , the leffer value, gives 6.1 , equal the value fought.

Problem X.
To find the value of an annuity upon two lives, that is to continue as long as either of them is in being.

$$
\begin{gathered}
\text { SOLUTION. } \\
\text { CASEI. }
\end{gathered}
$$

If the lives be equal, find the given age in Tab. III. and againit it, under the propofed rate of interef, will be the number of years purchafe required.
Case II.

If both ages be between 25 and 50 , take half their fum for a mean age, and proceed as in Cale I.
Case III.

If one or both ages be without the limits mentioned in the laft cale, but the difference of values correfponding to thofe ages, as found in Tab. III. be not more than $\frac{1}{6}$ part of the

## M OR

leffer, take half the fum of thofe values for the value re, leffer, t
Guired. value of the two joint lives by Care IV. Prob. IX. which fubtract from the fum of the values of the two fingle lives, and there will remain the required value of an annuity upon the longeff life.

## Example of Case I .

Wherein the two given ages are each fuppofed 50 years, and the rate of intereft 4 per cent. Here againft 50 years, in Tab. III. under 4 per cent. fands 13 , , hewing the number of years purchafe whichian annuity is worth for two fuch lives.

## Example of Case II.

Suppofe one age 30 years, and the other 46 , then the half fum of the ages will be ' 38 , anfwering to which, under 4 per cent. ftands $15 \cdot 3$.

## Example of Case III.

Let the two propofed ages be 6 and 21 years; then againft 6 years, will be 19.7 , and, againft 2r, 18.2 , the half fum 'whereof is 18.95 , equal to the number of years purchafe required.

## Example of Case IV.

Let one age be II yea:s, the other 68 , and the rate of intereft as in the preceding examples; then the value of the two 'joint lives, by Care IV: of the latt prohlem, will be found 61 , and the values of the fingle lives, iby Problem VIIL. equal to It .3 , and 6.7 , the fume of which two, decreafed by $6 . \mathrm{r}_{\text {, }}$, is 16.9 , equal to the value required.
PRoblem XI.

To find the value of an annuity upon three joint lives.

> SOLUTION.
> CASEI.

If all the lives be equal, find out the'given age in Tab. IV. and ajanil $i$, und. the propofed rate of intereft, will be the number of years purchafe required.
Case II.

If all the three ages be between 15 and 55 years, and the difference between the greateft and leaft of them not more than 15 years, take $\frac{1}{3}$ part of their fum for the mean age, and proceed as in Gare ${ }^{1}$.
Case III.

If one or more of the propofed ages be without the limits mentioned in the laft article, but the difference of the valuss anfwering to the greateft and leaft of them, not greater than half the leaft; then to the fum of the two greater values add twice the leaft, and take $\frac{1}{4}$ of the fum for a mean value required.
Generallv, be the ages what they will, muitiply the fum of the three correfponding values by the fquare of the feaft of them, referving the product; multiply the two greater values into each other, and to the duble of the product add the fquare of the leffer values; divide the referved product by this fum, and fubtract the quotient from twice the deffer value; the refult will be the value fought.

## Example of Case I.

Let each age be 35 , and the rate of intereft 3 per cent. then in Tab. IV. againf 35, under 3 per cent. ftands 7.6 , which is the number of years purchafe that an annuity is worth for the three joint lives.

## Example of Case II.

Let the three given ages be 20,25 , and 33 years. Here ${ }^{\frac{1}{s}}$ of the ages will be 26 , correfponding to which, under 3 per cent. ftands 9.0.

## Example of Case III.

Where the propofed ages are 7,15 , and 33 years; againft thefe ftand $11.9,11.2$, and 7.9 , therefore the fum of the two greater values is here, 23.1 ; this added to twice the leffer, gives 38.9 , the $\frac{1}{7}$ of which, or 9.725 , is the value fought. Example of Case IV.
Let the three ages be 13, $31 \frac{1}{2}$, and 53 years, and intereft 4 per cent. then the values anfwering to thofe ages will be 105 , 7.3, and 5.0 ; the fum whereof is 22.8 , which multiplied by 25 , the fquare of the leaft of them, gives 570 , to be referved. Again, the two greateft values mulriplied into each other, produce 76.65 , the double of this added to 25 , the fuare of the leaft, will be 178.3 , by which dividing 570 , the referved,

## MOR

produch, there comes out 3.2 ; this fubtracted from ro, the double of the leaft value, leaves 6.8 for the value required.

## Problem XII.

To find the value of an annuity upon the longeft of three lives.

## SOLUTION:

## CaseI.

If the lives be all equal, feek the common age in Tab: V. and againft it, under the propofed rate of intereft, will be the number of years purchafe required.

## Case II.

If none of the ages be lefs than 10 , nor greater than 60 years, and the difference between the greateft and leaft of them not more than is years, to twice the fum of the two leaft add the greateft, and take $\frac{1}{5}$ part of the fum as a mean age.

## Case III.

If the difference of the greateft and leaft values, found againft the propofed ages in Tab. V. be not more than $\frac{7}{4}$ of the leaft, then, to twice the fum of the two greateft values, add the leaft, taking $\frac{ \pm}{5}$ part of the fum for a mean value.
Generally, find the value anfwering to the greateft of the given ages in Tab. III. and the values correfponding to all the three feveral ages in Tab. V. and let the difference of the two values, anfwering to the greateft age, be taken and referved; let the fquare of the greater of thefe two be divided by the product of the two other remaining values; multiply the fquare of the quotient by the referved difference, then this laft product, added to the value of an annuity for the two youngeft lives, will be the value required:

## Example of Case 1 .

Let the three ages be each 35 years, and intereft 4 per cent. then in Tab. V. againt 35, under 4 per cent. ftands I7.3, for the number of years purchafe required.

## Example of Case II.

Let the propofed ages be 16,24 , and 36 years, then will the mean age be 22 years, and the number of years purchafe required 19.4.

## Example of Case III

Suppore the three ages to be 28,35 , and 44 , then the three correfponding values will be $18.3,17.3$, and 16.0 , and therefore twice the fum of the two greater added to the leffer, is 87.2 , which divided by 5 , quotes 17.44 for the anfwer.

## Exampie of Case IV.

Let the given ages be 20,36 , and 60 ; and intereft as in the preceding examples: here, the value found againft 60 years in Tab. III. is 11.2 , and thofe againft 20,36 , and 60 , in Tab. V. 19.7, 17.2 , and 12.7 , refpectively; wherefore, taking 1 I. 2 from 12.7, we have 1.5 for the difference to be referved : now the fquare of 12.7 , divided by the product of 19.7, and 17.2 is 0.5 , the fquare of which, multiplied by 1.5, the referved difference gives 0.375 ; this added to 17.0 , the value of an annuity for the two youngeft lives (as determined by Cafe II. Prob. X.) will give 17.375 , or 17.4 , for the number of years purchafe, which an annuity is worth upon all the three lives.

## REMARK.

That the reader may not entertain any fruple concerning the exactnefs of the methods of folution hitherto laid down, for eftimating the values of annuities upon two or more unequal lives, I thall here, according to my promife, endeavour to make it appear, that thofe folutions may be always depended on as very near the truth. In order to this it will be requifite to refume the two hypothefes laid down in Corol. II. and IV. Prob. I. wherein the probabilities of life are fuppofed in a geometrical and in an arithmetical progreffion, and to compare the values of equal fictitious lives, computed according to thofe hypothefes, with the correfponding values in the tables, for real lives, computed from actual oblervations, and then to confider from thence, how the values ought to differ in lives that are unequal. Accordingly, let the value of each of the equal lives, whether confidered as real or fictitious, be fuppofed equal to any number of years purchafe, as $7,8,9,10,11,12,13,44$, and 15 fucceffively; and let the rate of intereft be at 4 per cent. then will the correfponding value of two equal joint lives be as in the following little table; whereof the firft column exprefles the value of each of the fingle lives, and the fecond, third, and fourth columns, the value of the joint lives, according to obfervations, and the two forefaid hypothefes refpectively.

| 'Value of one fingle life. | Value of two joint lives, per Tab. | Value of two joint lives, per ift hypot. | Value of two joint lives, per 2d hypot. |
| :---: | :---: | :---: | :---: |
| 7 | 4.7 | 3.9 | 4.9 |
| 8 | 5.4 | 4.6 | 5.6 |
| 9 | 6.15 | $5 \cdot 3$ | 6.4 |
| 10 | 6.8 | 6.1 | 7.1 |
| 11 | 7.6 | 6.9 |  |
| 12 | 8.5 | 7.8 | 8.8 |
| 13 | 9.5 | 8.7 | 9.7 |
| 14 | 10.5 | 9.7 | 10.6 |
| 15 | 11.5 | 10.6 | 11.6 |

Now, by infpecting this table, we may obferve, firt, that the value of the joint lives, according to the laft of the two hypothefes, is a fmall matter greater than the value of the fame lives, as deduced from real obfervations, but never by more than about $\frac{3}{10}$.bf a year's purchafe; anid, fecondly that, on the other hand, the value of the joint lives, according to the firft hypothefis, is always lefs than the true value deduced from obfervations, and that at leaft by $\frac{y}{70}$ of a year's purchafe. Hence we may infer, that the probabilitie's of life, as giveh in the table of obfervations, do not come fo near a geomerric progteffion as to ant drithmetic one (which, in fome meadure, appears from the table irfelf) and, confequently, that the value of an annuity upon real lives, whether equal or unequal, will differ little from the value defived from the laft hypothefis, but fomething more from the former. Let us, therefore, now fee what the differences will be, ini two uriequal joint lives, by the general rule before given (in Prob. IX.) from whence we hall be enabled to judge of the exactnefs of that rule. What thefe differences are, may be feen by the following table, which exhibits the values of the joint lives, according to each of the three forefaid ways; wherein the value computed by the rule, compared with thofe derived from the hypothefes, appears to agree fo exactiy, throughout the whole table, with what has been above obferved, with refect to the true value', as to fufficiently prove, that the rule iffelf muft be very near the truch. But if this rule be near the truth, the two particular ones preceding it muft be fo too, being fo concrived as to always bring out nearly the fame value with the general one; but with this difference, that as the general one, for the moft part, gives the anfwer a little too fmall, the firft of thefe always makes it a little too great, though neither of them fcarce cver err by more than $\frac{x}{10}$ of a year's purchafe.

| Value of the two fingle lives. | Value of the two joint lives, per rule. | Value of the two joint lives, per firft hypoth. | Value of the two jointlives, per fecond hypeth. |
| :---: | :---: | :---: | :---: |
| 6 and 8 | 4.5 | 3.8 | 4.7 |
| $6 \cdots$ | 4.8. | $4 \cdot 3$ | 5.0 |
| $6 \quad 12$ | 5.0 | 4.6 | 5.2 |
| 6.14 | 5.2 | 4.9 | 5.4 |
| $6 \quad 16$ | $5 \cdot 4$ | 5.2 | 5.5 |
| 810 | 6.0 | 5.3 | 6.2 |
| 812 | 6.4 | 5.8 | 6.7. |
| 8.14 | 6.7 | 6.3 | 7.0 |
| $8 \quad 16$ | 69 | 6.7 | 7.2 |
| $10 \quad 12$ | 7.5 | 6.8 | 7.8 |
| 1014 | 8.0 | 7.5 | 8.3 |
| $10 \quad 16$ | 8.4 | 8.1 | 8.7 |
| 1214 | $9 \cdot 3$ | 8.6 | 9.5 |
| $12 \quad 16$ | 9.9 | 9.4 | 10.1 |
| $14 \quad 16$ | 11.4 | 10.6 | 11.5 |

In the fame manner it may be made to appear, that the othet rules for three joint lives, and the longeft of two or three lives, are likewife very near the truth; but I hall content myfelf here with giving one or two inftances, in annuities upon three joint lives. Let there be three equal lives, and the value of an annuity upon each of them 14 years purchare, and intereft at 4 per cent. then will the value of the joint lives, by Tab. IV. come out 8.3, but, by the two hypothefes, 7.3 , and 8.5 , refpeclively. Again, let the lives be fuppofed very unequal, fo as to be worth 6,10 , and 16 years purchafe, then will the value of the joint lives be, by the general rule, 4.5 , but, according to the hypothefes, 3.84 , and 4.63 ; which examples, agreeing fo well with each wher, and with what bas been aboveraid, ind greatly to evince the accuracy of the rules, or, at leaft, to fhew that they are confiftent with the table of obfervations. Simpfon's Annuities upon Lives.
MOSKITOCOUNTRY, is fituated in North America, between $\$_{5}$ and 88 degrees of weft longitude; and tetween

13 and 15 degrees of north latitude; having the North Sea on the north and eaft; Nicaragua on the fouth; and Honduras on the weft; and, indeed, the Spaniards efteem it a part of the principality of Honduras, though they have no colonies in the Mofkito country. When the Spaniards firlt invaded this part of Mexico, they mallacred the greateft part of the natives, which gave thofe that efcaped into the inacceffible part of the country an infuperable averfion to them; and they have always appeared ready to join any Europeans that come upon their coafts, againft the Spaniards, and particularly the Englifh, who frequently come bither, and the Mofkitomen being excellent markfmen, the Englifh employ them in ftriking the maratee fifh, \&c. and many of the Mofkito Indians come to Jamaica, and fail with the Englifh in their voyages.

## Rem AR Ks.

Thefe people are fo fituate between moraffes and inacceffible mountains, and a coaft full of rocks and hoals, that no attempts againtt them by the Spaniards, whom they mortally hate, could ever fucceed. Neverthclefs they are a mild inoffenfive people, of great morality and virtue, and will never truft a man who has once deceived them. They have fo great a veneration towards the Englifh, that they have fpontaneoully put themfelves and their lands under the protection and dominion of the crown of England. This was firft done when the duke of Albemarle was governor of Jamaica, and the king of the Monkitoes received a commiffion from his grace, under the feal of that inand; fince which time, they have not only been fteady in their alliance with the Englifh, but warm in their affections, and very ufeful to them on many occafions.
When their king dies, the next male beir goes to Jamaica, to certify that he is next in blood, and receives a commiffion in form from the governor of Jamaica to be king of the Mofkitoes, 'till which be is not acknowleged as fuch by his countrymen. So fond are thefe people of every thing that is Englifh, that the common people are proud of every chriftian or furname given them by our feamen, who honour their chief men with the titles of fome of our nobility.
Quere, Might not fome valuable fettlements be made by the Englith among thefe people, that would produce logwood and other dyeing woods, and many valuable commodities befides? See the article Logwood.
MUNSTER, in Ireland. This province lies open to the Vergivian Sea on the fouth and fouth-weft, and the Atlantic on the weft ; and is bounded on the eaft and fouth-eaft with the Ocean and province of Leinfter; and, on the north, with the province of Connaught: it's circumference, including the great windings and turnings, is above 600 miles.
It enjoys a mild temperate air, has many excellent bays and havens, and rich towns, and the coil, in general, fruitful. It's commodities are cattle, wood, wool, and fifh ; of which laft it abounds with all forts, efpecially herrings and cod. It is divided into the five counties following, viz.

1. Waterford county, which has Wexford on the eaft; Cork on the weft; the ocean on the fouth; and the river Shure on the north, by which it is parted from Kilkenny and Tipperary. In come parts it is pleafant and fruitful, but moltly mountainous, and of a barren coarfe foil.
Waterford is as conveniently feated for trade as any port in the world; it has a good harbour, and fhips of burthen come up clofe to it's fine key, though it is a good diftance from the rea, Gallway contends with this city for priority, and claims the preference as to trade; though, as $W$ aterford outdoes it in bulk and people, fo it is thought it does in commerce; particularly Waterford drives a very great trade with England, which Gallway cannot have, by reafon of it's lituation.
Dungarvan ftands upon a bay of it's own name, with a parrow tide haven, and a commodious road for fhips; but it is a town of no confequence, and of little bufinefs.
Tallagh is a handfome flourifhing town, in a fine fruitful vale, near the river Bride, which being navigable from hence to Youghal, renders this a place of good trade.
II. The county of Cork, has Waterford on the eaft ; Kerry on the weft; Limeric on the north; and the Vergivian Ucean on the fouth. It is partly woody and mountainous, and partly fenny, yet has many good towns, abounds in fine rivers and good harbours, is both rich and populous, and the inhabitants induftrious. A copper mine was lately difcovered near Cork, which is likely to turn to very good account.
The firf confiderable fea port, next to Waterford, is Youghal, or Youghil, a place of good trade, at the mouth of the Broadwater. The convenience of the harbour, which has a good well-fenced key, and the fertility of the adjacent country, draws fo many merchants hither, that the town is pretty populous and rich.
CORK is a fine, large, populous, and wealthy city, being thought the richeft in Ireland except Dublin. The town ftands up the river, about 15 miles from the fea, where the mouth of the harbour is two miles broad. The great fhips generally ride at a place called Paffage, about fix miles below the city; but fmaller veffels come quite up to the key. It is the chief port for merchants bufnefs in the kingdom; and there is
more beef, butter, and tallow thipped off here, perhaps, than in all the otier pots put together, as well for our own colonies as for France, and the butter for Flanders and Holland in particular. This occaftons a great refort of nhips always to this port, particularly thofe bound to Jamaica, batbadocs, and all the Caribbee Inands, which put in hore to complete their lading.
Kinsale is a populous and rich town, in a fruitful foil, near the mouth of the river Bann, or Bandon, with a trade the molt confiderable of any on this fide of the intand, next to Cork. Many good mips belong to it, and a great quantity of provifions is exported from hence to Flanders, Holland, France, and the Englifh iflands in the Weft-Indies. It has an admirable harboúr, and a good bay without it.
Downham's Bay, fo called from a neighbouring village, is a large and commodious retreat for fhips in a dom, and lies on the north fide of the Miffen-Head.
III. The county of Kerry, has that of Cork on the fouth and eatt; Limeric on the north; and the Atlantic Ocean on the weft.
Trailey is a thriving corporation, and the fhire-town; it ftands on a bay of the fame name.
DINGLE has a good harbour, very convenient for trade; the bay near it is one of the largeft in Ireland, and has feverai harbours.
Mair, or Kilmare river, is a bay on the fouth eaft corner of the county, which is a fafe harbour for the greateft fiips. Killarny is a thriving pretty market town, near which is a confiderable lead mine.
IV. The county of Limeric has Tipperary on the eaft; Cork on the fouth; part of Tipperary on the north; and Kerryon the weft. It is fruitful in all forts of corn and rape, has a large breed of cattle, and is well inhabited, but has few remarkable towns.
The city of Limeric flands on the Shannon, which is navigable very near to it for fhips of burthen, though it fands almoft 50 miles within the point called Loupthead. It is a rich and populous city. Though here are fome merchants to whom belong fhips, it is not fo famous for it's wealth as it's frength. The chief trade it ufed to drive was to France, but a pernicious one to the fair trader, viz. the carrying out wool, and cious one to the fair trader, viz. the ca
bringing in wine and brandy by fealth.
V. The county of Tipperary is bounded on the weft with that of Limeric; on the eaft with Queen's county and Kilkenny; on the fouth with thofe of Cork and Waterford; and, on the north, with King's county. The fouth part is fruitful, and well inhabited; the weft is well watered, and both abound in good paftures, and furnifhed with the greateí and belt flocks in Ireland; the north part is barren and mountainous.
Clonmele is a rich and papulous town, with a market of good refort, on the river Shure.
$M$ US $\nsubseteq \mathrm{U}$, originally fignified a place in the palace of $A$ lexandria, which took up a fourth part of the city; fo called, as being deftined to the Mufes, and the Sciences. Here were lodged, in colleges, a great number of learned men, who were of various lects, and applied to different fciences; and each college had a handfome revenue appropriated to it. The Afhmolean Mufæum, at Oxford, is a magnificent pile, erected at the expence of the univernity, for the promotion of feveral parts of curious and ufeful knowlege.
The mufæum of the late Sir Hans SJoane, Bart. contain's a great variety of the production of nature and art, and has been lately purchafed by the public, for the benefit of the nation; and, as it may be rendered of no lefs general benefit to trade, than to the advancement of natural knowlege, and experimental philofophy, our readers may not be difpleafed if wegive a genuine account of

The Names and Numbers of the feveral things contained in the Musfum of Sir Hans Sloane, Bart.

The library, including about 347 volumes of drawings and illuminated books, 3516 volumes of manufcripts, together with the books of prints, confifts of about 50,000 volumes.

## R EMARKs.

Nature, and all her wonderful productions, having ever been looked upon by the wifeft and beft men as the great book of God, it becomes a duty incumbent on mankind to read and ftudy that book, which we are affured can never miflead or deceive, if we are happy enough to underftand it.
Natural hiftory defcribes numberlefs of the productions of nature, which the various parts of the known globe afford; and thofe who have judicioufly collected any variety of particulars in the foffil, vegetable, and animal kingdoms, have contributed to render this divine book [the univerfal fcripture of the Supreme Being] the more intelligible : and thofe who have modeftly ftudied to underfand the qualities and ufes of but few of thefe infinite productions, have confpicuoully difcovered the digitus Dei in whatever exifts throughout the whole creation: and fuch fearchers into the works of the Almighty, have not only contributed to give mankind in general more jult and exalted ideas of the firft caufe, but have themfelves generally proved the moft ufeful, the wifeft, and beft of men, and their great example has influenced numbers to follow it.
So wonderfully numerous are the diftinct particulars of univerfal nature, that I can hardly think we have yet made any great progref's in her alphabet ; and much lefs do we know, I am afraid, of her fyllables and fentences; for, 'till we well undertand our chrift-crofs-row, we fhall not be able to read to any great purpofe.
What I would be underfood to mean by the alphabet of nature, is not only the numberlefs diftinct feecificated matters of nature, but the real properties and qualities of fubjects; for it is not the mere collection of the works of nature, that will afford juft ideas of their inherent excellencies, and, therefore, we fhalis ever be at a lofs thoroughly to underftand their ufefulnefs, unlefs we are equally affiduous to comprehend the properties of particulars, becaufe, without that, we fhall always remain ignorant of their general ufes.
The little knowlege we have of this kind feems to be included under the two articles of agriculture and medicine; for in thofe arts there may be fome fmall degree of certainty, upon ordinary occafions; but, if any thing extraordinary happens, how are the wifeft baffed and confounded? The greateft phyficians confefs their ignorance in the infallible cure of difeafes, the greateft philofophers own their infufficiency to prevent a blight, and thereby preferve nature's productions againft natural inclemencies, \&cc.
If therefore, we could exhibit to one view, on the furface of the earth, all fubterranean productions within her bowels; if we had before us all vegetable nature, from the hyflop on the wall to the cedar of Lebanon; if the myriads of animals were collected together into one ark: if nature was thus ranged, as it were, in array before us, for contemplation, thould we not rather be loft in aftonifhment, at the unfpeakable variety, than be able, by mere Inspection, to judge rightly of the qualities of the fimpleft and moft contemptible matter before us ? We might, perhaps, by racking our brains for ages, make hift to give names in all languages to a few of thofe wonders; but what advance would this be to the difcovery of their general virtues and ufes throughoutall nature? We are delighted with the fight of a diamond of the firt water and magnitude, and may ufe it as an external ornament ; fo we may be pleafed with the appearance of gold, which too much captivates us all; but to look upon thefe things in a trafficable light only, and as they are fubfervient to the mere grandeur of life, is highly undervaluing thefe objects of nature.

M U S
It is true, one principal ufe of thefe collections is, the confland qualities were more ffudied, as their ufes to mankind nifter an infinite greater variety in point of comacice.
But, notwith.landing all thofe collections that base hitherto been made, in all repofitories both at home and abroad, we have grounds to believe that very much more matter, which in the moft civil and moft peopled countries; whofe:underillands, rivers, and provinces, have been defcribed by the labour of geographers: it is not to be doubted, we conceive, but fill there may be an infinite number of cireatures over our
deration of their being objects of traffic; but, if their natures would multiply in proportion, the lame objects would admihas been yet unhandled, may ftill be brought to light, even ground treafures have been accurately pried into, whofe cities, heads, round about us, and under our feet, in the large fpace of the air, in the caverns of the earth, in the bowels of mountains, in the bottom of feas, and in the fhades of forefts, which have hitherto efcaped all mortal fenfes. In this the microfcope alone is enough to filence all oppofers. Before that was invented, the chief help that was given to the eye by glafles was only to ftrengthen the dim fight of old age; but now, by the means of that excellent inftrument, we have a far greater number of different kinds of things revealed to us than were contained in the vifible univerfe before; and even this is fcarce yet brought to perfection.
As a trading nation, we cannot be too affiduous in fcarching after thefe productions of nature, which will afford objcets of traffic in any fhape, or materials for the improvement of the old, or the invention of new manufactures.- But the mere external form of things does not always fignify to us what properties they may have, and in what variety of cales they may be importantly, beautifully, and profitably applied.There is no great matter, therefore, to be Iearned by thefe productions, by mere infpection only; and the greateft repofitory would prove of little benefit to the community, if it is o be confidered only as a raree how, or for the virtuofo to ramble over, and merely to repeat the names of, as if he was really knowing in ail the qualities, ufes, and applications of thefe things in nature, which be affects to be fo familiar with. -The natural hiftorian, and the collector' of nature's works, are very ferviceable, as they bring the objects of creation to light, which otherwife might remain for ever hid from our view.-Wherefore the mere naturalift, who ftudies nature no further than her outfide, is not the moft ufeful philofopher ; fuch an one would fcarce be inftrumental to the breeding of a lapidary or a fmith, much lefs to the inventing of new manufactures or new arts, to the advantage or delight of mankind. A Bacon, a Boyle, a Boerhaave, would look upon the objects of nature with a far different eye to what the mere external naturalifs do; they only burthen their memory with the names of things, and affect to be knowing in them; whereas the others would inform us of the qualities and beneficial applications thereof in all refpects, and thew themelves to be thoroughly knowing, while the others only pretended to be fo. Such may, dub themfelves with the titles of connoiffeurs and virtuofoes, and make great parade of their extraordinary knowlege; but when we enquire of what ufe they have been to fociety, what valuable difcoveries they have made in nature to benefit mankind, their talents to the community are far lefs ferviceable than thole of the loweft mechanic. What I would infer from hence is, that thofe repofitories we have for the productions of nature are made a very mean and a fcandalous ufe of, if they are maintained with great hew and expence, only for the amufement of the ufelefs and fuperficial virtuofo. However, we have great reafon to believe that this will not be the cafe of the Sloanean Mufæum, lately purchafed by the public, for the public ufe and advantage, it being under the direction and management of fo many honourable perfons, and efpecially many of thofe of the Royal Society, who have given teftimony of their talents to make ufeful and important experiments upon the works of nature, for the benefir, delight, and ornament of mankind.
Nor are the collections with regard to the works of art to be lefs attended to in a commercial ftate, than thofe of nature; for having all curious machines, \$c. ranged with relation to every diffinct mechanic and manufactural art, and proper admiffion given to all artifts, or improvers of art, they might, from narrowly infpecting thofe that had been invented, make either confiderable improvements thereupon, or from thence derive fuch notions as might enable them to difcover new ones of divers kinds.-But, as we fhall have occafion to fpeak more at large upon this point, under the article Royal Society, we refer the reader thither.

# The PRACTICALBUSINESS of the CUSTOM-HOUSE continued. 

$\mathbf{W}^{1} \mathrm{~T} H$ reipect to Malt, fee the article Corn. Malt imported from beyond fea, forfeited, or the value, purfuant to the annual malt act.

The bounty is to be allowed after the rate of thirty quarters, and no more, for every twenty quarters of barley, or other corn or grain entered and made into malt, for exportation; as thall appear by certificate from the proper officer, with whom the corn or grain, intended to be made into malt for exportation, was entered. 3 Geo. II. cap. 7. §. 14, 15.
Relanded in Great-Britain is forfeited, with treble the value, befides the penalty of the bond. 3 Geo. II. cap. 7. §. 15. and fince continued yearly with the malt act.

## With regard to Mariners.

Mariners. No mariner, or perfon, ferving on board any privateer, or trading veffel, employed in any of the Britifh fugar colonies in America, or being on fhore there, or at fea in any of thofe parts, fhall be liable to be imprefled by any officer belonging to a man of war (unlefs fuch mariner Thall have deferted from fuch fhip of war) under the penalty of 50 I, 29 Geo. II. cap. 30. \$. 1.
Every mafter of a trading veffel or privateer in thofe parts, before he receives any mariners into his fervice, is to make diligent enquiry, whether fuch mariner hath deferted from any of his. majefty's fhips of war; any mafter receiving a mariner who hath deferted, without reafonable endeavouring to difcover the fame, to forfeit 501.29 Geo . II, cap. 30. \$. 2.
Every mafter of fuch trading veffel or privateer, before departure from any port in the faid fugar colonies, is to deliver to the chief officer of the cuftoms an exact lift of all his men, containing names, ages, and defcription of perfons; neglect thereof, the mafter to forfeit 101 . for each man fo
omitted ; the officer of the cuffoms to return to the faid mafter an artefted copy of fuch lift: on the death or alteration of any feaman, fuch lift to be immediately altered accordingly, and delivered to the naval officer, or chief offcer of the cuftoms in any port where the ohip may arrive. All fuch lifts to be produced, and fhewn to the captains and other officers of his majefty's navy. 29 Geo. II. cap. 30. §. 3, 4: For more matter hereon, fee our article MariNERS.

Of Mediterranean Passes at the Cuftom-Houle.
Mediterranean Passes. Counterfeiting, altering, or erafing them, or knowingly uttering or publifhing fuch counterfeited, altered, or erafed, paffes, is felony without benefit of clergy. 4 Geo. II. cap. 18. §. x.

## Of Merchants at the Cústom-House.

Merchants put out of their turns, without exprefs order or approbation of the fuperior officers, penalty double cofts and damages. 13 and 14 Car. II. cap. 11. §. 34.

One of the bills of every entry inwards and outwards muft, in order to prevent the colouring of ftrangers goods, be fubfribed by the Merchant, his own fervant, factor, or agent, with the mark, number, and contents of every parcel of fuch goods, as are rated to pay by the piece or meafure, and the weight of the whole parcel of fuch goods as are rated to pay by the weight. I3 and I4 Car. II. c. 11. §. 10.

Cockets, or certificates outwards, to be in the Merchant's poffeffion, after he has paid the duty, till he fhips his goods, and then to be delivered, with the marks and numbers to the fearchers. See rule 25, at the end of letter A. See alfo latter end of letter $G$, and ditto of $S$, and ditto of $P$.

## N A P

## N A P

$\mathbf{N}$A PLE S, a kingdom of Italy, and by far the largeft flate there.: It is bounded on the north fide by the Adriacic Sca, on the fouth by the Tufcan, on the weft by the Ecclefiatial State, and on ine eaft by the mouth of the Adriatic and the Mediterranean.
The air, foil, \&c. are-extremely delightful and excellent in moft places, and the country in general is very rich, fertule, and well watered with rivers and fprings, which flow tirrough it from both fides of the Apennines; thefe rivers are, indeed, commonly fo rapid, that they may rather be called tinrents. The land produces excellent wines, efpecially that emphatically called lachryma Chrifti. They have likewife in feveral parts, plenty of corn, oil, rice, and pretty good patture; and the Neapolitan horfes are in no fmall requeft. Their almonds, olives, figs, citrons, oranges, granates, grapes, and other fruits, are very good, and in great plenty; and fo is their flax, hemp, pulfe, anife, coriander, and other feeds The air is, indeed, in fome places, excelfively thot. efpecially on the fouth fide of the Apennines, where the mountains reflect the fun's heat with fuch vehemence, that it is hardly to be borne in the three or four hit months of the year, but the north fide of them is quise tempuate, healiny, and delightful. They are fometimes annoyed with the locuit. The far greater part of the provinces into which this kingdom is divided, have an advantage peculiar to themfelves. For inftance, the air of the hither principality, is fo ferene and healthy, that peopte live in it to a prodigious age ; and the farther principality abounds in cattle more than any other, and all it's fruits are excellent. The Bafilicate is famed for it's fine faffron, honey, and wax ; Calabria for it's plenty of good manna; and the hither, for corn, wines, and mulberries, and the farther for it's fine honey and beautiful hories Otranto is faid to produce as much oil, as would fupply all Italy. Molife abounds with fuch quantity of venifon, that it fells cheaper there than beef or mutton. The territories of Lavoro, Campania, and fome others, are bleffed with fo rich a foil, and excellent temperature, that they produce the fame flowers twice a year. The Abruzzo, efpecially the hither, befides being the cooleft pari of the kingdoin, produces great quantity of corn, wines, oil, and faffron. The other three provinces not only come fhurt of all thofe conveniences mentioned in the reft, bur have, moreover, fome grievous difadvantages peculiar to them: as in the Capatmate the foil is dry, fandy, and in many places barren, and the climate unhealthy: in Apulia the heat is fo exceffive, and the people and cattle plagued with fuch fwarms of venomous flies, that it is fcarce inhabitable. In the province of Bari the air is pretty temperate, but the people are greatly infefted with fcorpions, vi pers, and ferpents, efpecially the tarantula, which renders their territory as uncomfortable as that of Apulia.

Of the Commerce of Naples and Sicily.
Naples, the capital of the kingdom of the fame name, is a very confiderable trading city, and the goodnefs of it's port draws thither a great quantity of foreign fhipping: they are daily, under the prefent reign of Don Carlos, endeavouring to render the fame more and more grand and magnificent: it's principal trade confifts in divers forts of filk fuffs, raw filk, knit filk ftockings and waiftcoats, fuch whofe clocks are of filver and gold, oils of various forts, fulphur after the Calabrian manner, rofemary flowers, annifeed and coriander feed, dried raifms, raifins of Corinth, figs and olives, tartar, foap, dried orange and citron peels, effences and quinteffences of all kinds.
The weight of Naples is called rottolo, and is of two kinds, as that of Lucca, but of different weight.
100 rottoloes gieat weight, make a little more than 185 pounds 's at Paris and Ainiterdan, and roo roctoloes frmall weight, make but $65 \frac{3}{5}$ pounds in thofe two cities; fo that 100 pounds in Paris and Amfterdam, make but 54 rottuloes great weight, and 152 fimall weight.
The canne is the meature for filk and woollen ftuffs; the canne is 8 palms, :00 cannes or 800 palms make 310 ells of Amfterdam, and 30 cannes $\frac{x}{2}$, or 258 paims $\frac{1}{6}$ of Naples.

The palm at Amfterdam makes $\frac{3}{8}$ of an ell, and four lines ${ }^{3}$ French royal meafure, and the canne three ells $\frac{1}{8}$ and fix lines lefs, of the fame meafure.
Corn, and other grain, are fold by the carro, of 36 tomoli, being so rottoloes great weight; one carro and a half, or 54 tomoli, make a laft of Amfterdam.
They keep their accounts in ducats, tarins; and grains; the ducat is five tarins, and the tarin 20 grains: thus the ducat of the kingdom is 100 grains, atd 12 piccioli the grain; there are alfo carlins, 10 of which make one ducat.
All bills of exchanges between Amfterdari and Naples are negociated by the way of Leghorn, Venice, or Genoa. The par of exchange with Genoa is 188 ducats per 100 piaftres of eight rials, bank money, or four livres 10 fols of Genoa, bank money, per ducat.

Remarks:
A treaty of peace, commerce, and navigation, concluded at Conftantinofle the 7th of April, 1740, between the kingdons of Naples and Sicily, and the Ottoman Porte, by Chevalier Fimochiett, minifter plenipotentiary of his Neapolitan majefty to the Porte.

Art. I. All trade thall be free between the fubjects of the contracting powers, and it fhail be permitted to them to trade with the fame liberty and privileges as all other allies in friendThi?; to fell their merchandzes repair damages fuftained by their ibipping at fea, or other accidents, and purchate provifions, \&c.
11. Our fubjecis and their fhipping fhall pay, in all the ports of the Ottom: $n$ empire, 3 per cent. at the cuftom-houfe, as well as the of er duties paid by orter powers ; and the fubjects and fhips of the fublime Porte fhall in our dominions, pay the fame duties, and in the tame manner, as thofe of ocher powers do.
IIt. Our minifter refiding at the Porte fhall be allowed to eftablif confuls in all the ports and maritime places of the Ottoman empire, and be granted all prerogatives and franchifes due to his rank, and our confuls interpreters, and thofe dependent on them, fhall bave the fame privileges that other nations enjoy.
IV. In cafe of the death of any merchant, or other of our fubjecs, in what place foever of the Ottoman empire, his effects hall not be confifated, nor fhall any one feize or poffefs themfelves thereof; but the effects of the deceaied fhall be remitted to our minifter or confuls, to be difpofed of according to the will of the deceafed; and, if he died inteftate; to the partners of the deceafed refiding in the fame place: and, if there be no confuls or partuers in the place, his effects thall be intrufted with the judge of the place commonly called the cadi, who thall afterwards remit the whule to fuch perfon as our minifter at the Porte fhall appoint, and nothing fhall be paid to the cadi but what is called the refmi : the fame fhall be practifed towards the trading fubjeEts of the Ottoman empise.
V. If any difpute, or law-fuif, happens between our conful and interpreters, and the fum amounts to 4000 afpers, the fuit thall not be brought before any tribunal of the provinces, but be referred to the fublime Porte. Merchants, and other of our fubjects, or thofe who fhall be under our banner, who have any law fuit; or controverties with thofe of the Ottoman Porte, be it on account of the fale, purch fie, or any other negociation of merchandizes, or for whatever other reafon, fhall be obliged to have recourfe to the judges: if none of their interpreters be prefent, the judges fhall not receive the information, nor determine the affair ; and, if the debts or fecurities are not leg, tly proved by authentic vouchers, the debtor fhali not be molelted It any differences happen between cur merchats, they fhall be examined and determined by our confuls and incerpreters, according to nur law and ordinary conftitutions. And the like practice fhall be followed towards the fubjects and merchants of the Ottoman empire who mas refide in our dominions.
VI. The Ottoman Porte fhall be allowed to efabith in our territories an attorney general, commonly called fach bender,
for the fecurity and protection of their trading fubjects who fhall refide in our dominions, and he fhall dwell at our capital of Meffina.
VIII. Pilots, and others fkilful in the art of navigation, being in our refpective ports, fhall give, as foon as required, all aid and affiftance to thips that have fuffered by a tempeft; and the merchandizes, fhipwrecks, and other effects, belonging to thofe that have been caft away, fhall be intrufted to the moft neighbouring confuls, to be afterwa:ds reftored to the mafters of fuch fhips.
XIII. No perfons, merchandizes, or effeets, belonging to our fubjects, or thofe under our banner and protection, thall be molefted, unlefs they have been engaged with the corfairs, enemies of the Ottoman empire, or iniifted into their fervice; but they thall be permitted to pafs fieely with their cffects. And, in cafe a fhip provided with our licence, happens to be taken by a corfair of the Ottoman empire, the merchandizes, fubjects, and effects fhall be reftored.
XV. If any of our fubjects be catched in a contraband trade, they thall be ufed no worfe than the fubjects of other nations are upon the like occafions. Our merchants hall, in their way of traffic, make ufe of fuch brokers as they think fit; and whofoever forcibly interferes therein, fhall be feverely punifhed. Our fhips failing to the fcales of the Levant, or to the ports of the Dardanclles, fhall not be fearched otherwife than thofe of other friendly powers.
XVI. Ships belonging to the Ottoman empire fhall not be purfued or molefted in the fight of our coafts; nor fhall they purfue or moleft thofe in friendfhip with us.
XVII. The fublime Porte fhall ftrictly forbid all her fubjects, efpecially thofe of Dulcigno, Albany, or others, failing, from committing any hoftilities againft our fhips or veffels of any kind; which, on the contrary, fhall be received as friends in all the fcales and ports of the Levant; and thofe nations flall be permitted to trade freely in our dominions.
The fublime Porte fhall communicate thefe articles to the regencies of Algiers, Tripoli, and Tunis, and they fhall take all proper meafures to regulate a free and unmolefled com-
. merce and navigation between our kingdums; and there hall be fent, as well on the part of the Porte as of ours, a minifter, who fhall jointly treat upon the plan of the prefent articles.
XVIII. It fhall not be permitted, in time of war, to arm foreign veffels in the refpective ports of the contracting powers, nor any privateers to take out commiffions to ferve under the banner of the enemy. In cale one of thefe veffels are taken, the commander, as an example to others, fhall be hanged at the malt of his fhip, which allo fhall be good prize, with all her effects, and the failors fhall be enlaved.
Neither the one or the other of the contracting potentates fhail grant commifions but to their own fubjects, or to thofe who are fettled in their flates.
XIX. Our minifter and confuls fhall be allowed to demand the ordinary dury of comfulage on all the merchandizes which pay the duty of cuftom, and which are imported under our banner, in the fame manner as it is demanded on the part of other friendly powers; nor thall our fubjects be hindered from loading merchandizes on board their fhips, except, nevertheIefis, powder for cannon, arms, and other contraband goods XX. The fale and purchafe of merchandizes thall be carried on by our fubjects, and thofe who are under our protection, in the fame manner as thofe of other powers in friendhip do. They fhall not be obliged to ufe other monies than thofe which are generally current, nor hall any duty but what is common be required on the exportation of monies.
XXI. Any fhip loaded and ready to depart, fhall not be detained on account of any intended law-fuit, but the difpute fhall be determined without delay by the conful.
Our fubjecis fhall be treated in all cafes expreffed, or otherwife, in this treaty, in the fame manner as thofe of allother nations in friendifip with the Porte.
If we cannot prevent the veffels of Malta, of the Pope, of the Genoefe, and thofe of the Inquifition of Spain, with commifion from his Catholic majefty, from failing in the Archipelago, we will give advice thereof to the Porte by writing, that they may take their meafures in conformity. This article fhall be inferted in the treaty. See Levant Trade.
Of Sicily in particular belonging to the kingdom of Naples.
Sicily, the largeft of the Italian ifiands, is fituate between i2 and 16 degrees of eaft longitude, and between 37 and 39 degrees of north latitude, being about 170 miles 1 long , and rod broad. It lies in a warm, but pleafant and healthful"climate. It is feparated from Calabria in Italy only by the Atraight or faro of Meffina, which is not feven miles over in the narroweft part ; but frum Meffina on the coaft of Sicily, to Reggio on the continent, which is the ufual paffage, it may be 12 or 15 miles over. The country is divided into mountains and vallies, in which there are abundance of fprings and rivulets, that make both hills and vallies exceeding fruitfui, and which occafioned it's being called the granary of Rome. The prodace of the ifland is corn, wine, oil, illk, and excellent fruits, of which they export great quantities, but chichy in forcign bottoms; their prefent monarch, of

French extraction, applies himfclf with great diligence to increafe their hipping and foreign commerce, and bas opened a trade with Turkey, which they never had before, being, like the Spaniards, perpetual enemies to the Turkifh empire. Mount \&tena in this ifland is a vulcano, which, by it's fiery eruptions and earthquakes, has overturned Several of their cities, particularly thofe of Syracufe and Catania, on the eaftern coaft of the ifland. This mountain is fo high, that it is furrounded with a circle of fnow towards the top, great part of the year; but, advancing a little further, we corne to the grand vulcano, fiom whence there iffues flame and fmoak. This is a baron, or cavity, about fix miles in circumference, the fides whereof are incrufted with fulphur, from whence there fometimes iffues a pure flame; and the noife of this burning pit is inconceivably dreadful. This hill is much larger than mount Vefuvius in Naples, viz. about 70 miles in circumfererice at the bottom; and the eruptions from it have been more frequent and more terrible than thofe of Vefuvius. The kingdom of Naples, as well as this inland, was anciently called Sicily; whereupon Don Carlos has revived the former name, and ftiles himfelf king of the Two Sicilics.
Messina is the greateft trading city in all Sicily; the great trade carried on there in filk, and the good fituation of it's port for all fhipping from the Levant, draws thither a great number of foreigners, which makes the trade floutifh. There was no appearance of it's lofing it's reputation, when it paffed under new dominion, by the treaty of Utrecht; and the manufagures that the duke of Savoy eftablifhed at Turin, and in feveral places of his ancient territories, excited the jealoufy of the workmen of Lyons and Tours, and was prejudicial to the fale of their fineft fuffs.
But the revolutions in Sicily, occafioned by the Spaniards invafion thereof in 1717 , and which afterwards, by the ceffion of the duke of Savoy, paffed under the dominion of the houfe of Aufria, drew the foreign trade to Sicily, which was yielded to him by the treaties of Utrecht and Raftadt.
Sicily changed matters again in the year 1735, in favour of Don Carlos, his prefent Neapolitan majefty, the fon of Philip. V. king of Spain; and the trade of this inland has greatly flourifhed under his fovereigrity.
The greateft part of the filk manufacturers dwell in the fuburbs of Meffina, which fpreads'iffelf along the fea-coaft, on the fide of the faro; and there is a very fpacious place, encompaffed with workhoufes, for the organzine filk, which is a very eftimable branth of that manufacture.
The Genoefe, Florentines, and Lucafians, are chiefly mafters of the whole filk trade of Meffina, which draws foreigners there in great numbers.
Another difadvantage to foreigners attending this commerce, is, that the Meffinians are principally their own factors, and will not fuffer, as is done at other places, ftrangers to fettle there for that purpofe; there are, notwithttanding, fome French and Englifh families, and thofe of other nations, who have houfes of trade among them.
The trade in linens of all forts, both for apparel and the table, imported, is very extenfive, and carried on with great facility for credit, the Italians having firft introduced the cuftom of trading generally on credit, at two, three, or fix months for their imports, but fell their own goods for ready money.
The payments for filk, and other merchandizes, is commonly made in Spanifh rials, brought from Spain, Genoa, and Leghorn.
When the merchants do not chufe to rifque fpecie by fea, they may take bills of exchange for Meffina and Palermo, where you may eafily draw for the fair of Novi in Genoa, with little difadvantage; you may likewife occafionally remit from Lyons to Novi, with fome profit.
The chief trade of the city of Palermo confifts in filk and filk manufactories, crude fulphur, tartar, and fine fponges; a great quantity of wheat allo comes from thence, and many other parts of Sicily ; from whence Marfeilles, and the greateft part of the cities of Italy fupply themfelves.
There comes from hence likewife a great quantity of manna. The rottolo is the weight of Palermo; it is of two forts, the fmall and the great weight; 100 rottoloes great weight make 141 pounds $\frac{2}{3}$ of Paris and Amfterdam, and 100 rottoloes fmall weight make only 65 pounds of the fame cities.
The canne is their long meafure. It is divided into 8 palms; they meafure filks and cloths indifferently therewith, which is not very cuftomary in Italy: 100 cannes of Palermo make 287 ells $\frac{3}{4}$ of Amfterdam, and 100 ells of Amfterdam make 33 cannes $\frac{9}{25}$ of Palermo.
There are three meafures for grain of all kinds, the falme, the tomolo, and the mandilo; 16 tomoli make the falme, and 4 mandiloes the tomolo.
10 Salmes $\frac{1}{T}$
117 Tomolis $\frac{3}{7}$, make the laft of Amfterdam. Savary. 685 Mandiloes $\frac{7}{3}$,
A new memoir upon the general trade of Sicily, from Savary.
Their accounts in Sicily are kept in ounces, tarins, and grains; an ounce is worth 30 tarins, and the tarin 20 grains: befides,
there is a crown confifting of 12 tarins, or two crowns and a half, which make an ounce.
Formerly, the ounce was imaginary, neverthelefs, while the Germans were mafters of that kingdom, they coined both filver and gold money, and the gold coin is current under the prefent government.
There are two kinds of weight in Sicily, the great and fmall weight, both of which are called cantarre : the cantarre is compofed of soo rottoloes; the great weight is of 33 ounces; each rottolo of the fimall weight has but 30 ounces, which makes a difference of 10 per 100 ; they reckon roo rottoloes or cantarres fmall weight, to a little lefs than, 200 pounds of Marfeilles weight.
There is befides the pound, which is.compofed of 12 ounces; fo that two ourices and a half, make one rottolo frall weight, or two pounds $\frac{3}{4}$ make the rottolo great weight.
Their merchandizes commonly are [old by the rottolo, and very little by the pound, among which are filk and fome fine drugs. Thofe which are fold by the great weight are all forts of falt-fifh, cheefe, and fruits: there are neverthelefs fome little towns, where the fmall weight only is ufed. The following coins are current in Sicily, befides thofe of foreign countries, viz.
All Portugal money: alfo the Spanifh piftole is worth 45 taAll Portugal money: alfo the Spanifh piftole is worth 45 ta-
rins, or one ounce and a talf; the old French piftole, and that of Savoy, is worth one ounce and 14 tarins, or 44 tarins. The French piftole d'or fol, is worth one ounce 23 tarins, and 10 grains.
The Venetian fequin rupee being full weight, is worth 26 tarins, according to the order of the king; neverthelefs, there is always an agio more or lefs, as they are wanted, which never advances beyond 25 tarins and a half. The other Venetian fequins are worth 26 tarins, for which there is very feldom an agio. They take fometimes the Genoefe fequins for 24 tarins, though they make fome difficulty.
The Florentinea nd Hungarian fequins are alfo current there, and are worth 25 tarins; very few of the firlt are feen therc, becaufe there is fome lofs in their importation.
The genouines are worth 17 tarins, the ducaton 14 tarins 8 grains, the philippes 12 tarins 16 grains, the lenternines 12 grains, the philippes 12 tarims 16 grains, the lenternines 12
tarins, the rofe piaftres in tarins and a half, the fevillanes 12 tarins.
All the coins are weighed, and they pay what they are deficient, viz. 7 grains for a piftole that wants a grain, and fo in proportion; oblerving, that if they are too light by 12 or 15 grains, they are not paffable. It is the fame for filver ${ }^{1} 5$ grains, they and they pay a grain for every two grains deficiency, coins, and they pay a grain for every two grains denciency,
but they generally refufe to take them when they are not full weight.

## Of the Measures of Stcily.

Corn is meafured by falmes, the fame as barley, large and fmall beans, peafe, and fmall nuts. There are two kinds of falmes, the general falme, and the great falme, which differ from one another $\frac{x}{6}$; fo that one great falme makes $I$ and $\frac{7}{6}$ of the gerteral falme; neverthelefs, when it is fpaken of falmes principally for corn, it is always underftood the general falme, principally for corn, it is aiways undertoo; all genera folme,
and if of the great falme it is explained; and if of the great falme it is explained; all pulfe is fold by
great falmes. The general falme makes 1 and $\frac{3}{4}$, or 100 ب general falones make 175 charge at Marfeilles.
Oil is meafured by caffis, which weigh commonly 12 rotolloes $\frac{7}{2}$ great weight, and 5 caffis and $\frac{3}{2}$ make the millerolle of Marfeilles. There are fome places where it is fold by the cantarre, and prices are fixed in proportion.
Wine is meafured by the falme, but there are falmes of different qualities: the falme of Meffina holds 126 meafures, which are called cartouches, and weigh from 22 to 24 ounces. That of Syracufa differs $\frac{1}{8}$, fo that I falme and $\frac{7}{8}$ of Syracufe makes I falme of Meffina. There are fome other different falmes, neverthelefs thefetwo falmes are made ufe of, in cafe of exportation, which commonly is done from Maicali, Melazzo, Syracufe, or the Faro of Meffina, which are the places where they load," and the meafure is different only at places wh.
All the cloths, filks, and linen, are meafured by the canne of 8 pans, each pan making 10 incles and 2 lines: the French ell makes 4 pans and $\frac{1}{2}$, and 3 Holland ells make a litule lefs than one canne of Sicily:

The balance in Italy is thought to concern the interefts of Great Britain; [fe the article Mediterranean] to which we have hitherto fhewn, juft and laudable regard; and. indeed, diftance in this refpect is of little conflquence, more efpecially on a maritime power. Our commerce in the Nediterranean and in the Levant, is of very high importance, and we cannot but be fenfible, that whateicralterations have been felt in the Italian balance, have likewife affected thofe branches of our commerce in a very fenfible degree; fo. that whatever fteps we have taken, eithor during the continuance of peace by negociation, or in time of war, by furporting the only prince in Italy, who declared for the common caufe, and was true to his own interefts, which were likewife ours, were right and juft mealures, and have no doubt left thofe

Vol. Il.
imprefions, which we hope will never be effaced by any art or intrigues whatever.
The injuries our merchants not long fince fuftained, and the great infult offered to the nation by the corfairs of Burbary, will not allow us' to doubt, that it is our true interfft to keep the Italian fates firmly united to us, that when occafion requires, they may afford us all the conveniencies in their power towards chaffizirig thefe infidel ftates, as our ufing vigorous meafures in fuch cafes, and fending a powerful feet occafionally into the Mediterraniean, will contribute not a little to make us refpected by the Italian potentates, as well as to obtain juftice from thofe pyratical governmeits, which as to obtain juftice from thole pyratical governments, which
is a thing fcarce to be expected from milder meafuris. See the article Morocco.
In the Spanifli, war, in the year 1742, the Neapolitans experienced the weight of the naval power of Great-Britain. The behaviour of France in protecting the Spanifh fleet occafioned us to take every advantage we were able. The king of Naples had then joined his father's troops with his forces, which amounted to 20,000 men, and they were, in every refpect, in much better condition than thofe of Spain. It was, therefore, of great importance at this time to oblige the king of Naples to adhere flrially to that neatrality which he profeffed. For this purpofe, admiral Matthews difpatched captain Marrin, as commodore, with a fquadron of hhips, with bomb-veflels, and tenders; to the bay of Naples, with a meffage from his Britannic majefty, importing, that his'Sicilian and Neapolitan majeffy, having violated his neutrality by joining his furces with the declared enemies of Great-Britain, of the queen of Hungary, and the king of Sardinia, with whom his Britannic majefty was in alliance, he, the commodore, was fent to require the king of Sicily, not only to, withdraw his troops from acting in conjunction with thofe of Spain, but to promife, in writing, not to give them any further affiftance in any refpect ; adding, that if his Sicilian majefty fhould delay giving the prop, fed fátiffaction, he had orders to bombard Naples.-But the court of Naples thought proper to comply with the firited demands of the Britifh court. For it is incredible, into what a confternation our fleet threw the capital of that monarch. The hiftory, perhaps, of no country can parallei the quicknefs, the decifion, and the importance of this expedition, which was undertaken with fo inconfiderable a force, againft a powerful prince, fitting in his capital, and furrounded by 300,000 fubjects. It is an illuftrious proof, how unavailing the pride of the fineft city in the world, is againft the very frown of a people that has the command of the fea. See Naval Power, and Sea British.

## NATIONAL ACCOUNTANTSHIP.

Under the articles Accountantship, Banking, Debtor and Creditor, Ledger, Mercantile AccountANTSHIP, I have endeavoured naturally to introduce the reader into this ufeful art, by reprefenting the fame in variety of familiar lights, with a view to fhew him how it was applicable to every kind of bufinefs, from the moft diflinguifhed merchant and tradefman, to the privare gentleman and greateft nobleman.
If what we have faid under the feveral heads enumerated be duly attended to, and thoroughly comprehended, no gentleman of diftinction can be at a lofs to underfand, what may further be faid, in relation to the beft method of keeping the Accounts of the Nation, the furef way of unavelJing any accounts of this nature, and difcerning every kind of mifapplication of the public money, and every defigned mifconftruction of acts of parliament, in order to alienate the national funds from the real defign of their primitive eftablithment, and thereby to occafion fuch alteration in shofe funds, that has defeated, or may hereafter defeat any the moft wife and upright intentions of the leginature to maintain the public credit, and honourably to dificharge the public debts. Nothiag can more apparently thew the neceffity of fomething of this kind, than the great debates for many years together, both within doors and without, during the adminiftration of the late Right Hon. Sir Robert Walpole, afterwards Jord Orford, more particula ly in regard to the application of the Sinking Fund, to other purpofes than the redemption of the principal money debt ; for, had the primitive fenfe of the asts of parliament been immediately fignificantly explained, in the adjuftment, regulation, and ftating the public accounts of the nation, there could not have been a politblity of miftaking the original meaning of the acts of pallianerit; for fuch is the fupreme exccliency of the art of accountaitflip, that if the Money Affairs of the kinedom are juftly and faithfully ftated in the Pubinc Accoun rs. according to the true and folid principles of that art, I will prefume to fay that no fuch-like intemperate debates conld ever happan as then did, the natural and prifline caufe of the rife and eftablifment of any fund could never be miltaken, and no party feuds and animolities take place among our reprefataives, in their deliberations upon the nature of the funds, and the in their deliberations upon the nature of the funds, and the
ufes and application herenfarall times, and upon all nicafions. whes and application therenfar al ours, and upon all necations.
And how this may be done, I intend one day to fhew, and to do meyrif the honnur muft humbly to fubmir a Nriv Scheme oi National Accountantship, to the con-
hisation

Fideration of the honourable houre of commions. For the prefent I thall only refer to the aricicle Revenue [Public Revenue].
NAVALAFFAIRS. Not only the prefervation of that thare of commerce we poffefs, but it's future advancement, depend on the good condition and the wife regulation of our penval affairs, and not only fo, but the very being of Great Britain as an independent empire and a free people, depend upon the conftant fuperiority of it's maritime power.--We thould be held inexcufable, therefore, if in a work of this kind, we paffed diver an article of fuch high concernment to the interelts of commerce.
Whoever would befully informed concerning the figure which England has made in all ages in maritime affairs, may find abundance of curious thatter in Selden's Mare Claufum, and from his time to ours, we may trace a feries of facts, in Lediard's or Burchet's Naval Hintories. I hall take notice of two remarkable periods of our ancient maritime ftory, becaufe fome ufeful obfervations may be made in comparing them; both with other nations and with ourfelves, in our prefent fituations
We are told that Edgar, king of this inland, had four thoufand Chips; by the terror of which he fubdued Norway, Denmark, all the iflands of the ocean, and the greateft part of Ireland. Thefe inftances of his power, are fpecifed in a record * cited by that great lawyer Sir Edward Coke, in the preface to bis fourth Report. This monarch made a naval progrels yearly round this ifland, and once took it in his head to caufe eight conquered kings to row his barge on the river Dee. But it feems that fome of his fucceffors have had fuch minifters, as either neglected to keep our fleets in repair, or were afraid to make ufe of them: for, at feveral periods of time, fince the days of king Edgar, we find that this kingdom has been miferably infulted on the feas, and even fuccefsfully invaded by other nations.

* Altitonantis Dei largiflua clementia, qui eft rex regum \& dominus dominantium, ego Edgarus Anglorum Bafleus, omniumque infularum oceani qux Britanniam circumjacent, cunctarumque nationem que infra eum includuntur. Imperator \& dominus, gratias ego ipfi Deo omnipotenti regi meo, qui meum imperium fic ampliavit \& exaltavic fuper tegnum patrum meoram qui licet monarchiam totias Angha adepti funt a tempore Athelltani, goi primus regum Angloram omnes nationes, quæ Britanniam incolunt fib armis fubegit nullus tamen eorum ultra fines imperium fuom dilatare aggreffus eft, mihi tamen conceffit propitia divinitas cum Anglorum imperio, omnia regna infularum oceani cum fuis ferociffimis regibus ufque Norvegiam, maxmamque partem Hiberniz cum fua nobilifma civitate de Dublina Anglorum regno fubjugare. Pref. to $4^{\text {th. }}$ Co. See alfo Rapin's Hiftory of England, in the life of Edgar.

The Britinh Neptune flept, or flumbered, molt part of the time, from the reign of king Edgar, to that of queen Eliza. beth: in her days he fprung up with vigour, being rouzed by Spain, which was then the greatel maritime power on earth. From queen Elizabeth to our time, our naval ftrength has gradually increafed, infomuch that at this day, the Spanifh fleets oppofed to ours, would make a very contemptible figure on the ocean : we now have it in our power to lord it over the watery world. It may be worth our enquiry, to know how thefe fluctuations have happened in the dominion of the feas.
The tafks and courfe of life of feafaring men are not to be learned in an inftant; their employment is a laborious and dextrous employment, to be acquired only by application and induftry. Money will buy all naval ftores except mariners, but unlefs a fucceffion of them be preferved, no wealth will be able to purchafe them. The fureft, the cheapeft, we may juftly fay, the only profitable method of fupporting fuch a fucceffion, is to have perpetual occafion for a multitude of feamen in a courfe of foreign traffic. It is indeed probable, that Edgar's amazing power at fea was, for the mot part, owing to his own great genius, attended with indefatigable endeavours in training up, and year by year augmenting the number of his mariners; for in thole days, England had no great fhare of foreign commerce, people generally contenting themfelves with the produce and manufacture of their native country. This great prince mult, therefore, have grievoully oppreffed his vaffals to enable him to keep up fo great an armament; and it is no wonder that it dwindled in fucceeding reigns, becaufe it had not that folid aliment, trade, to nourifh it.
The fuccefs of the Spaniards in America, caufed their fhipping to increafe beyond all their neighbours; they had occafion in their beginning there, for great numbers of tranfports o carry not only men, but alfo horfes and other cattle, and ftores of every kind, to their new conquefts. Add to which that Sicily, and a great part of Italy belonged to them at that time. The communication with thefe laft-mentioned places was by fea, fo that they had a confiderable part in the increale of the Spanifh naval power. In this flourifhing condition they continued for a great part of the long reigns of their Philip the IId, and of our Elizabeth. She had not a flee
able to give their armada battle: her fhips, indeed, were light and nimble, the Spanifh, though larger and more numerous, were unwieldy; therefore the lighter veffels being in no danger of a chate, fought or food off as they faw occafion. But this advantage would not have been lufficient if Providence had nor interpoled a tempeft for the protection of England.
The queen knew to what caufes the owed her danger and her deliverance, and became more attentive than ever to plant colonies in America. Death prevented her from executing her great defigns; but fome of her beft and wifent fubjects, and molt gallant feamen, had entered fo deeply into the plan, and laid it fo nearly to their hearts, that what the had intended in the fettlement of Virginia, was in a good meafure effected in the reign of king James the Ift, though the undertaking was a great + difficulty upon his timorous councils, becaufe the Spaniards, of whom he ftood in fervile awe, did not approve of it. But his fhame, with much debate, barely got the better of his fears, and that mine of treafure was opened to Great-Britain.
$\dagger$ See a Short Collection of the moft remarkable paffages from the original to the diffolution of the Virginia company.

This, with what elfe has fince been executed in favour of England, both on the continent and in the iflands of that new world, has added fuch a weight of maritime force to the natural ftrength, which we owe to our fituation, that we are able, by wife management, to give law to the ocean. Spain indeed, has greater councries and more fubjectis in America, than we have, and yct does not navigate in that trade a tenth part of the fhipping that we do. By a lucky kind of poverty, our dominions there have no mines of gold or filver: we muft be, and ought to be, contented to deal in rum, fugar, rice, tobacco, horfes, beef, corn, fifh, lumber, and other commodities that require grear fowage; the perpetual carriages of the fe, employ above 100,000 tons of hipping. The value of 50001 . in thele wares loads a veffel, which in the Spanifh trade would be freighted homeward with half a million of pounds fterling.
Thus has the Almighty placed the true riches of this earth on the furface of it, our fugars, rice, and tobacco, \&xc. are more real and permanent wealth, than their richeft minerals. They are wealkh, which create a power to defend our poffeffion of them: and, without a fufficient force to defend that, the poffeffion of all wealth is precarious. Should not Great-Britain, therefore, be ever attentive to the true intereft of our American plantations? Will not fuch meafures prove an eternal increafe to the tonnage of Britifh fhipping? See British America.
The Dutch were efteemed all the laft century, the only match for England on the feas; but, as a great part of their firength was merely artificial, it fubfides like the vivacity of a wretch, who has railed his Spirits with a dofe of opium. Commerce, and that wealth and power which attend it, may be either abfolutely in the power of a ftate or empire, confidered in and by itfelf, without regard to it's neighbours, which we call natural wealth, power and commerce; or they may depend upon treaties with other ftates, or be owing to their connivance, which, pro tempore, amount to a tacis agreement: thefe latter fpecies may becalled technical wealth, \&c. Such was theffifhery of the Dutch, which they enjoyed by the inactivity of fome of our Englifh kings: and this muft decline of courfe, if we vigorounly fupport our fifheries of every fort, becaufe of our fuperior treafures of this kind on the banks of Newfoundland and on our own coafts. Another branch of their artificial ftrength was, that by the indolence of all nations, they were for a time the carriers of the univerfe: but the world is grown wifer, other nations begin to work for themelves; and the Netherlands will fadly find, that this temporary fund of ftrength mult allo fail them. Their only natural foreign wealth and ftrength is their Eaft-India trade ; part of this is truly their own, becaufe the land that produces fpice is in their poffeffion: but when the two former branches fhall be cut off, they will find that poffeffion every day more and more precarious.
Thus the Britifh empire has a natural wealth in itfelf, and in it's dependent members, but it has allo for many years paft, enjoyed an adventitious, or artificial traffic. We have been emplayed by all the world in the woollen manufacture, but other nations have begun of late to clothe themfelves and their neighbours too. It is a fond fancy in us to imagine, that there are no fleecy theep in the world but our own, or that the reft of mankind will not learn the myftery of working in wool.
We feel this trade decreafing daily, and yet there are thofe among us, who would argue againft demonftration. But when they hope, by any laws of Great-Britain to hinder foreign nations from falling into the woollen manufacture, they may as well folicit an act of parliament to prevent their grafs to grow, and to intercept their fun-fhine. We will con fider one objection before I leave this point, becaufe fome imagine that we are fecure in this trade, againft the endeavours of all foreigners: fay they, we make better goods than can be made with any foreign wool, unlefs it be mixed with

## N A V

ours. Be it fo. But then, does our great wealth and income by that trade confift only in our fineft goods? Have not the Englifh merchants complained, that Ireland has underfold us in coarfe goods at Lifbon; that becaufe their wares are coarfe, they can be afforded cheaper, therefore they have a ready market, while ours, that are finer, but dearer, may rot in the warehoufe? What fays our Ruffia Company? Has no Pruffia fupplanted us in the clothing of the Mufcovite army? Who can be ignorant of the extenfivenefs of the woollen manufactories of France, if they confult what i have faid, under the article France? We have fent armed floops to check the Irifh, but who will reftrain the French, Germans, and Pruffians? The multitude don't much value the finenefs of their garments, they only defire to be warm; it is the cleathing of the millions that produces millions of money, and this is what other countries will certainly have their fhare in.
Is not this a time to caft our eyes upon our natural wealth, and to augment it as falt as poffible? If Mufcovy fupplies it's own woollen goods, or is fupplied by any other foreigner, it ought to make us refolve to bring our naval itores from North America; if Spain and Italy refufe our drapery, we may reject their filks, their raifins, oil, wine, olives, and divers other merchandizes, and be fupplied from Carolina and Georgia, with proper management.
We have been credibly informed that a gentleman, not long fince deceafed in this kingdom, was the firft perfon who made pitch in America; the people whom he converfed with then, looked on this experiment as a chimera, but it proved fo real, as to reduce that commodity above one half in it's value.
France has not the fame advantage as Great-Britain, in it's fituation for maritime affairs: that country is extended wide within land, and has not the benefit of being penetrated by many deep creeks, or navigable rivers; on half it's borders it is bounded with the continent, and the good harbours of France are but few, compared with the numbers of ours. See Britain [Great-Britain]. Thefe reafons of our capacity for conftant fuperiority over them in maritime affairs in general, ferved to prevent their increafing in North America as faft as we did; and there is another fpecial reafon, viz. we have bad the navigation of North America in us, by the larger traffic of our early fettlements', and even of the French fugar-colonies, which we fupply in a great meafure, with lumber, herfes, and provifions, though this trade may not be fo nationally beneficial as fome are wont to think. We have five fouls on the continent for one of theirs; their principal fettlement is in a climate too cold, and not very fruitful; and yet they contrive all imaginable methods of augmenting their numbers: they intermarry with the natives, and convert them; and the French king fupplies 2000 perfons yearly, with money to enable them to go thither, without being afraid that ho thall drain his country of people.
It is ealy to demonftrate, that we can afford to fend people abroad better than France and Spain. They have in each of thofe kingdqms more than 100,000 cloiftered females, not permitted to propagate their fpecies; and the number of males in a flate of celibacy is ftill abundantly greater, as it comprehends their fecular and regular clergy, and a confiderable part of their great armies, who refolve againft marriage, becaufe of the uncomfortable profpects they have with regard to their progeny.
It may be faid indeed, that though thefe do not marry, yet many ${ }^{\prime}$ of them get children; but it mult be admitted, that the uiual fate of that kind of propagation is, to be deftroyed fecretly, either before or after the birth; and the former of thefe crimes frequently procures barrennefs in the women. We have entered into the confideration of the lofs by the celibacy of their males, that nobody may imagine the computation of their deficiencies fhould be made upon their cloiftered females only.
And yet let us take a fhort view of their loffes upon that calculation, allowing a monk, or a prieft, for an hufband to each immured woman. The moft exact rules in this kind of arithmetic are as follow
Firt, the people who go on in an ordinary courfe of propagation and mortality, and are not vifited with fome extraordinary deftructive calamity, grow double in their number in 100 years.
Secondly, thirty-three years are a fufficient allowance for a generation, or three generations to 100 years. Now,
Since the Reforbation, we will fay, about 200 years are elapfed, at which time celibacy was abolifhed in England. Therefore, in that time, France has lioft more than five generations of it's inhabitants, at the rate of 200,000 in each generation, befides the accumulated numbers of cent. per cent. for each hundred years, which lofs muft be reckoned upon the fecond century, as intereft upon intereft; fo that the 200,000 individual perfons who were under the vow in France, 180 vears ago, will, 20 years hence, be a negative upon their numbers to the value of 800,000 people.
They who underftand a little arithmetic, may divert themfelves by computing the amount of all the parts of this lofs of people in the five generations.

## N A V

My aim, from what has been faid, is to rectify the notions of fome of my countrymen, upon an affair fo important as our commerce ; to point out the differences between a natural and an artificial trade; to inftance them in our neighbours compared with ourielves; to thew the induftry of the French to rival us in America; in fite of their geography and their religion; and to inculcate that our ftrength depends on our Shipping, and our thipping on our wide-extended colonies, which have neither gold nor filver, and, for that very reafon, confirm us the more powerfully in the dominion of the feas.
It is an obfervation worthy the ferious attention of every Englifhman, that empire has always followed trade, travelling, as it were, from one part of the world to another, as commerce has fhifted ir's ftation; and; in all councries, ftill growing or declining in power in proportion as traffic has been encouraged or difregarded.
Cicero ad Atric. fays, Qui mare teneat eum neceffe rerum potiri. This is the opinion of a very great man, who had been at the head of affairs in a moft powerful fate, above 1700 years ago and the practice of all great princes who have lived fince that time, and have ever defigned either to extend their dominions, or to render themfelves confiderable to their neighbours, fully proves the obfervation to be true.
The Romans (who afpired to nothing lefs than univerfal empire), while their conquefts were confined within the narrow bounds of Italy, were fo much prejudiced with the notion of a landed intereft, that, as Livy relates, they thought it fcandalous for a man of fafhion to exercife any merchandize : and in confequence of that prepoffeffion, they were not in a capacity to make any figure by fea, an element little practifed by them, and lefs underfood. But this notion lafted only 'till they had an opportunity to look more abroad into the world ; then experience taught them, as they came to quarrel with the Carthaginians (who at that time, were the great trading people) that commerce was necefiry to eftablifh their empire; and that not only their conquefts, were at an end, but the poffeffion of the territories they had conquered were precarious, unlefs they could acquire and fecure to themfelves the dominion of the rea.
If the dominion of the fea is abfolutely neceflary to a people who am at empire, of how much greater moment is it to a nation whofe grandeur, whofe wealth, whole very being depends upom Commerce and Navigation? It is with the higheft reafon, therefore, that we ought to look upon every wrong done to our trading fubjects, and on every attempt towards eftablifhing a new maritime power in Europe, as the moft faral, and, therefore, the mont unpardonable injury to a nation, whofe glory confits in being miftrefs of the fea, and whofe ffrength lies in trade.
The nations recorded in hiftory to have been at any time poffeffed of the empire of the fea, have always cfteemed a neigh bouring prince's offering to fet up a naval power, by building more lhips of war than were requilite to lecure the trade of his fubjects from piracies, \&c. to be as juft a foundation of political jealoufy, as the raifing of new forts upon his frontiers, or the levying of a formidable army in a time of profound peace : and, therefore, they have always taken meafures either to prevent fuch attempts, or to deftroy them in their birth. This was the practice of the Romans: and this has been the policy of his majefty's royal predeceffors, the kings of England.
The Romans, as foon as they had acquired the fovereignty of the fea, (which they thought not dearly purchafed with the lofs of above 700 fhips ) immediately entered upon meafures to preferve fo valuable an acquifition. They grew watchful over their new dominions, and were foon alarmed by the fmalleft umbrages, from any power that did but feem to interfere with them in naval affairs. It was from there political confiderations, that they would not admit the Carthaginians to fit out any fleets, and that they forbid Antiochus (at that time the greateft king in the eaft) to build more than 12 fhips of war. See the afticles Austrian Netherlands, and Ostend East-India Company.
It is not an empty title which the kings of England have always taken to themfelves, of being fupreme lords and governors of the ocean furrounding the Britifh fhore, but a right which they have conttantly maintained at the expence of numerous fleets. In that famous accord made between our great king Edward I. and Philip the Fair of France, it appears, that the French king was by him called to an account for piractes committed by his fubjects within the Britifh reas : and, by that memorable ordinance made at Haftings, in the reign of King John of England, the honiour of the flag (ever claimed by the Englifh) is decreed to take place univerfally, not barely as a civility, but as a right to be paid (cum debita reverentia) with due deference.
There is no occafion for troubling my readers with a detail of examples to the prefent purpofe, fince nothing is more known in our Englifh hiftory, than that our kings have ever been jealous of their neighbours making ufe of any pretext to increafe their naval ftrength; and have accordingly judged it of the greateft importance to fruftrate fuch defigns though at the
rifque

## N A V

rifque of a war: for what lefs did our immortal queen Elizabeth rifque, when the fent to the French king, to prohibit his building any more fhips of war than what he then had, without her leave firft obtained. This was an inftance of wifdom and refolution worthy a princefs who claimed the fovereignty of the fea.
Maritime trade, and in wholefale, has nothing in itfelf but what is honourable. Antiquity furnifhes us with illuftrious teftimonies in favour of thofe who practifed it. Solomon, king of Ifrael, according to feripture hifory, carried on a great trade abroad. Solon, that great legillator of Athens *, who was of one of the nobleft families in that flourifhing republic, being, by the father's fide, defcended from Codrus, the laft king of Athens $t$, in order to repair the decays of fortune, into which his family was fallen, by the exceffive liberality of his father, chofe rather to carry on trade, than to take money from rich perfons, who offered him large fums, and promifed never to allow him to be in want.

- He lived $59^{8}$ years before Chrif.
$\dagger$ Plutarch's life of Solon.
Now at that time, fays Plutarch*, after Hefiod, no handicraft was hameful; no art nor trade made any diftinction between men. Merchandize efpecially was honourable, becaufe it opens a comounication with barbarous nations, affords the means of making friendfhip and alliance with kings, and leads to the knowledge of an infinite deal of things, which would be unknown without it. There have been merchants founders of great cities; as Proteus, who founded Marfeilles, after having gained the friendhip and efteem of the Gauls who lived upon the banks of the Rhone. We are told alfo, that the wife Thales and Hippocrates, the mathematicians, applied themfelves to commerce, and that Plato defrayed the charges of his journey into Egypt, by felling oil in that country.
* M. Dacier's tranflation.

Cato the cenfor *, that Roman Demofthenes, a man of fuch rigid and delicate fentiments of virtue and honour, thought it not below him to acquire an eftate by commerce: wholefale trade, he faid, depended chiefly upon the mind, whereas trade in retail gave only employment to the hands. As all the acts of the mind are noble, the laws, which have neglected the diftinction and illuftration of trade in retail, for certain moral reafons, have honoured and diftinguifhed wholefale trade.

- Plutarch's life of Cato ; he lived 196 years before Chrif.

As a proof that commerce had nothing in it bafe and derogatory among the Romans, the emperor Pertinax exercifed it the greatelt part of his life, and even after he was emperor. Caracalla*, in the cruel maffacre he caufed to be made at Alexandria, had great regard to the body of merchants, who were very numerous in that city: in giving orders to all foreigners to remove from it, he excepted the merchants, and allowed them to ftay there at liberty. Alcxander Severus, from a view to make trade flourifh in Rome, and to bring in merchants thither, granted them large immunities. Maximinus himfelf carried on trade with the Goths, \&c.

* Hiflory of che Commerce and Navigation of the Ancients, by M. Huer, cap. 57 . no. 9, 11, 12, and 13 .
We have given occafinnally a multitude of other examples, throughout the courfe of this work, which fhew us that great men have thought it no difparagement to them to acquire great eftates by, trading: fuch examples are common among the Greeks and Romans ; thefe people had as delicate notions of honour as we. The Venetians, in order to train up the fons of their nobility in the knowledge of the navy, oblige the merchant fhips that fail into foreign countries to take always two of them, whom the captain is obliged to maintain at his table, without being bound to any work, but only to take notice how the fhip is wrought, and what obfervations are made by the pilots.
In fine, trade was fo honourable among the Ancients, that the emperors granted it a particular protection. They honoured the cities that fignalized themfelves in commerce, or in building fhips, or that were famqus for fome confiderable fea- port. Thefe cities caufed their medals to be famped either with a thip, or with a prow, or fometimes with a Neptune and his trident, or with a dolphin. Such were the medals of Tyre* and Sidon, of Byzantium, of Leucate, Chelidonium, Syracufe, \&cc. Hifory of the Commerce and Navigation of the Ancients, chap. xlvi. no. 15. p. 273.
* The Scripture, Ezek. xxvii. furnihes us with a glorious telimony of the riches and maritime forces of the city of Tyre, which the prophet extols, as weil as her failors, her fhipping, ber great tride. \&c. But this might be the old Tyre; the new city far furpafled it, according to the late M. Huet, in his Hiftory of the Comnerce and Navigation of the Ancients, chap. viii. no. 4. p. 33 . According to Herodotus, the Tyrians came from the Lydians.

## N A V

## Remarks.

How the French regard their maritime affairs.
' France; as well as the Roman empire, fays Monf. Dutot; has maritime and trading towns that deferve medals, and are undoubredly of confequence to be honoured and procected; becaufe they have fignalized themfelves in trade, and by building of Chips. Nay, the has fome that has done more; and, though they have neither lands nor manufacture, have found a way to carry on navigation. They are accuftomed to hazards; their fips have braved the dangers of the main; they have grown formidable to their neigbbours, by harraffing them continually, and by weakening them to fuch a degree, that thofe enemies, in revenge of their loffes, fwore the deftruction of one of thofe cities; and, for that effect, invented that formidable machine, fo celebrated, which was to reduce it into afhes. What wonders have been done by the courageous inhabitants of that city, equally diftinguifhed in it's watlike and trading capacity, in defiance to all the efforts of the enemies to the crown? Bound to fome rocks, they had found a way to render it inacceflible on all fides; to build fortreffes, which fecure their port; in a word, to make the rocks a prodigy of art, and an eternal monument of a genius for war, matched with a genius for trade. How many excellent fea captains have been produced in that city, and fome others like it, which cultivate trade! How many fhips have they built and fitted out! What noble failors! What excellent artifts! How many young combatants have they trained up *! And then how much gold and filver have they brought into the kingdom ! Their fhips happily arriving from the South Sea in 1709, brought home gold and filver bullion to the amount of thirty millions, which was a fupply to the ftate of fo much the more importance, as thofe cities lent the king fifteen millions in a very preffing exigence. This is what we are told by the minifter of the finances himfelf, in the 13th page of his Memoirs. What fpoils of the enemy have thofe trading towns brought home, ruining the commerce of our neighbours, and fecuring our own! Shall the nobility then [hear the Frenchman, Britons!] moft of whom live idly in their cafles, be thought more ferviceable to the ftate, more brave, more warlike, than thofe heroic citizens? How would the republics of Greece and Rome have heaped honours and rewards upon citizens fo worthy of that name!

* I fhall take leave to remark here, that feveral of the privatecrs and feamen whom the city of St . Malo made ufe of during the courfe of queen Anne's wats, were Normans. Among them who manned their thips, and diftiry whed
themfelves in fight, there were many from that province: themfelves in fight, there were many from that provin at this day feveral Maloine families are natives thereof,
The maritime forces of the Romans contributed not a little to their great power. Accordingly we fee in the Digefts, fome laws which inform us how much they applied themfelves to fea affairs in certain conjunctures, even during the heat of their wars. The exemptions from all municipal charges, which they granted to the citizens to invite them to build fhips and cultivate trade, are invincible proofs of their having been perfectly fenfible, that maritime force and commerce were neceflary to the prefervation'and advancement of their power.
Cardinal Richlieu, who had fo extenfive views for aggran, dizing the ftate, found no way more effectual to promote the power of the king, and the riches of the nation, than to improve navigation and trade; and, indeed, there is no other that can bring us in gold and filver. That great fatefman fhews us very well the neceffity and ufefulnefs of a power by fea *. According to him, trade has a neceflary dependance upon that maritime power.
* The Political Teftament, chap: 9. fect 5. I. 6.

After having fhewn the advantages which the Englifh would have over us, if our weaknefs by fea fhould cut us off from all means of attempting any thing to their prejudice, our author cites, by way of example, the infult offered by that proud nation [obferve monfieur again] to the duke of Sully, fent by Henry IV. into England, in quality of ambaffador extraordinary; and he counfels Lewis XIII. to put himfelf in fuch a pofture, that he may not fuffer the like again. He fhews all the advantages of a powerful navy; he proves the ufefuinefs of it and of trade, by the example of the Dutch, who owe their power only to their navy and their trade. It was in the time of his miniftry, that Lewis XIII. made that glorious ftatute of February 1, 1629 ; where, in order to induce the fuhjeels to carry on fea-trade, he declared by the 452d artirle, That the gentlemen, who fhould apply themfelves to that commerce in their own perfons, or by fubftitution of others, fhould Derocate nutifing erom their Nobleity, \&c.
It was upon there fame principles that the great Colbert, that faithful minifter, protected arts and manifactures. Here were at that time in France a great many factors and commiffoners from foreign tradss, and very few merchants. He
ooked upon focieties or companies ${ }^{*}$ as the moft proper neans to engage the French to carry on trade by themfelves : ind, as among all the examples of commerce that are exant in the feveral parts of the world, there is none richer or more confiderable than that of the Eaft-Indies; he dif:overed thereby the importance of navigation and of long royages ; he oblerved that thofe voyages not only were indi;ations of the power of a ftate, but alfo an infallible means of introducing plenty into it. He was of opinion, thereore, that it fuited with the glory of the king, and the inteefts of his people, to undertake that trade, which Henry IV. ind Lewis XHI. could not carry to it's perfection. He deermined the king to form the fame defign in 1664 , and to pare nothing for the accomplifhment of fo great a work, which might be ranked among the nolt famous tranfactions of the reign of Lewis le Grand. He formed the Eaft-India If the reign of Lewis le Grand. He ormed the Ealt-India
sompany, he protected it with all his power, affited it with is money, and took upon himfelf the heavieft charges of he execution, though he would have no fhare in the profits of the fuccefs. You will even find in father Charlevoix, the efuit's Hiftory of Japan, that knowing the Japanefe reeived in their ports only Dutch fhips, and would traffic either with the Spaniards nor the Portugueze, upon account of their profeling the Catholic religion, whereby they beame odious to them, this minifter propofed that the emperor of Japan fhould be told, that the king of France had a great nany fubjects who followed the religion of the Dutch; and that if he thought fit, the king would fend Thips to him nanned by none but thofe of that religion $t$. This is called hinking like a minifter. The project, however, did not fucceed, by reaion of the prejudice of the Japanefe governnent, which is terribly apprehenfive of Atrangers, having got intelligence of what paffed in the Eaft and Weft-Indies.

* This is the firf ftep by which all maritime nations cut out their branches of foreign trade; and it is the beft way for all new branches to be firft eftablifhed, becaufe companies will hazard what private men will not.
t See Oblervations upon modern writings, Tom. X. p. 305.
In this manner did that great minifter encourage traders to apply themfelves to maritime commerce, and to build fhips roper for long voyages. That company was not the only sne he formed; he eftablifhed one for the Weft-Indies, for the trade in the Levant, and for that in the North Seas. He laid out himfelf for the improvement of the old manufac-

## N A V

tures, and eftablifhed new ones; in fine, he gave powerful protection to trade, arts, and manufactures, which he juitly confidered as the molt effcctual means to increale the power of the king, and the riches of the kingdom. And, indeed, to fay it over again, there is no other way that can bring us in gold and filver.
M . Colbert had the fatisfaction to fee, that his pains and endeavours were not fruitels, he left trade in a fourifhing fate: but after him, the face of things very much changed, commerce was ruined, and all the expences he had laid out for the eftablifhment of the Eaft-India company, and what were laid out fince his time by his fucceffors, who were no longer fufficient to make that trade advantageous.
Navigation; which is the foul of commerce, procures always a valt profit to the ftate. The building of fhips, their victualling and ftores, confiderable articles of expence, which, being laid out within the ftate, furnifh feveral inhabitants with the means of living and enriching themfelves. It employs all the inhabitants of the fea-coafts, who can hardly be ureful in any other way; and, for want of this navigation, are in a manner neceffitated to ferve in foreign countries; this is what happened, whenever we gave over lea trade. By lofing them we fuftain a double lofs; our coafts become defolate, our navigation languifhes, and that of our foreign neighbours increafes at our expence. Prohibitions againf Sallors going out of the kingdom are ufelefs: they are born only for failing, the fea is their element; if we do not employ them that way ourfelves, no prohibitions will prevent their going elfewhere to feek for employment.
But we are told, the maintenance of a powerful navy colts the ftate iminenfe fums of money, which it is unable to fupport.
To remove this prejudice, we muft fhew by an accurate and well calculated detail, what was the monthly expence of the French navy in 168 I , the mof flourifhing one that France ever had. Here is an exad fummary thereof below *.
This navy, as we know, was as fplendid and magnificent as it was powerful. It confifted of 115 hips; of the firft, fecond, third, fourth, and fifth rates, of 24 fonall frigates, 8 fire-fhips, 10 barca longas, and 22 pinks, making in all 179 fhips; confifting of 7080 pieces of cannon, 1028 major officers, 7955 marine officers, 20,618 mariners, 10,904 foldiers, the whole crews being 39,477 (the 1028 major officers not included).

* The Summary.

Whofe monthly pay when they were equipped, amounted to the fum of 667,143 oo 00 And the victuals per month coft
Which makes the fum of
$\begin{array}{lll}3,6,650 & 00 & 00 \\ 1,003,793 & 00 & 00\end{array}$
The 30 gallies, all of them likewife armed, whofe whole crew were 5600 flaves, 2400 failors of one clafs, 935 of another *, and 3010 foldiers, coft for their
pay and victualling
Pay and victualling extraordinary
The expence of that whole navy armed and equipped, would therefore coft per $\}$ month the fum of
Suppofing the whole to be equipped for fix months of the year, a thing which ne-
ver happens every year, that formidable navy would coft

* Mariners de rang and mariners de rambades, names taken from the parts of the galley to which we have nothing correfpondent in Englifh.

Had all things rifen in proportion to the fpecie in France, fays our author, we might fay that this expence at prefent would amount to $12,933,920$ livres; becaufe $7,272,08$ I lives of that time, are exactly equal to $12,933,920$ livres of the prefent. But all things have not rifen in proportion to the fpecie: the falaries or pay of the fea-officers, are much the fame as they were in 168I; a feaman of the firft clafs has no more than is livres per month; thofe of the fecond 13 livres 10 fols, and fo of the reft. Provifions are not dearer at this day than they were. This being the cafe, the pay and Vol. II.
victualling of 39,477 men, who were in the aforefaid 179 fhips (not including 1028 major officers) and of the 10,985 men, who were in the above-mentioned gallies, making 50,462 men, which amount, as we have feen, to $7,272,081$ livres of that time, would hardly coft more at this day. The additional expence, if it can be called one, will only refpect the conftruction and equipment of the fhips and gallies, which we don't comprehend in this calculation, and which, to a mere trifle, might be made up by the faving of thofe years, when only a part, or at leaft not the whole, of that navy is 4 K
armed,

## N A V

atmed, for the whole navy is not armed or equipped every year; when at fea, it is there for ordinary only fix months of the year ; or when it is not, or but a part of it, the expence is not fo high; what is fhort of it amounts to a good deal, and at the long-run, perhaps, more than compenfates the charges of the conftruction, rigging, and arming of thofe thips.

## Another Calculation.

It is agreed among thofe who know what the conftruction and equipment of fhips is, that a man of war of 60 guns, equipped and victualled for a year, pay, \&c. cofts 600,000 livres.

Livres.
Now the pay and victualling for a crew of 500 men for one year, and the pay of the major officers, amount to 160,000 livres, at leaft they exceed 159,000 livres

160,000
they exceed 159,
This fum fubtracted from the 600,000 livres above, the remainder 440,000 liveres is for the conftruction, the equipment, guns, \&c. of the thip. And the common duration of a fhip is 20 years, we mult therefore reckon for every year only
A thip of 60 guns, compleatly equipped in war, cofts therefore per annum at moft but - -
Confequently oo fhips of that kind would coft 18,200,000 liveres per annum: but fuch a navy is at fea at moft but fix months of the year. A man of war of that kind, is able to carry provifions for 500 feamen, only five or fix months at moft. Now the pay and provifions of that hip for fix months amount only to

80,000

The conftruction and rigging as above
22,000
It would therefore be only 102,000
And for $100 \mathrm{hips}, 10,200,000$ livres per ann. fuppofing the whole to be equipped fix months of the year, which never happens every year; thus we may fay, that a navy of IQO fhips of 60 guns, would not cott ten millions, communibus amnis, all things included; an expence not to be laid in the balance with the honour and advantage, which would accrue from thence to the nation.
In 1681, the expence of $7,272,08 \mathrm{r}$ livres, was not more than France was able to bear; the king, however, at that time, had only $116,873,476$ livres of revenue *. He enjoys now at leaft 200 millions: therefore, you will fay, he is better able to fupport that expence, than he was in 1681. That is true if we look only to the tale of pieces, which is at prefent more than it was then by $83,126,524$ livres: but, if we confider that thefe livres are not the fame, we fhall find our error.

## - See Chap. II. art. 5.

Marks.
For the $116,873,476$ livres in 1681 , at 287
livres the mark of filver, made to Lewis $\}$
$4,174,052 \frac{5}{7}$ XIV. a yearly fum of

And the 200 millions of lives which Lewis
XV. enjoys at prefent, confint of livres, whereof 491.16 s . go to the mark; confequently his prefent majefty receives only the fum of

Therefore Lewis XV. receives the yearly fum of $7,865,82,5$ livres lefs than Lewis XIV. $\}$ received, amounting to

57,586s $\frac{5}{7}$
"Lewis XV. is therefore really lefs rich with his larger tale of $200,000,000$, than Lewis XIV. was with his fmaller one of $116,000,000$, though the people are not thereby more eafed, abftracting from the price of commodities which has rifen. This is a very plain proof, that the rife of the numerical value of money has been difadvantageous to the king and people as debtors. But this does not hinder France from being able to furnilh out the expences of a powerful navy; it will be eafy for her, if fhe has a mind, even without burdening the people with new taxes, to find 8,10 , and $12,000,000$ a year, if they be neceflary for the maintenance of that navy. This expence is the more neceflary to France, as the never will be powerful, refpected, nor feared by her neighbours, 'till fhe is miftrefs of the fea. All the forces fhe may or can have by land, will never produce the fame effect. An army of 20,000 men upon that liquid plain, would procure to her more honour and profit than 200,000 men by land.
The Ancients knew, that their power and riches abfolutely depended upon maritime forces. They were no lefs perGuaded than Themiftocles had been, and than Pompey was fterwards, of the truth of this great maxim, He who is mafter of the fea, is mafter of all *.

againlt the invafion of Xerxes, is an advice which all cor querors have taken to themfelves, and which Lewis XII made ufe of fo fuccefsfully, that his power by fea was becon ormidable to the Englifh, Dutch, and Spanifh, as that his grandfather was weak and conternptible; witnefs th affront offered by king James to the duke of Sully, whit we have mentioned above.

* Notes of Amelot de la Houffaye, p. ${ }^{23}$. of the fecon volume of cardinal d'Offat's Letters.
The indifpenbfile neceffity France lies under to maintain powerful navy, is alfo fully confirmed by a difcourfe up that fubject, delivered by an old fervant of the crown, upo in the ${ }^{13^{\text {th }}}$ tome of the French Mercury, p. 209, \& fer By the letter of cardinal d'Oflat of the r 6 th of October 150 to M. de Villeroy, minifter and fecretary of ftate*; by counfel which Antony Perez gave to Henry IV. and by th which cardinal Richlieu gave to Lewis XIII, as we fee it the 9 th chapter of the fecond part of his Political Teflamen fect. 5. Now, if in order to be more powerful by land, $w$ muft be ftronger by fea, and if the prince who is the matit of the fea is infallibly umpire of his neighbours, there is $n$ room for demurring: whatever expence a powerful fleet ma coft, we ought to lay it out preferably to other things whic are lefs important, fince the intereft and grandeur of the kin the good of his people, and the fecurity of the flate require France may have 100,000 feafaring people, the foldiers ${ }^{\circ}$ he navy not included. It is her intereft to employ an maintain thefe feamen, they are ufeful and valuable fubjeis to their country. I thall here give a particular account of a thofe who were through the feveral coafts, and in all the dil tricts of the kingdom, according to the reviews of the which were taken by the commiffaries in the month of Janu ary 1713 , amounting to 92,450 men, viz.

It is the 8 th in that collection of letters publined in 5 vo lames in 12 ma , with notes, by Amelor de la Houfiay p. 237, \& leq. of the 2 d tome
 Ship boys ditto

Total of all the feafaring people in all the diftricts
of the kingdom. $\} 99,45$
*They receive no more pay at this day. Provifions, or grain in general, is not dearer now than in 1681 . Thus the add ditional expence cannot fall upon the pay and victualling it can only refpeck the building and rigging of the hips.
Now the major officers, fuch as lieutenant-generals of naval armies, commodores, captains, lieutenants, enfigns, 8 ic. al thips, are not included in this calculation; thus we have more than a hundred thousand Seamen, without reckoning the foldiers and the gardes marines *.

* Thefe are gentlemen diftributed through the feveral feaports, to be inflructed at the king's expence in the know ledge of navigation, and whatever belongs to it, who ferve as volunteens, out of this body the fea officers are gene. rally chofen. Is it not very furprifing to bear peaple fay, that the French cannot man a fleet equal to that of Great-
Britain?

The land forces colt much more than this powerful navy, and they are neither capable of bringing us fo much honour nor profit; they can neither make the French flag be refpected nor feared fo far; they are no fort of protestion to our forcign trade, which is the only means of aggrandizing andeniching the fate. All the forces we can have by land, will never freeus from fubjection to maritime powers, nor put us in a condition to humble the pride of thofe haughty iflanders, who believe and call themfelves the kings of the fea. [Obferve how Britons are here treated!] This we are only to look for from a powerful navy, able to difpute that empire with them, and to oblige them to pay the firft honour to the French Flag; an honour which is due to it by a juft claim, as we thallendeavour to make appear. Attend, Britons, again
Carar, in his Commentaries, fpeaks of the northern Gauls *,
*Thefe are at this day the inhabitants of Normandy and of the Low.Countries. They have always been famous for navigation. See Thuanus's Hifory.
According to the geographical flate of Normandy by Maffeville, Tom. IL. p. 688 . we owe to the Normans.
The difcovery of Guinea, found out by the inhabitants of Dieppe in 1364 .

The conqueft of the Canaries, by John de Bethencourt, lord de Grainville in the county of Caux, in 1420 , and not in 1348 , as the author of the Hittory of Navigation alledges, Tom. I. p. 69 . In 1479, the privateers of that province took from the enemy 80 hips loaded with corn and herrongs. The Hillory of Normandy by Maffeville, Tom. IV. p. $3^{18}$.

The difcovery of the third continent of the world, known under the name of Terra Aultralis, made in 1504, by Capt. Gouneville of Lifieux.
The difcovery of Canada, made anno 1508, by Thomas Aubert of Dieppe.
According to Mezeray, Tom. II. p. 665 of his large Hif. tory, Guillemor's edition, the people of Dieppe have always had the glory of the fea among the French; and anno ways had the glo 1556, with ig thips they beat 22 Flemith, larger and better provided in artillery and fireworks, they carned everal of them to Dieppe He adds, that the Normans had more men,
that he Dutch were wont to fight with cannon- fhot, and the Normans with frort arms and by boarding. Thuanus gives Normans with fhort arms and by boarding. Thuanus gives the fame account of them. And it was by order of king Henry. I. that they fet out and attacked that fect. Geographical State of Normandy by Mafleville, Tom. I. p. 142. According to the Hittory of Navigation, Tom. II. p. 19. chap. IV. Nambue, a cadet, of a good family in Normandy, and captain of a king's Thip, was the firl of all the Europeans, who projected the defign, with fuccefs, of forming a colony in the American illands, anno 1625. And, in fine, the difcovery of Louifiana, made in the year 1676 or 1680 , by La Salle Cavalier of Rouen.
We might place at the head of the atchievements of the Normans, their conquelt of England, anno 1066, and that of the kingdoms of Naples and Sicily, made anno 1070, by the lords of Houteville, of the diocefe of Coutances.
as thofe who underftood commerce and navigation, the beft of any who were then known, without even excepting thofe of Marfeilles. He highly extols the dexterity of their pilots; he glories in having tranfmitted to the Romans the manner of building fhips, and of navigating, as practifed by the northern Gauls. Vegetius has written upon their naval difcipline. Sidonius fpeaks to the advantage of their mariners; he makes them as expert as the pilots of other nations; he fays, they know how to obey, as they know how to command. At that time the Englifh knew nothing of navigation; Cælar fays, they had only little canoes of ozier for their fifheries, and for navigating along their coafts.
It is very much to the honour of our nation, that ancient hiftorians find there the oldeft and the moft expert falors. Ought not this to put it beyond debate that the firft honour is due to the i rench flag?
At that sime, commerce was fot looked uponas derogatory to the nobility; it was, on the contrary, the original and fupport thereof. The Gauls made no diftinction in the affair of commerce and navigation; the nobles, as well as the plebeians, traded equally. The trading people, far from being excluded from offices and employments, were, on the contrary, invefted with them, as having greater ability and experience than others; for, as commerce and navigation inrich perfons, fo they make them, alfo, more capable than others of Managing Affairs, and, confequently, fitter for pofts and offices*.

* Father Lamy, in his Difertations upon the Sciences, fays, There are none who reafon in general with fo much good fenfe and juftnefs, as a merchant does with refpect to the affairs of commerce. The reflections and calculations which he is continually obliged to make, accuftom him to think. See our articleMercantile College. And quere, Whether fuch a courfe as I have there humbly propofed, would not accomplifh perfons of diftinction for the greateft pofts of truft and honour in the ftate, better than the ordinary foholaftic method of education? And whether being a few years converfant with real traffic, would not prove the moft ufeful college for fuch men of public bufinefs?

But the wars with which the Gauls were harraffed for feveral ages, having too much diftinguifhed from others thofe who bore arms, by their fervices and pofts, as by the riches which they acquired by the foils of the enemy; and thefe having given over commerce, to devote themfelves folely to arms, commerce remained only with the populace. A diftinction fo rivetted by long ufe, that, whatever laws the kings have made to engage thofe whom we call the nobles, to cultivate maritime and wholefale trade, by making it compatible with the privilege of their birth, they have always preferred to an honourable commerce, a dull inactive life of IGNominious Poverty, defpifing the examples of the Ancients, of the Englifh, the Dutch, the Genoefe, \&c. who, confidering commerce in a quite other light than we, live in a happy plenty.
It is navigation and commerce that renders Great-Britain fo rich, fo powerful, and have enabled that inand to counterbalance all the powers of Europe; and yet that country is not equal in excent to the half of France
It is alfo navigation and commerce that makes Holland fo powerful, though it's dominion extends only over feven little provinces, which produce not the twentieth part of what is neceflary to the inhabitants; and yer they put to fea a prodigious number of fips, and maintain confiderable armies by
land; which has made that fmall country, as it were, the general treatury of all the nations which their policy bus tound a way to unite aganft us; and who, whout the atfiftance of money from Holland, would nut be long of breaking their union ${ }^{*}$.

* That nation has at all times artfully improved every occafion that offered in favour of their commerce, and temarkbly the intereft that we had in 1678 to difunite her fiom her allies. This unhappy circomftance deternined the king o grant her a renewal of old creaties, and to allow her to explain them as the pleafed; which the joyfully accepted, and, in confequence thereof, the treaty of Nimeguen was agreed to, April 10, 1678.
After having fard, in the fixth article of that treaty, that the fubjects on erther fide fhould enjoy a full and intire liberry of commerce in Europe, in all the bounds of each o her's dominions, the Dusch added to the former ones that we find in the feventh article: this arucle is of fo much importance and advantage to them, that they have again extended it in the treaty of commerce made at Utrecht, April ir, 1713. This particular regard which the Dutch fhew to this article, lets us fee that they hold for almolt nothing the reft of the treaty, provided we put in execution this article, which is as favourable to them as it is contrary to the intereft of our commerce: for this article they made no fcruple to withdraw from their alles at Nimeguen, and to be the to withdraw from their alhes at Nime
By means of this article, the Dutch enjoy the fertility of By means of this article, the Dutch enjoy the fertility of
our country, and all the advantages of the French fubjeit: our country, and all the advantages of the French fubjeit:
they make a rery advantageous ufe of it, to the prejudice they make a rery advantageous ufe of it, to the prejudice
of the natural fubjects, and without contributing in any thing to the fupport of the ftate. Befides the advantages which this article procures them, they take from the king even the liberty of granting any particular favour to his own fubjects, unlefs, at the fame time, he gratifies with is the Dutch merchants : and, by the ninth article, we, in a manner, renounce the Levant trade in favour of the Dutch, who are become the matters of it. The Dutch are not ignorant, that, upon the remonitrances and complaints of the fubjects, the fovereign, who owes them juftice, preferably to foreigners, is always in the right to make what regular tions he thinks proper for the good of the fate. To conclude, this article included in the treaty of Utrecht, walimited to 25 years, and confequently it expired April in, $173^{8 .}$
Genoa, that formerly magnificent city, has buta fmall compals of dominion; would the ever have been in a condition ta fupport fo many wars, were it not for the riches that commerce and navigation procured her? In what vaft expence has fhe been engaged for many ages, to refift the Venetians, and other people in Italy, to whom her profperity gave umbrage? How many feditions at home amongft her inhabitants? How many tumults and commotions excited by thofe famous names of Guelphs and Gibelines? How much muft all thefe have coft her? What vaft expence has fhe been put to by the rebellion of Corfica for thefe many years palt? That article alone, we are affured, amounts to upwards of 30 millions: the is ftill flourifhing after all, and abounds with every thing: in the mean time, fhe has no other refource but from commerce.
There are numbers of other examples we might cite ; but thefe I take to be fufficient to fhew us, that France would reap vaft advantages from commerce and navigation, if the tafte for commerce could be further promoted in France ** What noble families would then be raifed!
- The erection of the India company is a pretty fure means to engage the French to carry on our commerce, and to give them a tafte for it; this is a bleffing to the ftate. The maritime trade, which it carries on with fuccefs enough; fets us at liberty from the fervile tribute we paid to our neighbours before it's ereetion, to be fupplied with things we wanted : they took advantage of our fupinenefs, to in rich themfelves at our expence.
At all times, the Englifh and Dutch have endeavoured to get us to demolifh any confiderable fea-ports we have had in the channel. Thefe ports give umbrage to them, and extremely incommode their commerce. But their continual oppofition is an invincible proof, that it would be beneficial to our commerce and navigation to have at leaft one fecure retreat for our thips, towards the middle of that bay. Cardinal d'Oflat was fenfible how neceffary this was; for, in his goth letter, dated December 18, 1596, he fays to M . de Villeroy, to whom he writes, That it is of very great importance to us, that we have men of war in that fraight. Now, we can have no fhips there without a port for their retreat; I have always heard it faid, that, with a little expence, we might make an excellent one at La Hogue, in Lower Normandy. This is the place in the world molt proper for raifing an important fortrefs, either for commerce or for fhips. It would hold a great many of them; there they would lie in fecurity, and theltered from every dangerous wind, by making a mole of about 2 or 300 toifes, of the great or linall redoubt of Morfalines, towards the port of La Hogue, leaving, at the foot of that fort, a convenient entrance for the port, and by digging the bay which the mole would inclore.
We might even caufe the port to be cleanfed by the river Saire, which is but about the diftance of fix or feven toifes

## N A V

from it, and which might eafily be turned inte it. That port would then be very confiderable, and well fituated; it has an admirable road; arid all who are acquainted with the afFairs of the navy, and with navigation, agree; that we ought to labour at it, and improve the advantages of that place, not ${ }^{-}$ withftanding the oppofftion of our neighbours; for, the more they fet themfelves in oppofition to it, the more ought we to be fenfible that it tends to our advantage. We ought by no means to be afraid of them; this would be to do them too much honour: in a word, there it is we muft have a port. The late marfhal de Vauban was of this mind; he has, as I am told, laid down the whole plan and feheme of this work. The low jealouly of other fea- ports towns has oppofed it ; perhiaps the intereft of the ftate, and of commerce in general, has not been fufficiently confulted, which ought always to prevail over private motives; but private intereft has always numbers of advocates, and the general intereft has but few. To make peace; in order to procure to ourfeives all the advantages of an extenfive commerce, is to make war upon our enemies. Let us have no more to do, therefore, with thofe victories that are gained by rulnous means; let glory fleep and be at reft. It is in the heart of our plains that induftry thall open to us eafy paths to greater conquefts. May pro pitious heaven preferve to us a prince whofe widdom meafures his glory by the happinefs of his people, and a worthy minifter, who feconds his veews with fo much zeal and extenfive difcernment. France, fuperior by the advantages of her commerce, fhall make neighbouring ftates know, that fhe is as capable of raifing her power by peace as by war.'

Remarks on Nayal Affairs before the laft war.
We have now feen what has been urged in France *, to fpirit up that notion to ufe every endeavour to augment their maritime prowefs; and we have no little reafon to fear that they will one day arrive at fo great a height therein, as may give them the fuperior dominion over the feas, which they have fo long ftruggled for. Our author infifts, that every power ought to bow down to the French flag, and that this is a rightand an homage due by all the powers upon earth to the fleets of this Grand Monarch. Many, too many, I am fenfible, will laugh at this, and treat it as the mere gafconade of a Frenchman; ochers, who are really acquainted with the extent of the maritime commerce of the kingdom, the number of feamen they can raife for the equipment of their fleets, and the daily increafe of their royal navy, by the almoft conftant purchafe and building of thips abroad and at home, will not think fo meanly as forne are wont to do, who ought to know better of the naval ftrength of this neighbour kingdom. Before the laft war, was it not fanguinely propagated by fome, that the French had no trade, none that ought to give GreatBritain the leaft umbrage? Has not experience taught us the contrary? Some will yet fay, that France has no feamen to man a fleet any thing formidable, nor any hips fit to look the Britifh navy in the face. I am afraid thefe people talk without book.-Under this head we can only touch the outlines, as it were, of a matter of this concernment; we fhal! refume the fubject hereafter, under the articles Sallors, Sea Dominion, and Shipping, where we fhall endeavour to give an authentic account of the French marine, and of the whole conftitution of their naval affairs, leaving others to make comparifons. The author is the laft perfon in the kingdom who would wantonly fpread groundlefs alarms ; he has taken fome pains to inform himfelf, not only of the commercial policy of this nation, but of the foundation now laid to raife it's maritime power to a pitch that may fome time make Britain tremble, however omnipotent the may think herfelf by fea at prefent.- The confequence hereof, I cannot help owning, as a friend to the liberties of mankind, appear to me with an afpect I fhould not chufe to deferibe at prefent. It is my buinefs to ftate what is reprefented to me for facts, before the public; if the danger is at greater diftance than we can prefume to forefee, none will blame our vigilance, and honeft zeal for the public interefts, who really wifh well to the trade and liberties of thefe kingdoms.-Do we not fee the greateft part of Chriftendom enflaved by ecclefinftical, civil, and military tyranny? Have we not long enough experienced the refractory politics of the court of Spain? What cardinal point has the nation gained of Spain, from the treaty of Ha nover to that of Aix Ia Chapelle, to make us any compenfation for the numerous millions they have occafioned us to fpend, and for the thoufands and ten thoufands of lives they have obliged us to facrifice? Rather than act with cordiality and juftice towards Great-Britain, in confideration of what the has as well borne from her, as done for her, are not depredations ftill made on our merchants? And we wifh that the may not appear ready to join with the firf power that may draw the ford againit us, inftead of doing us right in point of ous trade and navigation? Glad thall we be if thefe apprehenfions provegroundlefs. We, however, think it our duty not to conceal them, but modefly fubmit them to others.

- See Reflexions Politiques fur les Finances \& Commerce de France.
Under the article British America, we have fet forth the
claims and encroachments of the French in the new world. We have experienced, by our recent accounts from NorthAmerica, that our fears on that occation have not been chimerical; and what will be our fate in relation to the negociations touching the adjuftment of limits upon the continent, as well as in regard to our inand colonics, we do not yet feem to be fatisfied.-Under the articles France, French America, and divers other parts of this work, we have reprefented from facts indifputable, the nature and extent of the French commerce and navigation, and what ftrides they have actually made to univerfal empire: we have done the Jike under the chief provinces of Spain, and fhewn, that, inftead of doing right to the trade of thefe kingdoms, fhe is only ftudying to advance her own, and that the is abfolutely changing her fyftem, from a paffive to aftive commerce, and increafing her maritime ftrength ; all which forebodes ftill greater and greater evils to this nation in particular.- In regard likewife to the barrier of the Dutch, we have reprefented, under the article HolLAND, how importantly neceflary it is to fecure, without delay, a good Barrier to the States-General.- Their marine, we well know, is far from being in a refpectable condition: fo that if France and Spain fhould unite their naval forces againft us, we mult fland, as ir were, alone; we can have no timely and effectual aid by fea from our natural allies, and very little by land, if their barrier continues unfettled 'tilt a frefh war breaks out; their councils feem fome how perplexed and diftracted, by machinations that are apparent to every man who will vouchlafe to open his eyes.-ln a word, we wifh the affairs of a certain nation may not be fo condueled as they are, with a view chiefly to throw duft in the eyes of another nation, that the may be lulled into a lethargy, or diverted from the purfuit of her own fafery and prefervation, 'till the Proper Time may come for the great blow to be ffruck, by the fecret increale of a maritime force, that may prove formidable to all Europe.-Hitherto, all other means have failed them; their military alone they find will not effectually anfwer their reflefs intentions; aothing will humble the baughty inlanders but a fuperior naval force, and that they feem determined, at all events, to have, and therefore have been, imperceptibly, at it were, augmenting the fame, ever fince the late peace, by purchafing Englifh fhips, building others both at home and abroad, and filling their magazines with naval ftores.-Thefe things have been doing, and are daily doing; but that we fhould not clearly difcern tiveir doings; that this nation fhould, as much as poffible; be kept in ignorance of thofe meafures, and our fight ectipfed from feeing the gradual rife of their naval power, we wifh that pretended, inftead of real fchemes of diffraction, may not have been batched and kept alive, 'till they think the happy crifis is come.-We wifh thefe conjectures may prove vifionary ; but is it not right rather to be upon the Qui vive than otherwife? In our negociations fince the peace, have we met with that cordiality and difpofition neceffary to adjuf and terminate thefe mifunderftandings between the two crowns? On the contrary, have we not juft caufe to fufpect that they mean nothing lefs than to fettle thofe points amicably?
Upon the whole, Great-Britain fhould feem, as fhe is at prefent circumftanced, to have nothing to truft to but the increafe of her naval power ; and, if we take the proper meafures to fupply ourfelves with Naval Srores of every kind, the money we fpend on this occafion will fpring fromourfelves, and circulate among ourfelves, and thereby our very Navar Expences may be made inftrumental to the increafe of the riches of the nation, while they are augmenting it's Naval Power.
However paradoxical this, at firft fight, may appear, it is neverthelefs true : for, if our naval ftores are all raifed within ourfelves and our plantations, will they not all 「pring from our own lands, and the labour of our own people? And are not the produce of our lands, and the arts and labour of our people, the great fource of all our treafures? Suppofe, in order to maintain the Britifh navy in a fate of fuperiority, requifte to encounter every danger wherewith we might be furprized, the nation was to be at an extraordinary expence of half a million a year, for ten years together; if we took no article whatever which concern our naval affairs from foreign nations, this would be half a million a year clear and abfolute gain to the nation, and fuch a real increafe of her treafures; for if our own lands were fo cultivated as to produce every fpecies of timber neceffary for the occafion, as well as we have all provifions within ourielves ; and if we could provide ourfelves with all pitch, tar, turpentine, and hemp for cordage and fail.cloth; if we could alfo fupply ourfelves amply with iron of ah kinds, proper for the purpore, and every other individual article, from the fhipwright and grazier, even to the very fhip chandler; would not every one interefted in the fupply be gainers, in proportion to the additional national expence, from the landed gentleman to the very caulker and rigger by fuch increale of naval ftrength ? And, while the nation actually poffeffed an increafe in her quantity of fhipping, equivalent to the additional expence incurred, we do not fee how the pation could be any greater lofer by fucb extra-expence, than what may be allowed for wear and tear, \&c. becaule
the whole is the additional produce of our lands, our own labour, and our own arts.
If, indeed, by our contraEts for 'naval ftores, the nation is impored upon, and made to pay 50 , or cent. per cent. more for them than they are intrimfically worth; in fuch cafe, the lofs to the nation is fo much more than the article of mere wear and tear, as the nation is actually defrauded of:-Now, if this be the true flate of the matter, we have no reafon to apprehend that fuch an additional expence incurred, and paid within the year, could ever prove injurious to the nation, untefs the taxes for that purpofe were fo laid, as to prove a clog and incumbrance upon our trade; for if thereby the price of our labour, arts, and manufactures, was increaled in proportion to the yearly incurred national expence, then the nation might lofe in the vent of it's commodities at foreign markets, more than it gained by the augmentation of it's royal navy. This, among numerous other reafons given throughout our work, thould feem to fhew, that the prefent conftitution of the public revenue is às little calculated to promote the increafe of our naval, as of our commercial power; and, therefore, that it may one day become neceffary to think of fo gradually changing the prefent lyftem of the revenue, that it's neceffary plight and condition may ever go hand-in-hand with, the ad* vancement of our trading interelt, as well as the increafe and fplendor of our royal marine.- This is what all wife and haneft men, who are true friends to their country, wifh td. fee happily accomplifhed; and this is one great point that we thall moft fincerely endeavour to promote, with due fubmiffion to the judgment of the public.
Certain it is, that the furprizing fuccefs of the French in naVigation (to which, bur in our fathers days, they were almoft abfolute ftrangers) is, in our opinion, principally owing to the excellent laws and ordinances which have been eftablifhed; within little more than half this century, in that kingdom, for $\therefore$ the regulation of all maritime affairs ; in which their fummary and ealy method of proceeding has been found to be very beneficial to all that have had occafion to be concerned in it $:$ for the government finding that the only means to have a powerful navy, was to encourage trade and navigation amonget private perions, nothing was omitted that could, in any manrier, tend to the advancement of commerce.
And, indeed, if we confider the prodigious increafe of the Maval ftrength of Erance within thefe 70 years laft paft, we are obliged to aeknowledge, that they have been very induftrious in promoting trade; and if, likewile, we examine the meafures they bave uled, we fhall find them to be fuch as feldom, if ever, miffed of the defired fuccefs, becaufe particular care has been taken to remove every impediment that might obftruct the progrefs and imptrovement of their navigation, and the good execution of whatever ordinances they made for that purpofe.
We can hardly fuppofe that any man of fenfe can take amifs What we fay here to the advantage of the naval laws and conftifutions of France, as if we hereby feemed to have left refpect than we ought to have for thofe of England. Though the French be enemies to us, we fhould not be fo much ene${ }^{3}$ mies to ourfelves; as to reject the ufe of good laws; metely becaufe they are in force amongff them; or hase been devtfed by them. Whatever our practice may be, I can affure you, that they are neverthelers taken with good laws that are enacted in bad governments; and they have, 韵 their affairs of trade, confulted all the laws and fatutes in fotce in every n. part of Europe, and; by retrenching what therein was fuperfluous or inconvenient, and fupplying what was deffient, with proper regulations for every fubject, they have certainly compiled the moft complete fyftem of laws for trade and ha. vigation that ever Europe faw. Nor would it in the leaft de--rogate from our honour to follow their example in many things worthy of imitation, fince all the world acknowledges the reafonablenefs of thatufeful maxim,

## Fas eft \& ab hofte doceri,

The French are now to thoroughly convinced of the folly of their forefathers, in defpifing and neglecting commerce, that, at the beginning of queen Anne's war, an edict was publifhed $\cdots$ stolerating gentlemen to trade by wholefale, either in the mercantile, or any other way, which,'till then, was never heard of in France: on the contrary, if a gentleman only married a merchant's daughter, te derogated from his quality, of which they were fo ridiculoufly jealous, that neither merit nor money could induce them to marry below their own condition : but, by' the above-mentioned ediet, traffic is made $\therefore$ confiftent with nobility ; which has had as fuccersful effects as that nation could defire.
Nor is there, at prefent, a Chorter way for a man to make his fortunes in France, than by projecting any thing that thay tend to the benefit of commerce. The famous Colbert was indeed raifed to the poit of fur-intendant of the finances, by the character that cardinal Mazarine gives of his extraordinary talents for that employment; but his capacity in advancing the intereft of the kingdom, by the improvement of commerce and navigation, rendered him a man fo necellary at court, that the king neither undertook, nor fuffered others

Vos. II.
td unde: take, any thing confiderable of that nature; withdut his advice and approbation. He was the principal contriver of the exeellent regulations for exchange and commerce in France : and, in a word, being acknowledged by all to be a competent judge of all, fuch matters, a perfect deference was ever had to his opinion about every thing that had any relation to trade.
However; that accomplithed minifter being fenfible, that (confidering the other great affairs of ftate, with which the manifold dignities he defervedly pofleffed at court neceflatily bbliged him to be taken up) he could not apply himfelf fo much as he defired to the improvement of the national traffic, which was his darling fudy; yet he fo highly encouraged the induftry of other fit perfons, and fo favourably received every propofition thade for it's advancement, that the hopes of preferment fetting people's brains a working, the naval and mercantile polity of France was foon reduced into fuch a fytem, that could not fail to render it flourifhing and profperous almof all the world over.
Amongft other methods that have been taken for the profperity of navigation, and the increafe of navigators, fchools are erected in feveral places of the kingdom, in which all perfons that will repair thither, are taught the theoretical part of failing, and all things belonging thereto, by the moft accomplifhed mathematicians that the kingdom can afford, who have very handsome saliaries from the government for that service, which they muft perform gratis to all that defire to be inftructed: and, what is more, fo very defirous are they of providing themfelves with able and fkilful feamen, that, upon the bumble requeft of any young man defirous to learn navigation, and wanting means to fublift without fome other bufinefs, during the time that mult be employed in that fudy; A COMPETENT-SUBȘISTENCE IS ALLQWED HIM BY THE GOVERNMENT; fo that inftead of paying for the knowledge he acquires in fuch a uffful art, by which he procures a certain livelihood for his life-time, he is paid for his trouble in learning a profeffion which may eafily enable him to fubfift handformely, and frequently to make his fortune. Thence it is that France is very well provided with a great number of able and fufficient pilots, Gunners, masters, \&c. and all other fea officers, both for the fervice of the king and the merchants; and whether we confider the ftrength of the French navy, the number of their merchant fhips and mariners, or the ftate of their foreign plantations, the extraordinary effects of the means they have ufed to encourage navigation will be obvious.
Upon the whole; from an impartial furvey of the commercial and naval affairs of this kingdom; one of the greateft caufes to which we may juftly attribute all the advantages of the French in trade, is the wifdom of their mercantile and naval laws 5 whereby all perfons have been encouraged to engage their money in trade, and fo have extraordinarily impioved both their own and the pablic treafure.

