The three rules laid down by Cicero in his laws ought to be duly obferved by every member of parliament; (1.) That he conftantly give bis attendance in the affembly, becaufe a ull houfe gives a greater weight to all it's decrees and refolutions. (2.) That he feakk only in his proper turn, or when he is called upon. And (3.) That he fpeak in fuch a manner as always to keep clofe to the fubject in debate, without fallying into boundlefs mazes of perplexity and impertinence: That fenator who wilfuilly and carelefsly abfents himfelf from the public fervice without a juftifiable caufe, ought (as the fame author injoins) to be cenfured and punifhed as a criminal.
Neither is it convenient that \{enators Ihould be permitted to leave the city in which fuch affemblies are held, and to withdraw themfelves into foreign territories, unlefs they are fent abroad by their fovereign, to take upon them a command of confequence, or to execute an embaffy, \&cc. left, by thinning he fenate, fome detriment fhould unhappily befal the commonwealth. The Romans took care to prevent the ill conequence of fuch a practice, by a law made for that purpofe. After all, the fundamental principle which gives rife to, and will ever maintain, the fenatorial dignity, and crown the character of fo diftinguifhed a perfonage, is his conformity in his words and actions, and in all the relative capacities and offices of life, to the rules of virtue, by approving himfelf a juft and good man, and adorning his private flation with a fteady conduct, that will give a fanction to all he fays and does in public life. It is not enough that we are wife and prudent, unlefs we are upright in the whole of our conduct: for prudence without juftice and goodnefs, dwindles into craft and cunning; and is looked upon rather as a vice than a virtue. Wife men are denominated from their wifdom, but it is folid virtue that gives the juft, the equitable, and the honeft man bis proper titles, and makes him in character what he is really called oy name; and good men take their ftile from their virues, and not from their wifdom. Who then is a truly good man, but fuch a one as is defcribed by Plato, who well underftands what virtue is, who takes it into his bofom and dofert embraces, and lives up to it's commands and dictates, and who chufes to die for the fake of his country, and to fave her from any imminent danger, or from falling into an abject ftate of fervitude, or from being oppreffed by the arbirary dominion of tyrants and ufurpers, or of men remarkable only for their bafenefs and infamy?--Such truly great and good patriots will endure every thing rather than fee the ancient conftitution of their native country overturned.
There are fome men raifed to high ftations and dignities in the fate, who thruft themfelves into public bufinets by a prompt and eafy fluency of fpeaking, and by giving proofs of a lively wit, and more than ordinaray fagacity, whilf their hearts are full of deceit and fubtilty. When fuch men as thefe are engaged in fupporting the laws, or in defending the berties of their country, no orators deliver themfelves with a better grace, or with more beauty and elegance, but, when heir fpeeches are fifted to the bottom, they are all fediment and corruption; wrong and injuftice are the lees of all their fluency and rhetoric; there is nothing truly great and noble in what they fay, for all their pretences to public good are a vizor, and the tongue does not act in concert with the heart.
There is not a greater plague that can infect the body politic than a fet of fuch men, lurking within the bowels of a government, efpecially if their power and authority are fo fituated as to be able to diffrefs it. Amongh this clafs are
comprehended all thofe who are of a debauched and licentious character, and fet themfelves up for men of penetration, artifice and ftratagem, by a readinefs to commit all manner of oppreffion and injuftice, by promoting tumults and feditions in a fate. Bad as thele men are, in nothing is their villainy more confpicuous, and at no time more fucceffful, han when they can feduce thair countrymen to believe they are really honeft, upright, and faithful fubjects: for as man in general, when raifed to the moft exalted dignity and higheft attainments of his nature, is the beft and nobleft of animals; fo when he degenerates as far beneath the ftandard of law and juftice, he is, of all the reft of his own fpecies, the moft vile and dangerous.
And if public affairs thould ever happen to light into fuch hands, and reduce the ftate into great diforder and confufion, we muft put our chief hopes in the king, at the head of a parliament. While that place contains men of courage and public fpirit, matters cannot long proceed amifs: whoever, therefore, undertakes that truft, chould continually have before their eyes how much the common welfare depends upon their virtues; but, above all things, they fhould have difinterefted and felf-denying minds.
It can hardly be conceived, but by thofe who have feen it, what reverence is paid, even by his enemies, to a man of fteady principles, the tenor of whofe words and actions are always tha fame, who is neither to be bought nor frighted: he is admired and followed; all he fays has it's due weight ; his honeft hoary head is dear to all mankind. Whereas, as Dr d'Avenant fays, the whiffling prowlers after places, and little bufy intriguers, are contemptible to the very men of whom thoy are the wretched inftruments; and, let the ambitious think what they pleafe, that man has moft real power in this country, who is believed to be of the moft unfhaken integrity towards the public; and he who has fuch a character, enjoys more true greatnefs than all the vain pomp and honcurs a court can give.
The employments of England are yet but few, and their profits but inconfiderable, to what they are in feveral nations; however, fmall as they feem to be, it is to be feared that fome time or other they will be made the engines wherewith bad men will endeavour to fubvert this conititution.
It is true, at prefent, we may be out of fuch a danger, but if, in future times, we fhould chance to fee all employments referved for men in one certain ftation; if the road to preferment thould lie but through one paffage; when this happens, we fhall have caufe to be alarmed.
They who feel within themielves abilities to ferve the public, are by no means blameable in defiring to be upon the ftage of bufinefs; on the contrary, that four philofophy which makes fome perfons at all feafons retire, and abandon the flate, is by no means to be commended. They do, according to Tacitus, but Nomine magnifico, feque otium velare: if the pofture of affairs will poffibly admit of it, good men hould rather ftrive to be in power, that the commonwealth may not be ingrolled by corrupt and unfkilful hands.
A wife man can eafily difcern whether the minifters are fuch, that he may with honour and fafety mix in councils with them. If the adr iniftration be found and right, or if he has but a face looking that way, it is a proper feafon for men of probity, fisill, and virtue, to produce their talents, and to puih themfelves forward, in order more fully to mend things: and, at fuch a time, they fhould be ready to affift the ftate to the utmoft of their power, nor fhould they lazily fuffer the perfections of their minds to be ufelefs and inactive. And if among thefe there be any very eminent, ftrong in friends, verfed in affairs of fate, of a deep reach and forefight, who have eloquence to fway affemblies, and courage to refift and overcome popular fury; fuch ought not to defpair of the public, but affift with their wifdom, to redeem a people from their weak hands who fhall get into power, when the nation, perhaps, has been in a high ferment, as in boiling liquors the fcum will get uppermoft; and there is fuch a reverence paid to thofe who have a truly great genius, and a good heart, that, when they offer themfelves to ferve the commonwealth, the weight of the people will bear down all the upfart pretenders, and force them to give way, and make room for merit fo fuperior.
But if it fhould ever happen, that the adminiftration fhould be intirely bad and deffructive in their meafures, then ought good men to have no fhare nor hand in it; they fhould withdraw from any participation in the negligence or guilt; they fhould quit what they cannot honourably bold; they fhould concern themfelves no more in public bufinefs, leaving fuch minifters to govern by thernfelves, who will not govern well, and be contented to ferve their country by defending liberty in one poft againft any encroachments; they fhould not make fo ill a ufe of that affection the people may bear them, and of the intereft they may bave in the nation, as to be a fhelter for the crimes or folly of others: nor fhould they, as it were, lend their countenance, and be the fcreen, behind which bad men may fafely attempt to undermine the conftitution.
If the times are good, filent merit will be fought after; but, if they are had, ill men will be lifted up to the offices and
ignitics of the ffate, by the applaule of their adherents, and the faction of their friends; but, at fuch a feafon, it is no fhame not to be employed. Tacitus fpeaking of Ælius Lanira fays, Et non permiffa provincia dignationem addiderat.
Great men are often liable to one unfortunate vanity: they believe their parts, dexterity, and wifdom to be fuch, that they can mend things, give them a new complexion, correct all errors, and at leaft that they fhall preferve themfelves found, though every one elfe be tainted; and, upon thefe prefumptions, fome of the men in beft efteem have heretofore en gaged with a depraved miniltry; but we could never fee that they were able to make any converts: on the contrary, inftead of changing the court, the court changed them. Courts are but flowly mended, and that not by the authority or example of any fingle perfon, except it be of the prince bimfelf, ftrongly bent to fet matters upon a right foot; and yet we have more inftances of courts which have fooiled their prince, than of princes that have reformed their courts. And if it be afked, When is the moft proper time for perfons of probity and virtue to undertake the management of affairs ? it may be anfwered, It is then feafonable, when things call loudly to be mended, when unfkilful pilots have run the fhip a-ground, fo that the fticks faft, ready, to fplit at the next coming of the waves; when ignorant men are quite bewildered in their errors; when the whole people fee and feel the effects of ill government; when the prince grows a hhamed of thefe, whom his fubjects hate and fear; when the commonwealth cannot emerge out of it's debts and difficulties, without help from abler hands: then is the true time for the beft and wifeft men to offer themfelves to the fervice of their country. At fuch a feafon, honefty will not ftand alone, weak, defencelefs, and out of countenance, at the fight of profperous vice. Nor can courts be ever fafe' 'till the circumfance and neceflity of the times bring thither a party of honeft and able men, ftrong enough to maintain itfelf againt thofe who are grown great by wicked arts, and confpicuous ignorance in public bulinefs.
If Englifhmen will be content in this fingle point, all muft of courfe go well; if they who have noble commands in the country will fcorn meanly to depend in town; if they who have brave feats of their own, will defpife the crowded antichambers of the great ones here; if they who have plentiful effates, will flight a troublefome, dependent, and precarious employment, they are more happy than a court can make them: if our nobility and gentry would confider how miferable the noblemen of France are, with all their mighty places, they would at no time hereafter defire to wear the livery of bondage. And if they are truly feafoned with thefe notions, That their liberties are above all price, and (as Sir Benjamin Rudiard was wont to fay) That there is nothing worth being a knave for ; the head muft be very ikilful, and the heart very bold, that will undertake to invade our fundamental rights, It is true, what has been here advanced, may feem needlefs at prefent, when all things are prefumed to go well; but thefe notions may be of ufe to after-ages.
The duty which private perfons owe to the public lies in a very narrow compafs, and, when that is thoroughly performed, a country feldom fails to fee a fleady courfe of wifdom and honefty in fuch as are trufted with the adminiftra= tion. This duty may chiefly confift in the following particulars:
Ift, That fuch as reprefent the people be uncorrupt, unbiaifed, and difinterefted.
2 dly , That they diligently attend the nation's fervice.
$3^{\text {dly }}$, That they carfully watch any innovation or incroachments upon the conflitution.
4thly, That they make provifion againt future evils.
5 thly, That they look narrowly into the income and expence of the kingdom, and examine which way immenie debts have been contracted, and how that money bas been difpofed of which the nation has already granted, and how thefe debts may be gradually leffened and difcharged.
6thly, That they hold a ftrong hand over the men of bufinef, calling thofe to an account who, either through folly, or upon fome wicked defign, perufe deftructive meafures.
itt. That fuch as reprefent the people be uncorrupt, unbiaffed, and difinterefted. This point we have handled fufficiently; and to what has been already faid upon that fubject, we fhall now only add, that Rome was once free, that France heretofore had the three eftates, which were the guardians of it's liberty; that Spain had formerly many rights and privileges, of which nothing now but the fhadow remains; That Denmark and Sweden had once conftitutions fomething like that of England; and that all thefe countries have been coflaved by their own corruptions,
2dly, That they diligently attend the nation's fervice; for otherwife they do not difcharge that duty to which they are chofen. It has been formerly a matter of great wonder, that genclemen fhould even wafte their fortunes to be elected reprefentatives in parliament, and yet afterwards never mind that flation, which they feemed before fo vehemently to court. Cato had many virtues too high for practice, but be may be eafily imitated in one good quality he had, of never failng to

## PAR

## PAR

be prefent in the fenate. Such fhould give way to others, and make room for men of mote leifure, who can afford to employ their time in the fervice of their country. But, above all others, they are to blame who can be drawn from their duty by luxury, lazinefs, and pleafures. Liberty can be hardly wounded in a full houle; the attempts made upon it in former reigns were made when fuch as had no dependance upon the court were abfent about their country bufinefs: the ill minifters of thofe days took that opportunity to promote taxes, which would never pafs in a full affembly, to pals dangerous laws, to fet a-foot new-invented corporations, which may be fatal in their confequences, and to form projects, either deftructive to the nation in general, or ruinous to particular men. All the ill things that were done have been compaffed when the negligence of fome had made one fide ftrong, and the other weak.
And if, in after-ages, any of the men of bufinefs thould be fo wicked as to proceed by the fame councils, and to go by the like meafures, they will promote their dark defigns in fome fuch juncture, when the beft patriots fhall be gone away, quite tured out by feffions artificially prolonged.
But it is the duty of all who love England, to defeat, by unwearied patience, fuch a confpiracy againft the people; and to obviate fuch a mifchief, if the ordinary rules cannot do it, extraordinary laws may be thought on to oblige the members to that attendance which they owe their country.
He whodoes not attend, injures the borough for which he ferves; for it may fo happen, that in his abfence a thing may pafs to their ruin who have fent him, and which his prefence might have prevented; his electors, therefore, feem to have fuch a right to his fervice as in reafon no others ought to difpenfe with, without their confent.
Deferting in this manner the public is a growing evil, upon which account it ought to have a timely remedy. Perhaps it might not be amifs, if a bill were brought in to make it highly penal for any member to be abfent from the houle above 14 days, without exprefs leave firft had under the feal of the borough for which he ferves.
3dly, That they carefully watch any innovation or incroachments upon the conftitution. There is nothing lulls a people afleepmore, than the reign of a good prince, reverenced for his wifdom, feared for his high courage, beloved for his lenity, and admired for a number of other virtues; whereas, under a bad reign, the fubjects are jealous and vigilant, though often to little purpofe : however, it is agreed upon by all wife men, that the mild rule of Auguitus contributed more to confirm the flavery of Rome, than all the feverity and cunning of Tiberius.
The belt times likewife produced the worlt precedents; for, in good times, the people let many things llip, being then at their eale, not fufpicious, and, confequently, not watchful over the government ; but, where this fupine temper prevails, mixed governments decline immediately into abfolute power. The frequent contefts that were of old between the fenate and the people of Rome, without doubt preferved their freedom : for, where all are of one mind, ill ufe may be made of that unanimity, by fome fubtle, eloquent, and amhitious man, who may turn and rule it as he pleafes : therefore to preferve conftitutions that have a mixture in them of popular government, it is neceffary there hould be always fome divilion, juft enough to keep the minds of men awake, that they may obferve what advantages one part of the fate gets over the other.
Bad kings provoke many to look into their actions; but when the people bave a good prince, they give a favourable interpretation to all he does.
And the beft man that ever reigned may be ill ferved. It is a maxim of our Jaw, That the king can do no wrong, but if an ill be committed in matters of fate, the council mult anfwer for it; if in matters of juftice, the judges muft anfwer for it. But though the laws exempt our kings from blame, they are not freed from the bad effects of ill conduct in their minifters.
He , therefore, who reprefents his country, cannot do the nation nor his prince better fervice, than to fee thofe who fit at the helm do not run the fhip upon dangerous rocks. Abfolute dominion is a bait with which the greateft minds may be tempted; for they whofe goodnefs is unlimited, may defire that their power hould be fo too; but no one man ought to think of being ompipotent, unlefs he could be omnifcient and omniprefent. Befides, though princes may defire great power, that they may be able to do great good, fuch as ferve them rarely proceed upon this principle. They often defire their malters thould be arbitrary, in order to their own impunity, and to build a large fortune for themfelves; for which reafon they fhould be watched in all their windings, and followed in all their dark and fubtle mazes.
It feldom happens that the liberties of a country are invaded all at once the fteps of power are leifurely and flow ; minifters who have ic in their thoughts to change the nature of a government, go to work by degrees. At firft they make ufe of the moft popular hands they can poffibly procure, ordering it fo that the people may not perceive who it is that puts their fetters on ; but thefe popular men they fhove out, at the

Vol. II.
firft converient feafon, that all may be of a piece. Theif next bufinefs is to corrupt fuch perfons as have the cleareft fame, whom they difcard when fufficiently tainted, and this they do that the people may think all mankind alike, which naturally drives them to follow thafe only who are in power, and who can do them fervice. Afterwards, they get from the nation all the money they can, the collecting of which erects new employments, and creates them a number of dependants, who, in one certain place, ate their chief ftrength and beft fupport : by the diftribution of theie fums, they likewife make more friends. But being never out of fear of accounting for all at laft, their principal aim is to procure their mafter fuch a Standing Revenue, as may make him fubfint without the peoples help, without the neceflity of a palliement. If they find this impoffible or difficult, then by accufations, by exorbitant proceedings without any precedent, and by harraffing private perfons, either in their fame or fortune, they endeavour to make all the different ranks of the people out of love with their ancient contitution.
It has been often obferved of this nation, That we have loft by TREATIES what we have gained by VALOUR; and indeed it is very evident, that we have been conftantly out-witted in the pacts and fipulations we have made with foreign fates and princes, as well concerning intereft as dominion : they who could never face us in the field have over-reached us in the cabinet, and all along we have feemed fronger in a battle than in council.
It is, perhaps, no wonder that our honeft and plain anceftors fhould not have fufficient fkill to deal with the riper heads of warmer climates; but we may admire how it comes to pals that our neighbours the Hollanders in all treaties, but chiefly fuch as refpect commerce, have been ever too able for us, whom our vices have made crafty enough in other matters.
Their foil does not generally produce better underftandings than that of England; learning flouriohes with us as much as with them; our people have fharper wits; we are more cunning in a court than they; and yet, when we come to treat with them, they are always too fubtle for us.
But'the reafon of this is apparent to fuch as examine into the bufinefs ; for, as Sir Joftah Child has excellently well obferved, "They have in their, greatelt councils of ftate and war Trading Merchants, that have lived abroad in moft parts of the world, who have not only the Theoretical Khowlege, but the Practical Experience of Trade, by whom laws and orders are contrived, and peaces with foreign princes projected, to the great advantage of their trade.
And the concerns of commerce being made annong them a matter of ftate (as it fhould be in this nation particularly) they commit the care of it to, the ableft heads they have, by whofe affiftance and wifdom they have all along got the better of us and other countries:
In the reign of king James I, they obtained that the bunnefs of Amboyna fhould be flurred over ; and fo they have fecured to themfelves a firm poffeffion of the Spice Iflands.
The peace of Munfter was likewife very advantageous to the Dutch in all matters that had relation to their traffic, but efpecially in the plate trade from Cadiz.
In the reign of king Charles II, by delays and artifice, they got the taking of Bantam pafled over in filence, by which, in a manner, they have engroffed to themfelves the rich commodity of pepper.
It is Jikewife faid, when the book of rates was compiled, that the French knew how to plant fomewhere a great fum very fkilfully, by the help of which they procured that the Customs and Duties upon their product fhould be light, and heavy upon that of Spain; though apparently we got by one country, and though we were thought to lofe by the other in the general ballance:
It will not, perhaps, be feafonable to expect any redrefs as to paft injuries, and peradventure fome of our former errors are capable of little remedy for the prefent; but the wifdom of the ftate will undoubtedly provide, that England fhall be better dealt with in future treaties.
Our land-wars have plunged us in debt, and incumbered us with taxes unfpeakably injurious to our commerce. It is well known our proper bufinefs had been to have infifted only upon our strength at sea, for a large fleet would have always guarded and fecured our traffic, and would have kept that money within the kingdom which has been fent out to pay LAND-ARMIES IN FOREIGN COUNTRIES.
But as in purfuing quite a contrary courfe, we more confulted the direct and immediate concern and intereft of others than our own; fo, in realon and equity, the peaces which our money and arms have chiefly procured, fhould have been as advantageous to this kingdom, as convenient to the reft of Europe.
And yet we hall reap but little profit from all our expence of blood and treafure, unlefs the traffic of England be thereby put upon a fafe and equal foot with all it's neighbours.
The protection and care of trade will, therefore, very much confift in the meafures that thall be taken in this prefent juncture, to fecure us againht our neighbours.

Thefe memento's may poffibly have their ufe, more efpecially with the younger and lefs experienced members of that augult affembly, from whofe wifdom we expect every bleffing.

An act of paaliament made in the third year of Geo. III. relating to bénkrupts', being intitled to the privelege of parliament, and becoming insolvent.

Whereas merchants, bankers, brokers, factors, ferivenors, and traders, within the defcription of the ffatutes, relating to bankrupts, having privilege of parliament, are not compellable to pay their juft dubts, or to become bankrupts, by reafon of the freedom of their perfons from arrefts upon civil procefs; and fome doubts have alfo arifen, whether in cafes of bankruptcy, a commiffion can be fued out during the continuance of fuch privilege: To remedy which inconveniences, and to fapport the honour and dignity of parliament, and good faith and credit in commercial dealings, which require that in fuch cales, the laws fhould have their due courfe, and that no fuch merchants, bankers, brokers, factors, fcriveners, or traders, in cafe of actual infolvency, fhould by any privilege whatever, be exempted from doing equal juftice to all their creditors; it is enacted, \&cc.
That from and after 12 May 1764, it fhall be lawful for any fingle creditor, or two or more croditors, being partners, whofe debt or debts thall amount to 100 . or upwards, and for any two creditors, whole debts fhall amount to 150 l. or upwards, or any three or more creditors, whofe debts thall amount to 200 1. or upwards, if any perfon or perfons deemed a merchant, banker, broker, factor, fcrivener, or trader or traders, within the defcription of the acts of parliament relating to bankrupts, having privilege of parliament, at any time, upon affidavit or affidavits being made and filed on record in any of his majefty's courts at Weftminfter, by fuch creditor or creditors, that fuch debt or debts is or'are juftly due to him or them refpectively, and that every fuch debtor, as he or they verily believe, is a merchant, banker, broker, factor, fcrivener, or trader, within the defcription of the flatutes relating to bankrupts, to fue out of the fame court fummons, or an original bill or fummons, againft fuch mercbant, banker; \&c. and ferve him with a copy thereof; and if fuch merchant, banker, \&cc. fhall not within two months after perfonal fervice of fuch fummons, (affidavits of the debt or debts having duly been made and filed as aforefaid) pay, fecure, or compound for, fuch debt or debts, to the fatisfaction of fuch creditor or creditors, or enter into a bond in fuch fum, and with two fuch fufficient fureties, as any of the judges of that court, out of which fuch fummons thall iffue fhall approve of, to pay fuch fum as thall be recovered in fuch action or actions, together with fuch cofts as thall be given in the fame, be fhall be accounted and adjudged a bankrupt from the time of the fervice of fuch fummons; and any creditor or ereditors may fue out a commifion againft any fuch perfon, and proceed thereon in the like manner as againft other bankrupts.
Provided always, and it is hereby declared, that this act fhall not extend, or be deemed or conftrued to extend, to any fuch debt or debts as aforefaid contracted, before the eighth day of March 1763, any thing herein contained to the contrary thereof in any wife notwithftanding.
And be it further enacted, That if any merchant, banker, \&c. fhall, after the laft day of this feffion of parliament, commit any act of bankruptcy, that then, and in fuch cafe, any creditor or creditors as aforefaid, may fue out a commiffion of bankrupt againft fuch merchant, banker, \& cic. and the commiffioners in fuch commiffion, and other perfons may proceed thereon in like manner as againft other bankrupts; any privilege of parliament to the contrary notwithftanding.
Provided neverthelefs, and be it enacted, "That nothing in this act fhall fubject any perfon incitted to privilege of parliament to be arrefted, or imprifoned, during the time of fuch privilege, except in cafes made felony by the acts relating to bankrupts, or any of them.

PARTNERSHIPS intrade, are where two or more perfons agree to engage in commerce, either in equal fhares or otherwife.
With refpect to domeftic partnerfhips in trade in England, there are various adjudicated cafes, which ought not to be difregarded by thofe who enter into fuch kind of agreements.
Where there are two joint traders, and one accepts a bill, drawn on both him and partner, it binds both if it concerns the trade; otherwife, if it concerns the aceeptor only in a diftinct intereft and refpect.: I Salk. $\mathbf{I 2 6}$.
A. and B. were partners as woollen drapers, A. received money in the fhop of S. S. and gave a nore for it figned for himfelf and partner; A. and B. being both dead, and A. not leaving fufficient affets, it was held on a bill brought by S. S. againft the executors of both the partners, that this note being given by one of the partners, it hould bind them both ; and that though at law it binds only the executor of the fur-
viving partner, yet in equity the creditor may follow the eftate of the other, though no proof was made that this money was brought into the ftock, or ufed in trade. 2 Vern. 277.

The act of one partner fhall be prefumed the act of the other, and hall bind him, unlefs he can fhew a difclaimer, and a refufal to be concerned. I Salk. 292.
A. and B. are copartners, and a judgment is had againg A. and the goods of both taken in execution; it was held by the court, that the fheriff muft feize all, becaufe the moieties are undivided; for if he feize but a moiety and fell that, the other will have a right to a moiety of that moiety; therefore he muft feize the whole, and fell a moiety thereof undivided, and the vendee will be tenant in common with the other part ner. I Salk. 392.
But though a moiety of a joint ftock may be taken in execution on judgment againft one partner ; yet, if copartners become bankrupts, the joint eftate is to difcharge the joint debts in the firft place, and the feparate eftate to pay the feparate debts; and if there be no feparate eftate, then the reffdue of the joint eftate, after the joint creditors are fatisfied, to be applied among the feparate cteditors, and fo vice verfa; for the commifioners of bankrupts are intrufted both with a legaland equitable jurifdiction, and may therefore marfhal the different effects. and apply them in difcharge of the different creditors according to equity and juftice. a Vern. 293. 706. 2 Chon. Ca. 228.
The plaintiff's hufband (to whom fhe is adminiftratrix) and the defendant were copartners for many years in the trade of a druggift ; the plaintiff brought her bill for a difcovery of the eftate, and her proportion and dividend thereof, $8 x$. the defendant anfwered, and it appearing that many debts owing to the joint trade ftood out, it was moved on behalf of the plain tiff, that an able attorney might be appointed to fue for, and receive thofe debts; it being alleged in the brll, that the defendant carrying on a diftinct trade for himfelf, with the perfons that were debtors to the joint trade, to oblige them, he forbore to call in their debts; it was ordered accordingly, unlefs the defendant, within a week, would give fecurity to the plaintiff, to anfwer her moiety of the debts that were ftanding out. I Vern. 118.
For accounts as ftated in partnerfhip, according to the moft accurate methods of double entry. See our article Mercantile Accountanship.
For other forts of Partnerships in trade, fee our article Anonymous Partnerships.
PARMA, a duchy in Italy, is bounded on the north by the Po, which divides it from the Milanefe and Cremonefe; on the fouth it has part of the territory of Genoa, and duchy of Modena; on the eaft, part of the duchy of Modena; and on the weft, the Paviefe.
The parts into which it is commonly divided are, the duchy of Parma ftrictly fo called, that of Placenza, the ftate of Buffeto, and part of that of the valley of Taro, commonly called Val di Taro. Between Parma and Modena are the ftates of Pallavicini and Londi, which are commonly diftinguifhed from thofe duchies, becaufe they anciently formed two feparate ftates from them. The firft of them contains the marquifate of Buffeto, and Borgo de fan Domino, and wholly belongs to the duke of Parma; and that of Londi is divided between that prince, who hath in it the Val de Taro, and the prinee of Doria, who bath that of Bandi.
The revenue of this dukedom is reckoned to amount to 400,000 crowns, and the ordinary forces of it to 5 or 6000 men. The country is very delightful and fertile, producing great plenty of corn of all forts, excellent wine and oil, and was famous formerly for it's fine cheefe, which was in high requeft all over Europe; but they are now much outdone by the city and territory of Lodi. Other manufactures, fuch as filk, woollen, linen, \&xc. are likewife carried on here, as in other parts of Italy
The chief places of this duchy are, Parma, the capital, Placenza, Borgo de Santo Domino, Borgo de Val de Taro, and Ferenzula or Florentiola.
Befides thefe, there are reckoned above 30 other towns belenging to it, which, for the moft part, are confiderable for their largenefs, or on fome other accounts.
Parma, the famed metropolis of this dukedom, is pleafantly fituate on the river of that name, but whether it gave it to, or received it ftom it, is not eafy to guefs. It has three ftately ftone bridges over it, by which it keeps a convenient communication with it's fuburb on the other fide of it : and is about four miles in circumference, well-propled, and feated in the midft of a pleafant fertile foik, which fupplies it with plenty of corn, wine, oil, fruits, and every thing it watts for ufe or delight.
It ftands about 10 miles from the Po , on the fouth fide of it, and in the middle way between Modena and Placenza, 35 miles eaft of the firf, and as many weft of the other, 73 north-weft from Florence, 77 fouth-eaft from Milan, and above 200 from Rome, lat. 44 . 43 . lon. 10.55 . eaft.
Placenza, fo called from it's moft agreeable fituation and exquifite beauty, above all other cities of Italy, is feated in the midft of a Spacious fertile plain, zbout 100 yards diffant
from the Po and the Trebia, and watered with a number of fmall brooks and canals, and Theltered on all fides with pleafant hills, and both they and the plain producing great plenty of corn, wine, oil, fruits, \&ac. excellent each in their kind. It has likewife very good pafture-grounds, breeds great quantities of cattle, and is famed for making a fine fort of cheefe, not inferior to that of Parma and Lodi. Here are likewife in it's neighbourhood fome falt frings, from which they make a fine falt, exceeding white, and in great requeft. The hills about it have iron mines, plenty of wood, timber, warrens, and parks, all which are fo inviting and commodious, that the city is always full of inhabitants, efpecially merchants and tradefmen, who carry on a very confiderable commerce; infomuch that one of their fairs, which begins on the 15 th of April, lafts to the end of the month.
PASSPORT, SAFE-CONDUCTS, and PROTECTIONS.
A paffort, or fafe-conduct, is a fecurity given by the king, under the great feal, to a franger, for his fafe coming into and paffing out of the realm, and touching which there are feveral ftatutes. A paffport fignifies a licence granted by any perfon in authority, for the fafe paffage of a man, or any fhip, \&c. from one place or country to another.
As to protections, there are two forts, a public protection, where a prince takes upon him the defence of another prince or ftate, for his honour or profit, or a private protection of perfons or thips, which is, in effect, no more than a paffport for fuch purpofe. By the law of protection, he that is protected owes all refpect and honour to his protector, againft whom he ought not to confpire, or attempt any thing, ; and, on the other hand, the protector ought to fuccour and defend the proteeted, and ufe him well, for otherwife he may withdraw himfelf from the protection, and feek another. The Genoefe having put themfelves under the protection of the French king, revolted, whereupon he changed their conditions into privileges, to the end it might be in his will to deprive them of them when he fhould think fit. Molloy, Jur. Marit. 84.
In protections of finips and perfons, there is generally great faith kept by the granters thereof; for at this day, if a fhip hath the emperor of Barbary's protection, the pirates of that nation, if they feize any fhip, will reftore it ; and if there be no protection, yet, if the fhip be taken within fight of their caftes, the prize is not abfolute; but if reffifance is made, and there be a caption, the then becomes the captor's for ever, as the price of blood.
The ftatute of Magria Charta, 9 Hen. III. cap. 30. ordains, That all merchants ftrangers ihall have fafe-conduct of coming into, going out of, and remaining in England, to buy and fell, \&xc. if they are not openly prohibited, except in time of war, and they are of an enemy's country; and ; by 27 Edw. III. cap. 2. fafe-conduct is to be granted to merchants ftrangers, not alien enemies, to come and dwell in this kingdom, and return at their pleafure, as alfo to fell their goods and commodities, without having them taken from them againft their wills.
By the act 15 Hen. VI. cap. 3. it is recited, That whereas the lord the king hath granted bis letters of fafe-conduct'to certain perfons to come in and go out of the realms of England and Ireland, with a certain number of thips charged with their merchandizes, and faith and credit fhould as well be given to the copy called Vidimus, fealed under the authentic feals, and approved, as to the original of the faid letters; and that one John de Guntier granted and delivered fuch copy of the faid fafe-conduct, to as many perfons as he pleafed, fealed with the feal of him that called himfelf king of France, under colour of which, a great navy of enemies was affembled, and took many flips, and the king's liege fubjects and victuals to the towns and fortreffes of the adverfaries carried, to the great damage of the king, and his realm of England, \&e.
The faid lord the king, at the grievous complaint to him made thereof by the commons in parliament, confidering the great inconveniences which might enfue by fuch evil ufe of his letters of fafe-conduct, doth will and ordain, and hath commanded by the authority aforefaid, to the keepers of his great and privy feal, that they fhall not fuffer fuch claufe Vi dimus to be put in any fafe-conduct from henceforth to be granted, unlefs fome great or notable caufe move the fame lord the king to granr the fame in fuch wife : and willeth alfo, that in all fafe-conducts to be granted for the future to any perfon or perfons, the names of them, of the flips, and of the mafters, and the number of the mariners, with the portage of the fhips, fhall be expreffed.
By the 18 th of Hen. VI. cap. 8. it is ordained, That merchants aliens may at their pleafure charge fhips and veffels of Spain, and other parts enemies of the king, if the mafters, owners, or merchants of fuch veffels and fhips, have the king's letters patents of fafe-conduct, furety, or fafe-guard, for the faid mups and merchandizes, making mention of the names of the thips or veffels, and of the mafters thereof, as the manner is. And if any fuch hips charged or loaden with any merchandizes of fuch merchants aforefaid, be taken upon the fea by the king's fubjects, not having authentic fafe-con-
ducts for them, within the board of fuch thips or velfels, as the day of the taking, or not being enrolled in the chancerg of record, then the takers and poffeffors of the goods and merchandizes fo taken may enjoy and hold the fame; and proclamation is to be made of this flatute on the fea-coafts, to the intent that the faid merchants aliens may have know* lege thereof.
The goods and merchandizes loaded in the faid ihips and veffels of Spain, and other parts, enemies aforefaid, fometimes by falfe witnefs, marks, and letters teftimonials, con2 trived before the making of this act, were reftored to the faid merchants aliens, together with damages and expences, on fuit made before the king and his council, or before the chancellor of England, to the great lofs of the owners, mafters, and mariners, takers of the faid fhips, \&c. and difcouragement of the king's liege people to take fuch fhips and veffels, and alfo the hindrance of the navy of the realm : all which is fet forth in the preamble of the faid flatute.
By 20 Hen. VI. cap. 1. All letters of fafe-conduct granted to the king's enemies, or any other perfons, fhall be enrolled in the chancery of the lord the king, of record, before fuch letters fhall be delivered to them to whom the fame fhall be granted, or thall be void and of no effect : and if, at any time hereafter, any goods or merchandizes are taken by EngJifh fubjects upon the fea, or the coafts of the fame, loaden in any fhip or veffel belonging to enemies, and not having fufficient letters of fafe-conduct, enrolled in form aforefaid, they which thall fo take the fame goods thall enjoy them, without any reflitution thereof to be made, to whatever per fons the faid goods or merchandizes, at the time of taking, or before, were belonging.
And the king's fubjects taking fuch fhips laden with merchandize, not having or hewing letters of fafe-conduct, and bringing them by force to a certain port within the realm, fhall not receive darnage in their perfons or goods for fo doing, if they be ready to make full reftitution of the fame fhips and merchandize, within a reafonable time after they thall have knowlege of letters of fafe-conduct enrolled in the faid chancery of record before the taking of them.
The flatute 3 I Hen. VI. cap. 4 enacts, That if any fub jects offend upon the high feas, or in any port within the kingdom, and do damage to any perfon or perions being ftrangers in amity, league, or truce with us, or baving the king's fafe conduct, and efpecially in attacking any fuch ftrange perfon, and robbing and fpoiling of him, his fhip or goods, \&ac. the chancellor of England for the time being (as well for the deliverance of any fuch perfon fo attacied, as to make reftitution to every perfon robbed or fpoiled of fhips or goods, of the value thereof) fhall have authority, calling to his affiftance one of the judges, upon a bill of complaint to him made in this behalf, to make fuch procefs out of the chancery againft the offenders, to bring them in there, to an fwer to the parties grieved as aforefaid, and againft any other perfons to whofe hands any perfon fo attacked, fhip or goods fhall come, and alro for delivery and reftitution by them to te made of the fame perfons, fhips, and goods, as fhall feem to the faid cbancellor expedient and neceffary.
And upon this procefs made out, the chancellor fhall further proceed, if the cafe fo require, by advice of any fuch judge, to make to the perfons ftrangers that are grieved, full delivery and reflitution of any perfon attacked, and of all fuch fhips and goods, and likewife all their cofts, expences, and loffes difburfed and fuffered by them, and thereupon to award all manner of execution out of the chancery, as fhall be neceffary for fuch delivery and reftitution to be had and made as aforefaid,
A late ad, 4 Geo. II. cap. 18. recites, That treaties are fubfifting between the king and the feveral fubjects of Barbary, by which it is ftipulated, that all hips belonging to his Majelty, or his fubjects, may pafs the feas, and encer into the harbours of the faid governments, without any feizure or moleftation, upon producing paffes of a certain form, under the hand and feal of the commiffioners for executing the office lord high-admiral, called Mediterranean paffes. It is, therefore, enacted and ordained, That if any perfon thall, within his Majefty's dominions, or without the fame, fallly forge or counterfeit any pafs for any fhip, commonly called a Mediterranean pafs, or thall utter or eraze any pafs made out by the commiffioners for executing the faid office of lord admiral ; or fhall publifh as true, any forged, altered, or erazed pals, knowing the fame to be forged, \&c. every fuch perfon being convicted in Great-Britain, Ireland, or bis Majefty's plantations where fuch offence fhall be committed, hall be guilty of felony without bienefit of clergy.
And the faid offences, which fhall be committed in any place out of Great-Britain, either within the dominions of his Majefty or without, may be tried and adjudged in any county of England, by virtue of the king's commifion of oycr and terminer and goal delivery, or before any court of jufticiary in Scotland.
By the laws of France, no veffel thall go out of any port of that kingdom to put to fea, without a paffport from the admiral, recorded at the admiralty-office, of the place from whence the mafter departs, and within twenty-four hours af-
ter the mafter's arrival in any port, he hall prefent his pafiport, and declare the place and time of his departure, the burthen and lading of his fhip, the courfe he has fteered, the hazards he hath run, the diforders happened in his fhip, and all the confiderable circumftances of his voyage, \&ic. And by a treaty marine, made by king Charles II. with the king of France [fé Marine Treaties] in the year 1677, a form of paffport (or lea brief) is appointed, to be given by the lord high-admiral of England, or thole to whom the exercife of admiralty jurifdiction is ordinarily committed ; or by the mayor or other chief magiffrate, or the commiffioners or other principal officers of the cuftoms, in their refpective ports, and places within the dominions of the king of GreatBritain, to Chips and veffels, which paffport is as follows, viz.

## An Englifh paffert for fhipping.

To all to whom thefe prefents hall come, gret $\mathbf{t}$ ng, Thomas earl of P . lord high admiral of England, \&c. or we A. B. C. D. E. F. \&c. Efqrs, lords commiffioners for executing the office of lord high-admiral. Or we the commifioners, or principal officer of the cuftoms in the city or port of, \&c. do teftify and make known, That G. H. mafter or commander of the Ohip called the Prince Frederic, hath appeared before us, and hath declared by folemn oath, That the faid thip or veffel, containing about two hundred tons, of which he is at prefent mafter, as aforefaid, doth belong to the inhabitants of \&cc. within the dominions of the king of England : and in regard that it would be more acceptable to us, that the faid mafter or commander be affifted in his juft and lawful affairs, and we hereby requeft you, and every of you, wherefoever the faid mafter or commander thall arrive with his fhip, and the goods laden on board and carried in her, that you will pleafe to receive him courteoully, and ufe him kindly; and admit him, upon paying the lawful and ufual cuftoms, and other duties, to enter into, remain in, and pafs from, your ports, rivers, and dominions, and there to enjoy all kind of right of navigation, traffic, and commerce, in all places where he Chall think fit, without any interruption; which we fhall moft willingly and readily acknowlege, upon all occafions : in teftimony and confirmation whereof, we have, with our hands, figned thefe prefents, and caufed them to be fealed with our feal. Day the day of, \&cc. in the year, \&xc
And the like form of paffort (mutatis mutandis) fhall be ufed by the moft Chriftian king of France.

The form of a Dutch paffport or certificate, for mips that go from the United Provinces.

To the moft ferene, moft illuftrious, moft mighty, mof honourable, and prudent lords, emperors, kings, commonwealths, princes, dukes, counts, barons, lords, burgomafters, fheriffs, counfellors, judges, officers, juftices, and regents of all cities and places, as well ecclefiaftical as fecular, who thall fee or read thefe prefents. We burgo-mafters and governors, of the city of \&c. do certify, that A. B. Chipmafter, appearing before us, hath declared by folemn oath, that the fhip cailed, \&c. containing about, \&c. lafts, of which he is the prefent mafter, belongeth to inhabitants of the faid United Provinces, fo help him God. And as we would willingly fee the faid fhip-mafter affifted in his juft affairs, we do requett you and every of you, where the above faid mafter fhall arrive with his fhip and goods, that you will pleafe to receive him courteoufly, and ufe him kindly; ad mitting him upon paying the ufual dues, tolls, and other cuftoms, to enter into, remain in, and pafs from your ports, rivers, and territories, and there to trade, deal, and negociate in any port or place, in fuch fort and manner as be fhall defire, which we fhall moft readily acknowlege on the like occafion. In witnefs whereof, we have caufed the feal of our city to be hereunto put.

A general maritime paffport for a Swedifh or other fhip to pals the Sound of Denmark.

The confuls and fenators of the town of, \&cc. certify, That the thip, \&c. commanded by, \&cc. belongs to our faid town (or fome other town) in Sweden, and is laden only with goods belonging to Swedes, and bound for the ocean, as the mafter and the owners thereof have declared before us in our court, defiring this certificate as a proof of the fame; the fhip and goods being thereby to be exempted from all taxes and vexations in the paffage of the Sound and the Belt, according to the treaties between the two kingdoms. In teftimony whereof, we have caufed the feal of the town to be put to thefe prefents, which we have likewife caufed to be figned by the clerk. Given, \&c.
PATENTS. Letters patent are writings of the king, fealed with the great feal of England, whereby a perfon is enabled to do or enjoy that, which otherwife he could not do ; and fo called, becaufe they are open with the feal affixed, and ready to be Dhewn for confirmation of the authority thereby given : and we read of letters patent to make denizens, \&c.

The chief Laws of England relating to. Patents,
A monopoly is an allowance of the king by his grant, commiffion, or otherwife, to any perfon or perfons, for the fole buying, felling, making, working, or ufing of any thing, by which other perfons are reftrained of any freedom or libert that they had before, or hindered in their lawful trade Though a monopoly may be more truly defined to be, a kind of commerce in buying, felling, exchạnging, or bartering ufurped by a few, and fometimes but by one perion, and foreftalled from all others, to his or their private gain, and to the hurt and detriment of other men;' whereby of courfe, or by authority, the liberty of trade is reftrained, and the monopolift enabled to fet what price hepleafes on commodities.
Thefe monopolies ufed in this kingdom, have been diftinguifhed into three parts : firft, reafonable, of things and trifles for pleafure, fuch as cards, luteftrings, tobacco, or the like; fecondly, unreaionable, as of flefh, filh', butter, cheefe, or other needful things for the fuftenance of man, without which he can hardly live : thirdly, indifferent, as of velvets, filks, fpices, and other delicacies and curiofities, which are indifferent to be ufed or not. But all monopolies are contrary to the ancient and fundamental laws of this reaim, and are againft the freedom of trade, \&c. Upon this ground it hath been held, that the king's grant to any corporation of the fole importation of any merchandize by our common law is void
Some men are fatisfied, if a prohibition of a commodity be made by aft of parliament, and they will not call it a monopoly, though it be fo in effect ; as when a fociety of private merchants have a privilege to themfelves only, to fell certain commodities, or to import them, and all other fubjects are excluded, although they were heither the difcoverers or firft inventors thereof: but if it be done by the king's prerogative, then thèy take it to be a monopoly. There are others who would have all things at large in the courfe of traffic, and that there fhould be no focieties or corporations of merchants for any places of trade: for by way of partnerlhip, merchants might affociate themfelves, to make or enterprize any voyages, or in fending any goods or merchandize abroad, without having regard to our companies for carrying on trade, fome whereof are of great antiquity. And other perfons make a difference between companies or affociations, dealing in a joint-ftock or a-part, affirming the management of a joint-ftock to be within the compals of a monopoly; neverthelefs, they would be contented to tolerate the fame for the employment outward, but for returns homeward, they would have a particuiar divifion of the commodities which they receive.
The learned judge Vaughan fays, that if the exportation or importation of a commodity, or the exercife of a trade be prohibited generally by parliament, and no caufe expreffed of the prohibition, a licence may be granted by the king to one or more perfons without limitation to export or import, or to exercife the trade: for by fuch general reftraint, 'the end, of the law is no more than to limit the over-numerous exporters, importerfs, or traders in that kind, by putting them to the difficulty of procuring licences, and therefore fuch general licences fhall not be accounted monopolies. In thefe cales, the law implies that the king may licenfe, as well as if the prohibitory law had been, that no fuch exportation, \&c. thould be without the king's exprefs licence. Vaugh. Rep. 345.

Here we have given the various opinions of different men, concerning what is a monopoly, or not fo; and now we fhall take particular notice of the great cafe of monopolies in the reign of queen Elizabeth, as tranfmitted down to us by that excellent lawyer Sir Edward Coke. Queen Elizabeth intending that her fubjects being able men fit for hufbandry, hould be exercifed therein and not employ themfelves in making playing cards, which had not been any ancient manual occupation within this realm; and confidering that by making a multitude of cards, card-playing was become more frequent, and efpecially among fervants and apprentices, and poor arificers; aud to the end her fubjects might apply themfelves to more laudable and neceffary trades, by her letters patents under the great feal, dated the 13 th of June, in the thirtieth year of her reign, granted to R. R. Efq; full power, licence, and authority, by bimfelf, his fervants, factorg, and deputies, to provide and buy in any parts beyond the fea, all fuch playing cards as he thought good, and to import them into this kingdom, and to fell them within the fame; and that he, his fervants, factors, and deputies, fhould have and enjoy the whole trade, traffic, and merchandize, of all playing cards, to have and to hold for twelve years : and by the fame letters patent, the queen charged and commanded, that no perfon or perfons befide the faid R. R. \&xc. hould import or bring any cards into this realm, during the faid time, nor make buy, or fell, any fuch playing cards, \&c. upon pain of the queen's 'higheft difpleafure, and of fuch fine and punithment as offenders deferve in cafe of voluntary contempt.
On an action of the cafe brought by the patentee againft one for importing and making cards contrary to thefe letters pa-

## PAT

## PAT

tent, notwithftanding the glorious preamble and pretence thereof, it was refolved that this grant was void: for it is a monopoly, and againft the common law, and likewife divers acts of parliament; for all trades, as well mechanical as others, which prevent idlenefs (the bane of the commonwealth) and exercife men and youth, for the maintenance of themfelves and their families, and for increafe of their fubftance, to ferve the queen when occafion thall require, are profitable to the realm. And the fole trade of any mechanic art, or any other monopoly, is not only a damage and prejudice to thofe who exercife the fame trade, but alfo to all other fubjects, for the end of thefe monopolies is for the private gain of the patentees: and there are three infeparable incidents to every monopoly, againft the commonwealth, i. e. the price of the fme commodity will be railed; after the monopoly granted, the commodity is not fo good and merchantable as it was before, and it tends to the impoverifhment of divers artificers and others, who before, by the labour of their hands in their art or trade, had fupported themfelves, but now will be idle and in beggary.
And it is evident by the ad of 3 Edw. IV. cap. 4. that the importation of foreign cards was prohibited, at the grievous complaint of the poor artificers card-makers, who were not able to live at their trades, if fuch cards fhould be imported; and the faid act provides remedy for maintaining of the trade of making cards, forafmuch as it maintained many families by their labour and induftry; and the like provifion is made 1 Rich. III. cap. 12. and perfons may not be reftrained from exercifing any trade, but by parliament. Now when the wifdom of the parliament has made a ftatute to reftrain, for the good of the public, the importation of foreign manufactures, to the intent that the fubjects of the realm might be employed in making of the faid manufactures, \&c. and thereby maintain themelves and their families; to grant the fole importation of them to one for private gain, or to divers without limitation, notwithftanding the faid ftatute, is a monopoly againt the common law: and therefore the difpenfation or licence to have the fole importation and merchandizing of cards (without any limitation or fint) notwithftanding the act 3 Edw. IV. is utterly againft law. Adjudged Trin. 44. Eliz. if Co. Rep. 84, 85.
King Edward III. by his letters patents, granted to one John Peche, the fole importation of fweet wines into London, and at a parliament held 50 Edw. III. this grant was declared void. And queen Elizabeth having granted unto certain patentees, the fole coinage and tranfportation of all the tin in Cornwall and Devonhhire for 21 years, under a large yearly rent to be paid at the Exchequer. Adjudged, that this patent was a monopoly, anno 13 Jac I .
In an adtion the plantiff fet forth, that in the reign of Hen. IV. there was a fociety of merchant-adventures in England, and queen Elizabeth did incorporate them by that name, with privilege to trade to Holland, Brabant, Flanders, \&c. prohibiting all others not free of that company from trading thither ; and that the defendant not being free of that company, did trade there without their leave, and imported goods to their damage, 8 cc . To which the defendant pleaded the ftatute 15 Edw. III. That the feas fhall be open to all merchants to pafs with their merchandize whither they pleafe: the queftion was here, whether the king had power to reftrain his fubjects from trading to particular places? This cafe was not determined; but the better opinion was, that fuch a grant was void, it agreeing with lord Coke's definition of a monopoly: it is againft the ftatute of Edw. III. which gives liberty to merchants to buy and fell without difturbance; and it is exprefsly againft the ftatute 2I Jac. I. The cafe of the Eaft-India compeny is not like this, becaufe that patent reftrained the fubject from trading with infidels, without leave; if it had been to reftrain them from trading with Chriftians, it had been void. 3 Mod. Rep. 126.
By the ftat. 21 Jac. I. cap. I. it is enacted and ordained, that all monopolies, commiffions, grants, letters patents, and licences, for the fole buying, felling, and making of goods and manufactures within the king's dominions; and all warrants, proclamations, and reftraints, \&c. for the erecting, frengthening, or countenancing thereof, againf the tenor of any law or fatute, fhall be void: any perfons grieved by the putting them in ufe, thall recover in the courts at Weftminfter treble damages and double cofts, by action on the ftatute; and if any perfon thall caufe fuch action to be ftayed or delayed before judgement, by any order, warrant, \&ic. except only of the court where it is depending; or fhall, after judgment had, caufe or procure the execution to be flayed by coour or means of any fuch order, or warrant, power, or authority, fave only by a writ of error or attaint, he or they fo offending, fhall incur a premunire.
But this act doth not extend to any grants allowed or confirmed by act of parliament, nor to any grant or charter to any corporation, company, or fellowihy of any art, trade or myftery, nor to any company or fociety of merchants for enlargement'of trade; nor to grants of new manufactures, made to the inventors thereof by patent for fourteen years, being not contrary to law, or prejudicial to the commonwealth; nor to
V.OL. II.
any grant of privilege for printing, or making or compounsing of falt-petre for gunpowder; or for cafting or making ordnance, \&c. and certain patents granted to divers perfons $s_{2}$ are excepted out of the ftatute
And letters patent and grants of privilege heretofore made or 21 years, or under, to the inventors of any new manu factures, where they are not contrary to law or milchievous, by raifing the price of commodities at home, or hurt of trade, or generally inconvenient, are faved; fo alfo fuch patents granted heretofore for more than 21 years from the date hereof, notwithftanding this act.
All matters relating to monopolies, grants; licences; \&c. thall be examined, heard, and determined; by and according the common laws of this realm, and not otherwife; and the making ufe of or procuring any unlawful monopoly, is punifhable by fine and imprifonment at common law. 3 Co . Int. 18 I.
It is held, that a new invention to do as much work in a day by an engine, as formerly ufed to employ many hands, is contrary to the ftatute; by reaton it is inconvenient, in turning fo many men to idlenefs. And concerning inventors of new manufactures, \&cc. it hath been determined on this ftatute, that the manufacture in fuch cafe muft be fubftantially new, and not barely an improvement of any old one, by any addition, \&x. thereto, to be within the ftatute: it muft be fuch, as no other perfons ufed at the time of granting the letters patent ; and no old manufacture in ufe before can be prohibited in any grant for any new invention. 3 Inf. 184.
A grant of a monopoly may be to the firft inventor, by the 21 fl of Jac. I. and if the invention be new in England, a patent may be granted, though the thing was practifed beyond fea before; for the fatute mentions new inventions within the realm; fo that if they be new here, it is within the act, which intended to incourage new devices ufeful to the kingdom; and it is the fame thing, whether acquired by experience or travel abroad, and fo brought hither, or by ftudy at home. 2 Salk. 447.
A perfon had a grant by letters patent from king Cbarles II. for the fole printing of blank writs and bonds, \&ac. for the term of 30 years; and one Dorrel a fationer baving printed five hundred blank bonds, action of the cafe was thereupon brought againft him; who pleaded, that the company of ftationers for the fpace of 40 years then laft paft, before the granting of thefe letters patents, had conftantly printed blank bonds, and fo made a general conclufion. It was here argued, that the king hath a prerogative in printing, and may grant it exclufive to others; and that fuch grants have been made by the kings of England ever fince printing was invented, of which feveral inftances were given. Now the ftatute againft monopolies doth not reach to this cafe, becaufe of the provifo therein to exempt all grants of fole printing; and there being an inherent prerogative in the king, in thefe cafes, whenever he exerts it, all other perfons are bound up, who were at liberty before.
To this it was anfwered and confeffed, that the kiug hath a prerogative to grant the fole printing to a particular perfon; but then it muft be in fuch cafes, where no other perfons whatfoever can claim a property in it: on confidering printing as an art exclufive from the thing printed, this patent is not fo good; for if a man invents a new art, and another learns it before the inventor can obtain a patent, if afterwards granted it is void: and then if this be confidered in relation to the blank bonds printed, it is not a new invention, which might have made the grant good, becaufe the ftationers company have printed fuch fo long time; and for that reaton this patent is void, for where the invention is not new, their trade fhall not be reftrained. And fole printing is a manufagure, it is an art and k ill, which the king cannot reftrain; but when it is of publick concern, then the prerogative may interpole.
The court of King's-Bench made a difference in this care, between things of a public ufe, and thofe which are public in their nature ; and the court inclined, that the patent wa not good. 3 Mod. 75. 76. 78 . 2 Nelf. Abr. 899 .
It is agreeable to our common law, and the fundamental laws of all nations, to grant projectors or inventors of ufeful things, privileges for twenty-one, fourteen, eleven, or feven years; and as to the time granted, the thing itfelf ought to make the difference, upon good confideration, and fo as not to meafure all things alike. But the general intention of all grants by letters patent for manufactures, hath or ought to have relation to fet the people on work, to recompenfe the inventor of the art or fcience, and that things may, in fome refpect, be better and cheaper to the fubjects.
There may be letters patents granted to reward a projector and the fame be not any monopoly, altbough the public tiberty may feem thereby to be reftrained; and it may be rather a common diftribution than reftraine, whenever it brings a general good to the nation. The fatutes of the kinguom, refraining from exercifing divers cratts, all fuch as have not ferved an apprenticefhip unto the art which they would exercife, do it to no other end but that thofe arts might be
brought to better perfection, and the things'be good and ferviceable for thefe that buy and ufe them.

## Remarks in another Light.

When private perfons improve an old art, or invent or introduce from abroad a new one, they generally lay claim to the affiftance of the public, either by bounty or a patent. A diftinction fhould ever be made in the manner of encouraging a fingle invention or improvement, and an art capable of being carried into an extenfive trade or manufacture. In the frequency of patents this has not always been attended to. No manufacture can be managed with fecrecy. If one perfon only is at liberty to practife it publickly at home, fome of the workmen or other perfon poffeffed of the fecret, will find means to efcape and carry it abroad, if it is a new invention. Whenever a new trade arifes, the inventor or introducer deferves the honour and reward fuitable to his merit; his art Chould be purchafed by the public, and laid open, fo that a number of rivals in the country where it is invented or introduced, may carry it expeditioully to a neceffary height, and be ready to ftock foreign markets as faft as poffible. This would prove more nationally advantageous, than any perfon making a temporary monopoly of his art, and fecreting the tame to himelf. It would be a great injury to the public, that the new-invented cotton-thag, or any of the variety of the new articles daily produced in the weaving counties, fhould be confined to the inventor; and yet where the Fabric is quite new, he certainly merits due regard from the public ; for want of which, the growth of our manufactures was ever very flow, compared to that of France.
Whenever an ingenious art is introduced from foreign parts, and advances fucceffully, no encouragement is fo effectual as to check the importation of the fame manufacture from abroad, not by high duties, which either promotes fmuggling, or renders it more defirable, becaufe the more dear and toreign, but by prople of diftinction, efpecially thofe in the legiflative capacity, who thould effectually prohibit and damn it, by difcountenancing the wear at once, and making it unfa!hionable amongtt us.-If this be done too foon, our own artifts may not be obliged to exert their talents to excel, and the nation may leave the ufe of it from it's dearnefs; and if fo, we thall ftand no chance to come in for a thare of the fupply of other nations: and if this be delayed too long, the patience and fortune of the ingenious undertakers may be exhaufted, and the defign given over. Next to knowing the principles of a manufacture, certain compendious methods are neceflary to perform it with expedition. It is not enough to execute one piece, as well or better than the imported one; the more important point is to execute them in quantities, and this requires length of time and practice; and 'till this can be brought to bear, fome public encouragement fhould not be refufed to the frift of our own undertakers.
Among fingle inventions or fecrets, the boafted remedies of the faculties are commonly rewarded by patent. Whether this is for the public interefts, fee the article Quacks
However right it may be, that the inventors fhould keep their fecrets to themfelves, yet is there not an apparent abfurdity in folliciting an exclufive privilege for the fole making of what they fay no one can make but themfelves; is it not defiring a permifion from the king to keep their own fecret?
The common argument runs fop the preventing counterfeits. And in this light, the general good requires they fhould be indulged with a patent, that all fimilar ways of injuring the health of his Majeity's fubjects fhould be reftrained to one, which is paid for.
Sometimes the difcovery is adjudged to have real merit, and to be ufeful to the public health. In which cafe, the parliament, in lieu of a monopoly, has thought proper to honour the inventor with a bounty, and fo make a prefent of the remedy to the public: as we have feen done with relation to Mrs Stephens's cure for the fone, the univerfal medicine of Dr Ward, and formerly to the inventor of a feecific for the gout.
Patents are frequent for books, which often promotes the pirating and printing them abroad, or in Scotland. In works of more expence than invention, and where the printer rather than the author applies to the public, perhaps this is the only practicable method of fecuring his property. But when the author has done a work evidently ufeful to the public, and an honour to the nation, it were to be wifhed he might at leaft be confidered as the inventor of a new manufacture, and that rewards for good books were as common as for medicines. Burnet was honoured with the thanks of both houfes of parliament for the Huftory of the Reformation, and $\mathrm{Mr}_{5}$ Locke with a bounty for bis Treatife on Intereft and Coin. But nothing is more infecure in this nation than literary property, which we have fhewn in our Remarks under the aracle Book, and allo in our Remaks under the article BookTrade, and under the article Copies of Authors. Nor can any thing be a greater difcouragement to men of genius and application, to devote themfelves this way to the pablic fervice, nor does any thing call for greater artention from the leginature.

## PAT

In relation to the laborious work wherein I am at prefent eagaged, I bave not applied for any patent, although I may prefume to fay, it is a work new of it's kind in this nation, nor did any thing of that comprehenfive nature ever before appear in any other ftate or country. My reafons for it ape, that I thought it my duty firft to experience the judgment of the public; thinking it fomething extraordinary, however common, for his Majefty's name to be annexed to a book before the public or any body elfe, had ever feen one fingle fheet of it. However meritorious-fome books may be that have been thus printed, I cannot but think, in the general, fuch practices are highly impofitious and deceitful upon the mafs of the people, who are weak enough to imagine, that book with a patent to it has the fanction and authority of his Majefty, or thofe officers of fate, who are delegated to grant fuch powers and privileges; when the truth is, that neither the attorney or follicitor-general, any more than the fecretaries of flate, or the public, have ever feen a fingle fheet of fuch book; and the king knows no more of the merits there of, than the emperor of China; nay, it is frequent, if I am rightly informed, to obtain patents for books, before any part of them has been begun to be written. And what is fail more extraordinary, there are numbers of books publifhed in this nation, with thefe words annexed to them, Printed and Published according to Act of Parlia ment, or by the King's Autrority: and numbers are made to believe, that the parliament have really made an act to encourage and propagate thefe works throughout the nation, which are generally in the greatelt contempt, and only in efteem by the ignorant and deluded multitude. De not abufes of this kind require redrefs? Is the facred name of Majesty itfelf, and that of the Parliament of Great-Britain alfo, to be thus proftituted, for the fake of the fees of a common patent?
When a work is finithed and approved of in general by men of fenfe, candour, and impartiality, as a performance of folid and permanent utility to the kingdom, the author has a right not only to a patent, but to fome other reward and protection than that will give him, and may with a good grace properly apply for them. But to obtain a patent for a book before any one knows any thing of it's contents, and which turns out nothing but a barefaced piracy upon others of allowed merit, is raifing a moft impofitious and arbitrary tax upon the public ; and, what is ftill more intolerable, under the fanction and authority of the king and parliament, when neither of them know any thing of the matter.
The ingenious improvers of the engine for extinguilhing fires, the folar and pocket microfcopes, the air-pump, the teflecting telefcope, and of other machines of curious ftructure, were properly indulged with patents. The contrivers of the fire-engine, the importer of the Italian throwing-mill, [fee the REMARKs on the article DERBYSHIRE, and the infinite numbers daily inventing machines for hortening bufinefs, have generally been recompenfed with a patent; and fome few, if the machine was hughly curious and ufeful, with a bounty and honours alfo.
The public can fuffer nothing from a temporary monopoly of fuch machines, fince one or two perfons may eafily fupply as many as the nation will require of each, and they are things in their own nature durable, and of ufe only in particular places. Perhaps there are not more than two or three throwing mills in the kingdom, nor above an hundred fire-engines, or a thoufand water-engines (for thefe are rare, except in towns) and in general the higher machines, like the moft perfect animals, are feweft in number; forne of them, perhaps, for the fame reaion as beafts of prey are oblerved to be fo. Manufactures of moderate expence and quick growth, may, in the general, Cafely be left to private adventurers, and run the common chance for fuccefs; the finer arts will never flourifh but under public protection and noble patronage; no encouragements in the hands of private perfons are adequate rewards to the man of genius, who ftudies the univerfal promotion of thefe more ufeful commercial arts, which give daily bread to millions of the human fpecies, fupport the dignity of crowns, and the magnificence of the great and the wealthy. A noble profufion of honours and bounty raifed the Gobelines to it's prefent height; the united influence of thefe two being generally fufficient to call forth whatever heman induftry can attain to.
The houfe was the refidence of two brothers, who firt brought to Paris the fecret of dyeing a curious fcariet, and failed in fetting it on foot. The buildings went under the popular name of the folly of the Gobelines for many years, still the obloquy was taken off by a Royal Edict, and the name changed by public authority to the more honourable one of the Royal Mansion of the Gobelines. The fcarlet colour was ordered to be called after the name of the inventors, and the little river Bievre, which runs by the building, receives the fame diftinction.
Thefe in appearance were trifing matters, but will be fenfibly felt by the man of genius. The fame year the houfe was purchafed by the king, and intitled the Royal Manufacture of the Crown Furniture; and provifion was made by a Royal Charter, to render the place a

## PEA

PEA

Perpetual School and Seminary of the curious arts. Here the famous Colbert collected together from all parts of the world, the moft able mafters and defigners, as well as inferior artifts in the fine manufactures. Salaries were appointed for the directors, and penfions for life for the workmen; thefe were tapeItry-weavers, engravers in etching and metzotintocs, goldfmiths, jewellers, carvers, and workers in ebony.
In this place was wrought all the magnificent furniture for fourteen Royal Palacis, which has fince been deferyedly the admiration of the world. Particular care was taken that no part thould be furnifhed elfewhere, much lefs from abroad. All honorary Presents to foreign princes and noblemen abroad, and to the ornament of TEMPLes and public aiddings at home, were made in the beit performances, iftead of iewels or money. Many of the fuperior artifts in ited from foreign countries were made noble, and all of them had various honorary Privileges and Royal Pen sIons: the whole number, fuperior and inferior, were comprehended amongit the natives of France, and made free of Paris, with full liberty to practife there refpective trades where they pleafed, after working for a certain term in the Gobelines. This indulgence extends to all who hall at any time hereafter practife the limited time in this foundation. The whole quarter of the Gobelines was exempted from Taxes and Imports, and had a court of judicature peculiar to itelf, under the tide of the Court of the royal Ar ists. See the articles France, Artificers, ManU facturers.
Befides thefe, there are three other academies in Paris for the polite Arts, with various privileges, honours, and penfions to the members, forming the governing part of each fociety: as the academy of Painting and SCULPTURE, that of Architecture and the Military one, of late foundation. Precedents inviting our attention and imitation, if the latter may not be faid to command it. The two former and the academy of fciences are copied in Spain, and are equally liberal endowments.
In England, the fream of public favour and liberality has turned wholly to the advance of fciences; we have few or no inftitutions in favour of Arts, no place of refidence but for fecculation. The Royal Society are indebted to the public only for their name. The academies for initrueting youth in the rudiments of Navigation and Engineering, ake mean in their endowments and trifling in their effects.
Amongit the many noble inftitutions of our times, it feems, worthy of the glory of the nation, to make provifion for the embellifhment, foleador, and ornament of that country, for whofe fecurity, ftrength, and grandeur, they have fo amply provided. Whoever recollects the eftablifhment of Nova Scotia, the Herring Fishery, the Cambric Act, the encouraging the manufacture of IRON in the PLANTATions, and the endowment of the FoundiingHospital, may hope for any rational provifion in this age.
An academy for the fine arts above-mentioned, under a Royal Charter, with diftinguifhing honours and privileges for the higher members, and fmall penfions for the lower, might give us a profpect of fome perfection in the branches of Tapestry-Weaving [fee TapestryWeaving], Painting [fee Painting], Sculpture fee SCULPTURE], \&ec. and all the lower trades of elegance depending on fine defign. Without fome fuch public inftiution, they never yet were carried to an height in any counry ; no private fortune can fand out the time neceffary to train up hands enough to extend the Art into TrADE: but when once a fufficient number were made perfect in his feminary, private adventurers would be -found ready enough to take up the bufinefs; for no people ever wanted a trade, that abounded with working hands well inftructed therein, and who could fell as cheap as other nations. However ufeful upon particular occafions the granting of pa tents may prove, in the promotion of commercial arts, yet this practice thould not abfolutely preclude all other meaures that may be prudential in the public to take for the like great and wife purpofe. What there are, may be gathered rom what we have fuggefted under the articles Artificer, Manufacturer, Royal Society
EARLS, are little ftones almoft round, oval, or thaped like pears, compact, hard, fmooth, white, fhining, and of diffecent fizes, which are formed in certain oyfters, whofe fhells are of different bignefs: but there are fome of them met with that are three or four times as big as Rouen oyfters. They fin for thefe pearl-oyfters in the Eaftern and Weftern Oceans, according to Tavernier. The ancients called thefe pearls uniones, becaufe they believed there never was but one in an oyfter; but they were deceived, for we fometimes find reven in a phell. They are bred from a vifcous, or faline glutinous, humour, that is condenfed and perrified in everal parts of the finh.
Inftead of a particular part being affigned for the generation of pearl, they breed indifferently in all the parts of the oy-
fter, but are moft commonly found in the latgeft and beft haped oyfters, rather than in others. Sometimes we meet with pearl in mufcles, and other fhell-finh; as well as in oy fters. All pearl is efteemed cordial, proper againft infection, to recruit and reftore loft fpirits; but it's chief virtue is to deftroy acids, as other alkilies do, and likewife to correc the acrimony of the fomach. Pearl is likewife good againß a canine appetite, a flux of the belly, the hemorrhage, \&c. the dofe from fix or ten grains to a drachm.
Some pearls are very white, fome inclining to yellow, and others upon the black, which are as it were, of a leaden colour As to thefe laft, they are met with no where but in America, and their colour comes from the nature of the foil, which is fuller of mud than that of the eaftern parts.
In the return of the cargo, fays Pomet, which the Sieur du Jardin, the famous Jeweller, had in the Spanif galleons, there were fix pearls, perfectly round, but as black as jet, and which, one with another, weighed twelve catats each. He gave me thefe, among other things, to carry to the EaftIndies, and fee if I could difpofe of them; but I brought them back again, and could meet with nobody that would look upon them. As for the pearls which are inclined to yellow, it proceeds from hence, that the filhermen felling the oyfters in heaps, and the merchants ftaying fometimes fourteen or fifteen days before they open to take out the pearl, fome of thefe oyfters during this time lofe their liquor, which waftes and ftinks, and the pearl becomes yellow from the infection; which is fo true, that in all the oyfters that keep their liquor or water in them, the pearls are always white but they wait 'till the oyfters open of themfelves, becaufe if they fhould open them by force, as we do ours here, they would endanger the damaging and fplitting the pearl. The oyfters of the ftraights of Manar, open naturally five or fix days fooner than thofe of the gulph of Perfia; becaufe the heat is much greater there, which is in the tenth degree of northern latude, than in the ifle of Bahren, which is in the twenty-feventh; and therefore among the pearls that come from Manar, there are but few yellow ones. In fhort, the people of all the eaftern countries are much of our minds, in relation to whitenefs; for I have always made it my obfervation, that they love the whitelt pearl, the whiteft diamonds, the whiteft bread, and the faireft women.
And though 1 have never been in America, yet as well for the reader's fatisfaction, as that nothing may be omitted, I hall relate all the parts where the pearl-filhings are, beginning with thofe of the eaft. Firft of all, there is pearl-fifhing about the ifle of Bahren in the gulph of Periia. This belongs to the king of Perfia, and therein is a good fortrefs that entertains a garrifon of three hundred men. The water which they drink in this ifland, and that of the coaft of Perfia, is like falt water, and of an ill tafte, and what none but thofe of the country are able to drink. As for ftrangers, if they will have freh water, they muft pay for it; being only to be had a league or two off, by putting to fea five or fix perfons in a little veffel, and drawing water with a bottle from the bottom of the fea, where for about two or three feet at the bottom, the water is fweet, and pleafant to drink. When they that dive to the bottom of the fea to draw up this water have filled the veffel and ftopped it clofe, they give a pull to a fmall cord, which is tied to one of thofe in the boat, which is the fignal to his comrades to pull him up.
During the time that the Portugueze were poffeffed of Ormus and Mafcati, every veffel that went out to filh, was obliged to take from them a paffport, that coft fifteen abiffis, and they kept always feveral brigantines to fink fuch as refufed. But fince that, the Arabs have retaken Mafcati, and the Portugueze have no forces upon the gulph, every man that filhes, pays only to the king of Perfia five abiffis, whether he bas fuccefs in his fifhery, or catches nothing at all. The merchant alfo gives fome fmall matter to the king out of every. thoufand oyfters. See Abissis.
The fecond fifhery of pearls is oppofite to Bahren, on the coaft of Arabia Folix, near the city of Catifa, which belongs to a prince of the Arabs, with all the country thereabouts. All the pearls taken in thofe parts are mofly fold in the Indies, becaufe the Indians are not fo difficult to be pleafed as we, and will take the rough as well as the round.
They likewife carry fome to Balfora. Thofe that go into Perfia and Mufcovy are fold at Bander Congo, two days journey from Ormus. In all the places I have named, and other places of Afia, they admire the pearl that is upon the yellow water, more than the white; becaufe they fay the pearl with that water, retains it's livelinefs, and will not fade: but that the white will not laft above thirty years, without lofing it's lively colour; and not only the heat of the country, but the fweat of the perfon that wears them, will difcolour them with an ugly yellow.
Before we leave the gulph of Ormus, I muft beg leave to give an account of that admirable pearl, which the prince of the Arabs had, who took Mafcati from the Portugueze, who took then the name of Imencet, prince of Mafcati, but was called before that, Auph Acn Ali, prince of Norenvaé. This prince
had the fineft pearl that was in the world, not for it's fize, for it weighed not above twelve carats, or 't's perfect roundnefs, but becaufe it was fo clear and tranfparent, that you' might almoft fee clearly through it.
The moft perfect pearls have in all ages been allowed to have been brought from the Eaft-Indies. In is true. they do not at this day fetch fo high a price in Europe as they did formerly; but ftill the Oriential pearls are of confiderable value, and are like to continue fo, inafmuch as they have all all the properties that are requifite to render them fit to be reckoned amongft the moft beautiful jewels that can be; neither is their any counterfeits, that at all approach them in their luftre: though people bave attained in that art to a degree of perfection, fcarce to be expecied.
The finh that produces the pearl is a kind of oyfter, but much larger than the common fort, or indeed than any that are found in our feas; they are common on the coaft of Perfia, near Ormus, about Cape Comorin, and on the coaft of the illan of Ceylon*. The fhell-fin which produces them, is called the mothher of pearl. The ancients have an opinion that thunder and ftorms had fome effect in producing them, for which we Chall be able to give a tolerable account, without admitting of any thing wonderful in the fact. The filhing of pearl was 4 thing always attended with great hazard and danger, fuch as were employed in it being often obliged to dive in places 30 fathom deep, where they were expofed to many ravenous monfters, peculiarly thirfting after human blood. They were let down out of the veffel to which they belonged with a weight of fone, fixed either to their fide or to their feet, that they might defcend the quicker and remain the more fteady under water, In their right-hand they had a fharp iron, which they ufed for removing the oyfters from their beds; and on their left arm hung a bafket, in which they put the fifh when they were caught, and about this arm alfo a cord was tied, by which they gave notice to thofe in the fhip, when to pull them up by another cord that was about their middle $\dagger$.
*Voyages des Indes, vol. v. p. 265 . Par Monf. Reaumur.
+. Eliar. de Animal. lib. x. cap. 13. lib. xv. cap. 8. Ammian. Marcel. lib. xxviii. cap. 12.

The largeft fort of fifh were found far in the fea, and if they were at any time driven upon the coaft, it was by tempeftuous weather. And hence the opinion arofe, that great thunders and florms contributed to fwell and to increafe the pearl. The fact therefore was true, that after tempefts the largeft pearls were found: but the opinion grounded upon this, that the thunder was the caufe of the pearl's increafe, feems to have no foundation in reafon. So eafy a thing it is to miftake effects for caufes, and to introduce errors in Natural Philofophy, by reafoning wrong upon facts. When the divers touched the oyfters, efpecially thofe of the largef fize, they clung fo ftrongly to the rock, that, very often, there was no removing them, even with the help of their iron inftrument. In the oyfters they brought up, when opened, the pearls appeared like little drops of fair water or dew, which hardened by being expofed to the air, and were then carefully taken off the fhell. In one oyfter there was commonly ten or twelve, in fome more, in fome lefs; but the more they were, the fmaller; and if there was but one, it was generally of a very confiderable fize, and of greater value than many fmall ones, fo that thefe thells were efteemed the richeft of all *. The fhell itfelf is alfo of fome value, as baving a prodigious luftre, and being extremely fit for in-laying and other ufes.

* Plin. Nat. Hift, lib. ix. cap. 35 .

Philoftratus has a very curious paffage in relation to this fubject, if his accounts could be abfolutely depended upon; but whether they be or be not, what he relates is very remarkable, it deferves at leaft to be noticed, and then let the reader think for himfelf: the ftory, as he tells it, is this: fome of the Indian pearl-fifhers have a method of obtaining that valuable commodity, without bringing up the oyfters at all. In order to this, the divers carry down with them a certain kind of rich perfume, which they hold before the mother of pearl; and while the fifh fucks it, which it will do very greedily, they gently open the fhell, from whence a liquor diftils drop by drop, that prefently harden into pearls*. It might be alledged, in fupport of this fory, that both Athenæus and Pliny feem inclined to believe, that pearls are at firft liquid; which is, indeed, agreeable enough to their form and to their luitre $f$.

* Philof. in vit. Apollon. Tyan. lib. iii. cap. 57, Tom. IV.
lib, ii. cap. 20, 21.
$\dagger$ Athen. Deipn. lib. iii. p, 93. Plin. lib. ix. cap. 35 .
At this day, there are four confiderable pearl-fifheries in the eaft. The firt, as obferved, is on the coaft of the inand of Batren, in the Perfian Gulph, of which the Portugueze were
formerly mafters, but now this filhery belongs to the Perfians. The fecond is near Catifa, on the coaft of Arabia the Happy, over-againft Bahren. The pearls taken at thefe fifheries are moft efteemed in the Indies, though of a yellowifh caft. A great part of them are carried to Balfora, from whence they are diftributed all over the Indies. They filh twice a year; firt in the months of March and April, and again in the months of Auguft and September. The depth wherein they filh, is from four to twelve fathoms; and the deeper the oyfter is found, the pearls are the brighter, becaufe the water is not fo hot there, the fuh not being able to penetrate fo deep.
The third fifhery' is on the coalt of the illand of Ceylon. The pearls found there are of a good water, but fmall, and the greateft do not furpafs two carats; nay, it is feldom that they are found of that weight: but, in recompence of this, there is great quantity of feed-pearl fit to powder. The fourth and laft fifhing is at Japan; the pearls there are of a water white enough, and heavy, but ill thaped, moft of which fall into the hands of the Dutch Eaft-India company, becaufe the Japonefe themfelves have no efteem for jewels of any kind *. The poor people employed in thefe filheries live very meanly, and fcarce get a fubfiftence by them; even thofe who deal in pearls are far enough from being rich, through the oppreffion of their princes on one fide, and the art of the Dutch on the other; who finding that the bright pearls taken on the coaft of Ceylon are moft efteemed, and go off on the greateft rate in Europe, employ 2 brachman to buy them up as they are caught, which he does at a very low rate:

## * Tavernier Voyages anx Indes.

The perfons concerned in this trade, launching out into greater expences than they can afford, and thereby fubjea themfelves to the dreadful neceffity of parting with the fruits of their induftry to fuch as are poffefled of money.

* This tempts fome of them to a very bafe practice, which is throwing a poifonous drug into the fea, near the banks where the beft fifh lie; upon which they immediately remove to another coaft, where fuch as are in the fecret, fifh for them, and become rich before their roguery is found out $\dagger$.
* Voyages de la Blun, P, 330.
+ Voyage de Thevenot, 'Tom. III, Iiv. ii. cap. 11:
There are now feveral pearl-fifheries eftablifhed in the WeffIndies, and in other parts of the world, as we fhall fhew in their proper places. But, as the value of thofe pearls anife from their approaching in their colour and water to the Oriental pearl, this fufficiently fhews, that the excellence attributed to them by ancient writers, is not at all prejudiced by the difcoveries made in later times, to which the policy of the Indian princes contributes not a little; for, by purchafing the fineft pearls at high rates, they keep up their price to the Europeans, fo that there never came fuch numbers into this part of the world as to fink them much in their value: hence it is, that whatever becomes of the pearls of other countries, thofe of the eaft ftill keep up their credit, and a pearl of the weight of four carats, is worth ten or twelve pounds, and of a larger fize, and well-fhaped, much more *.
* Tavernier, ubi fup. Vide etiam Hift. Nat. des Indes de Jofeph Acofta, lib. vi. Hift. Gem. des Indes de Lopez Gomara, lib. vi.

## Of Artificial Pearls.

The Chinefe, according to Monfieur Lambet, pretend to have found the art of making pearls, which are in fome fenfe almoft natural. The Chinefe ladies of quality fet a great value upon true pearls, which they generally ufe, as ornaments in their drefs. The rivers of the eaftern Tartary furnifh them with pearls, which, however, are lefs beautiful than thofe brought from the Indies, but the value of the artificial pearls bears a proportion to their refemblance to fuch as are natural.
The fmall efteem the Chinefe have for the counterfeit pearls of Europe, fufficiently fhews, that they think them inferior to fuch as they themfelves make, and the advantage they find in this method is, that thefe pearls are formed, augmented, and perfected under their infpection, and that they catch them in the bofom of the fifh, where this fubitance is formed in the fame manner as the true mother of pearl. The fecret is as follows:
Take, fay they, one of the largeft oyfters you can find in pure water, put it into a bafon half full of limpid water; place this bafon in a retired place, in fuch a manner however, as that it may eafily receive the dew of heaven; take care that no woman approach it, nor let the barking of dogs, the crowing of cocks, nor the cackling of hens be heard in the place; (all which means only to take extraordinary care) then take fome of the feed of pearls, called yor-

## PEA

chus, uled in medicine, and reduce it to an impalpable powder ; then after gathering fome of the leaves of the tree called che-ta-kong-las (a kind of holy oak) wafh them well, exprefs their juice, and with it unite the feed of the pearls. Of this mafs, form fmall balls, as large as a pea, which you muft cover entirely with a fine powder of the fhining pelliculx, which is found in the infide of the mother of pearl In order to make thefe balls intirely round, roll them on a varnilhed plate, 'till there remain no more inequalities in them, and 'till they are dry enough not to fick to the fingers; after which, dry them altogether, in a moderate heat of the fun.
When your matter is thus prepared, open the mouth of your oyfter, and put the new formed pearl into it, and feed the byfter for an hundred days, in the manner I am about to defribe, but take care to give it it's food every day, at the fame time precifely, without varying even in a few minutes, and when the hundred days are expired, you will find a pearl of a beautiful water, which you may bore when you pleafe. The author does not forget to fpecify the materials of which this food is compofed, and particularizes the gin-feng, the China, or white efquine, and the peki, which is a root more glutinous than the moth-glue, and the pecho, another medicinal root. We muft, according to him, take of each of thefe, a drachm; and reduce them to a very fine powder, of which, with honey purified over the fire, we form long paftils, and divide the whole into a hundred portions for the hundred days.
This receipt is not feemingly without difficulties, which requirc illuftration from the author, if he could be confulted; for how fhall we open the oyfter without hurting it? or muft we wait 'till the oyfter opens itfelf? How muft we open the mouth of the oyfter to put the prepared pearl into it, or is it fufficient to put it into the Chell? In like manner, with repect to the diftribution of the food, is it only to be put into the water, whence the oyfter will not fail to draw it into it's mouth? All thefe points feem to require illuftration.
It is certain that in China, there are people employed in making thefe pearls, who certainly would not ufe the feed of pearls, fo much eftecmed in medicine, if they were not certain to reap a confiderable profit from it. Perhaps alfo, the Chinefe have found from experience, that by the nourifhment they give the oyfter, there are feveral fmall pearls formed, which indemnify them for the expences they have been at, in producing the principle one.
Be this as it will, it is certain that the Chinele have had a good deal of knowledge of the origin of true pearls. The choice they make of the mother of pearl, of a retired place, diftant from noife, and harfh peircing founds, accompanied with a pure air, and expofed to the dew, they long time they sequire for the formation of the pearl, the aliments they furnifh, and whereby they fuftain the juices drawn from plants, which the rains, after having enlarged the rivers, carry into the pearl fifheries, and which, as they affure us, render them all fertile, are circumftances that evince, that the Chinefe have endeavoured to imitate nature in her operations.
To the fecret of forming pearls, in fome meafure natural, the fame author adds fome other fecrets for reftoring their primitive beauty when loft.
When pearls lofe their beauty, there is a method of removing the impurities adhering to them, and reftoring them to their primitive fplendor. For this purpofe, let them fteep a night in woman's milk, then take the herb $y$-mont-fao, reduced to afhes, twake a lee of it, and receive the water which drops from it through a coarfe linen cloth; add a little fine wheat Hour; put your pearls into a filken bag, tied at the mouth and after having plunged the pearls into this liquor, rub them gently with your band.
If pearls are tarnifhed, or fpoiled with any unctuous matter, take geefe and duck's dung, dried in the fun, and reduced to ahes; make a decoction of thefe, and when the water is ettled, put the pearls in a filken bag, and wafh them in the manner above directed in this decoction.
The approach of the fire fometimes renders pearls reddifh: in this cafe, take the fkin of the hoan-naw-tfe, (a foreign fruit of which the bonzes make their beads) boil it in water, into which put the pearls and wafh them; or beat turnips or radifhes, and after having expreffed the juice of them, put the pearls a whole night into it, and they will come out very white.
f the pearls become red of themfelves, wath them in the juice expreffed from the root of the Indian banana tree; eave them in that juice for a night, and the next morning they will have their firf fplendor and natural whitenefs.
Pearls are fometimes damaged when without reflection they are brought near a dead body. In this cafe, they are reftored to their primitive luftre, by wafhing and rubbing them in the ee of the plant $y$-mont-fao, with which a little meal and lime re to be mixed
The author alfo advifes us not to leave pearls fcented with mufk, by which means they are fo tarnihed, as to lofe a confiderable part of their value.

Further obfervations on the methods fuggefted for the making artificial pearls.

The ancients, who wrote on the feveral Corts of precious ftones, ranged pearls among jewels of the firlt clafs.
The oriental pearls, as obferved, are the fineft, on account of their largenefs, colour, and beauty, being of a filver white; whereas the occidental or weftern pearls, feldom exceed the colour of milk.

## To imitate fine orintal pearls.

Take of thrice diftilled vinegar two pounds, Venice turpentine one pound; mix them together into a mafs, and put them into a cucurbit; fit a head and receiver to it, and after you have luted the joints, fet it, when dry, on a fand furnace, to diftil the vinegar from it; don't give it too much heat, left the ftuff fwell up.
After this, put the vinegar into another glafs cucurbit, in which there is a quantity of feed pearl, wrapped in a piece of thin Gilk, but fo as not to touch the vinegar; put a cover or head upon the cucurbit, lute it well, and put it in bal. marix, where you may let it remain a fortnight. The heat of the balnæum will raife the fumes of the vinegar, and they will foften the pearls in the filk, and bring them to the confiftence of a pafte; which being done, take them out, and mould them to what bignefs, form, and hape, you pleafe.
Your mould muft be of fine filver, the infide gilt; you muft alfo refrain from touching the pafte with your fingers, but ufe filver gilt utenfils, with which fill your moulds: when you have moulded them, bore them through with a hog's brifte, or gold wire, and let them dry a little; then thread them again on gold wire, and put them into a glafs; clofe it up, and fet them in the fun to dry; after they are thoroughly dry, put them in a glafs matrafs into a ftream of running water, and leave them there 20 days; by that time they will contract the natural hardnefs and folidity of pearls. Then take them out of the matrafs and hand them in mercurial water*, where they will moiften, fwell, and affume their oriental beauty; after which fhift them into a matrafs, hermetically clofed up, to prevent any water coming to them, and let it down into a well, to continue there about eight days ; then draw the matrafs up, and in opening it, you will find pearls exactly refembling oriental ones.
This method is very excellent, and well worth the trouble, fince by experimenting fo fine a fecret, one will have the fatisfaction of feeing the performance anfwer the direction above expectation.

* Mercurial water is thus prepared. Take plate-tin of Cornwall, calcine it, and let the calx be pure and fine; then with one ounce of the calx, and two ounces of prepared mercury, make an amalgama; walh it with fair water, 'till the water remains infipid and clear; then dry the amalgama thoroughly, put it into a matrafs over the furnace, giving it fuch a heat as is requifite for fublimation. When the matter is well fublimated, take of the matrafs and let it cool. Take out that fublimate, add one ounce of Venice fublimate to it, and grind it together on a marble; put this into another matrafs, clofe it well, and fer it upfide-down in a pail of water, and the whole mafs will diffolve itfelf in a little time into mercurial water: this done, filtre it into a glafs receiver, fet it on a gentle afh fire to coagulate, and it will turn into a chriftalline fubftance : this beat in a glafs mortar, with a glafs pefle, to a fine powder, frain it through a fine fieve, and put it into a matrafs, ftop it clofe up, and place it in bal. mariæ; there let it remain, till it refolves again into water; which is the mercurial water, fit for the abovementioned ufe.

## To form large pearls out of fmall ones, as directed by Korndorffer,

Take of mercurial-water 14 ounces; put two ounces of fulphur folis into a low matrafs, pour the mercurial-water upon it, and let it diffolve and extract. Then take of the whiteft fmall pearls 20 ounces, put them into a proper matrafs, and pour the faid water upon it. The pearls will by degrees diffolve, and at laft turn to a clear calx, much like diffolved filver calx. Pour off the mercurial water; boil the calx well out, and dryit; then put it into a clean crucible by itfelf, and caft it into what form you pleafe. When cold, polifh it in the fame manner as you do gems or cryftals, and you will have your work of the confiftence and beauty of the fineft and cleareft oriental pearl.

To blanch and cleanfe pearls.
Firft foak and cleanfe them in bran-water, then in milk-warm water, and laft of all fteep them in mercurial water; then ftring and hang them in a glafs; clote it well, and fet them in the fun to dry.

The bran-water is made thus: boil two good handfuls of wheaten bran in a quart' of water, 'till all the ftrength of the bran is drawn out, which ufe thus: take a new glazed earthen pan in which put your pearls on a ftring, and pour the third part of the bran-water upon it; when they have foaked, and the water is juft warm, rub your pearls gently with your hands, to clean them the better, and continue this 'till the water is cold; throw off that, and pour on another third part of the bran-water that is boiling ; proceed with this as you did before, and when cold, throw it away, and pour on the remainder of the water, ftill proceeding as before; after this, heat fair water, and pour it on your pearls, to refrefh them, and to wafh away the remains of the bran, by fhifting them, and pouring on frefh warm water : this'do thrice, without handling your pearls; then lay them on a fheet of clean white paper, and dry them in a fhade; after which, dip them into mercurial water, to bring them to perfection.

PEDLAR, a travelling foot-trader. See Hawker.

## REMARKs.

Almoft all the commodities of Europe are diftributed through Spanifh America, by a fort of pedlars, or merchants on foot, who come from Panama to Paita by fea, and in their road from the laft mentioned port, make Piura their firtt ftage to Lima, difpofing of their goods, and leffening their burthens, as they go along. Some take, the Road through Caxamarca, others through Tauxillo, along fhore from Lima: they take their paffage back to Panama by fea, and perhaps carry a little cargo of brandy with them: at Panama they again ftock themfelves with European goods, returning by fea to Paita, where they are put on fhore; there they hire mules, and load them, the Indians going with them, in order to bring them back; and fo thefe traders keep in a continual round, 'till they have got enough to live on.
Their travelling expences are next to nothing; for the Indians are brought under fuch fubjection, that they find lodging for them, and provender for their mules : this every white face may command, being an homage the poor Indians are long accuftomed to pay; and fome think they have an honour done inte the bargain, except, out of generofity, they now and then meet with a finall recompence. In the Britilh and French nations, a pedlar is defpifed, and his employment looked upon as a mean fhift to get a living; but it is otherwife here, where the quick return of money is a fufficient excufe for the manner of getting it; and there are many gentlemen in Old Spain, who, when their circumftances in life are declining, fend their fons to the Indies to retrieve their fortune shis way.

## Remarks on our article Pediar.

In Poland are very few or no manufactures among themfelves: their gentry, who are all called nobility, are infinitely above it, and the commonalty are far below it, the one too proud, the other too flothful. So that there is hardly a fuit of cloaths made in the country; but all is either made abroad, or the materials brought from abroad'; even the taylors are called merchants, for they travel from one nobleman's houfe to another to make their cloaths; and even the ladies buy their jewels of the pedlars, who carry them about.
The towns of Dantzic and Elbing, in Polond, being the only fea ports belonging to the kingdom of Poland, that want of lea coaft, and the exceeding length of the kingdom of Poland fouth, occafions that the remoteft parts of the kingdom are fupplied with their fineft goods, not by the warehoufe keepers and thop keepers vending their goods from hand to hand, and from the ports to the cities, and from the cities to the market towns, and from thofe towns to the fhopkeepers in the villages by wholefale, and thefe again to the inhabitants by retail, as in England; but the whole trade is carried on by the travelling merchants, that is, in Englifh, by pedlars and petty chapmen.
They travel from town to town, and from one gentleman's feat to another: and by thefe the ladies are fupplied with fine linen, laces, ribbands, filks, and with all forts of haberdathery, mercery, and drapery goods; fuch as come to Dantzic from England, Holland, France, and Italy.
The pedlars travel, fome with a horfe, fome without; fome with three, four, or five Horfes, and 'tis ordinary with them, when they come to a nobleman or gentleman's houfe, to have a chamber or two affigned them, by the lord or lady of the houle, and to flay there three or four days, 'till not only the family have fitted themfelves, and are furnifhed with all they want, bur 'till they have fent notice to fuch of the gentry who live near them, who come, the ladies efpecially, in their chairs and chariots, to fee the wares, and pleafe themfelves: all which time the pedlars, who are generally Scotfmen, are entertained freely, and both they and their horfes well taken care of, by command of the perfon whofe houfe it is, and always fully paid for whatever they fell, the Polihh ladies making it a point of honour to pay immediately for what they buy; and as the Poles, both men and women, affect to be
extremely gay in their cloaths, they lay out a great deal of money that way. This makes the trade of Dantzic and Elbing very confiderable, the pedlars always having recourfe thither for their fupply of goods, when they have fold off their ftocks. Thefe pedlars, who go with many horfes, are fome of them men of confiderable wealth, and carry with them goods to a great value; and yet that is the abfolute government of the nobility, and the common people are fo entirely fubjected to them, even for life, as well as fervitude, that the pedlars trade with the utmoft fafety, 'never meeting with the leaft injury from the common people : and if at any time they are apprehenfive of danger, the gentlemen will caufe the country people to guard them from place to place, and forbid them taking any thing of them for it.
The number of thefe pedlars is fo great in Poland, that if we may believe the ftory of Sir John Denham and Mr Killigrew, who were fent from England to take thennumber of them in the reign of king. Charles II. there were then reckoned 53,000 of them ; and thofe gentlemen having the king's commiffion, and the king of Poland's licence to tax them by the poll, brought home ro,000l. fterling, befides the expence of the journey, which muft be very confiderable. There is a diftinct fort of thefe pedlars, who are called goldfmiths; they call themfelves fo, and thefe generally travel with but one horfe ; they carry all forts of fmall goldfinith's wares, as gold rings, feals cut in gold and filver, and fteel, fnuff-boxes, and in a word,-toys of all kinds, as well in filver and gold, as in fteel, iron, and brafs, with all that we call cut-lery-ware, knives, forks, buckles, buttons, \&ec. diamond buckles for the bat or cap, which the Polifh nobility are never without, and value themfelves much upon; but counterfeit jewels too are very much ufed amongft them.
Thefe chapmen or pedlars buy old plate, and exchange it for new : they buy alfo jewels and rings, and every thing of that kind, as occafion prefents; and being pretty cunning in their trade, they generally gain more in proportion by buying than by felling.
PEGU, a kingdom fituate on the eaft fide of the bay of Ben gal, [fee Bengal] in the Eaft-Indies, in Afia, bounded by the kingdom of Ava [fee Ava] on the north; by the mountains, which feparate it from Lacs, on the eaft; by the kingdom of Siam [fee Siam] and the bay of Bengal on the fouth; and by another part of the bay of Bengal on the weft.
Captain Hamilton fays the country is very fruitful in corn, fruits, roots, and excellent pulfe of feveral forts, and produces timber for buildings, elephant's teeth, bees-wax, fticklack, iron, faid to be of fo hard a quality, that it is almoft a natural fteel; tin, oil of earth, wood-oil, the beft rubies in the world, fmall diamonds, fapphires, amethyfts, and other precious ftones. They have abundance of falt-petre, but it is death to export it ; and plenty of lead, which paffes all over Pegu dominions for money. About 20 fail of hips find their account in trade for the limited commodities, but the Armenians have got the monopoly of the rubies, which turns to a good account in their trade. Here is abundance of wild game, both quadrupedes and winged; and in September, and Ofober, wild deer are fo plentiful, that the captain fays he bought one for a goat; but though they are very felly, they are not fat. They have many forts of good finh and fwine's flefh, and plenty of good poultry.
They wear little of our European manufacture, except hats and ribbonds ; fo that the gentry will give extravagant prices for fine beaver hats and rich ribbands, flowered with filver and gold; and be the hats never fo broad, they are ftretched up the crown as far as poffible, but without any fort of cock.
Cotton-cloths from Bengal and Coromandel, with fome Ariped filks, are beft for their market; and filver of any fort is welcome to them. It pays the king $8 \frac{1}{2}$ per cent. cuftom; but in lieu thereof, he indulges the merchants to melt it down, and put what alloy they pleafe in it, and then to pafs it off in payments, as high as they can. Rupee filver, without alloy, will bear 28 per cent. of copper alloy, and keep the Pegu touch, which they call flowered filver; and if it flowers, it paffes current. They make flowered filver thus: when the filver and copper are mixed and meited together, they put it, while liquid into a fhallow mould, and blow on it through a fmall wooden pipe, which makes the part blown upon appear with the figures of flowers or ftars; but if there is too great a mixture of alloy, no figures will appear. The king generally adds 10 per cent. on all filver that comes into his treafury, befides what was put on at firft; and though it be not flowered, it muft go off in all his payments; but from any body elfe, it may be refufed if it is not flowered.
The chief towns are Syram, or Syrian, whofe bar is the only port now open for trade in all Pegu dominions. Some Geographers place it near the mouth of the river Acenam, or Liva; others near the mouth of the river Pegu, and the conflux of thofe two rivers, almoft over againf Martaban. It drives a good trade with Armenians, Portugueze, Moors, Gentaws, and fome Englifh. Their import is feveral forts of Indian goods, as betellas, mulmuls, tanjebs, \&c. European hats, and filver; and the cuffoms here, which are about 82 per cent. amount, with other charges, to about 12 in the bundred. The Englifh from fort St George, traffic pretty much

## PEG

with this country ; and, befides furs and Kins, import from thence rubies, fapphires, and other precious ftones.
As foon as foreign fhips arrive here. the number of people on hoard, with their age and fex, is fent to the king, to acquaint him that fo many of his flaves are arrived to partake of the glory and happinefs of his reign and favour.
PGU city, Capt. Hamilton fays, is about 40 miles to the eaft of it; and that the ditches round it, which are now dry, and bear good corn, fhew that few cities in the world formerly exceeded it in magnitude, but now is laid in duft, not one wentieth part of it being inhabited, and that only by the lower clafs of people.-Moll fays it lies 20 miles up the river of the fame name, which divides it into two towns, the Old and the New. . The latter was the feat of it's kings; the former is fill the refidence of it's merchants and artificers.

## Remarks.

Under thearticles East-India Trade, English EastIndia Company, Dutch East-India Company, French East-India Company, and Ostend EastIndia Company; we have fo ftated the nature of this commerce in it's feveral lights, that a good judgment may be made, upon the whole, in what manner this trade may be beft preferved, and improved to the general advantage of the kingdom; for the making of extraordinary innovations in the commerce of a nation, may poffibly be attended with confequences no lefs prejudicial to a ftate, than innovations in it's fundemental conftitution. The reader, who has candidly attended to what I have already faid in relation to this branch of ou r commerce, and others, will do me the juftice to obferve that I am no monopolift, though I have endeavoured to thew how extremely circumfpect we ought to be before the EaftIndia company is abfolutely annihilated; which, it feems, is a a matter very fanguinely talked of by come people.
Since we have treated of this fubject, under the preceding heads, and others, that may be confulted from the Index, there have appeared fome objections againft the company which well deferve attention, in order to their being duly canvaffed. And as this is the firft article in the Efft-Indies that has given me a natural occafion to touch upon this matter again, I might be judged wanting in impartiality to pals it over in filence, for which I would by no means give the leaft reafon; and, therefore, I hall fubmit to confideration what the gentleman has faid in his own words; for if it hall appear to bear the teft, it cannot be made too public; and, if it will not, a refutation will be expected.

- The charter of the Eaft-India company, fays our author *, obtained at firf for minifterial emoluments, cherifhed and fupported ever fince, probably on little better motives, has furmounted and baffed all oppofition, though many times attempted: nor has this enormous error in trading policy ever yet been canvaffed fo far as to have had one folemn hearing and debate, in that auguft affembly; from whence this injured, this almoft exhaufted, nation (of it's real wealth in fpecie) can only hope for redrefs.
* Some Thoughts on the Prefent State of our trade to India. By a Merchant of London, P. 5, \&. feq.
- To declaim on fuch an interefting fubject, and to pafs fuch fevere reflections, without producing fome probable facts in fupport of them, would be prefuming too far on the candour of the reader; the greateft meafure of which, by making large allowances for inaccuracy of fyle and method, is here needful; nor without it can the author entertain the leaft hope of being attended to.
- The plan, therefore, propofed for the fetting forth this truth, is to draw up a plain account, according to mercantile Rules; and as arithmetical proofs are the moft conclufive of all other incommercial affairs, fo upon thefe, and only thefe, let the equitable decifion of this queftion ftand or fall.
: In the courfe of the evidence you will find a fet of managers buying confiderable quantities of our woollen and other manufactures, biring of private merchants feventeen fail of fine capital fhips, each of five hundred tons burden, and having thirty guns, and one hundred failors; employing thereby great numbers of tradefmen of all forts, and, meeting once or twice a week, do, in their feveral committees, juftly

## P E G

dicchatge their duty to their conftituents; and whofe charakters, in point of integrity, are, and will remain, unimpeached.

- You will alfo find thefe gentlemen following, inadvertently, the blind rotation of public office, gradually working deftruction to their country, by purchafing immenfe quantities of gold and filver bullion, near treble the value of their exports in manufactures: all which together compofe the cargoes of the feveral hips outward-bound to India.
- Thefe fhips are, in this account, admitted and fuppofed to be arrived at the refpective ports and places of their deffination, and to return full freighted, with the commodities of that country, to their moorings in the river of Thames: which is done to evince the fair dealing of the accomptant. who will not take hold of the lofs of a hip or two, to throw an idea of difadvantage on the trade; but then, whatever fuch impartial conduct produces, he hopes will be looked upon as an equitable average, or a true picture of the real circumftances of it, even for any length of time.
- Every one knows, that the commodities returned for this deftructive export of ufeful products, and the yet more neceffary ingredient of national fafety, it's real and intrinfic wealth, bullion, confifts in the following; the cotton manufactures of India, the filks of China, with their tea, chinaware, and fome drugs: whatever other European nations take of us, in the articles, may be reckoned as profitable, becaufe our fhips and men were employed in the importation hither.
- On the other hand, whatever of thefe returns cannot be deemed ufeful materials of manufachures, \&cc. or are confumed merely by ourfelves, colonies included, may undoubtediy be as juftly accounted unprofitable; and, confidering what is fent out for it, to wit, the nerves of war, abfolutely worthy of ftrict enquiry.
The accountant in order to illuftrate what follows, more fully to the candid and unprejudiced reader, thinks it not amifs to lay before him his plan of operation, fhewing from whence he draws his materials to work upon.
- It will be looked upon as an attempt extremely ridiculous, efpecially among accountants, to pretend to form an account of profit and lofs on a branch of trade, itate a national account thereof, and, what is more, to give a chrewd guefs at the identity of a large fuppofed capital ftock, without ever having feen their books, or being in the leaft matter affifted by any of their clerks; the public judgment, however, may be fufpended, when this particular is remarked: the extracts of their books, that is to fay, the feveral entries at the cuftomhoufe, and amount of their cargoes, and declarations for fales, are all printed and publifhed; to collect from whence, though it be, and really has been, a very laborious and arduous talk, yet it is done; and, according to my motto, the motive makes

Labor ipfe voluptas.

- Firft, on the debit fide of the account, he collects his feveral charges from the bills of entry, printed and publifhed at the cuftom-houfe London, which if erroneous, the fault cannot be imputed to him.
- He makes a valuation of the coft of the feveral articies therein enumerated, fuch as woollen goods, wrought iron, brafs, copper, \&c. from the ufual market prices, as near as may be, and the articles of gold and filver are fpecified to a fingle ounce, and the filver caft up under the prefent value near 4 per cent. and it muft be obferved, that nothing can prejudice the juftnefs.of this ballance, but an over-rating of the feveral chgrges on this fide of the queftion.
- So, on the contrary, nothing can prejudice the fame on the credit fide, but the under valuation of the returns made on the voyage here to be ferutinized.
- Secondly, On the credit, this accountant takes his feveral materials of difcharge from the printed declarations of each fhip's cargo, compared with their fales; wherein he admits their whole amount, as put up and fold at the candle, that the truth may not be difputed by the non-arrival of one or more cargoes, due to the credit thereof.
- Thirdly, he is directed in the true prices of the feveral fpecies of sallicoes, prohibited goods, \&c. from the printed accounts publifhed by the maft eminent brokers, who conftantly attend the fales; and for the weighable goods, from the fale books, thrown into an average, of which the public are the beft judges, whether right or not.

Weighable goods, \&c.

-     - . . 92,500 $\quad$ -
$700,000 \mathrm{lb}$. of coffee, at 1 s .3 3 . per lb.
700,000 lb. of coftee, at 1 s. 3d. per li.
All other goods, as cowries, arrangoes, fhell-laque, turmeric, cardamums, \&c. \&c. at
Total value, at price free on board.
Note, The above goods are all bought by the Englifh private merchants, paidfor in ready money beforedelivery, and by them only exported, and difperfed throughout Europe, Africa, and America, thofe to our plantations being included in this calculation alfo: the whole undoubtedly ovet-rated near 100,0001 .

National Account of a Voyage to India.

## $D^{\text {r }}$

- I bave thus fated, continues this gentleman, the feveral accounts: firft, that of a given number of fhips, fully laden, failing a long and hazardous voyage to India, arriving, however, in fafety, difpofing of their cargoes, and returning home the fame tedious pallage, full freighted with the manufactures and worthlefs products of that country; fhips fhattered with frequent forms, their crews one-third dead, many of them fickly, all fatigued, and looking on one another with an'evil, inftead of a friendly, eye ; weary of each other's company in fo confined a fituation, wilhing, as the greateft bleffing, for that delightful profpeet from the matt-head, their native land, and at lenget arriving at the defired port in fafety : their cargoes printed and publifhed, the goods are landed,

Vol. II.

expofed, by fair and juft famples, to the infpection of the feveral buyers, who afterwards meet, according to public notice given, and either by themfelves, or agents, the brokers, purchafe what they have occafion for, in the fair method of a public auction
The whole being finifhed, the goods are paid for before they are delivered to the owners, and thefe allowed a difcount of $6 \frac{1}{2}$ per cent. for fuch prompt payment ; the feveral clerks become then employed in calting up the full amount of thefe fales, according to the grofs prices given at the candle, to which they are more immediately obliged, as the cuftoms are calculated and paid thereon ad valorem.

## PEG

This being compleated and fettled, I mean the duties for

## Nullum tempus aut caufa occurret regi,

it is fuppofed they difcharge the feveral freights agreed on for the hire of thips employed in their fervice, to the refpective owners of them, and all other incidental charges.
A careful and juditious mêfchant would then proceed to examine and form a ballance on the profit or lofs accruing from this adventure or voyage to and from India: this he is well enabled to do, by having his feVeral books of account haid before him g and it would be impoffible for any other, without the fame guides, to have the leaft idea of it : wherefore, in the feveral matters here before us, it is not alledged that they are drawn up with the accuracy which books could furnilh materials for ; but that from there which are, and muft neceflarly be made known in the carrying on this public truft, the accountant has, with the utmolt care, from there rambling papers, extracted an impartial and juft ballance (equitably confidered) of the real ftate of this branch of trade, both in regard to the nation, their flot $k$; and bond creditors; but yet not giving up the claim and right of mercantile accounts, that of errors Being excepted always.
To detect wilful or malicious charges, or unintended errors, he has alfo the particularized articles; and although the account be at length reduced to one debit and one credit, yet each are anatomized in the pages ( 10 to 15) and their truth expered, to be allowed or difallowed by the reader. By this a profit appears of the fum of $65,6551.4 \mathrm{~s}$. 3 d . after paying intereft for themoney borrowed on bonds. Trade, the Hollanders call, a fick bride, often out of order, but never dies; it will, in general, produce fatisfaction, when atteaded by occonomy, and foothed by prudence: on the other hand, our expences being latge, either through neceffity or vanity, do in no wife contribute to the increafe of the profits of tride; here our expences are dividends of 8 per cent. per annum ; thefe muft be paid; proprietors coming open-mouthed muft be fatisfied; indulged for years pait with a plentiful income, they know not how to retrench: ergo, on $3,200,000 \mathrm{l}$. at 8 per cent. for two years, is 16 per cent.

This deficiency muft be either taken from former profits (which, I believe, were as fully employed as thefe) or from thofe which are to come: a happy thought! But put 200 yoke of oxen to draw this load up the hill of gain, it will not avail ; the tarriage is weak, and the road almoft impracticable.
In regard to the account of national gain or lofs, may this be attended to, may this be fcrutinized, the refult amazing, un-thought-of, and unexpecteded! until evinced by this accidental enquiry. However erroneous the others may be, this will fland the teft: no glofs, no, fallacious arguments of occult my fterious trading, imports of diamonds, gold, and what not? by private traders fuppofed effects in India (mines of Potofi!) can be admitted, until confronted with more bullion carried out (manufactures none permitted) few or no diamonds on the company's account, no gold, but many fuppofed debts owing, at large intereft in India, and many more on bonds at home.

## O proceres, cenfore opus eft, an harufpice nobis?

The whole of the debitis formed from the fame materials as the voyage-account; but, on the credit, may be feen the total amount of what is re-exported of thefe Indian commodities to other European nations, the true value of the raw filk, falt-petre, red-wood, and drugs imported; and, though moft confumed at thome, yet are bere called valuable returns, as being materials uled in our manufactures.
The true and undoubted lofs to the nation of it's bullion, to the amount of $660,000 \mathrm{l}$. yearly, being hereby proved to demonftration (a prodigious fum in fpecie I) well may we tremble at every flurry in our paper circulation, fince the bafis, the rock, the ftrongeft foundation of it's credit, is thus fapped, thus undermined, perhaps through inadvertency, yet equally fatal to our welfare and fafety.
Tea, mean dirty drug, eftablimed by luxury, is become a necefliary of life. Ridiculed by the Chinefe, our hardy feamen brave all climates, difficulties, and hazards, to bring them gold and filver, to take in return a few dried herbs and baked earthen wares. Infatuation!
Arguments are vain, tea muft be had; but furely not at this rate. Had this fair eftate the Indies (more valuable than

## PE M

the reft of our trade) never been granted in mortmain to this monaftery of voluptuous fecular priefts, but the private Englifh merchant preforved in the rights of his birth, tobacco, or fome other product of ours, would have been the fole purchafe of tea; weed for weed; not a dollar exported, but for gold in return : which was the trade at firft ; but the Chinefe now hold both for tea. Or, in eafe this crade be laid open, by compoundirg for their charter, the government taking the protection of the traders into rheir own bands, what a fund of wealth, what increafe of revenue! equal to the whole of the prefent: what a new world for trade! The rich, the populous, the luxurious nations of Interior Afia, althiftories tell us their extent from Turkey to Japan; thefe are now Shut up from the Englifh merchant, for the fake of this monopoly, admitted by all to be bad, maintained by unjuftly obliging a people to buy their goods at one houfe, and no where elfe, wherebp the fame tea is fold at Gottentuarg 100 per cent. cheaper than at home; alone is a fufficient profis for the fmugglèrs: nay, it is cuppoled that the revenue does not fuffer a lefs fum yearly by that article than $200,000 \mathrm{l}$.
Supported by inflieting oaths on their wretched agents, has this bane of our peace and fafety reigned a long courfe of yeare, bringing poverty upon us by regular gradations: without fkill, without indiffry, and without wealth; have bhey proceeded in the difcouragement of the former, and diffipation of the latter : nor, in 30 years trading, has one hip been added for the benefit of our navigation; no increafe bux of perjuries.

## Hac fonte derivata clades In patriam populumque fluxit.

But that others may difcover clearer evidence of this pernicious trade, the injury done to our public credit already, and likely ftill to do, by the cartying it on in the manner beforementioned for nolefs than the value of $350,000 \mathrm{l}$. in gold and filver bullfon, has been fhipped for India fince the ift of $\mathrm{J}_{2}$ nuary * laft) and be convinced of the abfolute neceffiry of putting an immediate ftop thereto ; or that, at leaft, it may be limited for a term of three years, and, after that, to be intirely prohibited, and the exportation confined to our manufactures and products only.

* From the if of January to the 25 th of March 1754:

That thefe, under the judicious management of the regularbred merchant, will undoubtedly procure us à conftant and more reafonable fupply, to fay at one half the prefent monopolized price, though more difficult now than at firft, by the tafte the Chinefe have had of our wife policy.
To appeal to the underitanding of the unprejudiced, whether, if the trade be made free and open, according to the juft rights of Englih-born fubjects, our private merchants, by whofe hands alone is the profit now produced to the nation (or rather the lofs mitigated) by Indian commodities re-exported to European countries, could not very fhortly employ from 2 to 300 fine capital hips, take off three millions yearly of woollen, linen, and other manufactures, give real bufinefs thereby to more than 200,000 families, now preying upon each other, doubling the revenue, or more; the fears of leffening which laft, at this neceffitous juncture, are weakly urged, in defence of a manifelt fcourge of providence, almoft evincing, that

## Quos Deus vult perdere, prius dementat:

To thew that the great products and ingenious manufacturers we are bleffed with, the extenfive credit now diffured throughout the whole kingdom, joined by the fkill and induftry of our merchants (confeffedly fuperior to all others) may be made fubfervient to this great and good end : that every other European company, particularly the newly-elected ones, Swedifh, Danifh, and Pruflian, muft (though now fupported chiefly with Englifh fubfrriptions, yearly made) undoubtedly fink by thefe means.'
Upon what has been faid by this gentleman, we fhall make fome remarks hereafter, as occafion may offer.
PEMBROKESHIRE, in Wales, is more of a maritime county than any other there, it being encompaffed with the Irifh fea, except on the eaft, where it joins to Carmarthenthire, and on the north-eaft to Cardiganfhire. It is the extreme weft part of Wales, and lies neareft to Ireland of any of it's counties.
It is 33 miles in length, and 28 in breadth, according to Templeman, who gives it an area of 520 fquare miles. Others compute the area at 420,000 acres ; but make it no more than 26 miles in length, from Cardigan in the north, to St. Gowen's on the fouth; 20 in breadth, from Lhanbeder VelGowen's on the fouth; 20 in breadth, from Lhanbeder
fray in the eaft, to $S t$ David's in the weft, and but 93 in compafs.
The air of this county is better than is common to parts that are fo much expofed to the fea, and the foil is fruifful; it's few mountains, which are chiefly in the north-eaft part, have indifferent good pafture for catcle and theep; bus the parts

## PEN

near the fea abound with rich meadows, and good corn. It's other commodities are goats, fifh, fowl, falcons particularly excetlent, called peregrins, marle, pit-coal, and culm. It affords plenty of wheat, and is well ferved with fea-filh and foreign wines.
Haverfordwest, ftands on the fide of a bill, but is a very neat, well-built, populous, and trading town, having a commodious key for fhips of burthen and a cuftom-houfe.
Pabrore, the county town, ftands in the moft pleafant part of all Wales, at the innermoft and eaftern creek of Milfordhaven.
ST DAvid's, ftands on the moft weftern promontory of all, which extends itfelf confiderably into the Irifh fea, commonly called St, David's Head.
Tensy, on the fouth coaft of this mire, has a good key, which was formerly much frequented by fifhermen ; enjoyed a great trade, and it's inhabitants were wealthy: it's markets, at prefent, are well ftored with corn, fith, and other provifions; the road for thipping is very good. It häs a great fifhery' for herrings in the feafon, and a large colliery, from whence great quantities of coals are exported to Ireland.
PENSYLVANIA, a Britif colony in America. This prowince is bounded on the eaft by Delaware bay and river, and the Atlantic Ocean; on the north and weft by Canada, on the fouth by Maryland. It extends from Cape Hinlopen, in latitude 39. 3o. above 200 miles northwards, but it is very narrow in the fouthern parts, up to the 4oth degree of latitude, being fo pent in on the ealt by Delaware river, and on the weft by the province of Maryland, that in thofe parts it is not much above 15 miles broad, and in fome places lefs Atill; but beyond the latitude it is much broader, though we cannot afcertain how far it ftretches towards Canada.
As to the climate, Penfylvania is, by it's latitude, at a like diftance from the fun with. Naples in Italy, and Montpellier in France; but it muft be acknowleged that the climates on the continent of America differ much from thofe of the fame latitude in Europe: it muft, however, be owned that the air of Penfylvania is fweet and clear : the fall, or autumn, begins about the 20th of October, and lafts 'till the beginning of December, when the winter fets in, which continues 'till March. Frofy weather, and extreme cold feafons, are frequently known here; but as in moft countries where there are fuch feafons, the air is then dry and healthy. From March to June the fpring lafts, but the weather then is more inconflant than in the other feafons. The heats are extraordinary in the fummer months, July, Auguft, and Septémber, but mitigated by cool breezes, which make them very tolerable. The wind is fouth-weft during the fummer, but generally northwefterly fpring, fall, and winter, which blowing from the frofty and fnowy mountains and lakes of Canada, is doubtlefs the main reafon of the exceffive cold here in winter.
The foil of this province is in fome places a yellow or black fand, in others a loamy gravel, iri others a fat mould, like the vales in England, efpecially by inland brooks and rivers, where the lands are moftly three to one richer than thofe that lie by navigable rivers. There is alfo found a black hazel mould on a ftoney bottom. The earth is fruitful, fat, and eafy to be cleared, becaufe the roots of the trees lie almolt on the furface of the ground.
Here are trees of all forts; oak; red, white, and black afh, beech, Spanifh chefnut, cypref; the moft durable of all are poplar, gum wood, hickery, fallafras; and, as for fhrubs, fnake-roor, farfaparilla, falop, fpruce, and cranberries.
Wheat, barley, oats, rye, peafe, beans, water-melons, mufk-melons, apples, pears, cherries, apricots, quinces, carrots, turnips, onions, parfnips, cucumbers, \&c. are here in great plenty, as allo Indian corn, hemp, flax, \&c. It is common for one bufhel of corn fowed here to yield 40, often 50 , and fometimes 60 bufhels. Of living creatures, here are for food and trade, deer, the elk, as big as a fmall ox, rabbets, racoons, beavers, plenty of oxen, cows, and fheep; of the latter it is common for farmers to have 4 or 500 in a flock. They have alfo horfes, fome very good, and handrome enough. Of birds, here are very fine buftards, 40 or 50 pounds weight, pheafants, heath-birds, fwans, geefe, braindes; duck, teal, and fnipe. The fifh here are fturgeon, herrings, eels, finelts, perch, oyfters, crabs; cockles, and muffels. As to the trade of Penfylvania, with refpect to Europe and America, the cale ftands thus: their merchandizes confift of horles, pipe-ftaves, pork, beef, and firh, falted and barrelled up, ikins and furs, all forts of grain, viz. wheat, rye, peafe, oats, barley, buck-wheat, Indian corn, Indian peafe and beans, pot-afhes, wax, \&x. and, in return for thefe, they import from the Caribbee Inands, and other places, rum, fugar, molafles, filver, negroes, falt, and wine; and, from Great-Britain, houfhold goods, and cloathing of all kinds, hard-ware, tools, and toys.
They have alfo fome rice, but no great quantities, and a little tobacco of the worft fort. Their trade with the Indians confifts but in few articles: they receive of the natives chiefly fkins, and furs of their wild beafts, for which they give them cloathing, arms, ammunition, rum, and other fipirits, in return. This, as well as other northern colonies, are faid io have alfo a clandeftine trade with the Spaniards upon the coafts
of Terra Firma, \&sc. furnifbing them with European goods and merchandizes, for which they receive chiefly dollars in retura [fee Spanish America]; and they alfo trade to the bay of Honduras and Campeachy, for logwood [fee the article Logwoon]. But after all, it muft be admitted that Pedfylvania has no faple commodity, nor have the inhabitants yet fet up any capital manufacture of their own for ex portation.
This province is divided into fix counties, viz. Buckingham, Philadelphia; Chefter, Newcafte, Kent, and Suffex.
There were here a few Englifh, Dutch, and Swedes, before Mr Penn fent over the firft adventurers, under bis patent, but they all fubmitted to the governor he placed oyer them Thofe who went over from England were generally Diffenters, and efpecially Quakers, whofe relioion * is eftablifhed by law in this country.

* Among many good things, in relation to the conftitution and good government of this province, Mr Penn effabilhed courts of juttice in every county; with proper officers; and, to prevent law-fuits and contentions among his paffive peo ple, there were three Peace-Makers chofen by every county-court, in the nature of common arbitrators, to heat and determine differences between man and man, In king William's reign, when there were no profecutions in England, this province began to be fettled with people, who came thither to mend their fortunes, and not to enjoy the liberty of conicience, for the toleration gave them that at home Thefe men being of the church of England, Prefbyterians, and Baptifts, would have had a militia, but the Quakers, being the majority, were againit it, their principles not al lowing them the ufe of arms ; but not long after Mt Penn fecond voyage, they readily fell in with an armed force for a fhip of theirs being taken by pirates, they hired men, and fupplied them with ammunition and fire-arms, to recover her. And, in refpedt to the militia, fuch as were of another opinion were allowed to train themfelves, and take fuch military care for their defence as confifted with the peace of the country. However, they have yet had no great occafion for a militia; for it is very remarkable, that his provice, ever fince it's frift ellablithment, never had any war with their neighbours, Chriftians or Indians, bas have always lived in peace and amity with them all; and how they behaved in the late rebellion is recent in every one's memory. Let who will laugh at their religion and polity, we find, from the apparent effects of them, as his grace the late duke of Argyle juflly faid in the houfe of lords, upon a pe-culiar occafion, that they beat all other fects of people for found morals, ceconomy, and haman prudence : and, as I have had the fatisfaction to converfe with many of the more fenfible men among them, I tan fpeak from experience, that they are as little enthufiafts as the freeft thinkers of the age, notwithftanding the whimfies of fome of their green-apron old women ; and perhaps there are old women and fools, as well as knaves, of all fectaries and perfuafions, but fewer, I believe, among thefe people than among any other, on account of their religious principles ; nor do any deferve more protection under a free-contituted government : the reafons of which are obvious to all who know any thing of their fy fem of polity among themfelves.
It has been above obferved, that this province was divided into counties, of which there are fix; three upper, and three lower: the former are Buckingham, Philadelphia, and Chefter, and make the Penfylvania fo called in king Charles's grant; the latter counties of Newcafle, Kent, and Suffex (called Effex in fome maps) are taken out of Nova Belgia, or rather were thus called before the duke of York, afterwards king James II. granted them to Mr Penn.
I. Buckingham county, is the moft northerly of all

Bristol is reckoned the chief town in this county; it fands 20 miles from Pbiladelphia, to the north, on the river Delaware, over-againft Bridlington, in Weft New Jerfey, and confifts of about 70 or 80 houfes: it is noted for it's mills of feveral forts.
II. Philadelphia county; the firf town in it is Frankfort, as big as Briftol beforc-mentioned, and as well built.
Philadelphia, the capital city of this province, is efteemed to be one of the beft laid-out cities in the world ; and were it full of houfes and inhabitants, according to the proprietor's plan, it would be a capital fit for a great empire. It is a large city confidering it's late foundation, moft commodioufly fituated between two navigable rivers, Delaware and Schuylkill, in north latitude 40. 10. and longitude 75. 8. weft from London. Mr Penn defigned the town in the form of an oblong fquare, extending two miles in length, from one river to the other. The leng freets, eight in number and two miles in length, be cut at right angles, others a mile in length, and 16 in number, all ftraight and fpacious. He left proper faces for markets, parades, kels, meeting-houfes, fchools, hofpitals, and other public buildings: and ut increafes every day in edifices of divers kinds, which are carried on according to the firit plan.
The city has two fronts on the water, one on the eaf fide, facing the Schuyikill, and the other on the weft, facing the Delaware, which is near two miles broad here. The eaftern part is the moft populous, on account of the

Schuyikill,

## PEN

## PEN

Schuylkill, which is navigable 100 miles above Falls. We have obferved, that each front of the ftreet was to be two miles from river to river, as it was at firft laid out, but we cannot fuppofe that it is yet finihed in that manner. The ftreet that runs along the Schuylkill is three quarters of a mile in length; the houfes are ftately, the wharfs and warehoufes numerous and convenient.
The city fourifhed fo much at firlt, that there were near 100 houfes great and fmall in it, within lefs than a year's time; and it has made anfwerable progrefs fince, the number of houfes at this time being above 2000, and, generally fpeaking, better edifices than in the cities of England, a few excepted, and in thofe only a few ftreets. The houfes here have large orchards and gardens ; the land on which the city ftands is high and firm, and the conveniency of docks, and fprings, very much contribute to the commerce of this place, where many rich merchants now refide; fome of whom are fo wealthy, that they keep their coaches.
Ships may ride here in fix or feven fathom water, with very good anchorage. The land about it is a dry wholefome level. All owners of 1000 acres and upwards, had their houfes in the two fronts facing the river, and in the High-ftreet, running from the middle of one front to the middle of the other. Every owner of 1000 acres had alfo about an acre in front, and the fmaller purchafers half an acre in the back freets, by which means the leaft had room enough for a houfe, garden, and fmall orchard. High-ftreet is one hundred feet broad; fo is Broad-ftreet, which is in the middle of the city, removing from north to fouth. In the center is a fquare of ten acres for the ftate-houfe, market-houfe, and fchool-houfe. Several houfes on the key are worth four and five thoufand pounds, and fifteen hhips have been on the flocks at a time, and fome hundreds have been built there. The cellars and warehoufes on the key are made towards the river three fories high. Here are two fairs a year, and two markets a week. The city fends two members to the afrembly.
The inhabitants being at firft moftly Quakers, as they ftill continue, it was fome time before there was a church after the manner of England; but as foon as one was built, it was called Chrift Church. It had in a few years a very numerous congregation, and king William ordered an allowance of 50 l . a year to the minifter, which, with voluntary contributions, make a handfome provifion for him. There are above twelve thoufand of the inhabitants that are of this congregation. Here are, befides this, feveral meeting-houfes for the Quakers, who are properly the church as by law eftablifhed, being the original numerous fettlers.
According to the plan, there is in each quaater of the city a fquare of eight acres, intended for the fame ufes as was Moorfields in London, walks and exercifes for the citizens. The great dock is formed by an inlet of the river Delaware, at the fouth corner of the front of the wharfs, and has a bridge over it at the entrance. Several creeks run into the city out of the two rivers; and there is no city in Holland that is more naturally accommodated with fine and commodious canals, than this might be very eafily. The key is beautiful, above 200 feet fquare, to which a fhip of 500 tons may lay her broadfide. And, as thefe advantages have already rendered this one of the beft trading towns in the Britifh empire out of Europe, fo, in all probability, it will continue to increafe in commerce, riches, and buildings, 'till for number and magnificence it will have no equal in America. Here are almoft all forts of traders and mechanics, as well as merchants and planters. Here the affemblies and courts of judicature are held, and the bufinefs of the province is chiefly managed, as in all capital cities.
At a little diftance from Philadelphia, is a pleafant hill, well wooded, on the banks of the Schuylkill, called Fair Mount. Wico, half a mile from the town, is a Swedifh fettlement, where the people of that nation have a meeting for religion. They bave another meeting-houfe at Tenecum
Abington and Dublin are two pretty towns in Philadelphia county. But the moft confiderable, next to the city, is German Town, a corporation of High and Low Dutch: there are between two and three hundred houfes in it ; peachtrees are planted all along before the doors. The town is very pleafant, and well cleared from trees. Within land lies Radnor, finely fituated, and well built, containing about fifty families. In this place is a congregation of church of England men. It was at firlt called Amftel by the Dutch, who began building here, from the name of the river at Amfterdam.
There are feveral creeks in thefe two counties, as Derby creek, \&c. Amerlland lies between that and another namelefs creek, from whence paffing by Redloyer, we come to III. Chester county, fo called, becaufe the people who firft fettled here came from Chefhire. It lies to the fouth of Philadelphia county.
Newton is the firft town in it, confifting of between thirty and forty houfes.
Chester town, the capital of the county, is about 13 miles diftant from Philadelphia towards the fouth-weft, in latitude 40, and longitude 75. 17. weft from London. It con-
tains about an hundred houfes, and here is a very good road for fhipping, the Delaware, on which it ftands, being here three miles over. This place was alfo called Upland, and has a church dedicated to St Paul , with a numerous congregation of church of England people.
There is another town called Chichester, as is alfo the creek on which it ftands, which is navigable. It has above an hundred houfes. The little town Concord has not fo many. The other townhips in this county are fmall, bat the land is well planted. Marcus Hook, four miles from Chefter, is the boundary of the three upper counties, properly called Penfylvania. Chefter county fends fix members to the affembly.
IV. Newcastle county lies to the fouth of it. In thit county below Chichefter, is a great creek, where there is room enough to lay up the whole navy royal of England, there being from four to eight fathom water. Below it is Chrittiana creek, where the Swedes had a town and plantations. They inhabited this and the other fide of Delaware river, called La Nouvelle Swede, or New Sweden, by Robbe the French Geographer. It included part of this province and part of Jerfey. The creek is large, but the village in. confiderable, though the Swedes had a church here not long ago. Between this and the next creek is Newcaftle town, from whence this county takes it's name. It is inhabited by Englifh and Dutch, and is the next place for bignefs and trade to Philadelphia, containing now between five and fix hundred houfes well built. Here live and thrive many merchants and tradermen. The church has a large congregation, moitly Welfh. The Dutch alfo have a church here. The lands hereabout are called the Wellh Track, and there are near forty thoufand acres planted and laid out by and for Welfomen. It is thick of little towns, as Haverford-weft, Merioneth, and others. It is populous, and the inhabitants are very induftrious, by which means this part of the country is beft cleared. They have many large plantations of corn, and abundance of cattle, fo that they are looked upon to be in as thriving a condition as any in the province.
Mountjoy is a manor that belonged to a daughter of Mr Penn, and here the firf lime-ftone was dug, that was ever found in America. This whole county is remarkable for it's excellent gravel, very rare to be met with on the continent of America. Ten miles below Newcaftle is St George, 2 pretty village, New Blackbird creek, and over-gainft it is a little ifland called Rhode Inand, in the Delaware, where there is ten fathom water. This county fends fix members to the aftembly.
V. KENT county lies to the fouth-eaft of Newcafle county. Here are Cranebròok, Dover, Murden, and Mifpetliven creeks and plantations. Dover was formerly called St John's Town, and confifts now of about fifty families. It is looked upon as the capital of the county, which is fettled like Virginia, not in townhips, but fcattered plantations. In this county is a church of England congregation. The land is good, and the county is reprefented by fix member in the affembly.
VI. SUssex county lies to the fouth-eaft of Kent. The chief town is Lewes, on a creek fo called: it is handfome and lorge, ftanding on the beautiful banks of a river, between the town and the fea, wbich makes the harbour. Thefe two Jaft counties lie about Delaware bay, which is there about feven leagues over. Before Lewes is Cape Hinlopen, other wife called Cape William, and twenty miles below that is Cape James, the furthermoft bound of the province of Penfylvania. Suffex county, like Kent, is inhabited by planters, whofe plantations lie fcattering, as fuited beit to their conveniency.

## Remarks on Pensyivania before the laft war.

It is a point out of difpute, that no country in the world is more proper than Penfylvania for producing hemp and flax; and with refpect to thefe, we ought ferioufly to confider, as we have occafionally obferved on other of our colonies, that there is nothing plainer than that hemp and flax are fo ufeful in navigation and trade, that we cannot do without them; the firft for cordage of all forts, the latter for making failcloth, as well as for the linen manufactures carried on in this kingdom. The neceffity we are under for thefe commodities, ought to put us upon all imaginable care how to provide them, that we may not fall under the fame neceffity for them that we did in the year 1703 for pitch and tar, [fee the article Nanal Stores] when the government of Sweden abfolutely refufed to let us have them for our ready money, otherwife than in their ©hipping, from their tar monopoly, at their own price, and only in fuch quantities as they thought fit.
Upon that difappointment, the government, by allowing 2 confiderable encouragement for carrying on the manufadures of pitch and tar, had fufficient quantities from our own plantations, and it is greatly to be wifhed the like encouragement was given for raifing hemp and flax ; and as all forts of naval ftores may be raifed with fo many advantages to this kingdom, it would be unaccountable to leave us dependent, and
at an uncertainty for them. It is very ${ }^{\text {a }}$ well known, that our land is too dear for hemp and flax, and what does grow here (though it is tough and makes ftrong linen) neither dreffes fo kindly, nor whitens fo well as that which grows in hotter climates. In Ruffia, the beft hemp and flax grow in the fouthermoft parts of the empire, where the fummer is hot and the air clear, and yet the flax is not accounted fo good as that which grows in Egypt or Italy. Egypt has always been efteemed for it's linen, and even now 'fupplies Leghorn with large quantities: and the coafts of Syria, Afia Minor, Smyrna, Conflantinople, and other great cities, have a fupply of hemp and flax from thence.
All our colonies (which run twelve or fourteen hundred miles in length in North America, all the way bordering upon the (iea) have very hot fummers; the fouthermoft parts of them lie near the fame latitude with Egypt, and the north part much about the fame with Ancona or Bologna in Italy, where hemp and flax grow; therefore we have the greateft profpect to receive mighty fupplies of hemp and flax from them.
Part of the land in the colonies is very rich, and of fo fmall value, there will be opportunity of breaking up frefh as often as there is occafion to change the ground, which if laid down will recover itfelf again without the charge of manuring, as we do here, to the very great damage of our ploughing lands. Nothing impoverifhes land more than hemp and flax; and though it is manured, that alone will not do fo well, for the and ought to be changed after three or four crops, and generally the fineft and fatteft pieces are converted to that ufe. Thofe great conveniences of having land fo very cheap and fo fine a climate, which we know produces excellent hemp and flax, fo commodioully fituated adong'the fea-coalts, with fuch numbers of large rivers running up the country to the moft inland fettlements, where provifions may be raifed at fo fmall a charge, and where work may be done by the labour of flaves, almoft as cheap in India, gives ground to hope, that we may manufacture linens here cheaper, than any part of Europe can import them upon us, and the colonies be as profitable to us, by railing rough materials to enable us to carry on the linen manufacture, as the Suffex and other downs are, for fupplying wool for that manufacture; the profits of which we have valued ourfelves fo much upon, that we have fet the ref of Europe upon being our competitors therein.
And as the woollen manufacture, efpecially the coarfe part, has fpread itfelf of late into feveral parts of the kingdom, which has exceeded the demand, and caufed great focks to remain on hand, if thofe rough materials' of hemp and flax were prepared in our plantations, the people in North Britain, 8 cc . would foon find the advantage of advancing in that manufacture ; the laborious and coarfe part being performed abroad, the reft would invite, not only the poor and neceffitous, but people of better circumftances to employ their time in it.
If thefe propofitions are fufficiently confidered and heartily put in practice, we may hope, that by providing the aforefaid rough materials, we chall have the delightful profpect of feeing trade foutifh; for as the filk and linen manufactures brought to perfection, are altogether as profitable to thofe nations as the woollen is to us; and as we increafe in our linen manufactures thofe of Silefia, and all the hereditary countries of the houfe of Auftria, whence we take fuch quantities, muft abate of courfe; their people alfo will refort to us, and help to carry them on ; for it has always been obferved, where new manufactures are fet up, the manufacturers will likewife remove. This was the cafe with the Flemings, when queen Elizabeth gave fuch great encouragement to have the woollen manufacture remove thither ; and ours when we bad that inundation of China and India wrought filks, for our weavers went away to Holland, Flanders, France, \&tc. fo that feveral Atreets in Spital-fields were left almoft defolate; but when thefe filks were prohibited, the manufacturers returned again.
It is fuppofed the Ruffians export to England and all other parts, in hemp and flax, above the value of a million a year. If hemp and flax be fo valuable a product for merchandize with them, there feems to be a much greater profpect of it's being fo to ourfelves, by raifing them fin our plantations, becaufe they will not be fubject to any land-carriage, but Chipped immediately from the place of growth, becaufe land is much cheaper in our plantations, than in the fouth parts of Ruffia. The climate being equal with that in Egypt and Italy, is fuppofed to produce hemp and flax preferable to theirs.
We have fhewn, under other atticles which we fhall refer to at the conclufion of this, that in the cafes of fugar and tobacco, every white man employs four at home; that is to fay, finds them work to fupply him with utenfils requifite for his, If fugar and tobacco employ fuch a number of hands at home, certainly every perfon employed in the plantations, in raifing and dreffing hemp and flax, muft by his labour there, return more than twice the advantage that can be produced by fugar and tobacco, for they are manufactured in the plantations : the refining the fugar and cutting the tobacco, with the little quantity that is rolled excepted. Whereas flax and hemp, are materials for employing all idte hands; and
Vol. II.
of confequence the poors rate will foon be abated, and the nation will find in a little time what they fave yearly thereby, will be more than fufficient to encourage the people to purfuc that employment with indefatigable vigour. And if once we come to be employed with hemp and flax by methods here fuggefted, every place will be filled with flax-drelfers, and the overfeers of the poor of every parith where the wool fpinning trade is not carried on, may very eafily come at hemp and llax, which they will find as profitable to them; ${ }_{j}$ as the woollen is to the other; and the more diftant the employment is, the better, for many inconveniences have attended one manufacture interfering with another; befides, there will be an intercourfe of trade created, by one part of the kingdom fupplying the other with their diftinet manufac tures. This will give full employment to the whole kingdom, and an univerfal chearfulnefs to every body: for the poor are never happier, nor their minds eafier, than when they have full employment; and when they are employed, riches are diffured throughout the whole nation.
It is a common opinion, that we have above a million of pecple in the three nations deftitute of work, but if thofe rough materials (fo often mentioned in this work) hould come to be raifed in our plantations, there need not be one idle perfon: now fuppofe one million of people were put upon manufacturing thofe rough materials, and each perfon earned but one penny a day, and allowing but three hundred working days in the year, it would amount to $1,250,000$. A prodigious advantage to the nation, which is fill greatly heightened by confidering, that thefe people would be then employed, at leaft in part, and fo far as they were employed, would be the better fubjects.
That all this might be brought about with lefs trouble than has been given the nation by one Baltic or Mediterranean expedition, and the tenth part of the expence of a campaign in Flanders, is a thing will be acknowledged by all who are capable of judging of this fubject ; and therefore that it ought to be done, is a point that camot be dífputed. We would not milead our readers by the comparifon, into a bad opinion of fuch expeditions or campaigns that have heretofore been made, that is not our bufines or our intention ; the juftice of the compariton turns upon this, that the motives to fueb expeditions and campaigns have been, comparatively feaking, near and at hand; whereas we are lefs acquainted, or at lealt, lefs affected, by the connection between our interefts and thofe of the plantations : though, from what has been faid here, and throughout this work, we think it will plainly appear, that they concern us as much, and as nearly, as any interefts can do without the limits of our own ifland.
That the reader may the more fatisfactorily difcern the neceffity of encouraging our plantations, in the raifing of fuch rough materials as may reciprocally advance the trade of Great Britain, as well as that of the plantations, and keep the latter from interfering with the manufactures of their mother country, we refer him to the following articles, viz. Colonies, Flax, Hemp, Linen, French America, France, Spanish America.

Remarks on this province in another light, before the laft war.

The wife conduct of Mr Penn at the firf eftablifhment of this province, had fo good an effect upon the Indians, that they had him always in the higheft veneration; and they fill retain the fame to his memory, of which the reader will find an exemplary proof in the following fpeech made to Sir William Keith, governor of this country in 1722; only it may not be amifs to obferve, that Onas fignifies in the Indian language a pen; and therefore this is the name the Indians have, given to our proprietor and all his fucceffors, or reprefentatives.
' Brother Onas, you told us how William Penn, that good man did, on the firft fettlement of the province of Penfylvania, make leagues of friendfhip with the Indians, and treated them like brethren; and that, like the fame good man, he left it in charge to all his governors who fhould fucceed him, and to all the people in Penfylvania, that they Chould always keep the covenant and treaties he had made with the five nations, and treat them with love and kindnef. We acknowlege, that his governors and people have always kept the fame honeftly and truly to this day. So we, on our part, always have kept, and for ever fhall keep, peace and frindihip with a good heart, to all the people of Penfylvania. We thankfully receive and approve of all the articles in your propofition to us, and acknowlege them to be good and full of love: we receive and approve of the fame with our whole hearts; becaufe they are not only made one people by the covenant chain, but are alfo people united in one head, one body, and one heart, by the frongeft ties of love and friendihip. Brother Onas, you defire there may be a perpetual friendihip between you and the five nations, and between your children and our children; and that the fame may be kept as long as the mountains and rivers endure. All which we like well, and on our parts defire, that the covenant and union made with a true and clean heatt between you and us, may

5 X
laft as long as the fun and moon fball continue to give light. And we will deliver this in charge to our children, that it may be kept in remembrance with their children and childiens children, to the laft ages: and we defire, that the peace and tranquility that is now eftablifhed between us, may be as clear as the fun thining in it's luftre, without any cloud or darknefs, and that the fame may continue for ever. Brother Onas, we have well confidered all you have fpoken, and like it well, becaufe it is only the renewing former leagues and treaties, made between the government of Penfylvania, and us of the five nations, which we always believed we were obliged to keep. And, as to the accident of one of our friends being killed by fome of your people, which bas happened by misfortune, and againft our will; we fay, that as we are all in peace, we think it hard that the perfon who killed our friend and brother fhould fuffer, and we do in the name of all the five nations forgive it; and that the man who did it may be releafed from prifon, and fet at liberty to go whither be pleafes; and we fhall efteem that as a mark of regard and friendhip for the five nations, and as a farther confirmation of this treaty.'
Upon thefe principles, which are more likely to be obferved in this than in moft of our colonies, the friendhip of the Indians may be preferved as long as they remain a people; which hews how poffible it might have been to have maintained a like correfpondence with them in other places, which would not only have faved a great deal of bloodfhed, and have contributed to the quick growth of the colonies fettled in the countries, inhabited by fuch Indians, but would have been very ufeful in many other refpects: fince it is allowed, where the Indians are treated, as in Penfylvania, with ftrict juftice and humanity, they are as firm allies as any in the world; and in that quality more capable of doing fervice, than if reduced to be either flaves or fubjects; becaufe, living as they do, they preferve their ftrength and activity, and enjoy all the liberty they can defire, and are very willing to fight for thofe under whofe protection they enjoy it.
That our readers may be made thoroughly fenfible of the abfolute and indifpenfable neceffity, under which this nation labours to preferve and maintain an inviolable friend hip with the Indian nations in this part of America; he is defired to turn to the following articles, viz. British America, Canada, Colonies, Florida, Logwood, Louisiana, Map, Medal, Naval Stores, Plantations, North Carolina.

## Philadelphia, May 2, 1754.

As the following extract of a letter, from a gentleman refiding in one of the colonies to the northward, contains a more full and exact account of the armament fent by the French laft fummer from Canada, and of the pernicious confequences that may attend the French fettling on Ohio, than any I have as yet feen publifhed, it may be of ufe to be recorded in this work.

## SIR,

-- ' I am extremnly forry to hear that the governments of Penfyluania, and Maryland, have not viewed the encroachments of the French in their proper light; or, if they have, that they won't exert themfelves at this time of imminent danger. Should the French once gain a fettlement at Ohio, they will then have great advantages over the fouthern colonies,' as muft be obvious to every perfon the leaft acquainted with their fituation. In time of peace between the two crowns, they will continually be fpiriting on the Indians in their alliance, to murder and fcalp the inhabitants of your back counties, in order to prevent the extenfion of your fettlements; and, in time of war, how eafy it will be for a number of troops, collected from their feveral forts, or perhaps fent from Old France for that purpofe, to make a defcent upon fome one or other of the colonies. What then mult be the confequence !-Unarmed, and difunited as you are, will you be able to repel the invaders, or prevent their ravaging and laying wafte your country, or hinder them from committing their too well known barbarities on fuch of your inhabitants as may fall within their power? The evil day may a while be put off, but fooner or later it will furely come unlefs you roufe from the lethargy you feem at prefent in, and make ufe of thofe means to protect yourfelves which the Almighty has put in your power; the moft proper way of doing which is, to obftruct thofe incendiaries, the French and their Indians, from fettling on your frontiers. By a hearty union of the colonies, and proper management, we might, with little affifance from our mother-country, not only difludge the French from Ohio, but from Quebeck itfelf. But to fend three or four hundred men againit five times their number, can anfwer no other end, than to expofe us to the contempt of our Indian allies, who will think themfelves obliged to quit the intereft of thofe that feem unable to protect them. You defire me to acquaint you with what I hear that may be depended on, concerning the defigns of the French, in fending fo large a number of troops from Canada as they did the

Iaft fummer. In answer to which I can inform you, that I have lately feen $\mathrm{Mr}_{\mathrm{r}} \mathrm{B}-\mathrm{r}$, who was at Ofwego at the time their forces paffed by that fort; who fays, he learnt by fundry deferters, and others, that Monfieur Duquifne, the new governor general of Canada, a young gentleman formerly a captain of a man of war, declares he will bave a French fort on each of the waters that empty themfelves into St Lawrence, or Miffiffippi; that he believes the late governors of Canada have been all afleep, but that he will make every officer under him know his duty, and do it.-The four or five detachments were, during the laft fummer, fent from Canada to the Ohio, making in the whole about 2000 , befides $I_{n}-$ dians, under the command of Monfieur Morin (or Morang, as fome call him) whofe knowlege of the Indians recommended him to the new governor for that office. The detachment that accompanied Morin, confifted of about 40 or 50 large battoes and canoes, many of them fuppofed to carry more than 30 men ; they failed within mufquet-lhot of Of. wego, without ever Atriking their colours, and had their trumpets blowing, drums beating, \&c. This was in fight of many of the fix nations, and foreign Indians, who could not fufficiently exprefs their furprize at fuch an armament, and afked whether the Englifh and French were not at peace.Some of thefe troops returned to Canada to quarters during the winter, but great part of them were left, as is fuppofed, at the forts on and near the lakes, to be ready to go down the Ohio early in the fpring: thofe that returned had with them the Penfylvania Indian traders, fo often mentioned to be taken by the French on Ohio; thofe poor wretches were in irons, and lodged a night within a few miles of Ofwego. One of the famous chiefs of the Cahuga nation propoled to fome of the traders to attack the French, and recover the prifoners, but they could not mufter a fufficient party to do this.-Monfieur Morin built two or three forts, but many difputes arifing between him and his officers, together with a fevere fit of the gout, made him defire to quit his command ; for which purpofe, an exprefs was laft September fent to Canada, and I fuppofe the gentleman who writes to governor Dinwiddie was made his fucceffor, who, if he exceeds Morin as much in humanity as he does in politenefs and good fenfe, may be of fervice to thofe who have the misfortune of being prifoners in that country.-I faw Morin and his fon fome years ago in Canada; they have all the vain airs of the French, joined with the favagenefs of the Indians, without the leaft of the politenefs of the former, or native fimplicity and grandeur of the latter. The father commanded when the brave Donahew, captain of one of the Bofton floops, was decoyed afhore and killed ; the fon was one of his party: as trophies of theis vistory, the old man fhewed me a tobacco-pouch, which be, and the young brute, let me know was made of the fkin of poor Donahew's arm: the father had allo Donahew's ring, which the fon acquainted me he cut the finger off to get, as it would not come off eafily. After this, I faw fome of Donahew's men who were prifoners, they not only confirmed the above, but affured me the brutifh father did himfelf cut off reveral pieces of their dead captain's feih, and threw them into the fire, and encouraged the Indians to do the like; and when they were roafted, the cannibal fon, and fundry Indians, tore them with their teetb. - This may ferve as a fpecimen of the neighbours you are like to have.

Your's, \&c.'

## Further Remarks before the laft War.

Thus we find that the French are determined to raife their intereft in America to the higheft pitch of power, upon the ruins of that of Great-Britain.-This is a frefh confirmation, of what we have urged in this work, under the preceeding, and various other heads, to which we have referred, in relation to the meafures taken by France to aggrandize their power in the new world.
Our accounts alfo from Philadelphia, July 2, 1754, fay, - That the French have taken the Block-boufe and Truckhoufe, erected by the Viginians; cut off all our traders but two, and have taken in goods, furs, and fkins, to the amount of 20,0001 . at leaft. A fad ftroke to many here: this from the river Ohio, at a place called Log's-Town, about 190 miles from hence due weft. How they will be diflodged, time will hhew; but the fkin-trade is intirely put a ftop to, by this enterprize of the French. This account you may rely on, as ftrictly matter of fact.'
And alfo our accounts from New.York, of May.16, laff, fay, that © We hear from Auguftine, by the way of South Carolina, that a veffel of war, belonging to his catholic Majefty, was arrived there from the Havannab, the captain of which reported, the feveral armed veffels, with men, ammunition, \&c. were failed from thence for Campeachy, to join a fleet that was fitting out there, with a defign to attack the Mufquetto fhore. The above news may be depended upon, as we have it from good authority.'
Thefe things we have forefeen and forctold, for near thefe three years paft, throughout the courfe of this work; and this any man of plain common fenfe might eafily do, without any pretenfions to the gift of prophecy, if he ald
tended to thofe facts, which we have laid before him in various parts of this performance.