## Remarks on Naval Afrairs fince the laft $W_{A R}$, and the

 Definitive Treaty of $1763^{\circ}$.By our fucceffes during the laft war, and the new acquifitions obtained by the peace, Both from France and Spain on the American continent; and likewife of, the Neutran. Islands, that are annexed to the crown of thefe kingdoms; we may rationally enough hope for an increale of our mercantile flipping, by the general increafe of our North American commerce, as well as that of the iflands of the GreNADOES', ST́. Vincent, Tobaco, and Dominica : and whether that of France may not decrêale in proportion as our trade and navigation fhall augment, in confequence of the loffes they have fuftained in America, is a matter that nearly concerns us. For if it does not, and France fhall keep up and preferve the fame degree of general trade and mercantile navigation, and thereby uphold as great a degree of royal naval power as they poffeffed before the laft war, we have obtained no advantage over them; on the contrary, by entailing on ourfelves, fo great an increafe of PUBLIC DEB'TS and TAXEs as the laft war has colt us, we have fo loaded and encumbered our whole commerce, while that of France has not been fo to the like degree; though it is to be feared; the greater cheapness of French commodities, and the greater dearness of English ones, will enable France to increafe their foreign trade in proportion as ours fhall diminifh.
To prevent which effectually, it is to be wifhed that our rulers will embrace every poffible meafure that can be fuggefted to give IMMEDIATE RELIEF to our trade, by exonerating the fame from as much of the burthen of taxes, as can be devifed, and found practicable. For if that is not done, and without delay too, France will foon gain more by dine of Commerce, than they have loft by the war; foreign nations giving thofe the preference in their dealings, who can afford to fell their commodities the cheapeft; and the immenfity of our prefert debts and taxes rendering Englifh commodities fo much dearer than thofe of France, whofe expences during the fait war bore no proportion to thole of Great-Britain, their wares in general muft neceffarily be
fo Huch cheaper cormpared with ours, that foreigners will Hot be able to purchafe ours, and therefore muft be obliged to have thofe of our commercial comperitors : the confequence muft inevitably prove the lofs of all our trade with foreign nations; and what then will avail all our plantation improvements, be they e'er fo much extended? If they are enlarged to a degree to enrich and aggrandize the continent of America, may not this in the end ruin the motherkingdoms? Will not fuch riches in America, enable the Americans to manufacture every material they fiall be able to produce? If they do, will not their greater cheapnefs of commodities be as detrimental to this nation as that of France? That this injurious effect alfo, may not follow from our new acquifitions, too much care canmot be taken to prevent thofe colonies turning to any fort of manufactures that fhall at all interfere with thofe of Great-Britain and Ireland; every improvement that mult be fuffered to be made on the continent of America, tuult be reftrained to the materials for manuFactures, and thofe fuch only that the three kingdoms are not able to afford themelves, and that-we are under the neceffity of importing from foreign nations: and even with regard to this point, it muft be confidered, that unlefs we will take fome proportion of the produce of foreign nations, they will ceafe to take any of ours, and there will be an end of our reciprocal commercial conneetions.-It mult not be forgot neither, that if we diminilh greatly in our importations of foreigh commodities; our public revenue, the Revenue of Customs, will immediately feel the effects of it, and what will become of the Public Credit? And as we fhall decline in our imports from foreign nations, as we may increafe in thém from our ownAmerican plantations, and ftill keep up the fame Duties of Customs on the one, as we have done on the other, this may prove a great difcouragement to our improvements on the American continent.-Thefe things are not fuggefted to intimidate us fromattempting every wife improvement that can and ought to be made in America; thefe obfervations are made, with no other intent than to manifeft, that the moft confurnmate wifdorn is at this time requifite in the conduct of our commercial intereft, confiftent with thofe of every other kind،
NAVALST@RES comprehend all thofe particulars which are made ufe of, not only in the royal navy, but likewife in every other kind of navigation: as timber ant iron for thipbuilding, alfo pitch and tar, hemp, cordage, fail-cloth, gunnowder, ordnance, and fire-arms of every fort ; alfo all hipchandlery wares, \&c.

REMAKKs.
The prinçipal fupport of this nation, and the prefervation of it's commerce and liberties, depending upon the conftant refpectable plight of it's mercantile, as well as royal marine, nothing can be more defirable than for the nation to be in a condition to furnifh and fupply itfelf amply and cheaply with every kind of naval fores; for, if we could once be happy enough to effectuate this, even the public by fuch like national debts, provided they remained in the hands of the fubjects of Great-Britain, and no intereft money for the fame was carried out of the kingdom, could fuftain no greater detriment thereby, than what arofe from the weight of fuch intereftmoney lying, by way of taxation, upon our commerce.
It is well known, that we formerly received our fupply of pitch and tar from Sweden; but the Swedifh merchants, knowing that the beft tar and pitch was made in their country, thought they had an opportunity given them to engrofs it to themfelves, and to fend it abroad in their own thipping, and fell it to their neighbours at their own prices. In order thereunto, they formed a tar-company, who engroffed the whole; and feveral fevere laws were enacted, that no makers fhould fell to any but thein, and that no (hips, either foreign or their own, fhould load any but for their account, and by their order.
This monopoly gave great uneafinefs to our merchants, who thought it a hardihip to be debarred bringing home what pitch and tar they had occafion for in their own fhipping; for lofing that navigation, was putting a number of hhips out of employment, and, confequently, paying our neighbours for work whilft our people were unemployed.
They made feveral complaints, but to no purpofe, 'till the year 1703, a war being then declared with France, and, confequently, a royal navy to be fitted out.
quently, a royal navy to be fitted out. and tar enough for an immediate fupply.
Hereupon feveral letters were wrote to Dr. Robinfon, afterwards bifhop of London, then queen Anne's envoy at the court of Sweden, upon that occafion : to which the doctor returned an anfwer from Warfaw, the 4th of Auguft, 1703, to Sir Charles Hedges, then fecretary of ftate. This letter was copied out, and given to feveral merchants, that they might fee how much it was in the power of the king of Sweden either to forward the fitting out the royal navy of Eng. land, or to keep it in harbour.
That we may judge from Facts what has been our cafe, I have tranfcribed the letter.

## SIR,

' I jult now received your honour's letter, of July the 6th, with orders that I fhould earnefly prefis the king of Sweden oo give fuch directions about the delivery of pitch and tar, as that her majefty miay know what the has to truft to therein. Upon this fubject I humbly take leave to repeat what I have formerly writ your honour, that, on the $\frac{17}{2}$ th of March laft, I tranfmitted to the king of Sweden her majefty's letter about this bufinefs, and fent it, with a large deduction, to count Piper; whereupon, on the 20th of March, his majefty writ to the college of commerce at Stockholm, that they thould give all due affiftance to the Englifh factors employed to buy up that commodity for her majefty's fervice; that for ready money they fhould be fupplied as well with what was wanting for the two former years, as what was defired for this: which letter I fent to Stockholm, where it was in due time received.
Not long after, coutit Piper told me; The directors of the tar trade had reprefented it to the king as a great grievance, that they mould be obliged to deliver at Stockhom any pitch or tar for the ufe of the Engliih navy, for that they could-to much more advantage carry it thither, and fell it themfelves.
I prefled the count very earneftly, that at feaft the king's letter, which was already fent, might be complied with for this year, and that, if the like was defired for the future, we fhould give them time for deliberation, whether they thought : fit to gratify the queen therein or not.
I had hopes this fair requeft would not have met with any difficulty; but have lately heard from Mr. Jackfon,' it has been wholly rejected, and that the directors of the tar trade have declared they will export to England, and elfewhere, all their pitch and tar for their own accounts, and that her majefty's navy fhall be fupplied at the market-price fixed. This I take to be all her majefty has to truft to on that fide; and my hunble opinion is, no relief from hence can much mend the matter.
For as it can hardly be expected any new order from the king of Sweden (if procured, which is uncertain) can arrive at Stockholm 'till fome time in September; fo it is not fure it will then be abeyed more than hitherto, efpecially confidering that, by that time, the tranfportation of pitch and tar from Finland to Stockholm will be almoft over, and the direciors will have to fay, that they have not the quantity defired.
It would alfo fall into a hazardous winter voyage, and, in all human appearance, not anfwer her majetty's occafions; wherefore 1 am much in pain what refolutions to take.
To repeat her majefty's requeft to no purpofe, and where there may be a tolerable pretence for not complying with it, feems to me to be very improper; and I humbly hope your honour will be of that mind.
Mr. Jackfon writes me, in his letter of July I , That a good fum was then offered to facilitate the mateer, but he had no hope it would fucceed; I alfo believe it will not, the count Wrede being fo little inclined to contribute, in any cafe, to a good intelligence between England and Sweden, and none elfe having any authority in thofe matters: and, therefore, if thefe endeavours alfo fail, I cannot perceive her majefty can, with any certainty, be fapplied otherwife than eicher by buying pitch and tar of thofe directors, at fuch a price as they will fell it at in England, or by feizing what they fend, whether found by fea or in port, and taking it at a reafonable price. The king of Sweden did the fame laft year by lead bound for Dantzick; and our merchants there write me, they apprehend it may be fo this year alfo.
The reclaimers, not infifting upon the advantage they might have had by carrying their lead to Dantzick, offered it at the fame price the admiralty of Sweden paid for the laft lead they bought ; but, inttead of that, were obliged to let fall one fixth, and without any compofition for the bringing up and detention of their fhips. Againft this may be objected, That thereby the prefent occafion may be ferved, but the uncertainty become greater for the future.
To this I can only anfwer, That the Swedes muft always, by themfelves or others, Thip out their piteh and tar; and we fhall, therefore, hereafter be at fo much certainty as now. Befides, as thofe directors have for many years monopolized and referved to themfelves the tranfportation of all pitch and tar that goes to Holland; fo I judge they intend to do in regard to England alfo, which, if fo, would fall bard both on our traders in that commodity, and on our fhipping employed hitherto in a good proportion to fetch it: befide that the price in England would be what the monopolizers pleafed.
Thefe inconveniencies will, I hope, be confidered, and remedied one way or other. I am alfo of opinion, that, if the war with Mufcovy be of any long continuance, and inroads be made into Finland, as mof probably will, Sweden will not have fuch quantities of pitch and tar to fend abroad as the occafions of Europe require. Courland furnifhed fome formerly; but, while the Swedes are mafters there, none can be expected thence.

## N A V

It is but very little, and not good, that Norway yields; and I fuppofe there is but very little certainty it can be had from Muicony,
What difficulties there are in making and bringing it from New England, I am not acquainted with, but take it for granted, England had better give one third more from thence, than have it at fuch uncertainties, and in fo precarious a manner, from other countries, \&c.'-The end of Dr. Robinfon's letter to Sir Charles Hedges, fecretary of fate, the $4^{\text {th }}$ of Auguit, 1703.

## Further Remarks before the laft War

The Swedes were fo fond of their new monopoly of pitch and tar, that an Englifh hip had not been there for fix or feven $y$ yars: and that, when fome of our merchaints refiding there made application to the tar- company for a loading of pitch and tar upon an Englifh bottom, offering them their own price in ready money, no interef could prevan, unlefs the captain would give fecurity not to carry the faid loading to London, Lifbon, or any other port where the company had a factory.
The people of England foon took the alarm; the merchants made frong application for making thefe commodities in our plantations, and therefore that matter was brought before the parlament, who gave encouragement for importing pitch and tar from our plantations, which foon produced very great quantities from thence; they fo much increafed therein, that we received twice as much as the nation could confume, and were thereby enabled to export great quantities to the Straights, Spain, Portugal, Holland, Bremen, and Hamburgh.
The bounty given by the government, amounted to a large fum yearly; but what we re-exported and fold to our neighbours, made the kingdom amends for that diflburfement; and it brought down the price fo low, that both pitch and tar have been fold with us for one third part of the price we once paid for Swedilh pitch and tar: and, if this way of fupplying ourfelves from our own plantations had not been fallen upon, nobody knows how high the Swedes might have raifed their price upon us, befides the uncertainty of baving them at any price. What was feared foon came to pals, a war in the Baltic was begun, great numbers of our fhips were feized on frivolous pretences, and carried into Swedifh ports, and condemned as prize, to the unlpeakable damage of the merchants of this kingdom.
The lords commiffioners of trade being fenfible of the great advantage of fupplying ourfelves with pitch and tar from our own plantations, fent to the merchants to give them an accouit what other naval ftores might be produced and brought from thence.
Their lordfhips were informed, that if eftcouragement were given, and the people put in a proper way to begin, all other forts of naval ftores, as well as pitch and tar, might be broughowrom thence; that the Swedes had laid a new duty on iron of near 25 per cent. and that the interruption of our trade in the Balcic had greatly diftrefied our iron manufactures for want of iron to carry on their bufineff: and farther, that the Danes had raifed their boards from eight or nine - dollars, to eighteen dollars per hundred : that undertakings of this nature (as in the cafe of pitch and tar) would at leaft lower the prices, and leffen the imports of Danifh and Siwedifh commodities, which then drew from us a moft prodigious fum of money. And laftly, it was manifeft, that unlefs we imported about 20,000 tons of foreign iron per ann. our manufactories could not be compleatly carried on.
For, in the two years before the war began in the Baltic, viz. 1714 and 1755 (in which years we had a free trade with Sweden) above 40,000 tons of iron were imported; and, though in the two following years above 23,000 tons was imported, yet that being fhort of a fufficient supply, it created terrible complaints among the manufacturers.
Now 20,000 tons of iron, at 121. per ton, comes to 240,000 l. and the boards and tiniber we received at their advanced price, came to 200,000 l. more; and, if they found we could not otherwife be fupplied, they would raife the price on us.
Befides all this, it was further urged, that the Danes and Swedes had ufually the navigation of all their own bóards and timber, \&cc. in their own thipping; which employment qualified them to breed up reamen, and eonfequently upon any irruption, to fit out fhips for war and priyateers to annoy our trade; and, if fo great an advantage as bringing the faid commodities from our plantations could be brought to pafs, it would augment our navigation to the plantations to more than double what it then was, and not only be an additional employment to our hhip-builders, and all others concerned therein, as well as to our failors and feamen, but increafe the confumption of our provifions, and other neceffaries for victualling and fitting out the faid fhips ; and that as our navigation increafed, that of Sweden and Denmark muft of courfe decline, and our new fupply of feamen prove a. proportionate additional ftrength to the naval force of this kingdom, which faitors will be ready on all occafions to man out our deets.

That in the navigation we then carried on to our plantations, it often happened that the "crops of tobacco and fugar, \&ce. fell thort, to that many of the fhips were forced to come home dead freighted, and fome lie a whole feafon for the next crop, which (if encouragement was given for bringing timber and naval frores from our plantations) would, upon fuch difappointments, be fure of a loading.
Thefe accounts were received with great fatisfaction by their lordhips; and the merchants, to promote fo good a work, waited on the mimiftry at the board of trade, who heard and thoroughly examined what the merchants had to offer.
After their lordfhips had been attended at a great many meetings, and received full fatisfaction, that it would be greatly for the advantage of this nation, to be fupplied with naval ftores from our own plantations, and very much enlarge the exportation of our woollen and other manufactories to thefe plantations, a motion was made for bringing a bill into the houfe; which was accordingly agreed to, and paffed the commons with a claufe, That no perfon or perfons within the faid plantations, or any of them, fhall manufacture any iron wares, of any kind whatfoever, out of any fows, pigs, or bars whatfoever, under the penalty of
one part to fuch perfon or perfons as thall feize or fue for the fame, to be recovered in any of his majeity's courts of record at Weftminfter, or court of Exchequer in Scotland, courts of admiralty, or other courts of record in the plantations, \&c. the proof to lie on the poffeffor. By this claufe, no fmith in the plantations might make fo much as a bolt, or Spike, or nail.
This claufe muft, indeed, have put the colonies into a moff miferable condition, the fmith being above all other trades abfolutely neceffary for carrying on all other employments: among the reff, that of fhip-building had by it been utterly defroyed, though by this article they make a great part of their returns to England for purchafing our manufactures.
And there was another claufe added in the houfe of lords, That from and after the 25 th of December 1719, no forge going by water, or other work whatfoever, fhall be erected or kept up in any of the faid Brition plantations, for the making, working, or converting any fows; pigs, or caft iron, into *bar or rod iron, upon pain, that if any perfon from thenceforth erect or keep up, or caufe to be erected or kept un any fuch forge, or other work, for the ufe or purpqie aforefaid, fuch perfon fo offending, being thereof lawfully convict in any of his majelty's courts of record at Weftminfter, or in the court of Exchequer in Scotland, or in the court of admiralty, or other court of record beld in fuch plantation, where the offence fhall be committed, at the pleafure of the informer, fhall, for fuch his or her firt offence, fuffer fix months imprifonment without bail or mainprize, and for every other fuch offence fhall fuffer fix months imprifonment without bail or mainprize; and all governors or commanders in chief of the faid plantations, and cvery of them, now and for the time being, are hereby frittly required not to fuffer fuch forge, or other work to be erected, or kept up, in any of the faid plantations within theit refpective governments, contrary to the true intent and meaning hereof; and, if any of the faid governors or conimanders in chief, thall willingly or wittingly offend or be negligent in doing his duty herein, upon complaint and proof made thereof before his majefty, his heirs and fucceflors, or fuch as hall be by him or them thereunto authorized and appointed, by the oath of two or more credible witneffes, the faid governor, or commander in chief, fo neglecting or offending, thall be removed from his government.
This fecond clayfe muft have ruined all thofe iron works in the colonies, to the great lofs of the proprietors of them, and given the French a much fairer handle to tempt them into their fettlements which join to ours, than the fcarcity of iron gave them to entice away our artificers.
Which being duly conidered, thofe perfons that were folicitous for the benefit of the public, defired the bill thould be dropped that feffion, that the members of both houfes might have time fully to inform themfelves of the advantages thereof. Thofe gentlemen who chiefly oppofed this undertaking, were concerned in iron works, wha, on the before-mentioned interruption of the trade with Sweden, raifed their iron to an extraordinary price: they did all they could to oblfuct the bill; they reported, it would hinder the exportation of wrought iron to the plantations, that it was only a trick of fome ftock-jobbers, and that it was carried on by fome perfons that had a grant from the crown of fome part of Nova Scotia, \&c.
All which were groundlefs infinuations; for there never was a defign of making a ftock of it, nor were any ftock jobbers ever concerned in the foliciting it, much lefs did any perfon concerned whatfoever, think of a grant from the crown; neither was Nova Scotia the place intended for carrying on the aforefaid bufinefs; or thought to be proper for the faid undertaking.
But, as the people of New England, New York, Penfylyania, Carolina, \&e.. were under great neceffities for Englifh manufactures, and an incapacity of providing commodities to pay for them, preventing the Englih merchants from fend-
ligy them thofe large quantities that might be a fufficient fupply; and, as inevitable neccility put them upon manufacturing for themfelves, therefore this new employment of providing naval stores, was proposed to take them off the manufactures that interfered with OUR OWN.
At length, however, the widdom of parliament judged it expedient to griant a bounty on pitch and tar, which we thall fee bereafter.- This was but a fmall advance to fupply ourfelves with naval ftores in general
Hemp and flax are fo ufeful in navigation and trade, that we cannot poffibly do without them; the firf for cordage of all forts, the latter for making fail-cloth, as well as for the linen manufactures that are carried on in this kingdom; and the late Czar of Mufcovy being fenfible we muft have our fupply of hemp, Ste. from him, did, as the Swedes by their pitch and tar, make a monopoly of it in a manner; and the Rurfians had their pwn price for it, in ready money or bills of exchange, and the reft in fuch goods as they thought fit. Upon which it was urged by thole who underftood the public interefts; ( 1 .) That the neceflity we were under for thofe commodities, ought to put us upon all imaginable care and ftudy how to provide them, left we fhould happen to be under the fame neceffity for them, that we were in the year 1703 fo pitch and tar, when the government of Sweden, as obferved, abfolutely refufed to let us have them for our ready money, otherwife than in their own fhipping from their tar-company here at their own price; and only in fuch quantities as they thought fit. Upon that difappointment, the government, by allowing a confiderable encouragement for carrying on the manufactures of pitch and tar, had fufficient quantities from our own plantations; and it is greatly to be defired, the like encouragement was given for raifing hemp and flax'; for fince we have plantations where hemp and flax and all forts of naval fores may be raifed, with fo many and fo great advantages to this kingdom, it would be unactountable to leave us dependent and at an uncertainty for them, and to be fupplied only by a prince that will be paid for them juft as he pleafes. (2.) That it is very well known, our tand in general is too dear for raifing hemp and flax, and what is grown here (though it is tough and makes ftrong linen) neither dreffes To kindly, nor whitens fo well as that which grows in warmer climates. In Ruffia the beft hemp and flax grow in the fouthermoft parts of the kingdom, where the fummer is hot, and the air clear, and yet the flax is not atcounted fo good as that which grows in Egypt or Italy.
Egypt has always been efteemed for it's linen, and now fupplies Leghorn with quantities, and the coaft of Syria, Afia Minor, Simyrna, Conftantinople, and other great cities, have a fupply of hemp and flax from thence.
All our colonies (which run twelve or fourteen hundred miles in length, and all the way border upon the fea) have very bot fummers, the fouthermoft parts of them lie near the fame latitude with Egypt, and the north part much about the fame with Ancona, or Bologna in Italy, where excellent hemp and flax grow, therefore we have the greatelt profpect to receive mighty fupplies of hemp and flax from them. Part of the land in the colonies is very rich, and of fo fmall value, that there will be opportunity of breaking up frefh as often as there is occafion to change the ground; which, if laid down, wil recover itfelf again without the charge of manuring, as we do here, to the very great damage of our ploughing lands. Nothing impoverifhes land more than hemp and flax, and though it is manured, that alone will not do fo well, for the land ought to be changed after three or four crops, and generally the fineft and fatteft pieces are converted to that ufe.
Thofe great conveniencies of having land fo very cheap, and fo fine a climate, which we know produces excellent hemp and flax, fo commodioufly fituated along the fea-coaft, with fuch numbers of large rivers running up the country to the moft inland fettlements, where provilions may be raifed at fo fmall a cbarge, and where work may be done by the labour of flaves, almoft as cheap as it is in India, give ground to hope, that we may manufacture linen here cheaper than any part of Europe can import them upon us; and the colonies be as profitable to us, by raifing rough materials to carry on the linen manufacture, as the Suffex and other downs are for fupplying wool for that manufacture, the profits of which we have valued ourfelves fo much upon, that we have fet the reft of Europe to be our competitors therein.
However, a great deal of the value we fet upon it proceeds from miftake, we think abundantly more of it than it really is; the foreign linen and Flanders lace, linen yarn, and naval ftores imported into this kingdom, being fuppofed to amount to more than the exports of all our woollens. The manufacture of linen in Britanny, and other parts of France, forty years ago, was thought to be better to them than the woollen to us; for it was generally allowed we took above a million a year from them, and Portugal, Spain, and the Spanifh Weft-Indies, twice that value, befides what other countries took.
Indeed, they have in fome meafure loft their trade with us; we now receive little from thence, but what comes by fealth, or under the denomination of Swifs linen through Alfatia,
heir cambrics excepted, of which I have elfewhere taken notice. And now the emperor of Germany's hereditary countries, and other parts of the empire, have gained the fupplying of us, which has made them very rich and powerful, Now, as the wonllen manufacture, efpecially the coarfe part has fpread itfelf of late into feveral parts of the kingdom which has exceeded the demand, and pauled great ftocke to lie by, if thote rough materials of hemp and flaxiwere pre pared in dur plantations, the people in North-Britain and Ireland, \&c. would foon find the advantage of falling upon and advancing that manufacture; the laborious and coarfe part being performed abroad, the reft would invite not only the poor and neceffitous, but people of better circumftances to employ their time in it.
If thefe propofitions are heartily put in practice $3_{3}$ we may hope; that by providing the aforefaid rough materials, we fhẹuld have the delighiful profpect of fecing trade flourifh; for, as the filk and linen manufactures, where brought to perfection, are altogether as profitable to thofe nations, as the woollen now is to us; and as we increafe in our linen manufactures, thofe of Silefia, and all the emperor's hereditary countries, from whence we take fuch quantities, muf abate of courfe; their people will alfo refort to us, and help to carry them on; for it has always been obferved, where new manufactures are fet up, and take away part fram another country, the manufacturers will likewife remove: this was the cafe of the Flemings, when queen Elizabethi gave fuch great encouragement to have the woollen manufactute removed hither; and ours when we had that inundation of China and India wrought filks, our weavers went to Holland Flanders, France, \&c. and feveral ftreets in Spitalfields were almoft defolate; and when thofe filks were prohibited, the manufacturers returned again.
It has been computed, that the Ruffians export to Engiand and all other parts, in hemp and flax, above the value of a million a year. If hemp and flax be fo valuable a product for merchandize with them, there feems to be much greater profpeck of enriching ouffelves, by raifing them in our plantations.

1. Becaufe they will not be fubject to any land-carriage, but thipped immediately from the place of growth.
2. Becaufe land is much cheaper in our plantations thanin the fouth parts of Ruflia.
3. The climate being equal with that in Egypt and Italy, is fuppofed to produce 'hemp and flax preferable to theirs.
Sir Jofiah Child fays, That in the plantations of fugar and tobacco, every white man there employs four perfons at home; he means, we fuppofe, in providing clothes, part of their food, and all forts of utenfils for carrying on their bufineis. If fugar and tobacco employ fuch a number of hands at home, certainly every perfon employed in the plantations in railing and dreffing heinp and tlax, muft, by his labour there, return more than twice the advantage that can be produced by fugar and tobacco; for they are manufactured in the plantations, the refining the fugar, and cutting tobace, with the little quantity that is rolled, excepted; whereas flax and hemp are materials for employing all idle bands, and of confequence the poor's rate will foon be abated, and the nation will find in a little time what they fave yearly thereby, will be more than fufficient to encourage the people to begin that employment
We mention part of the poor's rate, becaufe they muft be maintained by our lands, if employment is not provided for them ; and abundance are thrown upon the parifhes for want of work, others make that a pretext for their begging from place to place: but,..where workhoufes have been built though materials for employing the poor are fcarce, yet fome public-fipirited men have there maintained them for half the expence they were at before thofe workhoules were ercted. [See the article Poor.]
This thews what good œeconomy can do, and the happinefs it is to thofe places, which have fuch gentlemen to direct and affift them. We may obferve here, that torether with the produce of hemp and flax, filk may be raifed by the fame hands, [fee the arricle SıLK, ] and not interfere the one with another; for, after the fowing of hemp and flax, the mul-berry-leaves come to be in'perfection for feeding the filkworms; and the filk-harvelt (as it is called) is over before hemp and flax are ripe: thus the perions employed tin the filk may turn their hands to that of hemp and flax, the-breaking and drefing of which, may be work for them all the reft of the year. The ftocks and utenfils to be employed in them, will coff but a fmall matter. If fuch a public firit prevailed now for promoting the general intereft of the nation, as did in our nobility and gentry upon the firif fettling of our plantations, I am perfuaded, that we may, raife fufficient quantities of rough materials for carrying on all our home manufactures.
And, if once we come to be amply fupplied with hemp and flax by the aforefaid methods, every place will be filled with flax-dreffers, and the overfeers of the poor of every parifh, where the wool-ppinoing trade is not carried on, may very eazaly come at hemp and flax, which they will find as prontable to them, as the woollen is to the other; and the more
diftinct the employment is, the better, for many inconveniencies have attended one manufacture interfering with another; befide, there will be an intercourfe of trade created, by one part of the kingdom fupplying the other with their diftinet manufactures; this will give full employment to the whole kingdom, and an univerfal chearfulnets to every body: for the poor are never happier, nor their minds eafier, than when they have full employment; and when they are employed, riches are diffured over the nation.
It has been a common opinion, that we have above a million of people in the three nations deftitute of work; but, if thofe rough materials Ghould come to be raifed in our plantations, there need not be one idle perfon. Suppofe that one million of people were put upon manufacturing thofe rough materials, and each perfon earned but 1 d. a day, and allowing but 300 working days in a year, it would amount to $1,250,0001$. Now, as we have already faid, the importation of foreign linen, Flanders lace, and naval ftores in general, amount to more than all our woollens exported; it is aftonilhing that fo wife a nation as this, does not take care to regulate thofe matters effectually, and have the greateft part of thofe linens made in the three kingdoms. See the article Linen. All other nations of Europe are fo wife, as to make linen enough for their own ufe, Portugal, Spain, and what is imported into Italy, excepted; and, if the government does not take care to put thofe poor people into proper regulations and employments, they muft continue in mifery and want. Setting up the making of pitch and tar in our plantations, was very advantageous; there was, indeed, very great encouragement given to begin that undertaking, which had it's defired end, and valt quantities of pitch and tar were imported; and it is hoped the proper encouragement will be given for every ocher kind of naval fores, that the Swedes and Ruffians, \&cc. may not retain fo confiderable a thare of the importation of that commodity upon us.
Our plantations in America abound with valt quantities of timber, and the navigation from New England, Nova Scotia, or Newfoundland, is not more tedious, nor at a greater diftance from us than the bottom of the Bothnic gulph, or Pe teriburgh : but thofe places have been long in trade, and having a conftant demand from us for that commodity, they always have great ftocks of timber ready quared, and boards lying ready to load a hip of five or fix hundred tons in ten or twelve days; but hitherto we have never had focks lying ready in our plantations, nor due encouragement for building large bulky fhips, fuch as are ufed by the Danes and Swedes, who fail with a few hands, and at a fmall charge. What timber we have had hitherto come directly to England, has been rather put on board to fill up, when tobacco or other merchandize has not been to be had; and therefore, no care has hicherto been taken to make a regular trade, which may deferve further confideration. See the article Timber.
They have iron-ftone all along the Continent, from the fouihermoft parts of Carolina, to the northermoft part of New England, in great plenty; fome of it, upon trial, has made extraordinary good tough iron, and very good fteel.
No part of the world abounds more with prodigious quantities of wood, nor has more rivers and freams than that part of the Continent. There is fo much wood, that the great charge of the planter is to clear the ground.
And, as no one undertaking confumes fo much wood as plenty of iron works, if they were erected, the land would be cleared of the wood, the air purified, the ground made fit for hemp and flax, and the beft timber might be preferved for bringing home.
In charcoaling the wood, there will be a very good opportunity of drawing pitch and tar out of the pine-trees; and no wood, according to the beft obfervation, makes better charcoal for iron works : and all this without any other charge, than providing fuel for the iron works; fuch a dependency have thefe operations one upon another.
And, as there are fo many circumflances that attend the making iron in our own plantations, if due and effectual encouragement be given *, it may be brought to a very great perfection, and fuch quantities made, as to exceed in value any other product of our plantations.

- It is but within thefe few years that they have had any encouragement for the making of pig and fow iron, which is extended to pig.

Iron is a commodity of univerfal ufe, ftaple, and certain in all parts of the known world; confequently as much to be valued as filver or gold; a commodity that will be carried every-where as ballaft, at litete or no charge.
And, whereas the Dutch do fupply Portugal, the Straights, and Turkey, with great quantities, if we could be fo happy as to have a full fupply from our own plantations, either by adventurers from hence, who would lay out their eftates in erecting iron works, or in exchange for the woollen or other manufaclures, which we export to thofe places; we fhould not only ballaft our thips with iron, but export great quantities, not only all over the Straights and Turkey, but even

Vol. II.
to India and Africa, and foon become mafters of a good part of the trade.
And, as we were once dependent on the Swedes for pitch and tar, we muft remain fo trill to them for iron, as we muft to Norway and to them for boards and timber, and to Mufcovy for hemp, unlefs fome effectual care is taken to relieve us from fuch a dependency: it may one day prove highly danerous, as it heretofore has done, to depend upon any power whatever, for any effential branch of our naval ftores.

Further Remarks on the benefits we may reap from North America, by the Definitive Treaty of 1763 .

That our plantations are really able to furnifh a fufficient quantity of hemp, flax, tar, pitch, turpentine, fir, timber, deal-boards, mafts, yards, pipes, and hoghead-ftaves, fully to fupply the whole demand of Great-Britain anid Ireland bas been taken for granted by many; fo as that we fhould fuffer no fcarcity, or want of thofe goods, though we fhould abfolutely prohibit their importation from any other place, after they become once well eftablifhed, in regard to Naval Stores in general.
By being able to furnifh ourfelves, muft be underftood thus; for we mult not fpeak more for them, than our plantations do for themfelves; and it is neceflary to be very exact and explicit, in what we call the firft principles: we would not be underfood to mean, that, at prefent, they have hands enough to fell and cut out the quantities of timber, \&c. draw and extract the tar and turpentine, fplit out the ftaves, \&c. raife the hemp, and make the iron neceflary for our ample fupply; for that may fill be a difficulty for want of hands, but that this is not invincible, fee the articles People and Poor; but we mean that the country and the woods, have a fufficient quantity of all thefe; that they are not to be planted, or waited for 'till grown; they have a boundlefs extent of woods, as well on the hills as on the plains, unexhaufted, and, indeed, unexhauftible; which are fufficient for all our demands, and much more.
Likewife we do not fay or infift, that they do now produce or plant a fufficient quantity of hemp and flax to fupply our demand; but that they have land enough, fufficient in ftrength of foil, and fufficient in quantity, and which, by cutting down the woods, would daily increafe: this we think is undoubted.
The countries where this fupply of timber and naval ftores would be produced, are, in a word, the whole Englifh part of the continent of North America, viz. New England, New York, Eaft and Weft Jerfey, Penfylvania, and all the country, whether poffeffed or no, upon the great river of Delawar, as far as that river is navigable.
All the colonies of Virginia and Maryland, to the bottom of the bay of Chefeapeake, all the colonies of North and South Carolina, and all the rivers thereof; in which laft colony alone, they tell us, there is as much fir timber growing, as in all the kingdom of Norway.
Likewife it is to be added, that, mutatis mutandis, the coin and value of payment confidered, they will be able to furnifh all there things as cheap as the eaft country and Norway trade does furnifh thern.
Thefe things granted, the propofal for amply fupplying ourfelves with naval fores, has been reduced to a narrow compafs; for it has been urged, that all the difference then between England (the market) and our colonies, the producers of thefe goods, lies in the price of the freight, occafioned by the diftance of the place, and length of the voyage; how to bring this to a par, is the whole of the enquiry: and this is to be done by the feveral methods following.
N. B. Bounties and payments of dead money to the importer for encouragement, has been rejected by fome, as being a mere charge upon the nation, though not upon the particular buyer of the goods, and is not by any means to be called a leffening the difparity, only it removes the burthen from private hands to the public, which is not fufficient; and fhould it extend to all the importations, would be a burden too heavy to bear, even for the whole nation.
The only weight, therefore, we would lay, fay the propofers, on the public, and even that but for a while, is to take off the duties entirely from all thofe fpecies of goods (not to repeat them) and prohibit the importation from other places; and not this laft part neither, 'till the colonies were fully entered into the trade.
Then for the freight; we are to fuppofe, that the freight of all there articles, from the eaft and north feas, flands now at a medium of forty to fifry thillings per ton, call it more or lefs: and fuppofe the freight of the fame goods from the coyonies fhould then fland at a medium of fix to eight pounds per ton, fo that the freight would be three times as much one way as the other: it is truc, this is a very conliderable article, and efpecially confidering then likewife to be all bulky goods. But two articles will immediately contribuce towards, if not be a full equivalent to, this excefs of freight.
Firft, Taking off the duty upon importation here, which being very high, fuppofe it for argument fake to be 20 per cent.
may fairly be calculated at one half of the difference, and mult be found by the importer in the price of his goods at market.
Secondly, Laying an impoft, fuppore it to be about ten per cent. upon all the importations of Englifh goods into thofe colonies, and this, we conceiver will be equal to the other half: the money fo raifed to be paid to the commanders of the fhips, in fuch proportions as fhall be adjudged by the public, and upon fo much tonnage only, as is loaden upon them of fuch particular goods.
The colonies will never complaiń of fuch a duty, becaufe it is in a manner paid to themfelves, and is but, taking the money out of one pocket, and putting it into the other ; the growth of their country will be exported (indeed the wafte grow th, for they burn a great part, their own people will be employed, and will be prodigioully increafed, and thefe two are of the laft importance to them; that give them but an affurance of thefe, they may give you affurance, that in a few years they will be the greateft, and moft profperous colonies in the world.
I acknowledge, I defpife (with the utmoft contempt of their ignorance) the fuggeftions of thofe times, when this glorious fcheme of New England's profperity was laid afide fome years ago, from a pretended jealoufy of thofe colonies growing too powerful, and making themfelves independent; infinuating, becaufe they were independent in a religious profeffion, they wanted to be fo in government; whereas firft, the very thought, befides a worfe principle it began in, viz. of party malice, was to the laft degree weak and fooliifh; fince it is evident, the profperity, and, indeed, the very being and fublaftence of New England in matters of trade, confifts in, and depends wholly upon their union with, and fubjection to Great-Britain, as the principal. growth of their country, which is the only article that fupports their comm 4 rce, is taken off but by the Eniglifh, and the fame of the reft: for example,
The provifions of North America are the mere growth of the couhtry, fuch as flour or meal in barrels, peafe, malt, rice, and tobacco; beef and pork, pickled and barrielied s. fheep and horfes alive; beer in cafks and in bottles ; white fifh falted and dried, and falmon barrelled; befides lumber, for building and repairing as well houfes as fhips, and fhips and floops ready built and finifhed.
Thefe all are the product of the country, and the labour of the people in the colonies of New England, New York, the two Jerfeys, Penfylvania, Virginia, and Carolina; without this export, thofe colonies would perifh. It is true, the iflands would ftarve for want of the provitions too, at leaft at: firft: but, on the Continent, if the iflands did not take off their product, the lands, which they have been at a vaft expence to cure, and clear, and plant, would lie ufelefs and uncultivated; the fwine, which the woods feed for them by thoufands, would over-run them with their multitude, and be worle to them, in time, than the bears and the wolves; their plantations would produce more of every thing than their mouths could devour, or than they could find markets to vend them at: their timber would ftand, indeed, where it was, for no body would fell it to have it, and they may fet their woods on fire, as they did formerly, to clear the land of them.
In a word, this being their cafe, their intereft ties them to England, though their duty fhould not; and, to feparate from England, would be to be undone.
Then carry the fame argument on to the purpofed commerce, for timber, naval ftores, \&cc. this would ftill bind them the fafter to their dependance on England, for no nation in Europe could give them the fame encouragement. We need not enlarge upon this article here, it is evident to all that underftand trade.
Let us then return to the propofal: having thus fated the equivalent, by which the government may be reimburfed what they Ihall be out of pocket for the complete trial, it remains only to give a brief account of the advantages of fuch a commerce: take them in a few fhort heads.
I. Inftead of the trade for deals and timber, tar, mafts, \&c. which we carry on now with Norway, almoft all for ready money, and which carries out more filver in fpecie, nay, in our very coin, crowns and half-crowns, than the Eaft India company itfelf, however. little notice has been taken of it: we fay, inftead of this difadvantageous trade, we fhould then receive all the fame goods in exchange for our opn manufachures, and they would be purchafed of, and produced by the labour of our own people, the induftrious planters, fubjects to the government of his majefty of Great-Britain
II. Inftead of having at leaft two-thirds of thefe goods brought over in foreign bottoms, Danes and Swedes, and the fhips navigated by foreign feamen, to whorn we pay dead freight in the like ready money, and which they carry away in feecie, as before intimated, it would be wholly brought to us in our own thips, New England built, and navigated wholly by our own feamen.
III. Inftead of a very few Englinh thips, which now ufe the Norway trade, this new commerce would at leaft employ a thoufand fail of fhips every year, and all the year, and molt
of them fhips of burden : fo that', befides the benefir of build ing, repairing, and fitting out fo many hips, it would be new nurfery of feamen to us, having always 15 to 20,0000 feamen employed therein.
IV. The colonies would be increafed in people teyond exprefling ; and, confequently, not only the confumption of provifions would be increaled there, which is, as faid hefore the grand fund of their profperity, but the confumption of manufactures, and all European exportations to them, would be increafed in proportion.
By the calculations which have been made, it is fuppofed that not lefs than roo,000 men would be employed in, the woods, in cutting and felling timber, deals, mafts, yards, \&cc. in the managing and planting of hemp and fax; in the extracting and drawing off the tar; and in preparing all the articles mentioned, to be fetched from thence on account of this trade; and befides the building thips among them, an artule To confiderable, as well deferves to be handled by itfelf.
V. It would effectually furnifh thofe colonies with returns for England, which they are now greatly diffrefled for, in order to pay the balance of their trade with England; the quantity of our manufactures which they take off, infinitely exceeds what they have of their own growth to fend us in return: whereas, in cafe of fuch a trade for the produce of their country, they would be at about a par with us, and we hould always be able to call for as much goods from them as would pay ourfelves
VI. By this means they would receive filver in great guantities from Jamaica, and the other iflands, for all that trade would be clear gain to them ; and that filver alfo would remain with them; which now it cannot do, the bulk of it be ing fnatched up for returns to England in fipecie, though it be fometimes to their great difadvantage; fo that, in confequence of this commerce, there would be a circulation of current money' in the colonies on the Contineift, a thing they have too long been ftrangers to.
It would take up a volume by itfelf to lay open all the gla rious fehemes of improvement in trade which would be the confequence of fuch a bufineff, and particularly taE aNcrease of our mánufactures here, by the demand of goods from thence, when the numbers of miople in those colonies shotild be thus increased : let any one calculate that is able to judge of thefe things ty what it is already, what it muft neceffarily be on an increafe of people : let them compute the exportations to the colonites.on the continent at prefent ; let them confider thofe exportations to be as they really are, one intire improvement, derived from mere nothing, or next to nothing, in the last huw DRED YEARS, for then it was all an embryo, and fome of thea were not in being' as to trade, viz. New York and the Jerfeys, conquered but in 1666 from the Dutch, Penfylvania not above 70 years growth, Carolina and Georgia lefs,
Let them tell us, or but guefs at for us, what a glorious tr to England it would be to have thofe colonies increafed with a million of people, to be cloathed, furnished, and supplied with all thbir needful thinçs food excepted, only from us; and tied down for ever to us, by that immortal, indiffoluble band of trade, their interef, which wifely regulated, need never injure, but unipeakably benefit that of the mother-kingdom.
Let them confider, that all thofe people muff fetch from GreatBritain only; their cloaths, woollen, linen, cotton, and filk; all their haberdafhery; all their manufactures of hard ware, wrought iron, brafs, 8 cc . all their heavy ware, fuch as calt iron and brafs, guns, mortars, fhot, fhells, pots, cauldrons, bells, battery, 8 c . all their clock-work, watch-work, even fo much as their toys and trinkets; all their houfe furniture, kitchen-furniture, glafs-ware, upholftery ware, thin-ware; in a word; almoft every thing we make, and every thing we import: it would be endlefs to repeat it.
How prepofterous mult thole notions be, and how oddly muft they think, if they can be faid to think at all, who fugget mifchief from the increafe of our colonies! Do any other nations.act thus? Do even the Spaniards think their empites of Mexico and Peru, Chili and St. Martha, too many and too great, though a bundred times as large as thofe we are naming, and though they drain even Spain itfelf of people? Were the French jealous of the number of their perple in the vaft countries of Canada and Louifiana before they lof them? Did they not, and do chey not ftudy, by all means pofifible, to increafe them, and to exiend their plantations? See the articles British America and French America. Migh we not with wife management have prople enough to fpare ? Do we not increafe 'till we are ready to eat up one another, we mean in trade? And can we not fipare cnough of the unprofitable part of our people, thofe who are rather faid to ftarve among us than to live? who, if they were well fettled there, would be induftrious, thrive, and grow rich; and it is by the induftrious that trade is fupported, and wealh increafed.
Let us no more amufe ourfelves, and raife the vapours with ,our phlegmatic thoughts about every litte German incroachment on our manufactures, and the prohibitions of a few petty princes in the North: here we can raile a confuaption

## N A V

of our manufactures, fuperior to all the obftruction they can give us.; here our manufactures will never be prohibited; ere the demand for ever will be increafing with the people; it is like a mill built by the lord of the manor, it grinds for all his tenants, and is kept going by his own ftream; fo that on one hand, it can never want work, and, on the ocher, can never want water.
We have no room to fay more, though we fcarce know when to leave off. We will conclude with obferving, in a few words, that here is the greateft opening for a very great adancement of our trade, and the eafieft to put in practice, hat ever was propofed, or perbaps can be propofed to thís nation; and 'till we enter heartily and vigoroufly into it, in t's full latitude, we ought never to complain of the decay of our trade, or of the want of a vent for our manufactures.
As the increafe of commerce and people in our colonies is, in confequence of our property in them, an increafe and imrovement of our trade in England, and, in particular, an increare of the confumption of our manufactures; $f o$ it is a natural inference; and evident to demonifration, that an increate of colonies muft have the fame effect, PRoviden, I mean, that our colonies are duly regulated in SUBSERYIENCY TO THEIR MOTHER-KINGDOM, BUT NOT otherwise.
We may, therefore, lay it down as a fundamental maxim, that additional colonies, where the people may plant and fettle to their advantage, is a wilible improvement to our national trade.
Employment of our people, or, as we call them, our poor, is the great fupport of our Yery being as a nation; without it, the poor will eat us up, the parifh-rates will devour not the produce of our land only, but the land itfelf; and he church-wardens will call upon you for 20 s in the pound for your beggars.
This employing of the poor is the effect of our manufacTURES ; but, as our manufactures employ the poor, fo trade carries off the manufactures, or elfe they would foon over-run the confumption, and come to a full ftop: the MANUFACTURES, SUPPORT THE POOR, FOREIGN COMMERCE supports the manufactures, and planting colohes suprorts the commerce.
Here you difpofe of your increafing numbers of poor ; they go there poor, and come back rich; there they-plant, trade, thrive, and increafe, even your tranfported felons, fent to Virginia inftead of Tyburn; thoulands of them, if we are not mifinformed, have, by turning their hands to induftry and improvement, and, which is beft of all, to honefty, become rich fubftantial planters and merchants, fettled large families, and been famous in the country; nay, we have feen many of them made magiftrates, officers of militia, captains of good 'hips, and mafters of good' eftates.
This way, therefore, we may difpofe of the growing numbers of our poor to an inexpreffible advantage, as well to a public as a private one : it is a private advantage, as it is really a benefit to the poor that go freety and voluntary. We would not be thought to infinuate the tranfportation of the poor; that would be. fending them away becaule they are poor ; bu thofe who being deffitute of employment here, that are willing to feek it abroad, would have a vifible advantage, and would foon give encouragement to others to follow them, and thoufands of fuch families would raife themfelves there by their induftry, and grow rich; for, where wages are High, AND PROVISIons low, as is the cale there, the labourer muft be idle, or extravagant, or thrive, and grow rich ;' and the confequence of the diligent labouring man there is always this, that, from a meer labourer, $:$ HE BRCOMES A PLANTER, and fettles his family upon the land he gains, and fo grows rich of courfe.
The advantage of the public we have fpoken of, though but briefly: we thall only add here, that, befides the increafe of commerce and people, it neceiliarily makes an increafe of feamen; all this growing commerce, to and from our colonies, muft be carried on by fea; all the commerce they can have there, one colony with another, muft be the fame: the firft by large thips of force, the laft by floops, ketches, and fmall mips. The increafe of the people increafes the trade; the in creafe of the trade increales the number of hips, and the in creafe of thips calls for an increafe of feamen: thus your frength, as well as wealth, grows with your colonies, the climax is very agreeable in profpect.
Whence that the advancement of our eftablihed colonies, and fettlement of new ones mult prove highly beneficial which is, without queftion, extending the commerce; it is enlarging the field of action; it calls in more hands to affif in the public profperity; it employs profitably the unprofitable numbers of your poor, and lays a foundation of more ex tended trade, indepfndent of all other nations; Which is now become a princtple of policy to be the more steadily pursued, as other nations are daily attempting to injure our trade, by setting up arts and manufactures for themselyes, and proHIBITINGTHE IMPORTATION OF OURS.

## The Premiums, or Bounty, that have been granted by

 parliament on Naval Stores imported.
## 'I. From the Britifh plantations in America.

By 3 and 4 Ann. cap. 10. §. 1, 8. firt granted from 1 Jan. 1705, to I Jan. 1714.
By 12 Ann. cap. 9. S. I. thence continued to I Jan. 1725. By 8 Geo. I. cap. 12. §. 1. hemp only further continued to 1 Jan. 1741 .
2 Geo. II. cap. 35. §. 3, 18. granted from 29 September 1729 , to 29 September $1-42$.
13 Geo. II. cap. 28 . §. 1. thence continued (as to mafts, yards, and bowfrits, tar, pitch, and turpentine) to 25 December $175^{\circ}$; and from thence to the end of the then next feffion of parliament.
During the aforefaid terms of years, the feveral forts of naval ftores hereafter mentioned, imported directly from any of the Britih plantations in America, in any hip that may lawfully trade, manned as by law is required, are to enjoy the following bounty, viz.
l. s, d.

Hemp, water-rotted, bright and clean, the ton \} 600 containing 20 bundred weight

600
Mafts, yards, and bowiprits; the ton, allowing:
40 feet to each ton, girt-meafure, according
to the cuftomary way of meafuring round bo-
I. 0 dies

Clean, good, merchantable, well-conditioned, clear of drofs or water, and fit. in every refpect for making of cordage, the ton, containing 8 barrels, and each barrel to gauge $3 \mathrm{I} \frac{1}{2}$ gallons, to be; well hooped and fitted up
Tar, Clean, good, merchantable, well-con: ditioned, clear of drofs or water, and fit in every refpeet for making of cordage, made from trees prepared according to the directions hereafter mentioned, the ton, containing 8 barrels, and each barrel to gauge $31 \frac{2}{2}$ gallons, to be well hooped and ficted up on the exportation thereof
Pitch, clean, good, merchantable, and well conditioned, not mixed with dirt or drofs, the ton, containing 20 grofs hundreds nett pitch, I
to be brought in 8 barrels of equal fize clear of drofs and water, the ton, containing 20. grofs hundreds nett turpentine, to be brought
in 8 barrels of equal fize.
Which premiums are to be paid by the commiffioners of the navy, by bills to be made out for the fame, and delivered to the importers within 20 days after the difcharge, or unlading of the Chip, in order to be paid in courfe, upon certificates of the refpective chief officers of the cuftoms where imported; to whom a certificate has been produced, under the hands and feals of the governor, lieutenant-governor, or collector of his majefty's cuftoms, and naval officers, or any two of them, refiding within any of his majefty's faid plantations, teftifying, that, before the departure of the fhip, the perfon lading the fame had made oath before them, That the faid fores were truly and bonầ fide, of the growth and produce of his majefty's faid plantations; and, with refpect to the high bounty on tar, expreffing, That it has appeared to them, the perfons fo certifying, by the oath of the owner, or maker of the tar, which certificate was granted, that the tar therein mentioned was made from green trees prepared for that purpofe, after the following manner: that is to fay, that when fuch trees were fit to bark, the bark thereof was Aripped eight feet, or thereabouts, up from the root of each tree, a flip of the bark of about four inches in breadth having been left on one fide of each tree; and that each tree, after having been fo barked, had ftood during one year at the leaft, and was not before cut down for the making of tar; and that the faid tar was made without mixture of any other tar therewith: as likewife, upgn oath to be made by the mafter of the fhip, at the port of importation in Great-Britain, That the fame were fhipped within fome of his majefty's plantations in America, and that he knows, or believes, that the faid fores were the produce of the faid plantations. 3 and 4 Ann . cap. 10 . §. I, 2. 12 Ann. cap. 9. §4. 8 Gco. I. cap. 12. §. i, 4. 2 Geo. II. cap. 35. §. 4, 12 .
But the aforefaid cerificates of the chief officers of the curtoms are not to be made out for the premiums on pitch, until the fame be freed from dirt or drofs; nor for any tar that is not fitting to be ufed for making of cordage, and fhall not be freed from drofs and water; and unlefs fuch pitch and tar be clean, good, mérchantable, and well conditioned. 5 Geo. I. cap. 1 i. § 16. 2 Gro. II. cap. 35 . §. 11 .
And the faid officers of the cuftoms, before they make out fuch certificates, are to examine the pitch, by opening the heads of the barrels, fawing of the ftaves in the middle, and break-
ing the barrels, or by fuch other means as they fhall think proper, to difcover whether the faid pitch is good and merchantable, not mixed with dirt or drofs; and alfo to examine and fearch the faid tar, to difcover whether the fame is clean, good, merchantable, well-conditioned, and clear of drofs or water, and fit for making of cordage. 5 Geo. I. cap. in. §. 17. 2 Geo. Il. cap. 35 . §. M1.

## II. From North Britain, or Scotland.

By 12 Ann. cap. 9.§. 2. firt granted from September 1713, to 1 January 1725.
By 8 Geo. 1. cap. 12.§. 1 . hèmp only further continued to 1 January 174 I.
By 2 Geo. II. cap. 35. §. 13. granted from 29 September 1729, to 29 September 1742 .
By 13 Geo. H. cap. 28. §. I. thence continued (as to mafts, yards, and bowfprits) to 25 December 1750, and from thence to the end of the then next feffion of parliament.
During the aforefaid terms of years, the naval flores hereafter mentioned, imported from North Britain into South Britain, in any hhip built in Great-Britain, are to enjoy the following bounty, viz.
Hemp, water rotted, bright and clean, the ton containing 20 hundred weight
Trees of 12 inches diameter and upwards, fit for maits, yards, or bowfprits, regularly converted, and turned at leaft into eight fquares, found, freth, and in good and merchantable condition, the ton, allowing 40 feet to each ton, girt meafure, according to the cuftomary way of meafuring round bodies

Which premiums are to be paid by the commiffioners of the navy, by bills to be made out for the fame, and delivered to the importers within twenty days after the difcharge or unlading of the chip, in order to be paid in courfe; upon certificates of the refpective chief officers of the cuftoms where imported; to whom a certificate has been produced, under the hands and feals of the comptroller and collector of the cuftoms, and the naval officer, or any two of them, refiding at the port or ports of exportation in North Britain, teftifying, That before the departure of the fhip, the perfons concerned or employed in cutting down the aforefaid trees, or any two of them, had made affidavit in writing, before fuch comptroller and collector, and naval officer, or any of them, that fuch trees were truly and bonâ fide, of the growth and produce of North Britain; and fpecifying in the faid affidavit, the parcicular number, quantity, and quality of the trees, together with the time when they were cut down, the names of the proprietors, and the places where the fame did grow; as likewife, upon oath to be made by the mafter of the fhip, at the port of importation in South Britain, that the fame were truly laden in North Britain, and that he knows or believes, that the faid trees were of the growth of North Britain. I2 Ann. cap. 9. §. 2. 2 Geo. II. cap. 35. §. 13.
Perfons counterfeiting, or making falfe affidavits, or certificates, of the growth of the trees or hemp, in order to obtain the premium, are to fuffer as for wilful and corrupt perjury, and to forfeic 1001.12 Ann. cap. 9. §4. 2.Geo. II. cap. 35 . \$ 14.
Comptrollers, collectors, or naval officers, making falfe certificates, are to forfeit their office and 501 . to be imprifoned a year without bail, to fuffer fuch corporal punifmment as the court of Exchequer thall think fit, and to be incapable of ferving again in the cuftoms. $13 \& 14$ Car. II. cap. 11. §. 8. 12 Ann cap. 9. §. 4.2 Geo. II. cap. 35. §. 14.
Mafters or owners of thips knowingly importing foreign trees fit for mafts, \&c, as of the product of North Britain, in order to obtain the bounty, are to forfeit 100 l . together with the fhip and furniture. 12 Ann. cap. 9. §. 5. 2 Geo. I.. cap. 35 . §. 15 .

## From the Britifh plantations and Scotland.

Upon the landing of the aforefaid ftores and trees, the pre emption or refufal muft be offered and tendered to the commiffioners of the navy; and, if within twenty days after fuch tender, they fhall not contract for the fame, the importers may otherwife difpofe of them. $3 \& 4$ Ann. cap. 10. §. 4. 12 Ann. cap. 9. §. 3.8 Geo. I. cap. 12. §. 3. 2 Geo. II. cap. 35. $\$ 6,13$

No fee, gratuity, or reward, may be demanded or taken by the officers of the cuftoms, for the examining, viewing, or delivering any of the aforefaid naval ftores, or for making or figning certificates, in order to receive the premium; upon forfeiture of office and 100 , and to be rendered incapable of ferving his majetty. 5. Geo. I. cap. II. §. 18. 2 Geo. II. cap. 35. §. 1 I.
And, if any of the aforefaid naval fores (except hemp) or trees, thall be again exported, the exporter muft, before eny thereof, produce to the collector, $\& \mathrm{cc}$. of the cuftoms, at the port of exportation, a receipt from the treafurer of the navy, or his caflicr, fubferibed by his comproller, or his
chief clerk, fignifying that the full amount of the aforefaid premium had been repaid to him; on failure whereof, fuch ftores may not be exported: and, if fuch fores are fraudujently exported without repayment of the premium, they are forfcited, and double the value. 2 Geo. II. cap. 35. §. 7, $9,16$.
And if , upon the exportation of the aforefaid ftores, ${ }^{5}$ doubts fhall arife concerning the growth, product, or manufacture, the onus probandi thall lie on the owner or claimer thereof, 2 Gea. II. cap. 35. §. 10, 16.
By an act of the 24 th of Geo. II. entitled, An aet to continue feveral laws therein mentioned, \&c. there is the following claufe for continuing the like encouragement on the importation of naval fores, from the year 1750 to 1757. This aft is further continued to 1764 .
During the late war, an act paffed in the year 1745 , to allow the purchafe for his majelty's ufe, of naval fores brought into this kingdom on board neutral thips, by any of his majefty's fhips, and to allow fuch ftores to be landed and entered during the continuance of the wars with France and Spain, or either of them. See the end of this letter $N$, for the Business of the Customs, \&c.
NAVARRE, is a kingdom in Spain, divided from France on the north by the Pyrenees, which alfo cut it into two parts, diftinguifhed into Upper and Lower ; the former, much the larger, and on the Spanilh fide, is the kingdom we thall particularly fpeak of; the other, beyond thefe mountains, by much the fmaller, and belonging to France, is bounded by the territory of Labeur on the north; by the Pyrenees, which divide it from Spanifh Navarre, on the fouth-weft; and by the principality of Bearn in Gaicony on the eaft; and is about 30 miles long, and 15 broad, and one of the barreneff provinces in France.
Spanifh Navarre borders upon Bifcay and Old Caftile on the weft ; on Caftile and Arragon on the fouth ; and eaftward upon Arragon. It's length is about 90 miles from north to fouth, and about 80 in breadth, from eaft to weft. It is divided into five diftricts, viz. Pampelona, Tudela, Eftela, Olite, and Longueffa, which are parted by prodigious high and uncouth mountains, yet yielding good corn and grain, wine, oil, honey, fruit and herbs, and affording plenty of food and pafture for their cattle, befides an infinite number of fowl, both wild and tame. The mountains produce, alfo, metals and minerals, and had formerly feveral rich filver and gold mines, though, at prefent, they are either neglected or exhaulted.

## NAVIGATION.

Of the practical art thereof, in relation to fhip-failing.
What a complete treatife of that art ought to contain, according to Sir William Petty.
I. What arithmetic, in whole numbers and fractions, as alfo in decimals and logarithms, is neceffary for the fame; and what books are beft for teaching fo much thereof. 2. What vulgar, practical, mechanical geometry, performable by the fcale and compafs, is fufficient. 3. What trigonometry, right-lined and fpherical, will fuffice. 4. How many ftars are to be known. 5. What inftruments are beft for ufe at fea, with the conftruation of them, and the manner of ufing them. 6. The whole fkill of the magnet, as to the directive virtues thereof, and all the accidents that may befal it. 7. The hydrography of the globe of the earth, the perfpective of the coafts, and the defcription of the under-water-bottom of the fea. 8. The knowledge of winds and meteors, fo far as the fame is attainable. 9. The hiftory and fkill of all forts of fifhings. 10. The art of medicine and furgery peculiar for the fea, in. The common laws of the admiralty, and jurifdiction of the fea. 12. The feveral vittuallings and cloathings fit for feamen. 13. The whole fcience of ebbing and flowing, as alfo of currents and eddies at fea. 14. Dromometry, and the meafures of a fhip's motions at fea. 15 . The building of hips of all forts, with the feveral riggings and fails for each fpecies, and the ufe of all the parts and motions of a fhip. 16. Naval oconomy, according to the feveral voyages and countries. 17. The art of conning, rowing, failing, of all the feveral forts of veffels. 18. The gunnery, fire-works, and other armatures peculiar to fea and to fea fights. 19. The art of loading and unloading the chief commodities to the beft advantage. 20. The art of weighing up funk Chips and goods, as allo of diving for funk goods in deep water. 21. The general philofnphy of the motion and figures of the air, the fea, and of feafons; of timber, iron, hemp, brimftone, tallow, \&cc. and of their feveral ufes in naval affairs. 22. An account of five or fix of the beft navies of Europe with that of the arfenals, magazines, yards, docks, \&c. 23. An account of all the hispping able to crofs the feas belonging to each kingdom and flate of Europe. 24." An account of all the chief commercial parts of the world, with mention of what commodities are originally carried from, and ultimately to, any of them. 25. An account of the chief rea-fights, and all other naval expeditions and exploits, relating to war, trade, or difcovery, which have happened in this latt century. 26. Of the moft advantageous ufe of telefcopes for

Reveral purpofes at fea. 27. Of the feveral deptbs of the fea, and heights of the armofphere. 28. The art of making fea water frefh and potable, and fit for all ufes in food and phyfic at fea.

## REMARKs

I am not acquainted with any book written upon the fubject of navigation according to this extenfive plan propofed by Sir Willian Petty. The beit book that has fell in my way upon this fubjeet, is that lately wrote by the judicious Mr. J. Robertfon, F. R. S. the mathematical mafter at Chrift's Hofpital, London; to which we refer the reader, after giving an extract therefrom upon one of the moft material parts relating to praetical navigation.

Of a Ihip's reckoning, in regard to the art of condudting of hips from one part of the world to another.

A fhip's reckoning is that account whereby, at any time; it may be known where the ihip is; and on what courfe or courfes fhe is to fteer to gain her port.
Dead-reckoning, is that account deduced from the occurrences wrote on the $\log$-board.
The log-board is a painted black board, whereon is wrote in chaik whatever is thought worthy of note from day to day; and, for a proper difpofition of fuch notes, the board is divided into five columns: the left hand one contains 24 hours, from the noon of one day to the noon of the next; in the fecond and third columns are the knots and fathoms the fhip is found to run per hour, fet againft the hours whan the log was hove; the fourth column contains the courfes the Ship fteers; and in the fifth, or right-hand column, is wrote the winds; the alteration of the fails, the bufnefs doing aboard, and what other remarks the officer of the watch thinks proper to infert: for it thould be obferved, that it is ufual to divide a hip's company into two parts, called the ftarboard and larboard watches, who alternately do the duty of the fhip, for four hours and four hours.
The log-book is a book ruled like the log board, in order to contain the daily copies of the remarks wrote on the log-board; which is the only authentic record' of the fhip's, tranfactions; and thele are, by the perfons who keep journals, tranfcribed every day at nown into their $\log$-books, from whence they make the necelfary deductions relative to the fhip's place.
But, as the fhip's motion is liable to be difturbed from a variety of caules, fuch as continual defection from the courfe fet, by the Chip's playing to the right and left round her center of gravity, and the unequal care of the helmfmen; the diftance being faulty, on account of tumbling feas, rolling, with or againit the thip; the unfteadinefs of the wind, unknown currents, fudden forms, and many other impediments, which feem impoffible to be furmounted; confequently her place, according to the dead-reckoning, may be juftly doubted, and, therefore, mariners try every day to find the latitude their hhip is in, by obfervations on the fun or flars; and, if the latitude obtained by obfervation, and that found by the dead-reckoning, agree, it is prefumed the fhip's place is well determined; but, if they difagree, the account of Longitude must be corrected *; and, for the latitude, that found by obfervation is always to be depended on.

- The lateft method, and the fimpleft, that has ever been propofed for this purpofe, is that lately communicated by the Rev. Mr. Richard Locke; the certainty or uncertainty of which, if I am rightly informed; is now trying experimentally. See the articles Commanders of Ships and Longituds, where what Mr. Locke has hitherto offered to the public is given at large: and, if it fhould prove trae in practice, will certainly render the whole practical art of navigation extremely eafy and fecure, and bids.fair, according to fome, for the real difcovery of thar great defideratum, the Longitude at Sea: but che certainiy hereof being doubted by fome mathematicians, the matter muft be left to repeated and infallible experience; where we leave it.

## Various methods of correcting the reckoning or longitude.

Confider whether the difference may not have been occafioned by a current; and, if it is poffible, try it (by the method defcribed below,*) or make fuch an eftimate of it's, fetting and drift as may be judged reafonable; then with. the fetting and drift, as a courfe and diftance, find the difference of latitude and difference of longitude, with which increafe or diminifh the dead-reckoning; and if the latitude, thus corrected, agrees with the latitude by oblervation, then the longitude thus corrected may be fafely taken as true, and fo the fhip's place determined.

## - Of failing in currents.

A Current, or Tide, is a progreflive motion of the warer, caufing all floating bodies to move that way towarer, cauling all Hoating bodies
wards which the tream is direted.
The fetting of a tide or current, is that point of the compafs towards which the waters run; and the drift of a current is the rate it runs per hour.

## NAV

The fet:ing and drift of the mofl remarkable tides and $c$ uif rents are pretty well known; but, in unknown carrents; the ufual way to find the fetting and drift is thus: Let three or four men take a boat a litcte way from the fhip; and by a rope faftened to the boar's stern, let down a heavy iron pot, or loaded ketle, icito the fea, to the depth of 80 or rco fa homs, where it can be, whereby the boar will ride almoft as fteady as at anchor: then hea e the log, and the number of $k$ nots rua out in half a minure will give the miles which the current runs per hour; and the bearing of the log thews the fetting of the current.
Exam. Suppofe a Mip, in 24 hours, finds, by her deadreckoning, the has made 96 miles of diff. latitude north, and 38 miles of departure weft; but, by oblervation, finds her difference of latitude is 112 , and on trial finds a current, which, in 24 heurs, make 16 miles of diff. latitude north, and io miles of departure eaft : required the fhip's departure?
Diff. lat by account 96 m . N. | Depart. by acc. 38 m . W. Diff. lat. by current 16 m . N. Depatt. by curr. Io m. E.
True diff. lat. $\overline{1 i 2} \mathrm{~m} . \mathrm{N}$. | True departure $\overline{28} \mathrm{~m} . W$.
Here the dead-reckoning, corrected by the current, gives the diff. latitude 112 miles, which is the fame as found by obfervation; therefore the departure, 28 , is taken as the true one.
The error in the dead reckoning is ufually attributed to unknown currents; for, by various caules yet undetermined, there are many counter-motions of the water in the open feas, as well as thofe obferved near the fhores, where the motions may be tolerably well accounted for. Some of the oblerved currents in the great feas may, perhaps, be owing to the tide's following the moon, and to the libratory motion the waters may have thereby; and the unfettled fetting and drift of thefe cuirrents may poffibly depend on the change in the moon's declination: however, it is well known frum obfervations, that the trade-winds occafion a confiderable current within their limits, particularly within the torrid zone, where the motion is perpetually towards the weft, at the rate of about eight or ten miles a day: but, at the extremities of the trade-winds, or near the latitudes of 30 degrees north and fouth, it is likely that the currents are compounded of the faid weftern motion, and of one towards the equator: therefore all fhips failing within thefe limits fhould allow a courfe each day for this current.
If, when all currents have been allowed for, there fhould ftill be a difference between the obferved latitude; and that given by account, then a further correction muft be made.
The bufinefs of correcting a fea reckoning is a very precarious operation, and, at beft, is little more than gueffing; for, by ought that appears, the fhip may be either to the ealtward or weftward of the point wherein the reckoning places her, and the mariner not be able to pronounce with certainty whether; however, the following methods are ufually taken: if the difference of latitude is much more than the departure, or the direct courfe has been within three points of the meridian, then it is moft likely the error is in the diftance.
And if the departure is much greater than the difference of - latitude; or the direct courfe is within three points of the parallel, or more than five points from the meridian, the error may be afcribed to the courfe.
Buf, if the courfes are in general near the middle of the quadrant, the other may be either in the courfe, or in the diftance, or in both.
For, to caufe an alteration in the diference of latitude, the firft of thefe cafes requires a greater error in the courfe than can well be fuppofed to have been committed; in the fecond "cafe, the diftances, muft be fo faulty as would farce efcape obfervation; and, in the laft, it is often doubtful whether to attribute the error to che courfe or diftance, but is as ufually corrected in both.

## Firft method.

When, by the dead-reckoning, the difference of latitude is more than once, and a half the departure: or, which is the farme, when the courfe is lefs than three points: to the difference of latitude, and the departure by account, find the courfe. With this courfe, and the difference of latitude by obfervation, find a new departure. With the new departure, and the co-middle latitude, find the difference of longirude. Exam. Yefterday noon we were in latitude $39^{\circ}$ I $18^{\prime}$ north, and, by an obfervation, are this day noon in latitude $37^{\circ} 48^{\prime}$ north; our dead reckoning gives 106 miles of fouthing, and 64 miles of eafting: required the fhip's true difference of longitude?

## By the traverfe table.

The difference of latitude 106 , and the departure 64, gives the courfe $2 \frac{3}{4}$ points. The courfe $2 \frac{3}{4}$ points, and the difference of lacitude by obfervation 90 , gives a departure of 54. The co-middle latitude $51^{2} 27^{\prime}$, and true deparsure' 54 , gives the difference of longitude 60 .
${ }_{4} \mathrm{~N}$
Second

## N A V

Second method.
When, by the dead-reckoning, the departure is more than ence and a half the difference of latitude, or the courfe is more than five points.
With the difference of latitude and departure by account, find the diftance. With this diftance, and the difference of latitude by obfervation, find the true departure. With the co-middje latitude and true departure, find the difference of longitude.
Exam. Yefterday noon we were in latitude $48^{\prime} 5^{\prime}$ north, and were to day noon in latitude $50^{\circ} 18^{\prime}$ north; our deadreckoning fhews we have made 68 miles of northing, and 112 miles of wefting: required the true difference of longitude the thip has made?

## By the traverfe table.

The difference of latitude 68, and departure 112, gives 132 for the diftance. The diftance 132, and difference of latitude by obfervation 86 , gives the true departure 100 . The co-middle latitude $40^{\circ} 25^{\prime}$, and true departure 100 , gives 155 miles for difference of longitude.

## Third method.

When the difference of latitude and departure by account are néarly equal, or the direct courfe has been between three and five points of the meridian.
To the difference of latitude and departure by account, 'find the diftance. With this diftance and difference of latitude by oblervation, find another departure. Take the half fum of the two departures for the true one. With the co-middle latitude and true departure find the difference of longitude. Exam. Thefe laft 24 hours we have made 84 miles of northing, and 76 of eafting; we were yefterday noon in latitude $52^{\circ} 40^{\prime}$ north, and are this noon in latitude $54^{\circ} 22^{\prime}$ north: what difference of longitude has the hip made?

## By the traverfe table.

To the difference of latitude 84, and departure 76 , the diftance is 113 miles. With the diftance 113 , and difference of latitude by obfervation 102, find a departure 47,7. The fum of the two departures 7 6 and 47,7 is 123,7 , it's half is 61,8 . To the co-middle lacitude $36^{\circ} 29^{\prime}$, and true departure $6_{1}, 8$, the difference of longitude is 103 .
The difficulty of finding the longitude at fea has inclined many perfons to attempt the folution of this moft ufeful problem: fome with no other view than the great advantage which the art of navigation would derive from their labours; others, and by much the greateft numbers, who have exhibited their thoughts on this fubject, were vifionary whimfical men, only lured by the hopes of the appointed reward: but Dr. Halley having collected a great multitude of obfervations made on the variation of the needle in many parts of the world, he, by the help of the latitude and longitude of the places of thofe obfervations, was enabled to draw on a mercator chart certain lines, fhewing the variation of the compafs in all thofe places oyer which they paffed at the time he publifhed, in the year 1700 ; and, confequently, the longitude of any of thofe places could be found by the chart, having it's latitude, and the variation of the needle in that place given.

Fourth method.
To find the longitude at fea by the variation chart. Find the variation of the compals, for which fee art. 1076, in Mr. Robertion's tract. Draw a parallel of latitude on the chart, through the latitude found by obfervation; and the point where it cuts the curved line, whofe variation is the fame with that obferved, will be the fhip's place.
Exam. A fhip finds, by a good obfervation, that the is in the latitude of $18^{\circ} 20^{\prime}$ north, and that the variation of the comlatitude of is $4^{\circ}$ weft: required the thip's place?
Take from the graduated meridian the diftance between the equator and the latitude of $18^{\circ} 20^{\prime}$ nortb; lay a ruler along the equator, and flide one point of the compafies along it's edge, 'till the other point cuts the curve of $4^{\circ}$ weft variation, and the interfection gives the fhip's place, whofe longitude will be found to be about $27^{\circ} 10^{\prime}$ weft from London.
There are two confiderable inconveniencies which attend this method.
Eirf, That, wherever the variation lines run eaft or weft, or nearly fo, this way of finding the longitude becomes imperfeat : but, among all the trading parts of the world, this imperfection is at prefent found chiefly on the weft coafts of Europe, between the latitudes of $45^{\circ}$ and $53^{\circ}$; on the eaftern Thores of North America, and in fome parts of the Weflern Occan and Hudfon's Bay, lying between the faid Chores; therefore, for the other parts of the world, a vaidition chart may be efteemed as of the greateft ufe.
But the variation curves, even where they run eaft and weft, may be fometimes applied to good ufe in correcting the latitude, when meridian obfervations cannot be had, as if frequenty liappens on the northern coaits of America, in the Wenua Oceail,
and about Newfoundland: for, if the variation can be ob. tained correctly, then the eaft and weft curve, aniwering to that variation on the chart, will hew the latitude.
Secondly, As the defloction of the magnetical meridian from the true one is fubject to continual alteration, therefore a chart, to which the variation lines are fitted for any year, muft in time become ufelefs, unlefs new lines, hewing the ftate of the variation at that time, be drawn on that chart; but, as the change in the variation is very low, therefore new variation charts being publifhed every to or 12 years, will aniwer the purpofe wanted.
In the year 1746, Mr. William Mountaine, F. R.S. and Mr, James Dodfon, fitted the variation linés to Dr. Halley's chart, for the year I 744 . As thefe gentlemen had collected feveral thoufands of obfervations to work upon, they were enabled to perfom this bufinefs with great correctnefs; infomuchyhat, wherever their chart has been ufed, it was found of very great importance, even to the faving a hip in the Indian Ocean; and it is much to be withed they were in more general ufe,

## Fifth method.

## To find the longitude from celeftial obfervations.

The difference of longitude between two places may be determined by knowing the difference between the times that any remarkable appearance in the heavens is feen in thofe places $\boldsymbol{\$}$.
*The difference of longitude between two places is eftimated by the difference of time, allowing an hour to every I 5 degrees of longitude, and one minute of time for every 15 min. of a degr. or a degr. for every 4 min . of time. Example. Having at 6 h. 48 . p. m obferved at fea a certin - appearance in the heavens, which I knew was feen the fame inflant at $3 \mathrm{~h} .25 \mathrm{~m} . \mathrm{p} . \mathrm{m}$. in London: required the different longitude between the places of obfervation.

Leaves $3 \quad 13$ =dift. time. Sum $\quad 4^{8} \quad 15$ =diff. lon.
And, becaufe the hour of appearance at London was leant, therefore I knew myfelf to be at the eaftward of London.

For, as thefe appearances confift in the appulfes, that is, the approaches of the heaverily bodies to one another, or their paffage.by one another; and thefe appulfes when they happen, are feen at the fame inftant of abfolute time to all parts of the earth where they are vifible: therefore, by knowing the relative times of the day when fuch appearances are feen in two diftant places, the difference between thofe times is known, and confequently the difference of longitude between thofe places.
There are every year publifhed feveral almanacks, or ephèmeres, wherein are noted the eclipfes of the fun and moon, the times of the planets rifing, fetting, and fouthing; the eclipfes of Jupiter's fatellites, and the times when other celeftial appearances may be feen at the places for which thofe ephemeres are calculated: now a mariner having one of thefe almanacks, if he obferves at what time any of thefe appearances happen in any part of the world he may be then in, will readily know his longitude.
Among the fatellites of Jupiter, one or more is eclipfed almoft every night; for they difappear either in going behind Jupiter, or in paffing before him; and the inflants of furh immerfions and emerfions may be feen by a refracting telefcope of about 8 or 9 feet long, or by a reflecting one of about $g$ inches focal length. The reflecting telefcope is much more commodious at fea, on account of it's fhortnefs; but the metals are very fubject to be tarnifhed by the moift air. To determine the longitude of any place from celeflial ohfervations, it is neceflary that the time of the day be well known in that place where the obfervation is made; and among the various methods propofed for this purpqfe, none feems more fit to be practifed at fea, than the method by equal altitudes; for no regular deductions can be made, without knowing the precile time of noon. Now, as clocks and watches undergo confiderable alterations from the motion of a chip and the change of the climate, they ought to be carefully examined, and their gain or lofs per day afcertained, whenever they are to be uled in the correcting of the longitude; and this need nor be done very often, only at fuch times when the flip inay be fuppofed through forms or bad weather, to be confiderably out in her dead-reckoning. At fuch times, the thip lying by, let the fun's altitude be takenat any time in the forenoon, let down that time and altitude: in the aftermoon, watch for the fun's having the fame alticude exactly, and note down that time; then the half fum of thefe two times; is the time fhewn by the clock. or watch when it was noon in that place.
As it is pofirble that an allitude, equal to one taken on the caftern fide of the meridian, cannot be obferved on the weftein tise by the interpofition of clouds, it is therefore bet to take feverat in tise forenon, or on the eaff fide, in order to have tie greater probability of fecuring a corre ponding altitude on the weiturn fide, or afternoon; and, if feveral oober-
vations
tations of equal altitudes can be made on both fides of the meridian, it will be beft to take the mean time correfponding to each pair of equal altitudes; and if the means all agree, it is an evident fign that the obfervations were well made but fhould they difagres half a minute or fo, thien it is beft to add together all the times of noon, and divide the fum by he number of times, and the quotient may be taken for the true time of noon in that place, as 作解 by the clock or watch.
In the raking of thefe equal altitudes of the fun, it will be moft convenient to have them at a diftance from one another not exceeding 4 or 5 hours; becaufe then there will be no oc: cafion to correct the latter altitude, by the alteration in declination during that time.
The true time of noan being obtained, then the time that any planet, or other celeftial body paffes the meridian, may be thus known : on the evening following, let one or more alsitudes of the planet be taken, which fet down with their refpective times ; and on the next morning, note down the dimes when that planet has the fame altitudes: the half fum of thefe two times, will be the time when the oblerved plaet paffed the meridian of that place; and if feveral oblervations bave been taken, find the mean of them, as before for the fun: but, if the planet oblerved be the moon, whofe declination may be confiderably altered between the times of the obfervations, then let a proportional part of her daily variation in declination be added to, or fubtracted from, the time found for her paffing the meridian, according as the moon is, receding from, or approaching to, the elevated pole. And, if there is reafon to fufpect that the clock or watch gains or lofes every day, let the times of two equal altitudes of the fun be taken next day, and the noon thereby determined: then the difference between the times of noon both days, as fhewn by the clock or watch, will be it's daily variation ; and the time of the planet's paffing the meridian, muft be increafed or diminifhed by a proportional part of that variation.
Now, by having a table or an ephemeris, containing the times when the moon paffes the meridian of a certain place, and by having from obfervation the time when the paffes the meridian of any other place, the difference between the longitudes of thofe two places may be thus found:
Seek in the ephemeris for the time of her foutbing on the given day, and that of the following day, and take their difference; alfo take the difference between the times of the tabular fouthing and the obferved one, on the fame day ; then fay:
As the daily difference is to the obferved difference, fo is 360 degrees to the difference of longitude fought.
For, as the whole difference arifes in a day, or by the running through 360 degrees, confequently any part of that difference will require a proportional part of 360 degrees.
Example. Suppofe at fea, the moon was obferved to pafs the meridian on the 18th day of June 1753 , at 57 minutes after one in the morning: required the longitude of that place?
At London the, moon paffes the meridian on the 18 th of June, at I hour 47 minutes, and on the Igth day, at 2 hours 31 minutes, the difference is 44 minutes; and the obferved time is 10 minutes later than at London.
Then as 44 min. : $10 \min$ : : $360^{\circ}:\left(\frac{3600}{44}=\right) 8 \mathrm{I}$ degr.
49 min . Which fhews that place to be 8 I deg. 49 min . to the weft of the meridian of London.
As the tables of the moon's motions are not yet arrived at the wifhed-for accuracy, confequently the times of her paffing the meridian of any place, as Thewn by an ephemeris, are not fo true as they might be, and therefore the difference of longitude found by the time of the moon's fouthing, may err about 2 degrees; and chould the time of her paffing the meridian be ill obferved : the error may be much greater: it has therefore been propofed to keep, an account of lungitude by a time-keeper, or kind of clock, that Chould always fhew the true time under the meridian of fome one place; confequently, was the,time of the day found in any other place, compared with the time then thewn by fuch a clock, the difference of longitude between thofe places would be determined : but the difficulties attending the conftruction of fuch an inItrument, have been hitherto found too great to be pvercome. Indeed, the ingenious Mr. Harrifon has removed fome of, if not all, the capital obftructions; and his judicious friends fu'pect he will entirely perfect his moft elaborate machine : he has received fome gratuities from the public, for the advances he has already made towards the folution of this intricate problem of the longitude; and it is wifhed he may merit the whole reward allotted by the government for the difcovery of this fo much defired acquifition in navigation.
Upon the whole, it appears that there are many means by which a thip's place may be found at fea, nearly exatt enough for navigating her to places whofe longitudes are almoft as incorrectly known as the flip's place; and, was the method of finding the longitude at fea correctly known, the fhips muft then keep as good a look-out for land as they do now
and alfo keep their account of dead-reckoning: therefore; would feamen put in, practice all the precepts that are giveri them for this purpore, they might proceed on their refpective voyages, and (which is fu'pecied now to be the cate) have very little concern about the perfecting the difcovery of the longitude.

## Of a Sea-journal.

A fea journal is a book, wherein is truly entered the mof remarkable daily occurrences relating to the fhip during he voyage outward and homeward. There are various ways of keeping fea-journals, according to the differcnt notions of mariners concerning what articles are to be entered.
Some writers direct the keeping fuch a kind of journal, which, is only an abftract of each day's tranfactions, fpecifying the weather, what hips or lands were feen, accidents on board, he latitude, longitude, meridional diftance, courfe and run thefe particulars are to be drawn from the fhip's log book, or that kept by the perion himfelf, for molt good mariners keep private log-books.
Other authors recommend the keeping but of one account, including the $\log$ book and all the work of each day, with the deductions drawn therefrom: this method is ufed in Mr. Robertfon's treatife, on account of reprefenting to the beginner the whole of each day's work: but when he is well verfed in this method, he may abridge what part of it he pleafes : although it is conceived that a journal neatly kept, with all the particulars of the work commodioufly ranged, would give more fatisfaction to thofe who might have occafion afterwards to infpect it, than a journal containing the heads only, and all the intermediate parts fuppreffed.
The method chofe by Mr. Robertfon to introduce the young mariner into this moft capital part of navigation, is, by fhewing him firft how to work a few feparate days works independent one of the other, and then to proceed to a continued journal of feveral fucceffive days works; for the duing of which, it was judged neceffary to premife the following obfervations.
I. That the day is fuppofed to begin at noon, and the day's work relates to the tranfactions done in the time between the noon of one day and the noon of the following day.
II. If there is an obfervation for an amplitude or an azimuth, let that amplitude or azimuth be worked as Chewn between art. 1070 and 1076, in Mr. Robertfon's treatife, and then find the variation as fhewn at art. 1077 in the fame tract; taking care in thefe operations, that the declination of the day be fitted to the proper time and longitude, as hewn art. 964,965 , in the fame author.
III. Correct each courfe by the variation thus found, as at art. Io78, alfo correct',thefe corrected courfes by the proper allowance for, lee-way, as thewn at art. 1080, 108 r .
IV. Write thefe corrected courfes in a traverle table, fum up the knots and fathoms belonging to thefe hours the Chip kept on the fame courfe, and write the feveral fums as diftances in the traverfe table againft their refpective courfe.
V. Complete the craverfe table as by art. 695, find the prefent latitude and longitude, as hewn in art. 786,787 , of Mr. Robertfon, and the examples, in art. 1228, \& feq. and then will the fhip's place be obtained by dead-reckoning. See Mr. Robertfon's treatife, entitled the Elements of Navigation : containing the Theory and Practice, with all the neceffary Tables. To which is added, A treatife of Marine Fortification. For the Ufe of the Royal Miathematical School at Cbrift's Horpital, and the Gentlemen of the Nayy.

## REMARK..

That the reader, who is defirous of underftanding the art of navigation, either to the perfection of the theory to which it has hitherto been brought, or only to underftand the fame in a mere practical light, without concerning himferf with the mathematical elements whereupon the art is grounded, we recommend him to the above mentioned excellent treatife, in the commendation of which too much cannot be faid. But, as the learned author has himfelf given a juft idea of his own performance in few words, we cannot give it it's due recommendation in a better manner, than introducing his own

ADVERTISEMENT.
As it may be expected that four kinds of readers will look into this book, it was thought convenient to point out to fome of them, the places where they may meet with what they more particularly want.
Firf, Thofe who have made a proficiency in the mathematics, will, it is likely, examine in what manner the fubjects are here treated, and whether any thing new is contained therein: it is conceived, that fuch readers will find fome things which may recompence them for their trouble, in almoft every one of the books.
Secondly, Thole learners who are defirous of being inftructed in the art of navigation in a fcientific manner, and would chufe to fee the reaton of the feveral fteps they mult take to acquire it: to fuch perfons, it is recommended that they read the whole book in the order they find it. Or, if the learner is very young, he may omit the fuurth book'till after he is
mafter of the fifth and fixth. Adult perfors, and thore under the direction of a mafter, may, if they -pleafe, read the eighth book immediately after the fifth, and read the fixth, feventh, and ninth books in fucceffion.
Thirdly, That clafs of readers, which, with too much truth may be faid, comprehend molt of our mariners, who want to learn both the elements and the art itfelf by rote, and never trouble themielies about the reafon of the rules they work by : as there ever will be many readers of this kind, they may be well accommodated in this work; thus, if they are not alpeady acquainted with arithmeric and geography, let them read the five firft rules of arithmetic, to page 20 ; thence proceed to, the definitions and problems'in geometry, from page 42 to 55 . In the book of trigonometry, read pages $83,84,85,86,92,93$, and from 98 to 108 : the whole of book V. In book VI. he may read to pare 267 and as much more as he pleafes. In book VII. let him read the fections III, IV, V, VI. from page 368 to page io7. In book VIII, he may read fection III. and as many problems in the $V_{t h}$ and $V$ Ith fections as he can, and let him read the whole of the ninth book.
Fourthly, That fet of readers who will not be at the pains of learning any thing more than how to do the practice of a day's work, fuch may herein meet with the practice almont independent of other knowledge. Let fuch perfons make themfelves acquainted with fection VIII. of book $V$. and the ure of the table at page 200; then learn the ufe of the tra verfe table at the end of book VI. which he will find exemplified between pages 243 and 274 ; alfo he mult learn the ue of the table of meridional parts at page 423 : after which he may proceed to book IX. where be will find ample inAructions in all the particulars which enter into a day's work. But, as with this. fcanty knowledge of things he will nor clearly lee every part of book IX, he may omit the ar ticles $1059,1091,1106$, and the XIth and XIIth fections.

Navig.ation.
Some of the principal Laws that have been enacted, relat ing to the trading Navigation of England.
According to the common right of mankind, the navigation through the world, is no lefs free and open to every one, than the air; and hence it proceeds, that paffage by fea to and from ail Chriftian countries, is and hath been fo indifferently permitted to all nations, not being "profeffed enemies: and none can be prohibited to fail in the main fea, unlefs in places where the waters are as royalties, which the Venetians claim in fome of their territories and jurifdictions, and other princes and ftates by prefcription. Lex Mercat. Malines, 124,130 If a fhip bound for Venice do enter into the river of Lifbon, and there deliver goods or mercbandizes, and afterwards entering into the ftraits of the Mediterranean Sea, be driven by contrary winds to fome other place or illand in the -aid feas, and after that make her difcharge at Venice, all this time of the voyage is confidered as one navigation, and the mafter of the thip hath committed no fault, if he departed from the firt port at the time limited. Ibid. 124.
As to fhips in general, there bave been many flatutes made for increafing and preferving them, and improving the navigation of this kingdom: by 5 Rich. II.c. 3. it was enacted, That none of the king's fubjects fhould bring in or carry out any merchandize, but in Englifh hips, on pain to forfeit all merchandíze otherwife conveyed, or the value thereof. But 6 Rich. IL. e. 8. ordains, That the flatute before-mentioned Thall only take place where able thips of the king's allegiance may be found, otherwife the merchants may hire other fhips, notwithftanding that ftatute.
By 4 Hen. VII. c. 10. No Gafcbign or Guiene wine, \&c. Thall be imported into this realm but in Englih veffels, on pain of forfeiture: and none Ghall freight any merchandize in any ftranger's thip, if he may have fúfficient freight in the fame port, in a denizen's fhip, under the penalty of forfeit ing all merchandize not thus fhipped, to be divided between the king and the feizer. This act fhall not extend to any fhip having merchandize on board, that is forced by tempett into any port of this kingdom, io as the owner thereof make no fale of the mercbandizes here, except only for neceffary victuals, or repairing of the fhip and tackle.
The fat. 32 Hen. VIII. c. 14. ordains, That Gafooign or Guiene wines, or Thouloufe woad, may be brought into this kingdom in any other Chips, as well as Englifh, notwith ftanding the act of 4 Hen . VII. And by this ftatute, a rate was ordained of what fhould be paid for the freight or portage of the feveral forts of merchandizes, in thips from the port of London to other places, and from thence to Lendon. By: Eliz. c. I3. If any owner of any merchandize, thall in the time of peace, embark or unload any part thereof (mafts, pitch, tar, and corn only excepted) out of or into any fhip, other than an Englifh bottom, he fhall pay cuftom as an alien: and no Englifhman hall crofs the fea in any hoy, sc. with any goods or merchandize, on pain to forteit the fame, to be divided between the king and the profecutor. But merchants, at their feveral hippings of cloth out of the Thames twice in the year, may embark merchandize in a

Atranger's fhip, fo long as there are not Englifh thips enough and convenient to convey fuch merchandize into Flanders, Holland, Zealand, or Brabant, \&c.
By the act of 'navigation, 12 Car. I.. c. 18.' it is enacted, That no goods thall be imported into, or exported out of, any territories belonging, or which may hereafter belong, to his majefty, his heirs and fucceffors, in Afia, Africa, or America, in any other hips but fuch only as belong to the people of England, or Ireland, Wales, or town of Berwick upon Tweed, and whereof the mafter and three fourths of the mariners are Englifh, on pain to forfeit all the goods'and commodities, and the fhip or veffel with all its furniture : one third part whereof to the king, another third to the governor of the country where fuch default fhall be, if feized there, otherwife that third alfo to the king, and the other third to him that will feize or fue for the fame. And commanders at fea, having commifion from the king, are to bring in as prize, thips offending contrary: hereunto; and in fuch cafe of condemnation, one moiety thall be to the ufe of fuch commanders and their companies, and the other moiety to the king.
No goods of the growth or manufacture of any countries belonging to Mufcovy, of of the produce of the Turkifh empire, fhall be imported into England, Ireland, Wales, or town of Ber,wick, in any fhip or veflil, not Englifh built, or not belonging to the people of fome of them, and navigated as aforefaid ; except veffeis of the buit of that place of which the goods are, or of fuch pers where they can un'y be; or ufually are fhipped; the mafter and three fourths of the marimers being of the faid country, on pain of forfeiting the hip and goods, to be divided and dilpofed as abovementioned: and all wines of the growih of Frarce or Germany, and divers $g$ oods and merchandize from spaın, Portugal, Ruffia, \&c. which thall be imported in o the places afuretaid in any other thip than what doth belong to Enyland, Ireland, \&c. and are navigated as aforefaid, thall be deemed alizns goods, and pay accordingly. Siat. ibid.
And no foreign built $\mathbf{v}$ fifie fhall pats as a chip belonging to England, Ireland, Wales. \&cc. 'till the owner makes appear to the chief officers of the cuitoms, in the port next to the plate of his abode, that he is not an allen, and take an oath that it was bona fide bought of fuch perfons, expreffing the fum given, and the time and place, when and where, \&c and that no foreigner hath a thate therein. Allo none fhall load in any bottom, whereof Atrangers are owners, part owners, or mafter, and of which three fourths of the mariners at leatt are not Englifh, any goods whatioeyer from one port or creek of England, Ireland, Wales, Guernfey, Jerfey, or town of Berwick, to another port of the fame, on pain to forfeit fuch goods and veffel. 'lbid.
The 22 and 23 Car. II. c. II. ordains, That where any goods fhail be laden on board any Englifh Thip of the burthen of 200 tons or upwards, and mounted with fixteen guns or more, if the mafter yields up fuch fhip or goods to any Turkifh veffel, or any pirate, without fighting, upon proof thereof in the admiralty, he fhall be incapable of taking charge of any Englifh veffel, \&c. And mafters of Englifh thips, though not of that burthen, nor mounted as aforefaid, that fhall yield to a Turkifl fhip or pirate (not having at leaft double number of guns) without fighting, fhall be liable to the penalties of this act : if any inferior officers or maxiners of a thip, fhall refufe to fight when' commanded, or utter words to difcourage others, they fhall lofe all their wages due, and be imprifoned, not exceeding fix months, \&c. and mariners laying violent hands on their commanders to hinder them from fighting in defence of their ©hips, thall fuffer death as felons. When any Englifh bip inall have been defended by fight, and brought to her port, in which fighting any of her men have been wounded, the judge of the admiralty, or his furrogate, \&c. where the fhip fhall arrive, upon the peticion of the mafter and feamen, may call fo many as he fhall be informed to be adventurers or owners, and by advifing with rhem, levy upon the refpective owners fuch fums as himfelf and the major part of them then prefent fhall judge reafonable, not exceeding two per cent. of the fhip and goods; which money fhall be diftributed among the matter, officers; and feamen, or the widows and children of the flain, according to the direction of the judge, with the approbation of three or more of the owners or adventurers. Ibid.
By the 5 th and 6 th W. and M. c. 24. Every perfon that Thall within fuch a time, build, or caufe to be built, any fhips of three decks, containing 450 tons, and mounted with 32 pieces of ordnance, having anmmunition, \&c.. proportionable, flaill, for the firft three voyages, which the faid fhips hail make to any foreign parts, receive one tenth part of the cuftoms called the fublidy of tonnage and poundage, payable for merchandizes exported and imported in fuch fhips: but if, after the end of the three firft voyages, any of the thips fo, built, thall be altered or put into another form of building, whereby they fhall become lefs defenfible than they were at firft. then they fhall be forfeited and loft.
By 2 Ann. c. 9. During the wat with France, owners of fhips might navigate with matters, and one half of the mariners Englifh, as if the malter and three fourths of the men

## N A V

had been fo: alfo by 3 and 4 Ann. c. 13. any thips might be navigated by foreign feamen; and foreigners Serving on board any Englifh hip for two years, were to be deemed na-tural-born fubjects, \&c
By 4 Geo. I. c. 12. and ir Geo. I. c. 29. If any captain, mafter, officer, or mariner, belonging to any fhip or veffel, hall wilfully calt away, burn, or deltroy the thip to which elongeth, or in any wife direct or procure the tame to be one, with intent to prejudice a perfon that hall have un derwritten any policy of infurance thereon, or any merchant who thall load goods therein, or any owner of fuch thip or veffel, the perfons offending being lawfully convicted thereof hall be adjudged guilty of felony without benefit of clergy. See the article Assurance.
The 5 th of Geo. II. c. 20. enacts, That no commander of ny fhipoutward bound fhall receive on board any gunpowder, either as merchandize, or fore for the voyage (except for his majefty's fervice) before fuch dhip thall be at Blackwall in the river Thames; and all mafters of fhips coming nto the river, fhall put on fhore all powder, either before th arrival of their thips at the faid place, or within 24 hours afer they came to an anchor there, upon pain of forfeiting 5 for every 50 pounds weight of gunpowder found on board and in the like proportion for a lefs quantity. And no guns fhall be kept loaded with thot in merchant-fhips between Lon-don-brigge, and Black wall, or fired before the rifing, or after the fetting of the fun, under the penalty of 51 . and for every gun to hred ros. And if any pitch, tar, rolin, or other combuftible matter, thall be heated or melted by fire in any chips, every perfon fo offending, thall for every offence forteit 5 And the fhips are liable to fearch by an elder brother, appointed by the mafter, wardens, and affiftants of the Trinity-houfe t Deptford.
And, in cale any fhip fhall be laid up or moored in the mouth; or any other part of St Saviour's dock (except hips as thall be loading or delivering their cargoes, and others not exceeding wo at one time, that thall ie at Shipwright-Yard at the north weft corner of the faid dock, during the time they fhall be repairing) the mafter of every fuch fhip thall forfeit 20 s . for every day the fame fhall continue to be laid up and moored, to be recovered and levied as the other penalties infieted by this act, before two juftices of peace, fubject to appeal to he quarter feffions.
By 6 Geo. It. c. 29. Mafters of thips lying in the river Thames, having occafion for ballaft, fhall pay i2 d. per ton colliers, other fhips 15 d . and foreign fhips 19 d . to the corporation of the Trinity-houfe at Deptford, who fhall pay ballaft-men 9 d , a ton for raifing and carrying, it; \&c. An fuch ballaft-men delivering more or lefs ballaft than mentioned in tickets, or without order, fhall forfeit 2s. 6 d . per con. Alfo working in lighters not marked and allowed, or counterfeiting any gauge mark, they hall forfeit 10 . leviab by two juftices of pëace, by diftrefs, \&c. And it fhall be awful for any mafter of a thip to appoint two perfons, whereof his mate to be one, to go on board any lighter bringing baliaft to fuch thip, to infpect the marks thereof; and every ballaft-man fhall immediately before the delivery of ballaitt to any thip, trim fuch lighter, fo as to make the fame fwim at equal marks, at the ftem and ftern, and pump all the water out, \&ic. And the mafter, wardens, and affiftants of the Trinity-houfe, are to make good to the mafter the quantity or value of ballaft which thall be found deficient, or forfeit 501. one moiety to the paor, and the other to the perion fuing for the fame.
The 7 th of Geo. II. 'c. 15 , ordains, That no owners of any thip fhall be liable to anfwer any lofs by reafon of embezzlement, by the mafter or mariners, of any goods or merchandize which fhall be fhipped on board, or for any act done by them without the privity or knowledge of fuch owners, further than the value of the fhip, and amount of the freight during the voyage, where fuch embezzlement, or other mal verfation of the mafter or mariners, fhall be committed: and if feveral perfons thall fuffer damage by the means aforefaid, and the value of the hip, 8 cc . fhall not be fufficient to make compenfation, then the freighters thall receive fatisfaction in average, in proportion to their refpective loffes, to be afcertained on a bill in equity exhibited for a difcovery thereof, and of the value of fuch thip and freight, \&c.
But nothing in this act fhall difcharge any remedy, which any perfon may have againft the mafter and mariners, in refpect of any embezzlement. See the articles Shipping, Sea Laws, Marine Treaties, Oleron's Law, Rhodian Laws. Freight, Assurances, and particularly the Busineș of the Customs, at the end of every letter.

A Memorr that may be neceffary to be referred to occafionally.
The cafe of Britilh merchants, owners of hips, and others, relative to the employment and increafe of British shipping and Rritish navigators.

The firit and tendency of all the laws which have been made In relation to the navigation of thefe kingdoms, clearly hew, that the principal view and aim' of the legiflacture, has ever Vob. II,
een to increafe and encoufage British shipping and British navigators.
That nevertheleff, the freights between thefe kingdoms and feveral countries in Europe, have been almoft wholly engroffed by foreign ships, becaufe foreigners will alway give the preference to thips of their own country; and thofe who ate merchants or fachors refiding here, having connecuions, or perhaps engagements, with fome of their countrymen at home, who are owners of fhipping, always have employed their own ships befure ours, not only when the prices of both were the fame, but even in forme infances, when Britifh Ships have been offered to load at a Cheaper rate than foreigners would agree to. From wbich it may be inferred, that the prices paid for freighting fhips with thore goods, are a lufficient encouragement for our owners, and that fuch freigliting voyages would be fought after by them, Nor is it to be apprehended, that the exportation of merchandize can be leflened, by confining it in fome meafure to British vesseds, becaufe few or none of thofe foreign owners are the freighters, but merchants (who are unconcerned in fhipping) are the real proprietors of thefe cargoes.
And the neceffity of contriving fome means for maintaining our wonted fuperiority, as a MARITIME PowER, appears the more evident at this juncture, when an univerfal fpirit and uncammon ardour for IMPROVING TRADE, NAVIGAtion, and naval strength, prevails throughout EUROPE; which is manifefted, by the various nations thereo purchafing thips from us, and by the great number of hands employed in building new bips of their own; and it may not be improper to obferve, that their own built hips are allowed different degrees of remiffion from duties and customs on their cargoes, in proportion to the newness of the vessel, 'till they have been occupied fixteen years. And fuch like bounties and encouragements, may in time enable foreigners to outvy us in shipping; for, in proportion as the, number of their thips and failors increafe, ours muf become unemployed, and confequently diminifh And, indeed, had it not been for the navigation acts, our merchants fhipping would, at this time, have been very inconfiderable.
That the increafe of our failors is not the only advantage that depends upon the increafe of our fhipping; for our fhipwrights, caulkers, and failcloth-makers, would meet with full employment and encouragement at home, and have no occation to feek their bread in foreign countries; and, in general, all trades depending upon the building and employment of fhipping be proportionably benefitted, to the great augmentation of the inland revenues, and advantage of the land'ed intereff, which always rifes and falls with the increafe and decay of trade. Befides, a greater importation of pitch, tar, hemp, timber, and other commodities ufed in building and equipping fhips would be promoted, which muft increate his majefty's cuftoms. Whereas none of thefe advantages accrue from foreigners, who never refit or victual their shipping here, but in cafes of abfolute neceffity
That our knowledge and acquaintance with the navigation in foreign feas and on foreign coafts (fome of which for want of experience we are unacquainted with) will confequently be improved in proportion to the greater DIVERSITY OF OUR voyages; by which means feamen may be trained up capable of navigating fhips of war in thofe, at prefent unfrequented, feas and coafts; which may in fome meafure countervail the advantage foreigners bave, in being fo generally acquainted with ours.
That bounties and debentures, in the original inflitution of them, were calculated for the benefit of trade in general ; and under that general head, muft certainly be included the fhipping and navigation of thefe kingdoms, which ought therefore to have the benefitmand advantages arifing from fuch encouragements, and which they undoubtedly will, by limiting and confining the exportation of goods, on which bounties and debentures are given, to British ships and vessels And when any government thinks proper to grant an en couragement to the exportation of fome particular fpecies of poods, it is but reafonable that the advantages refulting from it fhould be enjoyed by it's own fubjects only, and not by foreigners.
The frauds committed upon the revenue, by the relanding of bounty and debenture guods, would be more eafily detected, if Britifh veffels were obliged upon their return home to produce vouchers of the delivery of their cargoes, or be punifhed for fraud or neglect; whereas foreigners, that never return to a Britih port, may practife these frauds upon the revenue with impunity.
That the liberty allowed to foreigners to export our Rounty and debenture goods, with wher sorts of merchanorze by way of back freight, and the profit arifing from it, is manifitly the encouragement and inducement to them to load fo confiderably in thefe kinguoms; whereas were that liberty (as to bounty and debentu e goods) allowed to Britifh hips only, we might ourfelves enjoy the great profit which they now draw from us, and at the fame time the manufactures and goods of this country, on which there are no

40
bounties

BOUNTIES OR DRAWBACKS, might continue to be exported on foreign bottoms. Nor will thefe reafons be invali. dated by objecting, that a Britifh fhip would with difficulty, or perbaps not at all, get a back freight from the port to which the might carry our bounty and debenture goods; becaufe it has been tound by experience, that a veffel, atter fhe has once undergone the expence of her firlt out-fit, might even go in ballaft to another port for a back freight, with fufficient profit; as in the cafe of many of our corn ships, whofe cargoes being landed in the Mediterranean, or other places, they proceed thence to Britifh America in ballaft, in order to procure a lading home. Anorher advantage arifing from the increafe of our hipping, which would be oncalioned by this limitation is, thas our difcharged feamen and marines will meet with immediate employmene, and a more ExTENsive plan be laid for the training up of seamen FOR THE BENEFIT OF THE PUBLIC IN CASE OF EMERGENCY. Benefits which, without fuch a limitation, will naturally refult to foreigners, to the proportionable diminution of the navigation and fecurity of there kingdoms.
That the exportation of provisions from Ireland HATH been almof entirely engrossed by foreigners in foreign bottoms, whereas were that trade to be confined to Britif ships only, it would tend manifetly to the employment and increafe of Britifh hipping; nor would the exportation of provifions from thence at all be leflened, becaufe foreigners cannot be fo well fupplied from any other country: neither would this be any impediment to foreigners, for few of them take in provifions it Ireland on voyages to their plantations or fettlements, but fend fips to Ireland merely to carry provifions to their own European ports, and there vidual out their veflels for their voyages and Settlements; which freight would employ a confiderable number of oUR own shipping. And thould it be objected, that thore limitations in time of war may be a difadvantage to trade, yet this objection may eaflly be obviated, by velting a power in the crown to difpenfe with, alter, or enlarge the limitation during fuch war; and perhaps too it may be objected, that fuch a limitation may be of dangerous confequence to the trade and commerce of thefe kingdoms: but this limitation is not to be confidered as a general prohibition, for it is propofed to extend no further than the exportation of some Particular goons, on which bounties and debentures have been granted by parliament, and to Irish provisions, and would leave the navigation in other refpects as free and open as ever to foreign fhips, for the exportation of all other goods and manufactures.
That freighıs will not be enhanced by thefe limitations, fince the number of veffels at prefent unemployed, and numbers of others which would be built in confequence of this encouragement, would always be fufficient to export thofe kinds of goods, upon as eafy or eafier terms than they are at prefent exported by foreigners, who frequently come here in ballalt, in order to export bounty or debenture goods, and of that fpecies with which of neceffity they muft provide themfelves from hence, as being only to be had of us.
Should it be alledged, that the profit of freightage is the only inducement foreigners have to take fome kinds of goods from it, yet inducements of fo pernicious a confequence fhould be avoided, as this trade tends fo manifeftly to increafe THEIR shipping, and of courfe their naval power, whereby they may foon become our equals, and compel us to incteafe OUR MARITIME FORCE, though for no other ufe than to PREvent their superiority, even when we are (from our natural refource) lefs able to fupport or bear the expence of fuch an increafe.
That importarions into thefe kingdoms will be more confiderable in Britifh veffels, which by thefe means may afford to freight back upon eafier terms than foreigners, without any diminution of foreign commerce, fince FOREIGN COMMOdities are imported into thefe kingdoms without any regard to the veffel that brings them, but mevely for the benefit arifing from our markets.
That confining the exportation of corn to British shipPING, has been productive of no lofs or inconveniency to us, but on the contrary many good effects have been experienced from it, by the number of our fhipping, which has been, and
is employed therein; whence it may be reafonably concluded, that a general limitation of bounty and debenture goods to British shipping, will be of a fill further and proportionable advantage to thefe kingdoms.
And experience has thewn, that feamen employed in the European navigation have ever enjoyed a greater degiee of healrh, and better conftitutions, than thofe employed in the Ealt Indià, Weft-India, American, or African trades, which have been fatal to a great number of young, ftout, and valuable feamen; and the devaftation occafioned by the mortality of feamen in thofe climates, has been fupplied only by the nurferies of feamen in Europe; and, as thofe diftanc countries import and fend hither merchandize entitled to a drawback on exportation, our European navigation fhould be employed in fuch exportation; otherwife we have no cquivalent relative to our navigators, for fupplying the trade of India, Africa; and America, with fuch numbers of feamen. That the moft valuable feamen for the fervice of the publicin the navy, are thofe bred up in the MERCANTILE EMPLQY, who are no expence to the nation, but a comfiderable benefit; becaufe by their labour they maintain themfelves and enrich their employers, and alfo ferve as a natural refource for the defence and protection of this inland. It is not quite certain how many fhips are employed by this nation, but it is generally believed, that the number belonging to England trading over fea, is about 2000 fail great and fmall, amounting in the whole to about 170,000 tons; and the coafling veffels in England may confift of about the like number, and contain about 150,000 tons: and, by the lift annexed is fhewn, to what foreign countries or ftates the fhips therein mentioned belong, together with the number of their voyages, their names, and the tonnage of each foreign thip employed in bringing goods to England, in one year before the war in 1741, one year during the war, and one after the peace of Aix la Chapelle: which lift is brought to a head, and fhews the total of thofe particulars, and alfo the tonnage of the repeated voyages, added to that of the firlt voyage. It likewile afcertains the whole foreign tonnage of each year, the voyages and tonnage that bave increafed fince the war, by being compared with the year before the war, and an average made on the three years; by which may be formed a calculation of the Mips belonging to England, with the foreign fhips really employed in carrying freights for England.
The average of the burthen of foreign thips is 86,094 tons annually employed by England (exclufive of thofe carrying provifions from Ireland); and the tonnage of Britifh thips belonging to England in the foreign and coafting trade is 320,000 tons, which, if actually employed, does not amount to four times the quantity of foreign tonnage: and henee a calculation may be formed of the natural GROWING STRENGTH of our nefghbouring maritime powers, fo far as particularly relates to their trade carried on wita England. Upon the whole, therefore, it will furely appear, that, by limiting the exportation of BOUNTY AND DEBENTURE GOODS to British shipping only, no prejudice will arife to the trade and commerce of thefe, kingdoms; but on the contrary, the happieft and moft defirable effects will refult from it, in the greater encouragement which will be neceffarily given to artificers in general, to our manufactures of Britifh fail-cloth to all trades depending upon the building and employment of fhipping; and by it the fkill and experience of our feamen will become more extenfive, and even univertal in THE NAVIGATION OF FOREIGN SEAS, and a lefs encouragement will be given to foreigners to increase their shipping: and thereby alfo the revenues of the crown from inland duties and cuftoms will be more confiderably improved, and frauds in the latter more eafily detected, and the landed intereft in general will partake of thefe benefits arifing from it; and (which is of the utmoft importance to the nation) a foundation will be laid, not only FOR THE INCREASE AND EMPLOY of British shipping, but alfo of British navigators, trained up and made a ble and fkilful for the fervice of the public in all emergencies; from whence the necelfity of an act of parliament, as a foundation for producing thefe beneficial confequences, is very apparent.

An ACCOUNT of all the Foreign Shipping which have entered in at the feveral Ports of England, fet forth in Columns, under the Title of the Nation or State to which they belong, for two feveral Years, ending at Chriftmas 1743 and 1747, and one Year ending at Lady-Day 1749; which is one Year before the French War, one Year in the War, and one Year fince the War.

H O L L A N D.

A computation on the foregoing three
years, to form an average,
Voyages

The foregoing LIS T brought to a Head.

NEGROLAND. See Africa, English African Company, Antilles Islands.
NETHERLANDS, [The UNITED NETHERLANDS, or the UNITED PROVINCES of the NETHERLANDS.
Previoully to the perufal of this article, the reader is defired to confult what we have faid under Austrian Netheriands, Flanders, and Holland.
The United Netherlands confift of the feveral provinces of Holland, Zeland, Friezland, Groningein, Overyffel, Gelderland, with Zutphen and Utrecht, and are bounded by the German Sea on the north and weft, by the circle of Weftphalia in Germany on the eaft, and by Flanders, Brabant, and the dukedom of Cleves on the fouth, lying between 3 degrees 20 min..and 7 degr. 30 min. eaft long. and between $5 \mathrm{r}, 35$ min . and 52 degrees 40 min . north lat. and are about 50 miles long, and much the fame in breadth; including the Zuyder Sea, which takes up a confiderable (pace within thefe limits. This is a level country, and cut through with numerous canals, which form numerous fmall inands, fubject to be overflowed by inundations of fea and land floods, which are kept our, at a great expence, by the means of dykes. As a part of the country has been loft by inundations, fo much more has been gained by damming out the fea. Sir William Temple fays, that the fea may one day have it's own again. The air of this country is very bad, by realon of abounding
with fo great a degree of humidity. As to the foil of the provinces which lies near the fea, particularly on the weft coaft of Holland; their meadow and patture is moft of it - under water in winter, which, in fummer, is either dried up, or the water thrown out with wind-mills, and leaves a fat dime, which makes the foil very fruitful, whereon they fatten the lean cattle they purchafe in the north, and make prodigious quantities of butter and cheefe; but the country does not produce corn enough for their fubfiftence: yet they have as great plenty of it as any nation in Europe, and likewife of the produce of every country; thefe provinces containing magazines of every thing the earth produces, that is trafficable. But in regard to their trade, we fhall begin with their
Fisheries. See our general article Fisheries, and Herring-Fishery, and Holiand Emanuel Van Meteren, the Dutch hiftorian, informs us, that in 1610 , there went from Holland 1500 buffes upon the herring. filhery. The author of Batavia Illuftrata tells us, that one year with another, the number of thefe buffes does not exceed 800 ; but thofe are from 30 to 50 tons, whereas in Van Meteren's time, they were only from 20 to 30 tons: to that though the number of vefficls that may be now employed be not fo great, yet this is more than made up in their fize : there is a greater quantity of finh taken at prefent, more hands than ever employed, and a proportionable
confumption

## N E T

confumption of every thing that depends on their fifhery. The importance of the herring fifhery will appear very, great to any one that confiders how many different parts of commerce it gives motion to, and how great a number of people depend on each of them. There are here two featons of the herring filhery ; the firf continues for a month or five weeks, on the coaft of Scotland, from the latter end of June to the latter end of July; the fecond holds from the middle of September to the latter end of November, on the coaft of England, about Yarmouth and Leoftoff.
The inland fifhery of the Dutch is alro of no little confequence to them. Their lakes and ivers afford all kinds of frefh-water fifh; and thofe proper to the fea, are taken on every part of their coaft, with which their markets are plentifully fupplicd:- what is more than competent for bome confumption, is pickled, and added to their cod and herrings for exportation.
What the trade of the United Netherlands was, in the time of Sir William, we have in his account thereof; which, with remarks fuitable to it's prefent ftate, will. give the reader a good idea of it's prefent compared with it's former condition, will alfo thew the difference, and point out the caufe.
'Tis evident, fays Sir William, to thofe who have read the moft, and travelled fartheft, that no country can be found, either in this prefent age, or upon record of any flory, where fo valt a trade has been "managed, as in the narrow compafs of the four maritime provinces of this commonwealth; nay, it is generally efteemed, that they have more fhipping belongs to them, than there does to all the reft of Europe. Yet they bave no native commodities towards the building or tigging of the fmalleft veffel ; their flax, hemp, pith, wood, and irnn, coming all from abroad, as wool does for eloathing their men, and corn for feeding them.
Nor do I know any thing properly of their own growth, that is confiderable, either for their own neceffary ufe, or for traffic with their neighbours, befides butret, cheefe, and earthen wares. For havens, they have not any good upon their wiole coaft: the beft are Helvoethuys, which has no trade at alls and Flubbing, which has litile, in comparifon of other towns in Holland: but Amfterdam, that triumphs in the fpoils of Lifbon' and Antwerp, (which before ingroffed' the greateft trade of Europe and the Indies) feems to be the moft imcommodious haven they have, being feated upon fo fhallow waters, that ordinary fhips cannot come up to it without the advantage of tides, nor great ones without unlading.
The entrance of the Texel, and paflage over the Zuyderfea, is more dangerous than a voyage from thence to Spain, lying all in blind and narrow channels; fo that it eafily appears, that 'tis not an haven that draws trade, but trade that fills an haven, and brings it in vogue. Nor has Holand grown rich by any native commodities, but by force of induftry ; by improvement and manufacture of all fnreign growth; by being the general magazine of Europe, and urnifhing all parts with whatever the market wants or invites; and by their, feamen being, as they have properly been called, the common carriers of the world *.

- The Dutch have lot a very confiderable part of this beneficial traffic fince the peace of Utrecht.