Remarks on Pensylvania, fince the laft War, and Defintive Treaty, of 1763.

On perufal of what we have obferved under this article of Penfylvania, before the laft war, the reader will perceive from thence, as well as the whole tenour and fpirit of this work, interfperfed in variety of proper places throughout, that all that we prejudged relative to the laft war with France and Spain has come to pafs: and as the affembly of this province, upon a difpute with Mr Penn, their prefent governor, on the 24th of lant March, came to twenty-fix iefolutions, the laft whereof is as follows:

- Refolved, that this houfe will adjoin, in order to confult their conftituents, whether an humble addrefs fhould be drawn up, and tranfmitted to his majefty, praying that be would be gracioully pleafed to take the people of this province under his immediate protection and government, by compleating the agreement heretofore made with the firft proprietor for the fate of the government to the crown, or otherwife to his wifdom and goodnefs thall feem meet': and as it is further faid and believed, that now at this time of writing, all public bufinefs is at a ftand, and neither men nor money are raifed for the protection of their frontiers, fill miferably harrafed by the Indians--See our article Indians, Flom rida, Mississippi.
The foregoing being the prefent flate of this province, the following obfervations may not be unacceptable, refpecting what is urged by thofe who are for obtaining a Royal Government in exchange for this of the proprietaries.
'Tis unneceffary for us to enter into the merits of the difputes between the proprietaries and the people: 'tis our bufinefs only to obferve, that in the prefent conjuncture a perfect union and harmony is abfolutely needful as well in this province, as among the whole of our North American Provinces, for the mutual protection of their common trade and fafety againft the Indians; who, we experience, at prefent, give us no lefs uneafinefs here, than the junction of France and Spain in the laft war.
At prefent, Penfylvania is in a wretched fituation. The government that ought to preferve all in order, is itfelf weak, and has fcarce authority enough to keep the common peace. Mobs affemble and kill numbers of innocent people in cold blood, who were under the protection of the government. Proclamations are iffued to bring the rioters to juftice. Thofe proclamations are treated with the utmoft indignation and contempt. Not a magiftrate dares ftir towards difcovering or apprehending the delinquents. They affemble again, and with arms in their hands, approach the capital.-The government truckles, condefcends to cajole them, and drops all profecutions of their crimes; whilft honeft citizens, threatned in their lives and fortunes, fly the province, as having no confidence in the public protection. They are daily threatned with more of thefe tumults; and the government, which in it's diffrefs called aloud on the fober inhabitants to come with arms to it's affiftance, fees thofe who afforded that affiflance daily libelled, and menaced by its partizans for doing fo; whence it has little reafon to expect fuch affiftance on another occafion.
If the charge thought of may have the happy effect fo indifpenfably requifite at this time, the fooner it takes place, the better. It does not appear that a change of government can poffibly hurt the province; and there may many advantages arife from it. It is only a change of governor, that is, inftead of felf-interefted proprietaries, a gracious king! His majefty, who has no views but the good of his people, will thenceforth appoint governors, who, unfhackled with proprietory inftructions, will be at liberty to join with the affembly in enacting wholfome laws. At prefent, when the king requires fupplies of his faithful fubjects, and they are willing and defirous to grant them, the proprietaries intervene and fay, ' unlefs our private intereft on certain particulars are ferved, nothing fhall be done'. This infolent tribunal VEro, has long, too long incumbered all public affairs, and been porductive of many mifchiefs. By the crown taking the government into it's hands, not even the proprietaries can juftly complain of any injury. The being obliged to fulfil a fair contract is no injuftice. The crown will be under no difficulty in compleating the old contract made with their father, as there needs no application to parliament for the neceffary fum, fince it feems half the quittents of the lower counties belong to the king, and the many years arrears in the proprietaries hands, who are the collectors, muft vaftly exceed what they have a right to demand, or any reafon to expect.
If ftability in the government of every province does not take immediate piace, and a perfect harmony and union is not effectually promoted amongft them all; it is not poffible that the good intentions of the Britifh government can ever be anfwered, relative to our North American intereft, purfuant to the Definitive Treaty; the Savages will ruin our
whole commerce, and render the lives and properties of our colonifts ever precarious, and fubject this nation to immenfe expences to keep them in fubjection, provided the feveral colonies do not act powerful in concert for that purpofe: and if they do, they may foon fecure themfelves forever, and rear their commerce and navigation to an amazing hejght, by raifing fuch materials for the manufactures of their mothercountry; fuch as Flax, Hemp, Silk, Potash, Iron, Timber, great variety of other eftimable products that will equally enrich and aggrandize the plantations with thefe kingdoms in general. See our articles Amerića, Florida, Mississipri, Mexico, Perv, Canada, Fisherilis, Norway.
PEOPLE. Under the article Money, we have fhewn; that it is the meafure of commerce, but that the fpring and original thereof, in all nations, is the natural or artificial product of the country; that is to fay, what their land, and what the labour and induftry of the people produce.
There is no man that can reafonably difpute this pofition; and, if granted, it foilows from thence, that to know rightly how the ballance of trade ftands with any nation, a due infpection muft be made into their natural or artificial product; and the courfes of foreign exchange muft likewife be conflantly examined. See the articles Ballance of Trade, and Exchange.
But this natural or artificial product being moft of it in the refult of the people's labour and induftry, we fhall be ftill in the dark, as to all enquiries of this kind, without maturely confidering the numbers of the people.
In there fort of fpeculations, not only the quantity but quality of the inhabitants muft be duly pondered; they mult be divided into their feveral ranks and claffes: it mult be diftinguifhed, who, by arts, labour, or induftry, are increafing; and who, by their expence, poverty, or floth, are decreafing the kingdom's wealth. Thefe fub-divifions are likewife to be made, of what numbers are emiployed in the church, in the wars, in the fleets, mercantile and warlike, in the law, in offices, in merchandize, in hop-keeping and traders, in bandicrafts; and who, both of the higher and lower degree, are perfons living upon their eftates, who are freeholders, farmers, labouring people, fervants, cottagers, alms-people, and vagrants.
Various have been the conjectures, in relation to the number of people in this and other countries; which being a matter of ufe in commercial, as well as other political difquifitions, the following obfervations, which I have lately received from --.-.--, a gentleman of honour in a public character abroad, who is turned for ftudies of this kind, may not be unacceptable, though his fentiments differ from fome others, in regard to the number of people in this kingdom.
' Mr King, fays this honourable gentleman, obferves, that people alone do not make a government rich; for a multitude of beggars or flothful people renders it poor and weak?'
Wealth alone does not make a government rich; for people may be wanted to manage and propoyate a great ftock.
To which may beadded, that people, and wealth, and induftry, will not make a government rich and powerful, unlefs the ruling minifters of fate take pains to give them a proper direction and application, which is extremely difficuls to do, without fome knowlege of the quantity of each of thefe ingredients, and how they are employed.
One of the firl enquiries then of a patriot minifter, will be after the numbers and qualities of thofe from whom the public revenue is drawn. In which (unlefs a law was made for fome regifter of the people, or the method hereafter mentioned was taken) one can only be guided by conjectures and calculations.
From fuch lights as we have at prefent, it may be reafonably fuppofed, that the number of peopie in England was, at the beginning of this century, according to the obfervations of the famous Mr King, 5,500,000. See Davenant's Elfay on Probable Methods, \&c. p. 24.
The ratio of increafe has been found, by a great variety of good obfervations, to be, that roo,000 people augment annually, one year with another, to 100,175 .
The logarithm of the ratio of increafe being multiplied by 50 , and added to the logarithm of $5,500,000$, will produce a number upwards of $5,995,000$, which is near enough to 6 millions to be found any general obfervations upon, but far enough from the ufually fuppofed number of 8 millions: fo that, until it can be thewn us, either that Mr King was wrong, or that the foregoing method of computation, recommended by Mr Kerfeboom, is falfe, we have reafon to reject all conclufions drawn from a principle fo erroneous. See Aanmerkinges, p. 12, notes. Quarto edition. The 6 millions are fuppofed to be divided in the following manner:
In London
In London $\quad-\quad 747,985$
In the market-towns, and others of above 150 houles 951,091 In the countries

Sir William Petty would have us believe the number of people to be 30 times the number of deaths. The writer of this paper believes it to be about 28 in London, but the fafeft of all appears to be the adopting Mr Kerfeboom's opinion, founded upon very many accurate obfervations; and agreeing very nearly with Dr Halley, viz. that the number of children born alive in one year, being multiplied by 35 , will give us the fum of the inhabitants. See Meenigte Des Volks*.

* I do not agree with Mr Kerfeboom in his calculation of the number of people in London, but I ufe his method to thew that Mr Maitland was nearer the truth than he.

Thus London may be eftimated as follows:
The medium of regiftered births for 14 years
Ditto of unregiftered births, fuppofing difienters ? of all kinds, as 13,33 to 86,66

17,639
itto of illegitimates fould be about 65 in 100 ?
but is here rated only at 5 per cent.
Total
2,715
1,917
21,371
Which total, multiplied by 35, produces 747,985 for the number of inbabitants within the bills of mortality.

If thefe premiffes be allowed to be right, it will be very eafy for any comimon arithmetician to form a-new for thefe tiges, from Mr King's fchemes A. B. and C. as reported by Dr Davenant; but the many alterations that have happened fince his time, in the fcheme D. make it a work of fome difficulty: 'till a better can be formed, the following plan for it is propored.

SCHEMED.

If the numbers here fet down thould be thought any way near the truth, this fcheme may be eafily compleated with the incomes and expences, according to Mr King: No. I. hould be 800,000 l. per. ann. No. 2. 46,462 . No. 3. 3,826, 125 . There are feveral variations in this feheme, from Mr King's proportions; the reafons of moft of them will be obvious: No. 12, 13, and 14, as they are of the greateft importance towards judging of the political flate of the nation, fo the moft pains has been taken to make them right.
It has been imagined, by all thofe who have turned their thoughts to thefe matters, that the number of better fort of freeholders is much leffened within thefe few years; if it fhould be thought that I have diminifhed them too much, let the objector take the number of freeholders in any county where be is well acquanted, and compare them, according to the fize of his county, with thofe that hould be in the whole kingdom, and I am perfuaded he will find, erpecially if his county be large, that the proportion here fet down is great
nough; but be muft remember to deduct thofe freeholders, viz. clergy, lawyers, merchants, \&cc. \&c. that arebere included in other articles: thofe that will take this pains muft, I believe, agree ${ }_{2}$ that we have lof within there 50 years, 13,000 of thofe valuable families, the ancient yeomen of this kingdom.
As to the great augmentation of No. 17, thofe who confider the prefent ftate of luxury amongft $u s$, will not wonder at a double proportion of increafe being given to this clafs. Hoc genus ompe, having propagated very faft of late years in England.

- The people being the firft matter of power and wealth, Gays Dr Davenant, by whofe labour and induftry a nation muft be gainers in the ballance of trade, their increafe or decreafe mut be carefully obferved by any government that defignsto thrive; that is, their increafe muft be promoted by good conduat and wholfome laws; and if they have been decrealed by war, or any other accident, the breach is to be made up:as foon as. poffible, for it is a maim in the body politic, affecting allit's parts. Almoft all ceuntries in the world have heen more or lefs populous, as liberty and praperty have been there well or ill fecured. The firft conftitution of Rome was no ill-founded government, a kingly power limited by laws; and the peaple increafed fo faft, that from a fmall beginning, in the reign of their fixth king, they were able to fend out an army of 80,900 men. And, in the time of the commonwealah, in that juvafion which the Gauls made upon Italy, not long before Hannibal came thither, they were grown fo numarous, as that their troops confuted of 700,000 foot, and 70,000 horfe: it is true, their allies were comprehended in this number, but the ordinary people fit to bear arms, being muftered in Rome and Campania, amounted to 250,000 foot, and 23,000 harle.
Nothing, therefore, can more contribute to the rendering England popylous and Atrong, tban to have libenty upon a right foating, and our legal confitution firmly prefermed. A nation may be as well called free under a limaited kioghaip, as in a commonweadeh; and it is to this goad fonm of our government, that we partly owe that doubling of the people, which has probably happened here in the 435 years laft paft, according to Davenant.
And if the ambition of fome, and the mercenary temper of others, fhould bring us at any time to alter our conffitation, and to give up our antient rights, we flall find our number diminih vifibly and faft. For liberty encourages procreation, and not only keeps our inhabitants among us, but invites ftrangers to come and live under the fhelter of our laws.
The Romans, indeed, made ufe of an advantitious help to enlarge the city, which was by incorporating foreign cities and nations into their commonwealth; but this way is not without it's mifchiefs. For the flrangers in Rome, by degrees, had grown fo numerous, and to have fo great a vote in the councils, that the whole government began to totter, and decline from it's old to it's new inhabitants; which Fabius, the cenfor, abferving, he applied a remedy in time, by reducing all the new citizens into four tribes,' that being contracted into fo narrow a fpace, they might not have fo malignant an influence upon the city.
An açt of general naturalization, would likewife probably increafe our numbers very faft, and repair what lofs we may have fuffered in our people by the late war: it is a matter that has been very warmly contended for by many good patriots; but peradventure it carries alfo it's danger with it, which perhaps would have the fers influence by this expedient, namely, if an act of parliament were made, that nq heads of families hereafrer to be naturalized, for the firft generation fhould have votes in any of our elections. But as the cafe frands, it feems againft the nature of right government, that flrangers (who may be fpies, and who may have an intereft oppofite to that of England, and who, at beft, ever join in one link of obfequioufnefs to the minifters) fhould be fuffered to intermeddle in that important bufinefs of fending members to parliament. From their fons, indeed, there is lefs to fear, who by birth and nature may come to have the fame intereft and inclinations as the natives.
And though the expedient of Fabius Maximus, to contract the ftrangers into four tribes, might be reafonable, where the affairs of a whole empire were tranfacted by magittrates chofen in one city, yet the fame policy may not bold good in England; foreigners cannot infuence elections here, by being difperfed about in the feveral counties of the kingdom, where they can never come to have any confiderable Atrength. ,But fome:time or other, they may endanger the government, 'by being fuffered to remain fuch vaft numbers of them here in London, where they inhabit, all together, at leaft 30,000 perfons in two quarters of the town, without intermarrying with the Engliih, or learning our language; by which means, for feveral years to come, they are in a way frill to continue foreigners, and, perhaps, may have a foreign incereft and foreign inclinations. To permit this, cannot be advifeable or $\mathrm{f}_{\mathrm{f}} \mathrm{fe}$; it may, therefore, be proper to limit any new acts of adturalization, with fech reftrictions, as may smake the accelsion of ftrangers not dangerous to the public.

An acceffion of Atrangers, well regulated, may add to our flrength and numbers; but then it muft be compofed of labouring men, artificers, merchants, and other rich men, and not of foreign foldiers, fince fuch fright, and drive away from a nation more people than their troops can well confift of: for if it has been ever feen, that men abound moft where there is moft freedom: (China excepted, whofe climate excels all others, and where the exercife of tyranny is mild and eafy) it mult follow, that people will in time defert thefe countries, whofe beft flower is their liberties, if thefe liberties are thought precarious or in danger. That foreign foldiers are dangerous to liberty, we may produce examples from all countries and all ages.
The danger of admitting foreign and mercenary troops into the nation, is too well underfood to need any animadverfion. Indeed, all armies whatfoever, if they are over large, tend to the difpeopling of a country, of which our neighbour nation is 2 fufficient proof; where, in one of the beft climates in Europe men are wanting to till the ground. For children do not proceed from the intemperate pleafures taken loofly and at random, but from a regular way of living, where the father of the family defires to rear up, and provide for the offfpring he fhall beget.
Securing the liberties of a nation, may be laid down as a fundamental for increaling the numbers of it's people; but there are other polities thereunto conducing, which no wife ftate has ever neglected.
No race of men did multiply fo faft as the Jews, which may be attributed chiefly to the wifdom of Mofes, their law-giver, in contriving to promote the ftate of marriage.
The Romans had the fame care, paying no refpect to a man childlefs by his own fault, and giving great immunities and privileges, both in the city and provinces, to thofe who had fuch and fuch a number of children. Encouragements of the like kind are alfo given in France, to fuch as enrich the Commonwealth by a large iffue.
But we in England have taken another courfe, laying a fine upon the marriage bed, which feems fmall to thofe who only contemplate the pomp and wealth round about them, and in their view; but they who look into all the different ranks of men, are well fatisfied that this duty on marriages and births, is a very grievous burthen upon the poorer fort, whofe numbers compofe the ftrength and wealth of any nation. This tax was introduced by the neceflity of affaits. It is difficult to fay what may be the event of a new thing; but if we are to take meafures from paft wifdom, which exempted prolific families from public duties, we fhould not lay impofitions upon thofe who find it hard enough to maintain themelves. If this tax be fuch a weight upon the poor, as to difcourage marriage, and hinder propagation, which feems the truth, no doubt it ought to be abolifhed; and, at a convenient time, we ought to change it for fome other duty, if there was only this fingle reafon, that it is fo directly oppofite to the polity of all ages and all countries.
In order to have hands to carry on labour and manufactures, which muft make us gainers in the ballance of trade, we ought not to deter, but rather invite men to marry, which is to be done by privileges and exemptions, for fuch a number of children, and by denying certain offices of truft and dignities to all unmaried perfons; and where it is once made a fahion among thofe of the better fort, it will quickly obtain with the lower degree.
Mr King, in his fcheme (for which he has as authentic grounds as perhaps the matter is capable of) lays down, that the annual marriages of England are about 4r,000, which is one marriage out of every 134 perfons: upon which we oblerve, that this is not a due proportion, confidering how few of our adult males (in comparifon with other countries) perifh by war, or any other accident; from whence may be inferred, that our polity is fome way or other defective, or the marriages would bear a nearer proportion with the grofs number of our people; for which defect, if a remedy can be found, there willl be fo much more ftrength added to the kingdom.
From the books of affeffiment on births, marriages, (when this was the cafe) by the neareft view he can make, he divides the $5,500,000$ people inte $2,700,000$ males, and $2,800,000$ females; from whence, (confidering the females exceed the males in number, and confidering that the men marry later than the women, and that many of the males are of necefity abfent in the wars, at fea, and upon other bufinefs) it follows, that a large proportion of the females remain unmarried, though at an adult age, which is a dead lofs to the nation, every birth being as fo much certain treafure; upon which account, fuch laws muft be for the public good, as induce all men to marry, whofe circumitances permit it.
From this divifion of the people, it may be likewife obferved, that the near proportion there is between the males and females (which is faid to hold alfo in other places) is an argument (and the ftrongeft that can be produced) againft polygamy, and the increafe of mankind, which fome think might be from thence expected; for if nature had intended

Vod. II.
to one man a plurality of wives, fhe would have ordered a great many more female births than males, her defignments being always right and wife.
The fecuring the parifh for baftard children, is become fo fmall a punifhment, and fo eafily compounded, that it very much hinders marriage. The Dutch compel men of all ranks, to marry the woman whom they have got with child; and, perhaps, it would tend to the further peopling of England, if the common people here, under fuch a certain degree, were condemned by lome new law to fuffer the fame penalty.
A country that makes provifion to increafe in inhabitants, whofe fituation is good, and whofe people have a genius adapted to trade, will never fail to be gainers in the ballance, provided the labour and induftry of their people be well managed and carefully directed.
The more any man contemplates thefe matters, the more he will come to be of opinion, that England is capable of being rendered one of the ftrongeft nations, and the richeft fpot of ground in Europe.
It is not extent of territory that makes a country powerful, but numbers of men well employed, conveniant ports, a good navy, and foil producing all forts of commodities. The materials for all this we have, and fo improveable, that if we did but fecond the gifts of nature with our own in duftry, we fhould arrive to a pitch of greatnefs that would put us at leaft upon an equal footing with any of our neighbours.
If we had the complement of men, our land can maintain and nourifh; if we had as much trade as our ftock and knowlege in fea affairs is capable of embracing; if we had fuch a naval ftrength, as a trade fo extended would eafily produce; and, if we had thofe ftores and that wealth, which is the certain refult of a large and well governed traffic, what human ftrength could hurt or invade us? On the contrary, fhould we not be in a pofture not only to refift, but to give law to others? See the article Manure.
Our neighbouring Commonwealth has not in territory above eight millions of acres, and, perhaps, not much above two millions, two hundred thoufand people; and yet, what a figure have they made in Europe for thefe laft hundred years? What wars have they maintained? What forces have they refifted? And to what a beight of power are they now come, and all by good order and wife government?
They are liable to frequent invafions; they labour under the inconvenience and danger of bad ports; they confume immenfe fums every year to defend their land againt the fea, all which difficulties they have fubdued by an unwearied induftry.
We are formed by nature againft foreign enemies; our ports are fafe; we fear no irruptions of the fea; our land territory at home, is at leaft 39 millions of acres; we have, in all likelihood, not lefs than fix millions of people; what a nation might we then become, if all thefe advantages were thoroughly improved, and if a right application were made of all this ftrength, and of thefe numbers?
They apprehend the moderate growth of any prince or flate, may, perhaps, fucceed by beginning firft, and by attempting to pull down fuch a dangerous neighbour; but very often their good defigns are difappointed.
In all appearance they proceed more fafely, who under fuch a fear make themfelves ftrong and powerful at home. And this was the courfe which Philip, king of Macedon, the father of Perfeus, took, when he thought to be invaded by the Romans.
In all appearance the beft way for a nation, that apprehends the growing power of any neighbour, is to fortify itfel within; we do not mean by land-armies, which rather debilitate than ftrengthen a country, but by potent natives, by thrift in the public treafure, by multiplying the people, and augmenting their trade, and all the other honeft and ufeful arts of peace.
By fuch an improvement of our native ftrength, agreeable to the laws, and to the temper of a free nation, England without doubt may be brought to fo good a pofture and condition of defending itfelf, as not to apprehend any neighbour, jealous of it's ftrength, or envious of it's greatnefs.
And to this end we open thefe fchemes, that a wife government, under which we live, not having any defigns to become arbitrary, may fee what materials they bave to work upon, and how far our native wealth is able to fecond their good intentions of preferving us a rich and a free people.
Having faid fomething of the number of our inhabitants, we Thall proceed to difcourfe of their different degrees and ranks, and to examine who are a burthen, and who a profit to the public; for by how much every part and member of the Commonwealth can be made ufeful to the whole, by fo much a nation will be more and more a gainer in chis ballance of trade.
In regard to the ranks, degrees, titles, and qualifications of the people before diftinguifhed, it may be obferved:
Firft, that we may thereby detect their error, who, in the calculations they frame, contemplate nothing but the wealth

## PEO

and plenty they fee in rich cities and great towns, and from thence make a judgment of the kingdom's remaining patt ; and from this view conclude, that taxes and payments to the public, do mottly arife from the gentry and better fort; by which meafures they neither contrive their impolition aright, nor are they able to give a true eftimate what it thall produce; but when we have divided the inhabitants of England into their proper claffes, it will appear, that the nobility and gentry are but a fmall part of the whole body of the people. Believing that taxes fall chiefly upon the better fort, they care not what they lay, as thinking they will not be felt; but when they come to be levied, they either fall hort, and fo run the public into an immenfe debt, or they light fo heavily upon the poorer fort, as to occafion infufferable clamours; and they whofe proper bufinefs it was to contrive thefe matters better, have been fo undkilful, that the legiflative power has been more than once compelled, for the people's eate, to give new funds, inftead of others that had been ill projected.
This may be generally faid, that all duties whatfoever, upan the confumption of a large produce, fall with the greateft weight upon the common fort: fo that fuch as think in new duties that they chiefly tax the rich, will find themelves quite miftaken ; for either their fund muft yield little, or it muft arife from the whole body of the people, of which the richer fort are but a fmall proportion.
And though war, and national debts, and engagements, might heretofore very rationally plead for an excife upon our home confumption ; yet, in the time of peace, it is the concern of every man that loves his country, to proceed warily in laying new ones, and to get off thofe which are already laid, as faft as ever he can.
High cuftoms and high excifes both together are incompatible; either of them alone are fcarce to be endured, but to have them co-exift is fuffered in no well governed nation. If materials of foreign growth were at an eafy rate, a high price might be better borne in thinge of our own product ; but to have both dear at once (and by reafon of the duties laid upon them) is ruinous to the inferior rank of men [fee the article Duties]: and this ought to weigh more with us, when we confider, that even of the common people, a fub-divifion is to be made, of which one part fubfifts from their own Ravings, arts, labour, and indufry; and the other part fubfifts, a little from their own labour, but chiefly from the help and charity of the rank that is above them.
For, according to Mr. King's fcheme,
Heads.
The nobility and gentry, with their families and retainers, the perfons in offices, merchants, perfons in the law, the clergy, freeholders, farmers, perfons in fciences and literal arts, hop-keepers. $2,675.520$ and tradefmen, handicrafts-men, naval-officers, with the families and dependants upon all thore, all together, make up the number of
The common feamen, common foldiers, labouring people, and out-fervants, cottagers, paupers and their families, with the vagrants, make up the number of

## In all

5,500,520
So that here feems a majority of the people, whole chief dependance and fubfiftence is from the other part, which majority is much greater, in refpect of the number of families, becaufe 500,000 families contribute to the fupport of 800,500 families.
In contemplation of which, great cafe fhould be taken not to lay new duties upon home-confumptions, unlefs upon the extreameft neceffities of the ftate; for though fuch impofitions cannot be faid to fall direetly upon the lower rank, whofe poverty hinders them from confuming fuch materials, (though there are few excifes to which the meaneft perfon does not pay fomething) yet indirectly, and by uuavoidable confequences, they are rather more affected by high duties upon our home confumption, than the wealthier degree of people ; and fo we fhall find the cafe to be, if we look carcfally into all the diftinet ranks of men enumerated.
Firft, As to the nobility and gentry, they muft of neceffity retrench their families and expences, if exceflive impofitions are Jaid upon all forts of materials for confumption; from whence follows that the degree below them of merchants, hopkeepers, tradefmen, and artizans, muft want employment.
Secondly, As to the manufactures, high excifes in time of peace, are utterly deftructive to that principal part of England's wealth; for if malt, coals, falt, leather, and other things, bear a great price, the wages of fervants, workmen, and artificers, will confequently rife, for the income mult bear fome proportion with the expence; and if fuch as fet the poor to work, find wayes for labour, or manufactures advance upon them, they muft raife in the price of their commodity, or they cannot live; all which wóuld fignify a little, if nothing but our own dealings among one another were
thereby affected; but it has a confequence far more perni cious, in relation to our foreign trade, for it is the exportation of our own product that muft make England rich: to be gainers in the ballance of trade, we muft carry out of our own product, what will purchafe the things of foreign growth that are needful for our own confumption, with fome overplus, either in bullion or goods, to be fold in other countries; which overplus is the profit a nation makes by trade, and it is more or lefe, according to the natural frugality of the people that export ; or, as from the low price of labour and manufacture they can afford the commodity cheap, and at a rate not to be underfold in foreign markets,
The Dutch, whofe labour and manufactures are dear, by reafon of home excife, can, notwithitanding, fell cheap abroad, becaufe this difadvantage they labour under, is ballanced by the parfimonious temper of their people: but in England, where this frugality is hardly to be introduced, if the duties upon our home confumption are fo large as to raife confiderably the price of labour and manufacture, all our commodities for exportation mult by degrees fo advance in the prime value, that they cannot be fold at a rate which will give them vent in foreign markets; and we mult be every where under-fold by our wife neighbours. The confequence of fuch duties in times of peace, will fall mof heavily upon our woollen manufactures, of which moft have more value from the. workmanthip than the materials; and if the price of this workmanhip be inhanced, it will in a fhort courfe of time, put a neceffity upon thofe we deal with, of fetting up manufactures of their own, fuch as they can, or of buying goods of the like kind and ufe, from nations that can afford them cheaper.
And in this point we are to confider, that the bulk of our woollen exports does not confift in draperies made of the fine wool, peculiar to our foil, but it is compofed of coarife broad cloths, fuch as Yorklhire cloths, kerfies, \&cc. which make a great part of our exports, and may be, and are, made of a coarfer wool, which is to be had in other countries; fo that we are not fingly to value ourfelves upon the material, but alfo upon the manufacture, which we fhould make as eafy as we can, by not laying over-heavy burthens upon the manufacture : and our woollen goodstbeing two thirds of our foreign exports, it ought to be the chief object of the public care, if we expect to be gainers in the ballance of trade.
Thirdly, as to the lower rank of all, which we compute at $2,825,000$ heads, a majority of the whole people, their principal fubfiftence is upon the degrees above them; and if thofe are rendered uneafy, thefe muft thare in the calamity; but even of this inferior fort, no fmall proportion contribute largely to excifes, as labourers and out-fervants; which likewife affect the common feamen, who muft thereupon raife their wages, or they will not have wherewithal to keep their families left at bome; and the high wages of feamen is anothey burthen upon our fareign traffic.
As to the cottagers, who are above a fifth part of the whote people, fome duties reach even them, as thofe upon malt, leather, and falt, but not much, becaufe of their flender confumption; but if the gentry, upon whofe woods and gleanings they live, and who employ them in day-labour, and if the manufacturers, for whom they card and fpin, are over-burthened with duties, they cannot afford to give them fo much for their labour and handy-work, nor to yield them thofe other reliefs which are their principal fubfiftence; for want of which, thefe miferable wretches muft periif with cold and hunger.
Thus we fee excifes, either direClly or indirectly, fall upon the whole body of the people; and confequently upon aur trade and manufactures.
Our fludy, therefore, now ought to be how thofe debts may be fpeedily cleared off, for which thefe revenues are the funds, that trade may again move freely, as it did heretofore, without fuch a heavy clog.

Mr King divides the whole body of the people into two principal claffes, viz.

Heads.
Increafing the wealth of the kingdom
2,675,520
Decreafing the wealth of the kingdom

- $2,825,000$

By which he means, that the firft clafs of the people, from land, arts, and induftry, maimain themfelves, and add every year fomething to the nation's general frock; and befides this, out of their fuperfluity, contribute every year fo muck to the maintenance of others.
That of the fecond clafs, fome partly maintain themfelves by labour (as the heads of the cottage families); but that the reft, as moft of the wives and children of thefe, fick and impotent people, idle beggars and vagrants, are nourithed at the coft of others, and are a yearly burthen to the public, confuming annually fo much as would be otherwife added to the nation's general ftock.
The bodies of men are, without doubt, the moft valuable treafure of a country; and, in their fphere, the ordinary people are as ferviceable to the Commonwealth as the rich; f they are employed in honef labour, and ufeful arts : and

## PEO

fuch being more in number, do more contribute to increafe the nation's wealth, than the higher rank.
But a country may be populous, and yet poor (as were the antient Gauls and Scythians) ; fo that numbers, unlefs they are well employed, make the body politic big, but unwieldly, ftrong but unactive, as to any ufes of good government.
Their's is a wrong opinion, who think all mouths profit a country that confume it's product. And it may be more truly affirmed, that he that does not fome way ferve the Commonwealth, either by being employed, or by employing others, is not only an ufelefs, but a hurtful member to it.
As it is charity, and what we indeed owe to human kind, to make provifion for the aged, the lame, the fick, blind, and inpotent : fo it is a juftice we owe to the Commonwealth, not to fuffer fuch as have health, and who might maintain themfelves, to be drones, and live upon the labour of others. The bulk of fuch as are a burthen to the public, confifts in. the cottagers and paupers, beggars in great cities and towns, and vagrants.
Upon a furvey of the Hearth Book, made at Michaelmas, 1685 , it was found, that of the $1,300,000$ houfes in the whole kingdom, thofe of one chimney amounted to $554,63 \mathrm{I}$; but fome of thofe having land about them, let them be computed 500,000 families. But of thefe, a large number may get their own livelihood, and are no charge to the patifh; for which reafon Mr King very judicioully computes his cottagers and paupers, decreafing the wealth of the nation, but at 400,000 families; in which account he includes the poor houfes in cittes, towns, and villages, befides which he reckons 30,000 vagrants, and all thefe together, to make up 1,330,000 heads.
This is a very great proportion of the people to be a burthen upon the other part, and is a weight upon the land-intereft; of which the landed gentlemen mut certainly be very fenfible.
If this valt body of men, inftead of being expenfive, could berendered beneficial to the Commonwealth, it were a work no doubt highly to be promoted by all who love their country.
It feems evident to fuch as have confidered thefe matters, and who have obferved how they are ordered in nations under a good polity, that the number of fuch, who through age or impotency, ftand in real need of RELIEF, is but SMALL, and might be maintained for very bittle; and that the PoOR RATES are fwelled to the extravagant degree we now fee thern at, by two forts of people; one of which, by reafon of our flack adminiftration, is fuffered to remain in floth; the other, through a defeet in our conftitution, continue in wretched poverty, for want of employmen, though willing enough to undertake it.
All this feems capable of a remedy: the laws may be armed againf VOLUNTARY IDLENESS, fo as to prevent it ; and a way may probably be found out to fet thofe to work, who are defirous to fupport themfelves by their OWN LABOUR : and if this could be brought about, it would not only put a ftop to the courfe of that vice, which is the confequence of an idle life, but it would greatly tend to enrich the commonwealth; for, if the induftry of not one half of the people maintains in fome degree the other part; and befides, in times of peace, did add every year near two millions and a half to the general flock of England; to what pitch of wealth and greatnefs might we not be brought, if ons limb were not fotered to draw away the nouribment of the other; and if all the members of the body politic were rendered ufeful to it?
Nature, in her contrivances, thas made every part of a living creapure, either for ornament or ufe; the fame fhould be in a politic inftitution rightly governed.
It may be laid down for an undeniable truth, that whese all WOAK, NO BODY WILL WANT, and to promote this, weuld be a Greater charity, and more meritorious, THAN TO BUILD HOSPITALS, which vety often are but fo many monuments of Ile-gottan Riches, attinded With laterepentance.
'To make as many as poffible of there $1,330,000$ perfons (whereaf not above $33^{\circ}, 000$ are children too young to work) who now live chiefly upon others, get themfelves a large fhare of their maintenance, would be the opening a NEW VEINOF treasure, of some milifons sterling per anNUM ; it would be a prefent eafe to every particular man of fublance, and a lafting benefit to the whole body of the kingdotn: for it would not only nourifh, but INCRBASE THE NUMBER OF THE PEOPLE, of which mmy thoufands perifh every year, by thofe difeafes conttacted under a slotheul poverty.
Our laws relating to the POOR are very numerous, and this matter has employed the care of every age for a long time, though but with little fuccefs, partly through the ill execution, and partly through fome defect in the very laws,
The corruptions of mankind are grown fo great, that, now 2-days, laws are not much obferved which do not in a manner execute themfelves; of this nature are thofe laws which relate to bringing in the prince's revenue, which never fail to be put in execution, becaule the people muit pay, and the prince will be paid; but wherein only one part of the con-
ftitution, the people are immediately concerned, as in laws relating to the poor, the highways, affizes, and other civil ceconomy, and good order in the ftate, thofe are but flenderly regarded.
The public good being, therefore, very often not a motive ftrong enough to engage the magiftrate to perform his duty, law-givers have many times fortified their laws with penalties, wherein private perfons may have a profit, thereby to fir up the people to put the laws in execution.
In countries depraved, nothing proceeds well wherein particular men do not one way or other find their account; and, rather than a public good fhould not go oh at all, withcut doubt it is better to give private men fome intereft to fet is forward.
For which reafon, it may be worth the confideration of fuch as ftudy the profperity and welfare of England, whether this greas engine of maintaining the poor, aind finding THEM WORK AND EMPLOYMENT, may not be put in motion by giving fome body of undertakers a reafonable gain to put the machine upon it's wheels. See the article POOR.
PERSIA is bounded on the north by part of Ruffia, by the Cafpian Sea, and by the country of the Ufbeck and independent Tartars; on the eaft by the Mogul empire, from which a ridge of mountains and the river Indus divide it ; on the outh it bas the Arabian Sea, which is part of the ocean, and the Perfian gulph; and on the weft it has Georgia and Aran, or ancient Armenia, from which the rivers Kar and Aros part it, and alfo the rivers Tigtis and Euphrates, which feparate it from the Turkifh empire in Afia. It's greateft extent, from fouth to north, is about 19 degrees, from 25. 40. to 44. 40. that is to fay, 1140 Englifh miles; and it's greateft extent, from calt to weft, is about 1280 miles, though in many parts it is much narrower, efpecially towards the north, where, on the weft, it contains but a fmall track of land between Turkey and the Cafpian Sea, and, on the eaft, it is alfo pent in between the fame fea and the country of the Tartars. It is feated under the fourth; fifth, and fixth climates; fo that the longeft day, in the north part, is 15 hours and fome minutes, and in the fouth part 13 hours and 45 minutes: and, therefore, the temperature of the air is various, according to the different provirices.
Generally fpeaking, the foil in Perfia cannot be much praifed: for though fome parts be fruitful, and produce excellent fruits, yet other parts are peffectly barren, being mountainous and fandy; and, as there are here but few rivers, they have only rain, and the diffolved frow, to water the land, which falling from the mountains in fmall brooks and rivulets, render the vallies fertile.
Some travellers tell us, that their corn ripens expeditioully, and that, in forme parts, they have three-fold crops in a year.: They have almoft all kinds of fruits that are in France, but fairer and better, and, by reafon of the drynefs of the air, they keep a whole year. They have hin'e or ten forts of very good grapes; but they have not the mulcadine, fays Mr Thevenor. Their wines are white, and made of grapes which they call kifmich: they make alfo wine with other forts of grapes, but it is neither fo good, nor keeps fo well. They have alfo fome red wine, but little, and to make it they only put fome black grapes into white wine, to give it a colour: for, if it were made all of black grapes, it would not keep. We muft except the wine of Shiras, which is red, and very good, and fomachical, but is only brought in bottles, and in little quantity.
They have few trees but what grow in their gardens, and of thefe the palm-tree is the moft carefully cultivated; when it is young, and before it bears fruit, they dig at the foot eight or ten fathom deep in the earth, more or lefs, until they have found water; they only dig on one fide, and then fill up the hole with pigeon's dung, whereof they have always great provifion for that purpofe, as well as for manaring lands, and to make bot-beds for raifing melons.
Mr Thevenot fays, he was told by the people of the country, that, if they did not take that courfe with the palm-trees, they would not bear good fruit. But there is a very curious thing befides to be obferved in the cultivating of this tree, which. is, that every yearf; when the paim-tiees are in bloffom, they take the bloffoms of the miale palm.tree, and put two or three bunches of them into the matrix of each female palm-tree, when they begin to blow, otherwife they would produce dates without any pulp, and only winh ifkin and fone. The matrix is that bud which contains the flowers, from which, in procefs of time, the dates fpring; the time of making that impregnation is about the end of November; not but that the male palm-trees alfo bear fruit, but it is good for nothing, and therefore they take all their bleffoms to impregnate the female with. As to dates, it is worth oblerving, that the ufe of them is very dengerous during the heats in hot countries, becaufe they make the whole body break out in blotches and boils, and fpoil the fight.
Perfia produces alfo-every fort of carrots, beet-roots, parfnips, horfe-radith, radifhes, turnips, potatoes, mufhrooms, cauliflowers of an extraordinary fize, alparagus, and moft forts of our fmall fallad herbs, with cabbage, lettuce, and Roman lettuce with a long leaf, which is fweet, and very pleafant to
the tafte. They have alfo fmall red and white beans, peafe, white and grey, fmall black beans for horfes, and green peafe of the growth of Europe.
Perfia is alfo productive of all neceffaries of life, and abounds particularly with poultry and game. They have plenty of fnipes and woodcocks, many forts of wild ducks, teals, cranes, wood-pidgeons, turtles, larks, thruhhes, and partridges with red heads: however every fort of deer is here fcarce enough; but cattle, efpecially oxen, abound.
The Perfian bread is generally very thin, fays Sir John Chardin, and there are feveral forts of it; it is generally white and good, and alfo cheap enough, according to Mr Le Bruyn, who tells us, that they generally give but eight or ten pence for twelve pounds of bread.
A great many Perfians ufe opium ; but it is a drug that fo enflaves thofe who are addicted to it, that if a man has once made it cuftomary to himfelf, and fould afterwards forbear to take it, no lefs than his life would be in danger : if he fhould go but ro leagues out of town, and forget to take his opium with him, and find none in the place he comes to, though he fhould immediately return back again, and make all poffible hafte, yet he would not get to the town foon enough to fafe his life, fays Mr Thevenot.
The horfes in Perfia are the fineft in all the Eaf: they are higher than the Englifh faddle-horfes, Atraight before, a little head, and legs that are wonderfully thin and fine, exactly proportioned, mighty gentle, good travellers, and very light and fprightly: they are gentle and manageable, eafy to feed, and do good fervice 'till they are 18 or 20 years old.
Horfes are very dear in Perfia; the fine ones are valued from 90 to 450 pound fterling : the great exportation of them into Turkey and the Indies is what makes them fo dear, though they cannot carry any out of the kingdom without a fpecial permiffion from the king.
The beft and moft common way of riding there, after the horfe, is the mule' ; they have very good ones in Perfia, that pace well, never fall, and are feldom tired; the higheft price of a mule is about 45 pounds. The other beafts of ufe, after thefe, are afles, of which they have two kinds in Perfia, namely, the affes of the country, which are like ours, fow and heavy; thefe they employ for nothing but to bear burthens; but they have allo a breed of Arabian affes, that are mighty fine beafts, and the beft affes in the world; they have fmooth thining hair, they carry their heads lofty, their feet are light, and they move them gracefully: thefe are kept for riding, and their mafters love them for their lightnefs and eafy going: fome of them are valued at 20 pounds.
The camel is a beaft much prized by the eaftern people, of which there are two forts, the northern and fouthern, as the Perfians call them. The latter, which travel from the Perfian gulph to Ifpahan, and no further, are much fmaller than the other, and carsy but 700 weight, the other 1300 weight; yet they bring their mafters as much profit, becaufe they coft little or nothing to keep: they lead them without halter or reins, grazing on the road as they go along, notwithftanding their load. They thed their hair fo clean in the fpring, that they look like fcalded pigs, and then they pitch them all over, to keep the flies from ftinging them. The camel'shair is the moft profitable fleece of all the tame beafts; they make very fine ftuffs of it; and in Europe they make hats of ir, with a little beaver mixed with it. They take notice when the camel is in love, that they may increafe his load, otherwife he would be ungovernable.
As Perfia is very mountainous, it is full of metals and minerals, which they have begun to draw out in the laft century much more than in the preceding ages. Sir John Chardin afferts, that their diligence was owing to the great Scha Abas, and that it was the vaft quantity of mineral waters, which are here and there to be met with in all parts of the kingdom, that induced him to caufe the working of the mines to be profecuted with vigour.
The metals moft ufually to be met with in Perfia are iron, fteel, brafs, and lead. They have not as yet found any gold or filver there, though they are well affured there muft; be fome in the mines, it being impoffible that fo many mountains, which produce all forts of metals, and fulphur and falt-perre, fhould not likewife produce thofe the more precious metals, Cays Sir John; but, adds be, the Perfians are too flothful to make any difcoveries. Minerals abound through all Perfia: fulphur and falt-petre are extracted out of the mountain of Damavend, which feparates Tabriftan from Irax.
With regard to the mechanic arts and trades of the Perfians, Sir John Chardin gives us the following account: firft he oblerves, that the eaftern people are naturally foft and lazy: they work for and only delire neceffary things. All thofe beautiful pieces of painting, carving, curning, and ro many others, whofe beauty confifts in an exact and plain imitation of nature, are not valued among thofe Afiatics: they think that becaufe thofe pieces are of no ufe for the occafions of the body, they do not therefore deferve our notice. In a word, they make no account of the working of good pieces, they take only notice of the matter, which is the reafon that their arts
are fo little improved: for, as to the reft, they are men of good parts, have a penetraring wit, are patient, and would make very fkilful workmen, were they paid liberally.
He obferves, likewife, that they are not defirous of new inventions and difcoveries; they think they enjoy all the neceffaries and conveniencies of life, and reft contented, chufing rather to buy goods from ftrangers, than to learn the art of making them. It is well known how much the Turks and Perfians lay out in watch-work, yet they do not fet about to learn that trade, which they fee fo profitable; nor papermaking, though abfolutely neceffary; nor many other fuchlike trades.
Neither is there in Perfia one fingle native that knows well how to mend a watch. They have defired a hundred times to have printing-houfes; they acknowlege their ufefulnefs, and neceffity, and yet no body undertakes to fet one up.
Sir John's next obfervation is, that the hot climates enervate the mind as well as the body, and lay the quicknels of the fancy neceffary for the invention and improvement of arts. In thofe climates, men are not capable of night-watchings, and of a clofe application, which brings forth the valuable works of the liberal and of the mechanic arts. It is for the fame reafon, alfo, that the knowlege of the Afiatics is fo reftrained, that it confifts only in learning and repeating what is contained in the books of the Ancients, and their induftry lies fallow and uncultivated.
Our traveller obferves further, concerning the method of the eaftern artificers, that they need but few tools about their works. It is certainly an incredible thing in our country to hear how eafily and conveniently thofe workmen fet themfelves up, and work at their trade. Moit of them have neither fhop nor thop-bench; they go and work whereever they are fent for; they fet on the bare ground, or on an old carpet, in the corner of a room, and in a moment you fes the board up, and the workmen at work, fitting on his breech, holding his work with his feet, and working with him hands.
The gold and filverfmiths, as well as the reft, go likewife and work at people's houfes. The reafon why the Perfians have their work done at home, is becaufe they will not trult the workmen, and will fee whether things be done according to their mind.
As to the polity of the Perfian tradefmen, Sir John informs us, that the trades have every one a head to the company, elected out of their body, who is approved by the king; and that is all their government: yet, ftrictly fpeaking, they do not form a regular body, for they never affemble together. They have fome few cuftoms only, which the head of the trade caufes to be obferved; as for inflance, that there' be always a due diffance between the fhops and tradefmen of the fame trade, except in the places which are particularly defigned for one fort of work: whoever is about to fet up a fhop in any trade, goes to the head of the trade, gives his name and place of abode, to be fet down in the regitter, and pays fome imall fine for it.
The head never inquires of what country the tradefman is, nor who was his mafter, nor whether he underftands bis trade. The trades have likewife no reffrictions to hinder one from incroaching upon another: a tinker makes filver bafons, if they are befpoke; every one undertakes what he pleafes, and they never fue one another upon that account. There is, likewife, no binding of apprentices among them, and they learn their trades for nothing ; far from paying any money, the boys that are put out apprentices with a mafter have wages the very firft day they go to him: the parents make an agreemeut between the mafter and the apprentice, for fo much per-day the firft year, a half- penny or a penny a day, according to the age of the apprentice, and the hardflip of the trade; and the wages increafe now and then, according to the apprentice's improvement; but this is ftill without any mutual confinement with refpect to time, the mafter having always the liberty to turn away his apprentice, and the apprentice to leave his mafter.
There it is, indeed, that knowlege muft be ftolen; for the mafter thinking on the profit he may reap by his apprentice, more than on teaching him his trade, does not trouble himelf with him in that refpeet, but employs him only in thofe things that relate to his advantage. Moft trades are bound to the king's average, that is, to do the king's work when they are ordered; and the trades which are not employed in that work, as the fhoe-makers, the cap-makers, the drawer makers, pay a tax to the place called Cargh Padeha, i. e. the King's Expence.
The Perfians have but indifferent carpenters ; the reafon of it is, becaufe of the little timber there is in Perfia, and the little wood they commonly ufe in building. It is not fo with the joiners, they are very fkilful and ingenious in come pofing all forts of inlaid and mofaic work, and they make noble cielings in that kind: they fit them all on the ground, and, when they are done, they raife them up over the top of the building, on the columns that are to bear them up. The joiners fit on the ground at their work; their planes are not like ours, for they thruft the fhavings out of the fides, which feems to be a more expeditious way. Their ordinary
wood
wood is a white wood, very foft, and without knots, and therefore very eafily to be wrought. They bave excellent wood, that comes from Hircania (now Tabriftan) in long boards, like the Norway deal-boards,
Embroidery is one of the mechanic arts which the Perfians are beft verfed in; they do all forts of embroidery very well, efpecially the gold and filver, either in cloth, filk, or leather: they exceed us in that art, and the Turks, likewife, whofe ftitching and embroidery leather we fo much admire. Their leather-feams, and thofe of horle-trappings among the reft, are fo fmooth and fo neat, that you would take them for embroidery. The gold and filver thread they ufe is fo well $t$ wifted, that one would take it for wire when it is wrought, the filk not appearing in the leaft.
The enamel ware, or China ware, as they call it, is likewife one of the moft curious manufactures which they make all over Perfia. The earth of which that ware is made, is pure enamel, both within and without, like the China ware. The grain of it is as fine and tranfparent, as that is, whereby it happens, that one is often deceived in that earthen ware, and cannot diftinguifh it from China ware. Nay, you meet fometimes with Perfian ware, that exceeds the China ware, fo beautiful and lively is the varnifh of it; but this muft be underftood of the new China ware, and not of the old. The fkilful workmen in enamel ware, afcribe to the water the glofs of the colour, and fay, that there are fome waters that diffolve the colours and make them fpread, whereas there are others that contract and fix them.
The pieces which the Perfians make beft, are the ename tiles painted and cut out in imitation of mofaic work. Indeed nothing can be feen livelier and brighter in that kind, or drawn finer, or more regular.
This Perfian earthen ware is fire proof, fo that they not only boil water in it without breaking, but they even make pillowpots thereof; it is hard enough alfo to make mortars to grind colours, and other materials in.
The matter of that fine enamel is glafs, and little river pebbles pounded very fmall, together with a little mould mixed with them. There are fome tradefmen in Perfia, whofe employment is to mend earthen ware and glafs; they join the pieces together, and few them with very fmall iron wire, and ub the feam over with a kind of Chalk or fmall lime. A difh fo mended holds water as before
The gold wire-drawers and thread-twiners are very dextrous workmen: they draw an ingot, weighing a mufcal or drachm, nine hundred guezes or Perfian ells long, each gueze belng thirty-five inches long. Their thread is the beft and fmootheft hat can be imagined. All the art they ule to give it that lively and lafting colour it has, is to gild the wire very fine and very thick.
The next trade in which the Perfians excel, is that of tanning hides, and efpecially of working thagreen, and all forts of Turkey leather: abundance of thefe are made in Perfia, and exported to the Indies, to Turkey, and to the other neighbouring kingdoms. Shagreen is made of an afs's rump, and of a feed called the feed of caßbin: it is black, hard, and bigger than the muftard-feed, which they ufe for want of the carbin feed. The tanners drefs coarfe hides with lime; they ufe no bark, but chiefly fatt and gall inftead of it, and that is enough in their country, the air being hot and dry.
The turner's trade is alfo one of the mechanic arts, which the Perfians underftand very well. They have no frame for turning as we have; their way confifts only in a treddle, to which they faften whatever they intend to turn; a thong that goes twice round the treddle, and which a boy holds with both his hands, and pulling now one end, then the other, turns the piece about. But when they have but fmall pieces to turn, the workman needs no help, for with one hand he moves the axis with a bow, and with the other hand he holds the piece of wood. They ufe no wimbles as we do, but they ufe gimblets of feveral fizes, which are inftead of them, and which they turn with the fame inftrument as they do wood: it is a piece of iron flat and Charp at the end, fhaped like a rib, that it may cut the better, hafted in a round handle filled with lead, to make it weighty, about which they put a ftrap that goes quite round it; they hold faft the gimblet with the left-hand on the piece of wood they intend to bore, and turn it with the right hand; fuch is their mechanic way of turning aud boring.
They lay on lacquer very neatly, the violent motion of the turning inftrument melting it without the help of fire; they foread it with a palm-tree ftick, becaufe that wood is porous; and then with a piece of coarfe cloth and a little oil, they give to their work a wonlerful luftre, which never goes off; that lacquer, likewife, is never fubject to fcaling.
They turn metals as well as wood, but they are very far from attaining in that refpect, to the ikill of our workmen; they are likewife unfkilfut in the turning of an oval; it is a figure, the working of which they are utterly unacquainted with.
The armourers make very good weapons, efpecially bows and fwords. The Perlian bows are the molt valued of all thofe in the eaft. The matter whereof they are made is wood and horn laid over one another, and covered with finews, and over

Vol. II
that with the bark of a tree very flick and fmooth; they paint them afterwards, and varnifh them fo admirably well, that one may fee one's face in thofe bows, and the colour of them is as bright as poffible: The bow-ftrings are of twifted filk, the bignefs of a large quill. The quivers are made of leather embroidered with gold and filk. Their fcymitars or abres, are very well damafked, and excced all that the Europeans can do; which is, becaufe our feel is not fo full of veins as the indian fteel, which they ufe moft commonly, They forge their blades cold, and before they dip them, they rub them with tallow, ofl, or butter, to hinder them from breaking. Then they temper them with vinegar and copperas, which being of a corroding nature, thew thofe ftreaks or veins, which they call damafk-works. This is likewife what they call damafk fteel, becaufe the town of Damafcus was the moft celebrated place for the manufacture of thofe curious fcymitar-blades.
The Perfians make alfo very well the barrels of fire-arms, and damafk them as they do the blades; but they make them very heavy, and cannot avoid it; they bore and fcower them with a wheel as we do, and forge and bore them fo even that they fcarce ever burf. They make them alike ftrong and thick all along, faying that the mouth of the gun being weak the report thakes it, and communicates the wavering motion to the bullet; which is the reafon that if their guns be thicker, they therefore carry the fhot farther and ftraiter. They underftand very well how to make locks or fprings; thofe they put to their fire-arms, being very unlike to ours.
The workmen in iron and fteel are very well verfed in their trade; they hammer both iron and fteel cold, and fucceed very well in it with refpect to feveral forts of tools and inftruments: for inftance, country ovens, which are fhaped like two femi-cones, or femi-fpheres, cut through the top, and faftened together with iron hooks. The diameter of them is two feet and a half, and the height from three to four feet. There ftick out in the infide of thefe cones large pins about four inches long, and as big, with flat heads, and as broad as half a crown. When they have occafion to warm thofe ovens, they overcaft the infide and outfide of them with clay, which ficks to the nail's head, and makes, as it were, a wall of it, to which they ftick the bread. The iron and fteel tools they make beft alfo, are, among others, faws, which are made of fteel, as fmooth and as bright as a looking-glafs; razors which are but half as big as the handles, yet are as broad at the end, and have very well; fciffars which they make hollow in the infide, like gutters, faying that being fo flhaped, the edges of the two blades join clofer and cut better. Almoft all their fteel looking-glaffes are convex, fome few are concave like the burning-glafles. The air being very dry in Perfia, the brightnefs of the looking-glaffes does not grow dull, and they never ruft. The eaftern people ufe likewife glafs looking-glaffes, and even abundance of them, though not near fo many as metal ones, and that they do upon two accounts; the firft is, becaufe thofe metal looking-glaffes are more lafting, and do not break with falling ; the fecond reafon is, when the glafs looking-glaffes are once unfilvered, they become ufelefs, the method of filvering glafs, being unknown in all the eaftern parts; and the quickfiliver that is on the back of the looking-glaffes coming off eafier there than in Europe, by reafon of the drynefs of the air. They polifh their metal glafles with emeril, pounded to powder as fine as duft, they having little or no Venetian tripoly.
The art of dyeing feems to have been more improved in Perfia than in Earope. Their colours are nuch more folid and bright, and do not fade fo foon; but the honour of it is not fo much to be alcribed to their art, as to their air and climate; which being dry and clear, caufes the livelinefs of the colours; as alfo to the itrength of the dyeing ingredients, which growng moft of them in the country, are ufed when they are green and full of fap. Their dyeing and painting colours are the bole or red earth, the rounat or opponax, which are two common ingredients in Perfia; the Brazil wood, which is imported among them from Europe; the Japan wood, and the Indigo, which they fetch from the Indies. They ufe, moreover, in dyeing, feveral herbs and fimples, of their own growth, and gums, and bark of trees, and the inds of fruits, as of wallouts and pomegranates, and the juice of lemon. The lapis lazuli, which they call lagfverd, is got in their neighbourhood, in the country of the Uibecks, but Perfia is the general florehoufe for it.
There are glafs-boules all over Perfia, but they do not well underftand the art of making glais; moft of theirs is full of laws and bladders, and is greyifh: upon the account, doubtlefs, fays Sir John Chardin, that their fire lafts but three or four days, and that their deremne, as they call it, which is a fort of broom that they ufe to make it, does not bear heat fo well as our fewel.
Paper-making is performed very rudely in Perfia, becaule they ufe nothing but callico, either dyed or painted, therefore their paper is brownifh, foul, ragged, and over limber. They ufe a great deal of European paper, after they have prepared it, but they fecth fome from Little Tartary, which they prefer before it. They prepare their paper with a little foap, which they rub over it, then they fmooth it with a deek-

Itone,

## P E R

ftone, that their ink may sun more freely. Thefe are the chief mechanic arts and trades practifed in Perfia.
We come now to give an account of their manufactures. They have very good manufactures in cotton, in goats and camels hair, in yarn, and efpecially in filk, that being a plentiful and common commodity in Peria. The natives have addicted themfelves particularly to the well working of it; and it is the thing they are beft fkilled in, and in which they have the moft confiderable manufactures.
They keep their raw and unwrought filk in damp places, which they water fometimes, tocontinue the weight of them, becaufe they fell it by the weight, and for the fame reafon, they keep that which is wound up in leathern bags. We fhall pals by feveral forts of ftuffs of all filk, fuch as taffeties, tabbies, fattins, \&c. and allo ftuffs mixed with filk and cotton thread, or with camel's or goat's hair, which are made all over Perfia: we fhall only fpeak of their brocade.
There is the fingle brocade, whereof there are a hundred forts; and the double brocade, which is called douroye, i. e. with two faces, becaule it hath no wrong fide, and the machmely zerbafe, or gold velvet. They make gold brocades which coft fifty tomans the greze or ell, which being two feet and half a quarter long, French meafure, comes to about thirty crowns the inch, or eleven hundred crowns the ell. No part of the world affords fo dear a filk. They employ fix men tagether about the loom to make it, who ufe about thirty fhuttles to weave it. Notwithftanding the extraordinary rate of that precious brocade, the workmen employed in it do not earn above fifteen or fixteen pence a day, for they can make but the thicknefs of a half-crown piece of it. Thofe dear brocades are bought for curtains, door-hang. ings, and cuftions, which are the moft common furniture of a houfe.
The gold velvet, which is wrought in Perfia, is very charming, efpecially the curled velvet: all thofe rich ftuffs have fuch admirable property, that they laft or ever, as it were, and the gold and filver does not wear off whillt the work lafts, and keeps ftill it's colour and brightnefs. The fineft looms for thefe ftuffs are at Yefd, at Cafhan, and likewife at Ifpaban; thofe for carpets are in the province of Kherman: thefe are the carpets we commonly cell in Europe Turkey carpets, becaufe the merchants brought them through Turkey, before they traded with the Perfians by the ocean.
Trading, fays Sir John Chardin, is a very honourable proferfion in the Eaft, as being the belf for thofe that have any ftability, and are not fo liable to change: nor is it to be wondered at, for it cannot be otherwife in kingdoms, where, on the one hand, there is no title of nobility, and therefore little authority annexed to birth; and, on the other hand, the form of government being altogether defpotic and arbitrary, the authority annexed to places and employments cannot laft longer tban the employments themfelves, which are likewife precarious; for which reafon trading is much fet by in that part of the world, as a lafting and independent ftation.
Another reafon why it is valued, is becaufe the noblemen and even the king profefs it : they have their deputies or factors, as merchants have, and under the fame denomination. They have moft of them their trading fhips, and their ftorehoufes. The king of Perfia for inftance, fells and fends into the neighbouring kingdoms, filks, brocades, and other rich goods, carpets, and precious ftones. The name of merchant is a name highly refpected in the Eaft, and it is not allowed to fhopkeepers, or dealers in trifling goods, nor to thofe who trade not in foreigh countries; it is permitted only to fuch 2s employ deputies or factors in the remoteft countries: and thofe men are fomerimes raifed to the highelt rank, and are ufually employed in embaffies.
There are merchants in Perfia, who have deputies in moft parts of the world; and when thofe deputies are returned home, they wait on their mafters under no better denomination than that of a fervant, ftanding up always before them, and waiting at table, though fome of thofe deputies are worth above threefcore thoufand crowns.
In the Indies the laws are ftill more favourable to traders; for though they are more numerous than in Perfia, they are neverthelefs more valued. The reafon of this additional refpect is, becaufe in the Indies, traders are facred perfons, who are never molefted, even in time of war, and allowed a free paffage, they and their effects, through the middle of armies. It is upon their account efpecially, that the roads are fo fafe all over Afra, and efpecially in Perfia. The eaftern merchants affect grandeur in trading, notwithftanding they fend their deputies into all parts, and ftay at home themfelves, as in the centre of their chief concern. They make no bargains themfelves directly; there is no place of exchange in their towns, the trade is carried on by brokers, who are the fubtleft, the moft cunning, the flieft, the moft complaifant, moft patient, and intriguing men of the whole forety, having a mooth and infinuating tongue beyond expreffion
The Mahometans are not the greateft traders in Afia, though they are difperfed almoft in every part of it. Some of shem are too efteminate, and fome too fevere, to apply themfelves to tlade, clpecially foreign trade. Wherefore, in Turkey,

## PER

the Chriftians and Jews carry on the main foteign trade; and in Perfra, the Chriftians and the Indian Gentiles. As to the Perfans they trade with their countrymen, one province with another, and moft of them trade with the Indians. The Armenians manage alone the whole European trade; the reafon of which is, becaufe the Mahometans cannot ftrietly obferve their religion among the Chriftians, with relation to the outward purity it requires of them; for inftance, their law forbids them to eat flefh either killed or dreffed by a man of a different religion, and likewife to drink out of the fame cup with such a one. It forbids them to call upon God, in a place adorned with figures. It even forbids, in fome cafes, the touching of perfons of a different opinion, all which laws it is almof impoffible to keep among the Chriftians.
Another hindrance there is to the Mahometan improvement of trade, namely, the forbidding ufury and intereft wishout any diftinction. Mahomet broached his religion ín a country, whereof the whole riches and trade coniuted in cattle and breeds of horfes, where litile money was feen, and where the trade was managed by way of barter, as in former times; and it appears from a thoufand paffages in the Koran, that he did not forefee his religion would be propagated throughout the world, fo that he perceived no inconveniency in forbidding to lend money upon intereft.
The old commentators of his inftitution have not explained that prohibition, fo that it has remained in force to this day. Thus their law allows no intereft, but it allows changes, efpecially maritime changes, upon any advantage whatfoever, as thirty and forty per cent. profit, or more. As for interef, the parties have their way of evading the law juft as they pleafe.
Silk is the ftaple commodity of Perfia. They get fome in the provinces of Georgia, of Choraffan, and of Kherman, but erpeeially in Ghilar and Mazanderan. They compute that Perfia produces yearly twenty-two thoufand bales of filk, each bale weighing two hundred threefcore and fixteen pounds weight; and that account increafes every year, becaufe filk improves continually.
There are four forts of filk; the firft and the wortt is called Chirvani, becaufe it comes from Chirvan, a province ngar the Cafian Sea; it is a thick and rough filk, and the coarfeet thread of the fhell, it is that they call ardaine in Europe. The fecond, which is a fize better, is called carvari, i. e. an afs-load, to denote that fort of filk which the unfiliful buy; they call it legia in France, probably from the word Legian, the name of a fmall town in Ghilan on the fea, where none but fuch a fort of filk is made. The third is called ketkodapefend, as though one fhould fay, the citizen fort; which name the Perfians give to all things of a middling character. The fourth is called fharhaffee, i. e. the brocade filk, becaufe the beff filk is ufed for thofo rich goods. The abundance of Perfian filk exported is well enough known. The Dutch import of it into Europe to the value of near fixty thoufand pounds flerling yearly, by the Indian Sea; and all the Europeans who trade in Turkey, import nothing more valuable than the Perfian filks, which they buy of the Armenians. The Mufcovites import it likewife.
Some foreigners trade with the Perfians for camel's hair, and fome Europeans for kid's wool; they ufe it in Europe for making of hats. The beft wool of that fort, comes from Kherman and from Caibin; a famous city of Parthia, or Perfian Irack. Perfia exports into the Eaft-Indies abundance of tobacco, all forts of fruit dried, pickled in vinegar and preferved, efpecially dates, marmelades, wines, diftilled waters, horfes, Perfian ware, feathers, Turkey leather of all forts and colours, a great deal whereof is alfo exported to Mufcovy, and other European countries. They exportinto Turkey tobacco, galls, thread, coarfe goat's hair, ftuffs, and all forts of box-work, with many other things. The exportation of fteel and iron is prohibited, but it is exported notwithftanding.
It is not be fuppofed, however, that the Perfians manage trade with the fame method and rule as we do, or with the fkill of the Europeans; for inftance, trading by commiffion and the ufe of bills of exchange, are little known, but every one goes to fell his own goods himfelf, or feeds his deputies or his children to do it. Neither have they any letter-pofs in the ealt, becaufe their trade is not fpread far enough, and is not managed with fo much activity as in Europe; and allo becaufe the towns are at too great a diftance from one another, and meffengers are hired at a very eafy rate; they fend an exprefs a thirty days journey for abour thirty Chillings, and he performs that journey, which amounts to nine hundred Englifh miles, in eighteen or twenty days time, and fometimes in fifteen. When thofe expreffes are hired to go a journey, they run prefently from place to place, and give notice of their intended journey, in order to get fome letters to carry, which they carry for as little as you pleafe; they will carry a packet of letters of three ounces weight for fifteen pence.
It muft be alfo obferved, that in Perfia they fubfcribe no bills, bonds, and other writings, but inftead thereof, they write at the top of the paper their own name, and their inname, which is always their father's proper name; and they

## PER

## P E R

feal the paper at the bottom, in che prefence of witneffes, who attef it alfo with their feals: in that manner do the merohants make their writings; and although in moft cafes the contracts made, without due FORM of Law, be vaid, yet amongf merchants they remain in FULL FORCE, and the fecular powor rat fies them. The ufe of furities or bails, is alfo very common amongt them.
The moft curremt money in Perfia, as Tavernier, Thevenot, and others inform us, are the abaffi's, mahmoudi's, thai's, and cabbeghio's; the abaffi's are of the fineft filver, and the officers of the mint dare not coin amy lingle piece, until they have firft refined the piaftres, and other pieces of filver, that are appointed for the making of abafif's. And abaffi was in Thevenot's time, about eighten pence French money; and ccizidering there was no great difference then in the value of French and Englifh coin, we may well fuppofe an abaffi to be fill worth about fixteen pence of our money. The aballi's, as all the reft of the Perfian coin, are ftamped with the hammer, and not milled, and there is fo great an inequality in their weight, that in great payments they are weighed after this manner : they put twenty-five abaffi's in one ficale of the ballance, and as many in the otner; and if the one weigh more or lefs than the other, they conclude for certain, that there are fome falfe abaffi's mong them, and fail not to examine them, in which they are never out, for each fcale ought moft exactly to weigh alike. An abaffi is worth two mahmoudi's, a mahmoudi two thai's, and a chai ten fingle or five double carbeghi's. Thefe laft pieces are of brafs, the three other forts are all of filver, for gold is not current in trade. They have one brafs coin called bifti, worth four cafbeghi's, but the bifti's are now very fcarce. They do not ftamp their coin with the king's effigy, nor with his coat of arms; they only ftamp on one fide of the filver pieces the king's name, in whofe name it was coined, and on the other, the name of the town and the year of the hegira.
The brafs pieces have on one fide a lion, with a rifing fun on his back, the emblem of Perfia, and on the other the name of the place where it was fruck. There is a coin all along the Perfian Gulph, called larins, which is the moft common in trade. Larin, fays Sir John Chardin, fignifies coin of Lar, which is the capital of Caramania Deferta (now Lariftan). This was a diftinct kingdom, before Atlas the Great king of Perfia, who conquered it, joined it to his kingdom. that piece of money is of good filver, and is worth about ten pence Englifh. The make of it is very extraordinary, being a round wire, of the bignefs of a quill, folded in two, and an inch long, with a rmall mark on it, which is the prince's ftamp. None having been coined fince the conqueit above-mentioned, is the reafon they are now very fcarce. They do neverthelefs reckon by that coin all along the Perfian Gulph, and in the Indies, along the gulph of Cambay, and in the neighbouring ports; they fay that formerly it was current throughout all the eaft. Sir John Chardin does not give us the fame account with Tavernier, of the ftamp of the money; for he tells us that the flamp of the money, like that of the great feal of the kingdom, reprefents in the middie of one of the fides the Perfian belief in thefe words, There is no God but God; Mabomet is God's prophet; Aly is God's vicegerent, and the names of the twelve imans, and on the other the name of the king of the place, and of the year of the higera. Sir John adds, that the charge of coining is greater in Perfia than in any other parts of the world, for it amounts to feven and a balf per cent. The or is not a real coin, but only a nominal value of money, as a pound fterling is with us, and is ufed among merchants when they fpeak only of fmall furns; an or is worth fire abiff's. A toman alfo is but a certain fum of money, and no coin ; it is worth fifty abaffi's, and in Perfia they gencrally reckon by tomans.
Thicy bave no gold money in Perfia, for the pieces of gold ftamped with the king's effigy, and coined at his acceffion to the throne, and on new year's day, which are of the fame weight as the German ducats, are not current among the people, any more than counters are in France; befides thofe pieces of gold have no proper name; the Perfians call them commonly tela, i. e. gold pieces; they are called alfo chervali's, i. e. nobles, by reafon of their value. Tavernier tells us, that the merchants who travel into Perfia, carry with them ducats of Germany, the Low Countries, and Venice, but they muft carry them to the mint as foon as they enter the kingdom; yer if they can fecretly fell them to private perfons, they make a greater profit of them. And when they go out of the kingdom, they mutt declare atl the gold coin they take with them, and pay four pence duty to the king's officers for every ducat, if they fhould endeavour to conceal their gold, and chance to be difcovered, they would lofe it all
The common weight in Perfia is of two forts, the civil weight, and the legal or religious weight. The legal weight, which they call cheray, and which is like the weight of the fanctuary, according to the ufe of the ancient Hebrews, weighs commonly double the civil weight. They have, like us, different weights for medicines and precious flones, from the common weights. The civil weight is alfo of two forts,
the king's weight, and the tauris weight as they call it. The king's weight, or the great weight, weighs exactly as much more as the other, they call their common weight man, and alfo batman. The frmall weight man comes to five pounds fourteen ounces of Paris weight. Their way of dividing it is as follows: the ratel is the fixth part of a man, and comes near to a pound with us; the derham, or drachm, is the fifieth part of a pound; mufcal is half a derham; the dung is the fixth part of a mufcal, and comes to about eight grains of carat weight, and the barley-corn, which is the fourth part of a dung. 'The eaftern weights are all reduced to the barley-cotn.
There are two forts of ells, the royal ell, which is three feet ong wanting an inch, and the fhort ell, or guezemoukeffer, as they call it, which is but two thirds of the other. The geometrical meafurè is called girib; the land is meafured by no other meafure, and the girib contains a thoufand and fixty-fix fquare ells, each ell containing thirty-five royal inches. The carpets that are fold by the ell, are meafured alfo by the fquare ell, multiplying the length by the breadth, which the Perfians call ell by ell. For inftance, if a floor carpet is twelve ells long and three broad, they fay, three times twelve is thirty-fix, for it contains as many fquare ells. The Perfians have no meafure for dry goods, as a bufhel, \&c. becaufe they fell every thing by weight, even liquors. They have no meafure for time, neither clocks nor dials, They divide the day into eight parts, moft of which the Mahometan priefts give notice of in towns, by calling people to prayer.

## A fummary of the cornmerce of Perfia, according to the judicious Mr Hanway ${ }^{\text {w }}$.

- If we may judge, fays this ingenious gentleman, from the duties paid in ResHD, the trade began to flourifh on our arrival there; for in 1742 the cuftoms amounted only to 20,000 crowns, but in 1743 they arofe to 50,000 , and made about the fame fum in 1744. The annual produce of Ghilan in good times, I compute to be 30,000 batmans + of raw filk, of which about 6000 are confumed in Perfia, 4000 fent to Babylon, and the remainder over the Cafpian Sea. Shirvan formerly produced a large quantity, but that province is now in a much worfe condition than Ghilan This commodity is brought to market all the year round. They have feveral kinds of it, the firft is called lherbaff, or weaver's filk, they being fuppofed, particularly in Reshd and Cashay, to ufe the beft they can procure; but what generally goes for the Persian fabric at Cashan, is the fineft fort, the threads of which are more fplit; this is ufually all white, whereas the other is white and yellow; nor is it wound off fo fhort, fo that though finer we do not efteem it fo much as therbaff. There is alfo a fort called Arabs, from being bought up for the moft part by Arabians, who fend it into Turkey, where it is afterwards manufactured.
* See an Hiftorical Account of the Britif Trade over the Cafpian Sea.-By Jonas Hanway, merchant.
$\dagger 240,000$ great pounds.
Ghilan produces the beft and greateft quantities of Gilk; next to this comes Shirvan and Erivan, then Mazan deran, and laftly Astrabad; but the latter is vaftly inferior, ferving only for a manufacture mixed with cotton, of which they make their Chirts and drawers. Ghilan filk is fent into Ruffia and Turkey, and part of it is kept for the Perfian manufactures, but that of Mazanderan and Aftrabad is feldom or ever exported. From Shirvan they formerly fent all their filk to Turkey and Ruffia. The peafants of Ghilan perceiving that the Englifh required the Therbaff to be Thort wound, prepared it in that manner, and the filk proved good, and was much efteemed by our manufacturers. The peafants gave this reafon for chufing to have their filk long wound: in moift weather, the filk wound on a large wheel is not fo apt to ftick or be gummed together, in thofe parts where it lays on the bars, or divifions of the wheel, where it is often rendered black, and fo hard, that it cannot without great difficulty be feparated; befides, with a large wheel they make more difpatch; but all this time they did not confider the inconveniency of winding it off to be manufactured. Thefe peafants are extremely tenacious with regard to the price of their filk: their bufinefs is ufually done by brokers, but the buyer attends to pay the money. They fell it in fmall quantities, fo that a cargo cannot always be collected. Befides this inconvenience, there is that of bad money, for they are often obliged to cut it through, in order to fee that it is not copper filvered over. Their jealoufy ran fo high, that the governor of Ghilan once publifhed an order, that whoever refufed any kind of money, except it was manifefly bad, his ears and nofe fhould be cut off, and his eftate confifcated: but I never heard that this order was carried into execution.
The filk-worm, as is well known, takes it's birth from an egg no bigger than a fmall pin's head. In the month of March, when the fun is already very warm, I obferved the peafants in Ghilan prepare to give life to the eggs, which they had preferved during the winter, carrying them for the mof part about them, in the warmeft part of their bodies, and parti-
cularly under their arms. In ten or more days, according to the heat it receives, it becomes a maggot and begins to feed: the flrub mulberry- trees which are annually pruned, produce the moft tender and proper leaves for their food. In about forty days, the worm arrives to it's maturity, and winds itfelf by daily gradations into a pod of filk as big as a pigeon's egg. When this egg is completely formed, which is ufually known by the filence of the worm within, they fuffocate it by covering it with blankets, or by the heat of the fun; unlefs they wind off the filk immediately, for then warm water anfwers the fame purpofe. Some of them, however, muft be permitted to live and perforate the pod, for when it breaks from it's inclofure, it cafts it's feed or eggs, by means of which the generation is preferved. From the pods thus perforated, the filk cannot be wound off as from the others, but being prepared by pounding, it is fpun off like cotton yarn. This filk we call kedge, the remains or refufe of which is fo inferior, as to admit only of being milled and made into filk wadding.
The cleannefs and clearnefs of raw filk conflitute a great part of it's goodnefs; inferior filk has many knits and coarfe fuft fticking to the threads. The mofs, or head of filk, often appears fair to the eye, when much coarfenefs is concealed under it; for it is a trick of the peafants of Ghilan, to hide the defects as they wind it off from the pod. The beft filk has conftantly a glofs or brightnefs: the white or filver coloured is moft efteemed, but in Ghilan the greateft part comes yellow from the worm. White filk that is foiled, is generally found to have lain in a moift place, which hurts it's ftrength as well as beauty. Silk fhould be equal, frong, and round as wire, and allo clean ; the greateft part of it fhould be in medium with regard to finenefs, for the fineft is not the eafieft to manufacture to advantage. The threads of filk being thus even, that is, as near as poffible of one fize, and not coarfe and fine intermixed, can be moft eafily feparated in the winding; but otherwife the coarfe is apt to tear the fine, and make wafte in manufacturing it. The fize which we ufually moft efteem, is wound off 16 or 18 pods or cocoons. A mols, which is about 60 inches in the round, can be mon conveniently reeled off; longer is not approved of, and if fhorter it is apt to break by the quick revolutions of the reel, being glued together with it's own gum. It is alfo to be obferved, that there is a valt difference between filk cleaned by combing, and that which remains juft as it came from the pod. The former, to an unkilful perfon, who does not obferve the broken threads and the ends of the combings, Mall look better than the latter, though it be confiderably worfe.
When the Armenians and Ruffians pack up their filk, they generally comb the heads of the mofles, to deceive the buyer, but this makes it really worfe, becaufe it hurts in the winding off. Thefe people, who were never famed for probity, have long practifed the art of falfe package: hence, at Smyrna and Aleppo, where the Armenians fell their filk to the factors of our Turkey company, as likewife in Ruffia, it has often been rejected upon that account, efpecially as they hold it a conftant maxim, not to fuffer their bales to be broken up except at the heads. The price of filk and Ghilan generally rifes in proportion to the advance on foreign goods, except in a very great fcarcity, as of late: during the courfe of the Britifh Calpian trade, we found it vary from 12 to 18 crowns the batman; it was generally about 15 , but within thefe two or three laft years the Ruffians and Armenians have paid from 30 to 40 crowns.

The kinds of European goods which the Ruffians and Armenians vend in the northern provinces of Perfia, with a fuccinct account of the Perfian weights, meafures, and coins.

I fhall fininh this Mort view of the trade of Perfia, by giving a general idea of the different kinds of European goods, which the Ruffians and Armenians now vend in the northern provinces of that kingdom, with an account of the coins, weights, and meafures, according to the beft informations I could procure; but I mult obferve, that there feems to be a great difcordance among writers in this particular. The chief demands of European goods, next to Dutch cloth, is for Bri tifh woollens, fuch as hair-lift drabs, of 12 to I9l. per piece of 37 yards in white, which the Perfians call bergreft: of there they ufually confume nine bales in 30 .
Glofter cloths, of about 9 l . Ios. to 11 l. ros. per piece of 42 yards in white, which the Perfians call maghoot, and confume thereof io bales in 30
Ordinary York thire cloths, of about 3s. 6d. per yard dyed, which the Perfians call Londora, and confume thereof in bales in 30.
Five bales of fhalloon, of a middling quality, are ordinarily required in 100 bales of cloth.
From Holland they reckon one bale of maghoot, one of ihalloons, and one of long ells, to to bales of bergreft. E"glifh emboffed cloth is alfo demanded; likewife indigo cucheneal, and, in good times, fome rich filks, gold and filver lace, velvets, 'and other rich manufactures.

## PER

The Perfians had long been accuftomed to Dutch cloths, which were thicker, and, for the moft part, better fhorm and of a fofter and finer wooll; the crimfon and fcarlet of finer dye; but they were dearer than ours: however, after two or three years, we improved fome of our drabs, fo as to bealmoft equal to the Dutch cloths in fubftance, and, in my judgment, fuperior in foftnefs and beauty.
The tranift duty in Ruffia is 3 per cent. on the value, with an agio of 150 per cent. which, with other petty charie makes it about 8 per cent. only in the cuftom-houfe. In Per fia the duty on European goods is 5 per cent, on the value.

## An Account of the Money of Persia.

The toman, biftic, and denaer, are imaginary, but the othe denominations are real; the valuation and currency of filver money, are, viz.
A toman is ten hazardenaers
It muft be obferved, that the hazardenaer
(which the Englifh call mildenaer, and
the Ruffians a ruble) is computed by Eu-
ropeans, and accounts kept in hundreds
renaers.

An englifh crown melted down in Refhd, produced, at $\mathrm{I}_{7}$ denaers * per mufcal, only 95 denaers; but we always computed the mildenaer, or 100 denaers; equal to an Englinh crown of 5 s .
-The common price of filver.
The Gold Coins current are,

Weights.
1200 mufcals, or I butman, are avoirdupois lb. ordinarily computed $12 \frac{1}{5} \mathrm{lb}$. Englifh - 1 $98 \frac{1}{3}$ ditto
1 ditto $I$ have found to be 3 dwts. $\frac{1}{2}$ grain, but
nicer calculators call it grains $\quad$ - $\quad 71888$
I dunk, or donk - - - II 8648
1 karrat - - - 29662
hæbbie
The old batman, or manfhah, is 1200 mulcals, or 200 drams, by which filk, cocheneal, indigo, kedge, \&c. are weighed. The new batman thah is 1280 mufcals, or $213 \frac{2}{3}$ drams, by which heavy goods are weighed.
At Tavris the batman, called tavizie, contains 640 mufcals; likewife chiefly ufed at Mefched and Herat, as it is allo, more or lefs through the whole country, for feveral fpecies of goods. The antient batman of Tavris weighed 600 mufcals. At Irpahan, at Shamakie, and all through Shirvan, the filk batman contains 48 titlls, or 1600 mufcals, and 3 ftills are called a thadah, and weigh 100 mufcals; but the batman, by which indigo is weighed, contains only 800 mufcals. At Trohiran the batman is called re, and contains 1600 mufcals; rice, wheat, liquors, and provifions, are fold by the batman. A chervar, or load of a camel, is 50 batmans.
A load of a mule, 25 batmans, according to the king's computation, but carriers ufually load from 30 to 34 . A charvar of a horfe is 20 batmans, tut carriers ufually load 25. The fame load of an afs, according to the common rule of carriers is 15 batmans.
Kæbbie, a handful.
Dizz, or gerib, 1000 rice.
Four batman of Shahi rice, make one kuttie.

## P ER

Corn and grain, and even liquids, are fold by the batman, but rice, when winnowed, is fold per meafure, or jar.
The mufcal through oll Perfia is the fame: the filverfmiths commonly make ufe of pieces of money intead of weights, efpecially fifid denaers of $\frac{1}{2}$ mulcal in weight.
One karrat is three bæbbie.
Fourkarrats, or nockoot are one dunk.
Six dunk one mufcal.
Six mufcals one dram.

## The Measure of Reshd.

Seven horfe-hair breadths are one barley-corn.
Seven barley-corns are one finger.
$2 \frac{1}{3}$ fingers are balf a gaze, or gaz $=$ one cubit.
4000 cubits are one mile.
Three miles are one farfang.
But the meafure in common ufe is the gaze zerræ, divided into 16 parts, and called gierrie.
The foreign and Perfian merchants, in buying of woollens, compute the greze at 40 inches Englifh, but it is only $39 \frac{2}{5}$. One ditto is computed to 10 Ruffian archeens of 28 inches ios Smyrna pikes are reckoned equal to 70 Perfian gæze. The Mokzefar greze is $\frac{1}{10}$ lefs than the Shah grze, and by the Mokzfar, Perfian manufactures, and moft part of retale goods are meafured.
The Tavris gaze is one per cent, longer than the Shah gæze. The account which Mr Van Meirop gave of the import and confumption of Mefched, extracted from the cuftom-houfe regifter of that city, made the quantities very inconfiderable, and the whole was fent by Armenians, Ruffians, and Greeks, from Rehd, viz.

Mefched, and it's neighbourhood
For the confumption of Bokhara

| Bokhara | 20 | 50 | 10 |  |
| :--- | :--- | :--- | :--- | ---: |
| Orange | - | 15 | 30 | 5 |
| Balkh | 15 | 15 | 5 |  |
| Anthuy | - | 10 | 15 | 5 |

Befides thefe not diftinguilhed with regard to the place of their confumption, were imported.
1000 Shalloons, $\}$ the moft part from Kherman, by the way 1500 Long ells, 5 of the gulph of Perfia.
250 batmans of Lahori indigo, brought by the indians, of whom there are a confiderable number, who alfo trade in cloth from Refhd.
500 Batmans of American indico from Refhd, by Armenians; formerly it came from Turkey, where they bought of the French.
300 Batmans of cochencal from Refhd, brought by Armenians and others.
Though Mefched was under the particular protection of Na dirShah, it was with difficulty that this gentleman fold to the value of 22000 crowns, during the fpace of 27 months which he refided there; and great part of this fum was in exchange for Perfian manufactures, which no reafon but the abfolute impoffibility of obtaining money induced him to accept; fuch was the diftrefs of that country.
For my own part, I had the utmoft reafon to confider this as a military trade, and myfelf as having made a campaign. The journey, had, however, afforded me an opportunity of feeing Peria, and of enquiring into many circumfances relating to the oriental commerce. The confufion arifing from inteftine broils muft ever give a deep wound to trade, the fecurity of which is founded in the arts of peace, and the execution of civil laws; but the government of Perfia was now rendered precarious to a degree that threatened the fubverfion of that monarchy. The Turks, the Lefgees, the Indians, the Turkumans, and other frontier nations, either favoured thefe inteftine factions, or endeavoured to recover fome limb which had been torn from them; fo that every imaginable excefs was committed, upon no better principlo than the power of doing it.
In this fituation it was the ill fortune of the Ruffia company [fee Russia Trade and Russia Company] to find Perfia governed by an ufurper and a tyrant, whofe cruelty had no bounds: and the profpect at this time, in a more particular manner, was overfhadowed with a dark cloud, which threatened a form: the Ruffia company had already feit ${ }^{5}$ fome of the difficulties in which they were involved, others they forefaw, but knew not how to provide againft them.
The rebellions in Shirvan in 1743, of Shirafs, Athabad, Hazerjereb in 1744, were fupprefled by the flaughter of many thoufands, and the almoft total ruin of thofe provinces. It is true that Nadir had enriched his treafures with the plunder of India, yet the heavy taxes he had impofed on his people to fupport fuch a continued feries of foreign and domeftick wars, having reduced them to poverty, and driving them to defpair, obliged thoufands to feek a voluntary banifhment.
I have already obferved that Nadir's army had been fupported for upwards of four years, by the taxes drawn from his Perfran fubjects, and that his Indian treafure remained in a great meafure untouched ; this was one principle caufe of their diftrefs; by endeavouring to deprive them of the inftruments of

Vol. II.

## P E R

rebellion, he provoked them to rebel, and chaftifing them he compleated their ruin. Could any trade be carried on under thefe circumftances?
It was computed that Nadir had near 200,000 men in pay, the charge of whom, officers included, was computed at 100 crowns * a year, and, confequently, the expence of maintaining his army was 20 millions of crowns $\dagger$, exclufive of the contingent expence.

* Twenty-five pounds,
$\dagger$ Five millions fterling.
In good times, the provinces are fuppofed to bring into the exchequer the following fums :

Mildenaers. $\quad f_{0}$.

The reader will naturally obferve. how great a part of the Perfian revenue was produced by Nadir's conqueft in India: it will alfo be obvious to him, that the charge of an army is certain, but the revenues to fupport that army are uncertain, efpecially if they commit the leaft violence; and here the whole was a feene of rapine: the confequence was, that, except the conquered provinces in India, and thofe of Ghilan and Khorafan, the reft of the kingdom was fo impoverifhed, as to be difabled from paying, perhaps, a quarter part of the ufual tax. Next to the above-mentioned, Kandahar, Hzerat, and Erivan, were faid to be the leaft diftreffed, but mifery reigned in every quarter.
Of thefe $200,000 \mathrm{men}, 60,000$ were quartered in Cabul and the adjacent provinces on the weftern fide of the Sind ${ }^{*}$, which had been conquered and kept by Nadir; and the revenues appear to have much exceeded the expence of fupporting that part of the army. If one confiders this number of troops, and large revenue, it was not unreafonable to expect a large demand for cloth and other European goods; but we were not then acquainted with the nature of cloathing a Perfian army; for indeed not a th ird part of it wears European cloth,
* Ancient Indus.

With regard to the quantity of goods imported by the Perfians over the Cafpian Sea, whilft the port of Gambroon was open to the feveral nations of Europe, the Cafpian traders could but ill form an idea of the general confumption in that kingdom. The Ruffia company were more fanguine in their expectations, from a knowlege that, in the beginning of this century, the factors of the Eaft-India company had extended their trade as far as Tavris, on the weftern coaft of the Cafpian, where they fold great quantities of the woollen manufactures of Great-Britain: but when the Bitilh factors in Ghilan, whofe fituation was now fo much more advantageous, would have made an experiment of the like nature, they difcovered that city and it's confines to be in fo ruinous a ftate, as blafted their hopes of doing any bulinefs in thofe quarters.
Whan Perfia enjoyed repofe, the agent of the Eaf-India comWhen Perina enjoyed repofe, the agent of the Eat-India com-
pany of England lived in fplendor ; the regal government being held in great veneration in that empire, he acted as immediately under the crown of England, and from thence derived an influence which he could not otherwife have poffeffed: his pompous manner of living had fome good effects, but the expence was too confiderable to be long grateful to the company
With regard to the advantages the Ruffians enjoyed, it muft be obferved, that befides the Ruffian minifter who attends at the Perfian court, generally under the title of refident, the conful of that empire, who is fixed in Ghilan, is confidered, in fome meafure, in a minifterial light, and allowed a company of Ruffian foldiers as a guard, at the expence of the emprefs their fovereign.
Hence it was that $M$ r Elton recommended foftrongly, that a commifion hould be given to one of the Britifh findects in Ghilan, by which I prefume he meant himfelf, to act as con-

6 A
ful;
ful; but the fate of things was now changed, and every ftep that could be taken to eftablifh the intereft of the Ruffra company in Perfia, in effect blocked up our paffage through Ruffia into Perfáa. See Russia Company
The advantages which the Eaft-India company of England enjoyed beyond the Ruffia company, were fuch as will hardly admit of a comparifon, nor indeed is it material to my prefent purpore; I fhall pafs over in filence the trade from GreatBritain to the gulph of Perfia, as alfo that between Perfia and India; obferving only, that, after the Portugueze had fettled themfelves in Eaft-India, they took theifland of Ormus, and being mafters of the fea, carried on the trade between thofe countries. That great prince Shah Abafs thought it his intereft to diflodge them from his neighbourhood: for which purpofe he entered into a treaty, in 1622 , with the agent of the Eaft-India Company, and, by means of their (hips, he took Ormus, and demolifhed the town, bringing the com merce of that illand to the continent. This induced that prince to build the town of Bender-Abaff, now called Gambroon, which is reputed the greateft place of trade in all Perfia. For thefe good fervices Abafs made the company a grant of half the cuftoms of the new town, in perpetuity; buthis fucceffors have not religioully obferved the engagement.
The invafions of the Afghans, in $\mathbf{1 7 2 2}$, ruined the company's fettlement at I/pahan, in no lefs a degree than the death of Nadir occafioned the pillage of the Ruffia company's factors in Refld, as was the cafe. Their lofs, though very confiderable, was not, I believe, fuperior to that of the Cafpian traders, except the long interruption of their trade: in both cales, extortion and plunder were carried to an extreme. The Armenians fuffered alfo *; the Dutch likewife met the common fortune of the times, and being obliged to withdraw the greateft part of their factory from Ifpahan, they fettled in Gambroon, where they fecured themfelves, in a great meafure, by very ftrong fortifications: they did not come into Perfa 'till ten years after us, but as they are the only traders in foice, fo much in ufe over all Afia, they have been encouraged to continue their commerce, though with lels advantage than in paft times.

* See Mr Hanway's Hiflory of Revolutions, in vol. iii.

The French firft appeared in Perfia in 1665, and concluded a treaty with the thah of Perfia in 1674 ; but the miferies of that country, in confequence of the invafion of the Afghans in 1722, compelled them alfo to retire from Ifpahan. A very pompous propofal was made by a French projector, in relation to a trade over the Cafpian, in the beginning of this century, upon the occafion of an ambafly * from Shah Sultan Huffein to Lewis XIV. This perfon imagined that caravans could not be conducted fafely through Ruffia, and, therefore, he propofed to carry merchandize in veffels, by the lakes and rivers with which that country abounds; but, in regard to robbers, he feemed ignorant that this would not mend the matter in the leaft. He mentioned alfo feveral commodities which he propofed to return to France, particularly rhubarb: but this article is monopolized by the Ruffian government: this fcheme never was, and I believe never will be, earried into execution.

* It has been faid that this was entirely counterfeit, to amufe Lewis XIV. in his old age; but it appears from feveral circumftance, as well as the nature of the thing, that this opinion was very ill grounded, if not ridiculous.

But of all the nations who have endeavoured to eftablifh a trade with the north of Perfia, the Ruffians are the moft advantageounly fituated: the inteftine broils of that country have not put a ftop to their commerce; on the contrary, they have fometimes turned to their advantage; for, befides the ordinary courfe of their trade to and from Perfia, they reap confiderable profit by their trading voyages on the Cafíian Sea, carrying rice from Ghilan to Baku, Derbends, and fometimes to the fouthern coaft, as I have already mentioned. And as this export of provifion fometimes creates a fcarcity in Ghilan, it occafions a demand for Ruffian meal, from which again new benefits are derived. Befides cloth, and other European goods, the Ruffians alfo export red leather, furrs and linnen, for the northern provinces of Perfia, and make their returns in raw filk. Hence arofe their jealouly of the Britifh traders; for the Ruffian merchants, particularly thofe of Mofcow, and the trading towns on the Volga, no fooner obferved that the perfian markets were glutted with European goods, by the Ruffia company of England, than they began to murmur, refolving to make remonitrances to court on the fubject.
The Armenians, indeed, have for fome years extended their trade to the north of Perfia, much beyond the Ruffians; for, by means of their credit in Holland, joined to their own capitals, they employed in this branch of commerce about $100,000 \mathrm{l}$. This flock, however, was now infufficient to fupport them; for the exceffive glut of the market in Ghilan, and the terrible oppreffion of the Perfian government, ftopped the circulation of their trade, and, confequently, funk their credit in Holland. At length they were alfo conftrained to abandon Perfia, and, in 1745, they retired to

Aftracan, to wait with their effects 'till there fhbuld be a fair opportunity of returning thither.
Whilt the Ruffia company were in fecurity, they could not be infenfible of the benefits of buying raw filk immediately of the peafants of Ghilan; but advantages may be over-rated, and indeed ceafe to be fuch, when attended with vexations and inconveniences, like thofe which the Cafpian traders experienced. It was not, however, the lefs ungrateful to obferve the Armenians, a people in themfelves defpicable, and of no confequence to Ruffia in competition with the Britifh nation, fupported and protected in this trade, when meafures were fo apparently taken to wreft it from us.
The Ruffians do indeed alledge, that many of there Armenians are fubjects of their country; and it is true, in general, that fuch of them as are engaged in the Cafpian trade do put themfelves under the protection of that empire; thefe people are likewife educated in all the fervilities of Afia, and underftanding how to accommodate themfelves to indignities, which the genius of a free nation will hardly fubmit to, are in fome meafure the better qualified to carry on a commerce through foreign dominions.
The fhare which the Ruffia company enjoyed in this commerce made an eclat, but it was not yet puhbed to near the height which the Armenians had carried it; of what confequence it was to the latter, may be eafily deduced from hence, that not many years ago they imported into Ruffia near 1000 bales of raw filk *. Of this the greateft part was fent to Amfterdam ; part of the filk was alfo fent to the German markets, and about 100 bales remained in the city of Mofcow, for the ufe of the Ruffian manufactures.

* Of 25 batmans, is $300,000 \mathrm{lb}$. of 16 ounces; whereas all the Britifh trade never amounted to half that quantity.
PERU. Thistcountry is bounded on the north by Popayan which is part of Terra Firma ; on the eaft by the country of the Amazons; on the fouth by Chili; and on the weft it has the South-Sea, or Pacific Ocean. It extends from the Ift degree and about 30 minutes north latitude, to the 25 ch degree 10 minutes of fouth latitude: fo that it contains 28 degres from north to fouth ; that is, 560 leagues, or 1680 Englifh miles; but, confidering the windings of the coalt, and that it does not lie directly north and fouth, but rather north-weft and fouth-eaft, we may very well agree with thofe geographers who make it about 600 leagues, or 1800 miles long. It's greateft breadth is not much above 100, and in fome places 130 leagues, from weft to eaft.
Beffdes the fruit-trees which have been tranfported hither from Europe, as pears, apples; figs, grapes, olives, \&c. there are thofe of the Caribbee Iflands, as ananas, guayvas, patatas, bananas, melons, water-melons, befides other peculiar to Peru; the moft valued of the laft fort are the chirimbyas, refembling in fmell the anana, and pine-apple, buing full of a white folid fubftance, mixed with feeds as big as kidneybeans; the leaf is fomenhat like that of the mulberry-tree, and the wood refembles that of the hazel.
In relation to commerce, the Creolians are as fharp and underftanding as the Europeans; but being dainty and floth ful, and not vouchfafing to deal unlefs there be a confiderable profit, the Bifcayners, and other European Spaniards, who are moft laborious, grow rich fooner.
This country is divided into three audiences, or jurifdictions, which are, going from fouth to north, Los Charcas, or La Plata, Lima, or Los Reyes, and Quito.
Los Charcas. This province bas Chili and Tucuman on the fouth ; part of Paraguay, and of the country of the Amazons, on the eaft ; the audience of Lima on the north; and the South-Sea on the weft. It extends along the fea-coaft, from the $25^{\text {th }}$ degree of fouth latitude, to Rio Tamma, in latitude 17 . Io. fo that jit's length is 7 degrees and 50 minutes, that is 570 miles, in a frait line: but, confidering the windings of the coaft, we may very well reckon it above 600 miles. It's greateft extent, from weft to eaft, as much as we can judge from the beft maps, is about 400 miles, though in fome places much lefs.
The climate of this country is but indifferent : on the fhore ir is exceffive hot, and the inland parts of the country partake fo much of the other extreme, that it is faid the Spanith ladies, when pregnant, are compelled to remove to a warmer climate, before they can be delivered. The foil however is, generally fpeaking, fruitful ; on the coaft it is made fo by art; but the vallies among the mountains in the inland parts, are from nature luxurioufly fertile, being every where fufficiently watered; whereas there are no rivers at all upon the coalt. As to the commodities of this country, though it may juftly be ftiled one of the richoft in the world, yet they may be reduced to three, namely, pimento, which grows upon the coatt, and is a kind of pepper, little different from what we call Jamaica pepper, and produces to the inhabitants 600,000 pieces of eight per annum.
The other commodities are filver and gold, of which we fhall give fome account when we come to defcribe the places where or near which the mines are found.
La Plata, otherwife called Chaqui, or Chaquicaca, the capital, lies in fouth latitude 19.33. and in longitude 65 .

65. 30. weft from London; it is about 250 miles diftant from the neareft fea-coaft to the eaft, and about 780 from Lima, towards the fouth-eaft. It was formerly very confiderable on account of the rich mines in it's neighbourhood, many of which are now neglected.
отоsi, a moft famous place on account of the rich filver mines in it's neighbourhood, is about 60 miles diftant from La Plata a the fouth eaft.' It ftands at the bottom of a hill called the Silver Hill, which is round like a fugar-loaf. The king obliges the neighbouring parifhes to fend thither a certain number of Indians yearly, to work at the mines. Captain Rogers obferves, that there are 1500 or 2000 of them conftantly employed in that work; they have two reals a day, and are paid every Sunday. The corregidores, or chief magiftrates, caufe them io fet out on the fealt of Corpus Chrifti; moft of them go to that ferviiude with tears in their eyes, and with the greateft reluctancy: bowever, after a year's duty, there are many who forget their habitations, and continue fettled at Potofi, which is the reafon why that town is fo populous.
This place is faid to be very cold: they have great froftsand fnows here in May, June, and July. Provifions are very fcarce in the town, and they have no firing but charcoal, which is brougltt from 30 to 50 leagues diftance. Knivet in his remarks fays, that, in his time, they were well fupplied with every thing from the South-Sea, and that the natives of the adjoining country trafficked in gold and precious ftones. The mines here were difcovered by mere chance, 12 years after the Spaniards had entered the country. In I545, Villaroele, who was a Spaniard, and an Indian, named Guanea, began with opening two mines: they called one Rica, and the other Diego Centeno. The former was raifed above the furface of the earth, in the form of a cock's-comb, about the heighth of a lance, and was 300 feet in length, by 13 in breadth : this mine was fo rich, that almoft half of the ore was pure and fine filver, to the depth of 50 or 60 fathoms, where it began to change a little. The third mine, which was called Del Eftauno, becaufe of the hardnefs of the flints, was begun foon after the former two, and the fourth, called Mendieta, was opened in Auguft 1545. Nothing can come up to the riches of thofe mines: it appears from the royal regifters, that, feveral years after they were difcovered, there were brought every Saturday to the licentiate Pol, who was prefident at Potofi, 150, and fometimes 200,000 pefos, that he might take the fifth part for the king of Spain: and it appears from the accounts of perfons who were very well informed, that the king's fifth part amounted to 76 millions. The excellency of thefe mines will further appear from this particular, that, though they hađ̛ dug 200 fathoms deep, yet they were not incommoded with any water.
Thefe mines are much decayed in their value, and the mint does not coin one quarter of what they did formerly. There were once 120 mills; and at this time there are only 40 , and, for the moft part of the year, there is no employment for half of them.
rco is about 20 miles to the weft of Potofi : it was alfo famous formerly, for it's filver'mines, before thofe of Potofi were difcovered, which being richer, and not incommoded by water, drew all the undertakers and workmen from Porco; but fince the mines of Potofi are decayed, it is probable thofe of Porco may be opened again.
A PAz is feated near the fpring-head of a river called Choqueaffo, from which this town is alfo called by that name. It is about 2 ro miles diftant from La Plata to the north-weft, and 125 from the fea-coafk to the eaft. It is a fmall town, but plealantly fituated in a fine plain, full of fprings, fruit-trees and fields of maiz, with mountains on each fide. It has many rich gold mines, and good falt-pits.
rica lies in fouth latitude 18. 27. and in longitude 70. 20. weft from London, and above 245 miles from Potofi to the north-weft.
league up is the village of St Michael Desapa, where they begin to cultivate the agi, that is, Guinea pepper, which is fown throughout all the reft of the vale of Arica. In that little face of the vale, which is very narrow, and not above fix leagues long, they fell yearly of is to the value of above 80,000 crowns.
s Reyes. This province has on the north the audience of Quito, on the eatt the Cordillera mountains, on the fouth the audience of Los Charcos, and on the weft the South Sea It's extent from north to fouth, is about feven hundred miles; but it's breadth is very unequal, both on account of the bending of the coaft, and becaufe it is in many places pent in by the mountains.
This country abounds with nines of gold, filver, quickfilver, vermillion, and falt. They have plenty of cattle, fowl, and finh, and all provifions common to us, except butter, inftead of which they ufe lard.
They have oil, wine, and brandy enough though not fo good as in Europe. They drink much of the jefuits herb camini brought from Paraguay by land, whence it is alfo called the herb of Paraguay [fee Paraguay]; for all EaftIndia tea is prohibited. The Spanilh writers in general fay, that for five bundred leagues in length, from Tumbez to Chili, it never thunders, lightens, nor rains, but the want of
this is fupplied by great dews; fo that they have as rood fruit and corn, particularly wheat, as any in Europe. In the valleys near the fea, the climate is hot, but tempered with breezes from the fea and mountains. In the hilly parts, far into the country, it is winter, and very rainy, when it is fummer, in the plains, though in the fame latitude. The product, beafts and birds, are much the fame with other parts of the South-Sea coaft. (Rogers.) Zuratte, the Spanifh biforian, has given us the natural caufe of the perpetual drought there is in this country. He obferves, that the fouth-weft winds blow upon the Pervivian coaft all the year round, and the ocean here is therefore called Pacific, becaufe thefe winds never difturb the waters. Thefe eafy gales always bear away the vapours from the plains, before they can rife, and form a body fufficient to defcend in a fhower: but when they are carried farther and higher, they grow more compact, and at length fall by their own weight into rain. (Betagh.)
Lima, the capital of all this province, and of all Peru, is feated in 12 degrees, 6 minutes, and 28 feconds of fouth latitude. and in the 77 th, 15 minutes of longitude weft from London, and five miles eaft from the port of Callao, which is it's harbour. This city is in fome fort the repofitony of all the treafures of Peru. It was computed fome years ago, that above fix millions of crowns (or $1,200,000$ pounds fterling) were expended there, but it muft be much abated at prefent.
For the regulation of trade, there is a confulfhip, where a prior or chief, and two confuls prefide, who are chofen from among the merchants who beft underftand trade.
Callao is the harbour of Lima, from which it is two leagues or fix miles diftant to the weftward: it extends along the feacoaft, fo that it is much longer than it is broad.
The town is built on a low, flat point of land on the feathore. It's trade is confiderable. From Chili they bring cordage, leather, tallow, dried fifh, and corn; from Chiloe, cedar planks, woollen manufactüres, and particularly carpets, like thofe of Turkey; from Peru, fugars of Andaguaylas, Guayaquil, and other places ; wine and brandy from Lanafoo and Pifco; „mafts, cordage, timber for fhipping, cacao of Guayaquil, and the country about it, tobacco, and fome little honey of fugar. The cacao is afterwards tranf ported to Mexico: from Mexico, as from Sonfonate, Realejo, and Guatimata, they bring hither pitch and tar, which is only fit for wood, becaule it burns the cordage; woods for dyeing, fulphur, and balfam, which bears the name of balfam of Peru, but in reality comes from Guatamala. There are two forts of it, white and brown; the latter is moft vaJued; they put it into cacao-fhells, when it is of the confiftence of tar, but generally it comes liquid in earthen pots, and then it is liable to be falfified, and mixed with oil to increafe the quantity. From the fame places they bring fine works, which they call caray, and commodities of China, by the way of Acapulco, though contraband goods. The French had formerly a confiderable trade here.
Cusco lies in the $13^{\text {th }}$ degree, and 15 minutes of fouth latitude, and $7 \mathrm{I}, 30$, of longitude welt from London. It is above 326 miles diftant from Lima, towards the eaft. It ftands in an uneven country, furrounded with mountains on every fide, near the river Yucay and Apurina.
The gold and filver of Peru was brought in great plenty to Cufco, in the neigbbourhood of which there are very rich mines, which have been in fome manner neglected, becaule thofe of Potofi afford much more filver, and with lefs danger. The mines of Lampa, and thofe of Cordillera, de Cufco, are very confiderable, though there be others much richer towards the Moxos, where the Indians have plenty of gold, but they are of a favage and fierce temper. The Spaniards have fome little trade with the nations that dwell beyond the mountains of Cufco.
There are in this city, manufactures of bays and cotton cloth, which are fome fmall prejudice to the trade of Europe. They alfo make fome forts of work in leather, as well for the ufe of men, as for the furniture of horfes and mules. This city is alfo famous for the valt number of pictures the $I_{n}$ dians make there, and wherewith, wretched as they are, they fupply the whole kingdom. (Frezier.)
Guamanca is 180 miles from Lima towards the eaft. It's principal trade confints in leather, and boxes of confectionary, paftes, marmelades, jellies, preferved quinces, and other fweetmeats, which are moft efteemed in the kingdom, where there is a confiderable confumption of them. They alfo make here pavilions, which ferve inftead of bed-curtains, whereof there is a famous manufacture hore, as there is of feveral forts of painted and gilt leather. The town is reated at the foot of a high mountain, -in a very healthy country, fruitful in all forts of provifions. The province abounds with mines of gold, filver, quickfilver, copper, iron, fulphur, and load-ftones. About $g$ leagues to the north-weft of Guamanca, are the famous mines of Guancavelica, from which they take great quantities of quickfilver. The mines of Palcas, in the terfitory of Guamanca, being difeovered, the Spaniards flocked thither to get the quickfilver, which is of great ufe to extract the filver. They get every year from the mines of Guancavelica, quickfilver to the amount of a million of livres. (De Laet.)

## P E R

Guancavelica is a fmall town, but rich, and famous for the valt quantity of quickfilver taken there from a mine, which is forty Spanifh yards in front, and alone furnifhes all the gold and filver mills in that kingdom, fays Frezier; but this mult be a miftake, fince there are other rich mines of quickfilver which are worked as well as this, Private perfons, adds he, work there at their own expence, and are obliged to deliver up to the king all they get, upon pain of forfeiture of their eftates, banifhment, and perpetual fervitude at Baldivia. His Majefty pays a fet price for the fame, which is ixty pieces of eight the quintal, or hundred weight, upon the pot, and he fells it for eighty, at the remote mines,
When a fufficient quantity has been taken out, the king caufes the mouth of the mine to beftopped up, and no man can have any, but what comes from the king's ftores. The carth or mineral which contains the quickfilver, is of a whitilh red, like ill burnt brick; they pound it, and put it into an earthen furnace, the head or top of which is a vault, like the top of an oven, a little fpheroid. They lay it on an iron grate covered with earth, under which they keep a fimall fire, made of the flrub they call jeho, which is more proper for that purpofe, than any other combuftible matter; for which reafon there is a prohibition to cut it within twenty leagues round. The heat paffes through that earth, and fo fires the pounded mineral, that the quickfilver flies out volatile in fmoak; but the top or covering being clofe ftopped, it finds no way out, but only through a little bole, which conveys it to a fucceffion of earthen veffels like gourds, round, and joined by the necks; there the fmoke circulates and condenfes, by means of a little water there is at the bottom of each gourd, into which the quickfilver falls condenfed, and in a well formed liquid.
It is lefs formed in the firft gourds than in the laft; and becaufe they grow fo hot that they break, care is taken to cool the outfides of them with water. In this town there is another thing peculiar, which is a fpring, whofe water petrifies fo eafily, and fo quick, that moft of the houfes in the town are built with it.
Truxillo is 250 miles diftant from'Lima, towards the northweft. It flands near the fea-fhore, on the banks of a little river, near fome rocky hillocks. There is a great deal of fugar grows in the valley of Chacama, or Chicama, near this town.
It has a great trade for flour, braudy, fugar, wine, and marmelade, of which they export three or four thips-loads every year, with which they fupply, the city of Panama.
Qurto. This province is bounded on the eaft by part of the Amazon's country, on the fouth by the audience of Los Reyes, on,the weft it hath the South-Sea, and on the north the country called Popayan. It's extent along the fea-coaft is from Punta de l'Aguja, or the Needle-Point, in the fixth degree of fouth latitude, to the river of Emeralds in the fifth degree of north latitude, which is feven degrees, or four hundred and twenty miles. It's breadth, in fome places, is three hundred and fixty miles eaftward, in others more, and in others lefs. The Spaniards divide it into three diftricts, which they call Quito Proper, Los Quixos, and Los Pacafnores. The climate here, fays De Laet, is rather cold than hot. The winter continues from Oftober 'till March, during which time they have heavy rains, but without any fnow, except in the mountains of Andes. They have abundance of cows and fheep, which multiply wonderfully here. They have a great deal of faltpetre in many places where the foil is marlhy, and make very good gunpowder of it. They have alfo excellent fulphur or brimitone, which is as clear as the faltpetre, and of a gold colour. They gather it out of the veins that are near the cold mines, of which there are feveral in this country, as well as of filver, quickfilver, and copper. They have alfo emeralds, and medicinal drugs, fays captain Rogers.
Quito, the capital city of this province, fands in 20 minutes of fouth latitude, and in the 76 th degree, 50 minutes of longitude weft from London; about feven hundred and twenty miles diftant from Lima, to the north. It is feated in a valley, that is bounded on the north and weft by a ridge of very fteep mountains, which extend from Porto Vejo, on the South-Sea, to Cartagena on the North-Sea. The foil about the city is very dry and fandy, and a-crofs the city there is in the ground a large opening, over which there are feveral bridges. Wine, oul, fpices, and other European merchandizes, are brought hither from the South-Sea, firft by the river of Guayaqui!, and then by land-carriage. The Indians alfo have here their fairs and markets, and fell their wares, not by any certain weight or meafure, but by way of barter or exchange.' They bring hither fruit, catle, cheefe, of theep, cows, and guats milk; cloaths made of cotton, all forts of cloths, cap, cables, wool, flax, and leather. (De Laet.) Tacunga is about twenty miles diftant from Quito, to the fouth. It is a very populous town; the inhabitants weave woollen-cloth, in which they drive a great tradc.
Zamora is about two hundred and ter miles diftant from Quito to the fouth, and a hundred and twenty from the neareft cuaft of the South Sea to the eaft. In the neigh bourhood of the town of Zamora, there are gold mines, from

## P E R

which they have taken grains of a prodigious bignefs. There are alfo feveral fprings, fome of falt water, of which they make very good falt in great plenty.
Guayaquil is about 185 miles diftant from Quito to the fouth-weft, and 565 from Lima towards the fouth. The town is well feated for trade, and the building of chips, for which they have theds to cover the workmen from the fun, It may be reckoned one of the chiefeft fea-ports in the SounthSeas. The commodities that are exported from thence are cacao, hides, tallow, farfaparilla, and other drugs, with woollen cloth, commonly called cloth of Quito, becaule it is made in that city. This and all other commodities which come from Quito, are hipped off at Guayaquil for other parts, and all imported goods for the city of Quito pafs by Guayaquil; by which it may appear, that this is a place of no mean trade. (Dampier.)

## General Remarks on Peru.

There are two forts of filver mines at Peru, the one where filver is found fcattered about in fmall quantities, the other where it runs in a vein between two recks; the one exceflively hard, and the other much fofter ; and it is thefe laft which beft deferve, and are generally diftinguifhed by the name of the filver mines.
This metal, which is in other countries the fandard or meafure of riches, is in Peru the riches of the cpuntry confidered in another light ; we mean that of a natural commodity; for, throughout the whole of that vaft country, there are almoft every where filver mines to be met with of more orlefs value, according as the ore produces more or lefs filver, and can be wrought at a greater or lefs expence.
There are fome, but not a great many mines, to the northward of Lima; but to the fouth they are very numurous, On the back of the Andes there lies a nation of Indians, called Los Plateros, or the Platemen, from the vaft quanitite they poffefs of filver; but the Spaniards have very little communication with them. The beft part of the mine-countries are to the fouth of Cu (co, from thence to Potofi, and fo to the frontiers of Chili; and where for the face of three hundred miles, there is a continued fucceffion of mines; fome being difcovered, and others deferted every day. It is a common thing for the people here, as well as ellewhere, to complain of the prefent times, and commend the paft, as if heretofore there were infinitely greater quantities of filver dug out of the mines, than at prefent, and, perhaps; with regard to particular mines, it may be fo; but, upon the whole, doubtlefs the quantities of filver that are annually obtained in the Spanifh Weft-Indies, abundantly exceed what was formerly exported from thence. As to the names of thofe which have been moft remarkable, or are fo at prefent in the country of Peru, they are thefe, viz. the mines of Loxa and Camora, Cuenca, 'Puerto Vejo, St Juan del Oro ; thefe are wrought at prefent : thofe of Oruro and Titiri are neglected; thofe of Porco and Plata are filled up.
At Potofi there is a great number of mines, and thofe of Tomina, Chocaia, Atacuma, Xuxui, the Chalchaques, Guaico, Iquique, \&ic. are all wrought with more or lefs profit ; and this according to the fkill of their proprietors, or of fuch as have the direction of thefe works.
It is generally believed, and there feems to be fome reafon for it, that experience has taught the people here a perfect acquaintance with minerals, and the art of treating them, fo as to obtain the largeft profit. But, however, when one confiders their ignorance in other arts, their going on conftantly in the fame beaten track in this, together with their vat wafte of quickfilver, we are tempted to believe, that our European miners might manage their works to ftill greater advantage.
This feems the more probable, when we reflect, that this knowlege of theirs is not at all founded upon principles; but is, properly fpeaking, an art built upon accidental difcoveries, in which there is little of accuracy, and abundance of uncertainty; which will be more evident to the reader, when he has perufed and confidered the following account of the manner in which the filver is extracted from the ore at the mines.
The moft perfect filver that comes from thence, is that which the Spaniards call pinnas; that is a lump of filver extremely porous, becaufe it is the remainder of a part made up of filver duft and mercury, and the latter being exhaled, leaves this remainder of the mafs fongy and light. It is this kind of filver that is put into different forms by the merchants, in order to cheat the king of his duty; and therefore all filver in this condition, if found any where on the road, or on board any fhip, is looked upon as contraband goods, and is Iiable to feizure.
In regard to the art of refining therefore, we fhall thew the progrefs of the ore, from the mine to this kind of mafs or cake. After having broken the ftone, taken out of the veia of ore, they grind it in their mills with grindfones, or in the ingenios reales, or royal engines, which confift of hammers, or pounders, like the French plaifer mills., They bave generally a wheel about twenty-five or thirty feet diameter,
whofe long axletree is fet with fmooth triangles, which, as they turn, hook or lay hold of the iron hammers, lift thent up to a certain height, and from whence they drop at once at every turn; they generally weigh about two hundred weight, and fall fo violently, that they reduce the hardeft ftones to powder. They afterwards fift that powder through iron or copper fieves, to take away the fineft, and return the reft to the mill.
When the ore happens to be mixed with fome metals, which obftruct it's falling to powder, as copper, \&cc. they calcine it in an oven, and pound it over again. In the little mines, where they ufe none but mills with grindttones, they, for the moft part grind the ore with water, which makes a liquid mud that runs into a receiver : whereas, when it is ground dry, it muft be afterwards fteeped, and well moulded together with the feet, for a long time. To this purpofe they make a floor, where they difpofe that mad in fquare parcels, about a foot thick, each of them containing half a caxon or chef, that is twenty-five quintals, or hundred weight of ore, and thefe they call cuerpos, that is, bodies.
On each of them they shrow about two hundred weight of fea or common falt, more or lefs, according to the nature of the ore, which they mould and incorporate with the earth, for two or three days. Then they add to it a certain quantity of quickfilver, fqueezing a purfe made of a ikin, wherein they put it to make it fall in drops, with which they fprinkle the mafs equally, according to the nature and quality of the ore. They allow to each mafs, ten, fifteen, or twenty pounds; for the richer it is, the more mercury it requires to draw to it the filver contained: fo that they know not the quantity, but by long experience.
An Indian is employed to mould one of thefe fquare parcels eight times a day, to the end that the mercury may incorporate with the filver. To that effect, they often mix lime with it, when the ore happens to be grealy, where caution is to be ufed : for, they fay, it fometimes grows fo hot, that they neither find mercury or filver in it, which feems incredible.
Sometimes they alfo ftrew among it fome lead or tin ore, to facilitate the operation of the mercury, which is flower in very cold weather, than when it is very temperate; for which reafon, at Potofi and Lipes they are often obliged to mould the ore during a whole month or lix weeks; but in more moderate climates, the amalgama is made in eight or ten days. To facilitate the operation of the mercury, they in fome places, as at Puno, aud elfewhere, make their buiterons, or floors, on arches, under which they keep fire to heat the powder of the ore for twenty-four hours, on a pavement of bricks. When it is thought that the mercury has attracted all the filver, the aflayer takes a little ore from each parcel a-part, which he wafhes in a fmallearthen plate, or wooden bowl, and by the colour of the mercury found at the bottom of the bowl, knows whether it has had it's effect; for when it is blackinh, the ore is too much heated, and then they add more falt or fome other drug. They fay that then the mercury difpara, that is, Choots, or flies away. If the mercury is white, they put a drop under the thumb, and prefling it haftily, the filver there is amongft it, remains ficking to the thumb, and the mercury flips away in little drops.
In conclufion, when they perceive that all the filver is gathered, they carry the ore to a bafon, into which a little ftream of water runs to wafh it. Much in the fame nature as we fhall thew they wafh gold, excepting that this being only a mud without ftones, inftead of an hook to ftir it, an Indian ftirs it with his feet to diffolve it.
From the firft bafon it falls into a fecond, where another Indian is, who ftirs it again to diffolve it thoroughly and loofen the filver. From the fecond it paffes into a third, where the fame is repeated; to the end, that what has not funk to the bottom of the firft and fecond, may not efcape the third. When all bas been walhed, and the water runs clear, they find at the bottom of the bafons, which are lined with leather, the mercury incorporated with the filver, which they call lapella. It is put into a woollen bag, hanging up for fome of the quickfilver to drain through. They bind, beat, and prefs it, laying a weight upon it with flat pieces of wood; and when they have got out as much as they can, they put the pafte into a mould of wooden planks, which being bound together, generally form the figure of an octagon pyramid cut hort, as the bottom whereof is a copper plate full of little holes. There they flir, in order to faften it; and when they defign to make many pinnas, as they call them, that is, lumps of various weights; they divide them with little beds, or layers of earth, which hinder their coming together. To that end, the pella, or mafs, mult be weighed, deducting two thirds for the mercury that is in it, and they know within a frall matter what net fiver there is.
They then take off the mould, and place the pinna with it's copper bafe on a trivet, or fuch like inftrument, ftanding over a great earthen veffel full of water, and cover it with an earthen cap, which they again cover with lighted coals, and they feed the fire for fome hours, that the mafs may grow violently hot, and the mercury that is in it evaporate in fmoke; but that fmoke having no paffage out, it circulates in the hollow, that is, between the mafs and cap, 'till coming down to
Vol. II.
the water that is underneath, it condenfes to the botton again, converted into quickfilver.
Thus little of it is loft, and the fame ferves feveral times; but the quantity muft be increafed, becaufe it grows weak. However, they formerly confumed at Potofi fix or feven thoufand quintals, or hundred weight, of quickfilver every year, as Acofta writes, by which a judgment may be made of the filver they got. When the mercury is evaporated, there remains nothing but a foongy lump of contiguous grains of filver, very light and almoft mouldering, which the Spaniards call la pinna, and is obferved as a contraband commodity from the mines; becaufe, by the laws of the kingdom, they are obliged to carry it to the king's receipt, or to the mint, to pay the fifth to his majefty there.
Thofe maffes are caft into ingots, on which the arms of the crown are ftamped, as alfo that of the place where they were caft, their weight and quality, with the finenefs of the filver. It is always certain, that the ingots which have paid the fifch have no fraud in them; but it is not fo with the pinnas or maffes not caft: thofe who make them, often convey into the middle of them, iron, fand, and other things, to increafe the weight ; fo that, in prudence, they ought to be opened, and made red hot at the fire, for the more certainty ; for if fallified, the fire will either turn it black or yellow, or melt it more eafily.
This trial is alfo to extract a moifture they contract in places where they are laid, on purpofe to make them the heavier. In fhort, their weight may be increafed one third, by dipping them in water when they are red hot, as alfo by feparating the mercury, with which the bottom of the mafs is always more impregnated than the top. It alfo fometimes happens, that this fame mafs is of different finenefs.
The ftones taken from the mines, the ore, or, to fpeak in the language of Peru, the mineray, from which the filver is extracted, is not always of the fame nature, confiftence, or colour.
There are fome white and grey, mixed with red or blueih fpots, which is called plata blanca, or white filver. The mines of Lipes are moft of them of this fort. For the moft part there appear fome little grains of filver, and very often frall branches, extending along the layers of the ftone. There are fome, on the other hand, as black as the drofs of iron, in which the filver does not appear, called oregrillo, that is blackifh: fometimes it is black with lead, for which reafon it is called plomo ronco, that is, coarfe lead, in which the filver appears as if fcratched with fomething that is harh, and it is generally the richeft, and got with leaft charge; becaufe, inftead of moulding it with quickfilver, it is melted in furnaces, where the lead evaporates by dint of fire, and leaves the filver pure and clean.
From that fort of mines, the Indians drew their filver ; becaufe, having no ufe of mercury, as the Europeans have, they only wrought thofe whofe ore would melt; and, having but little wood, they heated their furnaces with ylo, and the dung of lamas or theep, or other beafts, expofing them on the mountains, that the wind might keep the fire fierce. This is all the fecret the hiftorians of Peru fpeak of, as of fomething wonderful. There is another fort of ore like this, as black, and in which the filver does not appear at all ; on the contrary, if it be wetted and rubbed againft iron, it turns red; for which reafon it is called roficler, fignifying the ruddinefs of the dawn of the day: this is very rich, and affords the fineft filver.
There is fome that glitters like talck or ifinglafs; this yields little filver; the name of it is zoroche: the peel, which is of a yellowih red, is very foft and broken in bits, but feldom rich ; and the mines of it are wrought on account of the eafinefs of getting the ore : there is fome green not much harder than the laft, called cobriffo, or copperifh; it is very rare : however, though the filver generally appears in it, and it is almoft mouldering, it is the hardeft to be managed, that is, to have the filver extracted from it; fometimes, after being ground, it mult be burnt in thefire, and feveralother methods ufed to feparate it, doubtlefs becaufe it is mixed with copper. Laftly, There is another fort of very rare ore, which has been found at Potofi only, in the mine Cotamifo, being threads of pure filver, intangled together like burnt lace, fo fine that they called it Arana, fider, from it's refemblance to a cobweb.
The veins of mines, of what fort foever they be, are generally'richer in the midule, than towards the edges; and when two veins happen to crofs one another, the place where they meet, is always rich: it is alfo obferved, that thofe which lie north and fouth, are richer than thofe which lie any other way. Thofe which are new places, where mills can be erected, and that are more commodioully wrought, are often preferable to the richer, that require more expence, which is the reafon that at Lipes and Porofi, a cheft of ore muft yield ten marks, of eight ounces each mark of filver, to pay the charges, and at thofe of the province of Tarama, five pay them.
When they are rich and fink downwards, they are fubject to be flooded, and then they muft have recourfe to pumps and machines, or elfe drain them by thofe they call cocabones,

being

## P E R

P E R
being pallages made in the fide of the mountain for the water to run out at, which often ruin the owners by the exceffive expence they infenfibly draw them into.
There are other ways of feparating the filver from the ftones that confine it, and from the other metals that are mixed with it, by free or frong feparating water, made ufe of at fome mines, where other means fail, and where they make a fort of ingots, which they call bollas; but the moft general and ufeful method is to make pinnas or maffes, abovementioned, which are preferred to other forms, on account of their eafinefs in making, and that they fave fome ingredients, which is a thing of confequence in works of this nature, where to fave in the expence, has the fame effect as finding the mine.
It is very natural to fuppofe, that in mines, as well as other things, there happens great variation in their product, and in the value of the product. The mines which very lately yielded moft filver, are thofe of Orura, a little town eighty leagues from Arica: in the year 1712, one fo rich was difcovered at Ollachea, near Cufco, that it yielded two thoufand five hundred marks, of eight ounces each, out of every cheft, that' is, almoft one fifth part of the ore ; but it has declined much, and is now reckoned among the ordinary fort. Next to thefe are thofe at Lipes, which have had the fame fate.
Laftly, Thofe at Potofi yield but little, and caufe a vaft expence, by reafon of their great depth. But notwithttanding the mines here are far diminifhed in their product, yet the quantity of ore that has been already wrought, and laid many years upon the furface, is thought capable to yield a fecond crop; which is a proof that thefe minerals generate in the earth, like all other inanimate things; and it is likewife certain, from all accounts of the Spaniards, that gold and filver, as well as other metals, are continually growing and forming themfelves in the bowels of their natural earths.
This opinion is verified by experience, in the mountain of Potofi, where feveral mines have fallen in, and buried the workmen with their tools; after fome years they have dug the fame place, and difcovered many bones and pieces of wood, with veins of filver actually running through them. Thefe mines belong to him who firft difcovers them : he immediately prefents a petition to the magiffrates, to have fuch a piece of earth for his own, which is no fooner done than granted. They meafure eighty Spanifh yards in length, and forty over, which is about twelve hundred feet in length, and one hundred in breadth, and yield it to the difcoverer, who chufes what fpace he thinks fit, and does what he pleafes with it. Then they meafure juft the fame quantity for the king, which is fold to the beft bidder, there being many who are willing to purchafe a treafure which may prove ineftimable. If any other perfon has a mind to work part of the mine himfelf, he bargains with the proprietor for a particular vein; all that fuch a one digs out is his own, paying the king's duty, which is, for gold a twentieth part, and for filver a fifth; and fome landlords find fuch an account in letting out their ground and their mills, that they live upon the profit, without any hazard.
At Copiapo there are gold, mines juft beyond the town, and all about the country likewife, which have brought many purchafers and workmen thither, to the great damage of the Indians; for the Spanifh magiffrates take away not only their lands but their horfes, which they fell to the new proprietors, under pretence of ferving the king, and improving their fertlements. There is alfo a great deal of magnet and lapis lazuli, which the Indians know not the value of. And fome leagues in the country, there is pienty of falt and faltpetre, which often lies an inch thick on the ground. About an hundred miles eaft upon the Cordelier mountains, there is a vein of fulphur two feet wide, fo fine and pure, that it needs no cleaning.
This part of the country is full of all forts of mines, but in other refpects is fo barren, that the natives fetch all their fubfiftence from Coquimbo; and that way being a mere defart for three hundred miles together, and the earth abounding fo much with falt and fulphur, that the mules often perifh for want of grafs and fweet water. There is but one river in two hundred miles, which the Indians call ancalalue, or hypocrite, becaule it runs only from fun rife to funfet; this is occafioned from the great quantity of frow melted from the Cordeliers in the day time, which freezes again at night, where the cold is often fo great, that the peoples features are quite diftorted.
Hence Chili takes it's name, the word fignifging cold in the Indian language; and we are certainly informed by the Spanifh hiftorians, that fome of their countrymen and others, who firft traded this way, died ftiff with cold upon their mules; for which reafon, the road is now always lower towards the coaft.
We come now to the fecond point, which is the regular commerce carried on between the inhabitants of the dominions of the crown of Spain in Europe, with thofe of America.
The method in which this trade is carried on, is well enough known in general, but few enter far eniough into it's particulars. In order to give as diftinct an account of this matter as poffible, we thail fpeak of the galleons, the flota, and the
flotilla, regifter fhips, and guarda coftas, though we have occafionally touched upon thefe points under feveral other heads; and when we have done this, the reader will perfectly comprehend the myftery of the Spanifh policy in this point. A galleon is, properly fpeaking, a very large man of war, of three or four decks, built in a manner now altogether out of fahion, except in Spain; and the reafon why it is ftill ufed there is, that it affords a great deal of room for merchandize, with which the king's fisips are generally fo much crowded, as to be in no condition of defending themfelves.
That fleet which we call the galleons, confifts of eight fuch men of war; of thefe there are three very large ones, ftiled la Capitana, Ia Admirante, and il Governo, two others which are lefs, la Patacha, and la Margarita, each of 50 guns, and and an advice frigate of forty. The merchantmen which fail with this fleet, and purchafe their licences at a very high rate, are in number from twelve to fixteen, and in burthen at leaft a third part bigger, than is expreffed in their refpective fchedules. Thefe fhips are intended to carry all that is neceffary, either of warlike ftores or merchandize for Peru, and this is the fpecific difference between this fleet and the fota, which is intended for Mexico. See Galleons.
In time of peace ('till fince that of. Aix la Chapelle) the galleons fail regularly once a year from Cadiz, at no fet time, but according to the king's pleafure, and the convenience of the merchants. From Cadiz the gaileons fteer directly for the Canaries, where, if the flota fails with them as it fometimes does, they anchor together in the haven at Gomera: thence they bear away for the Antilles, and when they arrive at that height, the flota feparates, and the galleons bear away for Carthegena. As foon as they double the Cape de 1 Vela, and appear before the mouth of Rio de la Hacha, advice is fent to all parts, that every thing may be got ready for their reception.
In the harbour of Carthagena they remain a month, and land there all the goods defigned for the audience of the Terra Firma ; then they fail to Porto Bello, where they continue during the fairs, which laft five or fix weeks; and having landed the merchandize intended for Peru, and received the treafure and rich commodities fent from thence on board, they fail again to Carthagena, where they remain'till they return to Spain, which is ufually within the fpace of two years. When they have orders to return, they fail firf to the Havannah, and having there joined the flota, and what other Chips are returning to Europe, they fteer through the gulph of Florida, and fo to the ffraight of Carolina, where meet ing with the weftern winds, they fhape their courfe then for the Azores: they take in frefh water and provifions at Tercera, and thence continue their voyage to Cadiz. The flota confifts, as well as the galleons, of a certain number of men of war, and of a certain number of merchant thips: the former are feldom more than three; Ja Capitana, la Admirante, and la Patacha: the latter are ufually about fixteen, in burthen between five hundred and a thoufand tons.
This fleet fails about the month of Anguif, that by the favour of the winds, which prevail about November, they may the more eafily purfue the voyage to La Vera Cruz. In theit paffage they call at Puerto Rico to take in frefh water and provifions, then pafs in fight of Hifpaniola, Jamaica, and Cuba; and according to the feafon of the year, and the nature of the winds, pafs either by the coaft of Jucatan, or higher, through the gulph of La Vera Cruz, which lies at the bottom of it. See Flota and Mexico.
The run of this fleet, according to the courfe we have mentioned, hath been thus computed: from Cadiz to the Canaries, two hundred and fifty leagnes, in about ten days: to the Antilles, eight hundred leagues in twenty days; to the moft weftern point of the ifle of Cuba, five hundred leagues in twenty days; to Vera Cruz, two hundred and fixty leagues in twelve days or thereabouts; in all, eighteen hundred and ten leagues, in about fixty-two days.
As the flota is defigned to furnih not only Mexico, but the Philippine Inands alfo, in order to fupply the trade of Acapulco with European goods, they are obliged to remain there for a confiderable fpace, and, when it is neceffary, they winter in that part. The cargo with which they return, is not fo rich as that of the gallions; but 'till this method was laid afide, it increafed annually in it's value; which muft be owing to the progrefs made in rettling what the Spaniards call the kingdom of New Mexico.
It is ufually in the month of May that the flota leaves La Vera Cruz, though fometimes it is detained in that harbour 'till Auguft. Then the fhips that compofe it fail for the Havannah, for though the galleons and the flota feldom leave Spain at the fame time, yet they generally return together. As foon as they are fafely arrived at the Havanna, they detach a few of the lighteft and cleaneft thips to Europe, who, befides money and merchandize, carry alfo an exact account of the contents both of the galleons and flota. Thefe ihips are called by the Spaniards with propriety enough the flotilla, i. e. the little feet. The principal reafon of fending them in tha manner into Spain, is to give the court of Madrid an opportunity of judging what convoy may be neceflary, in cafe of
any alteration of affairs, to be font to efcort the grand fleet, as alfo to regulate the indulto [fee Indulto], which may be levied on the merchants, in proprtion to their intereft in the galleons and flota: but the reader may poffibly incline to enquire, what obliges this great fleet to remain fo long at the Havannah? To which two caufes may be afligned, viz. waiting for a wind, or for the regifter Chips which they are to convoy home.
A regifter thip is fo called, from it's being regiftered with all A regiter effs embarked in Spain, in the books kept for that purthe effects embarked in Spain, in the books
pofe in the chamber of Seville. As this general account will not probably appear fatisfactory, we thall endeavour to flate the matter more fully.
A company of merchants having, as they conceive, juft grounds to imagine, that European goods are greatly wanted at fome particular ports in the Weft-Indies, they draw up a memorial or petition, containing thefe reafons in the cleareft and concifeft terms, and lay it before the council of the Indies [fee India-House of Spain]. The prayer of this petition is, that they may have leave to fend a chip of three hundred tons burthen, or under, to the port they mention. When leave is obtained, they pay a certain fum to the crown which is generally between thirty and fifty thourand piece of eight, befides prefents, and thofe no fmall ones, to the king's officers, from the greateft to the leaft.
That this, however, may not induce any fufpicion of fraud, they regifter their Thip and cargo, that it may appear confiftent with their petition and licence; and yet (fuch a fatality attends on all cuftom-houfe cautions) this (hip of under three hundred tons, generally carries upwards of fix hundred ton of goods, and affords accommodation for paffengers befides.
Copies from the regifter are tranimitted to the governor and royal officers at the port, to which the regifter fhip is bound; and fuch is their diligence, fuch their integrity, that when the thip comes to an anchor in the port, they make a very narrow enquiry, and yet there is feldom or never any fraud difcovered; but, on the contrary, this fhip of fix or feven hundred ton, returns into Europe with an authentic certificate from all the king of Spain's officers, that fhe does not carry quite three hundred, together with a bill of lading, in the fame ftrain of computation.
By thefe regifter hips there is fometimes a gain of two or three hundred per cent. which enables the owners to pay fo bountifully for cheating the king, having firft got the money by robbing his fubjects.
Thefe regifter Mips go to Buenos-Ayres, St Martha, Porto Cavallo, and other places, to which neither the galleons nor flota come; yct, generally fpeaking, they return with thofe fleets as they fometimes go out with them, and fo leave them in a certain latitude. The S panifh grandees often intereft themfelves in procuring fuch licences; and fome people do not ftick to fay, that they find their account in it.
The profits accruing by this fort of commerce, making thofe concerned therein extravagantly rich in a fhort fpace of time, the Englifh and Dutch in the Weft-Indies, have beretofore had a ftrong defire to be dealing this way, without the ceremony of a licence; and for many years they fucceeded to their wifh, partly by the connivance of the Spanifh governors, and partly by employing fooce.
At length this evil grew fo fagrant, that the court of Spain determined to put an end to it; and in order thereto, fent new governors into America with very precife orders on this head, declaring at the fame time, that they fhould be carried fully into execution.
Thefe inftructions gave rife to the guarda coftas, or guard Bhips, which have flince made fo much noife in the world, and of which I think it neceffary to fpeak more particularly: it cannot be denied, that there was originally good grounds for equipping them, fince the Englifh in come mearfure, and the Dutch more openly, began to carry on an illicit trade by force.
The Dutch veffels were from twenty to thirty-fix guns, and therefore valued nothing the governor of Carthagena could do to prevent their trading on his coalt ; but when the guard fhips were ftationed here, they for fome time put an end to the evil, for falling in with fome of thefe interlopers, they funk one and took two, the cargocs of which were worth upwards of an hundred thoufand pounds; nay, finding on board them fixteen Spanifh merchants, who on a fignal given were come off to trade, they hanged them all without mercy. So far all was right; for without queftion thefe fmugglers, not only prejudiced the king of Spain, but even the fair traders of their own nation, by the clandeftine commerce they carried on.
The captains of the guard hips, however, foon altered their conduct, and inftead of taking contraband traders, infefted the Englifh commerce, and took, without diftinetion, all they were able, at firft under very frivolous pretences, and at laft without any pretence at all.
As the Spanifh governors reaped a confiderable profit from the prizes of thefe privateers, or rather pirates, brought into their ports, they were ready to fend deceitful accounts to the court of Madrid, which produced that firit of obftinacy, which
brought on, all the world knows, the laft war, and trtay very poffibly foon bring on another, unlefs this matter is very foon happily adjufted between the two crowns. See the article Logwood, where I have done myfelf the honour to propofe an expedient for this good purpofe.
To return, however, to the point before us, and to collcet what by thefe different methods comes into Spain from her colonics. This account has becn with great indultry, and, perkaps, without any fenfible error fated thus: in gold, of which the galleons bring home between two and three millions, and the flota generally about one; in filver, by the galleons from eighteen to twenty millions, by the flota from ten to twelve: in precious fones by the galleons, in pearls two hundred thoufand, in emeralds three hundred thouland, in bezoares, turquoifes, amethyffs, \&e. thirty thoufand; and of late by the flota fome turquoifes, to the amount in the whole of fix hundred thoufand pieces of eight. In Vigonia wool, by the galleons, fifty thoufand pieces of eigbt, by the floata none.
Quinquina, by the galleons twenty thoufand pieces of eight, by the flota as much: in raw hides by the galleons, twenty thoufand pieces of eight, by the flota as much. By hides from Buenos-Ayres, in a regifter thip two hundred thoufand pieces of eight; in logwood, by the galleons fixty thoufand pieces of eight, by the flota none. In cocheneal, by the flota and regifter fhips, one million of pieces of eight; in indigo, about two hundred thoufand pieces of eight; in fugar, tobacco, and other drugs, about two millions of pieces of eight. So that the whole may be computed at thirty-eight millions two hundred and ninety thoufand pieces of eight.
We are now arrived at the laft point, which is that of difcoveries. The Spaniards, beyond doubt, have been long pretty much at a ftand; which how ftrange foever it may' appear to us, who fee what prodigious advantages have attended all difcoveries, and more efpecially thofe made by the anceftors of thefe Spaniards in the two laft centuries; yet when we come to reflect coolly upon this matter, we fhall find that the great impediment of farther difcoveries, has been the valt extent of what is already difcovered.
However, not to do the Spaniards wrong, we ought in juftice to obferve, that they have not been altogether fo indolent, carelefs, or inactive, as is commonly reported. The kingdom of New Mexico lies without the fphere of our prefentenquiry, [fee Mexico] and therefore we fhall only fay here, that they have not only made great difcoveries, but great conquefts on this fide, even in modern times; infomuch, that thofe who have been in thefe parts, bave affured us, that the communication is open by thelakes, from thenorth-east Spanishsettiements quite to Canada. See British America, Canada, Colonies, Mexico, florida.
To keep, however, to the province of Peru. All the difcoveries that can be made from thence, muft be either by land towards the eaft, or by the ocean towards the weft; we will fpeak of each of thefe feccinctly.
The countries which are already in the hands of the Spaniards, are of fo great compafs, and afford fuch vaft riches, that they have no very ftrong temptation to make either conquefts or difcoveries; and as the fame thing may be faid of the Portugueze fettlements in Brazil, fo from thence we gather with certainty, that there is a very large country in South America, altogether undiscovered, or at leaft unpossessed by any European nation.
If any one defires to be more particularly informed concerning this point, let him examine the beft maps of South America, which hitherto bave been publifhed, and all the credible relations that have come from thofe parts, and he will find that this undifcovered country of which we fpeak, muft be in length near two thoufand miles from eaft to weft, and near a thoufand broad from north to fouth.
The people poffeffed of thefe parts, are not only the defcendants from their original inhabitants, but alfo vaft numbers of Indians who have fled hither from the cruelties of the Spaniards, and if we confider their multitudes, and the vaft advantages they have from the fituation of the countries in which they dwell, we fhall fee no juft reafon to fuppofe they ever will be conquered, unlefs it be by the mifionaries, in the manner by which they have fubdued the people of Paraguay. [See the article Paraguay.]
However it be, this unknown country contains a great deal more land, as well as many more people, than all the provinces of the Spanifh empire; and there is good reafon to believe that it is infinitely more rich in silver, gold, and jewels, as well as in cattre, corn, sugar, rich drugs, and fine fruits.
Of this we can fcarce doubt, if we reflect on what the beft Spanifh writers themfeives affirm, that at the time Pizarro made his firft eruption into this country of Peru, he found the kitchen utenfils in the meaneft houfes of GOLD, and their roofs covered with thees of the same metal; but there are no fuch great quantities of gold now to be had, whence we ought to conclude, that this immenfe plenty of that precious metal, came from the INLAND PARTs, of which we have been fpeaking.

## P.E R

## P ER

But this is Atill farther demonfrated, by what has happened to the Creole Spaniards, who inhabit the frontier provinces, by which we mean, thofe that lie next to that vaft track of unconquered country. As for inftance, in the province of Popayan, which is fo called from a city of the fame name, large, populous, and rich, the bifhop and his cleigy have done more for the crown of Spain, than could have been done by a large garrifon, for they have converted many Indians, and by bringing them into the city, and matching them with Creole families, they have introduced a commerce with the free inhabitants of the mountains, which is of infinite fervice, and may be a means of reducing the whole country.
It is remarked, that the inhabitants of this province are much more active and induftrious, as well as much braver, than any of the reft of the natives of New Spain: which is attributed to their continual wars with the free Indians, and their being obliged to make long and hazardous journeys, for the managing their own affairs.
There are in Popayan abundance of large towns, well built, and tolerably fortified; but the open country is much expofed to the inroads of the Indians, who, whenever they have an advantage, ufe it cruelly enough againft the Spaniards, towards whom their hate, with juft reafon, is implacable. As the northern frontier of this country joins the weftern ifthmus, which is alfo inhabited by free Indians, the Spaniards are extremely apprehenfive of the ENGLISH MAKING SOME ATTEMPT THIS WAY, AND THEREBY SECURING TO THEMSELYES A SETTLEMENT ON BOTH SEAS: and although there may be fome difficulties attending an enterprize of this kind, yet it is not impoffible, but fuccefs may one day attend an attempt of this kind, if the Spaniards continue tomaltreat this king dom.-But there is a far eafier, lefs hazardous, and lefs expenfive, way, to humble Spain than this, if their conduct towards Great-Britain fhould make it neceffary, which does not feem at all unlikely.
In the like manner there is a very beneficial trade carried on by the inhabitants of the city of Conception, with the Indians behind them, who though they are not fubjects of the crown of Spain, nor have ever negociated a peace with the Spaniards, yet trade with them, and this in a very particular manner.
Thefe Indians are ftiled Peulches, and inhabit the Cordillera, or great chain of mountains at the back of Chili, for a fpace not certainly known, and who retain exactly the fame manners and cuftoms they had before the Spaniards arrived here. When a perfon goes to trade with them, he addreffes himfelf to the cacique, or chief: no fooner this little prince fees a ftranger, than he cries out, What! are ye come? The Spaniard anfwers, Yes, I am come. The cacique's next queftion is, Well, what have ye brought me? The merchant anfwers, a prefent: to which the prince replies, Then you are welcome. A lodging is inftantly provided him, near that of the cacique's, whither all his family go to vifit the ftranger, in hopes be will make them fome prefents.
In the mean time a horn is founded, to give notice to the Indians who are abroad, that the merchant is arrived: upon this they all run to the place where the ftranger exhibits his treafure, confifting of knives, fciffars, pins, needles, ribbands, fmall looking-glafies, \&c.
All there the Indians carry away without giving any thing for them, only the price is fettled, and thus the merchant credits folks he never faw, and whom, for ought he knows, he may never fee again.
After a certain time is elapled, the horn, by the direction of the cacique, is founded a fecond time, when immediately the favages return, and exaCtly perform their refpective promifes. The goods they deal in are cattle, lkins of wild beafts, and fome gold, but this they bring only in very fmall quantities, knowing well how dear the poffeffion of that metal hath coft their neighbours and their anceftors. As for the other Indians, who were formerly fubdued, and have now recovered their freedom, they have little or no intercourfe with the Spaniards.
In refpect to the difcoveries that have been made of iflands or countries at any diftance in the Pacific Ocean, between the continent of Peru and the Philippine Ifands, they are not much to be boafted of. The iflands of Solomon, indeed, are reported to have been worth the feeking and poffeffing, as being large and pleafant, having excellent ports, and immenfe treafures of filver ; yet in the face of almoft two hundred years, thefe valuable countries have fcarce been feen, and never fettled or conquered; nay, fome who are defirous of paffing for men of fuperior fenfe, and not to be ed away by flying reports, are inclined to think thefe iflands maginary; yet if this fort of wifdom had prevailed, in Porugal or Spain, when the firft propofals for difcovery, were made, we might have known as little of the Eaft-Indies and of the Weft, as we now do of thefe inlands; fince the reafons and rumous upon which thefe difcoveries were undertaken, were certainly lefs clear and cogent, than what bas been, or may be offered in refpect to the illands of Solomon; and as this is a fubject fomething new, and which has never been treated, at leaft in a fatisfactory manner, the giving the
reader a hort and methodical account of it, may be efteemed curious and entertaining'; nor is it impoffible that it may fall into the hands of fome, who may alfo think it ufeful.
The iflands of folomon were originally difcovered by Alvaro de Mendoça, under the orders of the licentiate Lopez Garcia de Caltro, in 1567, and looked upon as a very great thing. But as the Spaniards were always pretty flow in their motions, and, befides, were under a neceffity of waiting for orders from Europe, it was ten years before they made any farther progrefs; but when they were about to have undertaken fuch an expedition, as they flattered themfelves would have put them in poffeffion of a new Indies, they received directions from Spain, not only to lay afide the defign for the prefent, but to fupprefs, with the utmoft care and diligence, all papers, charts, letters, and whatever elfe might give the leaft light into the fituation of thefe iflands, on account of Sir Francis Drake's expedition, who actually paid a vifit to the South-Seas in 1578 . As foon as they were recovered from this fright, and were in a condition of thinking of fuch matters again, the project of difcovering the iflands of Solomon was revived; but was again defeated before it could be put into execution, by the arrival of commodore Cavendifh in the South-Seas, in 1586 . However, having taken about nine years time to breathe, Don Alvaro de Miranda was fent with a fquadron of four fail of flipg upon this difcovery. They did not find the iflands of Solomon, but they found other iflands very near them, of equab, if not of greater value ; but they behaved fo very ill, that they compelled the natives to have recourfe to arms, by whom they were driven out, and obliged to fly for thelter to the Philippines.
In their paffage thither, three of their fhips were loft, and the only one that efcaped, arrived in a thattered condition, This affair, however, had been then profecuted, if Capt. Richard Hawkins had not arrived in this ceitical juncture in thofe feas, as he himfelf tells us in his curious and excellent account of his Voyage thither.
It is a very mutulated and dark account of this expedition of Don Alvaro de Miranda's, that we have in the fourth volume of Churchill's Coilection of Voyages, under the title of a Fragment of the Difcovery of the iflands of Solomon; and there is a very ftrange blunder in the date, of abgs for 1595, which renders the whole account almoft unintelligible.
That this is the true fate of the matter appears from hence, that in this voyage the Spaniards picked up one of Cavendifh's men, in which there is nothing ftrange, if it was undertaken nine years after, but would be very extraordinary indeed, at the diftance of one hundred, and nine.
There was one Ferdinand de Guiros who laboured hard to get this project refumed; and fome memorials of his are fill extant, which were printed at Seville in the year'1610, from which time this affair flept for any thing we know, for near one hundred years.
However, in 1709 , when Capt. Woods Rogers was in the South-Seas, there was a veffel fitted out by a Spanifh gentleman from Lima, in fearch of thefe illands, but having the misfortune to be taken by the Englifh, almoft as foon as he had failed, the bufinefs was once more dropped. About ten years after this, while fome of the perfons who were with Capt. Shelvock, in his expedition, were prifoners at Lima, there came in two fhips at a fmall diftance of time from each other, the crows of which reported, that being driven by froms out of their courfe, they had fallen in with thefe iflands, which they defcribed very circumftantially, with fuch manifeft correfpondence in their accounts, that one Mr Thaylet, a Frenchman, was fent by the viceroy in a fmall floop in fearch of them; but having only two months provifion, he returned without doing any thing: it may be, that Providence has referved the, difcovery of thefe illands, and the fouthern unknown continent, for fome other nation.
PERUVIAN BARK. The quinquina, Peruvian bark, or the bark againft fevers, is the external bark of the trunk and branches of a tree, that grows plentifully in Peru, from whence this is brought us by the way of Cadiz.
According to the judicious Mr Bernard, the tree of which the quinquina is the bark, grows in the province of Quito in Peru, upon the mountains near the city of Loxa. This tree is almoft the fize of a cherry-tree; the leaves are round and indented: it bears a long reddifh flower, from whence arifes a kind of hufk, in which is found a kernel like an almond, flat and white, cloathed with a thin rind; that bark which comes from the trees at the bottom of the mountains, is thicker, becaufe it receives more nourifhment from the earth: it is fmooth, of a whitigh yellow without, and of a pale brown within. I hat which comes.from trees on the tops of mountains, is much thinner; it is uneven, browner without, and of a higher colour within; but the trees which grow on the middle of the mountains, have a bark yet browner than the other, and more rugged. All thefe bark; are bitter, but that from the trees at the bottom of the mountains, lefs than the others.

It follows from hence, that the bark of the leaft virtue, is that which grows in the loweft places, becaufe it abounds more with earthy and watery parts, than that which grows high, which, for the contrary reafon, is better; but the beft of all, is that which grows in the middle of the mountains, becaufe it has not too much or too little nourifhment. There is another kind of quinquina, which comes from the mountains of Potofi, and is browner, more aromatic, and more bitter, than the former, but abundantly fcarcer than any of the reft.
Befide the qualities remarked in this bark, it ought to be heavy, of a firm fubftance, found and dry. Beware of fuch as is rotten, or hurt by wet, and fuch as flies into duft in breaking, or is dirty and unclean, as it happens to be fomesimes : but make choice of fuch as is in little thin pieces, dark and blackifh without, with a little white mofs, or fome fmall fern-leaves fticking to it, reddifh within, of a bitter and difagreeable tafte, and refufe that which is full of threads when broke, and of a ruffet colour; and take care that there be not feveral pieces of wood mixed with it, which you have fometimes fticking to the bark. This was brought firft into France in the year 1650, by the cardinal Lago a jefuit, who having brought it from Peru, it was had in fuch vogue in France, as to be fold weight for weight for gold, but the quantities of it foon afterwards brought over, quickly leffened the price.
The ufe of this bark is for the cure of fevers, efpecially intermitting, for which purpofe it is given in fubftance, tincture, or infufion; but as it is a medicine fome people have an utter averfion to, and as the ufe of it is of ill effect, unlefs properly applied, we would advife no booly to make ufe of it without the direction of an able Phyfician.
To prevent the return of the ague, this method ought to be continued for eight days, three times a day; firft, early in the morning, then an hour before dinner; and at night, an hour before fupper; but if the ague fhould return again, as it does, if you purge after it, the ufe of the bark mult be repeated after the fame manner as before, and it will not fail to produce the defired effect, which is abrolutely to cure the ague. But though the ague feems to be perfectly gone, for feveral revolutions of fits, yet it is neceflary to continue the ufe of the remedy for twelve days, by which means you will fecure the patient againft any frelh affault.
It is at the end of the fit that the dofe is to be given, and it muft be continued 'till the cure is perfected ; which in a fingle and double tertian, commonly happens at the fecond fit, or at moft at the third: the fame is to be uneerfood in a fingle and double quartan, wherein you have two whole days to give the medicine in, without interruption; in which, as in the tertian, the ague is maftered at the third and fourth fit, if not at the very firt, which often happens; and to prevent it's return, the ufe of the bark is to be the longer continued after the cure; for it is the too hafty difoontinuance of it which caufes the relaple, and puts the patient to a new trouble of running over the fame courfe again.
This medicine ought not to be given at the coming on of the fit, nor yet during the time of it; becaufe then, inftead of alleviating the force and violence of the ague, it would be apt, by reafon of the febrific ferment, to excite a fiercer conflict, and make the paroxyfm the more violent. This method being obferved, the medicine will interrupt the courfe of the difeafe in it's progrefs; and being conveyed into the mafs of blood by a gentle motion, it purifies it, and deftroys the feverith ferment, which would produce a new fit. It ought likewife, to be given at feveral times, to produce gradually, the wifhed for effect; and but a fmall fpace of time ought to be allowed between each dofe, that the fecond dofe may begin it's operation, when the force of the firft is over; and the third may begin to act, when the ftrength of the fecond is loft. It is given, in like manner, two or three hours after, that thereby it's virtue may the better unite itfelf with the chyle in the fomach, in order to it's entrance into the mafs of blood, to correct, depurate, and renew it. If this courfe is purfued, the cure is in a manner certain and infallicounte is purfued, the cure is in a mannet certain and infali-
ble, and it will hardly be poffible for the fit to return again. When the paroxyfm is gentle, in a good habit, and a good feafon of the year, there is no need of giving it above five or fix days together, once or twice a day in the intermifion ; but when the paroxyfms ore ftrong, ofterer, as before directed The ufe of this bark, the Spaniards fay, was difcovered by accident: an Indian in a fever accidentally drinking the water of a pond, into which feveral of thefe trees were fallen, was cured by it ; which made people fearch into the occafion, and fo difcover this ineftimable medicine.
ETTYCUSTOM, or ALIEN's DUTY. Thisduty is payable by * merchant-ftrangers, that is, aliens born, ordenizens, on all goods imported liable to the fubfidy of poundage (unlefs where the original old fubfidy has been entirely taken away) but not on thofe liable to the fublidy of tonnage, becaufe an equivalent is included in the old fubfidy.

* ith rule of certain rules, orders, directions, and allow12th rule of certain rules, orders, directions, and allow-

To be paid in ready money, without difcount, upon due exportation, as directed for the old fubfidy, \&cc. drawback, or repayment of this duty, muft be allowed, as follows, viz.

The drawback

* Currants, the hundred weight, all but All other goods, nothing.

6th rule. See the Bufinefs of the Custom. House at the End of every Letter.

PEWTER, a factitious metal, ufed in the making domeftic utenfils. The common fort is a compofition of tin, regulus of antimony, and tin-glafs, in feveral proportions, fuitable to the quality of the metal intended to be made. There are other ways of making it, with tin, lead, and copper; but that with any degree of copper is efteemed unwholfome.

## To make Pewter hard.

Take one pound, or what quantity you pleafe, of pewter, and Jet it melt in an iron pan; add to it fome fallad oil, let it evaporate well, and ftir it continually, keeping the flame from it ; add to this fome fine wheat-flour, and fir it well about ; then take all the burnt matter off the top, and to each pound of tin add three or four ounces of plate brafs, cut in fmall pieces, mixed with oil, and a few ounces of pulverized bifmuth, or regulus of antimony; ftir it all the while, and, when all is melted and incorporated, you will not only have a pewter that is harder and whiter, but alfo different in it's found from common pewter. Or,
Melt tin in an iron pan, frrew colophony or rofin, with fine wheat flower mixed together, into it, and ftir it gently about; this takes off the blacknefs, and makes it of a fine white colour. If you would have it hard, add to each pound of tin one or two ounces of pulverized regulus of antimony and veneris; this makes it white, hard, and gives it a clear found.
PHARMACY, that branch of phyfic which teaches the preparation of medicines. It is ordinarily divided into Galenical and Chemical; the former is called fimply pharmacy, and confifts in the knowlege and management of the materia medica, in an unchemical way, as it were, and without the torture of bodies, as the art of chemiftry inftructs.
Pharmaceutical chemiffry defines the art of dire $\mathcal{A}$ ing and performing the feveral proceffes or methods of manual operation, whereby natural fubftances are reducible to artful medicines.
Thus the whole art confifts of the theory and practice: the former is claimed by the Phyfician, and the latter is affigned to the Apothecary.
A succinct Account of the Art of Pharmacy.
Moft of the natural bodies being fome way or other employed as fubjects of pharmacy, the materia medica is extremely large, and it's operations various. It's materials, in the earlieft ages, indeed, were few, and the ways of managing them

6 C
were
were fimple: fubjects afterwards multiplied, operations increafed, and, at prefent, we feem abundantly focked with both fimple and compound medicines.
But the hiffory of pharmacy may deferve to be more pasticularly treated, in order to fee by what means it arrived at it's prefent flate, and how it may be further advanced.
Difeafes mult bave been early, if the firft inhabitants of the world experienced the fame changes of feafons, breathed the fame kind of air, and ufed a like diet and regimen of life with ourfelves. But foon after a difeafe afflicts, the patient feeks a remedy: whence we may reafonably fuppofe, that this was the foundation of pharmacy in various parts of the world.
Expdriments being thus multiplied, and the event gradually introducing better methods of preparing the fimples, pharmacy would begin to appear in the form of an art: yet, when Hippocrates came to compile a kind of a fyftem of phyfic, from the obfervations of antiquity, he defcribed but few, and thofe were generally fimple.
Succeding phyficians enlarged the materia medica: Galen confiderably fwelled the catalogue, which received many additions from the Arabians.
And, when learning began to revive in Europe, the materia medica was again enlarged, and great changes wrought upon it by chemiftry: whence chemiftry at length was generally received, and acknowledged of ufe in pharmacy.
Both the galenic and chemical parts of this art are now extremely copious. Neceffity gave the occafion, nature fapplied the materials, and art and obfervation difcovered their preparations; virtues, and ufes.
Thus we at prefent feem provided of a competency of fanding medicines; and phyficians have, by degrees, acquired a method of prefcribing in extemporaneous forms.
The art of pharmacy may be confidered under the management of phyficians, apothecaries, trading chemilts, and druggifts.
ft is the office of the phyfician to direct the medicines, or give the rules of extracting, compounding, and managing the fimples. If the phyfician, therefore, thould be defective in this part, let the apothecary, the trading chemift, and the druggift, be ever to jut, or ever fo knowing, the att of pharmacy muft fall fhort of perfection.
To the apothecary belongs the reduction of the materia medica into certain forms of medicines, according to the direction of the phylician.
But there are two kinds of apothecaries, vulgarly known by the names of wholefale and retale apothecaries. It is the latter alone we are here concerned with: thefe act by rule, generally follow their ftandard, and compound with art and care; though they will fometimes fubftitute quid pro quo, and now and then venture to reverfe an order. According to theix ikill and care, they are more or lefs liable to be impofed on by the druggift, and the trading chemilt, all of them ufually felling what they buy; but if the apothecary be here often deceived, how ftands it with the patient and phyfician, or what is the ftate of pharmacy?
The retale apothecaries, however, deal more in fubfitution than in fophiftication. The prudent phyfician, therefore, prefcribes what is ufually kept, and proper to keep, in the fhops, or what is otherwife eafily obtainable. If there are other abufes committed in this part of pharmacy, they may, perhaps, be chiefly attributed to fome want of fkill or conduct in the phyfician.
The defign of the trading chemifts and druggifts is to furnifh medicinal matters to the apothecary, who cannot always detect an artificial counterfeit, or a dextrous fophiftication: and perhaps many remedies well defigned by the phyfician, have failed or had mifchievous effects upon this account.
This is propofed as a fort intimation of the prefent flate of pharmacy in England. If the art be found more perfect in other nations, it may, perhaps, be chiefly owing to this, that their phyficians are well acquainted not only with the theory, but alfo the practice thereof; two things which Chould never be feparated, as being, in reality, but one effective thing, confifting of two parts, viz. previous notion, and execution. What ufeful addition or reformation the materia medica is capable of receiving, no one at prefent can fay. If a ftrict enquiry were made, perhaps it might be found proper to throw cut of our prefent collection a confiderable number of materials to make room for others of greater efficacy. But this is no work for private perfons: our prefent bufinefs is to fee whether any improvements may be made in the ways of preparing the common medicines of the fhops.
For the better regulating of our enquiry, it may be of fome fervice to lay down two larger obfervations, viz. 1. That the defign of pharmacy is to leparate from bodies the more medicinal parts with which they are naturally endowed, and, upon occafion, to mix fuch of them together as will beft anfwer the curative intentions. All in the power of art is only to reparate and mix, or diferently modify, it is nature alone that is able to produce. Pharmacy, therefore, confilts in analyfis and fynthefis.
As it is the perfection of art to copy nature jufly ; fo, by refolving bodies into their principles, we obtain a general rule
for compofition, and fee the feveral fteps we ought to take in it. Nature thews us, that, in all mixed bodies, there is a bafis, or fubftratum, fomething to fupport and envelope the other ingredients. The natural falts are thus diluted with water, the oils with both, and altogether compofe one uniform and elegant whole. To prefcribe juftly, therefore, the phyfician hould imitate nature; but, if we compound without regard to this rule, the ingredients will appear huddled together, as if it were by chance; and, inftead of preferving and affifting, they will often clog, incumber and deftroy each other.
We now proceed to our experiments, whereby may be illuftrated and improved, (r.) The common method of diffilling fimple waters. (2.) The common method of preparing tinctures. (3.) The method of preparing fyrups. (4.) The method of making electuaries; and, (5.) The method of making compound oils, unguents: thus propofing to touch upon the chief articles of the prefent Galenical pharmacy, as it is vulgarly called, though, in reality, it is fomething chemical alfo.

## Experimenti.

## The beft way of diftilling fimple waters.

Take as much dried mint, cut fmall, as will fill two-thirds of a ftill ; then adding a fufficient quantity of rain water to make the plant float commodioully, yet leaving a fourth of the ftill empty, digefted a while with a gentle heat; then work the ftill, drawing off only fo long as the water appears thick or milky, and taftes rich and grateful; whereby you will obtain a fimple mint-water, in tolerable perfection.

## Obseryation.

This experiment, with a few occafional alterations, may fhew a general method of obtaining fimple waters in their greateft perfection. The fubjects beft fitted for it are thofe of the odorous, aromatic, and oily kind; though fome others alfo may, perhaps, communicate particular virtues to the water: among the fitteft may, however, be reckoned angelica, anifeed, baulm, camomile, cinnamgn, cloves, fennel, hyffop, rofemary, tanfey, wormwood, \&cc. but particularly pepper-mint, which affords an extremely aromatic, pungent, and agreeable water, good againft the cholic, and many other diforders of the ftomach and bowels; whence it's ufe, perhaps, is too little known.
It is a principal caution in this operation, to remove the receivers before the more pellucid, acid, faint, and dead water comes over, as it foon will do, and, if fuffered to mix among the reft, is apt to fpoil the whole, by giving it a vapid or faint tafte, and fometimes a degree of acidity, or vitriolic ftypticity, and an emetic virtue: for part of the effential falt of the plant, now rifing, ufually corrodes the copper head of the ftill, and carries over with it fome particles of the metal: whence thofe waters fhould either be diftilled with a glafs head, or one of pewter, or tinned copper, or elfe the operation fbould be carefully watched, that the fecond running may not mix with the firft. The greater care mould here be taken, becaufe fome patients, more particularly children, and thofe of a tender habit, have fuffered through a negleet berein; by being vomited; purged, and griped by the ufe of a fimple water, contrary to the intention.
The fimple waters diftilled after the manner of the prefent experiment, may, in many cafes, prove too ftrong to be ufed alone; but then it is eafy to lower them with common diftilled water, to the proper ftrength: and this is, beyond all comparifon, better than to mix fuch waters with their own faints, or liquor of the fecond running.
There are two improvements that might be made in this method of obtaining fimple waters: the firft is, by means of cohobation and digeftion; the other, by means of the previous fermentation of the plant. With regard to the firft, if the liquor remaining in the ftill be expreffed from the herb, and returned along with all the water that came over upon a freth quantity of the fame fubject, and they be digeffed together, in a gentle heat, for two days, then diftilled as before, the water thus obtained will be much richer, and more efficacious than the former: and, if the fame procefs be repeated two or three times, thofe who have not tried would fcarce imagine how rich a fimple water may be thus procured. And this method we would particularly recommend for making the fimple water of baulm, elder-fowers, rofes, camomile, and the like fubjects, but fparingly furnifhed with effential oils, for they otherwife make but indifferent waters.
The other way of improving fimple waters, is ufing by a previous imperfect fermentation: this is performed by adding to the plant and water put together, as in the foregoing experiment, a tenth or twelfth part of fugar, or honsy, or elle a fortieth part of yeaft ; then fetting the whole in a warm place, to ferment for two or three days only, fo that the herb may not fall to the bottom, nor the fermentation be above half finiifhed; then the whole being committed to the fill, a water may, at one operation, be obtained extremely rich, or impregnated with the full virtue of the plant. And thus may fimple waters be made fit for long keeping without foiling;

## P H A

P H A
the fmall proportion of inflammable firit generated in the fermentation, ferving excellently to preferve tbem. And thefe two methods feem applicable to the improvement of all thofe fimple waters commonly found in the fhops.
We fhould next proceed to fhew the method of perfecting or improving compound waters, if we had not already endeavoured to do it under the article Distillation, Vol. I.

## Experimentil.

The beft way of making light tinctures and infufions.
Take half an ounce of the rind of Seville orange, fhaved thin; half a drachm of gentian-root, thin fliced; a fcruple of the tops of Roman wormwood, half a drachm of cardamums, and half a drachm of cocheneal, each of them flightly bruifed: thefe ingredients put to fteep, for a night, in a pint of French brandy, and filter the liquor next morning.

## Onservatyon.

This experiment is general, and not propofed for it's own fake, but to ihew the method of making all kinds of the lighter and finer tinctures and infufions without fire, which would here prove prejudicial: the preparation itfelf is, however, a good fomachic bitter, of the fame general nature with thofe commonly fold under the name of Stoughton's elixir.
The excellence of thefe preparations depends not more upon the choice and goodnefs of the ingredients, than upon the manner of their being infufed: for, if fuffered to remain too long in the menfruum, or if heat be ufed in extracting the tincture, the grofs, terreftrial, and naufeous parts of the ingredients will be fetched out, and the tincture thus be loaded with a heavy indolent matter, of little virtue. But if the infufion be made in the cold, and the liquor ftrained off foon, only the finer and more firituous parts of the ingredients will be imbibed by the menffruum; whence the preparation will not only tafte and fmell more brifk and agreable, but alfo have a much greater virtue and efficacy. But if, through the fhortnefs of their continuance in infufion, the ingredients hould not have fufficiently impregnated the liquor, the method is to pour the liquor again upon fuch frefh ingredients, and again to ftrain it off, without letting it flay too long upon them, or feeling the heat of the fire. Thus, by repeated effufions of the fame impregnated menftruum, upon freflh ingredients, an infulion, or tincture, may be obtained, of almoft any degree of ftrength or richnefs, without containing the groffer or more concretive parts of the ingedients, but only what may be called the finer firit, or quinteffence: and this is no inconfiderable fecret, both in chemiftry and pharmacy, and may deferve the regard of thofe who defire to procure the full virtues of the fimples, unaltered in their nature, yet exalted, or concentrated to fuch a degree, that a few froonfuls of the liquor ©hall contain the Spirit, or quinteffence of a pound of a plant.
And this is an effect not to be expected from the fire, which almoft conftantly alters the nature of things committed to it ; nor could a valuable effence of violets, jafmin, lilies, borrageflowers, and any flower or plant of an extremely fine odoriferous fpirit, be procured by heat, as it readily may by feeeping thefe flowers in cold water, cold vinegar, cold wine, or the like, and frequealy pouring the tinsture upon frefh flowers, 'till the liquor becomes Atrongly impreguated.
Apothecaries ufually commit the fame error in preparing the finer tinctures, that they do in working their cordial waters, and in both cafes faturate the liequor with the groffer, more ufelefs, and lefs fpirituous parts of the ingredients; whence the cordial waters of the fhops too often abound with a grofs, heavy, difagreeable oil; and the tinotures of the Gops with a grofs heavy earth, or kind of bitumainous matter, inftead of a brik, lively, and invigorating fpirit, which alone is the thing required in both cafes.
This doctrine of tinctures and infufions thould be reduced to rule, for the improvement of chemiftry; which will never be perfected 'till it can excraci, feparate, and concentrate the virtues of things unimpaired, or unaltered in their nature. And doubtlefs it would prove a very ferviceable thing in chemilfy, medicine, and natural philofophy, to know the beft and eafieft ways of concentrating the virtues of bodies unaltered: and this may, in fome meafure, be effected by the prefent method, and practifed with well-adapted menftruums: for, in general, (1.) A quick and cold infufion extracis the firit of vegetables; but a hot and long one confounds, impairs, or deftroys it. (2.) To repute the infufion of a frefh fubject quick and cold, in the fame impregnated mentruum, feems greatly to collect and concentrate the firit, that is, the finer and more effential part of bodies. (3.) The proper menflruums for this purpofe feem to be fuch as pure rainwater, vinegar, wine, water mixed with a little fine alcohol, water and a little fugar; and, for certain ufes, the common atmofpherical air, which is an excellent menftruum to extract the fpirit or effluvia of plants, as we remarkably find in ficy groves and gardens, and may, in fome cafes, be ufed with good effect.

But, to obtain the faturated tinctures of hard, refinous, of gummy bodies, requires a different treatment, as in the following

## Experxment.

Take two ounces of that hard Indian rofin called gum-lacque, and reduce it into a fine powder, make it into a kind of fliff pafte, with oil of tartar per deliquium; fet this pafte into an open glafs to dry, by a gentle heat; then remove it to the open air, that it may relent or grow foft; and after this dry it again, as before: and, by repeating the procefs once or twice, the hard body of the rofin will at length diffolve into a purple-coloured liquor; which being now gently dried, and reduced to powder, will afford an excellent tincture, by being boiled for two or three hours in a tall glafs, with alcohol.

OBSERUATton.
This procefs is almoft general, or may be advantageoufly ufed for making the tinctures of myrrh, gum-juniper, dragon's blood, amber, and other hard gummy fubftances, which will fearce otherwife yield a tincture in fpirit of wine. Any improvement in the extracting tinctures with alcohol, may tend confiderably to improve the art of pharmacy, becaufe fuch tinctures are generally found powerful medicines; the fpirit of wine appearing greatly to increafe the virtue of the fubjects. Thus, though the tincture of amber, prepared in this manner, appears to be only a bare folution of the fubfance of the amber, yet it is found to have fuch effects as are no way equalled by any fine powder of amber: and, what feems remarkable, though fo large a quantity of fixed alkali be ufed in the preparation of thefe tinclures, yet they give no manifeft figns of containing an alkali; which is therefore changed in the operation, whether by the acid naturally contained in thefe refinous and gummy bodies, or by being expofed to the air, or both.
There are more methods of extracting the tinctures of there hard gummy bodies; but that delivered appears to be beft, though it might, perbaps, be fhortened, by ufing fome proper intermediate fubitance to divide the particles of the fub ject, fo as that the alkaline falt, the air, and the fpiritous menfruum, might all come into fuller confent therewith, and act more forcibly thereon. And for this purpofe pure virgin earth is recommended, fuch as is commonly ufed for the making of tefts or cupels; by means whereof firit of wine will extract a tolerable tincture from myrrh, without the addition of any fixed alkali.
But when tinctures not Cpirituous; or only aqueous folutions of thefe hard gummy bodies, are required, the ufe of the foluble tartar, or tartarum tartarizatum, is proper; for a folution of this falt will readily difolve myrrh, even in the cold, as water diffolves gum arabic.

Experimentill.
The bef method of making fyrups.
Take three ounces of the yellow external rind of frefh oranges, and infufe them in a clofe veffel, with a gentle heat in balneo marix, for fix hours, along with a pint and a balf of pure water; then fuffer the infufion to cool; filter the liquor, and add to it twice it's own weight of hard double-refined fugar, made into a fyrup, in a ciofe veffel fet in balneo marix.

Observation.
We would not contrive a general example to fit all fyrups, becaufe they differ greatly in the liquors of which they are made ; or according as thofe liquors are infufions, decoctions, natural juices, wines, or vinegars. We chofe to give an inftance in a fyrup made of a liquor by the infufion of an aromatic fubftance, whofe virtue would be almoft entirely loft if the fyrup were to be prepared by long boiling, as it is fometimes directed, with lefs than an equal weight of fugar. Difpenfatory writers have, perhaps, no where erred more remarkably, than in directing the making of fyrups, which feems the more ftrange, becaufe this part of pharmacy is extremely facile: the misfortune feems to have lain, that great men cannot fubmit to confider common and ordinary things; whence, however, the credit of a phyfician may fink in the efteem of thofe who, by their employ, are led to a knowlege of thefe ordinary things.
It is judged, that the whole of this bufinefs may be reduced to a few eafy rules, which we fhall here endeavour to lay down, for improving this branch of pharmacy. And, ( I .) It is matter of experience, that aqueous infufions, decoctions, or other aqueous liquors, require twice their own weight of dry fugar-candy, to make them into a fyrup of a juft confiftence for keeping, without candying or fermenting. This rule, by directing the ufe of fugar-candy, feems to fix the confiftence of fyrups with exactnefs; becaufe all falts acquire a determinate proportion of water in chryftallizing; fo that fugar, in the form of candy, confifts of one certain proportion of water, whilft different kinds may hold more' or lefs aqueous matter, according to their manner of refining, the accidents of the weather, \&ic. Hence, therefore, all fuch infufions for fyrups as ara of delicate or deffructible colour,

## P H A

which is impared by boiling (for example, violets, clove-july-flowers, \&c.) and all fuch infufions as contain any volatile parts, which would evaporate by a boiling heat (for example, thore of nutmeg, cinnamon, orange-peel, citronpeel, $\& \mathrm{cc}$.) fhould have twice their own weight of fugar added to thern, and be kept clofe covered, in the gentle heat of a balneum marix, 'till the fugar is diffolved; and, to haften the folution, the fugar fhould be firft reduced to fine powder.
(2.) The decoctions of fuch vegitable fubftances as lofe no valuable parts by boiling, may be boiled down to the form of a fyrup, along. with their own weight of fugar, the two being firft clarified together, with whites of eggs, in the ordinary way; but, if the ingredients here contain any unctuous or balfamic parts, whereon their medicinal virtues depend, let the fugar be added from the firft, and boiled along with the ingredients, afterwards ftraining and clarifying the decoction, before it is boiled to near the full confiftence of a fyrup.
This rule is founded upon that remarkable property which fugar has to diffolve oils, or the finer refinous fubitances, fo as to make them intimately mix with water: whence it may deferve to be confidered, whether the fyrup of myrtles, comfrey, and diacodium, fhould not be thus prepared. It muft alfo be obferved, that, by boiling the fugar fo long with the decoction, the aqueous part exhales and leaves the fyrup much ftronger than it could have been made without this boiling.
(3.) All vegitable juices are to be thoroughly purified before they are made into fyrups. Thus the juices of citrons, lemons, and oranges, are to pals the filter, and then be made into fyrups, without boiling, according to the firft rule, obferving to ufe no metalline veffel about them. But the juices of fruits, as particularly mulberries, rabberries, \&c. will not clarify without beginning fermentation; but, by ftanding for a day or two, they will begin to ferment and liquify, and may then be commodioully ftrained through flannel; after which, thefe alfo are to be made into fyrups, with about an eighth part lefs than twice their own quantity of fugar, or with two pounds and twelve ounces of fugar to a pint of juice, on account of their being fomewhat faccharine themfelves.
And this bolds alfo of wines and vinegars, when they come to be made into fyrups ; for wine contains an inflammable fpirit, which does not incorporate with fugar, and alfo a thick fyrupy fubftance, which is alfo found in vinegar. And, by a due application of thefe rules, we apprehend the bufinefs of making fyrups may be reduced to tolerable perfection.
The beft method of making electuaries, by an example in the faffafras electuary.
Take two ounces of the beft faffafras, newly rafped, and half an ounce of cinnamon, finely powdered; boil them together in a tall glafy, in a fand-heat, with so ounces of water, and 14 ounces of fugar, fo as that nothing might evaporate, for two hours; then fraining and preffing out the fyrup, add to it an ounce of frefh-rafped faffafrafs, a drachm of cinnamon, and 10 grains of nutmeg, all reduced to fine powder, and make the whole into an electuary.

## Observation.

In the common method of making this electuary, the faffafras and cinnamon are boiled in the water, whereby a great part of their virtue is loft, or not extracted, whence the medicine comes to be defrauded of it's due: but here, by boiling the ingredients in a tall glafs, with a due proportion of fugar and water, to make a fyrup (allowing an extraordinay proportion of water for what the faffafras will drink up) we obtain the fine aromatic virtues of the ingredients to advantage, without any confiderable lofs.
To make electuaries in perfection, where a fyrup is employed as their bafis, (I.) The fyrup fhould be prepared in the manner above delivered, fo as that the virtues of the ingredients may be preferved. (2.) The powders, or fpecies employed, Thould be frefh, and fine ground. (3.) The gums, where any are ufed, muft be be well cleanfed, and diffolved in their proper menftruums ; and, (4.) The whole muft be mixed, or thoroughly united into a fmooth uniform fubftance, of a due confiftence for keeping, without either candying or running into fermentation.
Where fyrups are ufed in the making of electuaries, care is not only required, that the virtues of the ingredients of the fyrups be preferved, as much as the form will allow of, but allo that it's confiftence be not too high, for this would difpofe it to candy in the electuary, and render the medicine unduly mixed, or knotty, the fugar thus concreting together in lumps, or flooting away from the fpecies.
If the fyrup be made too thin or aqueous, fo as not to furpend and hold the powder together, by a binding confiftence, the fyrup will of neceffity ferment in hot weather, and become fomewhat vinous, afterwards four, and at length corruptive, [fee the articles Brewing, Distillation, and Vinegar-Making] fo as to change, invert, or deftroy
the nature of the medicine; for purgative ingredients, by fermenting, lofe their purgative virtues : and all other ingredients, by corrupting, are reduced to an indolent kind of freces, or caput mortuum, very different from the thing in-tended.-See the article Wines. Hence electuaries that have thus fermented, or changed their nature, may fometimes prove pernicious, inftead of falutary.
The electuaries made with the pulp of fruita are lefs difpofed to keep for any confiderable time perfect, on account of the greater tendency which fuch pulpy fubftances have to fermentation and putrefaction: thus, though the lenitive clectuary were made ever fo artificially, it will fcarce keep many months without altering it's nature, and efpecially if the confiftence was originally too thin: whence fuch electuaries should be made in fmall quantities, or frefh as they could be wanted. But this does not hold of the capital electuaries, fuch as $V_{\text {e- }}$ nice-treacle, or mithridate, which require to lie for fome time, that the ingredients may digeft or ripen, as it were, and grow mellow together; for the gums and fpices that enter their compofitions preferve the medicines from alterations for the worfe, and the mixture becomes more perfect by time, provided the honey ufed in their compofition does not candy, or the whole become too dry. To keep the honey from candying, fome artifts mix the fpices and gums with it unclarified, taking care only to feparate the foul parts that lodge either at the top or bottom. And, if the medicine prove too dry, it is ufual at any time to foften, or beat them up in a mortar, with canary: thus thefe capitals of the fhops are fuppofed to improve by keeping. But diacodium having few of the warm gums in it's compofition, is more apt to alter, and lofe of it's aftringent quality by keeping: for which reafon it feems an alteration here for the better, to ufe a quantity of faccharum rofatum inftead of honey, or diacodium, as this not only gives a greater compactnefs to the medicine, but alfo contributes to preferve it's colour and virtues.
The powder, or fpecies, that enter into the compofition of electuaries, thould be frem, becaufe they lofe of their virtues by keeping, and they fhould alfo be fine ground, becaufe they would not otherwife intimately mix with honey or fyrup, nor fo readily part with their virtues in the ftomach, nor render the medicine fo agreeable to the eye. The common method of reducing thefe powders to a fufficient degree of finenefs, by the mortar and fearce, is faulty; becaufe this method expofes them too long to the action of the open air, whereby their more volatile and grateful parts are carried off, whilft only the groffer are left behind: whence it might be proper to have a clofe engine contrived for the purpofe; fo as to prevent this ill effect.
Some artifts grind their powders for electuaries by means of a horfe-mill; but the mill-ftones here wear off, and communicate a fony matter to the ingredients, fo as to prove difagreeable in the mouth, increafe the bulk of the medicine, without adding to it's virtues. - Nor is this method of the mill free from the inconveniencies of the latter; for the finer or more fpirituous parts of the ingredients alfo fly off, as is fenfibly found by the whole neightourhood where any large quantity of the ingredients for Venice-treacle, \&c. is ground by the common horfe-mill.
The better way doubtefs is, by the means of iron rollers, moving oppofite to each other in a clofe box, to grind all the ingredients, viz. the purified gums, the roots, herbs, flowers, \&c. along with the honey, and wine, after the manner of the chocolate engine: for thus the fine, volatile, and aromatic parts of the ingredients may, as well as the groffer, be entangled with the honey and gums, and all at once be mixed uniformly together, into a fmooth mals of a due confiftenci. But perhaps a much better, though more troublefome method would be in the form of extracts, effential oils, $\& \mathrm{c}$, to get out the full virtues of the ingredients, without any of their groffer parts, and mix thefe oils, extracts, gums, rofins, 8 \&c. together with a fuitable proportion of honey, 8 xc . fo as at once to concentrate the medicine, which might, therefore, be given in dofes of an agreeable fmallnefs, with all the advantages that can be expected. The fame method feems allo applicable to the making of pills and troches.
OBEERVATIONs.

1. We learn from the preceeding enquiry, that fome part of the falts of plants, as well as their oils, will rife by dititilation with water, and give an acid or alkaline nature to the fimple waters thus propofed, according to the nature of the plant. 2. That no fimple waters chould be diffilled fo low as to bring over any remarkable acid or alkaline liquor from the plant, for fear of mifchievous effects, or making fuch waters prove emetic or purgative, contrary to the intention.
2. That the virtues of fimple waters chiefly depend upon their containing the effential oil of the plant.
3. That there are two methods of perfecting fimple waters, viz. cohobation and fermentation.
4. That all tinctures and infufions of ingredients, whofe prin5. That all tinctures and infulions of ingredients, whof depend upon their lighter, or more fubtile and fpirituous parts, fhould not be made with hear, but in the cold.
5. That if fuch tinctures or infufions be required rich and ftrong, they are to be made fo, not by fuffering the menftruum to remain long upon the ingredients, or by the ufe of heat, but by adding frefh ingredients feveral times to the fame liquor, infufing them quick, and each time keeping out the ingredients that have once been ufed.
6. That the fire is apt to exhale, alter, or confume the more fubtile and fipirituous parts of vegetables, and, therefore, unfit to be ufed where thefe more delicate parts are required.
7. That the bufinefs of infufions and tinctures may be greatly improved, by extracting the efficacious, or more firituous parts of vegetables, unaltered in their nature, yet concentrated, or brought into a moderate compafs.
8. That rich tinctures may be extraEted, with firit of wine, foum the hardeft refinous and gummy bodies hitherto known, by means of fixed alkali's, properly applied.
9. That even aqueous folutions may be made of the fame kind of bodies, by means of the tartarum tartarizatum, or foluble tartar.
10. That the ways in common ufe for the making of fyrups and electuaries are improveable, by the obfervance of a few eafy rules.
11. That, therefore, there are grounds to expect fome improvement of the common pharmacy, upon the footing it now ftands, or by barely perfecting the methods of preparing the fhop-medicines in ufe, without either retrenching their number, introducing new ones, or reducing the art to a greater fimplicity. See Chemistry, and Philosophy Experimental.
HILIPPINE ISLANDS. The Philippine Iflands, fituate in the Pacific Ocean in Afia, are computed at 1200 in number, and extend from North latitude 6 to near 20, and from eaft longitude $1 I_{4}$ to 126 , of which 5 or 600 are pretty confiderable: they are about 400 leagues to the weft of the Ladrones, 120 fouth of China, and 200 eaft of Cochin-China. The air here is very hot, with little difference of feafons, but the rains begin generally in May, and laft three months. Their chief product is gold, rice, the ufual Indian fruits, beafts, fowl, and fibh, with good large nutmegs, which they do not cultivate, however, left it fhould tempt the Dutch to attack them. The natives neither allow the Englifh nor Dutch to trade hither, left they fhould difcover their riches and weaknefs.
Cheir chief iflands are, 1 . Mindanan, which lies fartheft, both to the eaft and fouth of them, all extending from north latitude 6, to $9 \frac{3}{4}$, and fiom eaft longitude 121 , to 126,30 . It is the biggeft of them all, next to Luconia, being, as Dampier fays, 60 miles in length, and 40 or 50 in breadth; but Captain Hamilton makes it, 140 leagues in length, and other 76 in breadth; though, after all, the latter is very unequal, by reafon of many harbours for fhipping, and abounding, as well as it's navigable rivers, with variety of fih. The foil is fat, the valleys well watered, and abound with rice and other provifions; evergreens, nutmegs, cloves, and good caffia lignum, or baftard cinnamon.
It's chief trade is with the illand of Manilla, but partly with Bornco. The Dutch come hither in floops from Ternate and Tidor, two of the Molucca Inands, and purchafe rice, bees-wax, and tobacco, the laft of which grows more plentifully in this ifland, than in any other of thefe feas, except Manilla, and is an excellent fort; but the people do not manage it to that advantage as the Spaniards do at Manilla. The common rate of the Mindanao gold, is 14 Spanifh dollars the Englifh ounce, and 18 dollars the Mindanao ounce; which is the rather obferved, becaufe thefe Spanifh dollars are the current coin in all thefe iflands.
It is divided into feveral principalities of different religions and languages. Thofe who live in the inland country, among the woods and mountains, are called Stilannoons, and have rich mines of gold ore, and great plenty of bees-wax and tobacco, which they exchange with the coafters for cloathing, callicoes, mullins, china-ware, filk, and other neceffaries.
3EHOL, north of the former, towards Mindanao, is but 40 leagues in compafs. The foil of it produces no rice, but yields cocoa and divers roots, much cattle and fifh, and is rich and gold mines.
Mindora, which extends from north latitude 12, to 13, and from ealt longitude 119, to 120 ; is about 20 leagues long, and 12 hroad, and 70 in compals, and lies on the weft fide of the Philippines, and particularly of Mafbate. It produces pepper, bas mines of gold, and a town of the fame name. It is divided by the ftraights of Mindora from Manilla.
Philiprina, which being firf difcovered, gave name to the reft, is alfo called Tandaya and Samar, lies, betwixt north latitude 12 and $14 \frac{1}{2}$, and is the pleafanteft of them all, fruitful and rich. It is about 30 leagues in compafs, and is divided from Manilla, on the north-weft, by the fraights of that name.
Xolo lies to the fouth-weft of the Philippines. All the fhips of Borneo touch here, and it may be called the mart of all the moorifh kingdoms in the eaft. It abounds with rice, and is the only inland of the Philippines that breeds elephants. The fea throws up abundance of ambergris on it's fhore, and yields pearls; and the foil, pepper and other fruits.

Masbate, to the wefl of Tandaya, is 30 leagues in compals; and yields wax, falt, civet, and gold, of which here are rich mines, and the ore rifes 22 carats fine, but they are not wrought,
We conclude with the biggeft, the richeft, and the moft horthern of all the Philippine Iflands, viz.
Luconia, which the Portugueze call Manilla, after the name of it's chief town, and the Spaniards New Caftille. It extends from north latitude 14, to almoft 19, and from ealt longitude 120, to 124 , and is faid to be 160 Spanifh leagues in length, but unequal in breadth, being in fome places twenty, in fome thirty, and in others forty leagues over. It affords corn, fruit, and roots in great plenty, as well as wild game and fowl. It produces gold of low touch, and is able to furnifh good materials for carrying on a confiderable commerce.
Manilla, lies on a point of land made by a river, which iffues from the lake of Bahia, and falls into the fea a little lower, at the town of Cavite; where is a fpacious harbour, but of difficult entrance, becaufe of rocks and lhoals at the mouth of the bay.
This ifland has the liberty of fending two thips every year to New Spain; but being limitted to that number, they therefore build them vaftly large. Thefe carry the fices and rich commodities of India to Acapulco, a port in the SouthSea, in the kingdom of Mexico, or New Spain, and bring back the valuable commodities of America and Europe, by which trade the gain is faid to he four hundred per cent. See Acapulco.
PHCENICE. This province lies along the Mediterranean coaft, being bounded by it on the weft, by Syria propria on the north, by Syria Cava, or Cælo Syria, and Batanea on the eaft, and Paleffine on the fouth, and is at prefent part of the Beglebergate of Tripoly. It is but a narrow flip of land from eaft to weft.
Tripolis of Syria, to diftinguifh it from that of Barbary, is pleafantly and commodioufly fituated, at the foot of Mount Libanus. It's diftance from the fea is but about a mile and a half, and hath a commodious haven, which comes up within lefs than half a mile of the weft fide of it. As to the port, it is rather an open fea than an inclofed harbour, except that it is in part defended by two fmall illands, which lie about two leagues from ft . (Maundrel.)
The people here fpend moft of the fummer-time in their gardens, where they bufy themfelves with their filk-worms, which is the greateft manufacture they have.
The air is excremely clear and healthy, and the country round about very rich and fruitful; fo that the town is fupplied with every thing it wants or can wifh for.
Berytus is fituate on the fame coaft, about 40 miles fouth of Tripoly, and about 18 fouth of Sidon. It's chief commerce, which is very confiderable, confifts in fine tapeftry, filks, camblets, cinnamon, nutmegs, ginger, pepper, caffa, rhubarb, and cocheneal. The fea banks abound with mulberty, pine, lime, and other trees; and with gourds and prodigious quantities of colocynth: fome add, that in the neighbouring hills are found a fort of fones, of which fome refemble olives. (Moncony \& Thevenot.)
Sidon, the antienteft city of Phoenicia, is feated in a fertile and delightful foil, between the fea on the wefl, and Libanus on the eaft, and about 30 miles fouth of Berytus.
It is at prefent but a little town, though formerly the metropolis of Phoenicia, and a place of great trade: one of the chief commodities of the place is that of raifins, which the Bafha lets to proper farmers, who are obliged to be moderate in their prices, left they hould fick in hand. Other merchandizes are oil, athes, Egyptian foap, rice, blue filks, Tur-key-leather, cotton, fenna, piftaches, buffaloes ikins, \&ic. Thofe they import from Europe, are fattins, damafks of $\mathrm{Ge}-$ noa and Lucca, fcarlet and light coloured cloth, paper, and fome other of lefs value. Provifions of all forts are bere in great plenty, and very cheap. The filk-worms are kept in little hutts under the mulberries, and thrive very well; unleis difturbed by violent claps of thunder.
Leaving the fea-coafts, and turning towards the eaft, at about 82 miles north-ealt of Aera, ftands the famed city of Damafcus, fituate on a fertile plain, encompaffed with hills, and upon the river Barady, which enriches that city and country with all kind of plenty and pleafure.
The city has feparate wards for every trade and calling, and thefe are fhut up every night by gates, and by a fout iron chain by day, to keep off beafts of burthen. It hath, in particular, above 20,000 inhabitants imployed in making feymitars, fword-blades, and other cutlery work; bridles, and a world of other things in iron and fteel; all which are in great requeft through Turkey, and beyond, on account of the fine temper which their water or art here gives to thofe metals. Other commodities are wines, raifins, prunes, raw and wrought filk, and all other merchandizes of Turkey, Arabia, and India, moft of which are brought hither by caravans, which go and come from Conftantinople, Egypt, India, Alleppo, Bagdad, Mecca, \&c. As for thofe which come from Europe, they are moftly brought hither by the Venetians.

## P H I

P H I
Damascus flands about 43 miles diftent from the fea, being parted from it by a long chain of mountains, and about 45 almoft eaft from Sidon, and 65 fouth-eaft from Tripoly. In latitude 33 degrees, 37 minutes eaft, longitude 37 degrees, 4 minutes.
PHILOSOPHY EXPERIMENTAL. By philofophy, we underftand, the fcience or knowledge of the nature, caufes, properties, and effect of all created beings, to far as they are capable of being known by reâfón, difcovered by art, or any ways adapted to the human comprehenfion.- By experimental philofophy, we mean, the art or method of making fuch experiments upon all material things, as will tend to lead and conduct the buman underftanding into the true and certain knowlege thereof, and their application to all the ufeful purpofes of life.

## Remarks of general utility to lucrative arts, manufac-

 tures, and comméré.In order to acquire this art of philofophizing, it's fcientifical elements muft be well underftood ; and it's operation perfonally viewed, and manually performed : whence it's two parts of theory and practice.
It's theory, in general, is acquired not only by information, axiomatically and demonfratively deliveted in the fynthetical manner, à priori ; but analytteally, and à pofteriori, in particular. It's practice is acquired by a careful inftruction in the proper manual operations; which, in general, are limited by place, time, the fubject and fuitable means; and, in particular, by the manner of performing. Whence are derived numerous arts, tradeś, and mechartical employments, and their daily improvement; which has induced us to take notice of an article of this kind. How far this knowlege may be advanced by the means of mathematics, fee the article Mathematics. How greatly alfo the knowlege of chemiftry may tend to the advancement of philo「ophy, grounded on indubitable experiments, and confequently of various arts and trades, fee the articles Chemistry, Aqua Fortis, Aqua Regia, Assay, Black [Dyer's Black], Bleaching, Blue, Bole, Brandy, Brewivg, Callico-Printing, Clays, Copper-Mines, Distillation, Dyeing, Emerald, Enamel, Farming, Fiux [in mettallurgy], Glass, and abundance of other articles, which the reader will find in the indexes to both the volumes. I come now to Chew, how Natural Philofophy contributes to afford us the neceffaries and conveniencies of life; whereby our empire is extended abroad, as a knowlege in phyfic, fecures us at home. And experimentalifts in philofophy may greatly reform trade, or improve it ; and this equally, if not more, perhaps, than thofe who are engaged in it, which chiefly lies in the hands of the illiterate. Thus, for inftance, the hurbandman's fkill confifts in the knowlege of a few plants and animals, their relation to particular foils, and management, with the influence of the celeftial bodies and meteors thereon; all which fubjects fall properly under the cognizance of a natural and experimental philofopher.
For he who bas attentively confidered the nature of generation, nutrition, and accretion, both in plants and animals, and knows how to vary an ufeful experiment, fo as to remedy the inconveniencies, or fupply the defects thereof; and can dextrouily apply his own, and others obfervations, may cultivate hufbandry to as much advantage, as the ordinary farmer tills his land.
An astentive confideration of the parts that conflitute each particular trade, would fhew how they all depend upon philofophy, and might be farther improved. Thus, the principal parts of refining are a knowlege of the preparation of aqua fortis, and it's operation, upon filver, copper, and gold, with the means to purge it, that neither gold may be diffolved, nor filver precipitated, when diffolved, thereby; to know what proportion is diffolvable therein, and the quantity of water neceflary to weaken the folution; how long copper-plates fhould lie, to precipitate the filver it contains; how lead is colliquated with, and what proportion thereof is requifite to carry off the bafer metals upon the teft; how cupels are made; and, with thefe, to draw off lead or antimony from filver or gold; to difcern when the metal is fufficiently refined; and, laftly, to know the proper proportion of gold and filver, to make water-gold. This trade, indeed, is underfood by few, and not fo diffufive and complicated as hundreds of others; yet, if they were all judicioully refolved into their component parts, it would doubtlefs appear, that moft of thern are only corollaries, deduced from particular obfervations in philofophy, or the bare application thereof, to the ufes of human life. And if fo, it is very probable, that farther difcoveries, in the nature of the materials, the fubjects of trade, and a knowlege of the laws they obferve, may reform or meliorate feveral of it's branches.
This too is performable, by odd and unfufpected means; ro that, perhaps, the chemift's charcoal, may prove an excellent equivalent for manure, if a vegitable falt, as probably it is, be the caufe of the land's fertility. For chemical experiments may difcover the nature hereof, and thereby afford ufeful directions towards the melioration of arable, pafture, and wood-
land. From the experiments which have been made upon earths, dungs, and feeds, whereby it hath been found that falts abounded in the liquors they yiclded; we fee reafon to wifh this enquiry were farther profecuted, towards the innptovement of hulbandry. Whoever has obferved thofe many particulars in this art, which caufed Sir Francis Bacon to pronounce nitre to be the life of vegetables; and confiders how land is improved by pigeon's dung, which impregnates it with faltpetre; and, laftly, knows, that moft fat earths, defended fromin the fun and rain, and left to themelves, will foon abound in titrous falts; whoever confiders thefe things, will, perhaps, believe a philofophic enquiry into the nature of faltpetre, may be of great ufe in farming.
I once caufed fome earth, fays Mr Boyle, to be dug up, from under a pigeon-houfe, and diftilling it in a retort, little or no oil, but a confiderable quantity of reddifh liquor came over, fo far unlike fpirit of nitre, that it greatly refembled volatile falts; for, without being rectified, it not only turned fyrup of violetsigreen, and precipitated a folution of fublimate into a milky fubftance; but there alfo came over therewith, into the lower part of the receiver, a dry falt, in tafte like the volatile kind, and fo far an alkali, that it readily hiffed, and caufed an ebullition in an acid menftruum. From hence it feems, which is highly remarkable, that a falt, very different from acid, may, by the operation of the earth and air, be fo altered, as afterwards, by a llight management, to afford faltpetre, whofe fpirit is ftrongly acid. And dropping aqua fortis upon pot-afhes, diffolved in a little fair water, 'till the ebullition and hiffing were perfectly ceafed; and, having filtered this liquor, and fet it in an open veffel to evaporate with a gentle heat, being in two or three days time removed to a cold place, it afforded very pure cryftals of faltpetre.
I might add, that the knowlege of the nature and diftinctions of faline bodies, may greatly affift to fhew the differences of the various faltnefs that is found in foils; and with what fort each plant or feed is moft delighted. By this means many tracks of land, now thought barien, for want of a knowlege hereof, might be rendered ufeful. A ground may be made to yield much better crops than ufual, by being fucceffively fown with a proper variety of feed, agreeable to the nature of the particular falt, at prefent inherent in the earth; for, by the abfence of one kind of falt, it is better prepared to feed thofe plants that delight in another. And of this the hufbandmen have, in fome meafure, already taken notice, as ap. pears by their fowing turneps in grounds too remote for the convenient carriage of compoft, to ferve for manure, and fit them for wheat. And I am of opinion, that any land, except mere fand, might, withoutmuch culture, be made fertile, were we but well acquainted with the foil, and provided of the various forts of grain that nature affords in different countries. There are various foils, both in England and elfewhere, left quite uncultivated, wherein fome foreign vegetables might thrive and profper. Many large tracks of fteep and craggy land, expofed to fouthern fun, lie wafte in feveral hot countries, where grapes are not planted; though in France, Italy, and even on the Alps, fuch landsare turned into excellent vineyards. An experienced way of caufing wheat to grow and profper, even in clay, where no grain had thriven; was communicated to me by a perfon who had ufed it; and the art confifted in fleeping the feed, for a determined time, in a certain expreffed oil that is not dear: whence it is probable, that without altering the foil, a flight change, properly made in the feed alone, may fo fit them for each other, as to yield a large increafe. I have alfo feen in a collection of rarities, an ear or two of corn, not much unlike our common wheat, one grain whereof, in a warm country, from whence this was brought, would afford fo vaft an increafe, that the poffeffor was almoft afhamed to declare, and $I$ am more afraid to repeat it.
An Englifh gentleman, however, affured me, that baving fown fome of this corn, in land of his own, he found a finglegrain to produce feveral hundreds; though that came nothing near what it was faid to do, in a more fuitable foil and climate.
The learned Acofta affirms, that in feveral parts of Americn, where the European wheat will not profper, the Indian, or Virginia fort, called alfo maiz, fucceeds fo well, that though the grain be large and more than one clufter often found upon one falk, yet, in a fingle clufter he has counted feven hundred grains. He adds, it is not unufual in that country, to reap three hundred times the quantity fown. This, indeed, feems a little incredible; but I myfelf have found, even in England, fuch a multitude of grains, in one of the vaft number of ears produced from a fingle grain, that I am inclined to abfolve Acofta.
In fome eaftern countries, a fort of rice, the chief food of the natives, thrives excellently upon land fo watery, that the perfon is there obliged to wade who fows it. Yet this is lefs ftrange than what Martinius tells us, as a practice in fome parts of China; where many places, that lie all the year under water, have feed fo well appropriated to them, that though thrown in the water, as baits for fifh, it hoots up in it's proper feafon, appears on the furface like a verdant field, and affords a plentiful crop.
To proceed : chemiftry and hydroftatics may help to difcover the kinds and degrees of faltneff, refiding in feveral other bo-

## P H I

dies, the hufbandman employs. I myfelf have made fur prizing difcoveries, in working upon fome forts of earth, by chemiftry. And as, in particular, the fertility of manure feems to depend upon it's falino-fulphureous parts, a practical enquiry into the differences and various operations of falts, may probably affift to difcover various kinds of compoft, with the proper manner wherein to multiply, compound, and apply them. See Manure.
And thus, not only fire, but water, by means of the engines, and contrivances to be learnt from hydroftatics, may be made more ferviceable to hubandry than ordinary. Martinius aflures us, that in one province of China, they water their rice-fied by means of moveable mills, placed as occation repuires, upon any part of the banks of a river. The wheels here, raife the water in buckets to a great height, above the furface of the river; whence it is afterwards conveyed to the deflined places in proper channels. But the art of levelling, or conducting water upon the ground, may be farther fer viceable in this cafe. For foils, fuited to this way of culture, are thereby greatly improveable; though it be almoft entirely neglected, both in England and elfewhere. Some ground, by being fkilfully overflowed, has doubled it's increafe. And wild boggith places, have been turned into a good dry and compact foil, by barely trenching and overflowing it equally, fix or feven times in a year, between the beginning of Octo ber, and the middle of April, with water from a neighbouring fpring, that is enriched by no land floods, and rofe in a barren and uncultivated place; fo that this ground afforded hay, in fuch plenty, as to become worthy twenty times it's former purchafe. Other inftances of the like improvemen have been made, from fkilfully overflowing grounds with common water.
I muft here obferve, that the more comprehenfive any trade is, the more improvements it will admit of from philofophy ; becaufe, depending upon many natural productions and operations, there muft arife many particulars to be meliorated or reformed, either in the manufacture or profeffion. Thus corn, in hufbandry, renders a knowlege of the whole art of tillage convenient, with the ways to order cattle, the dairy, or orchard; a kitchen garden, wood, flax, hemp, hops, bees, \&c. and the particular productions of fome of there, as honey, cyder, \&c. are capable of improvement, and require akill to manage. In the variety of particulats, therefore, wherewith the hufbandman deals, there mult be fome, wherein the fuperior knowlege and experience of the philofophers will be ferviceable. And, as one of the principal parts of hufbandry depends upon preferving cattle from difeafes, and the fruits of the earth from putrefaction; natural philofophy, founded on experiments, may conduce to both thefe ends. He who can accelerate, and delay putrefaction in bodies, may fhew the hurbandman how to prepare variety of manures; to enrich his ground with the peculiar kind of falt it wants; and alfo, how to preferve feveral feeds, flowers, and fruits, beyond their natural duration. Thus many have continued fruits, as quinces, for inftance, good almoft all the year round, by a pickle made only of water, and the refufe of quinces, or what is eafily obtained from them; but cherries have been preferved frefh and juicy for more than a year; and that without falt or fugar, only by a proper firit of wine, well impregnated with the tincture it drew from the fkins of the farme kind of fruit.
The great advantage accruing to the Dutch, from the beft way of pickling herrings; and to others, from fo ordering the fleth of animals as to keep fweet, in paffing from Europe to the Weft-Indies, and fometimes, even 'till it comes back again from thence, may fhew what benefit hufbandry might receive from difcovering means to preferve the production of the earth; but efpecially if it could be extended to fmall wines, cyder, perry, \&c. that are commonly made in large quantities, but foon decayed at home, and are unfit to be tranfported to very diftant countries. The virtue of fugar, to frengthen vinous liquors, and render them durable; and the method of preferving great variety of fruits, and the juices of plants, without the help of falt, or any thing fharp, give fome reafon to expect, that very different ways may be found to make fubftances outlaft their natural term of duration *.

To preferve fruit and flowers for a whole year, take faltpetre one pound, bole-armoniac two pounds, common clean and three pounds; mix them together, and, in dry weather, take fruit or flowers of any fort, not fully ripe, each with it's Italk, and put them fingly jnto an open glafs, 'till it be full; cover it clofe with oil-cloth, and in a dry cellar, put each of thefe glaffes four fingers deep under ground, o that quite round above, as well as below, there may emain two fingers thick of the mixture. See Philofophical Tranfactions, No. 237. p. 44 .

Again, that great damage the hufbandman often fuftains, by Aubborn and contagious difeafes in his cattle, might, in good meafure, be prevented by the inftructions of the philofopher, efpecially if fkilled in phyfic. For, as many difeafes, fo many cures alfo are analogous in men and brutes; though remedies, for feveral reafons, ufually fucceed beft in the latter. A gentleman has, fur feveral years, preferved his numerous
flocks in a moift country, when molt of his neighbours lof theirs, by the ufe of Spanifh falt. After having bled them a little under the eye, he obliged them to take down a fmall handful of it, two or three times in a few days, without per. mitting them to drink any thing for fome hours after it This remedy he employed at that feafon when there is a fuf picion the fheep will begin to be bloched. I might here al ledge the virtue of crude antimony, againft the foulnefs of the blood, and leprofy in fwine; of quickfilver againft the worms in horfes; of the remedy of Palmarius, which, he afferts, is infallible againft the bite of a mad dog in cattle; of a more probable one alfo, that ferves no lefs in men, the effeet whereof has been experienced of the antimonial cup, for feveral difeafes in horfes and fheep; and laftly, of another antimonial medicine, very fuccefffully ufed to fatten horfes after ficknefs; all thefe, and many more receipts of medicines, highly efteemed for their efficacy in feveral diftempers, both in men and brutes, might here be fet down, were it needful.
Moreover, there are many reafons affignable, why hufbandry, with the affiftance of philofophy, may be improved by the addition of a therapeutic part, with regard, not only to the animal and vegitable productions it confifts in, but alfo to the various diftempers of the ground itfelf.
For, were the caufes of barrennefs therein, with it's refpective indifpofition to nourifh particular plants or animals, difcovered, many of thofe defects may doubtlefs be removed by rational applications, and proper means of cure; as we fee in other inanimate bodies, and even metalline ones. And, from a knowlege of the particular caufe of a barren foil, fertility may perhaps be procured to it, without much coft.
Some ingenious hufbandmen have lately declared themfelves fatisfied with a way of meliorating two of the moft fruitful kinds of land, clay, and fand, that confifts only in fkilfully mixing them, in a due proportion, according to the ufe for which it is defigned. [See Manure.] And an ingenious gentleman, to fatisfy fome curious perfons, purpofely fowed fome corn, neaf a place which profpered fo ftrangely, that one root yielded fixty odd ears: and, what is more furprizing, this wonderful increafe depended only upon a philofophical obfervation; without any thing extraordinary having been done, either to the ground or the feed.
To proceed: not only the neceffary trades, butalfo the pleafurable ones, are improvable by philofophy; for they chiefly conffift in the knowlege and application, of fome natural productions and operations. And the things, by this means acquired, will, without changing their nature, ferve us in different capacities; thus wine quenches thirft, recovers a fainting perfon, and intoxicates : the fame firit of wine, wherewith the phyfician draws his tinctures and prepares his extracts for medicinal purpofes, will diffolve benjamin for the ladies; which, mixed with water, makes an excellent cofmetic ; and the fame fpirit, when applied to the proper ingredients, produces feveral kinds of fine varnifh; the tincture of benjamin, likewife, is applicable to the fame ufes, and is, itfelf, a pretty odoriferous varnilh, and good againft tetters, they being bathed therewith.
That knowlege and fkill may make happy applications, even of unpromifing things, to the delight of mankind, appears evidently from mufical inftruments; for, who would imagine, did he not know it, that a few pieces of wood, joined together, and the guts of cats or lambs, twifted into ftrings, fhould, when artificially ftruck, afford the moft ravifhing pleafure? We might here go on to inftance, in the art of coouring, perfuming, confectionary, and of preparing cofmetics, \&c. did we not chufe to recommend philofophy, from the pleafure it affords the reafon, rather than from the charm wherewith it bribes the fenfes. Though what has hitherto been delivered about the ufefulnefs of philofophy to trades, belongs chiefly to thofe wherein nature herfelf feems more concerned than the artificer; yet fuch are not here exempted, wherein art has the greateft hare. Thefe, indeed, rather depend upon the manual dexterity of men, than a fkilful management of nature's productions, by operating on each other; yet, even here the naturalift may be ferviceable.
Many manual trades, efpecially as exercifed in large towns, confift of feveral parts, and requireother trades to prepare and difpofe their materials before they can be finithed and fitted for fale. And although the finifher performs his part, by means of his hands and tools, yet the fubordinate workmen fually ftand in need of fome obfervations on the conditions of the body they deal with, or muft elfe employ fome phyfical operation; and herein they may be greatly affifted, by an intelligent philofopher. Thus, ftone-cutting, though it eems wholly to confint in thaping it's materials, contarn many particulars, wherein might eafily be fhewn, that expeimental philofophy would be beneficial. For unufual methods might be difcovered to examine the nature and goodnefs o marble, alabafter, or other ftones. A competent knowlege of the fap found in ftones, to be employed in building, is fo neceffary, that experienced mafter workmen affure us, that tone dug at one feafon, will foon moulder away; when the fame fort, taken out of the fame quarry, at another, will endure the weather for many years, if not ages. The cements
alfo, and ftoppings, as they call them, which are of great ufe in this trade, may be improved by one who is verfed in fuch kinds of mixtures. I remember I once taught an inquilitive artift a fine cement for rejoining broken flatues; who, by the like means, in other cafes, could connterfeit marble fo well, that though large cavaties were filled up with cement, the work would pais for entire, thofe parts being undiftinguifhed from natural marble. Want of curiofity keeps our fone-cutters, in England, unacquainted with the ways of working upon porphire; for none of them will undertake, either to cut or polifh it. Other countries alfo, are ignorant herein, though it was in great ufe among the Romans; and, even now, at Rome, there are few who make a very great advantage of this art. I am not certain what they employ for that purpofe, but believe it to be powder of emery; for I have, in England, caufed a porphire to be cut by means of that, ftel faws, and water. Not here to mention, that I have an art to ftain white marble with durable fpots, fmall or jarge, and of red or brown colour.
But the art of ftone-cutting depending greatly upon the goodnefs of the fteel tools, which they muft have from the fmith, and the dealers in iron; if thefe trades were improved, it would tend to the perfection of the other. And that the fmith's craft, however manual it appears, may be meliorated by a knowlege of nature, is not difficult to manifeft.
The ways of making iron and fteel, are not only improveable before they come to the fmith's hands, but better expedients may likewife be devifed for ordering them, when they come to be faflioned into weapons and tools.
The fword-blades, and other weapons made at Damafcus, are every where famed (and that juftly, as far as appears from fome trials made) for cutting afunder even iron itfelf; yet it feems to be only the fikill of the artificer that gives them this pre-eminence. Their goodnefs, indeed, might be prefumed to proceed from fomething peculiar in the materials of that place, did not Bellonius inform us, they bave no mines of their own, but receive all their iron and fteel from other countries, the artifts giving them this temper and perfection. In tempering of fteel, it is reafonable to fuppofe, that befides the goodnefs of the metal, and the particular degree of heat, which is all the workmen regard, the nature of the fluid, or other body, wherein the hot metal is plunged, and other proper methods of ordering it, may greatly contribute to bring it to great perfection. I have met with a graver of fo furprizing a temper, that all the known means, both $I$ and others ufed, could not let it down ; though no graver made in England, could have withftood us. This was afterwards affirmed to have been tempered at Damafcus. I am acquainted with a way to harden gravers, without quenching them in any liquor, tallow, or unctuous body; and having recommended to another, an uncommon method of tempering them, he brought me one, which, being plunged into a certain cheap mixture, had been bardened and tempered at once. And, what may feem more ftrange, though ignition and extinction in cold water be the common way to harden fteel, yes, by obferving one certain moment of time, fteel may, by this means, be made furprizingly foft. But farther, a curious maker of fteel tools, told me, he obferved a difference between pump and river water, in giving their temper, each being fit for it's refpective fort. Befides thefe, there are many other particulars, wherein iron and feel are improveable by the naturalift. And firft, the metal may be rendered fo foft, as by means of ftrong moulds to receive variety of figures. This an eminent artificer affured me, he has feen done in iron, with confiderable profit. Secondly, it may be rendered fufible, and I myfelf with a charcoal fire, and a flux powder compoled of tartar, fulphur, and arfenic, have run it into an exceeding hard, and very polifhable mafs. Thirdly, it may be fo ordered, as to continue long free from ruft ; and an ancient virtuofo, who purchafed the fecret for a great prince, ufed to thew feel fo prepared by tempering it in water, impregnated with the bark of a certain tree. In a word, there are various other means, whereby iron and fteel, or the trades that ufe them, may be meliorated; for the naturalift may advance an art or profefion, in abundance of refpects; as either by difcovering variety of materials, or rendering thofe already in ufe better conditioned; by detecting and reforming unheeded errors or miftakes, by devifing more eafy and compendious methods of operation, by improving the auxiliary branches; by inftructing the artificer to chufe, examine, and preferve his tools and materials; for laftly, by fhewing how to make the ultimate productions fooner, cheaper, eafier, and better, applicable to more ufes, or more durable than ufual, with other fervices, too numerous here to relate.
But farther, a naturalift may likewife introduce new trades, as well as improve the old ones; and that, either by inventing them originally, or bringing them into requelt, where they were unknown before: for neither nature nor human invention, is fo far exhaufted, as not to afford them, were philofophy employed in the fearch. We may here obferve, that a trade in many cafes, differs from an experiment, not fo much in the nature of the thing, as it's having been accidentally applied to human ufes, or made a bufinefs by a
company of artificers, in order to their own profit, which are things extrinfical and accidental to the experiment itfelf. Thus, for example, the explofion occafioned by a mixture of nitre, fulphur, and charcoal, whilft it paffed no farther than the laboratory of the monk, the reputed inventor of gunpowder, was only an experiment; but, when once the great ufe to be made hereof became more generally known, and people refolved to make a bufinefs of improving and applying it, this fingle experiment at once, gave rife to founders of ordnance, gunfmiths, engineers, and abundance of other trades.
The difcovery of the polar virtue in the loadfone, has occafioned a diftinct trade, the art of compars-making: and many other inftances of the like kind might be produced, efpecially where mechanical tools and contrivances confpire with the difcovery of natural productions; fo that frequently, a very few mathematical theorems, or phyfical obfervations, reduced to practice by the manual operator, become trades. Thus, two or three dioptrical propofitions, falling into mechanical hands, have introduced fpectacles, telefcopes, and microfcopes. Quickfilver being obferved to amalgamate with gold, and to be again feparable therefrom without diminution, produced the art of gilding; which principally confifts in mixing, by means of a proper heat, pure gold with five, fix, or feven times it's weight of quickfilver, 'till it become of a conififtence fit to fpread upon the filver or copper defigned. For the gold being by this means evenly overlaid, they can eafily by fire force away the mercury; and with a liquor, by workmen called colourifh, wherein nitre, verdigreafe, fal armoniac, and other faline bodies are diffolved, reftore it's luftre to the remaining gold, which they afterwards make bright by polilhing.
The light and obvious remark that a fpring, phyfically confidereded, was a continual and durable force, with it's corollary, that this force, properly applied, might ballance the weight required to move the wheels of a clock, joined to 2 fuitable mechanical contrivance, produced thofe ufeful machines called watches, which now afford a handfome fubfiftence to many dextrous artificers; and which, though cuftom has rendered them familiar to us, were unknown to the Ancients, and highly prized and admired even in China, when firft carried thither.
The difcovery that aqua fortis diffolved filver and copper, but would not work upon gold, added to the obfervation, that lead, melted with either of the noble metals, and then forced from them by fire, will carry off with it any of the baler fort, has, in later ages, produced the art of refining.
The operations of fome lixivia, clays, and other common things, upon the juice of the fugar-cane, has not only added to the ancient hufbandry the cultivation of thefe canas, but given birth to the feveral trades of fugar-boilers, fugar-bakers, refiners of fugar, and confectioners, not to mention the advantage it brings to the apothecary.
But even a very flight contrivance or manual operation, if it prove fortunate, may fupply men with a trade, as we fee in the art of printing. And the lucky trial made to bore very fmall holes through broken China cups, with the ufe of fender wire, inftead of thread or filk, to faften the pieces together, has given being to the exercife hereof, as a vulgar trade in the eaftern countries. Their art alfo of varnifhing or japanning as we call it, which depending on a knowlege of fome gums and liquors in their country, employs multitudes of tradefmen among them, is, as I am credibly informed, now practifed at Paris. And finding from Linchoten, that in China and Japan they made this excellent varnih of gum-lacca, I imitated one of the beft forts of it, by diffolving that gum in highly rectified fpirits of wine, giving it a colour, and laying it on in a particular manner. I might farther alledge, the art of cultivating and gathering fugarcanes, with the manner of ordering their juice, as a recent inftance of the tranfplantation of arts and manufactures; for, as I am very credibly informed, a foreigner accidentally bringing fome fugar-canes as rarities, from Brazil into Europe, touched at Barbadoes, where an Englifh planter obtained a few of him, with fome hints as to their cultivation and ufe; which, by the curiofity and induftry of the Englifh colony there, were foon fo wellimproved, that the ifland became, and ftill continues, able to fupply great quantities of fugar. I am the more particular in this infance, becaure it is very remarkable, and thews, how many hands the introduction of a phyfico-mechanical art may employ: for the negroes, who live as flaves there and at Jamaica, and are almoft wholly employed in the fugar-trade, amount to berween fixtyfive and feventy thoufand, according to the Rev. Mr Hughes. Thus then, it appears probable, that experimental philofophy may multiply trades, as well as improve them. Nor do I defpair, that among the means of increafing trades, one may be the retrieving of fome that were anciently practifed, but fince loft, of which the learned Pancirollus gives us a catalogue. For, as the fkilful diver brings up, not only pearls and coral, but alfo fhipwrecked merchandize, to the experimental philofopher dives into the deep receffes of nature, to recover inventions fwallowed up by the injuries of time, as well as to bring to light her hidden riches.

But, fill farther, I am inclined to think, there is no proferion, condition, or, perhaps, individual perfon of the fpeies, that may not, one way or other be advantaged or acommodated, were all the truths difcovered by natural philoCophy, known and applied. So that befides thofe inventions, which are formed into trades, there may be a multitude of loofe particulars, whereby the naturalift might highly gratify and affift mankind. The nature of the thing will fcarce permit ine to illuftrate this affertion, without defcending to innances trifing in themfelves, if not contemptible; for which, eafon, I hall here content myfelf with a few.
A great lady, lately complaining that the could not write in A great lady, lately complain blacking her fingers, I defired her to prepare her paper with a fine powder, made of about ciree parts of calcined copperas, two of galls, and one of um arabic; which being frefh mixed and rubbed with a lare's foot into the pores of the paper, when that came to be wrote on with fair water, it would immediately difcover black egible letters. Having feveral times, occafion to make a word or two lately written, appear as if written long before, I lightly moiftened them with oil of tartar per deliquium, nore or lefs diluted with fair water, as I defired the ink to appear more or leis decayed. Another cleanly way of writing without ink, is by rubbing the fine powder of exquifitely zalcined harts-horn, clean tobacco-pipes, or rather muttonzones, burnt to a perfect whitenefs, upon the paper, and then sfing a filver bodkin or the like, as a pen. A very fimple and eafy method of making white table books, is a temper ulverized cerufe, with a ftrong folution of gum arabic in water, which being brought to a thick confiftence, muft be rubbed over the paper, and fuffered to dry. A very ingenious artificer, having contrived an ufeful engine, a neceffary part whereof was a glafs filled with fair water and ftopped, complaining that frofty weather by freezing the water broke his glafs; I advifed him to ufe good firits of wine, inftead of the water, or to fave the expence of that, fea-water ftrengthened with a little falt; or laftly, common fpring water, with a twenticth or tenth part of falt diffolved therein; for I have found none of thefe, though clear, to freeze in the fharpeit of our winters in England. A confection made up with the oulp of floes, accidentally ftaining a large quantity of new jamafk from the top to the bottom, by feeping it for fome hours in new milk, and afterwards caufing it to be carefully wafhed in more of the fame, the damalk came out unftained and white. Urine will ufually take flains, even thofe made by ink, out of linnea; and with ftrong fipitit of falt I have done the fame; firft wetting the fpotted places with fair water, whence atter wafhing, no iron-mole has remained. Some ingenious perfons who deal much in lixivia and brines, complaining of inconveniencies that attend the trial of the ftrength of faline liquors by means of an egg; for to mention no others, the fame egg will, by being kept, grow lighter, and therefore, when ftale, they have ufually a large cavity at the bigger end; I recommended to them the ufe of a piece of amber for that purpore, of what magnitude beft fuited their occafions. Being once in a place where I could not procure fome Dantzic vitriol that I wanted, and obtaining therefore fome liquor which the rain had wabhed from green vitriol, or copperas-ftones, and adding thereto a proper quantity of copper, I made it ferve as a menfruum to work upoh the metal; and by exhaling the folution, obtained the blue vitriol I wanted. And the likee, I doubt not, may be done with all thofe common green vitriols miade of iron, wherein the faline part is not too much latiated with the ferruginous.
A great dealer in cyder, expreffing a defire to be able to make that liquor ftronger, fo as to keep langer than ordinary; I told him to infufe, for twenty-four hours, in ten or twelve gallons of the juice of apples, "about two bufhels of the fame kind of fruit, grofsly bruifed; then gently preffing them, to repeat the infufion, obferving not to make it too thick: and this fucceeded excellently.
Searching accidentally in a dark place, where food fome chemical glaffes I knew nothing of, negligently ftopped, and not wrote upon, one happened to fall, and grievoufly ftain a new fuit I had on; but judging, from the nature of the flain, that it proceeded from fome acid fpirit, by fearching about, and fmeiling to the remaining bottles, I found one that I gueffed by it's fcent, to abound with volatile falt, and with this liquor I bathed the fained parts, which immediately retored them to their former colour. By the like means alfo, I have prefently remedied the difcolourations made in garments, by fretting liquors, which would otherwife have been thereby rendered unfit for wearing.
A virtuofo having made a folution of gold, furpected the metal alloyed with copper, and therefore unfit for his purpofe; I advifed him to precipitate the gold by an urinous fpirit, which it did, into a fine calx, whate the fluid, remaining highly tinged with blue, betrayed the copper that had been ufed for alloy.
Thefe trifing inftances being more pertinent to my defign, than others in themfelves of greater value, is the reafon I have chofe them; nor fhall I repent the mention of them, if they ferve to thew, that the meaneft expesiments may fometimes be ufeful, and better adapted to convince flrangers to

Vol. ll.
philofophy of it's numerous ufes, than thofe of a higher and obftrufer nature. As to know the ufe of a bladder of air, may be more ferviceable to a pilot in a hipwreck, than the moft hidden properties of the magnet; fo in fome cales, obvious and flight experiments prove vaftly more welcome and ufeful, than more confiderable ones would at another time: fo true it is, that ' every thing is beautiful in it's feafon.' For my part, I cannot but hope, that natural philofophy will prove daily more ferviceable both to particular perfons, and trades themfelves; efpecially if a farther enquiry be made, and thereby new qualities detected, and unheeded ufes of natural and artificial philofophy difcovered. For whoever narrowly confiders it, will find, that trades at prefent, deal with but very few of nature's productions, in comparifon of thofe they leave unemployed; and that what they do make ufe of therein, are their obvious qualities, bating fome few more fecret properties which chance, or a lucky fagacity, rather than fkill and enquiry, have difcovered; and, therefore, $I$ fcruple not to affert, that if men were thoroughly fenfible of their own intereft, and would carefully keep their eyes open upon the properties of things, and the application that might be made thereof in human life; they might not only difcover new qualities thereby, and fo produce NEW Trades, but even convert them to fuch ufes as the inventos little imagined : and of this I might produce various infances. To thefe general confiderations I muft add, with regard to the following, that the reader is not to expect a methodical enumeration of all the grounds and motives I have to expect greater advantages from a future progrefs in the knowlege of nature, for I chufe to confine myfelf to what I can render probable by examples, and inftances of that which is already acquired, or very likely foon will be. It mult not, therefore, be imagined, that I have overlooked all the particulars pertinent to my fubjects; nor that I propofed to fet down all the inducements that might be brought, to hhew the ufefulnefs of experimental philofophy. My defign is only to render the expectations of advantages to be received from it probable; to do which, is taking a good ftep towards the attainment of the things themfelves, as Sir Francis Bacon well obferves. And I the rather endeavour to beighten mens expectations herein, becaufe many there are, who, being bred up in the valgar barren philofophy, judge of all philofophy by that; and becaufe fome morofe authors and defpondent perfons, who have unfuccefffully attempted to perform things delivered by unfaithful writers, fancy, and would perfuade others, that nothing confiderable is performable by natural philofophy; our forefathers having, if we credit thefe perfons, had the gootl luck to hit upon all the profitable inventions which philofophy can afford mankind. It may here alfo, poffibly be expected that I thould treat particularly of the principal means whereby a naturalift might advance trades, and affift mankind to recover part of his loft empire over the works of nature. And I confefs I have had thoughts of a projeet to advance experimental philofophy, confifting of fuch heads as thefe. A profpect of what may probably be attained to by philofophy, both in theory and practice. A brief account of what is already obtained thereby. The imperfection of our prefent attainments. What helps we now enjoy. The infufficiency of our prefent helps. The binderances and caufes of them. And laftly $y_{z}$ the means and helps that may be applied. See Royal Society.
Philosophical Chemistry confifts of three parts, viz. invention, rationale, and experiment. Whence it might be defined, the particular exercife of the inventive and rational faculties of the mind upon chemical fubjects, operations, and effects; leading up to experiments and back again; fo as to draw conclufions, account for phrenomena, ftart problems, and attempt their folution in this circle fucceffively *.

* Nec manus nuda, nec intellectus fibi permiffis, multum valet : inftrumentis \& auxiliis res perficitur ; quibus opus eft non minus ad intellectum quam ad manum. Bacon.

Philofophical chemiftry, therefore, is the fource and foul of the whole art ; as by inventing, reafoning, comparing, and adjufting of things, directing experiments, and concluding from the refult, it forms new doctrines, and makes new difcoveries, for itfelf, and all the other branches, to improve and apply.
In the way of invention, this part of chemiftry is more particularly applicable: (I.) To the imitation of natural and artificial things: (2.) To the production of new artificial bodies: (3.) To the ftarting of new arts and trades: and, (4.) To the fupplying of defiderata, or defects in the old ones. 1.) As natural bodies may be fo diffolved or taken to pieces, as in many cafes to difcover their cunttituent parts or ingredients; philofophical chemiftry hence furms rules, for imitating various productions of nature ; which, in fome particulars, is done to great exactnefs; as in the making of cinnabar, vitriol, 8xc. where the refolution has been found ealy; in others lefs, exactly, where, by the common methods, the refolution has hitherto proved more difficult, as in the butinefs of artificial gums and metals, though fome well meant attempis have appeared in this way 6 E .

The

The like alio is to be undertood of artificial bodies, made In one country and imitated in another; whence the imitataion of Venice glafs in England, the imitation of porcellain, the Japan varnifh, various refinements of foreign drugs, fugar, \&c. in Europe: all which were not cafual, are of pure chemical extraction: and the proper enquiries into things of this kind, fall under the inventive part of philofophical chemiftry.
(2.) New artificial bodies are chemically producible ab origine, either in the act of feparation or combination.
In the way of feparation, chemiftry has invented and produced fermented potable liquors, inflammable firits, falts, fugar, pot-afh; thofe vulgarly called chemical preparations, as oils, extracts, firits, \&c. various pigments, and all the pure and unmixed metals: and in the way of combination, it has produced foap, glafs, vitriol, gunpowder, all the mixed or artificial metals, \&c.
(3.) Arts and trades are the genuine fruits or confequences of the preceeding difcoveries, in which view inventive chemiftry is the purveyor to all the other branches, and has thus fruck out a very large number of hints, which are frequently formed in trades. Thus the invention of aqua fortis, for example, has given rife to the fcarlet dye, the bufinefs of etching, the art of refining, \&c.
(4.) And, as inventive chemiftry frikes out new arts and new trades, it is no lefs capable of difcovering means to promote them, or fupply the defect, which may appear in their firf eftablifhment, or retard their farther advancement. Inftances of this kind are every where to be met with; particlarly in the arts of fugar-baking, foap-boiling, fermenting, diftilling, \&c. wherein many morter and better methods of working have been feverally difcovered.
(5.) In the way of rationale, philofophical chemiftry is particularly applicable: (I.) To the accounting for natural and artificial phrnomena and effects: (2.) To the explanation of the general and particular properties, or forms and qualities of bodies: (3.) To the difcovery of the chemiftry of nature: (4.) To the confideration of natural and artificial tranfmutations: and (5.) To the giving a rational theory of medical matters.
(1.) Philofophical chemiftry accounts for many natural and artificial phænomena and effects, as it is often in the power of this att to imitate the fame; whence reafoning by juft analogy, it may be allowed to give fair and fatisfactory folutions. After this manner it endeavours to account for lightening and thunder, with their ftrange effects; the aurcra borealis, earthquakes, volcano's, \&xc. And much in the fame way it folves the phænomena of gunpowder, the phofphori, and various other farprizing productions of chemiftry itfelf.
(2.) As this part of philofophical chemiftry is ufed to explain the general and particular properties, or forms and qualities of bodies, ir confiders heat, cold, light, moifture, drynefs, volatility and fixednefs, fluidity and firmnefs, continuity and contiguity, colours, taftes, odours, congelation and conglaciation, effervefcenfces, fermentations, putrefaction, folution, precipitation, and the various operations of chemiftry, with numerous other phænomena; fo as to fhew how they are produced, effected, altered, or changed in bodies, and thence to make out their general and particular hiftories.
(3.) Philofophical chemiftry finds many reafons for allowing a chemical agency in the production of natural bodies, and their manner of acting upon one another, whence they bring about a kind of true chemical effects. And upon this foundation, the original compofition and ftructure of natural bodies, is rationaliy accounted for, with the operations and effects of the elements upon each other. Thus water and air may be chemically confidered, as two grand menftruums of nature; which, by means of the fun's heat, and the fubterraneal warmth, are continually at work upon all fublunary bodies, in order to bring forward various changes, regenerations, and tranfmutations, \&c. Whence the origin and appearance of meteors, the generation of hall, fnow, rain, metals, minerals, 8xc. And thus all vegetation, anomalization, and mineralization (if thefe words are allowable) may be confidered and accounted for, as operations or effects of natural chemiftry.
(4.) The bufinefs of natural and artificial tranfmutations falls che more particularly under the rationale of chemiftry, as little elfe but confideration and reafoning is required to underftand and apply it. Thefe cranfmutations may be entirely natural, or entirely artificial, or partly natural and partly artificial. Under the entirely natural, come fuch as thofe produced by putrefaction, long ftanding or digefting in the air, water, or any natural fluid: whence animal fubftances are converted into vegetables, wood into ftone, metals into one another, bodies into air, water, fire, \&c. and thefe are again into bodies.
The tranfmutations effected by the joint concurrence of nature and art, are fuch as thofe made by fermentation; where art puts the fubjects together, and rightly difpofes them, but nature performs the bulinefs: fo in the making of paper, art ftamps the rags, but nature half putrifies the matter, and thus contributes to change it.
The tranfmutations purely artificial, are fuch as thofe made
by triture, mixture, long digeftion, and other chemical ope rations; as in extracting the mercuries of metals, and feveral other inftances in the fublimer metallurgy.
Whether thefe artificial tranfmutations be real or only apparent, is not fo much the queftion; thofe who will not allow them for tranfmutations, may call them alterations or changes of one form into another: and, perhaps, they may be no more at the bottom; for, if the changed body be not always artificially reducible to it's priftine ftate again (which is fuppofed the criterion of an artificial tranfmutation) this may be owing not to any impoffibility in the thing, but to the want of a fuitable method for doing it.
(5.) A juft theory of many medical matters will naturally flow from the foregoing confiderations, or from a particular application of the rationale of philofophical chemiftry to the human body; with a view to obferve it's natural ftate, it's diforders, and the effects of remedies. Thus, in particular, it helps to clear up the difputes about animal digeftion, chy\% lification, fanguification, nutrition, \&cc. Ahews how the blood and humours are altered by heat, cold, motion, attrition, \&c. Whence the origin, nature, duration, and phanomena of diftempers, and their manner of cure.
(6.) In the way of experiment, philofophical chemittry is univerfally applicable, and many times abfolutely neceffary to the farther examination, illuftration, and confirmation, of the preceding parts, or the whole theory of the art, which indeed cannot fubfift without it. For though fome kind of theory might be formed of philofophical matters independent of experiments, yet fuch theories have ufually been found barren, unfound, or ufelefo, fo as in no refpect to be fafely trufted *.

* Omnem philofophiam ab experientix radicibus,' ex quibas primum pullulavit, \& incrementum cepit, avulfam rem primum pulluavit, \&
mortuam effe. BAcon.
(7.) It is the peculiar province of this part of philofophical chemiftry to bring new inventions and theories to the touch. ftone; difcover their validity or their infufficiency; and when found juft and folid, to confirm or ftamp them with a character that makes them univerfally current, and fit to be employed for farther ufes.
(8.) Thus, when any hint is ftarted for a new trade, or chemical method invented for the improvement of an old one, before the leaft attempt is made to apply it in real bufineff, the proper efflay or experiment muft be performed in minia. ture ; which proving fuccefsful upon repeated examination, with due variation of circumftances, may now encourage the application, or advancement of this difcovery into an art. (9.) And thus philofophical chemiltry works in miniature to try the truth, and find out the practicability of thing; an example or model of which procedure is preferved and particularly retained in the bufinefs of aflaying [fee AssAy], which before-hand determines the yield of an ore, and fometimes the beft way of working it in large, by previous experiments made in miniature.
(Io.) By thus confining itfelf to work in fmall, or in the way of trial, enquiry or fpecimen only, philofophical chemiftry has the opportunity of fully commanding it's fubjeet; which it chufes of a proper fize for the external fenfes to vjew, and examine on all fides, and obferve the phenomena, effects, and relations, without being oppreffed with too unweildy a bulk, or baving the mind diftracted with too many confiderations; which might attend a large work, and retard it's advancement to a regular and fated perfection. (II.) But when thus the experimental part of philofophical chemiftry has perfected any difcovery in fmall, with relation to arts or trades, and clearly and folidly fhewn how it may be wrought to advantage in large, it has now performed it's office; and here leaves the thing, or turns it over to the other branches of chemiftry, whofe end is advantage, to be carried on in the form of a bufinefs. So Cornelius Drebble, when he had fairly affayed and proved the invention of the fcarlet dye, gave it up to thofe, who afterwards erercifed it as a trade. And this appears to have been the general way wherein arts and trades were originally invented, or firt brought into ufe, for it cannot be fuppofed, that large expenfive works chould have been fet up, before any trial had appeared to encourage them.
(12.) It is a particular happinefs in this bufinefs of experiments, that when an enquiry is made by their means, a proper fet or competent number of them, gone through in due order, will ufually give the difcovery, or as it were a fpontaneous folution of the problem. But to practife this method to advantage, requires a judicious head and a dextrous hand, with a due obfervance of the rules laid down by the lord Verulam, in his noble work De Augmentis Scientiarum, and Novum Organum.
(13.) As the feveral parts of the philofophical chemiftry are thus feparately applicable to fuch good purpofes, much greater advantage may be reafonably expected from the joint ufe and mutual affiftance which they are capable of affording each other, efpecially by a precedent management and application. A great deal has been already done in this way, but more remains to be done. The lord Bacon feems to bave gone as far as mortal could, withour the affitance of new fetts of
experiments
experiments in all the parts of philofophy, but principally in chemiftry, up to which experiments his attatchment to nature led him: but at the fiat experimentum he judiciouly chofe to fop, rather than to advance farther by the help of conjecture, or fuppofing the event of experiments, which it would require fome ages to make. As if the fiat experimentum had been directed to Mr Boyle, he took up philofophical chemiftry where the lord Bacon left it ; and to what lengths he carried it, the prefent ftate thereof may witnefs.
(14.) But the Englifh philofophers feem, at prefent, to be got a little out of this chemical vein; and applying clofer to other fludies, leave the cultivation of chemiftry to the philofophers of other nations. We have had our Bacons, our Digby, and our Boyle; men as eminent in chemiftry, as in wiher parts of ureful knowlege : but Germany feems more difpofed to encourage this art, where every court has it's laboratory, and every mountain it's mine: whence it has been ufually well fupplied with a competent fett of original chemilts, fuch as Agricola, Ercken, Kunckel, Becher, Homberg, and Stahl.
(15.) Hence alfo their contiguous neighbours the Dutch have derived fo much of this art as fuits their purpore, and fits them to fupply all Europe with commodities of greateft confumption, new fabricated and refined by their induftrious hands. Nor has lefs induftry been ufed of late, to promote the knowlege of this art in their univerfities: and though it has been there taught with a view to medicine only, yet fome have hence took occafion to launch into the ocean of philofophical chemiftry; particularly Boerhaave, that late learned and affiduous profeffor of Leyden.
(16.) But not to leave this bufinefs of philofophical chemiftry too loofe, it may be neceflary to reftrain it within it's own bounds. It feems fufficiently diftinguifhed from the exercife of arts by that obfervation already made, as to it's confining itfelf to work in miniature, by way of trial and fpecimen only; whereas arts and trades, produce in large, upon a fetled difcovery, to fupply the demands of commerce.
(17.) Though we diftinguilh this general head by philofophy experimental (under which we comprehend all kinds of experiments that may be of ufe in arts and trades), yet there is a diftinction between philofophical chemiftry, and the common experimental philcfophy, which hes here; philofophical chemiftry, is the bufinefs of experimentally examining into the internal ftructure and compofition, not only of natural, but alfo of artificial bodies; feparating their conftituent parts, differently combining thefe again, and thus producing new concretes, and new modifying both the internal or external form of the old ones: whereas the common experimental philofophy is employed in the difcovering the more obvious properties, and external ufes of natural bodies; the grofs integrant parts, or entire aggregates, whereof it experimentally orders, difpoles, and applies in their natural form and fubfance, to the promotion of knowlege, and the ufes of life: but this produces no new bodies, nor enters into the fubftance, frructure, and compofition of the old ones; nor changes their external and internal forms; nor feparates their conftituent parts; nor varioully combines thefe afreih; nor regards bodies at all as they are refolvable and combinable, or as they are fimples, mixts, compounds, aggregates; or de-compounds: all which is the peculiar bufinels and office of philofophical chemiftry.
(18.) Thus again; it is conceived that natural philofophy cannot, with propriety, be faid to extract and purify metals, analyze vegetables, animal and mineral fubftances, tan leather, brew beer, dye cloth, make glafs, produce oils, fpirits, foaps, \&c. but thefe and all fuch, are the direct and proper operations of chemiftry, -See Tanning, Brewing, Dyeing, Glass, Oilg, Spirits, Soap, \&c.
So likewife, natural philofophy difcovers the obvious, external properties of the air, fire, water, heat, cold, moifture, wind, \&c. by means of various experiments, made with the air-pump, and other fuitable contrivances; but it is philofophical chemiftry, which more effentially examines into the internal nature, compofition, relations, and ufes of the elements, and other phzenomena, and thence finds ways of applying them as engines and inftruments of actual bufinefs: and thus in a more particular manner, it apphes thofe two grand inftruments, heat and cold.
(19.) In thort, there feems to be nearly the fame difference betwixt chemiftry and the prefent natural philolophy, as there is betwixt art and nature; fo that, perhaps, it might not be amifs, if, by way of diftinction, Universal Chemistry were allowed to pals under the name of Artificial. Philosophy
(20.) This diftinetion might not only ferve to reftrain chemiftry to it's proper province, and fettle it's real extent and immediate bufinefs, but contribute allo in fome meafure, to remove the prejudice too commonly affixed to the name, when chemiftry is mentioned.
(21.) The immoral practices of many who have affumed the name of chemift, have greatly contributed to bring a difrepute upon the art; whereto the abandoned and diffolute have ufually made their pretenfions with no more knowlege of it, than would ferve them to cheat dextrounly under it's appear-
ance. So odious has chemiftry been rendered by this treans, as to deter many from the due ftudy and exercife thereof, whence it has been too much left in bad hands. But the damage from this quarter is more fenfibly perceived in the fublimer metallurgy; whence colden mountains having been too often ferioully expected, the indigent and the knavifh pretenders to art, have hence been furnifhed with a fine handle to practife upon the unwary, or fuch as they found blinded by an immoderate paffion for gain. See Chemistry.
(22.) Thefe and the like abules, are no way juftly chatgeable upon the art itfelf, but entirely upon the artift; yet fuch is the fate of human affairs, that the faults of men are often laid at the door of the arts they profefs, as thofe arts may prove occational caufes of the ill: whence philofophic chemiffry, perhaps, gives more occafion of public and private abufes than other arts, as being lefs generally underfood, and attended with the profpect of greater advantages,
(23.) But, as the beft things are capable of the greater abufe, this mifapplication of chemiftry could hardly of itfelf, have removed it from the care and patronage of the Englifh philofophers, if more tempting fludies bad not come in the way; particularly the higher geometry, and fpeculative philofophy, which have employed moft of our greater geniufes. But if upon full examination, thefe more fublime ftudies thall be found of narrow ufe, philofophic chemiftry may again chance to be cultivated, as an art whofe effence is action, and whofe end is ufefulnefs in life.
(24.) And, if the genius of the Britifh philofopher fhould in earneft turn this way, the art itfelf might thus be nobly rercued from the hands of fuch as difhonour it; and be fet in it's true light, unfullied by chicane or delufion: new improvements would be daily made therein, many valuable fecrets difcovered, new trades advanced, commerce in general enlarged, and ufeful knowlege increafed. And though our philofophers were to be thus employed for ages yet to come, there is no fear of exhaufting this rich mine of philofophy and arts: which may be now dug to greater fatisfaction and advantage, as there is no want of mechanical hands in England to execute in large, or bring into works, fuch difcoveries as thall give the encouragement. For as much as the Englifh plilofophers excel in contrivance, invention, and accuracy of experiment, fo much are our mechanical people allowed to excel in adroitnefs and truth of work. And fince the new opening, draining, and working of mines among us, we feem to be called upon afrefh to the exercife and improvemtnt of this art; whence it may in time come to meet with that efteem and application it deferves, in a country fo juftly famous as ours for it's philofophy and it's trade, and thence one day appear in a due body and form of Artificral Philosophy.
(25.) But fuch a fabric cannot be erected without a number of hands, fet to work upon the feveral parts; and, indeed, all the affifance that can any way be procured, is little enough for the purpofe.
(26.) When a general knowlege is gained in the theory and practice of this art, of experimenting philofophically in all refpects, fo that it's ufes and manner of applying to the purpofes of life, are become ready and familiar; it feems principally neceffary to it's farther advancement, that there fhould be a free communication of fudies, experiments, and trials, among a felect number of perfons thus qualified: for as it is naturally impoffible that any fingle man chould have a competent knowlege in all arts and fciences, $f o$ is it expedient, that as much thereof as can be acquired fhould be lodged in fome few, who may freely draw out of each other as occafion requires. Whence they might be enabled to furnifh out not jejune repetitions of things already currently known and practifed, but refults of new enquiries, real improvements, and methods of fupplying the defects of particular arts; or effays well fraught with experimental $F_{A C r s}$ and ufeful difcoveries, after the manner of Bacon, of Boyle, of Homberg, and of Stahl and Shaw. Nor will fuch a felect body of men fail of procuring all the affiftance that can be had from uncommon books, papets, and accounts of particular facts and experiments. And in this manner philorophical chemiftry thould be kept coutinually open, or in a flate of improvement; permitting as it advances, that arts and trades be fupplied, detached, or drawn from it occafionally. See the articles Chemistry, Musiaum, and Royal Society of London.
PICARDY, in France, is bounded on the eaft by Champagne; on the fouth by the ine of France; on the well by Normandy and the Britifh Cbannel; by which alfo, with the provinces of Artois, Hainalt, and Cambrefis, it is bounded on the north. The foil is extremely fertile in corn, and feveral forts of fruits, but it afords little or no wine. It is ufually divided into three parts, viz. Upper, Middle, and Lower Picardy.
Upper Picardy has Hainalt and Cambrefis on the north; Champagne on the eaft, Laonnois on the fouth, and Vermandois on the weft.
At La Fere is a powder-mill, in which they make about 120,000 pounds of powder yearly; and at Vermins, a fmall city on the rivulet Serre, they have a great trade in corn.

Moncornet,

Moncornet, near the fame river, has a manufactory of coarfe ferges
Middle Picardy camprehends Verinandois, tha country of Santerre, and Amienois.
St Quintin, in Vermandois, near the Somme, is a very populous place, and has divers forts of manufactures, efpecially of linnen cloth.
Peronne, in the diftrict of Santerie, on the fame river, is alfo very populous, and they make a vaft quantity of linnen cloth in the neighbourhood, of which they fell yearly at $\mathrm{Pe}-$ ronne for above 150,000 livres.
Amiens, the capital of Amienojs, ftands alfo on the Somme, which runs through it in three different channels, which unite again below it.
There are here, and in the neighbouring villages, manufactures of ferrets, or woollen ribbands; they alfo make here a great quantity of black and green foap.
Lower Picardy comprehends Ponthjeu, Boulenois, and the Pais Reconquis, or the Recovered Cauntry.
Abbeville, in the divifion of Ponthieu, is fituated on the river Somme, and is the moft populous town of all Picardy, next to Amiens. In the year 16,65, Mr Van Roberts, a Dutcbman, fet up here a manufactory of woollen, the fuccefs of which has been extraordinary. Lewis XIV. granted him and his people feveral priveleges, and, in particular, the liberty of importing all neceffaries for his manufactory, without paying any duty. Thofe cloths are faid to be almoft as fine as thofe made in England or Holland. Some years ago one Turner, an Englifhman, went thither, and gave Mr Van Roberts all the infight he could; after which he went into Holland, and found a very good reception amongft the manufacturers of Leyden. There is alfo at Abbeville a manufactory of mocades, and Atriped ftuffs called tripes, the warp of which is thread, and the woof wool, of feveral colours, for the figures that are to be traced in weaving. They alfo make here fail and other coarfe cloth, and linens, which being dyed, ferve for linings. They have, befides, a confiderable manufactory of black and green foap, of which they fell for above 100,000 livses yearly. The mufquets and piftols made here are very much effeemed. This city has a good trade, by means of the veffels that come up the river Somme, with all forts of merchandize, which they exchange for the cloths, linens, and ftuffs made here. See France.
St Valery is a populous fea-port town, at the mouth of the Somme. The entrance is very dangerous, becaufe of the fhelves and quick-fands, that fift from place to place; however there is a very great trade bere, becaufe all merchandizes ate eafily carried from hence to Amiens, and from thence into Artois, Champagne, and to Paris. They import bere fpices from Holland, as alfo pot-afhes for making foap, codfifh, berrings, cheefe, and a great many other different commodities from feveral countrics, and even from America; and they export into Spain and Portugal the manufactures of Picardy.
Boulogne, the capital of the country or divifion of Boulenois, is fituated at the mouth of the little river Liane. The harbour is very incomrnodious, and the road before it extremely bad, the fea being exceffively rough and boifterous with any winds but what blow from the north to the fouth-eaf. It is divided into the upper and lower town, which laft is the largeft and moft confiderable for it's trade.
Calais, in the Pais Reconquis, is at prefent a confiderable mart. The port is very happily fituated, but yet it has feveral inconveniences, for no veffel can enter it without running a great danger, whether it comes along the eaft or weft mole, and there is here no road for fhips to ride at anchor.
PIED MONT is bounded on the eaft by the Duchies of Milan and Montferrat; by the territories of Genoa, and the country of Nice, on the fouth; by High Dauphiné, and part of Savoy, on the weft; and by the duchy of Aofte, and part of the Milanefe, on the north. The river Po divides it into two parts. It's length, from north to fouth, is about 130 miles, and breadth from eaft to weft, where broadeft, about 94 miles. It reaches from 43 degrees 25 minutes, to 45 degrees 50 minutes of latitude, and from 7 degrees tọ 8 degrees 30 minutes eaft longitude.
Piedmont, as it is a very rich and fertile country, fo it is likewife one of the moft pleafant and plentiful in all Italy. It produces great abundance of corn of all forts, wines, and fruits in great variety; as alfo hemp, flax, faffron, mulberries to feed great quantities of filk-worms, the filk here being a great manufacture; and affording good ftore of cattle, fome metals, and, in a word, plenty of every thing fit for man's ufe and delight, and fo well peopled, that the Italians ufed to fay the duke of Savoy has but one city in Italy, 300 miles in compars.
This country is divided into Piedmont, properly fo called, and French Piedmont.
Piedmont, properly fo called. This country is bounded with Montferrat on the eaft; the territory of Genoa on the fouth; the marquifate of Saluzzo on the weft; and that of Sufa, and the marquifate of Jurea, on the north.
Fossano was fo called from fome medicinal fprings in the neighbourhood of it, not unlike thofe of our Eprom and T unbridge. It ftands upon the river Stura, between Saluzzo to the weft,
and Mondowi to the fouth-weft, 27 mples foumh of Turin, 8 north-eaft from Coni, and 30 of Pignerol.
French Piedmont. This country fcarcely deferves to be made into a feparate article, it confifting only of three towns, which lie contrguous to that we have been defcribing above, and on the weft fide of it.

## Remarks.

No.country of it's dimenfions yields the fovereign fo great a revenue as Piedmont does the king of Sardinia: the Englifh alone have taken off the value of, at leaft, 200,000). of their raw filk annually, for feveral years; but their crops of filk-worms are fometimes deftroyed by ftarms of hil called the plague of Piedmont. See Silk-Wornas; Silk. PILCHARD. The pilchard is a fea fifh, bigger than the anchovy, but fmaller than the herring.
The pilchard has a gilt head, a white belly, and the back of a fea-green colour, that is, a little whitifh. This finh, eaten when it is frefh, and lightly fprinkled with falt, is reckoned exceedingly good; thofe of Royan, a fmall town in Xain tonge, are reckoned the beft, if we can credit the French. There are proper feafons for the pilchard-fifhery, being as the anchovy and the herring, a paffage-finh.
They are dreffed and falted in the fame manner as anchovies and herrings, with this difference neverthelefs, that they heave the bead of the one on, and take it off the other. The anchovy is eafily diftinguifhed from the pilchard, though this laft had it's head taken off; the anchovy having a round back, and the pilchard being very fat.
The pilchard-fifhery is very confiderable in France ; it is carried on from the road of Olone Sands, in lower Poitou, as far as the bay of Douarnenez, even to Breft. It commences in the month of June, towards the fand's fide of St Giles. This filh, in thofe places, is fold as foon as catched, to people that falt them, and carry them on horfeback to the neighbouring towns; where, at their firl coming in, they are much eftoemed.
Pilchards commonly follow the fhore, and a little while after they appear at the Sands and St Giles, they begin to take them at Belleifle, next at Port Louis, at Crac, and at Quiberon; afterwards at Concarneau, and, laftly, at Douarnenez, Crozon, and Cameret, near Breft. Pilchards have been caught in the bay of Douarnenez at Chriftmas.
Along the coaft of Bretagne, from Belleife as far as Breft, there is a great trade of pilchards; fome are fold falted, or in piles, fome in cafks, others are dried by the fire, or in fmoke, and otheris are put into little barrels, and are called pickied pilchards.
They do not prepare fuch quantities, either falted or in piles, as they did formerly, upon the account of the exactnefs of the cuftom-officers, who examine them when they come to the cuftom-houfe, and take off all the falt, without which they foon putrify.
Thofe that come in cafks, are called preffed, or pickled pilchards, becaufe when they have been in falt for a while, they are well walhed and put into cafks, in which they are well packed, in order to drain out all the oil which would corrupt them. The cafks which they make ufe of, are a little bigger than half a barrel, and the beft are made of beech-tree, pilchards being preferved therein, better than in any other fort of wood. Though thefe cafks be fmall, they give but four of them to a ton. There are ffatutes about their quantities, becaufe in all Bretagne they buy them by the ton, always packed in cafks.
Towards the end of the fifhing time, when pilchards are a little bigger, they pack fome in calks of a common fize; but thofe are bought and fold on account, in which the credit of the fifhermen is trufted to, who put them in cafks, and mark upon the bottom the quantity of pilchards therein contained. Pilchards that are caught in the months of July, Auguft, and September, are not fit for packing, becaufe the great heats rendering this filh foft, it burfts eafily on packing; and for this reafon, the pilchards which are packed at Belleile, Port Louis, Crac, and Quiberon, are not much efteemed, the fihing time lafting, in thofe places, but 'till the month of September; whercas, it does but begin at Concarneau and Douarnenez,' when the weather is not too hard, and fometimes lafts 'till Chriftmas.
It is from thofe two laft places, particularly Douarnenez, that the beft pilchards are caught, and beft preferved. The Maloins load whole cargaes of them there, to export to different places of the Levant.
In order to have the pilchards of a good quality, they muft be well packed, firm, white, and clear ; neither burft, nor foft, nor yellow, but of a good bigness, that a cafk may contain 6000 of them; for when it contains more, cven 10,000 , they are two fmall, and when lefs, they are too large; for which reafon, a little cafk fhould not contain above 2000, or 3000 ; fo that a trader who is obliged to fell them by retale, can get nothing by them.
The dried pilchards are bought and fold on account; when they are not broiled, they are more valued than thofe packed, and thofe falted alfo, are dearer. It is of the laft fithing, and
when the pilchards are very firm and big, that they dry them. There is a great fale of thefe fifh at Bourdeaux, Rochelle, and Nantes, as well as in fome little harbours in the country of Aunis, and the province of Xaintonge.
Sometimes they fend them to Bayonne and Bifcay ; but they are not dear there, but when the filhing has not been favourable in Spain, where great quantities are caught upon the coafts of Galicia.
The pilchard fifhery, in France, employs more than 300 fhalloops, and almoft all the feamen of the country, in the feafon, upon the coaft of Bretagne; each fhalloop is commonly of 2 or 3 tons burthen, and has 5 men, and 12 nets, from 20 to 30 fathom.
The barrel is fold from 20 to 50 livres; the greateft confumption of this fifh is in Spain, Portugal, Italy, and all the Mediterranean; the fifhery is commonly fo good, that at Port Louis only, they vend 4000 barrels yearly.
pilchards which are caught in Languedoc, are tranfported to Rouffillon, Dauphiné, and the Lyonnois.
The preffed oil of pilchards is put into cafks; it ferves to burn, and it would have more virtue if it was not falted.
There is fo plentiful a fifiery of pilchards upon the coafts of Dalmatia, in the months of May and June, near the fauth of the Ine of IIfa, that it fupplies, not only a part of Greece, but ailo a part of Italy; the Turks take this fifh as a medicine, when they are fick.
Pilchards follow the light; and encompafs the fhalloop that carries it in the night, and that contributes very much to their catching. To facilitate which, they make ufe, upon the coaft of France, of cods eggs; thofe eggs being a kind of bait for pilchards.
A fifhing, almoft as peculiar to Great-Britain as the herrings, is that of pilchards. The Cornifhmen fay of the pilchard, that it is the leaft fifh in fize, moft in number, and greateft for gain, of any finh they take out of the fea.
Their feafon is chiefly from the begianing of Auguft to AllHollowtide, as the countrymen call the I it day of November. They are faid to purfue,' on the coaft of Cornwall in England, a fmall fifh called the brit: and this draws them into the mouths of rivers and bavens. They fwim fo near the furface, that they are difcerned by the rippling of the water at a great diflance.
There are two ways of fifing for thefe pilchards, and the fifhermen are called drovers or feyners.-The drovers watch the fhoals of the fifh entering into the mouths of rivers and harbours as above, where they wait with large fquare nets, placed athwart the fide; and the fhoal of pilchards paffing by, and over them, all that come in the way of the net are entangled.-The feyners take them in the open fea. Thefe complain that the drovers fpoil the fihing, for that thofe driving nets take but a few, and that they break and fcatter the fhoals of the finh, driving them from the fhores: neither are the fifh taken that way fo merchantable, being bruifed in the mathes of the nets, and in tearing them haftily out.
The feyne is a large net, the fame in form with thofe ufed in rivers, but far much larger: for, as the.river feyne nets are $3^{\circ}$ or 40 fathom long, thofe ufed in the fea, are fometimes 5 or 600 fathoms; and each feyne is managed by three or four large boats at leaft, each boat having 6 men. With thefe boats and feynes, they ply about in the fea, where they expect the fifh; and they are directed in their work by a man, or feveral men, who are placed on the hills, called the balkers or fuers. Thefe men ftanding on a high clift, can difcern the courfe the fifh take, by the rippling of the water: and they give notice by fhouting, by waving a flag, or fuch fignal as is agreed on; and accordingly the men in the fifhing boats order their matters. At the appointment of thefe balkers, the men in the boats let down the feyne, and draw it this way or that way, as the fhoal of finh lies: then the net being wholly fpread, they row round, and coming behind the fifh, they beat the water with their oars to drive them into the net: at laft, they either clofe and tuck up the net in the fea, drawing the fifh into their boats, or draw it away to land; which, if the fhore be free from rocks, and not too fteep, is much the fureft, and moft advantageous way. By this method they fometimes take 2 or 300 tons of finh out of a fhoal.
The pilchards are cured by packing and preffing, as the herrings, and fent into the Streights from England, to the feveral parts of Spain, Italy, and the Levant ; where they generally meet with a good market. They formerly cured them by fmoaking; but they have many years left off that method in England.
PILOT. A pilot is he that has the government of a thip, under the mafter, or who is intrufted with the fleerage of the fame. And it has been ufual for pilots not only to direct the fhip's courfe, but alfo to fteer her too themfelves, as they are fill obliged to do amongft us, when the fhip has any dangerous place to pals through, or is fo near the fhore that a more than ordinary fkill is requifite to bring her fafe off; but otherwife, fuch of the other mariners as are moft capable of the function are appointed to do it by turns.
By the fea laws of Wifbuy [fee Wisbuy Laws] every piIot, mate, or mariner, that does not underfand his bufinefo, Ahall be obliged to repay to the mafter whatever wages he had
advanced him, and befides be bound to pay half as much more as he had promifed him. The laws of Denmark panifh an ignorant pilot by fentencing him to pafs thrice under the fhip's keel: and by the laws of Oleron [fee Oleron's Laws] if a pilot undertakes the conduct of a veffel, to bring her to any port, and fail of his duty therein, fo as the fhip mifcarry by reafon of his ignorance in what he undertook, and the merchant receives damage thereby, he fhall be obliged to make fatisfaction for the fame, if he have wherewithal; and if he bath not, or where the fault of the pilot is apparently grofs, that the Ahip's crew fee an apparent wreck, they may lead him to the hatches, and ftrike off his head. Sea Laws, 176. Leg. Oleron, 23.
The laws of France ordain, That no perfon fhall be received as pilot, nor perform that function, 'till he has made feveral voyages, and paffed a frict examination as to his knowlege and experience in navigation; and he Thall be obliged, for proving his voyages, to produce the journals thereof. The pilot thall provide himfelf with all maps, books, and inftruments neceffary for his art: and in long voyages, he thall bave two journals, in one of which he is to write the changes of the courfes and winds, the days and hours of the changes, the leagues which he believes the fhip has failed in each, alfo the reductions in latitude and longitude, the variations of the compafs, together with the founds and hores he has difcovered; and in the other he Chall write out, once in 24 hours, the courfes, longitude and latitude reduced, and the latitudes obferved, and all other remarkable things difcovered during the voyage; and at the return of fuch long voyages, thall lodge a copy of his journal in the Admiralty, on pain of 50 livres. Sea Laws, $291,292$.
And by the fame laws, if a pilot, by ignorance or negligente, occafions the lofs of a fhip, he Chall pay 100 livres fine, and be for ever deprived of the exercife of pilotage; and, if he does it defignedly, he fhall be punifhed with death. But no mafters of ihips fhall force pilots to pafs ethrough dangerous places, or to fteer courfes againft their will; and, in cafe there be difference in opinion, they fhall be governed by the advice of the moft expert mariners.
When a blip comes to a harbour or river, and the mafter doth not know the coaft nor the river, be ought to take a pilot of that country tocarry her up the river or harbour ; which pilot thall be maintained by the mafter, and paid by the merchant: alfo, if it is thought convenient in any river, or off any dangerous coaft, to take aboard a pilot of the country, though the merchant oppofes it, if the matter, the fhip's pilot, and the major part of the feamen are for it, he may be hired, and fhall be paid by the fhip and cargo, as avarages are calculated for goods thrown overboard. Leg. Win. 44 and 60. Ibid. $185,188$.
The mafter of the fhip generally in charter-parties [fee Char -TER-PARTY] covenants to find a pilot, and the merchant agrees to pay him his pilotage: though if a fhip thould be loft coming up the river, under the charge of the pilot, it has been a queftion, whether the mafter thould anfwer for the infufficiency of the pilot, or whether the merchant may have his remedy againft both? But it has been conceived, that the merchant hath his election to charge either; and, if he charges the mafter, then the mafter muft have his remedy againt the pilot. After the fhip is brought into fure harbour, the pilot is no further liable, for then the mafter is to fee to her bed and lying, and hath all the charge upon himfelf; fo that he muft anfwer all danger and hazard, except that of the act of God: but, before fle arives at her place or bed, and while the is under the pilot's care, if the or her goods perith or be fooiled, the pilot fhall make good the damage. Leg. Oleron. Molloy, 254, 255.
By ftatute 3 Geo. I. cap. 13. If ady perfon thall take upon him to conduct and pilot any fhip or veffel, by or from Dover, Deal, or the Ifle of Thanet, to any place on the rivers Thames or Medway, before he has been examined by the mafter and wardens of the fociety of Tinity-Houfe, and thall be approved and admitted into the faid fociety at a court of load-manage, by the lord-warden of the Cinque-Ports, or his deputy, and the faid mafter and wardens: every fuch perfon, for the firt offence, thall forfeit rol. for the fecond 201 . and for every other offence 40l. to be fued for and recovered by any one in the court of admiralty for the Cinque-Ports, if the offending pilot live within the jurifdiction of that courr; or elfe by action of debt, \&c. in any of the courts at Weftminfter, one moiety to go to the informer, and the other to the mafter and wardens of the fociety aforefaid, to be diftributed among fuperanuated pilots, and the widows of pilots of the faid fociety.
And the mafter, and fuch two wardens of the faid fociety as fhall be appointed to examine into the fkill and ability of any perfon on his being admitted as a pilot, Shall take the following oath, to be given them by the regiffer of the faid court of load-manage, or his deputy, viz.
of load-manage, or his deputy, viz.
I A. B. do fwear, That I will impartialy examine and enI A. B. do fwear, That I will impartialy examine and en-

quire into the capacity and flill of T. D. of, \&c. in the art of pilotage over the flats, and round the long Sand Head, and the coaft of Flanders and Holland, and will make true | and fpeedy retum thereof to the lord-warden of the Cuque- |
| :--- |
| F |
| Ports |

Ports for the time being, or his deputy, without favour, affecton, fee, or reward.

So help me God.
The number of fuch pilots fhall not be lefs than 120 , whofe names, ages, and places of abode, fhall yearly be affixed in fome public place at the cuftom-houfes at London and Dover, to which all perfons may have recourie; and not returning lifts, the mafter and wardens of the faid faciety fhall forfeit 101.

But this adt fhall not prevent the mafter or mate of any thip or veffel, or any part owner, refiding at Dover or Deal, or the ifle of Thanet, from piloting his own hip from any of the faid places up the faid rivers, nor fubject any perfon, though not of that fociety, to the penalties before-mentioned, who fhall be employed by any mafter to pilot his veffel from the places aforefaid, when none of the faid fociety fhall, within one hour after the arrival of fuch Claip or veffel at any of the faid places, be ready to pilat the fame. And mafters of mer-chant-firps may make choice of fuch pilot of the faid fociety as they fhall think fit; alfo no perfon fhall continue in this fociety who fhall not pilot a fhip at leaft twice in one year (undefs prevented by ficknefs) to and from the places above-mentionied. And for preventing any exorbitant demands from thefe pilots, for cowducting any hip or veffel from Dover, Deal, or the Ine of Thanet, to any places on the rivers Thames and Medway, the following, and no greater prices, fhall be taken or demanded, than are here mentioned, viz. for every fhip or veffel drawing feven feet water, 31. 10s. for eight feet water, 4. nine feet water, 4 I . Ios. ten feet water, 5 l . eleven feet water, 5 l . Los. twelve feet water, 61. thisteen feet water, 61. ros. fourteen feet water, 7 l . fifteen feet water, 7 l . 10 s . fixteen feet water, 81 . feventeen feet water, 81. ios. and no allowance to be made for odd inches.
In this att there is likewife a claufe, impowering the lordwarden of the Cinque-Ports to nominate three perfons there to adjuft differences between the mafter of any thip and others, where thips by bad weather are forced from their anchors and cables, for faving and bringing them afbore: and this act fhall not hinder any perfon from affifingeg a thip in diftrefs there.
By the 7th of Geo. I. cap 21. The lord-warden of the Cinque-Ports, with the affent of the commiffioners of loadmanage, and of the mafter and wardens of the fociety of pilots of the Trinity-Houfe, of the Cinque-Ports, at a court of load-manage held by the faid lord-warden, or his depüty, may make fuch rules and ordinances for the better government of the pilots refiding at Dover, Deal, and the The of Thanet, as thall be thought convenient, and may order a fufficient number of the pilots living at Dover, \&c. no lefs than eighteen, to ply conftantly at fea, to be ready to conduct fuch Thips up the rivers Thames and Medway as Gall have occafion for them: and the faid lord-warden, \&c. at a court of load-manage, may fufpend or deprive any of the faid pilots, for breaking the rules or orders; and if any pilot fo fufpended or deprived, fhall undertake to conduct any thip by or from Dover, Deal, \&cc. to any place in or upon the faid river of Thames, \&c. he fhall be liable to all fuch pains and penalties as are ordained by the before-mentioned act of 3 Geo. I. againt fuch perfons as thall conduct thips from and to the places aforefaid, without being firft examined and approved of by the mafter and wardens of the faid fociety, at the faid court, and admitted into the fame.
By the ftatute ${ }_{5} \mathrm{Geo}$. II. cap. 20. No perfon fhall undertake the charge of any thip or veffel, as pilot thereof down the river Thames, or through the North Channel, to or by Orfordnefs, or round the long Sand-Head into the Downs, or down the South Channel into the Downs, or from or by Orfordnefs, up the North Channel, or the river Thames, or river Medway, but fuch as thall be licenfed to act as a pilot by the mafter, wardens, and affiftants of the Trinity-Houfo of Deptford-Strond, under the common Seal of the corporation, on pain of forfeiting 201. being convicted before two juftices of peace for the city of London, or the counties of Middlefex, Eflex, Kent, or Surry, within their refpective jurifdictions: but mafters of fhips in the coal-trade, or other coafting trade, are not obliged to employ a pilot:
The pilots to be fo admitted and licenfed, thall be fubject to the government of the faid corporation, provided their regulations do not relate to the pilots keeping of turns, or to fettling the rates of pilotage, and fhall pay the ancient dues, fo as the fame do not exceed 1 s. in the pound out of fuch pilot's hire or wages, for the ufe of the poor of the faid corporation, within ten days after the fervice of any pilot thall be ended. And in cafe fuch pilots fhall refufe to take the charge of any of his majefty's flips, when appointed thereto by the corporation, or fhall mifbehave themfelves in the conduct of any fhips, or other part of their duty, or if pilots fhall refufe to obey any furmmons of the faid corporation, or fuch orders as they fhall make, then the general court of the corporation, upon examination thereof, are required to re-call the warrants granted to fuch pilots; and if, after notice of it given to them in perfon, or left at their place of abode, they fhall act as pi-
lots within the limits afore-mentioned, they fhall be fubject to the penalties inflicted on unlicenfed pilots.
This ftatute fhall not extend to the impeaching of any of the franchifes, nor to take away the fole right of piloting mer-chant-fhips from or by Dover, Deal, and the Ine of Thaner, up the rivers Thames and Medway, granted and allowed to the fociety and fellowfhip of the mafter, wardens, and pilots of the Trinity-Houfe of Dover, Deal, and the Ine of Thaner, by the flatute of 3 Geo. I. cap. I3.
And nothing herein fhall impeach any privileges heretofore granted to, $\sigma$ which by ancient ufage have been enjoyed by, the pilots of the Trinity-Houfe of Kingfton upon Hull, or the Trinity-Houfe of Newcafte upon Tyne.
Nor to prejudice any juriddiction of the mayor; or of the mayor, commonalty, and citizens of London, upon the river Thames; nor any jurifdictions belonging to the office of lord high admiral.
The act 8 Geo. II. cap. 21. continues the afore-mentioned ftatutes for regulating pilots.

## Of Pilots in Spain.

1. There are three feveral principal pilets belonging to the Weft-India voyage in Spain, viz. the chief pilot of the India. Houre, inffituted to examine and give their degrees to other pilots, and judges of the charts, and other inftruments of navigation. The next is the chicf pilot of the armada, or navy royal, to fecure the trade of the Indies, commonly called the galleons; and the third the chief pilot of the New Spain fleet. Thefe being all employments of great importance, it may be proper to give an account of the nature of them, their duty, qualifications, and the manner of beftowing them.
2. We are firft to fpeak of the chiref pilot of the India-Houfe, becaufe he takes place, and ought to be moft knowing, as being to chufe the pilots for the India fhips, out of which are chofen thofe for the galleons and floats: though as to feniority; there were chief pilots of the armadas before there were any of the India-Houfe; becaufe thofe difcovering the new world, made way for an India-Houfe, and, conifequently, for a chief pilot of it, who ought to be univerfal in the theory, not only for the voyage to the Firm Land; New Spain, the coafts of thofe provinces, and the Windward Iflands, but for the river of Plate, for which there was once a particular chief pilot.
3. The firft chief pilot of the India-Houfe was Americus Vefpafius, fettled at Seville, to draw charts upon the difcoveries of others, and the falary affigned him was 50,000 maravedies; this was in the year 1507, and in the reign of king Ferdinand. Not only the chief, but all others whom the king received as his pilots, had falaries fettled on them; and fuch as were as well Milled in warlike as in fea affairs, were received as feacaptains, which was done with Ferdinand Magallanes, whom we call Magellan, who firft difcovered the ftraight of his name, and Ruy Fallero, his companion, in 1518, afligning each of them, 40,000 maravedeis falary; and, in general great encouragement was given to all that were fkilful in this profeffion.
4. The municipal laws of the court of the India-Houfe ordained, That there be in the faid houfe a chief pilot, to be preferred by edict, which is thus: when the place is vacant, the king and the council of the Indies are acquainted with it, and there are edicts, or proclamations, put up in Seville, the univerfities of Salamanca, Valladolid, and Alcala, and alfo in thofe parts where failing pilots are known to refide, as $\mathrm{Ca}_{\mathrm{a}}$ diz, S. Lucar, Port S. Mary, and Ayamonte ; for though it be rare to find among the practical pilots any one fo well fkilled in the theory as to be fit to carry the place of chief pilot to the India-Houfe, yet they have fometimes been allowed as candidates, and the fame may happen again.
When the candidates have made their claims, the court acquaints the king how the parties are qualified, both by their own acts, and the information the prefident and commiffioners have of them, declaring whom they judge moft deferving, and what they think of the reft, that the council may advife, and the king decree, as fhall be moft expedient. The profeffor of cofmography is made after the fame manner; but as for the cofmographer, who is to be an inftrumentmaker, his ikill being of fuch fort as is not learnt at the univerfities, the edicts are fent to court, and put up at the council, and in Seville, at the India-Houfe, and Exchange, and the candidates are remitted by the council to manifett their ability before the prefident and commiffioners of the IndiaHoure.
5. Though fome of the practical pilots have been propofed as candidates, yet none of them have hitherto carried the employment, the council wifely providing, that he who fills this place be the moft knowing that can be found, not only in the art of navigation, but in other parts of the mathematics, becaufe he is not only to examine the pilots for the India voyage, but to judge of the profeffor of cofmography, and the cofmographer inftrument-maker, whom he is to examine and cenfure, as much as he does the mariners that have been his fcholars, in order to take the degree of pilots.

Vice-admirals have been propofed to fill this poft. The defign in inftituting this chief pilot, was only to examine, and give their degree to the other pilots, forbidding him to teach navigation, or the ufe of any inftruments, upon the penalty afligned, and he that learns of him to be incapable of being examined in two years; which was done to the end that affection for his own fcholars might not caufe him to wink at their ignorance. For the fame reafon, he is forbid making any fea-charts or inftruments to fell, becaufe it being his bulinefs to judge of them ufed in the voyage to the Indies, he could never fee any faults in his own, for no mafter will fpeak ill of his own work. For thefe reafons, the two employments of chief pilot and cofmographer were never but once conferred upon the fame perfon, and many inconveniencies appearing in it then, they were ever fince accounted incompatible.
6. When any are to be examined in order to be declared pilots, it is to be done in the India-Houfe, and no other place. The cofmographers and pilots that are then in Seville are to be prefent, to the number of fix at leaft, being men well akilled in fea affairs; the candidates are to be ftrictly examined, all the examiners taking an oath to do it fully, and give their votes according to the beft of their judgment; and the perfon fo approved is to be declared pilot, and not otherwife, upon forfeiture of ro,000 maravedies.
In the year 1604 it was ordered, That one of the commiffioners of the India-Houfe fhould be prefent at the examination, and then the act was performed in the chamber of direction, the commiffioners, chief pilat, and coimographers, litting under the prefident's canopy; which being thought too great an honour for them, they have fince fat in the court of confullhip, under a canopy, and the pilots and deputies of the corporation of failors fit on the faid benches, two cofmographers taking place under the canopy, according to reniority.
7. It is to be obferved, that one previous circumftance to examination is, that they bring proof they are none of thofe the law forbids to be admitted as pilots, which proof is to be made before the chief pilot, who, upon all public occafions, takes place of the fteward and deputies of the company of failors; and if they, being fummoned by the pilot's meffengers, refuge or neglect to appear, he may proceed to take information without them. When either the chief pilot, as a member of the India-Houfe, enjoys all the privileges, and is ander all the prohibitions that others are, yet there is a particular ordinance, which forbids him receiving any thing whatfoever of the perfon that flands to be made a pilot; nor is he to take any fees for the commiffion or warrant he gives them.
8. There are two cofmographers, as has been faid before; the one is profeffor of cofmography, inftituted by king Philip II. in the year 1552 , to teach the art of navigation and cofmography, with order that none fhould be admitted pilot or mafter who had not learnt under him a year, or therebouts. This time was afterwards fhortened to three months, and at laft to two, in order to fit them for examination; and as for reading and writing, it was thought enough if they could read the failing orders, and write their own names; all which was ordered to be taught as follows: the treatife of the fphere, or at leaft the firft and fecond book of it: the reatife that teaches how to take the fun's altitude, and the elevation of the pole, with all the reft taught in it: the ufe of the fea-chart, and bow to find out the point where the Thip is: the ufe of inftruments, and manner of making them, to difcover whether they are faulty, that is, the compafs, ftrolabe, quadrant, and Jacob's ftaff, and how to obferve the needles, to difcover whether they vary eaft or weft, which is a matter of great moment, to keep an exact account when they fail: the ufe of a general dial for day or night: and the pilots muft know, either by memory or by writing, what the age of the moon is any day of the year, that they may know how the tides fall out to enter any rivers or bars, and other matters in continual ufe. A leffon upon thefe fubjects is to be read every day, at the hours appointed by the prefident and commiffioners of the India-Houfe, that may be moft convenient for the learners. There is a great room in the Exchange appointed for this ufe.
9. The other cofmographer is inftrument-maker, the ufe of which the profeflor teaches; but the firft of thefe is the ancienteft employ. Both the coimographers are to fit with the chief pilot, upon examining of pilots, and to put queftions to them; and the law appoints, that if the cofmographer of the India-Houfe informs the faid commiffioners that the examination is not duly made, the faid commiffioners Maill take care to fee right done.
It is alfo the duty of the chief pilot and cofmographers to approve of, and mark the fea-charts, and other inftruments; and they are to have marks for that purpofe, which are to be kept in the India-Houfe, in a cheft under two keys, whereof the chief pilot is to keep one, and the younger cofmographer the other, that no inftruments may be fold or approved without the confent of all three: to which purpofe they meet every Monday, and no inftrument is to be fold without the mark, under the forfeiture of thirty ducats. Two practi-
cal pilots were to be appointed by the commiffionets of the India-Houfe, to examine inftruments, together with the chief pilot and cofmographers; but if the infruments were made by the cofmographer himfelf, then he was to have no vote it the approbation. If an aftrolabe be faulty, it is to be broke and caft again; and a chart, that cannot be mended, muft be cut, and left in the treafury-chamber, that it may not be put together again. When the pilot and cofmographers meet, if there are any to be examined for pilots, that is the firft thing to be done; what time remained after making inftruments, was to be employed in examining the general map, and adding what they think neceffary; but all thefe things are now out of ufe, there being no further difcovery made; and the inftruments and fea-charts generally ufed, being thofe made by the cofmographer of the India-Houfe, of which he makes fome profit, but nothing confiderable, nor is he to take any fee for touching the needles to the load-fone.
PITCH and TAR. This is a clear, fat liquor, that flows from the trunks of old pines. When they would kill or deftroy the tree, the Swedes and Norwegians cut the bark round the tree, which, inftead of yielding a white incenfe, or refin, yields a black liquor, which is the tar; and prefently , as foon as all that is fallen, the trees die, and are good for nothing but to burn.
This may help to undeceive feveral who believe, as many authors have vouched; that tar is made by burning of the pines; for it is certain; that all the tar we now fell is made as already mentioned, and not by means of the pines that are burnt. That which is found clear, is improperly called oil of pitch, and fold under the name of common or falfe cade oil. The tar is much ufed by mariners, farriers, and thepherds, to mark their fheep, as well as to defend them from difeafes. Chufe fuch as is natural and cloan, not fuch as is made with oil and pitch, but the true Stockholm tar.
It is generally brought to us from Denmark, Norway, Finland, and Swedeland; but there is much of it. made in New England, Virginia, Carolina, and other parts of Florida. It is the produce of all refinous trees. It was firft taken from the cedar, the larch-tree, fir-tree, and pitch-trees, but now chiefly from the pine-trees. It cures all forts of fcabs, itch, tetters, ring-worms, and other vices of the ikin.
Tar is better than pitch, becaufe, in boiling, the pitch lofes the more fubtil and fiedy parts; this, therefore, is proper for coughs, phthyficks, hoarfenefs, and other humours that fall upon the lungs. Tar and bees-wax make a plafter that is difcuffive and anodyne, good againft the gout, and all manner of old achs and pains. The firit is very diuretic, opens all obftructions, and refifts the fcurvy.
(What we call lamp black, is made by burning the foul parcels of pitch, refin, \&cc، and gathering the light foot that they fent up; this is much ufed by artficers of various kinds.)

## Remark.

How importantly uffeful to chipping and navigation the articles pitch and tar are, need not be faid: and how they ought to be encouraged in the Britilh plantations, fee Naval Stores. PLANTATIONS. A plantation, or colony, is a place whither people are fent to dwell, with an allowance of land for their tillage, and immunities for the good of themfelves and the ftate they belong to.
A nation, or people, being expelled out of their own land, may feek waftes in fome orher country; and fuch poffeffon creates a property againft all perfons, but he that hath empire there: and if, before they can reap the fruits of their labour, they are in want of neceffaries, by the laws of nature they may force a fubfiftence from a neighbour planter; for fabfiftence belongs to every man, who bath not merited to lofe his life. The written laws are conformable to this; by which, if provifions fail at fea, thofe who laid in particular ftores for the voyage, muft produce them for the benefit of all. Our plantations abroad, are the inands in America; and the ifles of Jamaica and Barbadoes, with fome others, are much frequented by unfortunate perfons, who oftentimes become wealthy there. The Englifh plantations in general are, befides thefe ines, Virginia, Maryland, New England, New York, Carolina, Bermudas, and the Leeward Iflands, \&c. and the fettlement of Georgia.
The iflands being originally gotten by conqueft, or by fome planting themfelves there, the king may govern them as he will: but it has been beld, that the laws in force before the conquelt of them, do bind 'till new laws are given; and even then, fome of the old cuftoms may remain, as they do in Barbadoes, \&c. But Englifh fubjects having found an uninhabited country, all Englifh laws are immediately in force. 3 Mod. Rep. 160.2 Salk. 41 I.
The Inle of Man and Ireland, are poffeffons of the Englifh crown; yet retain their antient laws: fo did Jamaica, 'till new laws were made. In Barbadoes, all freeholds are fubject to debts, and efteemed but as chattels, 'till the creditors are fatisfied, and then the lands defcend to the beir, which is different from the laws here. By the laws of Virginia, negroes are faleable as chattels. 2 Salk. 411.666 .4 Mod. 226. See ftat. $7 \& 8$ W. III. and 5 Geo. II.

If in an action for rent upon a leafe of lands in Jamaica, \&c. there be a foreign localiffue, it may be tried where the action is laid; and the plaintiff may enrol a fuggeftion, that fuch a place in fuch a county, is next adjacent; and it fhall be tried in the King's-Bench, by a jury from fuch place, according in the King of that country.
to the laws of that country.
Here, it was faid, there may be a law in Jamaica againit bonds; but it will not confine the action of debt on bonds made there to that country: an action of falfe imprifonment has been here brought againft a governor, and the laws of the country given in evidence. 2 Salk. 65 r. Mod. Cafes 195. In the year 1661, the then governor of Jamaica called the fifft affembly there, and made laws for raifing a public revenue by a tax on ftrong liquors, for upholding the government there, which were indefinite and perpetual. The king impowered another governor to chufe his own council; and, with confent of the major part, to frame general affemblies of freeholders, as in other plantations, and with their confent to make laws fuitable to thofe of England, to be in force for two years; and the affembly granted the like revenue out of ftrong liquors for two years only. The queftion here was, whether this laft law had totally laid afide the former? It was refolved, that the laft council having power to make laws only for two years, it did not repeal the perpetnal law made before, but fufpended it's power for that time only. Raym. Rep. 397. King Charles II. by letters patents, of OQober, in the 32 d year of his reign appointed Sir Richard Dutton chief governor of Barbadoes, who appointed 12 men to be of the king's council during pleafure ; and by their advice eftablifhed courts, \&cc. and had authority to make a deputy-governor, \&c. and Sir John Witham being fo conftituted, was charged with mal-adminifration, and by order of the governor and council was committed to prifon; for which having brought an action, it was faid for him, that the caufes of commitment (if any) were not cognizable by them, but by the king alone, \&c. To which it was anfwered, that being committed by order of council, it ought to be prefumed his commitment was legal. Judgment was given in B. R. for the plaintiff, but reverfed in the houfe of lords. 3 Mod. 160, 16 x. All governors on their entrance are to take oath, that to their utmoft, the acts paffed concerning the faid colonies be duly obferved. And, on failure, complaint being made to the king, fuch governor to be removed, and forfeit the fum of one thoufand pounds. Stat. 12 Car. II. cap. 18. and $7 \& 8$ W. III. By 11 and 12 W. III. cap. 12. If any governor, deputygovernor, \&cc. opprefs any of the king's fubjects under their government, or act any ways contrary to the laws of this sealm, or in force with their governments, \&c. it fhall be determined in the King's-Bench in England: and fuch like punifhments inflicted, as are ufual for fuch offences here in England.
And by 7 \& 8 W . III. cap. 22. All laws, cuftoms, \&c. practifed in any of the plantations, that are repugnant to any laws already here, or to this act, or any other law hereafter to be made, relating to thofe plantations, are declared null and void. And all places of truft in the courts of law, or relating to the treafury, in any illand or colony of England, fhall be held by native-born fubjects of England, Ireland, or of the faid infands. Alfo perfons claiming any right in any of them, thall not difpofe of the fame to any other than natural born fubjects of England, \&cc. without licence; and all governors appointed by fuch proprietors, fhall be approved by his Majefty, and take the oaths accordingly.
By 12 Car. II. cap. 18. no alien may be a merchant or fachor in any Englifh plantation, on pain to lofe all his goods: and any governor of the plantations that Chall fuffer any foreign built veffel to load or unload, without certificate, that the owners are not aliens, fhall be removed.
Goods thall not be imported or exported, in any other but Englifh or Irifh fhips, 8cc. and of which the mafter and three fourths of the mariners are Englifh, on forfeiture of hip and goods. And any abatement or privilege in the book of rates, is to be underftood, that the mafter and three fourths of the mariners be alfo Englifh.
In the progrefs of our laws relating to the plantations, no fugars, tobacco, cotton-wool, indigo, ginger, fuftic, or other dyeing woods, the growth of any Englifh plantation, were to be tranfported to any place but fome Englifh plantation, or to England, \&ec. on foifeiture of hip and goods. And for every velfel fetting out from England, \& 8 c. for any of the faid plantations, bond thall be given of 1000 l . if the fhip be under 100 tons, and of 2000 l. if of greater burthen; that if the faid veffel load any of the faid commodities at fuch plantations, it Thall bring them to fome port in England, \&c. But thefe laws were repealed by the acts of the 12 th and 20 th year of the reign of Geo. II, whereby liberty is given to carry fugars from the Britifh colonies, diredly to foreign parts, 'till the year 1757. See alfo the article Rice.-The progrefs of the laws follows.
Alfo for all fhips coming from any other port to thofe plantations, the governor fhall take bond as aforefaid. And every fhip taking in goods before bond given, or certificate from fome cuftom-houfe in England, \&c. of fuch bonds being there given, fhall be forfeited; and the governors fhall twice in
every year return true copies of all fuch bonds to the officers
of the cuftoms at London.
By 15 Car. II. cap. 7. no commodity, the growth or manufacture of Europe, fhall be imported into any of the plantations, unlefs fhipped in England, \&rc. and in Englifh built thipping, legally manned, and carried directly, thither, on pain of forfeiture.
But fuch hips may lade in any part of Europe, falt for the ficheries of New England and Newfoundland ; and in the Madeiras and Azores, wines, the growth of thofe Inands; and in Scotland or Ireland may take in Servants, or horfes, and all victuals, the produce of thofe places.
All perfons importing by land any goods into the faid plantation, thall deliver to the governor, or officer by him appointed, within 24 hours, their names, with a true inventory of the goods. And no veffel thall lade or unlade, 'till the mafter have given due notice of his arrival, \&c. and that the thip is Englifh built, and legally navigated, and have delivered an inventory of her lading, \&c. on forfeiture of thip and goods.
And any officers of the cuftoms in England, \&c. fuffering any tobacco, ginger, cotton-wool, indigo, \&c. the growth of the aforefaid plantations, to be tranfported 'till firtt unladen in fome port of England, \&c. Shall forfeit their places, and the value of fuch goods.
All perfons who thall plant any tobacco in England, \&cc. forfeit iol. for every rod of ground planted. And juftices, on information, fhall caufe it to be deftroyed; perfons refifting the act to forfeit 51 , and be imprifoned.
This act thall not hinder planting tobacco in phyfic gardens, \&c. fo it exceed not half a pole in any one garden.
By $22 \& 23$ Car. II. cap. 26. every veffel lading at any of the Englifh plantations, 'till bond be given, or certificate produced, or carrying the faid goods contrary to the tenor of it, was to be forfeited.
Bur the act 25 Car. II. cap. 7. feems to have taken off thefe penalties, ordaining, that if bond be not given, feveral duties are to be anfwered, payable, as appointed in the faid plantations: and if any perfons liable have not money, the officers Thall take commodities amounting to the value, at the current price in the fame plantations.
By 7 and 8 W. III. cap 22. no goods thall be imported or exported to or from any plantation, or port in the fame, England, \&cc. in any thip but Englifh, \&cc. or the faid plantations, and duly navigated, on forfeiture of thip and goods, \&c. as by former ftatutes.
No ihip Chall be deemed Englifh, \&c. built, or qualified to trade to any of the faid plantations, 'till regiftered by the proprietor, and oath made by the owners, where the fhip was built, who the prefent owners, and that no foreigner, direcily or indirectly, hath any intereft therein. Which oath being attefted by the governor, or cuftom-houfe officer before whom it is taken and regiftered, fhall be delivered to the mafter for fecurity, and a duplicate fent to the commiffioners of the cuftoms at London: any veffel trading without fuch proof, fhall be liable to forfeiture as a foreign fhip would. And no fhip's name regiftered thall be changed without regiftering anew, under like penalties; "alfo fale of any thare to be mentioned by endorfement on the certificate of the regifter.
All ihips lading or unlading at any of the plantations aforefaid, and the mafters of them, hall be fubject to the fatme rules, fearches, \&c. as in this kingdom by 14 Car. II. cap. 11. And the officers for collecting the revenue, \& tc. thall have the fame authority as the officers of the cuftoms in England, by the faid act 14 Car. II. and to enter houfes and warehoufes, to fearch and feize fuch goods; and all perfons affifting in conveying or concealing goods, or refifing the officers in their duty, and the boats, \&sc. Shall be liable to the like penalties, as for probibited goods in this kingdom; and the officers to the fame penalties for frauds, \&c. as here. If the governors or officers of the cuftoms have caufe to fufpect any certificates to be counterfeit, they may require fufficient fecurity for the difcharge of the plantation lading in England, \&c. and if they fufpect the certificate of having difcharged the plantation lading in this kingdom is falfe, they thall not vacate the fecurity given in the plantations, 'till fatisfied from England concerning it. And any perfon counterfeiting cocket, certificate, $\& x$. forfeits 5001 . and the cocket, \&c. hall be invalid.
The fureties of bonds taken purfuant to the forementioned act, thall be perfons of known refidence and ability in the plantations; and the conditions of the bonds within eightecn months after the date (danger of the feas excepted) to produce certificates of having landed the goods in England, sic. or the bonds and copies to be in force.
Nor thall it be lawful on any pretence, to land in Ireland any goods the product of the faid plantations, unlefs firft landed in England, \&c. and the due rates paid, on forfeiture of thip and goods: but if any thip fo laden, fhall by frrefs of weather be ftranded, or be driven into any port of Ireland, and unable to proceed, her goods may be put on hore, but fhall be delivered to the chief officer of the cuftoms there, 'till put on board fome other fhip, to be fent to fome port in England, \&c.

Where any queltion fall arife concerning importation or exportation of any goods, proof fhall lie on the owner or claimer: and on any actions, \&c. commenced in the haid plantations relating to the duties or forfeitures, none fhall be of any jury but natives of England or Ireland, or of the plantations; and the offences may be laid to be in any precinct of the faid plantations, where they are faid to be committed.
By 3 and 4 Anne, cap. 8. Any native of England or Ireland, may fhip in any port of Ireland in Englifh built huipping duly manned, any linen cloth the manufacture of Ireland, and ranfport to any plantation, \&c. belonging to England, and there vend the fame. But no thip fhall break bulk 'till notice be given to the governor, and a true invoice of the lading be delivered him, with a proper certificete from the chief officer of the port in Ireland where laden; and 'ill the mafter hath taken oath before the governor, \&cc. that the goods are the fame that were took on board, nor'till the fhip be fearched. If the mafter fhall break bulk before fuch notice given, \&c. or on fearch any other manufacture be found, thip and goods thall be forfeited. And fhips coming from Ireland to any fuch plantation, fhall be fubject to the like rules, fearches, and penalties, as fhips from England are.
If any hip laden in England for the plantations, fhall put into any port in Ireland and take on board fuch Irifh linen, the like certificate and oaths thall be made; and the thip, her mafter, and lading, thall be liable to fuch fearches and penalties, \&c. only, fuits are to be brought in a twelvemonth after difcovery of any offence. See the act 3 Geo. I, cap. 2I. The aft 6 Ann. cap. 30. recites, That her Majefty by proclamation, dated 18 June, 1704, fettled the currency of foreign coins in the American colonies, which was as follows:

## A Proclamation, for afcertaining the currency of the

 foreign coins in the Plantations.WE having had under our confideration, the different rates at which the fame fpecies of foreign coins do pafs in our feveral colonies and plantations in America, and the inconveniencies thereof, by the indirect practice of drawing the money from one plantation to another, to the great prejudice of the trade of our fubjects; and being fenfible the fame cannot be otherwife remedied, than by reducing all foreign coins to the fame current rate within all our dominions in America: and the principal officers of our mint, having laid before us a table of the value of the feveral foreign coins which ufually pafs in payments in our faid plantations, according to their weight, and the affays made of them in our mint, thereby hhewing the juft proportion which each coin ought to have to the other, which is as followeth, viz. Seville pieces of eight, old plate, feventeen pennyweight, twelve, grains, four thillings and fix pence; Seville pieces of eight, new plate, fourteen pennyweight, three fhillings and feven pence farthing; Mexico pieces of eight, feventeen penny weight twelve grains, four fhillings and fixpence: pillar pieces of eight, feventeen pennyweight twelve grains, four flillings and fix pence three farthings ; Pera pieces of eight, oid plate, feventeen pennyweight twelve grains, four thillings and five pence, or thereaboutis; crofs dollars, eighteen pennyweight, four fhillings and four pence three farthings; ducatoons of Flanders, twenty pennyweight and twenty-one grains, five fhillings and fix pence; ecus of France, or filver Lewis, feventeen pennyweight twelve grains, four hillings and fixpence; crufadoes of Portugal, eleven pennyweight four grains, two Chillings and ten pence farthing; three guilder pieces of Holland, twenty pennyweight and feven grains, five fhillings and two pence farthing; old rixdollars of the empire, eighteen pennyweight and ten grains, four thillings and fixpence; the halves, quarters, and other parts in proportion to their denominations, and light pieces proportionable to their weight. We have therefore thought fit, for remedying the faid inconveniencies, by the advice of our council, to publifh and declare, that from and after the firft day of January next enfuing the date hereof, no Seville, pillar, or Mexico pieces of eight, though of the full weight of feventeen pennyweight and a half, fhall be accounted, received, taken, or paid within any of our faid colonies or plantations, as well thofe under proprietors and charters, as under our immediate commiffion and government, at above the rate of fix fhillings the piece current money, for the difcharge of any contracts or bargains to be made after the time aforefaid; the halves, quarters, and other leffer pieces of the fame coins, to be accounted, received, taken, and paid, in the fame proportion, and the currency of all pieces of eight of Peru, dollars, and other foreign fpecies of filver coins, whether of the fame or bafer allay, fhall ftand regulated, according to their weight and finenefs, in proportiun to the rate before limited and fet for the pieces of eight of Seville, pillar, and Mexico; fo that no foreign filver coin of any fort be permitted to exceed that proportion upon any account whatfoever. And we do hereby require and command, \&c. (the obfervance of the directions herein, \&c.)
For the better enforcing the due execution of the faid proclamation throughout the faid colcnies, and more effectual

Vol. II.
remedying the inconveniencies thereby intended to be reméa died, it is enacted, That if any perfon within any of the faid plantations, fhall, for difcharge of any contract to be hereafter made, account, take, or pay, any the fpecies of foreign filver coins mentioned in the above proclamation, at any higher rate, fuch perfon thall fuffer fix months imprifonment without bail, and forfeit rol. for every offence.
But nothing in this act or proclamation, thall compel any perfons to receive any of the faid fpecies of foreign filver coin at the rates in the proclamation mentioned: nor any thing herein contained, reftrain her Majefty from fettling the rates of the faid foreign coins in any of the faid plantations, as the fhall judge neceffary by proclamation, or from giving her royal affent to any law hereafter made in any of the plantations, for the fame purpofe.
By 8 Geo. I. cap. 18. reciting divers acts, by which diverle commodities of the Britilh plantations, are reftrained to be imported into this kingdom, or fome other plantation, under fecurities and penalties therein fpecified, enaets, That copper ore thall be under the like fecurities, as for other goods enumerated by any former laws.
By 4 Geo. Il. cap. 15. All goods not mentioned in any former act, may be imported into Ireland from the American plantations, the act 7 and 8 Will. III. notwithftanding. But the goods thall be in Britifh fhipping legally manned.
By 5 Geo. II. cap. 7. All real eftates hall be chargeable with all juft debts whatfoever, as they are by the law of England liable to fatisfaction of debts due by bond, or other fpeciality; and fubject to like remedies and proceedings in any court, in any of the plantations, in the fame manner as perfonal eftates are there.
And for more eafy recovery of debts in the colonies in ariy fuit brought there, for debt or account, in which any perfon refiding in Great-Britain thall be party, fuch debts may be proved here on oath before any chief magiftrate near where the perfon thall refide, and being certified under the common feal of the city or town, \&c. Thall be of the fame force, as if the perfons had appeared in open court, or upon commifion. By 6 Geo. II. cap. 13. All fugars and paneles of the product of any plantations not under his Majefty's dominions, imported into any of his Majefty's plantations, fhall pay 5s. for every hundred weight, and for all rum or fpirits of foreign produce, 9 d . for every gallon; and for molaffes 6 d . the gallon. And on importation an entry fhall be made with the proper officers, \&c. and the duties paid down in ready money before landing the goods, on pain of forfeiture; and every fuch offence may be profecuted in an admiralty-court in the plantations, or court of record where committed.
By this act, fugars, paneles, \&cc. rum and fpirits of America, not the product of the Englifh fugar colonies, are prohibited to be imported into Ireland, but fuch only as are Chipped in Great-Britain, in fhips legally navigated, \&c.
By 5 Geo. II. cap. 22. No hats or felts fhall be exported from one Britilh plantation to another, on penalty of 500 l . and forfeiture of the goods; and perfons aiding and affifting therein, fhall forfeit 401. Any perfons may feize hats and felts found on fhip-board, \&c. and carry them to the king's warehoufe. And commiffioners of the cuftoms, \&c. in the plantations, permitting entries for exportation forfeit 5001 . This ftatute alfo regulates the trade of felt-making, \&ic. and no perfon fhall retain in the faid art any negro, on forfeiture of 51 . for every month.
By 3 Geo. II. cap. 28. Any Britifh fhip legally navigated clearing outwards in any port of England for the province of Georgia, may load rice there and carry to any port fouth ward of Cape Finifterre, under reftrictions limited in the act. And the officers appointed by the truftees of Georgia, are impowered to do all things there, which may be done by virtue of the faid act, by the officers in Carolina. The fhips concerning which province, fhall proceed directly without carrying rice to any other Américan plantation; firf taking out a licence from the commiffioners, on a certificate from the collector and comptroller of the port, that bond is given, that no enumerated goods fhall be taken on board at Carolina, or any plantation, unlefs for neceffary provifions in their voyage.
After landing the rice at fome port of Europe fouthward of Cape Finifterre, the fhip is to proceed for Great-Britain, and produce a certificate of having landed the fand rice; \&c. and the mafter producing the licence to the officers of the port where given, they fhall demand the amount of the lalf fubfidy payable for rice fhipped in Carolina, which would have remained, had the rice been firft imported in GreatBritain, and afterwards re-exported; which not being paid within 30 days, the bond fhall be forfeited, \&c. At prefent, rice, as well as fugar, is permitted to be carried to foreign countries from the plantations, without being brought to England.