Since the ground of trade cannot be derived from havens, or native commodities, (as may well be concluded from the furvey of Holland, which has the leaft and the worft ; and of Ireland, which has the moft and the beft of both) it were not amifs to confider, from what other fource it may be more naturally and certainly derived: for if we talk of indufliy, we are ftill as much to feek, what it is that makes people induftrious in one country, and idle in another.
I conceive the true original and grounds of trade to be, reat multitudes of people crowded into a fmall compafs of land, whereby all things neceffary to life become dear, and all men who have poffeffions, are induced to parfimony; but thofe who have none, are forced to induftry and labour, or elic to want. Bodies that are vigorous, fall to labour; fuch as are not, fupply that defect by fome fort of inventions or ingenuity. Thefe cuftoms arife firft from neceffity, but increale by imitation, and grow in time to be habitual in a country; and wherever they are fo, if it lies upon the fea, they narurally break out into trade, both becaufe whatcver they want of their own, that is neceffary to fo many then's lives, muft be fupplied from abroad; and becaufe, by the multitude of pecple, and fmallinefs of country, land grows fo dear, that the improvement of money, that way, is incoufiderable, and fo, turns to fea, where the greatnefs of the profit makes amends for the venture. This cannot be better illuftrated, than by it's contrary, which appears no where more thain in Ireland; where, by the largenefs and plenty of the food, and fcarcity of people, all things neceffary to life are fo cheap, that an induftrious man, by two day's labour, may gain enough to feed him the reft of the week; which I take to be a very plain ground of the lazineff attibuted to the people: for men naturally
prefer eafe before labour, and will not take pains, if they can live idle. Though when, by neceffity, they bave been inured to it, they cannot leave it, being grown a cuftom neceflary to their health, and to their very entertainment: nor, perhaps, is the change harder, from conftant' eafe to labour, than from conftant labour to eafe.
This account of the original of trade agrees with the experience of all ages, and with the confticutions of all places, where it has moft flourifhed in the world; as Tyre, Carthage, Athens, Syracufe, Agrigentum, Rhodes, Venice, Holland, and will be fo obvious to every man, that knows and confiders the fituation, the extent, and the nature of all thofe countries, that it will need no cnlargement upon the comparifons.
By the ee examples, which are all of commonwealths, and by the decay or diffolution of trade in the fix firft, when they came to be conquered, or fubjected to arbitrary dominions, it might be concluded, that there is fomething in that form of government proper and natural to thade, in a more peculiar manner. But the height it arrived to at Bruges and Antwerp, under their princes, for four or five deicents of the houfe of Burgundy, and two of Auftria, fhews it may thrive under good princes and legal monarchies, as well-as under free ftates.
Under arbitrary and tyrannical power, it muft of neceffity decay and diffolve, becaufe this empties a country of people whereas the others fill it; this extinguifhes induftry, whilft men are in doubt of enjoying themleves with what they ger, or leaving it to their children; the others encourage it, by fecuring men of both; one fills a country with folders, and the other with merchants, who were never known yet to live well together, becaufe they cannot truft one another And as trade cannot live without mutual truft among private men, fo it cannot grow or thrive, to any great degree, without a confidence both of public aird private fafety, and confequently a truft in the government, from an opinion of it's ftrength, wifdom, and juftice ; which mult be grounded ei ther upon the perfonal virtues and qualities of a prince, or elfe. upon the conftitutions and orders of a ftate.
It appears to every man's eye, who hath travelled Holland, and obferved the number and vicinity of their great and populous towns and villages, with the prodigious improvement of almoft every fpot of ground in the country, and the great multitudes conftantly employed in their fhipping abroad, and their boats at home, that no other known country in the world, of the fame extent, holds any proportion with this in, numbers of people; and if that be the great foundation of trade, the beft account that can be given of theirs, will be by confidering the caufes and accidents that have ferved to ferce or invite fo vaft a confluence of people into their country. In the firt rank may be placed the civil wars, calamities, perfecutions, oppreffions, or difcontents, that have been fo faral to moft of their neigbbours, for fome time before, as well as lince their ftate began.
The perfecutions for matter of religion, in Germany, under Charles V. in France, under Henry II. and in England, under queen Mary, forced great numbers of people out of all thofe countries, to fhelter themfelves in the fieveral towns of the feventeen provinces, where the antient liberties of the country, and privileges of the cities, had been inviolate under to long a fuccefion of princes, and gave protection to thefe oppreffed ftrangers, who filled their cities both with prople and trade, and raifed Antwerp to fuch an height and renown, as continued 'till the duke of Alva's arrival in the Low-Countries.
The fright of this man, and the orders he brought, and arms to execute them, began to fcatter the flock of people that for fome time had been nefted there; fo as, in a very few months, above a hundred thoufand families removed out of the country.
But when the feven provinces united, and began to defend themfelves with fuccefs, under the conduct of the prince of Orange, and the countenance of England and France, and the perfecutions for religion began to grow harp in the Spanifh provinces, all the profeffors of the reformed religion and haters of the Spanifh dominions, retired into the flrong cities of this commonwealth, and gave the fame date to the growth of trade there, and the decay of it at Antwerp.
The long civil wars, as firft of France, then of Germany and laftly of England, ferved to increafe the fwarm in this country, not only by fuch as were perfecuted at home, but great numbers of peaceable men, who came here to feek for quiet in their lives, and fafety in their poffeffions or trades like thofe birds that, upon the approach of a rough winterfeafon, leave the countries where they were born and bred, fly away to fome kinder and fofter climate, and never re turn 'till the frofts are paft, and the winds are laid at home. The invitation the fe people had, to fix rather in Holland, than in many better countries, feem to have been, at firft, the great ftrength of their towns; which, by their maritime fituation, and the low Ratnefs of their country, can, with their fluices, overflow all the ground about them, at fuch diftances, as to become inacceffible to any land forces. And this natural ftrength has been imptoved, efpecially a

## N E T

Amfterdam, by all the art and expence that could any ways contribute towards the defence of the place.
Next was the conftitution of their government; by which neither the States-General, nor the prince, have any power to invade any man's perion or property within the precincts of their cities. Nor could it be feared, that the fenate of any town fhould confpire to any fuch violence; nor if they did, could they poffibly execute it, having no foldiers in their pay, and the burghers only being employed in the defence of their towns, and execution of all civil juftice among them.
Thefe circumftances give fo great a credit to the bank of Amfterdam; and that was another invitation for people to come and lodge here, what part of their money they could tranfport, and knew no way of fecuring at home. Nor did thofe people only lodge monies here, who came over into the country, but many more who never left their own: though they provided for a retreat againft a ftorm, and thought no place fo fecure as this, nor from whence they might fo eafly draw their money into any parts of the world.
Another circumftance was, the general liberty and eafe, not only in point of confcience, but all others that ferve to the commodioufnefs and quiet of life; every man following his own way, minding his own bufines, and little' enquiring into other men's; which; I fuppofe, happened by fo great a concourfe of people of feveral nations, different religions and cuftoms, as left nothing ftrange or new, and, by the general humour, bent all upon induftry ; whereas, curiofity is only proper to ide men.
Befides, it has ever bpen the great principle of their ftate, running through all their provinces and cities, even with emulation, to make their country the common refuge of all miferable men, from whofe protection, hardly any alliances, treaties, or interefts, have ever been able to divert or remove them. So as, during the great dependance this ftate had upon France, in the time of Henry IV. all the perfons' difgraced at that court, or banihhed that country, made this their common retreat ; nof could the fate ever be prevailed with, by any inflances of the rench ambaffador, to refule them the ufe and liberty of common life and air, under the protection of their government.
This firmnefs in the ftate has been one of the circumftances that has invited fo many unhappy men out of all their neigh bourhood, and, indeed, from moft parts of Europe, to Thelter themfelves from the blows of jultice, or of fortune. Nor, indeed, does any country feem fo proper to be made ufe of upon fuch occafions, not only in refpect ot fafety, but as a place that holds fo conftant and eafy correfpondencies with all parts of the world, and whither any man may draw whatever money he has at his difoofat in any other place; where neither riches expofe men to danger, nor poverty to contempt; but, on the contrary, where parfimony is honourable, whether it be neceflary or no ; and he that is forced, by his fortune, to live low, may here alone live in fahion, and upon equal terms (in appearance abroad) with the chiefeft of their minifters, and richeft of their merchants : nor is it eafily imagined, how great an effect this conftitution among them may, in courfe of time, have had upon the increafe both of their people and their trade.
As the two firft invitations of people into this country, were the ftrength of their towns, and nature of their government, fo two others have grown with the courfe of time, and progrefs of their riches and power. One is the reputation of their government, arifing from the obfervation of the fuccefs of their arms, the prudence of their negociations, the fteadinefs of their councils, the confancy of their peace and quiet at home, and the confideration they hereby arriyed at among the princes and ftates of Chriftendom. From al thefe, men grew to a general opinion of the wildom and conduct of their ftate, and of it's being eftablifhed upon foundations that could not be fhaken by any common accidents, nor confequently in danger of any great or fudden revolutions; and this is a mighty inducement to induftriou people to come and inhabit a country, who feek not only fafety, under laws, from juftice and oppreffions, but likewife, under the ftrength and good conduct of a ftate, from the violence of foreign invafions, or of civil commotions.
The other is, the great beauty of their country (forced in time, and by the improvements of induftry, in fpite of nature) which draws every day fuch numbers of curious and idle perfons to fee their provinces, though not to inhabit them. And, indeed, their country is à much better miftrefs than a wife, and where few perfons, who were well at home, would be content to live; but where none, that bave time and money to fpare, would not for once be willing to travel ; and as England hhews, in the beauty of the country, what nature can arrive at, fo does Holland, in the number, greatnefs, and beauty of their towns, whatever art can bring to pafs. But thefe, and many other matters of feeculation among them, filling the obfervations of all common travellers, thall make no part of mine, whofe defign is rather to difcover the caules of their trade and riches, than to relate the effects.

Vol. II.

Yet it may be noted hereupon, as a piece of wifdom in an kingdom or ftate, by the magnificence of courts, or of puba lic ftructures ; by encouraging beauty in private building, and the adornment of towns with pleafant and regular plantations of trees; by the celebration of fome noble feltivals or folemnities ; by the inftitution of fome great marts or fairs; and by the contrivance of any extraordinary and renowned Spectacles, to invite and occafion, as much and as ofter as can be, the concourfe of bufy or idle people from the neighbouring or remoter nations, whofe very paffage and intercourfe is a great increafe of wealrh and of trade, and a fecret incentive of people to inhabit a country, where men may meet with equal advantages, and more entertainments of life, than in other places. Such were the Olympicks and other games among the Grecians; fuch the triumphs, trophies, and fecular plays of old Rome, as well as the fpectacles exhibited afterwards by the emperors, with fuch fupendous effects of art and expence, for courting or entertaining the people; fuch the wiles of New Rome; the jufts and tour naments formerly ufed in moft of the courts of Chriftendom the feftivals of the more celebrated orders of knighthood; and, in particular towns, the carnivals and fairs; the kirmiftres, which run through all the cities of the Nerherlands, and, in fome of them, with a great deal of pageantry as well as traffic, being equal baits of pleafure and of gain.
Having thus difcovered, what bas laid the great foundation of their trade, by the multitude of the people which has planted and habituated induftry among them, and, by thats all forts of manufacture; as well as parfimony, and thereby general wealth: I thall enumerate, very briefly, fome other circumftances that feem, next to thefe, the chief advancers and encouragers of trade in their country.
Low intereft, and dearnefs of land, are effects of the multitude of people, and caufe of fo much money to lie ready for all projects; by which gain may be expected, as the cutting of canals, making bridges and caufeys, levelling downs, and draining marihes, befides all new Essays at Forfign TRADE, which are propoled with any probability of advantage.
The ufe of their banks, which fecures money, and makes all paymentseafy, and trade quick.
The fale by regittry, which were introduced here and in Flanders; in the time of Charles V. and makes all purchafes fafe. The feverity of juftice, not only againft all thefts, but all cheats and counterfeits of any public bills (which is capital among them), and even againft all common beggars, who are difpofed of either into workhoufes, or hofpitals, as they are able or unable to labour. See the article Poor.
The convoys of merchant-fleets into all parts, even in time of peace, but efpecially into the Straights; which give their trade fecurity againft many unexpected accidents, and their nation credit abroad, and breeds up feamen for their thips of war.
The lownefs of their cuftoms, and eafinefs of paying them, which, with the freedom of their ports, invite both ftrangers and natives to bring commodities hither ; not only as to a market, but as to a magazine, where they lodge 'till they are invited abroad to other and better markets.
Order and exactnefs in managing their trade, whech brings their commodities in credit abroad. This was firf introduced by fevere laws and penalties, but is fince grown into cuftom. Thus there have been above thirty feveral placarts about the manner of curing, pickling, and barrelling herrings. . Thus all arms, made at Utrecht, are forfeited, if fold without mark, or marked without trial. And I obferved in their India-Houfe, that all the pieces of fcarlet, which are fent in great quantities to thofe parts, are marked with the Englif arms, and infcriptions in Englifh; by which they maintain the credit gained to that commodity, by our former trade to parts, where it is now loft or decayed.
The government managed either by men that trade, or whofe families have rifen by it, or who have themfelves fome intereft going in other men's traffic, or who are born and bred in towns, the foul and being whereof confilts wholly in trade, which makes fure of all favour, that from time to time grows neceflary, and can be given the government.
The cuftom of every town's affecting fome particular commerce or ftaple, valuing itfelf thereupon, and fo improving it to the greateft height: as Flufhing, by that of the WentIndies; Middleburgh, of French wines; Terveer, by the Scotch faple; Dort, by the Englifh faple and Rhenifh wines ; Leyden, by the manufactures of all forts of ftuffs, filk, hair, gold and filver; Haerlem, by linen, mixt ftuff, and flowers; Deift, by beer and Dutch porcelain; Surdam, by the built of fhips ; Enchuyfen and Mazlandlluys, by her-ring-fifhing; Friezland, by the Greenland trade, and Amfterdam, by that of the Eaft-Indies, Spain, and the Straights. The great application of the whole province to the fifingtrade, upon the coafts of England and Scotland, which employ an incredible number of hips and feamen, and fupplies moft of the fouthern parts of Europe with a rich and neceffary commodity. See the articles Fishieries, and Herring-Fishery.

## N E T

The laft I hall mention, is, the mighty advance they thave made towards engrofing the whole conmerce of the EaftIndies. [See the article Dutch East-India Company] by their fuccelfes againft the Portugueze, and by their many by their luccelles agand wars and viftories againtt the natives, whereby they have forced them to treaties of commerce, exclufive to all other nations, and to the admifion of forts to be built upon ftreights and pafles, that command the entrances into the traffic of fuch places. This has been atchieved by the multitude of therr people ano mariners, that has been able to furnifh every year fo many great thips for fuch voyages, and to fupply the lofs of to many lives, as the changes of climate have coft, before they learnt the method of living in them: by the vaftnefs of the fock that has been turned wholly to that trade, and by the conduct and application of the EaftIndia company, who have managed it like'a commonwealth rather than a trade, and thereby raifed a fate in the Indies; governed, indeed, by the orders of the company, but otherwife appearing to thofe nations like a fovereign fate, making war and peace with their greatelt kings, and able to bring to fea forty or fifty men of war, and thirty thoufand men at land, by the modefteft computations. The flock of this trade, befides what it turns to in France, Spain, Italy, the Straights, and Germany, makes them fo great malters in the trade of the northern parts of Europe, as Mufcovy, Poland, Pomerania, and all the Baltic; where the fpices, that are an Indian drue, and European luxury, command all the commodities of thofe countries, which are fo neceflary to Jife, as their corn; and to navigation, as hemp, pitch, mafts, planks, and iron.
Thus the trade of this country is difcovered to be no effects of common concrivances, of natural difpofitions or fitua tion, or of trivial accidents; but of a great concurrence of circumftances, a long courfe of time, force of orders and method, which never before met in the world to fuch a degree, or with fo prodigious a fuccefs; and, perhaps, never will again. Having grown (to fum up all) from the fituation of their country, extended upon the fea, divided by two fuch rivers as the Rhine and the Maes, with the vicinity of the Ems, Wefer, and Elbe; from the confluence of people out of Flanders, England, France, and Germany, invited by the ftrength of their towns, and by the confticutions and credit of their government; by the liberty of confcience, and fecurity of life and goods (fubjected only to conftant laws); from general induftry and parfimony, occafioned by the multitude of people, and fmallinefs of country; from cheapnefs and eafinefs of carriage, by convenience of canals; from low intereft, and dearnefs of land, which turn money to trade; the inftitution of banks; fale by regiftry; care of convoys; fmallnefs of cuftoms; freedom of ports; order in trade; intereft of perfons in the government; particular traffic, affected to pariticular places; application to the filhery; and acquifitions in the Eaft Indies.
It is no conftant rule, that trade makes riches; for there may be a trade that' impoverifhes a nation: as it is not going often to market, that enriches the countryman; but, on the contrary, if, every time he comes there, he bays to a greater value than he fells, he grows the poorer the oftener he goes: but the only and certain fcale of riches, arifing from trade in a nation, is the proportion of what is exported for the confumption of others, to what is imported for their own.
The true ground of this proportion lies in the general induftry and parfimony of a people, or in the contrary of both. Indultry increafes the native commodity, either in the product of the foil, or the manufactures of the country, which raifes the flock for exportation. Parfimony leffens the confumption of their own, as well, as of foreign commodities; and not only abates the importation by the laft, but increafes the exportation by the firft ; for, of all native commodities, the lefs is confumed in a country, the more is exported abroad; there being no commodiry, but, at one price or other, will find a market, which they will be mafters of, who can afford it cheapest : fuch are always the moft induftrious and parfimonious people, who can thrive by prices, upon which the lazy and expenive cannot live.
The vulgar miftake, that importation of foreign wares, If PURCHASED ABROAD WITH NATIVE COMMODITIES, AND not with money, does not make a nation poorer, is but what every man, that gives himfelf leifure to think, muft immediately rectify, by finding out, that, upon the end of an account between a nation, and all they deal with abroad, whatever the exportation wants in value, to balance.that of the Importation, muft of neceffity be made up with ready money. By this we find out the foundation of the riches of Holland, as of their trade by the circumftances already rehearfed: for never any country traded so much, and consumed so hittle. They buy infinitely, but it is to sell again, either upon improvement of the commodity, or at a better marKET. They are the great mafters of the Indian ficices, and of the Perfian filks; but wear plain woollen, and feed upon their own filh and routs. Nay, they fell the fineft of their own cloth to France, and buy coarfe out of England for their own wear. They lend abroad the beft of their own
butter, into all parts, and buy the cheapeft out of Ireland, or the north of England, for their own ufe. In fhort, they furnifh infinite luxury, which they never, practife; and traffic in plealures, which they never tafte.
The gentlemen' and officers of the army change their cloaths and their modes like their neighbours. But among the whole body of the civil magistrates, the mbrchants, therich traders, and citizens in general, the falhions continue fill the fame; and others as confant among the feamen and boors:- fo that men ceave off their cloaths, only becaufe they are worn out, and not becaufe they are out of fashion.
Their great foreign confumption is French wine and brandy; but that may be allowed them, as the only reward they en joy of all their pains, and as that alone which makes them rich and happy in their voluntary poverty, who would otherwife feem poor and wretched in their real wealth. Befides, what they fpend in wine, they fave in corn to make other drinks, which is brought from foreign parts. And, upon a preffure of their affairs, we fee now for two years together, they have denied themfelves even this comfort, among all their forrows, and made up in paffive fortitude, whatever they have wanted in the active.
Thus it happens, that much going confantly out, either in commodity, or in the labour of feafaring men; and little coming in to be confumed at home, the reft returns in coin, and fills the country to that degree, that more filver is feen in Holland, among the common hands and purfes, than brafs either in Spain or in France; though one be fo rich in the beft native commodities, and the other drain all'the treafures of the Weft-Indies.
By this account of their trade and riches, it will appear, that fome of our maxims are not fo certain, as they are current, in our common politics. As firft, that example and encouragement of excefs and luxury, if employed in the confumption of native commodities, is of advantage to trade: it may be fo to that which impoverifhes, but it is not to that which enriches a country; and is, indeed, lefs prejudicial, if it lie in native than in foreign wares. But the cuftom or humour of luxury and expence, cannot fop at certain bounds; what begins in native, will proceed in foreign commodities: and though the example arife among idle perfons, yet the imitation will run into all degrees, even of thofe men.by whofe induftry the nation fubfilts. And befides, the more of our own we fpend, the lefs we fhall have to fend abroad; and fo it will come to pafs, that while we drive a vaft trade, yet, by buying much more than we fell, we fhall come to be poor: whereas, when we drove a very' fmall traffic abroad, yet, by felling fo much more than we bought, we were very rich in proportion to our neighbours.
This appeared in Edward the IHd's time, when we maintained fo mighty wars in France, and carried our vitorious arms 'into the heart of Spain: whereas, in the 28th year of that king's reign, the value and cuftom of all our exported commodities amounted to two hundred and ninety-four thoufand, one bundred and eighty-four pounds, feventeen Thillings and two pence. And that of imported, but to thirty-eight thoufand, nine hundred and feventy pounds, three fhillings and fix-pence. So as there muft have entered that year into the kingdom in coin, or bullion (or elfe have grown a debt to the nation), two hundred and fify-five thoufand, two hundred and fourteen pounds, thirteen fhillings and eight-pence. And yet we then carried out our wools unwrought, and bought in a great part of our cloaths from Flanders.
Another common maxim is, that if, by any foreign invafion or fervitude, the ftate, and confequently the trade, of Holland, fhould be ruined, the laft would of courfe fall to our thare in England. Which is no confequence: for it would certainly break into feveral pieces, and Mift, either to us, to Flanders, to the Hanfe-Towns, or any ocher parts, according as the moft of thofe circumftances fhould any where concur to invite it (and the likenefs to fuch) as appear to have formerly drawn it into Holland, by fo mighty a confluence of people, and fo general a vein of induftry and parfimony among them. And whoever pretends to equal their growth in trade and riches, by other ways than fuch as are already enumerated, will prove, I doubt, either to deceive, or to be deceived. $\hat{A}$ third is, that if that flate were reduced to great extremi-: ties, fo as to become a province to fome greater power, they would chuse our subjection rather than any OTHER; or thofe, at leaft, that are the maritime, and the richeft of the provinces. But it will be more reafonably concluded, from what Sir William has faid in his former difcourfes on this flate, that though they may be divided by abfolute conquefts, they will never divide themfelves by confent, but all fall one way; and, by common agreement, make the beft terms they can for their country, as a Province, if not as a STATE: and before they come to fuch an extromity, they will firft feek to be admitted, as a Belgic circle, in the empire (which they were of old) and thereby receive the protection of that mighty body, which (as far as great and fmaller things may be compared) feems the moft like theif own flate in it's main conftiutions, but efpecially in the freedom or fo-

## N E. T

vereignty of the imperial cities. And this I have often heard their minifters fpeak of, as their laft refuge, in cafe of being threatned by too ftrong and fatal a conjuncture.
And, if this fhouid happen, the trade of the provinces would rather be preferved or increafed, than any way broken or deftroyed by fuch an alteration of their ftate, becauife the liberties of the country would continue what they are, and the fecurity would be greater than now it is.
The laft I will mention is of another vein: that if the prince of Orange were made fovereign of their country, though by foreign arms, he would be a great prince, becaule this now appears to be fo great a ftate. Whereas, on the contrary, thofe provinces would foon become a very mean country. For fuch a power muft be maintained by force, as it would be acquired, and as, indeed, all abfolute dominion mult be in thofe provinces. This would raife general difcontents, and thofe perpetual feditions among the towns, which would change the order of the country, and anger the property of private men, and Chake the credit and fafety of the government: whenever this fhould happen, the people would fcatter, induftry would faint, banks would diffolve, and trade would decay to fuch a degree, as probably, in courfe of time, the very digues would be no longer maintained, by the defences of a weak people againft fo furious an invader; but the fea would break in upon their land, and leave their chiefeft cities to be filher-towns, as they were of old.
Without any fuch great revolutions, I am of opinion, that trade has, for fome years ago paft it's meridian, and begun fenfibly to decay among them: whereof there feems to be feveral caufes, as firft, the general application that fo many other nations have made to it, within thefe two or three and twenty years. For, fince the peace of Munfter, which refored the quiet of Chriftendom in 1648, not only. Sweden and Denmark, but France and England, have more particularly than ever before, bufied the thoughts and councils of their feveral governments, as well as the humours of their people, about the matters of trade.
Nor has this happened without good degrees of fuccefs; though kingdoms of fuch extent, that have other and nobler foundations of greatriefs, cannot raife trade to fuch a pitch as this little flate, which had no other to build upon; no more than a man, who has a fair and plentiful eftate, can fall to labour and induftry, like one that has nothing elfe to truft to for the fupport of his life. But, however, all thefe nations have come, of late, to fhare largely with them; and there feem to be grown too many traders for trade in the world, fo as they can hardly live one by another. As in a great populous village, the firft grocer or mercer that fets up among them grows prefently rich, having all their cuftom, 'till another, encouraged by his fuccefs, comes to fet up by him, and thare in his gains; at length fo many fall to the trade, that nothing is got by it; and fome muft give over, or all muft break*.

- This would be juft, if the world did not afford a perpetaal increafe of tratfic.

Not many ages paft, Venice and Florence poffeffed all the trade of Europe; the laft by their manufactures; the firt by their fhipping; and the whole trade of Perfia and the Indies, whofe commodities were brought (thofe by land,' and thofe by the Arabian Sea) to Egypt, from whence they were fetched by the Venetian fleets, and difperfed into moft of the parts of Europe: and in thofe times, we find the whole trade of England, was driven by Venetians, Florentines, and Lombards. The Eafterlings, who were the inhabitants of the Hanfe-Towns, as Dantzic, Lubec, Hamburgh, and others upon the coaft, fell next into trade, and managed all that of thefe northern parts for many years, and brought it firft down to Bruges; and from thence to Antwerp. The firft navigations of the Portugueze to the Eaft-Indies, broke the greateft of the Venetian trade and drew it to Lifbon: and the revolt of the Netherlands, that of Antwerp to Holland. But in all this time, the other and greater nations of Europe concerned themfelves little in it; their trade was war; their councils and enterprizes were bufied in the quarrels of the Holy Land, or in thofe between the popes and the emperors (both of the fame forge, engaging all Chriftian princes, and ending in the greatriefs of the Ecclefiaftical State throughout Chriftendom): fometimes, in the mighty wars between England and France, between France and Spain: the more general between Chriftians and Turks; or more particular quarrels, between leffer and neighbouring princes. In fhort, the kingdoms and principalities were in the world, like the noblemen and genclemen in a country; the free ftates and cities, like the merchants and traders: thefe at firft defpifed by the others, the other ferved and revered by them; 'till, by the various courfe of events in the world, fome of thefe came to grow rich and powerful by induftry and parfimony; and fome of the others, poor by war and by luxury: which made. the traders begin to take upon them; and carry it like gentlemen, and the gentlemen begin to take a fancy of falling to trade.
By this fhort account it will appear no wonder, either that

N ET
particular places grew fo rich and fo mighty, while they alone enjoyed almoft the general trade of the woild; nor why not only the trade in Holland, but the, advantage of it in general, thould feem to be leffened by fo many that fhare it.
Another caufe of it's decay in that fate may be, that, by the mighty progrefs of their Eaft-India company, the commodities of that country are grown more than thefe parts of the world can take off; and confequently, the rates of them mult needs be leffened, while the charge is increafed by the great wars, the armies, and forts, neceffary to maintain or extend the acquifitions of that company in the Indies. For inftead of five or fix Eaft-India fhips, which ufed to make the fleet of the year, they are now rifen to eighteen or twenty (I think two and twenty came in one year to the United Provinces). This is the reafon why the particular perfons of hat company in Holland make not fo great advantage of the fame flock, as thofe of ours do in England; though their company be very much richer, and drives a far greater trade than-ours, which is exhaufted by no charge of armies, or forts; or fhips of war: and this is the reafon, that the Dutch are forced to keep fo long and fo much of thofe commodities in their magazines here, and to bring them out, only as the markets call for them; or are able to take off; and why they bring fo much lefs from the Indies, than they were able to do, if there were vent enough here : as I remember, one of their feamen newly landed out of their Eaft-India fleet, in the year 1669, upon difcourfe in a boat between Delft and Leyden, faid, he had feen, before he came away, three heaps of nutmegs burnt at a tinse, each of which was more than a fmall church could hold, which he pointed at in a vilage that was in fight.
Another caufe may be the great cheapnefs of corn, which has been for thefe dozen years or more, general in all thefe parts of Europe, and which has a very great influence upon the trade of Holland. For a great vent of Indian commodities (at leaft the ficices which are the grofs of them) ufed to be made into the northern parts of Europe, in exchange for corn, while it was taken off at good rates by the markets of Flanders, England, France, Spain, or Italy; in all which countries it has of late years gone fo low, as to difcourage the import of fo grear quantities, as ufed to come from Poland and Pruffia, and other parts of the north. Now, the lefs value thofe nations receive for corn, the lefs they are able to give for fpice, which is a great lofs to the Dutch on both fides, leffening the vent of their Indian ware in the northern, and the traffic of corn in the fouthern parts.
The caufe of this great cheapnefs of corn feems to be, not fo much a courfe of plentiful and feafonable years, as the general peace that has been in Europe fince the year 1659 or 60 ; by which fo many men and fo much land have been turned to hurbandry, that were before employed in the wars, or lay wafted by them in all the frontier provinces of France and Spain, as well as throughout Germany, before the peace of Munfter; and in England, during the acions or confequences of a civil war: and plenty grows not to a height, bur by the fucceffion of feveral peaceful as well as feafonable years.
The laft caufe I will mention, is the mighty enlargement of the city of Amfterdam, by that which is called the New Town; the extent whereof is fo fpacious, and the buildings of fo much greater beauty and coft than the old, that it muft have employed a vaft proportion of that fock, which in this city was before wholly turned to trade. Befides, there reems to have been growing on for thefe Jater years, a greater vie of luxury and expence among many of the merchants of that town, than was ever formerly known: which was obferved and complained of, as well as the enlargement of their city, by fome of the wifeft of their minifters, while I refided among them, who defigned fome regulations by fumptuary laws; as knowing the very foundations of their trade would foon be undermined; if the habitual induftry, parfimony, and fimplicity of their people came to be over-run by luxury, idlenefs, and excefs. However it happened, I found it agreed by all the moft diligent and circumpect enquiries I could make, that in the years 1669 and 70 , there was hardly any foreign trade among them, befides that of the Indies, by which the traders made the returns of their money without lofs; and none, by which the common gain was above two or three in the hundred. So, as it feems to be with trade, as with the fea (it's element) that has a tertain pitch above which it never rifes in the higheft tides, and begins to ebb, as foon as ever it ceafes to flow; and ever lofes ground in one place, proportionable to what it gains in another.

## Remarks before the laft War.

There is nothing clearer, than that it is the true intereft of this republic to live in perfect harmony with Great-Britain, inafmuch as both countries have continually reaped the greateft advantages, when this union has fubfifted; and have both felt the bad effeets of being fet'at variance, and employing their maritime forces againft each other, through the intrigues of their common enemies. It is, indeed, trur, that each of thefe powers baye an equal intereft in commerce;

## N E T

but while they live upon good terms, and conlult their refpective interefts only, they can, without any difficulty, iegulate the views of their fubjects, fo as to prevent their clafting with each other; and for the common benefit of both, which in the prefent fituation of things is far eafier than in former times; and of greater confequence than ever, confidering the new fchemes that are every day formed, and forming in different parts of Europe, with a tendency equally prejudicial to the trade of both.
Under the articles Flandfris and Holland, we have in our obfervations thereon thewn the necelfity, the abfolute and indifpenfible neceffity in Great-Britain, to contribute all in her power to fupport and maintain a good barrier for the prefervation of the Netherlands agandt the dominion of France to inforce which principle fill the more fenfibly, we have alfo under the article France, fhewn the extraordinary encroachments of that nation in point of territory fince the time of Monf. Colbert, as well as the furprizing increafe of their commerce and navigation from that period.-And, as the barrier of the Dutch fill remains unfettled, it ftill remains neceffary to corroborate what we have urged under the heads before-mentioned. - This we thall do from the authentic tranfactions of the parliament of England.
The fenle of the commons upon this occafion, can no way be better feen, than from their own journals, and therefore I fhall give the reader a fiont abfract of them.
In the beginning of 1677 , the commons did directly, and in very pteffing terms, reprefent to the king, that the minds of his people were very much difquieted with the danger arifing from the manifeft growth and power of the French king; efpecially by the acquifitions made, and like to be made by him, in the Spanifl Netherlands: in prefervation and fecurity whereof, fay they, we humbly conceive the in tereft of your majefty, and the fafety of your people, are highly concerned; and therefore we malt humbly befeech your majefty to take the fame into your royal care, and to frengthen yourfelf with fuch fricter alliances, as may fecure your majefty's kingdoms, and preferve the faid Spanifh Ne therlands, and thereby quiet the minds of your majefty's people.
And when the lords, who concurred with the commons in this addrefs, would have had particular mention likewife made of Sicily, it being of great importance to our trade, that Si cily be not in the hands of the French king; the commons difagreed to it for this reafon, becaufe, ' the feecial mentioning of Sicily, would feem to put lefs weight upon the prefervation of the Spanifh Netherlands; the confervation of which they conceive to be of much more moment to his maefty's kingdoms, than that of Sicily. For though it may be of great importance to our trade, that Sicily be not in the hands of the French king, yet the fafety of his majefty's kingdoms is not fo immediately endangered thereby, and therefore it ought not to be equally infifted on.'
The king agreed with his parliament, in owning the great importance the confervation of Flanders was of to England; but the reft of his anfwer, which fhewed his averfion to enter into a war for it's defence, was fo little fatisfactory, that a motion was immediately made for a fecond addrefs to his majefty, to enter into a frict and fpeedy alliance with the confederates; and, in purfuance of this motion, the houfe did about a fortnight after (March 30 ) in a fecond addrefs implore his majefty, "that he would be pleared to take timey care to prevent thofe dangers that may arife to thefe king doms by the great power of the French king, and the progrefs he daily makes in the Netherlands and other places; and that he would not defer the entering into fuch alliances as may obtain thofe ends, promifing fully to affift his majefly if he fhould be engaged in a war in purfuance of fuch lliances.'
Within three days after the king's anfwer to this addrefs, April. 13, the houfe made a third addrefs, to affure his majefty, that ' they would with moft chearful hearts proceed ooth then and at all other times, to furnifin his majefty with fuch large fupplies upon this occafion (to preferve the Netherlands and check the growth of France) as might enable him, by God's affiftance, to maintain the alliances they had ad vifed, againft all oppofition whatfoever.
This addrefs, upon the king's anfwer to it, was immediately followed by a fourth, April 16, affuring his majefty of their duty and affection; and that he might not only depend upon the fupply he defired, but upon all fuch affiftances as the porture of his affairs fhould requite: s in confidence whereof fay the commons, we hope your majefty will be encouraged in the mean time to fpeak and act fuch things as your majefty hall judge neceffary, for attaining thofe great ends we have formerly reprefented to your majefty.'
Thefe repeated addreffes from fo loyal a houfe of commons, fufficiently ficw bow much the nation was alarmed, upon the dange which they faw the Netherlands expofed The commons were fo bent upon this point, as a matter of the iaft confequence, that they would take no denial: which made the court refolve upon adjourning them for five weeks. But what paffed in this interval, did not make the commons alter their fenciments, or lefs earneft in the purfuit of them.

When they met again, May the 211 , they fell into very warm debates, and relolved to advance fill one fep father in a matter of fo great concern; which was, to addreff his najelty to enter inco a league offenfive and defenfive with the tates, and to make othe fit alfiances againit the growh ind power of France, and for the prefervarion of the Spanith Netherlands: and in this addrefs they tell his majefty, bow highly fenfible they are of the neceffity of fupporting, as well as making, the alliances defired in their former addreffes ${ }^{4}$ which we ftill conceive, fay they, fo important to the fafe ty of your majefty and your kingdoms, that we can't, with out unfaithfulnefs to your majefty, and thofe we reprefent omit upon all occafions humbly to befeech your majelty, as we now do, to enter into a league offenfive and defenfive with the States, \&c,' And that no time might be lof in doing this, they, give his majefty this reafon among otherse the great danger and charge which muf neceffarily fall upon your majefty's kingdoms, if, through want of timely encourage ment and afiftance, the States, or any other confiderable par of the confederates, fhould make a peace with the French king (the prevention whereof hitherto, fay they, mut be acknowledged to be a ingnular effect of God's goodne(s to us) which if it hould happen, your majefty would afterwardsh necelfirated with fewer, perhaps with ng alliances, to with ftand the power of the French king, which has follong and fo fuccefsfully contended with fo many and potent enemies and whilit he continues his overbalancing greatnefs, mult al ways be dangerous to his neighbours; fince he would be able to opprefs any one confederate, before the reft could get together, and be in fo good a pofture of offending him as they are now, being jointly engaged in a war; and if he fhould be fo fucceffful as to make a peace, or difunite the prefent confederation againt him, it is much to be feared, whether it would be poffible ever to reunite it. At leaft it would be a work of fo much tume and difficulty, as would leave your majefty's kingdoms expoled to much mifery and danger. Having thus difcharged our duty in laying before your ma jefty the dangers threatening your majefty and your kingdoms, and the only remedy we can think of for preventing it, and quieting the minds of your people; we moft humbly befeech your majefty to take fuch refolutions, as may not leave it in the power of any neighbouring prince, to rob your peaplat of that happinefs they enjoy under your majefty's' graciousto vernment. Then they oblige themfelves not only by their promifes with great unanimity renewed in a full houfe, but by the zeal and defires of thofe they reprefent, and by the intereft of all their fafeties, moft chearfully to give his majefty fpeedy and plentiful fupplies.
This earneft and importunate addrefs, which was prefented May the 26 th, expreffed not only the fenfe of a very full houfe, but indeed of the whole nation; which gave it fo much weight, that the court faw they hould be forced to comply with it, unlefs they betook themfelves to the laft re fuge in fuch cafes, and immediately put an end to the feffion The parliament, therefore, was accordingly difmiffed, and not fuffered to fit again 'till the end of January 1677.8 . But, though the court could interrupt the fitting of the parliament as they pleafed, it was not poffible to change their fentiments; and they no fooner met again, but they refumed their former debates with more earneftnefs, if poffible, than before. For as that long interval, in which they had not been fuffered to have an opportunity of interpofing their councilia with his majefty, had given the French fo much farther leifure to finifh their defigns upon the Netherlands; the nation was fo much the more alarmed, and in a new addrefs Jan 31, they ' humbly defire his majefty, with the higheft zeal for his honour, and the fafety of his people, not to admit of any treaty of peace, whereby the French king thall be left in poffeffion of any larger dominions and territories, or of any greater power than what be retained by the Pyrenean treaty lefs than which, they conceive, can't fecure his majelty's kingdoms, and the reft of Europe, from the growth and power of the faid king, but that he alone may be able to ditturb the peace thercof whenfoever he is inclined to attempt it. - And they farther defire, ${ }^{6}$ that in all treaties in order to the obtaining that end, his majefty would be pleafed to provide, that none of the parties that fhall join with him in making war for that purpofe, may lay down their arms or depart from their alliances, until the faid king be reduced, at leaft, to the faid treaty.
The commons had reafon to hope for a compliance with this addrefs; the king having in his fpeech acquainted them, that he ' had made, according to their defire, fuch alliances with Holland, as were neceflary for the prefervation of Flan ders; that fince a good peace could not be had by fair means, it thould not be his fault if it were not obtained by force of arms; that if he be fupported by them, he will not be wear still Chrigendom be reftored to fuch a peace, as ir thall not be in the power of any prince alone to difturb.
But, whatever influenced the councils of the court, this addrefs met with no better reception than their latt. They had been then told, that ' what they did was an invafion of the prerogative; and now they were told, not only the fame thing, but, what is more furprizing, that 'the king having

## N E T

aked the advice of both froufes, can't act upon any that does not come jointly from both.' The commons, howe cr, not rebuked with his treatment, perfevered; immediately vored a good fupply, and upon March i4th relolved to addefs his majefty, "' That to quiet the minds ot his fuifects, and encourage the confederaces, he would be pleafed immediatefy to proclam and enter into an actual war againtt the French king, promifing conftantly to fand by and afit his majefty with plentiful fupplies:' to which addrefs they defirel the concurrence of the lords ; but, before it could be enitely obtained, they were adjourned to the middle of ApriL, and from thence to the 2gth; when the Jord chancellor acquainted them in the king's name, 'That the States, whom he liad long found weary of the war,' (artd, indeed, had made fo, for they were quite difcouraged from expecting help from England, when they faw the zeal and fipirit of the nation entirely defeated and eluded by the court) ' were making bafte to get out of it, and were entered upon confiderations of accepting fuch a peace as France had thought frt to offer, though it be without his majetty's confent or privity; a peace as ill for themfelves and the reft of Chriftendom, as their enemies, could wiAh.' And in this difficult conjuncture the king delires their advice (when it is too late) and refolves to purlue it now; though their giving it before in time, when it would have been of the greateft confequence, was made a high crime. It is not my bufinefs to expofe the inlincerity of the court in this whole affair: they who would fee this, need only read Sir William Temple's Letters and Memoirs; a perfon of undoubted reputation and authority, and who was in thofe times his majefty's ambaffador in the Low-Countries.
But I cannot but obferve from thefe words, what a character the king gives of that peace that was a little after concluded at Nimeugen; and what made that peace fo ill a one, was the leaving fo much of Flanders in the poffeffion of France, and the remainder fo much expofed by a weak and infecure barrier.
But to proceed: the commons, who were willing to hope, that if the court were fincere, things might be yet retrieved, came, May 4, to two refolutions, which they laid before the king, without flaying to put them into the ufual form of ad drefs, by reafon of the importance of the affair, and the exigency of the time. In the firft, they 'declared the league made with the States to procure a peace between the two crowns upon certain terms therein fpecified, not to be purfuant to their addreffes, nor confiftent with the gond and fafety of the kingdom:' and yet by thefe terms (had France been obliged to accept them) Tourmay, Condé, and Valenciennes, were to be reftored, together with the dukedom of Lorfain. The other refolution was, to defire his majeity - forthwith to enter into the confederacy for the vigorous earrying on of the prefent war ; and, particularly, that effiectual endeavours might be ufed for continuing the States in the confederacy; and that no peace might be made with France, without general confent firft had.' And, upon the, king's refufing to give any anfwer 'till be had the concurrent advice of both houles, they immediately refolved to addrefs his majefty to give a fpeedy anfwer to their laft addrefs, and to remove thofe counfellors who advifed the anfwers to their former addreffes of the 26th of May and 31ft of January, or either of them; ' by which anfwers, they fay, his maje tyy's good fubjects had been infinitely difcouraged, and the fate of his affairs reduced to a moft deplorable condition:' they mean the progrefs of the French in Flanders, and the great jealouly and uneafiners that gave the nation. And, notwithAanding the king told them May 23, that things were driving violently on towards a peace, yet fill, to prevent fo much of Flanders remaining in the hands of France, they refolved, if his majefty would then enter into a war againft the French king, they were, and always would be, ready to affit him. But thefe and all the other efforts the commons could make could not force the court into right meafures, or prevent an, ill peace; and ferved only to vindicate themfelves to pofterity', from having any hand in it; and this I prefume it will be allowed they have done.
It is impolible to read this fhort account of the proceedings of the commons, and not obferve of how very great importatice they thought the faving of Flanders was, to the fafety and fecurity of this nation. This was fo plainly the known and certain intereft of England, that all the arts the court could ufe, could not divert them from purfuing this point. This was the filt parliament that was chofen atter the Reftoration, which continued fitting above 17 years; and cannot be fufpected either of not having a true regard for the prerngative, or a due deference for the ientiments of the court. But the intereft and fafety of their country was fo much concerned in the prefervation of Flanders, that this confideration carried them into thefe meafures in oppofition to the minittry, in which they fteadily and unalterably perfevered. and the ation was entirely with them; the point they preffed againft the court, having apparensly no orher foundation, than their hearty zeal and concern for it's true intereft. Aid the king bimfelf thought fit, when it was too late, to exprefs at leaft the fame concern thay did, and to concur in the feme fentiments; as appears from his feech to them not long after, in

## N.ET

which be opens his heat freely to hem, and tells tham he was, ' eiejved to fued landers, cither by a war or a peace as the greatelt foreign laterest of this adion.
The ne: re and importance of a good barrice to the Netherands, will be heit juged of from the barriver te enty ithat, of which at prefent we fould by no means lofe fight.

The Barbier Treati between her majerty queen Ammo and the Srates-General.

Her majefty the queen of Great-Eriain, and the lords the States-General of the Uniced Prowinces, having comfidencd how mush it concerns the quiet and fecurity of theit kinodoms and frates, and the public tranquillity, to maineain ans to fecure on one fide the fuccelhon to the cruwn of (G:iatat BLirans, in fuch manace as it is now effablifbed by the laws of the kingdom ; and, on the other fide, that the faid thatesGeneral of the United Pioviaces fhould bave a ftrone and ufficient barrier * againf France and ohene who would lurprize or attack them. and her majeity and the faid Stakes General, apprehending, with jult reafon, the croubles and mufchiefs which might happen, with refpect to this fuccefion, if at any time there fhould be any perfon or any power who fhould call it in queftion; and, if the cruntries and flates of the faid lords the States-General, were not fecured by fuch barrier: + for thefe faid reafons, her majefty the queen of Great-Britain, though in the vigour of her aye, and enjoying perfect healch (which God preferve to her many

* [Againft France and others.] Thefe words [and others] ought not, it was faid, by thoce who did nothke it, to have besm added in the treaty; the defigu of the treaty being to fecure the barrier of the Staies againft France only. That the fily and chief defign of a cleary for the barrier, was to fecure it agnal Erance, I readily aliow becaufe the firt and chiet daiger is from thencu; but if it is the in. terell of England that it shoold be fecured at ali, is is certainly the incere:t of England that it hould be fecured againt others as well as Hralce. If the barrier oe loff for want of fuch fecurity, whoever the invaders be, England want of fuch ecurity, whoe"er the invaders be, Eng, and
as well as Holland lofes the protection it gives them againit as well as holland lofes the protection it gives them a yainit
France; and therefoe it is our interelt, as well as theirs, Erance; and therefor it hon'd be fecured on all fides, and expofed to the
that it that it fhou'd be fec
And, fince the States oblige themfelves to afift in mantaining the Proteftant fucceffion, not only againft France, bue againll all others that thall atempt to diftorb it; there is the fame realon her majefty fould give as full a guaranty to the States, for fecuring their barrier againtt all that fhall attack it. The interelt of both is reciprocal, and therefore the engagement ought to be fo too. Nor can any inconvemience arile, from naking the guaranty generat againfe all invaders ; becaufe the obligations of mutual alifitarice, cannor by this treaty taice place on any other. occation, buthen only, when her majcity or the states thatl be attacked on account of the fucceftion or barrier. And therefore if the barrier be not attacked, though the States be jevaded in any other part, her majefy is not engaged hereby. it will be pretended, perhaps, that thore is no reafon to appreheld any danger from any poiver betides France: but firft, that is not true; for France, by her inrigues, has-fomer'y engaged fome princes of the empire in a war againft the Dutch, and may do fo agzin. Bur if it were true that nothing was to me apprehended from any other power than France, it is neccflary the treaty thould be made general, if it were oniy necifary the treaty houd be made generat, if to were only
to guard againt the mean and pitfulevafions that crown is always ready to make ufe of to carry on her ambitious defigns. or which it will be fufficient to give one memorable intance, which is to the prefent purpore. In the year 170I, when the French forces had reized the whole Spanifh LowCountries, and had by lincs and for's entirely cooped up the Scates on that fide; not content with this, to cut off the States from all commanication with the empire, trance fent, in concert with the elector of Cologn, a great body of troops into molt of the flrong towns belonging to that elector, and yet at the fame thine declared they would oisterve the peace and treaty of Rywick, and therefore thefe troops were called auxilary troafs of the circle of Bargundy. Where now is the difference whether the king of France attack the Dutch in his own name, or whether his trsops do is under the name of any body elie? The troops are the fame, and the danger all one. If this treaty therefore were not made general againft all invacers, fuch an evafion might defeat the intention of it even againflt France iticlf. Thus much for the reafon of this addation; and that the reader may be further fatisfied, he nevd only have recourfe to the 16 rio ar ticle, by which the defence of the focceffion and the barrier, is lefr general and unlimited.
- The reafon why thefe werds [and the abs fa:d queen, \&c. duly refecting upon the advantige which France has always made ufe of, \&c. for want of necefincy and reafrinable preiminaries being well elablifhed among the alite, were left qut in the creaty, will appear by observirg, that the counter-projet then inde was formed before the prelimi-
nary treaty in 1709 , whereas this of the barrier was not nary treaty in 1709 , whereas chis of the barrier was no made thafter it; and cierefore this clante was properly complied with in the freliminary uraty, figned by the Queen, the Empercr, and the States.

## N E T

years), out of her ufual prudence and piety, has thought fit to enter, with the lords the States General of the United Provinces, into a particular alliance and confederacy; the principal end and only aim of which, fhall be the public quiet and tranquillity; and to prevent, by meafures taken in time, all the events which might one day excite new wars. With this view it is, that her Britifh majefty has given her full power, for agreeing upon certain articles of a treaty, additional to the treaties and alliances that he already has with the lords the States-General of the United Provinces, to her ambaffador extraordinary and plenipotentiary, Charles vifcount Townfhend, baron of Lynn Regis, privy counfellor of her Britifh majefty, captain of her faid majeftys yeomen of the guard, and her lieutenant in the county of Norfolk: and the lords the States-General of the United Provinces, to the Sieurs John de Welderen, lord of Valbrugh, great bailift of the Lower Retuwe, of the body of the nobility of the province of Guelder; Frederic baron of Reede, lord of Lier, St. Anthony and Tirfec, of the order of the nobility of the province of Holland and Weft Friezland; Anthony Heinfius, counfellor penfionary of the province of Holland and Weft Friezland, keeper of the great feal, and fuperintendant of the fiefs of the fame province; Cornelius Van Gheet, lord of Spanbrock, Bulokeftein, \&c. Gideon Hocuft, canon of the church of St. Peter at Utrecht, and counfellor elect in the fates of the province of Utrecht; Heffel Van Sminia, fecretary of the chamber of accounts of the province of Friezland ; Erneft Itterfum, lord of Ofterhof, of the body of the nobility of the province of Overyffel; and Wicher Wichers, fenator of the city of Groninguen; all deputies to the affembly of the faid lord the States-General, on the part refpectively, of the provinces of Guelder, Holland and Weft Friezland, Zealand, Utrecht, Friezland, Overyffel, and of Groninguen and Ommelands; who, by virtue of their full powers, have agreed upon the following articles.

## Article I

The treaties of peace, friendfhip, alliance, and confederacy, between her Britifh majefly and the States-General of the United Provinces, thall be approved and confirmed by the prefent treaty, and hall remain in their former force and vigour, as if they were inferted in it word for word.

## Articee II.

The fucceffion to the crown of England having been fettled by an act of parliament paffed the twelfth year of the reign of his late majefty king William III. the title of which is, An act for the further limitation of the crown, and better fecuring the rights and liberties of the fubject: and lately, in the fixth year of the reign of her prefent majefty, this fucceffion having been again eftablifhed and confirmed by another act made for the greater fecurity of her majefty's perfon and government, and the fucceffion to the crown of Great-Britain, \&c. in the line of the moft ferene houfe of Hanover, and in the perfon of the princefs Sophia, and of her heirs, fucceffors, and defcendants, male and female, already born or to be born. And, though no power has any right to oppofe the laws made upon this fubject by the crown and parliament of GreatBritain; if it fhould happen neverthelefs, that under any pretence, or by any caufe whatever, any perfon, or any power or fate fhould pretend to difpute the eftablifhment which the parliament has made of the faid fucceffion in the mot ferene houfe of Hanover, to oppofe the faid fucceffion, to aid or favour thofe who thall oppofe it, whether directly or indirectly, by open war, or by fomenting feditions and confpiracies againt her or him to whom the crown of GreatBritain thall defcend according to the acts aforefaid; the States General of the United Provinces, engage and promife to affift and maintain, in the faid fucceflion, her or him to whom it thall belong by virtue of the faid acts of parliament, to aid them in taking poffeffion, if they be not then in poffeffion, and to oppofe thofe who would difturb them in the taking fuch poffefion of the faid fucceffion.

> Artiche lil.

Her faid majefty and the States-General, in confequence of the fifth article of the alliance concluded between the emperor, the late king of Great-Britain, and the lords the States-General, the 7 th of September 1701, hall employ all their forces to recover the reft of the Spanifh Low-Countries.

> Article IV.

And further, they fhall endeavour to conquer as many othet towns and forts as they can, in order to their being a barrier and fecurity to the faid lords the States.

Article $V$.
And whereas, according to the ninsh article of the faid alliAnce, it is to be agreed amongft other matters, how and in what manner the States thall be fecured by means of this barrier, the queen of Great-Britain fhall uie her endeavours to procure, that in the treaty of peace it may be agreed, that all the Spanifh Low-Countries, and what elfe fhall be found neceffary, whether of conquered or unconquered places, fhall ferve as a barrier to the States.

Articie VI.
That to this end their high-mightineffes thall have the liberty

## N E T

to put and keep garrifon, to change, augment, and diminifh it as they thall judge proper, in the places following: namely, New'port, Furnes, with the fort of Knocke, Ypres, Menin, the town and citadel of Lifle, Tournay and it's citadel, Conde, Valenciennes, and the places which thall from henceforward be conquered from France. Maubeuge, Charleroy, Namur and it's citadel, Liere, Hali to fortify, the pors of Perli, Philippe, Damme, the cafte of Gand, and Dendermonde; the fort of St. Donas being joined to the fortifications of the Sluice, and being entirely incorporated with it, fhall remain and be yielded in property to the states. The furt of Rodenhuyfen on this fide Gand fhall be demolihed.

Article VIf.
The faid State's Generals may, in cafe of an apparent attark, or war, put as many troops as they thall think neceffary in all the towns, places, and forts, in the Spanifh Low. Countries, where the reafon of war fhall require it.

Artiche VIII.
They may likewife fend into the towns, forts and places, where they fhall have their garrifons, without any hinderance, and without paying any duties; provifions, ammunitions, arms and artillery, materials fur the fortifications, and all that hall be found convenient and neceffary for the faid garrifons and fortifications.

Article IX.
The faid States-General fhall alfo have liberty to appoint in the towns, forts, and places of their barrier, mentioned in the foregoing fixth article, where they thall have their garrifons, fuch govervors and commandants, majors and other officers, as they thall think proper; who fhall not be fubjeet to any other orders, whatfoever they may be, or from whomfoever they may come, relating to the fecurity and military government of the faid places, but only to thofe of their highmightineffes (exclufively of all others); ftill preferving the rights and privileges, as well ecclefiaftical as political, of king Charles the IIId

Artiche X.
That befides, the faid States fhall have liberty to fortify the faid towns, places, and forts which belong to them, and repair the fortifications of them, in fuch manner as they hall judge neceflary, and further to do whatever fhall be ufeful for their defence.

Articie XI.
It is agreed, That the States-General thall have all the revenues of the towns, places, jurifdictions, and their dependencies, which they fhall have for their barrier from France, which were not in the poffeffions of the crown of Spain, at the time of the death of the late king Charles the IId; and befides, a million of livres fhall be fettled for the payment of one humdred thoufand crowns every three months, out of the cleareft revenues of the Spanifh Low-Countries, which the faid king was then in poffeffion of; both which are for maintaining the garrifons of the States, and for fupplying the fortifications, as alfo the magazines, and other neceffary expences, in the towns and places above-mentioned. And, that the faid revenues may be fufficient to fupport thefe expences, endeavours hall be ufed for enlarging the dependencies and jurifdictions aforefaid, as much as poffible; and particularly for including with the juriddictions of Ypres, that of Caffel, and the foreet of Nieffe; and with the jurifdiction of Lifle, the jurifdiction of Douay, both having been joined before the prefent war.

ARticle XII.
That no town, fort, place, or couniry of the Spanifh LowCountries, ihall be granted, transferred, or given, or deficend on the crown of France, or any one of the line of France, neither by virtue of any gift, fale, exchange, marriage, agreement, inheritance, fucceffion by will, or through want of will, from no title whatfoever, nor in any other manner whatever, nor be put into the power or under the authority of the moft Chriftian king, or any of the line of France.

> Article XIII.

And whereas the faid States-General, in confequence of the ninth article of the faid alliance, are to make a convention or treaty with king Charles the Md, for putting the States in a condition of fafery, by means of the faid barrier, the queen of Great-Britain will do what depends upon her, that all the foregoing particulars, relaing to the barrier of the Scates, may be inferted in the aforetaid treaty or convention; and that her faid majelty will continue her good offices, 'till the above mentioned convention between the States and the faid king Charles the IIId, be concluded, agreeable to what is before-mentioned, and that her majelty will be guarantee of the faid tieaty or convention.

## Article XIV.

And, that the faid States may enjoy from hence forward, as much as poffible, a barrier for the Spanifh Low Councries, they thall be permitted to put their garrifons in the towns already taken, and which may hereafter be fo, before the peace be concluded and ratified. And, in the mean time, the faid king Chatles the IIId, fhall not be allowed to enter into poffeffion of the faid Spanifh Low-Countries, neither entirely

## N E T

## N E T

nor in part; and during that time the queen hall affit their high-mightinefles to maintain them in the enjoyment of the revenues, and to find the milion of livres a year abovementioned.

Article XV
And whereas their high-mightinefles have ftipulated by the treaty of Munfter, in the fourteenth article, That the river Schelde, as alfo the canal of Sas, Swyn, and other mou!n of the fea bordering thereupon, fhould be kept fhut on the fide of the States.
And in the fifteenth article, That the fhips and commodities going in and coming out of the harbours of Flanders, fhall be and remain charged with all fuch impofts and other duties, as are railed upon commodities going and coming along the Schelde, and the other canals above-mentioned:
Thequeen of Great-Britain promifes and engages, That their bigh-mightinefles thall never be difturbed in their right and poffeffon, in that refpect, neither directly nor indirectly; as alfo that the commerce fhall not, in prejudice of the faid treaty, be made more ealy by the fea ports, than by the rivers, canals, and mouth of the lea, on the fides of the States of the United Provinces, neither directly or indirectly:
And whereas by the 16 th and 17 th articles of the fame treaty of Munfter, his majefty the king of Spain, is obliged to treat the fubjects of their high-mightineffes as favourably as the fubjees of Great Britain and the Hanfe-Towns, who were then the people the moit favourably treated; her Britannic ma jefty and their high mightinefles promife likewife, to take care that the fubjects of Great-Britain, and of their high-mightineffes, fhall be treated in the Spanim Low-Countries, as well as in all Spain, the kingdoms and ftates belonging to it, equally, and as well the one as the other, as favourably as the people the moft favoured.

ARTICIEXVI
The faid Queen and States-General oblige themfelves to fur nifh, by fea and land, the fuccours and affiftance neceffary to maintain, by force, her faid majefty in the quiet poffeflion of her kingdoms, and the moft, ferene houfe of Hanover in the faid fucceffion, in the manner it is fettled by the acts of parliament before-mentioned, and to maintain the faid StatesGeneral in the polfeffion of the faid barrier.

ARTICLEXVII.
After the ratification of this treaty, a particular convention fhall be made of the conditions by which the faid queen, and the faid lord the States-General, will engage themfelves to furnifh the fuccours which fhall be thought neceffary, as well by fea as by land.

Article XVIIf.
If her Britifh majefty, or the States-General of the United Provinces, be attacked by any body whatfoever, by reafon of this convention, they fhall mutually affift one another with all their forces, and become guarantees of the execution of the faid convention.

Article XIX.
There fhall be invited and admitted into the prefent treaty, as foon as poffible, all the kings, princes, and fates who thali be willing to enter into the fame; particularly his Imperial majefty, the kings of Spain and Pruffia, and the elector of Hanover. And her Britifh majelty, and the States-General of the United Provinces, and each of them in particular, fhall be permitted to require and invite thofe whom they fhall think fit to require and invite to enter into this treaty, and to be guarantees of it's execution.

## Article XX

And, as time has thewn the omiffion which was made in the treaty figned at Ryfwick in the year 1697 , between England and France, in refpect of the right of the fucceffion of England, in the perfon of her majelty the queen of Great-Biitain now reigning, and that, for want of having lettled in that treaty this indifputable right of her majefty, France refufed to acknowledge her for queen of Great-Britain, after the death of the late king William the Third, of glorious memory: her majefty the queen of Great-Britain, and the lords the States-General of the United Provinces, do agree and engage themfelves likewife, not to enter into any negociation or treaty of peace with France, before the title of her majefty o the crown of Great. Britain, as allo the right of fucceffion of the moft ferene houfe of Hanover to the aforefaid crown, in the manner it is fetcled and eftablifhed by the before-menioned acts of parliament, be fully acknowledged as a preliminary by France, and that France bas promifed, at the ame time, to remove out of it's dominions the perfon who pretends to be king of Great-Britain; and that no negociaion nor formal difcuffion of the articles of the faid treaty of peace thall be entered into, but jointly, and at the fame time, with the faid queen, or with her miniters.

## ARTICLE, XXI

Her Britifh majefty, and the lords the States-General of the United Provinces, thall ratify and confirm all that is contained in the prefent treaty, within the fpace of four weeks, to be reckoned from the day of the figning. In teftimony whereof, the under-written anibaftador extraordinary and plenipotentiary of her Britilh majefty, and the deputies of the lords the

States-General, have figned this prefent treaty, and have affixed their feals thereunto

(L.S.) G. Hocutt,
(L. S.) H. Sminia,
(L.S.) E. V. Itterfum,
(L.S.) W. Wichers.

The feparate article.
As in the preliminary articles figned bere at the Hague the 28th of May, 1709, by the plenipotentiares of his Impetial majetty, of her majefty the queen of Great-Britain, and of the lords the States-Gencral of the United Provinces, it is Ifipulated, amongft other ihings, that the lords the StatesGeneral fhall have, with inure property and fovereignty, the Upper Quarter of Guelder, according to the 52 d atticle of the treaty of Munfter, of the year 1648 ; as aifo that the garrifons which are or hereafter fhall be on the part of the lords the States-General in the town of Huy, the citadel of Liege, and in the town of Bonne, thall remain there 'till it thall be otherwife agreed upon with bis Imperial majefty and the empire. And as the barkier which is this day agreed upon in the principal treaty, for the muiual guaranty between her Britifh majefty and the lords the States-General, cannot give to the United Provinces the fafety for whicif it is eftablifhed, unlefs it be well fecured from one end to the other, and that the communication of it be well joined together; for which the Upper Quarter of Guelder, and the garrifons in the citadel of Liege, Huy, and Bonne, are abfolutely neceffary: experience having thrice fhewn, that France having a defign to attack the United Provinces, has made ufe of the places above-mentioned, in order to come at them, and to penetrate into the faid provinces. That further, in refpect to the equivalent for which the Upper Quarter of Guelder is to be yielded to the United Provinces, according to the 52 d article of the treaty of Munfter above-mentioned, his majefty king Charles III. will be much more gratified and advantaged in other places, than that equivalent can avail. So that, to the end the lords the States-General may have the Upper Quarter of Guelder, with intire property and fovereignty, and that the faid Upper Quarter of Guelder may be yielded in this manner to the faid lords the States-General, in the convention or the treaty that they are to make with his majefty king Charles III. according to the 13th article of the treaty concluded this day; as alfo that their garrifons in the citadel of Liege, in that of $\mathrm{H}_{4 y}$, and in Bonne, may remain there, until it be otherwife'agreed upon with his Imperial majefty and the empire. Her majefty the queen of Great-Britain engages herfelf, and promifes by this reparate article, which thall have the fame force as if it was inferted in the principal treaty, to make the fame efforts for all this as fhe has engaged herfelf to make, for their obtaining the barrier in the Spanihh Low-Countries. In teftimony whereof, the under written ambaffador extraordinary and plenipoten tiary of her Britifh majefty, and deputies of the lords the States-General, have figned the prefent feparate article, and have affixed their feals thereunto.

The fecond feparate article.
As the lords the States General have reprefented, that in Flanders the limits between Spanifh Flanders and that of the States, are fettled in fuch a manner as that the land belonging to the States is extremely narrow there; fo that, in fome places, the territory of Spanifh Flanders extends itelf to the foitifications, and under the cannon of the places, towns, and forts of the States, which occafions many inconveniencies, as has been feen by an example a little before the beginning of the prefent war, when a fort was defigned to have been built under the cannon of the Sas Van Gand, under pretence that it was upon the territory of Spain. And as it is neceffary for avoiding thefe and other forts of inconveniencies that the land of the States upon the confines of Flanders hould be enlarged, and that the places, towns, and forts fhould, by that means, be better covered; her Britifh majetty enering into the jult motives of the faid lords the states General in this refpect, promifes and engages herfelf, by this feparate article, that, in the convention that the faid lords the States-General are to make with his majefty king Charles HI he will fo affitt them as that it may be agreed, tha., by the ceffion to the faid lords the states-General of the property oran extent of land neceffary to obviate fuch-like and other inconveniencies, their limits in Flanders thall be enlarged more conve niently for their fecurity, and thofe of the Spanifh Flanders re-

Remarks, on this article of Netherlands, fince the lall War, and the Definitive Treaty of 1763.

In the late war from 1740 to 1748 , the Dutch lof their chief barrier; and although the States-General remained neuter, and looked on with indifference, while an unnatural rebellion was carried on in this kingdom in favour of a popilh pretender to the Britifh crown; yet when the peace of Aix Ja Chapelle was concluded, Great-Britain gave up the capital conqueft of Cape Breron made that war from France, to the end that the States General of the Uni, ed Provinces, might be put again in full and peaceable pofiellion, fuch as they enjoyed before that war, of the towns of Bergen-opZoom, and Maeftricht, and of ail they poffeffed before the war ingutch Flanders, Brabant, Holland, and elfewhere. And the towns and places in the Low Countries, the fovereignty of which belonged to the emprefs queen of Hungary and Bohemia, wherein their High Mightineffics have the right of garifon, were evacuated by France to the troops of the republic at the fame time. VIth article of the treaty of Aix la Chapflle made in thè year 1748.Thus Great-Britain expended threescore millions of money, and thereby run thirty millions more in debt during that war, and entailed proportionable taxes upon her trade in general, without receiving any advantage by that wai, not fo much as fecuring to herfelf the richt of NAVIGATION TO AND FROM HTK OWN COLONIES, without being searched by the Spaniards, nor fecuring her hight tothe logwoud, which were the points for which we entered into that war with Spain.-ln this manner have thefe kingdoms increafed their public drbts and taxes, and made themfelves tributaries to fureign credifors!
In the laft war likewife, the Dutch acted a part to the advantage of our enemies, by carrying on and protecting their trade for them, while they did all the injury they well could to that of Great-Britain during that war: fothat during the two laft great wars, we have been deprived of the alliance of the Dutch, while they have reaped the full advantage of a neutrality; and we have trebled ouf NATIONAL DEBTS AND taxes fince the peace of Utrecht, and have thereby redeced our whole commerce and navigation almoft to a ftate of ruin and deftruction, unlefs we preferve them by means of the laft definitive treaty of i763, and now in time of peace, reduce thofe immense taxes with which the nation is loaded. If this effential point is not accomplifhed, and that too without delay, our English commodities will continue fo excessiyely dear, that foreigners will not be able to purchafe them, while thofe of France will be excessively cheap, in comparifon thereto, that thofe of the latter will find their way into every nation in the world, and ours continue a drug upon our hands. By thefe means, France will gain the dominion in universal trade, though we have gained it in territory, and thus the nation muft at length be undone. See our laft Remaris on our article Naval Affairs, Flanders, Hollani, Duties, Labour.
NEUFCHATTEL and VALLENGIN Coonties, are bounded by the bifhopric of Batil on the north; by the lake of Neufchattel on the eaft; by the canton of Berne on the fouth; and by the Franche Comte in France on the weft; being about 40 miles long, and 20 broad, fubject to the fame prince, and form together one little ftate; for they are a free independent people, though they have a prince at their head. No lawis are made but by the three eftates; no taxes raifed, or magitrates appointed, but by the fates. The whole country is of the reformed religion, except two Roman Catholic villages. Upon the death of the duchefs of Nemours, fovereign of Neufchattel, anno 1707, there were many competitors, but the ftates made choice of the king of Pruffia to fucceed ber, who derived his title from the houfe of Orange and Chalons. The country produces fome good wine, but is for the moft part a maintainous barren foil.

NEVIS,
NEWENGLAND,
NEW JERSEY,
NEW YORK,
NEWFOUNDLAND, an ifland in the Atlantic ocean
in Amertca; betweei 55 and 67 degrees of weft tongitude, and between 47 and 52 degrets of north latitude, and fepa: rated from New Britain, or Eikimaux, by the narrow ftraight of Belleifle on the north, bounded by the ocean on the eaft and fouth, and by the bay of S. Lawrence on the weff, lying about 40 milcs north eaft of Cari Breton, now belonging to Great-Britain. See Amfrica for the treaty of 1763. This inland is of a triangular form, 350 miles in, length from north to fouth, and 200 miles in breadth at the baie, from eaft to weft, where broadeft.
The feas adjacent to Newfoundland produce an infinite fore of White Eishe, which the Engligh and French catec upen the banks or fands, fo called, overagaingt the inand. They bring them on fhore to cure and prepare for market, and fo fell them to other merchants, who come in other hips to buy the fifh, and carry them to the Strgights, to "pain, and Italy, as alfo to Porttigal. The French are allowed by the treaty of Utrecht to cure their filh on fome parts of the inland: and by the laft treaty of 1763 , they have acceded to them the fmall illands of' Miquelon and St. Pierre, for the fhelter of their Newfoundland fifhermen; on expreis condition that they are not to erect any fortifications at eirber of thefe fmall illands, nor to keep above 50 men there for the police. The property and fovereignty of the whole infand of Newfoundiand belongs to the linitifh government.
The cod fifhery here is very great. See our article $C_{c D}$ Fish. The quantity of ralmon afoo is very great bere, and the filh large and good, Thefe fifheries orcafun feveral buildings for the cure of the firk, and as weil of dwellinghoufes as warehoufes and filh houles, on the banks of the crecks and rivers, where the filteries are erclied; and they have their feveral boundaries in the fe rivers made out by thips and wears, for afcertaining the property of the places refpectively, as allo for the more eafy taking the fifh.
Thefe buildings increafing, were not the cold forexceffimply fevere, and the country iffelf fo inhorpitable and barren, that it difcourages the people from planting, wouid crituinly caufe towns or villages to be built in thole places, and would bring numbers of people to fettle there, rather than goback to England every winter, and return again every, foting; which is, befides the hazard of the fea, exceeding chargso able and troublefome to the fighermen themfelves.
But it cannot be avoided, unlefs numbers of people refolved to fettle together, and to affift one another as a company, as was the cale in the firft planting the colonies New England and Virginia, and other places; where, 'till a fufficient quan* tity of land was cured and planted, the people could not fubfift themfelves without conitant fupphies from Europe; both of men, catale, and provifions.
The Britifh fibheries at Newfoundland is chicfly carxied on by the merchants in the weft of England, of l'ool, Wey. mouth, Lime, Southampton, and other parts thlire.
N. B. Thofe who go to the banks to fifh, that is, to catch and cure, are called filh-boats, and Newfoundland fhips; or, in the feamens language, Newfoundland men, or barkers : but thofe veffels fent by the merchan:s to buy firh, and carry it off from thence to Spain, Italy, \&c. as abiove-mentioned, are diftinguithed by fack-men, and the voyage is called going FOR ASACK : and when a maffer of a fhip fayshe is bound for Newfoundland, or for the banks, 'ris cullothary to afk him, What, do you go to fifh, or go for a fack? that is to fay, to catch fifh, or to buy.

## Remarks fince the laft War, and Treaty of Peace of 1763.

In the late petition of the merchants and traders concerned in the Britifh Newfoundland trade, to the honoturable the houfe of coinmons, it was reprefented that there were employed in the fifheries 1500 fifhing toars, which remain at Newfoundland, above 150 banking veffels of the larger fize for catching the fifh, and 300 fail of other mercantile fllipping generally employed, in carrying the fift and the oil produced therefrom to foreign markets and to the Britifh plantations, and in bringing home the returns from thence, either in the produce of foreign countries, or of that of our Annerican colonies, or directly carrying the produce of our plantations, purfuant to acts of parliament made to tolerate the fane directly to foreign markets.-That thefe feveral branches of trade connectively confidered, did not employ fewer than 20,000 of his majefty's fubjects in every office relative to this capital filhery.- That fo wifely had the legifature regulated this branch of the Bitifit navigation, as to render it a conitant nurfery for the increafe of feamen, the fame breeding at leaft between 5 and 6000 frefh feamen annually. For that by the acts of parliament made in the 10 th ald rith years of the reign of king Wiltiam III. it is enacled, That mafters of fhips bound to Newfoundland, fhall carry at leaft one frefh landman in five; in bye fifhing boats and veffels, the mafters thall carry at leaft two fieft men in fix; that is, one who has never been at fea before, and one who has made no more than one voyage: and the faid maftert of fhips and firhing veffeis are obliyed to make oath thereof accordingly before the collector of the port, who is to. give them a certificate of their complance with the faid acts of

## N E W

parliament; which thew how confiderable a maritime nurfery for Britifh feamen thefe fifheries have proved to thefe kingdoms.- That upon the whole, there was not fewer than 16,000 perfons employed in the catching, the curing, the forting, and packing of the fifh, in fuch a merchantable manner as to preferve the credit and reputation of this fifhery throughout Europe and America; and that the faid 15,000 perfons by means hereof, became thorough bred feamen; and that the fhipping employed as bankers, or the larger fized filhing veffels on the banks of Newfoundland, together with the Chipping alfo employed in carrying the filh and oil to market, and bringing the returns, do not employ lefs than 4000 feamen more.- That the Britifh merchants and traders, who provide fo large a number of filhing veffels, and other fhipping, to tranfport the fifh to the Streights and Italy, Spain and Portugal, and to the Britifh plantations, in general, and who are at the expence of maintaining fo many thoufand of his majefty's fubjects, erecting ftages, flukes, wharfs, warehoules, and dwelling houfes for the refidence of the inhabitants on the ifland, who purchafe all manner of utenfils, and falt for curing the filh, and hire artifts experienced in the beft methods of curing, forting and packing them to the beft advantage, muft neceffarily occafion a confiderable capital ftock to be engaged in this trade at New-foundland.-That this commerce gave daily bread to a large body of the inhabitants in, or neighbouring upon the chref towns in the weft of England, from whence this trade is principally carried on : as fhip-carpenters, fmiths, fail and canvas makers, caulkers, block-makers, rope-makers, line and twine-makers, net-makers, tunnel-makers, pump-makers, compafs makers, bafket-makers, filh-hook-makers, butchers, brewers, bakers, ironmongers and nailors, fhoemakers, hatters, and all concerned in the clothing way, both in linen, woollen, and hofiery, and numerous other kinds of tradefmen and mechanics, whofe chief fubfiftence depends on the towns of Pool, Dartmouth, Topfham, Tinmouth, Briftol, and all along the coafts of Deyonthire and Dorfethire, from Southampton to the land's end; alio in the iflands of Guernfey and Jerfey, and the ine of Wight, where there refide many merchants and traders, who are interefted in this trade.
The whole of this petition, which was figned by many hundreds of the merchants and traders in the weft of England therein concerned, manifefts the importance of this trade to the nation in general.
By the treaty of peace concluded at Paris the roth day of February 1763 , the 5 th article delares, that 'the fubjects of France fhall have the liberty of firhing and drying on a part of the coafts of the illand of Newfoundland, fuch as is fpecified in the 13 th article of the treaty of Utrecht; which article is renewed and confirmed by the prefent treaty (except what relates to the ifland of Cape Breton, as well as to the other iflands and coafts in the mouth and gulph of St. Lawrence ;) and his Britannic majefty confents to leave to the fubjects of the moft Chriftian king, the liberty of fifhing in the gulph of St . Lawrence, on condition that the fubjects of France do not exercife the faid fifhery, but at the diftance of three leagues from all the coafts belonging to Great-Britain, as well thofe of the continent, as thofe of the iflands fituated in the faid gulph of St. Lawrence. And as to what relates to the fighery on the coait of the ifland of Cape Breton, out of the faid gulph, the fubjects of the moft Chriflian king thall not be permitted to exercife the faid fifhery, but at the diftance of fifteen leagues from the coaft of the illand of Cape Breton; and the fimery on the coafts of Nova Scotia or Acadia, and every where elfe out of the faid gulph, fhall remain on the foot of former treaties.'
By the 6th article of the faid treaty, ' the king of Great-Bri-tain cedes the iflands of St. Pierre and Miquelon, in full right, to his moft Chriftian majefty, to ferve as a fhelter to the French fifhermen; and his faid moft Chriftian majefty engages not to fortify the faid inlands, to erect no buildings upon them, but merely for the convenience of the fifhery, and to keep upon them a guard of fifty men only for the police.'
By the 18 th article of the faid treaty, ${ }^{\text {c }}$ his Catholic majefty defifts, as well for himfelf as for his fucceffors, from all pretenfions which he may have formed, in favour of the Guipufcoans, and other his fubjects, to the right of fifhing in the neighbourhood of the ifland of Newfoundland."' See Fisheries, Cod Fishery.
NEWS.PAPERS are too well known to need defcription. They are become fo numerous in Great-Britain, and her plantations, as to afford employment to many, to be inftrumental in the confumption of large quantities of paper, and rend, by the ftamp and advertifement-duties thereon, to the benefit of the public revenue.

Remarks.
On the ufe of News Papers.
The curiofity of mankind, to know what paffes in the werid, naturally leads them to the perufal of thefe papers; and the Vo l. II.

## N E W

more authentic the accounts given, the greater reputation has fuch news-papers. Befides the gratifying a laudable curiofity, thefe papers frequently convey the materials of cbtaiming a good knowledge of men and things, even in their mere narratives of the ordinary occurrences, and thereby furnilh numbers, efpecially among the bufy world, with conftant topics of converfation; wherein they would often be at great lofs to bear a hare, were it not for thefe diaries of public intelligence : and, indeed, they frequently afford notable fubjects for engaging amufement, as well as excrifie of the underftanding ; for they fometimes contain extraordinary phænomena of nature, and fuch occurrences that draw the attention, even of the philofopher, ftatefman, and divine. The political contents of thefe papers, as they refpect the tranfactions and negociations of foreign flates as well as our own, are not wholly ufelefs to thofe who have difcernment to make proper advantage of them, and more efpecially fo, when Facts are offered to public confideration. And that the people have a right to be informed of whatever nearly concerns the intereft and honour of the nation, fhould feem to be inferred, from the effablifhment of the paper called the Gazette, which is publifhed by authority.
Moft nations, at prefent, turning themfelves to the advancement of their commerce and navigation, it becomes neceffary that the people of Great-Britain fhould be well in. formed of the meafures which they thall, from time to time, take upon thefe occafions, our intereft, as a commercial ftate, being fo nearly, and fo importantly concerned: for if the people of England are kept in ignorance of the progrefs which her comperitors make in trade, how can they keep pace with them? How can they guard againft the greateft evils that may thereby attend various branches of their traffic? If the mifchief take root before they are apprized of it, it may be too late to apply to the leginature for requifite encouragementito counteract their rivals, or prevent the ill effects fpreading to a degree they might for want of timely information. The trade of the nation may be as much injured for want of this, as the wifeft meafures of an able miniter defeated for want of feafonable intelligence.
The neceffity and reafonablenefs hereof, will hardly' be doubted by any; but the queftion is, how we are to come at fuch prefervative information? We cannot have more convenient channels to convey fuch intelligence through the kingdom, than news-papers; but to come at that which is authentic, and can be fafely depended on, is more to be defired, I am afraid, than expected. Yet the difficulty to obtain fuch, will foon vanifh, if we put in execution the proper means; on which I fhall give my humble opinion.
The thorough knowledge of trade is no fuch light and trivial matter, as too many are wont to think ; which we conceive is fufficiently demonftrated throughout the courfe of this work; it requires fome talents as well as application, to be well grounded in thefe fludies. And who thall be able to give the people of Great-Britain a juft and right ftate of the trade of foreign countries, but thofe who underftand it? Perfons who do not, are difqualified to reprefent matters of this nature in their true view, fo as to anfwer interefting defigns towards their country: the mere dead narrative of a political meafure will not always fully convey the confequences, detrimental to us, that may attend it. Matters of trade are greatly involyed in circumftance, and of a very complicated nature; and to reprefent them comprehenfively, they fhould be difplayed in every afpeet and relation; otherwife the omifion of a fingle circumftance may mifguide a whole nation.
Thofe who reprefent his majefty at foreign courts in the fupreme capacity, are not, we are afraid, always the beft accomplifhed to tranfmit the true flate of affairs of this nature to their own country. They generally move in a fiphere tod diftant from the converfe of traders, and think it beneath them, either to affociate with mercantile people, or think once ferioufly of the fubject of commerce; which they effeem as much below them, as they do the traders practically concerned therein.
The minifters who bid the faireft to communicate ufeful in telligence of this kind, are thofe who act in the capacity of confuls; for they generally not only act in the capacity of merchants, but likewife in a judicial capacity, and have daily opportunities of experiencing what advantages in tiade competitors may have over us in foreign nations: and the experienced merchants, with a tolerable thare of letters, fhould feem to be the beft qualified to anfwer thefe defirable national purpofes. See our articles Consul and Chamber of Commerce, and Merchant's Court, or Courf Merchant.
That many of thefegentlemen are duly accomplifhed to give the nation the beft information of this kind, if they had encouraging appointments, I know from nyy own experitnce; having held a correfpondence with feveral of them for thefo twenty years paft, as I do at prefent. Nor can I but think, as before intimated in my Remarks on the article Consur., that the office of corfulthip is the beff preparative to accomplifhnent for the ambafiador, where our commercia! interchts afe to be takencare of. The fecretary finip to an
anna3y

## N E W

arobally is, at prefent, efteemed the principal qualification of experience, requifite as introductory to the ambaffadorfhip. But if the ambaffador knows nothing of trade himfelf, the fecretary will find little of that kind in his difpatches from whence he can derive any ufeful knowledge. We think no men fo well qualifed for an admiral or a general, as thofe who have run through the channel of inferior offices; nor can any one make an able minilter of ftate, without having paffed through all the proper requifites to his information, and his experience in public bufinefs.
That fome one fhould refide in foreign nations, who can give proper accounts of the ftate of trade, will hardly be gainfaid by any; nor fhould thofe accounts be. fecreted from the people, will be affirmed, we believe, by few. How then are they to be communicated to the public? As this mould be done by authority, that the nation may not be milled, nothing can be a more proper channel of conveyance than the Gazette. But when have we any thing of this nature contained therein? Whether this would not prove one of the moft impottant ufes of a news-paper, is fubmitted to thofe who may think proper to take notice of it.
The ufefulneis of there vehicles of intelligence is in nothing more obvious, than by the advertifements contained therein which relate to general trade, and fhipping, and other conveniencies of the public bufinefs. It is not many years fince it was thought mean and difreputable, in any tradefman of worth and credit, to advertife the fale of his commodities in a public news paper; but as thefe apprehenfions were founded only on cuftom, and not on reaton, it is become now fathionable for very eminent tradefinen to publifh their bufinefs, and the peculiar goods wherein they may deal, in the news-papers, by way of advertifement : nor do I fee what difgrace there can be in this. For do not the great trading corporations apprize the public of their fales, in the public news-papers? Do not the monied companies find it the eafieft, the moft efiectual, and the leaft expenfive way to inform the proprietors of the public funds of their tranfactions by this channel ? Nay, do we not, by this means, receive all our intelligence from the feveral great offices in the ftate, belonging to the public revenue? Is not even fuch intelligence as the government itfelf thinks proper to communicate to the people, done by the Gazette, a news-paper publifhed by authority ? In a word, advertifements in thefe papers feem, on the general, to be of no lefs utility to the public, in the concerns of real bufinefs, to the trading and bufy world, than the common news is to the meer faunterer and goflip; the former furnifhes matter of profit to fome, the latter matter of amufement and chit-chat to others.
Befides thefe ufes, there is another in thefe papers, which fhould by no means be paffed over in filence. We mean the effays that are, from time to time, communicated to the public therein. And the articles of news feem to be a natura decoy to draw great numbers to the reading of thofe fhort differtations, who, perhaps, fcarce read any thing elfe; and who, indeed, was it not for our news-writers, might happen to forget to read at all; whereby our churches might be much thinner than they are, when fome thoufands of the people thould be quite ignorant of the difcipline of their common-prayer-book. So that, in this' fenfe, our newswriters are of advantage to the caufe of seligion; and truly it muft be acknowledged, that, for many years paft, the public have had many excellent though concife lectures wrote to them in news-papers upon the fubject of moral virtue, religion, and the conduct of life in every capacity. And numbers are induced, over their coffee, to throw their eyes, for a few minutes, on a thort effay, wrote with wit and vivacity, who fcarce read any thing elfe in the twelve-month. We need not intimate the advantages that the public in general has received from our effay-writers in this chape; the mere mention of the Tatler, Guardian, Spectators, and numerous other very judicious and excellent performances fince, fufficiently prove it.
Nor have we derived lefs benefit, in the general, from occafional writings in this mode, upon government and the adminiffration of public affairs. The Freeholder, Cato's Letters, and many ocher admirable pieces, in defence of liberty and public virtue, leave this no matter of doubt. The privilege of writing and fpeaking his fentiment, on matters of religion and the affairs of government, is efteemed by the Briton she great palladium of liberty, although that glorious privilege may be fometimes thamefully abufed, and proftituted to the moft ignominious purpofes. This is only the abufe of the moft invaluable right, and the law is open to punifh libellous offenders when they merit it; and this, together with the privilege of the prefs, being allowed to antagonifts, are the only antidotes that can ever be adminiftered to,check the poifon, confiftent with the enjoyment of public liberty for when once any adminiftration in this kingdom, endeavours to fupprefs by violence, what they cannot do by law, there is an end of all our liberties, and we may as well be governed by French arrêts, edicts, and lettres de cachet, and the inquifition, as by fuch miniterial tyranny, which Atrikes at the root of all that is dear to us.

## Of the Abufes of News-Papers, with refpect to public

 affairs.It is not to be admired that in the ordinary way of collecting news, there fhould be frequently committed fome miflakes from mifinformation; and what of this kind is perfonal and injurious to any man's reputation, is punifhabble by law ; and the expence, as it ought, falls upon the proprietors of the paper, unlefs the printer is circumfpect enough to be indemniffed for the defamation he is induced to publifh : but nothing tends more to the ruin of a paper, than it's being the vhicle of fcandal.
The forging of falfe news, in relation to public affairs, by fictitious paragraphs of news formed abroad, and tranflated from the foreign papers, or by pretended accounts of things tranfmitted in private letters, and put into our news-papers, is another abule of a very enormous nature; for if this poli tical lying be practifed to make the people believe, that our foreign affairs are in a better fituation than they really are this public deceit can have no good confequences, but may prove bighly detrimental; becaufe it thay poffibly mifguide fome of our reprefentatives, who might be inftrumental, by their counfel in parliament, or otherwife, to fet our affairs with other nations to rights, when they happen not to be fo. But while they are kept in the dark by delufion, and amufed from day to day, and year to year, with fuch accounts from foreign courts, which the event proves to be grofsly fallacious, thefe mean temporary expedients can only more and more embarrafs the nation, inftead of extricate it from any difficulties under which it may labour.
We would not be underfood to fuggeft that it is always neceffary, the public fhould know the great arcana of ftate this might be attended with ftill greater evils than deluding the people with lies and forgeries; for fuch opennefs of conduct might, and certainly often would, give other nations an opportunity to defeat the beft laid defigns for the honour and intereft of the kingdom. Wherefore, at critical conjunctures, it may be more for the public intereft, to let the people know nothing, than to be amufed and deceived by falfe appearances. For in this nation, where the proprietors of our public funds poffers fo large a fhare of the national wealth, the ftocks are at certain times, fuddenly affected with almoft every puff of news; and if they are raifed by artifice, this proves injurious to all but thofe who are in the fecret, who make their advantage by the delufion of the reft. See the articles. StockJobbing, and Bubbles, and Actions. However, making things better than they are, is not fo detrimental to the public, as making them worfe than they really are. For, If, by the artifices of malevolent men, fuch news fhall be coined, and pretended to be authentically tranfmitted to them from foreign courts, as may diftract our affairs,' and occafion the nation to lofe all our weight at foreign courts ; if this Chould be the cafe at any extraordinary crifis of the public affairs, fuch conduct, practifed by men of weight and influence with the people, may be attended with very dangerous confequences ; it may clog and impede ठur negociations, augment the public expence, and give other nations advantages over us, that may prove highly derogatory to the honour, and unfpeakably detrimental to the commerce and navigation of the kingdom.
That the public interefts have, on certain occafions, greatly fuffered by fuch like practices, I am afraid there is too much reafon to believe'; and efpecially during the period of the adminiftration of the late right honourable Sir Robert Walpole, afterwards lord Orford. During that time no minifter ever met with a more violent oppofition, bath from within doors and without. Wlether there was fufficient caufe for fuch conduct towards that gentleman, I hall not take upon me here to determine; certain it is, that his adverfaries have been charged extremely home with the forgery of a feries of false news, with regard to our foreign affairs, which they publifhed in their paper called the Craftiman; and they have been charged alfo with making this false news the chief pretext and foundation of the greateft part of all their palitical differtations, to inflame the paffions of the people, and to hunt down that able minifter.
The tract wherein the gentlemen in the oppofition at this time, were charged with fuch conduct in their public newspaper before-mentioned, is intitled the D'anverian Hise TORX * of the affairs of Europe, for the memorable year $1731,8 \mathrm{cc}$. As the author takes into confideration, the principal articles of what he calls the forged news contained in the Craftiman for a whole year together, we muft refer the reader to the pamphlet itfelf, we not having room to do juftice to the performance in that reipect. However, as there is one paffage therein, which I think is quite new, and feems to have a tendency as well to preferve the liberty of the prefs, as to detect thofe who fhall, at any time hereafter, abufe that invaluable privilege againf future adminitrations; it may,

- If I am rightly informed, the writer of this piece was the late Mr. Lyons, thé author of the Infallibility of Human Judgment, \&c. The D'anverian Efftory was printed for J. Roberts, London, $1 ; 3$ ?

## NE W

perhaps, prove very acceptable to many to meet with it in this work; for it is as much every honeft man's duty to proted and vindicate able and upright minifters of ftate, as to expofe and worry down, by the power of the liberty of the prefs, thofe who deferve the contraity charafter.
The author, after charging the writers of the Craftiman with a long feries of falfhoods, obferves as follows, viz.'

- This is what paffes among the greater part of the cormon - people, for the ftate of our affairs, and the tranfactions of - the government. This is the D'anverian way of proving - minifters of ftate weak and wicked! this is the ufe thele ' good patriots have made of the liberty of the prefs ? s and thus have they put it in the utmoft hazard of being lot ; for fome thoufands of thofe deluded people have votes - for members of parliament, and with this'account of the - conduct and actions of the king and miniftry, do they defign - to fend them into the field of election, in order to diftrefs - the government, either by chufing fuch reprefentatives as - may reprefent the pafions and emotions they have worked 6 the electors up to, of to inflame them into immediate tu6 mults and infurrections; and that this cannot be prevented, - they hope, by any way but fuppreffing the Craftfman, and confequently all others, who hall write on government affairs:
- Thus is this eftimable liberty of the prefs come to it's crifis, if not to a period; and this dangerous attack is made 6 upon it by thefe treacherous patriots, who make a noife - with the word Liberty, while they are tricking and betray' ing us out of that valuable branch of it, which conduces ro - much to the fecurity and defence of the reft. For, in - their popular news-paper, they have brought it to this,
- either they will impofe fuch things of their own invention
- for the tranfactions of the king and miniftry, as may bring
- them into contempt with the people; or they will force
' them to reftrain the liberty of the prefs, and then they have
- it done more effectually.
- And what more exquifite joy can thefe envious patriots - feel after feveral years vain attempts, than to have it in
- their power to fay, this king, parliament, and miniftry;
- have made fuch an infringement on liberty; for thus do *they make it difficult to carry on any political affairs abroad, - or civil at homé, under fuch bold intults and interruptions ' as they work people up to, and, indeed, boaft they have - worked them up to; and this is the laft defperate effort of - perfons raging with difappointed malice.'

After this the author comes to his expedient.

- But, I think, they may be yet once more difappointed; - for there is one remedy, or an expedient at leaft untried, ' which may, perhaps, preferve to us this liberty of the prefs, c, and yet prevent their mifchievous proceedings. We have ' an office called a Gazetteer, in the feeretary of ftate's - office, whofe bufinefs we expect Thould be to tranfmit - things of this nature to the people; and he, or one in his * office, may be appointed, or at leaft permitted, to obferve - thefe abufes in intelligence, and take the fame method to - prevent the people from being impofed on, and the go6 vernment from being milreprelented, as all others do, from, - noblemen down to the meaneft mechanic, who do them-- felves juftice in the fame news-paper, in which they find - themfelves wronged by fhort advertifements upon the - facts.
- For example, we find the Craftfman of Dec. 11, 173I, - which we laft examined, infinuates, by way of reproach, "that the new works of Dunkirk were not demolifhed: - durft he have had the thought of affirming fuch a thing a - year and a quarter after this demolition, if he knew the - Gazatteer would have fent either that letter of Dec. in, ' 1730 , or that of Feb. 26 following, and half a guinea - wifh it, or whatever flould be the price of an advertife-- ment of that length, and obliged him to publifh it : and - let it be confidered what effect this muft have had on his - long railing political letters, as well as on his falfe news: ' and here is no occafion for one word of introduction or ar' gument, only the bare narrative inferted and publifhed - from any other difinterefted news-paper. I thall here take - the liberty to fhew, that this is not only a proper and na-- tural way, but it is the way which muft be taken, or S fomething worfe will, under another adminiftration ; that - is, a total fuppreffion of any news-paper but what the - court thall think proper. For, though this miniftry have - Atruggled through bufinefs (not without great difficulty) in - fpite of the ei interruptions; having a reputation eftablifhed - by many years, and a feries of fuccefs, very much owing to the ftedfatinefs and uniformity of his late and prefent ' majefty ; yet another miniftry, who cannot at firft have - thefe advantages, will never venture on any material and - doubtful affairs in difficult times, with the power in their - avowed enemies hands of engroffing near all the intelli' gence; and with this D'anverian precedent, of the ufe - which may be made of it: and minifters of ftate never - want enemies, and thofe too of the moft turbulent and - daring fipirit, nor do the common people inclination, to - hear' and credit every ill thing which can be faid of them; - the mifchief is therefore arrived to that height and danger,

## N. E W

- that a remedy muft be feeedily had, and that the methods
- hitherto taken are none we fhall foon fee.
' 1. The profecuting the offerider, as Mr. Francklin, the ' printer of the Craftfiman, lately was, brings no remedy - nor remaval of the grievance, rather increafes it, as ap-- pcars by his printing more in number, after his trial, than - a little before; for his paper has got the afcendency of at' tention, and he fecurely perfifts in it, that he is unjuftly c dealt by, as in the laft we examined of Dec. II, where he - juftifies his news,: and complains to the people, that he is - prohibited from giving them fuch foreign intelligence as he ' conceives they ought to have; and if he had not fome ' thoufands who credit this, fo many thoufands of his journal - would not continue to be fold. Therefore, to make fuch ' profecution have it's due effect, the generality of the people
' are to be convinced that the indictment is juft; that is, ' that fuch libel is falfe, malicious, and Fcandalous, the falfity - muft appear to them; but whillt he commands very near ' all the intelligence they have, how can they fee the falfity? ' And out of thefe deceived people the jury is chofen. But - if, in May laft, after it had been perceived that he had fes 6 veral weeks omitted to infert the treaty of Vienna, (for I 6 would have given him forne time, on purpofe to have ex'pofed him the more) the heads of it had been publifhed for
' him in his own paper; where he would have found vin-
- ditators of this Hague letter, for which he was profecuted,
' and the other vile accounts of things, which then would
' have appeared to he falle in fact, though he continued to
' juftify it by them? Whereas, for want of this, nine tenths - of the people do not know to this day, but that he was - profecuted only for fome bold and indecent reflections and - freedoms, taken with the king and miniftry, on certain ne' gociations and treaties, little imagining that it was for - Forging and inventing treaties and negociations.
' 2. Thefe profecutions do not put a ftop to their proceed' ings. Mift and Wolf, the prefent principal proprietors of - Fogs journal, are fled their country; yet their journal is - ftill carried on, and as virulently as ever, and it's gain is - rather outdone than rivalled by the profecution, than inter' rupted or reduced by any Craftiman, of the proprietors : ' it may now, indeed, bring in not above four or five hun6 dred pounds a yelr, inftead of eighteen hundred, or more, 6 which it once did: but it is a fcandal-fhop, ready to re' ceive and vend fedition in, and will never be laid down 6 while there is an enemy to the Britifh conftitution capable ' of writing fcandal in Englifh; and fuch a comfortable - livelihood is produced by it, though the prefent proprietors ' and writers may die, or be removed. So that we have at ' prefent thefe two principal weekly papers (for there are - others of lefler note who firld a gain in it) whofe profeffed -courfe, and openly avowed intention, is to bring the go-- vernment into contempt; and what ufe any foreign nation, - whofe intereft and defign it is to be our enemies, and emc. barrafs our affairs, by dividing us among ourfelves, may - make of them, I have already obferved, page 67 :
' 3. The taking them up by the meffengers,' and binding 'them over for three terms, has contributed more than any 'other thing to make the paper popular, and increafe it's c gain; and this coffs them, at moft, but four guineas: and - this piece of journal-craft has been often practifed, pur' pofely; when the paper has feemed a little dull, and funk - in number, then get fomething wrote which may provoke ' a fecretary of fate to fend the king's meflengers for the ' printer or publifher, it makes a new noife, and revives again. Another piece of this art and myftery of journal - craft, is to procure an anfwer; if it is by fome eminent or - popular hand, it does excellently well for the proprietors ; - for then, perhaps, a new edition of the journal (wrote - againf) is printed, and as many fold as at firtt; befides, ' that the writer is, by this means, thrown into a thread of - argumentation, which makes his writing eafy, and, by the c additional gain, more pleafant too. Not that I would be - underftood that thele anfwers and arguments have not been - of great ufe; for fome have been convinced by them: be-- fides, that they are fure to furnifh friends of the govern$\varepsilon$ ment with proper materials for defending it ; but to think ' of convincing thefe patriots out' of their malice, or the - writers and proprietors out of 1600 or 18001 . per annum, cis a jeft.
- Here hàs been now one profecution againft him, I admit a - chargeable one too, on which he is fined rool. and a year's ' imprifonment, which (by the way) is in the King's-Bench, - where he has the liberty of the rules; I' fay, all this charge-- ablé profecution cannot amount to above a quarter of a - year's gain of the paper. I have no occafion to enter into - the progrefs of an exact calculation, except ic was difputed, - it is fufficient to allow, in a round computation, 10,000 c in number weekly, and three farthings per paper clear pro' fit; but their ufual number was not lef's than 12,000 , or - 13,000 for a long time, even 'till fince May 22, 1731 ; - when, in a courfe of difputation with the author of the - Free Briton, and others, his patrons were detected in fo ${ }^{6}$ many falfities in facts, as well in his journals as other pam' phlete, that his paper loft a great depal of it's credit, fin'sing

## N E W

c in a hort time near 4000 in number; that is, from 13,000 ' to lefs than 9000: about the time of his trial, it rofe a 6 little again; but, notwithftanding this profecution, the c paper is fill carried on in it's utmoft malignancy, thus pro-- fitable, and thus popular, being read by no lefs than four

- hundred thoufand of the good people of Great-Britain, al-
- lowing no more than 40 readers to a paper.
c 4. Thefe profecutions are no remedy for his omiffions; - and this mifchievous artifice feems hitherto to be unob-
' Gerved: he has worked his readers up to an opinion, that c his paper contains a much more perfect account of the c fate of the nation, both at home and abroad, than any c other; befides fcandalizing molt with being partial and c minifterial papers: and this is generally credited, becaufe c it is wrote under the patronage of gentlemen of diftinction, 4 whole underftandings they cannot doubt, and whofe for-
6 tunes fet them above writing for gain; which is indeed
- true: but the people are not aware that the gentlemen - trouble themfclves very little with putting things in form,

6 thoush they may often furnifh materials and protection to
' the writer. But the courle of the paper is performed by
6 an hireling, who does it for gain and a livelihood; and it

- is he we mean, when we mention the fecretary or the au-

6 thor: and if this author will not infert fome things, who
"can force him? And by what law is he punifhable? Thus

- he thinks it nor proper to tell his readers of a negociation at
- Mofcow, where the differences relating to trade are ad-
- jutted, nor of the utter abolition of the Ohend Eaft-India
- trade, -nor of the difcharging the Heffian troops, -nor
- the Spaniards breaking and imprifoning their governors in
- the Weft-Indies, for encouraging the depredations of the
- guarda coftas,-nor of the care which has been taken to
- make Gibraltar invincible and inacceffible, and abundance - of fuch things which he, as proprietor of his paper, may ' omit without breach of any law; and what remedy have
6 we fur this, but writing them in his own paper for him?
- But then, what would Mr. D'anvers do for fubjects for his
- fine harangues and declamations, and what a deal of his
- excellent wit and fatire fhould we be deprived of?

6 5. This method can be of no ufe to a weak and corrupt c adosiniftration; for, if real evil and foolifh things are tranf6 acted, there is no concealing them, while the bold fpirited
c anti minifterial writer has his liberty of relating and com-
6 menting upon them, which by this means may be preferved, and even further indulged and protected, and there c is no fear of wanting fuch : for bad minifters, as well as good, have their oppofers. However, for the better pre-- lerving this liberty, the government's intelligencer may be - reftrained not to take up more than half a column; or,

- fuppofe a column at moft, which is a twelfth part of one, of c thefe journals; and if he paid for the face he occupied, as other advertifers do, here can be no trefpafs on the pro6 prietor's room for writing, nor invafion of his property; 6 and I never yet faw a cale which would take up above half
'this room, nor can I perceive there would be occafion for
- this ten times in a year: for the expectation of fuch a

6 contradiction would be almoft a fufficient check upon thefe
6 forgers of falfe news.

- Some object to me, that they would refufe fuch advertifement,
" and laugh at fuch an offer; and really, I am of the objector's
- opinion, if it is in their power to refufe it, and hould con-

6 tinue long fo; any enemy of our conftitution would laugh
s to fee us fo fond of liberty in the nation, and proftitute it to
the caprice of every angry malecontent, who hall attempt to
deftroy the government, which is the defence of it, by di-
viding us amongft ourfelves, and againft it, whilft we not 6 only ftand idly by and lee this, but encourage thefe incendi-

- aries and traitors to it, by permitting them to get fuch ample

6 revenues as a thoufand or two thoufand pounds ferling per
6 ann. for doing it, and we to have neither ingenuity nor au
thority to prevent the mifchief. This would, indeed, make
6 fuch an one laugh, but other laugh than this I can't fee.
6 Suppofe, for exampie, he had been defired to have publifhed
an extract of the declaration done at Sevile, June 6, 1731,
6 (which fee in it's-proper place) and money had been fent to

- have paid for the room it would occupy, as for an advertife-

6 ment, there is no doubt but he would have refufed it if he could, for it would have confuted more than half the papers
he wrote for two years: but in what manner would he have
laughed at this? And in what manner, or for what reafons,
would he have told his readers he refufed this?

- He would alfo moft certainly have refufed to publifh a pre-

Gentment of the Craftiman and Fog's Journal, and other li-
c bels, by the grand jury of Middlefex, on July 7, 1731. But I thould, neverthelefs, think it highly neceflary, that his 6 readers, and in his own paper too, fhould (as well as other - articles of London news) fee fome fuch extract of it as - follows.

Complaining of that prefumptuous and unprecedented li" cence, which has been aflumed by fomeftate-incendiaries for - a few years paft, of inflaming by falfe, feditious, and fcan' dalous libels, the minds of the common people with pre* tended grievances, and alarming them with imaginary dan-

6 gers;-from whence luch mifchiefs may fow, as may be of

- pernicious confequence to this nation and people, by fixins in foreign powers an opinion that we are divided among our felves, which may give grounds to extravagant demands in - negociations on their parts, and thereby occafion an increaie c or continuance of our taxes, in order to fecure our own " rights, and preferve his majelty's honour*.' See the D'anverian Hiftory, from whence this is quoted.
* See more reafons for thus advertifing, as well as examples of it, in a pamphlet by the fame author, price 6d. entitied. Liberty and Craftiman, publifhed in December, 1730.

The principal Laws relating to News-Papers and Pamphlets.
I. Stat. Weftm. 1. 3 Edw. I. cap. 34 . None fhall publifh or counterfeit any falfe news, whereby difcord of flander may grow between the king and his people, or the great men of this realm. And he that fo does, thall be kept in prifon, until he hath brought him forth into the court which did fpeak the fame.
II. Stat. 2 Rich. II. ftat. r. cap. 5. Of counterfeiters of falfe news of prelates, dukes, earls, barons, and other nobles and great men of the realm, and alfo of the chancellor, treafurer, clerk of the privy- leal, fteward of the king's houfes, juftice of the one bench or of the other, and other great officers of the realm; it is defended that none contrive or tell any falle things of prelates, lords, and others aforefaid, whereof difcord or ilander might rife within the realm; and he that doth the fame thall be imprifoned, 'tlll he have brought him forth that did feak the fame
III. Stat. 12 Rich. II. cap. II. When any fuch mentioned in the ftatute Weftm, ricap. 34. and 2 Rich. II. cap. 5. is taken and imprifoned, and cannot bring him forth that did fpeak the fame, he fhall be punifhed by the advice of the council. By ftat. xo Ann. cap. 19. All papers called pamphlets, fhal for every half theet pay a halfpenny; if larger than a half fheet a penny, and if larger than a whole fheet, and not fix theets in octavo, or in a lefs page, or not exceeding twelve fheets in quarto, or twenty fheets in folio, 2 s . fterling for every theet of paper in one printed copy; ant for every ad vertifement in the London Gazette, or other printed paper made weekly public, one milling. And they are to be ftamped accordingly.
Offences in printing, felling, or expofing to fale, any pamphlet, \&c. againft this act, may be heard and determined by two or more juftices within their jurifdiction. At any time within three months after the offence, upon complaint made, they may fummon the offender and witnefs, and may examine them on oath; or for not appearing, upon proof of notice given, may proceed, though the offender doth not appear and give judgment. And, if convicted either upon view of the juftice, or upon fuch information, may iffue warrants to levy the penalty of 101 . on the goods of the offender by diftrefs and fale, if not redeemed within fix days: and if fuch diftrefs cannot be had, may commit him 'till the penalty is paid. Thofe who are grieved may appeal to the next quarterfeffions, who may examine witneffes upon oath, and finaily determine, and may then iffue warrants to levy the penalty. The penaity may be mitigated by the juftices, but then the officers and informers muft be allowed their reafonable coft and charges over and above the faid mitigation, and fo as the mitigation muft not be lefs than a fourth part of the fine over and above the faid coft and charges.
Perfons fued for putting the act in execution, may plead the general iffue, and give this act and any fecial matter in evidence, and if he recover fhall have treble cofts.
Printing a pamphlet above one fheet, publifhed within the weekly bills of mortality, and not carrying it within fix days to the head office for ftamping; and if printed elfewhere, and not brought to the head collector of the ftamp duties within fourteen days, the printer and publifher fhall lofe the profit of the copy of fuch pamphlet for which the duty is not paid, and fhall forfeit 201. with full colts.
If the printer's or publifher's name is not printed thereon, the penalty is likewife 201 .
One moiety of thele penalties is to the crown, the other to the informer. But fome news-writers taking advantage of the paragraph in the act 10 Ann. cap. 19 . wherein for all pamphlets larger than one whole fheet, and not exceeding twenty fheets in folio 2 s . for every fheet of paper in one printed copy, and no more, was to be paid, contrived their news-papers fo as they took up one whole fheet, and one half fheet, and no more; by which means they for many years paid only 3 s. for each whole impreffion of their newspapers. Which being taken notice of in parliament, a claufe was inferted in a ftatute made Ir Geo. I. whereby all journals, mercuries, and news papers, printed on one fheet and balf a fheet of paper, fhall not for the future be deemed or taken as pamphlets, to be entered and pay only 3 s. for each impreffion thereof; but there hall be paid for every fheet of paper on which any journal, mercury, or other news-papers whatfoever fhall be printed, a duty of one penny, and for every half theet thereof one half-pemy, during the term

## N I T

mentioned In the act ro Ann, cap. 1g. to be levied in the fame manner, and fubject to the fame penalties, \&cc. as in the faid wit of 10 Ann cap. 19. or any other act relating to thofe duties is contained.
Since this another-act of parliament has taken place, laying additional dity on news-papers. and yet there appears o lefs propenfity after news than before, and the number of news-papers have increafed, as well as that of advertifements in general. See Advertise.
NEW SPAIN, fee Mexico.
nicaragua, fee Mexico
NICOBAR ISLANDS, fituate in the Ifidian ocean in Afia orth of the ifland of Sumatra, at the entrance of the bay of Beigal; 300 miles weft of the füther peninfula of India, ectween 92 and 94 degrees of eatt longitude, and between 7 and io degrees of north latitude, the largeft of thefe iflands, which gives name to the reft, and lies fartheft fouth, is 40 mites long and 15 broad. This country is almoft covered with wood, and produces no corn- but they have a fruit which they boil, and ferves them inflead of bread; they have alfo cacao-nuts,' plantains, and other tropical fruits, on 'which they live with the fig they take, but feem to flight flefh, though they hàye hogs and poultry enough, with which they uuply the fhips which touch here: and yet thefe people, as well 'as their neighbours of the Anderman iflands, were reported to be cannibals, when the Euro ${ }^{\text {eneans }}$ firit vifited thein. The natives, in return for the provifions they furnith hbips with, take iron, tobacco, and linen, and don't feem to have any commerce with the nations of the adjacent continent.

## NIGRITIA, fee Africa

NITRE, or SALT-PETRE. It is probable, that the nitre of the ancients, was either the Egyptian |natron, or a falt, found in the earth in a gray compact mals, or elfe the naural borax, or the falt which is drawn from the water of the river Nile, and many other rivers. And it may be, that all thefe falts are divers kinds of their nitre, but the nitre of the moderns is nothing elfe but falt-petre, and this is that of which we fhall fpeak.
Nitre is an acid falt impregnated with abundance of finits out of the air, which render it volatile; it is taken from among the ftones and earth of old ruined buildings. Some of it is likewife to be fouth in cellars, and feveral other moint places, becaufe the air doth condenfe it in thofe places, and eafily nites it with the ftones.
Nitre is alfo fometimes made by the urine of animals, falling upon fones and earths. Nay, fome have thought, that all falt-petre conies from that caufe, whereas we fee every day, hat fome of it is taken out of places, where there never came ny urine at all. There is alfo found in dry weather in hot countries natural falt-petre, againt the walls and rocks in fmall cryftals, which are feparated by fweeping foftly thofe plates with a broom; this is preferable to the ordinary falt-petre for the making of gunpowder, it muft be chofen neat in cryftals, eafily taking fire upon kindled coals.
A good and well efteemed falt-petre is imported from the Eat Indits, principally for gunpowder; it is faid, that the Pame is found in great quantities near Pegu, and that it is obferved to elevate from certain barren lands in white cryitals, as near one another as the grafs, fo that one may eafily gathe and purify the fame, which is like to our purified falt-pefre. The great and violent flame which happens fo foon as falt petre is flung upon the coals, and the red vapours which it yields when reduced into a fpirit, have caufed the chemifts generally to believe that this falt is inflammable, and confequently fully laaded with fulphur, becaufe fulphur is the only principle that flames; but, if they had fufpended their judg ments herein, until they got more experience on this Jubject, they would not only have known that falt-petre is not at al inflammable in it's nature, but they would even have doubted whether or no any fulphur does enter into the natural compofition of this falt; for, if falt-petre were inflarnmable of itferf, like fulphur, it would burn where there is no fulphur, for example, in a crucible heated red hot in a fire; but it will never flame therein, ufe what quantity of it you pleafe, and let the fire be ever fo great. It is true, indeed, if you throw falt-petre upon kindled coals, it makes a great flame, but this is only through the fulphureous fuliginofities of the coals, which are violently raifed and rarified by the volatile nature of nitre.
As for any fulphur that is thought to be contained in faltpetre, it can't be demonftrated by any operation whatever for the red vapours that coime from it are no more inflammable than the nitre, when they are not mixed with fome fulphiuereous matter; and it is far from probable, that this falt contains no fulphur, if we confider it's cleannefs, tranfparency, acidity, and cooling quality, which have no manner of affinity with the effects of fulphur, which are commonly. to make a body opake, to take off acidity, and to heat.

Of the purification of falt-petre.
To purify ralt-petre, is to deprive it of part of it's fixt falt, and of a little bituminous eatch which it contains.
vol. ll.

## N I T

Difolve ten or twelve pounds of falt-petre, in a fufficient quantity of water; tet the diffolution fectle, and filtrate it; then evaporate it in a glafs or earthen veffel, to the diminution of half, or until there begins to appear a little fkin upon it; then remove your veffel into a cooleplace, flirring it as littele as may be, and leave it there 'till the morrow, you'll find cryffals which you muft feparate from the liquor; evaporate this liquor again to a fkin, and fet the veffels in a cool place to get new cryftals, repeat the evaporations and cryftallizations, until you have drawn all your falt-petre.
Note, That in the iaft cryftallizations, you'll have a falt altogether like unto fea falt, or fal gemine, keep it apart, it may ferve to feafon meat witb.
The firft cryitals are the pure falt petre
You may, if you pleafe, diffolve and purify falt-petre feveral other times in water, obferving every time what I faid before, for to render it more white, and purify it from it's feaalt
Salt-petre purified is a great aperitive, it cools the body by fixing the humours that are in too much motion, and drives thëm by urime. It is given in fevers, in gonorrhoeas, and many other difeafes; the dofe is from ten grains to a drachm in broth, or fome appropriate.liquor.

## REMARK

The firf purification that is given to falt-petre is this: the tones and earths that contain it are grofsly powdered: they are boiled in a great deal of water, to diffolve the falt-petre: the diffolution is filtrated, and then potired upon afthes, to make a lixivium; after it hath been pouted upon the alhes feveral times, it is evaporated and cryftallized.
If inftead of pouring the diffolution of falt-petre upon affies, one is content to let it evaporate upon the fire in a cauldron or other veffel, 'till it adheres to the ikImmer, which muft be roaked in it, and 'till it appears in the confiftence of oil of a yellowith or brown colour, it will be a grealy and thick liquor, which the artifts call mother of falt-petre, or water of he fea.
The falt of the afbes which mixes with the falt-petre augments it's fixed pait, for notwrithftanding the falt is alkali, yet it changes nature, becaufe it's pores have been filled by the acid of the falt petre. This nitre falt, drawn by this firft purification, is called common falt-petre; the laft falt taken thence muft not be mixed with the firft; becaufe it is almoft fixed, and not fo good: if one diftils the fame in the manner as falt, an acid fipit will be drawn thence, which is a fpecies of aqua regias or a diffolvent of gold.
The earth from whence one has drawn the falt-petre being expofed to the air, and firred from time to time, impregnates again with the fame fpecies of falt.
The long cryftals which we fee in falb-petre come from it's volatile part, for that which cryftallizes itfelf laft, is fixed like fea-falt, and retains the figure thereof.
The falt-petre, though never fo well refined, always contains a falt like to mineral falt, or fea falt, but in lefs quantity. When falt-petre is boiled a long time in water, and over a great fire, fome part of the firit evaporates, and there remains at laft nothing but a falt like unto fea falt, or fal gemme, which ferves to prove that falt-petre is only a fal gemme, fuller of firits than the other.
When you would cryftallize a falt, you muft diffolve it in a convenient proportion of water; for if there Should be too much, the falt would be weakened too much, and not able to coagulate; and if, on the contrary; there fhould be too little, the cryftals would be confufed. Therefore, to make them fair, you muft take your veffel off the fire, when you perceive alittle fkin upon the liquor, which is a mark to hew, that there remains a little lefs liquor than is convenient to keep all the falt diffolved, and thus when it comes to be fet in a cool place, it will not fail to fix.
Acid falts, and among them the volatile, do cryftallize in much lefs time than others.
In purifying a great quantity of falt-petre; put it into one or more great and tinned cauldrons, and pour upon it a neceffary quantity of common water to diffolve it, put fire underneath, and when the falt is melted and the liquor begins to boil, take off with a fimmer the firf foum, which is called the dirt of falt-petre; continue to boil this liquor foftly, 'till it has acquired more confiftence; afterwards put in a little white vitriol or allum in powder to clarify it, and there will appear at the fuperficies a black fcum, which will thicken; this muft be feparated by little and little with a Rkimmer, as exactly as poffible: when the liquor is cleared of this fcum, pour it boiling with great ladles or otherwife, into another high and ftrait veffel, which is to be covered with a piece of cloth, to preferve it's heat for fome time, and hinder it's cooling too foon; and it mult not be ftirred in an hour and half or two hours; during which time it precipitates to the bottom of the veffel yellow dregs like lees, and the liquor becomes clear and good; which is afterwards feparated from thefe dregs, whillt it is yet fomewhat warm, pouring the fame by inclination into earthen bowls or bafons. Thefe vefleds are to be covered with a cloth, and the liquor is not to be flirred in a day or two, 'till the falc-petre is congeaisd in great, fine,
clear,
clear, white, and tranfparent cryfals, which are ordinarily of a fix angular form; afterwards thefe cryftals are taken out of the bowls, and are put into a tub pierced at the bottom, where they are drained: this is the refined falt-petre. Let the remaining liquor evaporate upon the fire about one half, and then let it cool, and there will be formed cryftals not quite fo fine as the firft; the fame proceeding is continued rill all the falt-petre is taken away, but the laft cryftals, which are in a little quantity, muft be fet apart, becaufe they contain much fixed falts.
The fame refined falt-petre is purified a fecondtime, not only to feparate from it fome fmall portion of filth, which, perhaps, fticks there, but alfo to clear it of it's fixed part, then it will not fo eaflly be fubject to run with mointure.
The falt-petre muft be chofen well refined, in long, neat, and tranfparent cryftals, cooling the tongue when applied to it, and much flaming when thrown upon burning coals.
Salt-petre cools the body, by reafon that being an acid it depreffes the humours, which by their too great motion did hurt the body, and fo precipitates them by urine; for the volatile falts and fulphurs that all bodies are full of, are eafily fixed and quieted by acids.

Of the firit of nitre.
Spirit of nitre is a liquor very acid and corrofive, drawn from falt-petre.
Powder and mix well together two pounds of fine falt-petre, and fix pounds of potter's-earth dried; put this mixture into a large retort, either of earth or glafs luted, fet it in a clofe reverberatory furnace; fet to it a great capacious bafon, or receiver, and give a very little fire to it for four or five hours, to make all the phlegm come forth, which will diftil out drop by drop. When you perceive there will ditill no more, row the phlegm away that is found in the receiver, and having refitted it , lute the junctures, and increafing the fire by little and little to the fecond degree, there will come forth firits, which will fill the receiver with white clouds; then keep the fire two hours in the fame degree, after that increafe it to the greatelt violence you can give it, and fo the vapours will come red; continue the greatelt fire till there come no more, the operation will be ended in about fourteen hours. When the veffels are cold, unlute the junctures, and pour your firit of nitre into an earthen bottle, which you muft Aop with wax.
Spirit of nitre is ufed for the diffolution of metals, it is a good aqua fortis [fee Aqua Fortis]; and the corrofive virtue of other waters of this nature, doth chiefly proceed from the nitre that enters into their compofition.