Remarks on Plantations before the laft War
In the courfe of this work, we have conlidered the Britifh plantations in various lights the moft nationally interefting to our commercial profperity. See the articles British America, Canada, Colonies, Florida, Lovietana,

MAP,

## P L A

## P L A

Map, France, North Carolina, Pensylyania. See likewife our Map of North Ameica, compared with the French one of Monf. D'Anville, performed by the order and under the patronage of the duke of Orleans, at a very great expence. Under the preceding heads, the reader will find the caufes of the prefent precarious ftate of our plantations in America, pointed out to him for feveral years paft; and alio fuch meafures, as we humbly apprehend, would have effectually protected our poffeffions from thofe infults and depredations, to which they feem daily liable, to the concern of all wife and honeft men, who wilh well to thefe kingdoms.
By the before-mentioned map it appears, how contiguous the French colonies in North America lie to the Britifh, which are entirely furrounded by them, and that the claims of the French, in many refpects, we have fhewn to be groundlefs and unjuft.
Several parts which they now claim, were, about the beginning of the reign of king James II. made over and furrendered by the Iroquois Indians and their allies, to the crown of England, the right and poffeffion whereof we have ever fince afferted and endeavoured to fecure, both by ourfelves and the abave-faid Indians our confederates, who on their parts, on all occafions of difference with the French or their Indians, have for that and other confiderations, demanded the good offices and protection of the Englifh; who knowing it their intereft, have never failed, if the caufe was juft, to afford it them: as they did in the year r696, when the count Frontenac, governor of Canada, with feveral thoufand French and Indians, attacked the Onondages, one of the Five Nations, and ravaged their country; but on the approach of colonel Fletcher, governor of New York, with fome regular forces, militia, and Indians, he was forced to retire, not without a confiderable lofs from thefe natives, who conftantly attended him in his retreat, often fell on bis rear, cut off many of his people, and all the ftragglers they could meet with.
The Five Nations, when fummoned on our two laft unfortunate expeditions againft Canada, readily joined the Englim troops under the command of General Nicholfon, with about a thoufand men, and the reft of them were in motion in different parts; fome to difcover and obferve the pofture of the enemy in their own country, others to fcout about the rivers and lakes. And they had fo great a reliance on the friendhip and protection of the Englih, whom they have heretofore found and acknowleged to be truly juft, honeft, and punctual, in their treaties and dealings with them; that during queen Anne's war, they not only permitted, but alfo invited them, to build a fort in the very heart of their country, and on their main river, the gate of which adjoined to, and opened into one of their capital towns or fortifications, inhabited by the Mohawks, the chief and moft warlike nation among them. The Englifh garrifon being a detachment from the independent companies of New York and Albany, lived with them in the ftricteft amity, and daily entered their caftle as the Indians did our fort, who contantly fupplied the foldiers with venifon, wild fowl, filh, and other neceffaries in their way.
From thefe Indians of the Five Nations, the Englifh of New York purchale the greateft part of their furr and peltry-trade, and in exchange fupply them with duffels, ftrowds, blankets, guns, powder, fhot, and other the manufactures of Great-Britain.
The French knowing and envying the great friendohip and commerce the Englifh of New York cultivate and carry on with thefe Indians, and being fenfible of the mighty ufe and fervice they are of, not only to that colony, but to all our other colonies to the northward, have on many occafions endeavoured, by all the artifices imaginable, to draw them over to their party and interefts, which when they failed in, they have attempted by force or fraud to extirpate or fubject them: but that cunning and warlike people, by the advice and affifance of the Englifh, have ever prevented their defigns, to whom they continue moft incenfed and irreconcileable enemies; though as long as the Englith have peace with them, they are purfuaded to continue the fame.
Indeed, during the reign of king James II. they had certainly been cut off and exterminated by the French (the Englifh being prohibited to give them the leaft affiftance) had not the happy Revolution of king William intervened, and the war with France foon fucceeded
Nay, even Col. Dungan, a Roman Catholic, made governor of New York by king James, was at that time fo very fenfible of the ruin intended to the Five Nations our allies, and in confequence to the Englifh plantations, that he ordered the Popifh priefts, who were by leave come into his government, under pretence of making profelytes, to depart from thence, becaufe he found their defigns was to betray our colonies to the French, inftead of making converts of the inhabitants.
The French, as is related above, have many ways endeavoured to ruin or diffrefs the Iroquois; but as they are well affured, nothing will affect them fo much and nearly, as to deprive them of their filhing and hunting, which is mofly on the borders of, and between the great lakes, and without

Which they muft farve; therefore they have attempted to build forts on the feveral narrow paffages thereof, and the rivers which empty themfelves thereinto, in order to intercept them, either in their going or returning from thofe places; but the Indians have as often prevented the finilhing of them, or otherwife obliged them to demolifh or defert them.
But fhould the French be permitted to eftablifh their projected communication between Cape Breton and the gulph and river of St Lawrence, as far as the Miffiffippi, and fo downwards to the bay of Mexico, which will be a mighty addition and increafe of territory, frength, and power to them, it is much to be feared, they will carry their point one time or another, and thereby diftrefs and fubject thefe our allies; the confequence of which will not only be very thacking, but of the utmoft concern to the fafety of our northern plantations: for if we now, in to great meafure, ftand in need of, and depend on them as our friends, for the fecurity of our frentiers, what muft we expect when that barrier is removed, and they become our enemies? And not only they, but all the reft of our friendly Indians to the fouthward, which we may of courfe depend on.
We bave heretofore experienced the difmal and tragical confequences attending a defection, of only one or two paultry nations of Indians bordering on Carolina; and though other pretences have been urged as the caufe thereof, and were, perhaps, in fome meafure true; yet the French, fince their late fettlements on the Miffiffippi, and the bay of Mexico, have frequently clandeftinely fomented and widened the breach, which occafioned the butchering of fo many hundreds of the inhabitants of that colony, with the burnings, devaftations, and almoft entire defolation thereof.
It is well known, that the frontiers of our colonies are large, naked, and open, there being fcarce any forts or garrifons to defend them for near two thoufand miles. The dwellings of the inhabitants are feattered at a diftance from one another; and it is extremely difficult, if not almoft impoffible, according to the prefent effablifhment and fituation of our affairs there, from the great number of our colonies independent on each other, their different forts of governments, views, and interefts, to draw any confiderable body of forces together on an emergency, though the fafety and prefervation, not only of any particular colony, but of all the Englifh plantations on the continent, were never fo nearly concerned.
For feveral of thefe governments, pretending to or enjoying fome extraordinary privileges, which the favour of the crown has formerly granted them, exclufive of others, if their affiftance is demanded or implored by any of their diffreffed neighbours, attacked by enemies, perhaps, in the very heart of their fettlements, they either by affected delays, infifting on punctilios and niceties, ftarting unreafonable objections, and making extravagant demands, or other frivolous pretences, purpofely clude cheir juft and reafonable expectations; and by an inactive ftupidity or indolence, feem infenfible of their particular and mof deplorable circumftances, as well as regardlefs of the general or common danger, becaufe they feel not the immediate effects of it; not confidering their own fecurity is precarious, fince what happens to one colony to-day, may reach another to-morrow. A wife man will not ftand with his arms folded when his neighbour's houfe is on fire.
The only expedient which has been fuggefted (wish the utmoft deference to his Majefty and his minifters) to help and obviate thefe abfurdities and inconveniencies, and apply a remedy to them, is, That all the colonies appertaining to the crown of Great-Britain on the northern continent of America, be united under a legal, regular, and firm eftablifhment, over which it is propofed a lieutenant-general, or fupreme governor, may be conftituted, and appointed to prefide on the foot, to whom the governors of each colony thall be fubordinate.
It is further humbly propofed, That two deputies fhall be annually elected by the council and affembly of each province, who are to be in the nature of a great council, or general convention of the effates of the colonies; and by the order, confent, or approbation of the lieutenant, or go-vernor-general, fhall meet together, confult, and advife for the good of the whole, fettle and appoint particular quotas, or proportions, of money, men, provifions, \&cc. that each refpective government is to raife for their mutal defence and fafety, as well as, if neceffary, for offence and invafion of their enemies: in all which cafes, the governor-general, or lieutenant, is to have a negative, but nor to enaft any thing without their concurrence, or that of the majority of them. The quota, or proportion, as above allotted and charged on each colony, may, neverthelefs, be levied and raifed by it's own aflembly, in fuch manner as they hall judge moft eafy and convenient, and the circumftances of their affairs will permit.
Other jurifdictions, powers, and authorities, refpecting the honour of his Majelty, the interelt of the plantations, and the liberty and property of the proprietors, traders, planters, and inhabitants in them, may be vefted in, and coguizable by, the abovefaid governor-general, or lieutenant, and grand convention of the eftates, according to the laws of England,
but thefe points are not thought fit to be touched on or inferted here: this propofal being general, and with all humility fubmitted to the confideration of our fuperiors, who may improve, model, or reject it, as they in their wifdom fhall judge proper.
A coalition, or union of this nature, tempered with and grounded on prudence, moderation, and juftice, and a gegrounded on prudence, moderation,
nerous encouragement given to the labr, induftry, and good management of all forts and conditions of perfons inbabiting, or any ways concerned or interefted in the feveral colonies above-mentioned, will, in all probability, lay a fure and lafting foundation of dominion, ftrength, and trade, fufficient not only to fecure and promote the profperity of the plantations, but to revive and greatly increafe the flouribaing flate and condition of Great-Britain, and thereby render it, once more, the envy and admiration of it's. neighbours.
Let us confider the fall of our anceftors, and grow wife by their misfortunes. If the ancient Britons had been united amongft themfelves, the Romans, in all probability, had never become their mafters: for ${ }_{2}$ as Cæfar obferved of them, Dum finguli pugrabant, univerfi vincebantur; whillt they fought in feparate bodies, the whole illand was fubdued: fo if the Englifh colonies in America were confolidated as one body, and joined in one common intereft, as they are under one gracious fovereign, and with united forces were ready and willing to act in concert, and affift each other, they would be better enabled to provide for and defend themfelves againft any troublefome ambitious neighbour or bold invader: for union and concord increale and eftablifh frength and power, whillt divifion and difcord have the contrary effects.
It muft feem to every man a very great indignity offered to his Majefty and the nation, that when there are are 500,000 Britifh fubjects (which are, perhaps, three times more than the French have both in Canada and Louifiana put together) inhabiting the feveral colonies on the eaft fide of the continent of North America, along the fea-hhore, from the gulph of St Lawrence to that of Florida, all contiguous to each other, who, for a century, have eftablifhed a correfpondence, contracted a friendibip, and carried on a flourihing trade and commerce with the feveral nations of Indians lying on their back, to the weftward and northward, for furrs, fkins, \&c. a moft rich and valuable traffic, the colonies themielves abounding with metals and minerals of copper, iron, lead, \&c. producing hemp, flax, pitch, tar, rofin, turpentine, maft, timber, and planks of oak, firr, and all other forts of naval ftores in great abundance, and the beft of their kind in the world; befides wheat, beef, park, tobacco, rice, and other neceffary and profitable commodities; with a noble fifhery for whales, cod-fifh, \&c. along the coalt and in the bays thereof: I fay it feems a great indignity offered to his $\mathrm{Ma}_{\mathrm{a}}$ jefty and the Britilh nation, that the French flould prefume to make thofe incroachments, and commit thofe ravages and hoftilities on our plantations, which are now the fubject of daily converfation and furprize; efpeçially fince the Englifh have planted and improved them, from the fea-coaft almoft up to the fources of the largeff rivers, by the confent of the natives, whofe lands they have actually purchafed and paid for, and whofe traffic we may be entirely deprived of, if the French do not meet with an effectual check.
Moreover, if the Englifh fuffer themfelves to be thus fraightly cooped up, without fretching their plantations further back into the continent, what will become of their offspring and defcendants, the increafe of their own and the nation's ffock; who claim and demand an habitation and inheritance near their parents, relations, and friends, and bave a right to be provided for in the country where they are born, both by the laws of God and man, and which the prudence and policy of the ftate does likewife require, as convenient and neceifary, Both for extending our territories, ftrengthening our hands, and enlarging our trade?
Befides, as the Englifh are not fond of extending their dominions on the continent of Europe, but confine themfelve to their iflands, being content with their ancient territories and poffeffions, except what is abfolutely neceffary to promote and fecure their trade and commerce, the very vitals of the ftate, I cannot apprehend with what reafon or juftice the French, or any other nation, fhould incroach upon their claims, colonies, or plantations in America.
We have heretofore likewife been, with juft reafon, alarmed in Great-Britain by the many letters, memorials, reprefentations, and remonftrances, which have, from time to time, been tranimitted from divers of our colonies upon the continent of America, fetting forth the danger they have been frequently expofed to from the neighbourhood of the French, if they obtained full poffefion of the province of Carolina, (which they fome years fince attempted) and the lands to the northward of it, as far as the five great lakes, which comprehend great part of what they call their Louffiana.
For through thefe countries many great rivers have their courfe, proceeding from the back of our colonies of New York, New Jerfey, Penfy!vania, Maryland, Virginia, North and South Carolina (their fprings being not far diffant from the heads of the chief rivers that belong to, and run through
thofe colonies) molt of them navigable without interruption from their fountains, 'till they fall into the Miffiffippi. And by means of their fettlements on that and the other inland rivers and lakes, from the bay of Mexico to the river and bay of St Lawrence, the French are drawing a line of communication, and now endeavouring to furround and ftraighten all our colonies, from Nova Scotia to South Carolina. Thus are they working out their own grandeur and our deftruction! Indeed the French, whom all the worid acknowlege to be an enterprizing, great, and politic nation, are fo fenfible of the advantages of foreiga colonies, both in reference to empire and trade, that they ufe all manner of artifices to lull their neighbours afleep, with fine fpeeches and plaufible pretences, whilft they cunningly endeavour to compafs their defigns by degrees, though at the hazard of encroacting on their friends and allies, and depriving them of their territories and dominions in time of profound peace, and contrary to the molt folemn treaties.
For befides their feizing on, and fettling the great tiver Miffiffippi, and fome part of the north tide of the bay of Mexico, and the claim they feem clandeftinely to make to another of our inhabited fouthern colonies adjoining thereunto, as I thall in the fequel demonfrate, they in fome of their writings boaft, that their colony of Louifiana hath no other bounds on the nogth than the aretic pole, and that it's limits on the weft and north-weft are not known much better, but extend to the South-Sea, Japan, or wherever they Chall think fit to fix them, if they can be perfuaded to fix any at all; intending one day, if it is in their power, to deprive the Britifh nation of all that vaft track of land fituate between the gulph of Mexico and Hudfon's Bay, which includes the province of Carolina, the aforefaid great lakes, and the whole country of our five indian nations and allies, with the furr, peltry, and ather trade thereof.
And what further views and defigns they may ettertain againft the Spanifh provinces of New Mexico and New Bifcay, may be eafily conjectured, fince we cannot forget the project framed by Monfieur de la Salle, to vifit and feize on the rich mines of St Barbe, 8rc. which if be thought no difficult taik to accompliih with about 200 French, and the affittance of the Indians adjoining to, and in ạctual war with, the Spaniards at that time; how much more eafily will they become mafters of them, when with the united ftrength of Canada and Louifiana, both French and natives, they Chall think fit to attack them? And after fuch an acquifition of the numerous mines of thofe provinces, with the immenfe riches thereof, what may not all our colonies on the continent of America apprehend from them?
Befides, Jamaica lying, as it were, locked up between their fettlements in the illand of Hifpaniola, and thofe on the bay of Mexico, will foon be in danger of falling into their hands; and whether the Havannah itfelf, and the whole ifland of Cuba, with the key of Old Mexico, La Vera Cruz, will long remain in the poffefion of the Spaniards, is very much to be doubted, if the Spaniards fhould neglect their true intereft, and not aft in concert with Great-Britain, to curb and reftrain fuch meafures: and fuppofing the beft that can happen to us, it will be but Ulyffes's fate, to have the favour of being deftroyed laft.
We are all fenfible what clamours were raifed at the conceffions made to France on the conclufion of the peace of Utrecht. There is fcarce a man well verfed in the iatereft of trade and plantations, but blamed the then miniftry for not infifing on the furrender of Canada, as well as Nova Scotia and Newfoundland, for the fecurity of our northern colanies on the continent of America, and the traffic thereof: nor ought they to have allowed them the poffeffion of Cape Breton, if they had well confidered or underftood the nature of the filhery in thofe feas.
The hiftory of former ages, and the experience of thefe latter times, have informed us, that the French have ever been troublefome neighbours, wherefoever they were feated: hiftorians afferting, that the natural levity and refleffnefs of their temper, their enterprizing genius, and ambition of extending their dominions and raifing the glory and grandeur of their monarchs, contribute in great meafure to make them fo.
Wherefore it is to be hoped, that the Britifh nation will be fo far from continuing idle or indifferent fpectators of the unreafonable and unjuft ufurpations and encroachments of the French on the continent of America, that they will let then know they have too much already of Canada and Cape Breton, and that, in reafon and juftice, they ought to abandon their new acquifitions on the Mifliffippi and the Bay of Mcxico, that river and the country belonging of right to the crown of Great-Britain.
And if, while they were weak, and in the infancy of their fettement in Louifiana, we had duly afferted and maintained our tight, we had a much better chance than at prefent to have kept them from further encroacloments: for fince they have had time to augment the number of their inhabitants, corrupt and infuence the natives to their intereft, frengthen themfelves, by fecuring with forts and garrifons, the palles of the rivers, lakes, and mountains, it will be no eafy matter to curb and reftrain them from giving greater and greater
iengths; but this mult be donc, or our plantations will be undone.
And I am apt to think, that prudence and policy will, or ought to prompt us to preferve a ballance of power in America, as well as nearer home; and that, as we have, for many years paft, found it our intereft to check and put a fop to the growing power of France, and fet bounds to their dominions here in Europe, we fhall not eafily be induced to allow them to encroach on, and deprive us of our colonies and plantatations in America.
The Spaniards, if they knew their own intereft, could not be lefs jealous and uneafy than we, at the fo near neighbourhood of the French on the Mississippi; for it iscertainly for their fecurity to difpoflefs them of their fettlements there, and on the bay of Mexico, left, in time, they render themfelves sole masters of thenavigation there$O_{F}$; and, with the affiftance of the Indians, make irruptions into the very hearts of their colonies, attack their towns, seize their mines, and fortify and maintain themselves therein.
And perbaps, if this matter was properly reprefented to the Spaniards, it is not improbable but they might be induced rather to divide this country with us, and surrender all their pretensions to whatsoever lies eastward to the Mississipfi, except St Auguftine, on condition that the French are obliged to remove thence, and retire elfewbere. And indeed nothing feems more proper and reafonable, than for that greatriver to BETHESETTLEEDAND acknowleged foundaryandpartition between the territories of Spain and Great-Britain, on the northern continent of America, nature seeming to have formed it almost pur. posely for that end, as will be evident to those who shall give themselves the trouble of viewing our maps; and at the fame time they will petceive how the French have wormed themfelves into a fettlement between the Englifh and the Spanifh plantations, on pretence of a vacancy, and, with an affurance fcarce to be parallelled, have fet bounds to the dominions of both. Whether fome proper ufe may not be made of thefe fuggeftions, at this critical conjuncture, at the court of Madrid, is moft bumbly fubmitted: if France, indeed, has not brought Spain into their fcheme of -- , fomething of this kind might poffibly be brought about.
This is certainly a treatment moft unjuft and difhonourable to the Britifh nation, which I Ghould not have mentionod, if the duty I owe to my fovereign, and the affection I bear to my country did not forbid me at fuch a juncture, and on fo important an occafion, to be filent and unconcerned.
If we tamely fubmit to thefe infults and injuries which are daily committed by the Frenchin America, without being alarmed, and taking the neceffary fteps towards a fpeedy and effectual redrefs of them, fhall we not feem infatuated, and wanting to ourfelves, be arraigned as felo de fe, and accounted, with good reafon, the eternal bubbles of the French? From what has been faid, and the feveral writings, charts, and maps of the French, it is evident to what a narrow extent of ground they have confined the Englinh plantations, and particularly in L'Ine's, as well as D'Anville's map, the beft and moft approved of any they have lately publifhed: befides many very remarkables, there is one in L'Ife's which we cannot omit taking notice of, viz. that on the part where they fix Carolina, now and long fince inbabited by the Englifh, they have inferted this memorable paflage, 'Caroline, - ainfi nommez en Phonneur, de Charles IX. par les Fran-- çois, qui la decouvrierent en prirent poffeffion et s'eftabli' rent, l'an 15 .'-That is to fay, Carolina, fo named in honour of Charles the IXth, by the French, who difcovered, took poffeffion of, and fettled it, in the year 15.-By which the author feems to intimate the right of his nation to that province; who, if they were fo bold to put in their claim in To bare-faced and fo public a manner, will they not, when they think themfelves flrong enough, attempt by force to affert it?
But if the French fhould ever grow fo powerful in America, as to be able to intercept or engrofs the trade with the Indians, or ruin or fubject our plantations, there is an end of the confumption of our home-produce and manufadures in America, of all our fhipping-trade thither, of the duties for goods ex. ported thither, or imported from thence, the increafe of our failors, and the advantages of raifing our own naval flores; befides the lofs of fo large an extent of dominion, and at leaft 500, coo Britifh fubjects therein. We may be likewife affured, thatall our islands in the West-Indies will foon undergo the fame fate, or be terribly diftreffed, for want of their ufual fupplies of fifh, lumber, and other neceffaries they conftantly fand in need of, and receive from our plantations on the continent; which neither Great-Britain nor Iteland can eafily affift them with, and which they purchafe with their fugar, rum, and melaffes, the vent of which will be, in great meafure, flopped on the lofs of our NORTAERN COLONIES, whereby they will be mightily difcouraged and impoverifhed, fo as to become an eafy acquifition to any ambitious and powerful invader.

Thus Great-Britain being deprived of it's fubjecte, dominions and trade in and to America, our merchants will be ruined our cuftoms and funds will fink, our manufactures will wan vent, our lands will fall in value, and, inftead of decreafing our debts will increafe, without the leaft profpect of the na tion's emergìng.
It looks with an afpect fomething very extraordinary and ftrik ing, that both France and Spain fhould take, almoft ever finc the late peace of Aixla Chapelle, every meafure to in creafe their MARITIME POWER, and procraftinate, fron time to time, the adjuftment of all mifunderftandings betwee the court of Great-Britain and theirs. Did we give up CAPI Breton in America the more effectually toenable the Frencl to maltreat and infult us in that part of the world? Was th Assiento contract given up to Spain for a fong, to en courage them to continue their depredations upon our trad and navigation in America, and France to ruin our Africal trade? Do not France and Spain seem, at present to act in concert against Great-Britain Does not their conduct fhew, that they have fomething mori in view than the humiliation of the piratical ftates? [See ou article Mediterranean.] This is an eafy pretext, ans may, like their domeftic jars, be contrived only to cover fom latent fcheme of $\qquad$ Be this as it may, we canno be too much upon our guard; and with this view and no other, are these things taken noticl of. But how far we may with fafety depend upon the faitl of a certain power, feems, at prefent, to be quite forgot: may, therefore, be ufeful to remind the nation, and indees all Europe, thereof, by giving a brief hiftory of the lat French king's perfidioufnefs in the breach of folemn treaties.

Additional Remarks on the constant Perfidy ol
France, which we ought never toforget.
Before we come to the facts, it is neceffary to take notic that the principles of ambition which led the late Frencl monarch to afpire to the univerfal monarchy, and the prin ciples of treachery which were needful to be practiled to. wards his obtaining it, were infufed into him by thofe whic had the charge of his education, and his conduct gave thy world a fufficient proof that he cultivated both to the highef degree.
The bihhop of Rhodes, who was appointed his fyrf preceptor gave him for a model of government the defigns of hi grandfather, Henry IV. as appears by the book which thi bilhop publifhed on that fubject. After that great prince hav made good his title to the crown of Franee, by renouncin! the proteflant faith, and fubduing thofe who had made th Catholic league againtt him, he formed a project to calt Eu rope into a new model, to reduce all the kingdoms and com monwealths of it to a certain number, and to prefcribe then fuch bounds as he fhould think fit, referving to hinifelf fuct a fhare as might enable him, or his fucceffors, to grafp the univerfal monarchy, as his predeceffor Francis I. intender before him.
To this end he chofe his generals, and other great officers, erected valt magazines of ammunition and arms, and laid up prodigious fums of money; but, as he was going to mode his army, he was murdered in his coach by Ravilliac.
In purfuance of the like defign, Lewis XIV. applied himfel in his youth to read the memoirs of the faid Henry IV. witt thofe of the prefent Jeanin and the bifhop of Rhodes; bul though he copied very well after his-grandfather's ambition, he ftudied nothing of his generous qualifications, which made him the darling of his fubjects, and procured him the efteem of the greateft princes and ftates of Europe: fo thal he inverted his plan in every thing that carried a thew of equity, and fet out upon the foot of making himfelf an abfolute conqueror, and of forcing all Europe to fubmit to his chains.
In order to this, abundance of mercenary, but able pens, were employed to flatter his ambition, on pretence of making his character glorious: in order to which, they poffefled him with the following maxims, 1. That any title was fufficient to take poffeffion by the fword, 2. That the greatefl part of Germany was the patrimony and antient inheritance of the crown of France. 3. That his predeceffor Charlemain poffefied Germany as king of France, and not a: emperor: the writers on thofe fubjects were gratefully rewarded; and one of them dedicated a book to him, intitled The juft pretenfions of the King of France to the Empire wherein, befides the above-mentioned principles, he laid dowt thefe following propofitions, viz. That the dominions of fovereign princes have always been the dominions and conqueft: of their eftates, and that the dominions and conquefts of crowns, can neither be alienated nor prefcribed; though, a the fame time, there were treaties betwixt the crown of France, the empire, and other princes, directly contrary tc thefe maxims
But, to come to the treaties, the firt we hall take notice of, is that of Munfer, which was concluded betwixt the pleni. potentiaries of the emperor and empire, and the French plempotentiaries at that city, the 24 th of October, 1648 . A

## P L A

to which, it is fit to obferve, that the Empire having defired the affiftance of France againft the houfe of Auftria, the French, on pretence of that affiftance, poffelfed themfelves of feveral provinces and confiderable towns in Spain, Italy, Germany, and the Netherlands; fo that the Empire finding temfelves to be in as much danger from France, as they had formerly been in from the houfe of Auftria, they willingly ame into that peace, and were content to fit down with their offes, rather than truft their French allies any longer. The court of France perceiving that they could not put off the peace of the empire by their ufual intrigues, nor hinder the Dutch to make a feparate peace with Spain, they found meDods to have the treaty of Munfter finifhed, without including the Spaniards, or the duke of Lorrain, in the general pace; and Monfieur de Wicquefort, in his book, intitled, L Ámbaffadeur $8 x$ fes Fonctions, lib. ii, and fect. I3. informs us, that cardinal Mazarine endeavoured to prevent the peace all that he could; and though his mafter's troops pretended ofpoufe the intereft of the proteftants, and that the Spanifh minifters preffed the imperial court to grant them all their demands, yet underhand he hindered it, that by continuing the war he might unite the Spanifh Netherlands to the crown of France; and at the fame time he favoured the elector of Bavaria, the chief of the papifts, againft the elector Palatine, who had been the bead of the proteftant League in the Empire. By thefe intrigues, the cardinal, and others of the young French king's governors, not only laid a foundation for a new war, whenever they fhould think fit, but got all confirmed to them that they had taken from the emperor and empire in a hundred years before, viz. the city of Brifac, the Landgraviate of Upper and Lower Alface, Suntgow, and the provincial lordfhip of the ten imperial cities in Alface, with all their dependencies, to be incorporated with the kingdom of France for ever. They did alfo obtain a perpetual right to keep a garrifon in Philipfburgh, and to the fovereignty of the cities and diocefes of Metz, Toul and Verdun, by which they opened their way into the empire on the Mofelle, and the Upper and Middle Rhine, whenever they faw occafion; or as foon as their king, who was then about ten years of age, Chould be in a capacity to practife the ambition and treachery which they bred him up to.
When he came of age, cardinal Mazarine brought on the treaty of the Pyrenees, in order to lay a furer foundation for his mafter's greatnefs, and had the fatisfdetion to fee his pupil outdo all the copies of perfidioufnefs and treachery he had fet him. This treaty was concluded by the cardinal for France, and Don Louis Mendez de Haro for Spain ; by which a peace was made betwixt the two crowns, on the 7 th of November, 1659, when the French king was left in pofferfion,
I. Of all Artois, except Ayre and St Omers, with their dependencies. 2. Of Graveling, the forts Philip, the Sluce, Hannum, Bourbourg, and it's chatellany, and St Venant, in Flanders. 3. In Hainault, he had Landrecy and Quefnoy, with their chattellanies and dependencies. 4. In Luxemburg, Thionville, Montmedy, and D'Anvilliers, with their dependencies, and the provofthips of Ivoy, Chavaney, Chafteav, and Marville, with all that belonged to them; Marienburgh and Philippeville, on the Maes with all their dependencies; Avennes, on the Sambre with all that belonged to it; Recroy, in the Ardernes; Le Chatelet, at the head of the Scheld, and Linchamp. 5. On the fide of Germany, all that had been granted him by the treaty of Munfter was confirmed. 6. By this treaty the duke of Lorrain was in a manner facrificed to him; for Nancy, his capital, was to be demolifhed, and not to be refortified; and all the guns, arms, and ammunition to be carried off: he was ftripped of the whole duchy of Bar, the county of Clermont, the provofthips of Stenay, Dun, and Jametz, Moyenvie, and their dependencies. 7. By this treaty all the French king's pretenfions to the kingdom of Navarre, were left in ftatu quo, and his fovereignty over the county of Carolois in Burgundy, was referved to him, the king of Spain being to hold it in fee, as before the war. 8. On the fide of Spain, the county of Rouffillon, the Viguery of Conflans, and part of Cardegna were yielded to him. 9. In Italy, the king of Spain obliged himfelf to reftore Verreil, with it's dependencies, to the duke of Savoy, to withdraw his garrifon from Correggio, to pay the duke the arrears of the dower of the infanta Catharina, to reftore the duke of Modena to his favour, and allow him a neutrality, to reftore the prince Manaco; and, on the French king's interceffion, the king of Spain reftored Juliers to the duke of Neuburg
By this means the French king had put into his hands the keys of the Empire, Spain, and the Netherlands; which were neceffary for his defign, to obtain the univerfal monarchy that he afterwards difcovered
We cannot fuppofe the Spaniards, who are a wife people, to have made him fuch a facrifice, without a valuable confideration; which was to preferve what they had left intire, that they might be at liberty to recover the kingdom of Portugal, which had newly revolted from them, and to obtain reftitution of the duchy of Burgundy, and fome places of importance the French had taken from them in Flanders. Befides,

Vol. II.

P L A
they had fome hopes of tying down this young appiring prince, by the bonds of love, fince they could not do it by force of arms; efpecially when the hands of the German branch of the houfe of Auftria were tied up from affifting them, by the treaty of Munfter, and their own low circumftances. In order to this, a contract of marriage was agreed on betwixt Louis and infanta Maria Therefa, the king of Spain's eldeft daughter, on condition that he and the fhould folemnly renounce all pretenfions for themfelves and their fucceffors, to the crown of Spain, or any of the dominions thereunto belonging; which was ratified by the $33^{\text {d article }}$ of this treaty, and there called the chief part of it, and the tnoft worthy, as well as the greateft, and moft precious earneit of the furety of it's duration.
But that the French court might thew themfelves to be ftill acted by the fame maxims of treachery and cruelty; as they made the match betwixt the king of Navarre, afterwards Henry IV. and Margaret of France, a trap to tuin the Proteftants, by the infamous maflacre of St Bartholomew ; fo they made the like trap of this match to tuin the family of Auftria, and ufurp their dominions, which has occafioned fo much blood in Europe, and God knows when the current will be ftopped.
We come now to the French king's behaviour, at, and after this treaty; which opens fuch a fcene of perjury, atheifm, and treachery, as, all circumftances confidered, never had it's parallel in the world.
To prove this, we fhall bring fome inftances which make it evident, that the French king fwore to the claufe of renunciation with a defign to break it. The firft is from cardinal Mazarine's letter to Monfieur Lionne, of Auguft 5, 1659, where he fays, " We could not fuffer ourfelves to be perfuaded to lofe fo many advantages, which with juftice we might pretend to, without agreeing to the marriage of the king with a princefs who might come to be heirefs of fo great a monarchy as that of Spain.' And in the fame letter he fays, 'That when M. Piementel made the overture of the marriage, it was without making mention of the renunciation.'
In his letter to Monfieur le Tellier, of Auguft 23, he gives an accouht of his conference with Don Lewis de Haro, the Spanifh minifter, wherein he would have perfuaded him to confent to the marriage without the renunciation; but Don Lewis fopped bis mouth, by telling him that the emperor had offered, in cafe he might have the infanta for himfelf, that he would break with France, and in all things follow the conduct of Spain; which obliged the cardinal to accept the match with the claufe of renunciation.
In that fame letter he fays, that Dou Lewis durft not propofe the marriage to the court of Spain, without the renunciation, they being fo averfe to it, that thete were none of the council but himfelf, and one more, who were for the match, even with that claufe; for they all maintained, and he himfelf was of the fame opinion, 'That if the king of Spain fhould lofe his two fons, which there was great reafon to fear, they could not expect that the king of France would quit his hopes to fucceed him, and renounce fo great pretenfions.' Upon which the cardinal adds his own reflections in the following words: ' I am fully perfuaded of the truth of all this, for feveral very ftrong and conclufive reafons.' And be fubjoins: ' moreover, I very well remember what the queen, his moft chriftian majefty's mother, who likewife made a renunciation when he was married to Lewis XIII. often told me, that when her brother, the king of Spain, had but one fon; but, fays he, (in a rapture of joy) I was well pleafed to hear the fame thing from the firft minifter of Spain, and that their whole counc: is of the fame fentiments.' Thefe letters being wrote for the king's own perufal, the cardinal durt not have prefumed to ufe fo much freedom, had he not been perfuaded that it agreed with bis majefty's intentions.
The fecond inftance is from Monfieur Aubery's Life of Cardinal Mazarine, dedicated to the king himfelf, by the author, who was an advocate of the parliament of Paris, and one of the king's council. He fays, in the fecond tome of Mazarine's life, p. 554. The cardinal acted prudently to fign the contract of marriage, without having any regard to the pretended renunciation; which being manifefly contrary to common right, and to the law and general cuftom of the frate, might be freely contradicted and difavowed.
Thefe are full proofs of the French king's fwearing to the treaty of the Pyrences, with a defign to break it: and what aggravates his crime is, that he had the fame treacherous intention when he took his marriage oath; which after, according to the religion he profeffed, he looked upon as a facrament, is a clear demonftration that he was not to be tied, even by what he himfelf accounts to be moft facred. The firft open breach he made of this treaty, was, that though in the 6th article of the contract of marriage, it was ftipulated, that he fhould make another satification of the renouncing claufe, jointly with his queen, as foon as he fhould be married, and enregifter the fame in the parliament of Paris, with other neceflary claufes, according to the ufual 'form yet he would never comply with it; fo carly had he learned to play faft and loofe with oaths and facraments, and fo little
regard
regard or love had he to the honour or perfon of the infanta, whom he could never have obtained without this renunciation.
The fecond breach was that of the 6oth article of the Pyrenean treaty, by which the French king obliged himfelf to abandon Porrugal, and to give that king no affiftance, in the following words: "His faid majerty fhall meddle no more with the faid affair, and doth promife and oblige himfelf upon his honour, and on the faith and word of a king, for himfelf and his fucceflors, not to give unto the forementioned kingdom of Portugal, neither in general, or to any perfons of it in particular, of what dignity, eftate, or condition foever, neither now nor hereafter, any aid or affiftance, public or privase, directly or indirectly, of men, arms, ammunition, victuals, fhips, or money, under any pretext; nor of any thing elfe, either by land or fea, or in any other manner: and that he would not fuffer levies to be made in any part of his kingdoms and eftates, nor grant free paffage to thofe which may come out of other countries to the affiftance of the faid realm of Portugal.?
But fo far was the French king from obferving this article, that immediately after the treaty, he fent privately feveral bodies of troops to Portugal, and encouraged their obftinacy to maintain the duke of Braganza upon the throne, contrary to the houfe of Auftria; which was fo much the more grofs, becaule it appears by many places of the cardinal de Mazarine's letters, that the French king muft of neceffity have continued the war, and gone without his bride; nor would the Spaniards have abandoned the duke of Lorrain, and the prince of Condé, as they did, in fo many material points, but merely on the confideration of the French king's abandoning Portugal. When the Spanifh ambaliador at Paris complained of this breach to the French king, that prince, to fhew how well he was verfed in the art of diffimulation, fent orders to all his ports, that no forces Chould embark there for Portugal, which they drd notwithftanding; and when the Spanith minifter renewed his complaint, he was told, that this was the marthal de Turenne's particular act, and that the court had no hand in it: though, at the fame time, the Spa-- niards intercepted feveral letters betwixt Monfieur Leon, the archbihop of Ambrun, and Count Schomberg, which fully proved, that the latter kept a conitant correfpondence with the French court, and received all his directions from thence for carrying on the war. So early had the French king learned the art of debauching Proteftant generals, fo far as to concur with him in carrying on his treacherous and tyrannical defigns.
The treachery of the French king, in this matter, was ftill more evident by the letters which the Spaniards intercepted; which made it evident, that foon after the treaty, be hindered the Portugueze from accepting the advantageous propofals made them by the Spaniards, by promifes of fach affiftance, as fhould enable them, not only to defend themfelves, but to carry the war into the beart of Spain. And foon after the clofe of the treaty, Mr Colbert made feveral journeys into Portugal to encourage them, and to contract a fecret alliance with them: aud Monieur Courtin went to England, at the fame time, to move the king of GreatBritain not to abandon the Portugueze: nay, the Spariurds intercepted, in a French veffel coming from Portugal, an account of the expences and fuccours which France had given, without intermiffion, to the Portugueze from the clofe of the treaty; and, among other things, that they had maintained troops there to uphold the war: and all this, at the very time when they offered to the Spaniards to compofe the differences petwixt them and Portugal, by their mediation. But, as ill men become more and more hardened in their wickednefs, by continuing the practice of it, the French king, in 1667, when he began to form his defign of invading the Spanifh Netherlands, did openly, in defiance of the Pyrenean treaty, make a league, offenfive and defenfive, with Portugal, againft all nations, England excepted.
By this treaty, all the harbours which the Portugueze fhould take in Spain, either upon the one or the other Sea, were to be put into the power of France, which was to furnifh them with men and money by way of loan; and this treaty was to laft for ten gears, and the French were not to treat until the Portugueze were intirely fatisfied, as we are informed by the author of $T$ he Buckler of State and Juflice.
Having thus treacheroufly enfeebled Spain, by continuing the war of Portugal, the French king dealt in the fame manner with the duke of Lorrain; and, contrary to the refervations made for the faid duke in the treaty of the Pyrenees, he forced him to fell him his duchy, to the prejudice of his lawful fucceffior: but knowing that the contract was null of itfelf, the French king obliged him, by force, to put the only place left him into his hands; by means of which he revoked the bargain, and got the thing without paying the price.
The next thing the French king did, was to poftefs himfelf of thofe provinces belonging to the Spaniards, where he was likely to meet with moft oppofition to his defign of making himfelf mafter atterwards of the whole Spanifh monarchy; either becaufe of their native ffrength, or becaufe of the intereff that neighbouring princes and ftates were like to take in
their prefervation; and thefe were Flanders, the French county, and Milan.
In 1665, the queen-mother of France, who had made the fame renunciation as her fon, the French king, had done, told the Spanifh ambaffador, in a difcourfe, that the was fenfible of the ill advice given her fon, the French king, to fet up pretenfions upon the monarchy of Spain; the was fenfible alfo of his defire of glory, and of the unquiet temper of the French nation, and being afraid that thefe things might give a difturbance to the peace, of which the looked upon herfelf to be the author: She therefore defired him to acquaint her brotber, the king of Spain, that the thought it neceffary, fince he had given fo much for a peace, to give yet fomething more for preferving it, and to ftop the mouths of thofe that pufhed on the king, her fon, to violent refolutions; and that for her part, the would infpire him with all the moderation the could.
But the French king was fo far from having any regard to the advice of his mother, or to her honour, that he perfectly gave her the lye, in his letter to the queen-regent of Spain; to whom he wrote, that his mother, in this conference, told the marquis that his pretenfions were juft, folid, and undeniable.
The Spanifh ambaffador gave the court an account of what had paffed betwixt him and the queen-mother of France; but Philip IV. of Spain dying a little after, they returned no immediate anfwer, only the ambaffador had orders, that if the queen-mother of France fhould again debate that bufinefs, he fhould inform her fully of the falihood of the French king's pretenfions, and that the queen-mother of Spain could do nothing in thofe things herfelf, during the regency.
The French king made no complaint of this anfwer, nor any new propofals upon it: and when he fent the marguis de Bellefonds to Madrid, with a compliment of condolance upon the king of Spain's death, he gave him no orders about his pretenfions ; but, on the contrary, the archbihop of Ambrun, the French ambaffador at Madrid, gave all affurances of his mafter's intentions to keep the peace, propofed entering in to a league with Spain, to compofe their differences with Portugal; and reproached thofe as perfons of a feditious and surbulent humour, who would call in queftion his mafter's fincerity. Nay the French king himfelf, when the Spaninh ambaffador took leave of him to return to Spain, charged him to engage his faith and word to the queen, that he would keep a conftant amity with her and her kingdom, without faying one word of his pretenfions.
By thefe falfe promifes he lulled the Spaniards anleep; and, to prevent their making any alliances for their own defence with their neighbours, he declared to the Spaniards, that if they figned any treaty with England, or made a peace or truce with Portugal upon their mediation, be would immediately declare war againft them, as appears by Sir William Temple's letter to the earl of Clarendon from Bruffels, May 4, 1667.
The French king having alfo, by his practices and private intrigues with Charles II. king of Great-Britain, raifed a wit betwixt England and Holland, he continued it by the fame arts, becaufe he knew very well that an union betwixt thofe two powers, would be an effectual curb to his defigns upon the Spanifh monarchy. Being unwilling, however, to alarm Europe too much, he made his pretenfions at firft only to the duchy of Brabant, with it's appurtenances; the lordhips of Mechin, Antwerp, Upper Guelderland, Namur, Limburg, the united places beyond the Maefe, Hainault, Artois, Cambray, the French county, and part of Flanders; which was expreffly contrary to the Pyrenean Treaty.
The French king having thus abufed the credulity of the Spanifh court, and prevented their taking neceffary meafures for their own prefervation, he affembled bis army on the frontiers of Flanders, on pretence of a general review ; and on the 8th of May 1667, he wrote to the queen of Spain, that be was ready to appear at the head of his army to do himfelf right, and at the fame time fent her his manifefto, without baving made any other demand of his pretended rights, but what paffed in the conference formerly mentioned betwixt his mother and the Spanifh ambaffador. The queen-mother of Spain returned him an anfwer the 2 Ift of the fame month, whefein with great modefty and reafon, the laid open the injuftice of his pretenfions and proceedings; but told him, fince he defired an accommodation, the was willing to agree to it, and defired him to name commiffoners, and appoint a place of treaty; but the French king, that his conduct might be all of a piece, did not ftay for her anfwer, went to his army eight days after the date of his letter, and made thofe furprizing conquefts, which at that time alarmed and amazed all Europe: nay, he waş fo far from ftanding to his own propofal of an accommodation, that he rejected it with fury, when the Spanifh miniftry offired to agree to it, and to refer it to the arbitration of neighbouring princes.
All his neighbours being alarmed at his progrefs in Flanders, and his conqueft of the French county, England and Holland clapped up a peace betwixt themfelves; and the king of England brought Portugal to a peace with Spain. In 1668, the triple league between England, Hulland, and Sweden, was
concluded; which put a fop to the arms of France, and brought on the treaty of Aix la Chapelle at that time. This treaty faved the remainder of Flanders, and obliged the French king to reftore the French county, after demolihing all it's ftrengths; but he fill retained and had confirmed to him for ever, Charleroy, Binch, Aeth, Doway, Fort Scarpe, Tournay, Oudenard, Lifle, Armentiers, Courtray, Berges, and Furnes, with all their appurtenances and dependencies. Yet the French king, far from being fatisfied with this, and knowing that the triple league was an invincible barrier againft his defign of grafping the univerfal monarchy, he refolved to break it; and for that end fent over the duchefs of Orleans, who had an interview with her brother king Charles II. at Dover, in 1670 , and not only prevailed with that prince to difengage himfelf from that alliance, but to concert meafures with France to carry on a joint war againft the Dutch, which broke out in 1672 . The reaton of his attacking the Dutch Was, that he knew they were concerned in intereft, as well as obliged by treaty, to prevent his getting any more of the Netheriands into his poffeffion.
The motive which moved our king Charles II. to join with him was, the alfurance given him by his fiffer the duchefs of Orleans, in the name of the moft Chriftian king, that he would affift him to attain an abfolute authority over his parliament, and to eftablifh popery in his dominions; as we are informed by the Hiftory of the War with Holland, printed at Paris in 1682, with the French king's allowance, but afterwards fupprefled; and the count de Maiole who wrote it, was put into the Baftille, upon complaint of the Englifh ambaffador, becaufe it difcovered the fecret tranfactions betwixt the two courts. The French king likewife engaged the emperor to approve the confederacy againft the Dutch, on condition that he fhould not invade the empire nor the Spanifh dominions. And all things being thus prepared, he actually invaded their provinces, and brought that republic to the brink of ruin. His treachery in this was fo much the more palpable, that it was not only contrary to treaty, but without any declaration of war, or demand of reparation for any injuries real or fuppofed: though the States wrote very refpectfully to him upon his preparations in $\mathbf{1 6 7 1}$, and promifed to make him all reafonable fatisfaction if they had failed towards him in any thing. King Chatles II. of England followed his example in this, and attacked the Dutch EaftIndia thips in their return home, without any declaration of war.
The French king and he publifhed their declarations afterwards, as did the bihhops of Cologn and Munter ; but all of them fo frivolous, that every body perceived that there was fomething elfe at bottom than what was prevended in thofe declarations. The Dutch publifhed anfwers to them feverally, wherein they fufficiently expofed the treachery of all the four, and the falfeners of their pretenfions. Thus the French king engaged king Charles II. in treachery aṇd perjury with himfelf. But the Englifh being diffatiffied with the meafures of our court and the progrefs of the Fretich king, it encouraged the Dutch to fend deputies to England to follicit a peace. King Charles accordingly fent over four perfons of quality to confer with the States and prince of Orange, to whom they pretended that the king defigned only to humble, but not to ruin them; and that being alarmed at the progrefs of France, he was much inclined to their intereft. This was nothing in effeet but a French artifice, for the fame perfons renewed a treaty with the French king for three years, and both of them delivered their dernands to the Dutch; which were fo extravagant, that the States refolved to rifk all rather than agree to them, and applied to the empire for affiftance. In 1674, the parliament of England being uneafy at the war with Holland, a feparate peace was made with the Dutch and Spain, and a great part of the empire declared in their favour; which, together with the admirable conduat of the prince of Orange, retrieved their affairs. The French king continued his war, however, upon the Spaniards, which occafioned a treaty of defenfive alliatice betwixt the king of England antd the Dutch; which was followed by another foon after, and by a third, by which the Spaniards were confiderable lofers. For inftead of Charleroy, Bioch, Aeth, Oudenard, and fome other parts of his conquefts, which the French king reftored to Spain, he had the French county, the towns of Befançon, Valenciennes, Bouchain, Condé, Cambray, with the Cambrefis, Aire, St Omers, Ypres, Warvick, Warneton, Poperingen, Bailleul, Caffel, Bavay, and Maubeuge, with their dependencies, confirmed to him for ever, as appears by the treaty of Nimeguen.-By this means the Spaniards entirely loft the French county, and had but a weak barrier in Flanders : yet the French king not being fatisfied with this, did, kccording to his ufual way of obferving treaties, prefently after the peace, fet up claims to feveral of the moft confiderable places of Flanders, \&c. under the pretence of re-unions, dependencies, \&c. but knowing thefe titles to be weak, be backed them with a powerful army; and, having fecured the friendhip of our king Charles II. he did not much value any other oppofition. He took Luxemburg, put the Spanifh provinces under contribution, and miferably harraffed them; but being ferifible that
he could not be long without oppofition in thefe unjuft proa ceedings, he propofed a feparate and advantageous alliance with the Dutch, who rejected it, becaufe they faw the fnare laid for them : and king Charles II. of England being unealy at home, becaufe of the too well-grounded jealoufies that the nation had of his popin and arbivary defigns, he propofed by Mr Henry Sidney, afterwards earl of Rominey, a treaty of guaranty to inforce that of Nimeguen, refufed to fettle the limits between him and Spain in the Netherlands, ac cording to that treaty, and forced the king of Spain to renounce his title of duke of Burgundy.
He proceeded in the fame treacherous manner againft the empire; and contrary to the treaties of Westrhalia and Nimeguen, continued his traops in the empire, sefufed to evacuate the places there, which he ought to have done by the treaty of Nimeguen, demanded contributions, obliged the ten towns of Alsace to fwear to him as their fovereign, and the vaffals and nobles of the country the like; he erected new courts of appeals there, and forbad appeals to the imperial chamber at Spires. He likewife fet up pretenfions to the fovereignty of the juridictions of Metz, Toul, and Verdun, and to other imperial flates and countries; confifcated the revenues of the chapter of Strahburg, made new fortifications at Schleftadt and Huningen, refuled to reftore Montbelliard, difmounted Duckfburgh, took Homburg, Bitich, and raifed new pretenfions on Strafburg: all which were complained of in the diet of the empire, and reprefented to the French king, who was fo far from thinking himfelf bound by the moft facred treaties and oaths, that inftead of redrefs, he invaded the Palatinate, furprized Stralburg by treachery; and, in order to grafp the univerfal monarchy, did all that he could by fraud or force to get the Dauphin chofen king of the Romans.
Much about the fame time, in order to make himfelf mafter of Italy, and particularly of the Spanih dominions there, he purchafod Cabal from the duke of Mantua, and by his intrigues with the duchefs regent of SAVOY, endeavoured to poffefs himfelf of the dominions of her fon, then but fourteen years of age, on pretence of fending him to Portugal to be matched with the infanta, and in her right to enjoy that crown. But this defign was bappily defeated by the nobility of SAvoy.
All thefe things together brought on the league of Augsburg in 4683 , by the emperor, the king of Sweden, the ftates of Holland, and feveral circles of the empire, of which league the prince of Orange, afterwards king William III. was the main inftrument. In 1684, the French king continued his conquefts in the Spanish Nethelands; but, perceiving the vigorous oppofition he was like to meet with from the prince of Orange, by viriue of the Aughburg league, be propofed a twenty years truce with the peifons concemed in it, and alfo with the king of Spain: which being accepted, be fecured himfelf of all that he had treacheroully taken from the Spaniards, except Courtraye and Dixmune, which he reftored after demolifhing the fortifications.
It appeared, however, afterwards, that the French king entered into this twenty years truce, with the fame treachefous intentions that he had formerly entered into all his other leagues; and when king James Ifd came to the crown of Great-Britain, he thought himfelf fure by his intereft and long alliance with that prince, where weaknefs and bigotry had made him his tool, to accomplifh his ambiticus defigns. He put him upon the fame defign of fubverting the Englifh parliament, and of eftablithing Popery in his dominions, as he had done his brother king Charles IF. Which England being fenfible of; they foon grew difcontented, and being unwilling to be brought under the curfed yoke of Popiry and Slavery, they made application to the immortal priace of Orange for affiftance, to free themfelves from the intended bondage, in which the States of Holland chearfully concurred. The French king perceiving this from their preparations, he ordered the count D'Avaux his minifter, in 1688, to acquaint the States that he hould look upon their firft act of hoftility againft king James, as a manifeft rupture with bimrelf, becaufe of the engagements of friendhip and alliance betwixt him and that priace. This was an interpofition which the French king was no ways concerned to make, had it not been for the treacherous alliance he had made with king James, contrary to the twenty yeafs Truce and the Treaties before-mentioned.
The ftates of Holland were not to be frightened, however, by this memorial of the French ambaffador, but came to a refolution to affift the prince of Orange in his expedition to England; upon which occafion, the Dutch take notice of the ftrict alliance between thofe two kings to deprive the ftate of their allies, and to overturn it. This expedition brought on the late happy revolution, which difconcerted the French king's meafures; whercupon, contrary to the twenty years truce, he treacheroufly invaded the empire, and befieged and took Philipsburg, \&ic.
It is fit to obferve here, that this very ftep difcovered his treachery alfo to king James: fince it would have been a much more effectual affiftance to him to have invaded the Netherlands, which muft needs have hindered the States
of Holland from lending their army to the prince of Orange, as he might have fent troops to England to affift king James here. Bur this did not fuit with his defigns: for he believed, no doubt, that England muit needs be engaged in a civil war by that expedition, and be thought it bis intereft to let GreatBritain be weakened by fheathing their fwords in one another's bowels, that they might not be able afterwards, upon the turn of affairs, to put a fop to his ambitious defigns of univerfal monarchy, as they had done feveral times before: and thus he facrificed his dear friend and ally king James.
Thefe treacherous proceedings of the French king occafioned declarations of war on both fides, and the allies in theirs charged the French king home with his treacheries. That of the States of Holland charge him, (1.) With invading them in 1672 , in a time of profound peace, contrary to folemn treaties then in being, for no other reafon, as he expreffes himfelf, but for the increafe of his honour and glory. (2.) With the breach of the treaty of Nimeguen in 1678 . (3.) With laying exorbitant duties upon their navigation and commerce, contrary to the faid treaty. (4.) With difurbing their navigation as well within as without Europe, and attacking their men of war in time of peace, with a manifeft defign to ruin their trade, and rejecting all their defires of redrefs with fcorn. (5.) That during his perfecution of his own proteftant fubjects, he had alfo involved their proteftant fubjects refiding in France in the fame calamity, and treated them barbaroufly, contrary to the law of nations and exprefs treaties; parted wives from their buibands, and children from their parents; imprifoned their fubjects, refufed them leave to withdraw, and barbaroufly ufed their confuls. (6.) That he threatened the States for making alliances for their own defence, which, it is allowable to all fovereigns, they had a liberty to do by the treaty of Nimeguen. (7.) That in time of peace, contrary to the faid treaties, he had feized the veffels, perfons, and goods of their fubjects in his dominions; ill ufed their merchants and traders, clapped them up in prifon, and fold their fhips, becaufe they would not change their religion. (8.) That his troops had burnt and plundered reveral places in their dominions, before the war was declared, or at leaft on the fame day, for no other reafon, but becaufe they made fome extraordinary levies for their own fecurity againft his private defigns, of which they were too well informed.
The governor of the Spanish Nethereands, in his declaration of war againf France, charges the French king, (1.) With declaring war againt the Netherlands in April 1689 , for no other reafon, but becaufe the king of Spain had entered into an alliance with other princes and ftates, for his own defence. (2.) With bringing the Turks upon Hungary, and endeavouring to prevent a peace betwixt the emperor and his allies, and the Uttoman Porte.
King William and queen Mary, in their declaration againft France, charge him, ( I.) With invading the territories of the emperor and empire, their allies, and laying them wafte in a barbarous manner, contrary to treaties wherein England was concerned as guarantee. (2.) With many injuries againft themfelves and their fubjects, without giving reparation, though they had not been taken due notice of, for reafons well known to the world. (3.) With invading our trade and fettlements in Newfoundiand, from the governor of which the French did formerly take licence to fih. (4.) With invading our Caribbee Islands, and poffeffing himfelf of New York and Hudson's Bay in a holtile manner, and treating the inhabitants with the utmoft barbarity, while at the fame time his minifters were negociating a treaty in England for a Neutrality and good Correspondence iu America. (5.) With his countenancing the feizure of our fhips by his privateers; forbidding the importation of a great part of our products, and laying exorbitant cuftoms upon the relt, with a defign to deftroy our trade and navigation. (6.) With difputing our right to the FlaG, and barbaroufly perfecuting our proteftant fubjects in his dominions, contrary to the law of nations and exprefs treaties, and foroing them to abjure their religion by unheard-of cruelties; imprifoning and fending to the gallies our merchants, mafters of fhips, and feamen. (7.) With having promifed affitance to overthrow the government of England, and invading the kingdom of Ireland.
During the courfe of the war, which followed thefe declarations, he treacheroully brougbt the duke of Savoy to break the alliance, and to enter into a feparate peace with him.
We may alfo take notice here, that during the faid war, it appeared plain by the confeffion of Grandval, and others executed abroad, and by the trial of Sir William Perkins, Charnock, King, and Keys, \&c. executed here, that he was engaged with the late king $J$ ames in feveral plots to affaffinate king William and queen Mary ; which is moft cruel practice in private perfons, but to fuperlatively vile and abominable in one prince towards another, that the moft brutal of human favages have held it in abhorrence and deteflation
The war was at laft concluded by the theaty of Ryswic in 1697. But it foon appeared, that the French king entered into that treaty with no other defign than to break it, as foon as he could with fafecy and advantage : and as the States of

Holland charge him in their manifento of 1702, be d.d it with no other view than to induce the confederates to lay down their arms, to difband their troops, and to feparate them from one another, in order to weaken and ruin them: for that part of the treaty with the Dutch, which relared to traffic and commerce, was fcarce well ratified, when he began to invade the trade of their provinces, and openly refufed to grant them the tariff ftipulated in that treaty, and put their fubjects and merchants to numberlefs troubles on that head, and the States to a tedious and expenfive negociation. After which they were obllged to fubmit to a difadvantageous tariff, contrary to the tenor of that treaty, rather than bazard a new war: and though it was alfo ftipulated by the faid treaty, that the Dutch fubjects who fettled in France to carry on their trade, fhould be exempted from the taxes and duties laid upon foreigners; yet he impofed exceffive duties upon them, without giving any redrefs when demanded.
It is alfo well enough known, how they chicaned and triffed with us about reftoring our Hudfon's-Bay colony, and would never come to fettle a tariff of trade with us. He treated the emperor and empire in the fame manner, and broke that treaty, by refufing for a long time to reftore the fortrefs of Brifac, and by the injuries and damages he did to the houle of Montbelliard, and countenancing a treacherous explanation of the fourth article of Ryfwic, by which the proteftants of the empire were perfecuted: nor was he any thing more punctual, as to what he ought to have reftored to the crown of Spain by that treaty. But notwithftanding thefe new infances of his perfidioufnefs and treachery, king William and the States-General being willing to fecure the peace of Europe, if poffible, and, to prevent a new war about the fucceffion to the crown of Spain, upon the death of king Charles II. who was then in a languifhing condition; they entered firf into a treaty of Partition with the French king for fetcling the fucceffion of Spain on the electoral prince of Bavaria, on condition that. Naples, Sicily, Guipufcoa, \&c, fhould be granted to the Dauphin, and the duchy of Milan to archduke Charles. , But the prince electoral happening to die, they came to a fecond treaty of partition, by which the Dauphin was to have Naples, Sicily, \&xc. and the duchies of Lorrain and Bar, for which the duke of Lorrain was to have the duchy of Milan, and all the reft of the Spanifh dominions were to be given to the archduke and his heirs for ever. The French king entered into thefe treaties with all poffible proteftations of fincerity, and pretended be had no other defign in fo doing, but to preferve the peace of Europe, and to remove all obftacles that might interrupt the fame. That treaty was no fooner concluded, than it manifeftly appeared that the French king never intended to keep it ; for he immediately ufed all manner of artifices in the court of Spain not only to render the emperor odious to the Spaniards, but likewife to oblige king Charles II. to difpofe of his fucceffion by will in favour of France.
Here alfo it is fit to obferve his treachery to king James II. his kinfman and ally, whofe intereft with that of his pretended fon and daughter, be facrificed to the treaty of partition, contrary to folemn treaties, and all the rules of gratitude, fince that unfortunate prince had ruined himfelf by following his meafures.
The author of the fable of the Lion's Share, verified in the treaty of partition, wha was an able, writer employed by the imperial court, makes thefe judicious remarks upon the defign of the French king in the treaty of Ryfwic, and thofe of the partition. (1 .) That he facrificed fo many places of importance which he had fortified at a vaft charge, befides feveral provinces that he had conquered, and expofed his own frontiers, by demolifhing many ftrengths, merely that he might have an opportunity of ufurping the monarchy of Spain. It was this alone that made the peace of Ryfwic ablolutely neceffary to him; for it is well known, that when he concluded that treaty, he had the advantage of the allies by arms. (2.) His defign by the treaties of partition was, to divide the allies among themfelves, and to break the two maritime powers, and the elector of Bavaria, with the houfe of Auftria; who he had reafon to think would never agree to it, and could fcarce ever enter into a friendfhip again with the Englifh and Dutch, for abandoning them in this manner, fince by the fourth article of the firft grand alliance, none of the allies were to conclude a peace, 'till the treaties of Weftphalia, Ofnaburg, Muniter, and the Pyrenees, were vindicated, and all things reftored according to the tenor of the fame. (3.) Confidering the weaknefs of the houfe of AuPtria, and their then circumifances, he made no doubt either to bring them to agree to the treaty, or afterwards to break with the allies and join with himfelf, upon granting them better terms. (4.) Having by this means engaged the maritime powers to acknowlege the electoral prince of Bavaria's right, notwithtanding the renunciation of his mother the archduchefs to all the dominions of Spain upon her marriage with his father, he knew it laid a foundation for the dauphin afterwards to difpute his right to the whole with that prince, notwithitanding the enunciation of his mother the late quaen of France; who being a daughter of Spain, he was nearer in blood to that crown than the electural prince.

That fame author adds, That the Spaniards finding themfelves deprived of their allies by this treaty, and their monarchy difmembered, it was a powerful argument to induce them rather to accept of a fon of France, than to fuffer themfelves to be torn in pieces, and their monarchy partitioned. He is very modeft, however, as to the motives, which he thinks might have induced king William and the States to enter into this treaty; and fuppofes, that perceiving the French. king ready to break out into a war to make good his pretenfions to the Spanifh monarchy', when England and Holland were not prepared to refilt him, he defigned, like a wife politician, to charm the form with a negociation; and upon that account was not unwilling that the French king fhould publifh the treaty, by which the houfe of Auftria may take the alarm, and enter into proper meafures to prevent it.
? ${ }^{\text {and }}$ be that how it will, when the king of Spain died, the French king, who had fecretly broke that treaty before, by procuring a will which fetted the whole Spanilh monarchy on the duke of Anjou, then publickly avowed it; and by a jefuitical diftinction betwixt the fpirit and the letter of the treaty, he preferred that will to the treaty of partition, and advanced his grandfon to the throne of Spain, not only contrary to all thefe treaties, but alfo contrary,

1. To the laws of the kingdom, which do not allow the alienation of that crown, nor that it thould be placed on the head of a ftranger ; the fucceffion being fettled by confent of the States on the houfe of Arragon, from whom the houfe of Auftria is lineally defcended.
2. It was contrary to the renunciation made by Lewis XIII. 2. It was infanta Mary-Anne his wife, at the time of their marriage, the validity of which was not then difputed.
3. It was againft the renunciation made by the French king and his wife the famous Mary Terefa, at the time of their marriage, and the oaths which both of them fwore on the altar.
4. It was againft the treaty of the Pyrenees, of which that renunciation was one of the chief articles.
5. It was contrary to the will of Philip IV. purfuant to that renunciation.
6. It was contrary to all the arguments formerly made ufe of by Lewis XIV. againft the renunciations above-mentioned; which made him guilty of the fame injuftice to the Dauphin and duke of Burgundy, that he himfelf had charged upon the faid renunciations.'
7. It was exprefsly againft the civil law, and the decretal of pope Boniface VIII. which fays, "That every renunciation c made upon oath by a daughter above 12 years of age, in - favour of her father, in order to contract a marriage, by c which a fufficient dowry is affigned her, ought to be good

- in law, though the be then under the jurifdiction of her - father.'

As to the pretended will of king Charles II. of Spain, by which the duke of Anjou claims the crown, we may obferve, (r.) That it is contrary to the will of his father, which was founded upon a treaty with confent of the States, and the folemn renunciation of two fucceffive kings and queens of France, ratified by the legiflative power of France and Spain; which is no great argument of the piety of thofe that put him upon makıng it, or rather figning it. (2.) That it was contrary to 2 will which he made but a little before in favour of the archduxe, to his repeated affurances to the emperor, and to his known inclinations. All which make it evident, that it was an impofition upon him when he was ftruggling with the pangs of death, and in no condition to perufe, much lefs to compore, fuch a will.
To return to the treaty of partition; the French king not only broke it, but upbraided king William and the Dutch with it in fuch a manner, as difcovered both his treachery and ingratitude: for in his memorial after the king of Spain's death, he charges the treaty of Par tition with being productive of infinite troubles and misfortunes common to all Europe: which was a full proof of his wicked defign and infincerity, when he follicited the Englifh and Dutch to enter into it. For here he acted the part of the great enemy of mankind, firft to tempt, and then to accufe. In that fame memorial he reflected upon them, as having no right to thofe dominions, which were allotted him by the treaty; by which he charges them as ufurpers, and meddling where they had noiting to do: though upon the firft publication of the partition treaty, he joined with them in their memorials to the other potentates of Europe; wherein it was expected, that the defign of the treaty was to preferve the peace of Chriftendom; and that the partitioning of the Spanifh monarchy for that end, was as neceffary as the pulling down or blowing up a ftreet or fome houfes during a fire, to prevent a whole city's being confumed.
He difcovered his ingratitude ftill further, by charging the maritime powers with infincerity, in demanding what they never defigned to obtain; and the Dutch in particular, with framing views contrary to the intereft of their republic: and that neither we nor they Atipulated any advantage to ourfelves. The defign of this was to infence the fubjects of England and Holland againft their refpective governments, as if they had concerted meafures with Frapce, prejudicial to their

Vol. II.
trade and liberty: and we know well enough what ufe the diffffected faction made of this in England, when in parliament they charged the king with having made a felonious treaty, and impeached his minifters for confenting to it.
The French king having thus feized the Spanifh monarchy, by virtue of that pretended will, one would have thought he fhould have pioully obferved the contents of it; but he was fo far from doing fo, that, according to his ufual treachery, he broke in upon it in many inftances, and particularly by fending Frenchmen to poffefs the chief trufts of the kingdom, and to govern their councils, contrary to the 23 d article, by which king Charles II. ordered that each of his kingdoms Thould be governed by natives, without any innovation.
This treachery and ingratitude of the French king brought on the then confederacy, wherein the late king William III. was the chief inftrument, but died before the war was declared. Her majefty queen Anne, who fucceeded to his defigns at firft for the public welfare of Europe, as well as to his crown, publifhed her declaration of war againft France on the 4 th of May, 1702 , which was lefs than two months after king William's death. • Her majefty charges him there with unjuft ufurpations and encroachments; with keeping poffeffion of a great part of the Spanifh dominions; with exercifing an abfolute authority over all that monarchy; with feizing Milan and the Spanish Low Countries, and making himielf mafter of the entrance into the Mediterranean, and of the ports of the Spantsh West Indies, whth a defign to invade the libertes of Europe, and to obftruct the freedom of navigation and commerce.
It is fit to be obferved here, that, before the death of king William, the French king had declared the pretender to be king of Great-Britain and Ireland, which was directiy contra $y$ to the ift and 4th articles of the treaty of Ryfwick, by which he $w$ as bound to a perpetual peace and fincere friendthip with king William, to promote his intereft, honour, and advanıage, and tied up from affording any affiftanee, directly or indirectly, to anv enemy or enemies of king W Ihant, and in no manner whatfoever to favour the confpracier and plots which any rebels, or ill-difpofed perfons, may in any place excite or contrive againft the faid king; and that he wouid not aflift with arms, or any other way, any perfon or perfons who fhould hereafter, under ony pretence whatfoever, difturb or moleft the faid king of Geat-Britain in the free and full poffeffion of his kingdom, \&c.
Upon this her majefty, in her faid declaration, takes notice that the French king, inftead of giving that fatisfaction for his contravention of the above-mentioned treaties, which ought juflly to have been expected, not only proceeded to further violence, but added thereto a great affront and indignity to her majefty and her kingdoms, in taking upon him to declare the pretended prince of Wales king of England, Scotland, and Ireland; and had alfo influenced Spain to concur in the fame affront and indignity, as well as in other oppreffions.
The States-General, in their manifefto, recapitulate the French king's former breach of treaties, and particularly that of Ryfwick; wherein, befides the other infractions already mentioned, they charge him alfo with breaking the treaty of Partition, notwithfanding the repeated pran teftations he had made never to depart from it: and that he had violated the fame, without giving any previous communication of his intention to thofe with whom he had nade it, alleging, for his principal motives, that the Spirit and Sense of the faid treaty, and not the Letter, were to be regarded; and explained that Spirit and SENSE in his own way. He threatened them, at the fame time, of they did not concur with him, which they juftly obferved was an uncommon, as well as unheard-of, breach of talth, and d dangerous inflance, which tended for the future to undermine and ruin the faith of all Public Treaties. They charged him likewife with having poffeffed himfelf of the Spanıf dominions, contrary to the treaty of Partition, without any regard to the emperor's pretenfions; whirh being the foundation of it, the greateft part of the Spanifh monarchy was thereby yielded to the archduke. He likewife, contrary to that, and former treaties, had poffeffed himfelf of the SPAnish Netherlands, notwithftanding they had garrifons there by the confent of the king of Spain, for the fecurity of the country; by which the French deprived them of the Barrier he had fettled by former treaties, and particulaily by that of the partitions, and bad procured an abfolute furrender of thofe provinces from his grandfon, whofe dominions he governed in as abfolute a manner as if France and Spain were one and the fame kingdom. He alfo endeavoured to force the States into a feparate treaty, without their allies; and, to compel them to it, feized Liege, and the moft confiderable places of the electorate of Cologn, that he might invade them on all fides, as in 1672, and for that fame end raifed a confiderable number of troops in the country of Wolfenbuttle. He likewife feized all the harbours of Spain, Naples, and Sicily, and otheriflands in the Mediterranean, and alro of the Spanish Netherlands and the West-Indies, to make himfelf entire mafter of the commerce of EUROPE, and to exclude them and other na-

## P L A

tions from it. He endeavoured likewife to perfuade the king of Portugal to deny them his harbours, and fent a fquadron to the Weft-Indies, to feize the Plate-Fleet, in which the fubjects of the States, and of other princes and potentates, had fo great a fhare; and at the fame time he endeavoured to amuse them with a treaty for a General Peace, though he erected a fort in the Netherlands, within cannonThot of one belonging to the States, contrary to a treaty agreed on with Spain in 1648 , contrary to the laws of nations, and thofe of war.
The emperor, in his declaration, charges the French king with the breach of the treaty of Ryfwick, and, of the Pyrenees; with feizing feveral hereditary countries belonging to the houfe of Auftria; with invading the empire, and feizing feveral of his fiefs; with fupporting the elector of Cologn in his difobedience, and his grandfon, the duke of Anjou, in ufurping feveral titles, as that of duke of Auftria, count of Hapfburg and Tyrol, \&c. which belonged to none but the archducal houfe. In the laft place, with feizing the dominions of Spain, on pretence of a will contrived by fome bribed Spanifh counfellor, according to the direction of the French king, which was offered to the king of Spain when he was fo weak in body and mind, as not to be able to read or underftand, much lefs to weigh and examine, as was neceffary, the large contents of the faid will; which of itfelf was full of falfities, and incomprehenfible contradictions, as well as contrary to the intention of the faid king, which he had fo often fignified to the emperor.
All thefe things being confidered, we may juftly fay that there was never a prince in the world, and much lefs any who affumed the title of Cbriftian, whofe reign affords fo many inftances of fudied and deliberate perjury, and breach of folemn treaties; nos have we an inftance of any prince that ever pretended to the belief of a God, that fo frequently profaned his name by the breach of public oaths, or that played faft and loofe in fuch a manner with things that they themfelves accounted facred: fo that, like another Pharaoh, he all along bid defiance to the Almighty, and it was the language of his practice, though not of his mouth. Who is the Lord, that I thould obey him?
Though the divine vengeance punifhed him in a remarkable manner, by the defeats of his armies, and defolating judgments upon his dominions, he went on ftill in his obftinate perjuries and ufurpations, and had fo chicaned with the Confederates in the bufinefs of the preliminaries to the peace of Utrecht, and fo egregioufly impofed upon the nation in that treaty, and attempted to do fo infinitely more than he did, by an infamous treaty of commerce; that we have all inazginable reafon ever to diftruft the fincerity of a court that has proved fo difhonourable, efpecially if we have fufficient caufe to believe, that the fame fyftem of difturbing the tranquility of Europe fill prevails, in opder to afpire at that univerfal empire which they have fo long had in view.-And what advances they have really made thereto in Europe, which feem not to be duly noticed, will appear from what we have urged under the article France, which the reader is defired to refer to: how far, likewife, their fyftem tends to deftroy the ballance of commerce and empire in America, the reader is defired to turn to our REMARKS on the article BRITISH America: fee alfo our articles North Carolina, Cana da, Louisiana, Pensylvania, and French AmeriCA, and all others to which we refer from thofe.-And ftill to confirm our opinion that we have entertained of the meafures of this nation, ever fince the laft treaty of Aix la Chapelle, we fhall conclude this head of Plantations with the two following fpeeches of governor Shirley, of New England.

## REMARKS before the laft war

Whilft I have been drawing up this article, the public have had communicated from Bolton in New England, the authentic fpeech of governor Shirley, which, as it gives an account, that may be depended on, of the conduct of the French in that part of America, we judge it neceffary to give the fame a place in this work.

The fpeech of his excellency William Shirley, Efq; to the great and general court, or affembly, of the province of the Maffachufetts Bay in New England, March 28, 1754.

## Gentlemen of the council and houfe of reprefentatives,

Having received, in the recefs of the court, fome difpatches, which nearly concern the welfare of the province, I thought it neceffary to require a general attendance of the members of both houfes at this meeting of the affembly, that the matters contained in them may have as full and fpeedy a confideration as the importance of them feem to demand.
By account fent from Richmond Fort, and declarations made before me and his Majefty's council, by two of the fetters at Francfort, upon the river Kennebeck, I am informed, that, in the fummer before laft, a confiderable number of French fettled themfelves on a noted carrying-place, made ufe of by the feveral Indian tribes inhabiting that part of the country in their paffige to and from Canada, which feparates the head of the aforefaid river from that of the river

## P L A

Cbaudiere, which laft falls into the great river $S t$ Lawrence, at four miles and a half above the city of Quebec.
And I have received further intelligence, that the French are fettled very thick for twelve miles on each fide of the faid river Chaudiere, at about 30 miles diftance above the mouth of it, and in the mid-way between the river St Lawrence and the before mentioned carrying-place; and the captain of Richmond Fort, in his letter dated the 23d of laft January, informs me that the Norridgwalk Indians have declared to him, "That they had given the new French fettlers upon the carryingplace liberty to hunt any where in that country, as a recompence for the great fervice they will be of to them, in a time of war with the Englifh, by fupplying them with provifin and military ftores.'
The fame officer further acquaints me, in another letter dated February the 11th, that feveral Indians of the Arreffigunticook, and fome of the Penobfcot tribe, amounting, together with the Norridgwalk Indians, to 600 effective men befides boys capable of bearing arms, were then lately arrived in the neighbourhood of the fort under his command: and that, though they affembled there on pretence of writing 2 joint letter to me, as they have done, yet he had reafon to expect, from their haughty infolent behaviour, the repeated open threats of fome of them, and the private warnings from others, that, as foon as the rivers fhould be free from ice, they would commit hoftilities againft the Englifh, upon that and neighbouring rivers; in which they intimate, they are to be affifted by a number of French from Canada, difguifed like Indians. And in another letter, dated the soth of March, be acquaints me, that the French prieft, miffionary to the Indians of the river Kennebeck, appeared to him to be continually ufing artifices to excite the Indians to prevent our fettlements from being extended higher up it, to fet them at variance with the Englih, and difpore them to a war with them this fpring.
Moft of thefe accounts are confirmed by the declarations of the before-mentioned fettlers at Frankfort, with the additional circumftances, that the French prieft had been very inquifitive after Roman Catholic families in this fettement, and ufed endeavours to draw off fome of the inhabitants into the fervice of the French, particularly for building a chapel and a dwelling-houfe for himfelf upon that river, about three or four miles above Cufhana, and at a diftance of 24 from Frankfort, and been very induftrious to perfuade them that it was within the French territories; and the Indians have further declared, that they have been inftigated by the governor of Canada, to hinder the Englifh from fettling upon any part of the river; which is ftrongly confirmed by a depofition of Capt. Lithgow, made in Auguft laft.
Upon this occafion, gentlemen, I fent as foon as might be, with the advice of his Majefty's council, the neceffary reinforcements of men and ftores to all the eaftern forts, iffued commiffions for raifing fix independent companies in the townhips and diftricts next adjacent, with orders for the officers and foldiers to hold themfelves in conftant readinefs to march, upon any alarm, to the fuccour of any neighbouring fort or fettlement which may be attacked, to cut off the enemy in their retreat; and, in cafe that they fhould find that the Norridgwalk Indians have committed hoftilities, to break up their villages and fettlements upon Kennebeck, and to kill or captivate all they can meet with of their tribe: I likewife ordered an officer, commiffioned by me for that purpofe, to proceed, by the firft opportunity, to the fuppofed place of the new French fettlement, in order to difcover the certainty and circumftances of it, and to require the French commandant to retire and withdraw the people under his command from that fpot, as being under his majefty's dominions, and within the limits of this government.
And I doubt not, gentlemen, from your diftinguilhed zeal for the defence of his Majefty's territories, and tbe protection of his fubjects within this government upon all occafions, but that, upon a refufal of the French to comply with that requifition, you will make fufficient provifion for enabling me to compel them, with the armed force of the province, to free us from their encroachments
The concern, gentlemen, which you expreffed in your meffage to me at our meeting in December laft, upon your apprehenfions of the imminent danger which the province was in, from the French having fortified themfelves upon the river of St John's, clofe to our borders, leaves me no room to doubt of your being fenfible of the fatal confequences in the general that muft attend their encroachments, which it feems plain they are now pulbing into the heart of the province (as the general court, in a vote paffed the 16th of January, 1749 , juftly call the river Kennebeck) unlefs they are timely removed.
But it may not be improper for me to obferve to you in particular, that it appears from extracts which I have lately caured to be made of fome original letters taken among Father Ralle's papers, at the breaking up the Indian fettiement at Norridgwalk in $\mathbf{1 7 2 4}$, and which paffed between him, Father Lauverjat, prieft of the Penobfcot tribe, and Father La Chaffe, fuperior of the Jefuits at Quebec, during the Indian war in the years 1723 and 1724 ; that the head of Kennebeck river, near which the Indians have declared the French have made

## P L A

## P L A

a new fettlement, was the centre of moft of the tribes then at war with us, and the general rendezvouz of all that catne to the caltern parts; the Hurons, the Iroquois of the falls of St Lewis, the tribe of St Francis (or Areffigunticooks) and the Indians of the feignory (as the French call them) of Be cancour on the one hand, ufed to affemble with the Norridgwalks here, from their feveral fettlements; and the Penob fcots from their river, on the other : here they beld their confultations, and from thence iffued out in parties united or feparate, as beft fuited them, againft the Englith; hither they retired after action, and brought their wounded for relief and here, if they met with provifions, they fared well; if not, they fuffered greatly for want of them
It appears further from thefe letters, that the foveral French It appoaries chiefly conducted and managed this war ; that they had the care of fupplying the Indians with the necefliary provifions and ftores for carrying it on; were employed to make them perfevere in it, and to pulh them on to thei boldeft enterprizes; that they tranfmitted accounts of their proceedings to the government of Canzda, through the hand of the fuperior of the Jufuits at Quebec, through whom likewife they received their directions from thence, as the governor of Canada feems to have done his, upon this oceafion, from the court of France
And I would further obferve, that this route affords the French a hhorter paflage for making defcerits from Quebec upon this province, and deftroying the whole province of Maine, with the king's woods there, and in the government of New Hampthire, than any other whatever from Canada. Thefe advantages, which the poffeffion of this river would give the French over this province, make it ealy to accoun for their conftant endeavours, ever fince the treaty of Breda, at which it was determined, in the moft folemn manner between the two crowns, that the river Pentagoct, or Penobfcot, was the boundary between New England and Acadia, or Nova Scotia, to extend the limits by claim upon al occafions (as in fact they have done) to the eaftern fide of the river Kennebeck; though they never attempted, until within thefe few years, to pafs over the river St Lawrence, within the extent of this province.
I am fatisfied it is ncedlefs for me, gentlemen, to urge any thing more to fhew how neceffary for the fafety of this government it is, that we fhould fecure to ourfelves the porfeffion of this important river, againd the encroachments of the French, without delay: and $I$ think the prefent fituation of affairs in that country muft convince you, how vain a fcheme it would now be to have your fole dependence for gaining this point upon making annual prefents to Indians, who appear to have entered into an offenfive alliance with the French againft you, and have fhewed evident marks of a difpofition to put the river into their power.
How different are fuch proceedings from thofe of the French ? Whilf we have been fuing in vain to a few Indians, for cheir permiffion to fettle lands within the undoubted limits of this province, and which themfelves cannot deny to have been purchaled of their anceftors, and have in effeit promifed them a yearly tribute, to reftrain them from committing afts of hofility againft us, the French have marched armies into diftant countries of numerous and powerful tribes, which, without any colour of right, they have invaded: they have forbid them to make further grants of any of their lands to the Englifh, and have built, and are fill building frong forts, with an avowed intent to drive them off from the lands already granted to them, and to exclude them from all commerce with thofe Indians, whom they have threatened with deftruction, if they fhall prefume to interfere in their favour.
It is time, gentlemen, for you to defift from having your chief dependence upon temporary expedients, which feem rather to have expofed the government to the contempt of thefe Indians, than to have conciliated their friendihip to it ; and to take counfel in part from the policy of our neighbours.
Vigorous meafures againft the French, in cafe' they fhall refufe to quit his Majefty's territories within this government, without being conpelled to it by force; building a ftrong fort near the head of the river Kennebeck, above the fettlements of the Norridgustalk Indians, and pufhing on our fettlements upon it in a defenfible manner, would effectually rid the province of the encroachments of the former, and either hold the latter in a due dependence upon us, or oblige them to abandon the river.
And further, by making ounfelves, through this means, mafters of the pafs, which was the general place of rendezvous during the Indian war in 1723 and 1724 , of all the tribes engaged in it, both in their incurfions and retreats, we fhould have it in our power to curb all thofe Indians for the future, and in a great meafure prevent them from attempting to make depredations in our expofed fetdements.
I muft further obferve to you upon this occafion, gentlemen, how dangerous delays to make fuitable preparations for removing the French would be.
How practicable was it, at firf, to bave put a ftop to their proceedings in building their fort, at Crown Point? And you can't but remember what mifchievous effects of the negleet
to do that in the beginning, were felt by this and the province of New-York, in the ravages which they fuffered from thence during the late war.
A fhort delay to diflodge them from their encroachments near the river Kennebeck, might give them an opportunity of making themfelves mafters of that river likewife, in the end; and in that cafe we may expect foon to fee another fort buil by them, near the mouth of it, and the French in poffeffion of all the fea-coaft between that and the river St John.

## Gentlemen of the council and houfe of reprefentatives.

I hope you will proceed in the confideration of thefe matters with that unanimity and difpatch which his Majefty's fervice and the fafety of the province requires; and that you gentlemen of the houfe of reprefentatives will make the neceffary fupplies.

## Council-Chamber, <br> March 28, 1754 .

W. SHIRLEY

Bofton, April 25, 1754
On the $2 d$ inftant his Excellency was pleafed to make the fol lowing fpeech to the great and general court, or affembly, then fetting here, viz.

## Gentlemen of the council and houfe of reprefentatives.

The occafion of my fpeaking to you now, is to acquaint you that I have received a letter from the right honourable the lords commiffioners for trade and plantations, fignifying to me, that his Majefty has been pleafed to order a fum of money to be iffued, for prefents for the Six Nations of In dians, and to direct the governor of New York to hold an interview with them for delivering thofe prefents, at fuch place and time as he fhall appoint; and I am directed to lay this matter before you, and to recommend to you to make a proper provifion for appointing commiffioners from this government to meet commiffioners of Virginia, Maryland, Penfylvania, New Jerfey, and New Hampfire (to the refpective governors of which colonies their lordfhips have wrote to the fame effect) as alfo for making fuch preferts as have been ufual upon the like occafions.
I have likewife to acquaint you, that I find, by a paragraph. of their lordfhips letter upon this occafion to the governor of New York, which his honour lieutenant-governor De Lancey commander in chief of that province, bath communicated to me, that he is herein directed to take care that all the provinces be, if practicable, comprized in one general treaty, to be made in bis Majefty's name.
And that Mr De Lancey hath given me notice, that he hath appointed the faid interview to be held at the city of Albany, on the 14th of June next.
I am perfuaded, gentlemen, I need not ufe arguments to convince you, that if is of very great confequence to the interefts of his Majefty's colonies upon this continent at all times, that as many of the tribes of Indians inhabiting it as may be (thofe of the Six Nations more efpecially) Chould be kept in friendflip with the Englifh, and a dependence upon the crown of Great-Britain; and that as free a commerce and intercourfe fhould be maintained with them as is poffible; but I think it my duty, at this time, to enter into a particular detail of thefe matters.
At the treaty of Utrecht, which is confirmed by that of Aix la Chapelle, thefe were looked upon to be points of that importance to the Britih intereft in North America, that care was taken in that treaty to have the Indians of the Six Nations acknowleged by France to be fubject to the dominion of Great-Britain ; and it is herein exprefsly flipulated, that the French fall give no hindrance, or moleftation, either to them or the other natives of America, who were friends to the Englifh : it is alfo flipulated, that the fubjects of both crowns thould enjoy full liberty of going or coming (upon this continent) on account of trade; and that the natives of the countries upon it fhould with the fame liberty refort, as they pleafe, to the Britiih and French colonies, for promoting trade on the one fide and the other, without any moleftation or hindrance either on the part of the Britilh fubjects or the French.
With regard to the Indians of the Six Nations in particular, I would obferve to you, that, according to an account given by them in an open council at Turpehawkie, at their return from the Indian treaty at Philadelphia in 1742, of the feveral Indian nations which have been conquered by them, and are now in their alliance, and trade with the Englifh, and which feems to be depended upon, the warriors belonging to thofe tribes may be computed to amount to 16 or 17,000 at leaft; and one, who muft be a good judge of the ftrength of the Five Nations themfelves, upon being interrogated by me concerning the number of their fighting men, made anfwer, That he did not know their number, but well knew that they are a numerous people, a terrible body of men, and able to burn all the Indians in Canada,

You mult be fenfible, gentlemen, what frequent attempts the French have made, from time to time, to draw off the Six Nations from the Englifh intereft into their own ; and from the repeated advices we have received from his Majefty's fouthern colonies on this continent, what efforts they have lately exerted to win over their allies, together with the other numerous tribes inhabiting the vaft countries lying along the great lakes and rivers, and to the weftward of the Apalachean Mountains (all which may be reckoned to exceed double the number of the Indians of the Six nations, and thofe in their alliance) as alfo what meafures the French are taking to exclude the Englifh from all trade and commerce with thofe Indians.
To compafs this, they have, in manifeft violation of the aforefaid treaties, entered the country of thefe Indians, upon the back of his Majefty's fouthern colonies, and within the limits of his territories, with large bodies of troops, feized the effects, and captivated the perfons of the Englifh, whom they found trading there; abrolutely denied their right to traffic with thofe nations, and erected a line of forts upon the lakes and rivers, from Canada to Miffiffippi, to cut off all commerce and intercourfe between them; they have committed hoftilities againft fome of the tribes in friendhip with the Englifh, engaged others to take up the hatchet againft them, and threatened thofe with deftruction who fhall interfere with their avowed defign to drive the Englifh out of that country.
Should the Indians of the Six Nations, at this critical conjuncture, defert our alliance, and go over to the French, how fatal an influence muft fuch an event have upon the Britifh intereft? On the other hand, fhould proper meafures be taken to attach them finally to it, how greatly would it difappoint and check the prefent fchemes and enterprizes of our dangerous neighbours?
It it is well known how wavering the difpofitions of thefe Indians have of late been, and how vifibly they have abated their former enmity to the French; and we can's be at a lofs to difcover the real caules of it.
Nothing could at this time fo effectually reclaim them to their old alliance with us, as the meafures directed to by their lordinips of the board of trade, one general league of friendfhip, comprizing all bis Majefty's colonies, to be made with them in his Majefty's name, with Atipulations to build fuch forts in their country as they fhall chufe, and may be judged neceflary for their thelter and protection againft the French.
Such a coalition of the colonies for their defence, would be 2 convincing proof to them that they might fafely depend upon his Majefty for protection, and confirm them in their ancient alliance with the Englin; and how neceffary fuch a confederacy of the colonies for their fafe-guard is, may appear to you from the following account, given by an Indian trader, who for more than 20 years had carried on a trade among the different nations of the Indians, fome hundred miles weft of Philadelphia, the truth of which I have great reafon to depend upon, viz. 'That, at the commencement of the late war, he, with fundry other traders of the Englifh, was taken prifoner by fome Frenchmen belonging to a fort upon the river Ohio, and from thence was tranfported from fort to fort to Quebec ; by means of which forts and the lakes, the French, he fays, have a communication open from Quebec to Miffiffippi; that they have forts there within 20 or 30 miles diftance from each other, with a command of from 10 to 20 men in each; in which, he fays, they put the fqua's and papoofes of the Indians in alliance with them, for protection, whillt the men go out to war, and there keep them until the men return; and he obferves, that, by means of thefe forts, they bid fair, in a little time, to reduce the Indians in alliance with the Englifh, as the Englifh do not afford the fame protection to their women and children, whillt the men are gone to war, as the French do.'
I would therefore earneftly recommend to you, gentlemen of the houfe of reprefentatives, to make fuitable provifion for fending commiflioners on the part of this government, to join in the approaching interview at Albany, duly authorized to concert fuch meafures, in conjunction with the government of New York, and commiffioners of the before-mentioned governments, as thall be judged proper to be entered into for cementing a firm league of friendihip with the Indians of the Six Nations, and retaining them in the Britifn intereft; and to give thofe commiffioners full power to agree with the other governments upon the quota of money and men to be furnifhed by this province for this fervice.
I have taken the liberty to propofe the fame thing to be done by the other governments concerned in this interview, in my letters to his Majefty's governors, and againtt the prefent dangerous enterprizes of the French on every fide of them.
I have already let you know, gentiemen, his Majefty's orders to me and his other governors upon this point, fignified to us in the earl of Holderneffe's letter of the 18th of Auguft laft, and how neceflary it is that fuch an union thould be im. mediately formed in the common caufe: whoever takes a furvey of the whole extent of the invafions and encroachments
which the French are furrounding his Majefty's territories upon this continent with, from their moft eaftern to their mof weftern limits, muft foon be convinced.
Clofe on the back of the fettlements of his Majefty's fouthern colonies, they are joining Canada to Miffiffippi, by a line of forts and fettlements along the great lakes and rivers, and cutting off all commerce and intercourfe between the Englin and the numerous powerful tribes of Indians inhabiting that country, whom they are attempting to engage in their intereft by all manner of hoftilities and artifices: and, at the fame time, they are pulhing on their encroachments with equal vigour quite round his Majefty's eaftern colonies, where they have fecured all the Indians in thofe parts to join them againft the Englifh.
Should the French prevail in the former part of their fcheme, and gain a general influence and dominion over the Indians behind the Apalachean Mountains, which they muft, in the ordinary courfe of human events, do in a fhort time; if they are not timely prevented by an union of his Majefty's colonies, they will have, in a few years, a moft formidable army of thofe Indians at their command, maintained without any expence to themfelves; but, on the other hand, with great profit arifing from an immenfe furr-trade carried on with them: and what fatal confequences fuch an army of warriors (a few of which have been found fufficient to keep a large frontier in continual alarm) muft have upon all his Majefty's fouthern colonies, by continually harraffing them, at the direction of the French, and fupported by them from Canada on one fide, and Miffiffippi on the other, and covered in their retreat behind the mountains by a ftrong line of forts, commanding the navigation of all the lakes and rivers, is ealy to conceive; efpecially if the Indians of the Six Nations fhould defert our alliance, and join the French, which muft, in fuch cafe, be a decifive blow to the Britifh intereft on that part of the continent.
At the fame time, if they are not prevented by a coalition of the colonies, from finifhing the fcheme which it is moft manifeft they are forming againft the eaftern provinces, and already far advanced in, they muft foon have it in their power equally to diftrefs them likewife; and all the Englifh colonies will be involved together in one general flame. It is true, thofe colonies are far fuperior to the French in their number and ftrength; but if that ftrength, gentlemen, is not properly exerted, by an union among themfelves, how little will it avail? It is not difficult to imagine fuch a body of troops as the French may foon collect, together with the affiftance of all the Indians fcattered throughout this continent on the back of the Englifh colonies (as the French fettlemente likewife are) when under the command of the governorgeneral of New France, who, upon all emergencies, can direct their force as he pleafes, may reduce a number of difunited provinces, many of them very remote from each other, though much fuperior to them in point of the number of inhabitants.
For forming this general union, gentlemen, there is no time to be loft: the French feem to have advanced further towards making themfelves mafters of this continent, within there laft five or fix years, than they have done ever fince the firft beginning of their fettlements upon it: and how determined they are to accomplifh their fcheme as foon as poffible, appears from their breaking through the moft folemn recent treaties and agreements made between the two crowns in order to effect it.

## Gentlemen,

His Majefty hath given the ftrongelt proof of his paternal care of his colonies, and conftant attention to their fafety, in directing his governors to promote this union within their refpective governments: and I hope you will not be wanting on your parts to contribute all in your power towards effecting it, by improving the opportunity which the approaching in terview with the Indians of the Six Nations at Albany happily prefents for that purpofe: and I doubt not but that you may depend on all reafonable fupport and protection on the part of his Majefty, againft all prefent and future enterprizes and attempts of the French againft you.
Council-Chamber, April 2, 1754. W. SHIRLEY.
Remarks on our article Piantations, fince the laft war and the Definitive Treaty of Peace, 1763.

From the whole drift and tenour of what we urged under this article, one would be led to think, that we were poffeffed of the gift of political prophecy; every thing falling out, with refpect to the laft war with France and Spain, as we had prejudged, though this work was begun juft after the peace of Aix la Chappelle: and the revival of the paft perfidy of France could not be malapropos, as being intended to rouze and alarm us to guard againt the treachery of that fate. The precaution, we have all the way fuggeffed, in relation to Spain joining France allo, did not prove vifionary: we have likewife pointed out what came to pafs, in relation the

## POL

## POL

the making the Miffifippi the boundaries between GreatBritain and Spain; and even fuggefted the total extirpation of France from the whole American continent: and if it Chould prove true, that France has actually ceded $\mathrm{NE}_{\mathrm{E}}$ O ORleans, and their weftern parts of the Mississipfi to Spain, it will manifeft how far human foretight may reach in matters of a public nature when a man is governed in his re impality See Lne his re prefentations by facts and impartiality. See Leeward Islands, America, Colonies, Mexico, Florida, Bahama Islands, Newfoundland.

PODOLIA. This province has Volhinia on the north, the river Niefter on the fouth, which feparates it from Moldavia, Oczrakow, Tartary, on the eaft, and the palatinate of Lemberg on the weft. It is divided into Upper and Lower, and is 250 miles in length, and near 80 in breadth, according to Moll. It is exceeding fiuitful, and abounds particularly with wax and honey, and afparagus grows wild in the fields: but the eaft part of this province, although it be good land, is in a manner a perfect defert, by reafon of the frequent invafions and ravages of the Turks, Tartars, and Coffacks, to whofe incurfions the whole province is very fubject.
The upper, which is the weft part, is populous and fruitful, though mountainous in fome parts, and abounds with honey; and the valleys are well watered by rivers. In feveral places it has fundry forts of marble and alabafter.
Caminiec, the chief city of the Upper, and indeed of all Podolia, flands on the river Smotriick, which about 110 miles below, falls into the Niefter, not above 12 miles from'the confines of Moldavia, 98 fouth-eaft from Lamberg, 224 eaft from Cracow, 230 fouth-eaft from Warfaw, and 480 northweft from Conitantinople
The Lower Podolita, which is the eaft part, and alfo called, the palatinate of Braclaw, from it's chief town on the riven Bog, 40 miles from the confines of Moldavia, and 92 eaft from Caminiec.
POITOU, in France, is bounded on the eaft by Touraine, Berry, and La Marche, on the north by Anjou and Britany, on the weift by the Ocean, and on the fouth by Aunis, Saintonge, and Angoumois. It is'a large province, and more or efs fruitful, according to the different fituation of it's feveral parts
Chatelleraub is fituated on the river Vienne. The inhabitants of this place are induftrious, and inclined to trade, They make a great quantity of watches, clocks, knives, feiflars, and other works of that kind. Their corn and wine they difpofe of within the country, but they export fome flax and hemp.
Partenay, has a pretty confiderable trade in cattle and corn.
St Maixant bas a manufactory of woollen ftockings, caps, and ferges, which they fell within the kingdom and abroad: but their chief trade is in corn and all forts of grain, and in oxen, theep, horfes, and mules, of which they fell a grea many to the merchants of Auvergne, Lyons, Piedmont, and Savoy. They keep two markets weekly, and fix fairs in the year.
Fontenaille-Compte, is a fmall, but well built city, with - pretty good trade. They make here cloths; and feveral other woollén fluffs.
Niort, is fituated on the river Sevre. Within the diftrict of this city they drive a great trade in cattle, horfes, and mules; and have in the city, manufactures of hamoy-leather, druggets, ferges, and other woollen ftuffs.
Olone, is inhabited by people who apply themfelves chiefly to the marine, and are very good feamen.
POLAND, as it is now extended, is bounded on the north with Livonia, Mufcovy, and the Baltic; on the fouth with Upper Hungary, Tranfylvania, and Valachia; on the eaft with Mofcovy, and Little Tartary; and on the weft with Getmany. It's extent is from the frontiers of Pomerania on the weff, to the frontiers of Tartary on the fouth-eaft, about 700 miles; and from the frontiers of Livonia, to the Crapach, or Carpathian mountains, which are the linits of Hungary, on the fouth, above 600 miles.
By the fituation, the climate is temperate, and the air not exceffive cold; yet fometimes it's lakes and rivers are fo frozen, that coaches and carts pais over them for 5 or 6 months together. The foil alfo is generally fertile, fit for tillage and pafture, and produces a vaft quantity of corn and cattle; even enough to feed the populous nation of Holland, who yearly rend vaft fleets to Dantzick to buy the corn and oxen, fent down thither from the feveral parts of Poland.
Lithuania, in particular, produces honey, wax, hemp, flax, leather, pot-abhes, falt, wood, faltpetre, vitriol, and quickfilver. With thefe ftaple commodities they purchafe thofe of other nations, viz. wines, cloth, 保, wrought-filks, tapeftry, jeweels, fablens, martens, tin, fteel, iron ware, brandy, and ipices. The country of Poland, in general, produces alfo all kinds of fruits and herbs, and a good breed of horfes; fo that their cavalry is numerous, and well mounted. There are vines in many places, whofe grapes are grateful to the tafte, efpecially if the fummer and harveft be favourable, but the wine generally is very fharp, when drawn off. In the mounVoL. II.
tains there are mines of lead, filver, copper, and iron ; but the moft confiderable of all, are the falt mines in Leffer Poland which are the chief riches of the country, and bring moft money into the Exchequer. They work in thofe mines as the colliers do in our coal-pits. The falt is generally of a bluin colour, but fome of it white and tranfparent. When it is dug it has a brackifh tafte; but when expofed to the air,-it becomes brittle and more fweet. They have alfo fome veins of fal-gemma. The woods are well ftored with hares, coners, fquirrels, deer, foxes, bears, wolves, and boars. The Mafovian forefts have plenty of eiks, wild affes, wild oxen, cal led uri, and buffaloes, whofe flefh when powdered, the Poles efteem a great dainty. In the Ukraine there are wild horfes alfo, whofe flehh is equally efteemed by the nobility: The -wolf, refembling a hart, or the European linx, called lupus cervarius, and by the natives ris, with fpots on it's belly and legs, affords the beft furs in Poland. The quails in Podolia have' green legs ; it is faid their fieh is unwholefome, and, if immoderately eaten, breeds the cramp.
It is a plain flat country, rather inclining to marfh lands; fo that no confiderable, woods or mountains are found here, ex cept thofe that make the frontiers to Hungary, which is a craggy ridge of 300 miles in length, and called the Crapach, or Carpatbian Mountains. The eaftern part of the country, indeed, is full of woods, forefts, lakes, markhes, and rivers, which affords a delightful profpect to that part of it which is open. As for it's rivers, the moft confiderable is the Viftula the Niemen, or Cronus, the Nieper, or Boryfthenes, the Niefter, or Tyras, the Bog, or Vagus.

The kingdom of Poland confifts of thefe parts.
I. Poland, properly fo called, in the weft.
II. Pruftia on the banks of the Baltic.
III. The great dukedom of Lithuania in the eaft.
IV. Samogitia and Courland, in the north.
V. Watlovia, Polachia, and Polefia in the centre.
VI. Red Ruflia, and Podolia, in the fouth.
VII. Volhinia, and the Ukraine, in the caft.

The fubdivifions whereof are thus:
Poland, properly fo called, is divided into the Upper and Lower.
Upper Poland, called alfo the Leffer Poland, contains the three Palatinates of Cracow, Sendomir, Lublin.
Lower or greater Poland, contains the Palatinates of Pofnania, Kalifh, Brezefty, Wladiflaw, Lencici, -Inowloiz, Silad, -Rava, Ploezko, Dobrizin.
Prufia is divided into Royal, and Ducal.
Lithuania, is divided into the Palatinates of Witna, Troky, Bellaw, Novogrodeck, Minky, Mzciflaw, Witepk, Poloeza, Rofiem.
Samogitia hath thefe cities, Midnick, Schivende, \&c
Courland is divided into Semigallia, Courland.
Warfovia, otherwife called Maffovia, hath one Palatinate of Czerkow, and the city of Warfaw
Polachia, the Palatinate of Bielik.
Polefrifia, Breffici; :or Brefte.
Red Ruffia contains three Palatinates, Lemberg, Belcz, Chelm.
Podolia, divided into Upper, wherein is the Palatinate of Caminiec. Lower, wherein is the Palatinate of Braclaww. Volhinia, divided the Upper, which contains the Palatinate of Lufuck. The Lower, which is commonly called the Ukraine, contains the Palatinate of Kiow.
The Upper or Leffer Poland, is firuated between the Lower Poland and Warfovia on the north, Hungary on the fouth, Red Ruffia on the eaft, and Silefia on the weft, containing in extent, from eaft to weft, near 200 miles, from north to fouth," about 120, lying between 49 and 51 degrees of latitude. The riverViftula, or'Veiffel, paffes through it; the Warta hath it's fource here, and feveral other rivers water the land, which is reafonably fruitful, but over-run with woods. It is divided into three Palatinates, wherein are thefe cities and chief towns, viz.
In the Palatinate of Cracow, being the fouth-weft part of the province, are, Cracow, Novoguria, Severia, Czenterow, Lelow, Ofwieczin, Zator, Wieliezka, Bochna, Sandecz, Lubowla, Bryecz.
In the Palatinate of Sendomir, which is the middle part, are, Sendomir, Zawicheft, Cunow, Schidlowitz, Radom, Zarnaw, Malogocz, Pikzow, Viflickia, Corezin, Polaniez, Pilfno.
In the Palatinate of Lublin, which is the north-eaft part, are, Lublin, Kafimiers, Piotrowin, Urzendow, Epol, Scodlec.
The Palatinate of Cracow has Silefia on the weft, the palatinate of Sendomir on the eaft, Hungary on the fouth, and Siradin on the north. There is a fort of manna in this country, which they gather in May and June, fweep it off the grats with fieves, together with the dew, and make feveral difhes of it
Cracow, Cracovia, the metropolis of this palatinate, and of the kingdom of Poland, is feated on a rocky bank of the river $\bar{\nabla}$ iftula, about the midsle of the Palatinate; 36 miles caft from the confines of Silefia, 40 eaft from Germany, 44,
north
north from the confines of Upper Hungary, 86 fouth-welt from Sendomir, 120 fouth-eatt from Almutz, and 127 from Breflaw, 135 fouth-weft from Warlaw, and 185 north-eaft from Vienna, 173 north from Buda, 250 fouth from the Baltic Sea, 680 north-weft of Conftantinople, and near 720 weft of Mofcow.
Near this city are falt mines, of whicb Dr Conner gives this account. They were difcovered in 1548 , are about 300 geometrical paces in depth, and have fo many alleys and palfages, that one can fcarce go over them all in a week.
They are generally fo cold as is fcarce to be endured, and the winds are fometimes fo furious, that nothing can withftand them. The yearly revenue of thefe mines is about 400,000 French livres, of which 50,000 go to the king, 10,000 to the queen, and fome thoufands more to the officers of ftate; befides which, the proprietor is obliged to make a yearly prefent to all the cities of Poland, and their faroftas
The falt here is of four kinds; one extreme hard, like cryftal; another fofter, but clearer; a third white, but brittle thefe are all brackifh; but the fourth is fomewhat frefher. On one fide of thefe mines there is a fream of falt water, and on the other one of frefh.

## The other towns of note in this palatinate, are,

Zator, on the fouth fide of the Veiffel, 22 miles fouth-weft from Cracow, and 20 from the confines of Silefia.
Severia is capital of a large duchy of the fame name; in the neighbourhood are mines of filver and lead.
Breez, 33 miles fouth-eaft of Cracow, is watered by the river Rapa, a branch of the Veiffel, of whofe froth they make fulphur. This town fands on the confines of the palatinate of Sendomir, and has good mines of vitriol in the neighbourhood.
$S_{\text {ANDECZ, }} 24$ miles fouth-eaft from Cracow, is noted for trade, the induftry of the inhabitants, and fome mines of gold and copper.
Osvieczin, 30 miles from Cracow, on the fouth fide of the Veiffel, near the river Sala, 12 miles from the borders of Si lefia, is reckoned the capital of Polin Silefia. This town is a thoroughfare from Cracow to Vienna, and has a great trade in hard falt, of which there are great lumps expoled to fale in the public fquares; of from 20 to 30 quintals in weight. It is dug out of the mines near Cracow, to the inhabitants of which, it is fold for 8,10 , or 12 florins each, and the others from 50 to 70 .
Czentochow, 57 miles north-welt from Cracow, and 70 ealt from Breflaw, ftands on the river Warta, and the confines of Silefia. It is famous for good beer, tranfported over the nation and into Germany.
Slacovea, 25 miles north-weft of Cracow, gives name to a duchy, and is noted for filver mines, which bring great profit to the bihhap of Cracow.
Proszovice, 10 miles north of Cracow, on the banks of the river Sozienova. The king has a palace there, in which is kept a provincial dyet.
Ileussia, 20 miles weft of Cracow, is a royal town, noted for filver and lead mines, and the beft bread and beef in Poland.
Wieliez, 25 miles eaft from Cracow; and Bochnia, another town in the neighbourbood, are noted for quarries of excellent rock-falt, difcovered in 1252, of which that of the latter is moft tranfparent. The mines which are below the town, make one of the beft branches of the revenue, and employ a thoufand men and many horfes. Such of them as work un-der-ground, grow blind, from the fharpnefs of the falt. Here are alfo feveral fprings, the water of which is boiled into falt. Our Philofophical Tranfactions, No. LXI. p. 1099, call them falt-gem mines. Here are three forts of falt, one coarfe-and black, another finer and whiter, and the third very white and clear, like cryftal. The black falt is cut out into maffes of three Polifh ells long, and one in thicknefs. They lay the great pieces before the doors, that the cattle may lick them. Thefe pieces are ground by mills and other engines.
This palatinate is fmall, exceeds all the reft in mines, except that of Sendomir only: for, befide thofe already mentioned, there are fome, both of copper and gold, at Novoturgus; marble of all colours at Silefia; pit-coal at Tencinum; and iron mines, and glafs-houles at Olftinia.
The Palatinate of Sendomir bas that of Cracow on the weft and fouth-weft, Hungary on the fouth, Mazovia and Great Poland on the north, and Red Ruffia and the palatinate of Lublin on the eaft. It is divided into eight diftrifts, and has nine fenators, viz, the palatine and caftellan of Sendomir, and the caftellans of Williez, Radom, Zawicholt, Zarnow, Malagofh, Polowiez, and Sechow. It abounds with mines of gold, filver, copper, iron, lead, and marble, and has it's name from it's capital, viz.
Sendomir, on the weft fide of the Veifel, near it's confluence with the San, 70 miles north-caft of Cracow, and 75 fouth of Warfaw.

The ocher towns of any note, are,
Kunow, 40 miles north of Sendomir, noted fur quarries of marble of all forts and colours.

SydloveEz, 40 miles north-weft of Sendomir, is noted for ftore of timber, iron, and fteel, in it's neighbourhood, and plenty of fifh.
Viarden, a new built town, of good trade much frequented.
Irza ftands on a river that falls into the Veiffel, 70 miles north eaft of Cracow, and furnifbes all Poland with earthen ware.
KIelez is famous for mines of copper, and lapis lazuli.
Chenein, 12 miles eaft of Kielez, noted for mines of lead and filver, and quarries of marble.
Lagovia is a city famous for making earthen ware.
The Palatinate of Lublin lies north-eaft from that of Sendomir, out of which it is taken ; has Mafovia on the north, with Podlachia; is bounded on the eaft by Lithuania, aud the palatinate of Ruffia. It has two fenatore, viz. the Palatine and Caftellan ; and the Veiffel and the Vieperd are it's two chief rivers.
Lublin fands at the foot of a hill, near the river Ufrieza, 20 miles from the frontier of Red Ruffia, 35 weft of Chelm 56 north of Sendomir, 55 fouth-eaft of Warfaw, and 130 north-eaft of Cracow. It has a confiderable trade, and is frequented by merchants of Turkey, Armenia, Mufcovy, Germany, Italy, France, England, \&cc. at it's four annual marts, which laft each a month.
The Lower or Great Poland, is bounded on the north by Pomerania and Royal Ruflia, by the Upper or Leffer Poland on the fouth, by Silefia and the marquifate of Brandenburg on the weft, and on the eaft by Mafovia, or the duchy of Warfaw. It is 165 miles from fouth- eaft to northweft, and the like, where broadeft, from eaft to weft, ac cording to thofe geographers who include Mafovia in it: : but, excluding this, which is rather a boundary than a fubdivifion of it, it is 200 from eaft to weft, and about 500 from north to fouth.
It is, in general, a level champaign country, bas pleafant rivers, lakes, and ponds, and is well furnihhed with all manner of fifh and fowl. It's hills abound with theep, and other cattle, and it's valleys with corn.
Posnania, called by the Germans Posen, is bounded on the north by Pomerania, on the eaft by Pomerelia, and by the palatinate of Kalih, part of which, together with Silefia, bounds it alfo on the fouth; and on the weft it is bounded, partly by Silefia, and partly by the marquifate of Brandenburg.
It's capital city of the fame name ftands in a plain, among feveral little hills, by the river Varta, or Warta, 28 miles weft of Gnefna, 40 north of Wratillaw, 43 north-weft of Kalifh, $\mathbf{I} 35$ fouth of Dantzick, and 143 weft of Warfaw. There are chree very famous commercial fairs kept, in this city, much reforted to by the German traders and genery. The firft is kept about the beginning of Lent, and lafts a month ; the fecond and third at Midfummer and Michaelmas, each of which continues five weeks.
The Pafatinatif of Kalis lies along the river Warta, between the palatinate of Pofnan on the weft, Siradia on the fouth, Sendomir on the fouth-eaft, and Cujavia on the eaf and north-ealt.

## The chief city of this palatinate, is,

Gnesna, which is the capital of the Lower Poland, and was formerly the metropolis of the whole kingdom, and feat of the king. It ftands in the middle of the palatinate, in a plain, between hills and lakes, 37 miles north of Kalifh, and eaft of Pofnan, 46 fouth-weft of Thorn, 95 north of Breflaw, 118 fouth of Dantzick, 121 north-weft of Warfaw, and 155 north-weft of Cracow.
The Palatinate of Sidaria lies on the eaft and weft fides of the river Warta, and is divided into four diftricts, having Sitefia on the weft, Little Poland and Sendomir on the fouth and fouth-eaft, Kalifh on the north, and Lencicia on the eaft. It has five fenators.
The Palatinate of Lencicia has that of Rava on the fouth-eaft, and Little Poland on the fouth; is divided into three diftricts.
The Palatinate of Rava lies eaft from Lencicia, between Leffer Poland, Mafovia, and Cujavia, and is feparated from Sendomir by the river Piltza.
The two following palatinates are comprehended in the province of Cujavia, which has Royal Ruflia on the north, Kalifch on the weft, Lencicia on the fouth, and Dobrin on the eaft.
The Palatinate of Brezestey, on the fouth-fide, is fertile in all forts of grain, of which it exports vaft quantities to Dantzick, by feveral navigable rivers. It is divided into four diftricts, and has it's name from a little town 16 miles weft of the river Veiffel, 30 miles fouth-weft of Thorn, and weft of Ploczko, and 60 eaft of Gnefna.
Vladislaw is a palatinate, whofe capital city of the fame name is built among marhes near the Veiffel, in the midway between Ploczko and
ThORN, 14 miles north-eaf of Brezeftey, 20 fouth-eaft of Thorn, and 75 north-weft of Warfaw. Though the adjacent fuil is marihy, and fo fcarce of fuel, that the inhabitants fuffer very much for want of it; yet is is fruitful in corn, and fends great quantities to Dantzick.

The Palatinate of Inowlock. It extends from the lake of Goplo and the city of Grufwick, to the Veiffel, and the confines of Pomerania; has Pruffia on the north, the Veiffel on the eaft, Kalifh on the fouth, and lies north-weft from Brezeftey. It is divided into three territories.
Darbin is by fome made a diftinct palatinate of the province of Mafovia, and by others a territory belonging to that of Brezeffey. It lies on the eaft of the Veiffel, between Cujavia and Pruffia; abounds with fruits and fifh of all forts. It is divided into three diftricts.
Ploczio, on the weft fide of the country, is by fome alfo reckoned a palatinate of Mafovia, from which it dies rather to the eaft, between the Veiffel and Ducal Pruffia. It is divided into four diftricts

## Remarks.

Dantzick being the chief city of traffic in Poland, we fhall more particularly deferibe that and it's commerce from the beft accounts.
Dantzick, eaft longitude 19, latitude 54, the capital of Royal Pruffia, in the kingdom of Poland, fituate on the weftern thore of the Viftula, which a little below falls into the Baltic Sea. It is an excellent harbour, and has the beft foreign trade of any port within the Baltic. It ftands 140 miles north of Warfaw, and 70 miles fouth-weft of Koningfburg. The town is large, and encompaffed with a wall and fortifications of a great extent. The houles are well built of ftone or brick, fix or feven ftories high, and the grainaries, containing vaft magazines of corn and naval ftores, are till higher, to which the fhipping lie clofe, and take in their lading; for the Dutch annually import from hence a great many thoufand tons of corn, timber, and naval fores, and other nations fome; but the Dutch have the greateft fhare of this trade, paying for their merchandize with pickled herrings, the fpices of India, fugars, brandy, and other produce of the more fouthern countries; whereas, the Englifh and other nations are forced to purchafe thefe things chiefly with treafure. The inhabitants are computed to amount to 200,000 fouls.
The moft confiderable part of the trade of Dantzick confifts in corn, which the Polanders bring down the Viftula in large ftruzes or barks, which carry in bulk about 50 tons Englifh. Thefe barks generally come down annually, in very plentiful years to the number of 1600 . They reckon by lafts, of 11 Englifh quarters; the grain is fmall, but the red fort often fells for 180 Polifh gilders the laft, and rye about half this value.
As thefe cargoes are often expoled to the weather, it is a cuftom to fpread their fails on the banks of the river, and dry their corn on them. They allo export bees-wax annually, to near 1000 fchip-pounds, for which they often get the price of 300 gilders per fehip-pound. Narrow linens, of about 2 I inches broad, and facking of different qualities, for bags and imbalage, are alfo exported to a great amount *; alfo potath $t$, weed-aht $\ddagger$, and pearl-afh; this laft is calcined, and takes it's name from it's colour. Pipe-ftaves are alfo a confideratle article, and oak-plank, of which the greateft part is 4 inches thick, 16 to 20 inches broad, and 50 feet long $\$$. This fpecies of timber will not fland the weather fo well as Euglifh oak, but under the water is efteemed equal.
> * Some fay near 100,000 l.
> + Sold there at 50 f. per fehip-pound.
> $t$ Sold there at $22 \frac{1}{2} \mathrm{f}$. per barrel of 360 lbs .
> § Of this near 30,0001 . value.

They import iron from Sweden, to the quantity of 1500 or 2000 tons, but of the woollens, and other manufactures of England, an iniconfiderable quantity. The laws of commerce are very frict to prevent one foreigner from felling to another, or to re-fell to any other burgher than to the perfon he bought of, which mult neceffarily cramp the trade very much. Peter the Great made a ${ }^{-}$law to the fame purpofe for Peterfburgh, and yet it is unrepealed; but the government knows very well, that to inforce the execution muft be extremely prejudicial, and contrary to the maxims of all wife fates. Even in Dantzick, in the time of the fair, all ranks and degrees of people are admitted free, to fell what, and to whom they pleafe.
Poland abounds in Jews, faid to be of the tribe of Benjamin : whatever tribe they are of, they appear as defpicable as any people in the world; yet their acutenefs and induft y have given them an eftablifhment, in which it is the intereft, both of the lords and the clergy, to fupport them; for the trade which they carry on, enables them to pay an intereft of so per cent, per annum for large fums.
They keep their accounts here in gilders, grofels, and phenmigen, a ducat paffing for 8 gilders, 6 grofch.

The Current Money here is,
3 hillings, or 18 phennigen
3 grofch
I grofch,
2 ditkins
a ditkin,
3 fixers
1 fixer,
1 tymph,
$7 \frac{1}{2}$ grofch
1 ach de hallet,
4 ach de halbers
${ }^{1}$ gilder.
A current dollar is 3 gilders, and a feccie dollar 4 gilders.
Here are alfo half, whole, 2 gilders, and 4 gilders pieces, of which the laft is a French crown of Lewis XIV. efteemed the beft money current, when they have not been in the hands of the Jews. Polifh coin fells from I to 2 per cento advance. The exchange is ufually 280 to 290 grofch pet pound Flemifh banco. Koningfburg draws in current maney, I per mil. according to cuftom, being deducted.

Weight in Dantzick.
32 lote 1 pound,
24 pounds I fmall ftone,
34 dittos $=1$ large ditto,
120 dittos ; I centner,
320 ditios .' I fchip-pound, or $2 \frac{1}{2}$ hundreàs Englifh.
The weight is there 4 per cent. lighter than the Englifh. A laft of corn is 60 fheffelt, but of malt 90 .

Long Meafure.

5 Brabant ells.
The whole amount of the trade here, is ordinarily computed twelve millions of current dollars, on which the duties are about 7 or 8 per cent. One half is called the revenues of the crown, the other the property of the city.
This duty is paid in Alberto fix dollars of 4 gilders. HaNway.
Of the General Courfe of Exchange of Dantzick and Koningberg.

London exchanges, with Poland and Pruffia, by the way of Amfterdam and Hamburgh,-See Holland.

Remarks before the laft war between Engeand, France and Spain.
It is recent in every one's memory, that the death of king Augultus of Poland gave rife to a bloody war between the houfes of Auftria and Bourbon.
The late emperor Cbarles VI. was very far from being fatisfied with the conduct of king Auguffus, in the latter pare of his reign, becaufe he fufpected, not without grounds, that he had forne engagements with the courts of France and Bavaria, not' very favourable to the Pragmatic Sanction; for which reafon the imperial intereft was employed in Poland, rather to traverfe thain promote the king's views, with refpect to the fucceffion.
But when his Polifh majefty was dead, and the imperial court found his fon, the prefent king, very tractable, with refpect to it's favourite point, the Pragmatic Sanction : this gave a new turn to the councils of the court of Vienna, and engaged them to favour that meafure which they had bitherto impeded.
On the other hand, France, from firft to laft, openly fupported the intereft of king Stanillaus, whofe hiftory, from the time of his being driven out of Poland, is, in a few words, this.
His genernus friend, the king of Sweden, affigned him his paternal inheritance, the little duchy Deux Ponts for his fubfiftence, which he held fo long as that prince lived; but upon his demife, the next beir took poffeffion, and king Staniflaus was forced to retire to Strafburgh, where he lived on the bounty, as well as under the prorection of his moft Chriftian Majefty, who in the year 1723, married the princefs Mary, his daughter; which confequently intereffed France extremely in his favour. His greac alliances, bis many virtues, and his being freer from vices than almoft any prince in his time, had preferved him many friends in Poland; fo that it was no difficult matter for the marquis de Monti, the French ambaffidor in that kingdom, at the death of king Auguflu, in conjunction with the primate, to form a great faction in his favour, more efpecially as they were both men of great abilities.
But the electoral prince of Saxony being fupported by the courts of Vienima and Peterfburgh, a double election enfued. King Staniflaus, who paffed into that country immediately after the throne became vacant, went to Warfaw, where he was received and treated as king, but was very foon driven out again by the Ruffian army commanded by count Munich, and obliged to retire to Danzic, in which be fuffained a long fiege, ran great hazards, fuffered many hardhips, and at latt with infinate difficulty made his efcape to Konigfberg, where he was protected by the late king of Pruffia.

In

In the mean time, the crowns of France and Spain broke with the emperor, upon pretence of this difpute, and of his having fupported king Auguftus III. and profecuted that war with great vigour in Germany and Italy; 'till at laft having carried their point, and forced the emperor to a peace, all the care that was taken of king Staniflaus was, that he fhould enjoy the title of king of Poland and the duchy of Lorrain for life, and on the other hand, France and Spain acknowleged king Auguftus.
It was very clear from their whole management of this affair, that the court of Verfailles was never in earneft in the fupport of Staniflaus's title to this crown; but made ufe of it only as a colour, firft for engaging in a war againft the houfe of Auftria, and next for obtaining an immediate poffeffion of Lorrain under his name, which otherwife they could never have gained.
It hath been the conftant view of France for many years paft, to extend her frontier to the Rhine; and, upon the breaking out of feveral wars there, the hath conftantly feized great numbers of places, and fortified them at a vaft expence. The return of peace hath generally demolifhed them, and put the French under a neceffity of employing large fums again, upon the renewal of every war. The experience of this, and that they may be the more ready upon any occafion, hath convinced them long before now, that Lorrain, if not the greateft, is at leaft one of the moft confiderable acquifitions, that they could poffibly gain or defire.
That Lorrain is of great ufe to the French in the defign they have long fince laid, of carrying their frontier to the Rhine, hath been fufficiently feen in the great advantages they have received by that country, all the time of their ufurpation.
The union of Lorrain with France, advances their frontier forty leagues into the empire; for fo many there ate, from the extremity of the duchy of Bar to the city of Strafburg; makes them mafters of all the country between Queitfch, the Saar, and the Mofelle; opens a way into the Palatinate, and into the territories of Mentz and Triers. See Lorrain.
This duchy fecures the communication of France with the county of Burgundy, and the two Alfatia's; is fituated at the head of the Mofelle and the Meare, and therefore cannot but be extremely commodious, as well to preferve their old conquefts, as to make new. Here they may affemble their forces, to diftribute them in every part; make provifion of corn to fill their magazines in Alfatia, and KeEP AN Army in winter-Quarters, to be ready to act upon the Rhine, before their enemies can take the field. It is hard to imagine greater advantages than thefe; and if we add to all, that out of this country above 30,000 men are raifed and paid, we fhall find, that the French had good reafon to obtain it, as they have done. Thus has France made dupes of all Europe, and gradually purfued their ambitious point towards universal empire; which is greatly to be feared they may fill one day obtain, if they are not effectually checked. To confirm the truth of which, fee the articles France, and Plantations.

Remarks on the artiele Poland, fince the laft great war, and the Definitive Treaty of Peace, concluded in 1763 .

The immenfe load of Public Debts and Taxes, with which this kingdom is at length incumbered, and by which our whole commerce and navigation are now oppreffed, will, it is to be hoped, be a ftriking memento to our rulers, that this nation may be as little as poffible involved for the future in wars with the continent, which do not immediately concern the interefts of Great Britain : for it is certain, that by engaging ourfelves in continental, in that moft expenfive and profufe manner we have done, has been greatly inftrumental to entail upon us our tax-incumbrances. However neceffary fuch policy may have been heretofore judged, our own immediate fafety will inftruet us as readily to relinquifh fuch a fyftem as we have been to embrace it; our wares in general becoming fo exceffively dear, by one tax-incumbrance after another, that foreigners will not be able to purchafe them at all ; and if we cannot fell our commodities and manufactures, how can we be able to buy the commodities of other nations? Can any means prove fo effectual to the Absoluteruin of our whole foreign trade, as to be eternally loading it with more and more taxes? And if once our imports decreafe, in proportion as our exports do, will not the revenues both of Custom and Excises be gradually annihilated? and what then muft become of the public credit, every wife man will tremble to confider.
The choice of a king of Poland feeming to threaten Europe with a frefh continental war, in the opinion of fome, we are willing to hope that this nation will by no means be drawn into it: for fuch a war may be kindled by certain potentates, with the fole view to that end, that thereby we may more and more incumber and opprefs our commerce, that ac length they may gain the domirion therein, and by that means re-
cover more than the full value of what they loft in the laft war.
The election of a king of Poland being the firft occafion that has offered fince the laft peace, whereby certain powers may try the difpofition of the court of London towards another continental war; it will be our prefent as well as future intereft, to convince them, that it is our intention never more to be trapanned into that destructive system, in the manner we have heretofore been-That we have fufficiently experienced, that the chief fecurity and profperity of this notion will depend upon it's maritime ftrength, which we are determined to cultivate to the utmoft, and that we are refolved to raife every fhilling's worth of NAVAL stores in oUR own plantations; and that whatever we hall expend for the future upon our maritime force, hall be raifed within ourselyes, and every thilling thereof fhall likewife be spent. among ourselves: and to this great end, we are further determined to raife all future supplies to cary on our naval wars within the year; in confequence of which, we fhall be able to bid our enemies de-FIANCE.-There are the meafures that ball be feadily adopted by an Englifh-born king; becaufe thefe meafures, and thefe only, will confantly promote and advance the profperity and happinefs of his people of Great Britain.
As the foregoing obfervations were drawing up, and not printed off, we have advice of the choice of a king of Poland; and it is worth remarking, that the election to that crown gives us the moft ftriking inftance that we can imagine, of the effect the late war has had, in prejudice to the power of the court of Verfailles. If we look back a century paft, the retrofpection will Thew the amazing influence of France in the choice of Polifh kings; and if we take the flighteft review of the public tranfactions of a few months in Poland fince the death of Auguftus, we fhall find that ber interef there has actually dwindled into nothing; or that the is determined to avoid future continental wars, and not interfere fo much as the hath been wont to do in the wars of other flates, but feems determined now to mind more her own affairs; which it is to be hoped will caution other ftates to pay a due regard to their own intereft, and not interpofe in the concerns of others fo much as they have done.
It is at prefent currently faid, that Pruffia defires affiftance from the Court of England, againft Auftria and France, in cafe of new troubles, which that monarch is apprehenfive of, from their jealoufy of his influence in Poland; and that a ftrong memorial has alfo been prefented to the States of Holland, requefting the fame, and to have immediate anfwers to both. And on the other hand, it is faid, that Auftria and France, in their memorials to our court, complain heavily againft Pruffia and Ruffia, and infift on knowing what part England intends to take in the new troubles that threaten Europe.
In anfwer to which memorials, we are informed, that they have been given to underftand, that Great Britain would no ways interfere in the affairs of Poland, as the Poles certainly have a right to chufe their own kings; and that if they had a mind to go to war, they might fight it out among themfelves: which wife anfwer, if perfevered in, will preferve the peace of Europe; for if we pay either fide, the Germans will foon find an enemy.
POLITICALARITHMETIC. By political arithmetic, we mean the art of reafoning by figures, upon things relating to government.
The art itfelf is undoubtedly very antient, but the application of it to the objects of revenue and trade, is what Sir William Petty firt began, who as yet has been followed by very few; he firft gave it that name, and brought it intarules and methods; and his excellent difcernment would have carried it very far, if he had lived to this time ; for his fkilful hand did all along want right materials to work upon, with which he might have been furnifhed, by the variety of new taxes that have been fince his time levied in this kingdam.
The foundation of this art is to be laid in fome competent knowlege of the numbers of the people; fee the article PeoPle: and in all his enquiries, he took for guides the cuftoms, excife, and hearth-money, but the accounts of thefe revenues were not fully ftated, and their produce was not known, at leaft to him, when his books were written.
He endeavoured to compute the number of the people from the trade and confumption of the nation, into which the excife and cuftoms were to give him an infight, and where the hearth-money might afford him yet better lights. He was to guefs at our ftrength and wealth, by the general fock employed in trade; and be might fee a little into the quantity of money in the nation, by the turnings it made into the Exchequer, in the payments of cuftoms and excife; the number of houfes in England thewed him in the number of families, from whence he was to gather how many inhabitants the kingdom might contain.
But his chief fchemes were calculated, before the true produce of thefe three branches was fully known; for as to the excife, 'till the beginning of Mr Vincent's farm, which was anno 1674 , the farmers in their feveral contracts, had never
been obliged to give in a real ftate of their accounts, and a been obliged troduce of their refpective counties. And as to the true produce of their refpective cons likewife kept private 'till Mr Trant's farm (which began anno 1679) who was obliged by his contract to give it in. And we have yet never been able to meet with any true account of what the cuftoms produced, 'till from the year 1674 .
duced, the the very grounds upon which he built his calculations So that the very grounds un which he bu inftances, be mifbeing probably wrong, he muft, in many inftances, be mistaken in his fuperftructure ; and the true produce of there branches being concealed from him, and indeed from every body elfe but the parties concerned, in all likelihood, he overreckoned them in his mind, aud was thereby brought to overrate the inhabitants of England, and to under-rate the numbers, and the ftrength and wealth of other countries: and this error in a fundamental, has led bim into many others, and has mifled fuch as have followed him in thefe matters. It is true, Sir William Petty had very much ftudied the bills of mortality, and the accounts of the births and burials, not only of this kingdom, but of other nations, which did certainly help him to very ufeful lights.
But, through the whole courfe of his writings it may be plainly feen, by any obferving man, that he was to advance a propofition not quite rigbs in itfelf, but very grateful to thofe who governed.
The growth of the French king, and chiefly of his naval power, was a very unpleafant object for the parliament and the people of England to contemplate; and no doubt it did difquiet the mind of king Charles II. Bat this prince delighting to be foothed in his eafe and pleafures, and to have no anxious thoughts, was very glad to fee one of Sir William Petty's repute for calculations of this nature affirm *, Tbat France exceeded England very little in point of territory; that we came near them as to the number of men, and that our numbers were as effectual in point of Itrength; that the people of England had, head for head, thrice as much foreign trade as the people of France; that France was under a natural and perpetual impediment of being powerful at fea; and that the French had not above 15,000 feamen to manage their trade, out of which, not above io,000 could be fpared for a fleet of war.

* Sir William Petty's Political Arithmetic, page 74, 75, 7, 85, 56, 57.

Every good Englifhman does undoubtedly wifh all this had been true ; but we have fince had manifeft proofs, that this great genius was miftaken in all thefe affertions; for which reafon we have ground to fufpect, he rather made his court than fpoke bis mind.

The king was well pleafed to be lulled afleep by a flattering council, which fuggefted, that the power of France was not fo formidable, and could never be prejudicial to this kingdom : for it excufed his breach of the tripple alliance, and all the other meafures which have fince proved fo pernicious to the intereft of England. See the article Plantations. But if fuch as meddled with computations at that time, had truly compared the ftrength of both kingdoms, and if the miniffers themfelves had duly weighed the increafing wealth, trade, navai force, and growing greatnefs of that nation, it might, perhaps, have awakened both the king and parliament from that lethargy, which has fince proved to fatal and expenfive to us.
The abilities of any minifter have always confifted chiefly in this computing faculty; nor can the affairs of war or peace, be well managed without reafoning by figures upon things. As for example, fuppofe a nation entering into a war, that may have a good event, if they can hold it out longer than the enemy; and a bad one, if they thall be obliged to give back firft in fuch a cafe, does not a wife ftatefman, even in the beginning of the bufinefs, compute and compare the power and riches of the adverfe party, with the wealth of his own country; and all in order fo to hufband it's frength, that it may continue to the very laft? Does he not fum up the revenues of the enemy, and, at the fame time, reckon what may be gathered at home? And does not all this belp him to govern wifely his prince's affairs, and to give his mafter wholefome and fafe counfels? Does it not often happen that a nation, which, without any prejudice, may fpend three millions a year for a long fpace of time, may be ruined by the expence of twenty millions in three or four years? For that body which can bare frequent but moderate bleedings, muft die, if too great a quantity of blood be drawn from it at once. Great ftatefmen, therefore, have always taken care, not only to know the exact pofture of their own country, but likewife to underftand perfectly the power or weaknefs of other people, with whom they have wars or alliances; and the judgment formed from thence, is political arithmetic.
It was by this computing faculty, that Fabius Maximus found out the way to break the ftrength of Hannibal, and reftore the affairs of Rome. Fabius confidered, that the forces of his enemy were not of a repairing nature; that their fupplies were to come from a factious and a diftant country; that

Vol. II.

Hannibal was a wary captain, full of Atratagems, and not to be furprized himfelf: that his voluntary troops, compofed of different nations, were invincible in battle, and to be wafted and wearied out only by a long war, which might confume their numbers. On the contrary, that the Romans were at home, and had recruits ready at hand; he therefore quite changed the manner of the war: and thus, by rightly computing and comparing the Roman and Carthagenian ftrength, he prevailed more by not fighting, than many confuls and detators had done with their courage, not fo wifcly governed and directed.
If it could be clearly fated what the real wealth and ftock of a kingdom is, and if it can be known by what degree it grows rich in time of peace, and by what fteps it becomes poor at other feafons, fome opinion might be formed, and judgment made, how longo and upon what foot a war might be carried on with fafety to the public.
In the fame manner, if the condition of the enemies affairs can be rightly underftood, fome guefs may be made how long they can probably hold out, fuppofing fortune to incline neither way, and to diftribute her favours (as fhe ufually does among nations ffrong and wife alike) with equal hands.
And if a country (engaged in a league with other nations) can be truly apprized of the ftrength and riches of their allies, they may know whether any of their confederates are not juftly to be called upon, and preffed for a larger quota, and to affift with more vigour in the common bufinefs.
For thefe reafons, able ftatefmen in all ages, have been at a great expence in embaffies, or fpies in foreign courts, to get intellligence of the pofture of affairs in thofe countries 'with which they are at war, or with whom they hold alliance.
He that would furnifh himfelf with fuch fkill in foreign affairs, as may make himfelf ufeful at home, muft begin with an enquiry into the condition of his own country; in which, if he can attain to a competent knowlege, he will more eafily find out the pofture and ftate of orher places. See the articles Ballance of Trade, Britain [Great-Britain], British America, Credit/[Publick Credit], Debts [National Debts], Funds, Bullion, Cash, Coin, Colonies, Exchange, Exportation, Importation, Labour, Landed Interest, Manure, Money, Naval Affairs, People, Revenue, Shipping, Treaties of Commerce.
He muft know the laws, conftitution, humour, and manners of his own country, with the number of it's inbabitants, and it's annual expence and income from land, [fee the article LAND] with it's product from trade, manufactures, and the other bufinefs of the kingdom: and mankind in the mafs being much alike every where, from a true knowlege of his own country, he may be able to form an idea, which fhall prove right enough concerning any other, not very diftant people.
As for example, when the number of inbabitants in England is known, by confidering the extent of the French territory, their way of living, and their foil, and by comparing both places, and by other circumftances, a near guefs may be made how many people France may probably contain. See the article France.
In the fame manner he that knows the income of England from trade, by contemplating the frugality and induftry of the Dutch, their feveral forts of commerce, the places to which they deal, and their quantity of fhipping, fhall be able to find out what annual profit arifes to the Hollanders, from their foreign traffic: See Holland and United Provinces.
And he who knows what taxes [fee Taxes] and impofitions one country can pay, by confidering the different humours of the people, their fock and wealth, their territory, their foil and trade, fhall be able, by comparifon, to form a good conjecture, what revenues can be raifed in another nation; and confequently he may make a near guefs, how long either kingdom can carry on a war.
In the art of decyphering, it is faid, where three or four words, perhaps letters, can be found out, the whole cypher may be difcovered: in a great meafure, the fame holds in the computations we are treating of: and very probable conjectures may be formed, where any certain footing can be found, to fix our reafonings upon.
No commonwealth or monarchy did ever arrive at a very great power, but by methods to be comprehended by the underftandings of men; and we read of no great empire ruined, but the feeds of it's deftruction may have been obferved long before, in the courle of it's hillory; there being a certain degree of wifdom, induftry, virtue, and courage, requifite to advance a ftate; and fuch a meafure of folly and ill conduct, neceffary to pull it down.
In the fame manner, the ways are evident by which a country grows rich, and the decays in the wealch and fubftance of a nation, may be likewife forefeen early, by fuch as bend their fludy to matters of this nature : for where the caufes are apparent, we may judge eafily of the effect. A people who keep their expence at home, or who protect their trade, [fee the article Commerce] will not be much wafted by a war. A foreign war muft needs drain a kingdom of it's trea-
ure. This treafure being the common fock, if it be diminifhed, muft certainly diminilh the trade and bufinefs of that nation; and by how much the trade and bufinefs of a country is leflened, and by how much it's treafure is exported, [fee Baldance of Trade] by fo much that country is grown poorer: indeed, to compute the exact degrees in all this, is difficult; but in fo dark a point, conjectures that come fomewhat near the truth, may be of fervice to any fatefman.
It is true, that fpeculations in the clofet, which have not been enlightened and affifted by practice and experience, will be very uncertain guides to him who defires to know the fate and condition of his country: a ftatefman, therefore, who would compute with any effect, conducive to the public good, muft confult variety of men, and men of different talents; and, in any fcheme he is to form, above all things, he muft avoid projectors, [fee the article $P_{\text {ROjEctors }}$ ] his Hatterers or admiters, or thofe who depend upon him. For the projectors are always too full of their own thoughts and bufinefs, to judge rightly of it. His flatterers will always affent; his admirers will be too much bialled by his opinions, and, from his dependents, he can never have that contradiction, by which truth muft be fifted out.
A great ftatefman, by confulting all forts of men, and by contemplating the univerfal pofture of the nation, it's power, frength, trade, wealth, and revenues, in any counfel he is to offer, by fumming up the difficulties on either fide, and by compuring upon the whole, fhall be able to form a found judgment, and to give a right advice, and this is what we mean by political arithmetic. See the article Parliament [Member of Parliament.]
He that has fuch a computing head, will feldom enter into ill meafures; he will not put the wars of his prince upon a wrong foot; he will not engage him in weak alliances; he will not propofe ill digefted fchemes and funds for revenues that Chall not anfwer. In any new council he will weigh the event beforehand, and confider how far it may difturb his mafter's affairs, or affect the nation's credit. Happy are thofe kingdoms, which abound in ftatefmen fo qualified; but milerable is that country, where the men of bufinefs do not reckon right; and where, in matters very important, and on which the whole welfare of a people depends, they are allowed to fay, they are miftaken.
This computing faculty may not only be ufeful to ftatefmen in the general and higher affairs, but it will likewife help them in the more fubordinate and minifterial parts of government. It fhall not only contribute to their well guiding and conduating the nation's whole ftrength and wealth trufted to their care, but if they know sightly how to reafon upon things by figures, they thall commit very few errors in relation to their prince's revenues, or to the trade of the kingdom.
There are few places which afford better helps for computation, than England does at prefent. The excife, the cuftoms, and land-tax, are criteria, by which we may judge, not only of what the people confume, but, in fome fort, they let us into a knowlege how their numbers increafe or diminifh. Thofe duties are the very pulfe of a nation, from which it's health or decays may be oblerved. And thefe revenues muft be the better guide to computers, becaufe the accounts of them are fairly kept and ftated, and becaufe the refpective branches have been under fo exact a management, that their produce is known and underftood.
The wealth of all nations arifes from the labour and induftry of the people: a right knowledge therefore of their numbers, is neceffary to thofe who will judge of a country's power and ftrength. See the article People.
And upon this account undoubtedly, the Romans did fo often make the cenfus, that a judgment might from thence be formed, how able the commonwealth was to defend itfelf, or to invade others.
And the fin David committed in numbering Ifrael, might be probably this, that it looked like a fecond proof of rejecting theocracy, to be governed by mortal aids and human wifdom. For without doubt, it muft very much help any rules to underftand fully that ftength which he is to guide and direct; fince he may thereby know how many are fit for war, what hands fupport the commonwealth by their labour and induftry, and what fort of men are idle and ufelefs in it.
And this is fo far from being a matter of mere fpeculation, as fome think, that very many conclufions may be drawn from thence, ufeful and reducible to practice.
For if the numbers of the people can be truly ftated, if they can be divided into proper ranks and claffes, if it can be diftinguifhed who are rich, who are eafy, who can barely fubfift, and who, by reafon of poverty, can contribute little in any tax or aid to the public: if all this can be thoroughly underftood, in the laying any kiad of tax or impofition, a very near computation may be made, what fuch a duty hould praduce to the government, fuppofing it to be duly collected, and under a good management.
When the different ranks and qualifications of men are divided and fated, when there is a right diftinction made, be-
tween the number of tolvent and imfolvent perfons, whon it is known how many pay not to chunch and poor, how many receive alms, and how many are mere vagrants, a very grad judgment may be made what any perfonal or family-tax ought to yield, ftill fuppofing it to be well and carefully levied.
The number of the people leads as to know, what the yearly income may be from land, and what from mines, houfes, and homefteads, rivers, lakes; meers, ponds; and what from trade, labour, induftry, arts, and fciences: for, where a nation contains fo many acres of arable land, fo many of palture and meadow, fuch a quantity of woods and coppices, forefts, parks, and commons, hearhs, moors, mountains, roads, ways, and barren and wafte land; and where the different value of all this is computed, by proper medums, it is rational to conclude, that fuch a part of the people's expence is maintained from Jand, \&cc. and fuch a part from mines, houfes, \&cc. and that fuch a part is maintained from trade, labour, \&c. And the poor, exceeding fo much the rich in numbers, the common people are the proper medium by which we may judge of this expence.
There is a certain fum requifite to every one for food, raiment, and other neceffaries; as for example, between 7 and 81. per annum; but fome expending lefs, and fome more, it may not be improper to compute, that the mafs of mankind in England, expend one with another, near 81. per. annum: from whence it may be concluded, that an annual income of fo many millions is needful for the nourifhment of fuch and fuch a number of people.
And if land with it's product will not reach this fum, it is rational to infer, that the reft mult arife from trade, arts, and manufactures.
And further, when a nation contains fuch a number of people, fkilled in hufbandry and the improvement of land, when they have fuch an extent of territory, and when their acres are, one with another, of fuch a value, it may be from thence concluded, that the land of this country will produce fuch and fuch a fum.
So much of the product of the earth will nourifh fuch a number of the people; and a foil fo and fo improved, will yield fuch a product; and if this be above what the people confume, it follows, that there mult be fuch and fuch a quantity of goods for exportation.
Such a number of men fkilled in maritime affairs, verfed in traffic, with variety of ports, dealing to many countries, with fuch and fuch a native product to export, and fuch an acquired ftock to turn and wind, muft gain fo and fo by trade.
And if land and trade do not reach the expence in queftion, it follows, that the reft muft arife from arts, manufactures, and the other bufinels of a people.
But if land and it's product, with what is done at home, is fufficient to nourifh fuch a number of inhabitants, and that they are befides able to export many commodities and manufactures, and that their ftock is fuch, as to deal in many goods with foreign people; we may infer, that there is fuperlucration of wealth accruing to fuch a country by their traffic.
Therefore a right diftinction to be made between what part of the people's expence arifes from land, \&c. and what from trade; and what from arts, labour, \&c. muft be a good guide to princes and ftates, in laying any kind of taxes or impofitions.

Expence muft arife from income, and Guppofe
the general income of a nation, from land
$44,000,000$ trade, arts, \&xc. Thould be Suppofe of this, land to be - $14,000,000$ ) $\left.\begin{array}{lll}\text { Trade } & - & 10,000,000 \\ \text { And arts, labour, \&c. } & -\quad 20,000,000\end{array}\right\} 44,000,000$

20,000,000
And where this is the cafe, can it be reafonable in taxing the people to lay almolt the whole weight upon the twenty-four millions, and to let the other twenty millions in a manner efcape. And yet this muft happen, in countries the whole burthen is generally put upon land and trade.
So that fuch a political arithmetic, as could diftinguifh in all the different parts which compofe a nation's wealth, mult be very ufeful and of public fervice.
The eighth penny, raifed upon the annual income or expence of England, would have maintained the war of king William a great while, on the foot of five millions a year, if the burthen had been put upon all degrees of men alike, with geometrical proportion; for, in all probability, an equal land-tax, and moderate duties upon the whole confumption, would have produced fuch a fum: and if this could have been compaffed, the landed men had undoubtedly been in a better condition than they are at prefent, and we had avoided the vaft debt, which was a weight upon the king's affairs.
This computing faculty confifs in comparing the ftrength of nations, and in confidering their number, power, polisies, wealth, trade, hipping, naval force, land armies, and alliances.