## Remarks.

You might, as fome do, mix four parts of potter's-earth with one part of nitre, when you would draw it's firit; but you will fucceed better, and with lefs difficulty, by obferving the preceding directions; for the earth does here ferve only as an intermedium to leparate the parts of this falt, to the end that the fire operating more eafily upon it, may draw it's fpirits; and therefore it is a very needlefs bufinefs, to ufe more of the earth than is neceffary towards this effect. Befides, this over great quantity of earth may ferve to weaken the fpirits, and by taking up too much room, may hinder the drawing fuch quantity, as otherwife you would with the fame retort. The phlegm is thrown a way, becaufe it only ferves to weaken the fpirit. The white vapours proceed from the volatile part of the falt-petre, and are a weaker fort of fpirit; but the red ones proceed from the fixed part, and are the ftrongeft fpirit: for whick reafon, the fire is made fo very violent towards the latter end. Of all falts, nitre is the only one that yields red vapours.
When you ufe here the beft falt-petre, there remains nothing in the retort but only earth
On boiling feveral times in water a good while the earth that remained after the diftillation of the fpirit of nitre, and after evaporating of the filtrated decoction, you will find no falt at bottom. But fometimes a little vitriol, in the fame manner as in feveral clayey grounds.
It has likewife been obferved, that out of two pounds of purificd nitre, a pound and fourteen ounces of liquor, in phlegm and fpirit, may be drawn.
A third part of the retort, wherein the operation is performed muft remain empty, and the receiver muft be very large; for otherwife thefe fpirits coming haftily forth, would break all to-pieces for room to move in.
NIVERNOIS, or NEVERS, a province in France, bounded on the eaft by Burgundy; on the fouth by Bourbonnois; on the welt by Berry; on the north by Gâtinois. It is pretty fertile in wine, corn, and fruit: there are alfo many woods, and mines of iron. It is watered by feveral rivers, three of which are navigable, namely the Loire, the Allier, and the Yonne. It's extent is about 17 leagues, from north and fouth, and about 12 from eaft to weft. The only place where there is any confiderable trade is at
Nevers, the capital city, fituate on the river Loire, near it's confuence with the Allier and the rivulet of Nierre. This ciry is famous on account of the great quantities of glafs white iron, and fine earthen ware manufactured here.

NORFOLK, in England, has Suffolk on the fouth ; Cambridgelhire on the weft; is wafhed by the German Ocean on the eaft and north, and is in circumference about 140 miles, The air is of various temperatures in the feveral parts of it, and bas a greater variety of foil than is, perhaps, in ary o her county; but even it's wort, namely the fens, marfhlands, and fandy heaths, are exceeding profitable.
The chief rivers of this county are the Yare, Thyrn, $W_{\text {a- }}$ veney, Oufe, and Bure, all abounding with fifh, the laft of which is noted for excelient perch. There is a great herringfifhery on the coaft, which begins in September, and brings great trade and treafure to Yarmouth: mackarel are alio caught here in the fpring in vaft quantities; fo that here are every year two great markets for herrings and mackarel. Woollen and worfted ftuffs, with ftockings, are their chief manufacture; and they are in moft places fo diligent in nourihhing and increafing their ftocks of bees, that honey in theie parts is very plentiful. Jet and ambergreafe are fometimes found on it's coaft.
Norwich city ftands near the conflux of the Winher and Yare, which is navigable from hence to Yarmouth, 30 miles by water. The inhabitants are wealthy, and the city populous, having a great trade itfelf, and adds not a little to that of Yarmouth, by the vait cargoes of coal, wine, filh, oil, and all other heavy goods, which it has from thence by the Yare. It's manufactures are, generally fpeaking, fent to London, though they export confiderable quantities alfo to Holland, Germany, Sweden, Norway, and other parts of the Baltic and Northern Seas. They confift in great varicty of worfted ftuffs, as fays, bays, ferges, Thalloons, \&c. in which they carry on a vaft trade; and are lately come to weave druggets, crapes, and other curious ftuffs: of all which it is faid, this city vends to the value of no lefs than 100,000 l. a year. All hands are daily employed, and even children earn their bread in this manufacture. Eight wardens of the wortedweavers, four out of the city, and four out of the neighbouring country, are annually chofe, and fworn to take care that there be no frauds in fpinning, weaving, or dyeing the faid ftuffs. Here is another company of woollen manufacturers, called the Ruffia company. The weavers here employ all the country round in fpinning yarn for them, of which they ufe many thoufand packs from other counties, even as far as Yorkfhire and Weftmoreland. A calculation was lately made, from the number of looms then at work in this city only, that there were not lefs than 120,000 people employed, in and about the town, thofe who fpin the yarn included. There is a flocking manufacture alfo here, which has been computed at 60,0001 . a year.
Great Yarmouth is a large, well-built, populous town, much increafed of late years in buildings, fhipping, and people, and greatly fuperior to Norwich in fituation, traffic, and wealth; it's great commerce to France, Holland, and the North and Eaft Seas, and, above all, it's herring-fifhery, make it the greateft town of trade on all the eaft coaft of England, except Hull; for, befides all it's other trade, it has the whole herring-fifhery, where, including the little town of Leoftoff, 50,000 barrels, which fome magnify to 40,000 lafts, containing no lefs than $40,000,000$ of red herrings, are generally cured in a year. Thefe are moftly exported by the merchants of Yarmouth, the reft by thofe of London, to Italy, Spain, and Portugal. During the fifhing-feafon, all veffels that come for that purpofe from any part of England, as great numbers do from the coafts of Kent and Suflex, Scarborough, Whitby, \&c. are allowed to catch, bring in, and fell their fifh, free of all toll or tax, as the freemen of Yarmouth are.
They have alfo a fifhing-trade to the North Seas, for whitefifh, called the North Sea cod, and a confiderable trade to Norway and the Baltic, for deals, oak, pitch, tar, hemp, flax, canvaifs, fail-cloth, and all manner of naval flores, which they confume, for the moft part, in their own port, where they build a great number of thips every year.
LYNN is feated at the mouth of the Oufe, where it falls into the fea, little after it has received feveral leffer rivers, which gives it a navigation for trade into the very heart of the kingdom, almoft as high as Northampton; by which means it commands the trade of feveral inland counties, which it fupplies, efpecially with coals and wine, this being the greateft port of importation for thofe articles of any place on all the eaftern coaft of England, from London to Berwick. Ia return for this, Lynn receives back all the corn which thofe counties produce, and therefore is, next to Hull, the greateft port for the exportation of that commodity. The tnerchants of Lynn have the fame of a great correfpondence, and of carrying on a confiderable foreign trade, efpecially to Holland, Norway, and the Baltic, and alfo to Portugal and Spain. The harbour is fafe when fhips are entered into it, but diffio cult to come at, by reation of the many flats and fhoals in the paffage.
Cromer, on the coaft, is a pretty large town, chiefly inhabited and frequented by fifhermen, efpecially for lobfters, which are caught here in great quantities, and carried to Norwich, and fometimes alfo to London.

## N OR

Worsted is remarkable for the invention and twifting of that fort of woollen-yarn and thread which is from this place fo call.d, as cambrics and callicoes take their names from the towns where they were firlt made. Here is alfo a manufacture of worlted fuffs and flockings, both knit and wove.
St Farth's, a village between Norwich and Cromer, is noted for a fair of lean cattle, fcarce to be equalled in the kingdom, they being brought hither in great droves out of the north of England and Scotland, and fold to the Norfolk graziers.
Clay has a harbour for hhips, on the fame coaft as Cromer, and large falt-works, where very good falt is made, and fent all over the country, and fometimes to Holland and the Baltic.
Marbam and $W_{\text {glls }}$ are two towns on the fame coaft, in each of which there is a very confiderable trade carried on with Holland for corn, which this part of the county is very full of, befides the great trade drove hither from Holland in return.
Wimondham, or Windham, is a little town, whofe inhabitants, both old and young, are generally employed in making figgots and faucets, fpindles, fpoons, and the like fort of wooden ware

## Peculiar laws relating to Norwich and Norwich ftuffs.

By 13 and 14 Car. II. cap. 5. in Norwich, and the county of Noifolk, there muft be 12 wardens and 30 affiftants chofe, who, whinin 14 days after notice thereof, nuit take an oath before the mayor faithfully to difcharge their office. If they refufe, or die within the year, the mafter weavers may choofe others. Raym. 192.
Half of the wardens are to be chofen on Whitfun-Monday. by the greater part of the mafler-weavers in the city:, half of the affiftants on the lame day, by the greater part of the weavers of the county.
Seven of the wardens and affiftants may meet when they pleafe, or as often as defired by the affiftants. Fourteen days before they intend to meet, the wardens of the city muft give notice to thole in the county when they intend to meet, by fetting fuch notice upon the door of their fealing-hall.
Two of them may fearch in the public places for fale, and feize defective yarns, and, within 20 days afterwards, bring them to a trial by jury, who may impofe fines on the yarn not exceeding half the value, to the ufe of the poor of the trade. By-laws being made and confirmed by the mayor and two juftices of the city, and three of the county (quorum unus) muft be publifhed four times in a year, at four affemblus for trade, and may impofe fines not exceeding 10 s . for every offence.
Any one difturbing them, convicted by oath of one witnefs, or by his own confeffion, before the mayor, or a juftice of peace of the city or county, forfeits 40 s .
At their four affembles for trade, they are to account before the mayor and one juftice of the city, and two of the county, for what fines and forfeitures they have received, and what they have expended about the trade, and what remains, by the faid mayor and juftices to be divided as they fhall direct, between the poor of the trade of the city and county.
The jury muft confift of 12 artificers, half of the city, and half of the county, and mult be empannelled by precept from the mayor or deputy; and, if any being fummoned, refufe to appe,ir, forfeits 5 s. to the poor of the trade.
All ftuffs in which there is wool, muft be under the regulation of wardens and affiffants, and muft be brought to Weavers-Hall in Norwich, before they are expofed to fale; and, if found good, then fealed; if defective, they muft be tried by a jury, \&c. who may fet fines not exceeding half the value of the ftuffs, for the ufe of the poor of the trade, and detain them. 'till paid, and fell them, if not paid within 40 days after trial.
They in whofe poffeffion unfealed ftuffs fhall be found, forfeit 40 s . per piece, and the maker or feller 4 s . for felling them unfealed, to the ufe of the poor of the trade.
If wardens feal ftuffs which fhall be found defective by jury, fuch jury may fet fines on the wardens of 40 s . for every ftuff, but wardens fhall have double damages for unjuft vexation.
Perfons convicted before the mayor, or a juftice of the city or county, by confeflion, or oath of two witneffes, of counterfeiting the fcal, or fealing therewith, or removing the feal from one piece to another, forfeit 20 l . Every one mult have his proper mark upon every piece made by him, or forfeit 3 s . per piece to the poor of the trade.
The forfeitures are to be levied by diffrefs, \&c. by warrant from the mayor or juftice, or by action of debt, indictment, or information. All yarns and wortted muft be reeled on a reel of a yard about, and every reel-ftuff muft have fourteen lees.
By ftat. 9 Geo. I. cap. 9 . it is enacted, That all manufacturers; or makers of fluffis made of wool, or in which there is any mixture of wool, and all makers of worfted into yarn, who are not journeymen or fervants for hire, mafter-weavers and mafter woolcombers, and all perfons dealing or employing fervants and journeymen in any fuch manufactures, or

## NOR

having any intereft, fhare, or partnerfhip therein, living in Norwich, fhall be made free, and admitted freemen of that city, on their requeft to be made at any affembly of the corporation of the faid city, paying not exceeding 5 l. for fuch admiffion and freedon; and all pertons to be made free fhall take the ufual oaths, or, being Quakers, Ghall take the folemn affirmation.
If any perfon (except fervants and apprentices during their fervice) who is any fuch manufacturer or dealer, \&c. prefume to exercife any of the faid manufactures, or be otherwife interefted therein, not being made free, and being convicted thereof on a profecution commenced within fix months after the fact committed, he fhall forfeit rol. for every calendar month he flall exercife any of the faid manufactures, or be concerned therein, next after the third quarterly affembly of the faid corporation, to be recovered by action of debt, \&c. brought by the chamberlain, for the ufe of the mayor, theriffs, citizens, and commonalty of the city, in any court of record at Weftminfter.
NORMANDY, in France. This province, or duchy, is bounded on the north by the Britilh Channel; on the wefl-by part of the fame, and by Britanny ; on the fouth by Maine, Perche, and Beauce; and on the eaft by the Ifle of France and Picardy: it's whole circuit being of about 240 leagues, the greatelt part of which is on the fea-coaft. This country abounds in paftures, and is extremely fruifful in corn, fax and feveral kinds of fruit; and has alfo mines of iron, and fome of copper, and other metals. They have a confiderable trade in corn, timber, coals, hay, cattle, and herbs proper for dyeing, as madder, woad, \&c.
Rourn, the capital of the province, is fituated on the north bank of the river Seine, in which the tide flows fo high, that Phips of above 200 tons can come to the key here. The trade carried on in the city and diftrict ts very confiderable and extenfive: it confifts in woollen and linen cloths, leather, hats, paper, and a great many other merchandizes. The woollen manufactures, which employ many thoufand workmen, are very advantageous to the province; but, as they are here chiefly fold within the kingdom, are only fo $\mathrm{far}_{\text {a }}$ profitable to the nation in general as they prevent the money being fent abroad. But the linen manufactures of many forts, which are exported into Spain, are extremely fo, becaufe the returns are generally made in cafh.
Elbeuf, a large and populous borough on the river Seine, famous for the manufactory of cloths fet up here in 1667 .
DIEPPE is a noted fea-port on the fhore of the Britifh Sea, at the mouth of the river Betune. The town is reafonably large, and inhabited by feafaring men, reckoned Mkilful in their profeffion; mechanics that make curious works in ivary; and merchants whodrive a confiderable trade to foreign parts, efpecially Newfoundland in America. The chief trade here confifis in herrings, with which they fupply Paris, and the province of Normandy: they alto fifh for whitings, mackarel, and oyfters. There is alfo a manufactory where they make tobacco rolls, which employs daily fome hundreds of hands.
Havre de Grace is a frong fea-port, at the mouth of the Seine, and a place of good trade, feveral merchants inhabiting here who trade to Newfoundland, and other places.
Caddebec is a pretty well peopled town. A fmall river runs through it, divided into feveral canals, on which fand divers mulls of great ufe to the tanners and leather-dreffers here: among other manufactures, they make here a kind of hats, which are very much efteemed on account of their refifting the rain.
Fescamp is fituated on a little river, eight leagues from Havre, and 12 from Dieppe. Their trade confilts in woollen cloths, ferges, linens, laces, hats, and tanned leather. They alifo fend fome fhips to Newfoundland, and a few barks to the herring-fifhery.
Eu, on the banks of the river Brefle, has a pretty good trade, by means of their manufactures of ferges, and other woollen ftuffs, linens, and laces.
ST. Valery is a large fea-port town, on the coaft of the Britifh Channel. They make here alfo linens and woollen ftuffs, and fend fome veffels to the herring and cod finheries.
Aumale is feated near the river Brefle. The ferges made here are very much efteemed : they make alfo a coarfe fort of woollen ftuff, called frocks, for the ufe of the common poople. Lisieux is a fair and large city. Several manufactures of linnen and woollen ftuffs afford the inhabitants a competent livelihood.
Honfleur, at the mouth of the Seine, has above 60 fhips belonging to it that trade to Newfoundland and the French colonies in America. They make here alfo a great many laces.
Bayeux is an ancient city, on the river Aure. They had fet up here manufactures of cloths, ferges, and focki:as, which fucceeded extremely well; but the high taxes the merchants were forced to pay, obliged them not only to abandon there manufaelures, but alfo to leave the city, and to fettie elfewhere.
CaEN is a large and well-built city, and a place of grod trade, veffels of burthen coming up to the bridge.

## N O R

VIER is a neat city, on a river of the fame name, with a confiderable trade, confifting chiefly in drapery goods manufactured here : they have alfo paper-mills.
Coutances is a pretty large and populous city. There is here a large fuburb, inhabited by a great number of tradefmen, particularly tanners and dyers.
The chief trade of Granville, a good fea-port town, confifts in falt-cod, which they filh and cure on the coaft of Newfoundland, and oyfters and other fifh, which they catch on the neighbouring coaft.
Carentan has fome trade, becaufe veffels of a pretty large fize can come up here at high water.
Cherburg is a fmall port, but pretry goad, admitting veffels Cherburg is a mall port, but pretty good, admittin
of. 300 tons : they build here fome merchant fhips.
Alençon, on the river Sarte, in a fruitful plain, is a fair and large city, and chief place of a generality ${ }^{*}$, which is not lefs confiderable than the two others of the fame province, with regard both to the variety and importance of it's trade.

* Befides the geographical divifion of France into provinces, there is, for the better adminifitation of the king's finances, another divifion of the kingdom inso what they call generalities, of which there are 24 , according to Monf. Paretiere, in each of which there is an office of the treafuries of France, with a receiver-general of the finances, and an intendant of jufice, or commifiary.

The manufactory of the linens which are called cloth of Alencon, becaufe they are wove in that city and in it's neighbour-hood, is ftill confrderable, though the flourifhing condition in which it was formerly, has fuffered great alterations by the long wars, and the want of hemp, which was either bought up for the fea-fervice, or which the hublandmen ceafe to fow their lands with, to put corn in it's ftead.
The briontes, another fort of linen very much efteemed, though fomewhat dear, are made at Bernay, at Lifieux, and at Brionne, from which laft place they have got their name. In the whole election, or diftrict, of this Jaft town, as alfo at Ponteau de Mer and Bernay, they make a great many linens of flax, which are fold under the name of blancards. The linens of which the warp is of hemp, and the woof of flax, and whish they call cretonnes, are manufactured at Lifieux.
At Domfront, Vienentiers, and in their neighbourhood, they make none but coarfe linens, which they fell before they are blanclied; they are fometimes called canvals, but improperly, the true canvaifs being much coarfer and more ordinary. Of all thofe linens, the fineft, ftrongeft, and whiteft are fent to Paris; the cleareft are defigned for Rouen, whence they are exported to Cadiz, to be fent from thence into Spanifh America; and the coarfeft are kept for the ufe of the country. The manufactory of French point, which, in the generality of Alençon, they call velom(velin), becaufe of the velom or parchment on which it is wrought, have alfo been affected by the long wars of the reign of Lewis XIV; it is, however, ftill kept up with fome reputation at Alençon, and in it's neighbourhood, the magnificence, or the luxury, of the French being fufficient to fupport it, even in time of war; but it flouifhes chiefly in time of peace, by the great quantity of thofe points that is exported into foreign countries.
There is alfo a great deal of drapery and woollen ftuffs manufactured , in the generality of Alençon, as the reader will fee in the feveral articles of the moft confiderable towns within this divifion.
The woollen fuffs called a frock by the French, which ferve for dreffing the common people, are made at Lifieux, Bernay, Orbee, and in the villages of Eervagues and Tardonet, whence they are fent into the provinces of Perche, Maine, and Poictou. Befides the wool of the country which is ufed in thofe feveral manufactorics, the weavers get a great deal alfo from, the neighbouring provinces. They make in this generality, one year with another, 50 or 52,000 pieces of woollen ftuffs, of which there above 15,000 marked or ftamped every year at the fair of Guibray only.
The pins made at Laigle and at Conches, the iron, fteel, copper, and brafs wares made in the laft-mentioned town, thé tanneries of Argenton, Vomontiers, Conches, and Verneuil, the manufactory of wooden fhoes, the large timber, boards, and fmall timber, conveyed to the fea by the rivers Diac and Tonques; the fattening of fowl, of which they fend vaft quantities to Paris, as alfo of butter and eggs, and the falt- petre of the election of Argenton, are pretty confiderable branches of the trade which is carried on in the generality of Alençon. But.there are two other branches of com. merce which procure greater profits fill to this part of Normandy; thefe are the manufactories of glafs, and the ironforges.
As for the manufacturing of glafs, it is efteemed a noble profeffion, none but gentlemen having the liberty to keep glafshoufes: they may be interefted in this manufacture without derogating from their nobility.
The chief glafs-houfes in this generality are, that of Nonant, in the foreft of Exines, that of Fortiffambert, in the foreft of Montpinfon, and the two which have been fet up in the little dificet of 1 himerais.

In the two former of thefe glafs-houfes they make cryftal glats, with the ftone called by them chambourin, and fern-glafs: in the two laft they make hardly any but fern-glafs, and a few cryftal works.
As for the forges, the moit confiderable are at Chanfegray Varenies, Carouges, Rannes; Conches, and Bonneville; this laft, though it has been fet up only fince the beginining of the eightecni century, equals, if it does not furpats the old ones, with regard to the good quality of it's iron, and of the work made there.
The neighbourhood of Domfront, and the little country of Houlme, are the places where the mines"abound moft, and from which they take the greateft quantity of mineral mater for the keeping up of thofe forges.
We ougto alto to reckon as a pretty confiderable branch of the commerce of this generality, the great number of haffes which they feed in the paftures of the country" of Auge, and which are fold at the fairs of Caen and Guibray: nor ough we to omit the fattening' of cattle, which is afterwards fent to Paris, or to the markets of Seaux, Roan, Neubourg, and the other chief cities of Normandy." We fpeak of the horfes of this province in other places.
The manufactories of the city of Alençon, are of Arong
 crapes of the fame breadth; but they make not much apove ioo pieces of all thefe ftuffs together per annum. They have neverthelefs a pretty confiderable trade in frmall woollen ftyffs, as druggets, tiretaines, and ftamines of feveral fuffs: but thefe are wove in other places, and there are marked, or thefe are wove in other places, and there are marked, or
ftamped above 800 of them; one year with another, at the hall or office of Alençon.
We have already mentioned the manufactory of French point ; we fhall only add here, that moft of the womep in this city work at it, befides a great many more, who are difperfed in the neighbouring villages: fo that above 800 perions are employed in that manufactory, which affords a trade of above 50,000 livres per annum. Moft of this point is fold at Paris, whence they fend part of it to the chief cities of the kingdom, and into foreign countries.
The manufactory of linens, which from this city are called linens of Alençon, is fill pretty confiderable there, though mush lefs than it was before the Proteftants of France were forced to leave their native country; there being a great many of them among the weavers, and among the merchants who dealt in thofe linens. They reckon, however, that the produce of this trade amounts flill to aboye 60,000 livres yearly, and this manufactory employs above 400 workmen in the city only, befides thofe of the country parifhes. Mof of thefe linens are fent to Paris.
The tanneries of Alençon are pretty much efteemed; they are of the number of thofe, whofe leather, according to the regulations, is to be fent to Paris.
There are three confiderable fairs kept at Alençon: the one on Candlemas day, the fecond the firft Monday in Lent, and the third at Midjent. The markets are kept three times a week, namely, every Monday, Thurfday, and Saturday.
Talaise is a fmall town, fituate on the little river Ante They make here and in the adjacent villages, light woollen ftuffs, fine linen cloths, laces, and other works, for which they have a pretty good trade, and the neighbouring. lands produce plenty of corn.
Argenton is fituate on the banks of the river Orne. The trade of this city confifts chiefly in corn, linen cloths, hats, and tanned leather.
Evreux is feated in a very fruitful plain near the river Eure It is a very ancient city. The inhabitants trade in cloth, ferges, and other woollen ftufs; they alfo make here linen cloth, and fell a great deal of corn.
Beaumont le Roger, is a borough where they make wool len ftuffs and linen cloth. This town is feparated only by a ftone bridge over the Rille, from a large borough called Vielle, in which they bleach a vaft quantity of linen.
Verneull on the river Aure, trades chiefly in drapery wares, buttons, and corn.
Vernon, on the Seine, is a place of trade, which confifts chiefly in corn, wine, linen cloths, and woollen blankets.
N ORTHAMPTONSHIRE is an inland county, fituate in thencentre of the kingdom of England, and bounded on the fouth by Buckinghamihire, on the weft by Warwicklbire and Oxfordhire, on the north by Leicefter, Rutland, and Lincolndire, and on the eaft by the counties of Bedford, Huntingdon, and Cambridge; and is in circumferenceabout 120 miles.
The air is exceeding pleafant and wholfome, and the foil very fruitful, bath in tillage and pafturage, and abounds with fheep and other catile, wool, pigeons, and falt-petre. lt's manufactures are ferges, tammies, flalloons, boots, and fliees. Peterborough, reckoned the leaft city in the kingdom, ftands on the river Nen, which is navigable to it py barges, in which they import coals, corn, \&c. and export to the amount of 6000 quarters of malt in fome years, befides many other goods; but efpecially of the wonllen manufachure, either of cloth or flockings, in which the poor are conftantly employed.

$$

Northampton,

## N OR

Northampton, the county-town, ftands at the conflux of the Nen, and another rivulet: The horfe-market here is thought to exceed any other of the kind in England, being eckoned the center of all in the kingdom, both for faddle and harnefs. It's moft famous manufacture is hoes; of which great quantities are fent beyond fea, and next to that ftockings. It is the deareft town in England for fuel, where, till the river Nen be made navigable, which is now, undertaken to Peterborough, no coals can come by water, and little taken to Peterbor on the land.
Whllingborovic; on the fame river, is a large populous trading town; the greateft trade it carries on is in corn, for which it's market is rifen on the decay of that of HighamFerrers. Neverthelefs, here is alfo a manufacture of lace, fo confiderable, that if is faid to return 501, a week into the town, one with another, and therefore may be reckoned the fecond town in the county.
Towcester is a hiandfome populous town. The inhabitants here, of all ages, are employed in lace, and a manufacture of filk.
Kettering is alfo a handfome town of good trade, pleafantIy fituate by the river that runs into the Nen. Near 2000 hands are faid to be employed here in the manufacture of ferges, fhalloons, and tammies, efpecially fhalloons.
NORTH CAROLINA. Under the article British America, we have given a fuccinct account of the commerce of the colonies in America beloriging to there kingdoms; and have, among the reft, taken notice of North Carolina; but it feems, from the information I have fince received from fome honourable perfons, well acquainted with that province, that the account I have given thereof, is-imperfect, and therefore I have here taken the firft natural opportunity that has offered, to fupply that deficiency from the authentic materials which I have had the honour to receive for that purpofe through the hands of the Attorney General of that province.
This province, fays my intelligence, is divided into 21 counties, all of them being large and extenfive ; and they are fettling very faft by the outfellers of the other colonies, whofe vicinity to the Indians in the French intereft, rendered their fituation very precarious and dangerous. By an accurate computation made in the year' $175^{1}$, the white inhabitants then amounted to 35,000 at leaft; but the negroes did not exceed 5000 .
There are fix principal thriving towns in it, which are rightly named and placed in our map of North America. See the MAP at the end of the firft volume. In the northern and $^{\prime}$ fouthern parts of the province, the foil is different, the former being a rich mould, and the latter mofly fandy; which makes their produce different likewife. The commerce of the foutherr diftrict confifts chiefly in pitch, tar, turpentine, and lumber ; and lately they have attempted to make indigo, and raife rice with good fuccefs.
Their only port is Cape Fear, which is a very fafe and fhort navigation ; and will eafily admit veffels of 500 tons, Upon this river are the two towns of Brunfwick and Wilmington fituated; the firft containing about 50 , and the other about 100 houfes. In both thefe are very good wharfs, and fafe lying for fhipping.
Nearly in the center of the province is Newbern, the metropolis, fituated on Neufe river; which, being lately made the feat of government, is a very profperous place, and confifts of 200 houfes at leaft; their commodities are the fame as at Cape Fear; but their navigation is not near fo good : to remedy which, there is a propofal now in agitation for cutting a canal, between 2 and 3 miles, in order to make a water communication with Port Beaufort, which will not only admit veffels of very large burthen, but is fituated fo near to the ocean, that, in an hour's time, veffels of any burthen may be cleared out to fea.
The commerce of the northern diftrict confifits chiefy of tobacco, beef, and pork, which they falt and fend to the WeitIndies; alto Indian corn, very good Englioh grain, fome lumber, and naval fores; and here likewile are raifed hemp and flax, which will foon become a confiderable article of their trade.
Their port, though at a good diffance, is an excellent one, called Ocacock; but between this and them there is fhallow water, where there are always lying convenient veffels for lightening fuch thips as draw too great a depth of water. This port ferves for the three towns of Newbern, Bath Town, and Edenton. Bath is fituated on Pantico river, and the nearelt to the ocean of the three; has an agreeable afpect from the river, and has fome good houfes in it. But the moft beautiful fituation of all, is that of Edenton, or Albemarle Sound. In this town the general aftembly of the province, and courts of juttice were formerly beld; and at this time it is the great rendezyous of the Virginia merchants, who find their account in carrying on a very large trade with the northern pafts of this province.
The trade of this diftrict to England, is chiefly in the hands of fome Liverpool merchants, whof fonply them with negioes and European goods, in ex ange for their commodities. The timber is fo picntiful dungood, and thére are fo many Vol., II.

## $\mathrm{N} O \mathrm{R}$

convenient ftreams, that the building of veffels muft turn to good account, and doubtlefs will be attempted by and by. some famples of excellent filk have been fent home from this place; but for this, as well as other profitable articles, the:e is wanting a public purfe, or fund, to enable particular perfons to fupport the expence and hazards of their firf effays; without which, it will be the work of after ages to make it a particular branch of their trade.
The government of this province is conftituted afier the true model of that of England, and confits of his majefly's governor, the council, and the reprefentatives of the feveral counties and towns. The chief juftice, attorney general, fecretary, and other officers are appointed from home, and have their refpective falaties out of his majefty's royal revenue of quit-rents.
By the following liff, we fhall perceive how confiderable a place of trade this is at pretent; and, from the particular kinds of produce, may be judged what it muft foon be. As few years ago, it was almoft fcandalous to be known to be of this country. It was the jeft and forn of the othet colonies, but is now a erowing rival, and become an object of their envy and jealoufy.

An account of the number of fhips and veffels entering inwards, and clearing outwards in the feveral ports of North Carolina, for the years 1750 and 175 I .

A true, lift.
Ben. Wheathex, Naval-Officer.

## Remarks before the laft War.

The attentive reader will obferve, that, throughout the courfe of this work, after the reprefentation of the ftate of trade, we have fliewed the danger our colonies on the continent of America are in, from the near neigbbourhood of the French, and from their encroachments upon the Britifh rights there, and the American Indians in alliance with them: we have likewife thewed the infecure and precarious ftate of our ifland colonies, provided the pretenfions of the French upon St. Lucia, St. Vincent, and Tobago, fhould be complied with by the crown of Great-Britain. What we have urged upon thefe important and interefting points, may be found under the following articles, viz. British America, Canada or New France, Colonies, French America, Loursiana, Mississippi, Plantations. And fill further to evince the real political fyftem, that the court of France has fteadily purfued, from the time of Monf. Colbert to the prefent day, fee the articles France, Flanders, Naval Affairs, and alfo the article Map.
And whether the prefent fyftem of the court of Spain; towards that of Great-Britain in particular, does, not perfecily coincide with that of France in thefe refpects, whereof we have treated under the feveral preceding heads, may be judged by confulting the following articles, Briscay, Castille, Catalonia, Florida, Logwood, Mexico, Mediterranean, Spain, South Sea Company, West-Indies. And if it fhall be found, upon due attention given to our plain and faithful reprefentations, that thefe two sourts feem, at leaft, to act in concert, in order to distress and ruin, if it be in their power, the whole Britise commerce and navigation in AmeRica, it is certainly needful that we fould be upon our guard, and take the alarm. Some miftaken people may, perhaps, fufpect me of a defign to plead for a war, under pretence of afferting the British rights. But I moft folemnly proteft a thought of that nature is foc contrary to my intentions, and fo foreign to my inclinations, that I heartily and fincerely wifh, if confiftent with our honour, intereft, and fafety, we may ever avoid onc. Nor can any one, who has done me the honour (as numbers of the greateft perfonages in this, and other kingdoms have done) to perule, with candour and impartiality, what I have humbly fubmitted to the public confideration, have the leaft reafon to entertain any fuch fufpicion of my intentions: on the contrary, we might fhew, not only from a variety of palpable inftances, but from the general tenor of the work, that nothing more remote ever entered into our thoughts. We have endeavoured to thew the folly and infatuation of going to war, 'till every other meafure in our power is tried to avoid one. We have fhewed that we have never yet got any thing by wars, but a load of debts and taxes; for the ho-
nourable
nourable redemption of which we have ever pleaded; but this cannot be done in a time of war. - lt is true we have difplayed the policy of France, in relation to their acquifitions, and the foundation laid for the increale of their commerce and maritime power, in a light wherein they never before appeared in this nation. Can any one uncandidly judge this to be done with a view to quarrel with that kingdom? We have laid open their commercial policy, with intent to point out what therein may deferve our imitation; as well as to put the nation upon it's guard against the conseQUENCES, which muft inevitably attend fuch wife and profound meafures as that kingdom has taken for the profperity of their trade, and the rife of fuch a NAVAL POWER, as may one day make this nation tremble.
In this light the policy of the French appears to me, from entering very minutely, as occafion offered, into their conduct, in regard to thefe capital points : and, indeed, to talk about that, or any other ftate in general, as we have hitherto always been wont to do, is to deceive ourfelves; and, therefore, the more particular and diftind our knowledge is of the commercial policy of other nations, the lefs fhall we be ever liable to be mifled and impofed on in our public conduet towards them. But nothing of this kind, perhaps, could have been fo effectually done, as in a work of this nature, and that conducted upon the plan whereupon I have endeavoured to execute it ; becaufe one part of the work explains, illuftrates, and confirms the truth of the orher, though confidered in various and different lights; than which, nothing of this kind can admit of a greater degree of probability, if not of certainty.
That we have no intention to embroil the nation, either with France or Spain, \&c. the reader is defired to turn to our articles Dutch West-India Company, Logwood, and Mexico, and he will meet with an expedient, under the article LoGwood, humbly fubmitted to confideration, to reconcile thofe mifunderftandings amicably, that we have fo many years had with the court of Spain; and time will fhew, whether our fulpicions are ill-grounded. In relation alfo to France, we have only fpoken plain truths, with great decency and moderation, and as often with great honout to the wifdom of that kingdom, as with contempt of their infincere conduct towards Great-Britain and other nations on certain occafions. See our article Plantations, relative to the perfidy of France, for above this century palt.
We have judged neceffary to mention thefe things here, left what we are about further to urge againft the conduct of the French in North America, fhould be mifconftrued. For what we have forefeen for fome years fince, in regard to the infecurity of our colonies on the continent of America, feems to draw towards the fulfilment; which appears from the following authentic (peech of the honourable Robert Dinwiddie, Efq; his majefty's lieutenant-governor, and commander in chief of the colony of Virginia, to the general affembly of the faid colony, on the 14th of February, 1754. And, as North Carolina is a near neighbourhood to Virginia, and this is a very recent occurrence, and confirms our fufpicions, with refpect to the candour and uprightnefs of French meafures, we judge it ufeful to introduce the fame under this head; and we fhall give the fpeech at large, as it has been tranfmitted to England from Virginia.
Gentlemen of the council, Mr. Speaker, and gentlemen of the houfe of burgeffes.

- Nothing lef's than a very important concern, could have induced me to call you together again, after fo fhort a recefs; but the dignity of the crown of Great-Britain, the welfare of all the colonies on this continent, and more efpecially of this dowinion, engage me to have your advice and affiftance, in an affair of the greateft confequence.
Major Wafhington, who was fent by me to the commandant of the French forces on the river Ohio, being returned, informs me he found that officer at a fort they had erected on a creek running into the Ohio, and that they were then preparing all neceffaries for building another fort on that river ; that they had two hundred and twenty canoes made, and many more rough hewed to be made, in order to tranfport, early this fpring, a great number of regular forces, not lefs than fifreen hundred men, with their Indians in friendfhip with them, down the river Ohio, in order to build many more fortreffes on it; and that they propofed Loggs town to be the chief place of their rendezvous.
Major Waflington further reports, that he afked why they had feized the goods of the traders, and fent their perfons prifoners to Canada; to which the commandant anfivered, "s that his orders from their general, the governor of Canada', were, not to permit any Englifh fubjects to trade on the waters of the Ohio, but to feize their goods and fend them prifoners to Quebec." He alfo afked the reafon of taking Mr. Frazier's houfe from him, which he had built and lived in upwards of tweive years? He faid, "that man was lucky that he had made his efcape, or he would have fent him prifoner to Canadd."
Thefe tranfactions are entirely inconfiftent with the treaties, fubfifing becween the two crowns, and contrary to my in-

Aructions from his majefty, whereby I am directed to prevent any foreign power, fettling or building any fortreffes on his majefty's lands.
Add to the afore-mentioned unjuftifiable infults of the French, the cruel and barbarous murder, in cool blood, of a whole family in this dominion, man, wife, and five children, nolonger ago than laft month; and very lately a poor man on the fouth branch of Patowmack, robbed of his fon. Thefe depredations were faid to be done by the French Indians; but if I be rightly informed, fome of the French fubjects always go with the Indians on thefe incurfions, and are both privy to, and inftigators of, their robberies and murders.
How compafionable muft then be the diftrefsful fituation of that poor unhappy family; furrounded by a crowd of mifcreants, dreadfully running on to perpetrate the moff favage barbarities, inexorable to the parent's intreaties, inferifible to the cries of the tender infant, bafely determined to deftroy, without provocation, thofe who could not refift their violence. Think you fee the infant torn from the unavailing ftruggles of the diffracted mother, the daughters ravifhed before the eyes of their wretched parents; and then, with cruelty and infult, butchered and fcalped. Suppofe the horrid fcene compleated, and the whole family, man, wife, and children (as they were) murdered and fcalped by thefe relentlefs favages, and then torn in pieces, and in part devoured by wild beafts, for whom they were left a prey by their more brutal enemies.
But how muft your indignation rife when you extend your view to the abettors of there villainies! Such are the people whofe neighbourhood you muft now prevent, or with the moft probable expectation think to fee, in the bofom of your country, thefe evils, that you as yet have only the melancholy tidings of from your frontiers.
Confider the bloody villains, thievifhly lurking about a man's plantation, and where they dare not attack like men, bafely, like vermin, ftealing and carrying away the helplefs infant, that happened to wander, though but a little diftance from his father's threfhold.
I affure you, gentlemen, thefe infults on our fovereign's protection, and barbarities on our fellow-fubjects, make deep impreffions upon my heart; and I doubt not, as you muft hear them with horror and refentment,' but you will enable me, by a full and fufficient fupply, to exert the moft vigorous efforts to fecure the rights and affert the honour and dignity of our fovereign; to drive away thefe cruel and treacherous invaders of your properties, and deftroyers of your families, and thereby to gratify my warmeft wifhes in eftablifhing the fecurity and profperity of Virginia, on the molt folid and permanent foundation.
imunent earneffly recommend to you his majefly's commands, for a proper fupply, the immediate neceffity whereof, at this time, I defire you will ferioufly confider, and by a ready and effectual compliance, recommend yourfelves and the country to his royal favour.
This is your part, gentlemen.-What I could, before your meeting, I have done, for the public; and by the advice of the council I have arrayed fome part of the militia, which I have ordered up to the Ohio with all poffible expedition, to build a fort there, at the forks of Monongabela. And as his majefty's gracious prefent of thirty pieces of cannon, eighty barrels of powder, and other ordnance ftores fuitable are arrived, 'I have fent ten of the cannon, and a proportion of ammunition to Alexandria, to be from thence tranfported as foon as poffible to the Ohio.
I have wrote to the neighbouring colonies for their aid and affiftance, which I have good reafon to expegt ; but I mutt obferve to you, that their eyes are fixed on your proceedings, and I hope you will engage them, by a laudable example, to contribute lufficiently for the, common caufe.
The late occafion having fuggefted to me fome defect in the "act for making provifion againit invafions and infurreations," I think proper to obferve to you, that the pay is very unequally proportioned, being too high for the foldier, and too low for the officer; and there is no provifion made for a doctor, a commiflary of itores, and feveral other re-quifites.-I think it would be better to pay the militia in money than tobacco, by which there may be a faving to the country, and the men better farisfied.
Gentlemen of the council, and gentlemen of the houfe of burgeffes.
I look upon the fafety and welfare of Virginia to depend on your counfels and determinations, at this critical junchure, which, therefore, ought to be uninterrupted by any avocations from prejudice, or unfeafonable divifions, at all times the bane of public confultations, but which, at prefent, would be particularly fatal; and I doubt not, when you ferioully confider the importance of what is laid before you, you will find duty, honour, and your own prefervations, all united, to engage you to exert your efforts equd to the occalion.
The feafon for entering upon action being fo near at hand, your feffinn can be but fhort ; and I defire to conclude with an earneft exbortation to concord and expedition, left if we be divided, or flow in deliberation, our enemies may feize the time welofe, and render any future efforts ineflechual.

And in all meafures for his majefty's fervice, and the good of this colony, you will have my ready and zealous concurrence.'

February $16,1754$.
To the honourable Robert Dinwiddie, Efq; his majefty's lieutenant-governor, and commander in chief of the colony of Virginia.

The humble addrefs of the council.

- Sir,
© We his majefty's faithul and loyal fubjects, the council of Virginia, now met in general affembly, beg leave to return your honour our hearty thanks, for your kind fpeech at the opening of this feffion.
We cannot forbear to exprefs our juft indignation at the unwarrantable encroachments, and hoftile proceedings, of the French; and, at the fame time, to teftify our approbation of the prudent fteps already taken by your honour, for the defence and fecurity of the colony.
Our ardent zeal for the fupport of his majefty's crown and dignity, and our tender regard for the welfare and profperity of our country, will incline us, by a chearful concurrence with the houfe of burgeffes, to exert our moft vigorous efforts to fupport and effectuate your honour's proceedings, in what wc agree to be the common caufe of all the Britifh colonies upon the continent, and more efpecially of this dominion: and we affure your honour, that in all our confultations, we will proceed with that harmony and difpatch that the importance of the fubject, and advanced feafon require.
We cannot conclude without our earneft prayers, that your honour's conftant labours may be crowned with their deferved fuccefs; and our warmeft wifhes, that our country may long continue to flourifh under your honour's adminiftration; from whence we may with reafon hope to fee her fecurity and profperity eftablifhed, on the mof folid and permanent foundation.'

To which his honour was pleafed to return the following anfwer:

Gentlemen of the council,

- I return you my fincere thanks for your kind addrefs, and do affure you it gives me great pleafure, that the fteps I have taken in the prefent fituation of our affairs meet with your approbation.
Your ardent zeal for his majefty's crown and dignity, and your regard for the profperity and welfare of our country, with your intentions of concurring with the houfe of burgeffes, to exert the moft vigorous efforts for fupporting me in my proceedings againit the enemy, call for my moit unfeigned thanks.
And I have not the leaft doubt of your proceeding with harmony, difpatch, and refolution, on the prefent emergency,I am much obliged for your prayers for fuccefs to my endeavours, which I aflure you hall always be with a view for the welfare and profperity of this dominion ; and I hope, by our conduct, that our cnemies will fee we are not difunited, but clofely connected in defence of our rights and liberties.'
Virginia, f.
By the Hon. Robert Dinwiddie, Efq; his majefty's lieute-nant-governor, and commander in chief of this dominion.
A proclamation for encouraging men to enlift in his majefty's fervice, for the defence and fecurity of this colony.

Whereas it is determined that a fort be immediately built on the river Ohio, at the fork of Monongahela, to oppofe any further encroachments or hoftile attempts of the French, and the Indians in their intereft, and for the fecurity and protection of his majefty's fubjects in this colony : and, as it is abfolutely neceflary that a fufficient force thould be raifed to erect and fupport the fame, for an encouragement to all who thall voluntarily enter into the faid fervice, 1 do hereby notify and promife, by and with the advice and confent of his majefty's council of this colony, that over and above their pay, two hundred thoufand acres of his majefty the king of Great-Britain's lands, on the eaft fide of the river Ohio, within this dominion (one hundred thoufand acres whereof to be contiguous to the faid fort, and the other hundred thoufand acres to be on or near the river Ohio) thall be laid off and granted to fuch perfons, who by their voluntary engagement, and good behaviour in the faid fervice, fhall deferve the fame. And I further promife, that the faid lands hall be divided amongft them, immediately after the performance of the faid fervice, in a proportion due to their refpective merit, as fhall be reprefented to me by the officers, and held and enjoyed by them, without paying any rights, and alfo free from the payment of quit rents, for the term of fifteen years. And 1 do appoint this proclamation to be read and publiohed at the court-houles, churches, and chapels, in each county within this colonv, and that the fheriffs take care the lame be done accordingly.

Given at the council chamber in Williamfourg, on the 19th day of February, in the 27 th year of his majefty's reign, anno dom. 1754.

Rubert Dinwiddie.
God lave the King.
That we may judge of the intended meafures of the French in relation to our North American colonics, it is confidently faid, that by letters lately received from Virginia, brought over by the fhip Seahorfe, Capt. Jump, we are informed hat the French have erected five Forts, and garrifoned them with 1500 regular troops, on the part of the Britifh territory at the back of Virginia, which is neareft to Quebec, contrary to treaties. It is imagined that this breach of faith will be attended with very ferious coniequences.

Remarks on North Carolina fince the laft War, and the Definitive Treaty of 1763.
This work was firft began foon after thet reaty of Aix la Chapelle; and having pretty vigilantly attended to the conduct of the court of France from that time, towards GreatBritain, we thought it our duty to give a faithful reprefentation thereof, from time to time, as we proceeded herein, to the end, that where our commercial Interest was likely to be concerned, the nation might be duly apprized and alarmed, when that intereft was in imminent danger Our conduct in this refpect, was regarded by many, and commended as becomingly zealous; others put a lefs favourable conftruction upon it, and declared our apprehenfions of a freth war with France, fo foon as we did, after the peace in 1748, were chimerical and vifionary, and that our labours were rather of the incendiary kind than otherwife: all which have proved miffakes on our cenfurers fides; yet we have not a little fuffered in our private affairs by our honeft declaration of bold truths, all which the event has proved to be true, fo $f_{\text {ar }}$ as they related to the injurious intentions of France towards our North American colonies.
had alfo, fo far as the fame regarded our commercial fpe culations for the benefit and advantage of thefe kingdoms, attended to the conduct of the court of Spain, and from thence likewife prejudged, that court would join France fooner or later, after the commencement of the French war; which was condemned by fome as a premature fuggeftion, though verified by the event: nay, fo minutely had we obferved the conduct of the Spanifh court, that we apprehended they would revive the claim of the Guipufcoans to a thare in the Newfoundland fifheries, which came to pafs accordingly, and by the xviiith artiole of the Definitive Treaty of 1763 bis Catholic majefty deffits, as well for himfelf as his fucceffors, from all pretenfions which he may have formed, in favour of the Guipufcoans, and other his fubjects, to the right of filhing in the neighbourhood of the Island of NewFoundland.
Thefe things are not intimated, to induce our readers to entertain any extraordinary opinion of our forefight: they are noticed only to excufe ourfelves in the eye of thofe, who judged once unfavourably of our occafionalobfervations; and who, on that very account, have done us unfpeakable perfonal injury, for which they can never make us a compenfation were they difpofed fo to do: but this we never expect. We fill live, and perhaps, we may prefage fome other things, that may not be lefs difagreeable to thofe who regard their own intereft, and their own ambition in preference to that of the public good and profperity : and if events fhould hereafter happen to turn out as we apprehend they will, we can only attribute it to our honeft impartiality in reprefenting things as they appear to us, from the evidence of Facts and Experience. See our article Mexico, Florida, InDIAN AFFAIRS, and others to which from thence we refer. NORTHUMBERLAND in England, is a maritime county bounded on the fouth by the bifhoprick of Dutham, on the north by Scolland, on the weft by Cumberland, and part of Scotland, and on the eaft fide it is wafhed by the German Ocean, and is about 150 miles in circumference. The air is in general pleafant and healthy ; as for the foil it is va rious, being very fruitful on the fea-coaft if well manured and cultivated. The weft parts are indeed mountainous, but afford good pafture for theep.
It abounds more with coal, efpecially about Newcafte, than any other county in England. It is almof impoffible to exprefs the vaft trade brought into this county by the exportation of coals to all parts, infomuch that London alone, before there was half the number of brewers and diltillers that there is now, was faid to confume 600,000 chaldrons in a ear.
It's chief rivers are the Tyne and 'Tweed, which laft fo abounds with falmon, that the filhermen aften take great numbers of them at one draught.
Newcastle, the county town, fands on the north bank of the river Tyne.
By the fale of it's coal to other parts of England, and other morchandize, it is become the great emporium of the north
parts of England, and a good part of Scotland, and is the faireft and largeft town of the north next to York. Ships of any reafonable burthen load and unload at'st's key. But the coal-fhips generally load below, between the town and Shields, or at Shields, which is feven miles difant, the coals being carried to them in large lighters called keels, of which fo many are employed, that the keelmen are reckoned above 6000 . The town is extremely populous and very wealthy, and is faid to have the g!eateft public revenue in it's own right, as a corporation, of any town in England, it being computed at no lefs than 8000 l, a ycar.
This place is famous for grind-ftones, much better than thofe that ufed to come from Spain, which art of too fuft a grit, and therefore not fo ufeful for many purpofes. There is fuch a demand for them, that fcarce a fhip ftirs from this port without then. Befides many glafs-houres, a confiderable manufacture has been lately let up here, of hard ware and wrought iron, after the manner of that at Sheffield.
Morpeth, on the river Wentbeck, has a good market on Saturday for corn, cattle, and all neceflary provifions; but that on Wednefdays is the greatef in England for live catte, except Smithfield.
Berwick, at the mouth of the Tweed, is the latt town in the north of England, a county ard town of itfelf, and though fituate on the north fide of the river, is included in Northumberland. It is a large well built populous town. Here is a noble falmon-fifhery as fine as any in Britain, they being the fifh that are carried by land on horles to Shields, to be cured, pickled, and fent $t s$ London, where they are cried for Newcatle falmon. Here is alfo a confiderable manufacture of fine ftockings. The habour is but mean, neither is there any good riding in the offing near the bar, for the thore is feep and rocky.
North Shiexds, is a populous town at the mouth of the Tyne, chiefly inhabited by fallors and mafters of hhips, as fuch port-towns generally are. The river here forms a little bay, which is a deep fafe road for the colliers, of which 400 fail are fometimes lying here laden.
NORWAY, is bounded on the fouth by the entrance into the Baltic, called Schager-Rack, or Categate, on the welt. and north by the Northern Ocean, and on the eaft it is divided from Sweden by a long ridge of mountains, called at different parts by different names; but they are commonly by hiftorians ftiled the Dofrine Mountains.
This country lies between the 5 th and 3 If degrees of longitude eaft of London, and between the 57 th and 7130 of north latitude, fo that it extends about 5 degrees and a half beyond the polar circle; and the longeft day in the mof northern parts, is above two months. It's length, all along. the coaft, from Wardhus in the northeeaft, to the Naze in the mouth of the Baltic, is about ro80 miles; but it's breadth is unequal, being about 180 miles in fome places, and not near fo much in others. It's fituation, chiefly in the moft northern part of the temperate zone, and partly in the frigid zone, renders the air extremely cold, and the foil barren. It produces little or no corn, which is imported thither from other countries to Rerghen, the anly, town which has the privilege to dithibute it into the reit of the king dom.
The moft fonthern parts, meed, froduce fome wheat; but the rett of the country is fandy and gravelly, and bas nothing but rocke, woods, and mountains; fo that it's wealth confilts chiefly in the vaft forefts and mighty fir-trees, whofe ufefolnets in building, makes the merchants of England, Holdand, and orher nations, flock thither to purchafe them. The earb has mines of iron, copper, and fome filver, which, with pitch, tar, and filh, whereof great quantities are taken on the coaft, are the commeditics of this country. In the vallits they have a good breed of black cattle, and of fmall hurfes, very fwift, and capable of fatigue.
Norway is divided into four governments, or prefectorlhips, which are thole of Aggerus, Berghen, Drontheim, and Wardhus; befides that of Bahus, which is fubject to Sweden, and the feveral inlands depending on Norway.
The province of Aggerus is the fouth eaft part of Norway, and is fituated between the province of Berghen on the weft, from which it is leparated by vaft mountains, Dalcarlia and Bahus which belong to Sweden on the eaft, the mouth of the Baltic, called the Categate on the fouth, and the province of Drontheim on the north. It's extent from fouth to north is abbut 300 miles, and from eaft to weft in the fouth part about 120; but it grows narrower northward, 'till it ends in a point. The land is mountainous and woody, but the vallies are tolerably fruitful, being watered by many lakes and rivulets, which pafs through the country, and fall into the Ealtic: it is divided into fis particular gavernments, viz. Agdefinden, Hailingdal, Hammer, Hannemark, Rommerritkir , and Tellemack. There are feveral fea-ports, particularly Fleckefen, where the fithing-trade affords a pretty confiderable income.
Christians, the chief city of this province, feated at the bottom of a narrow bay, and is 30 miles diftant from the Bahic, and about 110 trom schagen cape in Jutland, to the north. This is a place of good trade for fir-timber, pitch, \&ic. Great quantity of mackarel is caught here, and much
pearl ; of which Henricus Arnoldi, a Dane, gives the following account. Their fhells are like thofe of mufles, but larger, and the finh like an oyiter, which produces a great clutter of eggs, like thole of cray-fifh, fome white and fome black. Thefe egys when ripe are caft out, and grow like the thell, from whence they came: but fometimes it happens, that one or two of thofe eggs ftick faft to the fide of the matrix, and are voided with the reft; which being fed by the filh, in time they grow into pearls of different fizes, and imprint a mark, boin in the finh and in the fhell, of the fame figure with themelves.
Frederickshall ftands on the Categate, at the mouth of the river Glammen, which Mr. Voltaire calls Tiftendall, which rifes in the Dofrine mountains, in the province of Dronthem, and having paffed through that of Aggerus, falls here into the fea, and by the conveniency thereof affords this, city a pretty good trade. It is about 50 miles diftant from the town of Aggerus towards the fouth-eaft, and is very well fortified and of fuch importance, that it is reckoned the key of this kingdom.
Saltzberg is a fmall town on the river Drammon, which falls into the bay of Chriftiana, from which city it is about 15 miles diftant to the north. It has a pretty confiderable trade from the neighbouting copper and iron mines.
Skien, or Scheen a few miles from Tonberg, ftands on the Categate; both thefe towns are places of good trade, by means of the above-mentioned mines. A filver one was difcovered in the neighbourhood under the reign of Chriftian IV, but it appears it is no rich one, fince it is not worked at prefent.
Berghen province, takes up the moit foutherly, and almof the whole wefterly part of Norway, and is furrounded by the fea on the fouth, fouth-weft, weft, and north.
The chief towns of trade here are as follow:
I. Bergén, an ancient and famous fea-port, ftands on a crooked bay called Jellefiord, into which veffels enter by a narrow ftraight named Carmefundt, which is bordered on each fide with high rocks for feveral miles together. This town is 137 miles diftant from Chriftiana, to the north-weft. The bay here is fo deep, that veffels of above four hundred tons can enter it, and come to load and unload before the merchants waxehoufes.
The inhabitants are partly natives of this cquntry, and partly Germans and Danes, whom the conveniency of this town for trade has drawn thither, this being the principal mart and magazine for feveral merchandizes ; divers forts of fine furs, vaft quantities of hides, tallow, fir timber, \&c. being brought hither from the neighbouring provinces, and ohipped off to foreign parts. The inhabitants drive alfo a confiderable trade in flock fifh, which are taken on thefe coafts and in the lakes in January, and dried in the open air.
The privileges granted by the king of Denmark to ftrangers make them flock to this town, and import thither thofe neceflaries of life which the country does not produce; as wheat, rye, bifcuits, beer, wine, brandy, \&c. which they exchange for the merchandizes above-mentioned. There is at Berghen a factory called the cloifter, in which a community of merchants live, who are filed monks, though they wear no particulà habit, and have nething in common with monks, except that they are not married.
Stananger, the chief town of the diftrict of the fame name, ftands in the bay called Buckenfiord, which is very fpacious, and full of fmall illands, and is 180 miles diftant from Berg. hen to the fouth, and ioo from Chriftiana to the weft. The harbour is very large and fafe, and it would have a greater trade than it has, were it not for the neighbourhood of Berghen.
Drontheim is the largeft government of Norway, it lies along the coaft of the North Sea, being about 500 miles in length, from fouth to north. It has the North Sea on the weft, the government of Wardhus on the north, that of Berghen on the fouth, and on the eaft it is feparated from Sweden by a long ridge of mountains. It extends from the 6rit to the 6gth degree of latitude: it's greateft breadth from eaft to weft, is not above 120 miles, and in many places it is much lefs. The country is mountainous, woody, cold, and barren; fo that though it be large, the towns are not very confiderable. This whole country is very thinly peopled, and not cultivated but along the fea fhore, 'till within 25 or 30 miles from it.
The moft confiderable towns here are as follow :
Drontheim, formerly the capital of Norway, is feated on 'the coaft of the Northern Ocean, on a little gulph at the mouth of the river Nidar, from whence it was anciently called Nideofia. It is about 220 miles diftant from Berghen to the north-eaft. It has a harbour pretty well frequented by fmall veffels, though very incommodious for large ones, the enterance being obiftructed by rocks. This town has a pretty confiderable trade, confifting in fmall mafts and fir deals. They alfo fhip off here a large quantity of copper, the mines of which are eighteen or twenty miles diftant from this town, near the village of Steckby. At the diftance of fix miles from thofe mints, there is a filver one belonging to the king. The other merchandizes exported from thence are, iron, tar, 6
furrs, aftes, goat-fkins, \&cc. and they import in exchange, fices, wine, brandy, vinegar, cheefe, tobacco, coarfe cloths, and a great many old rixdollars. The country round about is very barren; and even wood is fo fcarce, that a little beyond very barren; he people are obliged to ufe finh-bones for fuel, and for feveral utenfils.
Leerstrand is about io miles diftant from Drontheim to the fouth.
Stronden lies on the river Nider, 40 miles above Drontheim towards the fouth-eaft.
Scoerdale is about 20 miles diftant from Drentheim to the north weft, on the other fide of the fame bay.
Opdal lies at the bottom of a narrow bay, 40 miles from the ocean, and about 65 from Drontheim to the fouth.
Rocean, and or Romsdalen, ftands on the bottom of another bay, 40 miles from Opdal to the weft, and 70 from Drontheim to the fouth-weft.
Solendael ftands on another bay, about 30 miles from Romfdael to the fouth-weft.
Thefe are all places of fome trade.
Between the iflands of Sallere and Vero, is the famous gulph or whirlpool called Maelstrom, in lat. about 68 degrees, faid to be 40,000 geometrical paces in circumference. Seamen call it the Navel of the fea, Umbilicus maris. Several authors give the following defcription of it: it is, fay they, fatal to thips that come too nigh in the time of flood, when the fea, for two leagues round, forms fuch a terrible vortex, that it fwallows up every thing that comes near it; and during the fix bours of ebb, it throws out the water with fuch violence, that the heavieft bodies cannot fink if thrown into it, but are cift back again by the impetuous ftreams. Veffels fwallowed up by this whirlpool are caft up again fhattered to-pieces, uping dafhed againtt the rocks wichin it. Between the ebb and the flood there is an interval, during which hips can fafely fail over it, the water being then filli, but, during the ebb and flood the water makes, they fay, a prodigious noife Francis Neri, an Italian, who travelled into Norway, obferves, that there is no whirlpool here, but only a rapid current, which makes a great noife during the fix hours of flood, which noife is occafioned by the water's dafhing againft feveral fmall iflands, or rocks, which repel the freams now to the fouth and then to the north, fo that they feem to whirl about. During the ebb the water is fo fill, that fmall boats can crofs from one illand to another without any danger This account is more rational, and more agreeable to truth, than the poetical relations given us by feveral travellers, and particularly by the German author of the Curiofus Antiquarius, who give us a moft frightful defcription of this pretended whirlpool.
Wardhus is bounded on the north and weft by the ocean, on the eaft by Mufcovite Lapland, and on the fouth-weft by the government of Drontheim. It's extent from ealt to weft is about 310 miles, and 200 from fouth to north, that is to fay, to the north cape, including the idands. It is divided into two parts: the weitern and maritime is called Finmark, and the eaft and fouthern Norvegian, or Danifh Lapland. It being the moft aorthern part of Norway, we cannot expect here much produce of the earth, or plenty of people, and confequently no cities or coniderable towns that make any figure in hiftory.
Wardius, fituated in an inland called Ward, from whence this province has it's name. It is the feat of the governor, and is, properly, nothing but a caft]e, with a ftreet or [mall town of cottages, inhabited by fifhermen. The ifland lies on the north-eaft point of Norway, near the borders of Mufcovite Lapland, and is fmall, being but 14 or 15 miles in circumference. It is about 3 or 4 miles diftant from the continent. The cafte is fo old that it falls to ruin, and has no manner of fortifications, though it was buils to protect the fifhermens huts, of which there are great numbers along the coalt. The inhabitants of this and the neigbbouring iflands, live upon dried fock- fifh, and bave neither bread nor beer but what is brought them from other parts by the Englifh and Dutch hips, that come this way for filh.
Bahus, though yielded to the Swedes in 1658 , by the treaty of Rofchild, is yet reckoned a part of Norway, for which seafon we think it proper to give an account of it in this place. It is the moft fouthern province of Norway, and is a narrow track of land, lying on the coaft of the SchagerRack, or Categate, about 90 miles in length from fouth to north. It has Weft Gothland on the fouth, Dalia on the eaft, the government of Aggerus on the north, and the Categate on the weft. It's breadth is not proportionable to it's length, being in fome parts but ten miles broad, and in none above 25. The country is fruitful enough, but a great part of it is taken up by large lakes. It is divided into two parts, Iland and Wickliden. The chief places are,
Mablstrand, or Marstrand, the capital of Wickfiden, is a ftrong town built on a rock, is a kind of peninfula, about 10 miles below Bahus; it is a place of great trade for herrings, and other fea fifh.
There are a great number of illands hefides thofe we have already mentioned, along the coalt of Norway, but they are Vol. II.
not confiderable ehough to deferve a particular account. See Denmark.

Trade between England, Norway, and Denmark.
Norway and Denmark take from England guineas, crown pieces, and bullion, a little tobacco, and a few coarfe woolens of fmall value.
England imports from Norway, \& cc , vaft quantities of dealboards, timber, fpars, and iron. We pay them a very great balance, and their rebuilding great fhips of burthen, deftroyed in the war between them and Sweden, has again pretty well re-eftablifbed them in the navigation and freight of their timber, and greatly increafed their balance upon this nation. See Naval Stores, and Denmark.

## REMARKS before the laft WAR.

Frederic IV. king of Denmark, was always inclined to promote the welfare and trade of his fubjects, and took cate of every thing that might contribute to their benefit; but, towards the end of his life, it was thought he liftened, too much to projectors, who induced him to enter upon fchemes which were not always attended with the confequences he expected from them. He died; however, at the age of 60, greatly regretted, on the 2d of OCtober, 1730.
His fon, the late king Chriftian VI. afcended the throne of his anceftors with univerfal reputation. He had, in his father's life-time, been very attentive to the concerns of the Eaft-India company, and had been, in a great meafure, the fupport of it, which induced the people to hope that a particular regard for trade would be the principal view of his reign; and fo indeed it proved.
At bis acceffion to the government be made many changes, but all of them in fuch a manner as to give great fatisfaction to his fubjects, who were particularly pleafed with his abolifhing a farm that had been eftablithed in his father's time, for vending wine, brandy, falt, and tobacco, which was very burthenfome to the fubject, however advantageous to the prince. Such as were interefted in the farm offered to advance larger fums if it might be continued; but the king anfwered, It brought in but тоo much, fince his fubjects eomplained of the Exactions which it occafioned.
He foon after erected a Council of Trade, whofe bufinefs'is to examine all propofals that are made for extending it, in order to give fuch encouragement as may be neceffary for carrying them into execution. He likewife fent for workmen out of Holland, and other countries, at his own expence, to eftablifh manufactures in Denmark, and took every other ftep for their encouragement that his people could either defire or expect. Amongtt others, he erected a Royal Bank, which has been attended with many advantageous confequences; was always careful to keep his fleet and army in a proper condition to render him refpected by his neighbours; and, to prevent the expence occafioned thereby frombecoming burthenfome to his people, he from time to time alfo made treaties of fubfidy with foreign powers, which brought in large fums, without expofing him to the neceffity of taking any thare in the quarrels either in the North or Germany.
His con, Frederic V. the prefent poffeffor of the throne, fucceeded to it July 26, 1746, in the 23 year of his age; he efpoufed, abouc three years before, the princefs Louifa of Great-Britain, by whom he has an heir apparent, born January 18, 1749 . Upon his firft taking the reins of govern ment into his hands, he thought fit to make a few alterations, very judicious in themfelves, and acceptable to his fubjects. He has fteadily purfued his father's maxims, in maintaining peace, improving the trade, and encouraging the induftry of his.fubjects. His application to bufinefs, joined to a conftant and well-regulated œeconomy, has enabled him not only to live within the bounds of his revenue, but to make very confiderable favings. In this, however, he has conducted himfelf as a wife and good prince, or rather in fuch a manner as to become a model to thofe of his own rank, who generally afpire to fo fublime a character; for he has demonftrated that this did not arife from avarice, or a natural nearnefs of temper, but from a noble and true royal principle of doing whatever might contribute to the public good: for in thofe provinces of his dominions that have fuffered by inevitable calamities, fuch as the mortality among their cattle, and the inclemency of feafons, he has remitted even his juft rights. He has expended very confiderable fums for encouraging and promoting New Manufactures, and he has dilcharged large debt due from the crown.
This, though in itfelf very extraordinary, confidering the fum, and the fhort time he has reigned, has been attended with a circumftance too fingular to be omitted. The creditors of the crowa, as foon as they were informed of his majefty's defign, endearoured to prevent it, by humbly reprefenting, that, if he was difpleafed at the largenefs of their intereft, they were content to accept of 4 , inftead of per cent. which had been hitherto paid them; but his Danifh majefty anfucred, That having the money in bis coffers, where it could be of no fervice to the public, he $4^{Y}$

## NOR

chofe to difcharge their obligations; but that he would take it as a favour done to himfelf if they would lend the money he now paid them, at a low intereft; to his fubjects, which might enable them to extend their Commerce, and improve the New Manufactures.
It is incredible to what a degree his own and his father's peaceable 'and prudent adminiffrations, have contributed to the benefit of the countries belonging to the crown of Denmark, and how much the face of affairs is changed within fo fhort a time. New Ports have been opened, which has been owing to the opening New Channels of Trade; the fhipping of the Danes has been more than doubled, and the revenues of the crown have increafed in the fame proportion within that fmall fpace. The court is fplendid without profufion, the king rich without oppreffion, the minifters attentive to the duties of their refpective frations, not only from the example of their mafter, but from the fenfe they have that a contrary behaviour would infallibly draw upon them immediate difgrace. Adored at home, and refpected abroad, the king is only attentive to preferve and promote the happinefs of his fubjects, in which he places his own.
The laws of this country have been defervedly in reputation, as lying within a very narrow compafs, a moderate quarto containing them all; and the adminiftration of juftice is fo well looked after, that fuits of law in this country are but few, and thofe very fpeedily determined. The king makes and repeals laws, as to him appears neceffary for the good of his fubjects; but the crown bas always ufed this power with much moderation and difcretion: fo that, as Denmark may be truly faid to be the only legal abfolute government in Europe, pertiaps in the world, the people have had lefs reafon to regret the change made by themfelves than could well have been expeoted; and, if their monarchs copy after the example of their prefent king, the Danes will feel fewer evils from the want of liberty, than in other nations are produced by the abufe of it
The kingdom of Norway, which remains united to that of Denmark, is of great confequence; and, under the laft and prefent reign, there have been great improvements made in it's trade, and the inhabitants have been ufed with more indulgence than formerly. The fame thing may be faid in regard to Iceland, and other inlands belonging to the crown of Denmark, which have been of late years put in all refpects into a much better condition than they were; fo that their commodities come to a better market, their manufactures are in a much better fourilhing condition, and the number of their inhabitants, towns, and fhipping, is continually increafing; whereby, in the fpace of another century, if no wars break out, or unforefeen confufions happen, the Danes will become quite another people, and their monarchs make a greater figure than they have for fome ages paft *.
*We have in this month of October 1764 , an account from Copenhagen, that upwards of 1400 perions were daily mployed in the Danilh royal wooller manafacory, that they produced laft year 66 pieces of good cloth; and in other woollen fabrics there are, in the whole, about 4000 men at work. There are likewife 16 filk fabrics, where 938 perfons are at work; of the faid 16 the royal is the largeft, there being los looms, which employ 335 perfans.

Remarks on Norway fince the laft $W_{a r,}$ and the Definitive Treaty of 1763.

The balance of trade between England, Norway, and Denmark, being reckoned at leaft to the disfavour of this nation 300,0001 . per ann. it is to be hoped now, that no meafures will be left unpractifed to furnifh ourfelves from North America, with every fpecies of Timber that continent will produce, éither requifite for House-building in England; or for Ship-building; and thereby fave that balance, we have fo long paid to Dermark for Norway timber. Moft certainly we may; and the building of large bulky fhips for that purpofe, will prove an additional valuable nurfery for our feamen, and enable us the better to keep and preferve, and make proper advantage of our new acquifitions on the American continent.
It is allowed by thofe that knew the plantations, that the moft proper places in the colonies for fupplying the royal Britihh navy, are the provinces of Main, New Hamphire, and the Maffachufets in New-England. Therefore, if thofe three provinces were entirely appropriated to that ufe, the other parts of our extended colonies would fufficiently fupply not only Great-Britain and Ireland, but even Portugal and Spain, with the fame quantities that they now ufe, or may ufe, perhaps, to the end of time, provided we admit and encourage young trees to grow, after we have cut down the old ; which will take us up centuries to do.
It may be obferved, that the little quantity of land that is acceffible in that mountainous rocky country of Norway, has fupplied not only Great-Britain and Ireland, Spain, Portugal, France, and Flanders, with timber; but even Holland icielf with piles for their dykes, fea-walls, and foundations

## N O R

for houfes, which are thought to be more than are growing upon all the acceffible ground of Norway. The greateft upon all the accefible ground of Norway. The greatelt
part of Europe is fupplied with pipe, hogthead and barrel faves from Germany, and the Dutch with oak timber for building their thips, and manufacturing into clapboard and wainfcot by their faw-mills, with which they not only fupply this nation, but feveral other parts of Europe; and yet the Germans are fo far from apprehending any danger of not being fupplied with the increafing growth of their oak timber, that they would efteem it a particular happinefs to have their people employed in cutting it down, and hauling it to places of navigation. The foreft of mount Libanus, which is but a frall tract of land, the wooded part of it not fo big as Yorkfhire, has fupplied amazing quantities of timber. Solomon, in his time, employed a great number of hewers of wood for building the temple. The Tyrians, Sidonians, and all that coaft, were fupplied with timber from thence for their Buildings and Shipping; and hiftory tells us, that Alexander the Great was fupplied with timber from thence, for carrying on his bank from the main land to the ifland of Tyre; and all fucceeding ages have been conitanty cutting down the timber, and yet, it is faid, there is as good here as ever.
If thole places have furnifhed Europe and Afia with fuch vaft quancities for fo many ages, and the tiinber cut down conftantly fupplied with a growth of new, what may not be expected from fo large, fo immenfely large a tract of ground, fo well replenifhed with trees and navigable rivers as our plantations are? Thefe inftances are given to obviate the miftakps fome gentlemen are under, who think our forefts in America can be hurt by cutting down our timber.
Some have made it a doubt, whether it is prudent in us to let Portugal, Spain, or the Streights, have boards and timber from our plantations; alledging, that if they are fupplied, they may build merchantmen and hips of war, and may, in time, interrupt our trade and navigation; forgetting, we mult fuppofe, that the Dutch will fupply them with as much German oak as they want.
The Spaniards themfelves have great quantities of extraordinary oak, and fine large pine-trees fit for mafts, efpecially in Aruagon and Catalonia, near the Ebro and Segra; but fuch is their indolent temper, that if they can purchafe what they want with money, they care not to ftretch out a hand to help themfelves ; and it might not be good policy in us, to ftir them up to a neceflity of becoming induftrious.
The value of timber among ourfelves has given gentlemen that notion, becaufe it fetches a great price in this ifland, it muft confequently be valuable all over the world. But if they were in America, and there beheld the great labour of the planters to clear the ground of the wood, and the valt number of fine timber trees that are hauled together and burnt, before it can be fit for any ufe, they would certianly think it abundance of prudence to have it cut up into boards and other ufes, and tranfport to Portugal and Spain what we could not difpenfe with amongft ourfelves in Great-Britain, and the money remitted to England ; for there is no merchandize more profitable to the nation than timber, being the moft bulky, and confequently employing the greateft number of Shirs and Sailors, with a very fmall part of the $\mathrm{N}_{\mathrm{A}}$ of SHIPS and SAILORS, with a very tmall part of the Na-
TIONAL STOCK, which is fufficient to give it all imaginable encouragement.
This merchandize is what has bred the king of Denmark fo many failors, and enabled him to fit out a Royal Navy, and his fubjects of Norway to build fo great a number of bulky Ships, by which they have enriched themfelves to a much greater degree than the farmers of the fertile country of Poland have done by their corn. If this Trmber Trade has been fo advantageous to them, why may it not he rendered fo likewife to England, by means of her vaft colonies now on the American continent? We have for the mof part the fame markets; we fhall thereby have opportunities exceedingly to enlarge and extend our navigation; and the wages of a failor very much exceed thofe of a ploughman, labourer, or manufacturer; their food and cloathing are from ourfelves; and if they carry a loading of timber from the plantations to Spain, Portugal, or the Streights, \&c. and return to England, not only the merchant's profit, but the profit of the owners of the fhip, and the fallors wages, would be all brought home, and fpent here.
The advantage a Timber Trade would be to us between our plantations and the Streights, \&c. would be confiderable. We cannot fee but a thoufand acres of Timber Ground in America, may be made more beneficial to England than 1 thoufand acres of Corn Land within ourfelves. Let us fuppofe a thoufand acres of corn land may produce thirty crops of corn in fifty years; and that every crop may yield in Holland, being our moft certain market for corn, 4000 . for every year of the faid thirty years, which is $\mathbf{1 2 0 , 0 0 0}$. We will fuppofe, that twenty acres of Wood-LAND in America may afford timber enough to load four fhips of fix hundred tons each, and their cargoes carried to Spain or Portugal, \&c. and each fold for gool. each. Thefe thirtyfix hundred pounds are all produced by the manufacture and labour of our own poor, and nationa! flock in this thipping.

## N O T

Thefe 1000 acres, fuppofe it would take fifty years in cutting, and fify crops, at three thoufand fix hundred pounds per crop, flate double the quagty thouland polary to produce four fhips loading of timber. It is very well known there is fuch a propenfity in the land of America to run into wood, that when it has been tilled fo long, that it would bear nothing, yet it has, within the fpace of thirty years, been loaded with a vaft number of trees, many of them above a yard and a half in girt, fix feet from the ground. Timber grows there fo very quick, as we are informed, that they are at their full growth in a few years. The clearing the lands in America, in places the moft advantageous to navigation, would not only be thoroughly beneficial to thefe kingdoms, \&c. and fave us the balance which we now pay to Denmark, but would bring us in a very confiderable one in our favour: and not only fo, it would tend to lay the country open in time, and put the Indians more in our power, there appearing an abfolutely rieceffity to do this to bring them into fubjection, if ho amicable means will avail to that purpofe. This, with our navigation on the river St. Lawrence, the Ohio, the Miffilippi, and in the bay of Mexico, will enable us to collect vaft quantities of timber, and produce us the like of pitch and tar, and the under-wood make charcoal for our iron furnaces there. All which together mult be of no inconfiderable emolument to Great-Britain, and will prove inftrumental with the raifing other materials for manufactures in England, to give conftant employment to all the inhabitants we can people our new and old acquifitions with, and thereby keep and preferve them in a due and reafonable ftate of dependence and fubferviency to their mother kingdom.
NOTARYPUBLIC, is a perfon, ufually a fcrivener, who takes notes, or makes a fhort draught of contracts, obligations, or other writings and inftruments. Stat. 27 Ed. III cap. I. At prefent we call him a notary public who publicly attefts deeds or writings, to make them authentic in another country, but principally in bufinefs relating to merchants they make protefts of foreign bills of exchange, \&c. [fee Bills of Exchange; ] and noting a bill, is the notary's going as a witnefs, to take notice of a merchant's. refufal to accept or pay the fame.

Remarks.
The learned civilian Domat obferves, That a diftinction between a voluntary and a contentious juriddiction, obliges us to take notice of a particular kind of officers, whofe functions are of a very great and very frequent ufe, and who have a kind of voluntary jurifdiction, without any fhare of the contentious jutifdiction, which are the public notaries: for the function of notaries imply two characters of a voluntary jurifdiction: the firf confifts in this, that their prefence and their fignature ferves as a proof of the truth of the acts which are (ped in their prefence; and that whereas in the writings, which are called private, that is to fay, which are figned only by the parties, their figuatures being unknown in courts of juftice, it is neceflary to verify them, if they are called in queition; the fignatures of notaries, who are public officers, carry along with them the proof of the truth of the acts which they fign; and the fecond of thefe characters confifts in this, that the acts which contain fome obligation of one party towards another, being figned by a notary public, give a right of mortigage on the eftate of the perfon who is bound, which a private bond or obligation, ligned only by the party, would not give: and fince it is in France the authority of juftice that gives the mortgage, it is by virtue of a kind of juriddiction that notaries have this function, that a mortgage is acquired by the means of their fignature; and it is becaufe of this voluntary jurifdiction, that, in fome of the provinces of France, it is ufual for the notaries to infert in the acts feed in their prefence, that thofe who are parties to them have duly fubmitted themfelves, and are condemned to perform what they promife: by which words they intend to fignify this voluntary juridiction, to which the contracting parties fubmit themlelves *.

- The function of notaries, in France, implies this kind of Jurifdiftion, which is fignified by the royal feal, of which they are the deponitaries for feaiing the acts : and this fea is prefuppofed in the acts which are not fealed.
Il n'elt rien de plus beau qu'n Notaire honnête homme, Mais dans ce corps on a vû de tout tems
Se gliffer des fripons parmi d'honnêtes gens:
Bóur. Efope. Richelet.
NOTTINGHAMSHIRE in England, has LincolnChire on the eaft, Leicefferfhire on the fouth, Derbyfhire on the weft, and Yorkfhire on the north; and is in compals 110 miles. It enjoys as healthy, mild, and pleafant an air, as any part of England. It is well watered with rivers, the chie of which are the Trent and the Idle. The foil is various, the eaft fide being very fruitful both in corn and pafture; but the weft is generally woody, in fome places producing nothing but coal, and fome lead. The chief commodities are cattle, corn, malt, wool, coal, wood, liquorice, cheefe, butter,

## N U B

leather, and tallow. The chief manufactures are flockings, glafs, and earthen wares; and it is noted for frong ale. Nottingham, which gives name to the fhire, and a town and county of itfelf, is reckoned one of the neateft in England, and has as good a trade as moft inland towns. It fands on the river Trent, which has at a great expence been made navigable to it by barges. Glafs and earthen wares are made here; but it's chief manufacture is weaving frame-ftockings :
the beft malt is made here of any town in thefe parts.
East Retford is an ancient borough, in the midft of a large plantation of hops, in which, and in barley, it drives a great trade, though not fo confiderable as formerly, becauie Work fop has got much of it away
Newark upon Trent is a handfome well-built town, of pretty good trade in corn, cattle, wool, \& 8c
Mansfield is a large populous town, in the foreft of Sherwood, which drives a great trade in malt, and has a marke well ftocked with corn, cattle, and other marketable goods.
Worksop is a fmall town, near the head of the river Ryton, with a market noted for plenty of liguorice and malt,
NOVA ZEMBLA, or NEWLAND, which the Dutch call the illanid of VEYGATS, is fituated in the North or Frozen Ocean, between 50 and 80 deg. of eaft long. and near the north pole; feparated from the province of Samoieda, in Ruffia; by a narrow ftreight called the Streights of Veygats. Whether it be an ifland, or part of fome great continent, is uncertain, no fhips having ever paffed to the northward of it, though many attempts have been made to find out a northeaft paffage to China that way. The Dutch, indeed, pafled the Streights of Veygats, fouth of Nova Zembla, and wintered on the eaft fide of it, anno 1596, but did not find it practicable to fail further, for the fields of ice they met with There are no conftant inhabitants here; but the Samoieds and Offiacs climb over the mountains of ice in the fitreights, when they are frozen over, and hunt elks and rein-deer here at proper feafons.
NOVOGOROD, in Ruffia. This duchy is fituate on the eaf of Pleikow, and the lake of Ladoga on the north; on the eaft the duchy of Belozeca, and Twere; and the province of Rzeva on the fouth.
It is called Novogorod Veliki, or Superior, to diftinguifh it from the Inferior, or Nizi Novogarod. It's extent from eaft to weft, on the fouthern part, is computed to extend near 250 miles, but grows more and more narrow towards the north. It's chief produce is corn, flax, hemp, wax, honey, and leather; in all which it drove a confiderable traffic, when it was governed by it's own princes, though, even 'then, it was very often obftructed by it's wars with Murcovy; but, fince it is become under it's fubjection, it is much decayed of it's flourilhing condition
The city of Novogorod Veliki, capital of this province, called by the French Neugard, and by the Dutch New Garten, fands on the Wolohova, and is a large and confiderable place, very populous, and well fortified.
NOYONNOIS, a province in France, was formerly a part of Picardy, but under the government of the Ifle of France, and is bounded on the north by Vermandois, part of which belongs to the election of Noyon; on the eaft by Laconois on the fouth by Soiffonnois; and on the weft by the bail wick of Roye in Picardy. There are here but two cifies of any note, viz.
Noyon, fituate on the declivisy of a hill, of an eafy defceit, on the rivulet Vorfe, which, at a quarter of a league's diftance, falls into the Oife. It is feven leagves diftant from Soiffons to the north-weft, five from Laon to the weft; and 16 from Paris to the north. It is a pretty large city, containing about 4500 inhabitants, and is well fituated for inland trade, which confifts here in wheat and oats, which they fend to Paris; they have alfo manufactories of linen cloths, lawns, and tanned leather.
Chauny is fituated on the river Oife, near the borders of the Ille of France, three leagues diftant from Noyon to the eaft, and fomething lefs from La Fere to the fouth. It is a royal city, and the feat of a cafteward.
NUBIA, the kingdom of, in Africa, is bounded on the north by Upper Egypt; on the eaft by the Red Sea; on the Couth by Ethiopia, from which it is feparated partly by the Nile, and partly by a long ridge of mountains, and the defert of Garham; and on the weft it is bounded by the kingdom of Goaga.
This country, though under fo hot a climate, being wholly within the torrid zone, is yet in many places, cfpecially on each fide of the Nile, very fruitful, the inhabitants being much given to agricultu:e, and producing fome fine fruits, plenty of corn, and fugar-canes; but of this laft they feem not to know the ufe righty, fo that it bears litile or no value, either among the natives or foreigners.
The chief commodities this country affords, are gold in great quantity, and very fine mulk, ivory, fanders, and other medicinal wrods.
Dongala, the metropolis of the king jom, is faid to be vety populous, and to conrain about 10,000 houfes, but molt of then meanly bult, of wood and mud only. The inhabitants, however, are rich, and drive a confiderabie commerce

## N U T

their own commodities, more efpecially fanders and mufk, for arms, linen clorh, und other wares.
SINNAR, another large city, faid to contain $1,00,000$ fouls, ftands on the weftern bank of the Nile, about 250 miles fouth of Dongala. They trade in gold, mulk, elephants teeth, and other commodities, for which they receive in exchange fices, filks, cottons, and other merchandizes from India; for they make no ufe of money in all their commerce, though they have varicty of coins among them. See Africa.
NUTMEG. The nutmeg is an aromatic nut, the kernel of a fruit, of the fize of a green walnut.
The nutmeg is of two forts, the male, or long nutmeg, and the female, or common nutmeg.
The tree that bears the nutmeg is of the bignefs of the peachtree, and the Jeaves have a very near refemblance to thofe of the fame tree, except that they are fhorter and narrower; after which comes the fruit.
This trce, according to Mr. Tavernier, is not planted, but grows by means of certain birds, or fowls, which fwallow the nutmegs whole, and throw them out again, without having digefted them; and the nutmeg being then covered with a vifcous and gluey matter, and being calt upon the ground, takes root, and produces a tree, which it would not have done if fet in the manner of others.
The nutmeg is likewife a commodity which none but the Dutch are mafters of, becaufe it grows no where but in the ines of Nero, Lentour, Poulcay, Rofgain, Poleron, Granaping, and Dame ifland, in the great illand of Banda in Afia
It is remarkable, that fo little a quantity of land fhould furnilh all the world with nutmegs; but it is not hard to be believed, when one confiders that thefe ines are fo ftocked with nutmeg-trees that it is almolt incredible; and befides, they lie in fo good a climate, that the trees are always loaden with flowers and fruit, and they have three crops a year, viz. in April, Augult, and December; but that of April is much more valued than thofe which are got in Auguft or December; and the climate is fo temperate, that the men live to a hundred and twenty years of age, and have nothing to do but eat, drink, and fleep, and walk about, while the women employ themfelves in feparating the outer fruit from the nutmeg, drying the mace, and breaking the fhells wherein is the nutmeg, being the chicf commodity of the country, and almoft all they live by.
The nutmegs we fell are nothing but the kernels of the fruit, which are covered with a hard, thin, and blackifh fhell; wihout this fhell there is found a covering, which is thin and reddifh, of a fweet fmell, and aromatic tafte, and is what we call mace, but vulgarly, and improperly, the nut-meg-flower. After the mace, there is a green pulpy fruit, that is of no ufe. From this it is to be obferved, that the nutmeg has three wrappings, or coverings, viz. the fheil, the mace, and the pulpy fruit, and not barely two, as a late author has oblerved; and the thing is fo evident, that, if any perfon will give himfelf the trouble to cut a preferved nutmeg in two, be will find the three parts which I have been fpeaking of above.
The trees which bare the female, or common nutmegs, grow not but in cultivated, or improved lands; but thofe which produce the long nutmegs grow in woods and forefts, which makes the Dutch call them wild nutmegs; but they are little ufed, becaufe they are almoft withour tafte or fmell, and void of any virtue; and for this reafon they are feldom brought hither.

## N U T

As to the common nutmegs, we ought to chufe fuch as ate heavy, firm, hard, and of a full plumpnefs, of a light gree whofe infide is finely marbled, and reddifh, and fuch as are of a fat oily body, which are the figns of their newnefs, and which, being grated, afford a fweet flavour, and, put into the mouth, yield a warm, piquant, aromatic tafte. As to the little hole that is met with fo very common in nutmers, it is a vulgar error to believe that that makes them lofe their virtue, for there is no nutmeg without it, as may be feen when the thin rind is raifed.
The ufe of the nutmeg is fo well known, it would be needlefs to fay any thing of it; we fhall only add, that it is valued in medicine, and being beat up with fugar, there is a powde made of it, which is admirable, taken in warm white wine for curing of catarrhs and rheums, that proceed from cold caufes; and this is called the Duke's Powder. The ufual quantity is to put two ounces of nutmegs to a pound of fugar, and fome add cinnamon.
The inhabitants of the ine of Banda make a confection of the green nutmegs, which is brought to us by the way of Holland, fometimes with fyrup, and fometimes without, Thefe are one of the beft preferves we have, being very proper to ftrengthen and invigorate the ftomach, and to reffore a natural heat to age; but their chief ufe is to carry to fea, particularly by the inhabitants of the northern parts, wherc they are much efteemicd, the people there being great lovers of thefe forts of warm fweet-meats.
As to the oil of nutmegs by expreffion, that which is brought us frequently from Holland is no better than frefh butter for which reafon the apothecaries ought to make it themfelves, rather than bny it at fuch a cheap rate, when it good for nothing. The true oil of nutmegs ought to be of a thick confiftence, of a golden yellow, a fweet aromatic fmell, and a warm poignant tafte.
The manner of making this oil is fo ealy, and hath been fo long know to every artift, that it would be fuperfluous, at this time of day, to pretend to teach it; only this may be obferved, that, when it is expreffed, it will be liquid and clear; but, when cold, it coagulates, and becomes yel lowifh, of a folid confiftency, and that it will yield a double quantity of oil this way, from the fame weight of any other fice, fruit, or feed whatever.
There is likewife another oil, made by diftillation, which is a white clear oil, very fragrant, and has double the ftrength and virtue of the former; and whatever the nutmeg has fingly in itfelf, is hereby highly exalted; fo that four or five drops is a dofe, in any proper vehicle, wherein it becomes cephalic, neurotic, ftomarhic, cordial, hepatic, uterine, and alexipharmic; it is good againft all cold difeafes of the head nerves, womb, \&c. expels wind, and cures griping of the guts.
The mace that grows round the nutmeg has all the fame virtues; difperfes wind, helps concoction, cures ftinking breaths, ftrengthens the child in the womb, ftops fluxes and vomiting: it is of thinner parts than the nutmeg, and, therefore, more piercing. The oils by expreffion and diftillation are made the fame way as thofe of nutmegs. Chufe fuch as have the largeft blades, the higheft and frefheft colour, and the cleaneft you can get.
As to the bark of the trunk, and the branches of the nutmegtree, it is fo little ufed, that it is not worth fpeaking of, and is feldom brought hither, by reafon of it's great likenefs to the white coftus, both in figure and tafte. Some fell coftus for the nutmeg-bark, but of this beware.

## The PRACTICAL BUSINESS of the CUSTOM-HO.USE continued.

## With regard to Naturalization.

NATURALIZATION by act of parliament-Provifion mult be exprefly made in the bill exbibited for that purpofe, that the perfons therein mentioned, fhall not be thereby enabled to be of the privy council, or members of either houre of parliament, or to take any offices or places of truft, or to have any grants of lands, tenements, or hereditaments from the crown. I Geo. I. c. 4 § 2 .
Aliens, or perfons not born within his majefty's allegiance, or naturalized, or made free denizens, may not be merchants or factors in the plantations, upon forfeiture of all their goods and chattles; $\frac{1}{3}$ to the king, $\frac{1}{3}$ to the governor, and $\frac{1}{3}$ to the inmer. 12 Car. Il. cap. 15 . § 2.

With regard to Naval Stores.
Pival Stores imported from the Britih plantations and

Scotland, for the premium and regulations, fee Naval Stores. Naval Stores if afterwards exported, the faid premium muft be repaid,

- Imported from Ruffia-A true account thereof to be laid before both houfes of parliament every feffion, by the commiffioners of the cuftoms, under their hands. Io and in W. III. c. 6. §4.

With regard to the Newfoundland Trade.
Newfoundland Trade, free to all his Britilh fubjects. io and II W. LII. c. 25- § I.
frefh man in five of hips bound thither, to carry at leaft one frefh man in five; of by-boats, to carry at leaft two frefh man in fix; that is, one that has'made no more than one voyage, and one that never has been at fea before; and are to make oath accordingly before the collector of the port, who is to give them a certificate thereof. 10 and II W. MII. c. 25. §9, 10 .

## O.

## O A K

## O A K

0A K. The oak is a tree, known to all the world, as well becaufe of it's durablervefs, as for the different ufes made of it. This tree is the emblem of virtue, ffrength, firmnefs, and duration, and was therefore, by the Ancients, dedicated to Jupiter. Some pretend that this tree is a mortal enemy to the olive and the walnut-tree; fo that neither of them can live near it.
The firft thing, and the moft confiderable we have from the oak, is the miffeltoe, which is an excrefeence that is found growing to the faid tree : this production appears extraordinary, in that the oaks do not produce the miffeltoe in all places: there are few that I know of, in this refpect, like thofe that are met with betwixt Rome and Loretto; efpecially near a little village named Foligni, about the midway. This excrefcence refembles the branch of trees, and is of a folid, heavy fubftance, of a greenilh brown outwardly, and of a yellowifh white within.
The branches are hard and compact, and bear feveral little fiprigs which intermingle with each other, and from whence arife a great many longith, thick leaves, that are femicircular, of a pale green; the berries are white, refembling our little white currants; and thefe berries contain a vifoous humour, which the Ancients ufed to make glue with. The miffeltoe continues always green, during the time it remains upon the tree; chufe the largeft, heavieft, and beft fed; you may know, if it be true, by the deep colour within, but the fureft way is to fee that fome part of the oak hangs to it. They attribute a great many virtues to the miffeltoe of the oak, and the Ancients revered it, and held it facred, as weil as the tree itfelf. Julius Czfar and Pliny fay, that the Druids affembled themfelves under thefe trees to perform their devotion; thefe Druids inhabited the countries we now call Villa de Dreux, near Chartres, whence it is evident; that there have been oaks which bore miffeltoe in France.
This miffeltoe, taken invardly, is efteemed an excellent remedy againft the palfy, apoplexy, falling ficknefs, and worms: it is alfo an ingredient, in many compofitions, for external ufes, as ointments, plafters, \&c. as a refolvent. The berries are acrid and bitter, and their juice is good to ripen abfeeffes, and haften their fuppuration.
Miffeltoe is alfo the bafis of the pulvis ad guttetam.
It is found growing upon many other trees, as well as the oak; but it's virtues are fuppofed not to be fo great when it is taken from any other tree.
All the parts of the oak contain a great deal of oil and effential falt; the bark and leaves are aftringent and refolvent, good in the gout, fciatica and rheumatifms, ufed in fomentations, and taken inwardly in decoctions to fop diarrhoeas and hæmorrbages.
The fecond thing we have from the oak, is a little plant we catl polypody of the oak, which is like what we have from walls: this fort of plant grows from places where the branches of the oak are forked, by means of fome fmall earth that lights there, and the water which drops upon it: it grows likewife upon the flump of the faid tree. We rarely ufe this polypody, becaufe it is not fo proper, fince that is much better which grows upon old walls; which is the fort that is fold about Paris. Chufe the root fuch as is new, plump, dry, brittle, of a reddifh tawny colour on the outfide, and greenifh within, fweet and fugar-like, inclining fomething to a liquorifh tafte.
Quercus vulgaris, the common oak, is a thick, ftrait, durable tree, fpreading it's branches wide; the trunk is covered with a thick ruggid bark; the leaves are large, longifh, and broad, deep flahed or indented, hanging upon fhort ftalks ; the flowers are in long fhells or hulks, compofed of little threads hanging upon one another by a fine fiber or ftring; thefe hufks leave no fruit behind them, the fruit growing in other parts, which are the acorns, that are about the fize of the olive, of an oval, or cylindrical figure, contained in a hard grey cup, called in Latin, cupula feu calix; this acorn is covered with a hard rind, that is fmooth and Mhining; green at firf, but yellowih as it grows riper: within this rind we meet with a fort of kernel, or hard felhy feed, compofed of Vol. II.
two lobes. The acorns hang upon the tree by long or Mort flender ftalks, and their tafte is aftringent.
All the parts in the oak contain in them a good deal of oil and effential falt: the acorn, called in Latin, glans quercina is likewife employed in medicine. Chufe fuch as are large and plump, feparated from the rind, and dried gently; bus take care of worms, to which they are fubject; let them be reduced to powder before ufing: they are aftringent, and proper to appeafe wind cholicks, and the fluxes of women newly delivered.
Polypodium, or common polypody, bath a root, taking a very flight and fuperficial hold of the earth; it is pithy and brittle, about the third part of an inch thick; within it is of a pale green colour, but outwardly a little reddifh, and covered over with fine thin fcales, when it is frefh and green ; but being dry, it becomes of a more red colour : it is knotty, or full of round knobs, and adorned with feveral fmall filaments like hairs: jt's pith is fweetifh, with fomewhat of a Charp, auftere, or ftyptic tafte. The leaves fpring out of the knots, or hollow knobs of the roots; they are fingle, about nine inches in length, and parted into feveral jaggs or fcallops, cut clofe into the ribs; they are fharp pointed, of a light green colour ; it bears no flowers, but there arife feveral fmall knobs, like blifters, upon the lower or under part of the uppermoft jaggs of the leaves, ranked in a double order ; they are round, and about the fixth part of an inch thick, confifting of a fine duft, that is firft a little yellowifh, and turns of a bright golden colour; every grain of this duft is a fort of fmall feed-veffel, being of a round figure, and membranous, which, when ripe, breaks into two equal parts, and pours forth feveral feeds, fo fmall that they can fcarcely be defcerned by the naked eye.
Polypody grows upon rocks, old walls, and ancient decayed trees; but that which grows upon old oaks is reckoned the beft; upon which account, polypody of the oak is commonly prefcribed, and is ranked among the purging medicines: yet Dodonæus denies it's cathartic quality; neither ought we to diffemble the matter, for the decoetion of it fcarcely moves the belly; but the powder of it does fometbing, being given from one dram to two drams.
This root contains a great deal ofoil, and no fmall quantity of an acid phlegm; but this is, as it were, fuffocated by the oil, which is the caufe that it produces no alteration of colour on blue paper, when it is dipped in the infufion of it. There is likewife a large quantity of earth extracted from polypody, by a chemical refolution. It is from the earth that it's ftyptic and brackifh tafte proceeds. The roots are very properly adminiftred in all diftempers proceeding from a faltifh difpofition of the blood: fuch as the fcurvy, rickets, and hypochondriac paffions; they alfo help to abate an inveterate cough, when it is attended with a faltifh fittle. They are prefcribed in potions and apozems.
Take of polypody of the oak, two ounces; falt of prunella, one dram ; infufe them in a quart of warm water; ftrain it: to be taken by cupfuls or fpoonfuls, as an apozem. Or take polypody of the oak, one ounce and a half; clecampaneroots, three ounces; infufe them all night in a quart of warm water: in the ftrained liquor add two ounces of Calabrian manna; mix and make a ptifan to be drank. Take of the decoction of polypody-roots, fix ounces, in which infufe two drams of fena-leaves; in the frained liquor diffolve the electuary of diacarthanum, three drams; mix and make a purging potion. Polypody-roots are ufed in the catholicelectuary, the lenitive-electuary, the confection of bamech, the panchymagog extract of Hartman, Quercetan's pills of tartar, and in the hiera of coloquintinda.
The oak, whofe bark, $\& \mathrm{c}$. are ufed in medicine, is the quercus vulgaris, Ger. 1156. Quercus latifolia, Park. 1086 The milfeltoe is the vifcus quercus \& aliarum arborum, J. B. I. 89. Vifcum vulgare, Park. 1392.

And the polypody is the polypodium vulgare, C. B. Park. 8 zc .
It is to be obferved, that both thefe are much more frequently found on other uees, than on the oak.

## OAT

The other fpecies of the oak, mentioned in the catalogues of officinal trees, are,

1. The phagus, five efcalus', Park. 1387 . J. B. 1, 2,74 , the efculent, or fweet oak, the acorn of which is eatable, not being fo bitter as thofe of the reft.
2. The Cerrus Aldrov. Dendr. 253. Cerris majore glande, Ger. 1162. Quercus calyce echinato, glande majore, C. B. Pin. 420. The bitter oak. And,
3. The robur tertia Clufii, J. B. I, 2, 76. Robur five galla 3. Thajor altera, Ger. Em. 1314. The gall oak.

The common oak grows naturally in many kingdoms; the efculus is found in Greece and Dalmatia, the cerrus in Italy, and the laft in Smyrna and other places. Pomet.

REMARKs.
There are five forts of oak in England; but we fhall only recommend two kinds of them to be planted for timber. The beft is the upright-oak, which grows more eregt than any other; the other is the large fpreading oak. We have many inftances of thefe kinds, that have attained to fuch prodigious greatnefs of ftature, that the cimber alone of one tree has been fold for upwards of 501 . The oak doth not only afford us the utmoft ferviceable timber for naval architecture, but alro for other building. It's bark is ufeful to tanners, and the oak is therefore cut down about April, when it's bark will peel. The acorns are excellent food for hogs. This tree delights in moift ground of a good deph,' and will profper in the coldeft clay, and, as Mr Evelyn fays, in graprolperfo.
Some oaks having been fown in hedge-rows, bave, in the fpace of 30 years, borne a ftem of a foot diameter. There have been fome feedling oaks, of 20 years growth, of near that fublance, which have never been removed from the place where they were fown; and every plantation of oaks fhould be fet with acorns, on the very fpot where they are to remain, and we fhould be careful to chufe our acorns from thriving, vigorous trees. The diffance between them ought to be about 33 feet, and the fpace between the oaks fhould be interfown for underwood.
The oak is an eftimable tree or plant, in a proper fituation, for the benefit of pofferity. There is no part in bufbandry which men commonly more fail in, neglect and have caufe to repent of, than that they did not begin planting betimes. And indeed, fuch perfons who have been deaf to demonAtration at the firft poffeffion of their eftates, and are afterwards convinced of the vaft advantages to be reaped by an early plantation, either from the experience of their neighbours or themfelves, mult have a pungent retrofpect upon this occafion.
Every man is naturally willing to enjoy the profits of the works, as we may fay, of his own hands; and he, therefore, who begins at 50 to be fenfible that he has loft many a fair thoufand, by neglect of improving his eftate between 20 and that age, is to himfelf indeed a lofer, but a warning to others to avoid that folly. See the articles Earth, Husbandry, Manure, Norway, British America, Mississippi, Indian Affairs,
OATHS. [Custom-House Oaths, and other Revenue Oaths.]

## I. Of the Oaths taken by the Officers of the Cuftoms.

## The Comptroller.

* Who, as well as the cuftomers, were to be chofen from amongtt the beft and moft fufficient men, and not to be made for affection or reward, or upon any follicitation, but upon defert; and were to fit with the cuftomers, and in all things to cheque and imitate their tranfactions: and, as the cuftomers were wont to write their accounts in rolls, the comptrollers were to keep counter-rolls; which counter-rolls, or accounts, they were to deliver into the exchequer yearly, upon oath. And now there are collectors appointed, to receive and account for the king's duties; they are likewife to cheque all their tranfactions, by examining and figning all accounts, difpatches, \&cc. and by keeping the like books of accounts: and they are to be privy to all orders of the commiffioners, and to be confulted with, in the whole management and bufinefs of their refpective pofts, and to join with the collectors in all their proceedings.
* 12 Rich. II. cap. 6.51.

And for the due and faithful difcharge and execution of their duties, thefe comptrollers were, at their admiffion, to take the following oath, viz.

- Ye fhall fwear, That well and truly ye fhall ferve the king, in the office of comptroller of the king's cuftoms and rubfiin the in the place of cuftomer; and truly ye fhall enter all the goods and things cuftomable, the which fhall come to the faid port, or fhall pafs from the fame: and that ye fhall no gift take for to do your office, nor for any thing that may fall in difadvantage of the king; nor any merchandize, nor any other thing cuftomable, ye fhall not fuffer to pafs out of the faid port, without cuftom due be paid: and ye fhall do the office yourfelf, and dwell thereupon in your proper perfon,

## O A T

without making any fubftitute or deputy under you: and ye fhall write the rolls with your own hands; and the king's profit ye fhall wait and do, inafmuch as ye may, after your knowledge and power: as God you help and his faints.'

Same rules, in regard to Oaths in particular, that are to be obferved by the officers of the cuftoms in general.

1.     * That no perfons are to be employed in the bufinefs of the cultoms, 'till they had given fecurity, and have taken their corporal oaths in the following form, viz.
Deputation dated the 'I, A. B. (his employment) do fwear D. E. $\longrightarrow$, furities, to be true and faithful in the execu-
D. E. — of of —— penalty-ll. juravit apud -_ die corum nobis.
B. C.-Collector.
C.D.-Comptroller. tion and difcharge (to the beft of my knowlege and power) of the truft committed to my charge and infpection, in the fervice of his majefty's tion, in the rervice of his majeftys
cuftoms; and that I will not take or receive any reward or gratuity, directly or indirectly, other than my falary, or what is or thall be allowed me from the crown, or the regular fees eftablifhed by law, for any fervice done, or to be done, in the execution of my employment, upon any account whatfoever. So help me God.'
A. B.

* 13 and 14 Car. II. cap. 2 § 33. 4 and 5 W. and M. cap. 5. § 25 . But note, this act does not dised who fhall adminifter this oath.

Which oath is to be adminiftered by the principal officers of every out-port, or any two of them, and to be entered or regiftered in a book to be kept in the cuftom-houfe for that purpofe: and if the fecurity be given at the port, the bond muft be returned to the commiffioners, and the fufficiency of the fureties, with their places of abode, certified to the examiner of fecurities.
2. * That all perfons employed in the cuftoms, in any outport, muft, at their admiffions, likewife take the aforefaid oath, before two juftices of the peace, in the county, town, or place where their employments thall be, upon forfeiture of their employments, for refufal or neglect: and the faid juftices muft certify the taking of this oath, to the next general quarter-feffions.

* 6 and 7 W. and M. cap. 1. $\$ 5,6$.

And when any officer, having taken thefe oaths, is thereupon to be admitted, the collector and comptroller are- to deliver him his deputation or commifion, taking a receipt for the fame, in a book to be kept for that purpofe, and allo at the foot of the copy of his inftructions annexed to his bond, which are to be tranfmitted together to the commiffioners.

## The Customers.

* Who were to be chofen from amongft the beft and moft fufficient men to be found, to the lard treafurer's eftimation, and not for affection or reward, nor upon any follicitation, but upon defert: and by the king's letters patent, under the great feal of England, were appointed collectors of the great and petty cuftoms, as alfo of the fubfidy of tonnage and poundage : which pffice they were not to have $\dagger$ for life, or term of years, but only during the king's pleafure; and if their patents were made to the contrary, they were to be void.
* 12 Rich. II. cap. z. $\$ 1$.

Vnd for the due and faithful difcharge and execution of their duties, thefe cuftomers were, at their admiffion, to take the following oath, viz.
- Ye fhall fwear, That ye fhall make continual abiding in the port -—, and thall overfee the charge of wool, leather, and wool-fells, and all other merchandizes and things cuftomable, and the number of facks in the faid port; and, in asmuch as in you is, ye thall not fuffer that the king have hure or lofs there; and that true account thereof ye fhall yield; and of the iffues of the faid cuftoms, truly ye fhall anfwer, without fauxim or fraud, to be done in any point: as God you help, and his faints.'
* They were, upon ten days notice given them in writing, by the king, or fix of his privy-counfellers, to declare what money due to the king, was in their hands, and to make ready and full payments, upon forfeiture of office; and $\dagger$ they were to fwear to their accounts in the exchequer.
$* 7$ Edw. VI. cap. 1. $\$ 13$.
+4 Hen. IV. cap. 13. $\$ 1$.
But now there are particular officers appointed, by the name of collectors, who receive the king's cuftoms, fubfidies, \&c. and account for them to the comptroller-general; fo that
cultomers have only the accounts to keep, which they fill deliver into the Exchequer, yearly upon oath.

## II. The Searchers or Finders.

* Who were to be chofen as the cuftomers were, and were appointed for their affiftance in the bufinefs of the cuftoms, without doors, to fee that no goods were imported or exported without due payment of duty; and not being allowed any falary, were to take the moiety of all forfeitures and feizures for their pains: and they were to keep entries of all cockets, sxc. paffed to them from the cuftomers, and likewife of their own feizures, and were to account yearly for the truth of their tran\{actions.
\#:2 Rich. II. cap. z. § 1
And, for the due and faithful difcharge and execution of their duties, thefe fearchers were, at their admiffion, to take the following oath, viz.
- Ye fhall fwear, that ye fhall ferve the king well and truly in the office of the fearcherthip in the port of - and do the king's profits in all things that belongeth to you to do, by way of your office: and well and truly ye fhall make due fearch of all the fhips and veffels coming in or paffing out of the faid port, and truly anfwer the king of all that thall belong unto him in your faid office, without fraud or maligne, after your wit and power: as God help you, and his faints.'

## REMARK.

Under the article Affidavit, we have confidered the ill confequences which, is greatly to be feared, may attend the multiplicity of oaths that are required to be taken in this nation by traders, in relation to the public revenue. If the conftitution of the public revenue was fuch, that no oaths need be required to be taken but by the officers concerned in the collection, it might prove far lefs injurious to the public, by removing the motive to perjury; which is grown to fuch a pitch among us, that all wife and good men lament it as one of the greateft evils that can attend the community.
This confideration alone is inducement fufficient, methinks, to point out the neceffity of fo Changing the system of, the puclic revenue, that there might be no occafion for any oath to be taken in regard thereunto, except by the officers concerned in it, and not even by them. How this might be happily effectuated may be eafily inferred from what has been urged relative to the revenue throughout this work. In the interim, we fhall only make fome fhort obfervations on oaths in general, while the revenue continues in it's prefent ftate and conftitution.
As the impofition of an oath was always efteemed to be the greateft tie and obligation that could be contrived, for the difcovery of the truth of any fact; and the ufual confirmation of all oaths, being in the moft folemn manner to call upon, and appeal to, the almighty God, who knows the fecrets of all hearts, to judge of, and be a witnefs to, the truth thereof, and to beg his help, upon no other terms, than that what is there afferted be true, and in teftimony thereof. kiffing his holy gorpel: I fhould think that none but the moft profligate, or the moft ignorant of mankind, would be fo hardy as to difhonour God's name, by thus taking it in vain, which muft either fuppofe that be knows not whether we fipeak true or falfe, or elfe, that he will countenance our folemn lies and perjuries.
And, with refpect to the perfons thus affirming the truth of any fact or thing upon oath, it muft be confidered, that if he knows that there is not perfect truth in that he fwears, he is guilty of wilful and downright perjury; as he alfo is, if he fwears to the pofitive truth of that whereof he is wholly ignorant, nay, or only doubtful; for, though the fame fhould be true, yet fuch fwearing is but at a venture, to what might as well be falfe. And, as all perfons making oath to the truth of any thing, are fuppofed to perfectly know the whole affair, and to have carefully informed and fatisfied themfelves in every particular circumftance, which may occalion the lealt doubt ; it is not only very filly, but very wicked, to footh themfelves with the poor evalion, that the fact or cafe might be fofor ought they know, becaufe they know nothing of the matter. And of this abominable nasure, is that Chameful excule for thofe perjuries, which it is to be feared, are but too frequently committed at the cuftomhoufe, viz. That it is but a Custom-House Oath; as if God, who is omniprefent, did not fee, and was not equally offended at profaning his name there, as at any other place whatfoever: but let thefe offenders remember the punithment, which is denounced againft them in the third commandment. Since, therefore, oaths are of fuch a facred and folemn nature, they ought to be adminiftered with all imaginable reverence, and not flightly and with indifference ; but, after having interrogated the perfon concerning every particular circumitance, and being fatisfied that he underfands the nature of an oath, and does not offer to fwear ignorantly or rafhly, and not having any reafon to doubt his fincerity, the
whole oath thould be maturely, deliberately, diftinctly, and reverently rehearfed to him.
And, as the multippicity of oaths in the bufinefs of the revenue, particularly in the cuftoms, does, it is to be feared, in a great meafure, leffen that awe and juft regard that ought to be paid to fuch folemn and facred ties; it is much to be wifhed, that fewer oaths were neceflary; and therefore we would recommend, that any fuperfluous oaths thould not by any means be exacted ; but only fuch as are either exprefsly enjoined by the letter of the law, or are abfolutely neceffary for the dilcovering or afcertaining any thing for the fervice of the revenue, which cannot be obtained by any other means.
As to the perfons to which the oaths are to be adminiftered, it muft be carefully obferved, that they who offer to fwear, are the proper perfonsin the eye of the law ; and where the laws have not particulafly directed, that they be fuch perfors as are the moft proper, according to the nature of the cafe, as being either principally concerned, or the moft knowing in the whole affair ; provided they are not boys, or fuch ig norant perfons as are not capable of underftanding the nature and confequence of an oath.
Befides the oaths before-mentioned, there are likewife promiffory or obligatory oaths, particularly in the report of a Thip outwards, concerning the not relanding of goods intitled to a drawback, bounty, \&c. the breach of which is not lefs criminal, than of any other oath ; and, if the mafter at the time of making fuch oath, has no real intention to make it good, or whether he then has or not, if he afterwards breaks the fame, he certainly muft be deemed guilty of perjury.
And laftly, as to the oaths in general, it muft be remembered, that they are always to be taken according to the common and ufual interpretation of the words, and in the fame fenfe that they are known to be defigned, and not with any private referve or evafion. See Officers of the Customs.
OFFICERS of the CUUSTOMS. The officers principally employed in the management of the cuftoms in an out-port, were originally no more than three, viz. a cuftomer, a fearcher, a comptroller.

## I. The Customers,

* Who were to be chofen from amongft the beft and moft fufficient men to be found, to the lord treafurer's eftimation, and not for affection or reward, nor upon any follicitation, but upon Desert : and, by the king's letters patent under the great feal of England, were appointed collectors of the great and petty cuftoms, as alfo of the fubfidy of tonnage and poundage.
* 12 Rich. It. cap. 2. § 1.

Which office they were not to have * for life, or term of years, but only during the king's pleafure; and, if their patents were made to the contrary, they were to be void.

* 14 Rich. II. cap. 10.61 .
${ }_{17}$ Rich. II. cap. 5. 5 I.
1 Hen. IV. cap. 13. § 1. 31 Hen. VI. cap. 5. 5 I.
And, for the due and faithful execution of their duties, thefe cuftomers were, at their admifion, to take the following oath, viz.
'Ye fhall fwear, That ye fhall make continual abiding in the port of -———, and fhall overfee the charge of wool, leather, and wool-fells, and all other merchandizes and things cuftomable, and the number of facks in the faid port; and in as much as in you is, ye fhall not fuffer that the king have hurt or lofs there; and that true account thereof ye fhall yield; and of the iffues of the faid cuftoms, truly ye fhall anfwer, without fauxim or fraud, to be done in any point: as God you help, and his faints.'
* They were upon ten days notice given them in writing, by the king, or fix of his privy-counfellors, to declare what money due to the king was in their hands, and to make ready and full payment, upon forfeiture of office; and they were to fwear to their accounts in the Exchequer.
* ${ }_{7}$ Edw. VI. cap. i. $\$ 13 . \quad \dagger 4$ Hen. IV. cap. 20. § 1 \% But now there are particular officers appointed, by the name of collectors, who receive the king's cuftoms, fubfidies, \&c. and account for them to the comptroller-general; fo that cuftomers bave only the accounts to keep, which they fill deliver into the Exchequer yearly upon oath.
And thefe cuftomers * were to be refident upon their office, without making deputies, and to be fworn to do the fame, and not to be abfent by three weeks at the moft, unlefs other wife in the king's fervice of record, upon lofs of office, im prifonment, and forfeiture of 1001 , to the king : but now $\dagger$ the cuftomers of every head-port, mult have one able and fufficient deputy or fervant at the leaft, to refide at all members and creeks, appointed by commiftions out of the court of Exchequer, for the entering, clearing, paffing, \&c. of hips and merchandizes.
*. 1 Hen. IV. cap. s.f. 4 Hen. IV. cap. 20. 5 .
${ }_{13}$ Hen. IV cap ${ }^{\circ} 1$
1 Eliz. cap. 11. 8 . 13 and 14 Car. II cap. $11 . \$ 14$

In fome of the out-ports, there is a cuftomer inwards and another outwards, but in moft ports the fame perfon is cuftomer both inwards and outwards; and thefe cuftomers are fcarce ever known to act themfelves, unlefs where they are collectors likewife; but in the fmaller ports do ufually appoint the collectors to be their deputies, and in the larger ports they have diftind deputies; to whom they are obliged to allow at leaft 201. per ann. or elfe to relinquith to them the whole fees.
For the principal other regulations concerning cuftomers, fee the bufinefs of the cuftom-houfe in general throughout the work.

## II. The Searchers or Finders,

* Were originally to be chofen in the manner of the cuftomers, and were appointed for their affiftance in the bufinefs of the cuftoms without doors, to fee that no goods were imported or exported without payment of duty ; and not being allowed any falary, were to take the moiety of all forfeitures and feizures for their pains: they were alfo to keep entries of all cockets, $\& \mathrm{c}$. paffed to them from the cuftomers, and likewife of their own feizures, and were to account yearly for the truth of their tranfactions.
* 12 Rich. II. cap. 2. § 1.

And, for the faithful execution of their duty, thefe fearchers were, at their admiffion, to take the following oath :

- Ye fhall fwear, that ye fhall ferve the king well and truly in the office of the fearcherfhip in the port of and do the king's profits in all things that belongeth to you to do, by way of your office; and well and truly ye thall make due fearch of all the fhips and veffels coming in or paffing out of the faid port; and truly anfwer the king of alt that fhall belong unto him in your faid office, without fraud or maligne, after your wit and powar: as God help you, and bis faints.
* They were to be fworn not to let thoir offices to farm, nor to appoint deputies, but to be refident therean theoffelves, and not be abfent by three weeks at the moft, unlefs otherwife in the king's fervice of record, upon lofs of office, imprifonment, and forfeiture of 1001 . Bar now the fearchers of every head port, muft bave one able and fufficient deputy or fervant at the leaft, to refide at all members and creeks, appointed by commiffions out of the court of Exchequer, for the paffing, 臽ipping, clearing, 8zc. of Bips and mercbandizes: and it is the practice for the fearchers likewife to appoint deputies at the principal ports, fcarce any of them acting themfelves; and thefe deputies in the fraller ports are often the fame perfons that are appointed land-waiters, but in the larger ports it is ufual to have diftinct deputies to whom they are obliged to allow at leaft 20 l : or elfe to relinquifh to them the whole fecs.
- 4 Hen. IV. cap. 20 . $\$ \mathrm{r}$.

4 Hen. IV.cap. 2v. § 1.
${ }_{13}$ Hen. IV. cap. 5. § f .
$\dagger$ IEliz. cap. 11 . §8. 13 and 14 Car. II. cap. 11 . § 14.
Though the bufinefs of a fearcher feems originally to have been not only to attend at the fiipping of goods defigned to be exported to foreign parts, but likewife at the landing of goods imported from foreign parts, and alfo at the chipping and landing of goods coaftwife; yet now there being particular officers appointed by the names of land-waiters for the landing, examining, and delivering of all foreign. goods imported, and coaft-waiters for the examining, landing, and fhipping of goods, brought and carried coaftwife; the fearchers are only concerned in the examining and fhipping of goods defigned to be exported to foreign parts, and even in that part of the bufinefs, the land-waiters are moftly joined with them.
For other regulations relating to this officer, fee the bufinefs of the cuftom-houfe throughout the whole work.

## III. The Comptrollers,

* Were originally, as well as the cuftomers ${ }_{2}$ to be chofen from amongft the beft and moff fufficient men, and not to bo made for affection or reward, or upon any follicitation, but upon Desert; and were to fit with the cuftomers, and in all things to cheque and imitate their tranfactions: and, as the cuftomers were wont to write their accounts in rolls, the comptrollers were to keep counter-rolls; which counter-rolls or accounts, they were to deliver into the Exchequer yearly, upon oath. And now there are collectors appointed to receive an account for the king's duties, they are likewife to cheque all their tranfactions, by examining and figning all accounts, difpatches, \&c. and by keeping the like books of accounts: and they are to be privy to all orders of the commiffioners, and to be confulced with, in the whole management and bufinefs of their refpective ports, and to join with the collectors in all their proceedings.
* 12 Rich. II. cap. 2. § 1.

And, for the faithful execution of their duty, thefe comptrollers were, at their admifion, to take the following oath, viz.

Ye fhail fwear, that well and truly ye fhallferve the king in the office of comptroller of the king's cuftoms and fub fidies, in the place of cuftomer; and truly ye Chall enter all the goods and things cuftomable, the which thall come to the faid port, or thall pafs from the fame : and that ye fhall no gift take for to do-your office, nor for any thing that may fall in difadvantage to the king; nor any merchandize, nor any other thing cuftomable, ye fhall not fuffer to pafs out of the faid port, without cuftom due be paid: and ye fhall do the office yourfelf, and dwell thereupon in your proper perfon, without makiug any fubstitute or deputy under you: and ye fhall write the rolls with your own hands; and the king's profit ye thall wait and do, inarmuch as ye may, after your knowledge and power : as God you help, and his laints.'