But there is in this art a fphere for lower capacities to move in, who can prefume no further than to find out and prepare materials, to be made ufe of by abler hands,' and who think it praife enough to them, if they can make tools for diiful it praite enoagh withal.
artifts to work win
If gentral computations had been more fudied and improdved, thofe errors relating to the revenues, muft probably have been avoided; which bave fo entangled the public affairs.
If fome of the men of bufinefs had confulted political arithmetic, the parliament had not been troubled ever feffion, to make, goad fo many deficient funds, which have loaded England with a heavy debt.
Moft undoubtedly a right fkill in this art, would be of great ure in all confiderations relating to the public revenue: for though the number of people could not be certainly fixed, and though the confumption of any commodity could not be truly known; yet he who goes by fome rule (though not capable of a mathematical proof) fhall feldomer err, than capable of a mathematical proof) the wropes entirely in the dark, and only follows the fuggeftions of his fancy.
The projectors of moft new funds, have hitherto been generally miftaken two parts in three: that art is therefore to be praifed, the rules of which, if rightly followed, will how it priori, within a fmall difference, what any branch of the sevenue fhall produce, making allowance for the difference between war and peace, or any other extraordinary occurrences.
In all computations, the number of people is the groundwork; however, that knowlege will be but an uncertain guide, without other helps and directions. For in reckoning what any branch may yield, confideration muft be had of the prefent abilities and condition of the kingdom; of the current calh, and even of the difpofition of the people to pay the duty. The nature of the commodity likewife to be charged muft be confidered, whether it be the proper object of a duty, and not eafily concealed and evaded, and whether its collection is to be afcertained by high or eafy penalties; and whether it is to be come at by a few or by many officers; and the law itfelf, which is to give the duty, muft principally be weighed; for if it is to be flackly penned, the branch will anfwer accordingly : by an univerfal contemplation of thefe matters, and by making every where proportionable allowance, in all the foregoing, and fome other inftances, a judgment may be formed, what fum the government may reafonably expect from any new revenue.
And, in computing any new duty, the number of the people will be an uncertain guide to thofe who do not difitinguifh rightly, between the rich and the poor of a country; for in moft computations, men are led into error, by reckoning and concluding, from what is in view, and juft before them. But they who will make a true eftimate in things of this nature, muft confider the mafs of the people together, and not meafure the riches of the whole; by that plenty and pomp, which they fee among a few.
He who will pretend to compute, muft draw his conclufions from many premifes; he mult not argue from fingle infances, but from a thorough view of many particulars; and that body of political arithmetic, which is to frame fchemes reduceable to practice; muft be compofed of a great variety of niembers.
He who will arrive at this art, muft look into all the public revenues ; he mult underftand fomething of their management ; he muft not be a ftranger to the product and manufactures of every country and place; he muft know what goods we export, and what foreign commodities are imported to us; and only from this general view, he muft frame any fcheme that may be ufeful to the public. A contemplation of one object, thall give him light into things, perhaps, quite of"a different nature : for as in common arithmetic, one operation proves another, fo in this art, variety of fpecolations are helpful and confirming to each other.
Nor is the faculty of computing lefs ufeful in matters relating to trade, than in what concerns the public revenues.
The councils of a country are always inquifitive after truth, but to hide it from them, and to perplex things which have relation to trade, is the intereft of fo many, that in the greateft deliberations, wife men are often milfed by fuch as in all their actings, confult more their private profit than the common welfare.
There is hardly a fociety of merchants, that would not have it thought the whole profiperity of the kingdom depends upon their lingle traffic.
So that at any time, when they come to be confulted, their anfwers are dark and partial ; and when they deliberate themfelves in affemblies, it is too frequently with a bias, and a Fecret oye to their own emolument.
There is hardly a commerce, but the dealers in it will affirm, we lofe by all the reft: when, perhaps, in time of eftablifhed peace, the kingdom gets by trade in general.
A true account of the ballance of trade would fet all this right, and thew what traffics are hurtful, and what are beneficial to the ration; and the general ballance is not to be
accurately found out, but by the aid of political arithmetic, and a lkill in the foreign exchange. See Baxiance of Trade, and Exchange.
And, perhaps, this art alone can thew the links and chains by which one bufinefs hangs upon another, and the dependance which all our variopus commercial dealings have each upon the other.
In firft appearance, thofe traffics feem hurtful which export money; but when we come to reafon upon things by figures, we find that fuch trades are often beneficial, when shey bring in one way more bullion than they carry out another. See the article Bullion, Vol. I. page 397 .
We may feem to lofe by the ballance in one place, but perhaps, that trade may be the caufe of another, twice as profitable: fo that to object againgt the motion of one wheel, without knowing and feeing how the whole engine moves, is to no manner of purpofe.
He that would, therefore, compute with any good effece in matters relating to trade, muff contemplate the wealth, fock, product, confumption, Ghipping, exportations and importations of his country; and, at the fame time, he muft confider the ftate and condition of other places.
Ia this art, the moltdeficient point is, to find good materials, and to have a footing probably fure to fix our reafonings upon; for where our premifes can be gertain, our conclufions thall be almoft undeniable.
It is a great guide, in concerns of this mature, to have before us an account of all the exportations from London and the out-ports, to every diffinet country ; and alfo of all the importations to London and the out-ports, from every dilininct country, and of their values at prime coft, and fo downwards. Every commodity thould be under a feparate head, and the drawhacks upon reexportation taken due notice of, and the value taken into confideration, where the duty on goods is ad valorem. Thefe materials are very helpful in our compatations of this kind.
But it would be a further light into the general ballance of trade, if we could form a good judgment of that beneficial trade of buying goods in one place, to fell in another country, and what we gain by the articles of freight. If the true ftate of thefe matters could be obtained, it would greatly contribute to our information in regard to the general lols or profit made by commerce.
The general pofture of our traffic, as well in time of war as peace, is likewife requifite to be taken into confideration; for by contemplating the various charges in our exports and imports in thole different junctures, a judgment may be formed, from political arithmetic, how the ballavee of trade formerly ftood, and how it is like to ftand hereafter, with the feveral countries wherewith England has commercialinegociations.
Thefe are the out-lines of the art of political arithmetic; and how far this work may contribute to give the reader fome knowlege of the art itfelf, can be known only by thofe who Chall perufe our work throughout; wherein they will, perhaps, find more matter, if righty applied, tending to information of thiskind, than thofe who have not dipped into it may be aware of.
POMERANIA. The ancient Pomerania was of a much larger extent than the modern, far it included Pomerelia, and Caffubia, called Black Pomerland. The madern duchy of Pomerania, taken all together, is a long narrow track, above 200 miles from eaft to weft, and from 50 to 80 from north to fouth, the breadth being very unequat.
It has Polifh Pomerania on the caft: the Baltic Sea on the north; the marquifate of Brandenburgh on the fouth; and the duchy of Mecklenburgh on, the weft. It's air, by reafon of it's being the extreme north-eaft corner of Germany, is reckoned the coldeft of any part of it. The foll in many parts is fandy and barren, and their arable lands near the Ohore are frequently overwhelmed with fand; yet in other parts they have corn enough, both for confumption and export, belides good paftures filled with cattle, and many large woods and forelts, which abound with deer, wild boars, bares, foxes, wolves, wild horfes, wild buils, \&c. and fowls of all forts. Here are alfo beavers, and fuch plenty of water-fowls, that they reckon 20 forts of ducks. They have great plenty of falt and freth water fifh, particularly falmon, and very lange lampreys, erpecially in the bay of Stetin and lake of Laffen. About Gripfiwald and Rugen thay have good her-ring-filhing; and in the lake Madduje, near Colbatz, there is a large broad filh, called muicum, found no where elfe in Germany. There are many fair and fertile meadows between the branches of the Oder, and has great quantities of fruits of all kinds, as in any province of Germany. They have no wine of their own growth, but excetlent mum, and beer of feveral forts, particularly the bitter beer of Stetin, the mum of Gripfwald, and the ftout of Wollin, which mariners tranfport ellewhere: and as there are fcarce any mountains in the country, it has no mines, but fome few of tron in the Upper Pomerania. It abounds with amber, efpecially on the coafta of Brandenburgh Pomerania, where it is not only thrown up by the fea, and found among the fea-weeds and fands, but alfo dug out of the rocks, and mines. It is frequently dug out

## P O M

of the ground, at a great diftance from the fea, and many times found by the humbandmen, as they plow their lands. There is a particular lake in this country, that communicates with the fea, where they gather it in nets, when the fea begins to flow, and fometimes haul up pieces as big as one's fift. At firft taking up it is foft, but foon hardens, by the air, into a ftony fubftance: it is of feveral colours, white, yellow, black, and red: the fort found in Pomerania is a dark yellow.
It is well watered by rivers and lakes: among the former are, the Oder, the Pene, the Rega, the Perfant, the Wiper, the Stolp, the Rekenitz, and the Barte. The Rekenitz feparates Pomerania from Mecklenburg, forming a large lake near Damgarten, and falling into the Baltic at Dars. The Barte rifes near Stalfund, and falls into the fea at Bardt. The Oder, foon after it's entrance into Pomerania, divides into fevesal branches, add after having pafled by Garts, Griffenhagen, Schwedt, and Stetin, flows into the Damifh lake, and then into Damantzkt, and at laft dilates itfelf into a frehwater lake, or fea, called the Great Frifch-Haff, which is an excellent road for fhipping, 30 miles in length, and 10 in breadth, abounds with fifh, and falls into the Baltic by three currents, through which Rhips pafs to Stetin. Befides the abovementioned, there are many more rivers in Pomerania, which fall into the Baltic.
The moft common divifion of this country is, into the weftern, viz. the Upper, or Swedifh Pomerania; and the eaftern, viz. the Lower, or Brandenburg Pomerania; which latter is alfo called Ducal Pomerania, or the duchy of Pomerania, becaufe it was given to the ducal houfe of Brandenburg by the treaty of Munfter.
The chief towns of the eaftern, or Brandenburgh, i. e. Ducal Pomerania, are,
. Stolpe, 22 miles north-eaft from Rugenwald, 52 eaft of Colberg, and 64 weft of Dantzick.
2. Rugenwald is the capital of Wenden duchy, on the river Wiper, 18 miles north-eail from Collin, and 20 from Carmin.
3. Coslin, 18 miles north-eaft of Colberg, is a very pleafant town with a good air. It being but a league from the Baltic, the inhabitants can eafily export their coin, and import what commodities they want from abroad. The Fricch-Haff lake is a treafure to them, for they often, in the winter, bring up an hundred tons of filh there, at one draught of the net, if we may credit fome. The adjacent country is fruitful, and interfperfed with little hills, on which ftood formerly Popith chapels, much frequented by pilgrims. Here are three annual commercial friars, viz. the Saturday after LadyDay, the Thurfday after the fourth Sunday in Lent, and AilSaints Day.
4. Corlin, 13 miles eaft of Colberg, and 12 weft of Collin, has two annual fairs, viz. on the Saturday before Palm-Sunday, and on Afcenfion-Day.
5. Beigart is a litule town, with a good trade, five miles fouth-eaft of Corlin, 16 from the Baltic, 18 from Colberg, and 56 north-eaft of Stetin.
6. Colberg is the capital of that called the duchy of Caffubia, and ftands at the mouth of the Perfant, near the Baltic fhore, 30 miles north-eaft from Carmin, and 55 from Stetin. Salt is made here, of which large quantities are fent abroad, to the great enriching both of the town and of the elector of Brandenburg, to whom the town came by the treaty of Munfter. It's harbour, which is a good one, though fomewhat too narrow, is defended by a ftrong caftle.
7. CAMIN is a fmall city, which fome, however, reckon the capital of Ducal Pomerania, but five miles from the Baltic Sea, 32 north of Stetin, and 33 eaft of Wolgaft: it ftands on the mouth of the Oder that is called Druvenow. It has three trading fairs "year, viz. the fecond Sunday in Lent, on Trinity-Sunday, and Holy-Crofs-Day.
Upper, or Swedish, called alfo the Royal Pomerania, extends from the Oder to the frontiers of Mecklenburg, and from the marquifate of Brandenburg to the Baltic.

1. Griffenhagen flands on the eaft fide of the Oder, above Stetin, almoft oppofite to Gartz. It has three fairs in a year, viz. on Thurfday after the firft Sunday in Lent, on TrinitySunday, and on the 28th of October.
2. Dam is a fmall but ftrong town, on the eaft fide of the Oder, overagainft Stetin. There are three annual fairs at this place, viz. on the Friday before the firft Sunday in Lent, the eve of Palm-Sunday, and Michaelmas-Day.
3. Stetin, the metropolis of this Pomerania, fands on the rifing of a fmall hill, with a fine caftle on the weft fide of the Oder, which runs from thence through the lake called GrofsHaff, into the Baltic, by the ille of Ufedom. It is 18 miles from the frontiers of Brandenburg, 73 north of Frankfort 74 north-eaft of Berlin, 153 weft of Dantzick, 170 eaft of Lubec, and 320 north of Vienna. It's trade was the moft confiderable of any in thefe parts, 'till the fettlement of the Dutch republic. It was formerly one of the Hanfe-Towns, and the rendevous of the fleets which thofe towns ufed to fit out to protect their trade, and fecure their privileges. It is 40 miles to the fea, yet fhips of good burthen come up to the very walls of the city, where they have a fine key,

## POM

though the river itfelf, which is navigable a great way above the town by leffer veffels, is a fufficient harbour
One branch of it's trade is, the exporting of falt and frem fifh, efpecially thofe taken in the Grofs-Haff, the lake abovementioned, which is abour 15 miles below the town; and from thence they alfo fhip off great quantities of naval ftores, efpecially oaken plank, mafts, with other wood, both for building and fuel; canvas, linen, yarn, honey, wax, rofin, Sic. Many thips come yearly from hence to London: and as the Oder brings down a vaft quantity of corn, which comes into it from Poland and Silefia by the river Warta, about so miles above the city, here is a very great exportation of it, efpecially for Sweden, which is fometimes much diftrefled for want of it. In fine, it is fo proper a center for exchang ing the commodities of Poland and Germany, with thofe brought from the Baltic by the conveniency of the river Oder, that it cannot fail of having a great thare of trade, and it, is now faid to be fo populous, that many of the inhabitants are obliged to live in cellars and vaults, They have large granaries, fore-houfes, an arfenal, and a dock for building granat
4. Triptow, a pretty town, defended by a frong cafle on the Tolien Sea, or lake, not far from the confines of Mecklenburg, 26 miles fouth of Gripfwald: it has three fairs a year.
There is a town of this name in the Lower Pomerania, near Conlin, which is called Triptow on the river Rega, or New Triptow. The townfmen have an opportunity, by their r ver, of trafficking to fea: it has a fair on St Peter and Paul's Day.
5. Passewalck, anciently Pazdewalck, flands between Prenzlow and Turgelow, on the weft fide of the river Ucker, by which the inhabitants fend their goods through the Haff to the Baltic.
6. Gartz is another town on the fame confines, and is one of the palfes of the Oder.
7. Ukermunde fands where the Uker river falls into the Grofs-Haff.
8. Anklam, on the river Pene, 17 miles fouth-weft from Gripfwald, and 3I north-weft of Stetin. It made a grod figure once among the Hanfe-Towns. It is advantageoully fituated among good arable lands and excellent pafture, with the conveniency of fifhing, and of exporting their commodities abroad by the river Pene.
9. Gutskow is a town on the river Pene, 8 miles fouth of Gripfwald, and 10 weft of Wolgen, between Anklam and Loytz, and capital of a county of the fame name, which formerly included Gripfwald, Loytz, and the abbey of Eldenow.
1o. Loytz ftands on the Pene river, between Grotikow and Demain. It has four fairs a year, viz. the Monday before Lent, the Monday before Whitfuntide, a fortnight after Midfummer, end a fortnight after Michaelmas.
1I. WOLGAST ftands very pleafantly, near the mouth of the Oder called Pfin, nine miles fouth-eaft from Gripfwald, 27 from Stralfund, and 40 north-weft from Stetin. It is a very handfome, well-built, populous, and ftrong town. The harbour, though 12 miles from the fea, is the beft in all this duchy, Stralluind excepted.
12. The IsLe of UsEDom lies weft from that of Wollin, and is formed by the Pene, where it falls into the Baltic along with the Oder, fo that one of the mouths of the Oder, which runs between this and Wollin, is called the fwine, and the other, beyond Ufedom, the Pfin. Upon the deftruction of Wollin, the town of Ufedom was reforted to by the Danilh and Polifh merchants, and became a place of very good trade, being very large, and well fortified; but fince I 473, when it was burnt down by an accidental fire, it has been only an inconfiderable fea-port. This illand is about fix miles in length, abounds with wild boar, deer, and hares, and was the park where the dukes of Pomerania kept their game.
13. Wollin is the eaffermoft of the two illands formed by the tree mouths of the Oder: it is 25 miles Iong, 15 where broadeft, and is divided by the Swine from Ufedom. The town, which flands at that mouth of it called Drenow, is five or fix miles fouth-eaft of Rugen, 25 miles north of Stetin, and 25 fouth-weft of Volgaft. It was built out of the ruins of Julinum, once a very famous town, and was one of the largeft cities in Europe, and it's greateft mart, next to Conftantinople, being inhabited by Danes, Swedes, Ruffans, Jews, and merchants of all nations, who had their feparate ftreets and houfes of exchange; and faid to have been fo powerful, as fingly to maintain a war againft Denmark; but having been partly deftroyed by lightning, and partly by the arms of Woldemar king of Denmark, it was, in 1170, totally demolifhed, and has been but an inconfiderable town ever fince: it's commerce has been transferred to Lubec ard Dantzic. This is the common fate of all places that lofe their trade.
14. Gripswald, 9 miles north-weft of Wolgaft, 29 routheaft of Stralfund, and 46 north-weit of Stetin, which was one of the Hanfe-Towns, and formerly imperial, flands within half a league of the Baltic, at the bottom of a fmall gulph, which they call the fea of Strallund, over-againt the iffe of
Rugen:

## POO

Rugen : and there being another bay in the illand juft oppofire, both together make the paffage above 20 miles over The place is not fo big as Scralfund or Stetin, yet it is a con fiderable town, being well built, well fortified, and has a good trade by fea. The beft falt was made bere of any place upon the Baltic, but the works have been difcontinued for want of fuel, which in this country is fcarce. They have abundance of cattle here, and deal much in hides and tallow. Here is a good harbour, and a great many fhips belonging to it, which are brought to the quay by means of a canal, that is cut from the gulph to a great lake on the other fide of the place.
15. Rugen is ftrong both by art and nature, and much cele brated in ancient hiftory for the courage of the Rugii, it's old inhabitants. It is about 30 miles in length, and as much in breadth (though fome fay the latter is not more than 20): it is is fruifful in corn, that it is called the granary of Stralfund; and in grafs, that it is well ftocked with horfes, black cattle, Theep, and the largeft geefe in Europe. The feas and lakes here abound with filh; and the Rugeners are not only good fifhermen, but reckoned the beft pilots in the Baltic, which makes them very ufeful to the merchants of Stralfund. The foreft of Jafund furnithes them with fuel and timber, and the fea, bays, and lakes, with plenty of fifh for confumption and export.
16. Stral sund, the largeft and richeft town in Pomerania, the fixth in rank of the Hanfe-Towns, and a free imperial city, by fome reckoned the moft confiderable in the circle of Upper Saxony, ftands near the banks of the fea, over-againft the inland of Rugen, 19 miles north of Gripfwald, 32 miles northcaft of Roftock, and 66 north-weft of Stetin. It has an excellent haven, where thips come up to the very town, and is fo well fituated for trade, that it has a very great and lucrative commerce, both by fea and land; for it is to be obferved, that here begins the export of thofe flaple commodisies which all Europe fends for to the Baltic, as corn and naval ftores, viz. hemp, flax, \&c. but efpecially corn, of which great quantities are exported, this being the firt city in the Baltic, to which the Dutch trade for it. Here are alfo great quantities of honey, and wax, tar, pitch, rofin, hides, and tallow, as alfo of linen, efpecially canvas, of which a good fort is made here.
POOR. There is certainly no ftate in which may be found more laws than in ours concerning the poor: laws wifer in appearance, or more humane, more equitable: or fo many books and excellent reprefentations on this fubject: fo many hofitals: or, in thort, fo great a fund of generofity and charity, as in England: at the fame time too, there is not, perhaps, a country in which there are fo many poor.
Yet thofe laws muft be intrinfically defective, which being fo important as they are to every member of fociety, have not the force to make themfelves be executed, or which one may cafily elude.
The poors-rate for England only, which is from two fhillings as far as to fix and eight fhillings in the pound, in fome parts, exceeds three millions and a half fterling. If we add to it the private charities, and foundations of hofpitals, a fum fufficient to maintain the tenth of the inhabitants.
The charges of the roads, and of the public works, are alfo imnenfe, and continual refources for fuch as want employment.
The charity-fchools maintain and bring up the twentieth part of the children that are born: neverthelefs, in the towns, the ftreets fwarm with poor, fome of whom foon after, perhaps, beg on the high-way with a prefented piftol in band
The abufe of the particular adminiftrations of the poor's revenue, and the infufficiency of the laws, are too glaringly evident, and the confequences of this evil are too dreadful for the adminifration not to become a national concern.
There is no more effectual method of redrefs for it, than to appoint a committee of members of Parliament, before whom Should be annually laid a ftate of the fums levied, or applied to the maintainance of the poor, and a lift of the poor maintained in every county.
By thefe circumftantial ftates and lifts, by comparifons and indifputable facks, it would be made manifeft,
1ft, That fome of the principal caufes of there being fo many poor are, privileges, exclufive rights of freemen, and corporations; the indiferect, as well as unfaithful, diftribution of the parifh-alms; the money fcattered through towns and country, by the candidates, in the time of elections; the multiplicity of alehoufes, taverns, and other infamous fnares of idlenefs, and debauchery.
2diy, That robbers owe their origin not to want, but indifcreet charity. The clafs of men which hias no right to the pariih-alms, is far lefs abundant in robbers than that which has: that right is an encouragement to, and the certain refuge of, idlenefs, the parent of debauchery and crimes.
In fhort, it would appear convincingly plain, that the only prompt remedy that can be brought for this urgent evil would be,

1ft, To form a common national aggregate of all the fimin levied throughout all the parifhes, under the name of the poor's tax, to which Chould be joined the funds of all the ancient charitable foundations: with refervation, however, of liberty to all future donors to apprepriate particularly their charities to whatever counties or parifhes they fhould think fit.
2dy, To take into workhoufes, or alms-houfes, all beggars, even every perfon applying to the parifh for charity, equally in cafe either of ficknefs or of health, without any diffinction even of the private poor, that is to fay, of fuch as are ahamed of begging: becaufe there ougbt to be no poor of that nature in a nation where it is no flame for any one to work.
3 dly , To affign to every perfon fo received into thefe workhoufes, that fort of work of which he fhould be capable, infomuch that the fick, and fuch as fhould be deprived of the ufe of all their fenfes, thould alone be difpenfed with from it.
4thly, To divide thefe workhoufes into two wards, the one for the poor who Chould work voluntarily, the other for them to be carried to, in eafes of neceffary correction, and forced to work, fhould they refufe to fubmit to it.
5 thly, It would alio be very neceffary to collect together, in one common houfe, all the children difperfed in the different fchools and effablifhments of each patifh. The care of their firft years of life, and of breeding them up to work, would be better adminiftered in one common houfe than by parifhnurfes, who inhumanly facrifice, even in the cradle, fo many innocent vidtims to their barbarous avarice. This is a truth inconteftibly proved, by a comparifon of the number of dead beneath the age of feven years, amongt the children nurfed by the parifh-nurfes, and amonglt thofe brought up in the Foundling-Holpital.
6thly, Every workhoufe or alms-houfe throughout England fhould render an account of it's adminiftration, attefted by the magiftrates or officers of each town or parifh, to the committee of the nation. Thefe accounts would ferve for checks upon one another. The members for every county fhould be called to the infpection of the account of the general adminifitration, and, upon the report of this general committee, the poor's tax fhould be fettled, and paffed by the nation.
From fuch a form of adminiftration as this, would refult the following advantages:
The real mifery of the fick and difabled would receive the relief which is due to it.
The malverfation of particular adminiftrations would be remedied.
The number of the poor would fenfibly diminifh: many now receive private alms, who would then refolve to work, rather than receive public ones.
Society would be delivered from beggars, of whom the example and enormities are fo much to be dreaded.
The produce of the work of fuch as fhould be free to leave the houfe when they pleafed; and, the work of the poor under confinement, would be a elear and new profit to the public.
The poor's tax would diminifh confrderably.
All the recenfrons of the above-deduced three claffes of men, and of their fubdivifions, hould be draughted and framed in each parihh, by it's refpective churchwardens, aldermen, overfeers of the poor, or the like proper officers. A fhort enough time, and a great deal of order and method, would fuffice to carry them to the requifite perfection for making all the ufe to be promifed from them, without much expence.

## Dr D'Avenant's Scheme for fetting the Poor to work.

Firft, That fuch perfons as ifall fubfcribe and pay the fum of $300,000 \mathrm{l}$. as a fock for and towards the better maintaining the impotent poor, and for buying commodities and materials to employ and fet at work the other poor, be incorporated and made one body politic, \&c. by the name of the governor and company for maintaining and employing the poor of this kingdom.
By all former propofitions, it was intended that the parifes fhould advance feveral years rates to raife a fock; bur, by this propofal, the experiment is to be made by private perfons, at their rifk; and 300,000 . may be judged a very good ftock, which added to the poor's rate for a certain number of years, will be a very good fund for buying commodities and materials for a million of money at any time. This fubfription ought to be free for every body; and if the fum were fubfribed in the feveral counties of England and Wales, in proportion to their poor-rates, or the monthly affeffment, it would be moft convenient; and provifion may be made, that no perfon fhall transfer his intereft but to one of the fame county, which will keep the intereft there during the term; and as to it's being one corporation, it is prefumed this will be moft beneficial to the public. For firft, all difputes on removes, which are very chargeable and burthenfome, will

6 M

## POO

## POO

be at an end, this propolal intending, that wherever the poor are, they fhall be maintained or employed. Secondly, it will prevent one county which will be diligent, impofing on their neighbours who may be negligent, or getting away their manufactures from them. 'Thirdly, in cafe of fire, plague, or lofs of manffacture, the fock of one county may not be fufficient to fupport the places where fuch calamities may happen; and it is neceflary the whole body fhould fupport every particular member; fo that hereby there will be a general care to adminifter to every place according to their neceffities.
Secondly, That the faid corporation be eftablifhed for the term of 21 years.
The corporation ought to be eftablifhed for 21 years, or otherwife it cannot have the benefit the law gives in cafe of infants, which is their fervice for their education; befides, it will be fone years before a matter of this nature can be brought into practice.
Thirdly, That the faid fum of 300,0001 . to be paid in, and laid out for the purpofes aforefaid, to remain as 2 ftock, for and during the faid term of 21 years.
The fubfeription ought to be taken at the paffing of the act, but the corporation to be left at liberty to begin either the Michaelmas or the Lady-Day after, as they fhall think fit; and per cent. to be paid at the fubferibing, to perfons appointed for that purpofe, and the remainder before they begin to act, but fo as 300,000 . fhall be always in ftock during the term, notwithttanding any dividends, or other dilpofition: and an account thereof to be exhibited twice in every year, upon oath, before the lord chancellor for the time being.
Fourthly, That the faid corporation do, by themfelves or agents, in every pariih of England, from and after the
day of during the faid term of 21 years, provide for the real impotent poor, good and fufficient maintenance and reception, as good, or better, than hath at any time within the face of years before the faid day of been provided or allowed to fuch impotent poor ; and fo fhall continue to provide for fuch impotent poor, and what other growing impotents thall happen in the faid parifh during the faid term.
By impotent poor is to be underftood all infants and old decrepit perfons not able to work; alfo perfons who by ficknefs, or any accident, are for the time unable to labour for themfelves or families; and all perfons (not being fit for labour) who were ufually relieved by the money raifed for the ufe of the poor: they fhall have maintenance, $\& \mathrm{cc}$. as good, or better, as within years they ufed to have.
Theis does not directly determine what that fhall be, nor is it poffible, by reafon a fhilling in one county is as good as two in another; but it will be the intereft of the corporation that fuch poor be well provided for, by reafon the contrary will occafion all the complaints or clamour that probably can be made againlt the corporation.
Fifthly, That the corporation do provide (as well for all fuch poor which on the faid day of
thall be on the poor-books, as for what other growing poor thall happen in the faid term, who are or fhall be able to labour or do any work) fufficient labour and work proper for fuch perfons to be employed in; and that provifion fhall be made for fuch labouring perfons according to their labours, fo as fuch provifion doth not exceed $\frac{3}{3}$ parts as much as any other perfon would have paid for fuch labour. And, in cafe they are not employed and fet to work, then fuch perfons fhall, until materials or labour be provided for them, be maintained as impotent poor ; but fo as fuch perfons who fhall bereafter enter themfelves on the poor's books, being able to labour, fhall not quit the fervice of the corporation, without leave, for the fpace of fix months.
The corporation are to provide materials and labour for all. that can work, and to make provifion for them not exceeding ${ }_{3}{ }^{3}$ parts as much as any other perfon would givè for fuch labour. For example: if another perfon would give one of thefe a fhilling, the corporation ought to give but nine-pence. And the reafon is plain ; firf, becaufe the corporation will be obliged to maintain them and their families in all exigencies, which others are not obliged to do, and, confequently, they ought not to allow fo much as others. Secondly, in cafe any perfons able to labour fhall come to the corporation, when their agents are not prepared with materials to employ them, by this propofal they are to allow them full provifion as impotent poor, until they find them work, which is intirely in favour of the poor. Thirdly, it is neither reafonable nor poffible for the corporation to provide materials upon every occafion for fuch perfons as chatl be entered with them, unlefs they can be fecure of fuch perfons to work up thofe materials; befides, without this provifion, all the labouring people of England will play faft and loofe between their employers and the corporation, for, as they are difobliged by one, they will sun to the other, and fo neither of them hall be fure of them.
Sixthly, That no impotent poor fhall be removed out of the parifh where they dwell, but upon notice in writing given to
the churchwardens and overfeers of the faid parifh, to what place of provifion he or the is removed.
It is judged the beft method to provide for the impotent poor, is in houfes prepared for that purpofe, where proper provifion may be made for feveral, with all neceffaries of care and maintenance: fo that in fome places one houfe will ferve the impotent poor of feveral parifhes, in which cafe the parifh ought to know where to refort, to fee if good provifion be made for them.
Seventhly, That, in cafe provifion be not made for the poor of each parih, in manner as aforefaid (upon due notice given to the agents of the corporation) the faid parifh may order their poor to be maintained, and deduct the fum by them expended out of the next payments to be made to the faid corporation by the faid parifh.
In cafe any accident happens in a parifh, either by ficknefs, fall, cafualty of fire, or otherways, and that the agent of the corporation is not prefent to provide for them, or having notice doth not immediately do it, the parifh may do it, and deduct fo much out of the next payment; but there muft be provifion made for the notice, and in what time the corporation fhall provide for them.
Eighthly, That the faid corporation thall have and receive, for the faid one and twenty years, that is to fay, from every parifh yearly, fo much as fuch parifh paid in any one year, to be computed by a medium of feven years; namely; from the 25th of March, 1690, to the 25th of March, 1697, and to be paid half yearly; and befides, fhall receive the benefit of the revenues of all donations given to any parifh, or which Thall be given during the faid term, and all forfeitures which the law gives to the ufe of the poor; and to all other fums which were ufually collected by the parif for the maintenance of the poor.
Whatever was raifed for, or applied to, the ufe of the poor, ought to be paid over to the corporation; and where there are any donations for maintaining the poor, it will anfwer the defign of the donor, by reafon there will be better provifion for the maintenance of the poor than ever; and if that maintenance be fo good as to induce further charities, no doubt the corporation ought to be entitied to them : but there are two objections to this article: Firft, That to make a medium by a time of war is unreafonable. Secondly, To continue the whole tax for one and twenty years, does not feem to give any benefit to the kingdom in that time. To the firft, it is true we have a peace, but trade is lower now than at any time during the war, and the charge of the poor greater; and when trade will mend is very uncertain. To the fecond, it is very plain, that although the charge may be the fame to a pariin in the total, yet it will be lefs to particular perfons; becaufe thofe who before received alms, will now be enabled to be contributors; but befides, the turning fo many hundred thoufand pounds a year (which in a manner have hitherto been applied only to fupport idlenefs) into induftry, and the employing fo many other idle vagrants and fturdy beggars, with the product of their labour, will altogether be a prefent benefit to the lands of England, as well in the rents as in the value: and further, the accidental charities in the ftreets, and at doors, is, by a very modeft computation, over and above the poor rates, at leaft 300,0001 . per annum, which will be intirely faved by this propofal, and the perfons fet at work; which is a further confideration for it's béing well received, fince the corporations are not allowed any thing for this fervice.
The greater the encouragement is, the better the work will be performed; and it will become the wifdom of the parliament, in what they do, to make it effectual ; for fhould fuch an undertaking as this prove ineffectual, inflead of semedying it will increafe the mifchief.
Ninthly, That all the laws made for the provifion of the poor, and for punifhing idle vagrant perfons be repealed, and one law made to continue fuch parts as are found ufeful, and to add fuch other reftrictions, penalties, and provifions, as may effectually attain the end of this great work.
The laws hereunto relating are numerous, but the judgments and opinions upon them are fo various and contradiftory, and differ fo in fundry places, as to be inconftant with any one general fcheme of management.
Tenthly, That proper perfons be appointed in every county, to determine all matters and differences which may arife between the corporation and the refpective parifbes.
To prevent any ill ufage, neglect, or cruelty, it will be neceffary to make provifion, that the poor may tender their complaints to the officers of the parih; and that thofe officers having examined the fame, and not finding redrefs, may apply to perfons to be appointed in each county, and each city, for that purpofe, who may be called fupervifors of the poor, and may have allowance made them for their trouble; and their bufinefs may be to examine the truth of fuch complains; and in cafe either the parifh or corporation judge themfelves aggrieved, by the determination of the faid fupervifors, provifion may be made that an appeal lie to the quarter feffions.

## PO 0

Elevently, That the corporation be obliged to provide for all bublic beggars, and to put the laws in execution againft public beggars, and idle vagrant perfons.
Such of the public beggars as can work muft be employed, the reft to be maintained as impotent poor ; but the laws to be feverely put in execution againft thofe who thall afk any public alms.
This propofals, which in moft parts of it feems to be yery maturely weighed, may be a foundation for thele to build upon, who have a public firit large enough to embrace fuch a noble undertaking.
But the common obftruction to any thing of this nature, is 3. malignant temper in fome who will not let a public work go on, if private perfons are to be gainers by it: when they are to get themfelves, they abandon all fenfe of virtue, but are cloathed in their whiteftpobe; when they fmell profit coming to' another, mafking, themfelves with a falfe zeal to the commonwealth, where their own turn is not to be ferved. It were better, indeed, that men would ferve their country for the praife and honour that follow good actions; but this is not to be expected in a nation, at leaft leaning towards corruption; and, in fuch an age, it is as much as we can hope for, if the profpect of come honeft gain invites people to do the public faithful fervice. For which reaton, in any undertaking where it can be made apparent, that a great benefit will accrue to the commonwealth in general, we ought not to have an evil eye upon what fair advantages particular men may thereby expect to reap, filii taking care to keep their appetite of getting within moderate bounds, laying all juft and reafonable reftrajnts upon it, and making due provifion that they may not wrong or apprefs their fellow fubjects.
It is not to be denied, but that if fewer hartds were fuffered to remain idle, and if the poor had full employment, it would greatly tend to the common welfare, and contribute much towards adding every year to the genezal ftock of England.
Among the methods that we have here propofed of employing the poor, and making the whole body of people ufteful to the public; we think it our duty to mind thofe who confider the common welfare of looking with a compaffionate eye into the prifons of thia kingdom, where many thoufands confume their time in vice and idlenefs; wafting the remainder of their fortunes, or lavilhing the fubitance of their creditors, eating broad and doing no work, which is contrany to good order, and pernicious to the componswealth.
We cannot, therefore, but recommend the thoughts of fome good bill, that may effectually put an end to chis mifchief, fo candalous in a trading country, which foould let no bands remain ufelefs.
It is not at all difficult to contrive fuch a bill as may relieve and releafe the debtor, and yet preferye to his creditors all their fair, juft, and honeft rights and intereft.
Thus have' we endeavoured to hew, that to preferve and increafe the people, and to make their numbers ufeful; are methods conducing to make us gainers in the ballance of trade.

Extract of two letters wrote to the apthor, from an Binglifh gentleman of honour, who fome time fince refided in Holland, and is now appointed in a public character at a certain court in Europe.

## SIR,

- It is eafy to anfwer your queftion, How are the poor maintained in Holland? But to da it fo as to pleafe you, who look farther than the outfide of things, would require more than one day or one letter. However, defering other things to next poft, $I$ will be as particular as I am able, upon for hort watning, to be upon this fubject; fenfible that it is of the greateft confequence to $\mathrm{us}_{3}$ and that shofe who have newer confidered it, will hardly imagine what an IMMENSE PROFIT England might make by fetting her poor at work, befidea all the advantages of getting quit of all your pickpockets, \&ce. 8cc. \&c.
I will firft give you fome extracts of the laws of this country [meaning the UNITED PROyINcEs] about the poor, and ther an account of their practice.
The garlieft law that I fird in their fatute-books relating to the poor, is a long one of the,emperor Charles; $V$. It enacts';

## * 7 OCtober 153 I

## ARTICLEIX.

That whereas the poor of our provinces are now much more in number than they formerly ufed to be, wand whereas it is found by experience, that many abufes have arifen from fuffering them to beg and afk alms, particularly that it fixes them ia inleness (which is the beginning of all evil), and that neither. they nor their childien follow any rrade or method of getting their living, but
are thus brought into BASE ACTIONS, AND A BAD MANNER OF LIFE: fo that though young, frong, and healthy, they neverthelefs extort, by great importunities, whiat ought to go to the poor and fick; to the impotent, and thore who are in danger of flarving: and whereas, befure our departure, we defire to remedy and regulate thefe evils, \&c. \&c. \&c."

* 'Groot Placart. book I. B. zo. T.

## Remàist.

It appears by this article, and the following one, and by the end-of the 12th, that before this law, every body that liad a mind WAS FREE TO BEG IN THESE PROVINCES.

## ARTICLE X.

That no one, be it manor woman, from this time forward, fhall begorask almg, byday orby night, secretly or openly, in the ftreets, in the churches, nor in or at the houfes of our good people, in any manner whatfoever, upon the penalty, that whoever acts contrary to this law thall be put, for the firft offence, in PRISON: AND FED wiTh bread and water, according to the difcrecion of our officers, judges, and magiftrates, who Chall be commiffioned to execute this our edict, \&c. \&c. And for the fecond offence they áre to be WHIPPED AND CORRECTED, according to the difcretion of our officers, \&c. except always the mendicant friers, \&c. \& c .

## ARTICLEXI.

No forebgier, nor outlandifh perfon, fhall beg or alk alms, but hall be liable to the fame penalties, except pilgrims, \&c.

## REMARKS.

Upon thefe two articles I cannot help obferving, that the great freedom Holland once enjoyed from beggars'; robberies, \&c. \&cc. feems to have been entirely owing to the flrict execution of the article enjoining them to be kept upon BREAD AND WATER; this fimple circumftance being of the greateft confequence in taming otherwife incorrigible offenders, to whom not death itfelf is fo terrible as low living ; and this plainly appears by their conduc, for they rifk their lives, only for the fatisfaction of living Luxuriously, and therefore abftinence is a more effectual punifliment to them than hanging,

## ARTICLE XI.

All poor people, who thall remove from one ciry or VILLAGE to ANOTHER, there to live or refide, fhall be liable to the fame penalties and corrections, unlefs they are reduced by fortune of war, inundation, fire, or other fuch misfortunes, and that they make this properly appear; in which cafes, and not otherwife, it is permited to let them lodg INGS OR HOUSES; and all the peor refiding in our faid provinces, and having been there a whole year, muft remain in the places where they are fettled, and have their thare and part of the alms which fhall be there ordered them, without going about to beg alms or bread, openly or fecrety, as hitherto.

Remarkes.
This article is quite contrary to our norions in* Eng LAND, and to the liberty we give our poor, of trying to get their livelihood better in one parifh than in another. I fhall not venture to decide which of the two nations is in THE RIGHT, where much may be faid for both.

## ARTICLE XIIT.

Whoever fall permit their children, whether great or fmall, to go and permit any rascallity; or to beg and afk alms, thall undergo the aforefaid penalties; and the children fhall be whipped with rods, and othervife corrected, according to the difcretion of our officers and magitarates of the places where the offence fhall, happen.

## Remarks

The making parents punishable in this cafe for their children (efpecially if underftood to be thofe under 12 years of age) appears highly reafonable.

## A RTICLEXV.

As for the fupport of the poor, sick, and others, not able to get their bread, nor having any thing to live upon, in.any town or village of our faid provinces; we order, that a common purfe thall be made of all charities, poorhouses, hospitabs, brotherhoods, and others having the diftribution of the PRODUCT OF ALMS, and that

## POO

part thereof fhall be given to the poor, according to the advice of the malters and governors of the aforefaid chartties, poor-houses, \&c. joined with fuch of the officers and magiftrates of every town, parifh,' or village, as thall be deputed for that purpofe, according to the manner hereafter declared; except that alms founded for ecclefiaftics, as well mendicants as others, fhall be diftributed according to the directions of the foundera,

## 

Might not the charities given annually by our colleges, by being put into a common purfe, be more ufefully employed than now they are?

## ARTICLE XVI.

That, for the future, boxes thall be placed in every PArish Church of our provinces, to receive the srcret ALMS OF GOOD PEOPLE; the faid boxes ta be locked with three keys, of which the parifh prieft fhall keep one, the magiftrates another, and the deputies; who fhall be appointed according to the manner hereafter declared, another; which faid perfons are impowered to take the money out of the faid boxes, whenever they hall think good; and farther, the magiftrates and officers of each parifh thall depute an honeft man or two to go round the faid charches, once or twise a week, to colliect for the poor ; and befides, the aforefaid deputies of every parih fhall go once a week, or oftener, to every houfe, in order to beg almis for the support of The POOR; and all thefe feveral committees or deputies, as well thófe who receive, as thofe who difribute thefe contributions, are obliged hereby to give an account, at the end of every month, of what they receive or diftribute, before the magiftrates or their deputies, IN PUBLIC AND OPEN PIACES, where every body thall be admitted that have a mind to come in.:

Remarks.
This laft paragraph feems to be a wife provifion againft misApplication of the money collecteo: as to the manner of collecting, I fhall only fay, that I have fometimes thought-That one good way of collecting with us, as well as of altering a thameful cuftom of giving money to SERVANTS before their masters faces, would be for every gentleman to hang up a box in his hall, where every vifitor might put his volunta,ry contribuTION, and that it fhould be undertood, that at the end of the year this was to be divided, one half to the poor, and one half to the servans of the family. By this means no man would be obliged to pay more than he chufes for dining with a lord, and a good ufe would be made of half the vaft fum collected in a year from thofe who vifit their friends: befides, fervants would be mended by the temptation of flaying a year in their places, for the fake of their divifion.

## ARTICLE XVII

In order to regulate and conduct this work of charity, the officer * and magiffrates of every town and village áre here. by required to chufe out perfons residing amongst them, the beft qualified for the faid purpofes, whom we require and order to take upon them this care, according to their duty to God, and out of a true fiitit of charity, and to regulate themfelves in it according as is prefribed them by our edict ; and the faid deputies fo chofen, fhall appoint themfelves a treafurer to keep their particular accounts of the aforefaid alms, and what belongs to them on that account, and fhall each in his diftrict, take or caufe to be taken, an exact list of the number, state, quality, and condition of thepoor within it, of what TRADE, and of wht age they are, how they are burthened with children, what they gain or may gain.

* Officer fignifies hare, the chief magiftrate for executixg of juftice in criminal affairs.

## ARTICLE XVIII.

The aforefaid committee thall keep a REGISTER IN EVERX parish, wherein fhall be plainly written the refuilt of their feveral enquiries, viz. the number of the POOR in EACH fa'mily or dwelling, and the quantity of money necesSARY FOR THEM, over and above what they can gain, confideration being had of their abilities, neceffities, and burthens.

ARTICLE XIX.
The alms fhall be diffributed in every parif, according to the difcretion'of the faid deputies, be it in MONEY, BREAD, fiking, cloaths, or other necessaries, confideration being had of the Quality and condition of the aforesaid poor perions: to drunkards, idérs, gamefters, and füch like, No money is to be given, but only bread, firing, cloathing, and other necessa-

## POO

ries to mantain their families; and thofe that lead idle or roguifh lives, and areaple, thall, be gampelled To wORK, and to bring theiri GAins home, under the penalty of being deprived of the benefit of the alms:purfe, and befides, of being corrected arbitrabily by the magiffrate.
REMARKg.

Thefe three laft articles hew how the poor were governed, and the alms diftributed, before the Reformed Chirch, and the offices of elders and deacons were eftablithed in thefe provinces.

ARTICLEXX.
That sick and weak persons, who canhot come out of their houles, and women in childbed, fhall be vifited and affifted by the alms-purfe, and provided with linen, fheets, and coverlids, with victuals, with firing, and other neceffaries; and fo likewife, muft young orphans and foundlings be maintained out of the faid alms-purfe.

## ARTICIE XXI.

As to the children of those poor peopie, who, before the publication of this edict, were idlers living upon roguery, fome thall be put to fchool, and fome to trades or to fervice, and fhall, on Holidays and Sundays, be taught the Lord's Prayer, the Creed, and the Commandments, and fhall be carried to mafs and to vefpers every Sunday; and that the faid children may be put in a condition to go to Trades OR SERVICE, the faid committee fhall have them cleaned from all filth and naftinefs; and cloath them in a decent manner.

## A R T I C L E XXII.

The poor that live upon this alms-purfe muft wear a badge.

ARTICLE XXV.
We forbid all perfons, who by themfelves or their children, enjoy any fhare of the diftribution of the alms-purfe, from henceforth to go into, or converfe in taverns, cabarets, or sUch like places: we likewife forbid them playing at ninepins, bowls, dice, or other fuch forbidden games, upon pains of arbitrary punifhment; confenting, neverthelefs, that they may fometimes drink a pot of beer for their recreation with their wives, but not fo as to be drunk. We are now come to the laws made fince the Reformation, of which the firft is an edict of the States of Hoiland, the nobility, gentry, and cities of Holland, \&ec. \&cc. *

* 19 March 1614.

## ARTICLEI.

That all men and women, who being in health go a begging, or are vagabonds, either in the towns or open countries, fhall be obliged, within four days from the publication of this ediet, to quit the province of Holland, or to acquaint the officer of the place where they defign to get their livelihood, by work or by trade, and to give him a declaration who they are, whence they came, what is their bufiners, and likewife inform him where they todge and lie at nights, and pray permifion to ftay in that place, one, two, or three days, engaging themfelves not to beg in the mean time.

ARTICLE IV.
The beggars and vagabonds, who are not abletor fir to work, hall, within two days after the publication of this edict, be fent to the place of their, abode, where they mult be maintained according to the ufage and cuftom of the place; and from thence they are forbid to wander, or beg in other towns and villages, under the penalty of being, for the firft offence, put to diet of bREAD AND WATER, according to the difcretion of the magiftrates; and, for the fecond offence, to be Whipped and banished; the third offence, publicly whipped, marked with the burning-iron, and banifhed again.

## A R TICLE VIII.

All children forbid to beg, on pain of being put to bread and water, if above 8 years of age.

## ARTICLE IX.

The fathers and lodgers of children; as well above as under 8 years old, are required to take good care that their children do not go a begging, under the penalty of being punifhed as beggars themfelves.

## ARTICLEXI.

For the clearing of the open country, all the drofts are ordered to go about their diftrict every 8 days, and take up all vagabonds

## POO

vagabonds and beggars, and to deliver them into the hands of the officer of the place where they are taken, to be proceeded againft according to this law. We command likewife the ordinary officers of juftice, fo often as they can, and at leaft once a month, to do the fame ; and the aforefaid drofts ate ordered to pive an account to the provincial council of hate, and the aforefaid ordinary officers to the court of Holland, either by word of mouth or by writing, of what they have done, touching the execution of this atticle.

## ARTICLE XII.

Officers required to fearch inns, and all fufpected places, to find out beggars and apprehend them.

## ARTICLEXV.

All carriers, waggoners, \&c. \&cc. are forbid to tranfport any beggars, from one place to another, under penalty of three gilders for every offence.
The laft law I iball quote, is one of the States-General, of the United Provinces *.

- Placart 25 June 1649:

## ARTICLEIV.

It is likewife enaeted, That every town, village, or Parish, fhall maintain its poor out of the income of the charizable foundations and colleetions, fo far as it will go; and, in cafe that thefe means fhail fall thort, then the magiftrates fhall maintain them at the general expence of the inhabitants, as can moft conveniently be done; provided always, that the poor be obliged to work and labour, either for merchanty, farmers, \&ec. \&rc. according to their Rrength and abilities, for reasonable wages. In order that they may, as far as poffible, be fupported that way; provided alfo, that they are to be indulged in no idlenefs nor infolence.

## ARTICLE VI.

Forbidding, for the future, all matters of poor-houfes, hofpitals or charity-houfes, mafters of inns or taverns, farmers, or any other perfons whatfoever, to lodge or harbour, either in their houfes, granaries, or ftables, or to fupport with meat or drink, any idlers or vagabonds, foreigners, or others, who are healthy and sound of their limbs, and who neverthelefs appear in various forms and manners of beggary and idlenefs: forbidding alfo agreements with them to go fhares in the profit which they make by fuch unlawful means, or to attend their rendezvous, or to go with them, or to Shew them the way, unlefs along the common roads, or otherwife to fhew them any favour or affitance, on pain of being taken for their accomplice, and being punithed as fuclh, as to jaftice Chall appertain.

## ARTICLE VII

Nor thall it be any excufe for the faid innkeepers, \&c. that thefe people came by force and againft their will to lodge with them, unlefs it be proved, that the faid innkeepers, \&c. gave secret notice to the officer of the place, that fuch vagabonds were'at his houfe.

## ARTICLE IX

To the end that the officers of the towns and open country may be better informed and advertifed, where fuch vagabonds and offenders are, we command and require them and their under-officers, to go about all ordinary markets, churches, hofpitals, and poor-houfes, upon fair-days, upon marriages, and fuch-like affemblies or fealts, where thefe offenders are commonly found, to take them up, and proceed againft them according to the contents of this ediet.

## ARTICLEX.

And to provide againft the cheats that fome beggars practife, of appearing to be afflicted with ficknels, or otherwife infirm; it is ordered, that beggars fufpected of fuch deceits Shall, by order of the maglftrates, and at the expence of the place where taken, be vifited and examined by fworn phyficians and furgeons, that the truth being known, thofe who have been guilty of fuch cheats, may be PUnished according to the nature of their offence.

## ARTICLE XIII.

Charging and commanding all officers of juftice in their refpeetive diftricts, to do their duty, by apprehending all fuch idlers, wanderers, and vagabouds, on pain of being, not only arbitrarily punifhed, but of being obliged to pay all the damages which thall happen to any perfon, through their having neglected to apprehend fuch offenders.

Voi. II.

## POO

## ARTICLEXV.

And that no difficulties may be made by schepenis, jứs: tices, or officers of particular places, before whom the faid offenders Thall be brought, about the JUDGING of These offenders; we ftrictly and exprefsly command, that whoever fuch offenders are brought before, whether it be highbailiff or other officer, he thall be obliged to examine, and SENTENCE THEM, upon pain of being not only deprived of his office, but otherwife arbitrarily punithed.

## Remarks.

Thus much for their laws; upon which $I$ beg leave to make this oblervation; that this manner of providing for their poor was not begun at the Reformation, or occafioned by the diffolution of monaftries ; but rather was a natural confequence of their increafing in PEOPLE AND TRADE, which brought both bufy and idle people amoright them : in the fame manner, our law of the 43 d of queen Elizabeth was made, upon our having flourihed for about the faid term of years. The difputes between the archduke Maximilian, and the States of Flanders, which forced a great deal of trade into Holland, having only ended about 1491; and the firft of thefe laws is made juft 40 years after, as our law was forty years after the end of queen Mary's perfecution, and the beginning of queen Elizabeth's encouragement to trade *.

* See Mr North's Manufeript upon the Poor, $\$ 2$.

Now, as to their practice, every town or congregation maintains it's own poor, either out of the collections which are made every Sunday, and church-day, or the ordinary collections which are made four times a year, from houfe to houfe, or the extraordinary ones, which are made when neceffity requires, which have been frequently four times more. Thefe voluntary contributions are laid up and diftributed by the deacons of the feveral congregations, and the poor are by them, either maintained in their own houfes, or lodged with others, according to their circumftances or infirmities.
The charity of the people of Holland is fuch, that the collections fuffice, in ordinary years, for the maintenance of the poor ; but in extraordinary ones, the magiftrates have advanced great fums for that purpofe: as for example, in the year 1740, the magiffrates of the Hague paid 15,000 gilders, and thofe of Leyden 30,000 on that account.
But the diacony, or treafury of the reformed and eftablifhed church of Amfterdam, is upon fo good a footing, that they did not even in that year, want the aid of the magiftrate; they diftributed 578,758 gilders, but their income is about 500,000.
The Romih, Lutheran, and other diaconies, are directed in the fame manner as thofe of the eftablifhed religion, and diftributed to about 500, and may keep in houfes 6 or 700 old people and children in Amfterdam: the eftablihed church to about 1000 or 1200 poor families, befides their three almf houles, where are about 1300 old people and children.

## Remarks.

There are other hofpitals and poor-houfes, befides thefe three, of which the great one, that takes in beggars children of all perfuafions and foundlings, has about 1500 children.
The poor are here, not only free of all excifes, but they have an allowance paid of fome branches of the excife, and a third part of all fines in criminal cafes, computed, goes to the poor-houres, of which there are two forts where poor children are maintained; one goes by the name of the or-phan-houfe, the other of the poor-houfe; the former is filled with children of a betterrank than the other, with the children of decayed shopkeepers, and thofe who have lived well, and the latter with thofe of the lowest SORT OF PEOPLE. When a child is taken into either of thefe houfes, the governors poffers themfelves of whatever little effects they have for the ufe of the houfe.
Thefe children are extremely well taken care of; they have mafters and miftreffes, to teach them reading, writing, and accounts, and the girls plain needle-work. When they are fit to go out, they are put to mafters and miftreffes by the day to LEARN TRADES, and they come back to there houfes to dinner, and in the evening; what they gain during this time, in the poor-houfe, belongs to the houfe; but in the orphan-houfe, the children are allowed A FOURTH OR A FIFTH Part of what they gain for themfelves.
When they come to be upwards of 20 years of age, and are able to gain their living, the houfe cloaths them well, and TURNS THEM OUT; in the orphan-houfe they return likewife the value of the capital brought in with them, but the intereft falls to the houle: there are, however, fome who, on account of defetts in their underftanding, os other reafons, are-maintained in the houfe all their days.
Thefe houfes have been fome of them pious foundations of private perfons; fome of them have been built or bought by the towns, and afterwards fupported from pious legacies and charities, by which fome of them are become rich.

The public old mens and womens houfe in Amfterdam, was founded by the profits of two LOTTERIES, about the year 1600 , and is fupported by fome donations, and by periodical collections, in the old-church, and by one third of the profits of the PLAY-HOUSE, which is from 12 to 15,000 gilders a year; the other two thirds go to the fupport of the burghers orphan-houle.
The dizection of thefe houfes is always in the best people of the country, and it is efteemed an honour, as well as a pious office; to affict in looking after them. Thus ladies of the FIRST QUALITY have gone, once in three weeks, or oftener, to fee that things are well adminiftred, to examine the childrens linen, cloathing, nourifhment, \&xc. \&c. and to infpect the expence and accounts.
As to the Rafp, and Verbetering, or correction-houfes for rogues, and thofe who being able will not work, thele are maintained by the refeetive towns, generally at a fmall expence, there being a good deal of Profit made of. The WORK THAT IS DONE IN THEM: they fet the offenders reafonable tafks, and when thofe are well done, they allow them certain hours to work for themselves: a few years ago the workhoufe at Breda coff the bapony a TRIFLe, AND MADE very fine manufactures: the mafter, who was put in there, had been a broken clothier at Leyden, but who, tho' become a bankript by misfofitunes, underftood his bufinefs well, and inftructed numbers of people in the workhoufe to make good cloths, by fetting them firft to comb wool, and fo bringing them by degrees to more difficult branches.
The yearly expence of the Rafp-houfe at Rotterdam, is from 8 to 10,000 gilders, of which generaliy ahout 5 or 6 accrues from the labour of the people; and. the remainder is fupplied by the magiftrates out of the furplus of fome of their taxes. There is a kind of Bridewell (called the Vrywillige Rafphuys) at Amfterdam, which is partly maintained. By An additionae Tax on all the Gin shops, petty Houses for selling Wine and Beer, and little Tobacco-shops.
The people in the Rarp-houfe are employed in two kinds of labour, chipping and rasping locwood: a chipper muft chip 3600 pounds in 14 days, Sundays included, for which the boufe is paid at the rate of 5 fivers per pound. A rafper mult rafp 300 pounds nett in 12 working days, and the houfe is paid for it 30 ftivers per 100 pounds. When they perform more than their allot ted task, Two-Thirds go tothemfelves. The women are employed in a great many different branches, and contribute in proportion as much towards the general expence as the men.
By more or lefs allowance of meat and drink, as well as by the quality of it, the GOOD ARE encouraged, and the bad brought to reason: to thofe who are remarkably obftinate, they ufe fuch feverity as foon reduces them to order, but it cannot be enough repeated, that the grand fecret of reducing all rogues to temper and reason, is by diet more than by any other correction; and I am perfwaded, if this was once tried steadily in England, it would prevent robberies, \&c. \&c. more than any other method of feverity.
In the villages, or open country where there are no houses of correction, offenders are fent to the towns who have thom, and fo much is allowed by thofe who fend them to the towns for their maintenance; and their poor children are taught and taken care of in the villages, by perfons appointed by the magiftrates of the place.
In general, the adminiffration of the poor here is excellent, tho' their difcipline, with regard to foreign beggars, is much relaxed; but thete being many checks upon the accounts of all their charities, it is difficult to attempt, and rare to hear of any fraud in the recerpt or disposiTION OF THEM: the provifion of the I6th article of the emperor Charles the Vth's law, enjoining the making up the accounts publicly, is, perhaps, alone fufficient to guard the poor-money from any notorious mal-adminiftration.
Thefe, Sir, are the informations I propofed to give you relative to the poor of this country, their conduct with regard to them having been often cited as a pattern worthy imitation.'

## General Remarks on the article of Poor.

Let us caft our eyes on the multitude of unfortunate people in this kingdom of reputable families, and of liberal, or at leaft eafy education: fome undone by guardians, fome by lawfuits, fome by accidents in commerce, fome by ftocks and bubbles, and fome by furetilhip. But all agree in this one circumftance, that they muft either be burthenfome to their relations, or betake themfelves to little flifts for fuftenance, which (it is ten to one) do not anfwer their purpofes, and to which a well-educated mind defcends with the utmoft conftraint.
What various misfortunes may reduce the rich, the induftrious, to the danger of a prifon, to a moral certainty of ftarving! Thefe are the people that may relieve themfelves, and ftrengthen our plantations, [fee Colonies and Plantations] by reforting thither, and Great-Brizain by their departure. I appeal to the recollection of the reader (though he
be opulent, though he be noble) does not his own fphere' of acquaintance? (I may venture to afle) Đoes not even his own blood, his fett of near relations, furnimh him with fome in ftances of fuch perfons as have been here defcribed? Muft they ftarve? What honeft mind can bare to think it ? Muft they be fed by the contributions of others? Certainly they muif, rather than be fuffered to perifh. Are thefe wealch to the nation? Are they not a burthen to themfelves, a burthen to their kindred and acquaintance, a burthen to the whole community ?
I have heard it faid '(and it is eafy to fay fo) let them learn to work; let them fubdue their pride and defcend to mean employments, keep ale-houfes or coffee-poufes, even fell fruit, or clean thoes for an honeft livelihood. But alas! thefe occupations, and many more like them, are overfocked already by people who know better how to follow them, than they do whom we have been talking of. Half of thofe who are bred in low life, and well verfed in fuch thifte and expedients, find but a very narrow maintenance by them. As for labouring, I could almoft with that the gentleman or mercbant, who thinks that another gentleman or merchant in want, can threh or dig, to the value of fubfiftence for his family, or even for himfelf: I fay, I could with the perfon who thinks fo, were obliged to make trial of it for a week, or (not to be too fevere) for only a day : he would find himfelf to be lefs than the fourth part of a labourer, and that the fouth part of a labourer's wages could not maintain hime. is
I have heard it faid, that a man may learn to labour by practice; it is admitted: but it muft alfo be admitted, that before he can learn, he may ftarve. Suppofe a gentleman was this day to begin, and with grievous toil found himfelf able to earn three pence, how many days or months are neceflary to form him, that he may deferve a hilling per diem ? Men, whofe wants are importunate, muft try fuch expedients as will give immediate relief. It is too late for them to begin to learn a trade, when their prefing neceffities call for the exercife of it.
Having thus defcribed (I fear, too truly) the pitiable condition of the better fort of the indigent, an objection arifes againft their removal; upon what is fated of their imbecility for drudgery. It may be afked, if they can't get bread here for their labour, how will their condition be mended in our plantations? The anfwer is eafy, part of it is well attefted, and part felf-evident. They have land there for nothing, and that land is fo fertile, that they receive an hundred fold increafe for taking very little pains. Give here in England ten acres of good land to one of thofe helplefs perfons, and I doubt not his ability to make it fuffain him, and this by his own culture, without letting it to another: but the difference between no rent and rack-rent, is the difference between eating and ftarving. See the article MAnure.
If I make but 201. of the produce of a field, and am to pay 201. rent for it, it is plain I muft perifh if I have not another fund to fupport me: but if I pay no rent, the produce of that field will fupply the mere neceffrties of life.
Befides the perfons before defcribed, there are others whom it may be proper to fend abroad, for reafon will alfo thew at whofe expence thefe other forts of indigent people ought to be removed. I think it may be laid down for a rule, that we may well fpare all thofe, who having neither income nor induftry equal to their neceffities, are forced to live upon the fortunes or labours of others; and that they who now are a heavy rent-charge upon the public, may be made an IMMENSE REVENUE TO IT, and this by a happy exchange of their poverty for an affluence. Believing it will be granted that the people before deferibed ought in prudence to go abroad, or have land given them to cultivate at bome, and that we are bound in humanity and charity to fend them, there arifes a queftion, Whether our aiding their departure be confiftent with good policy? I raife this objection on purpofe to anfwer it, becaufe fome who mean very well to the public have fancied, that our numbers abfolutely taken, without a distinction, are real wealth to anation. Upon a little examination, this will appear to be a miffaken notion. It arifes from a mifapplication of Sir William Petty's Political Arithmetic, and of Sir William Temple's Obfervations on the United Netherlands. But when thefe great men efteem people as the wealth of a nation, furely they can only mean fuch as labour, and by their induftry add yearly to the capital flock of their country, at the fame time that they provide the neceffaries or comforts of life for themfelves.
Perhaps the Rafp-houfes may be reckoned part of the riches of Holland, becaufe the drones-are made to work in them: but is an infirmary of incurables wealth to a community? Or (which is worfe, becaufe it is remediable and is not remedied) are hundreds of prifons filled with thoulands of Englith debtors, and are they a glory or a reproach, a benefit or a burthen to the nation? Who can be fo abfurd as to fay, that we fhould be enriched by the importation of a multitude of cripples, who might not be able, perhaps, to earn a fourth part of what is neceffary to fuftain them?

If ten thoufand of thefe would be an addition to our wealth, ten millions of them muft add a thoufand times as much to it. Did the fire of London add to the wealth of the nation? I am fure it gave abundance of employment to"the poor, juit as people are employed in trade to feed and cloath the inhabitants of prifons. But thefe are alfo a flow fre, an hectic fever to confume the vitals of the flate.
The true ftate of national wealth is like that of private wealth, it is comparitive. The nation, as well as individuals, muft work to fave and not to fend. If I work hard all day, and at night give my wages to the next cripple I fee, however good it may be judged of in a deligious fenfe, my worldly fortune is in the fame condition as if I had flood idle. If the produce of the nation be in moveables, land, and labour, fifty millions in a year, and only forty-eight millions are expended to maintain the people, then has the nation added two millions to it's capital: but if it fpends fifty-one millions, then is that to be made good by finking part of the perfonal eftate, or mortgaging the real. And upon a par, plus a million, and minus a million in earning and expences, will operate nothing towards increafing the national wealth: if you proceed in infinitum, it is only impoverihing the RICH to maintain the poor: it feems, indeed, to have fomething of levelling in it; to prevent which, I think our men of fortune would act wifely once for all, to put thefe poor people on a footing of their own, and fhake off the perpetual incumbrance by a fingle act of prudent beneficence.
Some would have Scotland, Ireland, and Wales, funk unider water, but all the people faved and fettled in England. Such certainly deceive themfelves with a view of the artificial frength of the Dutch, when their fifhery was at the higheft pitch, and when they were carriers for mankind.
But they have not been able to preferve thefe branches of trade entire, and their numbers mutt decreafe as do the means of maintaining them *. Therefore, inftead of taking it for granted, that numbers of people neceffarily create a traffic, we may invert the propofition, and fafely hold, that an extenfive traffic will infallibly be attended with fufficient numbers of people.

- To illuftrate the doctrine laid down in this fentence, take the following part of a defcription of a neighbouring country by a celebrated auchor,
I met in my day's journey nine cars loaden with old mufty fluivelled hides, one car-load of butter, one cow and calf driven by a man and bis wife. A colony of one hundred and fifty beggars, all repairing to people our metropolis, and by increafing the number of hands, to increafe it's wealth: upon the old maxim, That people are the riches of a nation. And, therefore, one thoufand mouths with hardly ten pair of hands, or any work to employ them, will infalliby make us a rich and flourifhing people. Secondly, Travellers enough, but feven in ten wanting fhirts and cravats; nine in ten going barefoot and carrying their broagues and fockings in their hands. One woman in twenty having a pillion, the reft riding bare-backed. Above two hundred horfemen, with four pair of boots amongtt them all; feventeen faddles of leather (the reft being made them all; ; feventeen faddles of leather (the reft being made
of frraw) and moft of their garranes only flod before. I of fraw) and mot of their garranes only fhod before. I
went into nne of the principal farmer's houfes out of curio. went into nne of the principal farmer's houfes out of curio-
fity, and his whole furniture confinted of two blocks for fity, and his whole furniure confifted of two blocks for
fools, a bench on each fide the fire-place made of turf, fix flools, a bench on each fide the fire-place made of turf, fix
trenchers, one bowl, a pot, fix horn-spoons, three noggins, trenchers, one bowl, a pot, fix horn-fpoons, three noggins, three blankets (one of which ferved the man and maid-fervant, the other two, the mater of the family, his wife and five children) a (mall churn, a wooden candleftick, a broken fick for a pair of tongs. In the public towns, one third of the inhabitants walking the ftreets barefoot, \&c.

And yet thefe unbappy people, who are not able to earn above a fourth part of their fubliftence at home, and as we have fhewn, are a load on the fortunes and induftry of others, may in feveral of our plantations, or by cultivating more land in Great-Britain and Ireland, provide by their labour a decent maintenance, and at the fame time enrich their mother-country. See the article Manure.
Upon what has been faid, the reader may be defirous to fee a fate of the difference (with refpect to the interefts of the induftrous and wealthy part of the nation) between a poor perfon here, earning but half his sustenance, and the fame perfon fettled in a frechold, of a fertile soil without tythes or taxes; and in this computation, let us remember, that of the many thoulands of poor debtors who fill our prifons, few earn any thing at prefent; and our colonies are chiefly intended for the UNFOTUNATE, there being no danger of the departure of fuch as are able to maintain themfelves here.
A man who is equal in ability only to the fourth part of a labourer (and many fuch there are) we will fuppofe to earn four pence per diem, or five pounds per annum in London; his wife and a child of above feven years old, four pence per diem more: upon a fair fuppofition (becaufe it is the common cafe) he has another child too young to earn any thing. Thefe live but wretchedly, at an expence of twenty pounds per annum. To defray which, they earn ten pounds; fo that they are a lofs to the rich and induftrious* part of the nation of ten pounds per annum; for there are but three general methods of
fupplying the defect of their ability. Whatever they confume more than they earn, muft be furnifhed, firft, either by the bounty or charity of others; or, fecondly, by frauds, by running in debt to the ruin of the induffrious, \&c. or, thirdly, by what our law calls force and felony, as theft and robbery, \&c. They muft be fupplied at fome of thefe rates; therefore, as obferved, this family is a lofs to the rich and in duftious of ten pounds per annum.

## Remarks on the article Poor.

Since the drawing up the foregoing, I have been informed by a gentleman of great honour and veracity, refident at Ipfwich in Suffolk, that their poor there are fo wifely managed, as to maintain themfelves; which example, if it could be happily reduced to practice as fuccefffully in all other parts of Great Britain, would prove an extraordinary faving to the kingdom: certain it is, that to obtain fuch eafement from the poor rate, and at the fame time to add thoufands upon thoufands of induftrious fubjects to the community, who are at prefent a dead weight upon it, well deferves the efforts of every public-fipirited man in his parifh : and if once we had a few more examples evidencing the practicability of the Ipfwich one, it would animate other parifhes to imitate it, whereby the fame might become univerfal thoughout the nation. The employment of a million of hands, perhaps, amongft the poor, would have a tendency to lower the price of labour in general, and confequently fall the prices of our commodities and manufactures, which is fo much wanted at this crifis. See our articles Duties, Labour, Taxes, WAR, and fuch other, to which from them we refer.
PORCELAIN, or PURCELAIN, a fine kind of earthen ware made in China, and therefore alfo called China; or China-ware ; but brought into Europe from other parts of the eaft, as Japan, Siam, Surat, and Perfia.
The annals of the city of Feou-leam relate, that fince the year 442, the workers in porcelain have always fupplied the emperors with it : and that one or two mandarines, fent from the court, had the care of that work. It is, however, probable, that before the year 442 , this ware was in ufe, and that it has been gradually brought to it's prefent perfection. The fine porcelain, which is of a bright and lively white, and of a beautiful fky blue, is all brought from King-teching.
There is porcelain made in other parts, but it is very different from this both in colour and finenefs. The emperors have brought to Pekin workers in porcelain, and all the materials employed in making it, but their work never fucceeded. King-te-tching alone, has the honour of fending porcelain to all the parts of the world. The Japonefe come to buy it at China.
The matter of which it is made, is compofed of two kinds of earth ; one of which is called petunfe, and the other kaolin. This laft is intermixed with corpufcles, which have a kind of fplendor, but the other is fimply white, and very fine to the touch. At the fame time that great numbers of large barques afcend the river of Jaoicheou to King-te-tching, to be loaded with porcelain, almoft as many fmall ones defcend from Kimuen, loaded with petunfe and kaolin, reduced to the form of bricks, for King-te-tching produces none of the materials proper for the porcelain.
The petunfes, whofe grain is fo fine, are nothing elfe but pieces of rocks dug out of quarrics, and moulded into this form. All ftones are not proper for this purpofe, otherwife it would not be neceffary to go twenty or thirty leagues, into the other provinces for it.
The Chinefe fay, that the flone ought to be of a greenifh colour. The firft ftep of the preparation is this; they break thefe pieces of flone with a large bar of iron, after which they put the broken pieces into mortars, and with peftles which have heads of ftone covered with iron, they reduce them to a very fine powder. Thefe peftles play continually, either by the labour of men or by water, as the hammers of our paper-mills do. After this they throw the powder into a large urn full of water, and ftir it brifkly about with an iron peftle. When they allow it to reft fome minutes, a kind of cream four or five fingers breadth thick, floats on the furface. This they take off, and pour it into another veffel full of water. Thus they feveral times agitate the water of the frft urn, gathering the cream each time, 'till there remains none but the groffer parts, which fubfide to the bottom. Thefe are taken out and pounded afrenh
With refpect to the fecond urn, into which they throw what they had collected from the firft, they wait 'rill a kind of pafte is formed at the bottom of it. When the water above this pafte appears very clear, they pour it off by inclination, that they may not difurb the fediment, and they throw this pafte into large moulds proper to dry it. Before it is quite hard, they divide it into fmall \{quare pieces, which are fold by the hundred. This figure and it's colour have made it get the name of petunfe.
The moulds into which this pafte is thrown, are a kind of very large and broad cales. The hortem is filled with bricks laid end-ways, fo as to make the furface equal. Over this
bed of bricks thus ranged, they fpread a cloth, as large as the cavity of the mould. Then they pour in the matter, which they cover with another cloth, over which they place a bed of bricks laid flat on each other.
This is done in order to force out the water the fooner, without lofing any thing of the matter of the porcelain; which by becoming hard, eafily receives the form of bricks. There would be nothing to be added to this labour, if the Chinefe were not accuftomed to alter their merchandize; but people who roll fmall grains of pafte in pepper, in order to cover them with it, and mix them with genuine pepper, do not care to fell petunfe without mixing fome fediments with is ; for which reafon, they are obliged to purify them at King-te-tching, before they make ufe of them.
The kaolin, which enters the compofition of the porcelain, gives lefs trouble than the petunfe, nature having a greater hand in producing it. There are mines of it in the bofom of certain mountains, which are covered eternally with a reddif carth.' Thefe mines are pretty deep, and contain the kaolin in lumps, which they cut into fquares, in the manner with the petunfe. The white earth of Matta, commonly called St Paul's earth, has a great refemblance to the kaolin, though the former has not the little filver grains with which the latter is interfperfed.
It is from the kaolin, that the fine porcelain derives all it's ftrength. Thus it is the mixture of a foft earth which gives Arength to the petunfes, which are taken from the hardeft rocks. Some Englifh and Dutch bought fome petunfe and brought it into their own countries to make porcelain, but their enterprize failed, becaufe they had no kaolin.
Befides the barques loaded with petunfe and kaolin, with which the fkirts of King-te-tching are covered, we fee others full of a whitifh liquid fubftance, and this is the oil which gives the porcelain it's whitenefs and luftre. This oil or yarnifh is drawn from the hardeft ftone, which is not furprizing fince it is thought that flones are principally formed of the falts and oils of the earth, which mix and are intimately united with each other. Though the fpecies of ftone of which the petunfes are made, may be indifferently ufed to obtain the oil, yet they generally chufe that which is whiteft, and has the greeneft fpots
Though the Hiftory of Feou-leam does not defcend into a desail, yet it fays, that the good fone for the oil, is that which has pots of a colour of a cyprefs-leaf, or which has red marks on a brownilh ground. This ftone muft be firft well wafhed, after which it undergoes the fame preparations with the petunfe. When they have in the fecond urn the hardeft parts they could take from the firft, they throw a pound of ftone or mineral like allum, upon a hundred pounds or thereabouts of this cream. It muft be made red by the fire, and afterwards pounded. This is, as it were, the preffure which gives it confiftence, though they take care to keep it always liquid
This oil of fone is never employed alone. They mix another with it, which is, as it were, the foul of it. The compofition is as follows: they take large pieces of quick lime, on which they throw a little water to diffolve and reduce thern to pieces. Then they make a bed of dry fern, over which they lay another of llacked lime, of thefe they put feveral alternately over each other. After this they fet fire to the fern. When the whole is confumed, they fread thefe afhes on new beds of dry fern.
This is done five or fix times, and the oftener they do it the oil is the better. Formeily, fays the Hiftory of Feou-leam, they, ufed befides the wood of a tree, whofe fruit is called fe-tife.
If we judge of this tree by the fournefs of the fruit before it is ripe, and by it's fmall top, we fhould take it to be a kind of medlar.
It is no longer ufed at prefent, probably becaufe it is become too fcarce in that country. Perhaps it is for want of this wood, that the prefent porcelain is not fo beautiful as that of former times : the nature of the quick lime and fern contributed to the goodnefs of the oil; and it is obfervable, that what is brought from fome parts, is better than what comes from others.
When they have a certain quantity of the afhes of quick lime and fern, they throw them into an urn full of water. Upon an bundred pounds they muft diffolve one pound of ke-kao, fir the mixture well, and allow it to reff, 'till there appears on the furface a cloud of cruft, which they take off, and put into a fecond urn. This they repeat feveral times. When a kind of pafte is formed at the bottom of the fecond urn, they pour off the water by inclination, and keep this liquid pafte, which is the fecond oil, to be mixed with the former; for a jult mixture of thefe two depurated oils, they muft be equally thick. In order to judge of this, they feveral times plunge into each of them pieces of petunfe, by taking which out; they fee upon their furface whether they are equally thick.
This is what relates to the quality of thofe two oils., As for the quantity, the beft way is to mix ten meafures of the oil of flone, with one meafure of the oil of quick lime and fern. They who are moft fparing, never put lefs than three mea-
fures. If the merchants who fell this oil, have the leaft inclination to cheat, they can eafily augment it's bulk by throwing water into it, and adding a proportional quantity of ke-kao, to cover this fraud and hinder the oil from being too liquid.
Before I explain the manner of applying this oil, or rather varnifh, I thall defcribe how the porcelain is made. We hall firft begin with the work performed in the leaf fe quented parts of King-te-tching. There is an inclofure of walls, within which they build vaft piles, one ftory above another, of a prodigious number of earthen urns. In this inclofure live and work an incredible number of labourers, each of whom has his tafk fet him. Before a piece of porcelain is taken out of this to be carried to the furnace it paffes through more than twenty hands, and that withour confufion. They have no doubt found, that by this means the work is much more quickly carried on.
The firft labour confifts in purifying again the petunfe and the kaolin, from the dregs which remain in them when they are fold. They bruife the petunfe, and throw it into an urn full of water. Then they diffolve it, by flirring it about with a large fpatula. They let it reft fome moments, and ake off what fwims on the furface, and fo of the reft, in the manner above explained.
As for the pieces of kaolin, it is not neceflary to break them. They only put them into a bafket, which they immerfe into an urn full of water. The kaolin is eafily diffolved of itfeif; there generally remains a fediment, which muft be thrown away. In a year's time the dregs are accumulated, and form great heaps of white fand feparated from the kaolin. Thus prepared, there muft be a juft mixture of them. For fine porcelain, they put in as much kaolin as petunfe; for ordinary, they put four parts of kaolin to fix of petunfe. The leaft they ever put, are five parts of kaolin to three of petuinfe.
After this firt operation they throw this mafs into a large cavity, well paved and cemented every where. Then they tread upon it and knead it 'till it becomes thick.
From this mafs thus prepared, they take different pieces, which they extend upon large flates. On thefe they knead and form them into different hapes, taking care that there be no flaws therein, nor no mixtures of extraneous bodies; for a hair, or a grain of fand, would fpoil the whole work; for want of rightly managing this mafs, the porcelain fplits, cracks, and warps. It is from thefe firlt elements, that we have fo many beautiful works of porcelain, fome of which are made on the wheel, others are only made upon moulds, and afterwards perfected by the chiffel.
All the plain or fmooth works are in the formier manner. A cup, for example, when it comes off the wheel, is no more than a kind of imperfect cavity, almoft like the crown of a hat before it is formed on the block. The workman firf gives it the diameter and height he wants, and it comes out of his hands almoft as foon as he has begun; for he has only three farthings Engliih money for a fhelf, and every thelf contains twenty-fix pieces. The foot of the cup is at that time only a piece of earth of the bulk and diameter which it ought to be of, and which is hollowed out with the chiffel when the cup is dry, and has acquired confiftency; that is, after it has received all it's'ornaments.
This cup on coming from the wheel, is firt receiyed by another workman, who places it upon it's bottom. A little af: ter it is given to a third, who applies it to in's mould, and gives it the fame figure: this mould is a kind of turningwheel.
A fourth polifhes this cup with the chiffel, efpecially near the lips, to render it thin and tranfparent. He fcrapes it feveral times, moiftening it a little with water, if it is too dry, left it thould break. When the cup is taken off the mould, it muft be rolled gently on the fame mould, without preffing more on one fide than another; without which there will either be flaws in it, or it will warp. It is furprizing to fee with what fpeed and dexterity one of thefe cups paffes through fo many different hands. Some fay, that a piece of porcelain has paffed through the hands of feventy workmen.
The large pieces of porcelain are made at two different times. One half is raifed on the wheel by three or four men, who fupport it, each on the fide next to him, to give it it's figure. The other half being almoft dry, is applied and united to it, by the matter of the porcelain, diluted in water, which ferves as a kind of mortar or cement. When thefe pieces thus united are entirely dry, they with a knife, fcrape the internal and external fides of the part where the union was, which, by means of the varnilh with which they cover it, becomes equal to the reff:
It is in this manner, that they apply handles, ears, and other ornaments to veffels. This principally regards the porcelain made upon moulds or by the hands, fuch as ribbed pieces, or fuch as are of a whimfical figure; fuch as animals, idols, or bufts, which the Europeans befpeak, or other things of a fimilar nature. Thefe kinds of moulded works are made in three or four pieces, which they join to each other, and afterwards perfect with infruments proper to hollow, polifh, and repair the different parts, which had efcaped the mould.

## P O R

As for their flowers, and other ornaments, which are not raifed, but, as it were engraved, they are applied to the porcelain with feals and moulds, They alfo apply raifed work prepared almoft in the fame manner, that gold lace is fewed on a coat.
When they have the model of the piece of porcelain which is wanted, and which cannor be imitated on the wheel ;by the hands of the workmen, they apply over the model, earth proper for the moulds. This, earch receives the impreffion, and the mould is made of feveral pieces, each of which is pretty large. They fuffer the mould to become hard, when the figure is imprinted on it. When they, want to ufe it, they place it near the fire for fome time ; after which they fill it with porcelain, in proportion to the thicknefs they want to give it: they prefs with their hands on all parts, and then for a moment, prefent the mould to the fire. The imprinted figure is forthwith detached fiom the mould by the action of the fire, which a little confumes the humidity that glued this matter to the mould. The different pieces of the whole drawn feparately are afterwards re-united, with the fomewhat liquid matter of the porcelain. In this manner they make figures of animals, which are all folid. They leave this mafs to harden, give it the figure propofed, perfect it with the chiffei, or add the parts formed feparately. Thefe kinds of works are made with great care and pains. When the work is finifhed, they lay on the varnifh and bake it. Then if they pleafe, they paint it of various colours and gild it. Afterwards they bake it a fecond time. Pieces of porcelain thus finifhed, are fold extremely dear. All thefe works ought to be defended from the cold ; humidity makes them fiplit, when they are not dried equally, for which reafon they fometimes keep fires in thefe laboratories.
Thefe moulds ase made of a fat yellow earth, which is found in a place near King-te-tching. This earth is kneaded, and where it is united, and becomes a little hard, they take a quantity of it neceffary for the mould, and beat it ftrongly; when they have given it the defired figure, they dry it, and form it on the wheel.
This kind of work is fold dear. In order fpeedily to anfwer a commiffion, they make a great quantity of moulds, that a vaft number of labourers may be employed at once. If thefe moulds are taken care of, they laft a long time. A merchant who has them ready for the porcelain-works, befpoke by an European, may fell his commodity better, and make a much more confiderable gain than another who thould have them to make. If there moulds hould happen to crack, or have their furfaces fplintered, they are no longer of any fervice, except for porcelain of the fame figure, but of a fmaller fize. In this cafe, they put them on the wheel and fmooth them, that they may ferve a fecond time.
They often embellifh their porcelain, by making it pafs through the hands of painters, who are not much richer than the other workmen. At this we need not be aftonifhed, fince, except a few of them, they would only pafs in Europe for apprentices, who had been fome months at the bufinefs. The whole fcience of thefe, and of the Chinefe painters in general, is founded upon no principles, and only confifts in following a certain beaten track, affifted with a narrow and confined imagination ; they are ignorant of all the beautiful rules of this art: we muft, however, confefs that they paint flowers, animals, and landkips, which are admired on the porcelain, as well as on fcreens, and the window blinds of fine gauze.
The painting is divided in the fame laboratory among a great number of hands. One only forms the firit coloured circle near the edges of the china; the other traces the flowers, which a third paints ; one is for rivers and mountains, another for birds, and another for animals; human figures are generally moft mangled by them. Certain landikips and planis of cities illuminated, carried from Europe to China, afford us the liberty of laughing at the Chinere method of paiuting. As for the colours of the Chinefe painting, they are of all forts; the moft common in Europe is of lively blue, on a white ground; there are, fome in which this ground refembles that of a burning-glats: fome are entirely red, and among thofe fone are coloured in oil, while others are of a blown red, and intermixed with fmall points, almoft like our water-colours. When thefe two works fucceed to their perfection, which they rarely do, they are accounted extremely valuable, and are fold at a great price.
There is fome porcelain in which the landikips are formed of a mixture of almolt all forts of colours, heightened by the gilding: thefe are very beautiful, when of the right kind, but the ordinary porcelam of this fort is not comparable to that painted with azure alone.
The annals of IKing-te-tchin fay, that formerly the meaner people only ufed white porcelain; this probably happened becaufe they had not in the neighbourhood of Joa-tcheou, found 2 lefs valuable azure than that ufed for the fineft porcelain, which is brought far, and fold dear.
It is faid that a merchant who dealt in porcelain being hipwrecked on a defert coaft, found there much greater riches than he had loft: as he wandered on the coaft, while the crew were building a fmall barque of the wrecks of the Bip,

Vol. II.
he petceived that the ftones proper for the moft beautiful azure were very common there. He brought a large cargo with him ; and it is faid that, by that means, there was ne ver fo beautiful an azure feen at King.te-tchin. The Chinefe merchant in vain attempted to find that coaft again, on which he had been thrown by chance. The azure is pre--pared in the following manner: thcy bury it in gravel, which is about half a foot high in the futnace; here they bake it 24 hours; then they reduce it to ap impalpable powder, as well as the other colours, not upon marble, but in large porcelain mortars, whofe bottoms are, without varnifh, as well as the peftes employed to pound it.
The red colour is produced with copperas: they put a pound of copperas in a crucible, which they lute with another crucible, in the fuperior end of which is a fecond aperture, which is covered in fuch a manner, that it may be eafily uncoyered, if neceffity requires. They furround the whole with a large charcoal fire, and, that they may have the fronger reverberation of the beat, they enclofe the whole with bricks. So long as the fmoke rifes very black, the matter is not duly prepared; but as foon as a finall clout, fine and fubtile arifes, it is fufficiently done. Then they take a little of this matter, dilute it in water, and make a trial of it upon a piece o boasd; if a beautiful red is produced by it, they remove the fire which furrounds it, and in part covers the crucible; when the whole is cold, they find a small cake of this red at the bottom of the crucible, but the beft red adheres to the fuperior part of it. A pound of copperas yields four ounces of the red with which they paint the porcelain.
Though the porcelain is naturally white, and rendered fill more fo by the varnih, yet there are certain figures for which they apply a particular white upon the porcelain, which is painted of feveral colours. This white is made of the powder of tranfparent flints, which is calcined in the furnace, in the fame manner as the azure. To half an ounce of this powder they add an ounce of cerufs pulverized. For example, to make the green, to one ounce of cerufs, and half an ounce of the powder of flints, they add three ounces of what they call tom-hoa-prien, which, according to all appearances,' are the fineft fcoriz of copper reduced to powder.
The prepared green becomes the matter of the violet, which is made by adding a proper quantity of white: they add more of the prepared green in proportion, as they want the violet more deep. The yellow is made by taking feven drachms of prepared white, to which they add three drachms of copperas. All the colours laid upon the porcelain already baked, after they are varnifhed, do not appear green; violet, sed, or yellow, 'tll they are baked a fecond time. Thefe different colours are applicd with cerufs, falt-petre, and copperas; fome fay that they only employ cerufs, which is mixed with the colour, when they diffolve it in gum water.
The red colour in oil is produced by mixing the red tom-lonhum, or even the red I have mentioned, with the ordinary oil of porcelain, and another oil made of white flints, in the fame manner with the firft fpecies of oil : leveral trials difcover the particular quantity of each to be ufed ; then they leave the porcelain to dry, and bake it in the ordinary furnace: if, after the baking, the red comes out pure and farkling, without the leaft ftain, they have attained then to the perfection of the art. Thefe kinds of porcelains do not found when they are fruck. The other fpecies of blown red is made thus: they have the red prepared; they take a pipe, of which the apertures are covered with fine gauze; they gently apply the lower end of the pipe to the colour laid on the gauze, after which they blow iuto the pipe againf the porcelain, which is, by that means, beautified with red fpots. This fort of porcelain is Atill dearer and rarer than the preceding, becaufe the production of it is more difficult, if the workman oblerves all the requifite proportion.
The black porcelain has alfo it's beauty and value: it is called oumien. The black is leaded, and refembles that of our burn-ing-glaffes; the gold laid upon it.renders it ftill more agreeable. They give this black colour to the porcelain when it is dry; and, for this purpofe, they mix an ounce of azure with feven ounces of the ordinary oil of fone: trials exactly teach the proportion of this mixture, according to the deeper or tainter colour they intend to give to the porcelain. When this colour is dry, they bake the porcelain, after which they lay on the gold, and bake it again in a particular furnace.
There is alfo a kind of porcelain made, which externally is all pierced, like pinking; in the middle is a cup proper to contain the liquor: the cup, however, is but one fubftance with the pinked work. There are other porcelains, on which the Clinefe or Tartar ladies are painted to the life; the drapery, the complexion, and the features, are all prterved : at a diffance thefe works are taken for enamel.
It is to be obferved, that, when they lay no other oil on the porcelain than that of white flints, this porcelain is of a particular fpecies, and is called trou-tfchi; it is all marbled and croffed in all directions, with an infinise number of veins.
The colour which this oil gives is a white, fomewhat cineritious. If the porcelain is all azured, and if they lay this oil on it, it will appear both cut and marbled when the colour is dry.

## POR

## P O R

When they apply the gold they pound it, and diffolve it in the bottom of a porcelain veffel, 'till they fee under the water, a fmall canopy of gold. They fuffer it to dry, and, when, they want to ufe it, they diffolve a fufficient quantity of it in gum-water. With thirty parts of gold they incorporate three parts of cerufs, and lay it on the porcelain in the fame manner with the other colours.
There is alfo a fpecies of porcelain made in the following manner: they give it the ordinary varnifh, and bake it again; they fometimes defignedly delay the painting 'till after the firft baking; fometimes, alfo, they have recourfe to the fecond baking, to conceal the fauits of the porcelain, by applying colours to the defective places. This porcelain, which is full of colouring, is agreeable to the tafte of a great many people. It generally happens that we feel inequalities on this fort of porcelain, and thefe bave been neceffary either to fupply the fhades of the painting, or cover the defect of the porcelain.
When the painting is dry, as well as the gilding, if there is any, they make piles of the porcelain, and putting the fmall into the large veffels, place them in the furnace.
Thefe furnaces may be of iron, when they are fmall, but generally they are of earth. Some of them are as high as a man, and almoft as wide as one of our largeft hogheads for wine. They are made of feveral pieces, of the fame matter with the cafes for the porcelain; they are large pieces, about an inch thick, a foot bigh, and a foot and a half long. Before they bake them, they give them a figure proper for becoming round; they are placed over each other, and well cemented. The bettom of the furnace is raifed about a foot and a half above the ground, and placed upon two or three rows of thick, but not very broad bricks Round the furnace is a well-built inclofure of bricks, which at it's bottom has two or three air-holes, which ferve as bellows to the fire. This inclofure is a foot and a half diftance from the furnace, except in three or four places, which are filled up, and ferve as fupports to the furnace; they, at the fame time, remove the furnace and the inclofure, without which the furnace cannot ftand. They fill the furnace with the porcelain they want to bake a fecond time, piling the fmall into a large veffel; when this is done, they cover the mouth of the furnace with pieces like thofe of which it's fides are built. There pieces, whofe edges are laid over each other, are clofely united with mortar, or a kneaded earth fit for that purpofe. They only leave an aperture in the middle, in order to obferve when the porcelain is baked. They afterwards kindle a quantity of coals under the furnace; they alfo kindle coals on the covering, whence they throw the afhes into the fpaces between the inclofure of bricks and the furnace. The aperture at the top of the furnace is covered with a piece of a broken pot. When the fire is burning, they now and then look through this aperture, and, when the porcelain appears to be thining, and painted with brifk and lively colours, they remove the fire, and take out the porcelain.
There may naturally arife a thought concerning the colours which are incorporated with porcelain already baked and varnifhed with ceruls, to which, according to the annals of Feouleam, they added falt-petre and copperas: if we employed cerufs in the colours with which we paint the fquares of glafs, and afterwards give them a fecond kind of baking, might not this cerufs reftore to us the ancient fecret of painting glafs, without deftroying any thing of it's tranfparency ? But this is only to be judged of by experience.
The Chinefe had formerly the art of painting, on the fides of porcelain veffels, fifhes, and other animals, which were only perceptible when the veffel was full of fome liquor. They call this fpecies kia-bin, that is, azure, is put in prefs on account of the manner in which the azure is laid on : this is all, that is retained of this fecret; perhaps, in Europe, we may conjecture at what the Chinefs are ignorant of. The porcelain to be painted thus ought to be very thin; when it is dry, we ought to apply a pretty faint colour, not externally, as is ufual, but within on the fides: They paint fifh, as moff proper to appear when the cup is filled with water. When the colour is once dry, they lay over it a flight bed of firong but fine glue, made of the fame earth as porcelain; this bed inclofes the azure between thefe two laminx of earth. When the bed is dry they lay the varnifh on the infide of the porcelain; fome time after they put it on the mould and wheel. As it has received a body in the infide, they render it externally as flender as poffible, without penetrating to the colour. Then we muft put the outfide of the porcelain into the varnifh, and, when the whole is dry, they bake it in the common furnace. This labour is extremely nice, and requires a dexterity of which the Chinefe are no longer mafters; they are, however, every now and then trying to recover the art of this magical painting, but to no purpofe.
Be this as it will, we may at prefent fay, that the beautiful azure appears again upon the porcelain, after having difappeared for fome time. When it is firft applied, it is of a palifh black colour; when it is dry, and has received the varnihh, it is totally eclipfed, and the porcelain appears white; the colours are then buried under the varnih; the fire makes them blow, almolt in the fame manner as the natural heat brings
out the mof beautiful butterfies, with all their variety of co. lours. It is to be obferved, that, before the varnih is laid upon the porcelain, it is to be polifhed, and it's irregularities removed: for this purpofe, they ufe a pencil made of very fine feathers, which they moiften a little with water, and pars every where with a gentle hand.
Befides, there is great art in the manner of laying the varnih on the porcelain, both in putting on a fufficient quantity, and fpreading it equally on all parts. To very thin and flender porcelain they give, at two different times, two flight beds of varnith, for, if there beds were too thick, the weak fides of the cup would not bear them, but bend immediately. Thefe two beds are as good as an ordinary varnih, which they give the fine and frong china: they lay on the one by impreffion, and the other by immerfion. At firt they take the cup in one hand, on the outfide, and holding it flopingly over the urn where the varnifh is, they with the other throw as much into it as is fufficient to varnifh it every where; this is done fucceffively to a vaft number of cups. When they are dry within, they varnifh the outfide in the following manner : they hold one hand on the cup, and fupporting it with a fmall ftick under the middle of it's bottom, they plunge it into the veffel full of varnifh, and immediately take it out; it is to be remembered, that the foot of the cup remains folid: in a word, it is not 'till it has received the varnilh and becomes dry, that they put it upon the wheel to hollow the bottom; after which, they paint upon it a fmall circle, and often a Chinefe letter. When this painting is dry, they varnif the cavity they have made under the cup, and this is the laft hand put to it, fince it is forthwith carried from the laboratory to the furnace to be baked.
The place where the furnaces are, prefents us with another fcene. In a kind of area, or entry, before each furnace, we fee heaps of cafes, deftined to contain the porcelain: every piece of porcelain, however coarfe, as well thofe which have lids as thofe which have not, has it's cafe. Thefe lids are but weakly attached to the lower part in baking, and are eafily difengaged by a fmall ftroke which they give them. As for the fmall porcelain-ware, fuch as tea and chocolatecups, they have a cafe common to many of them. The workman in this imitates nature, who, in order to concoct and maturate fruits, includes them under a common covering, that the heat of the fun may only penetrate them gradually, and that it's internal action may not be too much interrupted by the external air, during the cold damps of the night.
Thefe cafes have in the infide a kind of bed of fand, which is covered with the powder of koalin, that the fand may not adhere too much to the foot of the cup, which is placed upon this bed, after having preffed it, and given it the figure of the porcelain, which does not touch the fides of the cafe: the mouth of the cafe has no covering. A fecond cafe, of the figure of the firft, furnihed in like manner with porcelain, is fo fitted into it, as to cover it intirely, without touching the porcelain below. In this manner they fill the furnace with large piles of earthen cafes, all furnihned with porcelain. By means of thofe thick coverings, the beauty, and, if we may ufe the expreffion, the complexion of the porcelain, is not defaced by the fire.
With refpect to the fmall pieces of porcelain, which are contained in large round cafes, each of which is placed upon a fupporter of earth, about the thicknefs of two crowns, and as wide as it's foot, the bottoms of thefe are alfo covered with the powder of koalin. When thefe cafes are large, they put no porcelain in the middle, becaufe it would be too far from the fides, by which means, the cafe being deftitute of due ftrength, would break and fall down, and endanger the whole pile. We mult obferve, that thefe cafes are the third of a foot in height, and fome of them are not baked no more than the porcelain; however, they intirely fill thofe which have been already baked, and are fill fit for ufe.
We muft not forget the manner in which the porcelain is put into thefe cafes. The workman does not touch it immediately with his hands, for, by that means, he might either break it, or produce irregularities in it; he draws it from off the plate by means of a fmall cord; this cord is fixed at one end to two fomewhat crooked branches of a fork of wood, which he takes in one hand, while with the other he bolds the two ends of the cord, croffed and open, according to the bulk of the porcelain. In this manner he furrounds it, raifes it gently, and places it on the fmall pedeftal in the cafe. All this is done with incredible expedition.
We have already obferved, that the bottom of the furnace is covered with a bed of gravel, a foot and a half thick; this gravel is defigned for the more fecurely placing the piles of porcelain, whofe rows, which are in the middle of the furnace, are at leaft feven feet high. The two cales at the foot of each pile are empty, becaufe the fire does not act fufficiently below, and becaufe they are in fome meafure covered by the gravel: for the fame reafon, the cafe placed at the top of the pile is left empty. In this manner they fill the whole furnace, leaving no vacuity, except at the place which is immediately under the vent.

In the middle of the furnace they place the piles of the finef porcelain, at the bottom fuch as are coarfer, and at the entry fuch as are of a deeper colour, which are compofed of an equal quantity of petunfe and kaolin, and on which they have laid a varnifh made of the fone which has fots a little black or red, becaufe that oil has a ftronger body than the other. All thefe piles are placed very near each other, and united below, above, and at the middle, with fome pieces of earth which they apply to them in fuch a manner, however, that the flame has a free paffage to infinuate itfelf equally on all fides. This depends on the eye and dexterity of the workman, and is abroluely necoflary to fucceed in his attempt, and avoid certain accidents, nearly fimilar to thofe which arife from obfructions in the animal body.
All earths are not proper for the cales which contain the porcelain. There are three forts ufed; the one is yellow, and very common; it is ufed in the greateft quantity, and conftitutes the bafe. The other is called laotu, that is, a frong earth. The third, which is an oleous earth, is called yeoutou. Thefe two laft earths are in the winter-time taken from very deep mines, where it is not poffible to work during the fummer: if they were mixed with equal quantities, which would coft a little more, the cafes would laft langer. They bring thefe earths ready prepared, from a large village at the foot of the river, about a league from King-te-tching. Before they are baked they are yellowifh; but, when baked, they are of a dark red colour: as the workmen are very fparing, they put in moft of the yellow earth, which is the reafon why the cafes do not laft above two or three bakings, after which they fplit altogether; if they are but flightly fplit, they tie them round with a band of ofiers: the band is burned, but the cafe ferves for that time, without doing any harm to the porcelain. They muft not fill a furnace with new cafes, which have not been ufed before; the half of them muft be fuch as have been baked before: thefe are placed at top and bottom; in the middle of the piles they place fuch as are new made. Formerly, according to the Hiftory of Feou-leam, all the cafes were baked feparately in a furnace, before they were ufed for baking the porcelain; no doubt, becaufe at that time, they had lefs regard to the expence than to the perfection of the work: it is not fo at prefent, becaufe the workers in porcelain are multiplied to an incredible number.
We fhall now confider the ftructure of the furnaces. They are placed at the bottom of a pretty long entry, which ferves as a bellows to them, and is of the fame ufe as the arch of a glafs-founder's. The furnaces are, at prefent, larger than they were fome years ago, fince in former times, according to the Chinefe books, they were only fix feet in breadch and heighth; at prefent they are two fathoms high, and almoft four fathoms broad. The arch as well as the body of the furnace, is pretty thick, that they may be able to walk upon it, without being incommoded by the fire. This arch, in the infide, is neither flat, nor formed into a point, but runs flanting, and grows narrower in proportion as it approaches the great vent, which is at the extremity, and through which the flames and fmoke are dircharged. Beides this vent, the furnace has in it's top five finall apertures, which are, as it were, the cyes of it ; they cover them with fome broken pots, in fuch a manner, however, that they affift the air and fire of the furnace; it is by thefe eyes that they judge whether the porcelain is baked enough: they uncover the eye which is a little before the great vent, and with iron tongs open one of the cafes. The porcelain is enough baked when there is a clear fire in the furnace, and when all the cafes are red-hot, and when the colours are bright and clear: then they difcontinue the fire, and clofe up the door of the furnace for fome time; the furnace having a deep fire all over it. They pafs over a plank into the cavity of the furnace, in order to range the porcelain. When they have kindled the fire, they forthwith lhut the door, leaving in it an aperture neceffary to throw in pieces of wood a foot long, but very fmall. They firlt heat the furnace for a day and a night : then two men, who relieve each other, conftantly throw wood into it; for one baking they generally burn four-fcore loads. To judge of this matter by what the Chinefe book fays, that quantity cannot be fufficient: in it we are allared that they burned 240 loads for this purpofe, and 20 more if the weather was rainy, though at that time the furnaces were fmaller by one half than thofe ufed at prefent. They at firft kept up a gentle fire in them for feven days and feven nights, and on the eighth day made a very frong fire. It is to be obferved, that at this time the cafes of the fmall porcelain were baked apart, before they were put into the furnace; it mult alfo be owned, that the ancient porcelain had more fubftance than the modern.
The old workers alfo obferved one thing, which is neglected at prefent; when there was no more fire in the furnace, they did not open the door 'till after five days, for the fmall: at prefent, indeed, they delay opening the door, and taking out the large porcelain, for fome days, for without this precaution they would split; but for the finall, if the fire has been extinguifhed in the evening, they take them out the next day: the defign is probably to fpare wood for the next
baking. As the porcelain is exceffively hot, the workman in order to lay hold of it, ufes long flings hung about his neck
After having in one day burnt a bundred and four-fcore loads of waod in the entry of the furnace, it is furprizing that the next day no afhes thould be found. They who attend thefe furnaces muft be well accuftomed to the fire: it is faid they put falt into their tea, that they may drink as much of it as they pleare, without being the worfe; but it is not eafy to comprehend how this falted liquor allays their thirft.
After what has been faid, it is not furprizing that porcelain fhould be fo dear in Europe. It is alfo to be obferved, that, befides the great gain of the European merchants, and that which their Chinefe commiffoners make of them, it is rare that a baking fucceeds entirely, that often the whole is lof, and that, on opening the furnace, they find the porcelain and cafes reduced to a mals as hard as a rock; and too great a fire, or ill-tempered cafes; may deftroy the whole 3 that it is not eafy to regulate the fire which ought to be applied; that the nature of the weather inflantaneoully changes the action of the fire, the quality of the fubject on which it acts, and that of the wood which fupports it. Thus for one workman who becomes rich, there are an hundred others who ruin themfelves, and tempt fortune, from the hopes they have of amaffing wherewithal to fet up a merchant's fhop. Befides, the porcelain tranfoorted into Europe is almoft all made upon new models, which are often whimfical, and in which it is difficult to fucceed; provided it has but the fmalleft fault, it is difiked by the Europeans, who will have nothing but what is perfect; for this reafon, it remains in the hands of the workman, who cannot fell it to the Chimefe, becaufe it is not agreeable to their tafte: it is, therefore, neceflary, that the pieces fold fhould defray the expence of fuch as are rejected.
According to the Hiftory of King-te-tching, the gain formerly arifing from porcelain was much greater than at prefent. This can hardly be believed, for there was not at that time fo great a vent for porcelain in Europe. This bappens becaufe the living is at prefent dearer than before; becaufe the wood in the neighbouring mountains being exhaufted, they are obliged to bring it a great way, and at a vaft expence, becaufe the profit is divided among fo many different perfons; and lafly, becaufe the workmen are lefs. fkilful than they were in former times, and confequently hefs certain in fucceeding. This may alfo proceed from the avarice of the mandarins, who employing a great many workmen, make rich prefents to their protectors at court, and pay the labourers ill, which are fufficient reafons why the merchandize fhould be dear, and the merchant poor.
The difficulty of imitating certain models fent from Europe, is one of the circumfances which augment the price of porcelain; for all the workmen cannot labour upon all the models fent from foreign countries: fome of them are impoffible to be imitated in China, juft as fome of their works furprize ftrangers, and are thought impoffible to be done.
The following are fome examples of this: we there fee a large porcelain lanthorn, through which a flambeau enlightens a whole room. 'This work had been befpoke by the hereditary prince, who alfo befpoke feveral mufical inftruments, and, among the reft, a kind of fmall organ, called $t$-feng, which is near a foot high, and compofed of fourteen pipes, whofe melody is very agreeable. They fucceed perfectly in flutes, flagelets, and another inftrument called yun-lo, which is compofed of feveral fmall, round, and fomewhat concave plates, each of which has a particular found; they fufpend nine of them in a fquare, which correfponds to fo many different ftages, which are touched with flicks, like the drum: there is a fmall chime, which agrees with the found of other inftruments, and imitates voices. It is neceffary, they fay, to make a great many experiments, in order to difcover the thicknefs, and the degree of baking proper for the tones neceffary for harmony.
To return to fuch of the Chinefe works as are curious. They fucceed principally in grotefque pieces, and the figures of animals. The workmen make ducks and tortoifes, which float upon the water; they make cats, painted in the natural manner, which upon their heads carry a fmall lamp, the flame whereof forms the two eyes of the animal; by this means the rats are frighted in the night-time. They alfo make a great many ftatues of Kouan-in, a goddefs celebrated in China; they reprefent her holding an infant in her arms, and the is invoked by barren women who want to bave children: The may be compared to the antique flatues which we have of Venus and Diana, with this difference, that the ftatues of Kouan-in are very modeft.
There is another kind of porcelain, the making of which is very difficult, and is, therefore, very uncommon. The body of this porcelain is extremely thin, and it's furface very even, both within and without; it has mouldings, however, in it, groups of flowers, for example, and other fimilar ornaments. It is made in the following manner: when it is taken off the wheel, they put on a mould, on which the figures are engraved, and there are imprinted on the infide; they render it as fmooth and fine externally as poffible, work-
ing it with the chiffel, after which they varnifh and bake it in the ordinary furnace.
The European merchants fometimes defire the Chinefe workmen to give them plates of china for tables, the feats of chairs, or the frames of pictures; but thefe cannot be had : the largeft and longeft plates are about a foot fquare; if they are made larger, let them be as thick as they will, they warp. For this reafon, inftead of making thefe plates thick, they make them with two furfaces, which they unite, leaving the infide hollow: in the two fides they make two apertures, to enchafe them in joiner's works, or in the backs of chairs, where they make an agreeable appearance.
The Hiftory of King-te-tching fpeaks of feveral works ordered by the emperors, which they in vain attempted to make. The grandfather of this prefent emperor befpoke urns, almolt of the fame figure with thofe pots in which we put orange-trees; thefe urns he wanted to contain fmall red, gold, and filver-coloured fifh, which are accounted curionties. Perhaps he alfo intended to bathe in thefe veffels, for they were to have been three feet and a half diameter, and two feet and a half high; the bottom was to have been balf a foot thick, and the fides a third of a foot in thicknefs. The workmen laboured three years fucceffively at thefe 'verfels, and made two hundred, none of which fucceeded. The fame emperor ordered plates for the porch of an open gallery; every plate was to be three feet high, two feet and an half broad, and half a foot thick. All thefe things, fay the Annals of King-te-tching, could not be made; for which reafon the mandarins of that province petitioned the emperor to have the work difcontinued.
As every profefion has it's idol, and as divinity is there as eafily communicated as the quality of count and marquis in Europe, it is not furprifing that there fhould be a god of porcelain. The Pould, which is the name of this idol, owes it's origin to thefe defigns which the workmen cannot execute. It is 〔aid, that formerly an emperor would abfolutely have porcelain upon a model which he gave. It was reprefented to him, that the thing was impofible; but all remonftrances only excited his curiofty.
As porcelain has been in great efteem for fo many ages, perhaps the reader may want to know wherein that of former times differs from the prefent, and what the judgment of the Chinefe is in this particular. It is not to be doubred but China has its antiquaries, who are prepoffeffed in favour of their ancient works. Though the Chinefe are certainly admirers of antiquity, yet fome of them ftand up in defence of the modern works. But the porcelain does not, like old mecals, give us an acquaintance with remote times.
The old porcelain may be adorned with fome Chinefe cbaraflers, which, however, denote no point of hiftory; fo that the curious find nothing in it but the tafte and colours, to make them prefer it to that of the prefent days. It is faid in Europe, that porcelain muft be long buried in the earth before it arrives at it's perfection. This is a falfe opinion, at which the Chinefe laugh. The Hiftory of King-te-tching, Speaking of the moft beautiful porcelain of former times, rays, that it was fo much fought after, that the furnace was hardly opened, 'till the merchants were difputing with each other, who fhould have the firlt parcel. This by no means fuppofes that it was buried in the earth.
It is true, in digging in the ruins of old buildings, and efpecially in cleaning old wells, there are fometimes beautiful pieces of China found, which have been hid during revolutions in the ftate. This porcelain is beautiful, becaufe the inhabutants only hid what was valuable, that they might find it again when the troubles were at an end. If it is efteemed, it is not becaufe it has acquired any new degree of beauty in the earth, but becaufe it has retained it's ancient luftre; and this alone is of great importance in China, where they give large fums for the fmalleft veffels, which were ufed under the emperors Yan and Chun, who reigned many ages before the dynafty of Tang, at which time porcelain began to be ufed by the emperors. All that porcelain acquires by lying long in the earth, is fome change in it's colouring or complexion, which thews that it is old. The fame happens to marbles and ivory, but more fpeedily; becaufe the varnifh binders the moifure from infinuating itfclf fo eafily into the porcelain.
According to the annals of King-te-tching, there were formeily urns fold at fifty-eight, or fifty-nine taels, which amouns to more than eighty crowns. What an immenfe fum mult thefe have been worth in Europe?
Certain mandarins, to their protectors at court, make prefents of old porcelain, which they bave the talent of making themfelves; that is, they have found the art of imitating ancient porcelain, or at leaft fuch as is pretty old. The matter of thefe falfe koutongs, or counterfeit antiques, is a yellow earth, found near King-te-tching. A plate of this earth weighs as much as ten porcelain ones of the fame fize. There is nothing particular in making this kind of porcelain, if not that they give it a varnifh made of yellow ftone, mixed with ordinaly oil, which prevals moft in the compofition. This mixure gives the porcela $n$ a fea-green colour. When
it is baked, they throw it into a very rich breth, of fowls and other victuals, in which it is boiled. After this they put it into the filthieft fink they can find, and there leave it a month or more. When it comes out of this fink, it paffes for three or four hurdred years old, or at leaft as old as the dynafty of Ming; when the porcelain of this colour and thicknefs was much efteemed at court.
Thefe fpurious antiques likewife refemble the genuine ones in this, that when they are ftruck, they do not found, and when they are applied to the ear, they produce no humming noife.
The natives of China are almoft as curious about glaffes and cryftals which come from Europe, as the Europeans are of the Chinefe porcelains; but, whatever efteem the Chincfe have for our commodities of this kind, they do not crofs the feas for European glaffies, finding their own porcelain of more ufe, becaufe it bears bot liquors.

The method of giving a luftre to the gold laid on porcelain ; the different kinds of varnifhes and colours given to the porcelain; the method of preparing thefe varnimes and colours; new defigns of porcelain works; manner of emboffing porcelain.

As gold laid upon porcelain is, in procefs of time, effaced, and lofes a great deal of it's luftic, they reftore it's fplendor by wetting the porcelain with pure water, and rubbing it with an agate-ftone; but they muft take care to xub the veffel in the fame direction, for example, from the right to the left.
The lips of the porcelain are principally fubject to fcale off. To remedy this inconveniency, they fortify them with a certain quantity of bamboo-coal pounded, which they mix with the varnifh that is laid on the porcelain, and which gives it a grev, or cineritious colour. Then, with the pincers, they make a border of this mixture round the porceiain already dry, pusting it on the wheel. When it is time, they apply the varnifh to the border, as they do to the reft of the pur celain ; and when it is baked, the edges are extrenely white. As there is no bamboo in Europe, it's place may be fupplied by willow-coal, or rather that of alder, which more approaches to bamboo.
It is to be obferved, Firf, That, before the bamboo is reduced. to coal, it's green ikin mult be taken off, becaufe the afhes of that fkin make the porcelain break in the furnace. Secondly, That the workman ought not to touch the porcelain with greaty or oily hands, fince by this means the patt touched, would infallibly crack in the baking.
In blowing the colours of red and blue upon the porcelain, the latter is more eatily done. The Chinefe workmen agree, that if it was not too expenfive, they could blow gold and filver upon porcelain, of a black or blue ground, as they do a red or bluc ; that is, diffufe gold or filver equally all over it. This fort of porcelain, of a new tafte, could not fail to pleafe.
They blow the varniih as well as the red. They have, for the emperor, made works fo delicate and fine, and they were obliged to place them on cotton, becaufe they could not handle pieces fo tender, without danger of breaking them; and, as it is not poffible to plunge them in the varnifh, without touching them with the hand, they blow the varnifh upon them.
It is to be obferved, that in blowing the blue, the workmen take a precaution to preferve the colour which does not fall on the china, and to lofe as little of it as poffible. This precaution is to place the veffel on a pedeftal, pofited over a large piece of paper, which ferves for fome time. When the azure is dry, they take it off, by rubbing the paper with a fmall brufh.
They have likewife found a new fubftance, proper to enter the compofition of porcelain. This is a fone, or fpecies of chalk, called hoache, which the Chinefe phyficians ufe in a ptifan, which they fay removes wearinefs, is aperient and refreflung. They take fix parts of this ftone, and fix of liquorice, which they pulverife. They put half a fpoonful of this powder into a large draught of frefh water, which they order the patient to drink.
They pretend that this ptifan refrethes the blood, and temperates internal heats. The workers of porcelain have thought fir to employ this ftone inftead of the kaolin. Perhaps fuch parts of Europe, where kaolin cannot be found, may furnifh the flone hoache. It is called hoa, becaufe it is glutinous, and refembles foap.
The porcelain made of hoache is rare, and much dearer than the other kinds. It has an extremely fine grain ; and, with refpect to the work of the pencil, if we cempare it with the ordinary porcelain, it is almof what vellum is to paper. Befides, this porcelain is extremely light, which furprites a perfon accuftomed to handle other porcelains. It is alfo more brittle than the common fort, and the true degree of baking it is very hard to be hit upon.
Some workmen do not ufe the hoache for the body of their work, but make a thin glue of it, in which they dip the porce-

Lain when dry, before it receives the eolours and the varnih, by which means it acquires fome degree of beauty.
They ufe the hoache in the following manner. Firft, When they bave taken it from the mine, they wafh it with river or rain water, to feparate it from the yellow earth which adheres to it. Secondly, They break it, and put it into a veffel to diffolve; after which, they prepare it in the fame manner with the kaolin. They affirm, that porcelain may be made of the hoache alone, without any other mixture. Some Chinefe workmen, however, fay, that to eight parts of hoache, they put two of petunfe; and that in other refpects they proceed in the fame manner as in making ordinary porcelain with petunfe and kaolin.
In this new fpecies of porcelain the hoache is in place of the kaolin, but it is much dearer than the other: The load of kaolin cofts only twenty pence, whereas that of hoache comes to a crown. Thus it is not furprifing, that this fhould be fold dearer than the common porcelain.
There is another obfervation to be made on the hoache; when they propare it, and form it into fmall fquares, like the petunfe, they diffolve in water a certain quantity of thefe fquares, of which they form a very clear glue or cement. In this they dip the pencil, and draw various defigns on the porcelair ; and when it is dry they give it, the varnifh. When the porcelain is baked, we perceive thefe defigns to be of a different white from the reff. They feem to be a delicate fteam fread on the furface. The white of the hoache is called fiamyape, or ivory white.
They paint figures on porcelain with chekao, as well as with hoache, which gives it another fpecies of white colour ; but the chekao has this peculiar to itfelf, that before it is prepared like the hoache, it mult be toafted on the hearth; after which it is broken, and prepared in the fame manner with the hoache. They throw it into a veffel full of water, and agitate it there. They, at different times take off the cream which floats upon it; and when all this is done, they find a pure mafs, which they employ in the fame manner as the purified hoache. The chekao cannot ferve as the body of the porcelain. Hitherto, nothing but the hoache has been found to fupply the place of the kaolin, and give folidity to the porcelain. If, according to the Chinefe workmen, they were to put more than two parts of the petunfe to two parts of the hoache, the porcelain would infallibly be deftroyed in baking, becaure it's parts are not fufficiently united.
We have not as yet fpoken of a kind of varnilh, called tee-kin-yeou, that is, burnihed varnifh of gold. We might rathe call it varnifh of a bronze, or coffee-colour, or of the colour of a withered leaf. This varnifh is of a late invention, and in order to make it, they take common yellow earth, and manage it in the fame manner they do the petunfe. When it is prepared, they employ only the moft delicate part of it, which they thow into water, and which forms a glue, as liquid as the ordinary varnifh, called peyeou, which is made of pieces of rocks. Thefe two varnifhes, the peyeou and the tfe-kin, are mixed together, and for this purpofe they ought to be rendered equally liquid. Of this they make a trial, by plunging the petunfe into both; and if each of the varnihes penetrates it's petunfe, they judge them equally liquid, and proper to incorporate with each other. They alfo mix with the tfe-kin, varnifh or oil of quick lime, and athes of fern, and of the fame liquidity with the peyeou; but they mix more or lefs of thefe varnihes with the tfe-kin, according as they want it, deeper or fainter. This may be known by feveral trials; for example, mix two cupfuls of the trekin, with eight of the peyeou; then, to four cupfuls of this mixture, add one cupful of the varnifh of lime and fern. It is not long fince they found the fecret of painting the porcelain with tfoui, which is of a violet colour, and gilding it. They have tried to make a mixture of gold leat with the varnifh and power of fints, which they applied in the fame manner as the red, with oil; but this varnifh does not fucceed, and they have found that the varnifh of the tfe-kin had' more beauty and fplendor.
Formerly they made cups, to which they gave the outlide a gilded varnih, and the infide the pure white varnilh. They afterwards varied, and to a cup or veffel they intended to varnifh, they in one or two parts applied a fquare or circle of paper ; and after having laid on the varnin, they raifed the paper, and painted the unvarnifhed fpace red or blue. When the porcelain was dry, they gave it the ufual varnifh, whether by blowing or otherwife. Some fill thefe empty faces with a ground of blue or black, in order to apply the gilding after the firt baking. In this refpect we may imagine feveral combinations, according to our fancy.
They have alfo invented a new fort of porcelain, which is of an olive colour, and which they call long-tiven. This fecies was formerly called tfinko, the name of a fruit among them, whofe colour refembles that of olives. This colour is given to the porcelain, by mixing 7 cups of the varnifh called tfe-kin, with four cups of peyeou, two cups, or thereabcuts, of the oil of quick lime and fern, and one of trouyeou, which is an oil obtained from flint. The tfouyeou makes a large quantity of veins appear on the porcelain. When they ufe it alone, the porcelain is brittle, and without found when ftruck;

Voi. II.
but when it is mixed with the other vainifhes, it is vatiegated by beautiful fmall veins, and neither renders the porcelain lefs fonorous, nor more brittle than the commion fort.
We muft not omit one thing, which is, that before they give the varnifh to the porcelain, they polifh it, and fmooth all it's fmalleft inequalities. This is done by a pencil made of very fine feathers, which they moiften with water, and gently pafs it over the whole; but it is principally with the fine china that they ufe fo much pains.
The hining or reflecting black, is given to the porcelain by plunging it in a liquid mixture compofed of prepared azure. In this cafe it is not neceffary to employ the fineft azure, but the compofition muft be a little thick, and mixed with the varnilh of peyeou and tre-kin, adding a little of the oil of lime, and of the afhes of fern. For example, with ten ounces of azure, pounded in a mortar, we muft mix one cup of te-kin, one cup of peyeou, and two cups of the oil of fern, burnt with quick lime.
This mixture carries it's varnifh with it, fo that it is not neceflary to give it another. When they bake this fpecies of black china, they place it in the middle of the furnace, and not near the vault, where the fire has the greateft force.
It is not true, that the red laid on with oil, called the yeou-cihunc, is drawn from the red of copperas, fuch as that which is employed in painting their baked pocelain red. This red laid on with oil, is made of the grains of red copper, and of the powder of a certain fone or flint of a reddifh caff. It is thought that this ftone is a kind of allum employed in medicine. The whole is pounded in a mortar, along with the urine of a young man, and the oil of peyeou. This mixture is applied to the porcelain before it is baked, and they give it no other varnifh. They muft take care, during the baking that the red colour falls not to the bottom of the veffel. The Chinefe workmen fay, that when they want to give this red to the porcelain, they do not make ule of the petunfe to form it; but that, in it's ftead, they employ, together with the kaolin, a yellow earth, prepared in the fame manner with the petunfe. It is probable that fuch an earth is more proper to receive this kind of colour.
Perhaps the reader will be glad to know how the grains of copper are prepared. In China there is no filver coin, fince in commerce they ufe it in lumps, and there are a great many pieces bad. There are, however, certain occafions on which it is neceffary to refine thefe bad pieces, when, for example, taxes or fimilar contributions are to be paid.
Then they have recourfe to workmen, whofe only bufinefs it is to refine the filver in furnaces made for that purpofe, and to Ceparate it from the copper and lead. Before the melted copper is hardened and congealed, they take a fmall broom, which they dip flightly in water; then, by ftriking on the handle of the broom, they fprinkle the melted copper with water. A pellicule is formed on the furface, which they take off with iron pincers, and plunge it in cold water, where the grains are formed, and multiplied in proportion as they reiterate the operation. It is evident, that if they employed aqua fortis to diffolve their copper, the powder would be more proper for making the colour of which we fpeak. But the Chinefe are unacquainted with aqua fortis and aqua regia, and their inventions are all extremety fimple.
They have executed defigns which were thought impracticable. Thefe are urns, as before-mentioned, three feet high and more without the cover, which rife a foot high, like a pyramid. Thefe urns confift of three different pieces, fo elegantly joined, that they feem to make but one.
There are alfo pieces of porcelain, which they call yao-pien, which fignifies tranfmutation. This tranfmutation is caufed either by the defect or excefs of the heat, or by other caures, which are not eafily difcovered.
Thefe pieces, which have not fucceeded agreeably to the intention of the workman, and are the pure effects of chance, are not lefs beautiful and valuable than the others.
A workman intended to make veffels with red flowers blown; a hundred pieces were entirely loft, while only one came out of the furnace, perfectly like a pecies of agat.
If they would run the rikk and be at the expence of different trials, they might effectually difcover the art of making, what chance at that time produced. For this reafon, they have thought fit to make porcelain of a thining black, which they call oukom. The caprice of the furnace has determined them to this refearch, in which they have fucceeded.
When they want to give a varnifh, which renders porcelain extremly white, they add to thirteen cups of peyeou, one cup of the oil of fern afhes, as liquid as the peycou. This varnih is Atrong, and ought not to be given to the porcelain which is to be painted blue; becaufe, after baking, the colour would not appear through the varnih. The porcelain which has got tbe ftrongeft varnifh, may without any dread, be expofed to the greatelt heat of the furnace. Thus they bake it all white, either with a view to keep it in that colour, or to gild it, or paint it in different colours, and then bake it a fecond time. But when they want to paint porcelain blue, with a defign that the colour hould appear after the baking, they only take feven cups of peyeou, with one cup of varnih, or of the mixture of lime and fern alhes.

6 P
It

It is to be obferved in general, that the porcelain, whofe varnifh contains a great deal of fern afhes, oughesto be baked in the moft eemperate part of the furnace; that is, either after the three firft ranks, or at the bottom, about the foot, or a foot and a half high. If it was baked at the top of the furnace, the fern afhes would be fufed with precipitation, and fall to the bottom of the porcelain. The cafe is the fame with the red laid on with oil, the blown red, and the long-tfiven, on account of the grains of copper contained in thefe varniftes: on the contrary, in the top of the furnace they bake the porcelain, to which they have only given the tfoui-yeon, which is the varnifh that gives the porcelain fo many viens, that it feems to confift of pieces joined tngether.
The red of copperas, laid on the rebaked porcelains, is made in like manner with copperas called tfa-fan. But before we give the method of compofing this colour, we thall frit explain the proportion and meafure of the Chinefe weights. The kin, or Chinefe pound, confifts of fixteen ounces, which they call leams or taels.
The leam or tael is a Chinefe ounce.
The tfien or mas, is the tenth part of the leam or tael.
The fuen is the tenth part of the tfien or mas.
The by is the tenth part of the fuen.
The hoa is the tenth part of the by.
To a leam or tael of cerufs, they add two mafs of this red. They pafs the cerufs and the red through a fieve, and mix them together dry; then they incorporate them with water impregnated with common glue, reduced to the confiftence of mouth glue.
This glue fixes the redd to the porcelain, and prevents its melting. As the colours, if laid on too thick, would produce inequalities on the furface, they now and then dip the pencil in water, and then in the colour which they intend to ufe.
In order to obtain a white colour, to a leam of cerufs they add three mas, and three fuen of the powder of the moft tranfparent fint calcined, after having luted them in a veffel of porcelain, which they bury in the fand of the furnace before they heat it. This powder ought to be impalpable. They ufe fimple water, without any mixture of glue, in order to incorporate it with the cerufs.
In order alfo to make the deep green, they add to one teal of cerufs, three mas and three fuen of the powder of flint, with eight fuen, or near a mafs of tom. hoa-pien, to make the green. They muft wahh it well, and carefally feparate the grains of copper which are mixed with it, and which are not proper for the green. They only employ the fcorix, that is to fay, the parts of the metal which are feparated when they work it.
As for the yellow colour, it is made by adding to a tael of ceruls three mas and three fuen of powder of fint, and one fuen and eight by of red, which has not been mixed with cerufs. To make a beautiful yellow, you muft add two fuen and a half of this primitive red.
A cael of cerufs, three mas and three fuen of powder of fint, and two by of azure, form a deep blue of a violet caft. Some workmen add eight by of azure.
The mixture of green and white, for example, one part of green, added to two of white, makes the water green, which is very clear.
The mixture of green and yellow, for example, two cups of deep green, added to one of yellow, produces the colour which refermbles a leaf fomewhat faded.
In order to produce black, they dilute the azure in water, but the folution mult be very thin. They mix with it a little common glue, macerated in lime-water, and boiled to the confiftence of mouch-glue. When with this black they have painted the porcelain, which they intend to bake a fecond time, they cover the black parts with white. In the baking, this white is incorporated with the black, juft as the common varnifh is with the blue of the common porcelain.
There is another, called tin, which is prepared of a ftone, or mineral, refembling Roman vitriol. It is probable that this fubfance is taken from fome lead mine, and that carrying imperceptible particles of the lead along with it; it infinuates itfelt into the porcelain, without the help of the cerufs, which is the vehicle of the other colours given to the re-baked porcelain.
It is of this tfin that they make the deep violet. It is found at Canton and at Pekin, but that found at the laft of thefe places is by far the beft. It is fold at feven fhillings and fixpence a pound. The tfin is fufed, and when it is fo, filverfmiths, by way of enamel, lay it upon filver works. They will put, for inftance, a fmall circle of tin about a ring, or they will enchafe it by way of a ftone. This fpecies of enamel comes off at laft, but they endeavour to prevent this by laying it on a flight ground of mouth or common glue.
The tim, as well as the other colours we have mentioned, is only ufed for the re-baked porcelain. The tiin is prepared in the following manner. They do not toaft it as they do the azure, but bieak it, and reduce it to a very fine powder; then they put it into a veffel full of water, which they agitate a litele; then they pour out the water, in which there is fome naftinefs, and keep the cryftal which has funk to the bottom of the veffel. 'This mafs, thus diluted, lofes it's
beautiful colour ; bat the tifin recovers it's violet colour when the porcelain is baked. The tfin may be kept as long as they pleafe. When they want to paint any porcelain veffel with this colour, they muft dilute it with water, mixing a little common glue with it; which, by fome, is thought unnecelfary, but this muft be determined by experience.
In order to gild or filverize the porcelain, they add two fuen of cerufs to two mafs of diflolved gold or filver leaf. The filver upon the varnifh tee-kin has a beautiful fplendor. If they gild fome, and filverize others, they do not leave the filverifed work fo long as the gilt, in the fmall furnace, otherwife the filver would difappear before the gold obtains the degree of baking neceflary to give it it's luftre.
There is another fort of coloured porcelain, which fells dearer than thofe painted with the colours we have mentioned. Perhaps the account I am to give of it, may be of fome ufe for perfecting the Englifh pottery-ware, though we fhould not be able to obtain to the perfection of the Chinefe porcelain.
To make thefe kinds of works, it is not teceffary that the fubftance employed fhould be extremely fine. Thay take cups that have been already baked in the large furnace, without being varnifhed, which are confequently all white, and have no luftre. They colour them by plunging them in the veffel, where the colour is prepared, when they want them of the fame colour. But if they want them of different coJours, fuch as the works called hoan-tou-houan, which are divided into a kind of fquares, fome of which are yellow, and others green; they apply thefe colours with a large pencil. This is all the ornament they give to this fpecies of porcelain, only after the baking, they lay a little vermillion on certain places; as, for example, on the beaks of certain birds; but this colour is not baked, becaufe the fire would deftroy it, for which reafon it does not laft long. When they have applied the other colours, they re-bake the porcelain in the large furnace, with other porcelains which have not been baked before. It muft be placed at the bottom of the furnace, and below the air vent, where the fire has lefs activity; becaufe an intenfe fire would deftroy the colours. The colours proper for this fort of porcelain are prepared in the following manner: in order to make the green, they take tam-hoa-pien, faltpetre, and powder of flint. When they have reduced them feparately into an impalpable powder, they dilute, and mix them together with water.
The moft common azure, together with faltpetre, and powder of flint, forms the violet.
The yellow is prepared by adding three mas of the red of copperas, to three ounces of the powder of flint, and three ounces of cerufs.
For producing the white, to four mas of the powder of flint, they add a tael of cerufs. All thefe ingredients are to be diluted in water; and this is the whole of what relates to the colours of this fort of porcelain.
When fpeaking of the furnaces, where they re-bake the painted porcelain, we have obferved, that they make piles of porcelain veffels, putting the fmaller into the larger, and thus ranging them in the furnace. Care muft be taken, that the veffels do not touch each other in the parts which have been painted; for, in this cafe, all the veffels would be loft. The foot of one cup may be fupported by the bottom of another, though it be painted; becaufe the edges of the bottom of the fmaller cup are not painted: but the fides of one cup muft not touch thofe of another. Thus, when they have cups which do not eafily enter into each other, fuch as the long chocolate cups, the Chinefe workmen range them in the following manner.
Upon a bed of chefe porcelains, laid in the bottom of the furnace, they lay a covering, either of plates made of the earth with which the furnaces are built, or of the pieces of cafes for the porcelain; for in China every thing is ufed to the beft advantage. Above this covering they lay another bed of thefe porcelains, and continue to do fo to the very top of the furnace.
It is not true, as we have before obferved, that they know that the painted or gilt porcelain is fufficiently baked, when they fee the gold or colours fparkle with all their luftre. The colours are not diftinguifhed 'till the re-baked porcelain is become cold. They judge that the porcelain, baked in the fmall furnace, is ready to be taken out, when, looking through the aperture at the top, they, to the very bottom, fee all the porcelains red with the fire; when they diftinguifh the piled cups from each other ; when the porcelain has no longer thefe inequalities formed by the colours, and when the colours are incorporated in the body of the porcelain, in the fame manner that the varnifh laid upon the beautiful azure, is incorporated with it by the heat of the large furnace.
As for the porcelain re-baked in the large furnace, they judge that it is fufficiently baked, I. When the flame which comes out is not of a very red, but rather of a whitifh colour. 2. When looking through one of the apertures, they perceive that the cafes are all red. 3. When, after having opened a cafe at the top, and taken a piece of porcelain out of it, they perceive when it is cold, that the vainiih and colours are in the condition in which thry want them. And, 4. When
looking in at the top of the furnace, they perceive the gravel in it's bottom to be biniag. By all thefe marks, a workman judges whether the porcelain is perfectly baked.
When they would have the blue entirely to cover the veffel, they ufe leao or azure, prepared and diluted in water to a due confiffence, and in this they plunge the veffel. As for the blown blue, called tui-tlim; they in it ufe the molt beautiful azure, prepared in the manner before-mentioned. They blow it upon the veffel, and when it is dry, they lay on the ordinary varnilh, either alone, or mixed with tfoui-yeou, if they would have the porcelain veined
Some workmen upon this azure, whether blown or otherwife, draw figures with the point of a long needie. The needle removes as many fmall grains of the dry azure, as is neceflary to reprefent the figure; after which, they lay on the varnifh. When the porcelain is baked, the figures appear painted in miniature.
There is not fo much labour as may be imagined, in making the porcelains, on which flowers, dragons, and other fimilar figures are emboffed. They firit trage them with the graver on the body of the veffel; then they make fmall incifions round them, which raife them; and, laftly, they apply the varnith.
The following things are to be obferved in the manner of preparing the leao, or azure. I. Before burying it in the grave of the furnace, where it is to be toafted, it muft be well wafhed, in onder to remove the earth which adheres to it 2. It muft be included in a cafe of porcelain well luted 3. When it is toafted it mult be pounded, and paffed through a fieve. Then they put it into a well varnihed veffel, and pour boiling water upon it. After having agitated it a little, they take off the froth on the furface, and pour out the wa$t e r$, by inclining the veffel to one fide. This preparation of azure, with boiling water, is' to be repeated twice. After this they take the azure, thus moilt and reduced into a kind of thin pafte, and putting it into a mortar, pound it for a confiderable time.
The azure is found in the mipes of rock-coal, or in the red earths adjacent to thofe mines. It fametimes appears on the furface of the ground; and this is an infallible. fign, that by digging farther, more of it may be found. In the mine it prefents itfelf in pieces as large as a man's thumb, but flat, and not round. The coarfe azure is pretty common, but the fine is vey rare, and not eafily difcerned by the eye; and we muft make trial of it-before we can judge of it's value.
This crial confifts in painting a parcelain veffel with it, and then baking the veffel. If Eusope produced beautiful leao, or azure, and fine tifin, which is a kiad of violet colour; thefe would, among the Clainefe, be commodities of great value, and eafily tranfported: fo that we might bring back the moft beautiful porcelain in exchange for them. We have already obferved, that a pound of tin is fold for a tael and eight mas, that is, for feven fhillings and fix-pence. For two taels they fell a box of beautiful leao, which gontains only fix ounces, and this amounts to twenty-pence an ounce.
They have tried to paint fome porcelain veffels black, with the fineft of the Chinefe ink; but this attempt had no fuccefs: for when the porcelain was baked, it was found to be very white. As the parts of this black have not a fufficient body, they were diffipated by the action of the fire, or rather the had not ferce enough to penetrate the bed of varnich, and produce a colour different from it.

## Of the Saxon Porcelain, according to Mr Hanway.

Perhaps it may be fome indulgence, to a female curiofity at leaft, to be informed concerning this brittle commodity, which has been fo paffionately fought after by the fair fex. Bur can this pafion be deemed a fody, when we fee even mighty princes * pride themfelves in it? Here are a great number of porcelain figures of dogs, Equirrels, monkeys, wolves, bears, leopards, 8xc. Tome of them as big as the life; alfo elephants, and rhinoceros's of the tize of a large dog; a prodigious variety of birds, as cocks, hens, turkeys, peacocks, pheafants, hawks, eagles; befides parrots, and other foreign birds, and a curious colletion of different flowers. The Apoftes, near three feet high, are in white porcelatn. There is a reprefentation of the crucifixion, four or five feet high, with numerous other curious pieces: thefe laft are intended for the Romifh chapel, which is to be furnithed with thefe rare materials. A clock is preparing for the gallery in this palace, whofe bells are to be of porcelain: I heard one of them proved, and they are fufficient to form any mufic; but the hammers muft be of wood.

* His Majelty of Pruffa fometimes calls his brother of Poland the Porcelain King.

Baron Botgen, about 46 years fince, firft began to make this porcelain; his firft trial was the red, and from thence he proceeded to glazing, and fince that, gliding and painting have been carried te an amazing perfection. In order to preferve this art as much as pofible a fecret, the fabric at Meiffen, which is near Drefden, is rendered impenetrable to any
but thofe who are immediately employed about the work; and the fecret of mixing and-preparing the materials, is known to very few of them. They are all confined as prifoners, and fubject to he arrefted if they go without the walls; and canfequently a chapel, and every thing neceffary is provided within. There are about 700 men employed, moft of whom have not above ten German crowns a month, and the higheft wages are forty; fo that the annual expence is not eftimated above 80,000 crowns. This manufacture being entirely for the king's account, he fells yearly to the value of 150,000 , and fometimes 200,000 crowns *, befides the magnificent prefent he occafionally makes, and the great quantity he preferves for his own ufe. They pretend they cannot execute falt enough the commiffions which they receive equen from Afia, as well as from all parts of Europe, and are confequently under no neceffity of lowering the enormous prices; however, this muft be the confequence ere long, if the Eng + lifh and French continue to make fuch great improvements in this art. It is with great fatisfaction that I obferve the manufactories of Bow, Chelfea, and Stepney, have made fuch a confiderable progrefs. On the other hand, it is equally a rubject of hofyor to fee fo many fhops in the ftreets of London, fupplied with the porcelain of Drefden, though it is importable, only under oath of being for private ufe, and not for fale.

* 35,0001 ,

## REMARKS.

The French court feems to have very much at heart the promation of the new manufacture of porcelain, which has lately been fet up in the royal cafte of Vincennes, with a view of equalling that of Saxong. The Sieur Charles Adams, the undertaker of $i$ :, has, in particular, extraordinary power given hym over his workmen, to prevent their engaging with other projectors, to the damage of the faid Adams.
What renders the Oriental porcelain fo univerfally eftimable is, not only it's general delicacy, but it's general greater cheapnefs compared to that of Drefden, or any other nation: and 'till England, France, Holland, or Saxony, can afford this manufacture at as reafonable rates as the Eaftern nations do, it can never be expected that any, or indeed all the united European porcelain manufacturers, will vend fo large a quantity as is done by the Aliatics in general.
It is certain that the art of pottery, as well in England as in Holland and France, has, within thefe twenty years, arzived to great perfection. And, if ever this, or any other European nation fhould advance in the manufacture of China ware, to the degree of perfection that the Eaftern countries have done, I am inclinable to think it muf depend rathet upon art than on the mere productions of nature; for, although in the eaftern countries there may be earths of a quality for the purpofe, fuperior to fuch as may have yet been difcovered in any other parts of the world, yet the extraordinary beauty of their earth, we apprehend, is owing chiefly to akt: and, if once the Europeans obtain that art, we believe there are earths enough, even in England, from which as good porcelain may be made, as from any that ever came from the Ealt-Indies, or from Drefden, and that it may come as cheap too, as fome of our pottery-ware.
PORTO RICO. See Antilfes Islands.
PORTS, are thofe places to which the officers of the cuitoms are appropriated, and which include all the privileges and guidance of all members and creeks thereunto allotced.
Members are thofe places where anciently a cuftom-houfe hath been kept, and officers or the deputies attending, and are lawful places of exportation or importation.
Creeks, are places where commonly officers are or have been placed, by way of prevention only, and are not lawful places of exportation or importation, without particular licence from the port or member under which it is placed:

* The fone-ftairs on the weft fide are declared not to be a place for fhipping or landing of goods.
* Excluding the ftairs there, which are declared no lawful place for thipping or landing of goods.
* The ftairs there declared no lawful place for fhipping and landing of goods.
* The ftairs there declared unlawful for fhipping and landing of goods.
* The ftairs on the eaft declared unlawful for hipping or landing goods.

One other place betwixt Cock's Key and Frefh Wharf, called part of Frefh Wharf, the ftairs are declared unlawful for flipping or landing of any goods.

To be a common open place for the landing of fifh, falt, victuals, or fuel of all forts, and all native materials for building and for fruit (all manner of grocery excepted) and for carrying out of the fame, and for no other wares or merchandize.

$\int_{s}$only allowed for landing of any kind of corn for the city of London, and not upon any private or particular perfon's account.

Any perfon may lade into any fhip or veffel on the river of Thames bound over feas, horfes, coals, beer, ordinary ftones for building : fifh taken by any of his Majefty's fubjects, corn or grain, the duties being paid, and cockets, \&cc. duly paffed.
So likewife deal-boards, balks, and all forts of mafts and great timber, may be landed at any place between Limehoufe and Weftminfter, the owner firft paying or compounding for the cuftoms, and declaring where he will land them, and on licence bad, and in the prefence of an officer, he may unlade them, otherwife be incurs a forfeiture.
PORTUGAL. This kingdom borders northwards on Gallicia in Spain, and is divided from it by the Minho next the fea, and by'fome fmall rivers and hills farther up land towards the eaft. The weft and fouth fides are wafhed by the ocean, including the little kingdom of Algarve on the fouth, and on the weft, the Guadiana parts the faid little kingdom from Andalufia, from whence drawing a line northwards, Portugal borders on Andalufia, Eftramadura, and Leon. The whole extent of it from north to fouth is 300 miles; that is, from 37 to 42 degrees of latitude. From eaft to weft where broadef, which is about the middle, it is about 120 miles, that is, from 7 to 9 degrees weft longitude, and where narroweft next Algarye, about 60.
Here are feveral mineral and medicinal fprings, of great virtue, and much reforted to, fome of a hot, and others of a cold nature.
The foil bere is, perhaps, the very worft in all Spain, yet not univerfally fo. But, upon the whole, it never produces corn enough to maintain it's inhabitants, but mult be fupplied either from Spain, or, when at war with it, from England, and other northern countries. As to wheat, it has been always obferved to come fhort of what the people require. Pafture is no lefs fcarce, if we except fome of the northern parts, as the province called Entre duero e Minho, and along the banks of fome of their great rivers, where the beft and largeit cattle are fed; but on the fouthern fide, is very fcarce, fmall, and lean, though the fefh generally good.
To make amends for this want of corn and pafture, here are vaft quantities of wine made, which is indeed the beft commodity of this kingdom, and fo well known at prefent to all England, that we need fay the lefs about it. Oil is here likewife, in great abundance, but far inferior to that which we have from other countries, that of Portugal being commonly fo Arong.and foetid, that no one can difpenfe with it, that bath been ever accuftomed to the Spanilh and Italian. Lemons and oranges alfo grow here, and are exported in great quantities, though the acidnefs of the latter, be nothing near fo pleafant as that of thofe which come from Seville; nor are indeed any of their fruits, raifins, figs, almonds, chefnuts, \&c. euther fo large or well tafted, as thofe of Spain. Herbs and flowers of all forts are here commonly very good, and abundance of perfumed waters are diftilled from thofe of the odoriferous kind, which are here in great requeft, they being

V OL. II.
in fome thape or other, ufed in almoft every thing that is eat, drank, or worn. This country produces likewife great quantities of allum, white marble, alabafter, and efpecially falt, of which immenfe loads are continually exported hence from the port of Setuval; for moft northern nations. The woollen manufactures of this country are of fo indifferent and coarfe a nature, that they are only worn by the tieaner fort, being fcarcely fit for any other. Their filks are, in fome places, much better, but far inferior, not only in beauty and goodnefs, but in quantity, to thofe which are made in Spain.
The country in general is well peopled, and filled with goodly cities, towns, and villages, though not every where alike.We thall, in the fequel, give an account of the moft remarkable ones.
This kingdom is divided into five provinces, to which if we add the little kingdom of Algarve, they will be in all fix, of which we thall now fpeak in due order, beginning at the north, and fo defcending to the fouth. They are as follow:
I. Entre Duero e Minho.
II. Tra los Montes.
III. Beira.
IV. Eftramadura,
V. Alentejo.
VI. Algarve.
I. The province Entre duero e Minho. This province hath the Minho on the north, to divide it from Gallicia, and the Duero on the fouth, which parts it from Beira ; on the weft it is bounded by the ocean, and on the eaft by a ridge of mountains, which fevers it from the province of Tra los Montes, or over the hills. It is but fmall, not extending in it's utmoft length above 36 miles, and in it's greateft breadth above 30 , and where narroweft above 12 or 14 . It extends from 4 x to a little above 42 degrees of latitude, and within the 8th degree of weft longitude; but though fo fmall is the beft inhabited, has the greateft number of cities, towns, and villages, of all the reft, in proportion, befides that it is one of the pleafanteft and moft fertile, though mountainous having many other rivers befides the two that inclofe it, and a vaft number of rivulets, and fweet forings to water it, as we have already hinted; which makes it abound in good pafture more than any other parts of Portugal, though inferior, in this refpect, to many of the provinces of Spain. Befides thefe, the plains are every where covered with vines, fruit, and other trees of all forts, and the country well fupplied with every neceffary of life, except, as we oblerved before, that it hath not a fufficiens quantity of corn for it's inhabitants.
Braga, and Porto or Oporto, are the chief cities.
Guimaranes, Viana, Caminha, Valenza, Monzao, Barcelos, Ponte de Lima, Villa de Conte, and Amarante, are towns of note.
Braga, formerly the metropolitan fee of Portugal, is feated on the fouth fide of the river Cavado, about-4I degrees 30 mi nutes of north latitude, and 8 degrees of weft longitude: it is diftant about 180 miles north of Lifbon.
Porto, Oporto, a famed city and fea-port, on the north fide of the Duero, about three miles from the fea, is pleafantly built on a rocky ground, that river waibing it's walls. The port, a very commodious one, is fo well known and frequented by our nation, that we need fay the lefs of it. The harbour is fafe againf all winds, but when the floods come down, no anchor can hold the flhips; at which times they are forced to fqueeze and faften them to each other along the walls, to avoid the fury of the torrent. The city fands in 41 degrees 10 minutes latitude north, and 8 degrees 30 minutes weft longitude. It's diftance is 120 miles north from Lifbon.
Guimaranes is feated upon a hill, and is encompaffed by a good wall. It ftands about io miles eaft from Braga, and about 150 miles north of Lifbon. The chief manufactures of this place are linen and fine thread, of both which confiderable quantities are made and exported.
Viana de Fez de Lima, fituated on the mouth of the Lima, is a confiderable fea-port, encompaffed with ftrong walls. This town is become very confiderable for trade, ever fince the great confumption of Portugueze wines in England; and is itfelf famed for a delicate fort of it's own product, which is fmall, and not unlike the French, nor hardly inferior to it ; whereas thofe that grow in the more fouthern parts, are heavier and lefs pleafant. It is diftant from Braga about 20 miles fouth, and about 130 north from Lifbon.
Caminha another, but fmall, fea-port, feated on the mouth of the river Minho.
Valenza de Minho, about 12 miles above the laft on the fame river.
Monzao, about fix miles above the laft on the fame river.
Barcelos ftands on the river Cavado, in the territory of Viana.
Ponte de Lima ftands about 180 miles north of Lifbion.
Villa de Conde is ficuated on the fea-coaft, at the mouth of the river Ave.

## POR

P O R

Amarante fands on the banks of the river Tamada, and has the river of Locia running through the midft of it. It hath a linen manufacture.
II. The province called Tra los Montes. . This fmall province is called in Latin Tranfmontana, becaufe feated on the other fide of that chain of hills which parts it on the weft, from that of Entre Duero e Minho we have juft defcribed; on the north it borders on Gallicia, and eaftward on the kingdom of Leon, and on the fouth the Duero parts it from Beira. It's length from eaft to weft, is at moft about 74 miles, and breadth near 60 ; being fituated between the 41 ft and 42 d degrees of latitude, and ftretching from 6 degrees 40 minutes, to near 8 degrees wéf longitude.
This country is but dry and barren, being watered by but few rivers, and none of them of any confiderable length or breadth. For this reafon the territory has but few corn fields, except rye and fome barley, but yields plenty of wine, and fruits of feveral forts, and abundance of game.
The cities of this province are Braganza and Miranda.
Braganza is fituated on the furtheft angle of Portugal, but fix miles diffant from the borders of Leon, and at near the fame diftance from thofe of Gallicia. It ftands on a fpacious plain, watered by the river Fervenza, which runs along it's walls. It is feated in the 42 d degree of latitude, 6 degrees 30 minutes weft longitude, and about 120 miles northward from Lifbon.
Miranda de Duero, fands on a rocky eminence, and it's. walls are wafhed by a large pleafant brook, which falls into the Duero a little below it.
III. The province of Berra is divided on the north from the province Entre Duero e Minho by the former of thofe rivers; it is bounded by the ocean on the weft, and by fome part of Efframadura; on the fouth by another part of that province, and by the Tagus; and on the eaft it runs contiguous to the Spanifm Eftramadura, and the kingdom of Leon. The country, though not fo rich and fertile as fome in this kingdom, is yet capable of producing good corn, wine, and other ufeful commodities, if rightly cultivated.
Coimbria, once the metropolis of Portugal, is ftill one of the fineft cities in this kingdom, and no lefs celebrated for it's famed univerfity. It is pleafantly feated on the north fide of the river Mondego. It ftands in 40 and a half degree of latitude, and 8 degrees 20 minutes of weft longitude, being about ten miles from the mouth of the river Mondego, and about 90 north from Lifbon.
Averro is a confiderable market-town, commodioufly fituated in a plain, upon a bay at the mouth of a creek, on the weftern coalt, and made by a fmall river, which divides the town into two parts, joined by a ftately bridge. In this creek, which is pretty large, and forms a kind of haven, is made a vais quantity of falt, which is exported fome into other parts of the kingdom, and the reft into foreign countries. It ftands in 40 degrees 40 minutes latitude, 8 of weft longitude, and about 101 miles from Liibon.
IV. The province of Estamadura is a long narrow flip, running along the fea-coaft, and reaching from the mouth of the river Mondego northwardly down, fouthwardly quite below the town of Setuval ; fo that it extends from the latter to the former, that is, from fouth-weft to north-eaft, about 110 miles, or from 38 degrees 30 minutes to 40 degrees 10 minutes of Latitude. In breadth it is fcarce 50 , and in fome places much narrower; and in's utmoft verge weftward, which is the Cape la Roca, or, as the failors term it, the rock of Lifbon, lies under 9 degrees 45 minutes weft longitude. It is bounded on the north by the Mondego above-mentioned, which parts it from Beira, and the province of Alentejo. It hath again Eeira on the eaft, and the ocean on the weft. The land is here for the moft part the very beft in Portugal, and the climate very pleafant and mild, by it's being fo near the Weftern or Pacific Ocean. It produces wheat and other grain, in greater plenty than the other provinces, abundance of wine, oil, fruits of all forts, efpecially citrons, lemons, oranges, pomegranates, figs, dates, almonds, \&c. upon which account the people here live much better, and above want. Here are alfo greater variety of manufactures carried on, and a much larger fhare of trade and commerce; all which is owing partly to it's commodious fituation and fea-ports, to it's nearnefs to the city of Lifbon, the metropolis of this province and kingdom; to it's commodious harbour, and to the noble river Tagus, which is navigable a confiderable number of leagues inland, and carries a very confiderable commerce from that metropolis.
Lisbon, the head city of this kingdom, the refidence of it's monarchs, the great feat of all the courts of juftice, the metropolitan fee of Portugal, the moft noble and celebrated univerfity of it, an emporium of the world, the receptacle of all the richeft merchandizes of the Eaft and Weft-Indies, and the beft fea-port in the whole kingdom. It is fituated in $3^{8}$ degrees 46 minutes of latitude, and about 9 of weft longitude, in an excellent air; and though that climate be rather inclinable to be hot, yet is refrefhed by the delightful breezes of the fea, and of the river Tagus, on the banks of which it is'pleafancly and ftrongly fituated, and which conveys to it all the wealth of Afia and America, as well as the chief commodities of Europe and Africa.

The harbour is one of the moft commodious in Europe, it lying upon the Weftern Ocean, and being capacious enough of itfelf to contain ten thoufand chips, all riding in fafety, and without incumbering each other, and carries water enough for the largeft veffels to anchor before the windows of the royal palace. The entrance into it is defended by two handfome forts, the firft feated on the fhore, the other ftanding oppofite to it, on a fhelf, in the midft of the water. Befides thefe, nature has provided it with another defence, which is the bar, very dangerous to pafs without pilots belonging to the place. Within this appears a vaft capacious bay, which contracts itfelf as it draws near the city.
Setuval is a confiderable fea-port on this coaft, a little below Lifbon. It is feated on a handfome bay, clofe to the ocean, where the river Zadao difcharges itfelf, and is much reforted to by moft northern nations, efpecially for the vaft quantities of falt that are made here every year.
It ftands about 20 miles fouth of LißBon, and on the fouth fide of the Tajo, but in the fame province with the metropolis, it's latitude is $3^{8}$ degrees 27 minutes, and longitude about 8 degrees 48 minutes.
Santarem is fituated on a high hill, clofe to the Tajo. It - hath on the fouth fide a deep valley, with a fteep winding affcent to the town, and on the north is a craggy folid rock, altogether inacceffible; but on the weft it faces a delightful plain, covered with gardens, orchards, and fertile fields, producing vaft quantity of corn, oil, and variety of fruits. The Tajo abovementioned, * which is here very broad and navigable, enriches, moreover, all that country, by little channels that are cut from it; infomuch that we are told by fome Spanifh authors, that it yields a prodigious increafe of wheat and other grain, but that it is often fown, cut down, and threfhed, within the fpace of two months. The town ftands in 39 degrees 12 minutes latitude, 8 degrees 20 feconds weft longitude, and about 42 miles north-eaft from Lifon.
Sintra is feated near the fea, at the foot of a ridge of mountains, and by the cape that bears it's name, almoft on the utmof weftern verge of Portugal. The town is juftly efteemed the moft delightful fpot in the whole kingdom, both for the beauty of it's fituation and profpect, and for the fruitfulnefs of it's territory, which produces, among other commodities, plenty of corn and wine, oil, lemons, oranges, and other fruits; and the rock on which it ftands, hath a noble quarry of black and white marble, in great requeft.
Aicazar do Sal, fo called, from the great quantities of falt which this territory produces, is fituated on the river $\mathrm{Z}_{\mathrm{a}}$ dao. It ftands thirty-five miles fouth-weft from Lifbon, on the other fide of the river Tajo, and about thirty at it's neareft diftance from that river.
V. The province of Alentejo borders on the north, on part of Efframadura, and of the river Tajo ; ealtward, on the Spanifh province of Andalufia and Eftramadura; on the weft it is bounded by the ocean, and part of the Portugueze Eftramadura; and on the fouth, by the little kingdom of Algarve. It lies between 37 deg . $3^{\circ} \mathrm{min}$. lat. and about. 39 degrees weft longitude; but fo irregular, and runs fo much into the adjacent provinces, that it's extent can not be precifely ftated. In the whole it runs, where wideft, between 90 and 100 miles; and in fome places beyond, and in others much lefs than 80.
The country is reckoned the fineft and fertileft in all Portugal; and it's inhabitants, according to Faria, the wealthieft and beft bred. The far greater part of thefe are farmers; and the land here is fo rich, fo well watered by a number of rivers, which fall either into the Tajo, or Guadiana, which two laft great ones, run quite acrofs this province, that they are all wealthy and induftrious, and have few poor people among them.
This territory abounds not only with corn of all forts, wine, oil, fruits, and good paftures, fufficient for it's own inhabitants, but likewife to fupply fome of the adjacent provinces, which are more barren, or lefs cultivated: and this exportation is very much facilitated by thofe rivers, which interfect the country, and run into the great ones above-mentioned, and fome into the fea.
Evora is a very antient and confiderable city, feated in the heart of this province, on a pleafant hill, encompafied about with mountains. It fands about 60 miles fouth-eaft of Lifbon, and in 38 degrees 30 minutes latitude, and about 7 degrees 25 minutes weft longitude.
Elvas is fituated on an eminence, ftrong by nature, fix miles from the frontiers of the Spanifh Eframadura, where the river Coa divides it from Portugal. The country about is very pleafant and fertile, and produces, in particular, great abundance of oil. The chief trade of this town is in the woollen manufacture.
Estremos is feated on an high hill, on the top of which is a very ftrong cafte. Here is a curious manufacture of red earthen-ware, formerly much admired in England, and brought hence, rather for an ornament to mix among ChinaWare, than for any other ufe.
Near the town is a noble foring, which throws up fo much

## P O R

water in fummer，as ferves to turn feveral mills；and，con－ trary to all others，is dried up all the winter．
The town is about 105 miles diftant eaff from Lifbon，and 15 from Elvas．
VI．The litite kingdom of Algarve．This is that part of Portugal，called，by fome antient authors，Cuneus，or Wedge， being really wedged in by the ocean on the weft and fouth； on the eaft by the Guadiana，which parts it from Andaluifa： on the north，by the mountains called Serra de Algarve，and Serra de Monctique，which divide it from Alentejo；fo that it is but 90 niles in length，where longeft，and but 28 in breadth，where broadeft．
The country，though very mountainous in mof parts of it， is yet very fertile．It does not，indeed，abound with any great quantity of corn，but abundance of wine，oil，figs， raifins，dares，almonds，pomegranates，and other fruits．In the main，the country is nothing populous or wealthy，nor their cities and towns remarkable for any great matters．

Of the Monies，Weights，and Measures of Por－ TUGAL．

The Portugueze keep their accounts in milreas and reas， i000 reas making a milrea［fee the article Ledgen］；they feparate the milreas from the reas thus， $7^{6} 9(1) 210$ ，which is to fay， 769 milreas，and 210 reas．

The Gold Monies of Portugal are as follow，viz．

|  | Sterling money． |
| :---: | :---: |
| The $25 \pm$ 600 reas piece | 1． $7: 4$ |
| The $24(1)$ ditto | $6: 15$ |
| The $12 \omega 800$ reas ditto | $3 \cdot 12$ |
| The $12 \omega$ ditto | $3 \cdot 7$ |
| The 6 （1） 400 reas ditto | 6 |
| The $4 \cup 800$ reas，or moydore ftamped | 1 ： 7 |
| The $3 \pm 200$ reas piece | 18 |
| The $2 \Psi$ ， 400 reas ditto，or half moydore | 13 |
| The 1 （1） 600 reas ditto | 9 |
| The $1 \cup 200$ reas，or quarter－moydore | 6：9 |
| The 800 reas or teftoon－piece | 4： 6 |

## Their Silvir Monies are，

## Their Copper Coin．

The 20 reas，or vintin－piece
The 10 reas，or half vintin ditto
The 5 reas，or quarter vintin ditto

## Their Weights

Are but of one kind，and divided thus ： 2 drams $=1$ octave， 8 octaves $=1$ ounce， 16 ounces＝an arrate，or pound， 32 pounds $=$ an arobe， 4 arobes $=1$ quintal，or 128 pounds， half an arobe $=16$ pounds．They divide the faid ounce alfo into penny－weights and grains，as we do our ounce Troy weight．Their weights are about 3 or 4 per cent．heavier than our Englifh avoirdupois．

## Their Measures．

Their long meafure．－The vare is the length of the ell Eng－ lifh，and $81 \frac{1}{2}=100$ yards Englifh．The other meafure is the cavida，and is $\frac{3}{4}$ of a yard Englifh．
Their liquid meafure．－Their largeft is the almuda $=2$ cava－ das，and half and quarter cavadas；they have other meafures， that contain one half and one quarter of a gallon：the almuda $=4 \frac{1}{2}$ gallons of our Winchefter meafure．
Corn and falt meafure．-60 alquiers $=1$ moy $=3$ Enghifh quarts， $2 \frac{1}{2}$ alquiers $=1$ Englifh bufhel．

Of the Exchanges of Portugal with the principal places of Europe．

Portugal exchanges with London on the milrea，and Lon－ don gives pence fterling，more or lefs，for the fame，from 60 to 66.
With Holland，and throughout the United Provinces，and with Hamburgh，on the crufado of 400 reas，and gives gros Flemifh，more or lefs，for the fame
With Spain for the Spanifh ducat，and gives reas，more or lefs，for the fame．
With France on the exchange－crown，and gives reas，more or lefs，for the fame．
With Florence on the crown of $7 \frac{1}{2}$ livres，and gives reas more or lefs．
With Genoa on the fcudi，and gives reas more or lef．

## POR

With Leghorn on the dollar of 6 livres，and gives reas more or lefs．
as Exchanges are frequently made by the way of Amfter－ dam，Antwerp，or Hamburgh．
Suppofe I owe the following fums to my correfpondents， what will they amount to in the money of their refpective countries？

Of the Exchange of Lisbon upon France．
Exampie．
To reduce 560 crufadoes， 300 reas，of Portugal，into crowns of France，of 60 fols Tournois，the crown of ex－ change being at 490 reas per crown．
OPERATION.

Cruf．Reas．
560：300
400
496 ） $2243 \varnothing \varnothing$ reas（ 457 crowns， 45 fols， 3 deniers，for which 2887 the draught upon Paris ought to be 3360 made．
）ニ22ロた（45
2：55
） 1800 （3
INSTRUCTION．
Multiply the 560 crufadoes by 400 reas，the value thereof， and take in the 300 ，and divide the product， 224,300 reas， by the price of exchange，of 490 reas，and the quotient will give 457 crowns，with a remainder of 370 ；which multiplied by 60 fols，the value of a crown，and divided by the fame divifor，the quotient gives 45 fols，with a remainder of 150 ； this multiplied by 12 deniers，the value of a fol，and divided by the common divifor，it produces 3 deniers，to be received at Paris for the faid crufadoes，\＆ec．

Of the Exchange of Portugal upon Holland．

> ExAMPLE.

To reduce 1120 crufadoes， 72 reas of Portugal，into florins and fols bank money of Amfterdam，the courfe of exchange being at $44 \frac{3}{8}$ deniers gros per crufade．

> OPERATION.

## INSTRUCTION.

Reduce into reas the 1250 crufadoes, 250 reas, in multiplying them by 400, the value of the crufadoe, the product will be 500250 reas; thefe multiplied by 375 marvadees, the value of the ducat, the product thereof will be 187593750, for a dividend.
Multiply the 830 reas, the price of exchange, by 34 marvadees, the value of a rial, and the product will be 28220 , for a divifor.
Carry on the divifion, and you will have a quotient of 6647 rials, with a remainder of 1541 , which being multiplied by 34 marvadees, and divided by the fame divifor, it gives 18 marvadees old plate, to be received at Madrid : for the proof of which, fee the article Spain.

The Exchange of Portugal upon Genoa.
EXAMPLE.

To reduce $143^{\circ}$ crufadoes, 230 reas of Portugal, into piaftres, fols, end deniers d'or, bank money of Genoa, the price of exchange being 880 reas per piaftre of 5 lires of Genoa.

1430 crufadoes, 230 reas, to be multiplied By 400 reas

8810 ) 872310 ( to be divided by the price of exch. of 880 reas. 4*2 650 piaftres, 15 fols, 2 deniers, bank money, for which the draught upon Genoa Chould be made.

## Instruction.

Reduce into reas the 1430 cruladoes, 230 reas, in multiply ing them by 400 reas, the value of a crufadoe; divide the product, 572230 , by the price of exchange, 880 reas, and you will have a quotient of 650 piaftres, with a remainder of 23 : this multiplied by 20 fols, the value of the piaftre, and divided by the fame, it will give 5 fols, and 20 for a remainder ; which multiplied by 12 deniers, the value of the fol, and divided again by the common divifor, it gives 2 deniers bank money, to be received at Geinoa.-For the proof of which, fee the article Genoa, Vol. I.

## Of the Exchange of Portugal upon Leghorn.

## EXAMPLE.

To reduce 900 crufadoes, 300 reas of Portugal, into piaftres fols, and deniers d'or of Leghorn, the exchange at 770 reas per piaftre of 20 fols d'or.

## Operation.

900 cruladoes, 300 reas, to be multiplied By 400
$7710) 36 \varnothing \% \varnothing 10$ (to be divided by the exchange of 770 reas, $\{x \neq 1$ ( 467 piaftres, 18 fols, 5 deniers d'or, for which $\sigma_{7}$ the draught muft be made upon Leghorn.

## IN STRUCTION.

Reduce the 900 crufadoes, 300 reas, into reas, in multiplying by 400 reas, the value of the crufadoe; divide the product 360300 , by the price of exchange, of 770 reas, and you will have a quotient of 467 piaftres, is fols, and 5 deniers d'or to: be received at Leghorn; for the proof of which fee the article Tuscany, where you will find the port-town of Leghorn.
The remainder of the firft divifion muft be multiplied by 20 fols d'or, the value of the piaftre, and that of the fecond by 12 deniers, the value of the fol, and dividing by the fame, it will give 18 fols, 5 deniers d'or.

The Exchange of Portugal upon Messina.
ExAMPLE.

To reduce 2000 crufadoes, 200 reas of Portugal, into florins, ounces, tarins, grains, and piccioli of Meffina, exchange at 420 reas per florin of 12 carlins.

## Operation.

2000 crufadoes, 200 reas, to be multiplied By 400 reas
$42[0) 8 \propto \sigma x=10$ (reas, to be divided by the exchange of 420 reas. 382 ro ( $\frac{1}{5}$ ) 1005 florins, $y$ tarin, 8 grains, 3 piccioli.

38 I ounces, I tarin, 8 grains, 3 piccioli ; for which fum the draught muft be made upon Meffina.-For the proof of which, fee the article Sicily, upon Portugal.

## Instruction.

Reduce into reas the 2000 crufadoes 200 reas, in multiplying by 400 reas, the value of a crufadoe, and divide the product, 800200 reas, by the price of exchange of 420 reas, and the quotient will be 1905 florins, and ro for a remainder; which multiplied by 6 tarins, the value of a florin, and dividing the product by the fame, it gives it tarin, with a remainder of 18 , which alfo multiply by 20 grains, the value of the tarin, and dividing by the common divifor, you will have 8 grains, and a remainder of 24 ; this again multiplied by 6 piccioli, the value of a grain, and being divided by the fame, it produces 3 piccioli.
To reduce thefe florins, $8 x$. take the $\frac{\pi}{5}$ (becaufe the ounce is equal to 30 tarins, and the florin 6 tarins) and you will find that you have to receive at Meffina 381 ounces, 1 tarin, 8 grains, and 3 piccioli, for the fame.

\end{array}
$$

The above abridged, as directed under the heads referred to, will give $12 \times 2 \times 5 \times 25=3000$ reas, according to fuppofition.
Suppofe, alfo, that you would find the confequent of the antetedent of 50 grots of Hamburgh, purfue the fame method as directed in the laft queftion, and you will find it to be 400 reas; for the terms being properly ranged and abridged, the anfwer will turn out $50 \times 4 \times 2=400$ reas, which anfwers the queftion.

The application of this rule to find the juft par of monies of exchange, according to the Intrinsic Value of the real monies; by taking this value according to the weight and Itandard.

## EXAMEXe

To find the par of money of exchange between France and another ftate or kingdom, by the means of the real filver money, for inftance, of the piaftre of Spain, of 8 rials of old plate, or 128 quartos, by that of the effective piaftre, marked with two globes, we muft previoully underfand, that

170 Quartos is the value of this effective piaftre in Spain, $506 \frac{88}{180}$ Grains is it's weight
4608 Grains is the number that the mark contains
529 Grains fine is the ftandard that the coinage gives to this piaftre
262 Grains fine is that of the French filver crown
576 Grains is the number that the ounce contain
$277 \frac{1}{2}$ Grains is the weight of the crown, 6o fols is . 5 now it's value
128 Quartos is now the value of the piaftre of exchange in Spain.

Thefe preliminaries being known, we muft proceed, according to the foregoing conjoint rule, by antecedents and confequents, as follows:

If 170 quartos - $\quad-=1$ piaftre effective
And 17 fuch piaftres weight $-=506 \frac{88}{100}$ grains
And 4608 gr a are receiv. for ftand. $=259$ grains fine
And. 262 grains fine $\quad-=8$ oz. of French crowns And 1 fuch ounce weight $-=576$ grains
And $277 \frac{1}{2}$ grains of filver - $=60$ fols Tournois, how much are 128 quartos worth?
Anfwer, 8 r fols, 6 deniers Tournois.
Operatinu.n.

$617992^{\frac{1}{2}}$ divifor $) 50412224$ divid. (81 f. 6 de . As this fraction produces nothing, is the anfwer, and the we fupprefs it, though if you con- folution of the rule.

6 R
vert
vert it into a decimal of $\frac{5}{10}$, for greater precifion fake, you may divide by it ; yet it will occafion no alteration deferving practical notice.

## INSTRUCTION.

Multiply the antecedents together for a divifor, which will give $617992 \frac{1}{2}$; and the confequents, which will produce 50412224 , for a dividend, and the quotient will be 81 fols, with a remainder of 354872 , to be multiplied by 12 deniers, the value of a fol, and dividing by the fame divifor, it will give 6 deniers: fo that the par of the exchange piaftre of 8 rials old plate, of 16 quartos each, is in France equal to $81 \frac{1}{2}$ fols, eftimating the ftandard of the piaftre with two globes at 10 deniers 19 grains, as the coinage-office at Lyons receives it; and as they give in evaluation for the French crown of 60 fols, which is it's current value.
But if the par of this exchange-piaftre is required, according to the ftandard of which the piaftre of two globes is received in the mint of France, inftead of so deniers 19 grains, or 259 grains, you thould fubstitute, in the courle of the operation, $261 \frac{1}{2}$ grains, and only $56 \frac{3}{2}$ fols ; which is the proportional price of the mark of the faid French crowns, paid by the mint inftead of 60 fols currency.
In this cafe, the conjoint rule Chould be thus conftructed:

The anfwer to thefe pofitions is $77 \frac{1}{2}$ fols:
To which may be added, for the 4 den. per $\}$ I $\frac{1}{4}$
livere, given upon 10,000 livres - $\}$ I
$\left.\begin{array}{l}\text { Then the par of the piaftre will be, accord- } \\ \text { ing to this operation }\end{array}\right\} 78 \frac{3}{4}$ fols Tour.
The 46 livres 18 fols of the laft confequent, are the price at which the mark is eftimated with the French crown, in the mint of France.
And if you will fupprefs feveral proportions, to fubstitute in their fead the number only of piaftres of two globes contained in the French mark, that is to fay $9 \frac{1}{1}$, and the price that is paid in their mints, which is 46 livres 9 fols, you muft then form your rule thus :

To which we add as above a little lef's than 77 fols,

The true par, according to this operation - $78 \frac{x}{4}$ fols.
You will obferve that there is a difference of 6 deniers between the two preceding pars, which is occafioned by reafon that the mint pays the mark of the French crown, as if it was of the ftandard of 11 deniers, or 264 grains; whereas it is in effect but of 10 deniers 22 grains; for if, inftead of the antecedent of 262 grains, we had placed the faid 264 grains, the two anfwers would have come out equal.

8I $\frac{1}{2}$ fols is the par of the firlt operation, $7^{8} \frac{1}{4}$ fols is that of the laft,
$3^{\frac{1}{4} \text { fols }}$ is the difference; which evidently proceeds from this, that the French crown iffued by the mint for 60 fols, pays no more than $5 \frac{1}{2}$ : and this difference would be ftill greater, even $5 \frac{1}{3}$ Cols, if the affay-office, inftead of receiving the faid effective piaftre at the flandard of ro deniers 19 grains, fhould receive it at the mint at that of 10 deniers $21 \frac{1}{2}$ grains. This being the cafe, you will ank, How comes it to pafs that any one will carry thefe to the refiners? The anfwer is, Becaufe they give in payment ingots which the commerce of Lyons affords, that are worth more than 50 lives the mark of the flandard of 10 deniers 20 grains.
Obferve that to find the par of the places or countries to which France gives the variable courfe of exchange, you fhould place in the propofition the value in fuch country, of the effective fpecie, and that alfo of exchange, as is done in finding the par of the exchange piaftre of Spain, by placing to the firft antecedent of the rule, 170 quartos, and 128 to it's laft term.
But it muft not be fo for the places or countries to which France gives the certain or invariable money: fince in that cafe, you would find what will be given for the intrinfic value of the French crown, which is compofed of fols, and then you muft place in the propofition the price in fols that the mint pays for the mark of the faid crown: that is to fay, at 46 livies 18 fols, or 938 fols, to the firf antecedent, and to the laft term of
the rule the $56 \frac{1}{2}$ fols of the crown, according to the courfe of exchange, and paffes current for 60 fols ; which is done for England and Holland, France giving the certain and invariable exchange crown for an uncertain price of exchange.

Operation.
If 938 fols, the value of the mark of the French crown, are for 8 ounces,
And I ounce contains 576 grains weight,
And 565 grains weight of the Englifh crown are worth there 60 pence fterling, what will $65 \frac{\pi}{2}$ fols be worth? -Anfwer, $29 \frac{1}{2}$ pence fterling.
Note, The ftandard of the Englifh crown-piece being the fame with that of the French crown, we muft only place, in the conftruction of the rule, it's weight and $\mathrm{it}^{\prime}$ s value in the country; and as the 4 deniers per livre are not added to the firft confequent, you are not to take notice in the laft term of the rule of the $56 \frac{1}{2}$ fols.
But the ftandard of Holland being different from that of France, the rule muft be thus conftructed:
If 938 fols are given for the ftandard of 262 grains fine, And 245 grains is the ftandard of the mark, containing 4608 grains weight.
And $53^{6}$ grains is the weight of the crown of Holland, there worth 100 deniers gros; What will be $56 \frac{1}{2}$ fols be worth? Anfwer, 53 deniers gros, and a little more.

## Remark.

If the effective piaftre fhould be diminifhed in Spain to 160 quartos, inftead of 170 that it is there worth; the firf antecedent of the arbitrational rule being diminifhed, and the divifor, in confequence thereof, to 581640 , it undoubtedly follows, from this diminution, that the quotient muft be greater, fince, inftead of the par of $8 \mathrm{I} \frac{1}{2}$ fols, of which we have fpoken, it will give $86 \frac{2}{3}$ fols.
And if the price of the Spanifh piaftre remaining of the fame value in $\mathrm{S}_{\mathrm{pa}} \mathrm{ain}$, the price of the French crown fhould rifa to 70 fols, the product of the multiplication of the confequents becoming thereby greater (to 58814208 ) the divifor being the fame, the par, or the quotient, will be greater in the like proportion, that is to fay, $90 \frac{\pi}{4}$ fols.
If France, by increafing the price of their crown, the par with Spain thould only increafe, it is not eafy to conclude, that, if France diminilhes the price of this fame crown, the par in queftion thould alfo diminifh in the fame proportion; and, if there was both in Spain and France an augmentation of feecie, exactly proportioned the one to the other, the par whereof we have treated will be the fame, $8 \mathrm{I} \frac{1}{2}$ fols ; and in like manner, if the augmentation was, at the fame time, more confiderable, both Spain and France.
Upon thefe certain principles, in relation to the par between France and Spain, to which France gives the uncertain price, to receive the certain, you may eafily fix your point in view, and form your rule of conjunction accordingly, to obtain the par of Holland, \&r. \&c. to which France gives the certain for the uncertain price of exchange.

General Remarks upon the whole of this part of Exchange.

1. There is more difficulty, perhaps, in this matter of calculating the par of money between nation and nation, than moft people imagine, yet there is no one who has fully difcuffed it; but fince it is what ought to be well underftood, as well by perfons of quality as by merchants, we fhall obferve, by way of further illuatration, that all foreign coin is efteemed as bullion to us, and ours as bullion to them; fo that the extrinfic value regards chiefly the temporary intereft of foreign money negociations, in their commercial, or foreign banking concernments.
2. Another point requifite to be obferved, is the finenefs of our own coin, and the weight and finenefs of the foreign, which we are to receive in exchange; and this knowlege of the foreign mult be acquired, either by the experience of fome affay-mafter of allowed repute and accuracy [fee the articles Assay and Coin], or by the merchant's actual affay, few of whom are at all acquainted with the art of Assayng and Refining, and, therefore, are obliged to depend on the reprefentation of workmen who make it their bufinefs, or on the affay-mafter at the Tower, or Goldfmiths-Hall, on whom it is thought we may more fafely depend, than on the ordinary affay-mafters, though many of them are very accurate in their aflays.
Admit it were required to know how much flerling bullion, or coin may be given for 1000 pieces of eight Seville.
oz. dwt.
The finenefs of our coin we know is - - $11: 2$ And fuppofe the finenefs of a piece of eight, we $\}$ is : 3 will fuppofe to be, though more or lefs And it's weight r 7 dwts. 12 grains, Or the weight of 1000 pieces we find to be - 875 : 0
3. The third particular is, to know how many ounces of filver, 11 oz. 2 dwt . fine, are equal to 875 oz , of in oz. 3 dwt . fine; which is found by fingle indirect proportion thus: oz. dwt. oz. oz. dwt. oz.
II $3: 875::$ il 2 2. to 878,94144 decim. the anfwer.
Here it is found that we may give $878,94144 \mathrm{oz}$. of bullion, 11 oz. 2 dwt. fine, far 875 oz . of bullion of in oz. 3 dwt . fine (or for 1000 piecos of eight Seville of the aforefaid ftandard) which if paid in coin, we muft, for the 1000 pieces of cight, pay l. $227: 1: 2 \frac{\text { r }}{4}$ ferling: for
Grains.
Grains.
$1858,0645: 1.1$ ferling : : $421891,89: 1.227,059$ fterling.
That is to fay, as 1858,0645 (the grains in Il. fterling) are in proportion to 1 . fterling, fo is 421891,8912 (the grains in 878,94144 ounces of bullion, 11 oz. 2 dwt. fine, which are equal in value to the 1000 pieces of eight) to $1.227,059$ fterling, or $1.227: 1: 2 \frac{1}{4}$.
4. But fo often as I can buy $878,94 \mathrm{I}$ ounces of bullion for lefs than $1.227: 1: 2 \frac{x}{4}$. (which we can always do fo often as fterling filver is under 5 s . 2 d . per ounce) $\mathbf{t o}$ often we gain by making our exchange in bullion: if, however, we can buy bultion for 5 s . Id. per ounce, at that rate the $878,94 \mathrm{I}$ ounces (which we are to give for the 1000 pieces) will fand mein $1.223: 7$ Ix $\frac{1}{2}$, which is lefs than $1.227: 1: 2 \frac{1}{4}$ (the fum we pay in exchanging coin) by $1.3: 13: 2 \frac{3}{4}$, which is my gain by exchanging in bullion: thus in exchange, the par of money and builion ought to be conlidered, as well as the par of domeftic and foreign coins.
5. Though the foregoing rules, judicioufly applied, contain the method of calculating the par of money; yet, fince the price of exchange is agreed on in the currency of negociations by bills of exchange, it is ufeful to know how much fterling money each of thefo foreign pieces are worth; for which reafon we have, under the article Coin, fhewed, according to the affays of Sir Ifaac Newton, the intrinfic value of the chief gold and filver coins of Europe; whereby the merchant will know when he may negociate therein to advantage, and the politician alfo be informed whether the nation gains or lofes in the ballance of trade with fuch nation
The ftandard of the gold coin of this kingdom is 22 carats fine, and 2 alloy, per pound of gold; and 4 oz .2 dwt . fine filver, and 18 dwt. alloy, the ftandard pound of filver; and the divifion of the pound of gold is into $44 \frac{\pi}{2}$ guineas, and the filver into the ufual number of crowns. The guineas have varied in the nominal value feveral times, rifing up to 30 fhillings, and declining to 2 r , the prefent current value, but never have been reduced again to the level of 20 fhillings, nor indeed ought, when compared with the Portugal pieces of 31.12 s . or 11.16 s . it appearing to be better worth 21 Chillings.

To the lb . Troy.

This, with the difference in point of exactnefs in coining, wherein the Portugal is more defective than the Englifh coin, may be good reafons for their being refufed in payments in the receipts of the public revenue; but anfwer very well the purpofes of thofe who benefit by the irregularity in trading with the heavier, and paffing off the lighter by tale, and which if they can turn into guincas or heavy filver, make another gain.

## A Short Account of the Commerce of Portugal, on a very Interesting Occasion.

The Portugueze themfelves, carry on no yctive commerce of confequence with any other European domiaions: the Britifh, French, Germans, Dutch (and thofe who go under the denomination of Hamburghers), Danes, Swedes, Spaniards, and moof of the ftates of Italy, having confuls and factorics fettled in Lifbon: and fome of them, particularly the Eng lifh, have the fame at Oporto; alfo a few houfes in Viana, Figeira, Faro, and likewife on the illand of Madeira. Of thefe people, the Portugucze merchants purchafe the neceffary commodities for their India, Guinea, and Brazil commerce; as the town and country dealers do thofe for their bome confumption. And the fame merchants purchafe of the natives, or take in barter, the feveral produets of their dominions, which they export to the countries proper for their fale.
The native exports of Portugal are wine, lemons, oranges, dried firs, ordinary raifins, almonds, falt, oil, cork, fhumac tunny fifh, and other fmaller articles. Wool ufed likewife to be exported in confiderable quantities, but the extraction of it from that kingdom is now prohibited. However, there

## POR

is. reafon to believe, that the Dutch get a good deal of it off ftill under the name of Spanilh wool, by the help of forged certificates and falle fwearing; of which bad practice the Portugueze make as little fcruple for gain, as even the worft of our own countrymen.
The commodities the Portugueze bring from their foreign dominions, and fell chiefly at Lifbon, for other European countries, are diamonds of Brazil and India, fugars, tabaccos Brazil-wood of feveral forts, cocoa-nuts, coffee, catton, pepper, feveral forts of drugs, fome inferior kind of ficices, whalebone, raw and tanned hides, elephants teeth, arrac, orchella, citrons, and occafionally China wate, Indian filks, and cotton piece-goods. And here it may be proper to obferve, that all their India commerce is going to be made more regular and extenfive. To thefe exports we thall add, filver and gold. The former, as no produet of their own, is als lowed to be fhipped off by entry and licence. The latter is not, except for corn in time of great want, and by ftipulation for fome articles they receive from Sweden. But in eis ther of thofe cafes, the procuring of the licence would be attended with fo much trouble, that it is rarely, if ever, follicited. However, in their exports, gold muft be, and is, underfood as a Commodity, at the exportation of which Portugal ought to wink, or they could not carry on any of their other commerce. But Britain receives as fmall, or a fmaller proportion of gold, than any other nation trading with Portugal, as will be apparent from a general view of their commerce, notwithftanding the weight of that accufation in Portugal is levelled at us, through the folly and ignorance in fome, and from a want of firit, abilities, and refolution in others; for Portugal, of all kingdoms in the world, has the leaft reafon to mifufe or affront Great-Britain. The imports in Portugal, for their home and colonies confumptions, are almoft all things neceffary for the fupport, convenience, ornament, or luxury of life; of moft of which articles we thall give fome account, when we come to treat feparately of the trade of each country.
The nature of the government of this kingdom, which is entirely abfolute, has too ftrong a tendency to oppreffions, deftructive of induftry, efpecially in thofe parts of the country where the climate is an additional encourager of lazinefs, as well as the promoter of vice. To which may be added, the invincible pride of all noble and genteel families, every branch of whom will abfolutely farve, rather than ufe any fort of employment for their fupport. But above all, the burthens of priefts, friars, nuns, and the fuperfitious influence they have over the people, as well as an univerfal litigious difpofition in the whole nation, confpire to make every order of the people in that country poor. Thefe, joined to the natural fterility of the foil, the number of foldiers necerfary to garrifon a country which is almoft all frontier, and whofe pay is fo fmall as to oblige them to a life of celibacy, the great number of religious orders of all forts, and the neceffary draught of people for their immenfe extent of territory in America, keeps the mother-country continually weak in people. So that they do, and muft always, depend on the fuccours and fupplies of other nations, both for their protection and fubfiftence.
But the all-wife difpenfer of bleffings, to fupply their deficiency in ftrength, and the extent of kingdom, as well as of the exterior wealth of the earth, and even induftry, has given them a treafure from under it. Their gold and diamond mines in America, have enabled their monarchs of late, to figure amongft the great potentates of Europe, and made them generally refpected, from the convenient and neceffary commerce carried on to their dominions, greatly beneficial to all. The people of Portugal in general, look on no nation with fo evil an eye as Spain: France they have no affection nor efteem for; and always exprefs a juft fenfe of the natural connection they have with Great-Britain in commerce and intereft, as well as faith and reliance on our fupport in times of need.
We fhall now return to the ftate of the commerce; and, for the reafons given above, mult obferve, the native poverty of Portugal was fo great, on the difcovery of their gold mines, that they would bave found it impoffible to have worked them, but from the credit given by other countries, and particularly Great-Britain, in the neceflary commodities for that purpofe. And as their returns of bullion augmented, their credit from us, and by degrees all other countries, grew greater; and though now confiderably enriched themfelves, they fill work their very mines, and carry on almoft all their colony commerce, and much of their home trade, with foreign capitals. For they are credited with all articles of traffic, 'till the returns come round: infomuch that the merchants of other countries, not only fand the difburfe of the coft of their goods, and the charges of tranfporting them to Portugal, but alfo of the king's duties there, (which are very high on moft of the articles that are reexported) 'till, as was faid before, the returns for them arrive. A cuftom and confidence fo greatly advantageous to the king, as well as the fubjects of Portugal, that the foreign merchants fettled among them, efpecially the Englih, ought to live under the faireft and ftrongeft protection, even had
they no treaty to exact it ; becaufe, on the fupport of the foreign factories, that neceffary credit mult depend: for, without fuch merchants or factors refiding in the kingdom, no fuch credits could with fafety be given, not would it be fo at all: and this as ftrongly behoves every nation, that would preferve it's commerce to that kingdom, to fupport it's merchants eftablifhed there; otherwife the trade of that country will go gradually declining, and at laft be entirely loft.
The exports from Portugal to the Baltic, are fome cargoes of falt, a few lemons and oranges, a little arrac, and a meer trifle of wine; fo that the ballance paid in fpecie muft be exceeding great.
From Hamburgh and other neighbouring ports are imported immenfe quantities of German linens of all kinds and qualities; and, occafionally, many of the Baltic commodities. The exports of Hamburgh and it's neighbouring ports, are fome falt, fugar, and tobacco, whalebone, a little wine and arrac, a few lemons, oranges, and dried figs, fome cocoanuts, coffee, cork, citrons, a few India goods occafionally, and other trifing articles; the whole of which, however, cannot amount to one quarter of the value of their imports, confequently the ballance paid in fpecie muft be very great. It is, notwithttanding, to be acknowledged, the filver imported into Lifbon is chiefly in return for German linens, and ordinary Englifh woollen goods; a trade greatly beneficial to Portugal.
Erom Holland are imported great quantities of fine thin woollen cloths, hair camblets, linens, fpices, cordage, anchors, and all forts of naval fores, moft of the Baltic commodities, all kinds of grain, prodigious quantities of fmall round cheefes, coach-horfes, arms, ammunition, and accoutrements of war, indigo, toys, and other articles.
The exports for Holland are a few lemons, oranges, and dried figs; a fmall quantity of wines, fome candied citrons, orchella, wool (under certificates of it's being Spaniß), feveral cargoes of falt; diamonds, whalebone, a little fugar and tobacco, Brazil-wood, Come eocoa-nuts, coffee, Brazil hides, India goods, in cenfiderable quantities, when to be bad at public fale ; cork, Thumac, canes for weavers, and other articles. The ballance paid by Portugal to Holland in fpecie, and abfolutely carried over in their own fhips, \&cc. is very great.
The French fend to Portugal fine woollen cloths, various kinds of ftuff, particularly a fort of black goods called druggets, of which they fell immenfe quantities for the habits of the clergy (baving thereby entirely deftroyed the confumption of ENGLish Crapes, once a very important article of our trade), wrought filks, a great quantity of linens and cambricks, dreffed Calve-Skins (another branch taken from us), Hats, Silk-Stockings (both of which articles they are alfo getting from us every day), all forts of toys, furniture, ribbands, and moft of the ornamental parts of female drefs; grain of all kinds, when they have it to fpare, and fometimes in immenfe quantities; clarret, champagne and brandy, though prohibited, are fmuggled in; as are flowered and figured filks, gold and filver laces, India goods, and other contraband commodities: they likewife import printed books, fome ordinary fort of cutlery ware, and an abundance of fmaller articles, which it would be too tedious to enumerate.
By the help of wool fmuggled from us, the French have made attempts to rival us in Portugal, in our very great article of Long-Bays, but hitherto without fuccefs. God grant their future endeavours, aided by our inattention, may not bring fuch a project to bear.
The French take from Portugal fome raw hides, a fmall quantity of fruit, a few cocoa-nuts, and occafionally a little pepper; alfo fome Brazil wood, and orchella. They formerly, likewife, ufed to receive fome Brazil diamonds, but I think they now prohibit the importation of them in France. So that Portugal pays them a very great ballance in bullion, and for articles, in general, the leaft neceffary of any they import.
The Portugueze take from Spain immenfe quantities of cattle, both for labour and Naughter, a great deal of Bifcay iron, a vaft many cheap wrought filks and velvets (moft of which are fmuggled, to defraud the king of his duties), many cargoes of a thin ftrong kind of rufhes, for ordinary cordage, and other ufes; printed books, fome dried raifins, and occafionally corn and oil, and fome other commodities.
The Spaniards take from Portugal, cured tunney-finh, fome tobacco, a few fugars, fome cocoa-nuts, which are fmuggled in, as is alfo a valt quantity of feccie; fome part of which ballance Portugal, however, gets from them again, by the fame method, in another part of the world. To this article we muft allo add, the vaft fums of money Portugal pays to Spain for the labour of the people of Gallicia, who are the principal ordinary working perfons at Libon, and in many other cities; they come young into Portugal where they work bard, and fare hard, for a confiderable number of years: and then retire with incredible fums, for fuch people, to their own country.

The Italians import into Portugal immenfe quantities of wheat, a great deal of barley, and alfo a good deal of Le vant rice, vermicelli, and oil occafionally. They likewife import a prodigious quantity of writing paper, abundance of wrought filks and velvets, coral, and many expenfive curiofities; great quantities of glars beads, for their Guinea and home confumption, a great many cotton goods Guinea cial licence from Malta), many toys, and other inferior ticles; not to particularize religious traffic, which is very great and public.
The Italians export from Portugal hides, a confiderable quantity of fugars and tobaccos, cocoa-nuts, pepper, ordina fpices, elephants teeth, Brazil wood, fome drugs, and an immenfe quantity of bullion. Infomuch that of late, while gold bore fo high a price in England, it has been a drug all over Italy: a circumftance well worthy of Britifh attention.
The exports from England to Portugal are long bays of all kinds, Colchefter bays, Spanin, Yorkßhire, and fome few Gloucefter cloths; long-ells, fhalloons, fays, ferges, Spital fields, Norwich, and Coventry ftuffs of various kinds; printed linens, watered tabbies, filk and worfted flockings, hats, great quantities of Birmingham and Sheffield wares, fome wrought plate, lead, ihot, copper, pewter, tin, coals, corn of all kinds, pulfe, flour, bifcuit, iron, hoops, toys, watches, arms and accoutrements of war, fome cordage, 仿pchandlery articles; and, in fine, almoft every thing produced or made here that is ufeful, and cheaper than in other countries.
From Scotland they have barley, and a little cured ling. From Ireland they receive butter in great quantities, falted beef and pork, falted falmon, and fome ordinary camblets, barley and potatoes.
From Newfoundland, New England, and Nova Scotia, dried cod-filh, and particularly from the former place, in great quantities.
From Carolina, feveral cargoes of rice.
From New York, Philadelphia, Virginia, and Maryland, wheat, flour, Indian corn, bifcuit, pipe-ftaves, bees wax, and lumber.
They alfo buy mof of their commercial chipping from us, fome river built, by order, but moftly of Old or New England conftruction, that have been ufed.
We export from Portugal almoft all the wines that are hipped from their whole dominions, including the weftern illands and Madeira. The fame of lemons and oranges, falt for all our fifheries, and moft of our colonies ufe, in North America; for our filheries in England and Scotland, and to Ireland prodigious quantities for their filheries, exported provifions, and the whole national ufe; dried figs, raifins, almonds, cork, thumac, orchella, citrons, fugars of late, in very great quantities for Ireland, near, if not fufficient, for that king. dom's confumption, and from thence we have heard a great many, when refined, have been run into England; the whole to the great reproach of our colony management, as is alio our traffic there in French fugars. Diamonds, both of Brazil and India, Brazil wood, arrac, and occafionally other Indian commodities, which our fhips fmuggle into many parts of the Britifh dominions; oil when they, have it to fpare, at a reafonable rate; and fometimes cocoa nuts, elephant's teeth, drugs, a few tobaccos and other articles.
N. B. I have not placed their cotton among the exports for any particular country, as hitherto they bave not received great quantities from Marnham, and there are generally bidders upon it of all nations, who fend it to thofe places where it is likely to turn to account, the importation, I think, being prohibited no where.
From this fhort view of the particulars of the Portugal commerce, it is apparent, that the trade of Great-Britain with Portugal, is the leaft burthenfome, and difadvantageous to them of any; that in no article do we enjoy any preference, or receive any favour; but, on the contrary, in the branch of fine cloths, a manifeft injury.
I hall now recommend a few points, fays this judicious patriot merchant, to the immediate confideration of whom they may concern.
And firft, I recommend to fome fubttantial fabricant, or pub-lic-fpirited gentleman, to endeavour in fome place where $\mathrm{l}_{\text {a- }}$ bour is cheap, to fet a manufacture on foot that may rival the Black French Druggets; an article which, if it could be brought to bear, would employ every inhabitant of a confiderable village*.

* Since this worthy gentleman has fuggefted this matter, for the public benefit, I have alfo followed his example, and recommended the fame to one of the moft ingenious matter woollen manufacturers in the kingdom, who refides in a cheap country, and who has affured me, that he will undertake the fame, provided I can furnifh him with patterns of that fpecies of the French manufacture. Wherefore, I muft requeft the favour of this public-fpirited gentleman, to oblige me with patterns of fuch druggets as he would have our manufacturers imitate ; and 1 hope to be able to give him an acceptable account of the fuccefs. with Mr Knapton, Bookfeller, in London.

## New Remarks since the foregoing.

Since the above, I have received patterns of the beforemensioned French druggets, and put them into the hands of certain manufacturers,' in order that trials might be made thereof in our kingdom; and the trial has fucceeded, with refpeat to the quality of the manufacture, but not in price, by every one who has attempted it. . I have been informed, that one of the manufacturers did fucceed at Penryn in CornWALL; and it has been affirmed, that they were made fo cheap, at the commencement of the laft war, as to have been delivered at the Lifbon markets for the fame price that the French do theirs.-But it feems, that it fo fell out, that this branch of manufacture, which would have been attended with great national advantages, has been put a ftop to, and the manufacturer almoft ruined, becaufe he voted according to hie confcience for members of parliament, at the laft general election.
Whether this can be done, fince the encreafe of our taxes, occafioned by the laft war, I have never heard.
Thefe light druggets, commonly called the French druggets, is a kind of cloth greatly efteemed by the Spaniards and Porcugueze, for it's being well worked; though at the fame time thin, light, and cheap. The French were the firft introducers of this manufacture; and are, at this time, the fole venders thereof in the Lifbon and Spanifh markets, to the great detriment of our trade. Thefer druggets are made in France of the beft of the Spanifh or Turkey wool, which are very well prepared and fcribbled; and afterwards fpun nto the fineft yarn that thofe wools will admit of. - When placed in the loom, the chain and filling, or warp and woof, muft be of one quality, and be driven pretty clofe, as this cloth muft not be beat up clofe. after it is wove; (THese Last particulars are what the generality of our British manufacturers have erred in) a yard of this cloth, which is half-ell wide, when finifhed, hauld not weigh above four ounces.
The French fell their druggets at Lifbon from rs. 6d, to 18. 10d, per yard. The French and Dutch fuperfine cloths, which they underfell us with, at the Lifbon and Turkey, and other fouthern markets, are greatly inferior to the fuperfine cloths which are made in England, for lafting ; but this is not the principal quality which the inhabitants of thofe hot countries defire in their cloth... They defire a cloth, which is thin, and light, and of an inferior price to our fuperfine cloth; but, at the fame time it mult be well dyed, and look pleafing to the eye: this is the kind of cloth which the French and Dutch fupply them with, and which our manufacturers cannot be brought to manufacture, becaufe thisy imagine it greatly inferior to our own; but if we expect thofe people fhould buy our goods, we muft fupply them with fuch as are the moft agreeable to them. Both of thofe branches of manufacture may be carried on in feveral parts of this kingdom; and, therefore, if the government would give a bounty for the exportation of thole cloths, for a few years, 'till proper manufactories were eftablifhed, by way of encouragement, and ufe every meafure to annihilate all thofe taxes, will fall the heavieft upon our manufactures, and duly regulate all the poor of the kingdom, we thall. be able to rival, and underfell both the French and Dutch at all the fouthern markets. See our articles, Poor, Taxes.

Secondly, To fome of our northern counties, or to Ireland, I recommend, continues this gentleman, the making the fort of cheefe fent by the Dutch to Lifbon; of which many cargoes go in a year: and I cannot think but in our country, they are to be made cheaper.
Thirdly, To whom it concerns, to fupport and extend our Hat. Trade; chiefly by preventing the fale of beaver to the French, and to encourage the importing of greater quantities of it.
Fourthly, Improving our filk-ftocking bufinels as much as poffible, in point of cheaprefs and quality; particularly in gauze fabriks.

## Of the extraction of gold from Portugal.

I am now, fays this gentleman, to difcufs the interefting point, that has puzzled fo many weak heads; I mean the extriction of gold from Portugal, which has been ever foolifhly reprefented as an immenfe evil to that kingdom, fuffered, however, out of great kindnefs and particular favour to us, as is pretended.
Nothing is more evident, than that gold is, in itfelf, of no other value than for the neceffary and convenient ufes it can be put to. For example, I will fuppofe every Portugueze had his houfe full of that metal, and was at the fame time in want (as he muft be if he would not part with it) of comfortable food and raiment; might he nor, in fuch a cafe, with propriety, be faid, amidft his ufelefs heaps of thining ore, to be miferable, poor, and wietched? What are individuals, or what is a ftate the better for dead and ufelefs piles of wealth ? It certainly might as well be kept under ground,
Vol. II.
as brought above it to no putpofe; nay, it had better be kept there, on fuch principles, than produced to the light; becaufe the care and labour of working the mines would then be avoided.
Should the whole tace of Portugueze fall again into their old penurious, and inelegant methods of life; feed upon pulfe, or other fuch ordinary foods and that in a fparing manner, may, even without cleanlinefs; when their own corn was exbaufted, if they would content themfelves with eating chefnuts inftead of bread, as the poor, in bad years, yet do in the north part of their kingdom; or with the pods of the locuft tree, which often fupply the like wants to this day in Algarve: I fay, if the people of the metropolis and other affluent parts of their kingdom, could condefcend to forego the comforts of grateful food, kick off their thoes and ftockings once more, and make, as in times paft, an ordinary cloak their cloathing by day, and only bed by night, of what value would gold become ? Or, in what fhape could they propofe to make it ferviceable to them? For my part, I fee no other ufe it could pofibly be puf to, than the buying of themfelves, in time of need, a protection obftinately to poffefs a wretched and comfortlefs independence. Whereas, on the contrary, by parting with their gold in commerce to other kingdoms [lee the article Builion], they enjoy, not only the comforts, but elegancies of life; make a refpectful figure in Europe, and are fecure, fingly from Great-Britain (while they are fo wife as to preferve her friend(hip), of a fuller, and fafer protection than they could poffibly buy from the hire of all the mercenary troops upon earth.
That Portugal muft and does pay a great ballance in bullion to every other nation fhe trades with, I hope, has been made apparently, obvious: but if a further proof thereof is wanting, I appeal to the weekly, nay, I may almoft fay daily, practice of our buying bills of exchange for thofe ballances of the feveral countries to whom they are due.
Such debts of Portugal do we purchare, commonly for ready money, in an exchange bafinefs, which feldom gives a profit equal to national intereft, and a decent premium for fea rifques: and yet is a negociation more favourable for us than any other nation, on account of our fituation, and the number of privileged (hips we continually have at Liibon; as. alfo from the fuperior characters of our mercantile navigators, to thofe of Holland and other countries; infomuch that our fhips not only bring the money to England, but are alfo the general carriers of it, for all nations, to Italy. Thus becaufe our fhipping is principally ufed for the extraction of gold, and our country is made greatly a channel for it's conveyance, both the ignorant of Portugal and of Great-Britain imagine the ballance of our commerce with Portugal immenfely greater than it really is; for, as I faid before, England is only a channel for the greateft part of the fpecie'our Chips bring from Portugal; moft of it' going out of the kingdom at her eaftern ports, as furely as it enters at the weftern ones; fo that our gain on the traffic for the payments Portugal makes to many other nations, by the way of England, including freight, commiffion, profit, and charges, may be reafonably eftimated at from two and an half, to three per cent. and no more. Such is the profit for which we do the bufinefs, run the rifques, and bear the odium in Portugal; belonging to other countries.
I cannot quit this head without obferving, that it is exceeding ill policy in Portugal to make the rifque of extracting gold great; becaufe, according to the difficulties, the exchanges will be proportioned more or lefs againft them. And I muft add, if we were not the carriers of any, it would neverthelefs go, and more to the difadvantage of Portugal: for national ballances, like thofe of private people, muft be paid, ought to be fo, and will be, in bullion, let what laws foever be made to hinder it. See Bullion; and Ballancee of Trade.
The Portugueze, therefore; as our friends and well-wifhers, ought, by all means, to preferve to us the advantage of being the carriers of their bullion. Nay, the late king of Portugal did fo , on a patriot principal, after his eyes were once well opened, as they were in Wingfield and Roberts's affair*; for it is well known he ever after difcouraged informations and diligences about the extraction of coin, being well fatiffied of the abfolute neceffity there was for it's going out of his kingdom.

Two Englifh merchants of eminence who were condemned to be hanged in Lifbon for hipping off gold (but not duft, as has been ignorantly imagined), on which his late Britannic Majefty appointed a fieet to be immediately equipped, as was really done; and the very order had it's proper effect, by faving the gentlemen's lives, refforing their effects, and convincing the king of Portugal of his error.

Nothing thews the fenfe and firit of the Britifh court better, in regard to this matter, than the fpeech of the great lord Galway, made in the year 1709, to his late Portugueze Majefty (when that nobleman was general there of the Britifh forces, and ambaffador from queen Anne) on a project then in agitation at the court of Libon, to prevent the extraction of bullion: of which lord Galway having received infor-
mation, he immediately demanded an audience of the king, to whom he ftrongly and elegantly delivered his fenfe on the fubject, in the following manner:

- Your Majefty cannot be fufficiently commended for the fteady attention you have always thewn to the-affairs of your government. And the pains you have lately beftowed on examining into the ballance of trade, is a new proof of that merit which would entitle you to the crown, had it not de--fcended to you from a long and glorious line of royal anceftors. -But permit me, Sire, to oblerve, that there is a greater king; one by whom all kings reign, and whofe providence is over all his works. According to his diftribution of things, riches belong to fome nations, and induftry to others; and by thefe means the liberality of Heaven is made equal to all. Vain, Sire, are all baman councils, when oppofed to his wifdom; and feeble the efforts, even of royal powers, when directed to crofs his will. You have forbid gold to be exported out of your dominions, and you would willingly inforce the probibition: but the thing is impracticable. You may reflrain your fubjects, but you cannot fet bounds to their neceffities. But fay this was poffible: fuppofe you could defeat the induftry of the northern nations; what would be the confequence? Their hufbandmen, graziers, weavers, and all that infinite train of manufacturers that now labour quietly at home, to cloath and feed your fubjects, would then turn foldiers; and, inftead of feeing their marchantmen in Libbon, you would hear of their fleets conveying them to BraziL, to fetch much more of that gold you now fetch for them. Befides, Sire, if they are gainers by their trade, they thereby become the natural guarantees of your dominions. It is not only their treaty, but interefts, that bind them to your fervices. You have potent enemies, and you require powerful friends. The ambition of France knows no bounds, and the pride of Spain will teach her to keep up a perpetual claim to your territories and crown. You have no recourfe to fruPtrate the views and defeat the endeavours of thefe potentates, but to the Maritime Powers; and, therefore, let me befeech your Majefty to confider, that every project to diftrefs them, is, in effect, a fcheme to deftroy your (elf.'
This fpeech had it's defired effect, as fuch fpeeches ever muft have in Portugal ; at leaft while the prefent fyftems of power and politics remain as they are in Europe, or the Portugueze preferve their fenfes, or the governing men their true loyalty to their king, and a generous zeal and patriot love for their country.

## Of the privileges to which the Britifh rubjects in Portugal are entitled by treaty.

Of thefe privileges, many were the fpecial grants (doubtlefs for wife reafons) of feveral of the kings of Portugal in antient times, and were mere acts of grace and favour, 'till the celebration of Cromwell's treaty with Jobn the IVth, when they became our abfolute right, by being declared fuch in the third article thereof.
I fhall now mention the particular articles of privileges at prefent contended for, as well as others that are loft, and fhall fubjoin a fhort obfervation on moft of them.
We will begin with a very neceffary one, which is the right of having juftice duly adminiftered in Portugal : and that certainly ought not to be reckoned a favour in any nation: but it is at prefent too well known to be the cafe in Portugal (and I am afraid has been for many ages paft the cuftom there) to regard perfonal influence more than impartial juftice, in judicial determinations; which, doubtlefs, occafioned the treaty's being fo very full as it is, of regulations on that head.
The office of judge-confervator is our ftipulated right, by the 7 th article of the treaty, whofe province it is to judge all our caufes: but with a right, however, for either party to appeal to a body of judges, who are to give the final fentence within four months : which rule is fo far from being obferved at prefent, that law-fuits may be kept undetermined for forty years. The judge-confervator is, likewife, to protect the fubjects of Great-Britain (not from juftice, but) from wicked or vexatious infults. But that authority, like every other, is now taken from him ; and our merchants of the moft refpectable figure, are thereby fubjected to the infolences of the very meaneft fellows in office, having many of them been carried by fuch (unheard, unexamined) both with and without orders from their fuperiors, to the Newgates and Gatehoufes of the kingdom; and fuffered outrages in their houfes and properties (as we Shall hereafter give examples of) without a polfibility of obtaining reparation, or any fort of fatisfaction whatever ; even after proving the illegality of the proceeding, and the innocence of the infulted perfon.
Let every merchant of Great-Britain, every fubject of thefe kingdoms, think ferioully of fuch a fituation; and never venture mare to pronounce a valuable body of their country-men blameable for foliciting, nay demanding (for it is their right) protection from fuch unjuftifiable violences; or that their judge-confervator may be reftored to his ftipulated authority for that purpofe.
As to the navigation articles for America, they are all become now of no account : our fips are not allowed, unlefs in
diftrefs, to go to any of their colonies, except Mazagam and their Aftican.iflands, and there without preference. The right of having houfes of trade in Brazil, and their other fettlements, is alfo entirely taken from ús.
The right of a legal navigation and commerce to Portugal, with an equitable fecurity of property, particularly in perifhable commodities, and fome of them owing no duties to the king, are ftipulated to be free from all vexatious embaraffments; all of which is agreeable to reafon, juftice, and good policy, for them to allow of; and yet in moft of thofearticles our merchants are eternally plagued with vexatious obftructions and plunderings, of which feveral very extraordinary examples thall be produced.
We have alfo, by ftipulation, a right to the wearing of fuch arms for our defence, as are ufed by the native: an article which I hope is not thought a favour for us to enjoy, becaufe thofe nations who have no treaties with them do the fame, and ought to do it in every country.
The liberty of profeffing our religion, likewife, I bope this nation has too much dignity to receive as a favour from any in Europe, efpecially white the fame indulgence is granted to the people of all countries in Great-Britain.
That debts owing to our merchants by perfons fequeftered by the king or inquifition, fhould be made good to the creditors, is certainly a very reafonable and neceffary ftipulation: yet in regard to the king it is not obferved, in regard to the inquifition it is.
That the king, or any other power, by arbitrary protections, fhall not guard the effects of our debtors from legal executions, is likewife an article of mere juftice, yet it is frequently and wantonly violated.
The not protecting our run-away failors, on a pretence of changing their religion, and the obliging them, when demanded to return to their fhips, is an article now not at all regarded by the Portugueze : on the contrary, they are encouraged in unreafonable and infolent profecution of their captains, feduced from their duty, and fupported in their refiftance; debauched in infamous houfes, where they are encouraged to run in debt; for the payment of which, they are afterwards fold like cattle to the Portugueze and others; fuch practice being abfolutely become a traffic in Lifbon, to the difhonour as well as prejudice of Great-Britain.
The Britigh factory have a right, under the authority of their judge-confervator, to appoint, out of their own body, adminiftrators of the effects of fuch of their countrymen who die without parcners, or inteftate: which is certainly, not only a very reafonable, but very neceffary article, and can be no evil to Portugal.
Our merchants are exempted from hired or perfonal military fervice, as well as their domeftics; and from civil and religious offices, and all church tributes, which in fome points are merely reafonable and agreeable to the practice of all nations : in others, moft neceffary exemptions. They have, moreover, the right of having all neceffaries for their houfes and perfons, and thofe of their families, duty free, but this privilege is now made of little confequence to them. They have likewife, by royal decrees and the laws of the land, the right of being treated as gentlemen, even in the article of criminal profecutions; but it is fo far loft to them, that they are continually, even from wanton infolence, treated as flaves: and they have another privilege, which is that of being puifoners at large for debt.
By the feparate and fecret article, the regulation of Durres on our Woollen Goods is made; but to the manifeft prejudice both of Great-Britain and Portugal, it is, like moft of the others, never regarded.
Such are the Britih privileges in Portugal, and the fubftance of the ftipulations in our favour of the treaty with that crown, which ignorant, perfons have thought full of mighty advantage to this nation: whereas the fact is fo far otherwife, that if they join Charles the IId's treaty, and that of queen Anne to Oliver Cromwell's, and then take a cool view of our fituation, and that of other nations in Portugal, it will be found we are upon much the worft footing with them of any nation, being in nothing favoured in trade, and yet we are the only nation obliged to fuccour and protect them, as we frequently bave done at an immenfe expence.
The treaty made between queen Anne and Peter the IId of Portugal, confifting but of two articles (except the preamble and conclufion) and thofe being hort ones, I thall here give them entire to the public.

## ARTICLE I .

- His facred royal Majefty of Portugal promifes, both in his own name, and that of his fucceflors, to admit for ever hereafter into Portugal, the Woollen Cloths and the reft of the Woollen Manufactures of the Britons, as was accuftomed, 'till they were prohibited by the laws; neverthelefs upon this condition, that is to fay,

ARTICLEII.
That her facred royal Majefly of Great-Britain thall, in her own name, and that of her fucceffors, be obliged, for ever
hereafter, to admit the WINes of the growth of Portugal into Grat-Aritian; to that at no time, whether there thall *be peace of war between the kingdoms of Britain and France, any thing more thall be denmaded fou thefe wines by the naime of cuftent or duty, or by any other title whatfoever, directly or indirectly (whether they fhall be imported into Great-Britain in pipes or hogheads, or other cafks) than What thall be demanded for the like quantity or meafure of French wine, deducting or abating a third part of the cuftom or duty. But if at any time this deduction or abatement of cuftomf, which is to be made as aforefaid, thall in any manner be attempted and prejudiced, it thall be juft and lawful for his Laid royal Majefty of Portugal, again to prohibit the woolen clpthe, and the reft of the Britih woollen manufactares.'
I mult here obferve, that the cloth trade is not the only article to which we have an exclufive right becaufe the treaty mamifefly gives it for Woollen Goods in general; and fuch was the right that we accordingly did enjoy, in it's full and genuine fenfe, 'till the late Dutch conful M. Hefterman, found the means of explaining it away in favour of his nation, who thereupon began introducing Dutch cloths, now increafed to a great trade.-
ge of our
And the French have fince taken the like advantage of our fupinenefs to traffic in cloths to Portugal, though in fecret; and the botter to cover it, their cloths go wiok Eiegish Marks, Tickets, and Package, [to confirm the truth of which, fee the article France, Vall I. page 815] though they are well enough known : and as to any other kinds of French Woollen Goods, they are imported into Portugal openly, and in yery great quantities.
From the fenfe of the treaty, enforced by many years practice, it fhould feem clear, that we have the sole excritsive Right of importing woollen. gpods of all kinds into Portugal; and we are the only nation who gave them an equivalent for that right; the conditions whereqf $f_{2}$ to their advantage, being duly obferved by us, furely demands as honourable an obfervation on their part, of the ftipulations made in our favour; and. I fee no reafon for fuffering ourfelves quietly to be elbowed out of our rightful poffeflions by any intruders whatever.
In regard to our national dignity, weight, and privileges, I have only to add, as a ferious truth, that the Portugueze people laugh, này, cry thame on us, for given them fo tamely and readily up. The French act in all poinis with a quite different firit: they have no Treaty, no Privileges̃, but from fayour; and yet, from being betier fupported, their Merchants gain ground on ours every day.

Of the unjuftifiable treatment that our Britifh mercbants have lately fuftained in Portugal.

Having already explained, that a principal ufe of the confervatorial office is to protect our merchants from oppreffive vexations and perlecutions, I hall now, in proof of the ill confequence of that officer's lofing his power, mention two recent and very extraordinary imprifonments, that our Britifh merchants have fuffered in Portugal.
The firit was of a gentleman, who went on board of an Englifh packet boat, on the morning the was to fail, to take leave of a friend, who was coming in her to England. He had been guilty of no tranfgreffion; yet, on his return to the Shore, he was feized by the officers of a cuftom-houfe boat, and without any legal authority, nay even without carrying him before any magiffrate whatever, he was, by people of no higher account than tide-waiters, huried to the mof ignominious prifon of Litbon, where he remained a confiderable time; and, at laft, from the ftrongeft interceffion of one of the higheft noblemen, both in rank and employment, made to the governing man of the cuftom-houfe; he was, reluctantly, by that officer, fuffered to become a prifoner at large ; and has fince left the kingdom, without receiving an entire releafement, or any fort of Catisfaction for the infult.

* The marquis of Mariabua, captain-general of the forces of Portugal, and matter of the horfe to the king.

The fecond was of a gentieman, who had a barrel of beer depofited under his charge, about which there was a judicial contention; and there happening to leak out of the cafk a trifing quantity of the liquor, the fame head officer of the cuftom-houfe made the leakage a pretence (to gratify a pique) for committing him of a fudden to the common prifon; from whence he, however, foon got releafed, by the interpofition of a * lady of very bigh quality, as no fort of offence could be reafonably alledged in excufe for the violence done him.

- The marchionefs of Goavea, lady to the hereditary lord fteward of the king's houffiald.

Bifcuit is a commodity that pays no duty to the king of Portugal, nor any fees but a few at the cuftom-houle, Yet the fame good director of that office, took it of affudden into his head to infift, that an Englifh merchant, who had then im-
ported a confiderable quantity, fhould pay a duty on it. The merchant difputed the point : a procefs enfued, and the bifcuit was thereby detained in the cuftom-houfe warehoufes 'till it was fpoiled: then the healat-officers feized and condemned it, nay, laid a fine on the merchant for baving bad provifions on hand; whilft his antagonift of the cuftom-houfe notified him at his owa charge, to throw his bifcuit into the river ; which he was forced to comply with, and bas never been able fince ta obtain any kind of redrefs for the wrong.
Alfo a Britilh houfe of geeat figure, that had large warehaufes, at a country-feat they bired about a league above Liibon, on the banks of the river, had a vifitation there by the very meaneft officers of the cuftom-houfe, under a pretence of fearching for fmuggled geods. The family being in town, and only one fervant there, who had not the keys of the warehoufes, on their being demanded to be opened, the officers were told by the fervant that he would fend for his mafters and the keys, as he immediately did : but they infolently, and without legal authority, broke open the doors; and finding nothing to feize, left the warchoufes expofed to plunder, as the gentlemen found them when they arrived; for they went thither directly with their keys, on receiving the notice that was fent them. For this, like all other violences, no fort of fatisfaction could be obtained: and yet if there fellows had carried but a pound of foreign tobacco, fnuff, or foap, or a fingle pack of, foreign cardg, and then fwore they had found them there, this. Britifh houfe of trade would have been confifcated and ruined.
The 17 th article of the treaty exprefsly fays, ${ }^{5}$ If it happens that any controverfy does arife between the faid king's infpectors, officers, or minifters, and the faid merchants, concerning the goodnefs of fifh, or any other forts of proviligon whatfoever, which thall be carried to any of the faid king's dominions; the fame fhall be determilied by the atbitration of 'good men, provided they are Portugueze, who thall be equally chofen by the magiftrate of the place, and the conful of the Englifh nation, and they fhall determine the bufinefs in fuch a manner, that no damage may accrue to the owner in the mean time, while the matter is in difpute,'
Notwithftanding the equitable precautions in this article of the treaty, the health-officers are guilty of fuch arbitrary infolences and plunderings, as are wicked and infamous to the bigheft degree. For example, in the fummer of the year 1752, a great quantity of foreign grain being then at Lifbon, under falfe and ridiculous pretences, they exercifed fach tyrannies as would difgrace, even a Barbary government. They feized on whole warehoufes of corn, fined the owners of it, condemned the grain, and threw confiderable quantities, at the expence of the owners, into the river. . From others they took bribes to be quiet, which was the real end they drove at, and not the fafety of the public; for it is well known the people of that office are capable, for money, of fuffering the very plague to be imported and fold. With fuch proceedings it muft be concluded, all the holders of grain were greatly terrified; infomuch that the prices of wheat, and efpecially the Englih (which is not fo fit for keeping as Straights grain at any time, and was that year, from a wet harveft, of an inferior quality) fell 50,60 , nay 70 per cent. in price; fo'that the whole Britifh commerce did not lofe lefs that fummer than $50,000 \mathrm{l}$. fterling, befides the fums given in bribes to thofe harpies the health-officers,
On that occafion, the whole Portugueze nation cried fhame on fuch proceedings! However, the fooilers found protection, the merchants were plundered without redrefs, and the dealers in Englifh grain fuffered more in proportion than any others. I muft here beg leave to inftance one barbarous act of their wanton tyranny, which was as follows:
Two Englih houres, who had a great deal of our country wheat on hand, finding their corn begin to fuffer in quality, from the hot weather and weavel, joined together in a petition to the health-office, for leave to hip it off, under bondfecurity for producing certificates of it's being landed in other countries; which petition was rejected, under the unwarrantable and improbable pretence, that they might convey it to other parts of Portugal, and obtain forged certificates to cover the fraud :" whilft their real motive for the refufal was, not to let a commodity get out of their power, which they had hopes of fqueezing gains from. And, as a proof of the iniquity of this proceeding, I can aver, that the corn was afterwards fold for making bread at Lifbon; alfo, that it made very good bread; and yet it was embarraffed in it's fales by the health-officers, to the great lofs of thofe who bad fued for a juft and reafonable right, and swere refufed it. The hard impofitions that even attend the unlading of corn on it's arrival at Lifbon, can be vouched for by almoft every mafter of a flip that ufes the trade. It muft be eafily conceived, that hardly any cargo of corn can be navigated without recciving fome little damage, either from heating, or water made by the fhip on her paffage. The firft kind of prejudice is always removed by care in the warehoufe, after it is larided ; and for the fecond, any corn damaged by faltwater, it has been cuftomery to fell for what it might be found worth, to feed hogs or orter animals with; for corn can hardly be fo bad, as not to ferve well for fome neceffary
ufe. Yet the health-officers have been fo tyrannical of late, as to throw into the river great quantities of grain but little damaged, and fometimes when it was not at all fo, merely to extort iniquitous fees for themfelves.
It was not long ago that a merchant had a cargo of corn configned to him, fome of which was fpoiled by the fhip's making water on the voyage; when he heard of it, he ordered the damaged wheat to be thrown overboard : no, fays the healthofficer, there muft be a diligence done, and fees paid : the gentleman replied, there was no neceffity for any fuch diligence, fince all he could do was to caufe the corn to be thrown away, and he did not want to preferve it: but his remonftrances were in vain, for the pickpocket innovation was infifted on.
Such were the tranfactions in the corn trade, in the year 1752; and in the laft fummer, which was the following one, another game was played equally tyrannical and unjuft: the harvelt bad failed in Spain, and the crop alfo proved very thort in Portugal : however, in the latter kingdom there was a very confiderable ftock of foreign grain on hand; and, though the price of it was raifed, yet the merchants werrt on felling it in their ufual manner, without any combination, fraud, or i)l practice in their proceedings. They were not molefted for a confiderable time, that orders might be given for buying up farther great quantities, as was actually done, for a future fupply: but in the month of Auguft, juft the dangerous time for embarraffments to the flock. on hand, mifreprefentations having been made, out comes a Royal Ordination to circumfrribe and impede the fales of grain; nay, in effect, to take it, in that critical feafon, out of the proprietors hands; or at lealt, putting it out of their power to ufe the proper means for it's prefervation, thereby expofing many people to ruin : nay more, they were made liable to a treat ment due only to the vileft of felons, and that, even without the power of being heard in their own defence, for the order exprefsly directed the prefident of the corn-market to take out fecret informations concerning all tranfgreffors of it, and tranfmit them to the fecretary of ate, for the king to determine the punifmment in his clofet.
Down falls corn on this proceeding, 25 per cent. in it's prices, which might make the difference of near another 50,000 . fterling on the year's trade; befides the danger to the merchants (from falle informations) of fequeftration, corporal punifbment, and banihment from the kingdom; all againft the force of judicial determination, as well as reafon and cuftom; and alfo againft the fanction of a NATIONAL Treaty, in the roth article of which there is this ftipulation: 'And the people of this republic (England) may free-- ly carry arms, corn, filh, and all other forts of merchandize, into the kingdom, ports, and territories of the king - of Portugal, and fell the fame at their pleafure, either by - Retail or Wholesale, to any Person whatso-- ever, and for whatever prices they can get; AND THEY ' shall not be prohibited, circumscribed, or incapacitated, by his said Royal Majesty, or - his Ministere, Governors, Farmers of the Ref venues, or Monopolies, or by any Chamber or ' Jurisdiction of any Tribunal, either public ' or private.'
Such were the fecurities under which the merchants had fent for the corn, about which they were treated as before defcribed. 'I have now only to add on the fubject, that foreign grain is, by the very laws of the kingdom, a free trade; owing no kind of duty to the king, nor any fee whatever to his officers, except a trifte for any entry at the corn-table; and, therefore, there was no lawful plea for caufing the prejudices our merchants were made to fuffer, or the very alarming dangers to which they were fo arbitrarily expofed.

The Portugueze unjuftifiable treatment of the Britifh merchants in other refpects.

Part of the feparate or fecret article of the treaty between England and Portugal begins thus: 'That the people and - inbabitants of England, trading (as has been already men6 tioned) in the kingdoms, dominions, ports, and territories 6 of the faid king, fhall not pay more duties and taxes, but ' only in the manner following, viz. That the Englifh goods, - merchandize, and manufactures, thall never exceed 23 per - cent. on their valuation, for the payment of the Duties ; - and they fhall be favourably VALUED, according to the - reg:men (or book of rates) of the cuftom-houle, and the 6 ancient laws of the kingdom; and fuppofe there fhould be ' any motive for raifing the valuation, by reaton of a rife in - the real value of goods and merchandize, it fball not be - done but by the confent, and in the prefence of two Englifh - merchants, who refide and dwell in Portugal, and are cho-- fen by the Englifh conful; and, granting that the mer-- chandize fhould fall from it's prefent or future exact value, ' the valuation and doubt fhall be determined by difinterefted - perfons, who thall be chofen by the Englifh conful and the ' officers of the cuftom-houre.'
Such are the flipulations by treaty for regulating the duties on our Britifh manufactures in Portugal ; but thefe are at pre-
rent as little attended to in that kingdom as the reft, to ou manifelt injury, and indeed to that of the Portugueze alfo. The great article of Crapes, which, as before obferved, we have now loft, was a commodity that paid a moft enormous duty: and at prefent, Long Elis and Shalioons, and fome other fort of ftuffs, pay from 28 to 30 , and even upwards per cent. Duties on their valuation. The confequences of which are, that thefe branches greatly decline, and moft of the traffic in them becomes clandeftine, to the great prejudice of the fair traders, and alfo of the royal revenue of Portugal. Befides, Spain lies fo very convenient for fmuggling in her cheap and ftrong filks, that, if not timely checked, they muft infallibly undermine a very great part of our ftuff-trade to Portugal, which can only be preferved by a better and jufter regulation of the duties thefe goods are to pay.
It has become a practice of late for the provedors, or chief officers of the cuftom-houfe, to act in fo capricious and tyrannical a manner, that our merchants can make no certain calculations on hardly any thing they deal in, notwithftanding there is a printed Book of Rates*; and there are allo certain officers in the cuftom-houfe, whofe fole bufinefs is to affert the qualities of merchandize; but their determinations are no farther attended to, than as the fuperior pleafes. I fhall furnifh two inftances, out of hundreds that might be produced, of his overbearing and arbitrary management.

* Let any foreign merchant fuppofe this to be the cafe in England, upon what a precarious footing would he fend the commodities of other countries hither? Were not the duties upon the Portugal wines duly alcertained here, and the treaty in this cafe inviolably regarded, what would foon become of the vintages in Portugal ? If we fhould be obliged to retaliate in the like manner upon the Portugueze, they would foon feel the calamitous effects of our re. fentment.

The firft was of fome Englifh cloths, of a quality often imported by the gentleman thofe belonged to. The valuers of the goods put them at their ufual rate, the director of the cuftom-houfe infifted they fhould pay according to another. The owner remonftrated on the injuftice of fuch a demand : every valuer in the cuftom-houfe peremptorily afferted they could not poffibly have an higher eftimation than their ond one given, without a manifeft injury to the merchant; yet the chief officer perfifted in his demand. The merchant appealed to the higher tribunals, his cloths lying all the while (I believe near a twelvemonth) open in the cuftom-houfe, but could obtain no redrefs, and was forced to fubmit to the impofition.
The fecond inftance I hall produce was concerning printed linens. One Englifh houfe difpatched in the beginning of a week, fome cales of them, at the ufual rate of paying duties for fuch goods, which had always been regular and certain: about the middle of the fame week, another Englifh houfe fent to difpatch fome cafes of the very fame goods, both for kinds and qualities, and the valuers declared the rates for them to be as usual. But Mr chief direCtor peremptorily infifted they fhould pay more than CENT. PER CENT, higher duties. The owner remonftrated, but in vain ; he was obliged to pay the unreafonable exaction; nay, the duties were afterwards raifed greatly higher. When that gentleman reproached the cuftom-houfe valuers for the impofition, thinking it was their fault, the poor men fhrugged up their fhouldders, and thaking their heads, replied, "What, Sir, would you have us to do? We are as badly ufed as yourfelf. Since - T- came over bere and did nothing, you mult look upon yourfelves as given into the hands of this man, as we are, for him to do what he pleafes with.'
Such capricious and unreafonable exactions, made without any the leaft previous notice, deftroy all calculation, and render uncertain every rule by which merchants can, and do regulate their proceedings ; and, therefore, are acts of the moft barbarous oppreffion and injuftice.
Such were the violences and injuries, that have, from time to time, created uneafinefs in the minds of our merchants at Lifbon; and, as they were contrary to ftipulated regulations, they were certainly ftronger grounds for complaint.
Our merchants were, upon too good grounds, put under an extraordinary apprebenfion fome time ago. A method was taken to quiet their fears on that head, which effectually did it. They were, however, at the fame time, promifed their grievances fhould alfo be redreffed, and their juft privileges reftored: but what has been the event thereof? Reader, thou fhalt be impartially informed; for the following novelties have happened within the two years laft paft.
Ift, The few remaining powers of our judge-confervator, for protecting the Britifh merchants, have been entirely taken away, by a public printed decree of his moft faithful Majelty's.
2dly, Our corn trade has been made ten times more precarious, and the perfons and fortunes of our merchants rendered unfafe, from the worft and moft arbitrary violences, warranted by a written ordination of the king of Portugal's, which was ftuck upon the doors of the corn-matket in

Lifion: it's whole tenor expressly contrary to the Ioth article of the treaty; which they now fo effectually annul, as to difpatéh no petition about corn, in which a right from that treaty is claimed.*

* By petitions all kinds of applications are made to every office, and all legal procefies are likewife formed upon them.

3 dly , By a decree of the king of Portugal's, in favour of that righteous officer called the provedor of the cuftomhoufe, all cales, wrappers, barrels, and package whatfoever, are made his due, of any merchandize, imported into Portugal, and may be taken by him in fpecie if he pleafes. A moft unjuft ordination, as well as enormous tax ! for the paciage is certainly as much the merchant's, as the goods it contains; and, in fome cales, fach as butter, rice, and flour, for example, cannot belfeparated. In thort, never was there a law to unvealonable, or fo unjuft. That officer's chief pay arofe formerly on a duty only on package, which the kings of Portugal might have fome grounds for exacting, as it was a light charge to the merchants; but henceforward it may be made, what an arbitrary officer pleafes: though, in fact, we ought to pay no fort of duty on package, as by a decree of king Emanuel's, (now incorporated with our rights) we are entitled to import, free of duties, canvas, wrappers, bags, and other neceffaries far carrying on our bufinefs, provided they are for ourufe, and not for fale. ,
4thly, The infecurity of the perfons and fortunes of our merchants, from the before-mentioned corn ordination, well deferves the attention of Great-Britain.
The enumerating of thefe facts are the beft and fulleft vindication of our merchants at Libbon, that can, or need to be given for their proceedings, in appealing to their fovereign (through the proper channel of his miniftry) for his royal fupport and protection. They are well known to have hearts filled with zeal, loyalty, duty and affection for their king, and a becoming refpect for all who are in authority under him: but they would no longer deferve the name of Britons, if they acted in a manner fo unbecoming of themfelves, as to forget that juftice is their due, and legal liberty their birthright. There never was a more falle and injurious opinion propagated, than that out merchants at Liftoon are either factious, turbulent, or unreafonable; they are not fo, but the reverfe: and as their caule is juft, they trult it muft prevail.

Of other difadvantages under which the Britifh traders in Portugal labour.

The firf we chall name, is the prejudice which bigotry inIpires them with againit us, on account of our religion. It muft be acknowleged, to the great honour of the Portugueze, that all orders of them are very civil to foreigners, and the better fort are particularly polite: but ftill they are rigid Roman Catholics, with whom it is a neceffary point of faith, to think too feverely of thofe who differ from them in religious principles. And although there are many of the nation who are very obliging in their carriage, nay; that do many kind and friendly actions for our Proteftant merchants; yet it is not to be doubted but the very beft of them would like us ftill better, if we profeffed the fame tenets with themSelyes : and there are others, no doubt, whoefteem it a merit to bate us; and who think it a much lefs crime to deceive, over-reach, and defraud us, than any fuch as are of their own Church. Befides, the difference in religion does in a great meafure prevent a free intercourle with them; and hinders our having that intereft with the clergy, in particular, which is often of very great fervice to the Roman Catholic merchants of other countries.
The next difadrantage our countrymen labour under, is that of having too often improper, or encapable c-—s. For example, what fervice can any man be of, in that office, who goes over advanced in years, unacquainted with the laws, language, and cuftoms of the country, and is withal, totally ignorant of commerce ? 'Such a man, at beft, can be of no ufe to the merchants; and if to the want of thefe neceffary qualifications, are to be joined the poffeffion of fome bad ones, fuch as $\mathrm{p} \cdots \mathrm{de}$, ind $\cdots \mathrm{ce}$, ob-- $\mathrm{n}-\mathrm{y}$, or $\mathrm{p}-\mathrm{rv} \cdots \mathrm{min}-\mathrm{fs}$, he is fure to do them infinate differvice; of which having really happened feveral times, numberlefs inftances can be given. Whereas, other nations have the moft able and experienced refident traders appointed to that office [fee our article Consul]; men, who have been of the profeffion themfelves, Will certainly feel, as well as know how to act, for the merchants. And if the national end is to appoint a conful for the fervice of commerce, and the fame to be the motive for the merchants paying for his lupport, both are difappointed, both are wronged, by the nomination of any man, who wants affability, affiduity, or abilities: and what, alas I muft be the cafe, when all thefe, and many more neceffary, qualifications are wanting ?
The factory of Lifbon had formerly the indulgence of chufing and recommending a conful; but foolifhly refigned it, to prevent animofities from growing up among themfelves;
Vol. II.

## POR

and there are perfons yet on the foot who figned the letter for that purpofe. Fatal refignation! for thereby, the office is now fallen, amongft thoulands of others, to be fquabbled for by people who regard it for nothing but for it's profits; and who, without confidering confequences, think of little elfe but making the poft as eafy as it is profitable to them. Now, rightly confidered, I believe it will appear, there is no power. can legally oblige one Briton to pay money to another, without an'act of the leginature to authorize it: and therefore confulage can be confidered onl'y as a voluntary gratification for fatisfactory fervices; confequently the merchants have a right to demand reafonable and proper fervices; or refufe paying aty conful his appointments; efpecially if it is made a refolution of the majority of their body. But as this is a point of law, any able practitioner would greatly oblige the world by impartially difcuffing it, as a matter in which the profperity of commerce, and the rights of the fubject, are greatly interefted.
To the ill execution of the c---r o---ce muff be added, that our countrymen labour fometimes under the difadvantage of having the $m \cdots-1$ functions too, as badly performed. It is well known, that in Portugal, firit and dignity in a minifter, are very effential qualities for preferving a national refpect, as, the certain confequences of an abject, mean, or pofillanimous behavour; are it's being flighted, defpifed, and trampled on. "I will fuppofe, for example; that if our nation Chould be fo unfortunate, at any time, as to have a minifter at that court, who, in the face of fo very proud a people, could be fo mean as to trade, nay, fo indifcreet, as even to let his name appear at the head of a compofition in a bankruptcy, what figure can it be thought he could make? And how little muft he of neceffity be refpected, either by the natives or his own countrymen? Nay, I will carry my fuppofition farther, and imagine a Proteftant merchant of our factory, profecuted without a crime, fhould apply to him, by the direction of the body of merchants, for bis protection, and fhould receive from him this anfwer, ' I cannot protect you, I come hither for other purpofes; if you want protection YOU MUST GO TO A Convent for it.' I fay, if fuch a thing as this could poffibly happen, what opinion would Portugal have of GreatBritain? How would our merchants there look? How would they be treated by the very meaneft of that people? And how long, after fuch a difgrace, could Portugal be tolerable to 2 Briton?
A noble negociator, that, not an age ago, left Lifbon, on terms bad enough with his countrymen, had, (notwithftanding his piques) the wifdom and honour to deliver his true fentiments on the very evening of his departure from thence, in or near the following words: 'Well, after all, the trade of this place is of great confequence to Great-Britain ; and there ought to beid Minister here of illuftrous birth, with 2 high character, and large appointments (nor is the beft nobeman in the kingdom too great for the office) to fupport properly the dignity of the crown, and the rights of the nation. And there ought to be a CoNsul of fufficient abilities, who fhould be a merchant ; one that could obtain weight and influence in the tribunals of the kingdom, and do all the under parts of bufinefs, without troubling the minifter, who ought never to appear but in matters of real importance ; and, when he does move, he fhould have fuch powers as to enable him to act with great weight and dignity: and fo I will inform the miniftry when I get to London.?
It is to be hoped that fo wife and neceflary an information was given ; and that, to this nation's great benefit as well as honour, a time will come for carrying fuch prudent counfel into execution.
Were, therefore, the national difadvantages of having bad c-----s, and improper m---ft--s prevented by wife determination here, moft others would thereby be greatly weakened, if not entirely removed. Even the firf I mentioned; their prejudice againft us, on the fcore of religion, would a good deal be blunted, or at leaft many of it's bad effects removed, by a glare of grandeur on one hand, and a fteady, wife, and prudent conduct on the other ; efpecially if attended with affability, liberality, and politenefs. But from the reverfe of thefe qualities, either in minifters or confuls, I am fure all honeft and wotthy merchants of Great-Britain will join me in faying, Good Lord deliver us!

Of the late mifunderfandings, faid to have arofe between the Britilh factory, and the B--h $\mathrm{c} \rightarrow-\mathrm{l}$ in Portugal, and the ill confequences attending their unhappy differences.
The $\mathrm{B}-\mathrm{fh} \mathrm{c}-1$, in a public debate at a factory-meeting, oppofing the whole body of merchants, in points of great concern to the nation, as well as themfelves, was fo raih as to fay, that 'the treaty exifting betwixt the two crowns, could not, nor ought to, prevent the king of Portugal from making what Jaws he pleafed in contradiction to it, in his own kingdom.' To which a merchant, deeply interefted in point of property in the matter debated, faid, in his reply, ${ }^{\circ}$ Sir, if you wilfully facrifice the rights of the nation, you will be a traitor to your king, and an enemy to your country.' There was no explanation demanded of thefe words, conformable

6 T
to the praciice of all public affemblies; nor, indeed, was any explanation necellary, as the words if, and will be, made it clearly a fuppoled cafe. What followed was, that this officer, whole exprefs duty it was to protect his fellow-fubjects from extra judicial violences, applied to the arm of a foreign abfolute power, to punifh a fuppofed offender for what had paffed in a Britifh national affembly, and of which that court had no fort of right to take any cognizance.
A fecret procefs was formed; the merchant who never was judicially accufed, or, of courfe, allowed to make his defence, was banifhed (of a fudden and unexpectedly) from his houfe, at twenty four hours warning, and from the kingdom of Portugal in five days: nor could then obtain the jultice of being beard for himfelf, or even of making a written reprefentation againft fo violent an outrage. Thefe are the facts that have been told, and moft of them given in a printed narrative of the affair; and the truth of them is vouched for by every one acquainted with the proceedings. The whole of which are fo uncommon, fo unjuftifiable, in refpect to the merchant's banifiment, that hiftory does not furnifh a precedent of the kind.
As to the fuppofed crime, what was it? A warm expreffion, uttered in the heat of an entirely legal public debate; and that too, in reply to fuch a one as may, perhaps, be found to merit a moft weighty cenfure. Is not every fpeaker on public affairs liable, from human frailty, to fay more offenfive things than were uttered by this man? Who, it is to be alfo obferved, was not, on the occafion, an officious, idle babbler; but a fpeaker in behalf of his king, his country, of commerce, of the whole community prefent, of his own immediate property, and that of his friends entrufted to his care, in a foreign country.
In fo very interefting a caufe, if he had made a real rafh flip, what did it, what could it deferve more than a reprehenfion? And even that, a gentle and polite one? But for a c--l, for fuch an offence, to drive a man to ruin, ignominy, banifhment, and expofe, he cared not whom befides, to inconveniencies and prejudices, was furely acting fo wild, fo outrageous a part, as muft ftartle and thudder every humane and honeft man to hear of. Can there be produced, from amongt the ableft and cooleft feakers in public debates, hardly a man who bas not been fo much off his guard, as, on fome occafions, to let words fall from his tongue, that drew on him the difapprobation of his hearers? Nay, that even himfelf has not been afterwards forry for having uttered? Sure I am, that many inftances can be given, on the affirmative fide, of men who were even celebrated for an uncommon command of their tempers.
The mifchiefs that followed the outrage done to this man, are many of them known, and others may be mot reafonably fuppofed. It is nor, therefore, a mere reftoration, however honourable, that is fatisfaction fufficient, either to him or his houfe of trade: they ought, likewile, to have a full indemnification, a moft ample reparation; the voice of equity, the common practice of courts of judicature, the fafety of commerce, and the honour of the nation, all demand it.
When a gentleman has been prejudiced in his affairs, and others in theirs through him, is it fatisfaction fufficient, that, after a tedious time of fuffering, the illegal and unjuttifiable embarraflments and evils are merely removed? Surely no: an boneft jury, in any court of juftice, could not do otherwife than award very high damages; and every man, making the cafe fairly his own, would think they were undoubtedly his due.
But it may be faid, juftice is left open againft the offender; who, I mult fay, may, or may not be able to be refponfible for the determination; nor do I think it ought to be put on that iffue : thofe who put him in the way of doing fuch mifchief, or thofe who fo unwarrantably did it at his inftigation, ought in confcience, in juftice, in honour, to ftand in his place for the indemnification.

Of fome other difadvantages, under which our Portugal mer-
chants have laboured of late years. chants have laboured of late years.
Among the many particulars relating to our Portugal commerce, which bave lately appeared in public, it has been a matter of furprize, to find that no one has wrote upon the fubject of the money loft by our merchants, from on board the prince Frederick packet-boat, which was feized on her homeward voyage from Lifbon by the Algerines, feven years ago, carried into their port, and there plundered, under pretence of her not having a proper pafs on board for her protection:
The king's colours, which thofe packet-boats are authorized to carry, were always thought, 'till that time, a fufficient protection'; and the money put on board that veffel by our merchants, was thipped on a full perfuafion that fuch colours were a full fecurity againot the plunderings of the Barbary corfairs: however, it bas proved to be ocherwife; for their money has been feized, divided, and is irrecoverably loft.
Nothing can be more evident, than that the Moorih pleas, urged in defence of this piece of roguery, were all chicanery; trumped up pretences, and temporary evafions of truth,
reafon and juftice; however, they ferved their turn, in merely furnifhing excufes for keeping of our money; which we thought not worth hazarding the fafety of our navigation to quarrel about, and therefore accepted of their propofed expedient of making a new, and more explanatory treaty, which has been done; and the money, fo unwarrantably, feized, was accepted in lieu of a national prefent, which it is cuftomary for us to make on fuch occafions.
Had no treaty been made, or any other national benefit ac crued from this unwarrantable action, as the treafure was taken from under the king's colours, it is but reafonable that the royal revenue fhould be charged with the lofs, fince the prefents to the piratical ftates muft have been made out of that revenue. For if, as a new treaty has been obtained, for the fuller feciurity of refpect to our flag, and fafety of our mercantile navigation, which that money has exprefsly paid for, there can be no juft reafon affigned, why a Public benefit thould be purchafed by Individuals; and therefore it is an high injuftice, that the money mentioned, has not been repaid to the juft proprietors of it long ago.
If any man's abfolute property, of what kind foever, is made fubfervient to public utility, by an application of any fort, contrary to his own free difpofition, it has been the invariable practice of parliament (or the crown, if done on an emergency) to affign an ample equivalent for the appropriation they take upon them to make. And, therefore, as on the concluding of a national treaty with the Algerines, it is cuftomary to make them an expenfive prefent; and they, fenfible of the illegality of this capture, agreed, on the making of a treaty, that it fhould ftand in the place of fuch a gift; certainly the people, whofe property that treafure was, ought to have it made good to them again, and without delay; honour and juftice demand it chould be done: and no man, no minifter, who would be thought to have the intereft of trade at heart, ought, for his own credit, or the national honour, to evade or obftruct fo clear and neceflary an act of juftice.
And it muft be obferved, that public faith and honour were never more neceffary to be fet in a confpicuous light, than at prefent, when the French are faid to be attacking our diftant colonies, and where, for the prefervation of them, it may be neceffary that particulars thould have ftrong grounds to rely on public honour and juftice, for the voluntary difburfements and fervices that may be of the higheft confequence for them to contribute ; more efpecially fo, fince in thofe very parts of the world, there were, but a very few years ago, many too juft and well-grounded complaints for hard treatment, in proceedings of the utmoft fervice and importance to this nation.
Befides what has been reprefented, in relation to the conduct of the Portugueze towards our Britilh trading fubjects in general, they have begun, like fome other of their neighbournation, to feduce our people into their commercial fyftem, in order ftill more to infult and maltreat that kingdom which has been their protection. For by late authentic accounts from Lilbon, it appears, that the new East-India CompaNY eftablifhed there, are indefatigable in rendering their trade fuccefsful. Not long fince five of the thips fitted out for that fervice, failed from thence under the conduct of Mr Stevens, who was a lieutenant in the Britifh navy. He was fent from thence to London, to procure perfons to go as captains, and returned with three, who are alfo fent out commanders, upon their being frongly recommended for their great fkill in navigation, and their knowlege of the country. And their falaries, which are very confiderable, are to be paid by English factors, who are principals in this undertaking, and agents for the company.
Nor are Britilh factors only employed in this Portugueze undertaking, but it is very currently faid and believed, that Britifh captains, Britifh failors, and Britifh money, are all employed in advancing the Portugueze Ealt-India traffic, a confiderable part of which returns, may very probably be fmuggled into the Britifh dominions. Is it not frange infatuation, that Britons fhould thus encourage a nation in their trade, at the very time fuch nation is attempting to ruin that of our own country ? Is it not requifite, that frict inquifition into thismatter fhould be made on our fide ? Should not enquiry be made, who invited Mr S-----s to Libion? Under whole patronage did he live there? From whom did he receive his credit on England, when he came laft hither? On whom was that credit given? What are become of the Britifh failors who navigated the two fhips from London to Lifbon, called the King and Queen of Porcugal, that were built here for the Portugueze India trade? Who are the Britilh factors gone from Lifbon in the Portugueze fervice? To what houfes of trade there did they belong? What connections have they with any partners in fuch Britifh houfes; and what are the conditions and obligations of their engagements? Will the alluring away our failors, our merchants, and our money, by fome nations; and our manufacturers, artizans, and hipbuilders, by others, tend to the advancement of the Britith trade and navigation? If we have it not in our power to re taliate upon the Portugueze, will not our laws call Britifh fubjects to account for practices fo highly detrimental to the

## POR

national commerce of our own country? Was the conduct of the Portugueze towards this kiggdom, as unexceptionable as it ought to be, practices of this kind foould by no means be connived at among ourfelves:- but when it is otherwife, too much rigour and feverity, confiftent with the laws, cannot be ufed to fupprefs evils of this kind, fur if they are fuffered with impunity, in tegard to one nation, will not our wn fubjects follow the like example in refpect to others? Will not an unreftrained toleration of this nature, render the fkill and ingenuity, as well as the capital ftocks, of our Britifh merthants, fubfervient to the aggrandizement of the commerce of other nations inftead of our own, under which they are protected ?
Did all the Portugal gold that temporarily circulates in this Dation, proceed from the advantageous ballance of our trade with that kingdom, it would, even in fuch cafe, be a high indignity to Great-Britain to fuffer fuch treatmentit as our merchants have met with in Portugal. Would not this be the natural ftep to bring us into irrecoverable contempt and ignominy, without due refentment ; and would not that foon reduce the bullance of trade, as well as fink the honour and glory of the Britifh nation? But when nine tenths of the Portugal gold that makes it's appearance among us occafionally, belong to other countries, and England only is the carrier thereof, and the bridge over which it paffess to pay the ballances due from Portugal to other nations, that are greater gainers by her, what oblightion is there on us to bear with the leaft infult? Where is the nation that takes fo much of their wines and their fruit as Great-Britain does? What ftate is more highly favouted in the duties laid upon their productions imported into thefe kingdonis, than Portugil? Is not an hundred pounds worth of our woollen goods worth an hundred pounds worth of their wine, without a pipe of which we can eafily do, and yet not drink worfe in quality, or lefs in quantity, as I will one day attempt to demonftrate? And what nation will they then get to take their luxuries off their bands, in the like proportion that Great-Britain does? Is not a thou fand pounds worth of our lead or our tin worth a thouffind pounds worth of their gold? Cannot Great-Britain, find the way to the Brazils as well as the Portugueze, as lord Galway, in effect, gallantly told the late kitg "of Portugal : and as his late Majeity king George had refolution and magnanimity enough to threaten to fend a fleet to bombard the city of Lifbon, may not that be one day done in reality; if that nation fhould once dare to rouze that lion againft them, who has been their great fafety and protection? What potentate have the Portugueze to depend upon, in cafe of need, except Great-Britain ?, and does wifdom and policy dictate to them to ill treat their befr-and tried friends !
The natural and dangerous enemy of Portugal is Spain ; for as the acquifition of that kingdom would be of fuch infinite confequence in the points of eafe, convenience, and power, to the Spaniards, the Portugueze would be blind and igno rant indeed, not to fuppofe their ambitious neighbours would mifs no opportunity, on any pretence, for feizing on their country. And that fuch an apprehenfion does always exift in Portugal; is evident from the alarms conftantly taken on any movements or augmentations of troops on the Spanilh frontier The antipathy and hereditary hatred the people of thofe kingdoms have for each other (putting the Gallicians out of the cafe) are moft extremely obvious and ftrong. From traditions of former fufferings, and a dread of future 'ones, the Portugueze even abhor Spaniards; they confider them as having been the unwarrantable feizers of their country, and the tyrannical ruiners of it afterwards, to make the acquifition fecure : while, on the other fide, it may be faid as vioent a prejudice operates, and almoft to an equal degree. The proud Spaniards confider the Portugueze as a province of rebellious and revolted llaves, whom they want to thake their whips at, and conftrain to a fervile obedience, but cannot ; they affect to defpife the Portugueze, but, in the manner of expreffing their contempt, always manifeft an anger, that thews they are moft fenfibly hurt. Such is the animofity that reigns now, and has for ages reigned betwixt thefe nations ; nor is there the leaft likelihood of an abatement of it, but, on the contrary, rather an increafe : for if the prefent mof Catholic king dies without iffue, his fucceffor brings in the neighbourhood of Portugal a fpecious claim to it's dominions, in right of his mother, heirefs of the houfe of Parma, and, by direft defcent, reprefentative of an elder daughter of king Emanuel's of Portugal, than her from whom the houfe of Braganza inherit the throne. And, as a proof that the king of the Two Sicilies is not infenfible of his claim, he wears the arms of Portugal, in an efcutcheon of pretence, on his other royal bearings, if I greatly miftake not, even on his very coin: and, therefore, it is probable neither he or his defcendants will ever think they are in confcience obliged to acquiefce in the determination of the law of *Lamego, or the nobility's choice at the reftoration of Portugal, efpecially if any favourable opportunity for the exertion of power hould offer.

* An ancient and fundamental law of the kingdom, by which
it is determined the crown cannot be inherited by a prince

## POR

born out of the kingdom; but that laws in other particus lars, has been frequently violated.

To fuch an unlucky and difagreeable fituation as this, a new and important affair has happened, which puts Portugal under great difficulties with regard to Spain, and that is, the treaty concluded between his late moft faithful Majefty and the prefent Spanifh king, for the former giving up Nova Colonia to the latter, in exchange for other fpecified territories in South America," An adjuftment fo difadvantageous, and even dangerous to Portugal, that every fubject of that king dom fpeaks of the negociation in the harfheff terms, faying it was an impofition on their king, in his very infirm ftate of mind and body. However, the treaty having been ratified in form; the Spanilh court claims it's being duly executed and Portugat would be put to hard fhifss for evafion, did not, by great good luck, the Jefuits intrigue in their favour : thofe pious fathers, not chufing any other European neighbour too near their own valuable poffeffions in America, have firred up the natives of that country ceded to Portugal to oppofe the furrender of'it; and they accordingly profefs a voluntary obedience to the Jefuits, and refufe it to the king of Spain ; while the Portugueze, it may be concluded, fecretly encourage the oppofition, as in the mean time they remain poffeffors of Nova Coloria, and hope, in the end, to overfet the treaty; all which management muft be plainly feen, and the purpofes underftood by the court of Spain, who feem, on their fide, determined to carry their point. Thefe are the affairs that have occafioned alarms of late in Portugal, from the military motions and reiaforcements on the Spanifh frontiers. This having made appear that Portugal does, and always muft, want a powerful ally for her fupport, it is next to be confidered who, of all her European neighbours, is the beft able, and moft to be depended on, for that purpofe.

## Of the dependency of Portugal on Great-Britain.

France has had, fince the treaty of Utrecht, and pofibly may have for many ages to come, a moft clofe, but unnatural connection with Spain; I call it unnatural in regard to intereft and commerce, for in thefe points Spain has been greatly and manifeflly injured, by the national advantages having been made fubfervient to the mere family ties, as well as partial ambition of it's fovereigns. The Spaniards, notwithftanding they are become fuch paffive vaffals, as, in refpect to their crown, to glory in being obedient flaves, are not infenfible that their French alliance is hurtful to them, and allo, that their nation is not truly interefted in providing dominions for the collateral branches of their royal family, or in extending fuch foreign poffefions at any price: a humour, however, that France will probably find her account by encouraging at the court of Madrid: $:$ but in the purfuit the muft tread warily, for the connection of the nations can never be other than a minifterial one, that of a royal relationfhip, or the vanity of the Bourbon houfe: for, as I faid above, the fubjects of Spain do not think fuch an alliance for the national intereft or honour; and befides, are of manners fo very different from the French, that they bate them, and feldom mifs an opportunity of expreffing an abhorrence even equal to that they have of Moors, fince nothing is more common than to hear them to fay, in point of religion, That the heretics of other countries are better Chrifitans than the Romatr Catholics of France
In fuch a fituation with Spain, France can never be a fafe ally to Portugal: for if ever, on any account, the was to take part with Portugal againft Spain, the muft lofe her intereft infallibly with the latter; which would be giving up a greater convenience for a lefs, both in point of a military and commercial intereft, as allo be a fure means of cauling the laft thing France is defirous of feeing, the clofer unity of Spain with great-Britain.
Nor, indeed, is there wanting this fpeculative influence in Portugal againft the French, the people of that nation having no opinion either of French faith, generofity, or honour: they never fpeak of them with efteem or refpect, are open in their ridicule of them, and behave to them, more than to other nations, as impertinent and unwelcome intruders, that come either as fpies, or to pick their pockets.
Thus with Spain for an hereditary enemy, and France a friend that the dares not trult, where can Portugal, too weak to defend herfelf, look for an able and trufty ally? To Italy? No: they have no fuccours to fend, but, on the contrary, live themfelves in perpetual need of them from others. Can Holland do the bufinefs? Moft certainly no: her ftrength and weight are no more. As for the more northern kingdoms, they are at too great a diftance, and too poor, to enter upon, or comply with, fuch an engagement. Great-Biitain, then, is the only nation that ever has been, can, or will be, the fafe, the trufty, the generous, the able, fupporter of Portugal. If we examine hiffory, from almoft the firft foundation of their monarchy, it will be found we were always their true and honourable allies We generally helped them to conquer their country, and have ever protected them in it: for the truth of which I appeal to their own hiftorians, as well
as ours. At the reftoration of their monarchy, our Charles the Firft was one of the firft princes that acknowleged their John the Fourth, and entered into a treaty with him: the good effects of which were, however, in fome meafure prevented, by the unhappy troubles that juft then broke out in Britain. If a fquabble happened in Oliver's time, it was from an indiferetion of the court of Portugal, that they paid beartily for: and, on their becoming wifer, we became their friends again. Charles the Second was no fooner reftored to his dominions, than the interefts of Portugal were by him taken to heart. He married their Infanta, in preference to all other princeffes, notwithitanding the Spanifh king offered to portion higher any other Catholic or Proteftant princels that he would chufe. He confirmed all former treaties made betwixt the nations, and made a new and perpetual one with Alphonfo the Sixth; by which Great-Britain is to fuccour them in times of need, and particularly with a naval force adequate to the neceffity of their demand. It was under the fame king's fingle and exprefs mediation the treaty was negociated, by which Spain firf acknowledged the independency of Portugal, Charles being guaranty; and by his power did the earl of Sandwich abrolutely accomplifh and fign the treaty.
In confequence of our abovementioned engagement, did Great-Britain, in the year 1735, fend them a fuccour of near thirty fhips of the line, fo very expeditioully fitted out, that they carried themfelves the firft public news of their appointment; which fleet remained under the command of Sir John Norris, twenty-two months in the river Tagus, to the coft of above A Million Sterling to this nation. And whenever they require another and greater affiftance, I hope we fhall as readily grant it, on the fingle condition that Portugal as fully and willingly complies with her obligations to us, in obferving thofe regulations in refpect to commerce which the fame national treaty confirms and prefcribes, and which is not demanding from them any favour, nothing difhonourable to their crown, or difadvantageous to their country; nothing but what impartial juftice exacts, and what good policy on their fide would readily promote.

## Remink.

That Great Britain might be made amends by the court of Portugal for the obligations, under which fhe lies to her ; that court eftablifhed in the year 1756 , a wine company at Oporto; and endowed the fame with the following exclufive powers; which by law frikes at the root of the priviledges of an Englifhman in the kingdoms and dominions of Portugal. See our article treaties of commerce and navigation, where is contained the treaty of peace concluded by Oliver Cromwell, in favour of England: alfo various other laws, decrees, \&cc. made at fundry times, and oñ divers occafions, made by the kings of Portugal, in favour of the English Nation. To which is added, the king of Portugal's new law, concerning the diamonds found in the Brazils.

Institution of the General Company for the culture of the Vineyards of Alto Douro, in the kingdom of Portugad

## Most Gracious Sovereign,

Your majefty's dutifal fubjects, the vintagers of Alto Douro, and the good men of the city of Porto, humbly beg leave to reprefent to your majefty, that, whereas the fubfiftence of great part of the religious communities, private families, and chief inhabitants of the three provinces of Behira, Minho, and Tralos-montes, depends upon the culture of the vines; this fpecies of agriculture is neverthelefs reduced to fo great a decadency, and is in fo ruinous a ftate, that befides the detriment occafioned by the circumftance of the wines not yielding a fufficiency wherewith to cultivate the lands which produce them, this lofs of capital, to the proprietors in particular, is aggravated by the farther lofs of health to the public in general. For, as the number of taverners in the city of Porto is multiplied to an extravagant excefs, forbidden by your majefty's laws, as well as by the regulations of the guild of the fame city, beyond the poffibility of reducing that multitude to rule; it thence follows, that, as the faid taverners adulterate the wines, and corrupt them from their native purity, by a multiplicity of mixtures hurfful to human conftitutions, they deftroy not only the reputation of fo important and confiderable a fpecies, but alfo all the commerce which is carried on in that commodity; nay, and the very conflitutions of fuch of your majefty's fubjects as make ufe of the wines which the faid taverners vend for home-confumption. Animated therefore by the urparallel'd clemency with which your majefty has already afforded relief to your afflicted fubjects, even in cafes of lighter grievance than the above-mentioned, the petitioners have agreed among themfelves to form, under your majefty's royal favour, a company, which, by competently promoting the culture of the vineyards, may at the fame time preferve the produce thereof for the advantage
of foreign and domeftic commerce, as well as of the health of your majefty's fubjects.

## Sect. I .

The faid company thall conftitute a body politic, having a governor, twelve directors, and a fecretary; all of whom fhall be qualified fuch in the manner hereafter declared. Befides the faid directors, there fhall be fix confultors, men well verfed in this branch of trade. The faid company flatl be filed, The General Company for the culture of the vineyards of Alto Douro. All the authentic papers iffuing from it flall be difpatched in name of the governor and directors of the fame company, and fealed with it's common feal, which fhall exhibit the image of St Martha, protectrefs of the territories of Douro, and underneath it, a ferip, or label, with this device: providentia regitur,

## SECT. II.

The faid governor and directors fhall be either natural-born, or at leaft naturalifed fubjects of your majefty, and inhabitants of the city of Porto, or of Alto Douro, who have in the company's funds ten thoufand crufados ftock, or upwards.

## Sect. III.

The elections of the faid governor, directors, and confultors, fhall always be made in the common hall, or guild of the company, by a majority of votes of all fuch proprietors therein as are poffeffed of three thoufand crufados fock, or upwards. Such of them, however, as have not fo much capital ftock, may unite to make up out of, leffer fhares one total to the above amount, wherewith to conftitute a fingle vote in the name of feveral, to be given by whom they fhall judge proper to be nominated for that purpofe. The firlt chofen for this eftablifhment fhall ferve the office for the fpace of three years, and all others, who thall fucceed him, fhall ferve for the face of two years; provided always, that fuch as hall have ferved may not be rechofen in the next election, without having a majority of votes in their favour not lefs than two thirds, as is more exprefsly declared in fection iv. At tho fame time, and in the fame manner, fhall be chofen, from among the faid directors, a fub-governor and a fubfititute, who Chall gradually fill the office of governor, in cafes of death or hindrance.

## Sect. IV.

The governor, directors, and confultors, fhall at the firt election be nominated by your majefty, to ferve for the fpace of three years; at the expiration of which they fhall produce, in a general court, the accounts of their whole management, and diftribute to the proprietors the dividends belonging to them, or fuch as the court, by a plurality of votes, fhall appoint to be made. This done, they fhall immediately proceed to the election of the new governor, directors, and confultors: on whom it thall be incumbent firft, and before all things, to examine the accounts delivered in by their predeceffors, in order to pals to conteft them, according to their defert: and the fame fhall continue to be the practice in future elections, fo long as this company fhall fubfirt. Still, in cafe the proprietors fhould think fit to re-elect one or more from among the faid governor, directors, or confultors, they fhall be entitled to admit the fame again into office, on condition of their having a majority of votes of at leaft two thirds in their favour. The judge confervator (or, recorder) flall tender to thofe firf, who are to be nominated by your majefty, an oath that they will well and faithfully manage the effects of the company, and maintain it's feveral members in their refpective rights: and to thofe who fhall be thenceforward chofen, the fame oath fhall be tendered at the board of the company, by the governor who quits the office, and regiftered in a fpecial book he is to fet apart for that purpofe.

S ест. V.
The faid governor and directors fhall be the treafurers of the capital ftock, of which this company ball be poffefled from it's firft eftablifhment, and of all interefts thence arifing, 'till the times of making a dividend of them among the refpective proprietors: to which effect they fall keep one or more coffers, as occafion may require, with proper keys to them, of which keys every one fhall keep his own, fo that each may remain bound for himfelf, and every one for all, to anfwer for every deficiency which may be found in the faid fock, 'till they deliver up the capital to their fucceffors, and make a dividend of the interefts thereof among the feveral proprietors in the faid company.

Sect. VI.
All affairs, which fhall be propofed at the board, thallbe decided by a plurality of votes, and all which Chall be thereby
thus done, and ordarn'd, fhall have full credit given to it, afid thall be put in its full and due execution, in the fame manner as is practifed in your majefty's tribunals; provided that at the faid boards nothing be difpoled in alteration of the eftablihed laws and regulations relative to the fate of the Brazils, or that be contrary to any other of your majelty's laws, fave what is allowed to it in virtue of its prefent eftablifhment. The faid govertor and directors thall make choice of what officers they thali deem neceflary for the good government of the company, as well in the city of Porto, and within the kingdom, as in foreign parts. They fhall have ample jutidicition over them; to fufpend them, put them out, bring them to juftice; and provide others in their places : all of them fhall continue in their poft fo long as fhall feem meet to the company, which fhall have the infpection of their accompts, and pals to them acquittances, fign'd by two of the directors, and fealed with the company's feal, after their Laid accompts have been revifed and examined at the board.

## S е с т. VIt:

This company thall have a judge confervator (or recorder) who, with privative jurifdiction, and exclufion of all other tribunals, hall hold courts of ojer and terminer for all contentious fuits, wherein the governor, directors, confultors, fecretary, clerks, managers, and other officers of the companys, fhall be either plaintiffs or defendants ; whether the matter of the faid fuits be criminal or civil, fo long as they are carried on between the faid officers' of the company, or between them and perfons who do not belong to it : which faid judge confervator (or recorder) fhall call the faid fuits to bis tribunal in the city of Porto by pofitive decree, and elfewhere by precatories; and Chall have a definitive power in himfelf to the amount of 100 cruzados, without appeal or demur; as well in civil caufes, as in the penalties decreed by him : but in all other cafes, and in thofe, which being proved, are tapitally criminal, he Chall proceed in judgment in the high court of juftice, call'd the relaçã, by one fole joint form of procefs, with the affiftants which thall be appointed him by nomination from the chief juftice for the time being of the relaçao and king's bench at Portö, or whoever flall ferve office. Both the judge confervator (or recorder) and his clerk, as alfo his marhal, thall be nominated by the faid board, and confirmed by your majeity; who mall oblige the minifters, whom the company may chufe to ferve the faid office; and that notwithfanding the fatute, lib. 3 . tit, 12. and all other laws hitherto publifhed, relative to the office of confervatory (or recorderfip); for as the judgment of the faid judicature is not recurr'd to, as a voluntary privilege for the moleftation or vexation of the parties, but as a weighty contract for the fervice of your majefty, for the common good of your fubjects, and for the good management of the affairs of the company, and the writings which it thall pals in your majefty's royal name; all thefe motives render the faid judge confervator (or recorder) ablolutely neceffary. Such difputes, however; as may ariie between perfons interefted in the fame company, concerning the capital ftocks; interefts, and the dependences thereof, fhall be propofed at the board of adminifration, and there verbally decided, in mercantile form, by plain dealing, according to the known truth, without form of procefs, or other allegations than thofe of fimple matter of fact, and thofe of the rules, ufages; and cuftoms of commerce and navigation, commonly received as fuch, in the prefence of the judge confervator (or tecorder) and of the attorney-general of the company; which faid board, with the approbation of the two aforefaid minifters, thall decide all caufes, not exceeding the amount of 300 mil reis, without appeal or demur: and fuch as exceed the amount of that fum, where the parties are unwilling to abide by the decifion of the faid adjudgers, fhall be forthwith laid before your majefty, in an humble addrefs from the board, for your majefty to nominate fuch judges as to your wifdom fhall feem meet, who thall determine the fame in like form, without intervention of any other ordinary or extraordinary recourfe; all other difofitions of law or flatutes to the contrary notwithftanding.

## SEct. VIII

The faid confervator (or recorder) fhall, by fummonfés in the royal name of your majefty, difpatch all fuch orders as fhall be forwarded to him by refolution of the company, for the good government of the fame; as alfo for the hiring of carts, and embarkations for the carriage of wines, and for the compulfion of vintagers, coopers, taverners, and all other artifts on whom this branch of commerce may depend, to enter into the fervice of the faid company, on condition of it's paying them their falaries. And the minifters of your majefty fhall not take away, or interrupt their boats, carts; veffels, or any other things whatever, on which the difpatch of their loadings may depend; but rather, having occafion for more, the minifters to whom it may belong thall be required to fend them more. And for whatever elfe may be further neceflary towards the good government of the faid V OL. II.
company, it thall be empowered to fummon fuch minifters; as do not comply with, and effectually execute it's orders, before the relaçao, (or court of king's bench) of the city of Porto, whither they fhall repair to anfwer to the charge, the aid judge confervator being firf heard, who fhall attend the board of the company, whenever he fhall receive a meffage for that purpofe, having there a feat fuitable to his dignity.

## S е с т. IX.

It being indifpenfably neceffary for the company to have fufficient houfe-room, for it's difpatch of bufinefs, for the fecurity of it's coffers, for the accommodation of it's clerks and other officers, and for warehdufes wherein to keep their wines, veffels, and other materials thereto neceffarily appertaining; your majefty is, gracioully pleafed to grant to it the privilege of fettling, fo as that their judge confervator (or recorder) may caule dwellings to be affigned over to it's ufe, wherever the company fhall judge them to be mof for it's conveniency, without becoming fubject to the having the rents, they were valued at before, raifed. upon that account; which rents the company will pay to the owners ; and in cafe of difpute, the fame fhall be adjufted to the fatisfaction of the parties, by the arbitration of proper perfons, your majefty having for this effect abrogated all privileges of fettlement, which the perfons may be poffeffed of, from whom fuch dwellings thall be taken, or who have lodged their effects therein.

## Sест.

The main purpofe of this company being that of fupporting, together with the credit of the wines, the culture of the vineyards, and to promote; at the fame time, the advantage of the commerce, which is carried on in this commodity, by fixing. fuch a regular price for it, as may produce a competent profit to the manufacturers of its and a reciprocal lucre to the traders in it; by avoiding, on one hand, the exorbitant prices, which, rendering it's confumption impofible; deftroy the fpecies; and not fuffering it, on the other hand, to fall to fo low an ebb as that the yintagers thail be unable, without lofs to themfelves, to fupport the yearly expences of their agriculture ; it is neceffary for there ufeful ends to eftablifh certain competent funds : wherefore the capitatal ftock of this company fhall be one million two hundred thoufand cruzados, divided into aetions of four hundred mil-reis each; the half of which may be advanced in competent wines fit for vent, by fuch as fhall be willing to be concerned in the actions; and the other half thall be conftitured in abfolute calh, that the company may be enabled to fulfil it's engagement of fupplying the neceffities of the vintage, and commerce, in the following manner:

## Sect. Xí:

On the ftrength of the abovefaid funds the company thall lend to neceffitous vintagers, not only the neceflaries for the conftruction and dreffing of the vineyards, as well as for the managing of the wines, but alfo whatever elfe may be needful to them towards fome of thofe minute expences, which the prefervation of human life makes a daily matter of indifpenfable neceffity, without requiring of them, for fuch loan, any higher intereft than at the rate of three per cent. per annum; provided always that the faid loans fhall not exceed one half the value in general of the wines; which every fuch vintager is wont to collect: which wines, in confideration of the faid loans, fhall become and remain, effectively pledged to the company, in fuch manner as to give it the fame preferable right over them as landlords of houfes have over the goods therein contain'd, without it's having occafion for any other title thereto, or other proof, than that of the faid loans being entered in the books of the company, and verified by a writing under the debtors hands, recognized with the figna= ture of fome public officer.

## Sect. XII.

The company thall hold in readinefs all materials neceffary for the making of wine-veffels, not only for the yeat in which it may make it's ladings, but alfo for the year following, that no deficiency of this kind may occafion either damage to the wines, or a baulk in the provifion of them, which they are to furnig the ports of Brazil with, according to your majefty's gracious grant for this commerce.

Sect. XIII.
And that the faid ports of Brazil may not experience any want of this commodity, the company thall, for the prefent, fertle a ftock of 10,000 pipes of good wine, and fit for exportation, to enable it the firft year to bear any difappointment it may meet with in it's firft ladings, and to wait for the produce thereof for a competent time.

SECT.

## Sect. XIV

In order to facilitate the purchafe of ftocks, in favour of the vintagers of the wines of Alto Douro, the company fhall take of the purchafers of actions, fuch wines as are of the beft fort, and in their natural perfection, without mixtures or brewings, capable of fpoiling them, at the price of 25 mil-reis per pipe of common meafure; and fuch of an inferior fort as are neverthelefs fit for navigation, it fhall take in like manner at the rate of 20 mil-reis. At the fame prices they fhall purchafe the faid wines for the time to come, whether this commodity happen to abound or fall Mort: wherefore as the company is to pay for their wines at the above rates in the years of plenty, fo likewife thall the vintagers be obliged to deliver them at the fame rates, without any alteration, in the years of fcarcity, or dearth : the refpective interefts of each party being thus fairly compenfated to the advantage of the commodity itfelf.

## Sect. XV.

And that neither the company may deftroy the riavigation of the city of Porto, by difappointing it of the lading of wines, which is its principal fupport, nor the navigation may prejudice the company by omitting to fupply it with a competency of Mbipping for the tranfport of wines to the fates of Brazil: your majefty is gracioully pleafed to eftablifh, that for the carriage of every pipe of wine, brandy, or vinegar, which the company flall fhip from the city of Porto for Rio de Janeiro, it thall pay to fuch fhips ten mil-reis freight, after the manner heretofore practifed, witbout any alteration in this refpect whatever, on one fide or the other. For fuch wines, \&xc. as thall be Chipped for Bahia, it thall pay eight mil-reis per pipe as above ; and in like manner eight mil two hundred reis per pipe freight, for thofe it thall fend to Pernambuco, which freights thall not be altered in any wife whatfoever, neither by the company nor the proprietors, nor by the captains of fhips, on pain, to fuch as fhall act in any wife contrary to this regulation, of paying double the amount of fuch freights, the whole of which fhall be applied, one half to the informer's ufe, the other half to the ufe of the hofpital of the city of Porto, befides two months imprifonment of the delinquents.

## Sect. XVI.

The wines, brandies, and vinegars, which the company fhall fend to the Brazils, hall be thipped on board the veffels of the refpective fquadrons of that city, which hall put up for ladings, dividing them among them, and each of them, in proportion to their affortments; and the faid veffels thall be obliged to receive them, without hefitation, in the fame manner as is pracifed with regard to the falt-contract. Neverthelefs, if it fhould happen that the confumption of the faid commodities hould increafe to fuch excefs in the fates of Brazil, that the private fhips of the trade be not able to convey thither the quantity neceffary for daily provifion, the company in that cafe fhall be obliged to get ready, and fend at its own expence, the fhips neceffary for fuch tranfport, only, however, to that port, for whofe ufe the wines exceed the burthen of the faid private fhips belonging to the mart of the city of Porto. And in this cafe, neither fuch fhipping, nor their equipages, nor whatever fhall be neceflary for their conftruction and fitting out, thall be feizeable to any other ufes than thofe of the faid traniport and the dependencies of the fame company, not even under colour of your majelly's royal fervice, on pain to the perfons acting in oppolition thereto of paying to the faid company, out of their own effects, all the damage thence refulting to it; to which intent they thall be called to an account before the judge confervator, or recorder, of the fame company, and not at any other tribunal whatever, notwithftanding any privileges they may enjoy to the contrary.

Sect. XVII.
Confidering the notarious prejudice which falt, in it's nature, boes to wines in general, and the abfolute neceffity there is for that commodity in the ftates of Brazil, which obliges all the fhipping to take competent ladings of it, your majefty is pleafed to will, that none of the veffels on board of which the above wines are flipped fhail carry any ladings of loofe falt, but thall carry the whole in wooden chefts, as they ought and are bound to do, ftowing them well and clofe on that fide where the wines are put, and placing between the wines and the falt other moiff commodities, fo as by every poffible means to prevent the damage which may refult to the wines from their immediate nearnefs to the falt, on pain to the captain or commander, who thall aet contrary, of paying to the company double the value of all the wines which hall be found damaged at their arrival, as alfo of three months imprifonment for the firft offence, and the penalties Chall be doubled in proportion to the relaples into the fame.

## Sест. XVIII

The chief agent and deputies of this company, and the fators or adminiftrators it hall employ in the ftates of Brazil, for their adminifration, and the clerks it fhall employ in the city of Porto, for their falaries, fhall be entited only to their commiffion, at the rate of fix per cent. to be levied in the following manner: two per cent. on the coffs the company flall be at in it's feveral difpatches at Porto ; two per cent. on the fales which fhall be made in the faid harbours of the ftates of Brazil; and two per cent. on the returns and charges in the city of Porto; which faid fix per cent. Thall be made to fuffice for the full payment of the whole adminiftration belonging to the trade, without the company's being liable to any other charges of the like nature; fave only that it fhall be chargeable with all colts arifing from the falaries of fuch minifters, and other officers, as are to make a part of their body politic and ceconomic, as alfo with fuch as may arife from the renting of houfes and magazines, all which thall run on the company's account.

## Sect. XIX.

In order that this company may be able to fupport itfelf, and be enabled to make fuch a profit as may compenfate the obligations it lays itfelf under by this eftablifhment, and be a valuable confideration for the advantages thence refulting to the common-weal of the faid provinces, your majefty is pleafed to grant to it in the four governments within the fates of Brazil, of S. Paolo, of Rio de Janeiro, of Bahia, and of Pernambuco, the exclufive commerce of all the wines, brandies, and vinegars which fhall be fhipped from the city of Porto for the faid four governments and their refpective harbours; to the intent that no perfon of any condition whatever thall be qualified to fend thither any of the faid commodities, except the fame company, which Gall enjoy the faid exclufive privilege in the following manner:

Sect. XX.
The brandies and vinegars may not be fold by the company in the faid harbours for more than fifteen per cent. free to the proprietors of the principal coft, calkage, carriage, freight, cuftoms of import and export, fhipping, commifion, the one per cent. to the coffer, and of all other charges thereon to be made to the adt of fale, which fhall wholly run on the account of the buyers; confidering, however, the greater danger the wines are in of fuffering damage in their quality, and that, on that account, they more immediately threaten fome lofs to the faid company, therefore the faid company fhall be allowed the liberty of felling their wines at Gixteen per cent. free to the faid company from all the above-mentioned charges, but not at any higher price.

## Sect. XXI.

And in order to juftify it's fales, and make appear the exactnefs with which the company oblerves the faid prices, it fhall be obliged to fend to it's refpective factors, or adminiftrators, the accompts of the feveral cargoes figned in an authentic manner, by all the deputies, and fealed, with the feal of the company, in order to be thus made known to the people, that every purchafer may be enabled to examine thereby the true value of the feveral commodities as may be parcelled out, in which accompts of cargo fhall be fpecified in the moft circumftantial manner the prime cofts and other charges of each of the faid commodities, that there may be no room to fufpect the leaft unfair dealing.

## Sect. XXII.

This, however, is to be underftood on fuppofition, that the faid commodities be fold for ready money, or paid for, in cafe of fale, at the precife term agreed upon; becaufe the debtors, on default of payment, fhall incur the penalty of farther paying five per cent. interteft, for the whole time of their delay of payment, or fo long as the execution flall laft, with which they may be ferved: But if the faid wines be trucked in exchange for the goods of thofe governments, whofe value is uncertain, and depends on the free will of the fellers; in that cafe, the agreement fhall be fixed by convention of the parties; as it would not be fair for the inhabitants of that fate to raife their goods to fuch a heigbt as may do hurt to company, nor for the company to undervalue them, fo as to difcourage their agriculture.

## S e c т. XXIII

And becaufe, likewife, it would not be fair for the company to hurt fuch perfons in thofe governments, as fell the faid commodities by retail, by depriving them of the means of Cubfiftence, the faid company fhall not be entipled to fell at any time by itfelf, or it's factors, any of the above-nuentioned

## POR

commodities by retail, nor difoofe of any leffer quantity that one pipe of each of the faid commodities; the fale of which hall always be made at the magazines of the faid company, and never in fhops, or fuch like private places, on pain to fuch of it's factors as thall act contrary hereto of being chaftifed or every diforder, which thall thence refult; remaining (ipfo facto) incapable of ferving the company, as alfo of all and every the offices of juftice, or property, befides being condemned in a five years banilhment to Angola.

## б е ст. XXIV,

No perfon, whatever be his qualifications or condition; thall be allowed to fend, take, or introduce into the faid governments of S. Paolo, Rio de Janeiro, Bahia, and Pernambuco, the faid wines, winegars, and brandies, which are to be exported in the fquadrons from the city of Porto, or fhall be of the product of the lands of Alto Douro, on pain of the forfeiture of them, and as much more of their value amounts to: the whole to be applied, one half in favour of the company, and the other half in favour of the informers, who may give their information publickly, or in fecret, (provided their informations be made good, upon corporal apprehenfion) in this kingdom, before the judge confervator (or recorder) of the company, and in that flate before the prefiding minifter of the houfe of intendency, or before any common judges, in places where there are no intendants; all which Gall caufe the informations to be notified to the company's factors, that they may act as plaintiffs in the matter, being entitled thereby to a fifth part of the value; and they not thus fulfilling their duty, their effects chall be liable to anfwer the damages thence arifing.

## S e c т. XXV.

Nevertheleff, if it Chould happen that fome of the vintagers do not agree to the prices determined in fection xiv, and fhould have a mind to thip the wines of their own manufacturè for the faid ports of Brazil, they fhall be allow'd fo to do by the hands of the directors of the company; who, at the charges and rifk of the fame vintagers, ball fend them to their factors, to be fold in the faid ftate, at the fame prices as the company's winss ohall be fold at, and by no means at greater ; provided always, that the quality thereof beequivalent to the faid prices. And for the very reafon that any fuch vintager did not care to content himfelf with the eftablifhed prices on one occafion, he thall be excluded the privilege of obliging the company on any other, to take his wines at the faid prices; and the company fhall reimburfe the faid vintagers the amount of their product, abating commiffions, according to the eftablihed rule, and all other expences attending the returns, fo foon as the company fhall have received the lame: it being underitood, that all charges attending the faid wines, till put on board, fhall be paid at the coft of the vintager, and not of the company.

## SEET. XXVI

If the company thould find any advantage in extending it's commerce of wines and brandies to the foreign nations of Europe, it fhall be at liberty to do fo, on paying the duties already eftablifhed in the fame branch of trade; as alfo thofe of entry at the cuftom-houfe of the goods it imports in exchange; and for that purpofe, the company may retain in It's fervice the fhipping it may fand in need of, which it may difpatch, as it Ghall think beft, without any hindrance, and without being liable to have them, or their crews, diffurbed, or taken from it, even under colour of your majefty's royal fervice.

## Sect. XXVII.

The company thall pay all the duties hitherto wont to be paid on the abpye commodities, as well in this kingdom, as in the faid fate of Brazil, in the fame manner as has been heretofore practifed; and the fame chall be obferved with the returns it Shall make from the fame fate of Brazil to this king dom.

## S ect. XXVIII

Whereas every one knows the grievous prejudice, which has been done to the reputation of the wines of Douro, and confequently to the culture of the fame, by the great liberty hitherto taken in the dealing therein, and by the exceffive number of taverners, who retail them in the city of Porto, and the neighbouring tawns; every one endeayouring to adulterate them from their native purity, with mixtures, and foreign compofitions: and whereas the whole is contrary to what remains effablinhed by the charter of the 23 d of February, 1605, by the act of confullitip of the 18 th of June, 1655, and by the provifion of the board of Dezembargo do Paço, (or fenate) of the $23^{\text {d }}$ of Auguft of the fame year: your majefty, in order to provide againft thefe evils, is graci-

## POR

oufly pleafed to ordain, that in the city of Porto, and in the neighbouring places, within the diftance of three leagues, no wines fhall be fold, but on the account of this company, by retail; which faid company; for that purpofe, fhall purchafe of the proprietors the quantity of wines neceffary, and the governor and directors thall be entitled to no more than one per cent. on the price thereof, and the other charges thereto ncidental, on account of carriages, calks, duties, watehoufes and fale, or other trifing expences, by way of commifion out of the product of which they hall pay the factors they may employ in this fervice; and all the remaining profit Mall belong to the feweral perfons interefted in the faid company, by a liguid balance to be divided among them in the manner above eftablifhed in fect. iv. And that this regulation may be put in force, without any notable trouble to the parties, regard is to be paid to the following rections.

## Sect. XXIX.

Whereas an entire and abfolute feparation is to be made of the wines of the coafts of Alto-Douro, and it's diftriet in order ro be hipped for America and foreign nations; from all the other wines of fuch places as only produce a fort fit to be drank in the country, that by this means the inferiority of there wines may not deftroy the credit due to thafe on account of their native excellence; your majefty is gracioufly pleafed to will, that there be made, with the greateft expedition, a map and general furvey of the two coafts of the river Douro, north and fouth, wherein may be defcribed all that territory which produces the true wines for exportation capable of paffing forth of the bar of the faid river, feverally and difithetly fpecifying the great and fmall vintages of this peculiar kind, and exhibiting an eftimate, by a common fupputation or average, according to the produces of the laft five foregoing years, of what each of the faid vintages is wont to yield, in order that the proprietors thereof may not fell any, without makiing known to the sompany what they do fell, nor be enabled to fell tọ the company, or to foreigners, any greater number of pipes, than that which is allotted to them in the faid regifter or furvey, on pain, in cafe of exceeding the faid quantities in their fales, of paying nine times the value of the excefs, and remaining incapacitated to fell wines any more out of the kingdom.

## SE c t. XXX

No wine whatever Chall be brought from without the limits of the territory above defribed intd the fame, unlefs accompanied with permits, paffed by the whole body of the guilds of the places whence the faid wines are brought; which permits flall declare the place they are bound to, the ufe they are deftiped for, the name of the vintager and vintage where they are received, the perfons to whom they are configned, and the direct road by which they are to be tranfmitted; which permits, in the above form, Chall be exhibited to the commiffaries, whom the company flall bave nominated in the refpective places, to infpect whether; in fact, the ufe be made of them for which they were defigned. All this under the penalty, that the wine which is tranfmitted without permits, difpatched in the above form, or which hall be found to be out of the direct roads and highways, fiall be forfeited in favour of the company: and this, in order to prevent the forry wines from being mingled with the good, to increafe their quantity in prejudice of their credit, and to the detriment of the company, and of foreigners, who are to become purchafers thereof. And if inferior wines thould happen to be difcovered in houles not approved for their reception by the guilds, with the company's confent, not only the faid wines fhall be forfeited, but thofe perfons in whole cullody they be found, fhall be fined the treble of their value to the profit of the fame company.

SECT. XXXI.
In like manner, to prevent the fraudulent introduction of adulterated and forry mixed wines into thofe foreign countries, whither the wines which are to be qualified as above are tranfported, ne perfon, whatever be his fate or condition, thall, under the above ordained penalties, be entitled to embark any wines for the city of Porto, but fuch as come addreffed with the domeftic manifeftos of the vintagers to the board of directors of the company ; which, finding them exact, thall order their mark to be put upon them as fit for exportation ; finding them to be of aniother inferior quality, it Ihall order the proper mark to be put on them as inferior winies, fit only for home confumption on the fpot, or within the kingdom; and finding them fit to be fhipped for the Brazils, or for foreign countries, licence fhall be granted for the fale thereof, and the board of the faid company ohall be obliged to make out annually a general and particular lift of all the pipes of qualified wine which fhall be flyipped out of the bar of Porto to be navigated as above; putting on every one of them, whel a hot iron, the mark of their approbation, and pointing them put with permits, figned by
the governor, and all the directors of the company to the feveral cuftom-houfes to which they are bound; and declaring in the faid permits the names of the perfons who make the ladings, and the certain number of pipes which every one of the faid perfons fhippeth, though it be but a fingle pipe, or even but a barrel; to the intent, that if any fhould have an inclination to introduce into any of the faid foreign countries any wincs without permits, or in quantities exceeding the number fecified in the faid permits, on the fuppofition of their being wines of Alto Douro, the cheat may be inftantly difcovered in the refpective cuftom-houfes of the faid foreign countries, as it will be evident in both cafes that the wine is of different territories, and fubjected to thofe mixtures and frauds which the company is endeavouring to prevent for the common good. And for a ftill greater fecurity the company will, at the end of every year, remit to the different ports of America and Europe, to which any wines are exported, a printed general account, and circumftanced as above, with the names of the laders, and with a declaration of how much every one of them flipped, that it may reach the knowlege of every body.

## S e c t. XXXII.

For the fale of wine by retail in the city of Porto, no more taverners fhall be allowed than the ninety-five eftablifhed by the charter of the 23 d of February 1605 . by the act of confulthip of the 18th of June, 1655, and by the provifion of the board of Dezembargo do Paço (or fenate) of the 23 d of Auguft of the fame year: infomuch, that neither the number of taverns fhall be altered, nor any change made with refpect to the places appointed for them; nor fhall any taverner be admitted to hold any one of them, who is not approved and licenfed for that purpofe by the board of the company, on pain of forfeiture to the company's ufe, of all the wine found in taverns not licenfed as above, and of fix months imprifonment to fuch as fhall be detected felling therein: this penalty to be doubled and trebled, in cafes of relaple, againft fuch taverners or owners of wines as thall be fubject thereto.

## Sect. XXXIII.

That the manufacturers of wine, and the purchafers thereof, may be enabled to act upon certain grounds, fo as that neither the manufacture may claim, by felling it, fuch profits as may prove prejudicial to the commerce, nor the commerce be able to ruin the manufacture in it's beginning for the purchares thereof, the company thall unalterably pay for all the wines it may take up for exportation at the rate of twenty-five mil-reis per pipe, according to the two different qualities thereof, in the manner above declared in fect. xiv. o that, in cafe of there being a great deficiency of the abovefaid qualified wines, and a great demand for the fame, thofe of the firft rank may not exceed the price of thirty mil-reis per pipe, nor thofe of the fecond furpafs the price of twenty. five mil-reis. Such, however, as may prove unfit for exportation, and yet proper enough for home-confumption, thall alfo be bought and fold by the fame company at certain fixed prices, in the following manner: fuch as are of the growth of the lands lying between Porto and Arnellas fhall be bought at the rate of fcur mil-reis per pipe, and fold at the rate of ten reis per pint, the company being at all expence and charges thereof: thofe of the growth of the lands lying between Arnellas and Bayao thall be bought at the rate of five mil-reis per pipe, and fold in the fame manner at the rate of twelve reis per quart: thole of the growth of Anfede and it's territory, which fhall be hereafter defcribed, fhall be bought as above at the rate of fix mil reis per pipe, and fold in like manner at the rate of twelve reis and a half per quart: thofe of the growth of the lands of Barqueiros, of Mazaofrio, of Barrou, and Penhajoya, fhall be bought at the rate of eight mil-reis per pipe, and fold at the rate of fifteen reis per quart : the other ripe wines of the hills beyond douro, lying without the limits defcribed of the lands productive of wines for exportation, fhall be fold at the rate of twelve mil-reis per pipe, and fold in like manner at the rate of a vintem (or twenty reis) per quart: and the governor and directors of the company fhall caufe the faid wines to be diftributed among the taverns, to be fold at retail in the manner eftablifhed in fection xxviii. with this farther declaration, that for each of the abovefaid forts of wine the faid company fhall provide proper cafks, marked with a hot iron, diftinguifhing their feveral qualities and prices: and that the taverner who inverts the faid orders, cither by putting the better fort of wines in the calks of the inferior fort, or by mingling the one with the other, fhall for the firft offence pay a hundred mil-reis, fhall forfeit all the wine he may be found poffeffed of, in favour of the informer, and have fix months imprifonment; for the fecond, the fame penalties fhall be doubled; and for the third, he fhall be liable to the fame, and fhall be over and above publicly whipped and tranfported to the kingdom of Angola. And becaufe there will be fome wines of fo bad a fort as to be only fit to burn, or make vine-
gar, the company thall immediately grant licences to the proprietors of fuch wines for reducing them to brandies or vinegars, and being difpofed to make their provifions of thefe two commodities; they fhall purchafe the fame by mutual agreement of the parties.

## Sect. XXXIV.

If in fome years the growth of the wines thould be fo redundant as to render it impracticable for the company to difpofe of it readily, neither for American confumption, nor for that of the city of Porto, the vintagers fhall be at liberty to fell the faid commodity, for the confumption of any part of the kingdom, where there is no prohibition thereof; and if it is to be convey'd without the bar, the quality thereof fhall be marked on the calks it is conveyed in, and the whole fhall be accompanied with the company's permit, that the place it is defigned for may be known; and that it may not be tranfmitted to foreign countries, and become productive of the ill confequences before mentioned.

## Sect. XXXV.

Whereas this company is eftablifhed on the ftock and proper fubftance of the perfons therein interefted, without any mixture of fock from the royal revenue; and whereas every one is free to difpofe of his own effects as to himfelf may appear the moft for his own advantage, the faid company and the maragement thall be under the immediate fubjection to the royal perfon of your majefty, and independert of all the tribunals, as well the greater as the leffer ones, fo as that no minifter or tribunal of your majefty fhall in any cafe or accident whatever interfere with it or with what belongs to it, nor fhall be intitled to hinder or interrupt the fame in the management of all which belongs to it, nor demand of it any account of it's proceedings, it being the duty of the directors, who quit their office, to lay before thofe who fucceed them, in the manner laid down already in fect. iv. And this is to be underfood with exprefs inhibition to all the faid tribunals and minifters, and notwithftanding the right of their refpective jurifdictions; for though it may feem that the management of the faid company's affairs should be fubject to fuch or fuch jurifdictions, neverthelefs, as they do not interfere 'with your majefty's royal revenues, but belong wholly to the perfons who put their own ftock into the faid company, it is they who are to have the maragement thereof entirely to themfelves, with that feparate and privative jurifdiction which your majefty is pleafed to grant them. In the cafe, however, of a tribunal's wanting to be informed by the board of managers of any thing relative to your majeety's royal fervice, it may order it's fecretary to write to the fecretary of the faid board of managers, who being by him acquainted therewith, will direct him what anfwer to give. If it fhould be what the board does not think expedient to comply with, the tribunal which fhall have made the enquiry may addrefs your majefty, to the intent that, after the faid board has been heard upon the fubject, your majefty may take fuch refolutions as to your great wifdom fhall feem meet.

## S e c т. XXXVI.

In cafe the agents and factors of the company in America, or elfewhere, fhould happen to die, neither the judges for the dead and the abfent, nor the judges for orphans, nor any other than the proper judge appointed by the company to take cognizance of it's affairs in the refpective places, where fuch agents or factors thall die, fhall interfere in the feizure of the books and effects of the deceafed; which faid judge, or fuperintendant of the company's affairs, fhall feize the faid books and effects, and fhall give an account thereof to the board of the company in the city of Porto, that the fame may firff, and with preference to all other titles, feparate what belongs to the company, and then deliver up the remainder to the judges or parties where and to whom it may belong. The fame is to be underftood with regard to the coffers and fuperintendents of the city of Porto, with whom the company thall fettle accounts in the foregoing manner, down to the hour of death, admitting their heirs to be heard, to whom, however, the right of adminiftering to the deceafed is not to be transfered, but muft always remain untransferable.

## Sect. XXXVII

It is your majefty's royal pleafure, that the debts due to this company, which have been contracted from effects of the fame, and not of any other nature, be recovered in favour of the company by it's recorder (or judge confervator) or by the minifters every where, who fhall be required to recover them, the fame as your majefty's royal revenue, notwith ftanding any privileges or refolutions which the debtors thall allege to the contrary.

## POR

## S у с t. XXXVIF.

It is alfo your majefty's royal pleafure, that all perfons concerred in the trade, whatever be their fate or condition, and however privileged they be, on being, called before the lioard of the company for any affair belonging to the management thereof, thall be obliged to attend the fame forthwith, and on failure of fo doing the recorder (or judge confervator) thall proceed againft them as to him fhall appear moft proper.

## 

All perfons who fhall enter into this company with fix thoufand crufados fook, and thence upward, fhall, as long as the faid company periffts, enjoy the privilege of not being confinable but within their own houfes, in thofe cales' in which fuch privilege is ufually granted: and the officers of the fame, for the time being, fhall be exempt from bearing arms in any companies, whether of horie or foot, and from furnifhing recruits, or attending general mufters, in virtue of their rerpective employments. And the trade which Chall becarried on in the faid company as above, or by means of focks, or by employments exercifed by the board of the company, in the poft of goverior and directors thereof, Chall not only be of detriment to the nobility of the perfons, who carry it on, but fhall rather be, on the contrary, a proper means towards attaining to acquired nobility ; fo that the afore-mentioned voting members, conflituted by your majefty to ferve at this firft eftablichment, Thall temain habilitated for being inftalled in the military orders, without any difpenfation on the fore of mechanics, and their child fhall alfo, without fuch difpenfation, be qualified to contend for promotion before the fenate of Lifbon; on condition, however, that after having exercifed the faid employment, they do not themfelves fell by retail in warehoufes or fhops, and that they do not take up any bufinefs degrading to the faid poft, after hawing filled it: this, neverthelefs, is to take place upon future elections, only in favour of thofe perfons who thall have filled the pofts of governor and fub-governor, after having ferved at lealt two years compleat, to the fatiffaction of the company.

SECT. XL;
The offences committed againt any officer of the company, by deed or word, in matter concerning his office, fhall be punifhed by the recorder (or judge confervator) as if done to your majefty's officers of juftice.

## S ect. XLI:

No brokers thall be allowed to interfere in the purchafe or fale of the company's effeats; and only when the managers thereof thall think fit to make ufe of them in bargaining upon any affair, they fhall be paid for the fame; the hire agreed upon between them; which other wife they fhall not be obliged to undertake.

## Sect. XLII

Though the company be refolved to act in every thing which relates to preparing and difpatching it's ladings and hipping with the utmoft mildnefs, and without applying to methods of feverity, as neverthelefs it may find itfelf in abfolute neceffity of baving recourie to the affiftance of the minifters of jullice : it is your majefty's royal pleafure, that, to this effect, the board, by means of it's recorder (or judge confervator) may fend meffage to the judges of criminal and to the high bailiffs of the city of Porto, for thefe to execute the orders which Chall be fent them; and your majefty will look upon the good offices done by them on fuch occafions, as if done for the advantage of the royal fervice, that they may teceive from your majelty the reward thereof in their promotions, on prefenting to the faid judges for that purpofe a certificate from the faid board: and on the reverfe, if they do not comply with this obligation, it thall be matter of complaint, and be imputed to them as a failure of duty in their refidences.