* They were to be fworn as above, to be continually refident upon their offices, without making deputies, and not to be abfent by three weeks at the moft, unlefs otherwife in the king's fervice of record, upon lofs of office, imprifonment, and forfeiture of rool. to the king: but now the $\dagger$ comptrollers. of every bead-port mult have one able and fufficient deputy or fervant at the leaft, to refide at all members and creeks, appointed by commiffions out of the court of Exchequer, for the entering, paffing, clearing, \&c. of hips and merchandize: and it is the practice of the comptrollers likewife, to appoint deputies at the principal ports, fcarce any of them acting themfelves; and thefe depuries in the fmaller ports, are often the collector's clerks, but in the larger porto it is ufual to appoint diftinct deputies; to whom theys are obliged to allow at leaft 201 . per ann. or elfe to relinquith to them the whole fees.
* i Hen. IV. cap. 13. § t .

4 Hen. IV. cap. 20. 51.
$1_{3}$ Hen IV. cap. 5. $\$ 1$.

* 1 Eliz. cap. 11. §8. 13 and 14 Car. II. cap. 11. $\$ 14$. And the perfons who officiate as comptrollers are, by the honourable the commiffioners of the cuftoms, appointed comptrollers of the duties on coals, culm, and cinders, brought coaftwife, for which they are allowed poundage.
For other regulations relating to this officer, fee the general bufinefs of the cuftoms throughout this work.
Having thus given a fhort account of the officers, which, by the old laws, feem to have been originally entrufted with the management of the cuftoms, I fhall now proceed to treat of the feveral officers, which, by the great increafe of bufineff, have fince been found neceflary to be added, and are now actually employed in that revenue: the principal whereof are,
I. The Collectors.

Though the cuftomers were originally the collectors of his Majefty's cuftoms, \&c.: and are ftill fo ftiled in their patents, yet of later years, there have been new and diftinct officers appointed for that purpofe, by the titles of Collectors, who are entitled the officers of the commiffioners of the cuftoms; by whofe deputation they act, and under whom they have, at their refpective ports, the whole management and direction of levying and collecting his Majefty's cuftoms, and other duties on goods and merchandizes imported and exported, and of the duties on coals, culm, 'and cinders, brought coaftwife ; and alfo the direction of all the other officers employed in that revenue, deputed by the faid commiffioners: and are affo, by the fame authority, impowered to infpect the behaviour of the patent-officers, or their deputies, that in cafe of any mifbehaviour, they may reprefent the fame to the faid commiffioners.

## II. The Surveyors,

Are a kind of infpectors and fupervifors of the whole bufinefs of the cuftoms without doors, as well by land as by water; though in the larger ports there are feparate officers appointed by the names of Tide-furveyors, to execute that duty by water : but in all ports they are to attend, at the Chipping and landing of goods, as well to and from foreign parts, as coattwife, to fee that the proper officers regularly difcharge their refpective duties, and to adjuft the tares of goods, \&ic. and they are likewife to examine and jerque the land-waiter's books [fee the article JERqUE]: and though thes are not required to fend up quarterly accounts of the imports and exports, as the collectors, cuftomers, and comptrollers do ; yes they are to compare the original warrants granted for the land ing of all goods imported, and copies of all cockets granted for the thipping of all goods exported, with the collector's quarter-books which they fend up, and to atteft under their hands; that the true qualities and quantities of all the goods landed and fhipped off during that quarter, are truly entered therein.

## III. The Land-Waiters,

Are to attend at the landing of all goods imported from foreign parts, and take an account thereof, in order that his Majefty's full duties may be paid for the fame : and in fome ports they alfo execute the office of a coaft-waiter.
They are likewife filed Searchers, and are to attend with the patent-fearchers, in the execution of all cockets for the

## OFF

## O F F

hhipping of goods to be exported to foreign parts: and in all cafes where drawbacks or bounties are to be paid on the exportation of any goods, they as well as the patent-fearchers, are to certify to the thipping thereof on the Debentures. See the article Debentures.
For inftructions in the method of examining and delivering of foreign goods imported, fee the bufinefs of the cuftoms throughout this work.

## IV. The Coast-Waiters,

At their refpective ports, are to attend at the landing and fhipping of all goods coming from, or going to any other port within Great-Britain, to take an account thereof, and fee that they exactly agree in quality and quantity, with the fufferances granted for the landing or fhipping; fo that under the colour of bringing or fending one fort of goods coaftwife, any other forts may not be fraudulently imported or exported, to the prejudice of his Majefty's revenue.

## V. The Tide-Surveyors

Are at all times, when his Majefty's fervice requires it, to attend the fame by water, to vifit all fhips from foreign parts, upon their arrival into port, in order to put tide-waiters on board, and to rummage for prohibited goods, or goods concealed, and are frequently to call upon the faid fhips, to fee that the tide-waiters are on board, and do keep their watch; and when it is fignified to them that the fhip is wholly difcharged, they are to go on board and rummage the fame, and if they do not find any goods on board, they are to take off the tide-waiters.
They are likewife to place tide-waiters on board outwardbound lhips, whereon there have been laden any goods intitled to a drawback or bounty, to prevent the fame from being relanded; and are frequently to vifit the faid fhips, to fee that the officers on board do their duty: and, when the faid Chips have been regularly cleared in the cuftom-houfe by the collector, \&c. and are ready to fail, they are to difcharge the tide-waiters.
VI. The Tide-waiters, or Tidesmen, Are to be placed by the tide-furveyors on board all fhips laden with goods from foreign parts, to prevent the fraudulent landing or conveying of them away without payment of his Majefty's duties, which is to be fignified to them by a note under the land-waiter's hands: and, when they have received fuch note, order, or warrant, from the land-waiters, for permitting any goods to be unladen, they are to take an account of the marks, numbers, and outward package, in a book to be given them for that purpofe: but they may fend all fmall parcels of goods liable to berun, to the king's ware-
houfe, for fecurity of the duties, without any order, havir firft entered them in the faid books. And during the time that they are on board, they are to prevent wines from being filled up, or the package of any goods opened, and endeavour to difcover all goods concealed, as likewife any bulk tobacco, or any other prohibited goods, and to feize the fame.
They are likewife to be placed on board outward-bound hips, whereon there have been laden any goods intitled to a drawback or bounty upon exportation, to prevent the fraudulent relanding: and during the time they continue on board, they are to take care that the packages of any goods be not altered.

## VII. The Boatmen or Watermen,

In fome ports, are appointed only to row and give their attendance in the tide-furveyor's boats; but in moft ports they likewife, when occafion requires, officiate as tide-waiters, by watching on board lhips, \&c.
VIII. The Coal-Meters,

Are to attend at the delivery of all fhips coming coaftwife with coals, culm, or cinders, to mete, meafure, or weigh the fame, and to take account of the full quantities delivered, in order that his Majefty's duties may be fully paid.

## IX. The Riding Officers,

Are appointed to refide at, or near fome particular places on the fea-coafts, and have certain diffrichs allotted them; fome part whereof they are to vifit daily, in order to difcover any veffels hovering on the coafts, with a defign to land or take on boatd any prohibited or uncuftomed goods, which they mult by all means endeavour to prevent; and in cafe of the fraudulent landing or fhipping of any goods, to feize the fame, with the veffels, boats, \&c.
They are to enter each day's tranfactions and proceedings, with their motions from place to place, in a proper book to be kept for that purpore; from whence at the end of each month, two journals are to be tranferibed, and fent or delivered to the collector; one whereof to be preferved in the office, and the other to be tranfmitted to the commiffioners, in order'to be examined by the perfons appointed for that purpofe.
But, before thefe journals are thus tranfmitted, the collector is, on the back thereof, to make his oblervations how far the officers have performed their duty. And, as there will be no neceffity to mention thefe officers bereafter but occafionally, we Chall here add the forms of their books and journals, which muft be as follow :

Port of
Southampton.

Diftrict.
From $\mathrm{A}-$ to B
Journal of B. C. officer at D———, for the month of

| Day of the month. | When travelling. |  |  | When at | ending. | $\begin{aligned} & \text { Wind } \\ & \text { and } \end{aligned}$ | Tranfactions and obfervations, viz. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Place from whence, and hour of the day when fet out. | Places arrived at, and hour when. | Diffance of the place. | Place where attended. | From and to what time attended, and when returned. | the | What officers met, and where; what informations of goods run, or intended to be run, and what methods taken to prevent the fame, what feizures made; what fhips obferved on the coaft, and which way they fail, and what notice of fuch thips given to the next officer; what fignals obferved from the commander of the fmack; and allo whatever happens in the day, evening, or night, that may be fit for the commiffoners knowlege. |

X. The Surveyors, Waiters, and Searchers,

Are appointed to refide at creeks, to execute the offices of furveyors, tide-furveyors, land-waiters, coaft-waiters, and fearchers, in the fame manner as thofe diftinct officers are to execute the fame at the principal and member-ports: and they are likewife to perform the duties of riding officers, and to keep journals of their daily actions and proceedings, with their motions from place to place ; to be delivered to the collectors, in order to be by them tranfmitted to the commiffioners.
XI. The Masters of Smacks,

Are appointed to command veffels to cruize on the coafts of Great-Britain, and are diligently to attend on board, and to keep their veffels in conftant motion within their refpective diftricts, or ftations, unlefs in cafes of neceflity, or purfuit of fufpected veffels: and, in cruizing, they are to fpeak with all thips or veffels which they fhall meet at fea; and, if they have any reafon to fufpect they bave goods on board defigned to be fmuggled, they are diligently to watch their motions, and keep them company 'till they are clear of the coaft within their refpective diftricts, in order to prevent the fraudulent landing any fuch goods.
Vol. II.
And they are likewife to endeavour to prevent the exportation of fuch goods as are prohibited to be exported out of this kingdom; and, in cale they difcover any fuch goods to have been fhipped, or fhipping for foreign parts, they are to feize the fame, with the veffels, \&tc. For the due navigation of each of thefe veffels, there are likewife appointed a mate, and a fufficient number of mariners, who are to be under the direction of the faid matters.
And, for the victualling of thefe veffets, the commanders are allowed nine-pence per diem for themfelves and each mariner; whereof notice is to be affixed on the maft, that, if good and fufficient provifions are not provided by the commanders, the mariners may complain to the collector and comptroller.
Thefe mafters and their mates, are to keep journals of their daily tranfactions, with their motions from place to place, to be delivered monthly to the collectors of their refpective ports, in order to be tranfmitted to the commiffioners.
And, by way of diftinction, all fmacks, yachfs, or veffels employed in the fervice of the cuftoms, are to wear a jack and enfign, with the feal of office thereon, the mark in the enfign being twice as large as that in the jack; but not to wear a pendant.

The aforementioned officers are thofe which are chiefly concerned in the execution of the cuftom laws, \&c. in an outport; for as to the more inferior, fuch as weighers, watchmen, \&xc. their very titles befpeak their employments, fo that they need no definition ; and though, in fome ports, they are executed by diftinct perfons, yet in many, efpecially the fmaller, the tide-waiters and boatmen officiate.

## Remarks.

The foregoing is only a fhort general account of the natur; of the employments of the feveral officers of the cuftoms but, for the methods of executing their refpective employments, we muft refer to the feveral branches of the bufinefs of the cuftoms, where they are occafionally treated of. And as what has been faid relates only to the refpective employments of the officers, we fhall next give an account of what other regulations they are fubject to ; the which are likewife to be obierved by all other officers of the cuftoms in general.

Rules to be obferved by the Officers of the Customs in general.
I. * That no perfons are to be employed in the bufinefs of the cuftoms till they have given fecurity, and have taken their corporal oaths in the following form, viz,

* $1_{3}$ and 14 Car. It. cap.،11. § 33.4 and 5 Will. and Mar. cap. 5. \$25. But note, this aet does not direat who fhall adminitter this oath.

' I A. B. [his employment] do fwear to be true and faithful in the execution and difcharge (to the beft of my knowlege and power) of the truft committed to my charge and infpection, in the fervice of bis Majefty's cuftoms; and that I will not take or receive any reward or gratuity, directly or indirectly, other than my falary, or what is or thall be allowed me from the crown, or the regular fees eftablifhed
by law, for any fervice done, or to be done, in the execucution of my employment, upon any account whatfoever. So help me God.
A. B.

OFF
Which oath is adminiftered by the principal officers of every out-port, or any two of them, and entered or regiftered in a book to be kept in the cuffom-houfe for that purpofe: and, if the fecurity be given at the port, the bond muft be returned to the commiffioners, and the fufficiency of the fureties, with their places of abode, certified to the examiner of fecurities.
II. * That all perfons employed in the cuftoms in any outport, muft, at their admifion, likewife take the aforefaid oath, before two juftices of the peace in the county, town, or place where their employment thall be, upon forfeiture of their employments, for refufal or neglect; and the faid juf tices muft certify the taking of this oath, to the next general quarter-feffions.

* 6 and 7 Will. and Mar. cap. 1. §5,6.

And when any officer, having taken thefe oaths, is thereipon to be admitted, the collector and comptroller are to deliver him his deputation, or commifion, taking a receipt for the fame, in a book to be kept for that purpofe, and alfo at the foot thereof the copy of bis infructions, annexed to his bond which are to be tranfmitted together to the commiffioners.
III. That his Majefty's revenue may not fuffer by the office:s abfenting themfelves from their refpective duties, it mult be obferved, that they may not prefume fo to do without particular leave : and, therefore, when any officer's private affairs, \&c. require their abfence, the colledor may, upon their application, give them leave for any time not exceeding a week; and, if that is not fufficient, the commiffioners muft be applied to for longer time. But, notwithftanding fuch leave to be abfent for longer time than a week, two third parts of their falaries muft be deducted, and applied to the fund for paying penfions to fuperannuated officers: and if any officers are abfent for longer time than for what they had leave, they are to forfeit two days pay for each day fo abfent, to be applied to the faid fuperannuation fund; upon refufal or neglect whereof, their falaries to be ftopped.
And if an eftablifhed officer officiates for any other eftablifhed officer abfent by leave, the officer fo officiating is not to have an additional allowance, unlefs put to any extraordinary charges : bur, if an extraordinary man officiates, he is to be paid by incidents.
For the due regulations of fuch eftablifhed officer's abfence, 2 book mult be kept after the following manner:

Leave to be abfent from duty, requefted by eftablifhed officers.

## 5th of January.

I defire leave to be abfent from my duty for fix days, for $\}$ the recovery of my health

Granted-B. C. Collector,
A. B. Surveyor.

## 8th of January.

I defire leave to be abfent from my duty for fix days, on $\{$ my own private affairs
Granted-B. C. Collector,
C. D. Landwaiter.

Leave further continued for ten days, by commiffioners letter of the $13^{\text {th }}$ of January.

And from this fide of the book is to be tranfcribed an account in the fame form, in order to be tranfmitted to the commiffioners of the cuftoms, the next poft after the end of each month, with the monthly abiftracts.
And, with regard to mariners employed on board any veffels in the fervice of the cuftoms, it muft be obferved, that they may not be abfent above three days, except in cafe of ficknefs; and that, in all cafes of abfence, the commanders and mates are to give a certificate of the occafion, to the collector and comptroller.
IV. That a provifion may be made for the maintenance of fuch officers of the cuftoms as have behaved well, and through age or infirmities are become fuperannuated, or by fome accident rendered incapable of the fervice, a deduction of fixpence in the pound muft be made quarterly, out of the falaries and day's pay of all fuch eftablifhed officers of the outports, whofe falaries do not exceed 6ol. per annum, and whole taxes are repaid by the crown, except collectors and their clerks, and patent officers, or their deputies, who have no falaries on the eftablifhment : but no officer is to be in-

An Account of the abfence of eftablithed officers in the month

| Officers names. | Titles of office. | When abfented. | When returned. | Time of $a b-$ fence. | Occafion of abrence. |

V. That his Majefly's revenue may not fuffer through the incapacities and difabilities of the officers, there muft yearly, at Chriftmas, be tranfmitted to the honourable the commif fioners of his Majefty's cuftoms, a true ftate of the feveral fettled officers belonging to each port, after the following manner, the fame having been firft entered in a proper book to be kept for that purpofe.

An account of the ages, capacities, and abilities, of the feveral officers of this port, at Chriftmas .-.......

M. N. Comptroller.

OIL.
Of the nature and quality of Oit in general.
What the chemifts call oil, or fulphur, is not a fimple fubftance, but a body compounded of fire, water, earth, and falt; but we chule to fay fomething of it here, as it is moft commonly feparated intire in the operations of chemiftry, and is with fome difficulty refolvible into it's component principles.
It may be defined to be a fluid, vifcid, inflammable, tranfparent body, without tafte or fmell (though by mixing it differently with falts, thefe fenfible qualities are produced) compounded of fire, water, earth, and falt, and it may be conceived to confift of many flakes, or flocculi, each of which is again made up of very fmall flexible filaments, formed of the four principles beforementioned, by fermentation, as well in the bowels of the earth, as in the bodies of vegetables and animals: thus an aromatic plant growing in water, will, by difillation, yield an oil, which could never have been obtained from the water in which it food ; and all oils may by art be refolved into water, earth, and falc. From thefe fila-
ments, varioufly concerted, arife the flakes already mentioned, which are of different thickneffes, and in the pores thereof is lodged the element of fire, which alfo runs in rivulets thro' their interflices.
Upon there depend the fpecific levity, inflammability, and fluidity of oil ; but as, notwithftanding the inteftine motion caufed by the element of fire, the flocculi ftill adhere, in fome meafure, together, this fluid muft be more vifcid than any other.
From what has been faid concerning the nature of alkaline falts, and the figure and ftructure of the oily flocculi, it is eafy to conceive why all alkilies diffolve fulphurs; for, fince the alkaline particles are fpherical and prickly, they cannot enter the interftices of the flocculi without carrying away fome of them from the reft, and thus by degrees thoroughly diffolving them.
But the denfe, rigid, and pointed molecula of acids being forced into thefe interfices, increafe the denfity, and frengthen the texture of the flocculi; and, from the diverfity of thefe, and of the acid fpicula mixed with them, arife the different kinds of fulphurs. Sulphurs formed in the earth
of fre, acid falt, water, and a very fine earth, are termed bitumens.
Thus bitumens diffolved in a large quantity of water, form the mineral oils, or petrolea.
But, if they are mixed with earth and falt, the folid bitumens are produced, differing from one another in degrees of purity, according to the quantity or groffnefs of the earth, or different degrees of mixture. Thus foffile coals, jet, amber, and thecommon bitumenous, and bitumeno earths are produced.
If there be but a fmall quantity of earth, and much acid falt, the common mineral fulphur, or brimftone, is formed. If the mineral originat bitumen is joined to a fufble earth, capable of vitrification, it communicates to it a metallic form, that is, the found, brightnefs, fofenefs, ductility, malleability, and all the other fenfible qualities of metals.
This origin of mineral bitumens may be confirmed by many experiments. If a mixture of equal parts of oil of vitriol and oil of turpentine be digefted together for a confiderable time in a very gente heat, and afterwards diftilled in a retort, there will come over frift a yellowifh liquor, refembling petroleum both in fmell and confiftence.
What remains in the retort is at firft a foft bitumen, and afterwards turns into a hard black mafs, eafily inflammable, and, when burnt, fmelling exactly like foffile coal. But, if the diffillation be continued, a white acid liquor will next be obtained, which, by ftanding, lets fall a grey powder, which is true common brimftone, a yellow fubftance of the like nature adhering likewife to the neck of the retort; what is left behind being a black, hining, light fubftance, difpofed in thin difgregated ftrata, like talc, in which, by the help of the load-ttone, iron may be difcovered.
Thus, therefore, all thofe bitumens may be artificially produced; and the analyfis of the natural ones further confirm the manner of their formation.
Thus the chemifts have fhewn that metals are nothing but bitumenous fubtances, which have undergene a long digeftion; for, by depriving them of their fulphur, they are reduced to afhes, and then to glafs.
This is eafily feen in the imperfect metals.
For, if any of them be expofed to a long heat, and efpecially to the rays of the fun collected by a large burning glafs, the fulphureous principle flies off, and only a calx, or afhes, will be left behind, which in a more vehement degree of fire, are, prefently vitrified; and, by reftoring the fulphur, this glars may again be reduced to metal.
The inflammable fubftances in animals and vegetables confift of a different combination of the principle of fulphur and acid falt; for the oil or fulphur in thefe is formed by a fmal portion of earth, joined to the elementary fire, acid falt and water; this eil, when joined to an acid falt, produces gums; when joined to a fine acid, and a new acceffion of fiery particles, it produces effential oils and inflammable firits; but, if the acids are more grofs, by reafon of a large quantity of earth joined to them, it forms refins, as we learn from the artificial compofition of alt thefe fubftances: by mixing fpirit of wine with volatile fpirit of urine, we obtain a mucilaginous concretion, or thin gum. Oil of olives, and falt of tartar, melted together, make a kind of foap, or thick gum ; and, if firit of wine be digetted for a long time, with oil of vitriol, and then diftilled, an inflammable oil is obtained, refembling, in fmell and other qualities, the effential oils of plants, a true refin being left behind in the retort.
In animals, the fame oleaginous principle forms the fat, and other glutinous or gelatenous fubfances, thefe laft being compofed of an acid volatile falt and oil, as appears from their analyfis; but fat is made of the fame oil and acid falt; for if oil of olives and fpirit of nitre be mixed together and digefted, a fubtance will be formed, in every thing refembling the fat of animals.
Sulphurous fubftances found in bodies are either fixed or volatile.
The fixed fulphurs are either folid, fuch as fat, refin, or the bitumens; or fluid, as oils.
Volatile fulphurs are fuch as fly off with a fmall degree of fire, and have an appearance compounded of that of oil and water. Such are inflammable fpirits, obtained from the flowers and fruits of plants.
Oil, [Olive Oil,] in general, is an unctuous inflammable matter, extracted from natural bodies. It is fometimes applied to the juices which naturally exudate from plants and trees, as balm, \&c. but is more ffrictly applied to thofe juices drawn by expreffion * from fruits, grain, or feeds, as olivevil, nut-oil, \&xc. There are no little variety of oils, whofe properties, and manner of exprefion, are different. Oil of olives being the moft univerfal, and that chiefly ufed in medicine, food, and manufactures, we thall give an account of the method of preparation of the olives.-There are inferior, which are ufed in manufacture, not food and operations; forts, that are prepared in the fecond and third medicine.

* Expreffed oils are fuch as are procured by bodies only by preffing; as olive, almond oils, and the like.

## Remarks.

Quere. As we are under the neceffity of taking large quantities of olve-oil from other countries, may it not be worth while to endeavour to produce the olive in fome of our own plantations? Does not this deferve to be ferioully thought of? According to Columella, the beginning of December, for the moft part, is the middle feafon for gathering of olives, and making oil ; for, before this time, the bitter oil, which is called fummer oil, is made; and, about this month, they prefs the green oil ; then afterwards the ripe oil : but it is not for the intereft of a mafter of a family to make bitter oil, becaufe the olives yield but very little of it, except the berry fall to the ground by tempeftuous weather, and it be necef. fary to gather it up, left it be eaten up and deftroyed by tame cattle or wild beafts. But it is of very great advantage to him to make of the green fort, becaufe the olives both yield enough of it, and by it's price it almoft doubles the income of the owner: but, if the olive-yards are very large, it is neceffary that fome part of them be referved for ripe fruit. A loft to carry the olives into is very neceflary.
Neverthelefs, becaufe fometimes the immoderate multitude of berries overcomes the labour of them that attend the prefs, and are more than they can manage, there muft be a itoreroom in the upper part of the houfe, where the fruits may be put: and this loft ought to be like a granary, and to have as many fmall binns, or diftinct partitions, as the quantity of olives fhall require, that fo the gathering of each day may be but apart, and laid up by itfelf.
The fioor, or bottom of thefe finall partitions, muft be paved with fones, or tiles, and made fo floping, that all the moifture may run quickly out of them, by gutters or pipes; for the lees are very hurfful to the oil, which, if they remain in the berry, corrupt and fpoil the tafte of the oil. Therefore, when you have built the partitions with judgement, place upon the floor fmall boards, half' a foot diftant from each other, and lay reeds upon them, that are carefully and clofely woven, fo that they may not let fo much as a berry pafs through, and be able to fupport the weight of the olives. But hard by all thefe fmall partitions, in that part where the lees run out of them, under the very pipes, the floor muft be concave, after the manner of little trenches; or there muft be a hollow ftone, wherein may fand whatever liquor thall flow out of them, and from whence it may be drawn.
Moreover, you muft have fats, or barrels, ready prepared within doors, which may receive the lees of every kind of olives apart by themfelves, whether they be fuch as fow from the olives pure, without any mixture, or fuch alto as have received falt; for both of them are fit for many ufes.
But mills are more ufeful than the prefs, for the making of oil; and the prefs than the canalis, and the folea *. The mills are very eafily managed; for, according to the bignefs of the berries, the mill fones may be either lowered or raifed, that fo the kernel, which fuoils the tafte of the oil, may not be broken: moreover, the prefs difpatches more work, and more eafily, than the folea and canalis. There is alfo a machine, like an erect threfhing inftrument, which is called a beetle; and that does the work not incommodioully, except that it is frequently fooiled, and out of order; and, if you throw a little too many berries into it, you ftop it. Neverthelefs, the aforefaid machines are made ufe of according to the ftate and condition, and cuftom of the countrics: but that of mills, as alfo of the turning-prefs, is the beft. I thought it neceffary to premife thefe things, before I difcourfed of making the oil.

* Columella mentions feveral machines, wherewith the oil was fqueezed ont of the olive-berries; but gives no particular defcription of any of them, fo that it is not eary to form any diftinct idea of them. Cato, indeed, in his 22d chapter, gives a particular difcription of the trapetum; but it is not very iutelligible, perhaps becaufe of the incorrettnefs of the text; and learned men differ in their opinions about it. Varro fays, that the trapeta were oilmills made of hard rough fones; and Columella feems to make the mola and the trapetum two diftinct things: perhaps by the laft he means a prefs for fqueezing the olives, which had it's name from the turnirg of the ferews. We have no account at all, that I can find, of the canalis and folea: nor is it any great fatisfaction to be told by antiquarians, thar they were certain machines, ufed by the Antients for making oil, fince they give us no account of their flructure.

Now we muft come to the thing itfelf, although we have omitted many things; which, as before the vintage, fo, before the gathering of the olives, and making the oil, muft be all ready prepared; fuch as plenty of wood, which mult be brought home a long time before, that fo, when the thing is wanted, the labourers may not be called away from their bufinefs: ladders alfo, fmall bafkets, and fowers bafkets of ten modii and three modii each, wherein the berries, which are gathered off the trces, are received; frails, hempen and Spa-

## O I L

bih-broom ropes, iron ladles, wherewith the oil is emptied from one veffel to another ; covers or lids, wherewith the oil-veffels are covered ; fpónges, greater and fmaller ; pitchers, in which the oil is carried out; cane or reed mats, into which the olives are gathered. All thefe ought to be in great number, becaufe they perifh with the ufing, and become ewer; of which, if any one thing be wanting when there is accafion to ufe it, the work is at a fland.
As foon as the berries thall begin to be of different colours, and fome of them are already black, yet more of them white, the olive muft be gathered by hand, when the weather is fair, and fifted and cleanfed upon mats or reeds fpread under them: then, after they are cleanfed, they muft be preently carried to the place where the prefles ftand, and thut ently che frails, and put under the preffes, that they may be fqueezed as little a while as may be. Afterwards, when their thin rinds are opened, they ought to be foftened, by adding two fextarii of whole falt to each modius of olives; and the mafs iof bruifed olives ought to be fqueezed out, eiher in oblong fquare boards, if it be the cuftom of the country, or in new frails at leaft : then that which fhall frift flow from the prefs into a round fat (for that is better than a fquare leaden veffel, or a receiver made of flone or brick with two divifions in it) let the leader empty it prefently, and pour it into great earthen pans prepared for this ufe.
But, in the oil-cellar, let there be three rows of pans, that one of them may receive the oil of the firt note, that is, of the firft preffing; the fecond, that of the fecond; and the third row, that of the third: for it is of great importance not to mix that of the fecond, much lefs that of the third preffing, with that of the firft; becaufe that is of a much better tafte which flows from the olives with leaft force of the prets, as if dropped from them of it's own accord. When, therefore, the oil has ftood a little in the firt pans, the lader ought to flrain and empty it into the fecond, and then into the next, till he comes to the laft; for the oftener it is ventilated, and worked, as it were, by emptying it from one veffel into another, the clearer it becomes, and the more it is freed from it's dregs. But it will be fufficient to place thirty large pans in each row, except the olive-yards be very large, and require a greater number.
But if, with the colds, the oil fhall be congealed with the lees, you muft, in that cafe, certainly ule a little more toafted falt; that thing refolves and looferis the oil, and feparates it from every thing that may hurt or corrupt it. Nor is there any reafon to fear, that the oil will become falt or brackith; for whatever quantity of falt you thall put to it, yet the oil does not receive the tafte of it. But even thus, the oil ufually does not diffolve, when greater colds than ordinary come on fuddenly; therefore they toalt nitre, and bruife it, and fprinkle it upon the oil, and mix it with it: this liquifies the lees. There are fome, though very careful oilmen, who do not put the berry under the prefs whole, without breaking it, becaufe they think that fome part of the oil is loft by fo doing ; for, when the berry receives the weight of the prefs, the lees alone are not preffed out of it, but they attract fomething of the fatnefs of the oil with themfelves.
But I have this direction to give upon the whole, that neither froak nor foot be admitted into the place where the oil prefs ftands, or into the oil-cellar, as long as the green oil is making there; for both thefe are very prejudicial to this affair, and the fikifulleft oilmen fcarcely fuffer their work to be done at the light of one fingle lamp: wherefore, both the place where the oil-prefs ftands, and the oil-cellar, muft be fituated towards that quarter of the heavens which is moft Theltered from cold winds, becaufe the heat of the fire is not at all required. Moreover, the barrels and jars, into which the oil is put, mult not only be carefully cleanfed, and put in order, at the time when the neceflity of beftowing the fruit forces to do it; but, when they are emptied by the merchant, care ought to be taken, that if any dregs or lees have fallen to the bottom of the veffels, they be immediately cleaned out, and wafhed with a lee of afhes, not very hot, left the veffels throw off and lofe their wax; and let it be done once and again: then let them be gently rubbed with the hand, with lukewarm water, and often rinfed, and fo let all the moifture be dried up with a fponge.
There are fome who diffolve porters clay in water, like liquid dregs, and, after they have wathed the vefiels, daub them on the infide with this fort of gruel, as you may call it, and fuffer it to dry upon them: afterwards, when they have occalion to ufe them, they rinfe then with pure water. Some wath the veffiels thoroughly all over with lees of oil firt; then they wath them with water, and dry them: aifterwards they examine whether the barsels want new wax; for the Antients faid, that it was neceflary to wax them almoft every fixth year, at the time of making the oil, which I do not underftand how it can be done: for, as new veffels, if they be heated, eafily receive the melted wax, fo I cannot believe, that fuch as are old wiil bear waxing, becaufe of the juice of the oil; which very waxing, neverthelefs, the hubbandmen of our times, have wholly laid alide, and have been of opinion, that it was better to walh the new barrels all over with liquid gum, ant to fuffumigate them with white
Vol. II.
wax when they are dried, that they may not lofe their good colour, and tarnifh: and they judge that this fumigation ought to be done, as often as etther the new or old veffeis are cured and feafoned, and prepared for the new oil: Many, when they have daubed their new barrels or jars with grofs fat gum, are fatisfied with one gumming for ever: and, indeed, veffel which has once imbibed the oil, does not admit of a fecond gumming; for the fatnefs of the oil refufes any fuch matter as that of gum is.
After the month of December, about the beginning of January, the olive-berry mult be garhered in the fame manner as above, and the oil prefently preffed out of it; for if it be laid up in a loft, it quickly grows hot; for, with the waterrains, it breeds a.greater quantity of lees, which are very burtful to oil. Therefore you muft beware of making oil for eating of this kind of berry, which may, by this one way, be avoided; if, as foon as the berry is brought out of the field, it be ground, and put into the prefs, and the oil preffed out of it, and managed as we have faid above. All hufbandmen, for the moft part have believed, that if the berry be laid up within the houfe, the oil will grow in the loft; which is as falfe, as that corn of any fort grows in the threfhing floor: and this fallhood that antient author, Porcius Cato, refutes thus; for he fays, that the olive grows wrinkled in the loft, and becomes fmaller: for which reafon, when the hulbandman has laid up fuch, a quantity in the houfe, as is fufficient for one making; and, after many days, has a mind to grind it, having forgotten the firft quantity that he had brought in, he fupplies out of another heap, which he had in like manner placed apart by itfelf, as much as is wanting to each quantity; and by this one making, the berry that has refted for fome time, feems to yield more oil than that which is frefh and newly gathered, whereas he bas taken a greater quantity of olives to it. Yet, fuppofe that were exceeding true, neverthelefs there is more money raifed by the price of green frefh oil, than by the great quantity of that which is bad: which thing Cato alfo faid. And thus, indeed, whatever addition of weight or meafure is made to the oil, if you would compute the quanitity of berries, added to that which you reckon to one making, you would think it not an increafe and advantage, but a real lofs: wherefore we ought not to hefitate to grind the olives, and put them under the prefs, as foon as poffible after we have gathered them.
Nor am I ignorant that a fecondary oil, for common eating, muft alfo be made; for when the olive, which is gnawed by the little worms, falls off the tree; or has, by forms and rains fallen into the dirt, they have recourfe to warm water for a remedy; and the caldion ought to be made hot, that the dirty berries may be wafhed. But this muft not be done with exceeding hot water, but with that which is moderately warm, that the tafte of the oil may become the more agreeable; for if the agreeable tafte be boiled out of it, it attracts the tafte of the little worms, and of any other forts of naftinefs whatfoever: but when the olive has been thoroughly wahed, the other things ought to be done as directed above. But the pureft and beft oil, and that of the fecondary fort for common ufe, muft not be prefled in the fame frails; for old frails ought to be fet a-part for fuch olives as fall off the trees of their own accord; and thofe that are new, for the oil of the firft note; and when they have ferved for preffing out the oil of every particular making, they ought always to be prefintly wathed, twice or thrice, in exceeding hot water: then, if there be any brook, or running water, they muft be funk in it, by having ftones put into them, that they may be preffed duwn and detained by the weight thereof; or, if there be no river, they ought to be foaked in a lake or pond, of the pureft water you can find, and afterwards beaten with rods, that the dirt and dregs may fall off them, and then they muft be wafhed a fecond time and dried.
Oil of Sweet Almonds, drawn without fire, is prepared various ways. Some peel them before pounding, others pound without peeling. Some fteep them in lukewarm water, others in balneo marix; fome only bruife them, others beat them to a pafte. There are a great variety of different ways to prepare this oil.
The beft method is efteemed this: pound your almonds dry and new in mortars, pafs them through a coarfe fieve, lay them in a hair-cloth, and put them under the prefs between two plates of fteel; prefs them gently, and when all the unctuous part is exprefled, you will have a fweet oil without fediment, which is fcalce avoidable by any of the other methods.
Train Oil, is that generally procured from the blubber of the whale, by boiling. There is fome alfo drawn off the livers of the cod at Newfoundland, which livers are thrown up in heaps when the cod is cured; and from thence is drawn all the oil which comes from that part of America.
Gallipoli Oil, is that fort which we import from Naples, in large quantities for the ufe of our woollen manufactories.
OLDENBURG, a cunty of Germany, in the circle of Wefthalia; bounded by the German rea on the north, by the duchy of Bremen on the eaft, by Ofnabrug on the fouth, and by Embden, or Laft Fiielland, on the weft; being 50 miles long and 25 bood, ronfiting chiefly of bogs and

5 C marlbes,
marfos, where they breed a fmall fort of cattle lefs than the Wellh. The inhabitants are wretched poor, living in dirt houfes, and fubject to Denmark.
OLERON, weft longitude 1. 20, latitude $4^{6}$, an ifland of France, near the coaft of Poitou, and territories of Aunis, fituated' 14 miles fouth-weft of Rochelle, being about 15 miles long and 6 broad, and containing 10,000 people. The ancient inhabitants of this ifland, had fuch a reputation for their dill in navigation, that their rules became a model for other maritime powers to make their Jaws by, in relation to fea affairs ; and thefe were called the laws'of Olercn.
The foil of this ifland produces plenty of corn and wine, and they make a great deal of falt of the fea-water. There is a light-houfe on this ifland, for direction of hips.

## OLERON LAWS, of Navigation and Commerce.

An abftract of the naval laws of Oleron, inftituted by Ri chard I. king of England, in his return from the Holy Land, in the end of the eleventh century, for the better regulation of merchants, owners and mafters of flips and mariners, and all feafaring perfons in maritime affairs. To which is added, fome obfervations upon them, taken from feveral authors.

ARTICLEI.
When feveral joint owners make a man mafter of a fhip or veffel, and the fhip or veffel departing from her own port, arrives at Bourdeaux, Rouen, or any other fuch place, and is there freighted to fail for Seotland, or fome other foreign country; the mafter, in fuch cafe, may not fell or difpofe of that Hhip or veffel, without a fpecial procuration from the owners: but, in cafe he wants money for the vikualling, or other neceflary provifions of the faid veffel, he may, for that end, with the advice of his mariners, pawn or pledge part of the tackle' or furniture of a fhip. [See Hypothecation.] OBSERVATION.
The title of mafter is fo honourable, and the command of a thip of fuch importance, that great care has been taken by all maritime nations, that none may be employed but honeft and experienced men. By an ordinance of the admiralty in France, A. D. 1584, every mafter of a fhip, before he took upon him that trult, was to be examined; whether be was fit for it. The Spanifh naval laws require the 'fame thing; el maeftre de la nave, para ferlo, ba de fer marinero y examinado. Cidula real del anno 1576.' Impreffa con las de India quarto toms. The ordinances and regulations of the Hans Towns do not only demand experience and capacity, but honefly and good manners: And none was to be admitted into the fervice of any citizen aboard his Thip, without a certi ficate of his qualifications, as to his honefty and capacity. See their book of ordinances, book 6. art. 1.
Although the government of the fhip is intrufted, he cannot fell the thip itfelf, nor any of her tackle or furniture, without the order or confent of the owners. However, in cafe of neceffity, when be is in a far country, he may pawn or pledge her tackle for provifions; and if that will not do, he may borrow money on the fhip's bottom, though not without the confent of his officers and feamen. According to the ordinances of Wibuy, art. 13 and 15, and Philip II. king of Spain's ordinances in the year 1563, art. 12. Thofe of the Hans Towns forbid a mafter of a thip, notwithftanding he is part owner, not only to fell, but to do any' thing, even to buy tackle or victuals, without acquainting the other owners of it, unlefs it be in a ftrange country, and in a cale of neceffity, well and lawfully attefted, art. $3,4,5, \&$ feq.
By the ordinances and cuftoms of the fea it appears, that formerly it was not thought fafe to intruft a mafter of a thip with the veffel and cargo, unlefs he was a freeman of that city, and part owner of the fhip; and if be was part owner, when he had betrayed or abufed his truft, the other owners might turn him out of the fhip, paying him what his part of her came to, at the fame price he gave for it, according to the ordinances of the Hans Towns, art. 14. And if he pretended he had fold his part to another perfon, for more than it was worth, the other owners might have it appraifed, and take it to themfelves, paying him what it was valued at by fuch appraifement, art. 53.
The mafter commonly took care of every thing belonging to the fhip, from the poop to the main-maft : he was obliged to underftand the art of piloting and navigation, that he might know how to controul the pilor, and nind how he feers the hip, y fi el maeftre no fuere piloto es obligado a uevar un matinere dieftro en la navigacion, 'tel que, pueda regir la nave a falla de piloto, according to the ordinances of Spain. The mate's command reached from the fern to the mizenmaft, the latter included. It will not be thought improper by the curious to mention here the feveral officers of a hip , etther men of war or merchantmen, as they were diftinguifhed abroad, a century ago.
In royal navies, the firft officer was the admiral ; then the vice-admural; then the captain-major, or chief of a fquadron. In every man of war, the firit officer was the captain, the fecond the pilot, who enjoyed that place in honour of the frience he profeffed and practifed; next to him was the
mafter, who had the charge of the tackle and furniture, and then the captain and lieutenant of the foldiers. In a mer-chant-man, the firft officer was the mafter, the fecond the pilot, the third the mate, the fourth the factor or fupercargo; then his affiftant, accomptants, the furgeons, the fteward, four corporals, the cook, the gunner, the cockfwain; the gunner and cockfwain ufed to work before the maft, as well as the reft of the ihip's crew, but their wages were more.
There is a great deal of difference between the order of precedency on board of fhips now, and what was formerly : for the captain and lieutenant of the foldiers would think it very hard to give place to the pilot and mafter of a thip; and the factor or fupercargo will as difficultly be perfuaded to own the mafter of a veffel's fuperiority, except in what relates to the navigating the fhip.

A R T I C L E II.
If a fhip or other veffel be in port, waiting for weather and a wind to depart, the mafter ought, when that comes, before his departure, to confult his company, and fay to them; gentlemen, what think you of this wind? If any of them fee that it is not fettled, and advife him to ftay 'till it is ; and others, on the contrary, would have him make ufe of it as fair ; he ought to follow the major part : If he does otherwife, and the veffel happens to mifcarry, he fhall be obliged to make good the fame, according to the value upon a juft apprailement.

OBSERVATION.
It is a maxim, or a general fea-law, that a mafter of a flaip fhall never fail out of a port, never weigh or drop anchor, cut mafts or cable, or, indeed, do any thing of confequence, let him be in whatever danger may happen, without the advice of the major part of his company, and the merchants, if there are any aboard: he muft call all together to confult. Wifbuy, art. 14. See Wisbuy Laws:

A R T I CLE III.
If any veffel, through misfortune, happens to be caft away, in whatfoever place it be, the mariners chall be obliged to ufe their beft endeavours for faving as much of the hip and lading as poffibly they can: and if they preferve part thereof, the mafter hall allow them a reafonable confideration to carry them home to their own country; and in cafe they fave enough to enable the mafter to do this, he may lawfully pledge, to fome honeft perfons, fuch part thereof, as may be fufficient for that occafion. But if they have not endeavoured to fave as aforefaid, then the mafter fhall not be bound to provide for them in any thing, but ought to keep them in fafe cuftody, until he knows the pleafure of the owners; in which he may act as becomes a prudent mafter; for if he does otherwife, he thall be obliged to make fatisfaction

OBSERVATION.
The fhip's crew are obliged to do all that lies in their power to fave things from hipwreck, and gather up what they fave, on pain of lefing their wages; and thofe that hinder or diffuade them from it, thall be feverely punifhed. This law is very well explained by an ordinance of king Philip II. of Spain, in the year 1563 . By which it is ordained, that the feamen thall be bound to fave as much as they can from fhipwreck; and, in fuch cafe, the mafter is bound to pay them their wages, and to give them a further reward for their labour out of the goods: but if the feamen refufe to do their endeavour to fave the goods, they thall neither havepay nor reward. Hans Towns, ord. art. 44. Wifbuy, art. 15.

## ARTICLE IV.

If a veffel departing with her lading from Bourdeaux, or any other place, happens in the courfe of her voyage to be rendered unfit to proceed therein, and the mariners fave as much of the lading as poffibly they can; if the merchants require the goods of the mafter, he-may deliver them if he pleafes, they paying the freight in proportion to the part of the voyage that is performed, and the cofts of the falvage : but if the mafter can readily repair his veffel, he may do it; or, if be pleafes, he may freight another fhip to perform his voyage. And if he has promifed the people who helped him to lave the fhip, the third, or the half part of the goods faved, for the danger they ran, the judicatures of the country fhould confider the pains and trouble they have been at, and reward them accordingly, without any regard to the promifes made them by the parties concerned in the time of their diffrefs.

OBSERVATION.
This law does not relate to an entire lofs, but only to falvage, or rather not to ftipwreck, but to the difabling of a fhip, fo that the cannot proceed in her voyage without refitting. In which cafe, the merchants may have their goods again, paying the freight, in proportion to the way the fhip made. If the merchant has not money to pay the freight, and the mafter will not credit, the latter may take his goods in payment at the market price. Wifbuy, art. 33. The emperor Charles the fifth's ordinance, art. 40.
If the mafter can, in a little time, refit bis veffel, and rendet her fit to concinue her voyage; that is, if be can do it in three days time at the mof, according to the Hans Town laws; or if he will himfelf take freight for the merchandize

## O L E

aboard another flhip bound for the fame port to which he was bound, he may do it; and, if the accident did not happen by any fault of his, the freight fhall be paid him, by the Rhodian laws. Numb. 42. fecundo \& ultimo tomo juris Graco Romani in fine. Wifbuy, art. 16, 37, and 55 . King Philip If. of Spain's ordinance, under the head of averages, art. 30.

30 .
As for the charges of falvage, there are very great allowances As for the charges of Ralvage, there are
made to the falvers, Lege Rhod. Secundo tomo juris GracoRomani, num. 45 \& 47 . Harmenopolus in promptuario juris, lib. 2. tit. 6. By this law there was adjadged to the divers and falvers, the half, the third, or the tenth of the things. faved, and that according to the depth of the water out of which they were fifhed, fifteen, eight, or one fathom; as allo a tenth part for falvage on the coaft, and the fifth to him that faving himfelf, carries and faves fomething with him. The promifes that are extorted in danger upon this account, ought always to be regulated according to juftice, with reafon and proportion, without keeping to the expreffions of fuch promifes; for this there are feveral laws in France, and an inftance of it is thus recorded. A gendeman named La Mothe, embarked at St Machaire with two horfes in a boat, going for Bourdeaux; as they were in their paftage, one of the horfes grew furious and leaped overboard. La Mothe held him by the bridle, the horfe fplafhed the water up in his face, and the gentleman pulling his handkerchief out of his pocket to wipe it off, at the fame time pulled out a purfe that had thirty piftoles in, it, which fell into the water. The boatmen came, and La Mothe defired them to take notice of the place, by obferving the trees and buildings that were near it, and when the tide was out, to feek after the purfe; promifing if they found it, to give them a piftole for their pains. The boatmen excufed themfelves; neverthelefs, when they had put La Mothe and his horfes afhore, they went to look for the piftoles when it was low water, and one of them found them where they were dropped. His companions demanded their thare of them, but he who had the good fortune to find the purle would not let them have any of the gold, and there was a law-fuit about dividing it, before the judge of St Machaire. Monf. La Mothe hearing of it, came thither, and put in his claim to the puife and piftoles, but the judge gave it againft him. He then appealed to the fenefchal of Guyenne's court, but with no better fuccefs; at laft he appealed to the parliament of Bourdeaux, and that court decreed, he fhould have his piftoles, but fhould pay 60 livres to the boatmen for their pains and trouble

ARTICLE V.
If a veffel departing from one port, laden or'empty, arrives at another, the mariners fhall not leave the fhip without the mafter's confent: if they do, and by that means the happens to be loft or damnified, they thall be aniwerable for the damage; but if the veffel be moored, and lying at anchor, with a fufficient number of men aboard to keep the decks and lading, they may go without the mafter's confent, if they come back in good time, otherwife they fhall be liable to make fatisfaction, if they have wherewitial.

OBSERVATION.
In regard to this article relating to feamen, it will not be unacceptable to the reader to obferve, what other cuftoms and ordinances we have met with concerning them.
Mariners are obliged to look carefully after every thing that relates to the prefervation of the fhip and goods, Wifbuy art. 47. For which reafon, they ought not to go afhore and leave the veffel, without the mafter's or mate's permifion: if they do, they are bound to anfwer to all the damages that happen to the fhip or merchandize in their abfence. Wibuy, art. 17. The emperor Charles the Vths ordinance in the year 1552, art. 9 and ro. Conformable to the Rhodian law, fecundo tomo juris Greco-Romani, num. 20. The regulations of the Hanfe-Towns, art. 40, ordain, That if any feamangoes afhore without licence, and if in his abfence the fhip happens to be loft for want of hands, the feaman thus abfent thall be apprehended, and kept a year in prifon on bread and water ; and, if any one fhould be killed or drowned in his abfence, and that be the caufe of it, he fhall be corporally punilhed. The fame ordinances condemn thofe mariners that lie out of their flup all night, to pay all the damage that thall happen while they are abfent. 'Thofe of the Hanfe-Towns, art. 22 and 23. add imprifonment. Some laws forbid them to undrefs themfelves, and the Hanfe-Towns, art. 32. to lie with their wives aboard. The reaton is, that they may always be ready to affit their fellows in the difcharge of their duty, in the prefervation of the fhip and goods. The obligation of the mariner to the mafter, begins as foon as he is hired and terms are agreed, and ends when the voyage is finihed and they are returned. The obligation of the mariner to the merchant is from the beginning of his charge, and the mariner is obliged to fow and unftow the goods according as the place they are in is commodious or not, to keep them from damifying, and promote or hinder the fhip's trimming ; and if by their refufing to do fo, the merctandize is damnified or fpoiled, they are bound to make the damage good. Wifbuy, art. 48. Philip II. art. 19. By the laws of Wibuy, they are alfo bound to unlade fome goods with the
thovel, and fome to hand afthore, for which they are to have no extraordinary allowance; but for letting things up or down, they are by the fame laws to be allowed fomething extraordinary, that is, above their wages. The laws are very fevere againft thofe feamen, that run away from thips after they are hired. In men of war defertion is punifhed with death: in merchantmen, by the Hanfeatique laws, or thofe of the Hanfe-Towns, they are to be marked in the face with a red-bot iron, that they may be known, and be infamous as long as they live. If the mariner runs away before the voyage, when he is taken he ought to refund half as much as the mafter was to have paid him for the whole voyage. If be hires himfelf to two mafters, the firft may demand him ; and by the Hanfeatiques, art. I. is not bound to pay him any wages. Provifion is made for fuch feamen as runaway, only becaufe the mafter has ufed him ill. By the fame laws, if any mafter entices away a mariner hired before by another the laft mafter fhall forfeit to the firft 25 livres, and the mariner half the wages he was to have had of the mafter that fo enticed him.
That mafter who knowingly hires a mariner who was hired before, fhall pay double the wages he was to pay the mariner, and the latter be bound to follow and ferve the firft mafter. However, a mariner may demand, and ought to have bis difcharge, either before or during the voyage, for thefe four reafons; in cafe he is made mafter or mate of another thip; if he marries, and then he is obliged to refund what he has received; if he made any provifo in his bargain for quitting the fhip; if the voyage is finifhed, the fhip difarmed, unloaded and light, the fails, tackle, and furniture, taken away and fecured. See the laws of Wifbuy, art. 54 and 63 . If the roafter gives a mariner his difcharge, without any lawful caufe, and for his pleafure only; in cafe he does it before the voyage, and while the thip is in port, he ought to pay half as much as he was to give him for the whole voyage; but if he difcharges him after the fhip is failed, he ought to pay him all his wages. Wifbuy, art. 3 .
By the Hanfeatiques, the mafter is to pay a third of the wages only, and not to bring it to his owner's account. He is obliged alfo to pay him not only all his wages, if he difcharges him in his voyage, but to defray the charges of his return If after a bargain is made between the mafter and mariner, if the veyage happens to be hindered by war or pirates, or any other lawful account, the mariner, according to king Philip's laws, art. 9. fhall have a quarter part of the wages that were promifed him for the voyage, and the mafter by a French law fhall have balf the freight.
A mafter may turn off a mariner if he finds he is ignorant in maritime affairs, and incapable to perform the voyage, particularly a pilot, to whom in fuch cafes, he is not bound to pay any wages, and at his return may have him punifhed for his rafhuefs, according to king Pbilip's and the Hanfeatique laws.
If it happens, that the mafter finds out the pilot or mariner's ignorance when he cannot difcharge them, they fhall be obliged at their return to refund all the money he had advanced to them, and pay the mafter befides, half what he had promifed : but if the pilot declares at firft he is dubious, and cannot depend on his knowlege, that he is out of the way, and does not very well underftand his bufinefs; if it is when he is outward-bound, he fall be paid half what was promifed him, if homeward-bound, all.
If the mafter finds that any officer or feaman aboard his fhip has any infectious diftemper that is dangerous, he may put him afhore at the firft place he comes to, without paying him any thing, but then he muft prove it by two or three witneffes. He may alfo turn away any thieving mariner, or any quarrelfome or factious fellow; but as to the latter, he fhould have a little patience, to fee if he can be brought to reafon. By the Hanfeatiques, art. 29. and the laws of Wifbuy, art. 25.

## ARTICLEVI.

If any of the mariners hired by the mafter of any veffel, go out of the fhip without his leave, and get themfelves drunk, and thereby there happens contempt to their mafter, debates, or fighting and quarrelling among themfelves, whereby fome happen to be wounded: in this cafe, the mafter fhall not be obliged to get them cured, or in any thing to provide for them, but may turn them and their accomplices out of the Ship; and if they make words of it, they are bound to pay the mafter befides: but if by the mafter's orders and commands, any of the thip's company be in the feivice of the fhip, and thereby happen to be wounded or otherwife hurt, in that cafe they fhall be cured and provided for at the cofta and charges of the faid fhip.

OBSERVATION.
By the laws of Wibuy, art. 18. Thofe mariners that are mutinous and quarrelfome, are obliged to refund all they have received, and pay befides what the maller is forced to give to others whom he hires in their places above the wages he was to give them.
The laws of Charles V. art. 28. \& leq. ordain certain punifhments, according to the heinoufnefs of the offences and crimes committed by feamen. If the mariners are wounded,
or any wife hurt in ferving the mafter of the hip, they fhall be cured, taken care of, and indemnified at the charge of the fhip. Wifbuy, art. I8. Hąnfeatiques, art. 39. Charles V, art. 27 and 28 . Philip II. art. 16. If the mariness are taken by corfairs in his and his fhip's fervice, the mafter is bound to redeem them, and befides that, to pay them their wages during their captivity, as much as if they had all that time been in his fervice. This law is in the Confulat. chap. 182. If in defending himfelf, or fighting againft an enemy or corfairs, a mariner is maimed or difabled, to ferve on board a fhip for the reft of his life, befides the charge of his cure, he fhall be maintained as long as he livesat the coft of the fhip and cargo, according to the Hanfeatiques, art. 35. An inflance of this follows:
In the year 1621 , Giles Efteben, a citizen and merchant of Bourdeaux, loaded a veffiel of 36 tons with wine for Calais, and gave the charge of the cargo to one Fiton his fervant. The veffel fet fail, and when the was at fea met with a Turkilh rover. The corfair came up with her and took her, but did not meddle with the veffel or the wine, either becaufe the alcoran forbids the Mahometans to drink or deal in wine, or becaufe he held intelligence with the mafter of the veffel, who was a Scotchman; for he did him nor bis crew any manner of hurt, but took away Finton, and fold him in Barbary for a flave. He remained there four years and a half in great mifery and poverty; at laft he was redeemed by alms in the year 1625, and paid for his ranfom 780 lives. Fiton returning to Bourdeaux, found that his mafter Efteben was dead; however, he entered an action in an inferior court againf the widow for his wages, as well for the time he was detained in flavery, as for that before his captivity, as alfo for the reimburfement of his ranfom money, his loffes and intereft. The widow removed the fuit to the higher courts, and from thence it came before the parliament, who decreed, that the widow fhould pay Fenton 1000 livres in full for his wages, redemption, expences, lofs and intereft.

ARTICLE VII
If it happens that ficknefs feizes on any one of the mariners while in the fervice of the fhip, the mafter ought to fet him on fhore, to provide lodging and candle-light for him, and alfo to fpare him one of the fhip's-boys, or hire a woman to attend him, and likewife to afford him fuch diet as is ufual in the fhip; that is to fay, fo much as he had on thip-board in his health, and nothing more, unlefs it pleafe the mafter to allow it him, if he will have better diet, the mafter fhall not be bound to provide it for him, unlels it be at the mariner's own coft and charges; and if the veffel be ready for her departure, fhe ought not to flay for the faid fick party: but if he recover, he ought to have his full wages, deducting only fuch charges as the mafter has been at for him. And if he dies, his wife or next a-kin fhall have them.

OBSERVATION.
The 19th article of the laws of Wifbuy, the 45 th of the Hanfeatiques, the 27th of Charles V. and the 16th of Philip II. which he compiled for the Low-Countries, were all founded upon this law of Oleron, in what relates to a fick mariner, and agree exactly with it, both if he recovers his healch, or dies in the voyage. The Spaniards have another cuftom in the Weft-India voyages: for in cafe a mariner falls fick, he muft fubftitute another in his place, otherwife he lofes all his wages for the time in which he could not work. By the Hanfeatiques, art. 45.
If a mariner is detained afhore by ficknefs, the voyage ought not to be retarded on his account. By Charles the Vth's ordinances, if the mariner dies as he is outward-bound, his wife and heirs fhall receive half his pay: if, as he is home-ward-bound, they fhall have all, deducting the charge of his funeral if there has been any.
In fhips of war, the cuftom in fome places has been more favourable to failors; for we find in a treatife written by Francis Pyrard de Laval, intitled, Avis pour aller aux Indies Orientales, That if a man died the firft day of the voyage, his heirs were to be paid as much as if he had compleated it.

ARTICLE VIII.
If a veffel be laden to fail from Bourdeaux to Caen, or any other place, and it happens that a ftorm overtakes her at fea, fo violent, that fhe cannot efcape without cafting fome of the cargo overboard for lighting the veffel, and preferving the reft of the lading, as well as the veffel itfelf, then the mafter ought to fay, Genclemen, we muft throw part of the goods overboard; and if there are no merchants to anfwer him, or if thofe that are there approve of what he fays by their filence, then the mafter may do as he thinks fit; and if the merchants are not pleafed with his throwing over any part of the merchandize and forbid him, yet the mafter ought not to forbear cafting out fo many of the goods as be fhall fee to be for the common good and fafety; he and the third part of his mariners making oath on the holy evangelifts, when they arrive at their port of difcharge, that he did it only for the prefervation of the veffel, and the reft of the lading that remains yet in her. And the wines, or other goods, that were caft overboard, ought to be valued, according to the juft value of the other goods that arrive in fafety: and
when there fhall be fold, the price or value thereof ought to be divided livre à livre among the merchants.
The mafter may compute the damage his veffel has fuftained, or reckon the freight of the goods thrown overboard at his own choice. If the mafter does not make it appear that he and his men did the part of able feamen, then neither he nor they Chall have any thing. The mariners alfo ought to have one ton free, and another divided by caft of the dice, according as it fhall happen, and the merchants in this cafe may lawfully put the mafter to his oath.

OBSERVATION.
Of two evils, to chufe the leait is the law of nature as well as of nations; and when a thip is in danger of perifhing, the lives of the feamen, and the fafety of the reft of the cargo, make the throwing part of it overboard the leaft evil: but that the mafter's ignorance or fear might not hurry him to do any thing to the detriment of the merchant, without good grounds for it, he muft confult the merchants, paffengers, or mariners aboard his ihip, and, according as the neceffity of it appears to them, to throw the goods overboard. This he is warranted to do by the Rhodian law. Secundo tomo juris Greco-Romani, num. 9 . 2nd by 20th, 2 Ift, and 38 th articles of that of Wifbuy. The 20th and 38 th articles provide alfo, That if the merchants alone are againft the propofition of throwing the merchandize overboard, and the reff, who have their lives and goods alfo to lofe confent to it, the mafter and third part of the feamen purging themfelves as foon as they come afhore by oath, that neceffity forced them to do it, and that otherwife they could not have been faved, may do it, and fhall then be juftified for what they did.
The mafter is not obliged, when he comes to this extremity, to throw his own goods overboard firft. The cuffom of the Levant is, the paffenger or merchant firft flings out fomething of his own. Philip the IId's ordinances, under the tite of Averages, require, That the fhip's utenfils fhould be furt thrown overboard; fuch as old cables, fire-wood, anchors, and guns, which weigh heavy, and are not of the greatef fervice; then the chefts belonging to the fhip's crew, as being of the leaft value. All thofe things which are thrown overboard come into an average, except thofe that belong to the fovereign. See Average.
By the 38 th article of the laws of Wifbuy, the clerk of the fhip ought to regifter all the goods that are thrown overboard; and if there is. no clerk aboard, it is convenient for the mariners to make atteftation of them at the firft port they come to. By the Rhodian laws, the goods that are damaged by the florm come into an Average. By the fame laws, if the mafter by overloading his chip, is the occafion of the goods being thrown overboard, he thall make good the damage. The laws of Wifbuy, art. 46. except in this cafe thofe goods, which were fo laden with the confent of the merchant. See Rhodian Laws, and Wisbuy Laws.
If the mafter has let out more freight than' he has flowage for, he muft not therefore overload his own fbip, but by the Confulate is bound to find freight for them in another. If the merchants, paffengers, or mariners, have any plate or other precious goods in their chefts or cabinets, they ought to inform the mafter and clerk of it, otherwife their chefts will not be liable to any average, for any thing more than what is known to be within them.
Perfons never are reckoned in an average, but all forts of goods whatfoever. Victuals belonging to the lhip are exempted from the laws for throwing goods overboard, and privileged from paying contributions in averages. Seamens wages are not liable to averages. By the Hanfeatiques, art. 28. thefe wages ought to be paid by three payments, a third part before the fhip goes out of the port, a third part when the's unladen, and a third part at her return.
By the Rhodian law, the failors ought to have a ton freight free from contributions in average, when goods are thrown overboard. To explain this it will be neceffary to oblerve, that failors were ufed to hire themfelves out for a voyage for feveral confiderations: fome had a certain fum of money for the whole voyage, or fo much a month, or fo much a day; others hired themfelves for fuch a proportion of the freight, or a liberty to load fo much goods aboard, or let out fo much freight to others : but the moft corrmon way, and the beft of hiring themfelves, was for part in wages, and part in freight, either for themfelves or to let out. Thofe feamen who had wages only, contributed nothing to the average for goods thrown overboard. Thofe who had goods concributed, unlefs thofe goods were bought with their wages, and they had only one ton exempted. The merchants who hired their freight of them, had the fame privilege by it as themfelves.
Having bad occafion to make mention of livrce à livre, an explanation of it will not be unasceptable to the reader. The civilians confidered every thing as an whole; as for example, an inheritance compofed of feversl parts, makes together one whole or mafs, of whatever importance it may be, great or fmall, as if the whole of this inheritance made one livre, one pound, as hereditatis. This pound divided intn twelve equal parts, is named ounces. The merchants and mafters of thips, in cafe of averages for goods thrown overboard or
damnified in forms, have the fame view; that is, they confider the fhip and cargo together as one pound, and the goods loft or damnified as another ; fo that he who had a tenth in the pound of the cargo, a fifteenth or any other thare, mult carry a tenth, a fifteenth or any other fhare to the pound of the avarage ; and this proportion of one pound to another, is what is called by the French naval laws, livie à livre, pound to pound.

ARTICLE IX.
If it happen, that by reafon of much foul weather the mafter is like to be confrained to cut his mafts, he ought firft to call the merchants, if there be any aboard the fhip, and fuch as have goods and merchandize in the veffel, and to confult them, faying, Sirs, It is requifite to cut down the mafts to fave the flip and lading, it being in this cafe my duty. And frequently they alfo cut their mooring cables, leaving behind them their cables and anchors to fave the fhip and her lading. All which things are reckoned and computed livre by livre, as the goods are that were caft overboard. And when the veffel arrives in fafety at her port of difcharge, the merchants ought to pay the mafter their thares or proportions without delay, or fell or pawn the goods, and employ the money he raifes to fatisfy by it the fame, before the faid goods be unladen out of the faid fhip: but if he lets them go, and there happens controverfies and debates touching the premifes, if the mafter oblerves collufion therein, be ought not to fuffer, but is to have his complete freight, as well for what goods were thrown overboard, as for what he brought home.

## OBSERVATION.

No merchant is obliged to pay average for goods thrown overboard, unlefs the mafter can prove he did it for the fafery of his own and his mens lives, and the prefervation of the fhip and the reft of her cargo. What lofs happens by accidents, breaking the mafts, or burning the fails, or pirates taking part of the goods, fhall not come into the common average. By the Rhodian laws, every merchant hall bear his own lois, and the mafter thall do the fame. See allo the 12 th article of the laws of Nifbuy. Averages are by that to be paid for damages done within the fhip, and not for thofe without; therefore the mafter and mariners are obliged to purge themfelves by oath, how the damage came, in the firft court of admiralty they come to, and that it was done in very great neceffity. Indeed, if pirates take the fhip and cargo entire, and both are redeemed for a fum of money, the average for that fhall be common, and all the concerned fhall pay contribution. If the merchants and paffengers aboard the fhip, defire the mafter to put into any port out of his way for fear of pirates, and in going out of that port he lofes anchors or cables, thofe who defired him to put in there fhall pay for them, and the Thip ought not to pay any thing towards that lofs.
After a gencral Chipwreck, there is no average or common contribution, but fave who fave can, as is vulgarly faid on this occafion. If any goods that were thrown overboard in a florm, to lighten the fhip, happen to be recovered, the owner of them ought to refore what he had recovered for thamages by average to thofe that paid him, deducting for the lofs he may be at by his merchandizes being damnified. The Rhodian law enjoins this.

## ARTICLEX.

The mafter of a fhip, when he lets her out to freight to the merchants, ought to thew them his cordage, ropes and nings, with which the goods are to be hoifted aboard or afhore : and if they find they need mending, he ought to mend them; for if a pipe, hoghead, or other veffel, thould happen, by default of fuch cordage, or llings, to be fpoiled or loft, the mafter and mariners ought to make fatisfaction for the fame to the merchants. So alfo if the ropes or Alings break, the mafter not hhewing them before-hand to the merchants, he is obliged to make good the damage : but if the merchants fay the cordage, ropes, or llings, are good and fufficient, and notwithftanding it happens that they break, in cafe that they ought to divide the damage between them; that is to fay, the merchant to whom fuch goods belong, and the faid mafter with his mariners.

## OBSERVATION.

By the r 2 th article of the laws of Wifbuy, and the 7 th of king Philip's, The mafter when he lets his fhip out to freiglt, is bound to fhew her to the merchant or their agents. The confulate requires the fame, and that the mafter foould let the merchants vifit not only the ropes, but all the fhip above decks and below, that they may fee what is wanting, and have it mended; and if it is not mended, and the merchandize is damnified, the mafter thall make good the lofs. The 49th article of the laws of Wifbuy, enjoins the mariners to give the mafter notice of the faults and defects in the cordage; otherwife they fhall be refponfible for all accidents that may happen: and if after fuch notice given, the mafter does not take care to have them mended, he fhall anfwer the damage out of his own pocket.
The Rhodian Jaws, fecundo tomo juris Greco-Romani, num, II. wills and ordains, That the merchant who loads a Vol. II.

Siip, fhall inform himfelf exactly of every thing, diligentef interrogare debent mercatores qui prius in ea navi navigaverunt. The law fays, he thould enquire of thofe that have failed in her before; but that is of little ufe, except as to her failing, for fhips grow daily more and more out of repairs and thould be always' viewed by the perfon that is going to be concerned in them, without trufting to the information of others.

## A R TICLE XI.

If a veffel being laden at Bourdeaux with wines; or other goods, hoifts fail to carry them to fome other port, and the mafter does not do his duty as he ought, nor the mariners handle their fails, and it happens that ill weather overtakes them at fea, fo that the main-yard hakes or ftrikes out the head of one of the pipes or hogheads of wine, this veffel being fafely arrived at her port of difcharge, if the merchant alledges, that by reafon of the main-yard his wine was loft, and the mafter denies it, in this cafe the mafter and his mariners ought to make oath (whether it be four or fix of them, fuch as the merchant hath no exception againft) that the wine perihed not by the main-yard, nor through any default of theirs, as the merchants charge them, they ought then to be acquitted thereof; but if they refure to make oath to the effect aforefaid, they fhall be obliged to make fatisfaction for the fame, becaule they ought to have ordered their fails aright before they departed from the port, where they took in their lading.

## OBSERVATION.

This article is explained by the 23 d of the laws of Wilbuy, which ordains, That if the cargo is ill ftowed and the fhip ill trimmed, and the marinets do not manage their fails rightly, and any damage happens by it to the thip or goods, they thall be refponfible for the damages as far as they have wherewithal to do it. There were formerly in feveral ports of Guyenne certain officers called arrameurs, or ftowers, who were mafter carpenters by profeffion, and were paid by the merchants, who loaded the fhip. Their bufinels was to difpofe right and ftow clofely all goods in cafks, bales, boxes, bundles, or otherwife; to ballance both fides, to fill up the vacant fpaces, and manage every thing to the beft advantage.
It was not but that the greateft part of the hip's crew under ftood this as well as there flowers, but they would not meddeelwith it, nor undertake it, to avoid falling under the merchant's difpleafure, or being accountable for any ill accident that might happen by that means. There were alfo facquiers, who were very ancient officers, as may be feen in the I4th book of the Theodefian Code, Unica de faccariis portus Romæ, lib. 14. Their bufinefs was to load and unload veffels aden with falt, corn, or fifh, to prevent the fhip's crew defrauding the merchant by falfe tale, or cheatirg him of his merchandize otherwife.

## ARTICLE XII

A mafter having hired his mariners, ought to keep the peace betwixt them, and to be as their judge at fea; fo that if there be any any of them that give another the lie, whilft they have wine and bread on the table, he ought to pay four deniers; and if the mafter himfelf gives any the lie, he ought to pay' eight deniers; and if any of the mariners impudently contradict the mafter, he alfo ought to pay eight deniers ; and if the mafter ftrikes any of the marimers, he ought to bear with the ftroke, be it with the fift or open hand; but if the mafter ftrikes him more than one blow, the mariner may defend himfelf: and if the faid mariner doth firft affault the mafter, he ought to pay five fols, or lofe his hand.

## OBSERVATION.

This law reftrains the correction of the mafter to one blow with his fift, which the mariner ought to bear, and no more. The Confulate, chap. 16. explains how far the mariner is bound to fuffer the mafter's affaulting him, in thefe terms; the mariner is obliged to obey the mafter, though he fhould call him ill names, and is enraged againft him, he ought to keep out of his fight, or hide himfelf in the prow of the hip; if the mafter follows him he ought to fly to fome other place from him ; and if he ftill follows him, then the mariner may fland upon his defence, demanding witneffes how he was purfued by the mafter, for the mafter ought not to pafs into the prow after him.
The 24th article of the laws of Wifbuy punifhes the giving the lie. The fame article is very fevere againt the mariner that ftrikes the mafter. The mariner that frikes, or lifts up arms againft his mafter, was to lofe half his hand in a very painful way. If the mariner has committed a crime too great for the mafter's authority to punifh, then the mafter and his officers ought to feize the criminal, pur him in irons, and bring phim to juftice at his return.

ARTICLE XIII.
If a difference happens between the mafter of a thip and one of his mariners, the matter ought to deny him his mefs thice,

## OLE

before he turn him out of the fhip, or difcharge him thereof; but if the faid mariner offer in the prefence of the reft of the mariners to make the mafter fatisfaction, and the mafter be refolved to accept of no fatisfaction from him, but to put him out of the fhip, in fuch cafe the faid mariner may fullow the faid veffel to her port of difcharge, and ought to have' as good hire or wages, as if he had come in the Chip, or as if he had made fatisfaction for his fault in the fight and prefence of the Chip's company: and if the mafter take not another mariner into the fhip in his ftead, as able as the other, and the fhip or lading happens thereby to be through any miffortune damnifed, the mafter fhall be obliged to make good the fame if be hath wherewithal.

## OBSERVATION.

To deny him his mefs is in the original, Oftar la touaille, an old Gafcon phrafe, which fignifies to deny him the tablecloths or victuals for three meals, by which is underftood a day and a half. The Wifbuy law, art. 25. provides for the mafter's making fatisfaction for the damages that may happen through the want of the mariner he turns off. And the Hanfeatiques, art. 27 , require the mafter not to give the feamen any caufe to mutiny; not to provoke them, call them names, wrong them, nor keep any thing from them that is theirs, but to ufe them well, and pay them honefly what is their due. Some French laws ordain, That no mariner fhould be admitted under 18 years, nor above 50 . The choice of the crew is entirely in the matter ; the reafon is, that he ought to be himfelf very well affured of his feamens ability, and not to take it upon truft by report of others.

## AR TICLE XIV.

If a veffel being moored lying at anchor, be ftruck or grappled with another veffel under fail that is not very well theered, whereby the veffel at anchor is prejudiced, as alfo wines, or other merchandize in each of the faid hips damnified, In this cafe the whole damage fhall be in common, and be equally divided and apprized half by half; and the mafter and mariners of the veffel that ftruck or grappled with the other, fhall be bound to fwear on the holy evangelifts, that they did it not willingly or wilfully. The reafon why this judgment was firft given, being that an old decayed veffel might not purpofely be put in the way of a better, which will the rather be prevented when they know that the damage muft be divided.

## OBSERVATION.

This law agrees exactly with the 26 th, 50th, 67 th, and 70 th, articles of the ordinances of Wifbuy. The dividing the lofs in halves is, to prevent any cheat; for an old veffel that is worth little or nothing, might elfe be put in a new one's way: and if the runs againt her, more damage be pretended than the old hhip might fairly be valued at.

## ARTICLEXV.

Suppofe two or more veffels in a barbour where there is but little water, fo that the anchor of one of the veffels lies dry, the mafter of the other veffel ought in that cafe, to fay unto him whofe anchor lies dry, Mafter, take up your anchor, for it is too nigh us, and may do us a prejudice : if neither the faid mafter nor his mariners will take up the faid anchor accordingly, then may that other mafter and his mariners (who might be otherwife thereby damnified) take up the faid anchor and let it down at a further diftance from them; and if the others oppofe or withftand the taking up of their anchor, and there afterwards happens damage thereby, they thall be bound to give full fatisfaction for the fame; but if they put out a buoy or anchor-mark, and the anchor does any damage, the mafter and mariners to whom it belongs are not bound to make it good ; if they do not, they are; for all mafters and mariners ought to faften fuch buoys or anchor-mark, and fuch cables to their anchors, as may plainly appear and be feen at full fea.

## OBSERVATION.

The 28th and 5 Ift articles of the ordinances of Wifbuy, require mafters to put out buoys, to warn others where their anchors lie, on pain of making fatisfaction for whatever damage may happen for want of them : for anchors hid under water may do a great deal of mifchief at ebb and low water. If any mafter fipies them, and they lie near him, he may remove them, and prevent any damage coming to his thip. Harmenopolus in promptuario titulo de rebus nauticis, licet in difcrimen adductis, qui fe aliter explicare non poffunt, altrius navis anchoras falutis fux caufa precidere. The buoys that are made ufe of, are either empty barrels, or pieces of the trunk of a tree, or any other light wood, with bafkets that fwim on the top of the water, and thew where the anchors lie.

## OLE

## ARTICLE XVI.

When a hip arrives with her lading at Bourdeaux or elfewhere, the mafter is bound to fay to his company, when the is ready to load again, Gentlemen, will you feight your own fhare yourfelves, or be allowed for it in proportion with the Chip's general freight: the mariners are bound to anfwer one or the other. If they take as the freight of the fhip fhall happen, they fhall have proportionably, as the thip hath; and, if they will freight by themfelves, they ought to freight fo as the fhip be not impeded or hindered thereby: and, if it fo happen, that they cannot let out their freight, or get goods themfelves; when he has tendered them their fhare and fowage, the mafter is blamelefs; and if they will there lade a ton of water, inftead of fo much wine, they may: and, in cafe there fhould happen at fea an ejection, or cafting of goods overhoard, the cafe fhall be the fame for a ton water as for a ton of wine, or other goods, livre by livre. If they let out their proportion of freight to merchants, what freedom and immu nity the faid mariners have, the faid merchants fhall alfo have.

## OBSERVATION.

This article has fomer relation to the 8th, which treats of mariners wages, and their freight aboard. The zoth article of the laws of Wifbuy is founded upon it. By the feamens immunity is meant, the privilege of being the Jaft to be thrown overboard in a ftorm, and having a ton free from all average. The mariners freight fhould be firft full, for the mafter is not obliged to ftay for them when his cargo is all aboard.
The reafons given-by our author, why, in cafe of throwing overboard, the mariners ton of water thall come in equally in the average, livre à livere, for a ton of wine, are, a mariner may make what ufe he pleafes of his ftowage, becaufe he takes it as part of his pay: befides, in fuch cafe, the water he has aboard lightens the fhip as much as if it was wine; and the mariner, by throwing over his watelif which by his privilege he may refufe to do, not only helpos to fave the thip and cargo, but to fave the latter the more entire: for, if any thing the merchant had aboard of more value than wine, ftood before his ton of water, it muft have gone firft, and his throwing his water overboard being fo much for the common intereft of the fhip and cargo, he is allowed to come in upon an average, as if it had been a ton of wine. How far this law of Oleron prevails in our maritime courts now, the civilians muft determine; but, by the common law of England, a ton, of water would never be rated livere à live, pound by pound, with a ton of wine.

## A R T I C LE XVII.

The mariners of Britany ought to have but one meal a day from the kitchen, becaufe they have beverage going and coming; but thofe of Normandy are to have two meals a day, becaufe they have only water at the thip's allowance; and, when the flip arrives in a wine country, there the mafter fhall procure them wine to drink.

## OBSERVATION.

The cuftom of giving every man a certain allowance is very ancient; and, to prevent jealoufies, complaints, and diforders, that allowance is fettled at fo much a head, and exactly delivered out to all alike. As to the allowance of wine and meals by this article, the 2gth of the ordinances of Wifbuy agrees with it. In thole voyages where wine is to be had, the mafter is bound to provide it for the mariners, and then they fhall have but one meal a day: but, when they drink water only, they fhall have two meals, Charles V. and Philip IId's laws ordain, That the mafter fhall order the mariners to have three certain meals a day; and, if they would have more meat, they fhall only have what was laft at their meals, unlefs upon extraordinary occafions. By the $5{ }^{2 \mathrm{~d}}$ article of the Hanfeatiques, the mafter of German flips bound for France and Spain are not to provide victuals for their mariners when they are outward bound; but, when they are homeward bound, if the Chip is let out to freight and loaden, the mafters are obliged to maintain their mariners; if they return light and empty, they are not obliged. The Portugueze, in their Eaft-India voyages, maintain both mariners and foldiers outward-bound, and allow each a pound and a half of bifcuit, three pints of wine, and three pints of water a day, and 31 pounds of falt fifh a month, fome dry figh, garlick and onions: but, in their homeward-bound voyages, they have only bifcuits and water to the Cape of Good Hope, and, after that, they live every man on his own provifion.

Facilis defcenfus ad Indos: Sed revocare gradum, veteremque evadere ad orbem, Hoc opus, hic labor eft.

## OLE

In cafes of necelify, when provifions fall fhort, thofe that have victuals aboard ought to communicate to thofe that have not, by the Rhodian law.

## A R T I C L E XVIII.

When a veffel is unladen, and the mariners demand their freight, fome of them having neither bed, cheft, nor trunk board, the mafter may lawfully retain part of their wages, till they have brought back the fhip to the port from whence the came, unlefs they give good fecurity to ferve out the whole voyage.

## OBSERVATION.

The 31? article of the ordinances of Wifbuy agrees exactly with this. The feamens wages are not regularly due, 'till after their work is intirely done, or the time they hired themfeives for expired, except there are any private agrements to the contrary. The 28 th article of the Hanfeatiques ordains, that their wages thould be paid at three feveral payments; one third when they fet fail upon a vayage, one third when they arrive at their port of difcharge, and the other third when the fhip is returned home.

## A R TICLE XIX.

If the mafter hircs the mariners in the town to which the veffel belongs, either for fo much a day, week, or month, or for fuch fhare of the freight, and it happens that the fhip cannot procure freight in thofe parts where the is arrived, but muft fail further to obtain it: in fuch cafe, thofe that were hired for a thare of the freight ought to follow the mafter, and fuch as are at wages ought to have their wages advanced courfe by courfe, that is, in proportion to the length of the voyage, in what it was longer than they agreed for, becaufe he hired them to one certain place; and, if they go not fo far as that place for which the contract was made, yet they ought to have the whole promifed hire, as if they had gone thither; but they ought likewife to bring back the veffel to the place from whence fhe at firft departed.

## OBSERVATION.

This article is explained by the 8th and 16 th, and what is faid upon them. The 32d of the laws of Wifbuy, the 12 th and $13^{\text {th }}$ of Charles 'V, and the 24th of the Hanfeatiques, are to the fame purpofe. By the 9 th article of Philip IId's laws, if the voyage is broken off by wars, pirates, or the command of the fovereign, the feamen ought to have a quarter part of the wages they agreed to have if they had compleated it. In the year 1626, about OCtober, all the Englifh thips that were then in the river of Bourdeaux were flopped, by order of Monfieur de Luxemburgh, governor of Blaye. Several of thefe fhips were laden with wine, and fome with other merchandize. They were forced to return to Bourdeaux and unload; after which the mafters demanded the whole freight of the merchants who had freighted them, by virtue of the law Colonus §, novem conduxit. D. locati, inafmuch as it was not their faults that they did not make their voyage, and carry the goods to their intended port: the freight was then 15 or 16 livres a ton :. the admiraltycourt adjudged them a quarter part of it: they appealed to the fovereign court, who, after two hearings, fet afide their appeal.

## ARTICLE XX.

When a veffel arrives at Bourdeaux, or any other place, two of the mariners at a time may go a-hore, and take with them one meal of fuch victuals as are in the hhip therein cut and provided, as alfo bread proportionably, as much as they eat at once, but no drink : and they ought very fpeedily, and in feafon, to return to their veffel, that thereby the mafter may not lofe his tide; for if fo, and damage comes thereby, they are bound to make fatisfaction ; or, if any of their company be hurt for want of their help, they are to be at fuch charge for his recovery as one of his fellow mariners, or the mafter, with thofe of his table, fhall judge convenient.

## OBSERVATION

The reafon of this law ceafes now for Bourdeaux, for which place it was originally intended: for the river is fo full of cating houfes and taverns on both fides, that it is not likely failors will carry any of their falt provifions on fhore, when they can get frefh.

## A R T I C L E XXI.

If a mafter freight his fhip to a merchant, and fet him a certain time within which he thall lade his veffel, that the may be ready to depart at the time appointed, and he lade it not within the time, but keep the mafter and mariners for the fpace of eight dajs, or a fortnight, or more, beyond the time

## OLE

agreed on, whereby the mafter lofes the opportunity of a faif wind to depart: the faid merchant, in this cafe, fhall be obliged to make the mafter fatisfacion for fuch delay, the fourth part whereof is to go among the mariners, and the other three-fourths to the mafter, becaufe he finds them their provilion

## OBSERVATION.

The 34 th article of the ordinances of Wiibuy, and the 39 th of the emperor Charles $V$, are intirely agreeable to this law. By the laws of the Hanfeatiques, and Philip IId's, the merchant is obliged to pay the whole freight, if he does not load the fhip in 15 days after the time agreed upon; and, by the Theodofian Code de Naviculariis, when a veffel artives in a port loaden, the merchant to whom the cargo belongs muft unload in ro days; but in our times, on account of holy-days and Sundays, the common time for unloading a fhip is 15 days; but that hould not hinder the paying the freight, which ought to be cleared in eight days, whether the fhip be difcharged or not. The mafter for his pay cannot detain the merchandize aboard; but, when they are in the boat or lighter, he may ftop them 'till he is fatisfied.

## ARTICLE XXIT.

When a merchant freights a veffel at his own charge, and fets her to fea, and the faid veffel enters into an harbour, where fhe is wind-bound, fo that the ftays 'till her monies be all fpent, the mafter, in that cafe, ought fpeedily to write home to his own country for money, but ought not to lofe his voyage on that account; for, if fo, be fhall be obliged to make good to the merchant all damages that fhall enfue. But the mafter may take part of the wines, or other mercharts goods, and difpofe thereof for his prefent neceffities: and, when the faid veffel fhall be arrived at her port of difcharge, the faid wines that the mafter hath fo difpofed of, ought to be valued and appraifed at the fame rate as the other wines fhall be commonly fold for, and accordingly be accounted for to the merchant: and the mafter ought to have the freight of fuch wines as he hath fo taken and difoled of for the ufe and reafon aforefaid.

## OBSERVATION.

The 35th and 69th articles of the laws of Wirbuy are to the fame purport as this; but, by the 68 th article of thofe laws, if the hip happens afterwards to be caft away, the mafter fhall pay the merchant for the wines, or other goods he fold in a cafe of neceffity; without pretending to deduct any thing for the freight. The Hanfeatiques forbid any mafter to borrow any money on any other fecurity but the fhip's bottom, that, if fhe fhould be loft, the debt might be paid; nor do they allow him, when he is at home, to borrow any thing on her bottom, or otherwife, without acquainting the owners with it. By the 45 th article of the laws of Wifbuy, the fhip is bound to the merchant whole goods the mafter bas fold in this manner, to make him fatisfaction, though fhe fhould be herfelf fold, and have other owners.

## A R T I CLE XXIII.

If a pilot undertakes the conduct of a veffel, to bring her to St Malo, or any other port, and fail of his duty therein, fo as the veffel mifcarry by reafon of his ignoronce in what he undertook, and the merchants fuftain damage thereby, be fhall be obliged to make full fatisfaction for the fame, if he hath wherewithal ; and, if not, lofe his head.

## ARTICLE XXIV.

And if the mafter, or any of his mariners, or any one of the merchants, cut off his head, they fhall not be bound to anfwer for it ; but, before they do it, they mult be fure he had not wherewith to make fatisfaction.

## Observations on the two foregoing articles.

The original calls thefe pilots lockmen; for, when thofe laws were written, there were officers aboard all thips, called pilots, who went the whole voyage, whereas the lockmen were like our pilots, mariners hired at every river, to guide the fhip; for, dwelling on the place, the lockman was fuppofed to know the fhore better than the fhip's pilot, who perhaps was never there before; for which reafon he commonly required the mafter to have a lockman, to avoid rocks, fheives, fhoals, and fands, which he muft be well acquainted with by long ufing the river. That of Roan is very dangerous on this account, and there are fworn pilors every two leagues, to guide hips up the Seine: they are very necefliary all over Britany. The 44th and 59th articles of the ordinances of Wifbuy oblige the mafter to take a new pilot, if his own and the fhip's crew demand one of him. The mafter finds him maintenance, and the merchant pays him, by the 6oth article of the ordinances of Wifbuy. The lofs of the pilot's
head, if through his ignorance or negligence the hip is loft, is taken from the Confulate, chap. 250, and anfwers to that known maxim in the law, Qui non habet in are, luet in corpore.

## ARTICLE XXV.

If a flip, or other veffel, arriving at any place, and making in towards a port or harbour, fet out her flag, or give any other fign to have a pilot come aboard, or a boat to tow her into harbour, the wind or tide being contrary, and contract be made for piloting the faid veffel into the faid harbour accordingly, but, becaufe of an unreafonable and accurfed cuftom in fome places, that the third or fourth part of the hips that are loft fhall accrue to the lord of the place where fuch fad cafualties happen, as alfo the like proportion to the falvers, and only the remainder to the mafter, merchant, and mariners: the perfons contracting for the pilotage of the faid veffel, in order to ingratiate themfelves with their lords, and to gain to themfelves a part of the fhip and lading, do, like faithlefs and treacherous villains, fometimes even willingly, and out of defign to ruin Chips and goods, guide and bring her upon the rocks, and then feigning to aid, help, and affift the now-diftreffed mariners, are the firt in difmembering and pulling the fhip to pieces, purloining and carrying away the lading thereof, con trary to all reafon and good confcience: and afterwards, that they may be the more welcome to their Jord, do with all fpeed poft to his houfe with the fad narrative of this unhappy difafter; whereupon the faid lord, with his retinue, appearing at the place, takes his Thare; the falvers theirs ; and what remains the merchants and mariners may have. But feeing this is contrary to the law of God, our edict and determination is, that, notwithftanding any law or cufrom to the contrary, it is faid and ordained, The faid lord of that place, falvers, and all others that take away any of the faid goods, fhall be accurfed and excommunicated, and punifhed as robbers and thieves, as formerly hath been declared : but all falfe and treacherous pilots fhall be condemned to fuffer a moft rigorous and unmerciful death, and high gibbets thall be erected for them in the fame place, or as nigh as conveniently may be, where they fo guided and brought any fhip or veffel to ruin as aforefaid, and thereon thefe accurfed pilots are with ignominy and much fhame to end their days : which faid gibbets are to abide and remain to fucceeding ages on that place, as a vifible caution to other Chips that fhall afterwards fail thereby.

## ARTICLE XXVI.

If the lord of any place be fo barbarous as not only to permit fuch inhuman people, but alfo to maintain and affift them in fuch villanies, that he may bave a fhare in fuch wrecks, the faid lord fhall be apprehended, and all his goods confifcated and fold, in order to make reftitution to fuch as of right it appertaineth, and himfelf to be faftened to a poft, or fake, in the midft of bis own manfion houfe, which being fired at the four corners, all fhail be burned together, the walls thereof fhall be demolifhed, the ftones pulled down, and the place converted into a market-place for the fale only of hogs and fwine to all pofterity.

## Observations on the two faregoing articles.

Thefe two laws were made upon account of that inhuman droit de bris fur les naufrages, the right of lords of coafts to hipwrecks; by which thofe miferable wretches who were caft away, their very perfons, and the goods that were faved, were conficated for the prince who was lord of the coaft. In the barbarous times men ufed to put this law in practice, efpecially the Gauls, who took all ftrangers for their enemies, and not only robbed them of their goods, but of their lives, facrificing them to their falle gods. From which bloody cuftom Hercules brought them off, according to Diodorus Siculus, lib. v. Hift. cap. 2. Pomponius Mela, lib. iii. de fitu orbis, cap. 2. The Romans, though they were covetous to excefs, and greedy after other mens goods, never approved of this cruelty, but condemned and abrogated the ufe of it to the utmoft of their power, toto titulo de incendio, ruina \& naufragio. Et de naufragiis, libro undecimo. Codicis, leg. a. $\&$ leg. 9 . But the empire degenerating in it's decadency, when fo many barbarous nations poured in upon it out of Scythia and Scandinavia, and tore it to pieces, this wicked droit de bris fur les naufrages was renewed, particularly on the coafts of Gaul, called Littus Saxonicum, on account of the frequent invafions of the Saxons there. Sidonius Appollinaris, lib. viii. epift. 6. \& carmine feptimo. Afterwards the Normans being by chance thrown upon that coaft, were immediately difpatched by the inhabitants; and, in courfe of time, this pretended right infinuated itfelf, and prevailed not only againft enemies and invaders, but againft any perfons that were fhipwrecked. Quicquid evadebat ex naufragiis totum fibi fifcus lege patrix vindicabat, paffofque naufragium miferabilius violentia principis fpoliabat quam procella, as fays Hildebertus Turonenfis atchiepifc. epift. $32 \& 63$.

At laft the counts and dukes of Armoreck; Bretagnc, and Gaul, were obliged by civility, and the requeft of the neiphbouring people of Bourdeaux and Rochelle, to change this barbarous cuftom of flavery and confifcation into a tax for all fuch as procured licences from them; of which licences there were three forts, bref de fauvette, bref de conduite, and bref de victualle: the two firf were to fave them, in cafe of hipwreck, from the old forfeitures to the lord, and exempt them fram the cruel droit de bris. The third was for liberty to buy provifions in Bretagne. The dukes of Bretagne eftablifhed an office and officers for giving out thefe licences, as at Rachelle and other places. The droit de bris was alfo practifed in Guienne, Sainctonge, Artois, and Poictou, but much more civilly and humanely than it was ufed in Bretagne; for the lords of the coafts took only a third or a quarter part, according to the feveral cuftoms; the falvers as much, and the reft was reftored to the poor wretches that were fhipwrecked, and their perfons were free.
This barbarity is abolifhed in England, Italy, Germany, Spain, and France, unlefs it be practifed againft the enemies of the fate, infidels, or pirates : but the Spaniards obferve this cuftom beyond the Line againt all but natural Spaniards. This droit de bris, which was not, however, fo cruelly executed in Guienne as in Bretagne, was folemnly abrogated by Henry III. king of England, and duke of Aquitaine and Guienne: his edict to this purpofe is regiftered and preferved among the rolls at Bourdeaux.
As to that part of thefe laws requiring traiterous pilots to be hanged on the fhore, in fome eminent place, to be a warning to att mariners, Andronicus, emperor of Greece, who reigned about the year 1150 , ordered the fame, or the like punifhment, for fuch as made fpoil of wrecks, as Nicetas reports, in the fecond book of his Annals. The lotd Verulam, in his Hiftory of Henry VII. writes, that it was heretofore the cuftom in England to leave the dead bodies of pirates on gibbets near the water-fide, for a warning to feafaring men.
The hanging fuch as are condemned for crimes committed at fea by the water-fide, and fome of the molt criminal in chains, has been practifed fince in this kingdom. Thofe malicious fifhermen who in the night make fires in dangerous places, to attract mariners thither, to the lofs of their fhips, by making them believe they are near ports and inhabited places, deferve the fame punifiment.
The word in the French which is rendered caution in Englifh, is belife, properly a beacon; but in this place it is ufed metaphorically: for a gibbet would be an odd fort of beacan in our language. There are feveral forts of thefe belifes, or beacons at fea, fet up to direct mariners to the right courfe they ought to take to avoid danger. Thefe are very neceffary in thofe parts where there are bare, that is entrances, where there muft be high tides to carry fhips over them. Sometimes buoys are made ufe of for belifes, and fometimes trees, light-houfes, and other things.
The burning the criminals houfes mentioned in thefe two articles, and all that is in it, fhews what an opinion the legiflature had of the heinoufnefs of the crime. Coiners were in France burned in old times, and their falfe money with them; their buildings were levelled with the ground, their woods felled and rooted up, and the places that belonged to them condemned and ftrewed with falt, as was the town of Poictiers in the reign of king Dagobert.

## ARTICLE XXVII.

A veffel being arrived at her port of difcharge, and halled up there into dry ground, fo as the mariners, deeming her to be in good fafety, do take down her fails, and fo fit the veffels aloof and aft, the mafter then ought to confider an increafe of their wages, kenning by kenning; and if in hoifting up of wines, it happens that they leave open any of the pipes, or other veffels, or that they faften not the ropes well at the ends of the veffel, by reafon whereof it flips and falls, and fo is loff, and falling on another both are loft, in thefe cafes the mafter and mariners fhall be bound to make them good to the merchants, and the merchants muft pay the freight of the faid damnified or loft wines, becaufe they are to receive for them from the mafter and mariners, according to the value that the reft of the wines are fold for ; and the owners of the fhip ought not to fuffer hereby, becaufe the damage happened by default of the mafter and mariners, in not making faft the veffels or pipes of wine.

## OBSERVATION.

Kenning by kenning, veu par veu, is a phrafe ufed by mariners, as is alfo courfe by courfe, in the 19th article of thefe laws. Thefe phrafes are very ancient, and kenning was particularly ufed when navigation was performed by views, and by obfervation on the land from one profpect to another, Plin. lib. vi. cap. 13 . which was before the invention or knowlege of the ufe of the compafs. It fignifies what the logicians, or metaphyficians, called agreement, the arithmeticians and geometricians proportion, and others exprefs otherwife.

ARTICLE

## A RTICLE XXVIII.

If two veffels go on a fifhing defign in partnerfhip, as for mackrel, herrings, or the like, and do fet their nets, or lay their lines, at Olonne, St Gilles, Survie, or elfewhere, the one of the veffels ought to employ as many filhing-engines as the other, and fo fhall go in equal fhares as to the gain, according to the agreement between them made. And if it happens that one of the faid veffels, with her filhing inftruhappens that one of the laid veliels, with the other efcaping,
ments, engines, and crew, perifh, and ments, engines, and crew, periih, and the other eicaping,
arrives in fafety: if the furviving friends of thofe that perifhed, require of the other to have their part of the gain, as alfo of their fifh, fifhing-inftruments, and boat, they are to have, unon the oaths of thofe that efcape, their part of the filh and fifining inftruments; but they fhall not have any part or hare in the veffel itfelf.

## ARTICLE XXIX.

If any fhip, or other veffel failing to and fro, and coafting the feas, as well in the way of merchandizing as upon the fifhing account, happen by fome misfortune, through the violence of the weather, to Atrike herfelf againft the rocks, whereby the becomes fo bruifed and broken that there the perifhes, upon what coafts, country, or dominion foever, and the mafter, mariners, merchant, or merchants, or any one of thefe ercape, and come fafe to land; in this cafe, the lord of that place or country where fuch misfortune fhall happen, ought not to let, hinder, or oppofe fuch as have fo efcaped, or fuch to whom the faid fhip or veffel, and her lading belong, in ufing their utmolt endeavours for the prefervation of as much thereof as may poffibly be faved; but, on the contrary, the lord of that place or country, by his own intereft, and by thofe under his power and jurifdiction, ought to be aiding and affifting to the faid diftreffed merchants or mariners, in faving their fhipwrecked goods, and that without the leaft embezzlement, or taking any part thereof from the right owners. But, however, there may be a renunciation, or confideration, for falvage to fuch as take pains therein, according to right reafon, a good confcience, and as juftice fhall appoint; notwithltanding what promifes may in that cale have been made to the falvers, by fuch diffreffed merchants and mariners, as is declared in the 4th article of thefe laws: and, in cafe any fhall act contrary hereunto, or take any part of the faid goods from the faid poor, diftreffed, ruined, undone, fhipwrecked perfons, againft their wills, and without their confent, they thall be declared to be excommunicated by the church, and ought to receive the punifhment of thieves, except fpeedy reftitution be made by them: nor is there any cuftom or ftatute whatfoever that can protect them againft the aforefaid penalties, as is faid in the 26 th article of thefe laws.

Observation on the two foregoing articles.
The civil law almoft every where allows all hipwrecked perfons a right to gather up their fhipwrecked goods. The Codex and the Khodian laws are particular in this matter, fo is king Henry IIId's charter beforementioned.

## A RTICLE XXX.

If a fhip, or other veffel entering into harbour, happens by misfortune to be broken and perifh, and the mafter, mariners, and merchants which were on board her, be all drowned, and if the goods thereof be driven afhore, or remain floating on the fea, without being fought after by thofe to whom they belong, they being ignorant of this fad difafter, and knowing nothing thereof: in this moft lamentable cafe, the lord of that place or country ought to fend perfons to fave the faid goods, which he ought to fecure and to put into fafe cuftody, and give the relations of the deceafed perfons who were drowned notice of it, and to fatisfy for the falvage thereof, not out of his own purfe, but of the goods faved, according to the hazards run, and the pains taken therein; and what remains muft be kept in fafe cuftody for one year or more; and if, in that time, they to whom the faid goods appertain do not appear and claim the fame, and the faid year be fully expired, he may publickly fell and difpofe thereof, to fuch as will give moft, and with the monies proceeding from the fale thereof he ought to give among the poor, and for portions to poor maids, and other charitable uies, according to reafon and good confcience. But if he affumes the faid goods, either in whole or in part unto himfelf, he fhall incur the curfe and malediction of our mother the holy church, with the aforefaid pains and penalties, without ever obtaining remiffion, unlefs he make fatisfaction.

## OBSERVATION.

The keeping fuch goods a year is in the civil law, 1, 2 Cod. Naufragis: but the parliament of Paris, in the year 1584, pretended to reduce the time to two months, which time was to commence from the day of proclaiming fuch goods in pubVOL. II.
lic market, and fixing a placart of it on the doors of the parifh-church. The confulate provides for the falvers more largely, allowing them half of the goods faved, and the lord and the poor the other half, cap. 252. By fome laws in France, as long as the goods are in being and unalienated, the merchant to whom they belong has a claim to them, paying the charge of falvage: but if, after a lawful time, they are fold, and become another's property, he has no claim to them. The cafuifts are of opinion, That, if he who finds them is rich, he ought to give all to pious ufes; if poor, to keep all himfelf, Hoftienfis in fumma de poenitentia; and the $3^{6 \text { th }}$ article of the laws of Oleron agrees with the judgment of the caluifts.

## A R T I C L E. XXXI.

If a fhip, or other veffel, happens to be loft by ftriking on fome thoar, and the mariners, thinking to fave their lives, reach the hoar, in hope of help, and inftead thereof it happens, as it often does, that in many places they meet with people more barbarous, cruel, and inhuman than mad dogs, who, to gain their monies, apparel, and other goods, do fometimes murder and deftroy thefe poor diftreffed feamen; in this cafe, the lord of that country ought to execute juftice on fuch wretches, to punifh them as well corporally as pecuniarily, to plunge them in the fea 'till they be half dead, and then to have them drawn forth out of the fea, and floned to death.

## OBSERVATION

To plunge them in the fea, plonger en la mer, is what the French now call bailler la cale, and we keel-hauling.
The Goths heretofore ufed to practife it as a fport or exercife, Olaus Magnus Hiftorix Septentrionalis, lib. 5. and lib. ro. cap. 16. And one may conceive an idea of the barbarity of the northern nations, when that was a divertion to them, which was a punifhment to others; as it was of old among the Celtes and Franks, and is now among the modern navigators.
Lazy and fcandalous perfons had fome fuch fort of punifhment, by the cuftoms or laws of the old Germans, Tacitus de Morbus Germanorum, num. 5. Turnus Herdonius was punifhed thus to death, for abufing and railing at the king. Tarquinius Superbus, T. Livius, lib. primo decadis prime. Bawds and whores are ferved fo at Bourdeaux ; and folds fomething like it in England, when they are put into the ducking. Stool.

## ARTICLE XXXII.

If by reafon of tempeftuous weather, it be thought expedient, for the lighting of any thip or veffel at fea, or riding at anchor in any road, to caft part of the lading overboard, and it be done accordingly for the common fafety, though the faid goods fo ejected and caft overboard, do become his that can firft poffers himfelf thereof, and carry them away: neverthelefs, it is here to be further underftood, that this holds true only in fuch cafes, as when the mafter, merchants, and mariners have fo ejected or caft out the faid goods, as that they give over all hope or defire of ever recovering them again, and to leave them as things utterly loft, and given over by them, without ever making any enquiry or purfuit after them: in which cafe only, the firft occupant becomes the lawful proprietor thereof.

## OBSERVATION.

The property of things thrown overboard remains in the merchants, and the finder has noright to them, unlefs they were thrown out with an intention to leave them there and look no more after them, c. 2. in fine, 1. qui lavandæ D. Lege Rhodia, l. quod ex naufragio, D. acquirenda vel amittendia paffeffione Neptunus faftidiofus ædilis' eft. Si quxe funt improbæ merces jactat omnes; as Plautus fays in Stichot. The fea drives all things to land: maris hæc eft natura, ut omne immundum, ftercorofumque in littoribus impingat. Seneca naturalium quaft. lib. 3. cap. 26. On this affurance, every one that flings his goods overboard in time of danger, hopes and defires to recover them again after feeking for them, and thofe things non funt in direlicto, red in deperdito, 1.fig quis Merces, D. pro derelicto. It is true, what is abandoned through contempt or careleffnefs, belongs to the firft occupiers; quod dominus ea mente abjecit, ut in numerum rerum fuarum effe nolit, qui primus occupaverit ftatim dominus fit jure naturali. Inflit. de rerum divifione 5, qua ratione, \& lege I. D. pro derelicto.

## ARTICLE XXXIII.

If a fhip, or any other veffel, hath caft overboard feveral goods or merchandizes, which are in chefts well locked and made faft ; or books well clafped and fhut clofe, that they may not be damnified by falt water: in fuch cafes it is to be prefumed, that they who did caft fuch goods overboard, do 5 E
ftill retain an intention, hope, and deffee of rocovering the fame. For which reafon, thofe who fhall happen to find fuch things are obliged ro make intitution thereof to bim who fhall make a due enquiry after theit, or put them to pious ufes, according to his confcience, and the adviee of fome prudent nëghbour,

## OBSERVATION.

Weil dafped; this is conformable to the glofs on the laft law. D. Legee Rhodia:

AR T I CLE XXXIV.
If any man happens to find any thing in the fea, or in the fand on the hore, in floods or in rivers, if it be precious ftones, filhezs or any treafure of the fea, which pever belonged to any mar in point of property; it belobge to the fifft finder.

## ARTICLE XXXV

If any fearches the fea-boaft to figh, or find gold or filvery and he finds it; be ought to reftore it all without any diminuition.

## ARTICLE XXXVF.

If any going along the fea-fhore to filh, or otherwife happens to find gold or filvers he fhall be bound to make reftitution thereof, deducting for his own pains; or, if he be poor he may keep it to himfelf; that iss, if he knows thot to whom to reftore it; yet he Ihall give notice of the place whers he found it, to the neighbrourhood and parts next adjacent; and advife with his fuperiors, who oaght to weigh, ard take into confideration the indigence and poverty of the finder, and then to give him fuch advife as is confonant, to good eonfcience.

## Observation on the three preceeding articles:

There are three forts of goods, which the fea naturally drives to land: as entire, wrecks; for which the eruel deoit de bris was in old times eftabilifhed by pernicious and barbarous cuftom: bui humanity, licences, and pafforts have abolifhed it in ours. The fecond is what is flung overboard, for the prefervation of mens lives, the fhip and cargo. Neither of thefe, by law nor the cuftom of the fea, change their proprietors ; but may be claimed and recovered by them, within the lawful time appointed by ordinances and cuftoms to claim, even while the goods are in being and unfold, as'appears by what has been faid in and upon the 3 oth aft.
The thid fort comprehends the two firft, which are not owned and demanded by the proprietor a and befides that, includes all the treafures of the fea, which come out of it's bowels, and it naturally drives afhore; as aromatic amber, on the coalt of Guienne; amber fuccinum; in the German ocean; red, black, and white coral, on the coaft of Barbary ; precious flones, filh-fiells, and ather riches, which the fea produces, and which, in the 34th article of thefe laws, are called herpes marines, in Englib, treafures of the fea, for it cannot be otherwife fo fully expreffed. The word herpes was taken from an old Gaulif teim herpir, which fignifies to take, and it's contrary, voerpir, is to leave.
Nor is he who firft lays his band on them, obliged to give thofe that are there with him a fhare of what he has found, unlefs he pleafes to do it out of courtefy, notwithttanding the conftitution of the emperor Leo, which is contrary to it. This is the law of nature; but princes and lords of the coalt have ufurped this privilege, and laid claim to all the treafures of the fea, that it throws on their royalties. The lords of the coafts, that is, of the manors or lands on the coafts of France, were notorious ufurpers in this, 'till the reign of Lewis XIII, when cardinal Richlieu, by an order of the council, bearing date the $13^{\text {th }}$ of December, 1629 , took away the pretended rights of feveral lords, or very much abridged them ; but he did not reftore the law of nature in this cafe: he only enlarged his own and his fucceffor's privileges and authority, he being great mafter, and fuperinten-dant-general of the navigation and commerce of France, This regulation of council occafioned great diforderg, and the count de. Olonne was particularly fo enraged at it, that his officers by main force drove away thofe of the admiralty, who came upon his royalty. But the French kings were now mafters of their fubjects. lives and fortunes, and it woute have been in vain for fuch counts to. have difputed the king's edict with thefe words in it, car tel eft nôtre plaifir, the ftanding reafon of the French laws at this time.

## ARTICLE XXXVII.

Touching great fifh, that are taken or found dead on the feafhore, regard muft be bad to the cuftom of that country, where fuch great fifh are taken or found. For, by the cultom, the lord of that country ought to have his flare; and with
good reafon, fince the fubject owes obedience and tribute to his fovereign.

## OBSERVATION.

This law deolares, thatt by the antient cuftoms of countries, as well fovercigns, as all particulay lords of royalties, to whom duties and tributes wore due, had both heretofore certain rights to the efpaves de mer, ferays of the fea. The couftonitis? do Normandie; under the article of Varech, fpecifies what beldinge to the one, and what belongs to the other; and particulamby that whales aind othet oil-finh belong to the particulaif hord of the royalty where they were found ; ohat is, off whofe land they are takein on the mores: in the originat io is, a laisive de la mier; and how far that is to be underftiond.to belong to the lond of that royalty, mian be found in the above-mentioned eouftomier, where the vatech underftands as far as a man on horfeback can reach with his launce: for if fle filh th found faptlyer of the fhore, the lord has no right to it, though it be brought or driven a-Aore afterwards.

## ARTICLE XXXVHI.

The lord ought to have his fhare of oil fith; and no other, aceording to the laudable caftom of the country whene dhey tre'found; and he that finds them is no furoher obliged than to fave thend, hif bringing than without the reach of the fea, and prefently to make it known to the faid lord of the place, that he inay come and demand whate is his righte

## OBSERVATION.

The couftotmier de Normandic mentions two forts of fin; the royal fifh, whith are the'dolphing the fturgeon, the falmonn, the turrbot, the fea-dragon, the fea-barbel, and, in general, afl filh fit fot a king's table: and oiltofifh, as whajes, porpuffes, fea-calves; and the like, of which oil may be made: all other fifh are the property of thofe that take them in the fed, near the fhore, or afar off. The dake of Efpernon, which is the capital of a little tertitory called de Buch, had 2 right to the eighth perity of all the fifh fold in the market at Bourdeaux, that were taken within his precinct of de Buch, the filhermen traving been beretofore vaffals to the lotds de Buch. And further, whatever paft of the province of Guienne the duke was $\mathrm{in}_{\mathrm{n}}$ thofe fifhermen were on all faltdays bound to fupely his table with fifh for himfelf and his family; but then the duke muft pay a seafonable price for them, and allow them fomething for their trouble. This right is called bian, and was, 50 years ago, in ufe.

## ARTICLE XXXIX.

If the lord of the place pleafes, and it be the cuftom of the country where the fifh is found, he may caufe the fame to be brought, by him that fourd it, to the public and open manketplace, but no where elfe; and there the faid filh hall be appraifed by the faid ldird, or his deputy, according to cuftom. And the price being fet, the other party that made not the price, fhall have his choice, either to take or leave it at that price; and if either of them, whether per fas or nefass; be an occafion of lofs or damage to the other, though but to the value of a denier, he fhall be obliged to make him refitution.

## ARTICLEXL

If the coft and charges of carrying the faid fifh to the faid market-place would amount to a greater fum than the fifh itfelf may be worth, then the faid lord fhall be bound to take his fhaie at the place where fuch fifh was found.

## ARTICLE XLI.

The faid lord ought likewife to pay his part of the aforefaid cofts and charges, beceufe the ought not, by another's damage, to enrich himfelf.

## A RTICLE XLII.

If, by fome chance or misforttome, the faid firh happens to be ftelen away, or otherwife loft from the place where it was found, after or before the faid lord has vifited it; in this cafe, tre that firft found it flall not any ways be obliged to make it good.

## ARTICLE XLIII.

In all other thinges found by the fea-fide, which have formerly been in the polfeffion of fome or other, as wines, oil, and other metrehandies, alutough they have been caft overboard, and left by the merchants, artd fo ought to appertain to him that firit finds the fame; yet herein allo the cuftom of the country is to be obferved, as well as in the care of filh. But
if there be a prefumption that thefe were the goods of fome thip that perifhed, then neither the faid lard, nop finder thereof, thall take any or convert any part of it to their own ufe; but, as has been faid, diftribute the money it produces amonglt the poor and needy.

## ARTICLE XLIV.

If any hip; or other veffel at fea, happens to find an oil-fifh, it fhall be wholly theirs that found it, in cafe no due purfuit be made after it; and no lord of any place oughe to demand any part thereof, theugh they bring it to his ground.

## ARTECLE XLV.

If a veffel, by ftrefs of weather, be conffrained to cut her cables or ropes by the emd; and fo to quit and leave behind her both cables and amehors, and put to fea at the merey of the wind and weather; in this cafe, the faid cables and anchors ougbt not to be loft to the faid reffel, if there were any buoy at them; and fuch as figh for them firall be bound to reftore them, if they know to whom they belong: but they ought to be paid for their pains, according to juffice. And if they know not to whom to reftore them, the lords of the place fhall have their fhares, as well as the falvers; but, for preventing further inconveniencies, every mafter of a 0rip hall caufe to be engraven, or fet upon the buoys thereof, his own name, or the name of his fbip, or of the port or haven to which the belongs: and fuch as detain them from him fhall be reputed thieves and robbers.

## A R'TICL•E XLVI,

If any fip, or other veffel, by any cafualty or misfortume, happens to be wrecked and perifh; in that cafe the pieces of the bulk of the veffel, as well as the lading thereof, ought to be referved and kept in fafety for them to whom it belonged, before fuch difafter happened, notwithttanding any cuftom to the contrary. And all takers, partakers, or confenters, of or to the faid wreck, if they be bifhops, prelates, or clerks, they fhall be depofed, and deprived of their benefices refpectively; and if they be laymen, they fhall incur the penalties aforefaid.

## ARTICLE XLVII.

This is to be underftood only, when the faid hip or veffel fo wrecked, did not exercife the trade of pillaging, and when the mariners thereof were not pirates, fea-rovers, or enemies to popery; but if they are found to be either the one or the other, every man may then deal with fuch as with rogues, and difpoil them of their goods, without any punifhment for fo doing.

## Observation on the three foregoing articles.

Every one has a droit de bris againft pirates. Piratæ communes generis humani hoftes funt, quos idcirco omnibus rationibus perfequi incumbit, fays the lord Verulam de Bello Sacto. For which reafon, according to the Civilians, funt ipfo jure diffidiati, cum quibds publice bellum habemus. Strachia in tertac parte de nautis; and again, it is cruelty to have any mercy towards pirates, folum pietatis genus eft in hac re effe crudelem. There is no right of action amongft them, and they have none to bring againft one who attacks them or robs them. Quia in omnium furum perfona conflitutum eft, ne ejus rei nomine furti agere poffint, cujus ipfi fures funt. Lege cum qui § quarto. lege qui re fibi § primo. Lege qui res. §Si ego. De furtis, \&xc. They have no action among themfelves. Communi dividendo lege communi §. Inter preliones. D. communi dividendo. On the contrary, for one pirate to take from another is very lawful, and will bear no action. Lege fed ipfi naute, \&c.
The teft of thefe laws in this copy is,

- Witnefs the feal of the ifle of Oleron, eftablifhed for all contracts in the faid ifle, the Tuefday after the feaft of St Andrew, in the year one thoufand, two hundred, fixty fix.'