## S ec T. XLIII

Your majefty is gracioufly pleafed to grant to the governor, directors, fecretary, and confultors of this company, the fpecial, favour, that, while they continue to ferve in the faid pofts, they may not be taken up, or confined, by order of any tribunal, military commander, or minifter of juftice, in any cafe civil or criminal (unlefs it fhould be in fiagrante delieto): without authority therefore from his recorder.(or judge confervator:) And that their factors and officers, who hall repair to the provinces, and other places out of the city of Porto, to make purchafes and execute the commiffions with which they may be charged, may make ufe of Vol. II.

## $\ddot{\mathrm{P}} \mathrm{O}$ R̈

all forts of fteel and fire-arms neceffary for the fafety of their perfons and the capital they have with them; on condition that they carry with them licences for fo doing, difpatched by the recorder (or judge confervator) of the company, in your majefty's royal name.

SECT. XLIV.
Whereas the fund, or joint capital ftock of this company confifts of one million (wo hundred thoufand crufados, divided into attions of four hundred mil-reis each, as is. already effablifhed in fect. $x$. every proprietor may have one or more actions, as he fhall think fit, provided that or compleating the number to the amount of ten thoufand crufados, which is the fufficient chare towards qualifying perfons poffeffed of actions for pofts in the management thereof, thofe actions, over and above the faid amount, do remain concealed in the books of the company, without being laid down in the public accompts; which are to be difributed among the members, who have a right of voting at general electionsi:

## Sect. XLV.

The company fhall remain open to the reception of the fums competent for the aforefaid actions, to wit, for the city of Porto and the whole kingdom, for the fpace of five months: for the iflands of Açores and Madeira; for feven: and for all the Portuguefe dominions in America, for the fpace of one year : the faid terms to commence from the day of publifhing the proclamations, that it may reach to every one's knowlege. And after the faid terms are ended, or before the expiration thereof, if the abovementioned joint capital ftock of one million two bundred thoufand crufacos be compleated, the company thall be clofed, fo as to be no more enabled to admit into the fame any other perfon whatever with this declaration, that for every one who thall enier into this company, it will be fufficient to pay down at his entrance one half the amount of the actions he fub/cribes for, and for the other half a credit will be given bim of fix months, reckoning from the day of fixing up the faid proclamations to pay in the fame, at two different payments; of three, and three months each:

## S ест. XLVI.

The perfons who fhall enter with the abovefaid actions, whether natives or foreigners'; may difpofe of the value thereof in that manner, and to that intent, which they fall think beft, whether by way of intail, chaplainfhip, truft temporal or perpetual; deed of gift to the living, or reverfion in cafe of death, or other fuch methods, making fuch ädoptions, and applying fuch difpofals and claufes as they ihall think fit all which it is your majefty's royal pleafure to approve and confirm, from this inftant, of your own free will, certain knowlege, and royal plenary and fupreme power, notwith fanding any difpofitions to the contraty, though naturally requiring to be efpecially mentioned, fo, and in the fame manner, as if the faid difpofals, adoptions, and claufes had been written in deeds of gift under Tpecious claims, or in laft wills, confirmed by the death of the teftators. Forafmuch as, fince the right which every one, in virtue of natural libertys is entitled to of freely difpofing of what is his own, authorifes donbrs and teffators to contract and difpofe as above in favour of private families and perfons, much more may, the perfons entering with the faid actions be au thorifed to act in the fame manner; when quer and above the onerous titles of the contracts they.enter into with the company, and the company with your majefty, they concur to the improvement of the advantages arifing from thic eftablifhment to your majefty's royal fervice, to the commonweal of your kingdom, and to the prefervation and credit of commodity; which, though fo important, is in fo rulinous a fituation.

## Sect. XLVII.

The money which fhall be thrown into this company fhall not be extracted thence, during the time of it's continu ance; which fhall be that of twenty years, reckoned from the day of the departure of the firft fquadron it Thall difpatch; which term of years may neverthelefs be renewable for ten more, if the company ©iall requeft as much, and your majefty be gracioully pleafed to grant it the fame. However, that the perfons who thall enter with their feveral capitals may have it in their power to make ufe thereof, they thall be at liberty to fell the whole, or part of the actions they are poffeffed of, as if they were abfolute mafters of the fame, at the prices they fhall agree for, transferring the fame actions to the perfons who thall be the purchafers, which contracts the board of the company fhall be immediately informed of, and the farme fhall caufe the neceffary minutes to be taken of the faid transfer, without fee or reward on that account, paffing new policies in favour of the 6 X
new
new owners of fuch actions, and entering marginal notes in the old policies of the fellers thereof, whereby the fale they have made of the fame may evidently appear, and taking care to fix to the faid actions fuch neceflary lights as may ferve for a full title to the new proprietors. All which is to be underitood, fo long as the faid company fhall remain with a mercantile form of management, and vefted with the privileges your majefty is pleafed to grant to it as above. For, in cafe of it's mercantile form of government being changed, or of failure of the accomplifhment of the fame privileges, every perfon poffeffed of actions in it thall be at full liberty to call out immediately the capital of his actions; together with the intereft thereof, which till that day fhall be found due to him. And your majelty confirms the fame, with the fame claures, to be literally and inviolably obferved, without interpretation, modification, or any meanings of fact or law, which can or may be alleged to the contrary.

## S e c'r. XLVIII.

The interefts arifing from the funds of this company fhall be divided for the firft time in the month of July, of the third year, to be reckoned from the departure of the firft fquadron, on board of which the faid company fhall fhip it's goods for the Brazils, and from thenceforward a dividend pro rata of the faid interefts, fall be annually and fucceffively made in the month of July aforefaid; although the directors chould happen to have more than a year to remain in their offices.

## S e c t. XLIX.

Such ftocks and interefts as fhall be found after the expiration of the twenty years, which compleat the term of the company's charter, or after the expiration of the farther term for which it may be renewed, having the nature of an intail, of a chaplainfhip, of a truft temporal or perpetual, or being the property of the abfent, fhall immediately be paffed from the coffers of the company to the general depofit of the court and city of Lifbon, where they fhall be laid up with the fame fecurity as the faid depofit itfelf is, in order to be difpofed of, applied, or delivered up, according to the difpofal of the perfons who fo fettled them at the time of putting into the company. But thofe ftocks which are not under any fuch reftrictions, and are perfectly allodial and free, fhall require nothing more or leff to entitle their proprictors to receive the full value thereof, than the very policy of the fame; and the money being paid to the perion who produces the faid policy, this fhall remain in the coffer, to ferve as a difcharge from the faid action or ftocks; for the recovery of which no copies fhall ever be of ufe, but the originals themfelves thall be always required.

## Sect. L.

All this thall extend to foreigners, and perfons refiding in foreign countries, whatever quality or condition they be of; and in cafe, that during the above twenty years term of charter, or the farther renewal thereof, this crown (which heaven avert!) Chould be at war with any other power whofe vaffals have thrown their effects into this company, neverthelefs no arreft, embarraffinent, fequeftration, or reprifal, Thall affect them, or the interefts thence arifing to the owners, but rather they iball remain to them as perfectly free, exempt, and fecure, as if every one had them in their own hands: a fpecial favour which your majefty is pleafed to grant to this company from the motives above-mentioned; and which your majefty, thus on your royal 'word, promifes to fulfil to them.

S : ct. LI.
And becaufe in courfe of time many things may occur, which cannot at prefent be expreffed for want of reflecting on them, your majefty is gracioufly pleafed to empower the faid company, as occafion thall offer, to lay them before your majefty, by means of the fecretary of ftate for the affairs of the kingdom, that your majefty may determine concerning them as your wifdom fhall find beft for your own royal fervice, and for the common good of your dutiful fubjects and of this company. And the company thall do fo accordingly, even in matters relating to it's own advantage, whenever any one of the directors thall infift on a cafe being laid before your majelty, provided the affairs be of moment, and it's confequences of importance to your royal fervice, to the com-mon-weal of the kingdom, or to fome weighty affair of the company.

## SEct. LII.

Whereas it is of great ufe to fix a time certain for the departuresf the fquadrons from the city of Porto to the fates of Brazil, as well as that the wines may be pavigated at a convenient fedion, as that the inhabitants of thofe governments may
make their neceffary provifions at a certain period of time: It is your majefty's royal pleafure, that the fquadrons, bound for thofe governments, do precifely fet fail in the fpring tides of the month of September, or, at the lateft, in the firf of thofe of October of every year, on pain, that the fhips which do otherwife, thall not be impowered to go our till the like time of the following year ; and that leave thall not be granced to them to lade or to fail at any other time.

## Sect. LIII.

And whereas your majefty, after hearing the petitioners, has been graciounly pleafed to nominate the perfons, whofe names are bereunder fubferibed, to eftablifh and govern this company for the firt three years; they, and every one of them; fign this writing in the name of the faid vintagers and good men of the city of Porto; perfonally binding their own effects with which they enter into the company, and allo thofe of the perfons in general, who fhall enter into the fame, fo far only as the portions wherewith they enter therein may extend : that your majefty may vouchfafe to confirm the faid company with all the claufes, pre-eminence, privileges, and conditions contained in the fame writing, and with all the ftrength and force neceffary for it's validity and fecurity.
Porto, on the 3 Ift of Auguft ${ }^{1}$ 1756:

Lewis Diogo de Moura Coutinho:
1, the king, make known to thofe who may fee this charter of confirmation, that having, and with perfons of my royal council, and other minifters learned, experienced, and zealous for the fervice of God, of myfelf, and of the commonweal of my fubjects, whom I thought fit to confult, maturely weigh the three and fifty chapters and conditions contained in the three and thirty afore written half theets, marked by Sebaftian Jofeph de Carvalhoe Mello, one of my council, and fecretary of ftate for the affairs of the kingdom, which the principal vintagers of upper Douro, and the good men of the city of Porto, therein mentioned, have made and ordained, with my royal approbation, in order to eftablifh a company, which may competently fuppott the culture of the vineyards of Alto Douro, and at the fame time preferve the growths thereof in their natural purity, to the advantage of domeftic and foreign trade, as well as of the health of my fubjects, without any expence to my revenue, but rather to the improvement of that and of the common-weal of my kingdom: and whereas upon examination of the faid conditions, with mature counfel, and prudent deliberation, they have been found not only convenient, as well as the company itfelf, which is of manifelt utility to the faid city of Porto, and to the provinces thereto adjoining; but allo, that the faid company is of fingular fervice in this particular, as alfo the perfons, who thereby contribute to the advancement of commerce and agriculture, by fo advantageous and folid an eftablifhment : it is my royal will and pleafure to confirmall the faid conditions, and every one in particular, as if they were, word for word, here inferted and declared : and, by this my charter, I confirm to it and them the fame, of my own free will, and certain knowlege, royal and abfolute power, to the intent that they may be put in execution, and fully obferved, according to the tenor and meaning thereof. And it is my royal will that this confirmation, in the whole and for every part thereof, be inviolably obferved, and never be repealed, but do always remain in it's full force and vigour, as firm, valid, and perpetual, without diminution; and that no doubts or demurs be raifed to obftruct the accomplifhment of the fame, either in part or in the whole, in judgment or out of it; and that it be underftood to be done in the bef form, and in the moft perfect meaning which can be exprefled and underftood in favour of the fame company, and it's commerce and the fupport thereof; fupplying, and having for fupplied, (as if inferted in this charter) all claufes and formalities of law and practice, which may be requifite to give it n's full force; and I repeal, and have for repealed, all and every the laws, ftatutes, ordinations, decrees of courts, provifions, extravagants, other charters, and opinions of doctors, which by any means, or in any manner whatfoever, may be contrary to the conditions of the faid company, or to any one of them, though they thould be fuch as to render it neceflayy to make herein a special and exprefs recital thereof, word for
word, notwithflanding the ordination of the fecond book, title forty four, which ordains that no ordination thall be deemed to have been by me repealed, unlefs exprefs mention of the fame be made : and for the greater force and irrevocable exiftence of this confirmation, I promife and give affurance, on my royal word, thus to fultil it, and-to caufe it to be fulfilled and maintained, and not to revoke it, but to fupport the perfons interefted in the faid company in the prefervation of that and of it's commercee; in the quality of protector thereof, as I am in fact : and this charter thall have the force of a law, that the confirmation of the conditions and chapters therein contained may always remain in their full vigour without any alteration. Wherefore I command the fenate of Lifbon, the courts of requefts; the court of excheqquer, the uitra-marine-council, the board of confcience, the guild of the city of. Porto, and other courts ànd triburtals, às álfó all the governors, generals of the Brazils, officers majors, intendants of the revenue, auditors general, and guilds of that fate, and all the magiftrates, minifters, judges; and juftices of my kingdoms and lordfhips, that they in like manner do fulfit and obferve it, and caufe the fame to be fulfilled and obferved, without doubt or demur, of any fort, not admitting any plea which may obftruct, in the whole or in part; the effect of the faid conditions, as whatever relates to the company belongs to the board of the fame. And it is my pleafure, that this charter have force as an inftrument, without paffing through the chancery-office, and notwithitanding the ordination, book fecond, title 39, to the contrary, though it be more than a year before it have it's full effects.

## Given at Belem the roth of

September, 1756 .
K E Y.

## Sebaftain Jofeph de Carvalho e Mello.

Charter, by which your majefty is pleaifed, for the realons therein alleged, to confirm the fifty-three chapters, and the conditions contained in the thirty three balf leaves aforewritten, which the principle vintagers of Alto Bouro, and the good men of the city of Porto, have made and ordaned, with your majefty's royal approbation, for forming a company, which, maintaining the culture of the videyards; may preferve the produce thereof in it's natural purity, to the adVantage of the vintage; of commerce; and of public héalth.

## For ydur majefty's infpection,

## Done by Joachim Joseph. Boralío.

Regiftered in the office of the fecretary of fate for the affairs of the kingdom, in book I. of the faid company, leaf t . and the following.
The printer, Michael Rodrigues, mày print the chapters, aind the conditions of the general company for the culture of the vineyards of Alto Douro; I having, by this'decree, granted him the neceffary licence for that purpofe only.

With his majefty's royal fignature.

## Regiftered:

Remarks on our article Portugai, fince the laft war, and the treaty of peace of 1763 .

The Portugueze being invaded by the Spaniards in the year 1762, we again fuccoured them at no lefs expence than we did before, and they became a contracting party to the Definitive treaty of 1763 . See America for the treaty at large. But we have not received or got any grateful returns, fuitable to all the obligations which Pottugal is notorioully under to Great-Baitain ; though it has been faid; we are in daily expectations to receive fuch in a commercial way, as will make us an ample compenfation for all the expences, which we have been at: but we know there is little gratitude amongit princes, when their turn is ferved. However, if Portugal oaly amufes and deceives us again ; it is to be hoped, that this nation will never more affift them, without previoully confulting her owni immediate intereft by fo doing: we are no longer in a condition to fight the battles of other nations, without receiving advantages, more,than equivalent to the expence, and the attention required by the court of England, when engaged in fuch enterprizes. The largenefs of our Public Debts, and the multiplicity of our Taxes, it is to be hoped will be a memento to relinquifh fuch fyftems, till we have got rid of our national incumbrances, or fufficiently reduced them.
Let any man of candour and impartiality judge, whether the above wine company is not an eftablithment, calculated to deftroy and annihilate all the commercial privileges to which the Englifh are entitled in the kingdom of Portugal : we are perfuaded, that he cannot think otherwife, when he compares it with the articles in Oliver's peace, which he will find under our article of Treaties of Commerce.

## P 0 R

However, whether the court of Portugal, will or no think proper not only to ratify and confirm all the ancient privileges of Britilh fubjects in that kingdom, but add fome frefh one to them, in grateful remembrance of the greateft expence the crown of Great-Britain has been at for the fupport of that nation, and the diftinguifhed attention this nation has lately given to her prefervation; we fhall foon bear, his excellency Count de la Lippe being jult now charged with a fpecial commiffion from our court to Portugal, for that purpofe, than whom no one could be more acceptable to the coutt of Portugal; the count having done it fuch important Iervices, by means of Great-Britain.
PORTUGUEZE AFRICAN TRADE. The Portugueze have a great thare of the trade to Africa; and, as the Dutch trade thither for gold rather than for flaves, fo the Portugueze trade there rather for flaves than for gold, though they have fome fhare of the gold alfo, efpecially on the eaft coaft. But this trading chiefly for flaves has been, in fome refpect, the fafety of the Portugueze commerce: for as the Dutch, who are every. where theif rivals in trade, have kept the coaft where there is molt gold, fo the Portugueze quietJy poffefs their factories in Congo, Angola, and the fouth coaft of Africa, where there are flaves; but nö great quantity of gold.
As the Dutch want but few llaves, becaufe they have but few plantations in America; fo the Portugueze want a great ndmber, becaufe their plantations in Brazil are fo very great; and they increafe their trade upon the coaft of Africa, becaufe their colonies in Brazil increafe confiderably every year. See the articles Brazit and Portugueze America.
In order to fupply themitelves with negrodes, they have a trade with all the factories upon the coalt of Angola, and the whole kingdom of Congo is, as it were, their own; by which they emjoy all that which geographers call the coaft of Congo; or the Lower Guinea, fromi the Portugueze fort on the north of the ifland Feritando, in the latitude of 7 degrees fouth, to Cape Negro, in latitude 16 degrees, befides a powerful fetthement ep the country, at St Salvador.
In this vaft extent of country they have a moft extenfive and advantageous trade, having made very confiderable fetclements ; but the principal, and where their governor or viceroy keeps his refidence, is at Loando in Angola, and Cape Palmerhino, where they have frong garrifons, and are able to bring together, For their defence againft the natives, 2 or 3000 men at a tirie, very well armed. See the following particulars of all their Yettlements in that country; with a brief account of the trade they carry on at all of them re= fpectively: for they have no fetilements here like that of the Cape of Good Hope, meiely for baiting and refrefhing their Chips.
The Portugueze fettlements on the coaf of Africa, with their trade, are as follow:

## In Guinea Proper, or Upper Guinea.

ARchrem, a fort upon a fmall river, near Cape Three Points: their trade here ís chiefly in elephants-teeth, Come gold, but not much.
They once had Det Miva, a frong cafle, and now the biggeft and faireft fortification in all Guinea. N: B. This caftle was taken from the Portugueze, who built it, by the Dutch, anno 1631, and the Dutch ftill hold it, and have made it very ftrong.
Wrodaw: here they have a fmall fettlement, but not much trade ; they fay they pretend to fettle there chiefly for intelligence:

## Inconeó

Fernando Pd, ah ifland the fartbeft north, and near the Englith factories. Here they obtain foine gold and eleptiantsteeth, with much bees-wax and civet; but the chief trade here is'for frefh provifions for the Portugueze fhips out-bound for India.
Capr Lopos. Here they have fuch a fettlement that the king of the country livès in the fort with them, and they are all confederates; they get here a great many flaves, and fome drugs.
Loango: it is a kingdam, and has it's proper king; but the Portugueze may be faid to be more properly kings of this whole country, efpecially the fea-coan, which they are fully poffeffed of for rioo miles together; and they carry from thence yearly 25,000 flaves, or negroes, for the Brazils, but little or nothing elfe.
Grieat Cascarrs, at the mouth of a fmall namelefs river, not navigable.
Goango, at the mouth of the fiver Zaire: here alfo they get abundance of flaves.
St SAIVADOR, the capital city, above 100 miles within the country.
Lóando, where the Portugueze governor refides.

In Angola.
Cape Palmerhino,
Cape Lehdo,
Libolo,
Benguelas, or St Philip. Thefe are the places where the

2 S. The Dutch have a fmall fettlement here, but the Portugueze drive a very good trade from hence notwithfanding.
Tortuga,
Angra De Negros.
Befides all thefe, they have fome fmall factories on the northern coaft, about Cape Verd and Rio Grand.
From thefe fouthern parts they carry a very great number of nlaves every year to the Brazils; and as their colony there is exceeding great and populous, as well as rich, were it not that they have fuch extended fettlements on the coaft of Africa, for the fupply of negroes, they could not be able to carry on their fugar-works, their mines, and other planting bulinefs in the Brazils, where the flaves are not long-lived.
But this is not all they have to depend upon for fupplying the Brazils: they have feveral confiderable fetclements on the eaft coaft of Africa, as in the territory of Mozambique, and the whole coaft of Zanguebar, a country that takes up the feacoaft from the Rio de Ladrones, in latitude 27 degrees fouth of the Line, where the Portugueze fay the government of Mozambique begins, to Jubo, which lies directly under the Equator, or within one degree north latitude, and from thence even to the gulph of Moccha, or the Red Sea.
The Portugueze governor of all this territory refides at Mombaza, in the kingdom of Melinda, where the king of Melinda alfo refides. They are abfolute mafters of all thefe coafts, where they are never intertupted by the vifits of any fhips or company from Europe, except their own, or except they be fhips in diftrefs, in their return from India; for in their going they fteer quite another courfe.
On this coaft of Africa they poffefs vaft dominion, and have feveral powerful people, countries, and even kingdoms tributary to them; of which we mult take notice, otherwife their trade from thofe places cannot be fully defcribed.

## In Monomotapa.

Inhagua, an ifland near the mouth of the river St Efprit, where the Portugueze dominions fouth of the Line begin. Here they get abundance of elepbants-teeth, and alfo much gold: 'here alfo they begin to be full of black cattle, and they furnifh great quantities to the Dutch at Cape de Bonne Efperance.
St Martin, an ifland alfo, in the mouth of the great river Cumana, where they have a traffic with the natives for European goods, but bring little away but provifions.
Puado, an ifland in a branch of the fame river Cumana. By this river the Portugueze carry on a great commerce with the Caffres, or inland negroes, exchanging a vaft quantity of European goods for llaves and gold, to their very great profit.

## Mozambieue, and therein

The coaft of Zanguebar, containing two governments: St John of Mozambieve, an inand with a city in it, which is very populous, and full of trade: it is wholly porfeffed by the Portugueze as fovereigns. They have a ftrong fortrefs here for protecting their trade, in the nature of a citadel, which commands both the country, the city, and the harbour, which is allo very good; and here moft of their fhips for Goa and Macao call, as well for trade as to refrefh themfelves, as they return from China and India. Here alfo they drive a very gainful trade, trucking the manufactures of Europe for gold and elephants teeth, but not many negroes.
Mongale, an inland town, poffeffed allo by the Portugueze, and garrifoned, and which is the faple of their European goods, manufaclures, \&c. of which they fell great quantitie ${ }_{s}$ to the natives, for fmall bits or lumps of gold, to very great ${ }^{5}$ advantage.
Quilsa: this is a ffrong fort, built by the Portugueze, but the country is unhealthy, fo that the factory could not hold it, and they demolifhed it again: but the king is tributary to them, and pays for their protection, as they call it, 1500 pounds weight of goid per annum, and a great quantity of ivory; and, as the people are cloathed here alfo, the Portugueze fell them abundance of European goods, manufactures, \&c.
Mombaza, a government and frong fortrefs, but loft to the natives in 163 r , who took it by ftorm, and cut all the Portugueze to pieces in it; but the Portugueze returned it, for they recovered it again, with greater flaughter of the inhabitants, and made it very ftrong. Here they have alfo a very advantageous trade.

Melinda, a large country; fubjeft to the Portugueze, though they have a king of their own alfo. The capital city is called likewife Melinda, a large populous place, wholly built by the Portugueze in the latitude of 8 degrees, a fea-port, with a very good harbour; and a ftrong citadel, which commands the entrance into the port. At this city the Portugueze are fo numerous, that they have 17 churches, befides religious houles. Here they have fuch large warehoufes for all forts of European goods, that they fupply the whole coaft and country for 1000 leagues within land; and here they yearly carry off a very great number of flaves, as alfo gold; horfes, rich gums and drugs, and fome oriental pearl.
Adjoining to this country there are five feveral kingdoms, all tributary to the Portugueze; fo that they have the fovereignty of as much land in this country, as the whole kingdoms of Spain and Portugal take up in Europe; and the merchants of Melinda are immenfely rich.
Brava: fome call it a republic; whether it be fo or not matters not much, they are fubject to the Portugueze, and pay a tribute for carrying the Portugal ftandard. The Portugueze trade here chiety for ambergreafe, elephants-teeth, and gold; and they take off great quantities of European goods, becaufe the people go cloathed after the Portugueze ganner.
From hence to the Red Sea the Portugueze have the command of the coaft, though no fettlement or trade with the people.
Whoever confiders the extent of the Portugueze dominions on thefe coofts, and includes the many nations and kingdoms which are their tributaries, muft neceffarily allow their trade to thofe countries to be exceeding great: and though the people of many of thofe nations go almoft naked, or with very little cloathing, and, therefore, confume not much woollen or filken manufactures (the climate being exceeding hot where moit of them live), yet this is greatly fupplied by the infinite number or people, who all make ufe of fomewhat; and the export in the whole, from Portugal to thofe places, muft be very great. As for their returns, they are made with great advantage to the merchant, as well as to the nation in general, for they are in fome of the mor precious and valuable things in the world; fuch as,
S'aves,
Gold-duft,
Elephants-teeth,
Gums of the richeft kinds,
Oftrich-feathers,
Bees-wax.
Drugs, $\left\{\begin{array}{l}\text { Senna, } \\
\text { Aloes, } \\
\text { Guinea grains, } \\
\text { Civet, } \\
\text { Ambergreafe, } \\
\text { Incenfe, } \\
\text { Erankincenfe, \&c: }\end{array}\right.$

| Wild |

| birds, |\(\left\{\begin{array}{l}Lions, <br>

Leopards, <br>
Tygers, <br>
Civet-cats, <br>
Elephants, <br>
Oftriches, <br>
Apes, <br>
Parrots, <br>
Horfes, very fine, of the Arab breed, from Magadoxa.\end{array}\right.\)

The Portugueze have alfo feveral poffeffions, and a great trade, in fome inands in feveral parts of the world. For example,
Madagascar, right againft the thore of Mozambique and Kanguebar, on the coaft of Africa, where they get llaves in confiderable numbers, but no gold.
Madeiras, a body of inlands near the Canaries, and which carry on a large trade in wine of that dominion alfo.
Terceras, or the Azores, or Westward Isies. Thefe are alfo a finall clufter of Inlands, feven in number, not far off from the coaft of Africa, and have a fmall trade with Portugal for European manufactures and corn, but have very little returns to make, except corn and cattle: they lie very convenient for victualling the Brazil Chips outward-bound. See Azores Islands.
Cape De Verde Islands. From whence they' derive their name is eafy to judge, they lying juft off Cape de Verde, or, in Englifh, the Green Cape.
All thefe inands are poffeffed by the Portugueze, except that of Madagafcar, and even there they have the people under fuch command, that it is all one as if they poffeffed it. In all thefe they have a very confiderable trade, but effecially to the Cape de Verde and the Madeiras: the latter, in particular, is faid to fend 20,000 pipes of wine a year to the Englifh lar, is faid to fend 20,000 plpes of wine a year to he
and French colonies in the Weft-Indies, particularly to Jamaica, Barbadoes, and Martinico; and the Cape de Verde inlands to furnifh falt to New England, and the Englifh colonies on the north of America, for their fifhing-trade.

The Portugueze had once begun a trade into the empire of the Abyflines, or Ethiopia; but were given out of it again by the Echiopians, who fancied they intended to ftop the channel of the river Nile, and turn it into the Red Sea, and fo cut off their commerce and communication' wich Egypt. One thing is to be noted of the Portugal trade, viz, that having no manufacture worth naming in trade, with which to carry on their affairs to all thefe remote fettlements, and where they have infinitely more people to fupply: than their whole country in Europe contains, all their fhips therefore go loaded with the product and manufactures of orher nations, juft as the Spaniards do to New Spain, fuch as thofe of England, France, Holland, and Hamburgh and as the Englifh have the greatef opportunity to oblige them, by the treaties made between them in trade, fo the greatef quantity of Enghifh manufactures have heretofore been fent to them, which they have again exported to all thefe remote parts of the world.
All thefe things confirm what is faid above, viz. how greatly the trade of Portugal is increafed in a few years, upon the occafion of the growth of thofe colonies; and of their intereft in them; infomuch that it is apparent Portugal alone has taken off more Englifh goods yearly, within the laft 40 years, than both Portugal and Spain took off together any Wear before.
This is chiefly owing to the increafe of their colonies in the Brazils, and on the eafterri African coaft, which are fo very much improved of late, and are daily increafing, by the vaft number of native Portugueze who go to fettle there, and who all grow rich, that it is believed Brazil only, in 40 years more, if it goes on as it has done for 40 years paft, will be the greateft colony in America, and have more people in it than are in all Portugal and Algarve in Eurofe.

## REMARKs.

From this account of the Portugueze fituation in Africa, the following particulars are obfervable:

1. That as the fuccefs of the gold and diamond-mines in Brazil, as well as the fugar-works, belonging to the Portugueze, depends upon the labour of negroes, they conftantly take care to obtain: a competent number for this purpore, by virtue of their African fettlements.
2. That from the greater dominion in fovereignty, as alfo the greater extent of territory in Africa than any other Eusopean power has, they neceffarily purchafe the productions in this part of the world at cheaper rates than other powers can do: that is to fay, they exchange lefs quantities of the merchandizes of Europe for their African llaves, their gold, ivory, \&c.
3. That their having brought far more of the natives to cloath in the European manner, than all the reft of the potentates confidered together who have fettlements there, the general traffic of the Portugueze in Africa is not of lefs confideration to them, perhaps, than that of all the other powers of Europe unitedly comprehended.
4. That the policy of the Portugueze in Africa points out, and even demonftrates, that it is by no means impracticable for the Englifh in particular, who have fuch a number of good forts and fettlements in Africa [fee English Afritican Company] to make at leaft as great advancement into the inland commerce of Africa as the Portugueze; and to bring thoufands, perhaps millions, of the natives, fo to cloath in the European manner, as to add infinitely more to the exports of this nation in that part of the world, than we have ever hitherto done: for, although England bas been in poffeffion of forts and fetlements in Africa fince the time of queen Elizabeth, yet we have never enjoyed any thing but a trife of the coaft-trade; we have never yet entered into the heart of Africa, and, confequently', have not enlarged our commerce there any thing like to the degree it will admit of. - But this, we apprehend, depends upon quite other meafures than what they have ever yet been taken. See the article English African Company, Vol، I. and fuch other heads to which from hence we have referred.
PORTUGUEZE AMERICA. The territories belonging to Portugal in America, are the Brazils ; which for fituation, extent, and other advantages derived from nature, have proved unfpeakably beneficial to the poffeffor. We fhall not enter farther back into the hiftory hereof, than what may be requifite to our purpofe. Among the various contentions amidt feveral powers for thefe territories, the Dutch were the laft who declared war againft Portugal on this occafion; but after five years, they were glad to make a peace, under the mediation of our king Charles II. which was figned in Auguit 1660; and the Portugueze have, fince this time, remained in quiet poffeffion of this vaft country. Sce the article BrazilL.
The trade which the Portugueze carry on to this colony has been fo great, that fome have thought that to have been the principal caufe why they have neglected that of the Indies.ee the article Portugueze East-India Trade.
Vol. II.

The trade of the five northern captainfhips of Brazil, viz. Paria, Maragnen, Siere, Rio Grande, and Parayba, is carried on in the laft mentioned port, which lies on the river of the fame name, at five leagues diftance from the fea.- It is a pretty fair and populous town, and there are annually about 7 or 8 hips fent thither from Lifbon and Oporto, of about 250 tons burden. Their lading confifts chiefly in fugar, of which they maike more in thefe northern captainfiips, than in the fouth; efpecially fince the difcovery of the gold mines, which has made the inhabitants negligent in refpect to this and all other productions and manufactures.
There was a time when the trade of Brazil fugar was fuperior to that of any in the world; for the Brazil fugar was the firf known in Europe, and the Portugueze are faid to have fet up their fugar-works in this country, about the year $15 \hat{\mathcal{E}}_{0}$; and their long poffelfion has made them more careful and exact in it, than any ather nation; fo that even at prefent, the clayed fugars from Brazil are whiter and finer than ours, and yet the method of doing it is no great fecret. See the article Sugar.
Befides fugar, they bring from hence dyeing woods, feveral forts of drugs, and other valuable commodities from Parayba, which is the leaft frequented port in Brazil, though thefe northern captainhtips are the beft peopled, and the inhabitants are eafy in their circumitances, notwithfanding there have been no mines yet wrought in thefe parts.
Tamarca, which lies next to Payraba, and the captainghip of Fernambuco, carry on their trade from the city of Olinda. It is feated on a hill not far from, the fea, which renders the Areets uneven and incommodious. The port is but narrow, and entry extremely difficult; yet there is a confiderable refort of Chipping there from the other parts of Brazil, and from the Canaries: and the annual fleet from Lifbon, confifts generally of about 30 fail, efcorted by a man of war. Thefe merchantmen are generally about the fame fize with thofe fent to Parayba, and their cargoes are compofed chiefly of fugar and Brazil, wood, which laft is faid to be the beft of it's kind in the world. See Brazil Wood.
BAhiA, or the Bay of All Saints, is the next captainhip of Brazil, is about 12 leagues over, but fcarce navigable in feveral places، There are in this bay feveral fmall illands, where there are tobacco and fugar plantations; and they have allo very good fifheries on the coaft of thele iflands, and on the banks.
St Salvador city lies in the latitude of 14 degrees fouth, and is at prefent the center, of the Portugueze trade in this part of the wond. Authors differ in the accounts they give of the fleets fent annually hither from Lifbon, fome making them double what others report; but the reafon of this is we apprehend, that the one fpeak of the whole Brazil leet, which generally affemble in the Bay of All Saints, in order to return together to Europe; and the other of the fleet from Libon expressly deftined for the Bay, which is about 30 fail efcorted by two men of war, about the month of March commonly.
The commodities they carry are wines, brandies, meal, or flour; oil, cheefe, cloths, fuffs, linen, iron, rough and wrought ; paper, all kinds of kitchen utenfile, laces, and moft kinds of apparel. On the other hand, they bring from thence the beft tobacco in Brazil, fo bighly efteemed in Europe; alfo fugar, indigo, balfam capaiva, ipecacuanha, pareira brava, cinnamon, long-pepper, ginger, woods for dyeing, and fome for inlaying; ambergreafe, and other rich drugs and perfumes: befides thefe, they alfo export from hence raw hides, train-oil, and whale-fins, abundance of thefe creatures being taken upon the coaft, and, for above thefe forty years laft paft, gold, amethyits, and diamonds. There are likewife fome filver mines in Brazil , which, though not wrought to fuch profit as to allow the exporting much of this metal to Portugal, yet furnifh fufficient for home circulation ; and of this filver that money is coined at St Salvador, which is current through the whole colony; and which bears on one fide the arms of Portugal, and on the other a crofs charged with a fphere, with the following motto: Under this fign will I ftand.
The reft of the captain/hips which lie farther to the fouth, carry on their trade by the Rio Janeiro, fo called for it's having been difcovered in the month of January 1555; and which, from being fcarce known 'till of late years, is, at prefent, become one of the molt confiderable rivers in the world. The banks of it are as beautiful and pleafant as can be imagined, the climate fine, the foil extremely fertile, producing fugar, indigo, tobacco, and cotton, all in perfecion.
It has alfo been experienced, that European corn will grow here with little trouble and to great perfection; but for the reafons affigned, this, and all other improvements, have peen difregarded, though independent of the gold mines, which have been difcovered in this and the neighbouring captainfhips of St Vincent, this might be confidered as the richef part of Brazil. The Portugueze fettled here are quite a different people from thofe in the Bay of All Saints; for they are active, indultrious, well inclined to foreigners, and fuffer the Indians who live among them, to enjoy as much freedom

6 Y
as themfelves, which renders the country a paradife; and it is not eafy to imagine, what valt cargoes were brought from the Rio Janeiro, before the gold mines in that country were difcovered.
St Sebastian city is the capital of this country, and ftands commodioully in 23 degrees fouth latitude on the welt of the river, about two leagues from the fea. It is the feat of the Portugueze governor, a bihhop's fea, fuffragan to the archbifhop of St Salvador, and is well fortified.
There are likewife feveral other confiderable towns on the Rio Janeiro, all of which have a large thare of trade, as may appear from the number of thips which compofe the fleet fent hither annually from Portugal, and which confilts of between 20 and 30 fail of veffels, of 500 tons burden, which are ufually efcorted by two men of war.
The commodities brought from hence are generally the fame with thore from the Bay of All Saints, diamonds only excepted. - In regard to the diamond-mines, it is about forty years fince, that fome precious ftones were brought to the city of St Sebaftian, taken out of a fmall river lying weftward of that city, which were at firft judged to be very fine pebbles, but it was not fo foon that they were brought over to Europe. About the clofe of queen Anne's war, thefe fine pebbles were found in greater quantities; and we are told, that fome rich planters began to employ their flaves in digging the black heavy earth, on the fides of the mountains, from whence this river defcended, and then thefe tones were found in greater plenty: fome of them were very large, but moft of a black or yellowifh caft, which blemiohed their luftre, and funk their value; notwithftanding which, many of the yellow fones were brought to Lifoon and fold for topazes. See the article Topaz.
After the crown of Portugal interpofed, the working of thefe mines were prohibited; which, however, did not hinder their coming in confiderable quantities; for it was fometimes faid, they were found in this or that river, and not dug out of any mine; fometimes they had other names given them, and many were fent to St Salvador, and from thence exported to Europe, under pretence of their coming from the Eaft-Indies by the Goa fleet. This involuntary fraud raifed their value, and at length the crown of Portugal became convinced, that fuch as pretended to great fkill in ftones had deceived them, and that fome of thefe Brazil ftones were farce to be diftinguifhed from Oriental diamonds : upon this the court altered their meafures, and it was permitted to fend over rough diamonds in the Rio Janeiro fleet, under certain reftrictions; which licence rendering the value of thofe jewels fitl more and more apparent, the king of Portugal refolved to put this trade under a new regulation. This new order took place in the year 1740, when his Portugueze majefty let thefe mines to a company at Rio Janeiro, for an annual rent of 138,000 crufadoes, which is 26,0001 . of our money, upon condition that they employed no more than 600 flaves at thefe mines
Thefe ftones coming into Europe, funk the price of diamonds at firlt confiderably; but this difcovery bas, notwithitanding, proved highly beneficial to the Portugueze, fince it has operated in their favour greatly, with regard to the general balJance of their trade; for as they have difpoled of thefe ftones to any nation, upon whom they have already a ballance, they muft bring money into the kingdom; and if, on the other hand, they have fold them to fuch nations to whom they pay a ballance in trade, this has leffened the ballance in the favour of fuch nations, and has prevented the exportation of gold in the like proportion; fo that take it either way, the difcovery of thefe diamond mines has been of high confe quence, and may prove ftill of far greater advantage to this nation.
St Vincent captainfhip lies fouthward from that of Rio Janeiro, which is the richeft country in Brazil, perhaps in all Scuth America. It is bounded on the north by the captainthip of Rio Janeiro, on the eaft by the ocean, on the fouth by that of Del Rey, and on the weft by the mountains of La Plata, and countries inhabited by various favage na tions : it extends from the latitude of 22 degrees to 27 degrees fouth, and is in length from north to fouth about 300 miles, and in breadth from eaft to weft, in fome places near 180 miles, but the greateft part of it is not above half fo broad.
St Vincent town is fituated on a fine bay of the Atlantic Ocean, or a kind of peninfula according to fome, well fortified : a little to the north-weft lies the town of Santos, which fome look upon to be the capital of the province; and which has as fine a port as any in the Weft-Indies, capable of holding the largeft fhips.

## R E M A R K s.

A fummary of this trade and poffeffion.
The extent of this çolony and government is the greatef at this time in the world, that is adminiftered by one deputy or viceroy: the dominions of the Spaniards in America are, indeed, greater, but then they are divided into feparate governments, and under governors independent of one another, though all fubject to the fame fovereign.

The proper bounds of this colony from north to fouth, is rom the river Amazons to the river Paraguay, or La Plata, [fee the article Paraguay] above 2200 miles, being from the line, or within half a degree of it, to latitude 37 degrees fouth, and the breadth above mooo miles; but of that indeed they poffefs very little, for the Portugueze are-fo ill beloved by the natives, and the latter, who are a terrible people, and the moft furious and bloody of all favages, are fo numeous in the inland parts of the country, that the Portugueze who are not the braveft men in the world, dare not vene ar among them ; that is, dare not plant far from the coan And this is the reafon, that though the Brazils are fo exceeding large as above, and that the Portugueze are poffeffed of the whole coaft for above 2000 miles, yet they are hardly any where fettled above fifty miles from the fea, except in the Bay of All Saints, and on the fouth parts to the banks of the Rio de la Plata; which alfo may be called a coaft, becaufe bounded by the banks of that great river.
The length of the fea-coaft entitles them to a great many good ports for trade; and the extent of the land entitles them to many different productions fit for merchandize. As the moft northern parts are exceffively hot, being under the line and confequently cannot produce corn or maintain cattle; on the contrary, the fouthermoft parts produce very good corn and maize, and fuch an abundance of cattle, that the hides and tallow are very confiderable articles in their exportations. The produce of the country in general is as follows.
Rice, corn, maize, fugar, cotton, tobacco, Brazil woods, fuitic, hides, tallow. Some valuable ftones and metals, as emeralds, jafper, cryftal, diamonds, filver, gold : drugs, as balm, lacque, faffron, ambergreafe, caffavy.
But the chief produce for merchandize belides the gold and diamonds, are only three of thefe heads, namely, fugar, tobacco, and hides.
It was many years the Portugueze carried on the trade of this colony, and with fuccels too, without knowing any thing of it's fubterranean wealth : filver, indeed, they expected, though they found very little at firlt ; and the number of fhips fent to the Brazils, was ufually but from nine to twelve fail in a fleet, and thofe fleets once a year; one fleet to the Bay of All Saints, and the other to Fernambuco, then newly recovered from the Dutch.
About the year 1680 , they difcovered a great deal of gold in the mountains, at fome diftance from the city of St Salva dor ; and after that they found the like in feveral other parts, chiefly in the mountainous country, and remote from the fea by this their trade has been fo enlarged, and the number of their inhabitants fo wonderfully increafed, multitudes going over every year, tempted by the good fortune of their countrymen, that it is fuppofed the Portugueze in Brazil will in a few years be richer and more numerous than they are in Porugal itfelf.
The increafe of this commerce may be guefled at by this, that they are faid to bring yearly from the Brazils to Portugal, the value of five millions fterling in. gold, coined and uncoined, befides a great quantity of fugar, tobacco, and hides.
The tobacco is a very confiderable article, it comes all very fine dreft, and fpun up in great rolls, which fometimes weigh between two and three hundred weight : it is molt of it made afterwards into fine fnuff, which is fomewhat medicinal, and is efteemed the moft valuable tobacco in the world.
On the fouth fide of the Brazils, towards the Rio Paraguay there are fuch multitudes of cattle running wild, that thoufands of them are killed every year for the hides and tallow; and every fleet brings home the hides to Portugal, fometimes from 17 or 18,000 , to 20,000 at a time.
In return for all this wealth, the Portugueze fend over in every fleet exceeding large quantities of the richeft European goods, and efpecially of Britifh manufactures about 30 years fince, of which they made fuch vaft demands in England, that in the year 1722, Portugal took off more Englifh goods in one year, than ever Portugal and Spain togetber had called for in any year before 1700 .
This general trade, as has been fhewn, ftill continues, and is like to continue and increafe, among the European powers in general, though it is in a great declenfion with relation to England in particular, if the flux of gold continues in the country; and, as the Portuguere tell us it is inexhauftible, we may venture to fay it will increafe; becaufe, as the wealth of the Portugueze in the Brazils fhall increale, fo alfo will their numbers of inhabitants: for every fleet carries away multitudes of people, who go thither to plant and fettle, fo that the colony fpreads continually; and as they increafe, and their wealth increafes, fo their expence in living (as it is with all the European nations) will increafe every year, and con fequently they will make Atill larger demands of goods from the other European ftates, and England is entitled to have a fhare equal to the encouragement the gives to the confumption of the wines and fruit of that kingdom.
Ir is for the fupport of this vaft colony, and for working in the hills where this treafure is found, that the Portugueze call

## P O R

## POR

for fo many negroes from Africa；and the number is fo great which they have now there，that if we may believe the Por－ tugueze，they have above 200,000 in that part only which lies to the fouth of the Bay of All Saints，and inclufive of the bay and colony adjoining；befides what they have at Fer－ nambuco，where they may，perhaps，employ one third of the number more．
Nor can it be lefs，if they carry over 50，000，and more， every year from the eaftern coaft of Africa，as hath been af－ firmed to be the cafe by themfelves，when fpeaking of the Portugueze trade at the city of Melinda on the coaft of Mo－ zambique．
The Portugueze had not hhewn any great concern，either for extending or improving their territories in Brazil after the expulfion of the Dutch，＇till a certain ftatefman advifed Don Pedro，about the year 1685，to think of improving his Ame－ rican dominions，and more efpecially the two extremities of Brazil．
That minifter fuggefted，that the climate at the Bay of All Saints，would fruftrate whatever endeavours might be ufed to render the people active and induftrious；but that it was otherwife，both with the northern and feuthern extremitics of Brazil，where a wife government and a little encourage－ ment，might render the country of much greater advantage to the crown of Portugal，than bitherto it had been．This advice was received and followed，which gave birth，on the one hand，to the eftablifing the Portugueze forts and fettle－ ments towards the river of Amazons；and on the other，to the improvement of the new colony at Santos，which was then but very fmall．
The method taken for this purpofe was fingular enough ；moft of the perfons made choice of were of the mixed herd，or，as the Portugueze call them，Meftices，who married Brazilian women，and the perfon intrufted with the government of there new plantations，were priefts and monks；but they were fent exprefsly from Portugal，and care was taken that they fhould be fit for the purpofe．The captain－general of Brazil，and all the officers of the fouthern captainhips，had orders to treat thefe people kindly，and to give them no dif－ turbance in their meafures．
It very foon appeared by the effects，that this plan was very wifely concerted；for they multiplied prodigioully，and，in the face of about fifteen years，the priefts added feveral hun－ dreds of families to their colony；extending weftward four－ fcore or one hundred miles，farther than the Portugueze had any fettlements before that time．By degrees they purchafed flaves，more efpecially the ecclefiafticks，whom they employ ed in the filver mines；and，treating the negroes better than moft of their neighbours，they foon became very rich；fo that feveral parifh－priefts in the captainthip of St Vincen were worth from ten to fifteen thoufand crufadoes；that is， from fifteen hundred to eight thoufand pounds fterling a piece． They paid the king＇s fifth very regularly，and this was the beginning of the riches drawn from this part of the world But when it was once known，that fo much wealth was to be had in thefe hitherto uncultivated regions，there began very foon to refort thither abundance of adventurers，of all countries and of all characters；when we fay of all countries， we mean Spaniards as well as Portugueze，free negroes， Mulattoes，and all the different mixtures that are to be met with in Brazil，down to the Caribocos，who are the offsfpring of Brazilian favages by negro women；and by different cha－ racters，we mean monks as well as laymen，foldiers，me－ chanics，broken planters ；and，in fhort，all that fort of men who are ready to go any where，or do any thing to get a living．As thefe were quite a different race from thofe of the new colony before－mentioned，it is not to be fuppoled that they could dwell together，more efpecially as the former were the quietelt and moft fimple，the latter the moft riotous and turbulent，people in the world．
Thefe adventurers，therefore，took care to look out for a new fettlement，and they found one of the propereft places in the world for their reception，at no great diftance．This was the thick and vaft forelt of Parnabaccaba，which over－ fpread all the mountains at the back of this captainfhip，and in which hitherto none but wild beaftg took up their dwelling． They foon cleared a part of this wildernefs for their habita－ tion，in which they eftablifhed not only a new town，which they call San Paulo，but a new republic alfo，in which they lived after the manner they liked beft．At firft this was over－ looked，becaufe the country was judged of no great value， and the adjacent captainfhips were very well pleafed to be rid of thore fort of folk，who reforted thither．In the fpace， however，of a very few years，they grew too floong to be dealt with；for，receiving，as they did，all forts of people， they quickly increafed from two or three hundred，to as many thouland men；and being a bold，hardy，enterprizing，and daring crew，the governors knew not how to manage them． In the firft place they took care to fortify the avenues to their territory，which were naturally flrong；and they feldom ven－ tured abroad，but in bodies of fourfcore or one hundred men， and in fuch parties they frequently traverfed the whole extent of Brazil．Thefe were the people who firft difcovered and wrought the gold mines，which muft be exceffively rich，
frnce they were able to obtain fuch vaft quantities of metal， without any of thofe affifances which the Spaniards have ${ }^{\prime \prime}$ their fettlements in Chili．
As this required，however，a great number of hands，they feized upon all the ftraggling Indians and negroes they could meet with，and compelled them to undergo fuch fatigues as they thought proper．
This new and extraordinary commonwealth，was denomi－ nated，from the place of it＇s fituation，Paulifts，and they would not fuffer any of the Portugueze officers to enter their territories；yet they acknowleged the fovereignty of the crown of Portugal，and paid regularly what they faid was the fifth of the gold they obtained；which，in the year 159 I ， amounted to one thoufand marks，or eight thoufand ounces； which Chews，that at that time they drew annually from the rivers and mountains in their poffeffion，forty thoufand ounces of gold ：they took care，however，every time they paid the tribute，to declare，they did it freely，and of their own ac－ cord，out of refpect to the crown of Portugal，and not from any fort of fear or fenfe of obligation．The tyranny of the gavernors of Brazil，and the oppreffion of the Spanifh governors in the adjacent provinces，furnifhed this new fate with abun－ dance of members，fo that at laft it became a very difficult thing to get admittance amongft them，and the method in this refpect was fingular enough to deferve notice．
They obliged fuch as prefented themfelves upon their fron－ tiers，which they never fuffered any ftranger to enter，to fub－ mit to a very ftrict examination，that they might know whether they were fit for their community，and to be fure they were not fpies，or perfons who intended to betray them： upon the bare fufpicion of which，they made no fcruple of beating their brains out：but if，upon this examination，they judged they might prove ufeful members，they obliged them to bring in two flaves for their fupport；affigning them a dwelling and plantation，by which they commenced Paulifts， and were to continue fo to the end of their lives；for any attempt to defert，was punifhed with death without mercy． They made no exception of country or complection；a fa－ vage was as welcome to thém as an European；and every man after his admifion，was at liberty to lead what kind of life he liked beft，provided he did not difturb the peace of the fociety．The Jefuits of Paraguay，either as they pretended out of concern for the fouls of the people，or rather moved by the report of their great riches，made feveral attempts to get amongft them，but to no fort of purpofe；yet they lived up－ on very fair terms with this ftrange fcciety；and the Portu－ gueze flrewdly fufpected，that the reverend fathers furnifhed them with fire－arms and ammunition，becaufe they knew not how they could be furnifhed any other way．See the article Paraguay．
How this little republic was fubverted，we do not fatisfac－ torily learn ；but it is certain，that all this country is now in the hands of the Portugueze，and as much under the obedi－ ence of the king of Portugal，as any other part of Brazil ； but the city of St Paul is ftill looked upon as the center of the mines，and a garrifon is maintained there for their fecu－ rity．Nor are we well informed，in what manner the gold is wrought or refined there；but，in all probability，their chief works are lavadero＇s，fince we do not hear of their ufing quickfilver，as the Spaniards do：but it is very certain， that they are much increafed in value，fince the king of Por－ tugal＇s fifth amounts very commonly to about $300,000 \mathrm{l}$ ．per annum ：and it appears by the lateft account，that thefe mines in particular are continually improving．
Del Rey is the only captaipinip to the fouthward of that of St Vincent，extending from the latitude of 28 to 34 degrees 30 minutes fouth，being about four hundred miles in length， but not above one hundred broad in any part of it．The country is fruitful and pleafant，but the Portugueze abfo－ lutely negle⿻コ一火 1 it，＇till the difcovery of the mines of St Vin－ cent put them upon planting and fecuring ir，by erecting fe－ veral forts on the north fide the river La Plata，to which the Spaniards formerly pretended，and upon which they are ftill fuppofed to caft a jealous eye．
The country in this province is as pleazant and fruitful as any in Brazil，and as capable of improvement ；but as it has not been fo long inhabited as the other captainfhips，it is far from being thoroughly peopled．There are only a few villages upon the fea－coaft，and fome forteffes upon the river of Plate． The chief advantage which the Portugueze draw at prefent from this province，is a kind of fmuggling trade，which they carry on with the Spaniards whom they furnih with rum and tobacco of their own growth，and with wines，brandy， cloths，filks，and linens from Europe；which occafion quar－ rels and difputes between the two nations，though in reality the true ground of their contentions is the thirft of gold in both parties，and the defire that each has of becoming idle pofleffors of the large ridge of mountains，which are the weftern boundaries of this province and that of St Vincent， and are fuppofed to be full of mines．
Some fpeculative politicians have infinuated，that it is not impoffible，that the Spaniards may，fome time or other，carry their point；but if they do，they mult begin with the Pa－ raguay Indians who are at prefent fubject only to the Jefuits；
for otherwife it is very certain, that they cannot raife men enough to give the Portugueze any uneafinefs, who, though they have not people to fpare for fettling this laft diftrict in Brazil, have, however, fuch numbers in the adjacent captainthip of St Vincent, as would very foon repel any invafion from their neighbours, who, after all, it is very certain, are on this fide rather weaker than themfelves. So that ftruggles of this nature, if ever this fhould happen, may be reputed at a great diftance; and, if the Portugueze were as free from any apprehenfion of inteftine diforders, it might be affirmed, that farce any colony is more fecure than that of Brazil. But this may one day give fome other power an occafion of fupplanting the Portugueze, if they efpecially are weak enough to farfeit the good-will of Great-Britain towards them.
The fmall country of Portugal, which bad hitherto made fo inconfiderable a figure among the kingdoms of Europe, began to take the lead of them all; and, from creeping along the coafts of Africa with a few little veffels, her fleets began to ftretch to the Eaft-Indies, [fee the article Portugueze East. India TRADE] and to embrace that trade, which was the object of Alexander's ambition. The Eait-Indies by the rout of the Cape of Good Hope, was their proper difcovery; and, though Columbus had a little the ftart of them, yet the finding and fettling of Brazil, plainly proves that America could not have lain long hid from their refearches.
The fruit of thefe great difcoveries and conquelts, was a prodigious trade, immenfe riches, and an amazing naval power, all deduced from a right turn in the government, which eftablifhed it's power in the extention of that of it's fubjects, without exerting a tyrannical authority over them. This created fleets, armies, and a dominion fuperior to any thing the Europeans had enjoyed, from the deftruction of the Roman empire. Thefe are the effects of well chofen colonies! Bur as a true and laudable ambition raifed the Portugueze to fuch a height, a falfe and baftard ambition made way for their ruin. Sebaltian king of Portugal was a hero, he had all the virtues incident to that character, but they took a wrong turn : he embarked the whole force of Portugal in a war upon the continent for his own glory, and to ferve no national purpofe whatfoever ; there he perifhed, and all his army with him; which, in itfelf, was a great misfortune to his fubjects, but in it's confequences a much greater; for this threw them under the dommion of Spain, which was the greatelt mifchief that could befal them; for after this, there appeared no public fpirit in the government; all their conquets in the Eaft-Indies were cither given to men who had an interelt at the court of Spain, or to fuch as that court defired to get out of their way.
'There was no longer any fpirit of virtue, generofity, or concern for public good, either left or encouraged; the enriching of private families took place of this, and while a few of thefe carried their point, the Dutch ftripped them of their empire in the Ealt-Indies, and bid fair for making themfelves malters of Brazil; which, if they had, Portugal had remained a province of Spain, and not a very confiderable province neither.
When the Portugueze recovered their former government, they recovered fpirit enough to preferve Brazil; but fince that time, the court has been infected with the Spanifh policy; and the defire of extending their royal power has, in a great meafure, extinguifhed that firit which once made them a great people. But, to confine our reflections to Brazil, the great point in the Portugueze councils at prefent is to fecure this trade, or at lealt the profits of it, to the crown; in order to which, the feveral fleets deftined for Parayba, Fernambuco, the Bay of All Saints, and Rio Janeiro, fail as regularly as the Spanidh galleons, and in the very fame manner. If this trade had been left more open, the number of fhips would have been vaftly greater, and there would have been no need of men of war to efcort them, or of another fquadron being fent to look out for, and bring them home, as is at prefent the cafe every year, and yet the Algerines frequently pick up fome.
pick up fome. we liall fee from a few examples: Brazil-wood is now a royal commodity, that is to fay, it is fold for the advantage of the crown only [fee Brazil-Wood]; and it produces about 200,000 crufadees, which is fomething better than 30,0001 . fterling annually: we have already feen what the diamond-farm brings in: and take the whole of the king's fifth from the gold-mines, and it will never be found to exceed a million of our money.
There was, indeed, a project of quite another kind fet on foot, for the impoovement, as they call it, of this trade in Portugal, of which we fhall give a very fluort account. In the year ${ }^{5} 709$, the king of Portugal, perceiving that the vaft quantities of gold that came from Brazil did but juit touch at Lifbon, and then travelled over all the countries of Eu-ope, directed this matter to be very feriounly examined in his council: fuppofing, that if a method could be found out to prevent this gold from fraying, the bufinefs would be done, and himfelf become, at once, the richef prince in

Europe. His council accordingly examined this point very carefully, and they reported that the Englifh and Dutch ran away with all the gold, in confequence'of their furnihing the goods and manufactures, which fhould be prohibited in that colony; and that the people thould be content with what could be fent them from Portugal. This' was confidered as a great ftroke of policy, and was on the very point of being put in execution, when it was prevented by the famous lord Galway, as we have before noticed under the article Portugal.

## Further Observations on the nature of this $\mathrm{T}_{\mathrm{rad}}$.

6 There is not a place in the world, fays an ingenious French author, in a voyage to the Brazils in the year 1717, China only excepted, where there is fo much trouble to get on hhore, or to know how to act when one is on fhore, as in Brazil. Wecame into this bay on the 16 th of November, and, when we were within a league of the city of St Salvador, we were reftrained from proceeding any further, by a gin fired from a little fort, upon which we came to an anchor, and fent our fepercargo athore in our boat; he was a very fenfible man, and withal had a great deal of gravity, a quality of all others the moft neceffary for one who has any bufinefs to tranfag with the Portugueze. . As foon as he came aflore, he was conducted to an audience of the viceroy, who received him with a great deal of ftate, and yet fhewed him, at the fame time, as much civility as be could expect. He told his excellency, That he came on bebalf of three French fhips homeward-bound from the Eaft-Indies, that were in many refpects greatly diftreffed, and had no hopes of performing their voyage, but from his affording them protection and relief. The viceroy continued for fome minutes filent, and then gave him his anfwer to this effect: That he was very forry for their misfortune, becaufe his mafter's orders were very precife againft admitting any foreign veffels into any port; and that he was the more concerned to hear that they were French, becaufe it was chielly on their account that thefe orders were given, becaufe feveral veffels of their nation, that had been admitted into the ports of that country upon the very fame pretences, had carried on an illegal trade directly contrary to the king's orders, and had fhipped great quantities of tobacco. He told him further, That the king's orders were to feize and confifcate, without diftinction, whatever foreign veffels entered that port, unlefs it plainly appeared they were in fuch a condition as not to be able to keep the fea; that therefore they were to have 24 hours given them to confider whether they would come and anchor under the guns of the fort, in order to be examined, or to put to fea without receiving any telief at all. He added, That if the cafe was fuch as our agent reprefented it, he might very freely enter the port, and, upon examination, all the care fhould be taken to affilt and fupply him that be could defire; but that he would do well to remember that the Portugueze were not to be impofed upon.
As our thip was really in fuch a condition that we had no reafon to fear any examination, we made fail immediately on the return of our fupercargo, and came to an anchor under the fort. The next day the judge came on board, attended by feveral fecretaries, and other officers, all of them very grave fober-luoking people, who examined every thing with all the nicety and ftrictnefs of an inquifition. They called for our journals, queftioned our pilots, mariners, and even the cabbin-boys, particularly as to this point, Whether we had not formed a defign of touching at Brazil before we were in fuch diftrefs? They all anfwered in the negative; but ftll we had fo little hopes, that every one in the fhip, who had it in his power, made them fome prefent or other, which they took indeed, but fcarce gave us thanks. At laft they took their leave, and fent fome carpenters on board, to whom our captain made fuch an application, that they reported our leaks to be fo dangerous, that the crew were very much alarmed, and were afraid of finking before they got out of the Ship.
As foon as this report was made, we had leave to go on fhore, which was refured us before, and we had alfo leave given us to take lodgings where we thought fit in the city, but with frict caution not to attempt any kind of trade on pain of forfeiting both Thip and cargo. The officers put on board the veffel talked the fame language at firft ; but feeing the inpreffion it made, and that our people were very exact in that particular, they were fo kind as to explain themfelves the third day, telling us that this was all a farce; that the judges themfelves knew ir; that they underfood by our prefents, we were a good fort of people, and that we fhould have, every night, boats come off with all forts of merchandize, and that they would take care we fhould run no fort of rifque, either in buying or felling. The boats came accordingly, and though at firft we were a little fufpicious, yer, in one week's time, their language was perfectly underftood, and trade went on brikkly every evening, as foon as it was daik.'

PORTUGUEZE

## PORTUGUEZE EAST INDIA TRADE.

## A Short History thereof.

The Portugueze were once the chief navigators of the world, and the firf Europeans who vifited the Indian coaft from the new way by the Cape of Good Hope.-Upon their arrival, on their firft voyage, at Callicut, on the coaft of Malabar, they found Zamorin, the king of the councry, receiving them they ly, and encouraging his people to trade with them, and kindly, and encouragng offering to enter into a leage to mutual advantage.
They found in all the ports of India abundance of fhipping, of Arabians and Moors: thofe called Maors were fuch as Ethiopians or Egyptians, who dwelt on the weft border of the Red Sea, and traded by their hhipping between the faid fea and the coaft of India, Malabar, Ceylon, Coromandel, Golconda, Bengal, \&ec. as alfo others, who were mere Arabians, from the gulph of Perfia.
Thefe traders, when the Portugueze firf came, were as civil to them as Zamorin was before: but, when they came to underftand that thefe Portugueze were Europeans, that they bad found a way about by long fea, from the coaft of Spain and Portugal, into their Indies, and, returning the fame way, they would carry the Indian goods ditectly thither, and withal fecing that they were ftout hips, of prodigious burthen, and would carry a great quantity of goods, and that alfo they had more hhips (for a fecond fleet of ' 3 fail foon arrived), they prefently found that all their trade to Suez, and to the Arabian and Perfian gulphs (the way whereby it had been carried on before) would be ruined: upon which they turned firt the fecret, and at laft, the open and implacable enemies of the Portugueze, and of their whole commerce; and they thewed it firf by provoking Zamorin, the king of Callicut, arainft them, and making him, from their friend, become their utter enemy.-This was in the year r499.
The next year Alvarez de Cabrale, another Portugueze admiral, coming again with fix fhips more, the fame people oppofed him alfo, not only by engaging the king againit them, but by engroffing all the goods, and foreflaling the markets: fo that, notwithitanding the king's orders, the Portugueze could buy-nothing.
But the Portugueze were not, in thofe days, fo eafily maftered as they have been fince; for on complaint to the king, and his majefty declaring that it was not with his knowlege, or by his direction, the admiral, Seignior de Cabrale, fell upon the Moors and Arabs chips in the harbour [家 the Arabians were at that time called Saracens] and foon beating their failors, they difpofed of their cargoes much cheaper and better than they might have had them before. This put the Arabians upon a military revenge : for the Portugueze having taken feveral houfes on thore in the town, the Arabians attacked them in the night, plundered them, and killed feveral of the Portugueze.
Cabrale applied for fatisfaction to the king, concluding, that as he had difowned the Arabians before, he would abfolutely renounce them now : but the king appearing partial and cold, and the Portugueze not obtaining the fatisfaction which they demanded, their admiral attacked io other Arabian Chips in the fame harbour, killed all the men, and unladed the thips into his own': and; when he had to done, to convince the king that he had not courted his friendhip out of fear of his power, he turned his broad-fides upon the city, and furioully battered it for feveral hours; and, leaving it in that fhattered condition, failed out of the harbour before their faces, for Cochin, where he was kindly received, and all the trading advantages given him that he could defire.
The next voyage the Portugueze made was not to Callicut, but directly to Cochin: but the Arabians, \&cc. not forgetting the affront offered them before, fell upon them with 20 ftout Thips in thofe days; but Vafco de Gama, another Portugueze admiral, gave them fo warm a reception, that he intirely over threw them. From this time the Portugueze grew potent in the Indies, and carried on a prodigious commerce, by means of their forts and fettlements.
It, was towards the latter end of the fixteenth century that the Englifh and Dutch began to interfere with the Portugueze in thefe parts; and they very foon, by the affiftance of the natives, took from them the moft conifiderable places they poffeffed, and fome of them they abandoned themfelves. It would take up a great deal of room, and, perhaps, anfwer the purpofe but indifferently, if we fhould attempt to give a large hintory of, the manner in which thefe places were reduced, and therefore we hall rather take them in the courfe of their fituation, by which the reader-will clearly perceive how the empire of this nation in the Eaft was diflofved. Shah Abbas; when monarch of Perlia, had an earneft defire to rid himfelf of the neighbourhood of the Portugueze; but he wanted a maritime force fufficient to accomplifh his defign, and, therefore, he applied himfelf to the Englifh, who had likewife fuffered much by the pride and avarice of the Portugueze ; and, by their affiftance, part of his forces were tranfported into the inland of Srmuz (whereof the Portugueze

Vol. II.
were pofferfed) which was attacked both by land and fea, on the 20th of January, $\mathbf{1 6 2 2}$. The defendants behaved with great bravery and good conduct, and made a noble refiftance ; but the Englifh having deftroyed their fleet, took the garrifon, which ruined the power of the Portugueze on that fide. The rich city of Surat, formerly a place of the greateft trade in the Indies, fuffered feverely from the Portugueze, who burnt it down to the ground, on purpofe to favour the commerce of their own city of Diu, which ftands at the entry of the gulph of Cambaya, and which they had rendered one of the Atrongelt and fineft places in the Eaft, keeping the monarch of that country in abfolute fubjection. But, notwithftanding their policy in this refpect, and that they fill remained mafters of Diu*, yet the Indian princes in the neighbourhood traded freely with all Europeans; and Surat, which they took fo much pains to deftroy in 1520 , is now in as flourilbing a condition as ever, and the Portugueze are almoft the only nation that are not benefited by it's traffic.

- This city of Diu ftands in the latitude of 21 degrees, zo minutes, upon an infand about a league in length, and not a third part of a league in breadth. The country aboat it abounds with all the neceffaries of life; and the city itfelf is as well built, and as well fortified, as any in the Indies. At prefent, the Portugueze are about to eftablifh as well the trade of this city, as of others in the Indies.

On this coalt they were poffeffed of feveral frong places, dowt to Goa; of thefe, Daman is fill in their hands, and is a place of pretty good trade; Bacaim is lately fallen into the hands of the Indians. Bombay they yielded to the Englifh, on the marriage of queen Catherine with king Charles II. and has continued in our hands ever fince. From Goa to Cape Comorin they had alfo very confiderablefettlements, molt of which they have been difpoffeffed of by the Dutch, who in the year 1663 becoming mafters of Cranganor, Cochin, and Coulan, foon after deprived them of Cananor, which was the firft place they had fettled at: and thus was their power greatly reduced on the coaft of Malabar.
Doubling this famous cape, and proceeding along the coaft of Coromandel, we meet firft with the port and fortrefs of Nagapatan, which, when the Portugueze came firf into the Indies, was no more than a village ; but they, confidering the importance of the place, fortified it with great care, and rendered it in every refpect very confiderable. But after the Dutch had deprived them of the ifand of Ceylon, they did not long let them reft here, but, by the affiftance of an Indian prince, befieged and became mafters of that place, in 1658. From thence all along the coalt, quite up to Bengal, the Portugueze have loft all power ; and as for fettlements, they had none of any great confequence to lofe, having, in the time of their greateft power, contented themfelves with a fmall eftablifhment at Meliapour, or St Thomas, reftraining all the reft of the coalt by their fquadrons, which were continually cruizing in the bay of' Bengal.
On the oppofte fide of the gulph, the Portugueze had once very great power in the kingdom of Pegu [fee PEGU], in confequence of their affifting the monarch of that country againft the king of Siam, who had invaded his territories, and would very probably have made him his tributary, if a body of Portugueze bad not come to his affiftance, by whom he was enabled not only to defend bimelef effectually againft his enemy, but even to purfue him into his own country.
It is very eafy to difcern what mighty advantages might have accrued to the Portugueze from this favourable turn, if they had known how to improve it ; but what might have turned fo much to their benefit, proved, by their own ill management, the caufe of their ruin, and that in a very fhort fpace of time. The king of Pegu, it feems, was fo fenfible of the fervice they had done him, in driving the king of Siam out of his country, that, in pure gratitude, he made one Seignior Thomas Pereyra, who commanded the Portugueze in the war, generalifimo of all bis forces, which preferment made the Portugueze fo infolent, that, in a few years, they became intolerable to all ranks and degrefs of perfons in Pegu. Both kings grew tired of war, but both were too proud to make advances towards peace; fo that, for many years, they had fkirmifhes with fmall parties, though not fet battles; and wherever the Portugueze arms went, they had victory to accompany them.
The king of Pegu, to have his forces nearer the borders of Siam, fettled his court at Marcavan, and kept the Portugueze near him, to be ready upon all occalions, either to repel or affault the Siarn forces, as opportunity ferved; and Thomas Pereyra was the great favourite at court : he had his elephants of ftate, and a guard of his own countrymen to attend him.-But he loft his life, and the Portugueze were all cut oIf, from an act of violence committed by him on the wife of one of the natives.
The kingdom, or, as fome call it, the empire of Siam, lies next to Pegu, and is a country of vaft extent, the monarch of which was too powerful for the Portugueze to think of making any great conqueft in his dominions, and therefore they chofe to live with him upon good terms, for the fake of the valt trade carried on in his dominions, which are ex-
tremely well fituated for commerce, having on one fide the kingdoms of Laos, Camboya, and Cochin-China, and on the other the countries bordering on the gulph of Bengal. Befides, there annually reforted thither a fleet of merchant-hips from China, laden with all the rich goods of that empire. They continued to hold a fair correlpondence with this monarch and his fubjects, as long as their power fubfifted in the Indies; but, by degrees, the. Dutch have, in a great meafure, excluded them from their influence here fince 1630, when they erected their factory here, and have fince wrought themfelves fo effectually into the confidence of this prince, that he has granted them an exclufive privilege of purchafing all the tin in his dominions, which is a branch of commerce of prodigious importance; yet the Portugueze are not wholly ejected, though their trade is greatly fallen from what it was. There are feveral fmall principalities on the ifthmus, before one comes to the country of Malacea, which were all of them formerly under the power of the Portugueze, as appears by their retaining ftill a mixture of that language with their own. The chief of thefe principalities are thofe of Ligor on one fide, and Quedah on the other; but the people are fo barbarous and perfidious, that the Europeans carry on fcarce any trade on their coafts.
The great peninfula of Malacca, at the time the Portugueze came thither, was fubject to the king of Johore; but the viceroys of the crown of. Portugal attacked, and made themfelves mafters of that city. After it came into their hands, it changed it's conditions entirely; and from being a place of fmall account, in a fhort time became famous all over India and Europe, lying almoft in the cenire of trade, brought thither by Chipping from the rich kingdoms of Japan, China, Formofa, Luconia, Tonquin, Cochin-China, Cambodia, and Siam, belides what Johore produced, and Sumatra, Java, Borneo, Macaffar, Banda, Amboina, and Ternate Inlands, that abound in valuable commodities.
After Goa and Ormuz, this was by very far the richeft city in the Indies, and a great market for all the different commodities that thefe countries produced. The whole was encompaffed with a ftrong ftone wall, regularly fortified with baftions, the place extremely well peopled, and the garrifon numerous, and well fupplied, becaufe the Portugueze confidered it as the eaftern frontier of their dominions.
In 1605, the Dutch [fee the article Dutch East-India Company ], who were then become very potent in the Indies, atracked and deftroyed the fleet of the Portugueze here, confifting of thirty-four fail, on board of which were three thoufand men; but they were not able to take the place. The next year, the king of Johore invefted it with an army of fixty thoufand men, in revenge of what the Portugueze had done againft him three years before, when they took and deftroyed his capital; however, he was obliged to raife the fiege with great lofs. But the Dutch well knowing the importance of the place, and the vaft advantages accruing to the Portugueze from it's fituation and commerce, the former affording them an opportunity of levying so per cent, upon all veffiels paffing through the Straights, and the latter producing annully a large revenue, they attacked it in the year 1640, fo vigrorouly, that they became mafters of it, after a fiege of fix months. The walls and fortifications they preferved, and fome of the churches, and the great hofpital they have turned into a warehoufe. In the kingdom of Cambodia, or Camboia, the Portugueze have ftill a confiderable trade, and they are likewife well received in Tonquin.
The troubles in the Low-Countries, which produced a war between the crown of Spain and the republic of the United Piovinces, began about 1570, and England interpofing in favour of the States, their power increafed to fuch a degree, that they were not only able to defend themelves againit Spain by land, but to give that potent monarchy inexpreffible trouble by fea. But this war feems to have no relation to Portugal, and we do not hear of their attacking any but the Portugueze fettlements in the Eal-Indies. In order to refolve this difficulty, we muft remember that the crown of Portugal was united to that of Spain in 1579 , by which means Philip II. became mafter of both the Indies, and confequently the States of the United Provinces were as much at war with the Portugueze, who were fubjects to the king of Spain, as with any of the reft of his fubjects; and confequently this gave them a right to attack the Portugueze fettlements, both in the Eaft and Weft-Indies, which they profecuted with fuch vigour, that they bid far for becoming mafters of all that the Portugueze had poffeffed in either Indies.
We have feen what mighty acquiftions they have made in the Eaft; but it is neceffary to our fubject to obferve likewife, that their Weft-India company became in that fpace of time, fo powerful, as to make almoft an entire conqueft of Brazil. It is very evident from hence, that nothing but the union of the crowns of Spain and Portugal could have afforded the Dutch either a pretence for attacking, or an opportunity of reducing thefe countries, both of which, in a fingular degree, they foom this accident obtaned. For as, on the one hand, his Catholic Majefty had enough to do in defending his hereditary dominions, before this acceffion of the territories of

Portugal ; fo he was tempted to apply the revenues of that crown to the immediate wants of the Spanifh government, which we may conclude were very great, fince on his deathbed he owned, that the wars of the Low-Countries had coft him five hundred and fixty-four millions of ducats, which is upwards of one hundred and twelve millions of our money; whence it is eafy to perceive, that he could not fare as much as was requifite for the defence of the Portugueze territorie. On the other hand, the Portugueze themfelves, though they had always been diftinguidhed for their loyalty to their natural princes, were far enough from flewing fo much zeal in the fervice of the king of Spain; and it is very natural, when the minds of private men are entirely defpoiled of public fpinit, for the affairs of the fate to fall into confufion.
But one would have imagined, that after the feparation of Portugal from Spain, which happened in the year 1640 , things would have taken another turn; becaufe, with king John IV. the Dutch had no pretence of making war. To give the reader a clear idea of this matter, we muft remember that the Dutch had taken Brazil from the king of Spain, or rather from the Portugueze, while they were his fubjeits; but afterwards, that nation confidering this as an injury not to be borne, attempted to drive the Dutch out, notwithftanding the treaty concluded between the States and the king of Portugal, in 1641 ; which, to lay the truth, had been but indifferently obferved on both fides*; that is. to fay, the Dutch had encroached upon the Portugueze in the Eatt-Indies, and they, on the other hand, gave the Dutch little or no refpite in Brazil, out of which, in ten years time, they drove them entirely.

* At the time the Portugueze delivered themfelves from the Spanith yoke, the Dutch were employed in reducing the illand of Ceylon, and made ufe of abundance of artifices, in order to profecute the advantages they had gained, norwithlanding the peace concluded between the States-General and the crown of Portugal in Europe; neither did they defift from their hoftiiities, even after the peace was proclaimed in the Indies, but continued to give the Portugueze almoft as much trouble as while the war continued. This they did under pretence of being allies to fuch Indian princes as were at war with the Portugueze; and where this pretence was wancing, they took care, by their emifiaries, to ftir up new wars, and, under pretence of reftoring the Indians to their freedom, constived things fo as to engage them in long and bloody wars, which had no other end than to oblige them to change their mafters, with this difference only; that whereas the Portugueze endeavoured to keep large countries, and to oblige the Indian princes to pay homage to the king of Portugai, the Dutch contented themfelves with the fea coalts, and forbidding thofe princes to trade with any other nation; fo that their flavery was equally great, though not always equally apparene, which ever fide prevailed.

About this time died king John IV. and left his fon Alphonfo VI. a minor, which advantage the Dutch took to declare war againft the crown of Portugal, from a perfuafion that this opportunity of regaining what they had loft in the Weft, and profecuting their conquefts in the Eaft-Indies, was not to be loft; the racher becaufe Portugal was at that time engaged in a dangerous war with Spain, and the Dutch had lately concluded a peace with that crown.
It was in confequence of this new war, that the Duth at tacked the Portugueze again in the Eaft-Indies, and even endeavoured to deprive them of Goa; but in this they did nor fucceed: and, on the other hand, the Portugucze foynd means to traverfe all the attempts that the Dutch made to eftablifh a trade in China, as alfo to raife fuch a ftorm, as deprived them of the illand of Formofa, which they had conquered, and which was of prodigious confequence to them.
But, in the mean time, the great fleets they fent to the EaftIndies, enabled them not only to extend their conquefts, but in the year 1661 , to defeat the whole naval power of the Portugueze in two general engagements. But while the public fuffered exceffively from the confequences of this fatal war, fome private merchants in Lifbon and in the EaltIndies, firted out fo many privateers, and of fuch ftrength, that the Dutch fuffered exceffively in their trade; and therefore both nations began to be weary of the war, and inclined to a negociation.
The crown of Great-Britain interpofed it's mediation, in confequence of the marriage between king Charles II. and the Infanta of Portugal, by which peace was brought about in the year 1661, and thereby the Portugueze were left in poffeftion of Brazil, and the Dutch accepted a fum of mosey as a fatisfaction for their pretenfions.
In the Eaft-Indies things were to remain as they then flood, and both parties were to keep whar, at the conclufion of this peace, fhould be in their refpective poffeffions; but the Dutch kept this no better than they did the former treaty; on the contrary, in 1663 , they attacked all the places which the Portugueze held on the coafts of Malabar, particularly Cochin, which they had mo fonner taken, than they defltoved all the wild, or baftard cinnamon, which, after the lofs of Ceylon, had proved an advahtageous branch of commerce to the Purtugueze. There were high complaints made of this

## POR

in Europe to the States-General, who were either deceived in the plaufible accounts given theon by their Eaft-India company, or pretended to be deceived, that dhey might, with a better grace, protract the negociation relating to this affair, 'till their fubjects in the Eaftredodies had fo fortified the places they had takan, ass to puk it entirely out of the power of the Portugueze to attempt the recovery of them. *

The Dutch, though their Eat-India company gained fuff ciently by thefe practices, fuffered very feverely, as a, ftate, from the jealoufies they excited in their neighbours. The Englifh had fome experience of a like difpofition towards hem; and though the Frenchi had nots, at that time, any grounds of complaint in the Indies, yet they were far enough from being pleafed with the growth of the Dutch naval poiver; and. therefore readily. joined in a war to humble them, as they phrafed it, which wasp that of 1672 ; and how far the caufes of that war were connecteds with the conduat of the Dutch in the Indies, may appear from a fact claygged upon them by Mr Tavernier, who, in his Travels, relates, that the Dutch factory of Gambrou in Perfia, publicly burnt the picture of king Charles II. in a fire partly made of cinamon, which was fuch an indig. nity as that prince never forgot, and which gave a very bad impreffion of the Dutch to the Perfians;' who laboured all they could to hinder it.

Thefo proceedings gave the finifhing blow to the ruin almoft of the Portingueze, who bave never fince been able to undertake any thing of confequence in the Eaft-Indies; but, on the conbrany, have exhaufted much of their remaining frength in defending themielves againft their Indian neighbours; who, encouraged by the progrefs of the Dutch, and excited thereto by fome of theis agents, have been fince endeavouring to tear from them she fraili remains of their poffeffions in India, and have ofien kept Goa itfelf blocked up, for many months together.
We have already pointed out many of the caufes of the dectanfion of that mighty power, which, in fo flort a fpace of time, the crown of Portugal a@quired in the Ealt; but as this is, perhaps, the moft ufeful part of the prefent article, it may not be amifs to add a few farther obfervations on this fubject. One great caufe of their ruin was, the circumftances of their goverument at home ; where, for many years togetber, they were engaged in a long, expenfive, and dangerous war againft the crown of Spain, in defence of their ind ependency, whach at once employed thei whole force, and exhautted their whole revenue. It is true, indeed, that this was rather the miffortune, than the fault of the Portugueze, fince it was what they could not axoid; but it was, neverthelefs, the great caufe of, their loffes in the Indies.
We may add to this, their fending over men of too great quality, as viceroye to Goa, with a view rather to better their fortunes than the public fervice; which is the reafon that, of late years, we hear nothing more of the Gamas, the Albuquerques, the Pereyras, or the Galvanos; but: are forced to fearch for the names of their viceroys in the priyate regifters of the palace, inflead of the public, records of hiftory: befides, as, thefe men have been, generally fpeaking, too psor to mind any thing fo much as mending their own eftates; fo they bave been too well allied to be called to any account, on their return, for their mal-adminiftration.
When their affairs began firt to decline in this part of the world, it was a common thing fon a governor of Mofambique, which was effeemed the firft viceroyflaip, and with all the other governors in the power of the viceroy, to become immenfely rich. Now, as it is impofilile thas fuch exorbitant fums hould be made any other way, than by opprefing the Indians and taking large fums from the merchants; we may eafily perceive, that all thefesprivare fortunes were made at the expence of the public interef.
The bad examples of the governors, badi a baxl:effect on all the fubordinate officers; fo that pride, vapity, luxury, and a pompous difplay of wealth, attained by illicit means, took place of that difinterefted public finit, which enabled their anceftors to lay the foundacion of fo large an empire, with an inconliderable part of that power, which was in the poffeffion of thofe who lof it.
The clergy too foilowed the example of the laity, and infead of promoting, as at the beginning, the converfion of the matives to the Cliriftian faith, from, the pretended view of faving their fouls, they now profecuted that work from the motive of making them fubfervient to theinown purpafes, and enabling them to acquire valt riches, FOR THEIR KINGDOM is OE THIS WORLD. This corruption proceeded fo far by degrees, that not only many of the Jefuits at Goa, engaged in trade, contrary to the rules of their order and their duty as miffionaries, but even defcended fo low, as to difguife themrelves in the habits of faquirs, or Mohammedan monks, that they might have an opportunity of vifiting the dianond mines, and puschafing ftones there of extraordinary value*.

- We owe thisc circumftance to the Hifory of Holland, by M. de la Neiville, who tells us, that the Dutch being, extremely piqued at the trouble the. Jefuits gave them at China, difcovered this prattice to the governor of the diamond mines at Vifapour, who caught twa of the fathers

## POR

difguifed like faquirs, with fones about them to the value of twenty-five thoufand pounds, which he took from them, and after whipping them publicly, for profaning the habit of thofe holy men, took fuch meafures as prevented their carrying on that trade in this fhape ever after.

But what moft of all contributed to corrupt the inhabitants of the Portugueze fettlements, was the little care taken to prevent their leaving all things to the care of their negroes and other llaves, and their intermarrying with the people of the country'; practices ever fatal to all European eltablifh ments, becaufe it not only effeminates. the minds of fuch as fall into this way of living, but alfo makes them lofe all regard for their country, and inclines them to take fuch meafures, as are moft likely to preferve them in the enjoyment of fuch fervile pleafures.
The Portugueze at Goa have been, for more than a century paft, fo much addicted to this fenfual kind of life, that provided they might enjoy their magnificent houles in the city, and their country palaces in it's neighbourbood, they gava themfelves no pain about what happened elfewhere, or how great progrefs the Dutch made in fubduing their diffant fettlements. The natural confequence of this was, that when fuch fettlements were loft, thofe who were driven from their habitations, Xnfead of repairing to Goa, and taking arms in the king's fervice, for the recovery of any part of his domipions, went into the territories of fome Indian prince, and there, for a pitiful fubfiftence, entered into his pay, or accepted of fome low office in his court; fo that while the fleets and armies of Portugal grew thin and contemptible, for want of foldiers and feamen, there were many thoufands of that nation feattered all over the Indies, difgracing their country, by the manner in which they got their bread; when, by a proper behaviour, they might have, reftored the affajis of their prince, as well as their own fortunes.
One may fafely affirm, that all thefe mifchiefs were, at the bottom, owing to the want of a right adminiftration in Portugal; where, if a council for the Indies had been fettled [fre INDIA-HOUSE OF SPAIN], compofed of men of real abilifies, and competent experience in commercial concerns, who had been intrufted with the fole power of beftowing places in that country, and had been charged to look carefully into the conduct of fueh as were employed by them, might, before things had gone too far, have reftored difcipline in their colonies, and recalled fuch, as from difontent or dif fidence in their former governors, bad taken refuge in other places.
But their attention to other things, and more efpecially, to their fettlements in Brazil, which have, indeed, accidentally compenfated, in fome meafure, their loffes on this fide, hindered them from thinking of their affairs in the eaft, 'till they became almoft palt recovery.
In this diftreffed and dejected ftate they lie at prefent, which, however, mult not excufe us from giving the reader a view of them, even in this condition, becaufe the Portugueze are ftill confidered as having fome intereft in the Indies, though it be in a manner nothing in comparifon of what it was, they are, however, at prefent, taking meafures to revive and effablifh their trading intereft again in this part of the woyld, and that, as we have before feen, by the means of British Merchants, British Sailors, and British Money.
The dominions at prefent fybject to the Portugueze yiceroy of the Indies are very eafily defribed. The city of GoA, of which we have fpoken before, is fill the capital, the feat of the viceroy, the archbifhop, and the inquifition, which are heavy burthens on fo exhaufled an eftablifhment. In the neighbourhood of this city they preferve the inands of Salfette, Bardes, Augedive, and fome others of no great confequence, farther than that they fupply the city of Goa plentifully with provifions, which is hard to fay whether it be an advantage to that place or not: for as rice comes in great quantities, and very cheap, to Goa, it encourages the citizens to keep a valt number of fervants, efpecialy negroes, who are content with one difh of this food at noon, and another at nigbt. If thefe were kept for any kind of labour or manufactures, there would be no great objection to it; but almoft every houfe-keeper has fix, fome of them 12, fome 30 or 40 , that have no other bufimefs than carrying their mafter's palanquin and umbrella'; fo that, in reality, they are not kept fo much for fervice as for ftate: and thus they rather exhauft, than increafe, the riches of the inhabitants.
Dru, which formerly belonged to the kingdom of Guzarat, is the frongeft place they have, and is, indeed, very well fituated for commerce. It has a very good port, and, while the Portugueze had any fleets of confequence, they were generally laid up here; and at this city the Moors, and other traders in thofe feas, were obliged to take out their paffports, before they proceeded any farther to the Eaft. At prefent, almoft dill the trade which was carried on here is removed to Surat, and what little fill remains at Diu, in the hands of the Portugueze, is carried on under Gentile ceblours; that is to ay, the Portugueze think themflyes fater under them
than under the flag of Portugal, formerly fo much refpecled in the Indies.
The port of Daman, on the gulph of Cambaya, is yet in tolerable good condition, though nothing in comparifon of what it was, the old town being in a manner deferted, and the new not near fo well peopled as might be expected from it's extent.
There are, however, fill fome manufactures carried on here, particularly in filk, with which they furnilh the market of Goa, and thereby enable the merchants fettled to carry on what fimall commerce they have left. Chaoul ftands behind the mountains, on the fame coalt, and has a very fafe and good port.
Thefe are all the places that they have on the Malabar coaft ; and in other parts of the Indies they have few factories, and no eftablifhments at all, except it be in the illands of Innor and Solor, not far from the Moluccas, which they polfefs jointly with the Dutch. Once in two or three years they fend a fhip from Goa to thefe illands, the chief commodities of which are fandal-wood, much efteemed in China, very good wax, and a fort of medicine called folor-ftones, which are very little, if at all, inferior to the bett bezoar. On the coalt of China they have the ifland and port of Macao, from whence they carry on a cofiderable trade to China and the Philippines.
All that remains under the Portugueze dominion, from the Cape of Good Hope in Africa, to the city of Macao in China, is governed by a viceroy, with the title of captain-general, who refides at Goa, as the metropolis of India. There are fix, and fometimes eight, defembargadores, or judges, that attend the government as a fovereign court, or council, who wear gowns down to their heels, over a caffock of the fame length, the gown with wide neeves down half way their arms: they wear golillas, and huge perukes of the French fathion. The chief court thefe gownmen fit in is called Re lacon, which adminifters juftice in civil and criminal cafes, having power over all minifters, and tries all appeals brought from all parts of their dominions. The viceroy fits as chief of this court, under a canopy; the gownmen fit on benches placed on the plain floor. The council de Facada is like the court of Exchequer, where one of the gownmen fit as the vicey's deputy. Thus the pomp and felendor of this goverrment is flll kept up, though the extent of it is much leffened, and the power and credit' of it in a manner decayed.
There are fill as many governments as ever, that is, in title; for otherwife they are of no great confequence; and thofe on whom they are beftowed have the characters of generals. There is, for inflance, a general of the gulph of Ormuz, who has four thips under his command; a general of the north, who directs the finall towns on the coaft of Malabar ; a general of Salfette, who has a territory of about fifteen miles; a general of China, who is, properly fpeaking, governor of Macao, and an abfolute vaffal to the Chinefe. There is another general in the iflands of Timor and Solor, to whom even the Portugueze there fcarce pay any obedience, and who lives in a miferable foit, the guns of which are in no condition for fervice. There is likewife a general of Goa, whofe bufinefs is to take care of the channels between the illands, and to reftrain fmugglers *.

* There is a very wide difference between thefe titular preferments and the governments formerly in the gift of the ferments and the governmeats formerly in the gift of
viceroy of Goa, which were five; the firft was that of viceroy of Goa, which were five; the firt was that of
Mofambique, which is fill in their hands, and the only one of the old government that is fo; the fecond was that of Mafcat, on the Arabian coaft, which was of very great importance, and brought in a large revenue; the third was that of Ormuz, on the coaft of Perfia; the captain-general of the ifland of Ceylon was the fourth, and the governor of the important fortrefs of Malacca was the fifth. Upon each of thefe general governments there depended many others of lefs confequence, and of which thefe generals had the abfolute difpofal; but thofe who held them, werc continued in them for no longer than three years. And it was for this reafon they were guilty of fo much extortion, looking upon their governments as leafes for fo many years, in which they were to make therr fortunes.

But the beft of all the governments that fill belong to the Indies, is that of Mofambique [fee Portugueze African Trade], which is an ifland fituated near the coaft of Africa, in the latitude of $15^{\circ}$ fouth, within balf a league of the continent. They have a flrong fort there, with four good baftions, which commands the channel, and in which there are feventy pieces of brafs cannon; and here there is always kept a good garrifon, and in tolerable order. The governor is honoured with the title of general of the river of Senna, where he has his heutenant, which employment was worth to him feveral hundred thoufand crowns a year. There are but a few houfes about the fort, the inhabitants keeping their effects on the neighbouring continent: but notwithftanding the narrownefs of the place, there are monafteries of Jefuits, Dominicans of St John de Dios, befides the chief church and that of the Mifericordia. The merchandize
brought to this place by the fhips of the company, ate bought at a fet price by the royal factory, which afterwards fends them to Chelimani; the mouth of the river of Senna running three hundred miles along the coaft, in galliots and fmall veffels, becaufe of the flats from Chelimani; the goods are fent up the river againft the Aream, in almandies or little boats, which are ten days going up and about five coming down. It is very difficult going up, for thore who are not well acquainted with the hhallows and windings of the river. The Cafres, or Blacks, refort to this port from provinces and kingdoms three or four months journey diftant, to buy or take up goods upon truft for fo much gold, which they never fail to bring punctually the next year, unlefs, death prevents them. This trade yields above cent. per cent. fo that the Portugueze may be fald to have another India in Africa.
SENNA is a little town on the right-hand of the river, inhabited by fifty Portugueze families, who make it populous enough, by the great number of blacks they keep. Thefe till the ground, and dig in the mines, and by that means maintain their mafters inftead of being kept by them.
About fifteen days journey from hence lies Sofala, where the Portugueze have likewife an eftablifhment, fubject, however, to the general of Mozambique, and here a prodigious trade is driven on, of which the Portugueze are, or might be, matters. It confilts chiefly in gold, of which there are greater quantities here than in any other country in the world, fince the annual produce of this market is computed, by the beft judges, at forty-fix thouland ounces. There are vaft quantuties of Spanifh and Canary wines, oil, filks, linens, cortons, coral, and other European goods fold here, which are carried by the inhabitants of the little kingdom of Som fala, through all the great empire of Monomorapa, which the Portugueze fille the empire of gold, from the prodigious quantities of that precious metal which is brought to them from thence. There are likewife, fome other very rich commodities brought hither by the negroes, fuch as the moft excellent ebony in the world, grear quantities of ivory, abundance of fine mats, which are much efteemed in the Indies, and a great number of flaves; fo that Goa, and all the reft of the Portugueze fectlements, are furnifhed from bence. One may juftly wonder, that, confidering the value of this fetilement, and it's convenient fituation, the Dutch had not made themfelves mafters of it long ago, as well as of all the other places belonging to the crown of Portugal on this coalt.
In the year $\mathbf{1 6 0 5}$, they attempted Mozambique with very little fuccefs, which, however, did not difcourage them; as it muft be allowed, that where there is a profpect of gain, the Dutch are not eafily difcouraged : and, therefore, in 1607, they attacked it a fecond time with greater force, but with the fame ill-luck as before, except that they made themfelves maflers of a rich Portugueze fleet, which, in fome meafure, paid the expence of the expedition. This rich trade, notwithftanding, is much fallen off by the Arabs making themfelves mafters of Monbaza, and other places whicn gives them an oppoitunity of fupplying the Africans with European goods, which they purchale in different 'parts of the Indies.
As for the fhare which the Portugueze fill retain, the gold obtained thereby is fent to Goa and to Diu, where it is coned into fmall pieces, called St Thomas's, which are not worth above half a crown of our money; and it is obferved, that this coin is of a worfe touch, that is, of a bafer allay than any other in the Indies [fee the article EASt-Indin Trada in general] which is another fign of a declining trade; for the Saracens, which were formerly coined at Ormuz, when in the Portugueze hands, were efteemed the beft gold in the Indies; but they are now become extremely fcarce, and the St Thomas's are coined in lefs quantities every year.
Thefe poffeffions are faid to produce fo little to the king of Portugal, that it has been more than once debated in the council of that prince, whether it would not be for the intereft of the crown to abandon them all together withdrawing their artillery and effects; and we are likewife told, that it is not any political, but purely a religious motive, that has hindered this meafure from being taken, the priefts having fuggeffed that, in fuch cafe a multitude of fouls would beloft to the Church. We fhall the icfs wonder at this, if we confider, that fuch as are beft acquainted with the lat India trade affure us, that a fingle merchant and a fingle thip of a reafonable burden, may carry on as great a commerce, as what at prefent fubfifts between Lifbon and Goa. This matter, however, deferves fome explanation. There are yet a great many fhips employed from Goa, Diu, and Daman, to the coafts of Perfia, Pegu, Manilla, and China, but they are moflly on the account of Indian merchants, there being fcarce a Portugueze trader at Goa able to furnith a cargo of the value of 10,0 co crowns; and it is very much doubted, whether in the whole of their trade, they employ above two hundred thoufand crowns; fo that it is not at all ftrange, that one year with another, there are not above two ihips fent directly from Goa to Lifbon, and thore
when they annually fent twenty.

Yet there has been a late regulation made at Goa, for the prefervation and promotion of trade, which thofe who underftand that fubject beft, agree compleated it's ruin. This is an exclufive company, which has the fole right to the commerce of Mozambique and Macao, which company has taken upon itfelf the payment of the royal officers, who are alfo two thirds concerned therein: this has given fuch a blow to the natural commerce of Goa, that the beft part of the Indian merchants that were left, are now retired from thence. To fay the truth, it was the great fhare the viceroys, governors, and other officers, always took in commerce, without contributing any thing thereto, except protecting the merchants from the violence committed by themfelves on fuch as did not admit them to a fhare in their trade, that firft deftroyed the extenfive commerce they enjoyed. And, upon this fubject, the wits of the Indies have framed a very pretty allegory: they fay, that when the Portugueze came firft there, they had a fword in one hand, and a crucifix in the other; but that they might fill their pockets the fafter, they quickly difpenfed with the firft, and foon after laid down the laft, by which they have loft all. But though their power and their commerce are fo much declined, their pride is as great as ever, infomuch, that they refufe the natives of the country, who are called Canarians, the privilege of wearing fookings, though they employ them as phyficians, lawyers, and merchants, by which many of them are fo rich, that they keep a dozen or fourteen flaves, and are in much better circumftances than the Portugueze themfelves. The revenues of the Church have fuffered very little by this furprizing change in the State; there being hardly a monaftery that does not receive four or five thouland crowns out of the treafurg, at the fame time the foldiers ftarve and mutiny for want of pay; which is fo much the harder upon the government, becaufe the reverend fathers know very well how to take care of themfelves, infomuch that it is affirmed, the Jefuits in Goa have a better revenue than the crown of Portugal. It is not eafy to know what becomes of the money thefe Popifh cfurchmen raife, but it is very evident, that the wealth they poffers, together with the effablifhment of the inquifition at Goa, is fuch a dead weight on the fettlement, as muft fooner or later deftroy it, unlefs other meafures are foon taken to prevent it.
The wifef of the Portugueze in Europe underftand this very well, and would be glad to fee fome proper remedy applied, not from any prejudice againft the Church or Churchmen, which is far enough from being the vice of that nation, but out of pure regard to the crown, and to the nation; and one would think, that the Clergy themfelves, inftead of grafping at more, ought to be willing to part with fome proportion of what is already in their hands, in order to render the State more able to protect them in the poffeffion of the remainder. Befides, there is nothing clearer, than that the erecting of religious houfes is directly oppofite to the very fcheme of planting, and mult always ruin the fettlements where it prevails, and confequently the religious houfes themfelves, which is certainly an argument that ought to prevail even with Popifh princes, to lay fome reftraint on the miffionaries that are rent abroad, unkefs they prefer the reputation of zeal among fuch as are no competent judges, not only to maxims of policy and good government, but to the principles of true religion. For, if there be any piety in converting Pagans to the Chriftian faith, it follows, that there is ftill greater piety in doing this effectually, and in maintaining for ever the eftablithments neceffary to fupport them, which reafon and experience fhews, the building monafteries, and maintaining numbers of idle people in them, will not do, but, on the contrary, will bring on in time the deftruction of thofe colonies, in which this humour is fuffered to prevail.
A few years fince we had advices from this part of the world, that Ieveral Indian princes were driven from before Goa, which they had blocked up with a numerous army, by the powerful fuccours fent by the prefent king of Portugal, and by the excellent condition of the late viceroy, who was the count De Laurical, and behaved there with great reputation. Such expeditions, however, are to be confidered as expedients only, which may for a time preferve that fettlement, but can never reftore it, or bring the affairs of this nation in thefe parts into fo good order, as to make them worth the attention of a prince, who has the honour of his crown and the good of his people at heart.
But, it feems, the Portugueze are, at prefent, determined to take effectual meafures for the reftoration of their Eaft-India commerce, and they intend to commence the fame at the port of Diu; which has been long fince obferved by M. Tavernier to be well fituated for trade, and as capable of improvement, as any in that part of the world, or more fo: and, if put under a proper regulation, that is, if made in fome meafure a free port, as it is faid the Portugueze defign, it mult neceffarily come in for a large fhare of that commerce now carried on at Surat, and, in all probability, retrieve much of the Arabian and Perfian traffic that has been fo long loft to them. And as the Portugueze have ftill fome factories at Bifnagar, and other places on that coaft, it would be no dificult matter to re-eftablifh their commerce in the heart

Vol. II.
of India, at the fame time that the port of Macao would fufnifh them with the means of fupplying the China market as cheap, or cheaper, than any other European nation, becaufe their colony at Mozambique is fo fituated, as to ferve them for the fame purpofes that the Cape of Good Hope does the Dutch, or the ifland of St Helena the Englift.
POSTAGE of LETTERS. Soon after the reftoration of king Charles II. an act of parliament paffed for erecting a general poft-office in England; and in the 1 ft year of king William III. an act of parliament paffed in Scotland, for ereeting a poft-office in that kingdom; but in the ninth of queen Anne, after the Union, an act of parliament paffed for repealing both thofe ftatutes, and for uniting both the faid poftoffices, and for erecting and fettling one general poft-office throughout all her Majefty's dominions; by which it is enacted, That there fhall be one general poft-office in London, and one poft-mafter general, who fhall have the fole receiving and difpatching all letters within this united realm, and without, \&tc. except letters which concern goods fent by common carriers, and which fhall be delivered with the goods, without any profit for receiving or delivering them; and except merchants letters, and thofe of mafters of lhips; fo as fuch letters be delivered to the perfons to whom they are directed, without receiving any profit for them; and except provifions, affidavits, writs, \&c. and any letters fent by private friends, in their journey, or by any mefienger about private affairs or bufnefs.
Provifo, That carriers do not receive letters which do not concern goods then in carrying, nor drivers of fage-coaches, nor matters of paffage-boats, nor paffengers therein, nor watermen or bargemen, though without hire or reward.
The poft-mafter general, and his deputies, and no other perfon, fhall provide horfes and furniture for any perfon riding poft, where any poft-roads fhall be fettled, at the rate of 3 d . per mile for every poft-horfe, and 4 d . for the guide, and fhall not charge any thing for carrying a bundle, fo as it does not exceed eight pounds.
And for letters he fhall take, viz.
For every fingle letter not coming from, or directed from on Chip-board, and to and from any place in England, not diftant above 80 miles from London, $3^{\text {d, and for every double }}$ letter 6d. and for the packets of writs, deeds, and other things 12d. per ounce: for every fingle letter above 80 miles from London, 4d. and for a double letter, 8 d . and for other things, 1 s .4 d . per ounce; for every fingle letter from London to Edinburgh, or vice verfa, 6d. and a double letter, i2d. and for other parcels, is. per ounce ; for any letter from Edinburgh, to any place not exceeding 50 miles in Scotland, 2d..and a double letter, 4d. and for other parcels, 8d. per ounce; and if above 50 miles, 3 d. and for a double letter, 6 d . and for other parcels, 12 d . per ounce; if above 80 miles, then for every fingle letter 4 d . and for a double letter, 8d. and for other parcels, 1s. 4d. per ounce: and for the poftage of letters and packets direeted on board, or brought from any veffel riding or ftopping in any port in England, id, over and above the faid rates; and for the poftage of all letters and packets paffing and repaffing by the penny-poft, and to be received and delivered within 10 miles diftant from the General Poft-Office Id.
The poft-mafter may erect crofs-ftages, and he or his deputy may demand and receive the fame rates in any fuch crofsftages, in proportion to the diftances of places, as letters to and fiom London are rated.
He may appoint one to meafure the roads by the wheel, except fuch roads where the fages are already fettled; and he who makes fuch furveys, thall make oath before fome juftice, \&c. in each kingdom refpectively, to perform the fame according to the beft of his fkill, and the juftice, \& cic. Thall certify the fame in writing, to be kept and entered in the General Poft-Office, without fee.
Provifo, That merchants accounts, not exceeding one theet, and all bills of exchange and invoices, and bills of lading, fhall be allowed to pafs without rate in the price of letters; and likewife the covers of letters, not exceeding one fourth part of a theet, fent by the way of Vienna, Marfeilles, Venice, or Leghorn, to be fent to or from Turkey.
None other but the poif-mafter general, or his deputies, thall receive, take, or carry letters, either by land or fea, or provide horles for riding poft, or collect any letters, or fet up any foot-poft, horfe-poft, or packet-boat, or any other conveyance for the carrying or delivering of letters, under the penalty of 51 . for every offence, and alfo 1001 . for every week that the offender fhall continue the faid offence.
If through the default or neglect of the poft-mafter, any perfon riding poft flall fail of being provided with fufficien horfes, after demand,' the party offending thall forfeit 5 l. one moiety to the crown, the other to the profecutor, to be recovered in any court of record.
Provifo, That if the mail be carried out of England in any veffel which is not a free fhip, and navigated by feamen as by the law is required, that then the poft-mafter-general fhall forfeit rool. one moiety to the crown, the other to him who will fue, to be recovered by bill, plaint, or information.

All money due for letters not exceeding 51. Thall be recovered in the fame manner, and under the fame rules, as fomall tithes, by complaint in writing before two juftices, who may fummon the party complained of, and, on default of appearance, determine the caufe, and give allowance and cofts, not exceeding yos.
If the party refufe to pay in 10 days after notice, the conftables, "\&c. are to deftrain, by warrant from the juftices, and thie diftrefs to be fold in three days.
All inland letters muft pay at the ftage where laft delivered, unlefs they are directed to any thip or veffel, or to any perfon in the army, or fent by the penny-poit, and unlefis letters going out of Great-Britain, which have ufually paid rates in England.
After the it of June, 1743, the old rates fhall be taken for Jetters again.
Perfons opening, detaining, or delaying any letter, after the fame is delivered into the General Pon-Office, except by warrant in writing, under the hand of a fecretary of ftate, or unlefs the perfon to whom directed refuies to pay the poftage, or where the letter fhall be returned for want of due or true direction: the perfon fo offending, or embezelling a letter, forfeits 201. to be recovered in the courts at Weftminfter, if in England; if in Scotland, in the court of feffion or exchequer, by fuch perfons who will fue, with full cofts, and the offender is difabled, and rendered incapable of any employment in the Poft-Office.
Pott-maffer general, and all in any employment relating to the Poft-Office, muft take the oath following, before one juftice of the peace of the county where fuch perfon refides.
IA.B. do fwear, That I will not wittingly, willingly, or knowingly, open, detain, or delay, or caufe, procure, permit, or fuffer to be opened, detained, or delayed, any letter or letters, packet or packets, which hall come into my hands, power, or cuftody, by reafon of my employment in, or relating to, the Poft-Office, except by confent of the perfon or perfons to whom the fame is, or thall be directed, or by an exprefs warrant in writing, under the hand of one of the principal fecretaries of fate for that purpofe; or except in fuch cafes where the party or parties to whom fuch letter or letters, packet or packets, thall be directed, or who is or are hereby chargeable with the payment of the poft or poffs thereof, fhall refufe or neglect to pay the fame; and except fuch packets or letters as fhall be returned for want of due directions, or when the party or parties to whom the fame is, or thall be directed, cannot be found ; and that I will not any way embezzle any fuch letter or letters, packet or packets as aforefaid.
It is enacted, by fat. 6. Geo. I. cap. 21. That when bills of exchange are fent wrote on one and the fame piece of paper with a letter, as alfo feveral letters to feveral and diftinct pesfons, are fent wrote on one and the fame piece of paper, that every fuch bill, and every' fuch letter, Chould be rated and paid for as fo many feveral and diftinct letters, according to the rates 9 Ann. cap. 19.
And whereas by the act 9 Ann. cap. 19. it is provided, That all bills of exchange, invoices, and bills of lading, fhall be underftood to be allowed without rate in the price of the letter; and fome doubts having been made, touching the faid provifo, it is, by the faid 6th of king Geo. I. cap. 21. declared and enacted, That it was, and is the intent and meaning of the faid act, that the faid provifo and allowance fhall extend only to fuch merchants accounts, bills of exchange, invoices, and bills of lading, as fhall be fent to or from the General Poft-Office in London to any parts beyond the feas not within his Majefly's dominions; and that all other merchants accounts, bills of exchange, invoices, and bills of lading, flaill be rated and paid for as fo many feveral letters, according to the rates mentioned in the faid act 9 Ann. cap. ${ }^{19}$.
By ftat. 4 Geo. II. it thall be lawful for any penny-poft-man to demand, for every letter originally fent by the Penny-Poft, which thall be delivered to, or for any perfon, at any place out of London, Weftminfter, or Southwark, and their refpective fuburbs, one penny befides the penny paid on putting the letter into the faid office; and no penny-poft-man Chall incur any penalty for detaining fuch letter until the payment thereof.
A letter, in which there were bills of exchange, was delivered at the General Poft-Office in London, to one who was appointed by the polt-mafter to receive letters, and there it was opened, and the bills taken out; and, in an action brought againft the Pof-mafter, three judges, againft Holt, chief juftice, held, That it would not lie, becaufe this was an office of intelligence, and not of infurance, or of conveyance of treafure; but the chief juftice held, that the action would lie, becaufe the poft-mafter hath a reward, which is the reafon that inn-keepers and carriers are to keep goods fafely. By the 26th of Geo. II. every writ is to pay as a diftinct letter ; and letters incloling feveral patterns, not exceeding one ounce weight, to pay only as a double letter.
N. B. The laft act in relation to poftage of letters, in. cluded in the tobacco-act.

A warrant to take a diftrefs for money ordered to be paid, by two juftices, for poftage.
Effex, ff. Whereas, on complaint this day exhibited, by A. B. of, \&cc. unto us, W. B. and J.S. Eqqrs. two of his Majefty's juftices of the peace for the county aforefaid, That L. M. of, \&c. has refufed to pay the fum of, \&c. by him jufly due for the poftage of letters, and the fum of, 8 cc . which we awarded for cofts on his refufal, as aforefaid : upon examining into, and determining the caure of complaint, according to the direction of the ftatute in that cafe made: thefe are therefore to require you to levy the faid feveral fums of, \& on the goods of the faid L.M. by diftrefs and fale, is not redeemed in three days; and, for your fo doing, this fhall be your fufficient warrant, Given, \&\&.

POT-ASH, are the lixivious alhes of certain vegetables, ufed in the making of glafs, foap, bleaching, dyeing, \&c
Although pot-afh is a thing daily ufed, and well known even to the vulgar ; yet, as the making of it is a mechanic art, practifed only by the vulgar, and neglected and overlooked by the learned, fo we have had no fatisfactory account of it; and they who underftand it, generally keep it a fecret, leff others fhould learn fo beneficial an art. But, as it is a commodity that no nation hardly can well be without, either for making foap, glafs, dyeing, or bleaching, fo the way of making it, is generally underfood in moft countries except our own. For, in France and other countries, where they make wine, they make a kind of pot-afh, in an eafy manner, from the lees of their wine. In thofe, and other more fouthern climes, they have many kinds of herbs hereafter mentioned, either fpontaneous, or cultivated on purpore, which they as eafily convert into pot-afh. In Germany, and other more northern countries, they make great quantities of pot-aih, by extracting the falts of their wood-a fhes, in a manner that is well known. But it is only in Ruffia, Sweden; and other northern nations, where the art of converting their woadathes into pot-afh, without the tedious procefs of elixiviation, is either well known to the learned, or practiled by the vulgar. By this means, moft nations are fupplied with this neceflary commodity of their own, except the Englifh, who might be fupplied with any quantities of it, from the great plenty of otherwife ufelefs wood they have in their colonies, if not at home, if they knew how to make it. But it feems this art is fo little underffood among us, that many attempts have all proved unfucceffful, merely upon that account, fo as to be intirely laid afide. This has put us, for fome time, upon enquiring into the ways of making this commodity, of which feveral have been fuggefted, from the feveral trials and informations hereafter mentioned.
It is well known, that the athes of all kinds of vegetables whatever, afford pot-ath in fome meafure or other; although fome are much more fit for that purpofe than others, which may be determined from the experiments of Redi, in the Philof. Tranf. No. 243, p. 28 I. Boerhaave, Merret, and others; fo that we need not infift upon them here. As for the trees and herbs of our colonies in North America, moft of thofe that are common in their woods are known to be fit for this purpofe, as the afhes of them all, burnt promifcuoully in their houfes, make a very ftrong lye fir for foap. Of thefe, the fitteft for that purpofe is their hiccory, the mot common tree in their woods, which makes the pureft and whiteft afhes, of the charpeft tafte, and ftrongef lye, of any wood. Their ftickweed is faid to do the fame, which is as common a weed. For this reafon, the afhes of both thefe plants were ufed by our Indians there, inftead of falt, before they learnt the ufe of common falt from the Europeans. The afhes of tobacco likewife, when damnified, or not fit for a market; or it's ftalks, ftems, and fuckers, of which great quantities are thrown away, and rot and perifh, are very fit for pot-afh, as they contain a great deal of falts, and are well known to make a ftrong lye.
On the other hand, pines, firs, faffafras, liquid amber, or fweet gum, or all odoriferous woods, and thofe that abound with a refin or gum, are unfit for pot-afh, as their ahbes are well known, even to our planters, to make a very weak lye, unfit for foap.
Befides thefe that contain little or no falt, there are fome other vegetables that afford a large quantity of it, but make a bad kind of pot-afh, at leaft for many purpofes, on account of a neutral falt with which they abound. This feems to have been the cafe of the pot-ath made in Africa, in a manufacture of that commodity, fet up there by the late African company, which Mr Houfton (wha was chiefly concerned about it) tells us, in his travels, proved fo bad, on account of a neutral falt it contained, that the manufacture was left off on that account ; or, perhaps, from their not knowing how to make it right. What thofe vegetables are, that afford this kind of afh, is not well known, if it be not fern, and fome fea-plants.
Whatever vegetables we make our pot-afh of, fhould be frefh or green, and no ways rotten, dried, or decayed. They

## POT

thould likewife be burnt to afthes by a low fire, or in a clofe place; otherwife, when they are burnt in the open air, by a ftrong fire, great quantity of the athes is confumed in fmoke, by the faline and terreftrial parts being carried up in fumes, before they are feparated from thefe exhalable parts, by the action of the fire. For the difference between burning wood in a clofe place, or the open air, is fo great, that the quantity of afhes obtained from one, is more than double the other. This we learn from the experiments of Lundmarck bereafter-, mentioned, who tells us, he burnt a quantity of birch in a clofe flove, from which he obtained five pounds of alhes; whereas, the fame quantity of the fame wood, burnt in the open air, yielded only two pounds.
It is for this reafon, that moft people who make pot-afh, burn thicir wood in kilns, or pits dug in the ground ; although the Swedes burn it in the open aır, as the author above-mentioned informs us. This firft fep, or the burning the wood to afhes, feems to be taken, by many, for the whole procefs of making pot-afh; for they who pretend to have learned this art in Ruffia, as wells as Lemery, and fome other authors, hardly give us any other account of it.
But, in order to convert the afhes, prepared in this or any other manner, to what is called pot-afh, there are many different ways practifed in different countries, which make as many different kinds of pot-afh, that are all to be found in our markets, and bave all their refpective ufes.

1. The firft of thefe is commonly called pearl-afhes by our people, who import great quantities of it from Germany. This is no other than the lixivial falt of wood-afhes, extracted by making a ftrong lye of them, and by evaporating it to drynefs, in a manner that is well known, and fufficiently explained by Kenkelius, in his art of making glafs, Boerhaave, and many others; fo that we need not infift upon it here: we thall take a more fit opportunity to explain it, for the ufe of our people in America.
2. But the art of converting thefe wood-aibes into pot-afh, without this tedious procefs of elixiviation, is only practifed in Ruffia, Sweden, and other northern countries, where it has been lately difclofed by one Lundmaick, who tells us he had often made it himfelf, in the manner he now defrribes. This account is contained in an academical differcation upon this fubjcet at Aboe, in Sweden, and was communicated to Dr Mitchell, by Dr Linneus, profeffor of botany at Upfal, as a genuine account of this art ; which I think has hitherto been generally unknown.
This author tells us, 'They have many large woods of beech in Smoland, and other parts of Sweden, in want of which they take alder: of theie they are allowed to ufe only the old and decaying trees for this purpofe, which they cut to pleces, and pile in a heap, to burn them to athes upon the ground, by a flow fire. They carefully feparate thefe afhes from the dirt or coals in them, which they call raking them; after which they collect them in bafkets of bark, to carry them to a hut built in the woods for this purpofe. This they continue to do 'till they have a fufficient quantity of theie ahes. Then their whole art follows: for whicls they chufe a convenient place, and make a pafte of thefe afhes with water, by a little at a time, in the fame manner, and with the fame infruments, as mortar is commonly made of clay or lime. When this is done, they lay a row of green pine or fir logs on the ground, which they plafter over with this pafte of athes: over this they lay another layer of the fame ftrait logs of wood, tranfverfely, or a-crofs the others, which they platter over with the afhes in the fame manner: thus they continue to crect a pile of thefe logs of wood, by layer upon layer, and plaftering each with their pafte of afhes, 'till they are all expended, when their pile is often as high as a houfe.
This pile they fet on fire with dry wood, and burn it as vehe. mently as they can; increaling the fire from time to time 'till the afhes begin to be red hot, and sun in the fire. Then they overfer their pile with poles, as quickly as they can; and while the afhes are ftill hot and melting, they beat and clap them, with large round fexible ficks, made on purpofe, fo as to incruft the logs of wood with the afles; but which the athes concrete into a folid mafs as hard as flone, provided the operation has been rightly performed.
This operation they call walla, i. e. dreffing. At laft they frape off the falt thus prepared, with iron inftruments, and fell it for pot-afh; which is of a bluidh dark colour, not unlike the fcorix of iron, with a pure greenifh white falt appearing here and there in it,'
All the pot-afla we have from Ruffia, Sweden, and Dantzick, is exaclly like what our author here defcribes, and feems to be made in this manner. It is, however, generally obferved, that the Ruflian is the beft of thefe, on account of the greater quantity of falt in it. Now if, in the preceding proceff, we make our pafte of afhes with lye, inftead of water, it is plain the pot-afla will be impregnaled with more falt, and make all the difference there is between thefe forts of pot-alh. This then is likely to be the pracice in Ruffia; where their wood may likewife be better for this purpofe, and afford more falt. This is well known to be the cafe of different kinds of wood: fo our author abovementioned tells us, he obtained $2 \frac{2}{6} \frac{\mathrm{~F}}{\mathrm{f}} \mathrm{lb}$. of falt out of eight cubic ells of po-
plar, which was very tharp and cauftic; but the fame quantity of bircls afforded only one pound of falt, and that not fo ftrong ; and fir hardly yielded any at all.
The way of making pot-alh above defcribed, may be the more cafily undertood by our people in America, for whom this is chiefly intended, as it is the fame with their way of making lime of fhells, the only lime they ufe in moft places. Thefe fhells they burn to lime between the layers of a pile of wood (inftead of a kiln) 'till reduced to athes, in the fame manner as is here directed to be done with afhes, to make pot-afh. The lime thus made, is reckoned very good; but, as it is impregnated with the alhes of the wood, and the marine falt that is often in the fhells, it is apt to make the houfes that are built with it very damp in moift weather, fo that the water often runs down their walls in Itreams; which cannot but be very unwholefome, in an air that is naturally clofe and damp: the only way to prevent which, would be to wafh and dry their thells frequently, and burn them in dry pine, that afford little or no lixivial falt. But to return to our purpore 3. There is another way of making pot-ah, practifed chiefly in England, where they make it in the following manner. With their athes of fern, or wood of any kind, they make a Iye, which they reduce to what they call pot-ah, by burning it with fraw. To do this, they place a tub full of this lye nigh a clean hearth of a chimney, in which they put a handful of loofe ftraw, fo as to take up a quantity of lye with it. The ftraw thus impregnated with lye, they carry as quick as they can to hold it over a blazing fire on their hearth, which confumes their friaw to afhes, and at the fame time evaporates the water from the falts of the lye. Over the blaze of the firft parcel of ftraw, they burn another, dipped in lye in the fame manner. This they continue to do 'till their lye is all expended. By this means the coals and afhes of the ftraw, and falts of the lye, are left on the hearth, and concrete together into a hard folid cake, of a greyifh black colour, which they rcrape off, and fell for pot-alh.
This is an eafy way of making pot-afh, in want of proper veffels to extract the falt of the lye by evaporation, or in want of wood to reduce alkes to pot-afh, in the way above-mentioned, for which it feems to be contrived, and for which it is only to be commended. Fur the pot-afh made in this manner, is full of the coal of the ftraw, and it's falt is not fo ftrong, as our workmen fay, or fo tharp and corrofive as the falt of the foreign pot-ahh, that is calcined in an open fire; befides other differences hereafter mentioned, which makes this pot-a ah unfit for fome purpofes, and not above half the value of the foreign.
3. They have a very different way in the north of England of reducing their kelp to pot-afh, which they ufe for making allum. This is made of the different kinds of fuci, or feaweeds, thrown upon the fhore, or gathered upon the rocks; which they dry a little in the fun, and afterwards burn in a kiln, built of the ftones they find on the fhore, in a cylindrical form, and about two feet or lefs in diameter. In this they firft burn a fmall parcel of the herb, and before it is reduced to afhes they throw on more, 'till the kiln is full, or their materials are expended. This is faid to reduce the afhes to a hard and folid cake, by the heat of the kiln, and quantity of falt in the herb, which makes what is commonly called kelp-athes.
There are fome other ways of making pot-afh, fuggefted by feveral, both authors and others, which appear to be more ealy and ready than any of the abovementioned; for which realon they are apt to be tried, by thofe who make attempts of this kind. Thefe are deduced from what they reckon the nature and properties of this production: and there is no doubt, but if that was well underftood, it might afford fome infight in the way of making it. For this reafon we made the following experiments with the beft Ruffia pot-afh, in order to difcover it's nature and properties, and how they are moft probably communicated to it; that we might fee what we are to make, in order to imitate the beft, or to make what is accounted good pot-afh.
I. Ruffia pot-afh, as it is brought to us, is in large lumps, as hard as a ftone, and black as a coal, incrufted over with a white falt, that appears in feparate foots here and there in it.
4. It has a ftrong foetid fulphureous fmell and tafte, as well as a bitter and lixivial tafte, which is rather more pungent than other common lixivial falts.
5. A lixivium of it is a dark green colour, with a very foetid fulphureous fmell, and bitter fulphureous tafte, fomewhat like gunpowder, as well as dharp and pungent, like a fimple ixivium.
6. Although it is as hard as a ftone, when kept in a clofe place, or in large quantities together in a hoghead; yet, when laid in the open air, it turns foft, and fome pieces of it run per deliquium; whilf moft other kinds of pot afh only turn friable, and crumble in the open air.
7. It readily diffolves in warm water, but leaves a large fes diment of a blackifh grey colour like afhes, which is in a fine foft powder, without any dirt or coals in it, that are to be obferved in moft other kinds of pot-afh.
8. As it is diffolving in water, there has been fcummed off from fome lumps of it, a dark purple bitumenous fubftance,
like petroleum or tar, which readily diffolved in the lixivium. 7. This, or any other true pot-afh, or a lixivium made thereof, will prefently tinge filver of a dark purple colour, difficult to rub off; whilft a mere lixivial falt has no fuch effect.
9. Pieces of this pot-afh, boiling in water, make a conftant explofion like gunpowder; which was fo ftrong, as not only to throw the water to fome height, but to lift up, and almoft over-fet, a ftone cup in which they were boiled. Thefe explofions were owing not fo much to the included air, which fome perhaps may imagine, as to the fulphureous parts of the compofition expanding and flying off: for this boiled lixivium had neither the green colour, nor foxtid fulphureous fmell and tafte; at leaft, in any degree, like what it has, when made of the fame pot-afh, by a fimple infufion in warm water.
10. We evaporated fome of the green lixivium, made only by infufion, and filtered through a double rag: as foon as it began to boil, a green powder, to which it's colour is owing, fell to the bottom, and the lye became pale. After it was evaporated to a pellicle, and fet in a cool place, a falt feparated from it on the fides of the cup, in angular cryfals like tartar. Thefe cryftals were foon formed, and in pretty large quantities, but were difficult to feparate from the alkaline lye and falt, in which, and the open air, they were apt to diffolve : but from the pellicle, I obtained fome pieces of the fame falt that would not diffolve in the open air.
11. Oil of vitriol makes a ftrong effervefcenfe with this green precipitate, with a white fume, and a very ftrong fulphureous fmell. It does the fame with thefe white cryftals, although the fulphureous fmell is not fo ftrong. But with the pure fixed alkali, there was no fuch fulphureous fmell to be difcerned.
From thefe experiments, we may determine fomething about the nature and contencs of pot-aih. This we are the better enabled to do, from the accurate experiments and reafonings of the learned Mr Geoffroy, on a like fubftance made of charcoal, and an alkali falt calcined together ; in which he obferved all the properties and contents of pot-afh abovementioned, particularly related in the Memoirs of the Royal Academy, for the year 1717. This was made of the fame materials, and had all the properties above-related of our potath ; particulariy a green lixivium, a frong fulphureous fanell and tafte, a fulphureous green precipitate, cryftallized falts, and fulphureous fumes, with oil of vitriol. From hence this learned author concludes, that this fubftance contained the active fulphureous parts of the wood, blended with more active igneous particles. Thefe united with the alkaline falts, make a kind of foap, or fulphureous faponaceous falt, refembling foap of tartar, or hepar fulphuris. The cryftallized falts he attributes to the acid of the wood mixing with the alkaline falts. All thefe parts of the wood then are contained in our pot-afh; and he obferved the fame in the common foda, or cineres clavellati, although they are in a lefs degree in that than in the Ruffian pot-alh.
Befides thefe, he fhews that pot-afh contains a metallic fubftance, which affords the Pruffian blue [fee Blue, Prus, sian Blue]. We may add further, that the combination of thefe principles trakes many properties in pot-afh, more than what refult from them in a ftate of feparation. The moft remarkable of thefe feems to be it's explofive quality; which we take to proceed from the cryitallized falts approaching to the nature of nitre, and uniting with the fulphur and charcoal; by which they form, from all thefe ingredients of gunpowder, a kind of that explofive fubftance, whofe parts are highly rarefied in an intenfe and confined heat, by which they readily explode in boiling lye.
By this we may perceive, that the difficulty in making potafh a-right is, firft, to reduce the materials to cinders and athes, and at the fame time to preferve their volatile, fulphureous, and exhalable acid parts, that are totally deftroyed in fuch a degree of heat ; and, fecondly, to calcine thefe athes ftill further, fo as to flux their falts, and vitrify their terreftrial parts, and at the fame time to keep them feparate from each other, or prevent their running into an indiffolvable glafs. To give pot-alh fome of thefe properties, feems plainly to require a degree of heat that will totally deprive it of others.
The moft likely way by which it comes to receive all thefe properties, is from the way of making it in Sweden above defcribed. In that procefs, the green fir in which the athes are burnt, impregnates them with the acid faline parts of the wood or tar, which is well known to be in pretty large quantities, and is abforbed and fixed by the alkaline falts, and porous terreftrial parts of the athes in this procefs; fo that, befides the fixed alkaline falts of the afhes, the pot-ath thus made, muft likewife contain the more volatile falts of the pine, which are exhaled in fmoke, by burning the pine alone in the open air. Befides thefe, it likewife contains the refinous parts, and fulphureous fumes of the pine, that are hindered from exhaling by the heap of the mals.
At the fame time the alkaline falts are fluxed in the open fire, and in a manner vitrified with the terrefrial parts of the afhes, which gives them their hard and folid confiftence; whilf the fulphureous and acid parts of the green wood hin-
der them from turning to a perfect glafs, or inert calk. All thefe parts united together in the fire, make that faponaceous fubftance we find in the pot-afh thus made, which further hinders the vitrification of the mals, and endows it with many of it's moft peculiar and active properties.
From hence we may fee how difficult it is to make a fubflance, endowed with all thefe properties, in any other manner. This is the reafon why, we could never before mak pot-afh equal to that of Ruffia, and the other northern coun tries, although we have much greater plenty of materials, and perhaps better: for this way of making it has never be fore been thought of by the learned, or practifed any where elfe.
Somewhat of the fame qualities are communicated to the Englifh pot-afh, by the way of making it above defcribed but in a degree as much inferior, as dry ftraw, ufed for that purpofe, is to green wood: accordingly our workmen find that pot-afh is much inferior to the foreign, for many purpofes.
From this account of the contents and qualities of pot-afh and the way of making it, we may form fome judgment of the other ways of making it, propofed by authors, and fuggefted by many. Thus Lemery and others tell us, pot-ailh is made in Ruffia, and all the northern countries, only by calcining the athes in pits bricked within, and forinkling them well with lye, 'till they become hard and folid. But fuch a calcination of afhes with a lixivial falt, muft render them whiter inftead of black, and muft further deftroy the active fulphureous parts of the wood, which we find in pot-ath rightly made. So that this only leaves the afhes in the flate they were at firft, or turns them into a kind of indiffolvable glafs, as we have found upon trial.
This, and the like miftakes, about the way of making potah, feem to proceed from a general error concerning the nature of it; for it is commonly fuppofed to be only a kind of inert calx, impregnated with nothing but a lixivial falt. Some fuch miftakes feem to have fruftrated all the attempts hitherto made of making pot-afh in America; for, upon trial, what they have made there, was found to be no better than common afhes.
But the moft general miftake about the way of making potafh, feems to proceed from the accounts we have of naking it, from glafs-wort, and fome marine plants, which are faid to be eafily converted to this kind of fubftance, in the manner above-mentioned. But we apprehend, the way of making it from wood muft be very different: for thefe herbs are eafily reduced to afhes by a fmall fire, that does not intirely confume their fulphureous parts, which wood is not. Thefe alhes abound with a great quantity of alkaline and fome neutral falts, that readily convert them to a hard and folid confiftence, which wood does not. They have likewife few or no terreftrial parts, to run them into an indiffolvable glafs, when fluxed in the fire, as happens in wood athes. Befides thefe herbs have few or no fulphureous or acid parts, like moft woods ; and the pot-afh made of them has few of thefe principles in it, like what is made of wood.
It is, however, generally faid, if we burn our wood in a clofe place, as a kiln in which we burn lime, or make charcoal, or a pit dug in the ground, we may impregnate the afhes with the fulphureous fumes and acid parts of the wood, only by the clofenefs of the place, or by fmothering the fire in it. If at the fame time, we impregnate them with a greater quantity of lixivial falt, it will flux the whole mafs, and make it run into a folid hard confiftence like pot-afh. This is commonly directed to be done, by throwing frefh or green wood or herbs upon the others, as they are burning, before they are quite reduced to alhes; or by fmothering the fire, as in mak ing charcoal; and at the lame time to fprinkle the afhes, thus burnt with a frong lye, from time to time, in the manner commonly practifed with glafs wort.
This would be a more ready way of making pot-ath than any of the above-mentioned; but as thofe who give their advice about it, have neither tried it, nor feen it done; and thofe who have tried this or any other way, find more difficulty in it, than at firft imagined, we hall fufpend our judgment about it, 'till we fee it fairly tried, left we fhould deter fome from making ufeful experiments of it, or lead others into fruitlefs and expenfive attempts.
By the various ways of making pot-aih above-mentioned, and the different materials it is made of, there appear to be many different kinds of it, that have as different qualities. It would lead us too far beyond our prefent defign, to give a particular account of each of thefe; but as they are ufed in many of our manufactures, it-feems worthy of enquiry, to know what forts are generally ufed, and what are the fitteft to be ufed in them.
The workmen in England make two general kinds of it, which they diftinguifh by the names of pearl-anh and pot-afh. The firft is a mere lixivial falt, which is fuppofed to be the only ingredient of any efficacy in pot-ah ; but, upon trial, there is found to be a great difference between them, efpecially in making foap. The falt is fo weak in the pearl-ath, that it does not entirely diffolve and unite with the fat. The reafon feems to be, that thefe falts are diffolved in water, in
order to extract them ; by which they lofe many of their cauttic igneous parts; whereas in pot-ah the falts are calcined, and lluxed in an open fire, with the ignited terreftrial parts of the abhes, which makes them more iharp and corto. five: they are likewife incorpurated with the coal and fuliginous parts of the vegetables they are made of, or with the gefinous parts of fir, which gives them the fulphureous quality above-mentioned, and makes a kind of foap of tartar, or hepar fulphuris, in all pot-ath ; which makes thefe falts fo ready to diffolve, and incorporate with oil, or other pinguious fubftances.
This is, perhaps, the reafon why the Cineres Ruffici are ordered for this purpore, inftead of a mere hxivial falt, by the College of Phyficians, in their late Difpenfatory. The foap made of them muft be impregnated with their heating fulphureous quality, which will make it more aperient and desergent, but not fo mild and foft as fome others; by which it may be more fir for obftinate and indurated obftructions, but will be more offenfive to the ftomach; which is much complained of by fome people, who take large quantities of the fharper kinds of foap.
But, to confider pot-afh as a commodity in trade and manufactures, which is it's chief ufe; it appears that the people in England not only have it at a dear rate, but the worft forts of it, at leaft for moft purpofes; which cannot but have a proportional influence on their manufactures: for it is generally of as great, and fome forts of a greater value in their markets, than a pure lixivial falt; notwithftanding the fmall quantify of fuch falt in afhes, and the trouble and expence of extracting it ; which feems to be occafioned by their not knowing how to convert ames into this commodity; for in Sweden, where the art is known, Lundmarck tells us, potafh is fold for little more than a farthing a pound, which coft our workmen nigh fixpence.
But this is not the only inconvenience we labour under for want of this commodity; the forts we are chiefly fupplied with, are perhaps the worft of any, and unfit for many purpofes for which pot-afh is ufed. The only pot-afh almoft to be met with here, comes from Ruffia, Sweden, and Dant zick, or is made in England. Thele are all made either of wood or fern-athes, whofe falts are never fo pure and white at the beft, as fome others: but, by the way of making them and the experiments on them above-mentioned, they appear to be impregnated with coal, fmoak, and foot, which renders them ftill more foul and impure, makes them of a black, brown, or green colour, and of a peculiar fulphureous quality. On this account they are entirely unfit for making white glafs: they make a very coarfe and ftrong kind of foap; they are too foul, fharp, and corrofive for bleaching, and are as unfit for dyeing, at leaft many colours.
It is, perhaps, for this teafon, that the workmen here make all their white glafs with faltpetre; which muft not only be more coftly, but Neri, Merret, and others, tell us it is not fo good, at leaft for the better fort of glafs, as a fharper lixivial Calt. See Glass. It is fand they ufe the volatile alkali of urine; but the Fiench pot alh, made of the lees of wine, is generally allowed to be the beft for that purpofe. So likewife the Alicant pot-ath is reckoned much the beft for bleaching, and making of fuap; as the Syrian and Egyptian is for making of glafs.
Thefe purer kinds of pot-ath are all made of herbs, that grow only in the more fouthern climates, whofe falts are finer and whiter, and lefs acrid and corrofive than the falts of wood, or moft other vegetables; and by the way of extracting them by calcination in a more open fire, they are more free of coal, fmoke, and foot, or any other heterogenous mixture. On this account they are much better for the purpures abuve-mentioned, than the coarfe and foul kinds of pot-ath that our people are fupplied with.
All we have of thefe kinds of pot-afh, it feems, comes only from Spain; for which reafon our people were obliged to petition, to allow the importation of pot-afh from thence, during the late war; as appears by an order of the king and council, of the 24th of June, 1742, fince they could not do without it in many manufactures: fo that it may be worth our enquiry, to know what it is that produces fo neceffary a commodity.
This kind of pot-afh is commonly called barriliba, from an herb of the fame name in Spain that produces it. The firft account we have of this barrilha, is from Amatus Lufitanus, who leaves us much in the dark about it. It is generally faid in England, to be a plant pretty well known to the Botanifts, by the name of Ficoides Neapolitana, flore candido. Hort. Ludg. Bat. but for what reafon I camot fay. We have as little reafon to believe with John Baubine, that is is what be calls Kali vulgare; for Munfiesr de Juffieu has thewn us, that the true barrilba is a diffeenent plant from any of thefe, from his own obfervations of it in Spain, where it is cultivated; of which he has given us a particular account of them, anno 1717, p. 93.
The pot-alh made of this plant, he tells us, makes the beft foap, the fineft glafs, and is the beit for bleaching of any other ; for which reafon it is much fought after in ail countries, where they value themfelves for thefe manufactures.

See Bleaching.' But I queftion very much, whether our workmen have it either pure and genuine, or in fufficient quantities for thefe purpofes. All the ufe I find made of it among them, is to make hard foap; although they fay what they have of it fpoils their foft foap, by making it curdle. This is well known to be the effects of fea-falt; and Monfieur de Juffieu and others tell us, that the true barrilba is often adulterated with fea-weeds, which contain fuch a marine falt: fo that it is probably only this adulcerated fort that they have. Accordingly, all the barrilha we have found here, was of 3 dark brown colour, and very foul and ponderous; whereas, the true fort is faid, by all who know it, to be more porous, pure, and of a blueih colour. It is for this seafon, in all probability, that notwithftanding all the barrilha our workmen have at fo dear a rate from Spain, yet they have not been able, 'till very lately, to make fo good foap as what comes from thence, and fome other places; which is now done as I am informed, by captain Marchant, at his foap manufacture near Stepney.
The only way then, by which we are likely to bave this commodity, either pure and genuine, or in fufficient quantities at a realonable rate, is from the herb itfelf that produces it. Whether or not it would grow in England, is not known; as I believe it has never been tried: but there is no doubt but it would grow very well in our colonies in America, as I am certainly informed it does in the Spanifh colonies there, where they have great plenty of it; and a fort that is indigenous, particularly in Peru, which might probably be found in our colonies, if fought for by thofe who knew it. But wherever it will grow in any of the Englifh dominions, there is no doubt but it would be a confiderable improvement, where pot-afh of all kinds is fo valuable a commodity, and fo much wanted; for it grows on the fame ground with corn of any kind, which it does no barm to, as it is a fmall annual herb, that does not fgread 'till the corn is ripe, or off of the ground.
There are fome other plants that are known to make a kind of pot-afh, commonly called rochetta, which is faid to be even preferable to the barrilha, efpecially for making glats. Thefe are the firft and fecond kinds of kali, defribed by Profper Alpinus, in his account of the plants of Egypt. The firft of which is the above-mentioned ficoides that grows in Italy, and all over the Levant, but the other is peculiar to Egypt. Thefe would be fit improvenaents for our colonies in America, where we feem to want nothing more than fome proper productions for the valt tracts of land we are poffefled of there. But thefe plants alone afford a commodity, which Profper Alpinus, and Rauwolfus tell us they faw many large Chips yearly loaded with in Egypt, and which gives the excellency to the glafs and foap that are made at Venice.
It would be worth while then, at leaft to make a trial of a production, that is likely to improve both our trade abroad and our manufactures at home.

Remarks on Pot-afh fince the laft war, and the Definitive Treaty of Peace, 1763 .
In our remarks on the article Norway, we have fhewn the national emolument that would accrue from fupplying ourfelves, from North America, with every fpecies of Timber our colonies will admit of, as well for every fort of houfe buildung, as that of hipping, that we may ftand in need of. It was too long before the legiflature could be prevailed on, to admit of the importation of fow and pig iron from America, and but very lately bar; we were fo wife as to give the preference to foreign iron, as we do ftill for Norway timber, than give our own people in our plantations due encouragement to attempt thofe articles. Herein daily experience evinces our egregious impolicy. It has been the fame by pitch and tar, and continues to be fo, with regard to other naval stores, to the great lofs of the nation, all which might have been long fince prevented. In regard to the article of pot-ath, which we have two long alfo taken from Ruffia, as well as hemp and iron, we may amply furnith ourfelves with this ingredient in the manufacture of SOAP; for as chefe colonies abound with timber of a great variety of qualities, and all proper meafures are taken for the felling of timber, and faw mills erected for the cutting the fame into boards for every kind of ufe, the very faw duft, and the underwood, and topping will furnilh plenty of material for making pot-aih, if ikilful people are employed, who are matters of the procefs, to infruct our people in the beft manner of making it ; and, when our nation is highly loaded with public debts and taxes, it is neceffiary to make every national faving, the better to enable us to leffen our weighty incumbrances. We can now have no excule for neglecting the production of every poffible material in North America, fince we have no body to oppofe us, except the Savages, who will foon be reduced. See Indian Affairs.
POTTERY, the art of making earthen pots, and other veffels, or the manufacture of earthen ware.
The perfection of this art confifts chiefly in the choice of proper earth, and the right management thereof, fo as to afford the moft beautiful matter for veffels.

7 B
Remarks,

## $\mathrm{P} O \mathrm{~T}$

## REMARKS

The delicacy of this art fhould feem to depend, rather upon the peculiar preparation of certain kinds of earth, than upon the ufe of them as they are 'produced by nature: thus we find, that the Dreffen and the Chelfea porcelain exceed the ware of China, although it is allowed, that no part of the world produces earths fo good for the purpofe, as that of the eaftern nations; and yet we do not find that any of the oriental earths are imported into Europe for the works of Drefden, \&c.-If this be the cafe, and Europe affords no earths that will naturally produce wares fo beautiful as thofe of the Eaft ; the Europeans who excel herein, mult do that by art, which the Chinere do chiefly by virtue of the natural excellency of fone particular earths.
The end of this art is to produce a matter that will not vitrify and turn into glafs by fire, and yet will be as beautiful and tranfparent, by proper management, almoft as glafs itfelf. Now nature affords divers materials, that feem to admit of thefe properties; as oyfter and cockle thells, and various other the Chells of fift; which bid fair to anfwer this intent by due calcination and purification, and by compofition with other fuitable materials, Pebbles, bones, pipe-clay, fpars, and talc, and divers other foffils, may, in fome fhapes be advantageoufly applied to feveral kinds of pottery wares: but the due preparation hereof, depends upon the philofophical application of the active and paffive principles of nature. By the active principles of nature, in this refpect, we not only underfand fire, air, and water, but fome peculiar kind of foffir productious; which will eafily work a great change upon certain bodies, but the fuccefs of fuch things depends upon a feries of experiments, made with judgment, upon bodies that feem proper fubjects, for the intention, with regard as well to the active, as to the paflive natures.
For the improvement of the art of pottery many good hints may, perhaps, be derived from what we have faid, under the articles Porcelain, Earth, Clays, Boles, and Fossils in general; for many of thofe things, judiciounly prepared, will afford earthen wares, perhaps, little inferior to thofe of China; and why we may not, one day, fall upon fome compoftions that will produce a porcelain, as cheap and as good as the Indian in general, we fee no reafon to defpair of.
And if we can once obtain the fit materials for the purpofe, our potters ate already fo expert in the art of moulding, and management of the fire, that there will be no obftruction on that account to the improvement of the art of pottery in this kingdom to it's laft perfection.

The art of glazing and painting on fine earthen ware.
Potters who paint with colours on earthen ware, may be ranged in the fame clafs with painters upon glafs, fince they ufe almoft the fame materials, and, in many refpects, the fame method.

## To prepare a white glazing.

Take of lead two pounds, tin one pound, calcine them to afhes, and melt them together. Of this take two parts, calcined fint or pebble one part, falt one part; mix them well together, and melt them in a cake.

The Rotterdam fine fhining white.
Take of clean tin afhes two pounds, lead afhes ten pounds, fine Venice glafs two pounds, tartar half a pound, and melt them to a cake. Or,
Lead ahhes eight pounds, tin afhes three pounds, fine clear calcined flint or pebble fix pounds, falt four pounds, melt them into a cake. Or,
Calcine eight pounds of lead and four pounds of tin into afhes; of thefe take one quart, falt and pebble of each one pound, and melt them into a cake.

A nother fine white for earthen ware.
Calcine fix pounds of lead, and three pounds of tin to afhes; whereof take two parts, falt three parts, pebble or flint thre parts, and melt them into a cake.

## Another white.

Take eight pounds of lead, and four pounds of tin athes, among which mix fix pounds of Venice glafs and a handful of rock falt ; melt them into a cake.

## A Saltzburg white.

Take three parts of lead, fix parts of tin; or fix parts of lead, and three parts of tin, falt three parts, tartar one part and pebble five parts, \&c. Or,
Take five pounds of lead, one pound of tin, three pounds of flint, three pounds of falt, \&c. Or,

## POT

Take fix pounds of lead, one pound of tin; melt and burn them to athes, whereof take twelve foonfuls, twelve of flint, and twelve of fine wood afhes.

To lay 2 ground upon earthen ware, on which the white glafs will better fpread.
Take calcined tartar one pint, flint and falt of each one pint mix them together, and ufe them for a layer or ground pint yout earthen wares, before you glaze them.

## The right Dutch maftirat for white porcelain

Take calcined pebble, flint or fand, 100 pounds, foda 40 pounds, wood athes 30 pounds. This mixture is by the Dutch called maftirat; of this take 100 pounds, tin lead afhes together 80 pounds, common falt io pounds, and melt them three times in a cake.
The tin and lead athes are made of 100 pounds of lead, and 30 pounds of tin.

## The common ware is thus glazed,

Take 40 pounds of clear fand, 75 pounds of litharge or lead athes, 26 pounds of pot-ahes, and ten pounds of tilt; mels them three times into a cake, quenching it each time in clear cold water. Or,
Take clean fand 50 pounds, lead afhes 70 pounds, wood afhes 30 pounds, falt 12 pounds; melt them to a cake. With this mixture they glaze fine and coarfe ware and fet it in an earthen glazing pan, which is round; the ware is fet on them upon three cornered bats, that go through the like holes in the pan, and the ware is kept afunder from touching one another.
The opening before, is only left in the figure' to fee bow the wares ftand, otherwife the pan muft be entirely clofed up.

## Of feveral colours for potter's glazed-work.

## A fine yellow.

Take red lead three pints, antimony and tin of each two pounds ; melt into a cake; grind it fine, and melt it again Repeat this feveral times, and you will have a good yellow. Or,
Take 15 parts of lead ore, three parts of litharge of filver, and 15 parts of fand. Or,
Take eight parts of litharge, nine parts of calcined fint, one part antimony, and a little iron filings; calcine and melt them to a cake.

## Fine citron yellow.

Take fix parts of red lead, feven parts of fine red brick duft two parts of antimony; melt them to a cake.

## A green colour.

Take eight parts of litharge, eight parts of Venice glafs, four parts of brafs-duit; melt them for ufe. Or, Take ten parts of lithi. ge, twelve parts of flint, or pebble, one part of æs uftum, or copper-afhes.

## Blue colour.

Take lead-afhes one pound; clear fand, or pebble, falt two pounds; white calcined tartar, one pound; Venice, or othe glafs, 16 pounds; zaffer balf a pound: mix them well to gether, and melt them; quench them in water, and melt them again; repeat this feveral times: but, if you will bave it fine and good, it will be proper to put the mixture in a glals houfe furnace for a day or two. Or,
Take litharge four pounds; clear fand two pounds; zaffer one pound; calcine and melt it together.
Take 12 pounds of lead, one pound of tin, and one pound of zaffer, five pounds of fand, and three pounds of falt, tarar and glafs one pound; calcine and melt it into a cake. Or,
Take two pounds of litharge, a quarter of a pound of fand, one pound of zaffer, and one pound of falt ; melt them. Or, One part of tartar, one part of lead-alhes, one part of zaffer, one part of fand, and two parts of falt; melt it as before.

## A brown colour.

Take of common glafs and manganefe, or brown fone, of each one part, lead-glafs twelve parts.

A fleih colour.
Take twelve parts of lead-afhes, and one of white glafs.
Purple. brown.
Take lead-afhes 15 parts, clear fand 18 parts, manganefe one part, white glafs 15 meafures, and one meafure of zaffer.

## PRI

## PR I

Iron grey.
Take as parta of lead-afhes, ${ }^{4} 4$ parts of white fand, five parts of copper-almes, one of maaganefe, one of saffers and one of iron flings.

A black.
Take lead-athes 18 meafares, ton-filings three, cooper afhes three, zaffer two meafures; this, when melted, will-make brown black; but if you mould have it blacker, put fome more zaffer to it.

## Brown on white.

Manganefe two parts, red-lead and white glaps one part; melt them well together

A fine red.
Take frximent two pounds, litharge three pound $s_{\mathrm{y}}$ ruft of iron calcined one pound; giind it to a fine powder.

To glaze with Venite glaifs.
When your ware is well dried, and ready to bake, frike it ell over with white-wine lees; then lay on the Venice glafs (ground fine, and mixed with (alt of tartar and litharge) and bake it as directed.

## A green

'Take copper-duft' two parts, yellow glafs two parts; melt them twice. Or,
Two parts of copper-filings, one of lead-alhes, and one of wifite glafs; melt them to a cake.

## Yellow.

Menning three parts, brick-duft two parts, lead-athes two parts, antimony two parts, fand one part, of che above white plaf one part, well calcimed and melted. Or,
Red-lead fout ounces, antimony two ounces; melt them to in cake.

## Gold yellow.

Take of antimothy, red-lead, and fand, an equal quantity, and melt it to a cake.

## A fine blue glafs to paint with.

Take lead-adhes one pound, clear fand two pounds, falt two pounds, white calcined tartar one pound, flint-glars half a pound, zaffer half a pound ; melt them together, and quench them in water; then melt them again, and repeat this feveral times.
Zaffer finely ground by itfelf makes good blue, to paint white glazed earthen ware.