## Remarks

This date of 1266 , is too modern, and does not agree with the time when this piece was put forth, as the learned and curious Selden, libro fecundo, capite 24, de dominio maris, very well obferves: fo that it is thought, that this date of the time of the delivery of the copy, from whence the edition printed at Rouen was taken, as the teft, and the feal eftablifhed for contracts in the ifle of Oleron, denotes, that it was a copy taken out by a notary fiom the original.
ORCADES, or the Iflands of Orkney in Scotland, are divided on the fouth, from that part of the main land called Caithnefs, Pentland or Pictland Firth; which is twenty-tour miles long, and from twelve to fixteen in breadth. They bave the Caledonian fea on the weft, the German on the eatt, and the fea that parts thein from Shetland on the north. They are reckoned about thirty in number, and contain, ac-
cording to Mr Templeman, an area of fix huridred fquare miles, but they are not all inhabited; the reft, which are called Holmes, being ufed only for pafturage for fheep and goats. The longeft day amongft them exceeds eighteen hours by fome minutes. Their winters are not fo fubject to frow as to rain, which falls fometimes in violent foouts, and the wind is often boifterous, As thefe iflands are larger, and have more inhabitants than thofe of Shetland, the foil is better and more improveable; and as they are fo much nearer to Scotland, there is more commerce, and much more converfation; for here are feveral gentlemen, of good families, who have good manfion-houles on the ifland where their eftates lie.
The principal inlands of the Orcades, are South Ronaldfha, Swinra, Hoy, Burra, Lambholn, Flotta, Faira, Cava, Gramfay, Main-land, or the Chief Inand, Copinfha, Strapinfha, Damfey, Inhallo, Stronfa, Papa-Stronfa, Sanda, North Ronaldfha, Eda, Roufa, Wire, Garfa, Eglefha, North Faira, Weftra, Papa-Weftra.
The chief difference betwixt thefe iflands, is in their fituation, or their being more or lefs mountainous. The foil in fome places is extremely dry and fandy, in others wet and marihy. They produce corn in abondance, but the chief of it is oats for bread, and barley, or beer corn; for they have no wheat, rye, or pulfe, except in the gentlemens gardens. They have, however, all forts of wild fowl, partridges, moor fowl, plover, duck, teal, widgeon, rabbets, \&c. and they want neither fifh nor venifon: fo that the inbabitants have every thing to make life comfortable, except better bread, and warmer weather.
It is a very pleafing profpect to ftand on the fhore and behold the fea in calm weather, in the narrow founds and paflages between the iflands; how the different tides run as from a fluice, as well one way as the other, and to fee a boat fy upon them, like an arrow out of a bow, it being as impoffible to row againft them, as to fhoot London-bridge againft a fteep fall.
In the Pentland firth, behind the ifland Swinna, are two great whirlpools, called the Wells of Swinna, which are fure to fwallow up any veffels that come within the draught; and the paffage of the firth is of itfelf very dangerous, becaufe of the many ftrong tides, which are not lefs than twentyfour, and make the fea go very high upon the leaft contrary wind. Thefe whirlpools are moft dangerous in a calm, for if there be any wind, and the boat under fail, they are pafled without danger. If the mariners, who carry paffengers beween the main land and the ifles, happen to be drove near them by the tides, they throw a barrel, a bundle of ftraw, or fome other bulky thing into the whirlpools, which make them fmooth enough, 'till the veffel has paffed them; and what is thus caft in, is generally found floating a mile or two off. Mean time the natives on both fides, who know the proper feafois, pafs this firth every day very fafe, except when the weather is tempeftuous.
The trade of the Orkneys difiers from that of Shetland, only in not depending upon the refort of ftrangers, but on their own produce. They export annually a very great quantity f corn, black catte, fwine, and theep, as alfo of butter, tallow, and white falt, together with feal-fkins, otter-fkins, lamb and rabbet-ikins, \&cc. Alfo ftuffs and great quantities of very good down, feathers, writing-quills and pens, hams and wool.
Their corn in particular is fold as far as Edinburgh, from whence they bring what goods they want in exchange. But he chief of their commerce confifts in their filhing for herings, and white filh, and in their corn and cattle. Hving Not merchants to export their fish when taken, they fish for the Dutch, and the merchants of Inverness, \&ac. And though upon this account, they fometimes go far from home, yet as they are an adventurous hardy people, and good failors, they make no difficulty of fifing in the darkeftnights, though at a great diftance from the inland; and yet their boats are none of the beft.
Their white fifhing trade lies chiefly on the weft fide of the iflands, towards thofe which we call the weftern illands.
There have been feveral attempts, by the merchants both of England and Scotland, to eftablifh a fifhery both in the Orkneys and the weftern illands; but the extraordinary expence of building warehoufes, fifhing veffels, \& $c$. always rendered it fruitlefs 'till lately; befides that, the taking of the herrings in thore feas, does not turn to fo good an account as thule taken on the eaft fide of Scotland, the makets being more emote. Indeed, the Glafow fifhing-boats generally come as far north as the Leuz, and fifh for herring, as do likewife the fifhermen from Londonderry, Belfaft, and other ports of Ireland, by whom the people of the iflands are fupplied with many neceffaries, efpecially tobacco, wine, brandy, and other liquors, and fome manufactures alfo for cloathing; but they meet with few or no returns, except finh and fome oil, which the iilanders make by killing porpoiles, feals, and fuch creatures
OrDNANCE, fee Artillery.
ORES. Experience daily traches us, that metais and minerals for the moft part, fuperabound with fuiphur and arfüic,

## ORE

which are feparated from them in the fmelting furnace, and that the body does not become truly metallic, 'till after this feparation. In reverfing this operation by chemical experiments, we find, that if fulphur and arfenic be added to a metal, a mixture is produced, which no longer refembles metal, but rather an ore or mineral mafs. By thefe fort of experiments, metal is brought back to the form of a mineral, therefore the operation is called mineralizing, and this name of mineralization is given to the action of the fulphur and arfenic upon the metal.
True it is, we cannot always produce a matter that fhall refemble natural minerals, for the chemical production will often retain but a very fmall appearance of them: from fulphur and lead the true lead ore is produced: and from fulphur and filver a real ore, known in our mines by the appellation of glafs ore.
Sulphur and regulus of antimony will re-produce antimony; fulphur and mercury will make cinnabar, which is the ore of quickfilver; and iron and arfenic will compofe a mixture of different colours. Of orpiment, filings of iron and fulphurated copper, may be made a kind of pyrites. But, from fulphur and iren, fulphur and copper, fulphur and pewter, no true ore is produced.
The two firft mixtures produce nothing but a kind of mineral gravel, and the laft makes a fort of pewter ore which is not natural. The celebrated Mr Henckel has already obferved, that there was no occafion to employ fulphur in it's feparated form for mineralization, as antimony, cinnabar, and pyrites, may be ufed for the fame purpofe. If that great man bad pulhed his refearches ftill farther, and applied the fame realoning to the arfenic, he might have been, perhaps, more happy in counterfeiting the mineral which he fought (I know not for what reafon) with fuch eagernefs.
Thus it hath been concluded from experience and obfervation, that fuiphur and arfenic are the two fubflances which reduce metals to the ftate of ore, and preferve them in that form. Yet we think, 'that fulphur and arfenic are the only two fub' ftances by which metals are found in the ftate of ore.' On the contrary, are there not certain kinds of earth, without any appearance of fulphur and arfenic, which neverthelefs are capable of preferving metals in the form of ore, and of mineralizing them by chemical operations?
If the true and natural mineralization of the metallic particles does not abfolutely depend upon the force of the acid, but rather is mechanically performed, as in all probability it is, a certain earth may infinuate itfelf between the metallic leaves and particles, and keep them feparate as well as fulphur and arfenic. Now, if this earth is neither fluid nor fhining, the ore will not be looked upon as a mineral, and very little metal will be extracted from it in the affay. If, on the contrary, this earth is tinctured by the metal which it contains, and appears brown, red, yellow, green, or blue, then the colour teftifies that it is impregnated with metal. From thefe forts of earth the affay-makers produce gold, filver, copper, \&c. and it cannot be denied that thefe metals are mineralized in thefe earths, although they contain no fenfible portion of fulphur or arfenic; for thefe two matters foon manife ft themfelves where they really are, by the fumes and fcent which they exhale upon the fire.
It will, perhaps, be alledged, that thefe earths are formed of ore which has been altered by time, which bath expelled the fulphur and arfenic by which they were formerly mineralized; but to this allegation it may be anfwered, that at leaft fomething vitriolic chould remain from the fulphur, and that the arfenic Chould leave a kind of ruft which is found in other minerals, though no fuch thing is found in thefe earths: befides, thefe earths are extremely compact, fo that we cannot prefume they have been altered by time, which generally renders them altogether porous and juicy: and they are moreover properly and naturally fituated in forms of beds and layers, a circumflance that is not to be obferved in earth, which has been altered by time and air.
To thefe natural indications, let us add the operations of art, which reprefent fomething of the fame appearance. A mineralization of metals, refembling that which we have mentioned, is made between pewter and lead. Pewter reduces lead to a kind of earth or alhes: zink mineralizes gold, though in a different manner: but we fhall here confine ourfelves to pewter and lead. Pewter being very earthy, partaking very little of the nature of glafs, and having befides very large pores, it's phlogifon eafily evaporates in the fire : when mixed with lead, it likewife deprives that metal of it's phlogifton, which it allows to evaporate.
This example will explain what is properly underfood, by the mineralization of metals, by means of earths; but, if we would examine this matter to the bottom, let us confider how the crocus of Mars, when mixed in a metal, not by the art of man, but by accident, hinders it from being refined in the fufion.
A fulphur abounds with vitriolic acid, and arfenic is a violent corrofive, which likewife exercifes it's acid by corrofion, it is plain that thefe two matters mineralize metals in quality of acids. This may be granted, without contradicting what has been advanced above: for, when a metal is melted, or

## ORE

very compact and folid in it's texture, certain it is all earth cannot penetrate this mechanic texture, and infinuate itfelf into it's pores, which can ouly admit a fubtle, fluid, acrimonious earth: now, this fubtile, fluid, acrimonious earth, is no other than an acid; confequently an acid, as fuch, mineralizes metals. Whence may we not enquire, whether fea falt, which likewife contains an acid, many not mineralize metals?
This falt reduces lead and regulus of antimony toafhes in the fire; but, as every body will not allow that this change into earth is a mineralization, we will quote other examples to be feen in the fame manner, in thefe three matters, namely, in a mineral, in a metal mineralized, and in a metal ftrictly allied with the acid of kitchen falt.
This laft is a Luna cornua, or again, a Saturnus cornuus, which after thefe metals are diffolved in aqua fortis, have been precipitated by kitchen falt or it's acid. With regard to the two firf of thefe matters, we may chufe, for example, a mineral, or metal mineralized, and make the trial upon either, and we may be certain that the experiment will not fail, if properly conducted.
The effects of the mineralization by nature and art, are thefe. (1.) Part of the metal is volatilized in the fire. (2.) The minerals will not amalgamate with mercury. (3.) They will not be diffolved by mercury. And (4.) part of the metal enters the fcoria. Lead and filver which refemble the cornua, produce the fame effects, the fourth of which is likewife produced by falt upon copper and iron.
Indeed the poffibility and imitation of mineralizing metals by the acid of kitchen falt, is manifefted by the preceding experiments: but it is not enough to know thefe effects, for the principal point is to learn, if nature acts in this mannes of herfelf; confequently we muft change the queftion, and endeavour to know, whether there are not actually in nature, metallic ores which have been mineralized by the acid of kitchen falt ?
We fhall firft fpeak of iron ore, which in fome fhape ought to be divided into two kinds; for, when diffolved, it becomes a reddifh or yellow earth. We mean it's natural, rather than artificial folution. Every body knows, that when iron ore continues long expofed to the vicifitudes of dry and wet weather, it in time degenerates and diffolves into a kind of earth and clay.
In this condition it is frequently found in the earth, where we fee it fome times degenerated through and through, or at leaft externally, and changed into a red or yellow earth, which ought to be confidered as a crocus martis naturally formed, and the colour ought to afcertain' the faline quality with which it is mixed: Now, we know from chemiftry, that iron treated with fulphur or vitriol, yields a red crocus. The colcothar, or caput mortuum of vitricl, is no other than fuch an earth of iron, \&cc. Chemiftry likewife teaches us, that iron diffolved in the acid of kitchen falt, appears yellow in the folution, and that in drying or precipitating it exhibits a yellow earth or clay. Thefe experiments hould feem to demontrate the caufes of the red and yellow iron ore; the firft feems allied with the acid of fulphur, and the yellow with the acid of kitchen falt; whence it refults, that kitchen falt preferves mineralized metals even in their natural ftate. It will perhaps be objected, that we have quoted the only example that is to be found in nature : but, provided the truth of this example is granted, it ought to ferve in the fame manner, with regard to a great many other minerals, fince we find abundance that contain fuch a yellow iron earth in their texture ; confequently, where-e ver it is found, we may prefume there is an acid of kitchen falt. We fhall, therefore, proceed no farther in minerology, otherwife we might deduce the fame proofs from the blue, and bluifh minerals of the copper.
Almoft all the minerals of lead would confirm the proof; for it precifely refembles what is called lead ore, and of confequence can be no other than the mineral of lead corroded by an acid. Nor is it more difficult to determine what that acid is, which thus corrodes it's mineral through it's whole extent ; for the fmall pieces of pyrites found fill in their natural fate within the mineral, prove that the acid, which formed this natural lead mine, muft not have been of the ftrongeft kind, fince it could not diffolve the pyrites. But as all we propofe in this place is by way of queftion, we do not pretend to decide upon any thing.
I thall, however, anfwer another objection, which may be made even by thofe people who are moft converfant with minerology: they may alledge, that the vitriolic acid and arfenic, each fimply confidered as an acid, are not capable of effecting a mineralization; but, both being combined with an inflammable earth, they derive principally from thence, the power of producing the form of a mineral ; but, they will add, where fhall we find the acid of common falt combined with an inflammable earth, fo as to produce the fame effect? To this queftion it may be replied, that art combines the acid of kitchen falt with a phlogifton, when the phofphorus is made; and this inflance will ferve, when they would pufh the propofition fill farther, and confirm it by experiment. 'But in the earth (fay they) no phofphorus is either

- made or found.' True, but in lieu of it, we find in feacoal, the acid of kitchen falt abundantly charged with phtocoal, the acid of king proof, that it is alfo naturally found in a condition not at all improper for naturalization.
In fine, fome perfon may alk what purpofe can be ferved by thefe theoretical queftions, and fubtile enquiries? It would be eafy to affign a very good reafon, if the queffions we have propofed were anfwered. But, that no body may think they prop thrown away, without having any view to manifeft utility, ither in theory or practice; we fhall obferve, that perbaps, by a precife folution of there queftions, minerology might be reduced to better order, and carried to much greater perfection. Minerals are commonly divided into certain clafles, according to the metals and demi-metals; but as each clais includes a good many kinds, there is a neceffity for inventing a number of fub-divifions. Would not the beft way be divide the mineral of each metal according to its mineralizing fubftance? For example, the minerals of filver are mineralized fometimes by fulphur, fometimes by arfenic, and fometimes by the acid of kitchen falt, \&c.
Thus we fpeak more conformably to nature, and this order may be oblerved in ranging them afterwards, according to the kind of rock, the limits of the mine, the layers of the earth, \&c. Now as hitherto, nothing has been written or faid of any matter or mineralizing fubftance, except fulphur and arfenic, and as we here give fome concife inftruction touching a third mineralizing acid, which is kitchen falt, it is eafy to conclude that minerology by this means, gains an increafe of one third ; and that in the fequel, we may difcover a number of other minerals of this new divifion, which are not now known to be fo, or at leaft, cannot be ranged in any clafs. By this likewife we give the key to an infinity of minerals, about which difputes have been hitherto maintained, to know if they are true minerals or only crude productions of mountains: we mean, all kinds of volatile minerals, or fuch as cannot be put in fufion or feparated, and thofe which appear in veins, as well as others in the mine, but are taken out in form of grains, \&c. in which it is agreed that there is. gold, filver, copper, \&c. Thefe are looked upon as unripe, as well as the pyrites found at a diftance from gold and filver, the minerals of talc, \&c.
In regard to intances of this nature, the reader may remember what has been faid above, concerning the mixrure of common falt with the phlogifton, and of the fea-coal thence formed; and add to this, after the lights with which we are furnifhed by natural hiftory, that agat is (if I may be allowed the expreffion) the nobleft kind of pit-coal; hence we perceive, that the fame acid may reprefent a mineral form of coal, or as a black fone that fhines like ice.
We know, that all thefe obfervations will appear to fome as fo many dreams of the imagination, and may be received as fuch by our ordinary miners: thofe efpecially who boaft of the productions of mountains, as of mineral metals, neither fay nor prove any thing of their natural ftate, mineralization, feparation, \&cc. The greateft part of them, repeat only what they have heard from othet people, and utter what they have been told, without having made any refections or refearches of their own : thus a good caufe is often very illy defended. On the other hand, thofe who decry the fame minerals, pretend to have made unfuccefffultrials of them, and think they have a right to difpute on the frength of their experiments, which are for the moft part unfkilfully made. But if we would not overthrow all hiftorical certainty, fince proofs are to be found even at this day, the places from which the minerals have been taken, the minerals themfelves, and the deferiptions which feveral people have given of them, in the courfe of fo many ages, which agree perfectly well together, we ought at lcaft to fulpend our judgment in this refpect. We are willing they fhould compare paft times to a dream, provided they will endeavour to dhew that they themfelves are now thoroughly awake.
We ought likewife to fay fomething of the practical utility of thefe theoretical refearches. According as minerology is divided, fo the forges ought to be difoofed: we ought carefully to attend to this point, which is of great confequence for a good theory and fyiftem in the fcience. At firtt, people were obliged to divide the forges according to the metals and femi-metals, and even according to the falt-pits; it is of no confequence, though filver, copper, and lead, be worked in the fame forge : this they are obliged to do in thofe places where thefe metals are found together, but where each metal is alone, it is wrought by itfelf, and then there is a natural procefs of the font for each.
Now, as the minerals of each metal are divided according to their different mineralizing principles, fo the proceffes of the font ought to be different, according to the mineralizing principle which is mixed in each. There is a particular kind of font for thofe minerals which contain fulphur, and this is what is called working rough or plumb. The arfenical minerals are of this number, but they mult firft pafs through the fire, and then they can no longer be properly reckoned among the arfenical minerals. But, a method of fufion quite different is required for metals, which are entirely arfenical, without any mixture of fulphur: and a different method of
without any
Vol. II.
fufion muft likewife be obferved with antimonial mineralso Confequently, a particular method muft be ufed with minerals that are mineralized by the acid of kitchen falt.
We fhatl not expatiate upon this, for it is eafy to conceive with what eye certain workmen of forges will regard us, if we undertake to introduce what they have never thought of That, therefore, is not our incention. We fhall content ourfelves with having thewn by example, how much theory might influence practice, and to have explained, in a few words, that by improving the fcience of mines, the revenues of thefe works might be confiderably augmented. Some may flight thefe fuggeftions to their lofs. While in working a mine, every thing remains upon the oid footing, and people are fatisfied with finding from time to time, fome little new advantage ; certain it is, the profit can never become very confiderable : but, if we could difcover new kinds of minerals, and invent proper methods for melting and feparating them, fuch difcoveries would become very important, and furnith frelh matter for more ufeful feculation. I will not prefume to fay that we are capable of making fuch difcoveries, but think that it would be no difficult matter to attain to fuch improvement, by a more careful cultivation of the fcience of ores, minerals, and mining, than that which is at prefent practifed.
It is with this view, that we endeavour to put the fentiments of the moft judicious in their proper light, in order to lay the foundation for fuch improvement, in form of queftions and problems : and with fome reafon for believing, that thefe principles may be found true by undoubted experience. We leave the folution of them to thofe who are our fuperiors in point of knowlege. After all, practice alone muft decide the matter. It is fhe who confirms all arguments, and rectifies all fyftems; and we know nothing pofitively, until it hath been fanctioned by her. But we ought to acknowlege at the fame time, tha the muft be preceded by rational theories, which are the lights that conduct her refearches into the fecrets of nature. Without their affiftance fhe gropes along, blindly following a beaten track; and whatever progrefs the makes, muft be owing to chance, from which fhe ought to claim no merit. For what further relates to the whole bufinefs of ores and metals, fee the following articles, viz. AQUA Fortis, Aqua Regia, Assay, Bullion, Copper Mines, Lead, Tin, Iron, Mercury, Silver, and Gold; al fo Fiux, Metals, Metallurgy, Mines, Mining, Minerals, Minerolqgy, Smelting
ORIENTAL TRADE. Under the article Levant Trade, we have fhewn, from the principal authentic royal arrets, edicts, and ordonnances, iffued by authority in France from time to time, from the year 1665 to the year 1749, what meafures the French have taken for the regulation of the Levant trade of that kingdom; whereby it appears from facts, to what caufes the prefent fourifhing fate and condition of that commerce in France may be attributed, and by what fteps this rival nation has fupplanted the Englifh in this branch of traffic. We have likewife under the fame article, reprefented the genuine regulations of the Dutch, in relation to their Turkey trade. The policy of other nations being fairly Jaid before us, and compared with our own, we may be enabled to make a right judgment, whether the meafures taken by our competitors, are preferable or otherwife to our own, and wherein our defects may be fo fupplied, as, at leaft, to empower us to carry on this commerce in the Ottoman empire, upon a footing not lefs advantageous than that of other ftates. And, without our taking thefe things into due confideration, this kingdom can never be capable of regulating her commerce in any branch to the beft advantage, or to an advantage equal to that of other countries. People may declaim and controvert to eternity, concerning the neceffity of this or the other meafure being requifire to be taken by the legifature, but withou having the polity of rival fates fairly laid before them, they will be ever liable to be mifled and deceived in matters of the laft importance to the intereft of trade. And yet it is to be feared, that as well in the folemn deliberation of the great council of the nation, as in our difputes without doors, there matters are, in the general, too little enquired into, not with ftanding they are the effentials whereby to fteer and direet the public judgment.
As under the article of Levant Trade, we had notroom to ftate our own cafe in regard to this branch of trade, we have referred to the articles Oriental Trade and TURKEy Trade, that all pacts and materials neceffary may be exhibited before the public, whereon to bottom their judgment with refpect to the means requifite to be taken by this nation. Wherefore,
Here we fhall give an hiftorical view of the conduct and proceedings of our own Turkey company.

An Historical View of the Conduct and Proceedings of the Turkey Company.

The company trading to the Levant Seas having fubfifted, as an exclufive fociety, one hundred and forty-feven years, the moft impartial and certain method of attaining to a clear
and perfect knowlege of the advantages, either of continuing the exclufion, or opening the trade, is to take an hiftorical view of their conduct and proceedings, from their firft eftablifhment to the prefent time. For, though arguments may be controverted, and reafonings oppofed, yet plain facts are unanfwerable, and will fpeak for themfelves: therefore, it was thourht proper to lay before the world in this public manner, efpecially before the honourable members of both houfes of parliament, the true flate of the cafe, as drawn from the books of the company themfelves, and from other authentic evidences, for the ufe of the committee of the honourable houle of commons, in the year 1743.4. This committee was appointed the 16 th of February, in confequence of reveral petitions fent up to parliament, from divers patts of the kingdom, complaining of the great decay of the Englifh trade to Turkey, and the increafe of the French on the ruin of ours; and afcribing both thefe national evils to the monopolizing view of a few individuals, who checked and reftrained the natural courfe of trade, by means of their exclufive powers.
The company likewife prefented a petition in their own behalf, fetting forth the nature of their charter, their exclufive privileges, manner of trade, and the like: but as thefe things will occur in the courfe of the fubfequent narration, it will be needlefs to infert them here. The narration proceeds as follows:
This company now exifts, by virtue of letters patent granted by king James If, bearing date the I4th day of December, in the third year of his reign, 1606 .
And of king Charles the IId, bearing date the 2d of April, in the thirteenth year of his reign, 166 r .
King James, by his letters patent, did (among other things) grant to feveral perfons therein named, and to their fons, and fucb others as fhould then after be admitted, or made free, that they fhould be one fellowfhip, and one body corporate and politic, by the name of the Governor and Company of Merchants of England trading to the Levant Seas, and fhould have perpetual fucceffion: and did direct, That all perfons, fubjects of this realm, being then mere merchants, which then were, or after the date of the faid letters patent fhould happen to be, under the age of 26 years, or not out of his or their apprenticefhip, fhould be admitted into the freedom of the faid company, if he or they fhould demand the fame, within one year next after he or they fhould attain the age of 26 years, or within one year after the end of his or their apprenticelhip; and fhould pay to the faid governor and company, for his or their admittance, the fum of 251 . And did further direct, That all perfons fubjects of this realm of England, being mere merchants, above the age of 26 years, fhould be admitted into the freedom of the faid company, upon paying a fine of 50 l . And did alfodirect, That all and every the fons of fuch as were or fhould be free of the faid company, and alfo all their apprentices employed in that trade, for the fpace of three years or upwards, within the limits of the faid letters patent, fhould, after the end of their apprenticelhips, be admitted into the freedom of their faid company, on payment of the fumof 20 s . only. Company's books, viz. Letters patent, p. 1, 2, 3, 6, 7, 8, 9 . And, as the petition of the faid company lets forth, feveral other privileges were granted by the faid letters patent, to the faid company.
Amongit which, all perfons who traded to the faid Levant Seas, and were not free of the faid company, were obliged to pay to the faid company 20 per cent. upon the value of the goods, Page 22.
And they had power, at a general court, of making by-laws, for the good rule and government of the faid governor and company, \&c. and a power of revoking the fame, as occafion thould require; which were to be performed and kept, under the pains and penalties therein mentioned, fo as the fame were not contrary or repugnant to the laws and ftatutes of this realm, or derogatory to any treaties or leagues made, or to be made, with any other prince or potentate, nor tending to the hindrance of the trade or traffic of any of the faid company, behaving him or themfelves duly and orderly, as becometh good merchants of the faid company, without any fraudulent or difordered attempts or pradices. Page 16.
King Cbarles, by his letters patent, did ratify and confirm the faid letters patent of king James; and did further direct, That no perfon refiding within 20 miles of the city of London, fhould be admitted into the faid company, or have any benefit of the privileges thereof, unlefs he was made free of the faid city. Page 36.
Now, under pretence of making by-laws for the good rule and government of the members of this fellowfhip, the faid company (or rather the greater part of them) have frequently exercifed a power of reftraint upon their own members (tending to the hinderance of trade and traffic), by making orders to lay a broke [penalty] of 20 per cent. upon' their goods, if they fent them to Turkey at any other times, or in any other thips, than thofe appointed by the company, which are called joint or general hips; fo that if any merchant (though a member of the company) had never fo large a quantity of cloth by him, and the want of cloth in Turkey
was never fo great, he could not fend it, but at fuch times, and in luch hips, as the faid company appointed, by reafon 20 per cent. is equal to a prohibition.
Some remarkable inftances of which, as well in early as late times, will appear, by copies of orders of general courts, which are hereafter ftated, as alfo the method in which the trade has, from time to time, been carried on.
There was an order of general court, That no manufactures or commodities of this kingdom fhould be fent from hence, or from Leghorn or Meffina, or any other parts of the Straights, to Conftantinople, Smyrna, Scio, or Scandaroon, but in joint fhips appointed by the company, under the penalty of a broke of 20 per cent. upon the value of all fuch manufactures or commodities, to be levied where any fuch goods were landed; but foreign commodities, as fpices, pepper, \&c, were excepted, and allowed to be carried in what fhipping any man pleafes. In 1625, 6 April (Company's books, page 127.)
It was ordered, according to an order of the laft court, That no Thip go from hence for any of the ports of Turkey, before the going of the joint flipping, which is appointed to be at Michaelmas next. In 1627,2 Aug. (Page I72.)

RS And for that there were then great quantities of cloth to be fent thither, it was conceived fit, that a reftraint for a certain time fhould be made for all other fhipping, that fo the markets might not be overcharged with com. modities, to the undue valuing thereof in the fale: it was refolved, upon the queftion, by crection of hands, That no fhip flould depart for any of the ports of Turkey, laden with Englifh commodities (tin excepted), after the departure of the next general fhipping, without the confent of the company, at a general court, until Michaelmas come twelve months, under the penalty of a broke of 20 per cent.
And that no private fhip do go from Leghorn to the Levant with money, \&c. to engrofs the commodities, and to prevent the company's market, upon the abovefaid penalties.
It was the opinion of the court (i. c. the court of affiftants), That, both for the keeping up the price, and maintaining the cloth, and other Englin commodities, in good efteem in Turkey, and fo advance the fales thereof there, and the returns at home, \&c. the trade to Turkey fhould be reftrained to joint fhipping; and it was ordered (if the next general court fhould confirm the fame) That no particular fhip should be freighted by any member of the company, and no Englih commodities laden (tin excepted) to any part in Turkey (Petras excepted), but upon joint hips, as the company flould at their general court appoint, under the broke of 20 per cent. In 1630, 2 March (page 23I.)
This order was confirmed by a general court, 9 March, page 232.

But fee the effects of thefe reftraints; for by a letter of the $13^{\text {th }}$ of June 1631 , from the conful at Aleppo, it appears, that there was but a fmall quantity of cloth in the factors hands at that place; and that it was probable, all would be fold before any fupply could get there
This letter being read in a general court, it became their confideration, Whether they fhould diffolve the act of reftraint, and to give liberty to fend fhips to all the parts of Turkey? But they only ordered one general thip for Aleppo, to depart from Gravefend before Chriftmas-day. In 1635 , 5 Octob. page 243.
The faid order was taken into confideration, and a further order made to fend a thip to Conftantinople, to depart by the laft of March; and it was ordered, that at Chriftmas come twelve months, That a fhip thall go to Conftantinople, and another to Aleppo ; and fo conftantly, from and after that time yearly, unlefs the company fhould, upon weighty reafons, think fit to order otherwife. 20 Octob. page 244. The bad effects of thefe reftraints ftill continuing;
The court fell into difcourfe, among other things, of the inconveniencies likely to enfue by the long forbearance of fendag thips and goods into the feveral parts of Turkey; whereby the French, and other ftrangers, have the advantage, and take occafion to fupply thofe places with commodities; which will redound to the great prejudice of this company and thair trade, if fome fpeedy courfe be not thought of for preventing thereof: and hereupon it was moved, That there might be a yearly fhipping refolved on ; or, in regard there is like to go very great quantities of goods upon the next hips, that another hipping might be appointed to go away at Michaelmas come twelve months, and yearly. from that time, \&c. but nothing was then determined, but left to the next general court. In 1633, 9 Jan. page Io4.
The proceedings of the general court, among other things of the 9 th inflant, were read, approved, and confirmed. 14 Jan. page 105.

F This laft proceeding of the general court is mentioned
to thew, That even in thefe early times, when the

## O R I

French or other foreigners bad little or no fhare in this trade, the members of the company, who had the pubis good at heart as well as their own welfare, forefaw the bad confequences that would enfue from thefe refraints; and would have semedied the fame, if the private gan of the reft of their fellowhip had not overballanced the general good of the trade.

However, from this time to the roth of May 1649 (fee the orders 12 Jan. 1635, 17 Febr. 1637, and 27 Octob. 1645) the trade was carricd on by general annual thipping ; and then it was refolved, That the trade fhould be open for every member of the company to lade when, and in what thips he leafed, under fuch reftrictions as the company fhould fee titig 1635 12 lan page 209, $1637,17 \mathrm{Feb}$ page 296. :645, 27 Oct. page 192, 1649,10 May, page 3 x.
From this time to the 6th of Augult, 1655 , it was carried on by general annual thips (fee the orders of the 25 th of Auguft, 7 th of December, and 25th of January, 1654) when eneral fhips, to depart at fuch times as the company fhould appoinr, were refolved on. 1654, 25 Aug. page 216. 7 Dec. page 232. 25th January, page 235. 1655, 6 Aug. page 256.

But this reffraint was thought toogreat ; and there being two private fhips laden for Smyrna, it was refolved, on the 3 d of September, 1656 , That liberty be given to any of the company to fhip when he pleafed. 1656, 3 Sept. page 289. From this time to the 3 oth of November, 1660, the trade was carried on by private llips; and then it was confined to general fhips under the ufual penalty of 20 per cent. on all goods, and fo continued 'till the 4th of October, 1664, when it was refolved, That the company would adhere to their former order for annual thipping. 1660, 30 Nov. page 7. 1663, in Sept. page $156.1664,4$ Oat. page 229.
From this time to 1683 , the trade was carried on by annual and general fhips: and, from 1683 to 1713 , fometimes by private thips, and fometimes by general fhips.
From the 5 th of June, 1713 , in the 12 th of queen Anne, fince the conclufion of the then war, to the latter end of the year 1717, the trade was carried on by what is ufually called an open trade ; that is, by fuch hips as the refpective members did appoint to carry away their cloth, and the cloth or fuch other members as might be pleafed to load upon them, to depart at fuch feafons of the year as was found to be moft convenient, which was ufually in autumn, or by Chriftmas; and the cloth fhip, in 1717, departed about that time.
And many members of the company, expecting the trade would continue to be carried on in the fame manner, went on in buying and finifbing of cloth, as ufual, for the year 1718:
But, on the 26th of March, 1718, itbeing under the confideration of the general court, whether the trade fhould be carried on by general Blipping, it was refolved in the affirmative, and the further conlideration thereof adjourned to another general court to be held on that day month, being the ${ }^{2} 3^{\text {d of April next. } 1718,26 \mathrm{March} \text {, page } 213 .}$
N. B. General hips, you will pleafe to obferve, by the aforefaid orders, are always chofen by the company as a body collective, and do depart at fuch feafons as they think proper to appoint.

The faid refolution was confidered and confirmed ; and it was alfo refolved, That the faid order fhould not be revoked withot the previous notice of a month given to the members of the company. 1718,23 April, page 215 , and 216.

RST Then it is recited, "Whereas the trade from hence to Turkey bath been carried on, for fome years paft. - to a very great extent, in cloth and other woollen - manufactures, and in money, in far greater quantity ' and value than that country hath ufually taken off,
' whereby the markets there are over-ftocked, and our - commodities depreciated, and the price of raw fllk, - and other returns, very much advanced there, and

- fallen here, to the great detriment of this trade in - general, and of this company in particular ; and to - the end that a proper time may be given to our factors, ' to difpofe of our eftates in Turkey to advantage, and - for reducing the prices of goods ufually fent for re' curns, it was refolved, That, if any member of the ' company fhould import into Turkey from hence, or
' from any part in Chriftendom, any cloth, or any gold - or filver, in coin or bullion, by other than general
- Thips, to be appointed by the company, fhall be liable
' to a booke of 20 per cent, upon the full value thereof
' to be levied into Turkey.'
Uppn this Sir John Eyles informed the court, "That he had - bought up 500 cloths, and defired that, notwithftanding - the refolutions now agreed on, the company will pleafe to - give him leave to fend the fame to Turkey : and a motion ' was thereupon made, that the queftion be put, Whether * leave be given to fuch members of this company as have

## O R I

' provided cloth for Turkey, upon their affirming, upon the ' oath they have taken to the company, That they had © bought the fame before they had any intimation of the faid ' refolution? And, a debate arifing thereupon, the previous ' queftion was put, Whether the queftion be now put? and - it paffed in the negative : and it was refolved, That the - company would, on the 23 d of October next, and not be-- fore, confider at what time it may be moft proper to take ' hhips into the company's 保vice.'
This order was confirmed. 1718,30 April, page 217.
The $23^{d}$ of October elapfes; and, on the 6th of November, 1718, the court was called to confider what time would be moft proper to take fhips into the company's fervice; and it was refolved to defer it until fome time longer. 1718, 6 Nov. page 232.
Then a motion was made to affix the time to which this confideration fhould be deferred; and one week, one month, two months, and three months being propofed, the queftion was put for each time mentioned; and it was refolved to be deferred for two monthslonger.

S Upon this further delay, a reprefentation was made to the then miniftry, who were fo fenfible of this extraordinary proceeding; and the prejudice it muft be to the common good, that Mr Secretary Craggs fent for the company, and informed them, That he had received fuch a complaint, and recommended it to the company to come to fuch refolutions as would prevent the confequences which might attend the faid complaint, fhould it come before his Majefty and his council, or before the parliament.

This matter came under the confideration of a general court, held on the $4^{\text {th }}$ of December, and they refolved, That, on the 8 th, they would proceed on the election of general hips for Turkey. 1718.4 Dec. page 237 .
And, at the fame time, a committee was appointed to wait on Mr Secretary Craggs, to return him thanks for the refpect he had fhewn the company.
Inftead of appointing fhips, it was refolved only to receive propofals for hips; and a committee was appointed to view them, and make a report on Thurfday the 22d. 1718, 8. Jan. page 247.
It was refolved, That the company would adhere to their order for their driving the trade by general hhips. 1718, 22 Jan. Then it was propofed, That a fufficient number of flips be taken up to carry the cloth, that was then ready, to all parts of 'Turkey, by the firft opportunity of convoy to the Mediterranean; and it paffed in the negative : and it was refolved That the company would very fuddenily chufe general lhips to all parts of Turkey, to be ready to depart by the ift of July next.
N. B. The ift of July was then generally underftood to mean winter, as the fhips ufually had departed at that time, which would have compleated two years prohibition.

This being the cafe, feveral members of the company, who had provided large quantities of woollen cloth, and other goods, for Turkey, applied to the boufe of commons; and, on the 24th of January, 1718, a committee was appointed to confider of the ftate of the woollen manufacture of this kingdom, and particularly in relation to the exportation of woollen cloth.
This committee fat, in purfuance of their appointment; and, on the $3^{d}$ of February, the complainants attended, and delivered to the committee a reprefentation, fetting forth the then fate of that trade, and the inconveniences arifing from the delay of fhipping ; which is figned by P. Delmé, John Lock, Ro. Radeliffe, Edward Radcliffe, James Lock, Joho Hanger, and Jofeph Eyles, who were fome of the moft confiderable merchants in the Turkey trade at that time; which paper has been in the cuftody of Mr Kenn ever fince, who attended the faid committee as clerk; no report being made, the complainants being made eary by the governing patt of the company, at the interceffion of Mr Secretary Craggs.
This application occafioned a general court to be held; on the 6th of February; and then it was refolved, That the trade Chould be carried on by a general annual fhipping. 1718, 6 Feb. page 254.
And a general court was held; and, at the defire of the complainants, two general thips were chofen, and appointed for Smyrna and Conftantinople, to depart from Gravefend the 15 th of March, 1715 ; which makes the prohibition two years and a quarter. 1718 , 12 Feb .
The laft order is recited ; and alfo that it was intended, that other general fhips be in like manner chofen and appointed for Scanderoon, and for Smyrna and Conftantinople, if defired by any member of the company to depart the int of July. 1718, 24 Feb. page 27 I.
And it was refolved, That from and after the departure of the aforefaid general mips, no other general Chips fhould be appointed until Midfummer, 1720.

It is"recited, That the trade was carried on to greater advanrage by general than by private fhips, if annually appointed : to the end, therefore, that the faid trade may again revive, It is refolved, That, for the future, general chips fhall be annually chofen, and the time of their departure to be about Michaelmas:
And that, if the company fhall not appoint fuch hips, it thall be lawful for any member of the company to fend cloth, or other woollen manufactures, by any fhip, to depart from Gravefend on or before the laft day of OCtober; provided fuch fhips be not lefs than 200 tons, Britifh-built, \&uc.
The fame orders continued: 1722, 8 June.
And the trade was carried on by annual general fhips, 'till the 2d of June, 1731, when the choice of general thips was fufpended for twelve months longer. 1731, 2 June, page 2.26 . From that time, to the 14 th of May, 1734 , it was carried on by annual general hips ; but, on the 25 th of October, 1733, it was ordered, that the fhip fent out this year to Scanderoon fhould not be allowed to bring home any filk, or mohair yarn. 1733, 25 Oct. page 219.
And on the faid rith of May, 1734 , it was refolved, That the trade Chould be carried on by general Chips. 1734, 14 May, page 7.
And the order of the 21 ift of October, $\mathbf{1 7 2 4}$, for the general court to chure fhips, was repealed; as allo the article for the time of the fhips departure:
And the roth article for allowing private fhips, when no annual general hhips were appointed:
And it was refolved, That the company will, at a proper time, agree when they will take up fhips for the fervice of the year.
From this time to 1735, the trade has been carried on by general fhips:
And, from the 17th of June, 1735, to 1743, by general annual hips; with a provifo, that, if the feveral lhips were not provided to depart at the fated times, it chould be lawful to rend cloths, or woollen manufactures, by any other fhips, provided fuch thips be not lefs than 200 tons, Britifh-built, and to carry 15 men for every 100 tons they are in burden. 1735, 17 June, page 48.

## N. B. There are called act hips (vide the 14th of king Charles 11.)

So that the trade to Turkey, from 1718 to 1743 , has been reftrained to annual general hips, to be appointed at ftated times; or general hips, to be appointed when the company thould think fit; notwithftanding the ftrong reafons given againft carrying on the trade under fuch reftraints, in the reprefentations delivered to the committee of the houfe of commons in 1718 ; which reprefentation is as follows :
The complainants do admit, That the company have, time out of mind, carried on their trade to Turkey fometimes by private fhips, fometimes by general hips: they defire only to remind the honourable committee, that, by the whole tenor of thofe old records by the company produced, it does appear, that they themfelves have frequently thought the delay of hhipping of fo dangerous a confequence, that, if they departed not annually, liberty was then given to each and every member, to export his own goods in fuch manner, and by fuch ways, as he fhould think proper:
And the complainants think it unneceffary to enter into the confideration what trade was, or how driven, 50 or 100 years ago, in it's infancy ; or whether the Dutch or the French had any or no trade in thofe days:
They defire to come to the prefent times; and to confider in what methods of trade the company have been, fince the conclufion of the laft war, and the alterations they have lately made : and it appears to have been carried on by what is ufually called an open trade, that is, by fuch fhips as the refpective members did appoint to carry away their refpective cloth, and the cloth of fuch other members as might pleafe to load upon them, to depart at fuch feafons of the year as were found to be moft convenient, which was ufually in autumn, or by Chriftmas.
Accordingly, the lait cloth fhips did depart about that feafon of the year, anno 1717; and many members of the company expecting the trade would contioue to be carried on in the fame mannet, went on in buying and finibing cloth, as ufual, for the year 1718:
But, on the 26th of March, 1718 , the company in a court refolved (as they themfelves have related it) that their members, for the future, fhould trade only by general hips; which was underfood to be, by fhips chofen by themfelves, as a bady collective, and to depart at fuch featon as they fhould think proper to appoint:
And, on the $23^{\text {d }}$ of April, 1718 , they refolved, That if any members hould, in any ocher manner, fend cloth to Turkey they would levy 20 per cent. on fuch members cloth in Turkey; and added, that they would confider of general thips on the 23 d of October following, and not before:
And in their own preamble (as it was here read) they give this remarkable reafon for their alteration, That it was in order to raife the value of Engliih manufactures abroad, and

ORI
filk at home ; hereby evidently demonftrating their private advantage, that of the nation, doubtlefs, lying more in 2 large confume than in a large price, as the one may beat our neighbours out of the trade, whilf the other mult neceffarily give them a thare in it. Now, although many members thought all this a great hardhip, yet did they acquiefce, in full expectation that, at that time, they fhould be permitted to export their cloth (at leaft) in the company's own way: But, on the 6th of November, they refolved to adjourn the further confideration of hipping for two months longer; and this made that evident, which was before fufpected, that they really intended no hipping at all :
Whereupon, a reprefentation of this grievance was made to the miniftry, who became fo fenfible of this their extraordinary way of proceeding, and it's fo highly interfering with the common good, that Mr Secretary Craggs fent for the company (as they themfelves have obferved) and defired them to reconfider this matter :
Which the company did, in a general court on purpofe affembled, on the 4th of December; when they refolved, that they would chufe fhips for the immediate exportation of cloth, on the 8th of January following, and appointed a committee to attend Mr Secretary with this their refolution :
But, when the 8 th of January came, they, by a majority of one vote only, inftead of chufing fhips, ordered a furvey of fhips, and a report to be made on the 22d of January.
When the report was made, on the 22d of January, they then refolved, That they would, in proper time, chute fhips, but not to depart before the firt of July next : now that ift of July was then generally underftood (before this application) to mean winter ; and, in that cafe, it would have compleated two years prohibition of trade.
Now this irregular and uncertain proceeding of the company, was the caufe that your complainants, thought the interpofition of the honourable houfe of commons, in this cafe moft proper, in order to their relief, in the exportation of that great quantity of cloth which has been fo long prevented, to their own, and, as they conceive, to the nation's prejudice: And they humbly offer the following reafons for it:
That the company's charter does not warrant them in fuch a prohibition, or reftraint of trade ; the claufes particularly relating thereto are fubmitted to the judgment of this committee, and will be fpoken to by fome of them.
Nor will Weftminfter-Hall (it is conceived) warrant their levying 20 in the 100 upon their members eftates; and therefore they always exercife this power in Turkey:
Nor can fuch reftraint be for the common good of the woollen manufacture of this kingdom, but evidently the contrary, as it neceffarily encourages the French and Dutch trade to Turkey; and it is fo advifed at this very time, and letters are ready to be produced in proof of it :
Neverthelefs it is granted, that there may be other letters, approving of this reftraint, and advifing that there was cloch remaining unfold, and particularly at Aleppo; but there is very good reafon to believe that it may, by this time, be all fold; and bad moft of it been long fince fold, had there not been an underftanding between the managers bere and there, in order, as the company's preamble fets forth, to raife the price of cloth abroad, and the price of filk at home.

23 This reftraint may be alfo a great caufe why fo much wool, at this time, is fent to France ; becaufe they have a vent to Turkey, and we have none.
And the hindering the exportation of woollen goods to Turkey at this critical conjuncture, when none can go either to Old or New Spain, may deferve confideration.
And the complainants do hope, that it will be found by this committee, that fuch members of the company as are willing to trade, ought to trade, and have a right to trade, even by the charter itfelf.
It has been objected, That the trade has been over-driven; and be it fo: will not that, in the nature of the thing, reduce the exportation as far as may be needful, without a forcible reffraint ? And doth it not appear very odd, that a majority of the company, fome of whom are unconcerned in the trade, and others but little, fhould have more regard to the welfare of their largeft trading members than they have for themfelves?
Our legiflature never thought the over-driving the trade to Portugal, Spain, or Italy, a fufficient reafon to intruft thofe traders with a power of reftraining it at their pleafure.
It muft be allowed, that the prefent fituation of affairs has made great alterations in almoft every thing.
Low intereft raifes land, enlarges trade, and reduces profit: but this is the evil; and, therefore, the remedy propofed by thefe reftraints fteps in, viz. that cloth may be bought the cheaper at home, and fell the dearer abroad :
That filk may be bought the cheaper abroad, and fell the dearer at home.
But, all this while, the French and Dutch are encouraged to fupply the woollen trade abroad; and to fupply (in a larger degree) the filk manufactures at home:
And our own manufackurers, in the mean time, both in wool
and filk, fo far deprived of their employments.-But thould the merchant lofe, yet the nation muft gain.
It has been further objected, That, by a delay, more cloth will be exported; and fo, probably, there may, fhould the fhips be yet detained twelve months longer.- But then the Thips be yet detained twelve months the French and Dutch, company thould take care to prohibit the French and Dutch,
and the Turks too, who, at this very time, are carrying on a cloth manufacture of their own:
But there can be no doubt but the foeedy fending abroad what is now provided, will be a greater encouragement to the buying more cloth than the detaining it can be; in that moft of this muft be fold before another fupply can follow it.
But were it otherwife, it is prefumed that thofe who induAtrioully have laid out their eftates in cloth, ought not to be detained for the fake of thofe who have neglected it; and it is belieyed, it may be granted, that the complainants are as likely to buy more cloth as any other members whatever.
Although the company have frequently practifed this way of trading by general fhips, yet it has occafioned frequent mifunderfandings between the members themfelves, and alfo the manufacturers. Two inftances hereof may be offered, one, upon a like occafion with this : fome members made application to king Charles in council; the company were heard, and pretended many difficulties : the king himfelf afked the queftion, Whether there might be any members that, notwithfanding, were willing to trade? It was anfwered, There might : Then, faid the king, they hall; and ordered trade to be opened.
The other was a complaint of the manufacturers to the houfe of commons, upon a delay of ibipping; when an annual fhipping for Turkey, in fummer for Aleppo, in winter for Smyrna and Conftantinople, had probably been enacted, had not the company, by large promifes of doing the thing, prevented it.
Now whether this pretended power to ftop trade be warrantable, or whether it has been exercifed for the common good, is humbly fubmitted to this honourable committee.

## P. Delme, <br> John Lock,

Ro. Radcliffe,
Edward Radcliffe,
James Lock,
John Hanger,
Joseph Exies.,
The Case of the Governor and Company of Merchants of England trading to the Levant Seas, as laid before the Parliament by the Turkey ComPANY, in the year 1743, in order to prevent the trade being laid abfolutely open, as was then aimed at.

If the Levant company faw reafon to hope the bill, as now framed, which is depending, could anfwer the ends propofed, of inlarging as well as regulating the Trade to Turkey, they Chould think themfelves guilty of breaking the truft repofed in them, if they did not ufe their beft endeavours to further it's being paffed into a law: but they owe to the public the fetting their charter in a true light, and the bearing teftimony againf attempts, how feecious foever, which threaten the nation with the lofs of the remains of this valuable trade.
The charter cannot be faid to eftablifh a monopoly, or exclufive trade : the company is already open to all manner of perfons not below the degree of mere merchants : it is exprefsly declared, That the trade thall not be confined to one port; and it is certain that none of the petitioners for the bill ever applied for their freedom of the company and were refufed: all merchants, of what place or port foever, have a right to be adinitted to their freedom, every perfon above 26 years of age paying a fine (for the ufe of the company) of 501 . and every one under that age, 251 . all fons and apprentices of freemen are admitted upon paying 20 s. only.
There is, indeed, a condition required by a fecond charter of king Charles II, of thofe merchants dwelling in London, or within 20 miles of it, that they thall be free of the city: but this extends to them only, and does not, nor can be pretended, to affect perfons dwelling at a greater diftance.
The fine taken upon admifion, with regard to the company, is not worth mentioning, furtber than obferving, that the fum cannot be deemed oncrous to any one in a condition of engaging in a trade, which from it's diftance, and other circumftances, is of a very tedious circulation, and requires a large fock : it is fmall with regard to the fhare it admits to of the fruits of paft very great expences, and is rather an advance made to the company than a fine; for, as it goes to the public ftock, he who pays this fine, or advance, has his fhare of it, by a proportionable lefs duty levied on his trade, and alfo of all other fines levied after his admiffion.
The limitation to mere merchants is expreffed, by the charter, to be for preventing the diforders and inconveniences which had then been found by experience, and mutt arife from the too great refort of low mean people, to places where the cuftoms and laws are fo intirely different from their own; where they muft themfelves be expofed to a variety of hazards and dangers, and by any fraudulent attempts, or even by
their irregularities and follies, may offend the Grand Signiof, and involve themfelves and others in troubles and dangerss When irregularities happen, if they are carried before a magiffrate, expence muft be the inevitable confequence; and, no doubt, thefe irregularities would multiply upon a greater refort of low people: and particular inftances have fallen out, with regard to every nation eftablithed in the Levant, where the lives and eftates of the fubjects of each nation, then refident in Turkey, have been in danger, from the abfurdity or villainy of one man.
The quarrel between Sir Kenelm Digby and the Venetian admiral, in the bay of Scanderoon, coft the Turkey company above 20,000). A difpute with Sir Sackville Crew coft above 80,0001 . A pretence that a quantity of pieces of eight were not of the true alloy, coft 7 or 80001 . A detention of the capitulations by a vizir, and other little difputes about the fame time, coft as much : the roguery of a captain, who had taken a freight at Alexandria, coft the Englifh at Cairo a great deal of money, and thad like to have occafioned the murder of them all: and the indifcretion of a young man, under Dutch protection at Aleppo, within thefe few years, caufed an infurrection in that city, which threatened the lives and eftates of all the foreigners there: and, lally, the company have been obliged to pay the Turks, as an indemnification for captures made on them by Britifh privateers, during the laft war, no lefs a fum than $12,000 \mathrm{I}$. Thefe are a very few of the many inftances that are to be met with.
The trade to Turkey is carried on under the protection of the capitulations, or treaty of friendfhip and commerce between / his Majefty and the Sultan; which was procured, and has been fince upheld and renewed, at great expences to the company.-By this treaty, the Britifh fubjects are put upon a much better foot, in point of trade, than even any of the Sultan's own fubjects, by paying lefs cuftoms, as well as in other relpects.-Thefe exemptions muft, no doubt, give uneafinefs to the farmers of the cuftoms, and the Sultan's fubjects that are traders; fo that it requires a very even and fteady conduet to avoid giving occafions of offence, which feldom efcape animadverfion; and often flight ones are taken, or feigned ones urged, to extort money; and the greateft care is taken by the company to fupport the credit of this nation through the Grand Signior's dominions, by the moft exact punctuality in all their dealings with the people of the country; and, more particularly, they have always guarded, in the moft effectual manner, againit all attempts to run cufforns, or to cover fubjects or other ftrangers goods: but if room is left for every one to become adventurers in this trade, to carry it on as they themfelves Iball pleafe, bad and perverfe people, free of all reftraint, will break in upon all order, endanger the quiet and fecurity of every body, and every thing, and endanger the total lofs of this ftill valuable branch of the Britifh commerce.
As the company ftands at prefent, it cannot be properly called any thing more than a body eftablifhed for the well and orderly maragement of the trade into the Levant, and providing for the fupport of the neceffary expences attending it ; which are, the maintenance of the king's ambaffador at the Porte, the confuls, and other neceffary officers and fervants, at the places of trade, and the obtaining and fupporting the capitulations, granted by the Porte at different times to the king's fubjects; [fee Levant Trade] and the company have, at great expence, obtained very valuable privileges for the king's fubjects from the Ottoman emperors, and hitherto fupported them through many ftruggles.-They have effablifhed proper rettements for the management of their affairs; they have, for many years, carried on a confiderable trade, greatly advantageous to the nation, in exporting it's manufactures and produce, and importing unmanufactured goods, though often under difficulties and difcouragements to themfelves; and have at this time great dependencies abroad.
If it be true, as the petitioners for the bill fet forth, that the trade of this company is decayed, it is an unwarrantable conclufion that the management under the prefent charter is the caufe of it : but ftill the Turkey company is ready to own, and defirous it thould be known, that their trade is leffened, and under difficulties, and the French trade increafed; and they have made heretofore proper reprefentations of it, but the remedy is far out of the reach of any thing attempted by this bill, as the laying the trade between England and Turkey more open will not be the means to increafe it, but probably quite the reverfe; which may be fairly inferred from the cafe of our neighbours the Dutch, where the trade to Turkey is open and free, and yet very inconfiderable, fcarce any at all: and that the French trade does not owe it's increafe to it's being more open or more free than the Englith, is plain fromit's beingunder much more ftrict regulations: [fee Levant Trade ] a chamber of commerce has the fuperintendency of this branch of commerce in France. - The cloth is exported only from one port there, viz. Marfeilles : no Frenchman goes to Turkey but with a licence ; nor is permitted by the French government to fertle in Turkey, without firft giving fecurity in France for his good behaviour in the Grand Signior's dominions: The number of houfes for the fale of their cloth in Turkey is limited; the prices of their cloths are fixed in France, from
which they cannot depart ; and they are not at liberty to underfel one another in Turkey; and when one houfe has fold it's quantity allotted, that houle can fell no more 'till the other houfes have fold theirs: fo frict are their regulations. The French cloth-trade has gained ground by the encouragement and affiftance it receives from the public: that manufacture was eftablifhed in Languedoc, by Mr Colbert, on purpofe for the Turkey trade ; and at fo valt an expence, that he expofed himfelf to great cenfure by that meafure, though the event has thewn the wifdom of his, views. Thefe cloths are chiefly made of Spanifh wool : there is a premium allowed by the public on every piece of this cloth; and, befides, there are feveral elfablifhments (which are called royal manufactures) made at the expence of the public, or the province where there are conveniences for making a piece of cloth from the wool, to it's being packed to put aboard the thip; and a clothier is put into one of thofe rent-free, on the fole condition of making a certain number of pieces of this cloth in a year. This is the molt vifible reafon why they can fell cloth, made of thofe fine materials, at a lower rate than we can fell our cloth; and however the French cloth may want the fubfance of ours, it has a preferable appearance, takes a beautiful colour, and is lighter than ours, and ferves feveral of their purpofes; and though many repeated attempts have been made to imitate it in England, they have proved ineffectual. See the article Manufacturers.
The next principal article of the Turkey trade, and the great branch of returns from thence, is filk: one half of that commodity ufed to come from Perfia through Turkey; but the continual wars that have raged in Perfia, for many years paft, have cut off all fupplies of filk from thence; and if thing Gould return to their former quiet ftate in Perfia, and the filk provinces to the flourihing condition they were once in, it is uncertain whether this branch of trade would return to the Levant company, fince it has been thought expedient to open another channel for it ; and the returns of filk from the Levant are; at this time, confined to the raw filk of the produce of Turkey, of which the company buy almolt the whole that comes to manket in Turkey, for exportation; and that the company purchafe with Englith cloth, and other products, bartered, in exchange : and if they were to fend money (which they many years ago made a by-law to prohibit, out of a regard to the public good) they would not get more filk would fell little or no cloth, and the French would get that money in exchange for their cloth.
As to mohair-yarn, which is another confiderable article of return, the company buy conftantly as much as hath always been a full fupply for this market; and there is a confiderable decreafe (arifing from the alteration of falhions) in the confumption of that commodity at home: and, to fhew the company's readinefs of embracing every opportunity that ofters of increaung their trade, they have, in the articie of cottons, which they found a demand for in England, and a fupply in Turkey, increafed their imports of that commodity from 400 bales to 5,000 , within thefe few years; which may ferve to compenfate for fome of the articles their trade is decreafed in.
The latitude given by the bill, in exporting and imparting, renders impracticable the reftraints that may be neceffary to obviate dangers of infection; and the liberty given to import goods to all manner of perfons in the Levant, is putting all forts of Arangers upon the fame foot as natural-born fubjects; and is, at leaft, giving away the advantage of commiffion : it alfo may raife dangerous difputes about capitulations, and endanger the lofs of them.-Nay, by this latitude, the French factors may find means to fend hither goods bought abroad with their manufactures
But if the wifdom of the legillature fhall think fit to attempt the enlarging or retrieving the Levant trade, fome more probable methods may be found out, and not liable to the fame objections with thofe in this bill; fuch as a proper encouragement, in whatever hape may be thought fit, for making fuch forts of cloth as the French fend ; or the affifting the company in the burden of their expences, which run bigh upon the trade, as the fame, or a greater fum, is to be raifed upon the remains of it, than when it was in it's moft fourifhing condition : but as, to the means propofed by the bill, fome of them could not have any effect at all, and others may have very fatal confequences. All which is humbly fubmitted to the confideration of the legiflature

An abftract of what has been argumentatively urged, in oppolition to the I urkey company, in order to lay tha branch of trade quite open to all his majefty's fubjects, by a very ingenious gentleman*.

* Reflections on the Expediency of opening the Trade to Turkey, \&c. Printed for T. Trye, near Gray's-Inn Gate, in Holborn, London, 1753.
I. All the powers in Europe are endeavouring to extend their commerce; and if Great-Britain cannot extend her's in proportion, the will be no longer able to preferve that figure the has hitherto preferved $\dagger$.

This is a true maxim, but that laying the Turkey trade ab. flutely open, is a meafure conducive to that end, has been enied by many. and particularly by another very judi cous gentleman, Mr. Hanway, in his travels, and his an fwer to the appendix of a pamphlet, entitled Reflections upon Naturalizations, Corporations, and Companies, \&c as this fubject is occafionally mentioned in Hanway's tra-els.-By the author of thefe travels. Printed for Dodiley and Millar.
II. Many of thefe countries, Spain in particular, which ufed to admit great quantities of Englifh merchandize, are now fetting up manufactures of their own, and laying burdens on ours, to prevent their introduction: fo that it is become more expedient than ever, to feek out as many new markets as we can*.

* That this is matter of fact, is fhewn thronghout divers part of our dictionary. See the articles Biscay, Castille, Catalonia, India-House of Spain, Spain, Spanish America

The Turkey company are not able, were they willing, to fell the Englifh manufactures fo cheap as they might be ren dered by a free trade : For,
(1), If no Chips are allowed to be employed, but the general fhips of the company appointed by the managers, a private member has ne choice, but muft fubmit to all the expences and difcouragements which the managers will lay upon him. (2), The carriage of the goods up to London, the gains of factors, warehpule-keepers, \&cc. are taxes heavy enough on he manufacture, to turn the ballance in favour of the Freach.
3). The expence of package, porterage, hallage, loading and unloading, \&c. are more exorbitant in. London, than in any part of the kingdom.
4). The dearnefs of vigtualling and manning of thips in the port of London, is another material article; whereas many ports are not only cheaper, but more commodioully fituated, as being nearer the places where the goods are manufactured.
IV. The gains of an exclurive company can never coincide with the welfare of the public; inarmuch as monopolifts, eftablifhed by law, are thereby fecured from rivals; fo that their particular intereft confifts in felling as dear as they can: whereas the interelt of private adventurers is to fell as cheap as pofible, in order to get cuftom by rivaling each other. Thus the public is benefited by emulation, as it promates the circuation of labour and univerfal plenty ; but is hurt by monopolifts, who are a check to induftry, to the circulation of labour at home, and it's exportation abroad; and whofe only view is to facrifice the generalintereft to that of a few.
$V$, The Turkey company is a monopoly in every fenfe, as no private member is allowed to fit out a fhip when he pleafes, to export and import what quantities of goods he would chufe.-As the trade is confined to the expenfive.par of London.-As the freedom of the company is limited to merchants by profefiion, and has been obftructed under frivolous pretence,-As the members themfelves are fettered with by-laws.
VI. This exclufive fociety not only exports a much lefs quantity of Englifh labour than would be, were the Englifh trade free, but alfo imports the lefs of raw materials, fo neceffary for feveral manufactures, and the employment of the poor.-That important article, raw filk in particular, which fhould always be brought to market at the loweft price poffible, has by monopolies, been raifed fo high, as greatly to injure the filk manufacture. And this arifes from two caules: (I). The Turks will deal with thofe that fupply them with goods on the cheapeft terms; confequently not with the Englifh; and fell to thofe, who give the higheft price, [i, c. the greatef quantity of labour in exchange] which an exclufive fociety will not do : therefore, our Englifh company neither, will, nor can make great returns in Turkifh goods. (2). After the goods are brought to England, the company keep up the price of their fales as high as poffible, in order to get immenfe profits on fmall imports. And this they do with afety, becaufe there are none to rival them.
VII. Our woollen manufacturers are ready to make it appear, from the fpecimens they have feen of the cloth of Languedoc defigned for the Levant, that they are able to out-rival the French; provided this commerce has a free courfe, and every adventurer is permitted to Chip off from what port be pleales.
VIII. Were fuch liberty obtained, they have reafon to conclude, that they could render their goods ftill cheaper.
(I). Becaule thofe drugs for dyeing, which now pafs through the hands of a company, would be fold at a more reafonable rate.
2). Becaufe the oils and a hes for making Caftille foap could be purchafed on fuch advantageous terms, as would induce the Englifh to fet up that branch of manufacture: which foap is made at prefent chiefly at Marfeilles, thence fent to Leghorn, and from Leghorn imported into England; by which means the Englifh manufaturer is burdened with an

## ORI

heavy additional expence.-Nor is this the only evil; for our colonies in America are now wholly fupplied with French foap from Martinico, and the other iflands belonging to that crown, and even from France itfelf (the prefent Englith foap made of tallow not being fit for their climates): by which means feveral other fuecies of French manufactures are introduced into our fugar iflands and northern colonies, to the great detriment of the commerce, revenue, and navigation of Great-Britain: But,
(3.) Another reafon why the woollen cloths, defigned for the Levant, might be vended cheaper, is, becaufe a confiderable faving is to be made in the expence of dyeing. For were this trade to have a free courfe, the manufaeturer might dye his own cloth at fuch 2 feafon as would not interfere with his other bufinefs, and contrive every thing to the beft advantage: whereas, at prefent, the cloth is fent up white to London, and dyed there in hafte, and at an exorbitant charge, both as living and wages are dearer, and as thole journeymen, who have not conftant bufinefs, muft bave the higher wages while they are employed.
IX. All other parts of a cargo for the Turkifh dominions, as well as woollens, might be rendered much cheaper, as the expence of carriage, fhipping, \&cc. would be confiderably Jefs.-Moreover, there is the frongeft probability, that great demands would arife from the manufactures of iron, fteel, brals, and copper, for cutlery and Birmingham ware; for the produce of the looms of Manchefter, Coventry, and Norwich; for printed linens, paper-hangings, and fuch kinds of ornaments; as moft of thefe articles might be exported from feveral places, at lefs charges than from London.-And as the Englifh are known to excel ocher nations, both in fabric
 feilles would labour under fuch difficulties from thofe circumflances, as the advantage of it's fituation could by no means compenfate.
X. Add to this, that the freight, and infurance, and navigation of fhips are much dearer, in proportion, at Marfeilles, than in England. The intereft of money is alfo 6 per cent. and the price of tin and lead, and fhot, mult neceffarily be much higher, fo that the prodigious increafe of their Levant trade, cannot poffibly be afcribed to any other caufe, than to the monopolies and exclufions of the Englif againft their own countrymen, in favour of the French. And therefore it fhould be duly confidered by every true patriot, and lover of his country, that the chief competition, in this ftruggle for the liberty of commorce, is not between one Englifh merchant and another, - but between Great-Britain and France.
XI. Were the trade laid open, the Turks, Greeiss, and all the nations of thofe valt territories would find a greater demand for their refpective commodoties, and then they could afford to buy greater quantities of ours:-whereas, at prefent, they neither are able to purchafe much, nor, if they were, are they inclined to do it, on account of the exceffive dearncfs of the Englifh merchandize.
XII. An increafe of the exportation of our own manufactures muft create an increafe in the excife, and all inland duties; for the government is infallibly a gainer by every fcheme that finda employment for the people, encourages labour, and promotes wealth, as thefe things neceffarily occafion the greater confumption of all commodities that pay duties - -on the other hand, an increafe of the importation of fuch foreign materials, as excite the induftry of the natives, is doubly advantageous, both by the cuftoms they pay at frif landing, and the hands they employ afterwards. Therefore, the increafe of fuch a trade is defirable in every light, both to the government, and to the people.
XIII. If any of the merchants, belonging to the out-ports, fhould happen to bring in fuch raw materials as are not wanted on the fpot, the advantages they receive in other refpects would enable them to pay the expence of carriage to a proper market. And, indeed, the carriage of raw filk, camels hair, cotton, wool, \&cc. from Briftol to Coventry, from Liverpool to Manchefter and Derby, from Yarmouth to Norwich, \&c. would not be fo dear, as it is now from London to thofe places. Befides, it is natural to fuppofe, that as the trade increafed, other towns in the north and weft, and middle of England, and in Scotland alfo, would fet up manufactures. So that every part of the united kingdom ought to confider itfelf as interefted in opening this mono-

XIV. Whatever regulations are judged neceffary, under the infpection of proper perfons, either at home or abroad, for the good government of a free trade, or the prefervation of health, and fecurity from the plague, they will be gladly received, and thankfully fubmitted to. And an open trade might be very cafily put under much ftrider examinations, not only as to the goodnefs of the manufactures exported, but alfo in relation to bills of health, and performing quarantine, [fee Quarantine] than what the company have been fubject to for many years paft. - Though a plague in London would have been much more fatal, than in any other part of the kirydom.

## ORI

XV. Were the trade to Spain or Portugal now in the hands of a company, and an attempt made to render it free, great pains would be taken, as there are now in the prefent cafe; to fet forth the danger of permitting thopkeepers and low tradefmen to go over to Spain or Portugal.
They will raife the jealoufy of the populace, by interfering with their trades, -or inflame the zeal of bigots againft countenancing hereticks : -low and indifcreet people will import prohibited books, and fo draw down the power and vengeance of the Inquifition,--will give offence, by their behaviour; while the hof is paffing by,-perhaps ridicule fome of their religious proceftions, and fo caufe tumults and infur-vections:--or, in general, they will not fail to excite an univerfal odium, by the diverfity of their drefs and cuftoms, and great licentioufnefs of manners. - Therefore, by attempting to throw the trade open, we fhall infallibly lofe it all.'
Thus it appears, that objections much more plaufible might be raifed againft opening the trade to Epain and Portugal, were it now in the hands of a company, than againft the revocation of any exelufive grant now fulffifting. But, indeed, we muft confider all thefe kinds of objections as the mere dialect of monopolifts, who ufe it, mutatis mutandis, againft opening any trade, in order to carry their own private intereft, under an appearance of public good.
But common fenfe and daily experience are continually expoling the falfity of fuch fuggeftions. And were the trade opened to Turkey; there is no degrees of probability, that fhopkeepers and low people would be fond of going there:-and if they did go, they certainly would agree with the natives, as well as the Englifh failors do now.
XVI. If the trade to Turkey had a free courfe, what reafon is there to imagine, that it would be engreffed by the Jews? And why mult it be fuppofed, that the Englifh in particular would fuffer in this refpect, more than the French, Dutch, or Italians? Befides, as the Jews might infift upon the freedom of the company, as well as others, provided they are merchants by profeffion; and as they refide chiefly in London, and are a rich united body of merchants, this very objection might be urged with greater force againft the confining fuch a trade to a company, than agaimf laying it open;-efpecially as the Englifh Jews, by means of their connection with their brethren in Turkey, who are the only brokers in that country, might be the better able to form a combination to ingrofs the whole trade themfelves, and execute it with fuccefs. But, in fact, this objection betrays it's own weaknefs, and would never have been brought, if a ftronger could be found; and it is the firf time that the Jews were accufed of being injurious to the interefts of a trading nation.
XVII. It is equally incredible, that the government and people of Turkey fhould be difpleafed at the diffolution of the prefent monopoly. And what grounds are there for fuch a fuppolition? For, in an open trade, Eaglifh manufactures would be imported in greater quantity and variety, and on cheaper terms,- more-Turkifh goods be taken in barter, and a larger revenue would arife to the government. But, in a confined trade, fewer manufaEtures are imported, more exorbitant in price, demanding fewer goods in exchange, and paying lefs to the cuftoms. And can we imagine, that the Turks would once hefitate, to which fide the preference is due? Or have we ever found, that any of thofe other nations; to whom we once traded by exclufive companies, have complained at the diffolution of thefe deftructive monopolies, and defired their reftoration?
To confirm this, we have a remarkable fpeech recorded in Camden's Annals of one of the Czars of Mufcovy, when that country was thought to be over-fpread with ignorance and barbarifm; which is mentioned by the reverend and ingenious Mr Smith, in his Memoirs of Wool, vol. i. p. 114, viz.
Theodore Joannides fucceèding to the empire, granted to all merchants, of what nation foever, free accefs into Ruffia. And being oftentimes folicited by the queen [Elizabect] to confirm the privileges granted by his father to the Mufcovy company of Engliih merchants, to wit, that only Englithmen of that company fhould come into, or trade into the north parts of Ruffia, and that cultom free, in regard they were the firft that difcovered the paflage thither by fea: he thereupon defired her to give liberty to all the Englifh to trade into Ruffia; for, to permit fome, and deny others, was an injuftice. Princes, fays he, muft carry an indifferent hand between their fubjects, and not convert trade (which by the law of nations ought to be common to all) into a monopoly, to the private gain of a few. As for his cuftoms, he promifed to exact lefs by one half of that company than the reft, becaufe they firf difcovered the paflage thither by fea. In other matters be confirmed their former privileges, and added fome few more, out of bis reppect to the queen, and not for any defert, as he faid, of the company, many of whom he found had dealt fally with his fubjects.
XVIII. But when an exclufive grant is once obtained, it muft be defended by fome kind of arguments, however weak and inconclufive. Now the Turkey company was firf erected, and afterwards eftablifhed in fuch times, when the principles
of trade, and the nature of the landed and commercial interefits of a kingdom were not underftood;-or, if underftood, not fufficiently regarded:-in fuch times when monopolies and exclufions carried all before them. Of the truth of which affertion, we need only confult Rymer's Foedera, and the common hiftorians for the reigns of queen Elizabeth, king James I. and king Charles I. to find fufficient evidence; many of which monopolies were again renewed by king Charles II. - And, at the time of the Revolution, were grown too powerful to be attacked with rafery.
For, as to foreign trade, there was an exclufive company to Hamburgh and the Baltic,-to Mufcovy and Greenland,to Germany and Flanders,-to France,-to Spain, and Portugal, - to Italy,-and to Africa.
Special licences were alfo to be purchafed for the importation, or fale of madder, logwood, deal-boards, wine, and tobacco: -likewife, for the exportation of corn, leather, and butter. And, 2 dly , As to our domeftic commerce, there were preexemptions, or monopolies for tin, falt, and eoals: exclufive patents for fea-weed, kelp, and glafs,-falt-petre and gunpowder, - foap and ftarch, - gold and filver lace, -beaver hats, and demi-caftors,--dyeing and dreffing of cloth,-making of allum,-and even for gathering of rags.
Special licences.were alfo neceffary to be obtained for making iron, and cutting down wood for charcoal,-making of butter cafks,-ufing of wine cafks for ale and beer;-alfo for making of malt,-and brewing of ale for public vent.
Moreover, the gardeners, for fix miles round London, were incorporated into an exclufive company, as were alfo the traders and artificers within the diftrict of three miles. Now all monopolies and exclufions (and many more might be enumerated) fet out with pompous tities, and great profeffions of zeal for the public welfare. They were all eftablithed, either for the increale and good government of trade, -or to keep up the credit of the Englifh manufactures in foreign markets,-or for preventing the ignorant and unwary from being impofed upon at home. -But the true reafon of their effablifhment remains yet to be told, viz. Jobs and Monopoly.
This was the æra in which the Turkey company had it's birth and education. And all the others, while in being, had juft the fame pretentions of public good to alledge in their favour: but time has fhewn, that we are much happier without them.
XIX. As London is the capital of the Britihh empire, and the centre of the body politic, every acceffion of wealth, trade, manufacture, navigation, and numbers of inhabitants, to other parts of the kingdom, mult redound to the advantage of the metropolis. For the centre in the body politic, is like the heart in the natural body, which receives benefit itfelf, by the brifk and regular circulation of blood in the extremeties. But if any one thould doubt of this parallel, let experience and matter of fact determine. For when almoft the whole trade of the kingdom was circumferibed by exclufive grants, and thofe monopolies confined to the fingle city and port of London, this city made a very mean and inconfiderable appearance, to what it doth at prefent: but, in proportion, as the inland countries, and the out-ports began to fhake off fome of their fetters, and extend their commerce; in the fame proportion did the metropolis increafe in wealth and grandeur, number of inhabitants, and extent of buildings. In fhort, if there was an acceffion of wealth to the fartheft ifles of Scotland, it would, fooner or later, find it's way to London. [See our article Midilesex.]
XX. Upon the whole, therefore, the continuation of this exclufive company, is no other in effect, than the paymensof a very large tribute annually to France;-together with this mortifying reflection, that this is a tribute we are not forced to pay, but do it voluntarily; though we know, that fome of her beft provinces are fupported by it, fome hundreds of fhips employed in the navigation, and the government enabled to turn the wealth and frength, acquired by our indolence and mifmanagement, to our own deffruction.
XXI. The landed gentlemen, in their refpective counties, are more particularly concerned to exert themfelves on this interelting occafion; becaufe of the rents of lands and houfes will be higher, and the demand for the produce of eftates, corn, wool, fheep, cattle, butter, cheefe, wood, coal, \&cc. \&\&c. will be greater, in proportion as the inhabitants of any country do increafe in numbers, riches, and manufactures. The poor alfo would be lefs numerous, as there is more employ-ment,-the weight of taxes will be lighter, when more perfons thare in the burthen,-and the tenants, by having better markets, will be better able to pay their rents: but thefe advantages cannot be obtained, while the prefent difficulties, which prevent induftry, and ftop the circulation of Jabour, are fuffered to remain. - In one word, all monopolies are fo many combinations againft the landed interaft. And the more violently they are contended for, the more clearly may the gentlemen of landed property difcern, whofe intereft is promoted, and whofe is facrificed.
The principal points to be proved at the bar of both houfee, are the following:

1. That the Englinh manufacturers can rival the French Turkey cloth.
2. That the port of London is the deareft in the kingdom, both for exporting and importing of, goods.
3. That not only woollens, but almoft all other parts of a cargo to the Levant, can be purchafed on cheaper terms in England, than at Marfeilles.
4. That freight and infurance are very high at Marfeilles, as is alfo the intereft of money.
5. That the exclufive powers of the Turkey company, by reftraining and leffening the exports of Englifh manufactures, leffen the labour, and of courfe, the wealth, power, and navigation of Great-Britain.-And, by leffening the imports of foreign raw materials, greatly obftruct the manufactures of thofe materials.

## Remarks.

This is the fubftance of what has been urged to lay the Turkey trade abfolutely open. $\rightarrow$ But what may be faid, on the other fide of the queftion, we have not room to confider here; we fhall defer that to the article Turkey Trade, where we fhall alfo confider the late act of parliament, made in relation to this commerce, and conclude the fubjeet, from an impartial review of what has been reprefented, as well under the article Levant Trade, and this, as what hall be further faid under the article Turkey Trade.
And, in relation to the East-India trade in general, as alfo our East-India Company in particular, fee the articles East-India Trade in general, and East-India Company, Dutch East-India Company, French East-India Company. But as it is rumoured, that people of weight and diftinction will exert themfelves to lay the East-India Trade open to all his majefty's fubjects, and to annihilate abfolutely our Eaft-India Company, as an exclufive trading corporation, we fhall lay all the evidence impartially together, that we have been able to accumulate, on both fides of the queftion, that a right judgement may be made, whether fuch a meafure would or would not be expedient, and tend to the public intereft or not. Wherefore, befides the peculiar heads to which we have before referred, we fhall alfo, in order to give this matter due confideration, refer our readers to the article Ostend EAst-India Company alfo in it's place.
ORLEANOIS, in France. In this government are the feven following diftinct provinces, viz.
I. Orleanois, properly fo called, bounded on the north by Upper Beauce, on the eaft by Gaftinois, on the fouth by Sologne, and on the weft by Dunois and Vendomois.
Orleans, the capital city of this province, and one of the moft confiderable in France, is fituated on the river Loire, by means of which, the trade it carries on is very confiderable; it confifts in all forts of corn, wine, brandy, fugar, filks, woollen-ftuffs, oil, iron, fteel, frelh and falt fifh, fruit, timber, broads, and a great many other merchandizes. They have alfo fome manufactories, viz. of ftockings, both knit and wove, of prepared leather, of refining and baking fugar,
BEC.
BEAUGENCI, on the fame river, has a manufactory of ferges and other woollen ftuffs.
II. Sologne. The limits of this province are not diftinetly fet down.
Ramorentin, on the little river Sauldre, has a confiderable manufactory of ferges and woollen cloth, which ferves to clothe the army, fo that they have a very good trade of it.
III. Beauce, lies between Orleanois, Blaifois, Porche, and the ifle of France.
Chartres, the capital of this province, is fituated on the banks of the river Eure. The chief trade here is that of corn. They have alfo fome manufactures, for which the water of the Eure is reckoned very proper.
Piuviers, a fmall town on the rivulet Oeuf. The neighbouring fields produce corn, of which they drive here a confiderable trade. The foil produces alfo wine and faffron.
IV. Dunors. This little province has Orleanois on the eaft, Blaifois on the fouth, Vendomois on the weft, and Leffer Perche on the north.
Chateau-Dun, fands on a hill near the river Loire. They make cyder here; and, in fome parithes of this diftrict, are manufactories of woollen ftuff, which they fell at Tours, Orleans, and Paris.
V. Vendomois, is bounded on the north by Perche, on the eaft by Dunois, on the fouth by Turrenne, and on the weft by Maine.
They have in this duchy manufactories of woollen cloth, and gloves. There are alfo embroiderers and tanners; but the crade of gloves is by far the moft confiderable. Vendome, the capital, is fituated on the Loire.
Montoire, on the fame river, is famous for the vaft quantity of linen cloth made here.
VI. Blaisors, has Beauce on the north, Orleanois on the eaft, Berry on the fouth, and Touraini on the weft.
Blors, on the Loire, is it's capital. The chief trade here confifts in wine and brandy, which they fend to Orleans, Paris,

Tours, Angers, Laval, and into Holland. It is alfo noted for the beft watches in the kingdom.
VII. Gastinois is bounded on the north by Beauce, on the eaft by Senonois, on the fouth by Auxerrois, and on the weft by Hurepois. Part of it belongs to the government of Orleanois, and the reft to that of the Infe of France. There are abundance of vineyards in this province, and a great many walnut-trees, of the fruit of which they make oil; the foil produces alfo a great deal of faffron.
Chateau-Regnard, has a manufactory of woollen-cloth, proper to cloath Soldiers. They have alfo a trade of coarfe linen cloths, made in the neighbourhood of Montargis, Cufne, and St Fargeau. The Germans ufed formerly to trade hither for faffron.
OSTEND, eaft longitude 2, 45, lat. 51,15 , a city and port town of the Auftrian Netherlands in the province of Flanders, fituate 12 miles fiom Bruges. See Austrian Nethertands.

## OSTEND EAST-INDIA COMPANY.

The late emperor Charles VI. attempted to eftablifh an EaftIndia company at Oftend in the year 1718, but was compelled to defift from the defign by the Englifh and Dutch. See Austrian Netherlands.
In order to give pofterity a juft idea of this company, and how jealous the Dutch and the Englifh were at this time of the eftablifhment of a new maritime power in Europe, to interfere with their Oriental commèrce, it will be neceffary to lay before our readers,

A Memorial prefented by M. Pefters, refident at the court of Bruffels on the part of their high-mightineffes the StatesGeneral of the United Provinces, to his excellency the lord marquis de Pric, grandee of Spain, knight of the order of the Anunciada, privy counfellor of fate to bis imperial and catholic majefty, and minifter plenipotentiary for the government of the Auftrian Netherlands.

## To his excellency,

The undernamed their high-mightineffes refident, is commanded to have the honour to communicate to your excelJency the remonftrances, which the directors of the privileged Eaft-India company, as alfo thofe of the Weft-India company eftablifhed in Holland, have lately renewed, about the navigation and trade which thofe of the Auftrian Netherlands, particularly thofe of the town of Oftend, ftill carry on in the Indies, to the great prejudice of the faid companies, and of their grants, confirmed and made probibitory by the treaty of Munfter, as well for the fubjects of Spain, as for thofe of the Republic, who out of the faid companies, ate not allowed to navigate, or carry on any trade within the diftricts of their grants.
It is upon thefe fielh remoniftrances of the faid directors, that their high-mightineffies have charged their envoy extraordinary to his imperial and catholic majefty, to reprefent to him anew, That having the honour to live in good correfpondence and amity with his imperial majefty, and having nothing more at heart than the prefervation and continuance of the fame good correfiondence and harmony, which at all tumes have fublifted between the fubjects on both parts, cannot bebold, without grief, that the inhabitants of thofe countuies, fubjects to his imperial and catholic majeft, are undertaking matters that may difturb and rufie that good correfpondeace, tending to the greateft prejudice with the Republic can fuffer, and contrary to the treaties fubfifting between his imperial and catholic majefty and their highmightineffes, fo that they have ftrong and juf reafons to complain of the fame; the rather, becaufe all the inflances made on their part for redrefs, have proved ineffectual; and that on the contrary, the faid inhabitants extend daily their enterprizes, in which they feem the more encouraged by the grant, which according to the public news, they have obtained of lus imperial and catholic majefty, freely to navigate and trade to the Indies.
Their high-mightineffes forefeeing the unavoidable troubles that muft attend this affair, if, on the one hand, his imperial and catholic majefty, contrary to all expectation aad equity, fhould permit his fubjects to proceed in their undertakings with refpect to their new navigation and trade to the Indies, againft the exprefs tenor of treaties; and if, on the other hand, their high-mightineffes making ufe of their right acquired by the fald treaties, fhould oppofe the fame; and defiring nothing more than that fuch inconveniencies and troubles may be prevented, their high-mightineffes could not avoid reprefenting afrefh to his imperial and catholic majefty, That by the treaty concluded in 1648 at Munfter, between his majefty the king of Spain then reigning and his fucceffors, on the one part, and their high-mightineffes on the other part, the navigation and commerce to the Eaft and Weft-Indice were regulated and limited, with regard to the fubjeets of Spain, on the foot they then exercifed and enjoyed their navigation and commerce to the Eaft. Indies, without power of extending the fame furcher ; and with regard to the fubjects of the Republic; it was agreed that they thould refrain

Vol. II.
from the places poffefled by Spain. That thefe articles have always been religioufly obferyed, and the inhabitants of the Spanifh Netherlands have never been permitted to trade to the Indies: that the faid Netherlands being at prefent under the dominion of his imperial and catholic majefty, have not in that refpect, acquired more right or privileges than they had before; nor can it ever be imagined, that their highmightineffes after having made fo great efforts, and contributed fo much to the recovery of the faid Netherlands, and other parts of the monarchy of Spain, in favour of his imperial and catholic majefty, purfuant to the engagements entered in on that behalf, could poffibly depart from the chat ters they bad granted, and from the right they have for ever acquired by the faid treaty of Munfter, to maintain the faid charters ; or that his imperial and catholic majefty had any intention in recovering the faid Netherlands, to make any alterations there, much lefs defign, contrary to the ftipulations therein to plainiy exprefied, to caule fo great a prejudice to the flate, in a point fo effential and important to the Republic, and which was fo ftrongly infifted upon in the negociations at Munfter, that had it not been obtained, the treaty would never have been concluded: to which it muft be added, that by the 26 th article of the barrier treaty it is exprefsly ftipulated, That commerce, and all that depends on ir, in the whole and in part, fhall remain upon the foot eftablifhed, and the manner appointed by the articles of the faid treaty of Munfter, infomuch that the treaty was confirmed by that of the barrier, under the guarantee of the king of Great-Britain, even at the time his imperial and catholic majefty was already in poffeffion of the Netherlands. [See Netherlands.] And that she right of the States in this particular, being fo manifeft, their high-mightinefles can but expect, both from the amity, and from the great equity and juftice of his imperial and catholic majefty, that he will not any ways infringe it, and therefore earnefly defiring and requiring that the patent which is faid to have by him been granted for the eltablifhment of the navigation and commerce of thefe countries to the Indies may not be pubhihed, but rather revoked, or at leaft rendered ineffectual; and that fuch orders may be iffued out by his imperial and catholic majefty, that fuch kind of navigation and commerce, with or without patents, may not be carried on any longer, and that the treaties made on that behalf be executed.
This, Sir, is the fubftance and purport of the orders tranfmitted by their high-mightineffes to their envoy extraordinary to his imperial and catholic majefty, and thofe received by the under-named refident direct him, to import the fame to your excellency, together with the remonifrances of the directors of the faid two companies of the Eaft and Weft-Indies, which he has the honour to lay, before your excellency, with a tranlation of the fame in French, being moreover charged to ufe the moft earneft endeavours to incline your excellency, by your good offices with bis imperial and catholic majefty, to fecond the good and juft intentions of their highmightineffes on the behalf above-mentioned, and to take care that things may not be carried to any extremity, 'till his ynajefty's further tefolution. Done at Bruffels this 5th of Agil 1723. Signed E. Pefters.

## REMONSTRANCEII.

Of the directors of the Eall-India company of the United Provinces, to their bigh-mightineffes the lords the StatesGeneral of the United Provinces.
${ }^{\text {T}}$ With all due refpect, the directors of thé privileged Eaft-India company of this country fhew, That in the years 1720 , and 1721, they bad the honour to inform your high-mightineffes by feveral memorials ond reprefentations, of the great lofs the company had already fuffered, and Chould ftill fuitain, by the eftablifhment of the new navigation and conmerce of the Auftrian Netherlands, and particularly ef the town of Oftend, in the Indies, fince the faid Netherlands were feparated from the crown of Spain, and seftored to his imperial and catholic majefty, directly contrary to what was \&tipulated by the treaty of peace, concluded at Munfter 1648, between the king of Spain of glorious memory, and this fate; the principal object and view of which treaty then was, conformably to the inftructions of your bigh-mightineffes minifters plenipotentiary (in the manner they were given, according to the remarks on the fame, found in the books of Acitzema, in the year 1645, which agree with the report of the faid minifters plenipotentiary) above all things, to fecure the commerce and navigation of the faid company in the EaftIndies, and to caufe the charters granted by your high mightinefles to be maintained and obferved even in Spain; and that each of the coritracting parties, that is, both the Cufillians and the fubjects of this ftate, frould freely enjuy the limits or diftrits of their commerce, with all the rowns, forts, lodges, and fortreffes therein fituate, and thar it hould not be permitted to the one to trade or traffic in the dittrict of the other, not only in fuch places the property whereof belonged refpectively to either, but nor even in thofe, which being poffeflid by neither in property, and remaining their
own mafters, might grant liberty of trading to other nations: which laft point was, indeed, looked upon by Spain as unreafonable, as may be feen by the report of M. de Meynderfwyk, inferted in that of the negociations of Munfter, dated February 7, 1647, fince the minifters of Spain alledged at that cunc, that it was not reafonable to pretend to hinder the king from making conquefts in Brafil and in the Indies upon the Portugueze, his rebellious fubjects, and to extend his dominions in other parts of the faid Indies, whofe inhabitants are their own mafters, and may give liberty of trade; but which, however, was obtained, and very exprefsly ftipulated on the part of this ftate, upon the preffing inftances of it's minifters plenipotentiary, as is contained in the 5 th and 6th articles of the treaty of Munfter, viz.
That the navigation and commerce to the Eaft and WeftIndies fhall be maintained, purfuant and conformably to the charters already granted, or afterwards to be granted, and that the prefent treaty of peace, and the ratifications that Thall be given thereupon on both fides, fhall ferve as fecurity thereof; that purfuant thereto, the Spaniards hall referve and retain their navigation, in the manner they had it then in the Eaft-Indies, without power of extending themfelves further, and that the inhabitants of the United Provinces fhall likewife refrain from frequenting the Caftillian places in the Eaft-Indies. The petitioners, by their firt memorial prefented to your high-mightineffes in 1720 , have fhewn, that the three principal points agreed on in the faid articles, to wit, ift, The peaceable poffeffion of the towns, cafles, forts, fortreffes, and rights of fovereignity, that were yielded to them, and which the fubjects of this ftate have acquired in the Eaft-Indies. 2dly, The regulation of the limits of navigation and trade in each diftric, according to the partition that was made, together with the folemn promife of maintaining the grant of the Eaft-India company. 3dly And laflly, The prohibition made to the fubjects on both fides, not to attempt any thing to the prejudice of the faid convention in their refpective diftricts, nor to fet up any new trade, or make any fettlement there by new fortreffes and lodges, all which is comprehended in the words, not to extend themfelves further, have fubfifted and been fo well obferved, that fince the conclufion of the faid treaty of peace, nothing has been done or attempted, either on the part of Spain, or on the part of the Eaft-India company, from which any confequence may be drawn to the prejudice, or the invalidating of the faid convention; but that, on the contrary, the Spaniards have kept to their navigation, as they exercifed it at the time of the faid treaty of peace, and continued it from Europe by the ftraights of Magellan in America, and from thence to the Philippine Iflands, or Manilles, in the Eaft-Indies, without either extending themfelves further, or frequenting or carrying on any trade in the towns, forts,' or lodges fituate within the limits of the grant of the faid Eaft-India company, much lefs did they erect there any new fettlements, fortreffes', or factories, not even in the places the inhabitants whereof being their own malters, may permit others to trade, fuch as Bengal, Siam, \&c. as on the part of the faid company, navigation and trade have fill been carried on towards the eaft of the Cape of Good Hope, to Batavia and Java, the Red Sca, the coafts of Afia and the Indies, as allo in the feas, sivers, and iflands, fituate between the Manilles and the ille of Java, as far as Japan and the Moluccas inclufively, without extending to the Mandles, or any other places where the Spaniards trade.
Matters between Spain and this ffate, or the Eaft-India company, would, in all probability, have ftood on the fame footing without any occafion of complaint, had not the Spanifh Netherlands been reftored to his imperial and catholic majefty, which has given a handle to many fubjects of the faid Netherlands very erroneoully to maintain, that the emperor is not bound by the treaty made with the king of Spain, his imperial and catholic majefty's predeceflor, and that upon that foundation, they had acquired a new right and liberty of trade, which they never had before, viz. to traffic in the Indies, territories, purts, and harbours, which the king of Spain, with refpect to navigation and commerce, ever held, out of the limits of Europe; that is to fay, out of the common liberty of commerce, as it is exprefled in the 4 th article of the treaty of truce of the year 1609, becaufe the Caftillians, and the king's fubjects naturalized, who were reputed Caftullians, had folely a right to traffic there, exclufive not only of the other nations, but alfo of all the other fubjects of Spain, as is explained more at large by the Spanih civilian, John Evia de Bolano, in Curia Philippica, lib. 1. De Commerc. Terr. cap. 1. where he fays, Ningun eftrangero del reino puede tractar en las Indias. No aliens, who are not fubjects of the kingdom, can trade in the Indies; naming afterwards the king's other fubjects; for inftance, the Aragonefe, Neapolitans, Sicilians, eftrangeros de las Indias, that is to fay, fuch as not being Caftillians, have no right to trade in the Indies; which is alfo confirmed by the ladd report of the negociation of peace, dated December 14, 1646, wheren it is faid, on the part of the minifters of Spain, That the trade to the Indies was by no treaty granted to any foreign nation; the racher, becaufe it was not fo
much as permitted to the fubjects of England, Denmark, and to the Portugueze, while they were under the king's obedience, nor to France before the war, nor to thofe of Arragon, Naples, nor even to the inhabitants of the Spanifh Netherlands, to carry on any commerce in the Eaft-Indies, inferring from thence, that this Republic could not be allowed to enjoy what was denied to the king's own fubjects.
This difference between the king's fubjects, particularly with refpect to the Flanderkins and thofe of Brabant, has been obferved, and was in very ftrong terms expreffed, in the deed of ceffion made in favour of this infanta Clara Ifabella Eugenia, the 6th of May 1598, whereby the king yields and makes over to her the Spanifh Netherlands upon certain conditions, and no otherwife, as may be feen in the 8th article of the faid deed, viz. That neither the infanta nor her confort, nor any of her fucceffors, to whom the faid countries thould devolve, hall carry on any manner of commerce or trade in the Eaft or Weft-Indies, nor fhall fend into thofe countries any fort of hipping, under what title, name, or pretence foever, upon pain, in cafe of contravention, of forfeiture of the faid countries. And if any of the fubjects of the faid Netherlands fhall, contrary to this prohibition, tranfport themfelves to the Indies, that the fovereigns of the faid Netherlands fhall be obliged to punilh them for it, by confifcation of their eftates, and greater penalties, even by death. An inftance of the efficacy of this article is to be found in the hiftory of Emanual de Metteren, among the occurrences of the year 1641, where he fays, that thofe of Antwerp being by the king fufpected of trading indirectly to the Indies, a commiffioner from court was fent into that city to infpect the merchants books, and to profecute thofe who Chould be found guilty of fuch a contravention, 'till at laft, to prevent many difficulties and profecutions that would have enfued, the fum of 600,000 ducats was to be paid, to buy off the king's difpleafure. Which therefore clearly hhews, that the fubjects of the Spanifh Netherlands never had a right to trade in the Indies, as will be further evinced anon; that although they changed mafters at the time of the lant barrier treaty, they cannot be deemed to have changed, or bettered their condition; and that the fuppofition, that his imperial and catholic majefty is not bound by the treaty of Munfter, or that being a fovereign, he may grant to the fubjects of the faid countries fuch a new right, to the prejudice of the faid treaty, ought to be looked upon as erroneous and illufory, for the following reafons:
Firf, Becaufe the king of Spain, by the deed of ceflion in favour of the faid infanta, and by the treaty of Munfter, not only bound himfelf and his heirs, but alfo in general, all bis and their fucceffors, in what right foever the fucceffion may fall, not to permit, or fuffer them to carry on that trade. Secondly, Becaufe all the motives which, at that time induced the king of Great-Britain as well as this ftate, to enter into an alliance with the emperor againf France and Spain, had no other foundation, and that the faid aliance was made and concluded with no other view, than to recover the crown of Spain for his imperial majefty, as having a right to it, in the whole or in part, with the fame obligations and engagements which the faid crown had contracted with Great-Britain and this ftate, and which fubfifted at the time of the demife of the late catholic king of glorious memory, and in the fame manner the faid monarcy was then conftituted; which is a confequence both by the faid engagement of the king of Spain for himfelf and his fucceffors, according to the treaty of Munfter, and, according to law, from the nature of the thing itfelf; to wit, That he who by right of fucceffion inherits and takes the place of the deceafed, flands bound and engaged to obferve and perform all the treaties and engagements which the deceafed had contracted with others. And the rather, becaufe his imperial and catholic majefty was to engage himfelf thereto, in a fpecial manner, by the 26th article of the barrier treaty, in receiving the Spanifh Netherlands only upon this exprefs condition, viz.
That trade and all that depends upon it, either in the whole or in part, fhall remain on the foot eftablifhed by the treaty of Munfter, and in the manner appointed by the articles of the faid treaty.
Which articles were, in the year 1715 , confirmed between his imperial and catholic majefty and this ftate in fuch manner, that no alteration having been made in them, the faid Netherlands cannot be confidered or deemed, both with refpect to the faid prior engagements, and to the privileges they enjoyed, but as belonging ftill to the faid fovereign, and as if they never have been fevered from the crown of Spain.
Which your high-mightineffes (with due fubmiffion be it faid) may the rather urge, becaufe having feent fo much blood and t eafure to recover the Spanifh Netherlands to the obedience of his imperial and catholic majefty, you ought not to undergo fo great a hardhip, as that the faid Netherjands or their inhabitants, fhould at prefent be allowed to undertake, to the detriment of your high-mightineffes, what they were not permitted to do before, and what they were forbid to do by a folemn treaty.
It may even be maintained, That his imperial and catholic majefty in his great equity and juftice, underfood and meant
it fo, as has been obferved in former memorials; fince in the patents or paffes which his Majefly has granted to thofe of Brabant and Flanders, there is a claufe, whereby they are prohibited to trade on the coafts of Africa, \&ic. in fuch places where, according to treaties, his imperial and catholic Majefty's fubjects are not permitted to trade.
Which or other like claufe, cannot always refer to any other treaties, but that of Munfter and to the barrier treaty, fince there are no other treaties that any body knows of, concerning the navigation to the Indies, that regard either his imperial Majelty or his fubjects.
It may alfo be afferted, that the treaty of Munfter had never been concluded, nor peace made at that time, between Spain and this ftate, had it not been for the prefervation and mainenance of the India Trade, in favour of the fubjects of this ftate.
All which evinces, that the fubjects of the Spanifh Netherands, not having had before the liberty of trading to the Indies, were left in the fame ftate and condition they were put in, both by the prohibition of that commerce, and by the exclufive treaty made on that behalf with this ftate, as alfo afterwards by the right of fucceffion of his imperial and catholic Majefty, and by the barrier treaty concluded on the fame foot; and that, confequently, it would be the greateft abfurdity to maintain, that at the time of the barrier creaty, a point fo very important as the trade to the Eaft-Indies, and the maintenance of the grant made to the company, fhould have been omitted or given up by this ftate, fince the confirmation of the faid trade, was the principal and greateft object of the treaty at Munfter, as was obferved before, and as appears befides, by what the minifters plenipotentiary of France wrote to their king, the 21 ft of December, 1646, as is related in the book intitled Memoirs and fecret Negociations of the court of France, touching the peace of Munfter, \&c. in thefe words
' Another thing that puzzles us, is the Spaniards yielding about the Indies, which undoubredly is one of the moft confiderable articles of the treaty, in which the Hollanders find an advantage they had not expected, and which could not be granted them but upon fome extraordinary motive. The king of Spain confents to abridge bimfelf of the power of extending his limits in the Eaft-Indies, and to reftrain them to what he poffefes there at prefent.
It is very remarkable, that the minifters plenipotentiary have, in their relation, made ufe of the words of extending bis limits, without determining or reftraining them to certain countries, towns, or fortreffes: which proves that the diftrict given up by Spain to the faid Eaft-India company, does not only confift of certain countries or places, whofe property the company had acquired, but in adiffrict of trade, or extent of limits, under which are alfo comprehended fuch countries where the inhabitants are their own mafters, and may permit others to trade, as was hewn before.
The petitioners have alfo evinced, by their former memorials, that both reafon, and the law of nations, as it is obferved now a-days, dichate and juftify, that navigation and commerce, which antiently were common, open, and free, are, at prefent, looked upon as limited, proper, and divifible, infomuch that trading nations ought reciprocally to refrain from trafficking in the diftricts of others.
It was with this vicw that the charters granted to the Eaft and Wert-India companies, and all the treaties of peace made with the Crown of Spain, from the firft treaty of truce, have been couched in fuch terms, as plainly fhew that the prohibition of trade and navigation was not folely reftrained to the diftrict or neiglobourbood of fome towns, lodges, or fortreffes, with the adjacent lands, as one may fay, as far as one's eyes can reach, or within cannon-fhot; bur, on the contrary, fuch words and expreffions have been ufed, as thew the reafon and neceffity both of the treaties and of the thing itfelf, which do not admit that they who are at the charge and expence of fortifications, maintenance of garrifons, and keeping up factories, be obliged to fhare them with others, which would, however, come to pafs if the fubjects of the Auftrian Netherlands had, as they claim by the antient law of nations, the liberty of navigating and trading within the diftrict of the Eaft-India company of the United Provinces, even in all places where the Caftillians were not permitted to trade, and whither they neither navigated or trafficked, from the treaty of Munfter to this prefent time.
So that, according to their opinion, the fubjects of this ftate fhould be and remain bound, with refpect to the Caftillians, to refrain from their diftricts in the Indies, and they, on the contrary, (although fubjects of Spain, and comprehended both in the treaty of Munfter, and in the barrier treaty) hould have acquired a new right of navigating and trading every where within the diftrict of the company of the United Provinces, as they actually do, not only in China, but alfo at Surat, Bengal, Coromondel, Malabar, the Red-Sea, and elfewhere, defigning and endeavouring to erect factories in any of thofe places, and to do all that may enervate or vacate the grant of the faid Eaft-India company, by enticing the fubjects to become tharers in this new trade, and employing on board their thips feamen that have been in the fervice of the faid company;
labouring to gain it's officers in the Indies, to engage them ${ }_{\text {s }}$ againft their oaths and duty, to aid and abet their enterprizes; and, in a word, to fupplant the company; a thing which the Spaniards would never have thought of; fince the late king of Spain ever did maintain the company's grant, in all it's parts, according to the treaty of Munfter, both with refpect to the partition of the limits of commerce, and to the rights of fubjects on both fides, not fuffering that the Caftillians, or any of his fubjects, Chould attempt or undertake what was by treaties forbid to the fubjects of this ftate, within the difrict of the Spanifh Indies, but that they ghould abide by what had been ftipulated, for greater and further fecurity, by the 15th artucle of the treaty of navigation made with Spain in the year 1650, viz. That the fubjects of either of the powers fhould not be allowed a larger licence than the other for their navigation and trade, but that in this, and in all things, there fhould be a reciprocation and equality on both fides.
And it is moft certain, that this reciprocation and equality could not abfolutely have their effect, according to the faid article, if either of the parties were obliged exactly to conform itfelf, and the otber thould let it alone, upon pretence either of having changed mafters, or becaufe the antient law of nations (according to which navigation and commerce were free every where, and to every one) ftill actually fubfifts, al: though nothing is more notorious, as was hinted before, than that pretended law of nations was changed by the general confent, and unanimous practice of the moft civilized nations of Europe; and that, even in relation to the prefent cafe, there is a fpecial treaty contrary thereto, and whereby the king of Spain has promifed not to extend himfelf that way, or not to fuffer that diftrict to be frequented for any trade, upon an exprefs renunciation and derogation to all laws; cuftoms, and all other things thereunto contrary, binding and engaging, for the fecurity and execution of the treaty, all his fubjects, inhabitants, kingdoms, and dominions, both in and out of Europe.
Which being thus fettled by treaty, and the Spanih Netherlands, with their inhabitants, being found to perform the fame, by the fovereign, as duke of Brabant and eall of Flanders, as the fubjects of this fate are likewife bound and obliged to all that has been promifed to the Caftillians, viz. not to navigate or trade within the diftricts of their commerce in the Indies: it would be the greateft hardfhip in the world for the Eaft-India company to ftand bound and engaged towards the Cattillians, whilft, on the other hand, thofe of the Aufrian Netherlands fhould be difengaged from all ties and obligations, and fhould do the company more hurt and prejudice than the Caftillians themfelves could, in cafe they would break the engagements of the treaty of Munfter, and extend themfelves further in the Indies than they are allowed to do ; for befides that, in fuch a cale, the Eaft-India company might do the like, and extend it's commerce within the diftricts of the Caftillians; the Spaniards have not, by much, the fame occafion with thofe of the faid Netherlands, by reafon of their fituation and neighbourhood, to allure and draw the fubjects of this fate to their intereft, to the prejudice of the company's grant.
Moreover, if the pretenfions of the fubjects of the faid Ne therlands fhould take place, the Eaft-India company, by the recovery of the faid Spanih Netherlands for his imperial Majefty, fhould not only lofe all the efficacy of the treaty of Munfter, which was obtained with fo much trouble, but would be in a worfe condition than if that treaty had never been concluded with Spain.
And as the petitioners are daily more and more fenfible of their loffes, by the fall of the price of their goods, occafioned by the great quantities of the fame imported into Europe, and by the great number of competitors; and forefee that, in time, little more may be left to the Eafl-India company than the charge of maintaining and keeping up their forts, garrifons, and factories, and the grief to fee the profits carried off by others, even by thofe who, according to the treaties and charters, have no manner of right to this trade, efpecially if it be true (what public and private news politively affirm) that his imperial and catholic Majefty has already granted a patent for the fettlement of an Eaft and Weft-India company in the Auftrian Netherlands, and that norwithfanding the reprefentations made and repeated on the part of your high-mightineffes, in order to maintain the tight of the company of the United Provinces againft the faid commerce; his imperial and catholic Majefty does neverthelefis endeavour, by his power and authority, to countenance and confirm a navigation and trade which, at all times, were prohibied to thofe of the faid Netherlands, and frum which they were fo carefully excluded.
Therefore the petitioners again prefume to remonflrate the whole matter to your high-mightinefies, and to jinhty more at large what they have already offered in their fimmer nimmorials, moft humbly praying, That, in confideration of the great prejudice which the licenied Eaft-Liria company has already fuffered, and will fuffer more and more, by the grant of the faid rew patent, and by the notoricus incroachment on their right to the Ealt-India trade, your high-mighti-
nelfes may pleafe to caufe your minifters at the courts of Vienna and at Bruffels, to continue and repeat the moft earneft and moft effectual inftances to engage his imperial and catholic Majefty, in his great equity and jultice, to put a ftop to the navigation from the Auftrian Netherlands to the EaftIndies, not to put in execution the faid patent, and not to grant any new commiffion or patent for their trading thither; and that your high-mightinefles may pleafe to ufe both this method, and all further means; which in your great wifdom, and more extended lights, you thall judge more convenient and effectual to oppofe this unlicenfed trade, and prevent it's progrefs, that the petitioners may quietly enjoy the effect and benefit of their charter: and the petitioners, \&c.

## REMONSTRANCEIII.

Or petition of the directors of the Eaft-India company, to their high-mightineffes the lords States-General of the United Provinces.
The directors of the licenfed Eaft-India company of this country, in all duty fhew, That it is with great regret they have found themfelves obliged to apply feveral times to your high-mightineffies, and from time to time to complain of the endeavours ufed in Brabant and in Flanders towards eftablifhing a new navigation and trade both to the Eaft and WeftIndies; that your high-mightineffes may remember, that the fame has occafioned the taking and confifating of fome veffels on both fides; and, of late, of the taking of the fhip called the Cornmany, by the Oftend privateers, for which lofs a due recompence has hitherto, againft all reafon, been denied; but that the petitioners have, at leaft, had this fatisfaction, that, fince the taking of thofe prizes, a frop has been put to the fending out fhips to the Weft-Indies and Africa, apparently becaufe it has been acknowledged, by the reprefentations made on that fubject, that the faid navigation is notorioully contrary to the 5 th and 6th articles of the treaty of Munfter; that the petitioners thought they might hope, that, although they fhould ftill be denied amends for the faid lofs, they fhould not, at leaft, have frefh matter of complaint given them : but, inftead of that, it appears by the public news, that there is a defign to begin again, and to carry on with more vigour than before, the faid navigation and commerce to the Weft-Indies and Africa, and that in order thereto a patent has already been obtained of his imperial and catholic Majefty.
That this undertaking is fo prejudicial to the general WeftIndia company eflablifhed in this country, and fo directly contrary to the faid treaty of Munfter, that the petitioners, without any further reprefentation of the right to them belonging, by virtue of the faid treaty, and of the engagements 'entered into by his imperial and catholic Majefty, as fucceffor of king Charles II. of glorious memory (mentioned feveral times before, and fufficiently known) cañot forbear applying again to your high-mightineffes, moft humbly to pray your powerful protection, towards the putting a ftop to the faid new navigation to the Went-Indies and Africa, and that the faid patent of his imperial and catholic Majefly, may not have it's effect ; and that his faid Majefty be defired not to grant, for the future, any new commiffions or paffes; as allo that your high-mightineffes be pleafed to take fuch further meafures as your high-mightineffes may think moft effectual to obtain the fame of the Emperor, moft dutifully referring themfelves to what your high-mightineffes fhall find proper to do therein. Done at Amfterdam, the 22d of March; 1723, by order of the abovelaid directors, and figned

John De Lá Bassecour.

## REMARKs.

By the fleady refolution of the States-General, in concert with the crown of Great-Britain, the abolition of this Oftend EaftIndia company was effectuated: but fo great is the change in the fyftem of Europe fince this time, that neither the States-General nor England feem to concern themfelves much about the eftablifhment of new Eaft-India companies with, as encouraging privileges and immunities as England formerly granted to her trading corporations. And is not this very natural to be attempted by other nations, they knowing, from the experience of England, France, and Holland, that this meafure has been attended with fo great fuccefs and profperity to the commerce and navigation of thofe refpective potentates? Quere, therefore, Whether it may not require the moft mature and deliberate confideration, before we abfolutely aboJifh our own Eaff-India company, while other ftates are eftablifhing and vigoroully fupporting the like kind of companies?
If it was really for the advantage of England and Holland to fupprefs the late Oftend Eaft-India company, by reafon only that it proved manifeflly detrimental to both, can it be believed, from the fame principle of reafoning, that the total annitilation of our Eaft-India company could tend to the trading advantage of the nation? Would not France, and perhaps Holland, and fome other potentates, rejoice as much at the deftruction of our Ealt-India company, as the Dutch
and Englifh, and even the French, did at that of the Oftend company?
We have, from the bell of our judgment, fated the cafe of our Eaft-India company, with all impartiality [fee the articles East-India Trade and East-Indsa Company]: and fo far have we been from pleading in favour of this company, and attempting to juftify them for not trading to all places within their charter, where it can be done with benefit to the nation, and without injury to themfelves; I have urged every thing argumentative that has been faid againft them in this refpect, and thewed the reafonablenefs of private traders being admitted to traffic in thofe parts of the Eaft-Indies where the company do not: for the company have been roundly charged with cramping, inftead of extending, their commerce within their charter.
As [ have occafionally introduced what matter has been farted in oppofition to the conduct of the company in this refpect, fo it is a duty on the impartial man to reprefent fairly what reply has been made to a charge of this nature, that the public may be able to make a right judgment of the matter before them.

- The firft charge againft the Eaft-India company, fays M. Rammell, is their not attempting to trade on the weft fide of the Red Sea, which is faid to be inhabited by Chriftians: to which I reply, continues that gentleman, that, as I lived fix years in the company's factory at Mocha, it cannot be fuppofed but that I have fome fhare of knowlege of the trade in the Red Sea, and the ports frequented by the merchants on both the fhores.
The firft place where I know of any trade in the Abyffine country, is at Zelah, a fmall port a little without the Baabs; it is under the juridiction of the Mocha governor ; there is a fmall fort, and garrifon of Arabs : at proper feafons of the year boats go from Mocha with an ordinary cargo of piece goods, and, in return, bring back hides, Cheep, and clarified butter ; there is fome fmall places within the Baabs on that coaft, which the Banians of Mocha trade to in boats, but they employ Abyfiners for their factors, of, whom there is a great number always at Mocha; the boats crew are of the fame country as the factors, for the Arabs are not fond of putting themfelves in the power of fo uncivilized a people: there, is no port', I believe, on what is called the Abyffine country, within the Baabs, large enough for a trade to be carried on there by Chipping; but on the Ethiopian coaft there is, but they are poffeffed by the Turks, the Chrifians living all inland, and I believe the country they poffers is ftiled the interior Ethiopia, and the nearefl fea-port to their territories is, if I miftake not, called Muffoah, and, as I obferved before, is in the poffeffion of the Turks, fo I leave the world to judge, if there is any manner of prorpect of the European Chriftians carrying on a trade with the Chriftians in Ethiopia by fea, whilft the Turk keeps poffeffion of the avenues to the country. I have known a fmall Mabometan flip from Surat make a voyage to that port with piece goods, \&ic. and have brought back elephants-teeth, fome civet, and a fmall quantity of gold duft. During the time of my refidence at Mocha, the chief of the French factory fent a fmall veffel thither, with Mahometan failros in her, and a Greek for the fupercargo, who had lived many years amongft the Turks and Arabs, (and I believe had been circumcifed) but the voyage turned to fo indifferent an account, that I have not heard of any veffel belonging to the Chriftians going thither fince. The Mahometan governments in the Red Sea are much prejudiced againft the Chriftians, on account of their religion (which may be owing to the vicinity of their prophet's tomb) and frequently treat them ill, without the leaft occafion, as I have often experienced. One of the governors of Mocha, in my time, iffued out his orders that the centinels at the town gates fhould knock down any of the French, Dutch, or Englifh companies fervants that flouid prefume to ride in or out of them, though, at the fame cime, they were free for all others to pafs unmolefted : this order was in force feveral months. The governor of Mocha always infifted on having the company's lead at his own price (and I believe the iron likewife) which was very low, fo that it ufed to be fent from thence to Bombay or Surat: the myrrh and drugs that are the product of Abyffine and Ethiopia, are brought to Mocha in fmall boats; but their aloes are no better than thofe which grow on the Arabian fhore, which are in little efteem in Europe ; thofe that ufed to be purchafed on the compang's account were brought from the illand of Socatra.
The next article is, that the company doth not trade to Siam, a rich and great kingdom, nor to Pegu, a country that prodüces rubies, gum-lacque, gum-dragon, and all materials of fine India varnifh, the Indians being induftrious, a great trade might be carried on there. The objectors then go on, and mention Tonquin, Cocbin-China, the kingdoms of Japan and Corea: I fhall give for anfwer to the foregoing, that I think the reafon is very obvious, which is, that the managers thereof are well faxisfied that it would not andwer their purpore, and therefore it would be injuring the proprittors to catry on a lofing trade.

As to the trade of Siam, I hhall not pafs it over without faying fomething relating thereto: I remember that about fix or feven-and-thitty years ago, I was concerned in an adventure fhipped on board the Morning Star, Capt. Alexander Hamilton commander, bound from the ports of Surat and Bombay to Siam, at which port he met with a fhip from Fort St George; the commander of whom, or fome other perfon belonging to the Chip, inftigated the government of Siam againft the faid Capt. Hamilton in fuch a manner, that they were the caufe of his being arraigned for his life (for no other reafon but to overfet his voyage) and though Capt. Hamilton efcaped the executioner's hands, it anfwered the others purpofe as well as if he had been hanged, for he was not permitied to do any bufinefs there; fo that he failed down the river with his hip, and anchored off the port, where he continued feveral days, with a full refolution of taking a prize, in order to reimburfe the owners for what they were like to be fufferers by his not being permitted to difpofe of his cargo in the port; (the particulars of this affair may be read in the faid Hamilton's Voyages, printed about 23 years ago) but at laft was obliged to quit his ftation without any booty, on account of the changes of the feafons, or want of provifion, I can't tell which. Now, for argument's fake, I will fuppofe he had taken a Siam veffel, or the thip from Fort St George (which I am almont poitive I have heard him declare he would have attempted, had fhe failed out whillt he lay before the river's mouth) with Siam, or other India merchants freighters on board : had, I fay, this been the cafe, the faid merchants would, in all probability, have received fome fatisfaction for the outrage committed againft them by the faid Capt. Hamilton; but had there been no Englifh Eaft-India company fubfifting, and he had been on his return to England inflead of Bombay, I don't fee that it would have been in the power of all the king's governors abroad to have done juftice to the poor injured Siamers; but fuppofe it was, 'tiis moft likely that the king of Siam would have gone a much fhorter and furer way to work, than to complain to them about the affair, by making reprizals on the next Englifh fhip that put into his port: for the trade in Afia, and it's policy, is not of a piece with that of Europe, where, if the fubject of one nation is ill treated in another prince's dominions, the minifter or conful of the nation he belongs to, will, on a proper application being made to him, endeavour to get him redrefled: but, as I have obferved, it is otherwife in the Eaft Indies; fo that it is very probable, if the trade thither was laid open, the Englifh would foon be involved in difputes and broils with feveral potentates in India (where the king of Great-Britain had no garrifons) whilift the French, and other nations from Europe, would carry on their trade uninterrupted, and the Englith would be looked upon no better than pirates, through the indifcretion and hot-headednefs of fome of the Englifh commanders; which there is no danger of whilft things are on the prefent footing, by reafon that, if any of the prefent commanders employed in that trade fhould commit a rafh or an unjuft action, whillt trading from port to port in the Eaft-Indies, on his return from the port he fet out from, or to the port where he is to take in his loading for England, the affair would come to light, and all the Englifh fetilements apprized thereof, as foon as conveniently they could, that they might take their meafures accordingly. It was rivallhip in trade that gave rife to Hamilton and Quarrel, the fhips belonging to different emplogers: and the fame caufe will always exift, if the Eaft-India company is Laid afide, and no doubt will frequently be attended with the like confequences.
As for the port of Pegu, the India company ufed to have a refident in that king's dominions, but, by reafon of troubles in the country, I believe" there has not been one for fome years paft; but I have of late beard talk that their governor ar Fort St George had inftructions from the company about fettling that place again: though Pegu , and fome other countries, may produce commodities proper for an Europe market, yet the lending one of their hips for them would lo enhance the price of the goods, that, in the end, they would ftand them in more than they could expect to fell them for. The Tonquiners may be an indufrious people, but I have been told that they are fo very poor, that they never have a ftock of goods by them ; and thofe that expect to meet with a cargo there, or indeed, any quantity of goods fit for the Europe markets, thould go with a refolution of faying a confiderable time at that port. I remember that a little hip called the Fame, Capt. Gregory commander, failed from Bombay to that port, where he and both the fupercargoes were murdered in their houfe on More; the fhip got fafe back again to Bombay; and, though I continued 14 years in India after this affair happened, I can't call to mind that the gentlemen at Bombey fent any other fhip thither. - The trade to CochinChina is in a manner prohibited to all Europeans; and although I bave been acquainted with India affairs for 40 years paft, I don't remember to have heard but of one fhip belonging to Europeans making a voyage thither, and that was commanded by one Capt. Pearce, or fome fuch name, and was fitted out either from Madras or Bengal ; but the voyage did not anfwer : the year before that he intended his voyage,
he by fome means or other (the particulars, though he toid them me, I can't recollect) procured the king's grant, or permiffion, to come to his country : it was wrote, or ftampt, I believe on a piece of folid gold, of about five or fix inches long, and about two inches broad, whereon was inferted the captain's name, and the number of mien and guns his hip carried.-As for a trade to Japan and Corea, I am well $\mathrm{C}_{4}$ tisfied that, if any of the Englifh governors, or free merchants abroad, had thought it worth their attempting, they would not bave admitted it (and I can't call to mind of any experiment being made in my time); for whatever the gentlemen in England may think of the matter, $I$ am well fatisfied, that, amongft the company's fervants and free merchants abroad, there is not wanting men of abilities, fortunes, or inclinations, to trade to every creek or port in India, where there is but any profpect of fuccefs; which is to be done for lefs than half the expences by what is called country fhips, than can be performed by hips from England. And, as an undeniable proof of the flourifhing condition the private trade was in when I lived at Surat (and may be fo ftill for any thing I know to the concrary) I declare on my own certain knowlege, that, at that port only, it amounted to about $250,000 \mathrm{l}$. per annum. This I infert to fhew what a fpirit of trade reigns amongft the Englifh in the Eaft-Indies. The author of the paragraphs in fome public papers, on which I have made the foregoing remarks, defires the candidates at, the approaching general election to enquire into the matter, and to ufe their endeavours for laying the trade to the EaftIndies open; and concludes the paragraph by faying, That, in a little time, the parifhes might be difcharged from the poor's tax: to which I reply, That I fuppofe the company at prefent employs as many fhips to the Eaft-Indies as is confiftent with prudence, and they all go out with their full loading of Europe cloth, \&xc. It is not at all unlikely, but that if the trade was open, there would for the firt year or two be a greater quantity of woollen goods carried thither than what the company at prefent export; but, if the returns back did not anfwer, it cannot be expected that the profits on cloth out would bear any proportion to the expence of fending a fhip to the Eaft-Indies: the difficulties of procuring cargoes for the return of the hips to England, is an article perhaps not much confidered, or known properly to thofe gentlemen who are not concerned in the trade to India; for, notwithftanding that the company fend orders to their governors, \&c. abroad, a year at leaft beforehand, of the tonnage they may expect out, and that the proper cargoes may be got ready againft the hips expeAted in India arrive, yet it fometimes happens that fome of their hips are obliged to be employed a year or two in India, for want of a loading. When the company's orders reach India, their governors, \&c. fend for the black merchants, and conitract with them to make the inveftment, and generally advance a good part of what it will amount to for the carrying it on. In the pepper fettlements, likewife, they frequently are under a neceflity of advancing part of the money before the crop is gathered. If the king's governors were to be put in poffeffion of the company's garrifons and factories, the trade could not be fupported or carried on,' but by perfons on the fpot having very confiderable fums of money by them, to buy up the pepper, as well as to advance money for the cloth inveltment, otherwife the black merchants would quit the Englifh bounds, and fettle elfewhere. In fuch cafe, I defire to know what benefit our fortifications, \&ic. would be of ? - As I have fhewn the improbability of the India trade being carried on with fuccefs without very great fums being left there yearly, it next fallis under confideration who is to advance it ; no private perfon is capable of doing it ; and if it is to be the concern of feveral merchants in conjunction, pray what is that but a little new company, of which I doubt not but feveral would by degrees \{pring up, out of the ruins of the old, who would foon be at variance with each other, and prove each other's ruin : for the more bidders there are at any matket, the greater price mult they be obliged to give for the commodity they want: and when they difpofe of their Europe cloth, $\& \mathrm{c}$. they will be under as great a difadvantage ; for, when the India merchants have feveral warehoufes to go to at the fame place, they will not be wanting to beat down the price, and our people muft be content, efpecially the moft needy ones, to fell their goods for the moft the market will afford them, whether they get any thing by the fale or not. It is well known, that, during the time the old and new Eaft-India companies had each their factory at Surat, the price of the goods they wanted at that market rofe confiderably, and that they frequently incenfed the country government againft each other, of which they took advantage, and fleeced both in their turns.
I am now come to the laft paragraph, wherein is recommended the incorporating the black merchants with the white, which has already been done by his Majefty's moft gracious charter ; and thofe that now live on the ifland of Bombay, or within the company's bounds at Bengal or FortSt George, are intitled to the fame privileges and immunities, and governed by the fame laws, as the Englith. If the fcheme takes place, of the trade to India being laid open, fome people
idxe upon them to advance, that the Englifh refiding in India will not only be able to defray their own charges (as if they had not done it hitherto) but give affiftance towards paying off the national debt. This laft is a noble thought, and breathes the true air of patriotifm ; but, to make the fuccefs more certain, I beg leave to recommend the fending out with the king's governors and officers, one million of the nation's calh, to provide cargoes for the fhips they may expect from Englarid, and for trading from port to port in the Eaft Indies; for there is no doubt but they will prove moft excellent merchants. I have now finifhed my remarks on what was publifhed in regard to the Eaft India company's not trading to Ethiopia, \&c, and have likewife fet forth fome of the evils that I apprehend will accrue to this nation in cafe the company fhould be abolifhed; my defign herein being an honeft endeavour to undeceive the deceived'.
Jerufalem Coffee-Houfe.
Tho. Rammell.'
OVERISILL, in the United Netherlands. This province is bounded on the north-weft by Friefland, and part of the Zuyder Sea; on the weft by that part of Guelderland called the Veluwe ; on the fouth by the county of Zutphen; on the eaft by the bifhopric of Munfter ; and on the north by the province of Groningen. The foil in many places is barren, being full of fands, heaths, and marihes; but, in fome parts, they have good corn and pafture: it is the worft peopled of any of the provinces, partly on account of it's barrennefs, and becaufe their fituation is not convenient for trade.
Zwol ftands on the river Aa, which falls here into the Vecht, and runs into the Zuyder fea, making a channel, into which the tide flows, which advances the trade of the town: it confift chiefly in timber, cattle fattened in the neighbouring paftures, Bentheim ftones, wool, corn, butter, and cheefe.
Campen fands on the Iffel, a little above where it falls into the Zuyder Sea. It's trade is decayed of late, the harbour being fo choaked up with fand, that it does not admit large veffels. It has two fuburbs, inhabited chiefly by fifhermen, there being plenty of fifh in it's neighbourhood.
Volienhoven, on the Zuyder Sea, has a great market for corn from the Baltic.
Brocerzy, on the fame fea, at the mouth of the river Aa , is a place of confiderable trade, and very populous : it's harbour will hold above 200 veffels.
OXFORDSHIRE, an inland county of England, bounded with Buckinghamfhire on the eaft ; with Gloucefterfhire on the weft ; on the north, where it terminates in form of a cone, it has Northamptonfhire on one fide, and Warwickfhire on the other; and, on the fouth, it is feparated from Berk@ire ; and is about 130 miles in circumference.
Fuel here is farce, that it is commonly fold by weight in the city of Oxford, and other towns in the north part of the fhire. Though many parts of the country bear corn very well, it abounds moft with meadows and paftures.
The city of Oxford ftands at the conflux of the Charwel and Ifis, in a plentiful country: it's chief trade is in fending malt by barges to London.
Woodstock has a manufacture of fine fteel chains for watches, and other things of polifhed fteel.
Henley upon Thames is a town of good wealth and building: it's chief trade is in malt, of which, and of other corn, it is thought above 300 carts are fold here on fome marketdays ; the inhabitants being generally mealmen, maltffers, and bargemen, who live by carrying corn and wood to London.
Whitney has a trade in fpinning for the neighbouring clothiers ; but it's greateft manufacture is rugs and blankets, which lait are commonly from 10 to 12 quarters wide, and fo preferred before all others for their whitenefs, that they have in a manner engroffed the whole trade of the nation for that commodity. They have 150 looms almoft continually employed in it, with above 3000 people, from eight years old and upwards; and it is faid 100 packs of wool are fpent in it every week. They fcour them in the river Windrufh, whofe waters, fome think, have a more abfterfive nitrous quality than others. They alfo make duffels here, which are a yard and $\frac{3}{4}$ wide, and exported to Virginia and New England, for cloathing the Indians. Cuts for hammocks, and tilt-cloths for bargemen, are likewife made here; and there is a great number of fellmongers in the town, who having dreffed and ftained their Cheep-fkins, make them into jackets, breeches, \&c.
Bampton lies on a river navigable by boats; and it's market is noted for the great quantity of fellmonger's wares, as leather jackets, gloves, breeches, ftockings, \&cc. brought hither from Whitney, and sold here into Berkfhure, Wilthire, and Dorfethire, no town in England having fuch a trade for thefe wares.

## OYSTERS.

The hiftory, the generation, and ordering of Green Oysters, commonly called Colchester Oysters. In the Month of May the oyfters caft their fpawn (which the dredgers call their (pat) it is like to a drop of candle, and about the bignefs of an half-penny.
The fpat cleaves to ftones, old oyfter-fhells, pieces of wood,
and fuch-like things, at the bottom of the rea, which they call cultch.
It is probably conjectured, that the fpat in 24 hours begins to have a fhell.
In the month of May the dredgers (by the law of the admiralty court) have liberty to catch all manner of oyfters, of what fize foever.
When they have taken them, with a knife they gently raife the fmall brood from the cultch, and then they throw the cultch in again, to preferve the ground for the future, unlefs they be fo newy fat that they cannot be fafely fevered from the cultch, in that cafe they are permitted to take the fone or fhell, \&xc. that the fpat is upon, one fhell having many times 20 fpats.
After the month of May, it is felony to carry away the cultch, and punifhable to take any other oyfters, unlefs it be thofe of fize, that is to fay, about the bignefs of an half-crown piece, or when the two fhells, being fhut, a fair fhilling will rattle between them.
The places where thefe oyfters are chiefly catched, are called the Pont, Burnham, Malden, and Colne waters, the latter taking it's name from the river of Colne, which paffeth by Colne-Chefter, gives the name to that town, and runs into a creek of the fea at a place called the Hythe, being the fuburbs of the town.
This brood, and other oyfters, they carry to creeks of the fea at Brickle Sea', Merfey, Langs, Fringrego, Wivenho, Tolefbury, and Salt-Coaft, and there throw them into the channel, which they call their beds, or layers, where they grow and fatten, and, in two or three years, the fmallef brood will be oyfters of the fize aforefaid.
Thofe oyfters which they would have green, they put into pits about three feet deep, in the falt marlhes, which are overflowed only at fpring tides, to which they have fuices, and let out the falt water until it is about a foot and a half deep.
Thefe pits, from fome quality in the foil co-operating with the heat of the fun, will become green, and communicate their colour to the oyfters that are put into them, in four or five days, though they commonly let them continue there fix weeks or two months, in which time they will be of a dark green.
To prove that the fun operates in the greening, Tolefbury pits will green only in fummer ; but that the earth hath the greater power, Brickle Sea pits green both winter and fummer: and, for a further proof, a pit within a foot of a greening pit will not green ; and thofe that did green very well, will in time lofe their quality.
The oyfters, when the tide comes in, lie with their hollow fhell downwards, and, when it goes out, they turn on the other fide; they remove not from their place unlefs in cold weather, to cover themfelves in the oufe.
The reafon of the fcarcity of oyfters, and confequently of their dearnefs, is, becaufe they are, of late years, bought up by the Dutch.
There are great penalties, by the admiralty court, laid upon thofe that filh out of thofe grounds which the court appoints, or that deftroy the cultch, or that take any oyfters that are not of fize, or that do not tread under their feet, or throw upon the fhore, a fifh which they call a five fingers, refembling a fpur-rowel, becaufe that fifh gets into the oyfters when they gape, and fucks them out.
The reafon why fuch a penalty is fet upon any that fhall defroy the cultch, is becaufe they find that, if that be taken away, the oufe will increafe, and then mufcles and cockles will breed there, and deftroy the oyfters, they having not whereon toftick their fpat.
The oyfters are fick after they have fpat; but in June and July they begin to mend, and in Auguft they are perfectly well. The male oyfter is black-fick, having a black fubftance in the fin: the female white-fick (as they term it) having a milky fubftance in the fin. They are falt in the pits, falter in the layers, but falteft at fea.
There are various other fpecies of oyfters, which are fo well known, that it is needlefs to enlarge upon this article.

The Laws of England in regard to Oysters.
I. Stat. 10 Geo. II. cap. 30. § 2. All oyfters imported from France fhall be rated at 7 d . per buthel ftrike-meafure, according to the Winchefter corn-bufhel, and fhall pay the old fubfidy according to that rate, and not according to the vaues affirmed by the importers.
II. Sect. 3. Where the faid oyfters are fubject to the further fubfidy; the one-third fubfidy, the two-thirds fubfidy, the additional impoft, or the duty payable upon goods imported from France, according to the values fet thereon for the old fubfidy, the fame fhall be paid according to the values fet thereon for the old fubfidy aforefaid, and not according to the oath of the importer.
III. Sect. 4. Upon exportation of the faid oyfters, the duties fhall not be drawn back or allowed.
IV. Sect. 5. The feveral duties upon the faid oyfters thall be paid, or fecured, by fuch ways, and under fuch penalties, \&c. as are mentioned in the feveral acts of parliament which granted or continued the fame.

The Business of the Customs continued from Letter N, with Regardto Offences against the Statutes.

Offences againft penal ftatutes may be profecuted, tried, \&c. by way of action, \&c. before juftices of affize, nifi prius, goal-delivery, oyer and terminer, or juftices of peace for the county, 8cc. where committed. 21 Jac. I. C. 4. § 1. -Informer or plaintiff not'proving the offence by evidence to the jury, the defendant to be found not guilty. 21 Jac. I. c. 4 . $\$ 2$.

## With Regard to Officers of the Cubtoms.

Officers of the Customs.-Not to obtain their offices for gift, favour or affection, but for defert, as being of the beft and moft lawful men, and fufficient to their eftimation and knowledge. 12 Rich. II. c. 2. § 1 .

- Not to have their offices for life on term of years, but during the fovereign's pleafure only; and the faid officers to remain in his hands, under the government of the treafury : And,
otherwife are void. 14 Rich. II. \& 1. and I7. Rich. II. c. 4. §1. and I Hen. IV. . . 13. § 1. and 20 Hen. VI. c. 5. § o. and 3 I Hen. VI. c. $5 \cdot$ § I .
- To refide by themfelves, or their fufficient deputies, at the feveral head ports, members and creeks, on penalty of rool. Iofs of office, and imprifonment. i Hen. IV. c. I3. § I. and 14 Hen. IV. c. 20 . § I. and 13 Hen. IV. c. 5 - § I. and I Eliz. c. II. §8, and 13 and 14 Car. II. c. II. § I4. ———No perfon may bargain or fell any office, or the deputation thereof, or any part thereof, nor receive any money, fee, or reward, or any promife, agreement, or affurance for any office in the cuftoms, upon penalty of forfeiting the place by the feller, and buyer to be adjudged incapable to enjoy the fame, and the bargain, fale, sic. to be void. 5 and 6 Edw. VI. c. 16. §2, 3 .
E-Or,their deputies or clerks, not to have any fhips of their own, nor to freight any fhips, nor to buy or fell any merchandize, nor to have any wharfs or keys, nor hold any common hofteries, or taverns, nor to be factors for any merchant, denizen or alien, or hoft to any merchant alien, on forfeiture of 40 I . 14 Rich. II. c. Io. § I. and 4 Hen. IV. c. 2I. § I. and II Hen. IV. c. 2. § I. and 20 Hen. VI. c. 5. § I .

No perfon to be cuftomer, comptroller, or fearcher in any port, where he is common officer, or deputy to fuch common officer, upon forfeiture of $40 \%$. for every half year he executes both offices. 3 Hen. VII. c. 7. § 1.
———Two of the commifioners firft named in the commiffion are, before the chancellor, or chief baron of the Exchequer, or mafter of the Roils; and every other of the commiffioners, patent-officers, their deputies, clerks, or fervants, and all other officers of the cuftoms in the port of London, are, before any two of the faid commiffioners, upon their admiffion, to take their corporal oaths for the true and faithful execution of their trufts and employments, to the beft of their knowledge and power, and that they will not take or receive any reward or gratuity, except their falaries, and what is allowed them from the crown, or their regular fees eftablifhed by law. 6 and 7 W. and M. c. I. §.5, 6 .
-Officers in the Out-Ports at their admiffion to take the like oath before two juftices of the peace.
-Refufal or neglect of taking fuch oath, is forfeiture of office.

The taking of fuch oath to be certified to the next general quarter feffions. 6 and 7 W . and M. c. I. § 5,6 . ———Deputies, clerks, and fervants before employed in the cuftoms, are to take their corporal oaths before the commiffioners and principal officers in the port of London, or the principal officers in the out-ports, or any two of them, for the true and faithful cxecution and difcharge of their truft and employments, to the beft of their knowledge and power, which oaths are to be entered and regiftered in the cuftomhoufes of the refpective ports where the perfons are employed. 13 and 14 Car. 2, c. 1 I. § 33 .
-_-In England..-.To receive the facrament of the Lord's fupper, according to the ufage of the church of England, in fome public church, upon a Lord's day, within three months after admiffion, under the penalties, forfeitures, and difabilities as in article 16. 25 Car. II. c. 2. § 2. and I Geo. I. c. 13. § 24.

## certificate thereof, under the hands of the minif-

 ter and churchwardens, muft be produced in the court where the oaths mentioned in the following article are directed to be taken; and there confirmed by the oaths of two creditable witneffes at the leaft. 25 Car. II. c. 2 . § 3 .-- At any time before the end of the next term, or general quarter-feffions, after admifion, are to take and fubferibe the oaths of allegiance, fupremacy and abjuration (in the words prefcribed by I Geo. I. cap. I3.) if they refide within

London or Weftminfter, or within 30 miles thereof, in the courts of Chancery, King's Bench, Common-Pleas, or Exchequer, or elfe at the general quarter-feffion of the county; \&ce. where they refide, between the bours of nine and twelve in the forenoon, upon forfeiture of office, unlefs it be in inheritance, and a deputy be appointed, who qualifies himfelf, and is approved by his majefty under his privy-fignet. 25 Car. II. c. 2. § 2, 4, 5. and I Ann. c. 22. §5. and I Geo. I. c. 13. §I, 3, 9, 10, 20, 29. and 2 Geo. II. c. 31. §3, | C. 13 |
| :--- |
| 4. | $4:$ Executing their office after the expiration of the time, without compliance, are difabled to fue in courfe of law, or to be guardian to any child, or executer, or adminiftrator to any perfon, and rendered incapable of any legacy, or deed of gift, or of enjoying any office, or of voting for members of parliament, and to forfeit 5001.25 Car. II. c. 2. \& 2, 4, 5. and I Ann, c. 22. § 5. and I Geo. I. c. 13. §1, 3, 9, 10, 20, 29. and 2 Geo. II. c. 3r. § 3,4 .

But upon compliance, after forfeiture, may be capable of a new grant either of the faid office, or any other, if not granted to, or enjoyed by another perfon. ${ }_{5}$ Car. II. c. 2. § 14 . and 1 Geo. I. c. 13 . $\$ 16,27$.

- Perfons not bred up in Popifh religion, and profeffing themfelves to be Popifh recufants, fuffering their children to be educated in the faid religion, are incapable of any office. 25 Сar. II. c. 2. §8, 9.

Such children likewife incapable, 'till they are converted to the church of England, and have taken the oaths of allegiance and fupremacy, and fubfrribed a declaration againft tranfubftantiation, before the juftices of the peace, at the quarter-feffions, and have received the facrament after the ufage of the church of England, and obtained a certificate thereof under the hands of two or more of the faid juftices, 25 Car. II. c. 2. § 8, 9.

## Wite Regard to Scotrand.

-_In Scottand.-To take and fubfcribe the oaths of allegiance and abjuration, and fubfribe the affurance, in the court of feffion, jufticiary, exchequer, or quarter-feffions,
within three months after admifion, under the fame penalties, forfeitures, and difabilities, as the officers in England. I Geo. I. .. $13 . \S 1,4,5,9,10,16,20,29$.

The deputations or authorities granted to collectors, furveyors, or other inferior officers of the cuftoms, not void by the death or removal of the commifioners who granted them. 12 Ann, c. 8. § 13.
———Taking a bribe, or conniving at a falfe entry of any goods, to the prejudice of his majefty, or fuffering prohibited goods to pafs, are incapable of any office for the future, and to forfeit 1001 . and the perfon giving the bribe, or offering any bribe, whether it is accepted or not, to forfeit 50l. is and 14 Car. II. c. 1 I. § 19. and 9 Geo. II. c. 35 . §24. ———But the offenders revealing their offences within two months, to the treafurcr of England, the chancellor, undertreafurer, or barons of the Exchequer, ate to be acquitted. 13 and I4 Car. II. c. II. § 20.
--millegally detaining goods, or neglecting or refufing to make repayments and allowances, or after notice given, not giving out and executing their warrant, liable to double cofts and damages. 13 and 14 Car. II. c. 1 I. § 34 .
———Or their deputies, may go on board anty fhips, and there remain 'till all the goods be difcharged. is and 14 Car. II. c. II. § 4 .
-Upon oath made before the lord treafurer, or any of the barons of the Exchequer, or the chief magiffrate of the place, that goods liable to duties have been landed or conveyed away without due entry, they may iflue out a warrant to enable any officers of the cuftoms, with the affiftance of a Cheriff, juftice of the peace, or conftable (within one month after offence committed) to enter into any houfe in the day time; and in cafe of refiftance, to break them open, and to feize the faid goods. 12 Car. II. c. 19. § 12.
injured The information upon fuch houfe falfe, the party injured may recover full cofts and damages againt the informer. 12 Car. II. c. 19 . § 4 .
Authorized by writ of affiftant out of the court of exchequer, may in the day-time (at any time after the offence) with a conftable, \&c. enter any houfe, hop, \&c. and in cafe of refiftance, break open doors, chefts, \&c. in order to feize and bring away prohibited and uncuftomed goods, and fecure them in his majefty's ftorehoufe of the port. 13 and 14 Car. May not exact unlawful fees.---Vide Fees.
———Bur may take fuch recompence for extraordinary fervice and attendance at times and places not required by law, as the commiffioners in the port of London, and the collector, cuftomer, and comptroller of the out-ports, or any two of them, fhall determine. 6 and 7 W. III. c. 7. § 15 .
--of the Excife..-Attempting to corrupt them, the penalty is 500 I. 11 Geo. I. c. 30 . § 40 .
--Or their affiftants, being refifted or molefted in the execution of their duty, by perfons paffing armed with prohibited or uncuftomed goods, may oppofe force to force in defence of themfelves, and execution of their duty; and if apprehended for beating, maiming, or killing any perfon fo refifting them, are to be admitted to bail. 9 Geo. II. c. 35 . § 35.

Either by patent, grant, or otherwife, are not void by the demife or death of his majefty, his heirs and fucceffors, but are to continue in force for the face of fix months after, unlefs fooner fuperfeded, or made void by the fucceffor : but the officers not required to take any oaths, de novo, in refpect of being continued for fuch fix months only. I Ann. c. 8. \$2. and 4. and 5 Ann, c. 8. § 0 . and 6 Ann . c. 7.§8, 18. I Geo. II. c. 5. § 2. and c. 23 . § 7 .

Of the cuftoms, excife, and ftamp duties, feverally continued for ever; with a proper number of commiffioners, and a comptroller, in each of them. 9 Ann. c. 21. § 12.

Of profit, and all other payments from the crown, are liable to a deduction not exceeding 6 d . in the pound, which his majefty may, by warrant under the great feal of GreatBritain, privy-feal, or royal fign manuel, caufe to be made, out of all falaries, fees, wages, and other payments, or any arrearages thereof from the crown, for the ufe of his majefty's civil lift. 7 Geo. I. c. 27. § 19. and 11 Geo. I. L. 17. § 19. and 12 Geo. I. c. 2. § 26.

## P A I

PACKERS. This is efteemed a very reputable trade, though they are really what their title expreffes, packers as well- as preffers of all forts of bale-goods (intended for exportation) for the great trading companies and merchants, for which they are anfwerable, if they fhould happen to receive any damage through bad package : befides this, feveral of them are confiderable dealers.
AINTERS. There are four forts of painting, which are properly called trades.

1. Houfe-painting, which is moftly plain work within and without.
2. Ship-painting, which is alfo for the moft part plain, but with a great deal of carved-work, and gilding fometimes.
3. Sign-painting, which is moftly rough figure-work: there are alfo fhop-keepers, who are alfo a fort of carvers and joiners, and make and fell all forts of wooden figns; but there are fome alfo of pewter, which is the pewterer's work to caft, and the fign-painter's to draw.
4. Coach-painting, which is partly plain, and partly in figures, and fome of it very curious: there are alfo armspainters, which are mnch ufed on coaches, $8 x \mathrm{c}$. Houfe and fhip-painter's work is by far the moft populous, but the heavieft and moft unwholfome.

## AINTING.

## Of Picture-Painting.

Whoever would apply bimfelf to painting, fays that celebrated Italian painter Leonardo da Vinci, muft, in the firft place, learn perfpective *: this will enable him to difpofe things in their proper places, and to give the due dimenfions to each: having done this, he muft learn to defing; chufing for that purpofe fome able mafter, who, at the fame time, may give him an infight into the colours of figures : he ought then to confult nature, to confirm himfelf in what he has already learnt ; and, laftly, let bim apply himfelf to the ftudy and imitation of the greateft mafters, in order to get a habit of reducing what he has learnt into practice.

* That perfpective is an effential requifite in a good painter, is attefted by all our moft eminent artifts, and is moreover confirmed by almoft every author, who has wrote with judgment upon painting ; nay, the very term painting impies perfpective. For, to draw a good picture, is to draw phes perfective. For, to draw a good picture, is to draw the repreientation of nature, as it appears to the eye; and
to draw the perfpective reprefentation of any object, is to to draw the perpective reprefentation of any object, is to
draw the reprefentation of that object, as it appears to the draw the reprefentation of that object, as it appears to the
cye : therefore, the terms painting and perfpective feem to eyc : therefore, the terms painting and peripective feem to
be fynonimous, though I know there is a critical difference be fynonimous, though I know there is a critical difference
between the words. Yet this will ferve, at lealt, to fhew the near alliance between painting and perfpeaive; that if the one doth not comprehend the other, perfpective, however, may be faid to be the bafis upon which painting is built ; and therefore, he who attempts to paint a picture, without having a general knowlege of it, will always, wander in the mazes of uncertainty, be fubject to the greateft errors, and his works, like thofe of Boticello, will be the lefs regarded. And what is faid of the ufefulnefs of perfpective to painters in particular, may be applied to artifts in general; fuch as engravers, architects, flatuaries, chafers, carvers, \&c.

To defign well, and to difpofe the lights and fhadows of figures fuitably to their fituations, being the moft confiderable parts of this art, and thofe on which the greateft ftrefs depends; it is in there that a painter, who would make any great proficiency, ought principally to exercife himfelf.
Of all animal operations, we plainly perceive fight to be the moft quick : it moves with incredible velocity, and difcovers a thoufand objects in an inftant. But then it fees them very confuredly, and, in effect, does not difcern above one at a time. For inftance, if you glance your cye over a page of this book, you will immediately perceive it full of different characters; but what thefe characters are, or what is intended by them, will be ftill a lecret: infomuch, that to gain any determinate knowlege of what you have feen, you muft connider them by piece-meal, forming the letters into words,
Vol. II.

## P A I

and thofe again into periods; fo a man who would mount to the top of a building, is content to go up ftep by ftep, as knowing it impoffible otherwife to reach it : in the fame manner, a perfon who would attain to fkill in painting, muft begin with the parts of objects, before he can proceed to reprefent them entire; and muft take them in order, never advancing to a fecond, before he has got a good habit of doing the firt : for, otherwife, his time will be thrown away, or at leaft, his advances rendered extremely flow and imperceptible. He muft further inure himfelf to work with patience and fteadinefs, always remembering, that a flow diligence will out-ftrip a bafty negligence.
some people have a fancy for painting, who yet want the neceffary difpofitions tyereto: this is eafily difcoverable in children, who amufe themfelves with drawing imperfect fketches, never troubling themfelves to thadow any thing they undertake.
A painter deferves but a fmall Thare of reputation, who only fucceeds in fome one branch of his art; as for inftance, in painting a nudity, a head, drapery, animals, landikips, \&c. fince the heavieft genius, by inceflant plodding on the fame thing, cannot fail, at length, of performing it well.
A painter muft therefore be univerfal, and apply himfelf to the ftudy and confideration of all objects ; but fo as to attend in a particular manner to thofe patts of each, which are the moft beautiful and perfect : by this means his imagination will become like a mirrour, reprefenting every thing laid before it, in it's proper character and colour.
But further, a painter, who is not equally pleafed with all parts of his art, will never become univerfal. Boticello, for inftance, had a peculiar pique againft landikips, and thought them much beneath his application; the effect of which was, that being a very forry landfkip painter, his merit, in other matters, was the lefs regarded. It was a faying of his, that a palet full of colours being thrown againft the wall, would leave a ftain behind it properly enough reprefenting a landfkip. It is true, indeed, that by help of a ftrong fancy, one may foy heads, battles, rocks, feas, clouds, woods, \&c. in a wall fo fmeared; it being here, as in the ringing of bells, where every body is at liberty to make them fay what he pleares.
But then, though fuch a fortuitous mixture of colours may ftart a hint, or give rife to a new invention, yet it will not furnifh the leaft affiftance towards the execution, or finilhing any thing that is occafioned.
A painter who would appear univerfal, and pleafe people of different taftes, muft fet off feveral figures in the fame piece, both with very deep and very foft fhadows; taking care by the way, to make the realon of fuch diverfity apparent.
A painter ought to have his mind continually at work, and to make remarks on every object, worthy of notice, that he meets. He ought even to fand ftill, in order to view them with the greater attention; and afterwards to form rules on what he bas obferved, with regard to lights, fhadows, place, and other circumftances. Let him make himfelf a mafter of the theory, before he meddles with the practice, and be' very curious in comparing the limbs and junctures of different animals with one another; taking minutes of every thing he learns, the better to fix them in his memory.
A painter who has no doubts in his ftudies, makes but a fmall progrefs in his art; it being an infallible fign, where all this appears eafy, that the workman is infufficient, and the work above his pitch. But when once a painter has got a juft fenfe of the whole difficulties of his work, every new reflection he makes, will give him new ftrength to furmount them; infomuch, that if he perfeveres in it, every day will contribute fomething towards his improvement and perfection.
Let a novice in the firft place exercife his hand, in copying the defigns of fome able mafter; after be has got a habit of doing this, he may proceed to relievos, defigning after them with proper application.
Tde firft iketch of a hiftory piece muft be very flight, and the figures very imperfectly formed, your principal regard being to the juftnefs of their fituation: having adjufted the

## P A I

P A I
ordonnance * of the piece, you may finifh the members at your leifure.

* Ordonnance is the placing regularly the figures, in refpect of the whole compofure ; or the particular difpofition of figures, as to the different groupes, malles, contrafts, decorum, afpeet, and fituation.

Whenever either your own reflection, or the information of your friends, points out any fault in your work, correct it immediately; left in expofing the piece to the world, you expofe your own weaknefs; nor flatter yourfelf, that what reputation you lofe by letting it efcape, may be retrieved in your next performance. It is not with painting as with mulic, which dies in the breath that gives it birth: painting is of a more durable nature, and whatever over-fights of this kind you make public, will be ftanding reproaches to you ever afterwards.
Nothing deceives us more than the judgment we form of our own works, nor are the opinions of our friends much more to be relied upon : a friend is, in effect, a fecond felf, and therefore to be held in the fame degree of fufpicion. It is the critic of our enemies, that we ought to form ourfelves by : this is ufually fincere, which is more than I can fay, either for myfelfor my friend.
Among other things, I fhall not fruple to deliver a new method of affifing the invention; which, though trifing in appearance, may yet be of confiderable fervice in opening the mind, and putting it upon the fcent of new thoughts; and it is this; if you look at fome old wall covered with dirt, or the odd appearance of fome ftreaked ftones, you may difcover feveral things like landikips, battles, clouds, uncommon* attitudes, humourous faces, draperies, \&cc. out of this confufed map of objects, the mind will be furnifhed with abundance of defigns and fubjects perfectly new.

* Attitude implies liztle more than action and pofture; theugh it is fometimes ufed, where neither of thefe would be proper: for inftance, action is not applicable to a dead corpfe : nor do we fay, that fuch a figure is in a handfome pofture, but in a graceful attitude or difpofition,

I bave often found it for ufe to recollect the ideas of what I had confidered in the day, after I was retired to bed, and incompaffed with the filence and obfcurity of the night. For by thus repeating the contours, and other parts of figures which require a clofer attention, their images are ftrongly impreffed on the memory, and familiarized to the mind.
If you intend to become a proficient, be fure never to defign any thing nightly, or in hafte; but take time to confider, with regard to lights, which parts receive the ffrongeft, and, in fhadows, which are the deepeft ; obferve how thefe mingle together, and in what quantity, ftill comparing the one with the other. As to the contours, confider towards what part they are to be directed, what quantity of light and fhadow meet within the lines, where they are more or lefs ftrong, larger or fmaller ; and, laftly, take care that your lights and fhadows do not terminate abruptly, but that they fall foftly into one another, and at laft lofe themfelves infenfibly, like finoke. After you have once habituated yourfelf to be thus punctual and exact in your defigns, expedition and difpatch will come a-pace.
While a painter is employed either in defigning or painting, he ought to liften with attention to the different fentiments which different people entertain of his performance: there bing no body, how ignorant in painting foever, but who underitands the fhape of a man, and can readily tell whether he be hump-back'd, crooked-legg'd, have any thing monftrous in his hand, or any the like blemifh : why may not a perion then, who can fo well diftinguifh the defects of nature, be allowed to judge of thofe of arts?
It is ridiculous in a painter to confide fo far in his memory, as think it capable of retaining all he has feen and obferved in nature : the memory is a faculty too weak, as well as tog narrow for that purpofe; and the only fure way is to copy, as much as poffible, from nature herfelf.
A painter lofes a great deal of his dignity, by confning his genius, and never venturing out of bis ordinary courfe: there are fome, for inftance, who apply themfelves to the painting of nudities; but fo as ftill frictly to obferve the fame proportions, and never introducing the leaft variety. Whereas, they fhould confider, that a man may be well proportioned, whether he be thick or flender, fhort or tall. By difregarding this diverfity of proportions, a painter feems to caft all his figures in the fame mould, which is an error of the firft magnitude.
A painter well acquainted with the theory of his art, may, wirhout any great difficulty, render himfelf univerfal. For all terreftial animals bave this in common with each other, that their members are compofed of mufcles, 'nerves, and bones; the only difference between them lying in their different lengths and thickneffes, as is demonftrated by the anatumifts. As to aquatic animals, in which indeed there is a great variety, I think a painter who is well advifed, will not trouble himfelf about them.

Thofe who venture on the practice, without firt qualifying themfelves in the theory, are like mariners putting out to fea without either helm or compafs, ignerant what courfe to take. The practice ought always to be built on a rational theory, of which perfpective is both the guide and the gate, and without which, it is impoffible to fucceed, either in defrgning, or in any of the arts depending thereon.
A painter fhould never tie himfelf to imitate the * manner of any other ; his bufinefs being not to reprefent the works of men, but thofe of nature; who at the fame time is $\mathrm{f}_{0}$ abundant in fier productions, that it is ridiculous to have recourfe to her fervants, who have nothing but what they borrowed from her, when the miftrefs herfelf is fo ready to entertain them.

* Manner is the habitude that painters have acquired, not only in the management of the pencil, but alfo in the three principal parts of painting, viz. invention, defign, and colouring: it is by the manner in painting that we judge this piece to be Titian's, Tintoret's, or Vinci's hand ; as by the fitle in writing, we guefs this book to be this or that austhor's.

Ta defign after nature, or the life, you muft be removed from the object, three times it's magnitude; taking care, as you draw each froke, to oblerve what parts of your * model meet under the principal, or perpendicular line.

- The model is generally taken for any natural objet that prefents itfelf to be drawn; in particular, it fignifies a fatue, nudity, or the like, fet up in the academies, to be copied by the novices in painting.
To judge of the goodnefs of a picture, drawing, or print, fays Mr Richardfon, it is neceffary to eftablifh to ourfelves a fyftem of rules, to be applied oocafionally : thefe are no other than thofe which he that is to give fuch judgment, would have been directed by, had he been to have made, what now he is to judge of.
And thefe rules muft be our own; whether as being the refult of our owd ftudy and obfervation, or by others examined and approved by ourfelves.
To affift the judgment herein, the following rules have been laid down.
I. The fubject muft be finely imagined, and, if poffible, improved in the painter's hands; he muft think well as an hiftorian, poet, philofopher, or divine, and moreover as a painter, in making a wife ufe of all the advantages of his art, and finding expedients to fupply it's defects.
II. The expreflion muft be proper to the fubject, and the characters of the perfons. It muft be ftrong, fo that the dumb-fhew may be perfectly well, and readily underftood, Every part of the picture muft contribute to this end; colours, animals, draperies, and efpecially the actions of the figures, and above all the airs of the heads.
III. There muft be one principal light, and this, and all the fubordinate ones, with the fhadows and repofes, muft make one intire harmonious mafs; the feveral parts muft be well connected and contrafted, fo as the tout-enfemble muft be grateful to the eye, as a good piece of mufick is to the ear. By this means the picture is not only more delightful, but better feen and comprehended.
IV. The drawing muft be juft; nothing muft be flat, lame, or ill-proportioned, and thefe proportions fhould vary according to the characters of the perfons drawn.
V. The colouring, whether gay or folid, muft be natural, beautiful, and clean, and what the eye is delighted with, in fhadows, as well as lights and middle tints.
VI. And whether the colours are laid on thick, or finely wrought, they muft appear to be done by a light, and accurate hand.
Laftly, nature muft be the foundation that muft be feen at the bottom; but nature muft be raifed and improved, not only from what is commonly feen, to what is but rarely, but even yet higher, from a judicious and beautiful idea in the painter's mind, fo that grace and greatnefs may thine throughout; more or lefs, however, as the fubject may happen to be. And herein confifts the principal excellency of a picture or drawing,
Thefe few plain rules being thoroughly comprehended and remembered, which may be done, with a tolerable meafure of good fenfe, a little trouble in reading, and a good deal of obfervation on nature and pictures, and drawings of good mafters, may greatly contribute to enable a perfon to be a tolerable judge in thefe matters, as being derived from, and founded upon, reafon; and though not deftitute of abundant authority, yer neither borrowed from thence, or at all truiting to that for their fupport.
For, whatever authorities there are for any propofition, their value confifts in their being derived from reafon, and they weigh with men of fenfe in proportion only as they fee they do fo; they then become our own, and we have no occafion to produce the author but the reafon: or, (if that be obvious) leave it to be oblerved by the reader.

The matter would terminate bere, though we had a book of rules for painting, faid to be written by Appelles himfelf, and it were allowed that what Appelles faid were infallibly true ; for then, inftead of faying, are thefe rules good, are they founded upon reafon? the queftion would only be, are they really of him? Their authority then will reft, not upon the credit of Apelles, but upon the teftimony of thofe that fay they are his. Which we fhall not want, if we find the rules to be good, and if we do not, it will be infufficient ; and all this without the jeaft prejudice to the profound refpect we have for Appelles, nay it is a neceffary confequence of it. To judge of the degrees of goadnefs of a picture or drawing, it is neceffary that the connoiffeur fhould be thoroughty acquainted, and perpetually converfant with the beft. For how perfectly foever he may be mafter of the rules of the art, he will know that thofe are like what divines call precepts of perfection; that is, they are given as what we thould endeavour to go by, as far as we are able. The beft things we know will be the ftandard by which we fhall judge of thofe, and all the reft. Carlo Maratti and Guiffeppe CBbiari, will be a Raphael and Giulio Romano, to him who has never feen better; and then an inferior mafter will make a good Carlo. We have been furprized to obferve what pleafure fome connoiffeurs have taken, in what another looked upon with little, if not with contempt, 'till we bave confidered one was not fo well acquainted with the works of the beft mafters as the other, and that accounts for it fufficiently.
All the different degrees of gooenefs in painting may be reduced to thefe three general claffes. The mediocre, or indifferently good, the excellent, and the fublime. The firft is of a large extent, the fecond much narrower, and the laft ftill more fo. I believe moft people have a pretty clear and juft idea of the two former, the other is not fo well underftood ; which we take to confift of fome few of the higheft degrees of excellente in thofe kinds, and parts of painting, which are excellent : the fublime therefore muft be marvel loas and furprizing; it muft ftrike the mind powerfully, and eaptivate it irrefiftably.
The fublime may be confned to hifory and portrait-painting; and thefe muft excel in grace and greatnefs, invention, or expreffion. Michael Angelo's great ftile intitles him to the fublime, not his drawing; it is that greatnefs, and a competent degree of grace, and not his colouring, that makes Titian capable of it: as Corregio's grace, with a fufficient mixture of greatnefs, gives this noble quality to his works. Vandyke's colouring nor pencil, though perfectly fine, would ever introduce him to the fublime ; it is his expreffion, and that grace and greathefs he pofleffed (the utmoft that portrait-painting is capable of), that fets fome of his works in that exalted clafs ; in which, on that account, he may, perhaps, take place of Raphael himfelf in that kind of painting, if that great man's fine and noble ideas catried him as much above nature then, as they did in hiffory, where the utmort that can be done is commendable, a due fubordination of characters being preferved; and thus Vandyke's colouring and pencil, may be judged equal to that of Corregio; or any other mafter.

## Remarks.

The management of the pencil, and the mixture of colours, with the knowlege of perfpective, and a habit of defigning, wherewith moft painters feem to content themfelves, make but a part of the art, according to the fentiments of the moll celebrated artifts. To thefe the affiftance of other arts muft be called in ; anatomy, optics, meterology, mechanics, stc. fearching attentively into the power of nature, in order to form an art that may imitate her; and, from the depths of philofophy, drawing means for the improvement of painting. It is not in painting alone, but in philofophy likewife, that the moft etrinent have excelled their brethren of the pencil ; nor does it appear improbable, but that it was from uncommon fkill in the latter, to which, in great meafure, they bave owed their fuccefs in the former. Thefe are two faculties that may be neater a-kin, that every one, pertiaps, is aware of; nor would there be any thing daring in the affertion, fhould it be affirmed, that philofophy is abfolutely neceffary, by way of preliminary to painting.
To paint, it is allowed, is to imitate nature ; but is not the knowlege of nature requifite to the imitation of her beauties? Muift it not be pleafaht to fee men about to reprefent natural objects, who are unacquainted with the nature and properties of the objects to be reprefented ? Quacks, indeed, there may be in painting, as well as in other profeffions; but to become a regular painter, it is indifpenfably neceffary, that a man ferve an apprenticefhip to philofophy.
We have people who pretend to cure difeafes, without knowing any thing of the animal œeconomy, or of the powers of medicines; we have others, who would be thought to paint by the mere mechanifm of a hand, and the motion of the pencil: but, as the college will never allow the former to be phyficians, fo there is no reafon why the latter fhould be complimented with the title of painters.
That this art requires fuitable inftitutions for it's advadeement and encouragement in this nation, may be naturally urged,
if we confider it only in the commercial light. For thete may be great pecuniary advantages accrue therefrom, fuch as ought to engage the attention of the mere merchant. If we had more regular artifts, and in greater number, not only much money, which is now fent to France and Italy, might be faved, but a very profitable exportation might be made of thofe works that were not purchafed by our own connoiffeurs. If we confider the great number of foreign ftatues, paintings, and prints, that are brought into this kingdom, the prodigious price that is given for fome, and the more than equitable price that is given for all; muft not the confideration fuggeft to us, that this article is highly difadvantageous to the nation? We often bear of a fum given for a fingle piece, the work of an antient or foreign mafter, that equats the annual revenue of a gentleman's effate. And, fometimes, the ignorance of the purchafer, or the confident knavery of the feller, impofes on us a copy of little value, inftead of an original. And whatever is paid for one of thefe extravagant articles of luxury, more than it will fell for again at a foreign market, is fo much lofs to the common national ftock, as well as to the private fortune of the immediate fufferer.
That we have annually a great many of thefe lofing articles, will fcarce be difputed; and whatever one nation, by fuch means, draws from another, muft contribute proportionably to ir's advantage. The fmalleft branch of trade, if carried on to our difadvantage, muft, in time, contribute to impoverilh us, and enrich thofe' who deal with us on the beneficial fide.
But, if the Britifh artifts became fuperior to the French and Italian, and could raife a tribute on thofe nations for any curious productions, we fhould not only fave all the balance againft us on this account, but draw into the nation as much more to their difadvantage. This would be adding continually ts our wealh, and conféquently to our ftrength and influence.
But what would this be, compared with the great influx of riches that would accompany perfons of diftinction from foreign nations? Do we vifit Italy for the purity of it's religion, or fuperiority of virtue and wifdom? Or France for the freedom of it's government? An Italian or Frenchman will not fay this, unlefs he be ignorant, and a bigot. Is it becaufe they are commercial nations, more than ourfelves? Neither can that be admitted. Why then is it, but becaufe the cities of Italy abound with temples and palaces, venerable and antient in themfelves, and enriched with all the profufion of art by the greateft mafters? But becaufe France is in the road to Italy, whom fhe has robbed of many of her treafures, and whom fhe rivals in expenfive projects, though not in the beauty of execution. Had we as curious works of our own, in the fame abundance, fhould we be at fo much expence, and, perhaps, lofs of time, to vifit thofe of our neighbours? They who are loudeft againft the folly and abufe of travel, can fearcely be of this opinion: there would be no pretence for the fops and fools, if the men of tafte and good fenfe did not meet with fome enterrainment. Admitting, therefore, that the greateft part of our travellets are of the former clafs, thofe of the latter mult, in this refpect, always lead the fafhion. Travel will always be commendable in men of tafte and real curiofity, while neighbouring nations bave thefe means of inftruction or delight, which we are deficient in ourfelves : but could we only rival our neighbours in the elegant and polite arts (as we already confeffedly do in literature) the fame motive would not remain : the men of fenfe would not wafte the time which they efteem precious, and the grand tour of our petits maitres would not be juftified by grave example.
The Lacedominians were certainly a brave, and hiffory has called them a wife, people; yet they forbad travel to their youth, as it contributed, in their opinion, to foften and corrupt their manners. If we have not been already too much foftered and corrupted, the comparifons made betwixt former ages, and the prefent, are unjuft. But do not all who make thefe comparifons, afcribe the difference to the bad habits we have learned from foreigners, whom, in point of bravery, our anceftors would bave defpifed ? Not only the cnlture of our lands, and the manufactutes of our productions, but the arts of peace and war were known to thofe anceftors: what then do moft of our young gentlemen learn? Are the dancing a minuet, and humming an Italian air, So great excellenciés? Admitting they were, the care of the prefent age has provided mafters capable of teaching both, even at home. No body can fay that we are not, in this and other refpects, fhameful to miention, fufficiently Frenchified and Italianized. See the article Dancling Master.
All that we would ainh at is, to fpirit up our own country, as well to excel in the art of painting, as in all other the polite arts, which contribute either to the wealth, or to the delight or ornament of the nation; that we may at leaft draw foreigners of merit and diftinction into our own country, in the like proportion that they draw Britons of figurent worth into other countries. See the articles Design and Engraying.
PALATINATE of BAVARIA, or the UPPER PALATINATE, in the circle of Bavaria, in Germany,
fometimes called the Nortgow, from it's northern fituation, in refpect of the elector of Bavaria's other dominions. It is bounded by Voigtland in the circle of Upper Saxony on the north, by Bohemia and Auftria on the eaft, by the river Danube, which feparates it from the Danube of Bavaria on the fouth, and by Swabia and part of Franconia on the weft, being about 70 miles long and 40 broad; a mountainous, rocky country, but in fome places their vallies produce good corn and pafture. They have alfo fome vineyards, but their wine has a fharp, unpleafant tafte. In their hills are rich mines of copper, filver, and iron; and the forges and manufactories of iron, are very confiderable in this country.
palatinate of the Rhine, fituated in the circle of the Lower Rhine, in Germany, is bounded by the archbihhoprics of Mentz and Triers on the north, by the circles of Franconia and Swabia on the eaft, and by Alfatia and Lorrain on the fouth and weft, being upwards of 100 miles long, and from 50 to 70 broad. The Rhine, the Neckar, and other fine rivers running through it, contribute to render it one of the pleafanteft and moft fruitful provinces of Germany ; only unhappy in lying on the frontiers of France, whofe princes have burnt and plundered this country, and demolifhed it's fine towns feveral times during the wars. It is always obliged to fubfift large armies of friends as well as enemies, whenever there happens a quarrel between France and the German princes. The revenues of the Palatinate arife by a toll on all veffels going along the Rhine, Neckar, and other rivers; and from the duties on corn, wine, and other provifions; the whole eftimated at 300,0001 . per annum. That prince keeps up a body of 6 or 7000 men in time of peace, and in the late wars maintained 12,000 regular forces many years. There is a difpute fubfifting between the elector Palatine and the elector of Hanover, about the titular office of arch-treafurer of the empire.
PALM, a meafure taken from the extent of the hand. The modernppalm is different in different places where it obtains. -At Rome it contains 7 inches $\frac{1}{2}$ : at Naples 8 inches : at Genoa 8 inches $\frac{4}{5}$ : at Morocco and Fez, 7 inches $\frac{1}{5}: 3$ in Languedoc and fome other parts of France, 8 inches $\frac{3}{3}$. The Englifh palm is 3 inches. At Leghorn there are two kinds of palms, the one for woollen, the other for filks: the firft one third fhorter than the latter.
PALESTINE, a part of Afiatic Turkey, is fituated between $3^{6}$ and 38 degrees of eaft longitude, and between 3 r and 34 degrees of north latitude, bounded by mount Libanus, which divides it from Syria on the north, by mount Hermon, which feparates it from Arabia Deferta on the eaft, by the mountains of Sier and the deferts of Arabia Petrea on the fouth, and by the Mediterranean Sea on the weft; fo that it feems to have been extremely well fecured againfl foreign invafions. It was called Paleftine, from the Philiftines, who inhabited the fea-coafts. It was called alfo Judea, from Juda; and the Holy Land, from our Saviour's relidence and fufferings in it : and it is called Canaan, and the Promifed Land, in the fcriptures. It is 150 miles in length and upwards, and 80 in breadth; and, in the time of Solomon, it feems to have extended from the Mediterranean Sea to the river Euphrates. It is generally a fruitful country, producing plenty of corn, wine, and oil, where it is cultivated; and would be able to fupply it's neighbours with corn and wine, as it did formerly, if the prefent inhabitants were as induftrious. The country about Jerufalem is the moft mountainous and rocky; but thefe mountains feed 'great herds of cattle, abound in milk and honey, and produce excellent wine and olive-oil where they are cultivated, as the vallies between the mountains do good crops of corn.
PAPER, a thin flexible matter, ufually white to write upon, and other forts for divers other ufes.
Paper owes it's origin to the neceffity that mankind were always under, to communicate their fentiments when at a difance from one another, and to the defire of tranfmitting their thoughts to pofterity. For this purpofe they firft thought of carving or painting upon the bark or leaves of trees, the characters which they ufed. The natives of America ftill ufe the fame expedients, and thefe may belooked upon as a living proof of what is recorded of the firt men of the old world.
They found inconvenience in having books compofed of fmall bits of bark ftrung upon twifted leaves, or on one piece of bark or leaves rolled up, and endeavoured to find another matter which might be more commodioully ufed. The Egyptians, who firft fettled a well governed ftate, were likewife the firf who endeavoured to procure this advantage; neverthelefs it was not (according to Pliny) 'till the time of Alexander's victories, that they made this difcovery. 'They fell upon a method of making, from a kind of dog-grafs, a fubftance, which foon became a confiderable and lucrative branch of trade, and this manufacture was the firf thing that deferved the name of paper.
Rome, as much as it was poffible, furnifhed itfelf with this paper, and as often as the Gauls could procure it, they gave it the preference to the birch bark; but the difficulty of bringing it from fuch a diftant country as Egypt, weighing too equally againft it's property of taking any defired form, and of being folded together in fheets, the Gauls, and other
nations endeavoured, in like manner, to find the means of fupplying it among themfelves. They accordingly found the method of making it with cotton : and according to Montfaucon, in his Effay upon the Egyptian paper, inferred among thofe of the academy of the Belles Lettres, at the end of the ninth century, this deffroyed the Egyptian paper manufacture through all the eaft; and this difcovery led to that of our paper, which is made of rags; the zra of which, as fettled by Montfaucon, is in the twelfth century.
Yet long before that period, the Chinefe (according to $P$. du Halde) made it with cotton-rags. He fays, in the article of Chinefe paper, that ih the 95 th year of the Christian æra, a mandarine of the palace manufactured paper of the bark of different trees, old rags of filk and bemp that had been ufed. Be that as it will, as foon as the rag paper appeared, it ruined the Egyptian paper in the weft, as the cotton paper had formerly ruined it in the eaft. We mult own, however, that the advantages of paper made of rags, ought not to have been fo fatal to that of Egypt; but on the contrary engaged their manufacturers to bring it to perfection Every thing feemed to lead the way.
The different kinds of paper had always been made of plants : and although the birch bark and the prepared leaves, were, not properly fpeaking, of that fpecies, yet the facility of folding and rolling, fhewed a flexibility in the fibres, capable of that preparation which is given to rags. It may be obferved, that thefe very rags are no other than fibres of a plant, which had fuffered a kind of decompofition, which had not happened to thofe that they made ufe of. It was therefore natural to think, that if they had undergone the fame preparation, they would have produced fuch a paper, or at leaft a kind that would have refembled our own.
Let us not feek for matter of reproach againf the Ancients. Their occafions for paper were nor probably fo preffing as ours; fince, notwithflanding the quantity of rags which is collected, the price of it fometimes rifes fo bigh, that the manufacturers are defirous of finding other materials for the fame purpofe, or compelled to have recourfe to expedients which are prohibited, in fome countries, by the regulations touching paper-works, though they always find means to conceal them from the vigilance of the infpectors.
When the rags that are proper for making white paper become farce, they employ thofe which at other times are ufed for the coarfe paper, and prepare them wilh chalk-water. By this preparation they confume, and indeed deffroy the foreign bodies which are in thefe coarfe materials, but at the fame time difcompofe the fibres of the rags, fo that there muft certainly be a great wafte. If we chould do no more then, but find a method for preventing this wafte, and procure fuch materials as the workmen at fuch times defire to have, fhould we' not gain a great advantage to the paper works? This new matter might be ufed for coarfe paper, and the other enter into the compofition of white paper, and of confequence the price of fine rags would fall, or at leaft never become exceffively dear. In my opinion, therefore, we ought to have been for a long time, employed in fearch.of a remedy for thofe times of dearth, and in preventing the confequences fo naturally drawn from the manner in which we now manufacture our paper.
It is not from the workmen we are to draw fuch confequences. He himfelf who makes any difcovery, very rarely perceives all it's confequences: the novelty often blinds us, touching what is already difcovered, and makes us defpife it, inftead of engaging us to bring it to perfection. It therefore requires men who, together with a difcerning underftanding, have a defire to bring the arts to perfection, and to enable mankind to enjoy them at a fmall expence.
M. de Reaumer, in an eflay publifhed in the year 1719 , upon wafps, feems to perceive thefc confequences. Wafps built habitations, the outward parts of which feem to be of paper or ftrong pafteboard: in fuch a manner do they prepare bits of rotten wood, as to make them affume that confiftence.
M. de Reaumer took a hint from this obfervation, touching the perfection of paper-works. He in his effay explains his own idea of that fubfance, and wifhes thofe who have an opportunity would examine, if it is fuch as he has conceived it to be: and this fubject he has renewed in che fixth volume of his hiftory of Infects.
Seba likewife, in the firft volume of his Natural Hiftory, has invited the curinus to profecute the fame project in thefe words. 'This country, fays be, does not feem to want trees fir for making paper, if people would give themfelves the neccflary trouble and expence. Alga marina, for example, which is compofed of long, ftrong, vifcous filaments, might it not be proper for this purpofe, as well as the matts of Mufcovy, if they were prepared as the Japonefe make their timber? The curious may at leaft try the experiment.' Whether there are no people, as Seba demands, who have opportunities of profecuting this work, or that every body is averfe to go to work, except upon his own plan, I know not one author who has communicated any thing upon this fubject.
P. du Halde, in the firf volume of his Hiftory of China, pretends that the Chinefe make paper of the fecond bark of
bamboo,

## PA P

## P A P

bamboo, of the bark of different trees, particularly the mulberry, of fraw, rue, and hemp. Koempfer, in his voyage to Japan, and after him Seba, in the aforementioned book, seport, that paper is made in that country of the inner bark of a kind of mulberry-tree.
M. de Ia Loubaire fays, that the Siamere make it of old cotton cloth, or the bark of a tree called toncoë. Flacourt defcribes the manner in which the inhabitants of Madagafcar make theirs of a kind of mallow, which they call avo. Finally, all the travellers to India as well as to America, recount with emphafis, the advantaget drawn from the palmtree for making fuffs, of which, when they are worn, it would doubtless be eafy to make paper. The opportunity which the paper-mills in the neighbourhood of Eftampes fecmed to afford me, of fulfulling the with of fome, and verifying what hath been faid by others, touching our trees and plants that are analogous to thofe mentioned by the authors above, has induced me to collect feveral of thefe plants. After having, furmounted all the difficulties, which we always find amono workmen, when any novelty is introduced amone them relating to their occupation, I have at length fucceeded fo far as to have tried fome experiments, and fatter myfelf which being able to continue thofe which I have in view Hitherto I have only fpoke, as if paper was made of nothing but vegetable fubitances, and that no materials could be taken from animal nature. Neverthelefs, it is doubted whether in China, paper is not made of filk. Pere du Halde fays, that they gather the refufe cods, when they are unwound in the filk manufactures, and make paper of them; but, notwithftanding the affertion of that author, the fact has been always confidered as problematic.
I will relate an experiment which may help to explain this queftion: but before I defcribe my fuccefs, I believe I had better diftinguifh the different plants I have mentioned above, and prefent them in a methodical manner. By thefe means the public will have a botanical hiftory of paper, and fee the plan of the work propofed.
The materials for paper then may be divided into two general claffes, namely vegetable fubftances, and thofe that belong to the animal kingdom.
In the great number of plants ufed for making paper, or of which people fuppofe it might be made, a regular order may be found. People of different countries, have been conducted by a kind of natural analogy. They have not fought to employ plants that were very different from thofe already in ufe. They have taken them of different claffes, in different kinds, but always in fome of thofe which had been before ufed, though probably they were ignorant of that circumftance. In effect, the greatert part of plants feems to be compofed of long, longitudinal fibres, nearer or clofer to one another, and covered with a fubtance which fils up the intervals: fuch are the palmiferous, the gramineous, and the liliaceous.
The clafs of the palmiferi, is one of thofe, which have been of moft fervice to the Indians, Afiatics, and Americans, in furnifhing them with cloathing, cordage, fails and ocher utenfils; almoft every part of thefe trees has ferved fome of thofe ufes, though they do not indifferently take every part of the fame tree. Thefe people have in the palm-tree, which they found among them, chofen what was moft fufceptible of manufacture. In fome they chofe the fatha, which invelops the regimen of fruits before they are ripe, or that which fultains the young leaves: and in others they employed the down which furrounds the fruit. The young and tender leaves have been preferred to this wool or down, which was not confiderable in other kinds; and when all thefe could not be compared to the bark for goodnefs and quantity, they made ufe of this lait.
The down of the fruit of the cocoa-nut-tree, the fpatha, the leaves and bark have been ufed, as feveral travellers relate. Rumphius, in his Hiftory of the Plants of Amboyna, fays as much of the calapa: the pinanga, the wild lonturus, the tetum, the hakum, the wanga, all different kinds of the palmtree, furnilh in their leaves a throad more or lefs fine, of which thofe people make fuffs
They have even prepared the leaves of the hakum, and foribe, and ufed them inftead of paper. The advantages which the Indians drawn from the palm-tree being already fufficiently important, I fhall not probably be blamed for not having inferted what is mentioned by Ray after fome authors: he reports, in his Hiftory of Plants, that the cocoa-tree contains, in lieu of pith, a quire of paper of fifty or fixty theets, on which people may write. This is like that which is found in the middle of a fruit of Peru, mentioned by M. Frezier, author of , Voyage to the South Sea. All this wonderful phanomenon, when reduced to it's juft value, is in my opinion, no more than that the pith of the palm-tree and the pulp of that fruit, may be eafily made into fbeets in the fame manner as that of the Chinefe alder, which is made into thofe fine artificial flowers that are brought from that country, or the books made of the roots of a kind of mallow, which requires no more than to be artfully dried and cut in leaves. The mufa or banana-tree, has been employed for fuch-like purpofes
The clals of the liliaceous includes the aloes, the yucca
Vol. II.
from the aloes is obtained the thread of pitte, known by the ufe to which it is put.
Father du Tertre, in his Natural Hiftory of the Antilles, defcribes the manner in which that thread is got. Sir Hans Sloane, in his Catalogue of the Plants of Jamaica, likewife mentions thefe aloes. In the number of fynonimous names which he recites, fome of them are taken from the ufe that is made of thofe plants, and which I cannot help, for that reafon, repeating in this place.
The fecond fpecies of that author, is by Gafpar Bauhin, in his Pinax, p. 20. called the eleventh fpecies of papyrus, em ployed for paper. Cluflus, in his treatife of Exotic Plants, p. 6. mentions a ball of thread made of the bark of a tree, which according to Sloane, is this aloes. John Bauhin, tom. i. p. 384. copies Clufius, and fays, this thread is very fine and extremely white. The third fpecies of aloes, ac cording to Sloane, which neverthelefs is a true fpecies of yucca, is known to Luet, p. 645. under the name of an excellent kind of hemp or flax, which even approaches very near to the finenefs of filk.
Seba in the firft volume of his work, has given the figure of two leaves of a plant, which he calls the aquatic bullrufh of Surinam, compoled of innumerable threads or filaments This bullrufh, fays that author, ought to be examined with regard to it's utility.
It was from the gramineous clafs, as already faid, that they obtained materials for the firft paper, which deferves that name. Michilli, in his New Gemera of Plants, has inferted in the number of rufhes, the plant called by Gafpard Bauhin, in his Pinax, p. Ig. and in 'his Theatre of Plants, p. 333 the paper of Syria or Sicily. Is this the fpecies formerly employed in Egypt? The figure and defcription of it given by Profper Alpinus, namely that of Vellingius and the Antients, leave it doubtful, whether this laft plant be a ruth or not Profper Alpinus fays, it is the paper called beid by the Egyptians.
M. de Juffieu, at whofe houre people will always find lights in all doubts that can occur upon thefe fubjects, and who finds pleafure in communicating inftruction, hath fhewn an Egyptian plant that feems to be a true ruff, and when compared with that of Michilli, exhibits no difference.
Dodo confiders the flag as a plant proper for paper, and gives it the name of papyrus. We have oblerved above, that Pere du Halde fays, the Chinefe made paper of fraw or the blades of rice. Bamboo is likewife employed in the fame country for a kind of paper; and, according to the fame author, is the reed-tree of Gafpar Bauhin, in his Pinax, p. 18.
The birch, which is of the clafs of cat's-tail Howers, was one of the firft trees, upion the bark of which people wrote. A's the word bark may be deemed equivocal, it will not be amils in this place to fix it's fignification. Are we to underfand by this word bark, that part of trees which covers externally the trunk and branches? Or, is not rather that interior layer, which ought to become waody, and is called liber? Without all doubt, it mult be this inner covering which we are to underftand by the bark of birch; it feems alfo, that in this fenfe it ought to be underftood in thofe authors, who treat of the different kinds of paper ufed by different nations, Moft of thefe writers fay, it is the fecond bark which is ufed. Others have only faid, that they ufed the bark; but the preparations which they defcribe, plainly fhew, that it was this inner part that was employed.
Rumphius defcribes two trees with cat's-tail flowers, one of which he calls the domefticum gnemon, and the other gnemon campeftre. The inhabitants of Amboyna, according to that author, obtain a thread from the bark of the boughs, which they beat a little; and this thread is proper for making nets, which they boil in a certain infufion, to make them ftronger and lefs apt to rot in the water. This ought the more carefully to be examined, as the knowlege derived from fuch enquiry, may ferve to bring to petfection the cordage of fhips, as well as that of which the fifhers make their nets.
Here we ought to recal the idea which M. de Reaumur has produced upon the fubject of rotten wood; an idea fo much the more happy, as it furnifhes others upon abundance of fubftances eafily got: the foreft prefents but too many of them fometimes. The fhops of our carpenters fupply us with cuttings, which, by their thinnefs, are in a condition to undergo, in a little time, the neceffary degree of rottennefs; for here, as in every other thing, there is a proper degree which muft be laid hold on. When the wood is too rotten, it's fibres are too much divided, they have loft that binding which connects their parts, they become too carthy, and I believe it would then be difficult, not to fay impoffible, to hind them together: therefore the wafps do not ufe indifferently all forts of rotten wood, but know how to diltinguifh that which is proper for their purpole.
The nettle, the mulberry, and the hemp, are ranked in a clafs which is called incomplete, becaufe thefe plants want the flower, or the calix, or the petala, or both thefe parts. Kcempfer, in his Catalogue of the Plants of Japan, mentions one which in the Japonefe idiom is called white hemp, and to which that author has given the appellation of the great common nettle, which bears real flowers, and yields ftrong
thread,
thread proper for linen and other works. The fame author calls the mulberry, which is employed for paper, the papyrus, whofe fruit refembles that of the mulberry, and whofe bark is made into paper. Seba has given it the name of the mulberry-tree, which affords paper, and is cultivated at Japan. Pere du Halde fays, tom. ii. p. 212. that before the mulberry branches, with whofe leaves the Chinefe feed their filk-worms, are deftined to the fire, fome people ftrip off the thin bark from thefe branches, and make of it a kind of paper, which is ftrong enough to cover their ordinary umbrellas, efpecially when it is oiled and coloured. I do not here join the other plant which the Japonefe employ, becaufe Koempfer leaves it uncertain under what clafs it ought to be ranged. He calls it the papyrus, which lies upon the ground, yields milk, has plated leaves, and a bark proper for making paper. For the fame reafon we likewife mention here a tree, which Sioane calls the tree with broad, long, jagged, fmooth, fhining leaves, like thofe of the laurel, whofe interior rind may be extended into a fine cloth like muflin for ruffles; this tree is commonly called lagetto, tom. ii. tab. 168, 169. The people among whom this tree is found, make cloaths of it. It is needlefs to mention the ufe of hemp in making paper, every body knows we ufe it for that purpofe; but hitherto no paper has been made of hemp, until it had paffed through the ftate of rags. Yet Peru du Halde reports, that at Nangha, paper is made of hemp beaten and mixed with lime-water, tom. iv. p. 373. And this confirms the notion I entertained, that the falks, or what falls upon the form in dreffing hemp or flax, might ferve for the fame purpofe. We fhall fpeak of this below.
The malvaceous feecies difpute the preference with all the other claffes, for this kind of employment. All the kinds of the mahot, yield a fort of thread proper for cordage. Sloane mentions two mallows, one of which be names the mallowtree on the fea-fhore, with round, fmall, prickly leaves, white below, which bears a yellow flower, and a bark that may be made into thread. Catalogue of the Jamacia Plants, p. 95. This is one of the mahots of father du Tertre. The other is mentioned by the name of the mallow-tree with round leaves, a very large flower of a fine red colour, like the fleur de lys, and a bark which yields thread. Ibid. This is another of du Tertre's mahots. It would be unneceffary to mention the different kinds of cotton which are ufed in making paper. I have oblerved above, that cotton-paper was invented in the eaft, and that in China, paper was made of cotton-rags; and, indeed, thefe are not neglected even in our manufactures. Although I have advanced, that people have never fought after plants that were far removed from thofe clafles which had been formerly ufed, I think I ought to except the flax, the linden-tree, and the thifle.
Linen-rags have entered, and now enter, into the compofition of paper: the workmen, in picking the rags, reject only thofe which are produced from woollen ftuffs and hides of animals: they pretend that thele ftuffs cannot be beaten, but this they fay, perbaps, becaufe they are beaten with more difficulty than produced from the fibres of plants, the parts of which are more eafily divided. They do not reject the others in thofe paper works where coarfe grey paper is made; the bufinefs then is to have a very fine pafte, and the hair may be beaten fufficiently, to incorporate with the fibres of other rags, although they may not be fo well bruifed.
Vellingius, in his little treatife upon the Utility of cultivating Plants, pretends that the down of certain thiftles has been ufed in making fuffs: ex acantii lanugine demptis finis, veftes effecerunt, fays that author. By the word acantium we muft underftand a kind of thiftle. The antients often employed the word in this fignification. The linden-tree was and is ufed in making ropes, a circumfance that denotes a flexibility in the fibres of that tree, capable of undergoing the neceffary preparation for making paper.
What Vellingius, whom we have mentioned, has writ concerning the luffa Arabum, which may be confidered as a kind of cucumber, ought to induce us to examine feveral plants. He fays, that the infide of the fruits when the feeds are taken out, is no other than a little net that feems to be made of flax; whence he conjectures, it would yield a thread like that which the Ethiopians and Indians, according to Theophraftus, made of their cotton-apples, and the Arabians, according to Pliny, of their gourds.
I know no author but Seba, who has fufpected that paper might be made of fea-plants and alga marina. When I read that part, I recolleeted that I had been ftruck with the whitenefs which it will affume, bleached no doubt by the fpray of the fea-warer, by the rains and dews, and lofing that glue with which all the marine plants are covered. Upon the feacoafts, the fucus is ufed for dunging the vines and circumjacent lands; and I have obferved that this, when tranfported to the grounds, likewife acquires a certain degree of whitenefs, and, like the alga, preferves its figure, together with a ftrong confiftence, nothing is fo common on the fea-fhore as the fucus, which in fome places covers the coaft, and nothing can be more eafily collected.
There is another plant which is likewife found on the feathore, but more commonly in ponds, and the bafons of gar-
dens; it is the conferva of Pliny, and in fome authors bear: a name that feems to promife confiderable utility. Imperan tus calls it the fea-flax. Loefel, in his Catalogue of the Plants in Pruflia, gives it the name of aquatic mofs, compofed of very fine filky filaments. I can fcarce doubt, that fome people have attempted to fpin this plant. When it is wet, it has a flexibility that deceives people, and the great quantity of it found in thofe places that favour it's multiplication, and by which means the fibres are interwoven in fuch a manner, as to produce a kind of ftuff like coarfe camblet, muft have more than once induced people to try to make the plant ufeful in the commercial arts. I know that a great princefs, ftruck with the quantity and finenefs of this plant, was defirous of having it fpun; but it becomes too brittle when out of the water, to be fufceptible of this operation. I Thall, in the fequel, relate the fuccefs I had in treating it, with a view to the paper manufacture.
I thought it neceffary to enter into a circumftantial detail of the plants which have been ufed in the compofition of paper, and thofe which may be ufed for that purpofe, in order to give, as before obferved, a botanical hiftory of that manufacture; and by the different claffes which I have defcribed, the public fees the plant which relate to it. At the fame time it muft be owned, that fome of thefe claffes are not fo rich here as in foreign countries. We are altogether ftrangers to the clafs of the palmiferi: but by way of recompence, the gramineous clafs is in greater abundance. The courfe of fome rivers is retarded by a kind of foreft of reeds, ruthes, and flags; and in fome places nothing is fo common as mallows: there is fcarce a perfon among us, who is not fometimes incommoded by the quantity of nettles and thifles, Cotton is nothing but a kind of down that furrounds the grain of that plant. I have therefore included in this defign, the down of different plants, fuch as that of willows and linagoftris. The grounds planted with willows, are covered at one feafon with the fall of the cat's tails of thefe trees; and fome meadows, efpecially thofe that are barren, are full of the linagoftris.
The ftalks of hemp and flax are compored of two parts, the filamentous and that which partakes of the nature of pith. We cannot poffibly doubt the utility of the firft, which indeed compofes our paper. Neverthelefs, this thread is rejected as ufelefs. It would therefore be a great advantage to render that part ufeful, even though the other never conld ferve any purpofe. What prodigious quantities of materials would be acquired by thefe means! We know how much hemp is brought from Berry and Cbampaign in France. In the rope-works, and efpecially thofe of the arfenals belonging to the fea-ports of that kingdom, great refources would be found; they are now made into tow, which often mouns to fuch a quantity, that they are obliged to throw it away, or make ufe of it as dung for the beds in their garden; in all the Lower Poiftier, there is fcarce a peafant who does not referve a piece of ground for flax-feed.
It is not therefore for want of materials, that we do not endeavour to procure a paper which may vie in beauty with our white paper, or at leaft furnifh us with a kind proper for covers and bundles. Perhaps I may be thought to have found too many plants fufceptible of this operation, and feem inclined to transform every thing into paper. Although what is related of foreign plants, may be a prejudice ftrong enough to infpire a notion of the utility we may reap from our own plants, I know at the fame time, we may be impoied upon by analogy, which is always deceitful. In other refpects, the experiments which I wifh we couldrattain, give reafon to perfection to which I have made, although far from that hope, that one day we may acquire a certain degree of that perfection.
Thinking I ought firft of all to examine the falks of hemp as the moft common materials, and thofe from which I thought I had reafon to expect fome fuccefs, I caufed them to be fteeped in water for a certain time, that they might acquire a degree of rottennefs, which would facilitate their erituration. When they were fuppofed to be fufficiently rotten they were beaten, but by a miftake, which by the bye, I had endeavoured to avoid, thefe ftalks were beaten with mallows and nettles, which I had ordered to be gathered and left to rot in a feparate place. Yet thefe different fubftances incorporated together: though it muft be confeffed, that their connection was not very ftrong, but, on the contrary, produced a very imperfect tiflue.
I look upon this effay, as fcarce deferving to be recounted: yet it Chews, that the leaves of piants as well as the filaments, may unite and incorporate; and that, if thofe different parts had been beaten feparately, and a proper degree of trituration beftowed upon each, fo as to form a well-binding paffe, fomething better might have been produced. I will even venture to fay, this doubtiefs would have been the cafe, having obferved what happens in ponds and marthes. Nature, more tranquil than art, frequently forms a very fine paper ot plants that rot in thofe watery places. I bave found in fome of the pouls of water of the foreft of Dourdon, when they have been entirely dried up, maffes of a fubfance that altogether refembles paper. They were compofed of feveral lamina or
leaves, eafily feparated from one another; they tore like paper, and, though I could not then determine whether they were formed of rotten leaves, or only a kind of byffus, it feemed to me that, if any of this laft plant entered it's compofition, there was likewife in it part of leaves, trees, and other plants. I have not fulfilled the aim which this obfervation infiried me with; diverted by a variety of other occupations, I could not befow upon this work the time, attention, and neceffary precifion it required. It was more eafy for me to repeat the experiment upon hemp alone: I therefore put in water to rot fome very fine hemp, well cleaned from the parenchymatous part, or pith that falls from the inftrument in drefling it: the paper which it produced was very ftrong, and convinced me that it was very eafy to make it of that part of the hemp which is thrown away in rope-works, or other workhoufes where it is dreffed or employed.
The conviction I reaped from this experiment touching the hemp, neceffarily influenced my notions concerning cotton, that down much fofter and more flexible than hemp, mult eafily undergo the neceflary preparation for making paper. I ought indeed, to regard the experiment I made upon cotton as fuperfluous, after that which I had tried upon hemp; yet as authors, thofe at leaft whom I have read, do not fay that cotton paper was made immediately of cotton, before it had paffed through the ftate of cloth, and Pere du Halde reports that the Chinefe make theirs with cotton rags, I thought proper to remove that doubt entirely, becaufe it feemed to me effential that no fcruple fhould remain with regard to that fact, and the fuccefs feemed to influence all thofe parts of plants to which we commonly give the name of down. Of this kind there are feveral, namely the linagoftris, the cat's-tail of the willow, dog's-bane, and trumpet-wood; which, though not fo eafily fpun as cotton, feem to me fufceptible of that confiftence which is neceffary to the pafte or pulp of which paper is made: the cotton being therefore, beaten to a fufficient degree, produced a fmooth white paper, of a ftrong texture, which promifed to have all the advantages of our own.
I will not, however, pretend to propofe it as an advantage to make paper of cotton: the hemp-rag is a material in our poffeffion, which would be altogether ufelefs if we did not know how to employ it for this purpofe; but by knowing, from this and other experiments, that it is poffible to make paper with thefe different materials, even though they have not paffed through an intermediate ftate, we afford a fuccedancum to thofe who are in want of ordinary rags, which are not fo common as people may imagine, in countties remote from great cities.
In fome places of our American colonies, cotton is more common than hemp-rag, which may be the means of making that trade more lucrative, and of greater confequence; but perhaps this is giving views of utility which many other reafons may render ufelefs: befides, to know whetber or not it would be ufed to advantage, would require more delicate experiments, and a more minute enquiry touching the price which that paper would bring, and the profit which is acquired in the ordinary cotton-trade. I have neither made the calculations nor the experiments that are requifite; all that I am in fearch of, is the poffibility of the thing, and not it's advantages or difadvantages.
I proceeded then to try the other downs, though I have been able only to examine that of the dog's-bane, called wad, and of the two kinds that are obtained from thifles, that only with feeds of divers kinds, which are crowned, but not the rind which the antients obtained from the leaves that have been mentioned above. This experiment did not fucceed fo well as that which I made with cotton. The pafte formed of the down of thefe plants was not of fuch a good confiftence or coherence as that of the pulp made with cotton; yet with much care and precaution, it was formed into fheets of paper ftrong enough to be hung upon cords to dry, but very eafily torn; the parts did not adhere, they not being fufficiently interwoven and bound together; and without this quality no paper can be good.
So great a difference between thefe kinds of down, may appear fingular, but this difficulty will be explained by the following obfervation. That which is upon wad and thiftle, is not, properly fpeaking, a down, but formed of a fort of hair, fuftained upon the feeds of thefe plants: thefe hairs are commonly called, by botanifts, tufts and plumes, becaufe they form upon the feeds a kind of tuft, and many of them pufh out branches on the fides, by which they refemble real plumes, or feathers.
Cotton, on the contrary, is a down that furrounds the grain, without order or regularity, fticking clofely to it, without any conftant figure. When this is pulled off, and the feed wiped clean, we can eafily perceive that it iffues from fmall points, like fo many holes. If this operation is performed while the fruit is young, the thread or hairs are found fofter, and lefs dry, than when it is farther advanced; and it is difficult to refute the notion, particular as it is, that cotton is no other than a matter which tranfpires from the feed. When we know what forms the down of certain thifles which we before have mentioned, the fuggulatity of this notion vanifhes.

The leaves and flalks of thifles are roughened with a quaño tity of hairs, which are fo many pipes giving iffue to a clear limpid liquor, a little vifcious and glutinous, which dries in the air, and alfumes a confiffence like that of cotton: nay it really is fo to fuch a degree, that when this down is collected, it is eafy to form a thread of it between the fingers: fuch an obfervation may, perhaps, appear very delicate to make, and thence doubtful and hazardous; yet it does not require fo much attention as people may imagine; all that is neceffary is, to procure a microfcope with a focus of fome inches, to obferve the threads, and the kind of wheel in which they are formed: and both thefe being diftinguihed, you may perceive, by the naked eye, all that palfes in this operation of nature.
That this may be feen the plainer, you may chufe the carduus benedictus of the Parifians, or that which has the round head, covered with down: thefe are, in my opinion, more proper than many others of the fame clafs, for proving this obfervation: the interior part of the fcales that form their head, is provided with an infinite number of glands, that filtrate a liquor like that which I have mentioned; and this liquor changes in the air to threads, which form the down that furrounds the heads of thofe thifles. This will not admit of a moment's doubt, feeing this thread may be perceived forming under the very eye: if we will gradually and cautioully feparate the fcales from one another, we then have the pleafure to fee this matter lengthen and extend like gum, rofin or wax, and in a moment change into white threads, refembling thofe of paper.
Now we perceive the fimilitude there is between cotton and the wool of thiftles, and the difference between both and the pretended down of thofe laft and of wad. The cotton iffues from the feeds, which it furrounds like the wool of thiftleheads, and both fweat from certain parts, which may be confidered as a kind of glands. On the contrary, what is fuppofed to be down in the thifte, confifts of parts that are ftiff and dry, confequently brittle, eafily grouped into little fmooth maffes, which are not compofed of a quantity of fmall fibres, that partly detaching themfelves from one another, form in the cotton and thiffle-wool that fuftnefs and flexibility, which makes what in thefe fubftances is commonly called the cottoneous part, a quality which renders them ealy to mix together, when they are beaten or pounded, in order to form a pafte for paper. Muft we, therefore, intirely reject thefe downs? No, furely; perhaps in the twinkling of an eye they may be rendered ufeful. I know it may be difficult to catch that point of view, than which nothing requires fo much addrefs in improving the arts; but we fhall' endeavour, at the conclufion of this article, to give fome hints on the fubject; for it would be very advantageous to find the means of employing a kind of down which is in fuch abundance, and cofts nothing but the trouble of gathering it.
We fhall now proceed to another experiment, which, though unfucceffful, ought to be related: it was tried upon the alga marina, which Seba exhorts us to examine. Under this name is comprehended not only that which is ufeful in packing glafsware, and wrapping round the bottles of liquor which come from Montpelier, and from thence called the glafs-makers weed; we lay, not only this is regarded as an alga, but likewile the fucus, or varus, which has a better title to that name, fince the glafs-makers weed is not properly of that \{pecies, but of the clafs of dog's-grafs: however, we have always mentioned it as an alga, becaufe it is better known by that than the name of cyperus.
This plant having been treated like the others beforementioned, did not form the pafte that would cohere in any fhape, or it's leaves has but few fibres: they are, in fome fort, compofed of parenchymatous parts, which may be confidered as a bundle of fmall veficles, the fphericity of which is an obftacle to that union that muft obtain among the parts of paper. Two fpheres can only touch one another in one point; this is a truth demonftrated in geometry, as well as this other, that plain furfaces may be in contact through their whole furfaces; a property which facilitates the intertexture of the parts of cotton-hemp in the compolition of paper, and to which the other is an obftacle. To this I likewife attributed the little fuccefs I had an experiment which I made with corralloides a kind of plant of the glafs of alga, which abounds in all our woods, and in fome places almoft intirely covers the trees and rocks. Thefe plants are in fome meafure diffolved by the trituration; and when they were fpread in water, according to the practice of making theets of paper, they could not be re-united upon the form. The fame thing happened to the conferva of Pliny, which is alfo of the fame tribe. It may be confidered as a lofs to the paper-manufacture, that we cannot give a body to thefe plants when they are triturated: the whitenefs they acquire when drying, and their prodigious quantity, make us regret this circumflance, efpecially if they cannot be employed with fuccefs in fome other manufacture; and we can eafily conceive what impieffions the report of the commilfioners of the academy mult have made, upon the minds of thofe who confulted it about the advantage that might be reaped from a cottonous matter they had gathered in the pond of Petz, at the diftance of a league
and a half from Metz, and was found to be no other than dried conferva, which did not deferve the attention that had been beftowed upon it; for they had already founded great hopes on the difcovery, relating to the trade of the country. A fubftance that might, perbaps, turn out to more advantage, is the cods of common catapillars, which, in fome years, are in fuch plenty as almoft to cover the trees. Thefe cods, though not proper for fpinning, may, neverthelefs, enter into the compofition of paper. The eflay which was made gives room to hope for the fuccefs. In effect, thefe cods, cleared of the leaves that ftuck to them, being beaten, were eafily reduced to a kind of pulp, which being fpread in the water, was without difficulty collected on the form, and made into theets of paper that might be brought to a degree of perfection, which it mult be owned they had not: neverthelefs, though this paper ought rather to be ranked with the coarle brown than with the white fine fort, it gives room to believe, that it may in time acquire a certain degree of whitenefs; fome of the fheets were whiter than others: nay, the fame fheets were fometimes whiter in one part than another: and the bufinefs will be, to find a remedy for this inconvenience. One of the beft (which, by the bye, I could not employ) is, without contradiction, to pound the cods in the ordinary mortars of the mills, or bray them under the cytinder: the quantity of cods gathered by my direction was not enough to fill the mill-mortar, fo that the workman made ufe of an ordinary mortar, which was attended with two defects; the fubfance was not beaten uniformly, and the foreign bodies were not difcharged : the ece evils are prevented in the mill: the peftles are always moved equally, or at leaft more equally than with the hand of a workman who ufes an ordinary mortar: fo that the fubfance muft be more effectually triturated in the mill. Befides, the mortars of the machine are open on one fide, near the bottom: this bole is covered with a hair-cloth, the interftices of which are large enough to tranfmit what has undergone a fufficient degree of trituration. Thus the pafte becomes whiter, an advantage we cannot obtain from any ordinary mortar, and which the filk paper I made could not have: for fome of the fheets were frinkled with feveral little black points, occafioned by the excrement of the catapillars, which were interwoven with the fiyk of the cods; and the water which paffes into the mortar of the mill would have carried off thefe excrements; nay, perhaps the filk lofes a part that ferves no purpofe but to render the paper of a greyer colour, when it continues mixed in the pulp. This part is more eaflly diffolved and difengaged from the pafte by the water that continually runs through the mortars. The fmall fragments of leaves that may be left after the picking, will allo be beaten with more difficulty in a common mortar, and the paper will be fooiled by them, as it happened to fome theets of that which we made.
This inconvenience would be avoided by putting the cods in the mill mortars, where, at leaft, the leaves would be more eaflly beaten, and this they might be, in the ftare wherein they appear in the cods: for the catapillars have divefted them of their parenchymatous parts, on which they feed, and nought remains but the fibres, which by the net-work they form, fupported the parenchyma that filled up the interftices. Though thefe fibres be like thofe of a tree, they are, at the fame time, more flender and fine, and have already by the work of the caterpillars, acquired an elaboration that wants only a little of our affiftance. The beginning of rottennefs might fuffice. The preparation given to the rags before they are put under the peftle, is one of the methods that may be the moft ufeful on this occafion. The rags being picked, are cut into fmall pieces, and laid in heaps where they grow warm, and acquire a kind of fermentation, that gives them a degree of rottennefs, which renders them the more fit for trituration. In the opinion of the workmen, this prepatation is fo indifpenfibly neceffary, that, when the rags are clean, and deftitute of the greafe which is then reguifite, they think themfelves obliged to fupply this defect. The fame method may be taken with cods mixed with leaves. Thefe leaves, affifted with a little moifture, will heat and rot to a certain degree, which it is our bufinefs to diftinguifh, that then they may be beaten as eafily as the filk.
It were to be wifhed that thefe leaves were not mixed with the filk, whereas the greatelt part of the cods are compofed of them; yet there are fome which confitt of pure filk, and are ufually found in the angle formed by the union of two branches. Thefe are no other than threads of filk fretched from one bough to another, in different ways. The others, confifting partly of leaves, are placed in the middle of leaves, which, after the caterpillars have partly confumed, they bind and unite them together, thus forming larger or fmaller bundles of pods, of the ends of little branches. There is no room to doubt that the filk of other caterpillars might likewife be employed: the cods of pure filk, and even thofe that are partly formed of the hair which covers the caterpillars, are equally proper materials for paper: nor fhould the cods belonging to the caterpillars of the pine-tree be rejected. We ought, however, to be fure that it is poffble to make paper of filk; but is it made of that fubftance in China? Though it may appear unneceffary to refolve that queftion, I will ex-
amine the reafons that are advanced to prove that it is not made of filk. It is ufually faid, That if the Chinefe paper, which is pretended to be made of filk, was actually compofed of that fubftance, it would in burning twift itfelf different ways, and be fhrivelled up like parchment, which is made of prepared theep-fkin; whereas that paper burns as equally as that made of the rags of hemp-cloth and linen. Thefe facts cannot be contradicted; but yet the filk paper which I made burned like ordinary paper, though the cods, which were the chief materials, fhronk up in burning, in the fame manner as parchment. What, therefore, is the caufe of this difference? I believe we muft feek for the explanation in the tiflue or texture, which is very different in the paper from what it was in the cod; there the threads are long, difpofed in different manners, fo as that one fingle thread often forms feveral folds.
The fibres of paper are very fhort, and, though differently arranged and bound together, the connection is not fo ftrong: it is no longer one or feveral threads of a confiderabie length. It happens then, that when the cods are burned, their threads are drawn different ways; thofe of one furface draw thofe of another, and, therefore, they muft wift and turn fometimes to one fide, and fometimes to another; whereas the fibres of paper being fo fhort, and connected together only by juxtapofition, they muft act very little, if any thing at all, upon one another, confequently will burn equally. What proves the juftnefs of this application is, that, in paper, there is fometimes one place where the filk has not been well beaten, and is ftill too much interwoven, and that place always is fhrivelled up in burning. This explanation is, perhap, fufficient to clear up the queftion relating to filk paper; and how foever the Chinefe paper may be made, I think we ought to be perfuaded that it is poffible to make it of filk: neither ought we to entertain any doubt about the ufe to which we might put the ftalks of hemp and flax; and I think we have seafon to hope, that one day an advantageous ufe may be found for the different kinds of down, not only of the cotton, of which, it is, perbaps, very fingular to have entertained any fufpicion, but alfo of the thiftle, the trumpet-wood, and the wad, which more than any other would merit an happy fuccefs, it's paper having a glofs and filver brilliancy which might be of fome ufe in many cafes.
All that remains, therefore, in order to fulfil our hope of this down, as well as of the others, is to find out fome method, perhaps very eafy and fimple, and, for that very reafon the more difficult to invent. If, for example, when the materials are ready to be beaten, inftead of fimple water, we fhould fubftitute a gummy or mucilaginous water, like that in which have been boiled the parings of leather, roots of marth-mallows, the great comfrey, or fuch fubfances, the paite by thefe means would be endued with a kind of glue, which might be-an expedient by means whereof the parts would cohere more ftrongly; perbaps it would be fufficient to prepare in this matter the water of the tub in which the pafte is diluted when it comes from under the peftle.
If, notwithftanding this preparation, the pafte fhould not have body enough, perhaps by fubftituting compreffion in the room of immerfion, which is the ordinary method of forming the fheets of paper, we thould be able to render the parts of the pafte more coherent; and I imagine this is the method which muif be taken with that cottoneous fubftance that owes it ${ }^{2}$ origin to the conferva of Pling. The heaps formed by the reunion of the different feet of this plant, are already of a certain thicknefs, and not eafily torn; fo that, in extending the pafte made of this plant, we might give what thicknefs we would to every theet, and the compreffion would afterwards do the reft. It might be found impracticable to make fheets as thin as thofe of ordinary paper ; but even if we could do no more than make pafteboard, it would be an advantage which we ought not to neglect, but, on the contrary, profecute with care. An enquiry into the materials which may be ufed for making of paper, by Mr. Guettard, of the Royal Academy of Sciences, and phyfician to his ferene bighnefs the duke of Orleans.

## REMARKM.

The reader will pleafe to obferve, from this account of divers materials whereof paper may reafonably be prefumed to be made, the great utility that a knowlege in natural hiftory has to advance the manufactural arts; and, therefore, how beneficial it may prove to our artifts and the nation, to have thofe things duly propagated in a trading empire. Every artifan and manufacturer will hence difcern how importantly ufeful to their refpective employments thofe gentlemen are, who have ftudied the productions of nature, and have fuggefted rational experiments thereon, in order to promote the trafficable arts. Princes, ftatefmen, and landed gentlemen in general, muft be convinced, from inftances of this kind, how neceffary it is to encourage and honour thofe who apply themfelves to ftudies that have fo happy a tendency to infpire a general induftry and ingenuity, and to advance the arts. Thofe who are wholly buffed in the active life, have rarely leifure for refearches of this nature, or a proper turn to make

## P A P

xperiments fuitably adapted to the advancement of their reveral ranches of bufinefs: but it well becomes thofe who are enaged in the hurry of life, to devote fome portion of their ime to the perufal of books wrote upon Natural Hiftory, and for the improvement of the manufactural and mechanic arts. By this means our paper, as well as other manufactures, may arive at their ultimate perfection, and be made from fuch merials as are little fufpected. See the articles Musfom Remarks thereon], and Royal Society of London. cumbustible Paper is made of the Afbefos [fee Asbestos] which will bear burning without injury; and if an ink could be made of the fame permanent nature, it might be a great prefervative of writings of confequence from that conmine element, in cales of accident.
Mr Lloyd, in the Philofophical Tranfactions, No. 166. defribes the manner of making this paper. He pounded a quantity of the afbeftos in a ftone mortar, 'till it became a downy fubfance, then fifted it through a fine fieve, and by this means purged it pretty well from it's earthy parts; fo that what earthy or ftony matter he could not leparate before, or in the pounding, being reduced to a powder, came through the fearce. This done he brought it to the paper-mill, and putting it in water in a veffel juft bigenouugh to make a fheet with fuch a quantity, he ftirred it pretty much, and defired the workmen to proceed with it in the ufual method, with their writing-paper mould, only to ftir it about always before they put it in their moulds, confidering it as a far more ponderous fubftance than what they ufed, and that, if not immediately taken up after it was agitated, it would fubfide.
The paper made thereof proved but coarfe, and too apt to tear ; but there is reafon to believe it might be much improved, in cafe it was pounded in one of their mortars for the fpace of 24 hours.
Paper is of various kinds...- With regard to colours, they are divided into white, brown, blue, \& c . and to quality, into fine, fecond, baftard, fuperfine, $8 \mathrm{cc} .-$ - With refpect alfo to ufe, into writing, printing, preffing, cap, cartridge, copy, poft, \&c.---With regard to dimenfions, into demy, crown, fool'scap, pot, royal, fuper-royal, imperial, elephant, atlas, \&cc. There is allo printed, raifed, and imboffed paper, wherewith to hang rooms, and wherein there is a large confumption, and in whieh our artifts have arrived to a great perfection.
Marbled Paper is a fort varioully fained with divers coours, made after the following manner :
Take clear white gum-tragant, put it into an earthen pan, pour frech water to it, 'till it is two hands high over the gum ; cover it, let it foak 24 hours, then ftir it well together, add more water to it, keep it often ftirring for a whole day, or longer, and it will fwell according as you find your gum is frefh or fale, for the frefh will diffolve fooner than that which has lain by a long time. When you find it well diffolved, pour it through a cullender into another pan, add to it more water, and, after it has ftood a little and been ftirred about, ftrain it thtough a clean cloth into another clean pan; keep it well covered, to hinder the duft, or any other thing from coming to it; this water, when you go to make ufe of it in marbling your paper or books, mult be neither too thick nor too thin ; you may try it with your comb, by drawing the fame from one end of the trough to the other; if it fwells the water before it, it is a fign that it is too thick, and you muft add in proportion a little more water.
Your trough mult be of the bignefs of your paper, or rather fomething wider, and about four inches deep.
After you bave filled your trough with the aforementioned water, and fitted every thing for the work, then (before you lay on your colours) take a clean theet, and draw the furface, which will be a thin fort of film, off of it ; then have your three colours, namely indico mixed with white lead, yellow oker, and rofe-pink, ready prepared at hand, and for each colour have two galley-pots, in order to temper them, as you would have them in different thades.
All your colours mult be ground very fine with brandy.
The blue is eafily made deeper or lighter, by adding more or lefs white-lead.
The yellow ufed for that purpofe is either yellow orpiment or Dutch pink.
For blue, grind indigo and white lead, each by itfeif, in order to mix that colour either lighter or darker.
For green, take the aforefaid blue and white, and fome yellow to it, and temper it darker or ligher, as you would have it.
For red, take either lake or rofe-pink
Every one of thefe colours are, as we faid before, firft ground very fine with brandy, and, when you are ready to go to work, add a little ox or fifh-gall to them ; but this mult be done with diferetion, and you may try them by frinkling a few drops upon your gum-water; if you find the colour fy and fpread too much about, it is a fign of too much gall, which, to remedy, add more of the fame colour that has none, but when you fee the colour fpread, and retract itfelf gently, it is right.
When thus you have your colours, and all things in good order, then take a pencil, or the end of a feather, and fprinkle or put firf your red colour, then the blue, yellow, green, \&c.
begin your red from No. i, and go along your trough to No. 2; alfo the blue from No. 3, all along to No. 4; the yellow and green put bere and there in the vacant places; then with a bodkin, or a fmall Ikewer, draw a fort of a ferpentine figure through the colours, beginning from No. I to No. 2: when this is done, then take your comb and draw the fame ftraight along from No. 1. to No. 2. If you would have fome tutnings or fnail-work on your paper, then with a bodkin give the colours what turns you pleafe.
Thus far you are ready in order to lay on your paper, which mult be moiftened the day before, in the fame manner as book-printers do their paper for printing; take a fheet at a time, lay it gently upon your colours in the trough, 'prefs it nightly with your finger down in fuch places where you find the paper lies hollow; this done, take hold at one end of the paper, and draw it up at the other end of the trough, hang it up to dry on a cord, when dry, glaze it, and it is done. You may alfo embellifh your paper with ftreaks of gold, by applying mufcle gold or filver, tempered with gum-water, among the reft of the colours.

## To gild paper.

Take yellow oker, grind it with rain water, and lay a ground with it upon the paper all over; when dry, take the white of eggs, beat it clear with white fugar-candy, and frike it all over; then lay on the leaf gold, and when dry, polifh it with a tooth.
Some take faffron, boil it in water, and diffolve a little gum with it; then they ftrike it over the paper, lay on the gold, and, when dry, they polifh it.

To filver paper, after the Chinefe manner, without filver.
Take two fcruples of clear glue, made of neats leather, one fcruple of white allom, half a pint of clean water, fimmer the whole over a flow fire, 'till the water is confumed, or the fteam ceafes; then your fheets of paper being lald on a fmooth table, you dip a pretty large pencil into that glue, daub it over as even as you can, repeat this two or three times, then fift the powder of talc through a fine fieve, made of horfe-hair or gaufe, over it, and then hang it up to dry, and, when dry, rub off the fuperfluous tale, which ferves again for the fame purpofe. The talc you prepare in the following manner:
Take fine white tranfparent tale, that which comes from Mufcovy, boil it in clear water for four hours, then take it off the fire, and let it fland fo for two days: then take it out, wafh it well, and put it into a linen rag, and beat it to pieces with a mallet: to 10 pounds of talc add three pounds of white allom, and grind them together in a little hand-mill, fift it through a gauze fieve, and being thus reduced to a powder, put it into water, and juft boil it up: then let it fink to the bottom, pour off the water from it, place the powder in the fun to dry, and it will become a hard confiftence. This beat in a mortar to an impalpable powder, and keep it for the ufe abovementioned, free from duft.

## To make fine red paper.

Take a pan full of water, put fome quick-lime into it, to make it into a lee, and let it fand over-night; then put Brazil chips into a clean pot, about balf full, fill it with the lees, and boil it to half, and, when it is juft hot, add to it a little allum; when you would ufe it, mix it with a little gum or fize, and then with a pretty large pencil lay your colour on the paper with an even hand.

## Of Japan Paper.

The paper is made in Japan of the bark of the morus papyrifera fativa, or true paper-tree, after the following manner: every year, when the leaves are fallen, or in the tenth Japanefe month, which commonly anfwers to our December, the young thoots, which are very fat, are cut off into three feet long, or Chorter fticks, and put together in bundles, to be afterwards boiled with water and athes.
If they fhould grow dry before they can be boiled, they mult be firt foaked in common water for about 24 hours, and then boiled. Thefe bundles or faggots, are tied clofe together, and put upright into a large and fpacious kettle, which muft be well covered, and then they are boiled 'till the bark fhrinks fo far, as to let about half an inch of the wood appear naked at the top. When the fticks have been all fufficiently boiled, they are taken out of the water, and expofed to the air 'till they grow cold; then they are flit open length ways, for the bark to be taken oft, which being done, the wood is thrown away as ufelefs, but the bark dried, and carefully preferved, as being the fubftance out of which they are in time to make their paper, by letting it undergo a farther preparation, confifting in cleanfing it anew, and afterwards picking out the better from the worfe.
In order to this, it is foaked in water for three or four hours, and being grown foft, the blackiln ikin which covers it, is fcraped off, together with the green furface of what remains, which is done with a knife, that they call Kaadfi Kiufaggi,
tat
that is, a Kaadi Razor. At the fame time allo, the ftronger bark, which is of full a year's growth, is feparated from the thinner, which covered the younger branches, the former yielding the beft and whiteft paper, the latter only a dark and indifferent fort. If there is any bark, of more than a year's groweh, mixed with the reft, it is likewife picked out and laid afide, as yielding a coarfe and worfe fort of paper. All grofs knotty particles, and whatever alfo looks in the leaft faulty and difcoloured, is picked out at the fame time, to be kept with the leaft coarfe matters.
After the bark has been fufficiently cleanfed and prepared, and forted according to it's differing degrees of goodnefs, it muft be boiled in clear lye. As foon as it comes to boil, and all the while they keep it on the fire, they are perpetually firring it with a ftrong reed, pouring from time to time fo much fref lye in, as is neceffary to quench the evaporation, and to fupply what hath been already loft by it. This boiling muft be continued 'till the matter is grown fo thin, that being but lightly touched with the finger, it will diffolve and feparate into flocks and fibres.
Their lye is made of any fort of athes in the following manner: two pieces of wood are laid a-crofs over a tub, and covered with fraw, on which they lay wet alhes, and then pour boiling hot water upon it, which as it runs through the fraw into the tub underneath, is imbued with the fame faline particles of the afhes, and makes what they call lye.
After the boiling of the bark, as above defrribed, follows the wafhing thereof. This is a bufinefs of no fmall confequence in paper-making, and mult be managed with great judgment and attention,
If it hath not been wafhed long enough, the paper will be ftrong indeed, and of a good body, but coarfe, and of little value. If, on the contrary, the walhing hath been continued too long, it will afford, it is true, a whiter paper, but too greafy, blotting, and unfit for writing. This part of papermaking, therefore, mult be managed with great care and judgment, fo as to keep to a middle degree, and to avoid either extreme. They wah it in a river, putting the bark into a fort of pan or fieve, which will let the water run through, and ftirring it continually with the hands and arms, 'till it comes to be diluted into a delicate foft wool or down. For the finer fort of paper the walhing muft be repeated, but the bark put in a piece of linen inftead of a fieve, becaufe the longer the walhing is continued, the more the bark is divided, and would come at laft to be fo thin and minute, that it would run out through the holes of the fieve, and be loft. At the fame time alfo, what hard knots or flocks, and other heterogeneous ufelefs particles remain, muft be carefully picked out, and put up with a coarfer fort of bark for worfe paper.
The bark having been fufficiently and thoroughly wafhed, is put upon a thick fmooth wooden table, in order to it's being beat with Aticks of the hard Kufnoki wood, which is commonly done by two or three people, until it is wrought fine enough, and becomes withal fo thin, as to refemble a pulp of foaked paper, which being put into water, will diffolve and difperfe like meal.
The bark being thus prepared, is put into a narrow tub, with the fat thimy infufion of rice, and the infufion of the oreniroot, which is likewife very flimy and mucous. Thefe three things being put together, muft be ftired with a thin clean reed, 'till they are thoroughly mixed in an uniform liquid fubftance of a good confiftence.
This fucceeds better in a narrow tub. But afterwards the mixture is put into a larger one, called in their language fine, which is not unlike thofe made ufe of in our paper-mills. Out of this tub the leaves are taken off, one by one, and proper patterns, made of bulrufhes inftead of brafs wire, and called mils. Nothing remains now but a proper management in drying them. In order to this, they are laid up in heaps upon a table, covered with a double mat, and a fmal piece of reed (which they call kamacura, that is, a cuthion) is put between every leaf, which ftanding out a little way, ferves in time to lift them up conveniently, and take them off fingly. Every heap is covered with a fmall plank or board, of the fame fhape and fize with the paper, on which are laid weights, firf indeed fmall ones, left the leaves, being then as yet very wet and tonder, fhould be preffed together into one lump, but by degrees more and heavier, to prefs and fqueeze out all the water. The next day the weights are taken off, the leaves lifted up one by one, by the help of the fmall fick abovementioned, and with the palm of the hand clapped to long rough planks made for this purpofe, which they will eafily ftick to, becaufe of the little humidity fill remaining. After this manner they are expofed to the fun, and when fuil dry, taken off, laid up in heaps, pared round, and fo kept for ufe or fale.
I took notice, fays Kœmpfer, that the infufion of rice, with a gentle friction, is neceffary for this operation ; becaufe of ir's white colour, and a certain clammy fatnefs, which at once gives the paper a good confiffence, and pleafing whitenefs. The fimple infufion of rice-flour would not do it, becaufe it wants that clamminefs, which is a very neceflary quality. The infufion, I fpeak of, is made in an unglazed
earthen pot, wherein the rice grains are foaked in water, and the pot afterwards fhaken, gently at firf, but ftronger by de. grees. At laft frefh cold water is poured upon ir, and the whole percolated through a piece of linen. The remainder mult undergo the fame operation again, frefh water being put to it, and this is repeated fo long as there is any clamminefs remaining in the rice. The Japanefe rice is by much the beft for this purpofe, as being the whiteft and fattelt fors growing in Afia.
The infufion of the oreni-root is made after the following manner. The root pounded or cut fmall, is put into frefh water, which, in one night's time, turns mucilaginous, and becomes fit for ufe, after it hath been frrained through a piece of linen. The different feafons of the year require a different quantity of this infufion to be mixed with the reft. They fay, the whole art depends almoft entirely upon this. In the fummer, when the heat of the air difiolves the jelly, and makes it more fuid, a greater quantity is required, and lefs in proportion in the winter, and in cald weather.
Too much of this infufion mixed with the other ingredients, will make the paper thinner in proportion, too little, on the contrary, will make it thick and parched. Therefore a middle quantity is required to make a good paper, and of an equal thicknefs. However, upon taking out a few leaves, they can eafily fee, whether they have put too much or too little of it. Inftead of the oreni-root, which fometimes, chiclly at the beginning of the fummer, grows very fcarce, the paper-makers make ufe of a creeping flirub called fane kadfura, the leaves whereof yield a mucilage in great plenty, though not altogether fo good for this purpofe, as the mucilage of the abovementioned oreni-root.
The juncus fativus is cultivated in Japan with great care and induftry. It grows tall, thin, and ftrong. The Japanefe make fails of it, and very fine mats to cover their floors.
It hath been obferved, that the leaves when they are frefh taken off from their patterns, are laid up in heaps, on a table covered with two mats. Thefe two mats mult be of a different fabric; one, which lies lowermoft, is coarfer, but the other, which lies uppermoft, thinner, made of nender buin ruhes, which muft not be twifted too clofe one to another, to let the water run through with eafe, and very thin; and not to leave any impreffions upon the paper.
A coarfer fort of paper, proper to wrap up goods, and for feveral other ufes, is made of the bark of the kadfura fhrub, after the method above defcribed. The Japanefe paper is very tight and ftrong, and will bear being twifted into ropes. A thick ftrong fort of paper is fold at Syriga (one of the greateft towns in Japan, and the capital of the province of that name) which is very neatly painted, and folded up, fo much in a piece as there is wanting for a fuit. It looks fo l:ke filken or woollen ftuffs, that it might be eafily mittook for them.
A thin neat fort of paper, which hath a yellowifh caft, is made in China and Tonquin, of cotton and bambooe. The Siamites make their paper of the bark of the pliokkloika. They have two forts of it, one black, and another white, both very coarfe, rude and fimple, as they themfelves are. They fold it up into books, much after the fame manner as fans are folded, and white on both fides, not indeed with a pencil, in imitation of thofe more polite nations who live fartheft eaft, but with a rude ftylus made of clay. Thus far the defcription of the way of making paper in the eaft, which the late learned Becmannus was fo defirous to know, and fo earneftly intreated travellers to enquire into, miftaken however in that thought, and feemed to be perfuaded, that it was of cotton; whereas it evidently appears, by this account, that all the nations beyond the Ganges make it of barks of trees and fhrubs. The other Afratic nations on this fide the Ganges (the black inhabitants of the more fouthern parts excepted) make their paper of old rags, of cotton ftuff, and their method differs in nothing from ours in Europe, but that it is not altogether fo intricate, and that the inftruments they make ufe of are groffer.
To compleat the account propofed to be given of the papermanufactures in Japan, we bave bere added the defcription of the plants and trees whereof it is made.

The Paper Teee.
From a ftrong, branched, lignous root, rifes a fraight, thick, equal trunk, very much branched out, covered with a fat, firm, clammy, chefnut-coloured bark, rough without, and fmooth on the infide, where it adheres to the wood, which is loofe and brittle, with a large moift pith. The branches and twigs are very fat, covered with a fmall down or wool, green, inclining to a dark purple. They are channelled 'till the pith grows, and quickly decay when broke off. The twigs are irregularly befet with leaves, at two or three inches diftance, or more, flanding, on flender, hairy, two inch long foot-ftalks, of a dark purple caft, and the bignefs of a ftraw. The leaves differ much in thape and fize, being fometimes divided into three, fometimes into five ferrated, narrow, unequally deep, and unequally divided lobes, refembling in fubftante, fhape and fize, the leaves of the urtica mortua, being flat
and thin, a little rough, dark green on one fide, and of a lighter and thin, a litterg to white, on the other.
They dry quickly, when broke off, as do all other parts of this tree. Strong fingle fat nerves (leaving a remarkable hollow on the oppofite fide) run from the bottom of the leaves towards the top, and fend out many tranfverfe ribs, almoft parallel to one another, which fend out others ftill fmaller, turned in towards the edges. In June and July come forth the fruits, upon the extremities of the twigs, fanding on thort fooctalks, round, fomewhat larger than a pea, furrounded with long purple hairs, comppled of acini, fiff of a greenith colour, which turns to a black purple when ripe : the fruit is full of a fweetifh juice. I did not obferve, whether or no there are any juli that come before che fruit. whether or no thered is cultivated for the ufe and improverient of the paper manufaculures, on bills and mountaine. The young, or two foot long twigs, are cut off and planted in the ground at moderate diftances, about the tenth month, which foon take root, and the upper part, which ftood out of the ground, quickly drying, they fend forth many fine young choots, which are fitteft to be cut for ufe towards the latter end of the year, when they are come to be about a fathom and a half long, and about the thicknefs of an arm of a middle fized man. There is alfo a wild fort of kaadi, or paper tree, growing on defart and uncultivated mountains ; but it is farce, and otherwife not very proper for paper-making, and therefore never ufed.

1. Thofe who would excel in the art of paper-making, Phould be acquainted not only with the common methods of making the different kinds of paper, but enquire into every fort of material wherewith the fame may be made in the cheapeft and the beft manner.
2. This bulinefs fhould be confidered with a chemical view, in order to thorten and improve the procefs. *
3. The methods of making the whiteft paper, and giving any kind of colour thereto, flould be well known.
4. Attempts thould be made to render paper more durable, and lefs apt to be gnawed or torn by domeftic animals.
5. The ftate of this art Thould be well known, as practifed in China, France, Holland, and England, in order to advance the manufacture for every ufe.
6. The ways of emboffing and printing of paper for hangings, fhould be advanced, the confumption therein being great.
7. The application of this art to the Afbeftos [fee Asbestos], fo as to make incombuftible paper, thould be faudied.
8. A method of difcharging the printers ink out of paper flould be enquired into.
9. The beft way of making filtring paper, for chemical ules, thould be invented.
${ }^{6} 5$ In the journals of the houfe of commons of the kingdom of Ireland, that I have by me, from the inth year of king James I. to the 25 th year of the reign of his prefent majefly king George II. incluffe ; printed at Dublin, upon a good paper, and with a good letter, I was well pleafed to find at the conclufion of them, the following, viz.
Thefe Journals are printed on an Irifh paper, manufactured by Mr Thomas Slator, at Temple-Onge ; and the types caft in Dublin, by Mefficurs Daniel Malone and Robert Perry, letter-founders.

Remarks on Paper, in another Light,
Before the Revolution, there was haridly any other paper made in England than brown; but the war enfuing, and duties being laid, from time to time, on foreign paper, it gave fuch encouragement to our paper makers, that moft of them began to make white paper, fit for writing and printing; and they have brought it, by degrees, to fo great perfection, both for quantity and goodnefs, that they make now above feven eighths of what is confumed in Great-Britain; and feveral of them make it as white and as well bearing as any that comes from abroad.
The neceffity of having writing and printing paper is well known to every body; but it will not perbaps be amifs to make it appear, how profitable and beneficial that manufacture is to Great-Britain.
Rags are the main ingredient paper is made of in thefe kingdoms, which were formerly caft away and thrown to the dunghill, but are now gathered with great care by poor people, who get honeftly their livelihood by it, and would otherwife beg their bread: this employs abundance of hands. When thefe rags are gathered, they are brought to the mill, and this fill employs more hands. After they are in the mill, they let them lie a while, 'till they are fufficiently mellow or rotten, and then put them into the tubs under the hammers, to be beaten into a kind of jelly or white fubfance, looking like milk; and being thence carried into the fat, the chief workman, upon a pair of molds for that purpofe, takes up the fheets or water-leaves (of which he makes 4 or 5000 a day, more or lefs, according to the fize of the paper).
relts, water-leaves, after being well preffed between two felts, and the water well drained out, are carried up into the
drying rooms, and there hung upon a multitude of ropes to dry: and from thence being brought down again into the fizing room, a liquor is there prepared for fizing or gumming every thect; the paper which is for printing being but moderately fized, but that which is for writing more nicely gummed, that it may bear ink.
This paper, after fizing, is a fecond time preffed, and carried up into the garrets, and hung upon the ropes to dry once more ; and then, with a great deal of care and hard labour, preffed a third, a fourth, and a fift time, to make it fonoth and of a good grain ; and then put up into quires and reams, Now, confidering how many hands every individual theet of paper paffes through, before it is brought to perfection, it is plainly perceived that a great number of people is employed in each mill, then thofe who gather the rags up and down in all the counties of England, and bring them to the mills: thofe who make the felts, which takes up a good quantity of wool, being very thick, and for every fheet of paper, a piece of felt of the fame fize, or a little larger; the rope-makers, the mold-makers, the carpenters, wheelwrights, timber-merchants, fmiths, (for this work confumes a great deal of iron, by the hammers beating perpetually upon the iron plates) and feveral other trades, who depend upon the building and keeping the mills in repair ; thofe who fell allum, copperas, cuttings and parings of gloves, parchment and leather ; all which are ufed in fizing or gumming of paper : thefe things confidered, it cannot be denied, but a vaft many people get their livelihood, or receive a benefit, by this ufeful and ingenious manufacture.
There is fill one farther ufe we would make of this information, and this is, to compute by it, the value of paper which was heretofore annually imported from the French nation.
Upon the interruption of our French commerce, in the late queen's wars, we increafed our importation of paper from other countries, and the manufacture of this commodity in Great-Britain. Indeed the manufacture of white paper commenced in this kingdom, not long before that æra. At this time there were about one hundred and twenty fats within 60 miles of London for white paper; which, at 8 reams per day, muft produce near 300,000 reams per annum: and if thofe of Yorkfhire and Scotland, together with the increafe of our importations from Italy and Holiand, were then allowed to produce above 100,000 reams more for the confumption of this kingdom, (as they certainly did, if the whole paper-manufacture of Britain was then, as computed, but two thirds of our confumption) the whole quantity made in this kingdom, or imported from other countries inftead of French paper, amounted to 400,000 reams'per annum ; then fuch therefore mult have been our annualimportation from France, and the value of this, at 5 s . per ream muft have amounted to 100,0001 . per annum.
The paper-manufacture hath, for many years, been eftablifhed in moft countries; though France, Holland, and Genoa, are the places where it has beft fucceeded. The quality certainly depends upon the materials whereof it is made; and where it is done from linen rags, it depends much on the quality of the linen worn in the country where it is made: where that is fine or coarfe, or brown, the rags, and confequently the paper made thereof, muft be fo too. Though the Englifh manufacture of paper is not yet arrived to the perfection of fome other nations; yet it is daily improving, and we doubt not but our artifts will equal thofe of any other nation, when they are wife enough to make fmall trials upon all forts of materials which bid fair to make a more beautiful manufacture than what they have. The vegetable kingdom, we have feen, admits of an infinite variety of fubjects, whereon to make experiments, at a very trifling expence : and whether many cheap foffils, of a beatiful white, may not, by proper managements, be brought to a due cohelive confiftence for the purpofe, may deferve notice.
As this is a manufacture of fuch general ufe, both for writing, printing, engraving, packing, \&c. it cannot be made too good nor too cheap for the great variety of purpofes wherein we find it fubfervient to other arts.

Extract of two ediets of the French king, concerning the paper manufaCture.
Arrêt of the king's council, prohibiting the exportation of old linen, old cloaths, rags, \&c. I697.
The king baving been informed, That the exporting old linen, old cloaths, rags, \&cc. is a very confiderable prejudice to the manufactures of paper and cards of this kingdom, had ordained, by a former arrêt of the 28 th of January, 1697 , That the faid goods fhould pay 12 livres per bundred weight upon their exportation, inftead of 6 livres per hundred weight, payable by the tariff of 1664 ; but his faid majefty baving fince that been informed, That notwithfanding double duty, divers particular merchants continue to export fuch great quantities out of the kingdom, as would caule a farcity thereof to the manufacturers in the provinces aforefaid; for remedy whereof, his majesty ordains, and hereby makes an exprefs prohibition to all perfons, of what rank or condition foever, to export out of the kingdom, without his permifion,

## P A P

any old linen, old cloaths, or rags, from the day of the publication hereof, upon pain of confifcation, and three thoufand livres fine, of which the third part to the informer.

Du Jardin.

Arrêt of the king's council, taking off the duties of exportation upon all cloth of gold and filver, and filks, and upon paper, pafte-board, and cards; and moderating the duties upon fluffs of wool, and thread linen-cloth, and other merchandizes, December 24, 170 .

Likewife his majefty ordains, That for paper of all forts, white, brown, blue, and all other colours; books, printed, bound, and not bound; cards, pafte-boards, and cards to play with, going out of this kingdom into foreign parts, there thall not be paid any duties at all.

Done at Verfailles,
Dec. 24, 1701 .
Signed,
Philipeaux.
By thefe two abftracts of the French king's arrêts, it may be perceived, how careful he is of his manufactures in general, and of that of paper in particular.
There are feven provinces in France where the manufacture of paper is fettled, viz. Champaigne, Normandy, Brittany, Angoumois, Perigord, Limoufin, and Auvergne ; the three laft provinces are full of large forefts of chefnut-trees, and abound fo much in that kind of fruit, that the common people have no other food all the year round, and no other drink but water; fo that they can afford their work very cheap, and do it for next to nothing, except forme of the upper workmen, who earn a fmall falary by the week. This is fo true, that confiderable parcels of paper were imported, fome years fince, from thence, although the duties paid here exceed one hundred per cent. on the firft coft ; notwithftanding which, the French merchants were long able to under-fell us greatly.
Now if chefnuts, and fuch-like fontaneous productions of the earth, for which we are chiefly beholden to nature, very little to the labour of man, are the greateft part of the fubfiftence of the people employed in the paper-manufacture of France, there can be little doubt of their living on lefs wages tban our Englifh labouring people: no one will affert, that a belly-full of chefnuts, which grow without the labour of man, fhall coft as much as a belly-full of bread, which pays fo much to the ploughman, the feedfman, the reaper, the threher, the miller, the baker, and innumerable other labourers, who have beftowed fome work upon every loaf that was ever eaten. Our people therefore, are fubfifted at a great charge, and the French manufacturers' in this article, for almoft nothing, in comparifon to what ours are. Ought not every requifite meafure, therefore, to be taken by this kingdom, fo to reduce the price of the common neceffaries of life, that our manufacturers may be able to afford their labour fo cheap, that our competitors may not in time run away with the whole trade? But how can this be ever effectuated, while the kingdom is incumbered with taxes neceffary to pay intereft-money for fo enormous a national debt wherewith we are now loaded?
PAPER CREDIT. Under the articles BANKs and Banking, Cash, Circulation, Currency, [Paper Currency], Money, the reader will find our fentiments in relation to thefe points; which having an affinity with what we fhall fay, upon the prefent occafion, may be neceffary to be confulted.
Paper-Credit fignifies, in the general, whatever property is circulated in a ftate, or transferred from one perfon to a nother, by the means of any written paper-obligation, inftead of hard money, or merchandizes, or lands; fuch as exchequer bills, bank notes, bills of exchange, promiffory notes, bonds, mortgages; and fome include herein all transfers made by focks, \&cc. The term confidered in this acceptation, including the conveyance of property of any kind whatever, from perfon to perfon, and from nation to nation, by the means of paperauthority only, comprehends a wonderful circulation of property over the whole trafficable world; without which, the concerns of commerce could not poffibly be carried on with that extent and facility they are at prefent.
In order to render what we fhail obferve of ufe chiefly to our own country, we hall reltrain our confideration to the circulation of property of this fort within ourfelves.
Eralmus Phillipps, Efq. computes in the year 1725, * the whole money-tranfactions of this nation at $126,199,3281$. which he does in the following manner, viz.

* See The State of the Nation, in refpect to her commerce, Debts, and Money, p. 42, \& feq.
'It is a flupendious thought, fays this gentleman, to confider the money-tranfaction of this kingdom; perhaps it may not be unacceptable to give fome account of it. I believe I hall be allowed to compute the rents of this kingdom at

## PA P

And upon the fuppofition that the lands of England are not taxed at half the value, this account may be near the truth.
The duties on the cuftoms produce per ann.? about

1,600,000
Which, upon an average of 301 . per cent. ad valorem, fhews our imports to be for $\}$ about.
Befides our re-export, which may be about
The reft of the duties and funds
5,300,000
1,500,000
2,199,328
$16,000,000$
lions of people in this nation, I believe I fhall not exceed, if I reckon the manufac-
tures confumed at home to amount to per
annum
I hall not mention the intereft arifing from mortgaged land, that being computed before in the rental; but I muft take notice of the mortgages themfelves, becaule they are often transferred, and may be reckoned money in circulation; and thefe have been computed
at a fifteenth part of the land, which will come to about
The next thing I fhall mention is the great national debt;
And this is about
The malt produces more, about
53,000,000
600,000
So that the whole money-tranfaction of this $\}$
126,199,328
And all this is carried on with no more than
15,000,000 of fpecie.
And perbaps I may be particular in faying, the reafon of this prodigious circulation is the debt itfelf; for the large and regular intereft that has been paid on thefe ftate-actions, have exbaufted all private hoards, and made thefe fecurities become like a new fpecies of money, current in every body's hands.'

## Remarks before the laft War.

Since Mr Phillips wrote, not only the national debts, but the public revenue has greatly augmented, and confequently our paper-circulation has increafed in the like proportion; and yet it is to be feared that the quantity of fpecie, at prefent; is much below $15,000,000$ at which, when that genteman wrote, he computed it. And to what degree the price of labour and our native commodities are affected by the weight of our national debts and taxes, or in confequence of this paper-credit fo greatly exceeding the quantity of real fpecie, may be feen under the article Duties, Labour, to which we refer the reader. To corroborate what is there urged, fee likewife the article Bonding, in regard to the Duties of Customs.
And how detrimental to the kingdom, in other refpects, this great increafe of paper-credit is likely one day to prove, may be inferred from what follows, according to the ingenious Mr Hume*.

* See Hume's political Difcourfes.

Firft, It is certain, fays that gentleman, that our national debts caufe a mighty confluence of people and riches to the capital, by the great fums which are levied in the counties to pay the intereft of thofe debts; and perhaps too, by the advantages in trade, which they give the merchants in the ca, pital above the reft of the kingdom.
Secondly, Public flocks, being a fpecies of paper credit, have all the difadvantages attending that feecies of money. They banilh gold and filver, from the moft confiderable commerce of the flate, reduce them to common circulation, and by that means render all provifions and labour dearer, than otherwife they would be.
Thirdly, The taxes which are levied to pay the intereft of thefe debts, are a check upon induftry, heighten the price of labour, and are an oppreffion on the poorer fort.
Fourthly, As foreigners poffefs a thare of our national funds, they render the public, in a manner tributary to them, and may, in time, occafion the tranfport of out people and our induftry.
Fifthly, The greateft part of public fock being always in the hands of idle people, who live on their revenue, our funds give great encouragement to an ufelefs and inactive life.
But though the injury that arifes to commerce and indufty from our public funds, will appear, upon ballancing the whole, very confiderable, it is trivial in comparion of the prejudice that refults to the ftate, confidered as a body polietc; which muft fupport itfelf in the fociety of nations, and hare various tranfactions with other ftates, in wars and neguriations. The ill there is pure and unmixed, without any tavourable circumftance to attone for it : and it is an ill too, of a nature the bighefl and moft important.
We have, inderd, been told, that the public is no weaker upon account of it's debts, fince they are monly due amongit ourfelves, and bring as much property to one, as they take from another, It is like transferring money from the right-

## PAP

hand to the left, which leaves the perfon neither richer nor poorer than before. Such loofe reafonings and fpecious comparifons will always pafs, where we judge not upon principles. We afk, is it poffible, in the nature of things, to overburthen a nation with taxes, even where the fovereign refides among them? The very doubt feems extravagant ; fince it is requifite in every commonwealth, that there be a certain proportion obferved betwixt the laborious and the idle part of it. But if all our prefent taxes be mortgaged, mult we not invent new ones? And may not this matter be carried to a length, that is ruinous and deftructive?
In every nation, there are always fome methods of levying money more eafy than others, fuitable to the way of living of the people, and the commodities they make ufe of. In Britain, the excifes upon malt and beer afford a very large revenue, becaufe the operations of malting and brewing are tedious and impoffible to be concealed; and at the fame time, thefe commodities are not fo abfolutely neceflary to life, as that their price would very much affect the poorer fort.
Duties upon confumptions are more equal and eafy, than thofe upon poffeffions. What a lofs is it to the public, that the former are all exhaufted, and that we muft have recourfe to the moft grievous method of levying taxes!
Were all the proprietors of land only ftewards to the public, mult not neceflity force them to practice all the arts of oppreffion ufed by ftewards, where the abfence and negligence of the proprietor render them fecure againft enquiry?
It will fcarce be aflerted, that no bounds ought ever to be fet to national debts, and that the public would be no weaker, were 12 or 15 s . in the pound land-tax mortgaged, along with all the prefent cuftoms and excifes. There is fomething thereiore in the cafe, befides the mere transferting of property from one hand to another. In 500 years; the pofterity of thofe now in the coaches, and of thofe upon the boxes, will probably have changed places, without affecting the public by thefe revolutions.
It muft be confeffed, that there is a ftrange fupinenefs, from long cuftoms, crept into all ranks of men, with regard to public debts, not unlike what divines fo vehemently complain of with regard to their religious doctrines. We all own, that the moft fanguine imagination cannot hope, either that this or any future miniftry, will be poffeffed of fuch rigid and feady frugality, as to make any confiderable progrefs in the payment of our debts; or that the fituation of foreign affairs will, for any long time, allow them leifure and tranquilJity, fufficient for fuch an undertaking*. What then is to become of us? The events here will depend little upon the contingencies of battles, negotiations, intrigues, and factions. There feems to be a natural progrefs of things, which may guide our reafoning.

* In times of peace and fecurity, when alone it is polible to pay debts, the monied intereft are averfe to receive partial payments, which they know not how to difpofe of to advantage, and the landed intereft are averfe to continue the taxes requifite for that purpofe. Why therefore fhould a minifter perfevere in a meafure fo difagrecable to all parties? For the fake, I fuppofe, of a ponterity, which he will never fee, or of a few reafonable reflecting people, whofe united interelt, perhaps, will not be able to fecure him the malleft borough in England. It is not likely we fhall ever find any minititer fo bad a politician. With regard to thefe narrow defructive maxims of politics, all minifters are expert enough,

As it would have required but a moderate fhare of prudence, when we firlt began this practice of mortgaging, to have foretold, from the nature of men and of minifters, that things wodld neceflarily be carried to the length we fee; fo now that they have at laft fo happily reached it, it may not be difficult to guefs at the confequence. It muft, indeed, be one of thefe two events; either the nation muft deftroy public credit, or public credit will deftroy the nation. It is impoffible they can both fubfift, after the manner they have been hitherto managed, in this as well as in fome other flates. See the article Monied Interest.
There was, indeed, a fcheme for the payment of our debts, which was propofed by an excellent citizen, Mr Hutchinion, above 30 years ago, and which was much approved of by fome men of fenfe, but never likely to take effect : he afferted, that there was a fallacy in imagining, that the public owed this debt; for chat really every individual owed a proportional Thare of it, and paid, in his toxe, a proportional fhare of the intereft, befides the expenfes of levying thefe taxes. Had we not better, fays he, make a proportional diftribution of the debt among uc, and each of us contribute a fum fuitable to his property, and by that means, difcharge at once all our funds and public mortgages? He feems not to have confidered, that the laborious poor pay a confiderable part of the taxes by their annuai confumptions, though they could not advance at once, a proportional part of the fum required. Not to mention, that property in money, and flock in crade, might eafily be concealed or difguifed; and that vifible property in lands and houfes would really at laft anfwer for the whole an inequality and oppreffion, which would never be fubmitted
to. But though this project is never likely to take place, it is not altogether improbable, that when the nation becomes heartily fick of the debts, and cruelly opprefled by them, fome daring projector may arife, with vifionary fchemes for their difcharge. And, as public credit will begin, by that time, to be a little frail, the leaft touch will deftroy it, as happened in France, and in this manner it will die or the doctor *. See the article Mississippi.

* Some neighbouring flates practife an eafy expedient, by which they lig hten their public debts. The French have a cuitom (as the Romans formerly had) of augmenting their money; and this the nation has been fo much familiarized to, that it hurts not public credit, though it be really cutting off at once, by an edict, fo much of their debts. The Dutch diminilh the interef without the confent of their creditors; or, which is the fame thing, they arbitrarily tax the funds as well as other property. Could we practifc either of thefe methods, we need never be oppreffed by the national debt; and it is not impofiible but one of thefe, or fome other method, may, at all adventures, be tried on the augmentation of our incnmbrances and dificulties. But people in this country are fo good reafoners upon what But people in this country are fo gooc rearoners upll what
ever regards their interefts, that fuch a practice will deceive no body; and public credit will probably tumble at once, by fo dangerous a trial.

But it is more probable, that the breach of national faith will be the neceffary effect of wars, defeats, misfortunes, and public calamities, or even, perhaps; of victories and conquefts. It mult be confeffed, when we fee princes and ftates fighting and quarrelling amidft their funds, debts, and public mortgages, it always brings to my mind, a match of cudgel-playing fought in a China fhop. How can it be expected, that fovereigns will fpare a fpecies of property, which is pernicious to themfelves and to the public, when they have fo little compafion on lives and properties, which are ufeful to both?
Let the time come (and furely it will come if we continue to increafe our national debts) when the new funds, created for the exigencies of the year, are not fubfribed to, and raife not the money projected. Suppofe either that the cafh of the nation is exhaufted, or that our faith, which hath been hitherto fo ample, begins to fail us. Supuofe that, in this diftrefs, the nation is threatened with an invafion, a rebellion is fuf pected or broke out at home, a fquadron cannot be equipped for want of pay, victuals, or repairs, or even a foreign fubfidy cannot be advanced. What muft a prince or minifter do in fuch an emergeney? The right of felf-prefervation is unalienable in every individual, much more in every community. And the folly of our ftatefmen mult then be greater than the folly of thofe who at firf contracted debts, or, what is more, than that of thofe who trufted, or contmue to truft this fecurity, if thefe flatefmen have the means of fafety in their hands and do not employ it.
Thie funds created and mortgaged, will, by that time, bring in a large yearly revenue, fufficient for the defence and fecurity of the nation: money is perhaps lying in the Exchequer, teady for the difcharge of the quarterly interef: neceffity calls, fear urges, reafon exhorts, compafion alone exclaims : the money will immediately be feized for the current fervice, under the moft folemn proteftations, perbaps, of being immediately replaced. But no more is requifite. The whole fabrick, already tottering, falls to the ground, and buries thoufands in it's ruin. And this may be called the natural death of public credit. For to this period it tends as naturally, as an animal body to it's diffolution and deftruction *.

* So great dupes are the generality of mankind, that notwithftanding fuch a violent hock to public credit, as a voluntary bankruptcy in England would occafion, it would not probably be long, c'er credit thould again revive in as flourifh ing a condition as before. The prefent king of France, during the late war, borrowed money at lower intereft than ever his great-grandfather did; and as low as the Britifh parliament, comparing the natural rate of interelt in both kingdoms. And though men are commonly more governed by what they have feen than what they forefee, with what ever certainty; yet promiles, proteitations, fair appearances, with the allurements of prefent intereft, have fuch powerfol influence as few are able to refitt. Mankind are, in all ages, caught by the fame baits: the fame tricks, played over and over again trepan them.
The heights of popularity and patriotifm, are fill the beaten road to power and tyranny, flattery to treachery, ftanding armies to arbitrary government, and the glory of God to the temporal intereft of the clergy. The fear of an everlafling deftruction of credit, allowing it to be an evil, is a lafling deftruction of credit, allowing it in reality, would raneedless bugbear. A prudent man, in reality, would ra-
ther lend to the public immediately after they had taken a ther lend to the pubis iminediately ate to their debts than at prefent, as much as an opulent fponge to their debts than at prefent, as much as an opulent
knave, even though you could not force him to pay, is a knave, even though you could not force hims to pay, is a in order to carry on bufinefs, may find it his intereft to difin order to carry on butinefs, may find it his intereft to dif-
charge his debts, where they are not exorbitant. The latcharge his debts, where they are not exorbitant. The lat-
ter has it not in his power. The reafoning of Tacitus, ter has it not in his power. The reafoning of Tacitus,
Hift. lib. 3. as it is eternally true, is very applicable to our prefent cale. Sed vulgus ad magnitudidem beneficioram
defat: filultifimus quifque pecuniis thercabatat : aptud fapientes caffa habebantur, quǽ neque dari neque accepi, falva republica poterant. The public is a debtor, whom no man can oblige to pay. The only check which the credicors have on it, is the interelt of preferving credit 3 an intereft which may eafily be overballanced, by a very great debt, and by a difficult and extraordinary emergence, even fuppofing that creditirrecoverable. Not to mention, that a prefent neceffity often forces ftates into meafures, which are, ftrictly fpeaking, againft their intereft.

Thefe two events, fuppofed abòve, are calamitous, but not the moft calamitous.
Thoufands are thereby facrificed to the fafety of millions. But we are not without danger, that the contrary event may take place, and that millions may be facrificed for ever, to the temprory fafety of thoufands*. Our popular government; perhaps, will render it difficult or dangerous for a minifter to venture on fo deperaté an Expedient, as that of a voluntary bankruptcy. And though the houfe of lords be altogether compofed of the propitetors of lands, and the houfe of commons chiefly, and confequently neither of them can be fuppofed to have great property in the funds; yet the connections of the members may be fo great with the proprietors, as to render them more tenacious of public faith than prudence, policy, or even juftice, ftrictly feaking, requires.

* I have heard it has been computed, that the whole creditors of the public, natives and foreigners, amount only to 17,000. Thefe make a figure at prefent on their income, but in cafe of a public bankruptcy, would, in an inftant, become the loweft, as well as the moft wretched of the people, The dignity and authority of the landed gentry and nobility, are much better rooted, and would render the contention very unequal, if ever we come to that extremity. One would incline to alfign to this event a very near period, fach as half a century, had not our fathers prophecies of this kind been already found falla cious, by the duration of our public credit; fo much be yond all reafonable expectation. When the aftrologers in France were every year foretelling the death of Henry IV thefe fellows, fays he, muft be fight at laft. We fhall, therefore, be more cautious, than to aflign any precife date, and thall content ourfelves with pointing out the event in general.

And, perhaps too, our 'foreign enemies, or rather enemy, (for we have but one to dread) may be $[0$, politic as to difcover, that our fafety lies in difpair, and may not, therefore, flow the dangef; open and barefaced, 'till it be incvitable. The balance of powier in Europe, our grandfathers, our fathers, and we, have all juftly efteemed too unequal to be preferved without our attention and affiftance. But our children, weary with the ftruggle, and fettered with incumbrances, may' fit ciown fecure, and fee their neighbours fo oppreffed and conquered; 'till at laft, they themfelves and their creditors lie both at the mercy of the conqueror. And this may properly enough be denominated, the violent death of our public credit. See the articles Money, Credit [Public Credit], Debts [National Debts], Funds.
Thefe feem to be the events, which are not very remote, and which reafon forefees as clearly almoft as the can do any thing, that lies in the womb of time.
And though the ancients maintained, that, in order to reach he gift of prophecy, a certain divine fury or madnefs was requifite, one may fafely affirm, that, in order to deliver fuch prophecies as thefe, no more is neceffary, than merely to be n one's fenles, free from the influence of popular madnefs and delufion.

## Remarks on Paper-Credit, fince the laft War, and the

 Peace of 1764Our public debts having near trebled fince Mr Phipps wrote, the judicious reader will duly apply the fame, in conjunction with what that gentleman has obferved : certain it is, that the weight of our additional taxes has enhanced the prices of every thing taxed, in proportion thereto. See our Articles Duties and Labour, and Bonding at the CustomHOUSE.
This increafe of paper circulation, of which is before fpoken, in a degree proportionate to the augmentation of our national debts and taxes, 'tis to be feared may occafion fuch an exorbitant rife in the price of our Englifh manufactures in general, that foreigners will not be in a condition to purchafe them of us: and if we cannot fell our wares, how fhall we be able to purchafe thofe of foreigners? if once this proves to be our cafe, what will become of the Revenue of Customs? When we are unable to fend our Englifh manufactures, what will alfo become of the Revenue of Excise, when the greateft part of our manufacturing people is rendered incapable to purchafe Exciseable Commodities? Inftead of thefe revenues producing any degree of a Sinking Fund for the gradual difcharge of our Principal Money Public Debt, how fhall we raife the intereft? Flatter ourfelves as much as we will, there mult afluredly be a NE PLUS ULTRA
to our Funding and Borrowing, or at length we muft become a bankrupt nation, if we continue to increafe our paper circulation more and more. Will not this at laft enable our competitors in trade to beat us out of all the markets in the world; and then what chance fhall we have to beat them with the fword, when the national wealth is exhaufted, and we have not but paper to circulate, which we can never tealize on the greateff exigency?
PAR, in affairs of commerce, fignifies any two things equal in value: and, in the exchange of money with foreign countries, the perfon to whom the bill is payable is fuppored to receive the fame value as was paid the drawer by the remitter; but this is not always the cafe with relation to the intrinfic value of the coins of different countries, which is owing to the fluctuation in the prices of exchange amongft the feveral European countries and the great trading cities. In order to judge of the intrinfic par of foreign coins for mercantile ufes, fee the articles Coin and Exchange; for the ufe that may be made of this knowlege, alfo in a national light, fee the article Ballanee of Tradz.
Befides the intrinfic par of exchange, there is another par, which, with no lefs propriety, we may difinguifh by the extrinfic par of exchange. For the nature; ufes, and private advantages that may be made by this fkill in the exchanges, fee the articles Arbitration of Exchatge, and alfo the capital trading cities of Europe, under the articles of their refpective provinces; $\& c$.
PARAGUAY, a province of South America, is bounded by the countty of the Amazons'on the north, by Brazil on the eaft, by Patagonia on the fouth, and by Përu and Chili on the weft, lying between 12 and 37 degrees of fouth latitude, and between 50 and 75 degrees of weft longitude, being 1500 miles in length from north to fouth; and almoft as much in breadth. Some make it's extent far more confiderable, but they are thought to exaggerate the matter. Some geographers make it to comprehend the feveral provinces or diftricts following, r. Paraguay, properly fo called. 2. Chaco, or Tucuman. 3. Rio de la Plata. 4. Guayra, Parana, Urvaig, and, according to others, the captainric del Rey in Brazil.
If fo, the extent is fo confiderable, that it muft be fuppored to have a variety of climates, foils, products, and inhalbitants, the particulars whereof fhall be given under the heads of each province above-mentioned.-To avoid needlef8 re petitions, we fhall firft give a general account of the whole. The land is, generally fpeaking, very rich and fruitful; producing plenty of wheat, and other European grain, fome vines, but chiefly abounds in fugar-canes; and has whele woods of peaches, almonds, figs, \&c. It is at prefent fo well Hocked with all forts of cattle, fmall and large, that they run in a manner wild. The Portugueze in the Brazils kil them in great numbers only for their hides and fuet, and let the flefhrot on the ground. [See Portugueze America]. The natives eat their flefh, but half raw. In fome parts they are obliged to deftroy their calves, to prevent their growing too numerous, through the richnefs of their pafture.' They have alfo great plenty and variety of other beaits, wild and tame horfes and mules in fuch prodigious quantities, that the former run wild every where, and of the latter they fupply Peru with 50,000 per ann. according to fome, befides what they fend elfewhere, and keep for their own ufe.
Mines of iron and copper have been difcovered in many parts of Paraguay, befides fome rich ones of gold and filver, and of the fineft amethyfts.
Paraquay Proper, fo called, is the molt northern of all, and neareft to Brazil, being bounded by that on the north, on the eaft by the province of Guayra, on the fouth by thofe of Rio de la Plata and Parana, and on the welt by that of Chace or Tucuman, But on the weft and north, geographers do not feem to be acquainted with it's boundaries. Paraguay Proper is divided into two equal parts almoft, eaftern and weffern, by the river of it's name, which runs through the mid\{t of it from north to fouth.
This river hath it's fpring-head in the fouthern part of the country of the Amazons, a little above the territories of the Xarayes, which lie from latitude 16 to 20 fouth, and lon gitude weft, fpread themfelves from 50 to 55 , and beyond, and are faid to abound with mines of gold and filver. In it's courfe from north to fouth, it forms a large lake, called the Laguna de los Xarayes, from which it enters into the province of Paraguay Proper, where it waters the towns of Porto de la Candelaria, and the city of Affumption, the capital, whenceit runs into the territory of Rio de la Plata. The chief rivers it receives are, Rio de los Payaguas, Botetes Jacarii, Taraiti, Guacuri, Pilai, Tabati, Peribibus, Salado, Araguaig, Cunagba, Tibiquari, Japfur, Pifcomay, Parana, and Vermejo; and after having received thefe two laft into it ftream, it then affumes the name of Rio de la Plata, near the town of Corrientes. (De Lifle.) According to the ob fervations made by the jefuits, anno 1702 and 1703 , which are the lateft and the beft that ever were made; this river is found to spring from the mountains of Potofi in Peru, of which we fhall feak in it's proper place. Father Techo reckons it one of the greatelt rivers in America, and gives it
a courfe of 300 leagues before it falls into the Parata; and adds, that it is navigable about 200 when joined to it.
Father Jepp, wha was there ann. 1691, fays, that filver was then cheaper than iron, ant that a common two penny knife would fetch a crown, a two fhilling hat, ten or twelve crowns, a guth of ten or twelde hillings thirty crowns, and fo of the reft. As to the healthinefs of the olimate; though we can fay nothing to contradiet if; yet moft of our accounts tell us, the natives are fär from enjoging the benefit of it; which is chiefly owing to their gerging themfelves with fuch prodigious quantities of balf raw flefh, as fills them with worms and other cruditles, that turn at length into dangerous difeafes.
The miffionaries in thofe parts where the natives are converted, take care to fow great tracks of land with wheat, that they may have plerty of white bread, not only for themfelves, but to impart to the natives, who living moftly on their Indian corn, are fo fond of this, that they will give two or three horfes for a white loaf. They likewife take care to cultivate their vines, that they may not want wine to their mufic and good chear ; and we are told, that they have fo many of them, as yield 500 calks of it in a year, if not fpoiled by the pifmires, which are here very numerous, or by the wafpg and bitds, or blighted by the notth-winds; for in this cafe it will make that liquor fo dear, that a cafk will coft twenty or thirty crowns, and after all cannot be preferved from turning four, without a great trixture of lime. They have plenty of roots and herbs; and the only thing they want is oil to their fallads, inftead of which they are forced to ufe honey and fugar. Silver is fo plenity among them, that old fhoes and hats are much more valued, and an ell of linnen hath fetched four or five crowns: whereas iron is fo fcarce that a horfelhoe arid a bitt for a bridle has been exchanged for feveral horfes.
The chief towns in Paraguay Proper and Chagua, lie in the following order:

1. Affumption. 2. Villa Rica. 3. Maracaju. 4. Arcacia. 5. Ypane. 6. Sant Ignatio. 7. Noracaju. Sign. de la Fé. 8. Xeres, Conception Antiqua.

Assumption town, the metropolis of Paraguay, fands on the eaftern banks of the river of it's name, a little above the place where the Picolmago falls into it, baving Villa Rica on the north, and that of La Plata on the fouth, and about feven or eight leagues from each. It was built by the Spaniards anno 1538 (De Laet, Rogers) and is famed for its healthy and advantagrous fituation, as well as for the number of it's inhabitants. The territory about it is exceeding rich and fruitful, produces plenty and variety of fruits, not only of thofe which are natural to the country, but of thofe which have been tranfplanted thither from Spain; and the air is there fo temperate, that the trees are cloathed with a conftant delightful verdure.
There are llekewife very noble and rich paftures, in it's neighbourhood around, on which are bred vaft herds of cattle; fo that there is fuch an extraordinary plenty of all provifions in the town, as makes the natives, blacks and others, ambitious of living in it.
Villa Rica, or the Rich Town, fands near the fame eaftern banks of the Paraguay, about eight leagues (fome fay much farther) noth of that of Afumption, on a fmall river of no great note.
Thofe called Puerto de la Candelaria, and Nopa Senhora $\mathrm{De}_{\mathrm{e}} \mathrm{Fe}$, are the two moft diftant towns northward from the metropolis abovementioned, and have nothing worth notice except their fruitful territories.
I. The province of TUCUMAN, is bounded on the north partly by that called De los Chicas, in Peru, and partly by that of Chaco; and on the fouth partly by that of Cayo, and partly by the territory of the Pampas; on the eaft by Paraguay Proper, and Rio de la Plata; and on the welt by the imperial bifhopric of St Jago in Chili, and by the fouth end of the Chica's; extending itfelf from Rio Vermejo, which parts it from Chaco on the north, to that called Rio Quarto, which divides it from Cayo on the fouth, almoft io degrees, that is, from the 24 th to the 34 th of fouth latitude; and from eaft to weft, where broadeft, that is, from the river Salado to the ${ }^{*}$ ridge De la Cordillera, which parts it from Chili, almoft 7 degrees, that is, from 62 to $69 \frac{x}{2}$ of weft longitude: fo that it lies for the moft part in a very temperate and healthy climate; and though it hath no mines difcovered of either gold or filver, yet it's territory is both rich and well cultivated, efpecially towards the government of Chili; but it hath fome defert cantons towards the Magellanic fide. The climate is moderately hor, being all within the temperate zone, and their fummer begins about the icth of our September, and ends about the gth of March.
The foil is of a fandy nature, and almoft without ftones, which makes it very inconvenient for building; but the land is very well watered not only with fome large rivers, but alfo with plenty of fmall ones, brooks, and variety of fprings and lakes; all which are commonly bordered with gardens, orchards, vines, and groves, which yield a noble profpect, and delightful fhade and verdure. The country between thofe rivers prodaces plenty of cotton, wax, honey, paftel,

Whichthey ufe for dyeing, befides variety of fruits, toots, In dian wheat, \&cc. They likewife breed up vaft quantities of cattle, large and fmall, with great plenty of deer, and other game, fowl wild and tame, efpecially partridges in great quantities, and a great variety of other fowl
This country, which is commonly called Traplanda, and, by the inhabitants of the government of Chili, the province De la Sal, is computed to extend about 300 leagues in length, from north to fouth, and abour 150 in breadth, where broadeft, but varies as it runs more towards the fouth, where it ends fomewhat in the figure of a cone. It is inhabited chiefly by three favage nations, viz. the Tucumans, from whom the whole diftrict is called, the Jurios, and Diaguites, the laft of which employ themfelves in feeding of cattle, efpecially fheep, the wool of which is manufactured and dyed by them, and a great commerce is made of it through this whole province. Thefe fheep are very large and ftrong, though their wool is fine, and the inhabitants ufe them likewife for carriage, as we do here our horfes. The inhabitants are cloathed with their woollen and cotton manufactures, which they dye of feveral colours with their paitel, and other ingredients:
The chief places in Tucuman are, I. San Jago del Eftero. 2. San Salvador, al Xuxui. 3. San Miguel. 4. Salta, or Lerma. 5. Londres. 6. Cordoua. 7. Efteco, al N. S de Talavera. 8. Rioja. 9. Putupas. ro. Soto la Punta. 11. Capo de San Luis. 12. De los Santos.

San Jago del Estrro, the metropolis of this province, and an epifcopal fee, is fituated on the banks of the Dolce, or Sweet River, which is here prctty large and navigable, being able to carry large veffels, and affords plenty and variety of fifh: the town, however, is not very confiderable, it confifting but of about 300 houfes, fome fay 500 families, and is without walls, ditch, or any other defence. The inhabitants are moflly of the Mafticho and Mulatto kind, of dark yellow complexions, lazy, and fickly, occafioned by the heat of the climate, and more given to pleafure than to any traffic or work. The country about it is rich, and produces plenty of wheat, rice, barley, fruits of all forts, particularly figs and raifins.
San Salyador, or Xuxuf, fands near the confines of Peru at the foot of a high mountain, which forms part of the famed ridge called the Andes. It has a confiderable river running by it, a little above the place where it falls into the Leon, from which both defeend into the Rio Vermejo, or Red River. This town has about 300 houfes, and is the moft northerly of all this province, and within a degree of the fouthern tropic, about 83 leagues from Potofi.
San Miguel, al St Michael, the firf town the Spaniards founded in this country, is pleafantly fituated on a fertile plain, and near the banks of a fmall river, which falls into the Rio Doice, near San Jago, from which it is diftant about 18 leagues to the north-weft. Mr Baudrand, who calls it S. Michael de Eftero, fays it is the capital of Tucuman, and a bifhop's fee, under the metropolitan of La Plata. The plain on which it ftands is fertile, producing plenty of wheat, rye, barley, grafs, \&c. fo that it breeds great quantities of cattle, produces cotton, flax, fome wine, and great abundance of wood for all ufes. The air is reckoned one of the fweeteft and healthieft in all Paraguay, and the country well inhabited, and flored with all conveniencies of life.
Salta ftands on a fmall river, which foon after falls into a neighbouringlake, and is at fome fmall diftance fouth-eaft from San Salvador, and eaft from the burning mountain of Capiapo, and about 15 leagues from Eftero, and hath a bridge over the river. It is inhabited moftly by Spaniards, to whom both it and the territory about it belongs, and hath about 400 houfes, and five or lix churches or monalteries. It hath neither walls, ditches, nor any other defence but it's inhabitants, who are about 500 men that bear arms, befides their flaves, negroes, as well as Mulattoes, which may amount to about thrice that number. Salta is a place of great refort, on account of the quantity of corn, meal, wine, cattle, falt meat, and fuch other commodities, which are fent hence into Peru, and other parts. Martiniere.
Londres, fituate near a great marfh of it's name, caufed by a fmall river which comes down from the Andes, and falls into it, was built by Tarita, governor of this province, ann. 1555, in order to keep the natives in awe, and called it Londres, in compliment to our queen Mary, then married to king Pbilip of Spain. (Wood Rogers.) It ftands near the frontiers of Chili, in latitude 29.12 fouth.
frontiers of fhili, in antitude 2g. I2 leagucs fouth of San Jago del Eftero, and 160 north-welt-ward of Buenos-Ayres, is a confiderable town in this province, but fituate on a marfoy, though a rich and fertile ground, and bigger than BuenosAyres. It ftands in latitude 3r. 30. fouth longitude, 63.30. weft, in a temperate climate and healthy, with equal winter and fummer, and all the territory about it full of catle, both great and frmall, and abounding with excellent paifture. It all produces plenty of corn, fruits, and other necelfaries, and hath feveral plentiful falt-pits; fo that the town drives a confiderable trade in thofe commodities with Peru, it being fituate on the road to Buenos Ayres. The inhabitants are Spaniards, and amount to about 300 , who are moftly emplojed in tilling
the ground, and manufacturing of cotton cloth, which they fend to Potofi.
II. Rio De La Plata, fo called from the famed river of that name, along whofe banks it extends itfelf on each fide about 200 leagues in length, from north to fouth, and about 100 leagues, where broadeft, from eaft to weft; is bounded on the north by the provinces of Chaco, Paraguay Proper, and Parana; on the eaft by that of Urvaig; on the fouth by the territory of Pampas; and on the weft by Tucuman. We muft, however, remind our readers, that the limits of thefe provinces are far from certain or agreed on, efpecially thofe between this province and Tucuman, there being no boundaries fixed between them, becaufe the whole country is plain and champaign, without mountains or hills, or even fo much as a tree, houfe, or hut, by which they might be terminated.
However, the climate is here moderate and bealthy, and pretty far in the temperate zone, the country extending itfelf from the 32 d , to almoft the 37 th degree of foutb latitude. Their winter is in May, June, and.July, when the nights are indeed very cold, but the days moderately warm; the froft is neither violent or lafting, and the fnows very inconfiderable.
The river De La Plata receives feveral confiderable ones in it's courfe, fo that it fwells at forme times to fuch a degree, as to cover a great deal of land on each fide, which, upon the abating of the water, is found to be much the fertiler by them. At fuch feafons, the natives betake themielves to their canoes, wherein they put their families and goods'till the inupdation affuages, and then return to their old habitations. (Rogers.) The ftream of it into the fea is fo ftrong and rapid, that it fweetens it for a great way. The water of it is faid to be very clear, and excellent for the lungs and wind, infomuch that the people who live near it are faid to have very clear and melodious voices, and to be generally inclined to mufic. (Covaglie.) Our author adds, that it petrifies the branches of the trees that fall into it, and that veffels are naturally formed of it's fand, which are of various figures, look as if they were polifhed by art, and keep the water cool. It likewife abounds with fuch plenty and, variety of fifh, that the people catch it in great quantities, without any other inftrument than their hands, and all along the banks are feen the moft beautiful birds of all kinds. : (Sepp.) The plains about it are likewife affirmed to be fo large and even, without any obfruction to the fight, that the fun feems to rife and fet in them. It's courfe, from the confluence of thofe fwo rivers that forms it, to it's mouth, is above 200 leagues: it runs mofly to the fouth and fouth-eaft, and is navigable all the way by the largeft veffels, and full of delightful iflands. Among the large rivers that fall into it on both fides, thofe called the Rio Vermejo, or Crimfon River, the Rio Dolce; or Salado, the Careaval, and fome others, flow into it on the weft, and the celebrated one of Urvaica, and fome others on the eaft fide : fo that, upon the whole, this famed river may, in all probability, be the greateft in the world for breadth and continued depth, though perbaps that of the Amazons, Quebec, and fome others, may equal or even excel it in length of courfe.
As the country on both fides this river is very plain and extenfive, fo their way of travelling is eafy and pleafant, viz. by high carts covered with hoops and ox-hides, and with conveniencies for travellers to fleep in ; which is fo much the more convenient, becaufe they travel moftly in the night, to avoid the exceffive heat.
The product of this province is much the fame with that of the others, that is, all forts of European and American fruits, both of wheat, cotton, fugar, honey, \&c. but the moft wonderful increafe in this country is that of the cattle of all kinds. For the plains here extending themfelves near, if not more, than 2 co leagues, and abounding with fuch an excellent parture, the beaftş brought hither fiom Spain bave multiplied to fuch a degree, that they are all in common, no man claiming any property to them, but every man taking what he hath occafion for.
The number of black cattle efpecially, is here fo prodigious, that they kill many thoufands of them merely for their hides, every time the fhips go for Spain, and leave their carcafes to be devoured by beafts and birds of prey, which are here likewife very numerous: fometimes, when they cannot vend their hides, they will kill them for their tongues, and thofe that care not to be at the trouble of fetching them from the plains, may buy them for a fhilling or two.
Thofe likewife that make ufe of their milks, either for food or drink, may go into thofe paftures, and milk as many cows as they will, or carry off as many of their calves, and kill them for their food, they being all at the mercy of the firft comer, and no man claiming more property to them than another. Horfes are no lefs numerous and cheap, and in common like the ather cattle; fo that they may be bad likewife for fetching, in what quantities a man pleafes; and of thdfe that are already broke, one may buy fome of the beft, and of the true Spanifh breed, fit for fervice, for a piece of eight per head; and it is confidently affirmed, if our author's accounts are not greatly exaggerated, that the Spaniards can
bring 30,000 horfe inta the field, all of Indians, well mounted, difciplined, and accoutred. (Sepp.)
Game fowl is here in no lefs plenty; and the partridges, which are as large and tame as our hens, are in fuch vaft quantity, that one may kill them with a fick. Their wheat makes the fineft and whiteft of bread; and, in a word, they feem to want for nothing here, efpecially the natives, but falt and fuel: the former the Spaniards have brought to then from other parts, and the latter they fupply with planting of valt groves of almond, peach, and'other trees, which require no other trouble than putting the kerneIs into the ground, and by the next year, we are told, they begin to bear fruit. The return for European goods is fo prodigious, that it almof exceeds belief, infomuch that an ordinary two-penny knife, or pair of fciffars, will fetch a crown, a gun of 10 or 12 fhillings value, 20 or 30 crowns, and fo of the reft, down to old hats, fhoes, needles, \&cc.
The chief towns in this province are, i. Buenos-Ayrese 2. Santa Fé. 3. Corrientes. 4. Santa Luifa; and 5. Chanas, befides feveral others of lefs note.
The town of Buenos-ayres is fo called from it's pleafant and bealthy fituation, it being feated under the 34 th degree of fouth latitude, upon a rifing ground, at about 50 leagues from the mouth of the Rio de la Plata, and upon the fouth fide of it, that river being here 7 leagues in breadth, and navigable by any lhip 60 leagues above the town, and no farther, by reafon of a great cataract.
The territory about it, which is of a vaft extent, is very fertile in fruits of all forts, and pafture grounds covered with vaft quantities of cattle; and would be fill more fo; if duly cultivated, efpecially in corn, but the people there are lazy, and content themfelves with what nature produces, without labour. It bore formerly very excellent vineyards, from which they made fome forts of exquifite wines, befides the valt quad tity of grapes they dried for ufe: but they were deftroyed by the pifmires, which chanced one year to appear in fuch fwarms that they eat them all up, roat and branch, fo that they were forced to pluck them up.
Santa $\mathrm{Fe}^{\prime}$ is the next Spanigh eftablifhment in this province to that of Buenos Ayres, to which it is diftant about 70 leagues to the north-weft, in latitude 3 1. 40. fouth: it ftands on the mouth of a river, which falls into that of La Plata, and on the fouth-weft fide of this latter. All the territory not only about it, but quite down to Buenos-Ayres, on each fide of that river, is very rich in all productions, and vaftly delightful. The town is built of brick, and encompaffed with the fmall river abovementioned, and was built by the Spaniards for the defence of both that of de la Plata, and of the fich gold and filver mines which are in the neighbonrhood of this fettlement, though the Spaniards do not care to operr them, left that fhould encourage fome of their enemies to come and take them from them. (Coreal, Rogers.)
Corrientes, or Corientes, is the next in courte up the river, and ftands about 80 leagues bigher, being built by the Spaniards, on the confluence of the Parana and Paraquay, but is fmall and inconfiderable, and no ways anfwering the dignity of it's fituation between thofe two famed rivers.
IV. The province of Parana, fo called from the great river of it's name beforementioned, and which is it's boundary on the fouth and eaft, where it divides it from thofe of Rio dela Plata, laft defcribed, and Urvaica; on the north it joins to that of Guayra, and the unknown illands of Brazil, and Paraguay Proper on the weft. It's extent, as. far as it is well known, that is, conquered and converted, is computed about 200 miles, all that is beyond being unknown to us as yet, and the breadth about 155 leagues, more or lefs according as it's limits wind more in or out.
The Parana hath it's fring-head in fome of the unknown tracks of fouthern Brazil, and holds it's courfe from north-eaft to fouth-weft, in which it croffes, and waters the provinces of Guayra' and Urvaica, as well as this of Parana. It's longeft courfe, exclufive of it't windings, is computed at 300 leagues, before it joins it's waves with thofe of the Paraguay, near the town of Corientes, lately mentioned, on the moft northern verge of Rio de la Plata, laft defcribed.
The towns belonging to this diftrict did lie on the Paranay, in the following order, San Ignatio, on the weft fide of it, about 30 leagues above the place where it joins with the Paraguay; Itapoa, or the Incarnation, about 16 leagues higher on the fame fide; Corpus, about 20 leagues higher on the eaft fide; Mondais, on a river of it's name, near its fall into the Parana on the weft; Santa Maria d'Ignazu, on it's confluence with it on the eaft, and now lying in ruins; Acarai, overagain't it, on the weft fide; Jovara, on the river of it's name, where it falls into this on the weft; and Paquiri, on another of it's name, overagainft it. We know very little of thefe towns except their fituation, and much lefs of thofe of Loretto and San Ignatio, on the Cucapa and Yuti, which lie more remote from the river, and of that of St Anne, on the lake of Apupan.
V. The Province of GuAyra, is bounded on the north by the unknown tracks of Brazil, and the nations of the Tupiques; on the eaft by the captaimic of St Vincent, in the

## P A R

## P A R

fame country, and partly by the Northern Ocean; on the auth it hath the province of Urvaica, and part of that of Parana; and on the weft the remainder of the fame province, from which it is divided by the river of that name: it's exent, from eaft to weft, is computed about 150 leagues, and about 40 from north to fouth; it's boundaries towards Brazil are uncertain.
The tropic of Capricorn cuts it almof into two equal parts, To that it's climate muft of courfe be very hot, though moift, by reafon of the vaft dews and rains, fo that it is very fruifful in provifions, as well as difeafes; infomuch that fome repreented it as a fitter habitation for wild beafts than human creatures : and yet we are told that it was pretty well peopled at the firft coming of the Spaniards.
It is watered by feveral rivers, which fall into the Parapana, which laft defcends from the fouthern mountains of Brazil, and is of a confiderable bignefs before it falls into the Parana. The chief of thofe that fall into the Parana, are the Tibaxiva, Pirapus, and Itangua, befides fome others of lefs note. Both fides of thofe rivers are covered with feveral forts of rees, the moft valuable of which among the natives are the cedars, which are very numerous, and fo tall and large, that they make veffels of one fingle trunk, which will carry 20 ars. Others produce excellent fruits, and fome of them yield a good kind of balfam.
I. The province of Urvica, commonly called Urvaig, and Urvaiga, is bounded by that of Guayra, laft deferibed, on the north ; on the fouth by the mouth of Rio de la Plata; on the eaft by the captainric Del Rey; and on the weft by the province of Parana, from which it is parted by the river of that name. It extends itfelf from 25 to 33.20 . of fouth atitude ; the length of it, from north-eaft to fouth-weft, being computed fomewhat above 210 leagues, and the breadth of it, from eaft to weft, about 130 where broadeft, but much narrower in other parts. It is divided into two parts, viz. eaft and weft, by theriver of it's name, which rifes out of a mall fpring in the country called Ibiturua, near the mountains of South Brazil, and runs quite through the midft of it, from north to fouth : fome Geographers gave it the name of the river of the Miffions, but it is very fmall and inconiderable during a courfe of feveral fcore of miles, 'till it comes to receive divers others into it's ftream, which fwell it fo far, that it becomes at length almoft equal to that of Paraguay, and falls into the Rio dela Plata, almoft overagainft the town of Buenos-Ayres.
In it's courfe, upon leaving the mountains of Brazil, and through the territory of Ibiturua, it's ftream runs moflly fouth-weft, after which it winds more to the fouth, and runs almoft parallel with the Parana. It's ftream runs near 200 leagues from it's fource, with a prodigious noife, occafioned by huge rocks and fones, which lie in it at certain diftances, and make it incapable of carrying ihips of burthen ; but, in winter, the valt floods and freams that pour down into it, make it look more like a fea, and overflow a great deal of land on each fide. After a courfe of about 200 leagues, it begins to enjarge it's fream, and flows more gently and fmoothly about as many more, the whole courfe of it being computed about 400 leagues.
Captain Woods Rogers, who calls this large river Uruguay, adds, on the authority of Father Sepp, that it hath a prodigious cataract, which he looks upon as an obftacle appointed by divine providence, to preferve the poor natives from the avarice and cruelty of the Spaniards, who are thereby prevented from proceeding farther up, and fettling themfelves in thofe rich cantons. He obferves, that thefe Indians are very barmlefs and ignorant, and not only fall into the vices of the Spaniards, but likewife under their heavy yoke; for it feems they make no difference between converts and idolaters, but ufe all with the like tyranny, and as if they were no better than brutes. The plains formerly were full of oftriches, lions, feveral forts of goats and deer, but at prefent all that vaft extent of land on both indes of the river Urvaig is turned into palture grounds, covered with an infinite number of cattle, efpecially cows and horfes, which run wild upon them.
Capitania del Rey, or the Royal Captainric. This diffrict is by fome joined with the captainrics of Brazil, and by others made a province of Paraguay: it extends itfelf along the eattern coalt of the latter, quite from the captainric of St Vincent, from which it is divided by the river of St Francis quite to the mouth of the Rio de la Plata, that is, from 26 to 35 degrees of latitude, extending itfelf, from north-eaft to fouth-weft, the length of so degrees, and about four in breadth, where broadeft. It has no places of any note, nor indeed any river worth deferibing, except that of the Holy Ghoft, and that called Rio de Martin de Souza; the former of thefe is alfo called Rio Grande, and it's mouth Barra de Rio Grande de Alagoa, and Puerto de San Pedro; it is formed by the two rivers of Tibiquari and Igat, both which have their courfe near the mountains of Ibrturua, but by a different courfe, the one directly fouthward, of above 100 leagues, and the other fouth-weftward, of above 160 ; during which, each of them receives feveral others; they unite their ftreams at laft, in the territory called Terra dos Patos, and thence taking a turn fouth-weftward, and parallel to the

Vol, II
rea-coaft, form a flip of latid of about five leagues in breadth $h_{g}$ and 50 in length, and empty themfelves into the Northern Ocean, at the barra abovementioned, and is is from the conHuence of thofe two rivers to this place that it hath the name of Santo Spiritu, or St Efprit; the other, called Rio de Martin de Souza, fprings from the mountains in the country of Tape, and runs directly fouthward into the fame ocean, about 60 leagues from the bar, or mouth, of the Holy Ghoft. The country is poorly inhabited, either by natives or Portugueze, the latter having formerly made fuch havock of the former, that thofe that were left were glad to retire farther into Paraguay, to avoid their cruelty.

## REMARKs

The Jefuits of Paraguay having been fo daring as to oppofe, with an armed force, a new regulation of limits agreed upon in America, between the crowns of Spain and Portugal, as appears by late accounts from Madrid, it may feem furprizing how thofe reverend fathers fhould refift the orders of fuch good friends to them as the Spanilh and Portugueze governments are, and much more fo, that they thould be able to refift them effectually: therefore, we doubt not but the following account, extracted from the beft authors, will be acceptable to fuch as are ftrangers to the empire which the Jefuits have founded in that country.
The fettlement made by the Jefuits upon the river Paraguay in America, is extremely remarkable. Thefe good fathers, every where indefatigable in improving their apoftolical talents, and turning the fouls of men into eccleffaftical traffic and power, began there by drawing together, into one fixed habitation, about 50 families of wandering Indians, whom they had perfuaded to take their word implicitly for whatever they told therm: for this is what they call converfion, and is, indeed, the true art of making Papifts, who have no other ground for their faith but the affertions of their priefts.
From this beginning, and fuch encouragement, thefe holy fathers ranging the country, and dazzling the ftupid favages with their fhining beads, charming them with their pious tales and grimaces, and their, tuneful devotions, made fuch a hareft of converts, as to form a commonwealth, or rather an empire of fouls : for every convert is a fubject moft blindly bedient.
The holy fathers, not 50 in number, are thus fovereigns of noble country, larger than fome kingdoms, and better peopled. It is divided into feveral large diftricts, each of them governed by a lingle fefuit, who is, as it were, a provincial prince, but more powerful and revered, and better obeyed, than any European, or even any eaftern monarch. His word is not only a law, but even an oracle; his nod infers fupreme command : he is abfolute lord of life, and death, and property, may inflict capital punihment for the lighteft offence, and is more dreaded, and therefore more obeyed, than the Deity. His minifters and officers, civil and military, are doomed by him to the meaneft punihments, and whipped, not only like common llaves, but like common felons: nor is this all their punifhment, at leaft all their abafement, which, to a man of fpirit, is the worft punihment: while they are yet marked and mangled with the lath, they run (colonels and captains run) and kneel before their holy fovereign, condemn themfelves for having incurred his pious difpleafure, and, humbly kiffing his reverend fleeve, thank him for the fatherly honour he has done them, in correcting them like dogs.
So much tamenefs and vaffalage is part, and an important article, of their converfion: they pretend to be even pleafed with their ftate of bondage, and care not what they do and fuffer here, for the mighty treafures of joy and liberty which are infured to them hereafter by the good father, wha gives them all that he has to give in the next world, and, by way of barter and commands, takes all that they have in the prefent. The poor Indians cultivate the ground, dig and plow, and reap and fow ; they make ftuffs, and other manufactures ; they rear fowls, they breed cattle, they carry burthens, and flavifly labour above-ground, as well as under it, where, in fweat and darknefs, and in peril of perifhing, they drudge in the mines: yet, with all this induftry, they earn nothing for themfelves: all their earnings, all the profic and advantages appertain not to them, but folely to their Popinh priefts, their fpiritual fovereigns, who rewards them to the full with what coft them nothing, bleffings and maffes, and diftant prefpects, whicy they leave to God, while they tyrannize over them like devils upon earth. Their grain and manufactures are all carried into their priefts warehoufes, their cattle and fowls into their yards, their gold and filver into their treafury : they dare not wear a rag of their own fpinning, nor tafte a grain of their own fowing, nor a bit of meat of their own freding, nor touch the metal of their own producing; no not fo much as an egg from the hens they rear: they themfelves are fed and fubfifted from day to day, by a limited allowance, furnifhed them by the appointment, and at the mercy of their grea lord, a worthlefs and imperious prieft.
Yet, under all thefe difcouragements, they are diligent and labotious to the laft degree, and vie with one another for the high price and diflinction beftowed by the father upon fuch
asexcel moft in their work andinduftry, even the bewitching honour of kiffing his deeve. The fecond commandment in their table of duties is, To fear the Jefuit, and to obey him; as the two next are much akin to it, and of the like tendency, even to ftudy humility, and to contemn all worldly goods, in order to inrich the prieft. The precept of fearing God feems to be prefixed for form, and in policy only, fince it is impoffible there fhould be any knowlege of God where the exercife of reaton is not known nor permitted; nor can God be faid to be regarded by thofe who ufe the images of God like beafts.
All thefe fores and warehoufes, fo much grain, fo much gold and filver, fo many commodities, from fo fine, fo large and fo plentiful a country, abounding in mines, in rivers, and meadows full of horfes and theep and biack cattle, of timber and fruit-trees, of flax and indico, hemp and cotton, fugar, drugs, and medicinal herbs, as we have feen, muft enable thefe good fathers, who have renounced all wealth, and the world itfelf, to carry on an infinite and moft lucrative trade, in whish, though they have vowed poverty, they are extremely active, and confequently muft make that Jefuitical government a moft powerful one.
It hath advantages which no other government ever had, an abfolute independency upon it's people and their purfes, the whole wealth of the country in their prefent poffefion, the people abfolutely fubmiffive, and refigned to their good pleafure, and all it's calls; no factions; not a malecontent ; an army of 60,000 men, all tame and tractable, devoted to blind obedience, commanded in chief by Jefuits, and obiftinately averfe to be commanded by any other generals; a yaft revenue of many millions; no trouble in taxing, nor any time loft in collecting taxes, the people being moulded by their priefts to throw all their property at their feet. Behold, Britons, and tremble at the Mocking effects of Popery!
Such a government, whilft it proceeds upon the fame prin ciple, is unchangeable. No wonder thefe jefuits are extremely jealous and tender, not only in keeping the poor natives haves to ignorance and bigotry, in order to keep them vaffals to themfelves; but in concealing fo much empire and wealth from all the worid, efpecially from Spain, from whence they were fent, at the expence of that crown, to convert the Indians, and make them fubject to the Spanifh monarchy.
The good fathers are fo far from meaning any fuch thing, that they not only carefully avoid teaching them the Spanifh tongue, but prefs it upon them, as a point of confcience, not to converfe with the Spaniards. If any Spaniard happens to come amongit them (a thing' which the jefuits are fo far from encouraging, that they care not to fee it) he is indeed civilly ufed, but carefully confined within the walls of their holy citadel, the prefytery: or if, by carneft intreaty, he obtains leave to walk through the town, he is clofely guarded by a jefuit at his fide, and fees not a native in the ftreets; for they are ordered to thut themfelves up, and faften their doors, upon any fuch occafion.
Befides, thefe vigilant fathers keep five or fix thoufand men, employed in feveral detachments (apoftolic troops) to watch and fcour the fiontiers, in order to cut off all intercourfe with the neighbouring countries, not yet fubjected to thefe pious fathers of the church. Towards one of their frontiers particularly, left the rich mines in it might invite a fettlement from abroad, they have deftroyed all the houfes, in order to difcourage any fuch fetdement. For thefe felf-denying friars, who are fworn to poverty, have an ardent zeal to fecure all thefe wealthy mines to themfeives for religious purpofes, as they impioully pretend.
Thefe poor-rich humble rovereign milionaries, as they are mafters of fuch immenfe wealth, all confecrated to their own ufe, that is, to the ufe of religion, make a proper difplay of it. The churches are fpacious, magnificent in their ftructure, and fet off with all pomp and decorations, grand porsicoes and colonnades, rich altars, adorned with baflo relievo, pictures in frames of mafly gold, and faints of folid filver, the foot and fides covered with cloth of gold, and the pedeftals with plates of gold; the tabernacle made of gold ; the pyx, or box for the facrament, of gold, fet round with emeralds and other coffly jewels; the veffels and candlefticks made of gold ; the whole, when illuminated, making a fhew almoft beyond belief. A proper bait for the eyes of the poor deluded natives, who, by fuch fine fights, and the pious mountebankry attending them, are retained in due awe and wonder.
The princely perfons of the poor jefuits are fuitably lodged in a fpacious palace, containing grand apartments, furnifhed with many pictures and images, with proper lodgings for their train of officers and domettics; the quadrangles and gardens all in proportion; the whole court making a fquare of fome miles. And the numerous opulent warehoufes, belonging to thefe boly difinterefted men, are their property, arifing out of the induftry and labour of the poor people. Such is the fituation, fuch the ftate and inimitable authority of every jefuit in Paraguay. There are but forty odd of thefe monks in all that great track of country, and in it they have above a million of fouls, not only to obey them, but to woifhip them; nor do thefe, their fightefs and abject laves,
know any other god: for where the true God is ever fo little known, no man will workhip friars, who always paint him as like themfelves, as they themfelves are, in reality, unlike him.

Remarks in another Light, before the laft War, on our article Paraguay.

The climate and foil of Buenos-Ayres has been thought fo inviting, that fome have fuggefted extraordinary advantage would arife to Great-Britain by a fettlement to be made here in time of war; and, indeed, as we have been fo many years yery roughly treated by the Spaniards, in our Weff-India commerce, we fhould caft about in times of peace for every place, the taking of which in time of war, might prove beneficial to us, and injurious to the Spaniards, in order to bring them to realon by force, if we cannot do fo by other meafures.
Would it not be the higheft aft of benevolence, would it not he aeting according to the pure and uncorrupt firit of Chriftianity, to relieve fuch a country from the opprefion and tyranny of Popifh prieftcraft?
There runs a noble highway from Buenos-Ayses to the province of Los Charcos, in which and Potofi, the moft conliderable mines are found ; and as this pravince is the fouthermoft of the whole kingdom of Peru, fo confequently all South America may be fupplyed with goods or merchandiz of all kinds they want this way, infinitely cheaper than any other.
The reafon why the Spaniards do not make ufe of it for this purpofe, fhall be given hereafter. But we think it not amifs, to give our reader here an account how all South America has been fupplied with European commodities.
In the firt place, the goods that come from England are Aipped at Cadiz aboard the galleons, which carry thew to Porto Bello, where they are unloaded, and fent over-land on mules backs to Panama, and there re-fhipped on board fhips in the South-Sea, and carried to Callao, and from thencedifperfed over-land again to the feveral provinces of that waft continent; from whence, it is plain, the charges of exportation exceed the prime coft of the goods four or five times. Whereas, by Buenos-Ayres the charges would be inconfiderable, in comparifon with the ufual way : for the journey from hence to Peru, is made with much eafe in fixty days; and for horfes or mules for the carriages, no country in the world is fo plentifully flocked with them as this, for all Peru is Yupplied with thefe animals from hence: and throughout the whole journey they pafs not in the leatt danger of any boftile Indians, for the province of Tucuman, through which they pafs, hath enjoyed a perfect tranquillity from the frift planting of it by the Spaniards, excepting about Salta, which borders upon the valley of Calchaqui, from whence they ufed to be plagued by the Chileans; and for which reafon the requas or earavan of mules, which ufe this trade, never come near it. They meet likewife upon this road at every forty or fifty leagues with good towns, as Cordova, St Jago de Leftro, St Michael de Tucuman, Effeco, Xuxio, Omagoaca, Soechoa, and others, and fingle plantations difperfed up and down the country, which make the way both pleafant and commodious.
The intelligent reader will confider the valt differences betwixt the way now in ufe, and that to fupply this part of Spanilh America by the way of Buenos-Ayres, by cafting bis eyes upon the maps to help him to form a true judgment upon the matter: he ought, at the fame time, to remember the inconveniences, as well as charge in entering all the goods at Cadiz in Spanifh names, to prevent confifcation, before they can be put on board the galleons, and the many hazards they are expofed to in embarking and re-embarking fo often; befides the land-carriage very often of feveral hundred leagues before they come to their intended market, which makes them fo exceffive dear, that what cofts one hundred pounds at Cadiz, mult of neceffity be fold for near a thoufand, to recompence the merchant, in any tolerable degree, for the charges and rifque he hath run, as well as the long time be muft be out of his money.
Whereas, by this way of Buenos-Ayres, when the goods can be carried thither in Englifh battoms, if what coft one hundred pounds in England, be only fold at market for 250 l. the merchant will gain confiderably more by it, and be able to have three returns in the time he made one the other way. And it is certain, upon fo confiderable a fall of thefe goods they ftand in fo much need of, the confumption of them will be much augmented; for our fulffs and cloths are fo. unreafonably dear, for the reafons already mentioned, that the poorer fort, and even the trading people, make ufe of Quito cloth for their wearing apparel, and only the better fort ule Englifh cloths and ftuffs. Bur if we could ever beable to fettle our trade effectually this way, we fhould utterly ruin the manufachure at Quito in a few years.
Though much more might be faid on this head, yet for the fake of brevity we omit it: we have faid enough to thofe who are competent judges. This is an article of great in portance to England. If we were ance nefted here fecurely

## PAR

## P A R

which if we can ever be perfuaded to undertake heartily, I do not in the deaft doubt may be eafily effected in time of war, and our poffeffions fecurely maintained) we flould be able, in defpite both of French and Spaniards, to enjoy a more lucrative trade than ever with South America. For, Buenos-Ayres, and the country depending on it, afford feveral commodities that Peru cannot bewnithout: in the firt place, all the mules and horfes that are ufed in the prefidency of Los Charcos, where they have fo great occafion for them in carrying firtt the ore, and afterwards the filver, from place to place, come from hence; andithey would have' much to da to fublift at Petafi, was it not for the great quantity of dried cow's fleth that is brought from Buenos-Agres hither, which the ordinary people fubffftupon.
It is not to be imagmed how dear provifions of all kinds are at the mines; and it is worthitaking notice of, that all countries in the world that afford gold or filver in any plenty, are deftitute of all other conveniences, and very unhealthy, Chili only excepted.
But what is yet of more importance than all the before-mentioned commodities, is the herb of Paraguay, that is only to be found in the country adjacent, and depending upon the government of Buenos-Ayres; a thing of that mighty confequence so Peru and Chili, that without it they would find it impoffible to dig any filver ore out of the mines: for thofe poor wretches, negroes and Intians, that are employed in working in them, are almoft every hour fuffocated with mineral vapours, which they meet with in thofe vaft fubterranean caverns; and then nothing will recover them but a liquor, made by infufing this herb in warm water, fweetened with fugar, and drank plentifully, which reftores them to their former vigour.
Sometimes, when the cafe is very bad, and the flaves almont dead before they can be brought into the frefh air, they ufe it for an emetic, which is done by making the infufion flronger, and leaving out the fugar, which clears the ftomach of the offenfive matter, and faves their lives, where every thing elfe is found ineffectual.
The inhabitants that live on the furface are likewife extremely plagued by thefe mineral exhalations, and their bodies dried, or rather parched up to that degree, that if it was not for this fame remedy, or liquor, which they are all day fipping, there would be no living near the mines. And with all the care they can take, without doubt their lives are fhortened extremely; but what is not avarice capable of doing? In a word, without this herb the mines would be of little or no ufe, and the province of Los Charcos very thinly inhabited. This herb is gathered in the couhtry of Paraguay, near the city of Affumption, which is fituated upon the river of Plate, about one hundred leagues above Buenos-Ayres, and there made into packs, and fent down the river to Santa Fé, a fmall village about eighty leagues above Buenos-Ayres, and depending upon that govertument; where the merchants from Chili and Peru come to buy it, and load it upon mules, and convey it to their refpective cities.
This village of Santa Fé, is the only pals by which it can go to Peru ; for people muft not imagine that one can pick and chufe which way they will go in thofe countries, as they can in Europe; it is very providential they have that one good road through fo large a country, fo fparingly inhabited. But fuppofe they could do this, it would be to little purpofe; for of ever we become poffeffed of Buenos-Ayres, we muft likewife fortify Santa Fé, which at prefent contains not many houfes, without any great fortification, and take Affumption, and fette it with a colony of our own.
This city is faid to contain about 1000 families, but is no better defended than the other.
It was fettled by people that had, by their lazinefs and ill mamagement, out-run tlieir fortunes $\ln$ Petu; and, to this day, ferves for a retreat to all fuch people as carl live no where elfe in the Indics.
The country tound it affords every thing necelfary for life, even in $t 00$ great abundance, for which reafon the inhatitants are exceeding lazy, and utterly neglect commerce, fpending their time in feafting and playing on the guitar.
They bave very littie money ftirring amongft them, bartering one thing for another like the Indians. This herb ferves to procure them cloathing from Buenos-Ayres, as well as all other European goods they want: in fhorr, the country is much too good for it's worthlefs inhabitants, and it's much more worthlefs priefts. We defire our readers to obferve, that all the places we have defcribed, as Buenos-Ayres, Santa Fé, and Aflumption, are fituated upon the fame river; and though the diffance between them at filf feems to be very confiderable, yet their having a direct and eafy communication by water, makes the paflage more convenient than fifty miles by land would be.
It is very obvious, therefore, to every common eye, that if we can ever fettle ourfelves at Buenos-Ayres, the Spaniards will, be under an abfolute neceffity to open a trade with us; nay, it is in our power to impofe what terms we pleafe upon them ; but if we had no other way to obtain it, than the affording our gyods as cheap again as they can furnifh themfelves with the other way, even that, with a little patience,
would infallibly produce it. But without trufting to that, we fhould have them in a manner at our mercy, by having the herb of Paraguay in our hands.
But we have ftill another lure for the Spaniards, as powerful and as proper to produce the defired effect, as any yet mentioned; which is, the fupplying them with negroes in fufficient number, and cheaper than formerly.
This is the great inconveniency, which the Spaniards have laboured under this laft age; for having in a manner utterly deffroyed the natural inhabitants, they are obliged now to perform the work by negroes, of which they could never get the number they wanted; and it is certain, if they were fully fupplied, they would get yearly above twice the quantity of filver they now do.
It muft be confefled they ufed all means imaginable to obtain them. The Genoefe undertook to fupply them at a concerted price betwixt them, for which end they formed a company called the Affiento, who had their factors at Jamaica, Curafoa, and Brazil ; and let it be confidered what a prodigious tour they made before they got to the mines; firf from Guinea to Jamaica, from thence to Porto Bello, and then to Panama, where they were re-fbipped on board the fleet when returning to Callao; which is a voyage of four months at leaft, for they have the wind in their teeth every league of this voyage. After ftaying fome little time at this laft mentioned port, they were put on fhip-board again, and fent to Africa, which is a voyage of a month, or thereabouts; and when landed, they can't have lefs than 150 miles to the mines: from whence it is obvious, that not above one negroe in three arrived at Potofi, or the adjacent mines, of thofe that were originally bought by their factors for that end. Whereas, the negroes that might be fent from BuenosAyres (as was done by the late Affiento contract, vefted in the South-Sea company) would be liable to none of the inconveniences that the other poor wretches fuffered, as paffing through fo many different unhealty climates, and fo many tedious voyages by fea, enough to wear out bodies of fleel, efpecially confidering how the miferable creatures are accommodated all the time both with lodging and diet: but this way, they would have but one fhort voyage by fea; for, from the coaft of Guinea to BuenosAyres, they would fail four parts in five of the voyage before the wind; and when landed, pafs through one of the moft plentiful and healthieft countries in the world, even in a manner to the mine's mouth: fo that one may venture to affirm, that with careful management, they would not lofe one in ten. This article alone is of prodigious confequence, and capable to render our African trade infinitely more flourifhing than it is at prefent ; for a cargo, rightly forted for Guinea, confifts of fourfcore different commodities at leaft, of which feventy are of the manufactures and produce of this country ; and they return us gold, flaves, ivory, and wood for dyeing.
There is another capital article of commerce in Buenos-Ayres, which fhould not be omitted; which is that of hides: though this article founds meanly, after to many great ones already mentioned ; yet, when better examined, will be found of no fmall confequence. Monfieur Acarete du Bifcay, the Spanifh hiftorian, fays, when he firft arrived there, he found riding in the port twenty-two Dutch hhips, who had on board, one with another, 14000 hides each; and he computes the bides to be worth, in Europe, no more than twenty-five fhillings a-piece (which is far from the cafe at prefent): and he further fays, that if there had been fifty fhips, they might have had the like loading; this therefore is no defpicable article. This happened when Oliver had declared war againft Spain, which had put fuch a ftop to the trade betwixt Cadiz and America, that the inhabitants were obliged to trade with the Dutch, or want all forts of European goods; for, by the law of Spain, this was capital, and the governor, notwithftanding the neceffity, was fome fmall timie after fent, for this very thing, a prifoner to Spain, and all he had was feized for the king's ufe.
The court of Spain fuffers but two thips to go yearly from Cadiz to this colony; and there is not a little friving, who fhall be the people concerned in them; for they gain above double what the merchants do that fend their goads in the galleons, and have their returas in much lefs time.
The Spanifh minifiers of flate have been very often ftrongly follicited to bring home all the treafures of Peru and Chili this way, and utterly forfake that of Porto Bello, as apparently more exp/fed to all enemies, efpecially fince they have loft Jamaica. The court was very much inclined to this advice, as being fenfible of the truth of the allegations, by many forrowful experiences in the wars they have had both with the Dutch and us; but upon fcanning this propofal more deliberately, they rejected it, becaufe they plainly perceived, if they thould abandon the ufual way, a great many cities, and tracks of land, that were then in a flourifhing condition, would, in a fhort time, become defolate, becaufe they abfolutely depend upon the paflage of the filver, and other merchandizes of Peru and Chili, either through or near them; by which means the other nations of Europe, that have not fuch choice of countries to fettle, would feize upon them, and

## P A R

occome nearer neighbours to the Spaniards than their true inereft will allow of.
It muft be confeffed, that the Spaniards, upon this occafion, made a true judgment upon the matter in debate. But if any nation in war with them, fhould feize upon Porto Bello, and think that way to diftrefs them by madering them from bringing home the filver of Peru, they would find themfelves extremely deceived, and laughed at by the Spaniards, who would very readily change the courfe of it this way; and when the war was over, re-fettle it again if they faw occafron. I cannot help taking notice here, of a great many people, who, at the beginning of the late war, were full to the brim with the notion of taking Porto Bello and Panama , as if they thought to imprifon the filver in the mines; for, by their politics, the Spaniards were neither to have negroes to work them, or a paffage to bring it to Europe. I have loft too much time in mentioning fuch a weak ineffectual project, if it was not in every body's mouth almoft that pretends to fpeak of this matter. Nor is this mentioned to depreciate the merit of the worthy, upright, and public-fpirited admiral, who has always laboured to do his country all fervices in his power.
If my countrymen have this at heart, as one would think there fhould be little reafon to doubt of, let them turn their thoughts upon Buenos-Ayres or Chili ; but the firft is by much to be preferred, for many reafons: for a voyage to Chili and back again, cannot take up lefs time than twenty months, and a fhip muft pafs through as formy and tempeftuous a fea as any in the worid; whereas to the river of Plate will not take up half the time, and in all probability will meet with little or no bad weather in the whole voyage. Secondly, the viceroy of Peru will not be able to difturb you at Buenos Ayres, before you probably will have received a fecond fupply or reinforcement, but not fo with Chili. Thirdly, we are more certain of procuring a trade with Pe ru from hence than from Chili, becaufe of the feveral commodities that Buenos-Ayres, and the country adjacent afford, which Peru ftands in abfolute need of, and can no way difpenfe without them : there are yet many more reafons, and, in my opinion, very cogent ones, which, for brevity's fake, I omit.
When this acquifition is once made, you need never fear procuring inhabitants, for there will be more occafion for the bridle than the fpur; the certain profpect of being enriched, the plenty and healthinefs of the country, will be fuch incitement to people impoverifhed by want of trade and Popifh navery, that the country would infallibly abound with inhabitants on a fudiden.
But there ought to be better order obferved in fettling this country, than that we have hitherto practifed in our other colonies in America; for it is the greateft wonder in the world they ever arrived to any perfection: and, indeed, it was in a great meafure owing to our civil wars, which made many wealthy people fy thither with their fubftance. This was the occafion of the halty growth of thofe of Barbadoes and Virginia; indeed New England and Penfylvania, owe their rife to the fectaries.
It bath both angered and grieved me, to obferve in our contiguous colonies upon the continent, this want of forefight; for I am very fure if one was attacked by an enemy, the governor of the next, though ever fo well difpofed, would find it the pardeft matter imaginable to get 500 men together to march to the relief of his neighbour, though they were fure their own turn would be the next. This is but a fmall inftance to what I can give, if I thought it proper. But it is to be hoped, this will foon be effectually remedied by the authority of a Britifh parliament; for we fee at this time, what infult the colony of Virginia has lately fuffered by the French. See the articles British America and North Carolina.
In the peopling Buenos-Ayres, if ever it Thould become the Britifh poffeffion, I advife my country to follow the Turkifh policy, and make the people hold their land by the fame tenure as their Timariote; only it Chould defcend to their heirs, upon keeping or obferving the original contract : which is, to be ready to come completly armed to the appointed rendezvous, and ferve wherever, and as long as the government requires. The number of acres that might be then allowed for every foldier, muft be fettled after fome years obfervation. Another thing that muft be remembered, is, never to grant too great a tract of land to one man; for this is the greateft hindrance to the peopling a colony that can be, and is the very difeafe that fome of our plantations are fick of, as $\mathrm{Ca}-$ rolina, New York, and the Jeifeys; neither is Virginia or Maryland free from this diftemper, which is occafioned by safcals taking up the land, becaufe the free redt is little or nothing, and hardly ever paid, in hopes to fell it dear to new comers'; though in the mean time they neither fock the ground, or any other way make it ufeful to the public. This very thing hath done feveral of our plantations incredible damages, by forcing people away who came to fettle in them. See the article British America, Plantations. Buenos-Ayres will allow of thefe, and yet more reftrictions, if it is found receflary; for here they enter upon the Spanifh
improvements without any of their labour, and will have fo many other advantageous avays of 'growing rich, by the fituation and proper commodities of the country, that it may juflly be reckoned a favour to be permitted to fettle here, and to have reafonable tracks of land granted them upon equitable conditions.
This country will, in a very few years, have funds of it's own, without any ways oppreffing the inhabitants, more than fufficient to defray the charges of the government; as a fmall duty upon negroes brought hither for the Spaniards, the like upon'exported hides, and a very confiderable one upon the herb of Paraguay, which will render it one of the leaft chargeable, and yet one of the moft important, colonies the crown of Great-Britain ever had.
That this place might have been as eafily taken at the commencement of the laft war, [in 1740] as Porto Bello, is little to be doubted ; and it's confequence to Great-Britain, had we poffeffed it no longer than during the continuance of the war, would have been of fo great importance to our trade, as to have in a great meafure re-imburfed the nation the expence of the war; for by this channel, we might have thrown immenfe quantities of the Britifh manufactures into Pe ru: and if the circumftances of affairs had obliged us to part with this place for the fake of peace, fhould we not have been able to have made far better terms with the Spaniards, than we did by giving up only the paltry inland of Ratan? Before we had parted with Buenos-Ayres, might we not have compelled the court of Spain to have ratified and confirmed to, us by treaty, our Right tothelog wood trade, and to a free and uninterrupted navigation to our own plantations? If for the fake of the Dufch and our Eaft-India trade, the court of Great-Britain fhould have judged it eligible to have given up Cape Breton, there would have been no reafon to have parted with BuenosAyres, or any other important place we might have taken from Spain, till we had made our own terms with that court and obtained at leaft thofe rights which engaged us in the war. See the articles West-Indies and Log wood.

Remarks on our article Paraguay fince the laft war, and the Definitive Treaty of 1763 .

By the treatment, it is not only rumoured but really credited at the time of writing this, our Britifh hog vood cutters have met with in violation of the late treaty of peace, it looks as if the Spaniards had no fincere intention to adhere to the terms and conditions of peace. Should this prove the cafe, and we Chould be obliged to come to a frefh rupture with Spain, the fuinefs of time feems then to be come to compel us to put an end to the Spanifh power in America: And as we are now very happily fituated, by virtue of the laft treaty, to deprive them of their Mexicon Treasures, [fee Mexico] why notalfo of their Peruvian? And Buenos-Ayres, down the river La Plate, being the receptacle of a part of the treafures from Perv, why hould this be unthought of longer? Why thould not at length a partition of the richeft parts of Spanish America take effect, either to prefer British Allies, and in that manner fatisfy them for contributing after a fuccefsful war, in conjunction with England, to humble Spain once for all?
Jefuitifm having met with a great blow lately in Europe, their great place of refuge will certainly be amongft their fraternity in Paraguay. What they lofe in Europe, therefore, they may gain in Spanifh America; and while their dominion fhall encreafe fo near to a fountain of Spanifh Peruvian riches, the more difficult it will be to extirpate them. But on a future Spanifh war, 'tis to be hoped, England and her Proteftant allies will be induced to get a footing as near to Peru, as Great-Britain is at prefent to Mexico, and then we may laugh at the Spaniards for ever after, for any injury they will ever after be able to do to this kingdom or her allies. See our articles America, British America, French America, Florida, Mexico, Peru.

PARAYBA. The captainric of Parayba in Brazil, belonging to the king of Portugal, is fo called from the river of it's name, lies between that of Rio Grande and that of Tamerac or Itamarika on the fouth, having the ocean on the eaft, and the Figuares on the weft. It's extent from north to fouth, that is, from Rio de San Juan de Stau to Capo Blanco, is about 35 leagues; that is, from 5 deg. 50 min . of latitude to 7 deg. 40 min . but as to it's depth into the inland parts we can affirm nothing.
The country is wateted by two confiderable rivers, viz. the Parayba abovementioned, and San Domingo al Monogoapa; the former of which lies under 6 deg. 24 min. fouth latiude, four leagues from Capo Blanco, and difcharges itfelf by two mouths into the ocean, being feparated by a large fand-bank. This river, though very fhallow in fummer, doth fwell fo high in winter, that it overflows all the adjacent low lands, and often carries off numbers of men and cattle. The other which lies farther north, is faid to be larger towards it's fource than at the mouth; between thofe two lies the bay called

Ponto de Lucena, between which and Cabo Ledo is a bay, which affords a fafe fation to the largeft fhips,
This country did formerly belong to the French, who were difpoffeffed of it by the Portugueze anno 1584, who built in it a large city of it's name, together with fome other towns and villages, and made fome confiderable plantations of fu-gar-canes, and erected a number of fugar-mills on the rivers above-named.
The whole territory is fertile, not only in that commodity, but likewife abounds with the Brazil wood, cattle, hides, tobacco, cotton, the roots maniok, aypi, roucou, \&c. and much ufed by the natives, who are called Pettiguares, and are at perpetual war with their next neighbours the Figuares.
The city of Parayba, is fituate at the mouth of the river of that name, and on the fouth bank of it about three leagues from the main ocean. The river is navigable up to it, and a fhip may carry without any danger, 6 or 700 barrels of fugar. The country along the river is pretty low, plain, and rich, but at fome diftance from it, it begins to raife itfelf gradually into fertile hills and dales, which yield a delightful verdure and product; but the flat country being much the richer, is divided into various cantons under their feveral names, all which being fertilized by the overflowing of the river abovementioned, produce plenty of barley, fugar, Indian wheat, potatocs, ananas, cocoa-nuts, meions, citrons, oranges, bananas, pakanas, and other neceflaries of life. The hills are no lefs fertile in good pafture, and the cattle that feed upon them, are in great numbers, infomuch that their very hides amount to a confiderable income
PARCHMENT, in matters of traffic, is made of fheep or goats-fkin, prepared after a peculiar manner, which renders it proper for feveral ufes, particularly for writing on and covering of books, \&c.
Parchment is begun by the fkinner, and ended by the parch-ment-maker. It conftitutes a very confiderable article in commerce.

Manufacture of Parchment.
The fkin having been ftripped of it's wool, and paffed the lime-pit after the manner of leather [fee Leather], the ikinner flretches it on a kind of frame, confifting of four pieces of wood, mortified into each other at the four angles, and perforated lengthways from diftance to diftance, which holes are furnihhed with wooden-pins thät may be turned at pleafure, like the fe of a violin.
To ftretch the fin on this frame, they make little holes all around it, and wough every two holes draw a little fkewer ; to this fkewer they tie a piece of fmall packthread, and tie that over the pins; fo that, coming to tutn the pins equally, the fkin is ftrained tight every way, like that of a drum.
The fkin being thus fufficiently fretched on the frame, the fleh is pared off with a tharp inftrument for that purpofe; this done, it is moiltened with a rag, and a kind of white ftone or chalk reduced to a fine duft, ftrewed over it ; then with a large pumice ftone, flat at bottom, much after the mannter of a muller for grinding colours, they rub over the fkin, as if about to grind the chalk, and thus fcours off the remains of the fleth. Then they go over it again with the jron inftrument ; again moiften it as before, and again rub it with the pumlce-ftone, without any chalk underneath ; this fmoathens and foftens the flefh-fide very confiderably. They drain it again, by paffing it over the iron inftrument as before. The flefh-fide thus drained, they pafs the iron on the wool or hair-fide, then fretch it tight on the frame by means of the pins, and go over the flelh-fide again with the iron: this finihes it's draining; and the more the fkin is drained, the whiter it ever becomes.
They now throw on more chalk, fweeping it over with a piece of lamb-fkin that has the wool on; this fmoothens it fill further, and gives it a white down or nap. It is now left to dry, and when dried, taken off the frame, by cutting it all round.
The fkin, thus far prepared by the fkinner, is taken out of his hands by the parchment-maker; who firf ferapes or pares it dry on the fummer, with an iron inftrument like that abovementioned, only finer and harper; with this, worked with the arm from top to bottom of the fkin, he takes away about one half of it's thicknefs. The fkin thus equally pared on both fides, they pals the pumice-ftone over them, to fmoothen it. This laft preparation is performed on a kind of form or bench covered with a fack fluffed with flocks, and leaves the parchment in a condition for writing on.
The paring the fkin dry on the fummer, is the moft difficult preparation in the procefs; for which reafon the Rinners feldom dare meddle with it, but ufually leave it to thofe more experienced in it: the fummer whereon it is performed, is a calf. Rkin well fretched on a frame, ferving as a fupport to the fkin, which is faftened a-top of it with a wooden inftrument that has a notch cut in it. Lafly, that the iron-knife may pafs the eafier between the fummer and the fkin to be pared, they put another fkin, which they call the counter-fummer. The parings thus taken of the leather, are ufed in making glue, fize, \&cc. What is called vellum, is only parchment made of the fkins of abortive calves, or ar leaft of fucking calves; it is finer, whiter, and fmoother, than the common
Vol. II.
parchment, but it is prepared in the lame matiner as that ${ }_{i}$ abating that it is not paffed through the lime-pit.
PARLIAMENT, a grand affembly of the three eftates of the kingdom, viz. lords firitual, lords temporal, and commons, fummoned to meet the king, to confult of matters relating to the common-weal, and to enact and repeal laws.
'Till the Conqueft, the great council, confifting only of the great men of the kingdom, was called magnatum conventus, and prelatorum procerumque concilium. The Saxons called it Wittinagemote, or an affembly of wife men
After the Conqueft, about the beginning of the reign of king Edward I. fome fay in the time of Henry I, it was firft called parlementum, from the French parler, to fpeak; though it fill only confifted of the barons, or great men of the nation, 'till in the reign of Henry III. according to fome, the commons were alfo called to fit in parliament, the firft writs fent out to fummon them, bearing date 49 Henry III. anno 1217 , though Sir Walter Ralegh thinks, the commons were firft called in the 17 th of Henry I. and Dr Heylin fixes the time of their firft admiffion to the reign of Henry II
Sir Edward Coke, Dodderide, Prynne, and others, have fhewn, that the commons, of England had ever a Chare in the legiflature, and a place in the great affemblies; though not on the prefent footing, as making a diftinct houfe, and as compofed of knights, citizens, and burgeffes.
Parliaments are to be fummoned, prorogued, and diffolved by the king'alone; nor can a parliament begin without the king's prefence, or his commiffioners. At firf new parliaments were called every year', by degrees their term grew longer. In the time of king Charles II. they were held a long time, with great interruptions between. Both which methods were found of fo ill confequences, that in the beginning of the reign of king William, an act was paffed, whereby the term of all parliaments was reftrained to three feffions, or three years, hence called the triennial act. Since that, from other views, the period of parliaments is again, 3 Geo. I. lengthened to feven years.
A parliament is called by the king's writ or letter, directed to each lord, commanding them to appear; and by othet writs directed to the fheriffs of each county, to fummon the people to elect two knights for each county, and one or two burgeffes for each borough, 8 cc .
Anciently all the people had votes at the elections; 'till it was enacted by Henry VI. that none but freeholders refiding in the county, and who had a yearly revenue of 40 s . fhould be admitted to vote ; nor were any to be elected that were under 2I years of age.
That the members might attend in parliament with more freedom, they and all their menial fervants, were privileged from all arrefts, attachments, imprifonments, \&c. for debts, trefpaffes, \&c. but not from arrefts for treafon, felony, and breach of peace.
The place where the parliament meets, is wherever the king pleafes; of late it bas been in the palace of Weftminfter; the lords and commons each in a diftinct apartment. In the lords houfe, the princes of the blood are placed in diftinct feats; the great officers of ftate, dukes, \&c. and bilhops on benches; and the vifcounts and barons on others acrofs the houfe, all according to their order of creation, place, \&c.
The commons fit promifcuoufly, only the fpeaker has a chair at the upper end, and the clerk and his affiftants at a table near hịm. Before any matters bedone, all the members of the houfe of commons take the oaths, and fubfcribe their opinions againft tranfubftantiation, 8 cc . which teft, the lords too, though they do not take the oaths, are obliged to take.
The houfe of lords is the fovereign court of juftice of the realm, and the dernier refort ; the houfe of commons is the grand inqueft, but no court of juftice like the lords.
Any member may move to have a bill brought in for any thing; which, upon a queftion put, being agreed to by the majority, that perfon, with others, are ordered to prepare and bring in the fame. When ready, a time is appointed for reading: after reading it by the clerk, the feeaker reads the abiftrad thereaf, and puts the queftion; Whether or no it fhall have a fecond reading? After a fecond reading, the queftion is, Whether or no it chall be committed? Which is either to a committee of the whole houfe, if it be of importance, or toa private committee?
The committee appointed, and a chairman chofen, the chairman reads the bill, paragraph by paragraph, puts every claufe to the queftion, fills up blanks, and makes amendments, according to the opinion of the majority. The bill thus gone through, the chairman makes his report at the lide-bar of the houfe, reads all the additions and amendments, \&c. and moves for leave to bring up the report to the table; which granted, he delivers it to the clerk, who reads the amendments, \&c.
The fpeaker then puts the queftion, Whether they thall be read a fecond time? and, if agreed to, reads them himfelf. To fo many as the houle acquiefces in, the queftion is now put, Whether the bill thus amended, Ghall be engroffed, the fpeaker holds it in his hand, and afks if it fhall pafs? If the majority be for it, the clerk writes on it, foit baille aux
f:igneurs,
feigneurs. Or in the houre of lords, foit baille aux com-munes.-If a bill be rejected, it cannot be any more propofed during that feffion.

- Forty members conftitute a houfe of commons, and eight a committec. A member of the commons, to lpeak, ftands up, uncovered, and direets his fpeech to the fpeaker of the boufe of commons only. In, the lords houle they vote, beginning at the puifne or loweft baron, and fo up orderly to the higheft, every one anfwering apart, content or not content. In the houfe of commons they vote by yea's and nay's; and, if it be dubious which is the greater number; the houfe divides. If the queftion be about bringing any thing into the houfe, the ay's go out $;$ if it be about any thing the houfe already has, the no's go out. In all divifions the feaker appoints four tellers, two of each opinion. In a committee of the whole houfe they divide by changing fides, the ay's taking the right, the no's the left of the chair, and then there are but two tellers.
If a bill pafs one houfe, and the other demur to it, a conference is demanded in the Painted Chamber, where certain members are deputed from each houfe; and here the lords fitting covered, the commons ftanding bare, the cafe is debated. If they difagree, the affair is null; if they agree, this, with the other bills that have pafled both houfeg, is
- brought down to the klng, in the houle of lords, who comes thither cloathed in the royal robes, and with the crown on ; before whom the clerk of the parliament reads the title of each bill, and as he reads, the clerk of the crown pronounces the royal afient or diffent.

The names of counties, cities, corporations, borough-towns, and ftewarties, in Great-Britain, with the number of knights, commifioners of Chires, citizens, and burgeffes, chofen in each to ferve in parliament.

A fcheme of the proportions the feveral counties in England paid to the land-tax in 1693, and to the fubfidies in 1697 , compared with the number of members they fend to parliament.
In this fcheme the proportions are thus confidered, viz. That as the whole kingdom fend 513 members to parliament; fo the whole of each tax is divided into 513 equal parts; and the firft column thewing the name of the county, the fecond fhews how many of the 513 parts each county paid to the land-tax in 1693, the third how many of the 513 parts each county paid to the fubfidies in 1697, and the fousth how many of the 513 members each county fend to parliament.

Cities are included in their re-
fpective counties.
Member of Parliament, being, according to the conflitution of our government, obliged to be polfeffed of a landed effate ; and the profperity of the landed intereft depending on that of trade, we judge it may not be altogether ufelefs or difagreeable to many, to take due notice, in a work of this kind, of a perfonage of fo bigh concernment in this kingdom, and upon whom, indeed, the rife or decline of the national commerce fo greatly depends.
It will hardly be difallowed, that a member of parliament is a man of as much confequence as any in the kingdom. He is placed in the higheft ftation, which his country has in it's difpofal, and invefted with the greateft truft the people can beftow upon him. He has the properties, the liberties, nay the lives of thofe who chufe hirn, in his hands'; and what is more, he is accountable to no man for what he does. Thus invefted with almoft abfolute power, bow circumfpect, how cautious fhould he be of acting in any manner unworthy of this great truft; a truft, which is by much the more facred, becaufe thofe who gave it, have divefted themfelves of the power of calling him to account, for any neglect, or nonperformance of his duty in it?
The accomplifhment of a perfon of this confequence fhould not be mean, nor his mind bafe and vitiated. There are two forts of men, whom we look upon as utterly unfit to prefide in the government of a Commonwealth. Of the firft are they, who have only wet their lips and tafted of the firft elements of reafon and wifdom, without going through the whole difcipline and inflitutions thereof; whereby the thirf of our inordinate defires, and the fire and violence of our paffions are effectually allayed and extirguifhed. Such men gencrally give into a way of life, oppofite to all the precepts of virtue and public fpirit, becaufe wifdom and philofophy have not taken deep root. Had it done fo, it would have made them learned in the acquifition of all thofe virtues, which would have qualified them for fo confpicuous and momentous a ftation.
There is another kind of men, quite different from the former; who, from their very infancy have made wifdom and philofophy their whole ftudy and delight. Their fpeculative notions, and contemplative way of life, having no regard to the common good of focieties, are therefore of no ufe to the public. However fuch may be jufly reckoned men of learning and ingenuity; yet, becaufe they are wrapped up in one fingle fyftem of plilofophy, and never bring forth their learning for the public benefit, are therefore defervedly looked on as unqualified in the affairs of a ftate.
Plato is of opinion, that fuch of thofe reclufe philofopher:, who are in their nature civilized, and well turned for the bufinefs of the world, and capable of being brought to do their duty in a public character, to their own glory, and the advantage of their country, hould be compelled to leave the. 5 retirement, and to take fome public truft upon them. But in relation to thofe who are of a quite different genius, he gives them up to the enjoyment of their folitudes, and leaves them and their philofophy to grow old together. Wherefore, it has been the opinion of the wifelt men, that they who have only made little, or a very mean, progrefs in the exercife of the underftanding, and given no teltimony of their public virtues; nor they who are wholly immerfed in mere fpeculation, thould never be admitted into a public flation in the concerns of government. Not the former, becaufe they have not yet obtained that honeft and virtuous way of living, that wifdom and juftice prefcribe: nor the latter, becaule they imagine they have attained to more happinefs, than what is to be met with in the civil and political life, and that folitude is the only ftate of blifs, and therefore they look on all high dignities with contempt and indignation.
Hence it is, that the public is under the neceffity of feeking out a middle clafs of men, well qualified for the adminiftration of public affairs : fuch are they, who, in their conduct and ftudies, have no other view but the acquifition of fuch accomplifhments, as are conducive to the happinefs of human fociety, and the good government of the Commonwealth. This is that peculiar fort of wifdom, of which the Britifh fenator makes himfelf mafter: whereby he will become well inftructed, how to bear rule in his own country, and approve himfelf a common friend and public bleffing to mankind.
A good education, fays Plato, is the fource of all knowlege. Parents are now grown neglectful of this, and we fee them fhifting off the charge of beffowing a virtuous and liberal education upon their own children, and giving it into the hands of ftrangers: the heirs of a noble and generous family are delivered over to the cuftody of a wretched pedant, or
unfkilfut pedagogue. The care of Cato, in the education of his fon, is never to be enough commended. He would by no means fuffer his own wife to wafh and bathe him, or to fwathe and drefs him, unlefs himfelf was prefent, to overfee and affift her. He had in his family one Chylo, a grammarian, a man well enough verfed in learning, as a domeftic tutor to his fon in that branch; yet he thought it an indignity to have a fervant reproach and domineer over him, or give him correction when faulty. - When he was fit to be inftructed in literature, and in the laws and cuftoms of his country, the father himfelf would have the fole care of him. None but he muft teach him, even to fling the javelin, to go through the whole exercife at arms, to underftand horfemanhip, with the manner of fighting in clofe combat, the art of fwimming, and all other atchievements, by which youth are inured to the bearing the extremes of heat and cold.
It is alfo faid, that Cato wrote a hiftory for the ufe of his fon, to bring him acquainted with the exploits of his anceftors, and with the art of prefiding with glory in the affairs of the ftate. Whenever his fon was prefent, the father would never fuffer any obfcene converfation, or let flip any expreffion, that favoured of rafhnefs and anger, or of vice or folly; being as cautious, as if a veftal virgin was prefent. Such was the behaviour of the great Cato, and fuch in the general the good conduct of all the Romans, in the education of their children! Among the feveral nations and republics of Greece, there was the fame care ufed in the training up their youth. Thefe were the great mafters and teachers of that ufeful knowlege, which thews us the way how to live happily in a private ftation, and in what manner communities of men are to be beft governed. It is the general wifh, that the governors of our literary inftitutions would be more careful to inftruct youth in the art of living well, than the art of controverfy, and inftil into them only the grand branches of knowlege truly ferviceable to the ftate, inftead of the jargon of wrangling, and the little frifkifh arts of fporting with words. Were this the cafe, we fhould fee their fcholars become more ufeful reprefentatives of the people, and promoters of the welfare of the kingdom.
The o!d academies of Greece were the feminaries of their republics; out of which, as out of the Trojan horfe, came their beft kings, and moft renowned generals and governors. Alexander and Scipio, two of the greateft commanders that ever lived, with others too numerous to be recounted, had their firft rife in glory from the Grecian inftitutions for literature: and in the fame way hould all thofe be trained, who may be expected from their birth and fortune to be placed in any diftinguifhed ftation, and more efpecially the fenatorial one. Hence it comes to be'a national concern; and it is certainly the duty of every government to have public fchools and colleges, fo well ordered, that they may be as nurferies, out of which the ftate may be furnifhed with perfons endowed with all the virtues and good accomplifhments, that can adorn human nature.
In the progrefs towards the complete education of a perfon of this character, he thould from bis youth be well inftructed in the art of fpeaking, both properly and gracefully; for without this talent, though he may think and judge ever fo juftly, yet if he is incapable of exprefing himfelf with a becoming and mafterly elocution, that the affembly may thoroughly underftand his fentiments, the affembly cannot receive the benefit of his judgment, nor can fuch a one have the fatisfaction to obferve that regard paid to his underftanding which he merits. At his firf fetting out in his enquiry after truth, there are threc asts requifite to be acquired, grammar, logic, and rhetoric. For thele are the portals to the palace, wherein true wifdom refides. From thefe are to be learned the rules of debating and converfing, which muft be confirmed and improved by ufe and exercife, and by reading and imitating the works of the moft inteligible and pureft writers. When the ftudent has made a proficiency thus far, let him not content himfelf with thefe trite and ordinary attainments; but let him grafp at higher improvements; let him enter into philofophy, and take a view of the fyftem of the univerfe; and then let him look into the life, actions, and ways of men, to fee how families are ordered, and in what manner cities and Commonwealths are eftablifhed and governed. In the former of thefe enquiries, Natural Philofophy, Metaphyfics, and Mathematics are our chief guides: in the latter, Moral Philofophy, Policy, and Economy. Both thefe forts of philofophy have but one and the fame end in view, by enabling us the better to exercife our intellectual faculties to the beft purpofes: they differ in this particular indeed; the one of them is confiftent with a life of eafe and leifure, whillt the other is converfant with bufinefs, and always in a fate of activity. Hence it is that happinefs is either private or public. They who repofe their happinefs in an active life, in the exercife of all the virtues, are always to be efteemed the moft beneficial members of the Commonwealth; for every good thing, by being communicated to many, gains fo much greater addition to it's intrinfic worth; the felicity, which diffufes itfelf to multitudes, is certainly preferable to that mere contracted happinefs, which centers within the individual. Yet a life of fpeculation is fint in order, and more honourable, that pre-
ceding practice, and giving life and dignity to the nobleft actions.
But fince the good fenator's happinefs, and all his knowlege and wifdom, are converfant with a life of activity and public bufinefs; and he ought to be one who knows how to meafure his actions by the rule of integrity and right reafon, who is qualified to manage affairs both private and public, and who underftands how to govern a city by wife counfel, how to fecure a conftitution by wholefome laws, and reform it by a due execution of juftice; it follows, that he ought to make hinfelf acquainted with that part of philofophy which prefcribes the precepts of virtue, which are the limits of human actions, and contain the whole fcience of behaving well in a national adminiftration. How fhall he be able to fet a fenate right, in the fundamental duties of juftice, prudence, and fortitude? Or, how fhall he appeafe a multitude, or quell a fedition, difpenfe, or expound laws, who is ignorant of the principles of juftice and prudence? Can fuch a one be able, wifely to give his advice about a war or a peace, a league or a treaty, who knows not when a war is juft or otherwife, a peace honourable or the contrary, and a league dangerous or well made, and fit to be kept facred and inviolable? The fubftance of this knowlege is not to be obtained, but by ftudying the moft approved authors in moral philofophy, policy, and ceconomy, For out of thefe treafures we may make a collection of all the virtues, and of all the arts of government.
There is another fort of learning likewife, not lefs neceffary to the accomplifhment of this character, by which we are brought acquainted with the moft remarkable fayings and exploits of the great and wife, who have lived before our times. Thefe are to be met with in the monuments of faithful annalifts and hiftorians. Thefe, according to Tully, are the witnefles and evidences of paft times, the torch-beaters and guides of truth, human nature's remembrancers, the leaders and conductors of our actions, and the meffengers and envoys fent to us by our forefathers.
To this ftock of knowlege, many additions are to be made, before the Britifh fenator can be thoroughly qualified. He muft be well acquainted with the cuftoms of his own country, the manners of his countrymen, their way of living, their difpofition, and their fentiments concerning the prefent pofture of affairs, and all the remarkable occurrences of public Jife. Befides this, he muft be fure to make himfelf mafter of that truly ufeful and neceffary knowlege, which completes the chasacter of a wife ftatefman. He muft be well acquainted with the true nature of war and peace, what quarrels his people are engaged in, what leagues and treaties fubfift between them and their neighbours, as allo between other potentates; what taxes, duties, and cuftoms are already impofed, or may be neceffary in future, and whether they are as wifely regulated, as they ought to be, confiftent with the intereft of commerce and the liberties of a free people : what the rights of the fubject are, and what the proceedings of the miniftry: in what manner the laws are executed; what are the difcontents or differences among the people, and how they are to be allayed and pacified: what is the prefent ftate of morality: how the youth of his country are educated and employed : what principles, cuftoms, and rules of conformity are necefflary to be introduced, in order to reform and moralize a people; and what is the prefent fate of religion.
Nor fhould the good fenator be ignorant of what paffes omong the allies and confederates of his own country; what are their rights and demands: he mult, in a word, be acquainted with all the realons and ends of government, underftand the cuftoms and ufages of his people, the proceedings of all courts of judicature, and all public affemblies. Nor fhould he be a ftranger to the examples and characters of all about him, and to the defires and expecations of his fellow fubjects. A good counfellor, fays Anthony, is fuch a one, who well underftands, and always adberes to, whatever may contribute to the eftablifhment and welfare of a ftate, or increafe it's happinefs. Such counfellors and fenators were the Lentuli, the Gracchi, the Metelli, the Scipio's and the Lzelii of Ord Rome. But in thefe our times, fuch examples are uncommon enough : we often fee men crouding for honours and offices, and becoming candidates for the fenatorial dignity, without the necelfary qualifications of knowlege, wifdom, and experience.
If, here and there, a candidate of an exalted character appears in public, yet, perhaps, his only recommendation is a fingle campaign, or the fervices of one year, or a little fmattering of the law, or the greatnefs of his wealth, or the popular clamour of his dependants, and partizans; whilf he has a very fiender acquaintance with what bave been intimated. The knowlege of men and things, is the rife and foundation of all true wifdom, which can never be attained, but by a knowlege of thefe arts, and that found policy which is the grand fupport of the fate : without there, it is impollible for him to think, and fpeak, and act well or wifely.
For the perfecting of this character of wifdom and prudence, it may be neceffary to become acquainted with the laws and cuftoms of foreign countries. This fort of knowlege is attained by travel. The benefit to be made by which, arifes from obferving the manner and civilities of thofe abroad,
and fuch of their rights and cuftoms as are worthy our imitation; and from remarking their predominant follies and vices, which we muft avoid. 'The laws of foreign nations, their jurifdiction, liberties, way and manner of living, their civil and military difcipline, with the management of their domeftic affairs, the fituation of their country, their clime and foil, their public buildings, their ornaments and fortifications, deferve our notice. It may alfo be of ufe to know the real character of every prince, whofe dominions we vifit; to enquire what opinion the people have of him, and how hey are affected towards his government. If there is a fenate or great council, how are they chofen, and what are the people's fentiments of their conduct? In what manner is juftice adminiftered? What is the national genius of the country? What men they have eminent for their wifdom and learning, and what great generals? Thefe are proper enquiries to be made by a judicious traveller: befides thefe, he hould endeavour to make fome ufeful and advantageous difcoveries, in the commercial arts and found polity, and bring them home, for the fervice of his own country upon emergencies. But great caution ought to be ufed not to introduce any ftrange cuftom into our country, left we infect the people with the itch of novelty, and corrupt their minds with effeminacy; whereby they will be brought to forget the rigid virtues and plain honefty, with the good manners, wife laws and cuftoms of their anceftors. For the populace atechangeableenough, and nothing is more fatal to a government, than extraordinary innovations. If one who would qualify himfelf for this great office, has no opportunity of travelling, let him fupply this defect by reading the moft approved cofmographers, geographers, and hiftorians: and let him be careful to fore up fuch a fock of knowlege, as may preferve him from that childifh behaviour, which is the effect of ignorance. In that part of philofophy, which treats of the more abftrufe fecrets of nature, he fhould not be entirely unikilful: but he may be very fparing of this fort of fludies; to run too far into them is not compatible with a character of this kind. Wifdom has a boundlefs field to range in. The fciences muft be cantoned out, fince no fingle perfon can become mafter of them all. The compals of our knowledge may be comprehended under what is honeff, pleafant and profitable. What is honeft and pleafant, ferves rather to make life agreeable, than to qualify us for the governor, court, the roftrum, or the tribunal; it ferves us to retire to, and gives new ftrength and vigour to the underftanding, by feafonably indulging in lawful eafe and delicacy. This fort of philofophy may poffibly do the public fervice, if it's followers delight more in a life of public bufinefs, than to immure themfelves in cells and folitude.
There is, however, a retired fort of philofophy, which is of great ufe to the public. For we are not to look upon them as the only philofophers, who are qualified to direct the affairs of a ftate; fince, befides thofe, thers are others, to whofe written labours, and immortal works, we are indebted for the remains and monuments of true wildom and learning. And there is alfo a third fort, whofe bufinefs it is to inftruct thofe under their care in the rules of virtue, and in the art of government. Thefe men certainly deferve well at our hands; becaufe, by their leifure and retirement, we are inftructed in bufinefs, and taught to come abroad with reputation and advantage. The Antients had many philofophers of this order : fuch were Theophraftus, Herachdes of Pontus, Dicæarchus, Socrates, and Pythagoras: it is remarkable, that the book which Dicaerchus wrote upon government, was, by a decree of the Spartan commonwealth, ordered to be read publicly once a year, and that all the youth fhould be affembled together to attend the lecture.
The great end of true philofophy, is to cultivate the mind, to plant in it the feeds of virtue, and not to grate or tickle the ears with wrangle and contention. All contumelious and paffionate language, all noify combats about words, feem unworthy of the name of true philofophy. All arts and fciences are not, properly fpeaking, virtues; they are only the inftruments and ornaments, by which virtue is attained and per fected. There are various fects in philofophy, but thefe differences ought not to diffact the mind of the wife and good enator.
When he hath made himfelf mafter of what has been fooke of, the attainment he is poffeffed of, will become confpicuous by eloquence, which is the ornament of wifdom. Where this is wanting, all his other accomplifhments, let them be never fo extenfive, will infenfibly dwindle into obfcurity. The art of peaking nervoully and elegantly, will enable a gentleman in this capacity, not ouly to maintain his own dignity, but to defend the rights and liberties of private per fons, and the intereft of the community. By this the minds of men, when raifed to an undue ferment, are eaflly pacified: by this, where they are lulled and becalmed, they are eafily put in agitation; and this has done more fure and fatal execution, than the fword or the fpear. When the fenator rifes to fpeak, let him fpeak with all the force of reafon and wif dom, and with all the graces and ornament of a chafte and manly eloquence, neither too verbofe and diffulive, nor too laconic. Let his feech be well weighed, and yet feem to be

Vot. II.
extempore ; let the dignity of pathetic action and gefture ail ways accompany whatever he has to communicate.
Next to eloquence, let him endeavour to make himfelf a mafter of the civil law, the defign of which, is to preferve an exact equality in the diftribution of all things. For, who is fo well qualified to decide the controverfies of his countrymen, to fupprefs fedition, well and wifely to defend the laws of his wn nation, or the rights of the people, as the man who is really a malter of law and equity?
The houre of a good and upright lawyer is the national oracle. But the lawyer who thould be excluded from the fenate, is the notorious brawler and tongue-pad. For this fort of creatures are of a low vulgar order, fervile and mercenary, capable of being the minifters of falhood and injuftice: wretches, who bring their tongues and their minds well armed and inftructed, into a court of juftice, and employ them in the defence of wrong and oppreffion. It is hardly poffible for that man to be a fincere lover of truth and equity, who will proftitute his eloquence, and let out his tongue to hire. On the other hand, it is part of the office and duty of the good fenator, to preferve the proceedings of judicature from all corruptions of fraud and deceit; to become a voluntary accufer, and ftrenuous adverfary of all wicked and traiterous fubjects, and a no lefs zealous defender of the good and virtuous; being actuated by a juft fenfe of his own high dignity, a love of juftice, and affection for his fellow-fubjects; fuch was the behaviour, and fuch the principles, of the wifeft and moft noble Romans, that ever fat in their fenate.
In the courfe and progrefs of all confultations, particular care muft be taken, that every fubject brought into debate, may be well weighed and thoroughly examined, in as nice, accurate, and judicious a manner, as human prudence, or human wit, can prefcribe or devife. We may enumerate five different forts of things, which are the proper fubjects of public debate and confultation, viz. the raifing of money by fubfidies and taxations; the proclaiming of war, and the making of peace; the defence and fafeguard of the realm; the ballance of the imports and exports of trade and commerce, and the enacting of good and falutary laws.
If a confultation is to be held upon ways and means to raife money, a thorough enquiry muft be made into the fate of the duties and cuftoms, and every branch of taxation, of which the public revenue confifts; that if they are too finall, they may be augmented; and if too great, diminifhed: for no new taxes ought to be impofed but upon urgent occations; becaufe all extraordinary impofitions are grievous to the fubject, and occafion civil diforders. When the emperor Tiberius was perfuaded to lay a new tax upon the people, he readily anfwered, That a good fhepherd had a right to the fleeces of his flock, but had none to flay and devour them. A complete knowlege in the finances of this kingdom is no eafy acquifition; we do not mean a knowlege only of what money has been raifed, and how it has been applied : all this is entering little into the heart of the matter; the fpecific funds, which bave produced the revenue, fhould be enquired into as minutely as a gentleman of ceconomy would enquire into every branch of his eftate; and not only the nett produce of the whole fhould be ftated before the national financier, but the grofs produce, that he may be able to judge accurately of the public expence in the collection of fuch revenue, what proportion that bears to the nett proceeds, and what incumbrance to the ftate, officers, and tax-gatherers, and all concerned in the revenue, really are to the kingdom. By which means, the wife fenator will be enabled to judge, whether fuch annual revenue cannot be raifed at a far lefs expence to the people, with lefs incumbrance to commerce and navigation, with greater advantage to the public credit, and with more glory and fafegard to the king and the nation.
Nor fhould the judicious fenator fop here in his enquiries into the Money Affairs of the kingdom: he fhould friely ferutinize into the R ATES laid upon all merchandizes imported, that he may be capaciated to enter into the primitive reafon and foundation of thefe rates, and to know whether the fame reafons ftill fublift, that gave rife to them; and whether our connections with certain foreign countries, may not be fo al tered, fince the time of fuch rates being laid, as to make it requifite to alter them likewife upon many ipecies of goods. And to make a right judgment of this matter, it is neceflary to be acquainted with every feecific fort of merchandize imported, and to know to what ufes in every branch of trade and commerce fuch fort of commodities is applied, from their importation to their confumption, or re-exportation, either in their firft ftate of importation, or in a manufactured one. Nor is it enough to know thefe things; the fenator mult be knowing in all the fubfidies and impolts laid upon fuch merchandizes, the feveral difcounts to which the merchant is juftly intitled, and the computation of the nett duties and drawbacks thereupon; whereby he will become fo minutely acquainted with every branch of the public revenue, as to judge rightly when any alteration may be neceliary to be made in the rates, or in the fubfidies and impolts of any kind; and more efpecially fo, if he takes into his confideration, to what degree the foreign nation, from whence fuch
commodities
commodities are brought, they lay duties upon the Britith produce or mantufactures of a fimilar nature to thofe we lay duties on, and whether they inviolably adhere to, or deviate from, thofe treaties of commerce which fublift between our nation and theirs: for this is the criterion whereby to judge when this nation is treated in their merchandize as we ought to be, and upon an equal footing with thole nations that have no right by treaty to be upon more advantageous terms than our own.
6 The profperity of a trading kingdom'depends on a wife regulation of it's revenues, fays a a judicious Spanifh author. When taxes are not levied in the manner they ought to be, they are the ruin of trade, a moth in a treafury, the univerfal lamentation of a nation, and the intereft and joy of foreigners. But a prudent difpofition of them is the foul of a ftate, the life of the people, glory to a prince, grief and diftrefs to foreigners, and a perpetual fountain of the richeft bleffings to human life.' See our articles Duties, Taxes, Labour, Revenue, and the Contents for the practical bufinefs of the cultom-houfe.
Nothing can be of greater concernment to a trading nation than the wife regulation of it's duties and cuftoms, and the moft vigilant eye over it's exports and imports ; for the grandeur of a kingdom depends folely upon felling much, and buying little, or upon felling more than is bought. He that is conftantly buying more than he fells, let him be a fecond Croefus in treafure, muft be at length reduced to the unhappy ftate of a beggar, for his ftock is diminifhed in proportion to the overballance of goods brought in: but whoever is conftantly felling more than he buys, let him be poor as Lazayus, muft by fuch a tranfaction acquire the happy circumftances of the rich: for, as much as the ballance is in favour of the amount of fales, juft fo much is added to his capital It is upon this principle the wifeft nations difcourage the importation of foreign goods into their country ${ }^{*}$, but leave their gates wide open to let their own manufactures go abroad and bring in riches from every quarter.

* When a great proportion of the public revenue of a nation arifes from the money raifed by the Duries paid by enhanfing the price of foreign imports; which exhauft the nation's treafure, the greater thofe Duties and Imports are, the more the nation is drained of it's folid wealth; and if the fupport of the Poblic Credit depends, in a good meafure, on the greatnefs of the fum raifed by fuch duties of cuftom, does not fuch temporary fupport of the public credit depend on the gradual ruin of the kingdom? Should not this induce the great reprefentative to think of fuch a gradual change in the conftitution of the revenue, that the profperity of the fare may go hand in hand with the height of the revenue, and not rife upon it's deftuetion? And in of the revenue, and not rine upon it's detruction? And in relation to the other branches of the public revenue, fuch as Excises, \&c. do not thefe demonitrably tend fo to raife the price of ous produce and manufactures, as to enable our forengn competicors in commerce to underfell us at all foreign markets? Is it impoffible to fall upon meafures whereby thefe evils may be happily prevented? Is there any thing of this kind infuperable to the wifdom of a Britifh fenate? Every impartial man muft readily grant, that it is infinitely more for the fafeguard and prof perity of an empire, for the good plight and condition of it's finances, to confift and harmonize with the profperity of it's commerce, than for the one to counteract the other, and that the money we raife by virtue of our trade fhould tend gradually to it's abrolute deftruction!

Commerce and navigation are the great fupports of our all: and every expedient to uphold the Public Credit that does not arife from the apparent profperous fate and condition of our tratde, can be looked upon only as temporary political amufements. The more money is raifed both upon foreign and native comodities, the worfe is the ftate of our commerce, the former hewing that we augment our ImPORTS, whilft the latter renders us lefs able to increale our Exports upon a par with nations which can afford itfelf cheaper than we. Thefe principles are obvious, and muft, at length, terminate in what every man of difcernment cannot avoid feeing. The good fenator, therefore, will eadeavour to bottom the fyitem of our funds upon principles that quadrate with our commercial intereft ; in which cafe the Public Credit will ftand upon a rock, not to be thaken either by the nefarious arts of ftock-jobbing and bubbles, neither by South-Sea nor Miffiffippi fchemes, nor even by rebellions, or infults from foreign courts; for, when other nations know the conititution of our finances to be fo wifely and happily framed, the crown of Great-Britain will have infinitely greater weight in Europe, than it can have whilft the ftate of the public revenue is founded upon principles diametrically oppofite to thefe. Under fuch circumftances, we fhould be as little intimidated to declare war againft thole who offered any dignity to our king and country, as compelled to make a peace any way difhonourable to the nation, or injurious to it's trade and navigation: and, 'till this comes to be our cafe, and we ate enabled gradually to difcharge our debts, or to lefien them to fuch a degree that we may eafily fuppost them, it is greatly to be feared our minilters will
daily lofe their weight and influence in foreign courts, and, confequently, be difabled from treating with them but upon the moft advantageous terms. See our articles Credit [Public Credit], Debts [National Debts], Funds, Interest of Money, Monied Interest, Duties.
In deliberating on the two great affairs of war and peace, it is firft neceflary to know what is the prefent military and naval fate of our country, and how numerous it's forces are both by fea and land, and how far our finances will admit of their augmentation; of what fort the war is which we ate entering upon, and with what enemy we engage. A frict enquiry ought alfo to be made into the ftrength of our enemy, and any confederacies againft us; whether their forces are difciplined in the fame, or a differemt manner from our own, and whether they have better engineers, generals, and ad= mirals, and whether they are a match for us, or inferior in number and ftrength, that we may regulate our conduct accordingly, and make peace with thofe who are too mighty for us, and war with thofe who are unable to refift us, if they attempt to encroachments upon rights, according to the laws of nations, and to fubfifting treaties; and the fcheme of the war, when we are obliged to enter into one, and all it's operations, ought to be well fettled, upon the beft principles of prudential forefight and conffderation. It may likewife be of ufe, on thefe occafions, to look over the hiftorical accounts of former wars, their rife, progrefs, and event: for fimilar and parallel inftances always explain and illuftrate each other.
The occafion of every war, and the juftice of it, muft alfo be well weighed and thoroughly fcrutinized into; and we muft be well affured, after many trials, that the matters in difference cannot be honourably decided, but by the fword: for, as the comedian obferves, it is a wife way to try all expedients for an accommodation, before we come to blows: an honourable peace is always preferable to an unjuft war. And if the debate be upon trade and commerce, and the exports and imports of a country, it is in the firft place requifite to enquire, whether any neceffaries of which the people are in want, do ever go our of the kingdom; whether any thing is exported to foreigners except fuperfluities, or the refidue or what is fpent at home. We muft alfo take care to make a juft eftimate and calculation of the price and value of all commodities, fold to, or exchanged with, foreign countries, and to balance the difference between profit and lofs, that the public treafure, or current coin of the commonwealth, may not be diminifhed [fee the articles Bailance of Trade, and Exchange]. And we mult likewife be ftrict in prohibiting the importation of all fuch confumeables, as ferve to introduce and encourage luxury and effeminacy.
That the knowlege of trade, both practical and political, is not a matter of a light and trivial nature, we are apt to believe will fatisfactorily appear to the candid and judicious, who thall do us the honour to perufe thefe our labours. The fubject confidered in thefe lights is, perbaps, not lefs extenfive than moft, and requires no lefs application and ability to become well acquainted with it, than a knowledge of the belles lettres, or any branch of fcience: it is, indeed, comprehenfive of many of the more lucrative arts, as well as fciences. See our article Mercantile College, and our Index, Laftly, the moft consummate prudence is always requifite in the enacting of good laws, for therein confifts the very being, as well as happinefs of the public. On this occafion, it is neceffary we fhould be well acquainted with the whole ftate, condition, and circumftances of a nation; the prefent fituation of it's affairs, what laws it ftands in need of, what will be well received by the people, or more effectually conducive to the preferving and ftrengthning of the conftitution, and fecuring and promoting the common felicity; for the commonwealth was not made for the law, but the law for the commonwealth. The better to inform ourfelves upon this fubject of legiflation, it will prove of no little ufe to enquire into the laws of other countries, as well as of our own: whereby we may know how to guard againft the evils under which our neighbours labour, and take example by them, in fuch inftances of wifdom for which they are remarkable. It will be of great advantage in all deliberations upon matters of the firft confequence, not to depend altogether on our own judgment, but to advife with others, becaufe it is impoffible for an individual to have more wifdom than many counfellors.
There are, as Cicero obferves, -Three forts of public things upon which men deliberate, or give or take advice: there are things honeft and profitable, and the differences that are between them whenever they are inconfiftent with each other.If in thefe three points the fenator is fully knowing and experienced, he can never be at a lofs to make a good judgment on any affair of public life. And where two fubjects of the fame fort are offered to confideration, it is a characteriftic of a found difcernment to decide which of the two is preferable; which $1 s$ the moff honeft or profitable to the fate.
Sometimes a gentleman in this fituation is called upon to give extemporary advice, and is furprized into a neceffity of delivering his opinion at the moment it is demanded: but,
whenever
whenever this happens to be the care, we muft never vary from the cardinal points of profit and honefty; we muft always chufe the good, and reject the evil, and of two evils, where both ate inevitable, mult make choice of the leaft. The bef way of forming good and wholefome counfels, is to keep a fleady eye upon the firlt and greatefl good, and to have that always in view, whether we are deliberating on matters of public or private concerns, of what relates to our own or to our country's happinefs: for from this firft principle all our thoughts and counfels ought to be directed. Unlefs the public happinefs be our chief aim, all our deliberations and advice are vain and fruitefs. How can the maxiner fleer a right courfe, when he is ignorant of the port to which he is bound? In debating within ourfelves what advice is proper, the utmoft prudence is required ; in giving it to others, the utmof fincerity. We mult ever be cautions to leave as little room as poffible for fortune to interpofe, for chance feldom brings about events that bear the characteriftics f wife and rational contrivance: let, therefore, all his counfels be the effects of prudence, goodnefs, fidelity, mature experience, thorough deliberation, impartiality, and freedom of thought; without the ftain of criminal craft and cunning, of temerity, or fecret ill-will to the public.
Subtle and artful, or daring undertakings, are extremely pleafant and entertaining; they dazzle with a falfe luftre, but it is hard to profecute them aright, and they are often fatal in confequence. It is of great ufe and fervice to a commonwealth to obferve this ftanding rule, that the fenate never enter upon any bufinefs within doors, but what has been before horoughly canvaffed without; it being a great folly to imaine, that the moft important affairs can be prefently difpatched, or require no more confideration than that only of a hort hour, or a few tranfitory moments.
After confultation regularly had and taken, nothing remains but the giving judgement, in any affair of ftate under confideration: fuch a judgement is an open declaration of the thoughts and counfels of the mind. There is a judicial faculty implanted in mankind by nature: we often find fome men, who have no character for learning or wifdom, are yet greatly to be depended on for their judgement, and in time come to be mafters of good fenfe, great cunning and fagacity, by dint of ufe and experience. Men of more years than learning are, therefore, much to be relied on for a found judgment, becaufe age and experience have, in effect, fupplied them with a third eye, whereby they take a furvey of palt tranfactions and future events, as well as of the prefent, with fo much the more accuracy.
We know nothing of a man 'till we have been witneffes to his converfation; and, 'till a fenator has delivered his fentiments, there is no forming a jult notion either of his wifdom or prudence. Socrates one day meeting a youth whom he had never feen before, looked for fome time earneftly upon him, and at laft faid to him, Speak, that I may know what you are. The fame experiment muft be tried, before we can approve the wifdom and gravity of the candidate for this office, or pronounce him duly qualified for fo high a ftation: for fpeech is the image and reprefentative of the mind, and by this muft the fenator give proofs of his judgement, and of the force and extent of his capacity.
There are fome orators whofe fpeeches are all glofs and falle colouring, intended rather to pleafe the ear, and touch the paffion, than inform the judgement; their words are all tinfel and feather, and they have more regard to elegance and delicacy, than to plain and folid truth, and clofe reafoning. Were their fpeeches taken to pieces, they would appear to be mere froth and emptinefs, void of weight and folidity, veracity or fincerity. The fenator's rhetoric muft never be thus adulterated: he may difplay his eloquence before the wile and eloquent, but he hould fpeak truth even before fools.
There is another fort of fpeakers, who are fwoln with pride, malice, and jealoury, incenfed by private animofity; and, whenever they have an opportunity of feaking in public, lay about them with perfonal reflection and calumny. Thefe men are of no advantage to the public, and ferve only to kindle a fire, infufe jealoufies and mifunderftandings, and :o ruffe the peace of a country, by introducing parties and factions, difcord and contention. If they were really good men, they would ftifle their private animofities and perfonal refentments, and make it their choice, as well as think it their duty, not to trouble the commonwealth with them, under pretence of doing it fervice.
There is a third fort of members, who for want of capacity, for counfel, and abilities in feaking, implicitly give into the fentiments of others, and always tread in their fteps. They who behave in this manner are really not to blame, unlefs they are obliged to it by ignorance and fupidity. It is of ufe and benefit to a flate to have the lefs able and Akilful members of it's council readily cemplying with the fentiments of their wife and more experienced leaders. Sometimes a fenate is unanimous: on which occafion it is much the wifeft way to concur in the general opinion, and not to give oppofition only for the fake of making a feeech, and fin out the tome with tedious bombaft and fulfone harangues.

Differences iil opinion will unavoidably happen, and occafion debates and altercations, whereby this great affembly may be fplit into oppofite parties. In all attempts to compofe thefe differences, and bring fucb debates to a happy conclufion, we muft be careful to avoid indecent language, excefs or pafion, or perfonal obloquy, with whatever elfe may interrupt the courfe of a deliberate and wife confultation, or ruflle the affections of brechren in the fame truft.
The opinions and refolutions of a fenate are to be valued by heir weight, not by the tale or number of voices: and care mult be taken that the beft and wifelt member of the great council of the nation may not be borne down by the multiitude or majority. Ariftotle permits a counfellor, deliberating upon any affair of moment, to be twice in doubt ; but if, after this, he could not come to any fettled refolution, he was for that time to lofe his right of giving any opinion at all. Caution fhould be ufed not to protract the day, and fpend too much time in debating a queftion, witbout coming to any refolution: we are guilty of a double fault when we tire both ourfelves and others with tedious harangues. A decent brevity is always to be obferved in fpeaking, as alfo an boneft plainnefs, and an open fincerity. We muft not be over eager to fpeak, or lay fnares for others, by mingling low artifces or falicies with what we deliver. Every thing faid hould have real weight, and carry with it a ferious and important meaning, and muft be well feafoned with fimplicity and truth, and with plain but nervous language; for that takes deep root, and fhews the man of bufinefs in oppofition to the florid babbler, whofe words are wind, and leave no mpreffion bebind them.