## A liver colour.

Take twelve parts of litharge, eight of falt, fix of pebble, or flipt, and one of manganefe.

## A fea-green.

Take five pounds of lead-athes, one pound of tin-ahhes, three pounds of fint, three quarters of a pound of falt, half a pound of taxtar, and half a pound of eopper duft.

To lay gold, filver, or copper, on earthen ware, fo as to refemble either of théfe metals.

Make an utenfil of fine potter's earth, form arid thape it thin' neat, and filver-fathion; then bake it, ant, when baked, glaze it: but before you bake it again, if you will filver, gild, or copper it, take a regulus of antimony, melt your metal with it, and beat it to a powder', grind it with water very fine, and glaze it therewith; then bake it, and, when done, the whole utenfil will look like filver; for, when it comes into the fire, the antimony evaporates, and leaves the filver, \&e. behind. But if you will filver or gild it only for ornament-fake, and keep it from any wet, then you may lay on the gold or filver leaves with brandy, and afterwards po lifh and finifh it in the beft manner, after the common method

## REMARK.

In regard to the glazing of the earthen or porcelain ware, on the infides, we would, by all means, recommend to the workmen the leaving out of lead and it's litharge, acids diffolving them, and their nature being infalubrious and fometimes poifonous: and this we conceive, may be eafily done, by proper experiments.
PRINTING, the art of taking impreflions with ink, from certain types, or characters, upon paper, parchment, vellum, of the like matter.

## It's Oritin and Progress, efpecially in Esrope.

I. At Haerlem I obtained, Gaye the jadicious Mr Ellis, the Gight of the fitf book printed by Cofterus: Fitwas not Domatus, as the Infcriptiones Hollandicte fay; mor Virgil, ner Tully's Qfices; as others haverabquainfed the werld ; but a Dutck piece of Theology, printed on one fide onlly of the paper; and after this is a fingle page of Latin, intitled, $\mathrm{Li}-$ ber Vitre Alexandri Magni, which made forte believe it to be Q. Cartius, but it is a monkifh Latin of that time. This and the theology were printed in the year 1430; whereas the Thictiptions, apd fome other authots, have told us, from Conterus'G picture, that printing was by him invented but anno 1440; but a pititure of Cofterus before another Dutch piece (bound up in the fame volume, and printed r432) bears the date of 1430 ; under which pieture is the infeription mentioned by Mr Ray (only the date is ten years forter) and the tetraftich which is manderibed by the author of the Inferiptions, from an effigies of Cofterus, which was then extant in a garden at Haetlera, but is not now to be found.
2. What Mr Elis fays about the books printed at Haerlem by Laur. Cofter, agreeing fo well with the account giten by Theodore Schrevelius and others, leaves as little or hib rooth to doubt (who mut-needs take it for granted, that his 'offetvation is accurate, and the dates to be trie) whether the honour of the invention be dueteo this or the other cities, whofe writers have fo eagerly contended for it, fince none of them have pretended to lhew any book printed fo foot as. A. D. $143^{\circ}$, or 1432 , or near that time. Bur the difficulty lies either in mewning why the praqice of this art hoild be at a Atand from A. D. 1432 , to the noted reviving of it at Mentis, by John Fuft and Peter Schoeffer, who, as it has been vultarly, but erroneoully faid, did print the fifft prifted book thiere, A. D. 1465, namely, Tully's. Offices; or elfe, in giving any tolerable account of the progrefs of this invention during an interval of above 30 yeats.
Boxhornius (as I remember) as well as Schrevelius, and other authors, do exprefisly fay (and, if they had not, it might well be imagined) that Cafter could not advance this invention fo far as to print fo large a work as the Speculum Salatis, without gradual inprovements, and that his firft effays were on loofe and fmall leaves of paper, before he attempted whole books; thefe being loofe and fingle, are fuppofed to be all loft; but I once obferved a loofe leaf of paper in octavo, lying in an old MS, breviary in her Majefty's'royal library at St James's which I then thought (and am ftill of the fame opinion) that it was one of Coftar's firt pieces, done when he had attained to fome experience in the art, and to get maney. It is a little rude wooden cut, of the five wouthds of our blelled Saviour, and the inftruments of his pallion, with a Latin incription at the bottom, to this purport, That thofe who fhould fay fo many Ave Maria's before it, fhould have fo many thoufand years of pardon. In this cur, or print, the ink which made it was writing-ink, and it was all blark, without thofe other colours with which Cofter feems afterwards to have adorned his books.
In the abovementioned Boxhornius's book de Origine Attis Typographice, it is faid, That Hadrianus Junius hard a book printed by Cofter, and like that kept in the cheft at Haerlem: now amongt thofe bequeathed to the Bodleian library at Oxford, by Mr Francis Junius (who was a kinfiman of Hadrianus's) there is a thin book in (mall folio (numbered 31) which may probably be the lame, and which Mr Fofs, a learned and curious Danifh gendeman, did aflure me was very like to that of Haerlem. This contains the fum of the hiftory of the Old Teftament, all teprefented in rude wooden cuts, coloured with divers colours without thadows, like to our cards (which, with fheet-ballads, are remains of the old manner of printing) and flamped upon one fide only; the white fide of two leaves being pafted together, the black both in the piftures and infcriptions, which flew the meaning of them, being writing-ink * (as the aforefaid leaf) inattificially fpread upon the wooden block, here thick; there thin, fpreading and yellowilh; the letters extremely rude, and altogether manifeftly fhewing that art was yet in it's infancy. The ftamping of this book on one fide only, was not (as fome think) becaufe the printer did not know how to difpofe the pages in fuch manner as might be proper and eafy for the bookbinder's ufe, for it has it's fignatures all along, in mi frufcule letters (fet in the middle of the page, which is remarkable) but becaufe it was thought that the paper would not bear a fecond impreflion on the backfide; jult as the book-wititers of thofe times (when paper began to be cheap, and to be made up into books) would yet have the firft and laft leaf of each quarternio, fenio, \&cc. to be of parchment,

- It is to be wifhed that Mr Bllis, when he had Cofter's books in his hands, had obferved whether the black ink was print ing ink or not; whether Cofter's piture was ancient, and coloured or not; or if there were more in either of the books : whether the whole was cat upon wood, or com pofed with printing-letters ; whether there were fignatures for the bookbinders, \&e.
for ftrength fake. This book (as I remember) is imperfect, and has no date now appearing, and perhaps-never had any; neither has fuch another book as this, which contains the biftory of St John, and the Apocalyple, in fuch like wooden coloured pictures and infcriptions: this is infcribed La ude 65 , in the fame Bodleian library, and has it's fignatures alfo in majufcule letters (as indeed I have obferved fignatures in many MSS. of different ages, as high as a thoufand years ago, and upwards, exprefled either by letters or numbers) ; this book, though printed on one fide, and pafted as the former, is yet more elegant, and fhews that the art was much improved.
And here it may not be impertinent to obferve, that in the fame library (Arch B. Bodl. 88.) is an antient MS. with the fame figures and infcriptions, though the habitio of the figures be different, thole of the MS. being of the older fathion; and it is very likely there is another copy of this book in the emperor's Jibrary at Vienna; for Lambecius, Comment. de Biblioth. Caf. lib. xi. page 772, reckons amongtt thofe which he brought away from the archducal library at Infpruck, a book of which he gives this account, Apocalypfis S. Joannis apoftoli \& evangeliftæ, Latino-Germanica, chartacea in folio, una cum vita ipfius, \& multis figuris ligno incifis quæ propter vetuftatem fuam fecctatu funt digniffimæ; and in this book at Oxford, befides the printed cuts, alfo a commentary upon the Apocalypfe, in High Dutch. Befides thefe two moft antient printed books, Mr Bagford told me, That in the manufcript library of Corpus Chrifti, or Bennet College, in Cambridge, he faw a third, containing the hiftory of our Saviour, printed on one fide only of the paper, with fuch like wooden cuts, but yet more neatly than either of the former which I had before fhewn him at Oxford. And thefe three books being, as is aforefaid, ftamped but on one fide of the leaf, the whole wrought or cut upon wood, not fet or compofed with printing-letters, and printed with writ-ing-ink, do fufficiently demonftrate, that the art was as yet in it's infancy, and may, though they bear no workman's name, be very reafonably afcribed to Cofter, not only becaule no body elfe lays claim to them, but becaufe, in divers circumftances, they agree with the hiftory of the man, and with what remains of his workmanfhip.
If it be afked, Why Cofter did not fet his name and the year to thefe books, as well as to that at Haerlem, mentioned by Mr Ellis? it may be anfwered, That Schrevelius tells us, that Cofter bound Fuft abovementioned by oath of fecrecy, and not to betray the art to any perfon whatfoever ; wherein it is likely that his delign was not fo much to let the world think that he had a new way of multiplying the copy of a book much quicker than the quickeff penman, but that he had defigned to impofe upon the world, by felling his printed books for new written copies, whereby the book-writer and illuminator muft (as he might well pretend) be fo paid for their work as to maintain themfelves and families. This trick might be long undifcovered in and about Haerlem, becaule there was no other printing whereby this might be condemned; but at length, as Buxhornius and Schrevelius write, Fuft ran away with all his mafter's tools and materials, and, in procefs of time, fet up a printer's fhop at Mentz, being affifted by his fervant Peter Schoeffer (a young man of a good genius) who afterwards married his daughter, and became his partner in the bufinefs.
The fory goes, that this John Fuft went to Paris (but whether before or after his fettling at Mentz I cannot tell) and that he there offered a great number of printed Bibles to fale, as if they were manufcripts. But the French were not to be fo caught; they confidered the number of thefe books, and their exact conformity to one another throughout the whole, to a line, a word, a letter, a point, and that the beft of bookwriters could not be thus exact; and, therefore, by indicting him of diabolical magic (or threatning him with it) they at once gave birth to the ftory of Dr Faultus, and caufed him to difcover the art. And I doubt not but about this time very many books were printed and fold for manufcripts, I have feen divers fuch books without dates, which looked rather older than any I have feen with them. I fpeak now of thofe that are fet, or compofed of letters, which, with printing-ink of lamp-black and oil, and the printing-prefs, is faid to be the improvement of Schoeffer abovementioned, though Schrevelius, with lefs reafon, aforibes the two former to his countryman Cofter.
When Fuft and Schoeffer began firft to work at Mentz is uncertain; but the firft mention I find of him, as a printer at Mentz, is in Schrevelius, Haeriem, p. 272. where he fays, That this Fuft (or Fauftus as he calls him) publifhed Alexandri Doctrinale, cum Petri Hifpani tractatibus, A. D. 1442 ; but this, and fome other books mentioned by writers on this fubject, are never faid to be extant in any particular place, in order to be confulted upon occafion, and, therefore their titles and dates are not fo much to be relied upon. But another date, which, though not fo old, is more authentic, may be found in the above-cited book of Lambecius, p. 989 , where he fays, he brought away from Infpruck, amongtt other choice volumes, and placed in the imperial library at Vienna, a Pfalter printed upon parchment, with
this infeription at the end : Prafens Pfalmorum codex venuf. tate capitalium decoratus, rubricationibufque fufficientur diftinctus, ad inventione artificiofa imprendi ac charecterizandi, abfque calami ulla exaratione fic effugiatus, \& ad Euftbiam Dei induftria eft confummatus per Johannem Fuft, civem Moguntium, \& Petrum Schoeffer, de Gernzheim, Anno. Dom Millefimo CCCCLVII. in vigilia Affumptionis. From this time there are conftant remains of the induftry of thofe men; and I can mention more books printed by them than the Durandus (in the library of Bafil in Switzerland) printed (as a gentlemen who faw it told me) A. D. 1458 . Joannes Joanuenfis's Catholicon (in her Majefty's and the lord bifhop of Norwich's libraries) printed 1460; the Latin Bible of 1462, yet extant in the French king's library, and in divers monafteries beyond the feas, and perhaps in England ; the Tully's Offices, printed both in 1465 and 1466 (if both thefe be not the fame edition, the laft fheet or leaf being compofed afrefh): fo on 'till Schoeffer worked for himfelf, after the death of Fuff, and Schoeffer's pofterity after him.
I add alfo, that upon the firft difcovery of the art by Fult at Paris, or at his firft fettlement or public profeffion of it at Mentz, it quickly fpread over the beft parts of Europe t, and was commonly ufed in other countries before it was known in England (notwithflanding what fome writera do affirm to the contrary) the firft book that we pretend to have been printed here being Hierom (or rather Rufinus) on the Creed, printed at Oxford, A. D. 1468.
$\dagger$ From thefe places, and from books, or parts of books, where, or wherein fuch forts of letter were ufed, the printers do fill call their letter Italic, Roman, Englin, \&c. autin, canon, pica, primer, brevier, \&c.

To prove this in fome meafure (not to mention the progefs of printing in other countries) I inftance in Italy, and particularly Rome. Here, not to infift on the large catalogue of printed books defrribed in an epiftle to pope Xyfus IV. publifhed at the beginning of the fifth tome of the Bible, printed, with Lyra's commentaries, at Rome, A. D. i472, and tranferibed by Boxhornius, I fhall only relate the fum of what I meet with in Bernard Montfaucon's Diarium Italicum, tom. i. p. 255, 256; it is, That Joannes Alericenfis, in a flattering epiftle to pope Paul II. (who was elected A. D. 1464) congratulates him becaufe printing was firft ufed at Rome under his pontificate: which, if fooken of the very firft practife of the art at Rome, and not of an eftablifhed imprimery, feems to be falfe, becaufe this learned monk, in the fame place, fays he faw a Lactantius in the mufaum (or ftudy) of Monf. de la Thuliere, which has thefe words at the end: Lactantii firmiani inftitutiones caufe in venerabili monafterio Sublacenfi, anno 1461, antepenultima $\mathrm{Oc}_{-}$ tobris. Now unlefs a man will fuppofe printing to be invented in this monaftery, he muft believe it ta be brought hither from Rome, which is but about 20 miles diffant from it ; and the fame author fays, That Floravantes Martunellus, in his Roma Sacra, affirms, that printing was practifed at Rome, in the palace of the Maximi, A. D. r455, under pope Nicolaus V. by Conrad Sweynheim and Arnold Parnartz, who were both Germans, and continued printers there for many years after.
The cuftom of putting the dates of printed books at the end of them, was taken up in initation of divers of the middleaged and recenter manufcripts (for I never faw or beard of any ancient manufcript in capital letters, either Greek or Latin, which has a profeffed date written in the firf hand); but here the infpector ought to be cautious, left he be led into an error, for feveral manuferipts at the end have a date, which may be by fome undertood of the tume when thofe individual copies were written, when as they only notify the time when the author finibhed his work; and fome of there dates, being printed from the manufcripts, have deceived many curious men : for example, the firf edition of Lynwood, Paulus à Sancta Maria, and others which I could name; befides fome dates in ancient printed books, being not corrected are falfe: fuch as a book printed in the beginning of the r6th century, in the library belonging to the $A B$ molæan mufæum at Oxford, which thus pretends to 400 or 500 years of age: Julius Hyginus, once fbewed to me by Mr Millington the bookfeller, printed at Paris (as there put down) Ann. Dom. MCCCCXII, inftead of MCCCCCXII; for the printer is mentioned as then living in L'Origne de l'Imprimerie de Paris. I have indeed a book, wherein, amungf other tracts, is one of an old print, at the end of which there feems to be fuch a miftake, though not fo eafily rectified as the former: the words are thefe, Explifcit opufculum Enee Sylvii de duobus amantibus in civitate Leydenfi, Anno Domini Millefimo CCCC quadragefimo tertio Leien. Now though Leyden feems to be the place where it was printed, yet 1443 cannot be the time when: for juft before Sylvius fays himfelf, Vale, ex Vienna quinto nonas Julias Mo CCCC quadragefimo quarto. Sylvius was elected pope by the name of Pius 1. A. D. 1458 , and died A. D. 1464: now it may reem probable, that, if this tract was printed after his election (as fuppofe A. D. 1463) or even after his deceale, papal

## PRI

## PRI

papal dignity might have been remembered ; if it be judged to have been printed before his election, I know of none that will allow of printing at Leyden (or even in Lyona) fo very early.
One objection may be urged againft what is faid of Cofter's or the old printed books abovementioned, being printed upon paper about A. D. 1430, or foon after: for fome authors are of opinion, that paper made of linen rags was firlt made at Bafil, by fome Greeks who fled out of their country after the fackage of Conftantinople, A. D. 1452, in imitation of the cotton paper, commonly ufed in the Levant. But this can have no force, our paper being much older: for $\dot{I}$ have a piece, the writing upon which feems to be about 350 years old, and agrees very well with a charter which I have feen of Thomas Beauchampearl of Warwick, bearing date, A. D. 1358, and $3^{2}$ Edward III. In the archives of the library belonging to the R. R. dean and chapter of Canterbury, I faw an inventory of the goods of Henry, prior of Chrift's Church there, taken upon his deceafe (as 1 remember) the 20th year of king Edward the IIİd, and this is written upon paper in the Cottonian library, though fearching after other matters, I could not but obferve feveral writings upon our paper, in the time of moft of our kings and queens, as high as the 15 th of king Edward IIId, and I doubt not but there are others more antient in the fame place. But in the Eaft the ufe of cotton paper is much more ancient; and I have, in the Bodleian library, feen an Arabic manufript (amongt thofe which the univerfity bought out of Di Huntingdon's) written in the 427 th year of the Heigra, A. D. 1049; and others in the fame place, without dates, feem older.
The proximity of the fubject caufes me here to take notice, that, though the invention of the rolling-prefs is common! y afcribed to Lipfius, yet it feems older than his time, from a printed book in the Bodleian library, placed Laudi D. 138. this is a Miffale fecundum ufum ecclefiæ Herbipolenfis (i. e. Wurtzburgh in Germany) : Rodolfus, archbifhop of that church, fets forth, in an inftrument at the beginning of the book, the reafons why he caufed this Miffal to be publifhed, which inftrument bears date the 8th of November, 1481; by which time he orders all the copies to be finifhed by Jorius Ryfer, his printer, who feems to have done fo, fince his name, and this year 148 I , is' written at the end of the book.
Inftead of a feal to this inftrument, is an engraven print, being the arms of the fee, fupported by two angels, and St Kilian (it's firft bilhop and protector) behind; as alfo this prelate's own arms, with thofe of the fee, in another efcutcheon, and a very fine mantling. This is extremely wellengraven for the time, and equals the performances of fome of our beft workmen at prefent. The evident marks of preffure by the plate, with fome touches of ink at the edges, the roughners of the print, and other circumftances concurring, I thought this muft needs be wrought off at the rolling-prefs: but being unwilling to rely too far upon my own judgment, 1 hewed it to divers very knowing and curious gentlemen, to feveral printers, engravers, and others working conftantly at the rolling-prefs, who all concurred (though at different times, one not knowing what another had faid) that it was not only excellently well engraven (and this before Albert Durer's time) but that it was certainly pulled from the rollingprefs, and could be done no other way. And that this print was not done after that time, appears from feveral notes written here and there in the book: one of them fpecifies that Willian Keufth, vicar of Bartholomew's church in Wurtzburgh, bought this book the fame year 1481, paying 18 florins for the parchment, printing, rubrication, illumination, and binding. By another it appears, that he gave it to his church for ever; and by fome others it appears, that it remained there during the time of his feveral fucceffors, 'till the laft age, when, as I fuppofe, the Swedes under Guftavus Adolphus, plundered the church, and brought it out. 3. The antiquity of printing, and the firft inventors, having been treated of by many authors, I fhall now only give a fhort account of the obfervations I have made in many years, from old books of feveral forts and kinds. The general notion of moft authors is, that we had the hint from the Chinefe; but I am not in the leaft inclined to be of that opinion, for, at that time of day, we had no knowlege of them. I think we might more probably take it from the ancient Romans, their medals, feals, and the marks, or names, at the bottom of their facrificing-pots, which antiquities we had amongit ourfelves in Europe, rather than fetch it fo far.
But if it be certain, that cards are as old as our king Henry the VIth, nothing, that I have feen or confidered of, feems to give fo fair a hint for printing as the making of cards ; as is evident by the firf fpecimen of printing at Haerlem, and by fome books in the Bodleian library at Oxford, one in Junius's collection, another in archbifhop Laud's, and a third in the fame, being the lives of the Ruffian faints, in a thin folio: the leaves are not pafted together, as the former two, but cut on wooden blocks, and illuminated. There is alfo another rare fecimen of the firft, in that valuable collection of archbihop Parker, in Bennet college library at Cam-
Vo1. II.
bridge, bound up with a MŞ, book: This was fhewn me at firft by Mr . Bullord; and differs very much from them at Ox ford; it is the life of Chrift, in figures, or rather the types; of the Old and New Teffament. They have not fo many fipecimens of the firt printing at Haerlem, as we have in England; and I am apt to believe, that, if fome curious pertons had the liberty of looking over the libraries in both univerifties, and that of the Royal Society, there might be found other fpecimens of the ancient printing, the aforementioned books being taken notice of but of late.
The cutting of the moulds or blocks for making our playing catds, is after the fame manner as thofe of the books printed at Haerlem. They lay a fhect of moift or wet paper on the form or block, being firft lightly bruthed over with ink, made of lamp-black mixed with ftarch and water; then they tub it off with a round lift with their hand, which is done with great expedition: this is for picture or court cards: after which they pafte them together threefold, the coarfeft in the middle. They colour them by the help of feveral patterns or ftanefiles; as they call them; they are card-paper cut through with a penknife, for every colour, as red, \&ce. (for at the firft printing the card has only a mere out-line:) thefe patterns are painted with oil-colours, to keep them from wearing out with the brufhes; they lay it upon the picture, and by fiding a bruh that is full and loofe gently over the pattern; it fixes the colour into the cut holes, and leaves it on the print that is to be a card, and fo goes through all the colours you fee on cards; but this cannot be fo well underfood by a defeription, as by feeing thern perform it. This I humbly conceive to be their way of printing firft at Haerlem, and thofe books abovementioned. This, methinks, might have been confidered before now, if they would have put themfelves to the trouble of infpecting the old manuftripts 900 years old ; for the great letters are done by the illuminators, the fame way as card-making.
The next form of printing at Haerlem was by cutting whole forms in wood from manufcripts exactly written, and without pictures: fuch I take the Donatus to be, mentioned in Hiftories; and this might bear date in 1450, fome fay 1440. This may be as plainly demonftrated as the former, from co py-books which we have feen printed at Rome, Venice, Switzerland, and England, as high as I500; and, if I miftake not, there is a block cut in box in the collection of the Mufrum of the Royal Society. This writing is harder to perform than either the Roman, Italic, or any other letters ufed in printed books.
The third way of printing was with fingle types made of wood, but to whom the honour of the invention is due, is not very evident; it was then efteemed fo great a rarity, that the printers carried their letters in bags at their backs, and got money at great mens houfes, by printing the names of the family, epitaphs, fangs, and other fmall pamphlets.
The fourth improvement of this noble art, was the invention of fingle types made of metal. Here we muft entirely give the honour to. Peter Schoeffer of Grenfchen; fervant, and afterwards fon-in-law, to Fauft, who entertained him to work in his houfe at Mentz: he obferving how induftrious his mafter was every day to improve this art; undertook it himfelf, and with much ftudy and induftry brought it to perfection. After he had made feveral effays, at laft he thews it to bis mafter Fauft, who having tried fome experiments with his new invented fingle types, finding that it would anfwer his expectation, was fo tranfpotted with joy, that, for his reward, he promifed he fhould marry his daughter, whofe name was Chriftian, which fome time after he performed; and continued together improving this art with great fecrecy, till it became known, and fpread itfelf over all Europe. Sometimes you have their names to the books they printed at the end, and fometimes not ; fometimes with dates as high as the year 1457, as the Pfalms printed by them, now in the emperor's library, which Lamberius mentions in his Bibliotheca, and as low as the year 1490; and for this we have the authority of Erafmus, in a preface to Livy; printed at Bafil by Froben, in 1500 :
As for John Guttenburgh, though by abundance of authors he is faid to be the firft inventor of printing, we cannot find one book with his name and printing.
We may rationally conjecture, that printing with plates of pewter, brafs, or iron, either graved, or eat with aqua fortis, was firft practifed by the working goldfmiths; for they have a way of taking off the impreffion of therr work by the fmoke of a lamp, which, perhaps, gave the hint to the graving on brafs. We have a dark ftory of it in fome authors.
Having treated of printing, to fatisfy the curious, I fhall fay fomething of the feveral advances and improvements it hath received.
The Haerlem printing at firft was a book with pictures; they took off the impreffion with a lift coiled up, as the cardmakers ufe the fame to this day.
But when they came to ufe fingle types, they made ufe of flronger paper, with vellum and parchment: then they made ufe of a prefs, although they afterwards contrived and made it more ufeful.

## PRI

Neither was their ink for printing brought to the perfection it is at the firft, but improved by degrees.
Rolling prefs printing was not ufed in England, 'till king James I. and then brought from Antwerp by our induftrious John Speed.
Now, as printing itfelf is but another way of writing, and brought to perfection by degrees, as other arts ; and as pictures either painted, cut in wood, or graved, were called the laymens books, for every one could read a pi\&ture, and fay this is an houfe, and that a tree; fo I may fay, that the pictures or drawings of the Antients, gave the firft hint of printing: and if the fcribes in process of time, had not brought cheir art of writing into the decorum and uniformity, and rule in their feveral volumes, the printers could not have followed them fo exactly in the imitation of their letters and pages of their books. Pictures firft were thofe of devotion; then the making of cards was another introduction to the invention of printing : the making of cards I take to be very ancient.
For the firf fpecimen of printing was on one fide only, as that at Bennet College, moft in figures, with fome few words only on the fide in labels, like that at Oxford.
The next ftep is that book at Haerlem; the defigns of the prints are better performed; and then they came to have not only lines, but whole pages of words, befides the pictures on a page.
The next ftep was ballad-printing, with the like piftures, and them but on one fide.
The next improvement of this noble art, was the cutting of whole pages on wooden blocks or moulds, and printing on both fides of the page; and the firft fecimen of this nature was a Donatus, and, as authors fay, was printed at Háerlem and at Mentz, although fome fay a Bible was printed the fame way 1457.
Since arts and fciences, efpecially ftatuary and fculpture, were arrived at fo great perfection, when the Roman empire was in it's glory, as the many beautiful ftatues, the exquifite intaglia's, and fine medals, which time hath banded down to us, do fufficiently evince; it is much to be wondered at, that they never bit upon the method of printing books.
The dies they made for their coins, and the famping them on the metal, was in reality printing on metal; their feals cut in cornelians and agates, and their preffing them on dough and foft wax, was another fort of printing; and a third fort was their making their earthen veflels, while the clay was foft, with the name of the potter, or the owner the veffel was made for. Thefe being of a larger fize, were properly called figna; the feals cut in ftone were called figilla; figillum being a diminutive of fignum, as tigillum is of tignum : but the fater and more barbarous Latinifts, have formed the diminutive of fignum into fignetum; and if a very fmall pocket-feal, they have called it fignaculum. *

* See Joh. Mich. Heinecius de Sigilis. Francof. 1709. fol. p. 16, \& feq. Vol. IX. Part. IV.

Montfaucon, in his Antiquité expliquée, Tom. III. part 2. chap. 12. gives us the figures and defcriptions of feveral of thefe larger figilla or figna, whereon he faith, the names were all cut in hollow in capital letters, Domini patronique nomen majufculis literis infculptum, which be expreffes in French, imprimé en creux ; and he imagines their ufe to have been to mark earthen veflels, particularly thofe great earthen jars, wherein the Romans ufed to keep their wines. If any of them had occured to him with the letters excifæ, exfculpte, protuberant or ftanding out, as the types in our modern way of printing are made, fo accurate a defcriber of antiquities could not have paffed fuch an one over, without having mentioned it, and that the rather, becaufe of it's being a greater rarity: though feveral lumps of terra cocta are flamped with letters impreffed or hollow, from fuch protuberant letters as in the following defcribed flamp, but the greater number bave the letrers raifed, or ftanding out.
The laft fort of ftamps, where the letters are exfculptzo or protuberant, as is likewife the edge or border round the whole ftamp, is made of the true ancient brafs, and is covered over with a green fcale or coat, fuch as is ufually feen on ancient medals. There was one found in or near Rome. On the back is faftened a ring, whereof the hole is $\frac{2}{4} \frac{7}{6}$ of an Englifh inch one way, and $\frac{2}{4} \frac{3}{6}$ the other way; the plate itfelf is two inches long, wanting $\frac{1}{40}$, and it's breadth exactly $\frac{33}{4}$ of an inch : the fides are parallel to one another, and the ends are likewife parallel to each other, but they are not upon an exact fquare with the fides, varying about one degree and an half from an exact rectangle. On the under fide ftand two lines or rows of letters $\frac{7}{40}$ of an inch in height, and well formed Roman capitals : the faces of them ftand up all upon an exact level with one another, and with the edge or border of the ftamp; their protuberance or height above the ground is different, the ground being cut uneven; for clofe to moft of the letters the ground is cut away only $\frac{2}{4}$, clofe to fome near $\frac{3}{40}$, and clofe to the edges full $\frac{3}{40}$. The firft line contains there letters, CICAECILI, with a ftop or leaf to fill up the line ; in the fecond line, HERMIAE SN. which is judged

## PRI

to be read Caii Julli Cxacilii, Hermixe Signum. Wha this Caius Julius Cæcilius was, we cannot find, he being probably a man in a private ftation, and fo his name hath not been handed down to us in any monuments, but only accidentally in this ftamp. In Gruter occur two of the name of Hermias, and feveral of the Cæcilii, but none with thefe two names joined together.
The ufe of this ftamp feems to have been for the fignature of the above-mentioned private inan, to fave him the trouble of writing his name, as fome people have now a-days. It was certainly ufed on paper or membranes, being firft dipped into ink, or fome fort of paint, becaufe of the protuberance of the letters, the hollow letters being fitter for foft fubftances, on which they leave the impreffion ftanding up, and confequently more eligible. Another argument that this ftamp was not to be ufed on any foft fubftance, into which it might be preffed quite down to the ground, is the unevennefs and roughnefs with which the ground is finifbed ; which, was it to have made part of the impreffion, the workman would have finifhed it with more accuracy ; but he, knowing that the furface of the letters was to perform the whole work required, was only attentive to finifh them with that accurate evennefs that thefe have.
Mr Mattaire, in his Annales Typographici, Hazge 1719, in 4 to, p. 4. concludes from the beft authors, that our modern art of printing was firf thought of about the year 1440 . A copy of the book he mentions, ib. p. 13. called Speculum noftre falutis, being pictures of ftories out of the Bible, with the verfes underneath in Dutch, is to be feen in the Stadthoufe at Haerlem. Each page was printed from a block of wood, like a forry wooden cut; and this was the firf effay of printing, which hint was taken from engraving, and is what he means, p. 4. by typi fixi ; after which they foon improved to ufe feparate types, as we now do, which he terms, ibid. typi mobiles. This ftamp is, in reality, a fmall frame of fixed types and prints, with our modern printer's ink, which is only a fort of black paint, as readily as any fet of letters, cut in the rude manner thefe are, can be expected to perform.
By the foregoing defcribed ftamp of two lines, we may fee that the very effence of printing was known to the Romans, and they had nothing to do but to have made a ftamp with lines three or four times as long, and containing twenty inftead of two lines, to have formed a frame of types that would have printed a whole page, as well as Cofter's wooden blocks, which he ufed in printing the Speculum Salutis, which we have in his hiftory.
In the firft volume of a Collection of feveral pieces of Mr John Toland, printed London 1726, in 800, p. 297, is a fmall tract of his, entituled, Conjectura verofimilis de primz Typographiz Inventione, which is founded upon the following paffage in Cicero, in cap. 20. lib. ii. De Natura Deorum; where Balbus the Stoic ufes the following words in an argument againft Velleius an Epicurean.
Hic ego non miror effe aliquem, qui fibi perfuadeat, corpora quædam folida atque individua vi \& gravitate ferri ; mundumque effici ornatiffimum \& pulcherrimum, ex corum concurfione fortuita ? Hoc qui exiftimet fieri potuiffe, non intelligo cur non idem putet, fi innumerabiles unius \& viginti forma literarum (vel aurea vel quales libet) aliquo conjiciantur ; poffe ex his in terram excuffis annales Eunii, us deinceps legi poffint, effici;' quad nefcio anne in uno quidem verfu poffit tantum valere fortuna.
He conjectures, that this very paffage gave the firft hint to the inventors of printing, about the year 1445 , becaufe they retained even Cicero's name for their types, calling them forme literarum, and made them of metal, as be fays, aurex vel quales libet. Moreover, in cap. 1o. lib. iii. De Divinatione, Cicero hath the very phrafe imprimere literas. Brands for making cattle were in ufe in Virgil's time, Georg. lib. iii. ver. 158. where he fays,
Continuoque notas, \& nomina gentis inurunt.
Procopius, in his Hiftoria Arcana, fays, the emperor Juftinus, not being able to write his name, had a thin fmooth piece of board, through which were cut holes in form of the four letters J UST. which, laid on the paper, ferved to direct the point of his pen; which being dipped in red ink, and put in his hand, his hand was guided by anotber. Poffibly this may likewife have given the hint to the firt of our card-makers, who paint their cards in the fame manner, by plates of pewter or copper, or only pafteboards, with Mits in them in form of the figures that are to be painted on the cards.
The advantage of printing above writing, has prevailed with the Grand Seignor to permit a printing-prefs to be fet up at Conftantinople. It was obtained upon a memorial prefented to him by the Grand Vizier, with the confent of the Mufti: the privilege was firft granted to Zaid, the fon of Mehemet Effendi, ambaffador in France, above 20 years fince, and Ibrahim Mutafarrica, the author of a fmall tract. The licence extended to the printing all forts of books written in the oriental languages, except fuch as treated of the Maho-

## PRI

medan religion : this book feems to be one of the firft that ever was printed there. For, though Gianhauri's Arabic Dictionary tranfated into Turkifh, was what the Turks defigned, for particular reafons, to begin withal, yet the manufript from which they printed off the firft theets, was found to be fo incorrect, that the Grand Seignor ordered the printing of it to be fopt, 'till a moie correet copy could be procured.
During this ftop, the book I 2m to give a brief account of was printed, containing about 150 leaves. The language of it is not Arabic, as was fuppofed, but Turkith, though it has feveral words and fome fentences that are fo.
The tite, or what may ferve as fuch, is Tuhhfati Ilkibar, or, A Present to the Great, containing an uccount of feveral engagements at fea. The author is HagiCaliba, fitied Chelebi Almurhhum, i. e. A gentleman who has obtained mercy or deceafed. It confifts of two tracts, 2 large, and a very fmall one. The latter is done by the publifher, Ibrahim Mutafarrica; Mutafarrica is a title of honour, fignifying a horfe-foldier, obliged to go to the wars when the Grand Seignor goes in perfon, but not elfe. It is a fhort account of geographical meafures of diftances, \&c. particularly of the circumference of the earth. The principal treatife is partly hiftorical, and partly geographical ; the latter treats of the nature of the terreltrial globe, the ufe of maps, and fituation of places, particularly of Venice, Corfu, Albania, \&sc. and fuch as border upon the Turkißh dominions. The hiftorical part is an aecount of feveral naval expeditions and battles between the Turks and Chriftians, efpecially during the Holy War in the Mediterranean Sea, with their conqueft of the iflands and places of note upon the feacoafts. It is an abridgment of the hiftory of their admirals, from the taking of Conftantinople to the year 1653; gives a defription of the Grand Scignor's arfenal at the Porte, with the charges of maintaining it, and concludes with fome dijections to the Turkifh officers.
Befides a general map of the world, there are three others; one of the Mediterranean, or White Sea, as the Turks call it ; another of the Archipelago, and the third of the Venetian Gulph: they have each fcales of Turkifh, French, and Italian miles annexed; but what is fomething furprizing, thefe maps have the degrees of latitude, but not of longitude, marked upon the fides. The laft plate has two mariner's compaffes, the one containing the Turkifh names of the feveral points, the other, befides the Turkith, has the Arabic names, which are taken from certain flars fuppofed to rife and fet upon or near thefe points.
The book ends with words to this fenfe: this treatife was done by the perfons employed in the bufinefs of printing, at the printing-houfe erected in the noble month of Dulkaadab, in the year 1141 (i. e. 1728) in the good city of Conftantinople. May God, \&sc. I forgot to obferve, it has the imprimature or commendations of a Turkifh divine, and three effendies, prefixed; and at the end an index of the errata, with their emendations, in three pages. The whole is done upon fhining or gummed paper, ftamped with three crefcents in pale and an imperial crown, proper to the Turks.
Thofe who would enter into the hiftory of printing in England, may confult the Typographical Antieuities Being an Hiftorical Account of Printing in England: With fome Memoirs of the Antient Printers, \&cc. By the curious and judicious Mr Jofeph Ames, F. R. S. and Secretary to the Society of Antiquaries.
The method of printing with metallic types, is fo well defrribed by others, and fo generally underftood, that we fhall not dwell upon this matter. The art, at prefent, is brought to as great perfection in England, as in any part of Europe. Printing of Callicoe. See Callicoe-Printing. Printing from Copper-Plates. - The iak being duly prepared, they take a finall quantity of it on a rubber, made of linen rags, ftrongly bound about one another; and therewith fmeer the whole face of the plate, as it lies on a grate over a charcoal fire. The plate being fufficiently inked, they firft wipe it coarfely over with a foul rag, then with the palms of the hand; and to dry the hand, and forward the wiping, rub it from time to time on whiting, which is no advantage to the beauty of the work.
In cleanfing the plate well, yet without taking the ink out of the engraving, confifts a good part of the addefs of the workmen. The French printers ufe no whiting, as being detrimental to the colour of the ink; nor do they lay the plate on the grate to warm, 'till after inking and wiping it.
The plate thus prepared, is laid on a thick paper, fisted upon the plank of the prefs : over the plate is laid the paper, firft moiftened to receive the impreffion; and, over the paper, two or three folds of blanketing, fmoothly laid
Thus difoofed, the arms of the crofs are pulled; and, by that means, the plate, with it's furniture, pafled through between the rollers; which pinching very frongly, yet equably, preffes the moiftened paper into the ftrokes of the engraving, whence it licks out the ink. See the articles Engraving, Design, and Painting.

## PRI

Some works require being paffed twice through the prefs, others only once, according as the graving is more or lefs deep, or the greater or lefs degree of blacknefs the print is required to have.
It muft be obferved, that the ftronger and thicker the ink is; the ftronger muft the rollers pinch the plate : this tempts many of the workmen to ufe a thinner oil, in order to fave labour; which proves prejudicial to the impreffion.
The wetting of the paper ought to be done two or three days before printing it, to render it the more fupple and mellow : as the prints are drawn off, they are hung up to dry.
After the number of prints defired have been wrought off from the plate, they rub it over with olive oil, to prevent it's rufting, and fet it by againft a new imprefion. If the ftrokes of the graving be perceived full of ink, hardened therein in the courfe of the printing, they boil it well in lye, before the oil be applied.

Plain inftrutions for limning and colouring prints, maps; \&cs with water colours

## Of the colours generally used in that art.

Out of thefe colours you may temper all the reft which your work may require.
Some colours are to be wafhed and ground; as for inftance. 1. White lead. 2. Brown oaker. 3. Dutch pink. 4. Umber. 5. Cologne earth. 6. Ivory black.
Some are only to be wafhed, which are, I. Red lead. 2. Mafficot. 3. Blue bife. 4. Smalt. 5. Ultramarine. 6. Vermillion.
Others are only fteeped in fair water; as, i. Gamboge. 2. French yellow, to which you muft add a little allum. 3. Sap green. 4. Blue lake. And 5. Latinus.
And others again are only ground, viz. i. Flake white. 2. Indigo. 3. Lake. 4. Diftilled Verdigreafe.

Grind all your colours with fair water, on a hard ftone, or on a piece of looking-glafs, which fix with white pitch and rofin upon a flat board, having alfo a muller of that kind.
Of the colours (after you have ground them very fine) you may take as much as will ferve your prefent occafion, and temper them in a gallipot, or thell, with gum water, in which you have alfo diffolved fome fugar-candy. You muft obferve, that colours which are very dry, require a ftronger gum-water; in others it muft be ufed very fparingly.
If your colours will not ftick, or the paper or print be greafy, mix a very little ear-wax, or a little drop of filh or ox gall amongt your colour ; you may dry your fifh or ox gall, and dilute it when you have occafion for it, with a little brandy. If your paper or print finks, then with clean fize and a fpunge wipe it over, after you have faftened the edges round upon a board, and let it dry.
You fhould be provided always with phials, containing the following liquids, which are very neceffary and ufeful in painting or colouring with water colours.

1. A phial with water, in which allum had been diffolved. This you ufe in wiping over the table, parchment, or paper, before you begin to lay on your colours; it will caufe them to lay fmooth, and with greater a luftre.
2. A phial with lime-water; you diffolve or flacken fome quick lime with fair water, then take the water from off the fettled lime, and put it up for fervice; this is of great ufe in tempering of fap green and litmus, which colours being apt to turn yellow, are preferved thereby.
3. Gum-water is made of gum-arabic diffolved in fair water ; if you add a little white fugar-candy to it, that will keep the colours from cracking, and flying off the parchment or paper.
4. Ox gall, or the gall of eels, boiled up in a little water, and fcummed, then put up in a phial ; this is of great ufe in painting of water colours, where the parchment or paper happens to be greafy, by only touching the point of your pencil, to touch it therewith, and to temper it with your colour.
5. White

## PRI

5. White wine vinegar ; this is of ufe in grinding of diftilled verdigreafe, as preferving that colour from changing upon the yellow.
6. A littie phial of fpirit of harthorn, a little drop whereof, mixed among the carmine, adds to the beauty thereof.
You muft chufe pencils of feveral fizes, agreeable to the work you are to ufe them for; as for laying on a ground, a fky , or clouds, chufe a larger fize than thofe that you ufe for drapery, trees, \&c. wherein you muft follow your own reafon: thofe pencils of which the hairs, after you bave wetted them between your lips, and turned them upon your hand, keep clofe together, are the beft.

## To paint or colour a clear 1ky.

Take clear blue verditer, mixed with a little white: with this begin at the top of your landikip or picture, and having laid on the blue for fome fpace, break it with a little lake or purple, working it with a clean pencil, one colour imperceptibly into another ; apply more white and mafticot, in order to make it fainter and fainter towards the horizon, working all the while the colours imperceptibly one into another, from the horizon to the blue fky; after which, you may lay fome ftronger ftrokes of purple over the light, fo as to make them appear like clouds' at a diftance.
For a fiery red Iky, ufe red lead, and a little white inftead of the purple ftreaks or clouds, working them, according to art, imperceptibly one into another.
Clouds you are to lay on with white and black, fometimes mix a little purple therewith; but the beft and fureft direction you can have, is from nature herfelf.

To lay a ground for walls of chambers, halls, \&c.
You muft ufe for a common wall, which is of reddifh hue, biown; red, and white, and temper your colour according as it is old or new; fhade it with brown or red, only mixed with a little biftre or foot.
Other walls lay on with black and white, and fhade it with the fame colours; fometimes mix a little purple with it, and then you fhade it with black and lake.
For wanifcotting, that is embellifhed with carved mouldings, and figures, you muft ufe one colour, for both the plain and the carved work, fhading and heightening it with judgment and care.
To paint a fore ground, in imitation of fand or clay, lay on the darker parts with brown oaker; to what is in their diftance, add a little white, and fo on in proportion, hading it with brown oaker, and the ftrong Mhades with foot.

## Of carnation, or fefh colour.

In carnation, or fleh colour, ufe for young women and children flake white, burnt oaker, and a little vermillion; fome add a little lake, but that muft be but faringly: having laid on the colour for the carnation, you thade the lips, cheeks, chin, knees, and toes, with fine lake and vermillion, and the naked parts, with fea coal and a little lake, or brown red, or with brown oaker and lake, or elfe with Indian ink or lake ; for a brownifh complexion, mix a little brown oaker among the carnation colour.
Some artifts lay the dead colouring of the carnation for young women on with white; they fhade it with paper black, and bring in the carnation colour where it is required.

## The paper black is made in the following manner.

Take the paper in which the leaves of, gold have lain, burn them quick one after another, and let them drop into a bafon of clean water; then take them out and grind them on a fone to a fine pafte, form it into little tents, and let it dry; when you ufe it, temper it with gum-water as you fee meet.
For ancient people ufe vermillion, brown oaker, and white; Made it with biftre and lake.
A dead corpfe of a young perfon, paint with flake white, brown oaker, and a little indigo, or fea-coal, and fhade it with biffre or fea-coal.
For an old dead corpfe, leave out the indigo, but thade it as before.
For dead bones, take white lead, mixed with a little biftre or chimney foot, with which you fhade and heighten it with white lead.
For the hair of young women and children, lay them with light oaker, Made them with deep oaker, and heighten them with mafticot and white.
Grey hair, lay on with black and white; fhade them with black, and heighten them with white; and thus proceed in painting any other coloured hair.
Drops of blood, lay on with red lead, thade it behind, where the light falls, with carmine and lake.
Trees are laid on, fome white, black, and biftre, thaded with brown oaker, and heightened with the fame colour, with more white in it. Thofe that ftand at a diftance, are

## P R I

laid on with indigo blue, brown oaker and white, and Mated with indigo and brown oaker. Thofe that are further difted lay on faint, and Ghadow them but aightly; which order you muft obferve in colouring of hips, houfes, and other build ings.
In thatched houfes, paint the thatch or fraw, when new, with Dutch pink, and fhade it with brown oaker; and, to heighten the ftraw, ufe mafticot and white. Old fraw, to on with brown oaker, fometimes mixed with fraw, lay white; heighten the ftraw with brown oaker and white. In colouring cities, caftles, or ruins, you muft obferve nat for no rules can well be given; however, to give a little light to a young practitioner, it muft be obferved, that thofe houfes which lie neareft the fore ground, are coloured with vermillion, white, and a littie brown oaker, fhading it with that and fome biftre; the heightenings are done with more vermillion, and more white.
Houfes further diftant, are laid on with lake, and a little blue and white, fhaded with blue and lake, and heightened with adding more white.
Such buildings as lie ftill further, are , Jaid on with a faint purple, and a little blue, thaded foftly with blue, and beightened with white; and the further they are off, the fainter and Alighter mult be your colour.
Flames and fmoke, are laid on with a pale yellow; thade the fmoke with paper black, or foot; the flames thade with red lead, or vermillion,' and heighten them with Naples yellow. In colouring of rocks, hills, \&c. that are at a great diftance, obferve the fame rule. Such as lay nearer the fore ground, you are to imitate according to nature. Trees that are upon the fore ground, you paint with feveral forts of greens, the better to diftinguifh one from the other; fuch as are on diftant hills, muft be done with the fame colour ás the hills.

## Of a fine collection of prints.

A collection of this kind may be divided into hiftorical and moral fubjects, the progrefs of arts, and mixed fubjects.
The hiftorical will contain the hiftory of the world, according to it's ages, monarchies, and nations, réprefented by maps, battle-pieces, medals, ftatues, bais-reliefs, portraits, \& c .
The moral part will comprehend emblems, devices, enigmas, of the religion, manners, and politics of different nations, with reprefentations of their virtues and vices.

## Remark.

I have of cen thought that it would prove greatly ferviceable to the caufe of liberty and proteftantifm, if fome of our beft artifts for defign and engraving, would oblige the world with a fett of curious prints, reprefenting the progrefy of Popery and Slavery, in all it's various lights. Nothing, we are inclined to think, could have a more general and happy tendency to difcountenance, and indeed, in time, eradicate, if poffible, thofe deftructive principles, fiom among mankind. The Papifts we know, ftudy every delufive art to captivate, by their paintings and idolatrous images, the minds' of the vulgar, and inftigate them to become bigots in their caufe: and will it not well become the Proteftant intereft, to baffle the wiles of fuch deceivers, with artillery of the like univerfal power and prevalence? Certain I am, that fomething of this kind, executed in a mafterly manner, would greatly contribute to root out of the minds of the mals of the people, thofe deteftable notions, and not only Afrengthen the Britih conflitution in particular, both in Church and State, but tend to the univerfal propagation of the Proteftant intereft throughout the world.-Such prints would alfo be of great ufe among our Indian allies in North America, and give them, in general, a more lively idea of the happinefs which attends living in conftant friendfhip with the friends to liberty, than with thofe of Mavery and arbitrary power.

The progrefs of arts, will take in the different files; by comparing the antique remains with the works of the Gothic ages, and of thofe eminent mafters who bave flourifhed within thefe 250 years; in order to oblerve their original increafe and declenfion, and their re-eftablifhment, to the degree of excellency to which they are now arrived.
The mixed fubjects may contain volumes of portraits of celebrated perfonages, hunting-pieces, and grotefque fubjects, \&c.
In relation to the hiftory of the world, the Ift, fhould contain the account thereof, as given us in the Pentateach.- The 2d, ought to be the fequel of the facred hiftory, as we find it in Jonua, Judges, Kings, \&c.-The $3^{\text {d, }}$, the remainder of the hiftory of the Old Teftament, according to Efdras, Tobit, \&c.- The 4th, may exhibit an abridgment of nature, according to the antient, poets and philofophers.-The 5 th, Chould thew the fabulous hiftory of the Heathen Deities The 6 th , the hiftory of the heroic times, the voyage of Argonauts, the war of Thebes, and alfo Ovid's Metamorphofes; the wars of Troy, voyages of Eneas and Ulyffes, with the

## PRI

laft acts of the heroic ages. - The 7 th, fhould contain maps and actions of the firft and recond monarchies of the Affyrians and Perfians, with other Aûatic, Egyptian, and African hiftories.-The 8th, the third monarchy of the Macedonians, comprehending the acts of Alexander the Great, and his fuc-effors.- The 9 th, the commencement of the 4th monarchy f the Romans; the reign of their 7 kings: under Numa Pompilius may be ranged, thofe peices which relate to their religion, facrifices, ceremonies, and burials of the Romans : under Tullius Hoftilius, every thing that relates to their militia: under Tarquinius Prifcus, whatever gives an idea of heir habits, ornaments, magnificence and triumphs, with the pomp of their public fpectacles, feafts, and baths.-The ioth, may take in part of the tranfactions of the Roman republic, from the expulfion of their kings, under their confuls and dietators, 'till the time of Julius Cxfar ; to which thould be dded, a collection of medals, and other monuments of the antient Roman families.- The irth, may contain what we have of the reigns of their emperors, Julius Cæfar and Au-guftus.- The 12th, might thew the manner of the wars of the Greeks, Romans, and antient barbarians.
From the Chriftian Æra, fhould be fhewn, x. The fubjects of the birth, life, and miracles of our Saviour, who appeared on the 42 d year of the Roman Empire, under the reign of Auguftus : alfo the death and fufferings of Cbrift, and a collection of holy parables. - 2 . The reigns of the emperors Ti berius, Caligula, and Claudius; under which will be included the hiftory and purity of the infant Chriittian Church.- 3 . What paffed under Nero and his fucceffors, to the end of the eign of Trajan, with regard both to facred and profane hi-ftory.-4. The hiftory of the Dacian war, as reprefented in the column of Trajan.-5. The ages and reigns of the emperors, from Adrian to the government of Alexander, the fon of Mammæa.-6. The emperors, from Alexander to the time of Conftantine the Great.-7. The empire of Confantine and his children, to the end of Theodofius's reign, which may be called the laft period of the Roman grandeur ; at the'end of which volume fhould be placed, the ecclefiaftical geography of the partriarchates.-8. The diffipation of the divifion of the Roman Empire, which began to be ufurped by the barbarous nations in the times of Arcadius and Honorius, and ended in the Eaft, by the taking of Conftantinople, in the year I453-9. The dreadful conclufion of the eaftern affairs in Africa, by the conquefts of Mahomed, and other Ottoman emperors, by the fophies of Perfia, and the kams of Tartary-- 10 . Should be a feries of Mahommedan princes, and Egyptian fultans; the cherifs of Morocco, and kings of Barbary: with which may be connected, a collection of hiftorical pieces to this third part of the globe; the Affyrians, the kingdoms of Congo, and feveral others.-II. Should contain the habits and ornaments of the Chriftian Greeks, and other fubjects of the Grand Seignor, with thofe of the Turks and Romans; of the Tartars, and other barbarous nations : alfo a collection of fome cruelties, and executions. 12. Should be the commencement of the religious orders which were inflituted in the Eaft; fuch as thofe of St An thony, St Bafil, the Crofs-Bearers, the Jeromites, and the Carmelities.-I3. Some hiftorical pieces of the knights of Malta.-I4. The infitution of the weftern religious orders, as thofe of St Auguftin and St Bennet. - 15 . The different orders that have flourifhed in the Eaft, fince St Bennet, to the time of St Dominic and St Francis; i. e. of the Carthufians, Premonffratenfes, of the Shady-Valley, the Mathurins, and of the order of the Cifteicians.-16. The or der of the Dominicans, and hiftorical pieces of the Holy Rofary; a collection of the images of the Virgin Mary, held in veneration by Papifts.-17. Whatever can give an sdea of the life of St Francis, and of the moft remarkable male and female faints, of his three orders: alfo a defcription of his defert of Avefne.-18. Should be the fequel of the order of St Francis, with fome pieces relating to the order of the Capuchins.-I9. Whatever relates to the religious confraternities that have arofe in the Romifh Church fince St Francis and St Dominic, to the prefent time.-20. A collection of all the whimfical habits and ornaments of ecclefiaftical perfons, and of the orders of monks and nuns.-2I. The reprefentations of religious ceremonies, and of the magnificence of the court of Rome.-22. The ceremonies practifed at the interment of Chriftians, and of the ancient Pa gans, and barbarous nations. - 23. Public rejoiciugs, entries, triumpbs, tournaments, fire-works, comedies, dances, and mafquerades.

1. Of the chronological hiftory of the Papacy, divided into centuries, from the time of Leo III. to the prefent Pontifi-cate.-2. The fequel of the hiftory of the Weft, containing a defcription of the modern city of Rome, it's churches, palaces, public buildings, villas, ornaments, and monuments of it's ancient grandeur.-3. Of the temporal ftate of the Popes, as now within and out of Italy.-4. Of the fovereign States of Italy, wherein fhould be a collection of what chiefly relates to the Republics of Venice, Genoa, Lucca, Ragufa, and St Morino.-5. The fequel of Italy, including the dominions of the kings of the Two Sicilies and Sardinia, the grand duke of Tufcany, duke of Modena, and of the houfe
Vol. II.
of Auftria, and other princes in Italy, and thofe of New Spaltr, and all that relates to America.-6. The hiftorical fubjeets relating to the kingdom of Old Spain.一 7 . Thofe of the kingdom of Portugal -8. Hiftorical pieces relating to the houfe of Auftria in the Low Countries.-9. The dominions of the king of Spain in Afia; under which Chould be comprized what relates to the Eaft-Indies, China, Japan, India Proper, and the reft of the Indian princes.-10. A collection of what concerns the republic of the United Provinces. in. An hiftorical collection of whatever regards the kingdoms of England and Ireland, to the end of the reign of queen Elizas beth.-12. What relates to the kingdom of Scotiand, and to the three kingdoms of England, Scotland, and Ireland, fince the union of thofe crowns in the perfon of king James the VIth of Scotland, and IIf of England, with a defcription of this monarchy.-13. What regards the northern States, as Ruflia, Poland, Sweden, Denmark, and other northern countries.-14. Should contain the ftate of the kingdoms of Bohemia and Hungary, the archduchy of Auftria, the county of Tirol, and other hereditary dominions of the houfe of Auftria.-15. Hiftorical fubjects concerning the emperors of Germany, from Conrad, duke of Franconia, who transferred the empire from the French to the Germans, to the late em-peror.-16. What relates to the feveral electors of the empire, as well the ecclefiaftical as fecular.--17. What concerns the other German princes.-18. Of the free cities of the em-pire.-19. What relates to the Republics of Switzerland, Geneva, the Grifons, the principality of Neufchatel, and the other allies and fubjects of the Switzers.-20. What concerns the duchies of Burgundy, Normandy, Lorrain, and Britany, before they were united to the French monarchy.21. The antiquities of the Gauls, and portraits of their illuftrious perfons, before the coming of the Franks, under their firft king Pharamond.-22. What regards the hiftory of the French, during the firft race of their kings, after their arrival in Gaul, under the conduct of Pharamond-23. What regards the fecond race of their kings, from Pepin to Louis the Vth.-24. Should begin with the third race of their kings, and contain all materials that relates to them, from Hugh Caput, to the end of the reign of Charles the Fair, where the right line of the eldeft branch ended. -25 . What concerns their kings of the third race, from Philip of Valois, to the death of Louis XI.-The reigns of their kings Charles the VIIIth, Louis the XIIth, Francis the Ift, and Henry the IId; and as by the marriage of Mary of Burgundy with Maximilian, Europe has been divided into the two families of Auftria and Boarbon, to avoid confufion, thole pieces relating to the foreign wars of the French, with the portraits of the eminent men who have been either their allies or enemies, may be put under the reigns of their kings. - 26. May contain the reigns of their kings, Francis the Ifd, Cbarles the IXth, and Henry the IIId.-27. What relates to the or der of the Holy Ghoft, inflituted by Henry the IIId : here may be added the names and arms of all the commanders and knights of the order, from it's firft inftitution to the laft crea-tion.-28. What relates to the reign of Henry the IVth 29. May contain the beginning of the reign of Louis XIII. his portrait, thofe of the queen, the princes and princeffes of the blood, with the arms and portraits of the cardinals, bifhops, and great officers of the crown.- 30 . The arms and portraits of diftinguifthed ecclefiaftics, religious, and feculars, who lived during the reign of Louis the XIllth ; to which may be joined Vandyke's portraits.- 3I. Pieces of the magnificent ceremonies, rejoicings, and other feftivals that paffed in France, during the reign of Louis the XIIIth. -32 What paffed of the fame kind in foreign countries, in this reign. 33. Pieces reprefenting the warlike exploiss of the French nation, from the beginning of the reign of Louis the XIIIth, to the year 1629, when all the cautionary towns of the Proteftants were reduced to his obedience.-34. The military actions that paffed in Europe, fiom the trme of Louis the XIIIth, to the rupture of the peace with Spain, in the year 1635.-35. The military actions of the treaty of peace at Treves, to the death of Louis the XIIIth.-36. May contain the habits and ornaments of the ancient and modern French, from the eftablihment of that monarchy to the prefent time; to which may be added, thofe of the conquered provinces, with the cries of Paris, Callot's heggars, and the rural fports of the French. - 37. A feries of the military actions during the reign of Louis the XIVth, the regency of the duke of Orleans, and the reign of Louis the XVth, now living. - 38. A feries of the magnificent ceremonies, feitivals, public rejoicings, fire-works, \&ic. during the fame period.39. Geographical defcription of the French monarchy, as divided into provinces, parliaments, generalities, \&c. to which may be added, charts of the coafts, plans, or profiles, of the fortified towns and fortreffes, of the principal churches, royal palaces, and public buildings, \&ic.-40. Maps of the States and Piovinces, with plans, or profies, of the principal towns and fortrefles which have been added to the French monarchy, from the beginning of the reign of Louis the XIIIth, to the piefent time. - $[5$ This would convince all Europe of the ftrides of the French to Universal Empire.]-See our article France. - 41. Suitable reprefentations of the
unchangeable
unchangeable treachery and perfidioufnefs of the French, in regard to treaties, down to the prefent times.- [See our article Plantations.]-42. Portraits of all the eminent men in the kingdom of France, either for arts or arms, fince the reign of Louis the XIIIth, to the prefent time; to which may be added, thofe of Flanders and other countries.- 43 . Portraits of thofe people who ought to be avoided; fuch as the authors of different fects of religion, of men noted for impiety or libertinifm, \&c. to which may be added, the reprefentations of monfters in the brute creation, by way of contraft. 44 . Portraits of faints and martyrs, and their perfecurors, with reprefentations of the various tortures inflieted on them, to the prefent time.
Pieces which illuftrate the fine arts of painting, fculpture, and engraving, and curious matters of antiquity, will compofe many volumes.- The firft may contain the origin of the art of painting, in the Egyptian hieroglyphics, fome bas-relievo's, trophies, rings, carneo's, vales, urns, ornaments of architecture, ancient infcriptions and epitaphs.-2. Pieces relating to the ancient Hebrews, with a collection of feftivals, medals, and antique flatues. - 3 . May regard the two books of the marquis Juftiniani's gallery, which are full of antique pieces, and the Trajan column, the moft entire piece of antiquity extant.-4. May fhew the decline of painting and fculpture, during 1100 years, that the empire was on the decline, from Conftantine to the end of the fifteenth century; which foould be compofed of pieces in the Grecian, Egyptian, and Gothic fliles, taken from the old paintings, tombs, medals, feals, and tapeftry.-5: May be the books intitled Roma Subterranea, filled with pieces in the decline of the empire, of the Gothic ftile.-6. Should be the fequel of the decay of arts, with feveral pieces from wooden plates, which thew the rudenefs of their defigns, fince the invention of printing. -7 . May be the origin of the art of engraving, about the year 1490, containing pieces of the moft ancient artilts; as of Ifrael and Martin Tederco, the matter of Albert Durer ; of Daniel and Jerom Hopfer, and others.-8. The works of Albert Durer, the reftorer of painting, and great perfecter of engraving, in Germany and the Low-Countries, about the year 1520.-9. A fequel for the works of the German and the Low-Country mafters, containing picces of Lucas of Leyden.-10. May be filled with pieces engraven on wood, done in Germany fince 1500 , to this time, as well by Lucus Cranis, Jacob Pens, Holbeins, Hans Schanflig, as others.-II. May be a feries for Germany and the LowCountries, containing pieces of the leffer mafters, fuch as George Pentz, Aldegraef, Lebalde, John D'Hifpanien, \&cc.12. Should be compofed of the works of Francis Flora, who is called the Flemifh Raphael, and thofe of Martin Hem-fkirk.-13. A fequel for Germany and the Low.Countries, containing fome pieces of Lambert Serave, Lambert Lambard; of Peter Brughel, John Mabufe, M. Quintin, George Behan, Gilles Maflart, and Gilles Coignet; of Otho Venius, Cornelius Corts and Theodore Bernard, of Amfterdam ; of Francis Klein, a Dane, and of John Strada.-14. Should be ftill a fequel for Germany and the Low-Countries, containing fome pieces of Charles Mander and Francis Pourbus, of Diterlin, and Lambert Lenoir, H. Utouch, Denis Calvaert, Abraham Janffens; of Paul Morelfer, Nicholas Hoey, Geldorp, Goltzius, Johbua of Monpre, John Haefnaghel, Gerard of Groningen, Cornelius Vanfichem, John Bol, David Van Boons, and Peter Vander Borcht.-15. Should contain fome of the works of Henry Hubert, and James Julius Goltzius.-16. The works of William and Crifpin de Pas of Magdalen and Barbara de Pas, and of feveral others of that name.-17. A fuit for Germany and the Low-Countries, comprifing fome of the works of Nicholas le Bruyn, of Theodore de Bry, and of James de Gehin.-18. The works of John, Raphael, Juftus, and Gilles Sadalaer, and alfo thofe of Martin de Vas.-19. A fuit for Germany and the Low-Countries, and to contain fome pieces of Anthony and Jerom Wierx, of Lucas Vefterman, Valder, John Saenredam ; of John and Herman Muller, James Matban, Simon Phrygius, Bartholemew Dolende of Mireuelt, and the Balfwert's; of Michael Synders, Baptift Urintz, Hans Bel, Peter and Gerard de Sade ; of Affuerus Londerfeel, and of Adrian Collaert.-20. Another fuit of mafters that flourifhed in Germany and the Low-Countries, in the beginning of the feventeenth century, viz. of Joleph Heintz, John of Vingth, John Abhac, John Rottenhamer ; of M. Kager Peter Candide, and Dominic Cuftos; of Chriftopher Schuvarts, John Speccard, and Gerard Seghers ; of Bartholomew Sprangers, Abraham Bloemaert, Anthony Van Dyck; of Abraham Brower, Gerard Hontherft, James Jordeans, and of Robert prince Palatine.-2I. Should be the works of Sir Peter Paul Rubens, a famous painter of the Low-Countries,-22 The reprefentations of night, and other dark gloomy pieces, of various mafters of all nations: as of L. Genth, J. Velde, Wittembrouck, Rembrant, Vanuliet, and others.-23. A collection of divers landikips, done by mafters of different nations; that is to fay, of Paul and Matthew Bril, of the Sadalaers, Peter Stephano, Cornelius Çorneli, Roeland Savery of Monperche, Claude of Lorrain ; of Fouquieres, Perelles; of Frederic Scalberge, Som, and the Nains, and feve-
ral others; to which may be added, the pieces of ruins of Henry of Cleves, Michael Colyns, and Newland; with fome feapieces and maritime profpects. - 24. Should be another fuit of different landfkips, viz. by Peter and John Brughel, Londerfeel, J. Velde, Tobit Verdach, Vanderboons, Merian, and others. -25 . In order to fee the re-eftablihment of the art of fculpture and engraving, fhould contain fome pieces of the firft painters and engravers, as of Anthony Pollarolo, Andrew and Benedict Montegna; of Dominic Cantpagnola, John of Brefia, and James of Verona; as alfo of feveral, ancient engravers, whofe pieces are only known by their marks: as the mafters of the name of Jefus, Mercury, the crab-filh, the bird, the ftar, and feveral others; to which may be added fome pieces of the firft Italian painters, as of Giotto, Chirlandaio, or Hercules of Ferrara; of Peter of Perugia, the mafter of Raphael, and of Giorgine, the mafter of Titian. 26. Should be a fuit of the Italian mafters, containing only fome of the works of Raphael of Urbin, and thofe engraven only by Mark Antonio, and Auguftine of Venice.-27. A fuit of the works of Raphael, engraved by the ancient mafters, from 1530 to 1560 ; that is to fay, by Julius Bonafone, Sylvefter, and Mark of Ravenna, Beatrix of Lorrain, and others.-28. Should contain fome pieces of Michael Angelo. - 29. Another fuit of the works of the Italian mafters, containing fome pieces of Anthony of Correggio, Francis Matzuolo, firnamed Parmigiano, and Polydore of Caravagio.- 30. The works of Titian.- 3I. Should contain the works of Julio Romano, the Caracci, and Perin del Vaga, engraved by John B. of Mantua, and Diana his daughter, as alfo by Theodore Ghifi, and George Julius of Mantua.-32. The works of the painters and fculptors that were contemporaries of Raphael and. Michael Angelo, to the end of the fixteenth century, viz. of Baccio Bandinelle, the Salviati; of Balthazar of Peruzzi, Dominico Beccafumi; of Sodom of Sienna, Pordenone, Marcellus Venufto, and Baptift, a monk of the order of Camaldoli.- 33. Should contain fome pieces of Thaddeus and Frederick Zucchero, of Daniel of Volaterra, Mark of Sienna, and Baptift del Moro.-34. Some pieces of Paul of Verona, Paul Farinate, the Baflans; of Tintoret, Baptift Franco of Mutiano, and the elder and younger Palma. - 35. Some pieces of thore who flourifhed between the year 1550 and the end of the fixteenth century, viz. of Æneas Vico, Martin Rota, and Reverdino ; of Camillo Proccacini, Baptift Fontaner; of Cornelius Cort, Paffaro, and Sebaftian of Venice-36. A fuit of the works of the Italian engravers who flourifhed towards the latter end of the fixteenth, and the beginning of the feventeenth century; that is to fay, of Cherubino Alberto, Villamena, of Raphael Shiaminofa, and the Tomafini.- 37. Should contain the pieces of Francis Vanius, Ventura, Salembeni; of Civoli, Michael Angelo, Caravagio, and the three Caracci.- 38 . Should be a fuit of the works of the Italian painters of the feventeenth century, viz. of the Capuchin friars, Piazzo, and Cormo of Caftel Franco; of Hippolitus Scarzelin of Schiavone, Cangiage Borgian, Charles of Venice, Pafqualin of Verona, Alexander Cefalani, Bernard Caftello, Vefpafian Strada, Anaftafius Fontebuono, Francis of Virterbo, Luke Ciamberlani, Andrew of Ancona; of Anthony Pomerange, of Matthew and Frederic Greuter ; of Philip of Naples, and Stephen Dellabella.-39. A fuit alfo of the woiks of the painters and fculptors that flourihhed during the feventeenth century, viz. of Cavalier Jofepino, Guercino, Cirano, Francis the Fleming, and Marcel of Provence, the reftorer of mofaic painting; of Gentilique, Valentin, Edward Fialetti; of Peter Beretino of Cortona, Dominichino and Guido Rheni.-40. Should be to thew the re-eftablifhment of painting in France, and contain fome pieces of René, king of Sicily, of Leonard da Vinci, Andrew del Sarto, and Roffo.-4I. A fuit of fome of Primaticio's works, engraved by Leo of Avefennes, and Anthony Jantus, his engravers ; as alfo fome pieces of Jeffrey of Montiers, Leonard of Limogues, Stephen of Loofne, René Boivin, Luke Penis, Dominic of Florence, and Leonard Thury.42. May be filled with the works of John Courlin, John Genet, of Swifs, of Little Bernard, Peter of Latour, Laurence the glazier, Juftus of Egmont, and of feveral others engraved in France fince the commencement of the fixteenth century.-43. Should contain fome pieces of thofe maffers who flourifhed at the latter end of the fixteenth century, and during the reign of Henry the IVth and Mary of Medicis, viz. of Freminet de Breuil, Burnet, Caron, du Bois Lallemand, Thomas de Leu, Leonard Gaultier, and others,44. The works of thofe mafters who flourified about the middle of the feventeenth century, that is to fay, of James Blanchard, de Rabel, Ferdinand, Ifaias Fournier, John Lis Faber, and Mallerac ; of Ruelle, Bellango, and James Cal-lot.-45. Should alfo be compofed of the works of James L'Homme, of Little Francis, Vanmol, Mellin, Quefnel, St Igny, Joffelin, Rouffellet, and Peter Brebiette.-46. May be filled with the works of the beft French engravers, viz. Claudius Mellan, Gregory Huret, Peter Daret, Gilles Rouffellet, Michael Lafne, and many others. -47 . With the works of the moft eminent French painters; that is to fay, of Simon Voüet, Nicholas Pouffin, James Steila, Champagne

## PRI

Bourdon, de la Hire, Vignen, Loir, Charles de Bran, and Peter Mignard, engraved by the beft miafters.-48. May be filled with the fineft pieces of the moft celebrated engravers of the with the $n$ eventeenth certury - 49,50 , 8 cc . may contain a collection of pieces of different mafters of all natlons, who have been either omitted or forgotten in the preceding account, or have Aourifhed fince the ent of the feventeenth century, as well as of others now living, whofe names we thall not fpecify, having In equal yeneration for them 'all.
The fubjects of morality will alfo form feveral volumes, viz. . May contain fome emblems of the Chriftian worlhip.. May be the reprefentationts of the virtues and the vices, with their fymbols.-3. A collection of different emblems, fobles, and enigmas.-4. A collection of devices of popes, king's, prelates, princes, noblemery and others:-5. May be filled with a number of grotefque pieces; to which may be added, a collection of all forts of mafquerades.

## Remarks.

Orr principal reafon for enumerating the preceding particulars is, with a views to'give the reader'a general idea how extenfive a fubject the article of prints may be rendered, whe? fcope there is for the genius of the greateft, artifts, and how conflderable a branch of trade is derivable therefrom. See our articles Design, Engraving, and Painting. For thefe reafons, it is certainly good policy to give all reafonable public encouragement to all our own fubjects who fhall excel fereim, that the catalogue may be fweiled as well with the names of Britons as of foreigners; for, in that cafe, we may Become exporters as well of the productions of our own celebrated matters, as importers of thofe of other countries. Befides, to excel in the refined arts in general, gives a reputation and dignity to a nation in all it's commercial concerns; and, indeed, where thefe arts do not flourifh, commerce can never arrive to that height it will do in nations where they do, they being the foundation of multitudes of other dependent trades.
It is needlefs to fay a word in favour of an art fo apparently ureful in other refpects, it tending to communicate an univerfal knowlege of nature and hiftory; men and things, in genefal, in the moft faniliar manner, and greatly to aid and arfift the memory in the retention of what we may have read for the embellifhment of the mind, and the improvement of the under itanding.
The elegancies of life, to a polite and wealthy people, become necefiaries; the very natural wants of a refined Bniton and a favage Indian are not the fame. Artificial defires, by long habit, work themfelves into our conflitution, and in the next generation become, as it were, innate. A new refinement creates a new defire, as importunate as any of the immediate calls of nature, when we once perceive the gratification within the reach of a little more induftry.
Hence a peculiar paffion arifes, ufeful, like all the reft, under proper regulation, and productive of much focial good, ferving both to excite our own induftry and that of others, to carry the ftandard of genius, and rational invention ftill higher, and to find endlefs employment for an increafing people. Luxury, if the name were not in ill repute, might be diffinguifhed into virtuous and vicious: fo far as it partakes of invention, and difcovers the application of the higher gifts of God in the creation, it is virtuous; and grows vicious only, when we are fempted by it to an abule of thefe improvements
The lower branches of manufacture, wherein the price is paid chiefly to labour, contribute moft to the increafe of fabouring hands. The trades of refinement are no ways comparable to thefe, for the number they employ. The arts of elegance are in next efteem, wherein we are an age behind our neighbouts ; what thefe may want in merit, as to increafe of numbers, they make up in that of wealth, the price of art rifing above labour, in proportion as genius is a fcarcer commodity than Perength.
There is nothing incompatible in the arts of ingenuity and
thofe of labour ; and all the plainer trades may be retaited, notwithitanding the higher arts are introduced, in which cafe we thould be both a richer and a greater people.
This art is the parent of many others: it is the parent of DESIGN in general, and that is the great parent of numberlefs uffeul and elegant arts and trades. An academy for the fine arts under a royal charter has been long talked of in this nation, and why it hould be fo long neglected is matter of concern.
It the liberal fciences in the knowlege of nature, and the means of conveying it, we are not inferior to any other nation in Europe. He that defigns, as well as he that writes, muft find his advantage in this; fince the learning of the hiftorian, poet, and philofopher, are as requifite to the accomplifhed painter, as to him that is diftinguifhed by either of thofe particular áppellations. At leaft, the painter cannot univerfally excel without a tincture of all thofe fciences, in which the profeflors of literature are feverally and diftinctly excellent.
But the greateft pre-requifite, the moft effentially neceflary of all qualifications, is dkill in drawing. Without this, neither the genius nor learning of the defigner, painter, or fculptor, can be difplayed to advantage. It is the fine quâ non, after all other accomplifhments are obtained.
Monfieur de Voltaire obfreves, that the Italians, on the revival of the liberal arts and fciences, gave them the name of Virtue. From this word was derived the term Virtuofo, which has been accepted throughout Europe, and is of daily ufe in England. Should not this appellation intimate, to thofe who affume it to themfelves, that the fludy of what is beautiful, in nature or art, ought to render them more virtuous than other men?
That thefe ftudies have really fuch a tendency, when not perverted to lafcivious or immoral purpofes, is undeniable and whether, when thus perverted, they ought to be ranked among the ornaments of life, I very much doubt. We are certain that the poets, artifts, and philofophers, who have acquired the higheff feats in the temple of Fame, are not thofe who proffituted their genius or ikill to the gratification of the fenfual and culpable paffions.
The painter, the fculptor, the architect, (who, with the mufician, are properly diftinguifhed from other artifts by the epithet liberal added to their profeffions) have fo near an affinity with the poet, the philofopher, the orator, and the geometrician, that there needs no apology for the frequent parallel we have made betwixt them. A noble and admired author, no lefs an one than the earl of Shafterbury, has done the fame; and whilft he prefers the artif of genius, to the mere fcholar by profefion, gives fuch reafons for it, as I hould do myfelf an injury not to tranfcribe.

- Hardly can I forbear, fays his lordhip, making fome apology for my prefent recourfe to the rules of common artifts, to the mafters of exercifes, to the academies of painters, ftatuaries, and the reft of the virtuofo tribe. But in this I am fo fully fatisfied I have reafon on my fide, that, let cuftom be ever fo trong againft me, I had rather repair to thefe infetior fchools to fearch for truth and-nature, than to fome other places; where higher arts and fciences are profeffed.
I am perfuaded that to be a virtuofo (fo far as befits a gentleman) is a higher ftep to wards the becoming a man of virtue and good fenfe, than the being what in this age we call a fcholar; for even mere nature itfelf in it's primitive fimplicity, is a better guide to judgment, than improved rophiftry and pedantic learning. The faciunt, næ, intelligendo, ut nihil intelligunt, will be ever applied by men of difcernment and free thought to fuch logic, fuch principles, fuch forms and rudiments of knowlege, as are eftablifhed ir certain fchools of literature and fcience. The cafe is fufficiently underftood, even by thofe who are unwilling to confefs the truth of it. Effects betriay their caufes. And the known turn and figure of thofe underftandings, which fpring from nurferies of this kind, give a plain idea of what is judged on this occcafion.
To imitate nature agreeably, is undoubtedly the perfection of art ; but this can be done only by a good eye, which makes a beatitiful choice among the objects that nature prefents.' This is well explained by the fame noble author, whofe thought, attentively confidered, might reconcile thofe who difpute concerning the propricty and jult extent of that imitation.
- A painter, fays his lordhiip again, if he has any genius, underftands the truth and unity of defign; and knows he is even then unnatural, when he follows nature too clofe, and ftrictly copies life. For his art allows him not to bring all nature into his piece, but a part only. However, his piece, if it be beautiful and carries truth, muft be a whole by itfelf, complete, independent, and withal, as great and comprehenfive as he can make it. So that particulars, on this occafion, muft yield to the general defign, and all things be fubfervient to that which is principal. In order to form a certain eafinefs of fight, a fimple, cleat, and united view, which would be broken and difturbed by the expreffion of any thing peculiar or diftinct.'

## P R I

## P R I

An act for the encouragement of the arts of defigning, engraving, and erching hiftorical and other prints, by vefting the properties thereof in the inventors and engravers, during the time thereim mentioned.

Whereas divers perfons have by their own genius, induftry, pains, and expence, invented and engraved, or worked in mezzotinto, or chiaro ofcuro, fets of hiftorical and other prints, in hopes to have reaped the fule benefit of their labours: and whereas printfellers, and other perfons have of Jate, without the confent of the inventors, defigners, and proprietors of fuch prints, frequently taken the liberty of copying, engraving, and publifhing, or caufing to be copied, engraved, and publifhed, bale copies of fuch works, defigns, and prints, to the very great prejudice and detriment of the inventors, defigners, and proprietors thereof; for remedy thereof, and for preventing fuch practices for the future, may it pleafe your Majefty that it may be enacted, and be it enacted by the king's moft excellent Majefty, by and with the advice and confent of the lords fpiritual and temporal, and commons, in this prefent parliament aflembled, and by the authority of the fame, That from and after the twenty-fourth day of June ${ }_{2}$ which hall be in the year of our Lord 1735, every perfon who thall invent and defign, engrave, etch, or work in mezzotinto, or chiaro ofcuro, or, from his own works and invention, fhall caufe to be defigned and engraved, etched, or worked in mezzotinto or chiaro ofcuro, any biftorical or other print or prints, fhall have the fole right and liberty of printing and reprinting the fame for the term of fourteen years, to commence from the day of the firft publifhing thereof; which fhall be truly engraved with the name of the proprietor on each plate, and printed on every fuch print or prints; and that if any printfeller, or other perfon whatloever, from and after the faid 24th day of June, 1735, within the time limited by this act, thall engrave, etch, or work, as aforefaid, or in any other manner copy and fell, or caufed to be engraved, etched, or copied and fold, in the whole or in part, by varying, adding to, or diminifhing from the main defign, or thall print, reprint, or import for fale, or caufe to be printed, reprinted, or imported for fale, any fuch print or prints, or any parts thereof, without the confent of the proprietor or proprietors thereof firt had and obtained in writing, figned by him or them refpectively, in the prefence of two or more credible witnefles, or, knowing the fame to be fo printed or reprinted without the confent of the proprietor or proprietors, fhail publifh, fell, or expofe to fale, or otherwife, or in any other manner difpofe of, or caufe to be publifhed, fold, or expofed to fale or otherwife, or in any other manner difpofed of, any fuch print or prints, without fuch confent firft had and obtained, as aforefaid; then fuch offender or offenders fhall forfeit the plate or plates on which fuch print or prints are or fhall be copied, and all and every fheet or fheets (being part of, or whereon fuch print or prints are or thall be fo copied or printed) to the proprietor or proprietors of fuch original print or prints, who hhall forthwith deftroy and damark the fame; and further, that every fuch offender or offenders hall forfeit 5 s. for every print which hall be found in his, her, or their cuftody, either printed or publifhed, and expofed to fale, or otherwife difpofed of contrary to the true intent and meaning of this act; the one moiety thereof to the king's moft excellent Majefty, his heirs and fucceffors, and the other moiety thereof to any perion or perions that Thall fue for the fame, to be recovered in any of his Majefty's courts of record at Weftminfter, by action of debt, bill, plaint, or information, in which no wager of law, effoign, privilege, or protection, or more than one imparlance hall be allowed.
Provided neverthelefs, That it fhall and may be lawful for any perfon or perfons, who fhall hereafter purchafe any plate or plates for printing from the original proprietors thereof, to print and reprint from the faid plates, without incurning any of the penalties in this act mentioned.
And be it further enacted by the authority aforefaid, That if any action or fuit thall be commenced or brought againft any perfon or perfons whatfoever, for doing or caufing to be done any thing in purfuance of this act ; the fame fhall be brought within the fpace of three months after fo doing; and the defendant and defendants, in fuch action or fuit, fhall or may plead the general iffue, and give the fpecial matter in evidence; and if upon fuch action or fuit a verdict thall be given for the defendant or defendants, or if the plaintiff or plaintiffs become nonfuited, or difcontinue his, her, or their action or actions, then the defendant or defendants fhall have and recover full cofts, for the recovery whereof he fhall have the fame remedy, as any other defendant or defendants in any other cale bath or have by law.
Provided always, and be it further enacted by the authority aforefaid, That if any action or fuit thall be commenced or brought againft any perfon or perfons, for any offence committed againft this act, the fame thall be brought within the fpace of three months after the difcovery of every fuch offence, and not afterwards; any thing in this act contained to the contrary notwithltanding.
And whereas John Pine of London, engraver, doth propofe
to engrave and publin a fet of prints copied from feveral pieces of tapeftry in the houfe of lords, and his majefty's wardrobe, and other drawings relating to the Spanifh invas fion, in the year of our Lord 1588 ; be it further enaeled by the authority aforefaid, That the faid John Pine flall be intitled to the benefit of this act, to all intents and purpofes whatfuever, in the fame manner as if the faid John Pure had whatfuever, in the fame manner as if the faid Jo
been the inventor and defigner of the faid prins.
And be it further enacted by the authority aforefaid, that this aet fhall be deemed, adjudged, and taken to be a public act, and be judicially taken notice of as fuch by all judges, juftices, and other perfons whatfoever, without fpecially pleading the fame.

## Remarks.

This act has given fome little encouragement to thofe artilts, but is no way equivalent to the difficulties and difcourage. ments under which they bave long laboured, by printellers and others, as I could inftance, though it is apparent that they have manifefted talents no way inferior to the artifts of any other nation : fo great is this merit, that they fland in need of nothing but the effectual patronage of the great o render them fuperior to any other artifts in aill Europe See the articles Engrating and Design

## PRISAGE and BUTLERAGE.

I. * Prifage is a certain taking or purveyance of wines to the king's ufe, out of every thip bringing in wines, belonging to the natives of England, except thofe particularly hereafter exempted, being the only duty or cuftom that was anciently payable for the fame to the kings of England: $\dagger$ and that the king's butler might not take more than was really neceffary for the king's ufe, the fteward of the king's houfe, and treafurer of the wardrobe, were to fend the certain quantity to all the ports of England, the which he was to take within ten days.

* 40 Hen. III. 28 Edw. I. 6 Edw. III. . 20 Rich. II.
$\dagger 20$ Edw. III. cap. 2 I. 43 Edw. III. cap. 3.
This duty is not due 'till the unlading or breaking of bulk, for the words are, De qualibet nave importante vina \& difonerante inde, fo that the breaking of bulk, or the landing of any part of the cargo, fubjects the thip to the whole duty, according to the quantity on board, though there be not more than one ton landed; therefore, when there aré any wines on board, defigned for foreign parts, the mafter thould diftinguifh them in his report, from thofe which are to be landed in'England: and when prifage is taken at any one port, and the thip proceeds to another, the collector of that port mould be acquainted thereof, by noting it on the back of the mafter's report, which he is to carry with him, to prevent it's being taken again.

## This duty is either fingle or double.

Single prifage is one ton, and is due in kind, when the quantity imported amounts to, or exceeds, 10 tons, but is under 20 tons: for if under ten tons, there is not any prifage due. Double prifage is two tons, and is due in kind, when the quantity imported amounts to, or exceeds, twenty tons, which is the moft due out of any one fhip: one ton to be taken before the maft, and the other behind the maft, at the pleafure of the king's butler or prifage-mafter; who may tafte the whole cargo, and chufe the beft wines, and fill up the velfels, or chufe thofe that are the fulleft, and take them away, allowing only * 20s. per ton for freight; or if the owners had rather, be may compound with them for the whole quantity at a certain price, as is the praCtice in London, and molt other ports.

- 28 Edw. I. cap. z.

But note, if any merchant brings in, to the quantity of above nine or nineteen tons, be it but a tierce or upwards, whereby to evade the payment of prifage, he is liable to the fame, as if the full quantities of ten or twenty tons had been imported ; or if any thip brings into the quantity of prifage at feveral times within the compafs of the fame vintage, this duty is due as if all thofe quantities had been imported all together; or if any merchant enters any quantity of wines in feveral bottoms at the fame time, or at feveral times within the compafs of the fame vintage, in the whole quantity amounting to prilage, the fame is due, as if imported in one bottom, and at one time.
But king Edward III. by his charter, dated 6 Martii, anno regno primo, granted a difcharge from prifage to the mayor, commonalty, and citizens of London, in hac verba, quod de vinis civium, nulla prifa fiat, fed perpetuo inde ellent quieri, \&c. which was afterwards allowed in the Exchequer. Though it is not every citizen that is capable of this exemption, but only thofe that are refident within the city, being freemen and troufekeepers, paying fot and lot; for he that

## P R I

would claim the benefit of this difcharge, ought to be civis \& incola commorans: for upon complaint that the lord mayor of London made ftrangers citizens, it was declared by an act of the $4^{\text {th }}$ of Henry VI. (a private act) that the difcharge from $\mathrm{pr}^{\text {ifage }}$ thould not extend to fuch citizens as were donati, made free, but only to fuch as commorant, incolant, and are refident in the city: and not only the merchants of London, but alfo of the Cinque Ports, Southampton, and Chefter, are exempted from prifage by particular charters; yet if an inbabitant of any other place, fhould confign wines to be delivered and landed at any of thofe places, the bare difcharge of the goods will not acquit the importer ; for it is not the party's importation, but his domicil that exempts him. II. * Butlerage is a duty of two hhillings for every ton of wines, for which freight is to be paid, brought into this realm by merchant-ftrangers; being a compofition (in lieu of the duty of prifage payable in kind by Englifh only, and from which Arangers were exempted) in confideration of the liberties and freedoms firft granted by king John, and afterwards by king Edward the Ift, to all merchant-ftrangers by thefe words, in a charter called $\dagger$ charta mercatoria; Concefferun de quo libet dalco vini quod adducent, vel adduci facerent, infra regnum, \&c. folvent nobis \& hæredibus noftris, no mina cultumx, duos folidos, \&c.

* Book of Rates referred to by $: 2$ Car. II. cap. 4
$\dagger 3^{1}$ Edw. I. cap. 1 \& 2. 27 Edw. III. cap. 26 .
With regard to thofe duties of prifage and butlerage, it muft be obferved, That if ${ }^{*}$ wines are entered in another man's name, in order to defraud the king of the duty, the penalty is double the value of the prifage, and all the offender's goods and chatels perfonal for ever, provided the profecution be within three years: and that the + collector, comptroller, and furveyor, are not to take any man's entry of wine, 'till he hath produced the butler's or his deputy's bill, teftifying that he hath feen the fame.

> * 1 Hen. VIII. cap $5.5 .6,7.2 \& 3$ Edw. VI. cap. 22. $5.3,4.5$. E. Eliz. cap. II. 5.66.
> + In Rot. Scac. Term. Sanct. Hil. 7 Eliz.

And though by the * act of tonnage and poundage, a fubfidy and additional duty were laid upon all forts of wines imported, yet as the prifage of wines, or prife wines were exempted from thofe duties, the duties of prifage and butlerage were fill continued and confirmed to be paid in like manner as before.

* 12 Car. II. cap. $4 . \$ 15$.
$\dagger 12$ and 27 Rules of the Book of Rates.
Though prifage and butlerage (which were originally the only duties due upon the importation of wines) were taken and received for the proper ufe of the crown; yet for many years paft, the kings of England bave been pleafed to grant the fame to fome nobleman, who by virtue of his patent or grant, is to enjoy the full benefit and advantage thereof, and may caufe the fame to be levied and collected in the fame manner as the kings themfelves might, and were formerly wont to do, and under the fame pains and penalties.
The patentee or proprietor of thefe duties, appoints a deputy in every port (ufually the collector of the cuftoms) to levy and collect the fame for him, in the beft manner he can, by taking the prifage either in kind, or by making a compofition, the latter whereof is the moft ufual method.
And when prifage is compounded, it is by paying a certain rate per ton, according to agreement made with the prifagemafter, for all the wines on board each fhip, liable to this duty: but as there is a difference in favour of the prifagemafter, between the cuftoms and other duties due to the crown, which are to be paid by him and the merchant; fo that if the merchant compounds, and enters the quantity for prifage, which, if taken in kind, muft have been entred by the prifage-mafter, he will pay lefs duty to the king for the faid quantity; therefore, in this cafe, over and above the compofition aforefaid, fuch difference in the duties mult be allowed to the prifage-mafter, unlefs the compofition be at fuch an high rate as ihall be equivalent.

## Some law cafes relating thereto.

King Edward I. having laid fome impofitions on the merchants, which in the twenty-fifth year of his reign were taken away, with promife that neither he nor his fucceffors fhould do the like, without affent of parliament, in the 31 lt year of that king they granted him an increafe of cuftoms: in lieu of which, he granted to fome places divers immunities, as releafe of prifage, \&c. And king Edward III. by his charter, dated the 6 th of March, in the firft year of his reign, granted to the mayor, commonality, and citizens of London, thar they fhould be for ever difcharged from prifage of wine; which charter was afterwards allowed in the Exchequer. 44 Eliz. It has been held, that it is not every citizen of London that is capable of this privilege, but only thofe cuizens that are

Vol. Il.

## PRI

refident within the city; fo it was ruled in the cafe of one Knowles, who being a citizen and free grocer of London, removed with his houfhold to Briftol, where he dwelt, but yet kept his hop in London; and a hhip of his arriving with wines at London, and being unladen, the prifage was demanded: he claimed the benefit of difcharge as a citizen, thefe being his own proper goods. It was adjudged he was not intitled to the fame; for he who claims the benefit of his exemption, ought to be a citizen and inhabitant there. In this cale, it was faid for the defendant Knowles, that if a perfon unlade his wines before prifage paid, then the king's officer cannot have his election. Trin. 4. Hen. VI.
If a fhip bound for the port of London, Should by frefs of weather or otherwife, be forced into any other port, in fuch cafe the citizens are to enjoy their privilege, as well as if the fhip had arrived at London. Hardr. 311. In cafe feveral thips of burden import wine into a port in fmall parcels, as where only nine tons and three hogtheads were imported in each veffel; this was held to be fraud, and that prifage fhould be paid for them: and, in equity, it hath been the ufual cuftom to caufe fingle prifage to be paid for nine tons and a half; but not if it be only nine tons-imported. Hardr. Rep. 218, 477.
The king granted to a Venetian merchant, that he fhould be quit of all cuftoms, fublidies, and impofitions, and all other fums of money, debts and payments, for any merchandizes whatfoever imported, and that he fhould be as free as the citizens of London; notwithflanding thefe particular words in the grant, it was refolved in the Exchequer, that by that grant he was not difcharged from prifage, becaufe the prifage is not fpecially expreffed therein, although the city of London were, by a feecial charter, free of prifage. The lord mayor of London cannot make frangers-citizens to be difcharged from payment of prifage. Davis's Rep. Hil. 43 Eliz. B. R.

Prifage is not due and demandable 'till the bulk is broken : but if a foreigner brings a thip, laden with wines, to a port with intent to unlade, and before the goods are entered, or bulk broke, he fells them to a citizen, prifage hall be paid; for the kings grant fhall not difcharge any citizen in fuch a manner. If the king, by grant, difcharges a certain fhip of A. being at fea, particularly naming the fame, from paying prifage, and the owner dies before the fhip arrives, no duty can be demanded; it is otherwife if a particular perfon has a grant to him to be difcharged of his goods, and he dies before the arrival there, the duty thall be paid. Hil. I3. Jac. I.
$\mathrm{An}_{\mathrm{n}}$ information being brought by Sir Thomas Waller, chief butler to king James I. againft Frances Hanger, widow, for detaining eight tons of wine due for prifage, fetting forth thatitwo hips laden with wines, belonging to George Hanger, came to the port of London, and afterwards two more, in which four thips there were 124 tons of wine, whereof eight tons were due to the king, and that the defendant, who was the widow of the faid George Hanger, refufed to deliver them : the defendant confeffed that the four flips did arrive in the port of London; two in the life time of her hulband, and two after his death, and that he was poffeffed of the faid wines ut de bonis propriis; and being fo poffeffed thereof, made her his executrix, and died: that the proved her hufband's will, and took upon her the executorfhip, and did unlade thofe two hips which arrived affer the death of her hufband; then the pleaded the grant, Old 3. unto the mayor, $\& \mathrm{cc}$. of London, quod de vinis civium, of citizens wine, no prifage thall be taken, but that they fhall for ever be difcharged of the fame, and denied that thefe wines were her goods; for that the had nothing in them, but as executrix to her hufband, and that be was a freeman and citizen of London. Upon this plea, it was a queftion, whether prifage was due for thole wines, and adjudged, that the hufband was. a citizen of London at the time of his death, and that the wines were bona civi, and fo within the grant; and by confequence difcharged from the payment of prifage in the hands of the executrix, who reprefented his perfon. Trin. II. Jac. Bridgem. 1, 2. Bult. 250.
This great cafe was feveral terms, and in divers courts depending, wherein there was a diverfity of opinions among the judges; fome infifted, that prifage ought here to be paid unto the king, efpecially for the two laft hips, for the widow and executrix has the wines in another's right. And as to the $p$ ivilege of difcharge, the difference ought to be, where the goods are attached in the life of the hufband, and where after his death; when it is in his life-time, and he dies the fame day, yet the difcharge fhall continue; but here the fame was after his death: and thefe are not the wines of George Hanger now, for that he is dead, and he hath no goods, nor is he now a citizen; and the difcharge bere fhould go only to the perfon of a citizen. But the lord chief juftice Coke held, that this privilege, to be exempt from prifage, is not fo mach tied to the perfon, but alfo to the wines of citizens, and the charter itfelf goech unto them; and the difcharge is of wines as of a chattel, and then a reprefentative thall be within the compafs of a grant; alfo an executor thall not forfeit the goods which he hath as executor; and the reafon is, becaule they fill are the goods of the dead: here George

Hanger

## P R I

P R I

Hanger was a complete citizen in every reipect, and fo continued 'till his death; and thefe wines, in the hands of his executrix, are bona civium, and therefore within the extent of this grant, to be freed from prifage. 3 Bulf. 2, 23, 26. By the adt of tonnage and poundage, 12 Car. II. c. 4, it is declared, that the prilage of wines ought not to pay tonnage or cultom, and flall not be charged with the payment of any cultom, fubfidy, or fum of money, impofed upon wines by this fatute, or any thing therein contained. But in the I Jac. II. c. 3. there is a provifo, that no merchant thall be charged with any duty granted by this act for the prifage of wine, which he imports in any thip or veffel; but that it thall be received and taken from the perfon who hath the beNufit of the faid prifage wine, who is hereby appointed to pay the fame. And by a late* act, which makes allowances to merchants importers, out of the feveral duties laid on wines for fuch wine as is damaged; it is enacted, That the faid allowances thall be made, not only to the merchant at importation, but alfo to the prifage-mafter, or proprietor of the duties of prifage : though it is here declared, that any thing in this act contained, or to be done in execution thereof, thall not extend to diminifh or leffen the duties of prifage and butlerage of wine, due upon the importation of the fame; but that the faid duties fhall be collected and received, in the fame manner as if this act had never been made.
*The flatute 6 Geo. I. ᄂ. 12. 6. 2 \& 7 .
In a late cafe, where an action was brought for money received to the ufe of the plaintiff, a [pecial verdict was found by the jury; that king Charles I. gave to J. S. and his heirs, the duty of prifage of all wines imported, to hold the fame, difcharged of all aids and taxes; and the queftion was, Whether the grantee fhould pay tonnage or not? It was here oblerved, that the duty of tonnage was firf impoled by 12 Car. II. viz. 4 l . ios. on all French wine; then comes 1 Jac. II. c. 3. and impofes 81. per ton on French wines, with a claufe, that the grantee of prifage thould pay the duty: after this the 7 and 8 W . III. c. 20 . impofes 25 l . a ton; and then comes 9 \& 10 W. III. c. 23. which grants an additional duty of 4l. Ios. per ton, to be levied as by the fatute 12 Car. II. On this remarkable caufe in the court of exchequer, it was there adjudged, that the faid grantee of the prifage wine fhould not pay the duty of tonnage: but, upon this, a writ of error was brought in the Exchequer Chamber, and the judgment was there reverled. Hil. Term 8 Ann. Paul againt Shaw.
It was argued, that the grantee of prifage was an antient and royal revenue, and if the crown had not granted it away, tonnage could not be due to the queen, for the could not pay that duty out of her own prifage; therefore the grantee claiming under the crown, ought to have the fame privilege and exemption, and the rather, becaufe it was granted to him with this immunity. To this it was anfwered, and accordingly refolved, that tonnage fhould be paid for prifage wines, by the grantee of prifage; becaufe, immediately on importation, this duty attaches upon the wines, and therefore, whatever part the grantee receives for prifage, he takes it charged with the duty; otherwife it would be raifed on the people to enich a private man, which could never be the insent of the law-makers: it is true, the queen could not be charged with a dury to herfelf, but the duty revives when prifage comes to a fubject; and as to the covenants of difcharge, in this grant of Charles I. they could only extend to the tonnage then in being, and which he then had, and not to what he had not, or might afterwards be given to his fucceffors. 2 Salk. Rep. 6r7. I NelC. Abr. 585. See the end of every letter relative to the Business of the Cus-TOM-HOUSE
PRIVATEERS and PRIZES. A privateer is a kind of a private man of war, though the commiffion be not reckoned very honourable: the ufe of them is not very antient, and fome perfons account thofe but one remove from pirates; who, without any refpect to the caufe, or having any im. mediate injury done them, or not being fo much as hired for the fervice, fpoilmen and goods, and innocent traders, making a traffic of it, amidf the calamities of a war. That privateers in general are lawful when under right conduct, there is no room to queftion; for if a war be entered into on a juft foundation, they cannot be unjuft: all ways of bringing an enemy to reafon, which are not againft the laws of nations, are allowed ; and it is no matter whether a perfon fo commiffioned is paid by the prince, or content to pay himfelf out of the fpoils of the enemy; or if he acts for no pay at all, but out of love to his country, and loyalty to his prince.
It has therefore been cuftomary, fince the trade of Europe hath been fo extenfive, for princes and ftates, in cale of a rupture with other princes, to iffue forth commiffions to private men, to equip thips of war; and the perfons concerned in privateers, adminifter at their own cofts a part of a war, by providing fhips of force, and all other military utenfils, to endamage the enemy; and they have, inftead of pay,
leave granted to keep what they can take from an enemy allowing the admiral his fhare, \&xc.
Befides the common private commiffions, there is mention of fecial commiffions granted to perfons that take pay, who are under difcipline; and if they do not obey orders, may be punifhed with death. And the wars in later ages, have generally given occafion for the iffuing commiffions to annoy the enemies in their commerce, and hinder fuch fupplies as might frengthen them, or lengthen out the wat; and likewife to prevent the feparation of Mips of greater force from their fleet.
By a law made in the 6th year of queen Anne, the lord high admiral, or commiffioners of the admiralty, during the war were empowered to grant commiffions to commanders of Britifh fhips (on their giving fecurity as ufual, upon granting fuch commiffions, except for payment of the tenths to the lord admiral) for the feizing and taking fhips and goods belonging to enemies, in any fea or river in America, \&cc. and perfons ferving on board privateers, \&c. are not to be im. preffed by any thip of war, under 201 . penalty.
Privateers may not attempt any thing againft the law of nations; as to affault an enemy in a port or haven, under the protection of any prince or republic, be he friend, ally, or neuter; for the peace of fuch places muft be kept inviolably. When thefe private commiffions are granted, there is always great care to be had and taken, by caution to preferve the leagues of our alles, neuters and friends, according to their feveral treaties; and therefore, by a marine treaty, between king Charles II. and the ftates of Holland [fee the articte Marine Treaty], made at London in the year 1674, before a commiffion thall be granted to any privateer or caper, the commander is to give fecurity in 1500 l . and if fuch thips have above one hundred and fifty men, then in 30001 . \&c. that they will make fatisfaction for all damages, which they fhall commit in their courfes at fea, contrary to treaties with that State; upon pain of forfeiting their commiffions, and anfwering fuch damage, for which the fhip is made liable.
By other articles in the faid treaty, if torture, cruelty, or any barbarous ufage, after a caption, be done to the perfon taken in the prize, the fame Chall difcharge fuch prize, although the was lawful; and the captains thall lofe their commiffions, alfo both they and the offenders be fubject to punifbment. This agreement between the Englifh and Dutch, is fit to be a ftandard to all nations whatfoever; and by the treaty of Utrecht, there is an article with France to the fame purpofe.
Ships carrying powder, fhot, and other warlike inftruments and provifions of armature for fea or land, bound for an ene$m y$ from a neuter nation, or a fate in amity with both the warring ftates, thall be taken as prize, and fo may money, victuals, \&c. But this muft be in a time of neceffity, when the war is fo bad, that a prince cannot poffibly defend himfelf or damage the enemy, without intercepting of fuch things. And, according to fome treaties, thofe goods which may be ufed out of war as in war, (except flaps) thall not be called prohibited, nor liabie to condemnation, unlefs carried to places befieged : and goods made ufe of for pleafure and luxury only, are free, and not reckoned among fuch as are prizable in neutral hips. Molloy. Jur. Marit. 29.
If a part of the cargoe of a fhip, taken by a privateer, be prohibited goods, and the other part not prohibited; but fuch as, according to the necefity of the war, fhall be fo deemed, that may draw on a confequential condemnation of the thip as well as lading.
In cale part of the lading is prohibited, and the other part merely for pleafure, the goods prohibited only thall be adjudged prize, and the Chip, and the reft of the cargo be difcharged; which may proceed in the voyage, on delivering up the other goods, without being brought into port: but if a fhip be wholly laden with contraband goods, both the thip and goods may be made prize. Ibid. 30 .
If any fuch thips thall be attacked, in order to be examined, on their refufing to fubmit they may be affaulted; and if the perfons on board do not furrender themfelves, the fhips may be entered by force, and the perfons refifting be dain. But where a commander of a privateer wilfully commits any fpoils on the fhips or friends of neuters, or on the thips of their fellow fubjects, according as the circumftances of the crime are more or lefs heinous, be is liable to punifhment by death or otherwife, and the fhip to be forfeited. Trin. 3 Jac. in $B . R$.
The owners of privateers are not to convert any part of their captures to their own ufe, until they are condemned as prize: and whether a thip be prize or nqt fhall be tried in the ad miralty, and no prohibition fhall be yranted : as was refolved, where in time of war between us and Denmark, a privateer belonging to Scotland took a Danifh Mip, and the was condemned by the admiralty of Scotland, and fold; whereupon a perfon fuggefted in the admiralty of England, that the was not a Danifh veffel, but a lhip of London, which belonged to an Englifh merchant, and being to difpute the property, it was infifted, could not be tried there: the court held that the
defendant
defendant had no property but by the fale, and the only queftion was, prize or no prize ; therefore they would fay nothirg, nor award a prohibition. 2 Keb. Rep. i58, 176. In an action of trover for a hhip, tackle and furniture; whereof a Dutchman born, but a denizen of England, was the owner; it appeared, that in the war between France and Holland the was takèn as a Dutch prize, and condemned in the court of admiralty in France, and there fold to the plaintiff : after which, the defendant, as fervant to the owner, took her from the plantiff to whom the was rold : it was here adjudged, that the fentence of the admiralty of France thould not be examined in this action, and the plantiff had judgment.

## Raym. 473.

Our laws take not much notice of privateers; but the diligence of enemies hath, times paft, obliged us to be allo diligent in this way, and therefore fome aets of parliament have been made for the encouragement of privateers, and ordering of prizes as patticulatly the ftatute $4 \& 5 \mathrm{~W} . \& \mathrm{M}_{\text {. cap. }}$. 25. which enadted, that all veffels with their ladings, and all goods and merchandizes that thall be taken and feized as prize, hall be brought into fome ports of this kingdom ; and, before breaking of bulk, put into the poffeffion of the commulioners of prizes, or their agents, who, with two or more perfons, as the officers and mariners of the refpective fhips Thall intruat, and fuch as fhall be appointed by the commiffioners of the cuftoms, are to preferve the fame, 'till they thall be adjudged prize, except where it fhall appear to the judge of the admiralty, that the goods are perifhable; in which cafe bail hall be taken for them, yet fo as to be fubject to fale and diftribution, as provided by this act.
After fuch goods and merchandize fo taken, fhall be adjudged prize, they thall, as foon as conveniendly it may be done, be fold by the commifioners for prizes, \&c. in the prefence of perfons entrufted by the commiffioners of the cuftoms, and the owners, officers, and mariners of the fhips of war, publickly by inch of candle, notice being given fourteen days before, of the quantity and quality of the things to be fold, and of the time and place of fale; and the proceed of fuch fale, after the cuftom duties are paid and deducted, in cafe fuch prize were taken by a private man of war, thall be divided into five parts; four parts whereof to be anfwered to the perfons interefted in the privateer, and the fifth to their Mafefties; and the Ghip, with it's furniture, is to be cajoyed by the perfons interefted in the privateer.
And if the prize be taken by any of the king's hips, the nett proceed thall be divided into three parts; one third to be anfwered to the commander, officers, and mariners, taking the fame, according to the cuftom of the fea for tharing prizes, \&xc. (a third of which is to be diftributed among the fhip's crew ) one third part to be paid to the treafurer of the navy, for the relief of fick and wounded mariners, and the widows, children, and impotent parents, of perfons llain at fea, in their Majefties fervice, and the other third part to the ufe of their Majefties: and in cafe a prize be taken by a merchant's dhip, enployed in the fervice of the crown, the proceed thereof chall be divided in like manner, as fhips taken by men of was.
If any perfons, who thall take fuch prize or prizes', thall embezzle or conceal any parts of the goods or merchandize, or put the fame on thore, in any other place than their MaJefties warehoufes, they fhall forfeit their fhare of fuch goods, upon proof made of it by one or more witnelles upon oath before the commiffioners of the cuftoms in the port of London, if the offence be committed within the faid port; and before the chief magiftrate of the place, in the prefence of the chief officer of the port, in any other ports; one moiety whereof to be to the ufe of the informer, and the other to their Majefties; and feamen, and others concerned in prizes, thall be permitted to fee and perufe the accounts of any prize. Where any fhips or goods fhall be taken by any privateer, by collufion, on proof made thereof in the court of Exchequer, or court of admiralty, they thall be adjudged lawful prize, and one moiety fhall be to their Majefties, and the other to him that fhall difcover the fame; and the bond given by the captain of fuch privateer is declared to be forfeited; and if fuch hips or goods fhall be taken by collufion, by any man of war, the commander thall forfeit 1000 I . alfo his command or employment, and be incapable of any office under their Majefties during feven years.
In all cafes where fuch prize fhall not be taken by any private men of war, one-tenth part, after deduction of their Majefties cuftoms, and before any divifion is made of the proceed thereof, thall be paid to the treafures of the navy, and by him kept apart, to be difpofed of by warrant from the commiffloners of the admiraly, or lord high admiral, for medals, and other rewards for officers and feamen, who fhall do any extraordinary fervice. And if any man of war, or privateer, Thall take or deftroy any French man of war, or privateer, they thall receive for every piece of ordnance, in any fhip fo taken or deftroyed, rol. reward, to be paid by the commiffoners for the prizes, out of their Majefties thare' of prizes. And if the commiffioners do not pay the fame, or give a bill for it, payable out of the firft monies that fhall come to their hands, within three days after the fame ought to be paid,
and demand thereof made, the faid commimioners thall be incapable to hold any office in their Majefties fervice for the future. And, by another claufe in this act, if the commiffion ers for prizes, or of the cuftoms, fhall detain the fhares belonging to perfons interefted in privateers; two days after they ought to be paid, \&c. free from all deductions; except for warehoufe-room, and 2 . per cent. for all other charges; they thall forfcit double the fum fo detained.
When any veffel thall be taken as prize by a privateer, having no goods on board of the growth and manufacture of France, the perfons interefted in fuch privateer flall have the whole n their own ufe, after condemnation and payment of cutoms, and other duties, without deduction for tenths, or any other parts to their Majenties, or the lord high admiral: If any thip, whereupon wool is laden to be tranfported, contrary to law, be taken by any privateer; on proof thereof in the Exchequer, the perfons concerned in the privateer fhall have a moiety of the thip and goods, and their Majefties the other moiety. But where any veffel thall be taken within any of their Majefties ports, rivers, or havens, by any privateer, fuch prize fhall belong to their Majefties, as a perquifite of the admiralty of England, and the captors to have only fith part as their Majefties fhall think fit to allow, by way of encouragemerit.
If any thip or veffel taken as prize, or any goods therein, Thall appear to belong to any of their Majefties fubjects, continuing under their protection and obedience, which were before taken by their Majefties enemies, and now retaken, fuch veffels and goods, and every part thereof thall bè retored, by decree of the court of admiralty, to the former owners, they paying in lieu of falvage, if retaken by a man of War, an eighith part of the value, which fhall be anfwered to the captains, officers, and feamen in the raid man of war, to be divided as in this act is directed, touching the fhare of prizes belonging to them, where fuch prizes are taken by any
 or other fhip, after having been in poffeffion of the enemy twenty-four hours, an eighth part of the value fhall be paid; if above twenty-four hours, and under forty-eight, a fifth part ; if above forty-eight hours, and under ninety-fix, a third part ; and, if above ninety-fix hours, a moiety ; all which payment to be made without any deduction. And if fuch retaken thip appears to have been fet forth by the enemy as a man of war, the former proprietors Ghall pay the full moiety of the value.
The lord high admiral, or commifioners of the admiralty, Thall exprefs all things by this aft directed to be obferved concerning prizes, \&c. in the inftructions by them to be given to captains and commanders of their Majefties Chips of war, and to commanders of privateers.

An order of council to releafe fhips, and exempt them from moleftation by men of war and privateers.

## At the court at Windfor, Auguft 13, 1705.

Prefent the Queen's moft excellent Majefty in council.
Her Majefty is gracioully pleafed this day to order, that all hips belonging to the fubjects of the States-General of the United Provinces, which have been taken by any of her Majefty's thips of war, or privateers, or which are now under arreft in any of her Majefy's ports, together with their loadings, be forthwith releafed ; and that, for the future, no fhips having paffes from the faid States-General to trade with France, be taken or molefted in their voyage, by any of her Majefty's faid Chips of war, or privateers, her Majefty having already opened the trade with the dominions of Spain, for the advantage of her own fubjects. And her Majefty is pleafed futher to declare and order, that the inftruction be now given for the future to the commanders of her Majefty's thips of war and privateers, not to bring up or moleft either the fhips of her own fubjects, or thofe of the fubjects of the States-General, furnifhed with proper paffes from her Majefty or the faid States refpectively, fo as they do not carry any goods or merchandize which are contraband. And all commanders of her Majefty's fhips of war, as well as privateers or merchanthips, having letters of marque, are to conform themfelves hereunto, notwithftanding any commiffions or inftructions beretofore given to the contrary. And for their more particular direction for the future, his royal bighnefs the lord high admiral is forthwith to order fuch inftructions to be prepared, as may be proper for the commanders of thips of war and privateers in this behalf, to be delivered to them as foon as may be.

Christopher Musgrave.
By the fatute 6 Ann. cap. 37. For encouragement of the trade to America, all prize-offices are fupprefied and taken away, and the flag, and other officers and feamen of every thip of war, fhall have the whole intereft in lhips and goods they thall take there (being firft adjudged prize in any of the courts of admiralty) fubject to the duties to her Majefty for fuch goods, and to be divided as her Majefty and fucceffors fhall direct.

## P R I

## P R I

The judge of the admiralty fhall, in five days after requeft, finih the preparatory examinations, in order to enquire of prizes, and the ufual monition fhall, on requeft, be executed in three days; and, in cafe no claim bemade and attefted on oath, giving twenty days notice after execution of fuch monition, \&c. then the judge of the admiralty, upon producing the faid examination, or copies thereof, and alfo all papers and writings taken in or with the capture, upon oath (or oath that no fuch papers were found) Shall immediately proceed to fentence, either to acquit or condemn the fame. If claim thall be made, and fecurity given by the claimant, to pay double cofts to the captors, in cafe the fhip or goods be adjudged prize, and there fhall appear no occation to examine witneffes, other than fuch as are near the court, then the judge Chall caufe fuch witneffes to be examined, and, in ten days after fuch claim and fecurity given, proceed to fentence. But if it appears doubtful whether it be lawful prize, and it is neceffary to have an examination of witneffes remote, and if it be defired, the faid judge fhall caufe the fame to be forthwith appraifed, by perfons named on the captor's part, and hall, after the appraifement, and in fourteen days after claim, take fecurity for the claimants to pay the captors the value of the appraifement, if the fame be adjudged lawful prize; and, after fuch fecurity taken, the judge thall order the releafing or delivering the fame to the claimants. And in cale any claimant refufe to give the faid fecurity, the faid judge is to require fecurity from the captors, to be approved by the claimant, to pay the value of the appraifement, in cafe fuch capture fhall not be adjudged prize, and thereupon the faid judge fhall make an order to releafe and deliver the fame to the captors, or their agents.
There hall not be paid to the judge and officers of the court of admiralty, for condemning of captures as prize, above 101. if the prize be above rootons, nor above 151. if of greater burthen. And if any judge, or officer, Chall delay proceeding relating to the condemning, difcharging, releafing, or delivering of prizes, as aforefaid, within the time limited, or as foon as the fame ought to be done by this act, he thall forfeit 500 l . one moiety to the queen, and the other to the informer.
The parties may appeal to her Majefty and council, fo as it be made in fourteen days after fentence, and fecurity be given to profecute the appeal, anfwer the condemnation, and pay treble cofts, in cafe the fentence be affirmed; and fo as execution be not fufpended by fuch appeal.
By ftatute 9 Ann. cap. 27. all prize goods and merchandizes taken by fhips of war, and imported into Great-Britain, \&c. fhall be liable to the payment of the faid cuftoms and duties as thole goods would have been had they not been prize.
PRIZE'S.

## The Laws of England relating to Prizes.

The officers and feamen of the king's flips, and of other Britifh thips having letters of marque, are intitled to the fole intereft and property of all fhips and goods by them taken, and adjudged lawful prizes by the court of admiralty. Stat. 13 Geo. II. cap. 4. §. 1 and 2.
The prize is to be divided among the officers and feamen of the king's fhips, as he fhall appoint by proclamation. Among privateers, the divifion is according to the agreement between the owners. Ibid
The court of admiralty are to finifh the examination of the perfons to be examined, to prove the lawfulnefs of the prize, in five days after requeft for that purpofe made: the monition is to be executed in three days. And in cafe no claim of the capture be duly entered, giving twenty days notice after the execution of the monition; or if there be a claim, after the claimant does not give fufficient fecurity to pay double cofts to the captors, if the prize be adjudged lawful, then the court are to proceed to fentence in ten days. Ibid. §. 3 .
In cafe of doubt, or of writings being remote, the court may releafe the prize, on the claimant's giving good fecurity to the captor for the payment of the full appraifed value, in cafe the prize be adjudged lawful. Ib. §. 3. fin.
Judges and officers, on failure of their duty in refpect to the condemnation of prizes, forfeit 500 l . with full coft of fuit, one moiety to the king, and the other to the informer. Ib. §. 6.
The judges and officers of the court of admiralty in the king's plantations or dominions abroad, thall not receive above 101 in cafe the prize be under an hundred tons burthen; not above 15 l. if it be of greater burthen. Ib. §. 7 .
Commiffioners of appeals, in caules of prizes, are to be appointed under the great feal, and appeals may be made to them within fourteen days after fentence. Ib. §. 8 ,
Agents for prizes are to be chofen by the captors. Ib. §. ro. The treafurer of the navy is to pay to the officers and feamen on board thips of war, or privateers, in an action where any thip of war, or privateer, Chall have been taken from the enemy or deftroyed, 5 l. for every man on board fuch prize or thip deftroyed in the beginaing of the engagement. Ib. §. 15. The captures of flota hips, or galleons, or regifter-fhips,
bound from Buenos-Ayres, or Honduras, can be tried only in the high court of admiralty. Ib. §. 17 .
This ftatute enacts feveral penalties and forfeitures for taking prizes by collufion. Privateers forfeit the prize, half to the king, and half to the informer; and the commander of a man of war forfeits 10001 . to be divided between the king and the informer. Ib. §. 19. See Privateers.
Prize-Ships. The duty of poundage is alfo payable (after the rate of 5 per cent. of the value upon oath) for fhips taken as prize, and regularly condemened in the court of admiralty: but it is the practice not to charge them with any other duty whatfoever.
No goods to be imported into, or exported from thence, in any other but fhips of the built of Great-Britain, Ireland, or the faid plantations, wholly owned by the peóple thereof, and whereof the mafter, and at leaft three-fourths of the mariners, are of the faid places (except fhips taken as Prizes, and legally condemned, navigated by the mafter and three fourths of the mariners Britilh, or of the faid plantations, and owned by Britifh) upon forfeiture of the Thip and goods, one-third to his Majefty, one-third to the governor, one-third to the feizer and informer.
Prize-goods not to be exempted from duties, \&c. but the goods may be unladen and brought on thore, in the prefence of the officers of the cuftoms, and fecured in proper warehoufes, under the feparate locks of the collector, comptroller, and agent of the captors. 'till they are appraifed and fold; and after they are fold, before delivery to the buyer they are to pay the cuftoms and excife. 6 Ann. cap. 13. §. g.
Prize-goods of the growth and product of foreign plantations, condemned in, and imported from, the Britith plantations in America, are, upon proper certificates and oaths, to pay the fame duties as if the produce of the faid Britifh plantations. 10 Ann. cap. 22. §. 2. and 15 and 16 Geo. II. cap. 31 . §. 6.
Foreign-built thips, or fuch not built in any of hls Majefty's dominions of Afia, Africa, or America, are not to enjoy the privilege of Thips belonging to Great-Britain or Ireland, although owned or manned by Britilh (except fuch h ips as are taken at fea by letters of marque or reprifal, [fee Marque Letters of Marque, and Reprisal] and condemned as lawful prize in the court of almiralty) but are to be deemed aliens fhips, and to be liable to aliens duties. See the artucle Privateer.

## The Laws of France relating to Prizes.

Art. I. No perfon fhall fit out a hip for war without a commiffion from the admiralty.
II. Such as obtain commiffions for equipping thips for war, fhall be obliged to caufe it to be recorded at the admiraltyoffice where the fhip is fitted out, and to give fecurity for the fum of 15,000 livres, which fhall be received by the lieutenant, in prefence of our attorney.
III. We forbid our fubjects to take commiffions from any foreign kings, princes, fates, to arm fhips for war, and fail under their flags, except it be by our order, under pain of being treated as pirates.
IV. All veffels belonging to our enemies, or commanded by pirates, buccaneers, and others, failing without the commiffion of any fovereign prince or ftate, fhall be good prize.
V. All veffels fighting under another flag than that of the nation whofe commifion they carry, or having commiffion from two different princes or ftates, fhall likewife be good prize; and, if they be armed for war, the captains and officers thall be punimed as pirates.
VI. All veffels, and their lading, in which there are no char-ter-parties, bills of lading, nor invoices, fhall be likewife good-prize: and we forbid our captains, officers, and feamen of fhips taking them, to divert them, under' pain of corporal punifhment.
VII. All hhips having effects on board belonging to our enemies, and the goods of our fubjects or allies on board of enemies fhips, fhall likewife be good prize.
VIII. If any of our fubjects thips be retaken from our enemies, after having been four-and-twenty hours in their hands, they thall be good prize; and, if it is before four-and-twenty hours, they fhall be reftored to the owners, with all that is in them, and one-third fhall be given to the fhip that retakes them.
IX. If the fhips, without being retaken, be abandoned by the enemy, or if by tempeft, or any other accident, they return into the poffeffion of our fubjects, before they have been carried into any enemy's ports, they fhall be reftored to the owner, who fhall reclaim them within the year and day, though they have been more than four-and-twenty bours in the enemy's poffeffion.
X. The fhips and effects of our fubjects and allies, retaken from pirates, and reclaimed within a year and a day afier the declaration made to the admiralty, flall be reftored to the owners, they paying one-third of the value for the charges of the retaking.
XI. The
XI. The arms, powder, ball, and other munitions of war, even the borfe and furniture, tranfported for the fervice of our enemies, fhall be confifcated, in whatever velfels they be found, and to whofoever they belong, whether they be our Subjects or our allies.
XIII. All veffels refufing to frike and bring to, upon the XII. All veffels refufing to ftrike and bring to, apon for war, may be compelled thereto by artillery, or otherwife; and, in cafe they refift and fight, they thall be good prize.
XIII. We forbid all captains of veffels armed for war to deain thofe of our fubjects or allies who have brought to, and hewed their bills of lading and charter-parties, or to take, or fuffer any thing to be taken from them, under pain of death.
XIV. No veffel taken by foreigners may remain above fourand twenty hours in our harbours, except they be detained there by tempeft, or be taken from our enemies.
XV. If in the prizes brought into our ports by foreigners, here be found goods belonging to our fubjects or allies, thofe belonging to the former fhall be reftored, and thofe of the latter fhall not be put in warehoufes, nor bought by any perfon, under any pretence whatfoever.
XVI. As foon as the captains of armed veffels fhall render themfelves mafters of any dhips, they fhall feize their licences, paffports, fea-letters, charter-parties, bills of lading, and all ather papers concerning their lading and voyage; together with the keys of their chefts, trunks, and chambers, and thall caufe to be chut the hatches, and ocher places where there is any goods.
XVII. We enjoin all captains that take prizes, to bring or fend them, with the prifoners, to the ports where they are armed, under pain of lofing their rights, 'and of an arbitrary fine, except they be obliged, by tempeft or enemies, to put into fome other port, in which cafe, they fhall forthwith acquaint the concerned.
XVIII. We forbid, under pain of death, all captains, foldiers, and feamen, to fink the fhips they take, and put athore the prifoners upon remote coafts or iflands, in order to conceal he prize.
XIX. And where the takers are not in a condition to take the charge of the fhip taken, and of the prifoners, and only take out the goods, or agree for a ranfom, they fhall be obliged to reize the papers, and bring with thern at leatt the two principal officers of the prize, under pain of being deprived of what may belong to them therein, and of corporal punifhment, \&c. XX. We forbid them to open any chefts, bales, facks, pipes, barrels, cafks, or trunks, or to tranfport or fell any goods of the prize; and we likewife forbid all perfons to buy them, before the prize be condemned, or 'till it be ordained by authority, under pain of reftitution of four-fold, and corporal punithment.
XXI. As foon as the prize is brought into any road or port of our kingdom, the captain that has taken her, if he be there, and, in his abfence, the perfon that is intrufted with ber, thall be obliged to make his declaration to the officers of the admiralty, to furrender into their hands the papers and the prifoners, and declare to them the day and hour, place and degree of latitude, in which the veflel was taken,. whether the captain refufed to thew his commiffion or his paffport; whether he attacked, or colly defended himfelf; what flag he bore; and all the other circumftances of the taking and voyage.
XXII. After the delivery of the declaration, the officers of the admiralty fhall immediately go aboard of the prize, whether fhe be in the road or in the port, and thall draw up a verbal procefs of the quantity and quality of the goods, and of the condition in which they find the cabbins, trunks, hatches, and hold; which they fhall afterwards caufe to be fhut, and fealed with the feal of the admiralty; and they fhall there eftablifh a watch, to take care of what they have fealed, and prevent the embezzlement of the effects.
XXIII. The officers of the admiralty fhall make their verbal procefs in prefence of the captain, or mafter of the prize, and, in his abfence, before the two principal officers and feamen betonging to him, together with the captain or other principal officers of the fhip that took the prize; and likewife in prefence of the reclaimers, if any be.
XXIV. They fhall hear, concerning the matter of the prize, the mafter or commander thereof, and the principal men of his company, and likewife fome of the officers and feamen of the fhip that took her.
XXV. If the Mhip be brought in without prifoners, charterparty, or bill of lading, the officers, foldiers, and feamen of the flip that took her, fhall be examined feparately upon the circumtances of the prize, and how the thip came to be brought in without prifoners; and the fhip and goods thall difcover, if poffble, to what nation they did belong.
XXVI. If by the depofition (or oath) of the company, and the featch and view of the fhip and goods it cannot be difcovered of whom they have been taken, an inventory fhall be taken of the whole, and it hhall be appraifed, and putinto fuffè cuflody, to be reftored to whomfoever it may belong, if reclaimed within a year and a day; and if otherwife, it thall -V OL.. II.
be divided as' a wreck between us, the admiral, and the * armateur.

* Armateur is the defignation given in France to merchants or others concerned as owners, in the arming of privateers $\delta \mathrm{c}$.
XXVII. If it be neceflary before the condemnation of a prize to take the goods out of a fhip, to prevent ther being damnified, an inventory thall be made in prefence of our attorney, and of the parties concerned, who fhall fign it if they can write; and afterwards the goods fhall be delivered into the hands of fome fufficient perfon, or in warehoufes locked with three different keys; of which one thall be given to the armateur, another to the receiver of the admiral, and the third to the reclaimer, if any be; and if none, to our attorney.
XXVIII. Goods which cannot be kept, fhall be fold at the defire of the parties concerned, and adjudged to the fatreft offerer, in the prefence of our attorney, at the fhutting up of the court, after three delays of the fale, from three days to three days; the port fales, or publication being duly mâde beforehand, and the placards affixed in the ufual places.
XXIX. The price of the fales thall be configned in the hands of a fufficient merchant, to be delivered after the adjudication of the prize, to whom it thall belong.
XXX. We enjoin the officers of the admiralty to proceed incellantly to the execution of decrees and fentences given concerning prizes; and to caufe the veffels, goods, and effects, for which a replevy thall be ordained, to be delivered immediately, and without delay, under pain of interdiction of a fine of five hundred livres, and of all cofts, charges; and damages.
XXXI. Before the repartition, the charges of the unlading, and of the keeping of the fhip and goods, frall be deduced, according to the account which thall be ftated by the lieutenant of the admiralty, in the prefence of our attorney and the parties concerned.
XXXII. After the aforefaid deduction, the tenth of the price fhall be delivered to the admiral, and the charges of the court Gall be taken out of the remainder; which fhall be afterwards divided amongft the parties concerned, according to the conditions of their partnerlhip.
XXXIII. If there be no contract of partnerlhip; twothirds Chall belong to them that have furnilhed the veffel, with munitions, arms, and provifions; and the other to the officers, feamen, and * foldiers.
* By foldiers, in this and feveral other articles of the French marine, is only meant fuch land-men as enter themfelves on board of privateers, only for fighting; and thofe go for the moft part, no purchafe no pay; for they have no regular and difciplined troops on board their privateers in France, no inore than elfewhere.
XXXIV. We forbid the officers of the admiralty to become directly or indirectly the parties to whom veffels, goods, or effects, belonging to prizes are adjudged, under pain of confifcation, a fine of fifteen hundfed livres, and interdiction of their offices.

## Prizes, under what regulations in Spatn.

Of the manner of difpofing of prizes taken by the armada's or flota's trading to the Weft-Indies.

1. The inftructions given to Peter Arias Davila in the year 1513, when he was fent governor and captain-general of the province of the FIRM LAND, which was then that of DARIEN, and the country about, fpoke to the matter thus: That of whatfoever he fhould take with the fleet he went over in, of which the fhips and provifions were his Majefty's befides the fifth, two parts fhould come to the king, the one for his fhip and the other for his provifions; but if there went with the fleet any fhip belonging to private perfons, and upon their own charge, and they fhould take any prize, his Majefty fhould have only his fifth, and the reft be divided among all the fleet, becaufe it was to be fuppofed the prize had been taken by the affirtance of it, and the diftribution ought to be according to every man's pay and allowance.
2. The emperor Charles V. afterwards declared, That though when any prince was taken in war, his ranfom and moveables were his Majefty's undoubted right, yet in confideration of the great fatigues bis fubjects endured in the conqueft of the Indies, he required only the fixth part of the ranfom of any cazique taken, or the treafures belonging to him, and all the reft, after deducting the king's fifth, to belong to the conquerors; but if the cazique were flain in the battle, his Majefty fhould bave one half of his treafure, and the other half, after deducting the fifth, be equally diftributed. 3. In 1558 , the admiral Peter de Roelas baving taken a French lhip, and recovered a Spaniard's taken by that privateer, it was ordered, that the admiral Gould have the king's fifth of what belonged to the Frenchman, and the reft of it to be divided for that time between the faid admiral and his
men;

## PRO

men ; and as for the fhip retaken, the one hall thould be for the admiral and men, and the other reftored to the owners. In $157^{\circ}$, fomo doubts arifing between two prizes taken, the king decided the controverfy thus, That the admiral fhould have the fifth belonging to his Majefty, and all the reft to be divided betwixt the officers, foldiers, and failors, belonging to the fleet : but if any fhips conhing from the Indies were retaken from pirates, they fhould be reftored entise to the owners.
4. If there arife any controverly about prizes taken, the court of the India-Houfe is to decide it $;$ but if it be above 600,000 marvadees value; there lies an appèal from it to the committee of war for the Indies, as was practifed in the year 1649, in the cale of an Englifh bip, which, though taken in time of peace, was condemned as lawful prize, becaufe it had Welt-India commodities aboard. D. Francis de Sotomajor coming from Potofr by the way of Buenos-Ayres, was taken by the Dutch, and carried to Baia de Todos or Santos in Brazil, which place being recovered by D. Erederic de Toledo, D. Francis pretended, that as much of his plate and goods as could be found ought to be reftored him; becaufe the war pirates make beirg unjurt, they could not despfive him of the jult dominion over what was his own, nuthougb it had beem above 24 hours in their hands, and he had judgment given for him. In the year 1584 , orders were given to all the commanders in the Indies, that when prites were taken from pizates, if there were any goods found belonging to his Majeffy's fubjects, they frould be delivered as they were found, without diminifing, to the owners.
RROJECTOR, one who contrives, fchemes, or forms any public defign.

Remarks.
Man is the worf of all God's creatures to thift for himfelf; no other ammal is ever farved to death; nature without, has provided them both food and cloathis; and nature within, has placed an inftinet that never fails to direet them to proper means for a fupply : but man cruff either work or farive, flave or die; he has, indeed, reafon given him to direct him, and few who follow the dictates of that reafon come to fuch unhappy exigencies; but when by the errors of a man's youth he has reduced himfelf to fuch a degree of diftrefs, as to be abfolufely without three things, money, friends, and health, he dies in an hofpital.
Ten thouland ways there are to bring a man to this, and but very few to bring him out again. Death is the univerfal deliverer, and therefore fome who want courage to bear what they fee before them, hang themfelves for fear ; for certainly felf-deftruction is the effect of cowardice in the higheft extreme.
Others break the bounds of laws to latisfy that general law of näture, and turn open thieves, houfe-breakers, highwaymen, clippers, coiners, \&c. 'till they run the length of the gallows, and get a deliverance the neareft way at St Tyburn.
Others, being mafters of more cunning than their neighbours, turn their thoughts to private methods of trick and cheat, a modern way of thieving, every jot as criminal, and in fome degree worfe than the other, by which honeft men are gulled with fair pretences to part from their money, and then left to take their courfe with the author, who fculks behind the curtain of a protection, or in the Mint, or Friars, and bids defiance as well to honefty as the law.
Others, yet urged by the fame neceffity, turn their thoughts to honeft invention, founded upon the platform of ingenuity and integrity. Thefe two laft forts are thofe we call Projectors; and as there were always more geefe than fwans, the number of the latter are very inconfiderable, in comparifon of the former ; and, as the greater number donominates the lefs, the juft contempt we have of the former fot, befpatters the other, who, like cuckolds, bear the reproach of other people's crimes.
A mere projector then is a contemptible thing, driven by his own defperable fortune to fuch a fraight, that he muft be delivered by a miracle or ftarve; and when he has beat his brains for fome fuch miracle in vain, he finds no remedy but to paint up fome bauble or other, as players make puppets talk big, to fhow like a Atrange thing, and then cry it up for a new invention, gets a patent for it, divides it into thares, and they muft be fold; ways and means are not wanting to fwell the new whim to a vait magnitude ; thoufands, and hundreds of thoufands are the leaft of his difcourfe, and fometimes millons; 'till the ambition of fome honeft coxcomb is wheedled to part with his money for it, and then

## - - $\quad$ Nafcitur ridiculus mus.

The adventurer is left to carry on the project, and the projector laughs at him. The diver ihall walk at the bottom of the Thames; the falt-petre-maker fhall erect a dunghill into a palace; the engineers build models and windmills to draw water, 'till funds are raifed to carry it on, by men who have more money than brains, and then good night Mr Patent and Invention ; the projector has done his bufinefs, and is gonte. But the upright and honourable projector is he, who having

## PRO

by fair and plain principles of fenfe, honefty, and ittgenuity, brought any contrivance to a fuitable perfection, makes out what he pretends to, picks no body's pocket, carries his projeet in execution, and contents bimfelf with the real produce of his ufeful invention
Neceffity has fo violently agitated the wits of men within half a century paft, that it feems not at all improper, by way of diftinction, to call it the projecting age. For though in times of war and public confufions, the like humour of invention has feemod to ftir, yet, without being particular to the prefent, it is, I think, no injury to fay, the palt ages have never come up to the degree of projeeting and inventing, as it refers to matters of negoce and methods of civil polity, which we fee this age arrived to.
For the improvement of tha deftructive art of war, there bas been project after projeet; efpecially in conducting armies, and in offenfive engines; witnefs the new ways of mines, fougades, entrenchments, attacks, elodgments, and a long et cetera of new inventions, which want narnes, practifed in fieges and encampments: witriefs the new forts of bombs and unheard-of mortarsy, of: feven to ten and twenty tons weight, with which our fleets ftanding two or thres miles off at fea, caln, in fome degree, imitate the fupremic Being himrelf, and rain fire and brimftone out of heaven, as it were, upon towns built on the firm land : witnels alfo our new invented child of hell, the mashine which carries the thander, lightning, and earthquakes is in's bowels, and tears up the moft impregnable fortifications.
But if we fhould fearch for a caufe, from whence it comes to pafs that this age fwarms with fuct a multitude of projoctors more than ufual, who, befides the innumerable conceptions which die in the bringing forth, and (like abortions of the brain) only some into the air and dikelve, do reatly every day produce new contrivances, engines, and projects to get money never before thought of : if Ifay, we would examine whence this comes to päfs, it muft be thus:
The loffes and depredations which wars occafion will not only fall upon private traders, but bring incumbrances on the nation in general ; and thefe have prompted men by neceflity, to rack their wits for new contrivances, new inventions, new trades, ftocks, projects, and any thing, to retrieve the defperate credit of their private fortunes, and fupport the credit of the nation. That this is probable to have been the caufe, will appear further; thus, France has, without queftion, felt it's haare of loffes by war as well as Great-Britain; but the poverty there falling chiefly on the poorer fort of people, they have not been fo fruitful in inventions and practices of this nature, 'till the Miffifippi affair [fee Mussissippi], their genius being quite of another ftrain. As for the gentry and more capable fort, the firf thing a Frenchman flies to in his diftrefs is the army; and he feldom comes back from thence to get an eftate by painful induftry, but either has his brains knocked out, or makes his fortune there.
If induftry be in any bufinefs rewarded with fuccefs, it is in the merchandizing part of the world, who indeed may more truly be said to life by their wits, than any people whatsoever. All foreign degoce, though to fome it is a plain road by the help of cuftom, yet it is in it's beginning ale project, contrivance, and invention. Every new voyage the merchant fcheman, is a project; and hips are fent from port to port, as ma'kets and merchandize differ, by the help of ftrange and univerfal intelligence; wherein fome are fo exquifite, fo fwift, and fo exact, that a merchant fitting at home in his countinghoufe, at once converfes with all parts of the known wotld. This and travel, make a true bred merchant, the most intelligent man in the world, and confequently the moft capable, when urged by necefity, to contrive new ways to live: and from hence we conceive, may be very properly derived the variety of projects wherewith we have abounded.
And from this fort of men, it is eafy to trace the origin of banks, stocks, stock-jobbing, assurancbs, friendiy societies, lotteries, and the like. To which may be added likewife, the long annual enQUIRY of the houfe of commons for ways and means, which has been a particular movement to fet all the heads of the nation at work. And I appeal, with fubmiffion, to the gentlemen of that honourable houfe, if the greateft part of the beft ways and means to raife public money, out of the common road of land-taxes, polls, and the like, have not beeri" handed to them from the merchant.
Projects of this nature have been doubtlefs in general of public advantage, as they have tended to the improvement of trade, and employment of the poor, and the circubation and increase of the public stock OF THE KINGDOM; but this is fuppofed of fuch as are built on the honeft bafis of ingenuity and improvement ; in which though I'll allow the author to aim primarily at his OWN advantage, yet with the circumftances of publick beWEFIT added.
Wherefore it is neceffary to diftinguifh among the projects of the prefent times, between the honeft and the difhoneft.

There

There are many fair pretences of fine difoveries, new inventions, engines, and I know not what, which having been advanced in notion, and talked up for great things to be performed, when fuch and fuch fums of money ftall be advanced, and fuch and fuch engines are made, that have raifed the fancies of credulous people to fuch a height, that merely on the fhadow of expectation, they have formed companies, chofe committees, appointed officers, fhares, and books, raifed great ftocks, and cried up an empty notion to fuch degree, that people have been betrayed to part with their money for thares in a New nothing: and when the inventors have carried on the jeft, 'cill they have fold their own intereft, they have left the cloud to vanifh of itfelf, and the poor purchafers to quarrel with one another, and go to law about fettements, transferrings, and fome bone or other thrown among them by the fubtety of the authors, to tay the blame of the mifcarriage upon thofe, who have been their bubbles. Thus the flares at firf begin to fall by degrees, and happy is he that fells in time, 'till like brafs money it will go at laft for nothing at all. So have I feen fhares in Joint stocks, patents, engines, and undertakinge, blown up by the air of great words, and the name of fome man of credit concerned, to 1001 . for a 500 th part or thare, fome more, and at laft dwindle away, 'till it has been flock-jobbed down to $12,10,9,81$. a fhare, and at laft there has been no buyer; that is, in thort, the fine new word for norking worth, and many families ruined by the purchafe. If we thould name linen manufactures, faltpetre-works, copper-mines, divingengines, and the like, for inftances, we thould do no wrong to truth, or to fome perfons that have been too vifibly guilty of forming fuch like deceitful projects.
We might go on upon this fubject to expofe the frauds AND tricks of stocx-jobbers, patentees, committres, with those mountebanks we very properly call stock brokers; but we have not gall enough for fuch a work: as a general rule of caution to thore who would not be tricked out of their eftates by fuch pretenders to enrich others, let thern obferve, that all fuch people who may be furpected of defign, have affuredly this in their propofals, to get a round sum to themfelves, before any one elfe can hope to Get any thing.
But this is no reafon why inventions upon honeft foundations and to fair purpofes, Thould not be encouraged; no, nor why the author of any fuch fair contrivances thould not reap the harveft of his own ingenuity: our acts of parliament for granting patents to first inventors for fourteen YEARS, is a fufficient acknowlegment of the due regard which oughe to be had to fuch as find out any thing which may be of public advantage, new difcoveries in trade, in arts and myfferies, of manufacturing goods, or improving of land, are, without queltion, of as great benefit, as any difcoveries made in the works of nature, by the feveral academies and royal focieties in the world.
There is, it is true, a great difference between new inventions and projedts, for the improvement of manufachures or lands, which tend to the immediate benefit of the public, and employing of the poor, and thofe framed by fubtle beads, with a fort of a deceptio vifus and legerdemain, to bring people to run needlefs or unufual hazards: and we give a due preference to the firft, and yet fuccefs has fo fanctified fome of thofe other forts of projects, that it would be a kind of blarphemy againft fortune to difallow them; witnefs Sir William Phipps's voyage to the wreck; it was a mere project, a lottery of a hundred thoufand to one odds; a hazard, which if it had failed, every body would have been afhamed to have owned themfelves concerned in: a voyage that would have been as much rediculed as Don Quixote's adventure upon the windmill. Blefs us ! that folks fhould go three thoufand miles to angle in the open fea for pieces of eight! why they would have made ballads of it, and the merchants would have faid of every unlikely adventure, it was like Phipps's wreck yoyage : but it had fuccefs, and who reflects upon the project ?
However, this fort of projects comes under no reflection as to their honefty, fave that there is a kind of honefty a man owes to himfelf and to his family, that prohibits him throwing away his eftate in improbable and impracticable adventures; but fill fome hit even of the moft unlikely, of which this was one of Sir William Phipps's, wha brought home a cargo of filver of near two hundred thoufand pounds fterling, in pieces of eight, fifhed up out of the open fea remote from any fhore, from an old Spanifh hip which had been funk above forty years.

## Remarks on our Article Projector.

## A thort hiftory of fome remarkable projects.

The invention of arts with engines and handicraft inftruments for.their improvement, requires a chronology as far back as the eldeft fon of Adam, and has to this day afforded fome new difcovery in every age.
The building of the ark by Noah, fo far as you will allow it a human work, was the firf project we read of; and no
queftion leemed fo rediculous to the graver heads of that wific; though wicked age, that poor Noah was fufficiently bantered for it; and had he not been fet on work by a very peculiar direction from heaven, the good old man would certainly bave been laughed out of it, as a moft fenfelefs and ridfculous project.
The building of Babel was a right project; for, indeed, the true definition of a project, according to modern acceptation, is a vait undertaking, too big to be managed, and therefore likely enough to come to nothing; and yet as great as they are, it is certainly true of them all, even as to the projectors propofal; that according to the old tale, if fo many eggs are hatched, there will be fo many chickens, \&ic: Thus it was moit certainly true, that if the people of the old world could have built a houfe up to heaven, they would never have been drowned again on earth, and they only had forgot to meafure the heighth; that is, as in otber projects; it only mifcarried, or elfe it would have fucceeded.
And yet when all is done, that very building, and the incredible heighth to which it was carried, is a demonftration of the vaft knowlege, of that infant part of the world, which had no advantage of the experiments or invention of any before themfelves.
A very diverting account might, perhaps; be given of this, but I Chall not attempt it. Some are apt to ray with Solomon, No new thing happens under the fun, but what is, or has been ; yet I made no queftion, but fome confiderable difcoveries have been made in their later ages, and inventions of human original produced, which the world was ever without before, either in whole or in part; and I refer only to two cardinal points, the ufe of the load-ftone at fea, and the ufe of gun-powder and guns; both which, as to the inventing part, I believe the world owes as abfolutely to thofe particular ages, as it does the working in brafs and iton to Tubal Cain, or the inventing of mufic to Jubal his brother.
As to engines and inftruments for handicraft men, this age, I dare fay, can thew fuch as never were fo much as thoughs of, much lefs-imitated before; for that is not a real invention, which has fomething before done like it, it is more properly an improvement. For handicraft inffruments, I know none owes more to true genuine contrivance, without borrowing from any former ufe, than a mechanic engine contrived in our time, called a knitting-frame, which being contrived with admirable fymmerry, works really with a very happy fuccefs, and may be obferved by the curious to have a more than ordinary compofition, for which I refer to the engine itfelf, to be feen in every focking-weaver's work-fhop. I fhall trace the original of the projecting humour that has reigned more particularly in England, and fome other parts of Europe, no farther back than the year 1680, dating it's birth as a monfter then, though it had indeed fomerhing of life in the time of the late civil war. We allow, no age has been altogether without fomething of this nature: and fome very happy projects are left to us as a tafte of their fuccefs, fuch are the water-houfes for fupplying of the city of London with water, and fince that, the New-River, both very confiderable undertakings, and perfect projects, adventured on the rifque of fuccefs.
In the reign of King Charles the Firft, infinite projects were fet on foot for raifing money without a parliament; oppreffing by monopolies and privy feals; but thefe are excluded our our fcheme, as irregularities: for thus the French are as fruitful in projects as we, and thefe are rather expedients or ftratagems than projects.
After the fire of London, the contrivance of an engine to quench fires, was a project the author was faid to get well by, and we have found to be very ufeful. But about the year 1680, the art and myftery of projecting began vifibly to creep into the world. Prince Rupert, uncle to king Charles II. gave great encouragement to that part of it which refpects engines, and mechanical motions; and bilhop Wilkins added as much of the theory to it, as writing a book could do: the prince has left us a metal called by his name, and the firft project upon that was cafting of guns of that metal, and boring them; done both by a peculiar method of his own, and which died with him, to the great lofs of the undertaker ; who, to that purpofe, had, with no fmall charge, erected a water-mill at Hackney-marth, known by the name of the Temple-mill, which mill very happily performed all parts of the work: and there were of thefe guns on board the Royal Charles, a firft rate lhip, being of a reddifh colour, different either from brafs or copper. There might be fome reafons of ftate, for laying that project afide. After this there was a floating machine fet on foot, to be wrought with horfes for the towing of great lhips, both againft wind and tide; and another for the raifing of ballaft, which, as unperforming engines, had the honour of being made, expoled, tried, and laid by, before the prince died.
If thus we introduce it into the world under the conduct of that prince, when he died, it was left a hopelefs brat, and bad hardly any band to own it, 'till the wreck voyage before noted, performed fo happily by Capt. Phipps, afterwards Sir William; whofe ftrange performance fet a great many heads at work, to contrive fomething for themfelves; he was im-
mediatlely
mediately followed by my lord Mordaunt, Sir John Narborough, and others from feveral parts, whofe fuccefs made them foon weary of the work.
The projeft of the penny-poft, fo well known, and ftill practifed, I cannot omit; nor the contriver, Mr Dockwra, who had the honour to have the injury done him in that affair repaired, in fome meafure,' by the public juftice of parliament. And the experiment proving it to be a noble and ufeful defign, the author malt be remembered, to his great reputation.
It was, no queftion, a great hardfhip for a man to be mafter of fo fine a thought, that had both the effential ends of a project in it, public good and private advantage; and that the public fhould reap the benefit, and the author be left out; the injuftice of which, no doub't, difcouraged many a good defign; but fince an alteration in public circumftances recovered the loft attribute of juftice, the like, we hope, is not to be feared in future. Mr Dockwra had the fatisfaction to fee the former injury difowried, and an honourable return made, even by them who did not the injury, in bare refpect to his ingenuity.
A while after this, feveral people, under the patronage of fome great perfons, had engaged in planting of foreign colonies; as William Pena, the lord Shaftbury, Dr Cox, and others, in Penfilvania, Carolina, Eaft and Weft Jerfey, and the like places; which we do not call projects; becaufe it was only profecuting what had been formerly begun: but here began the forming of public joint ftocks, which, together with the Ealt-India, African, and Hudfon's-Bay companies, before eftablifhed, begat a new trade, which we call by the new name of Stocs-Jobbing ; which was at firft only the fimple occafional transferring of intereft and fhares from one to another, as perfons alienated their eftates; but, by the induftry of the Stock: Brokers, who got the bufnels into their hands, it became a trade ; and one, perhaps, which has been managed with the greateft intrigue, artifice, and trick, that ever any thing which appeared with a face of honefly could be handled with; for; while the brokers held the box, they made the whole exclange the GAMESTERS, and raifed and lowered the prices of focks as they pleafed; and always had both buyers and fellers, who ftood ready, innocently to commit their money to the mercy of their mercenary tongues. This upfart of a trade having tafted the weetrefs of fuccefs; which generally attends a naval propofal, introduced the illegitimate wandering object. I fpeak of, as a proper engine to find work for the brokers. Thus ftock jobbing nurfed projecting, and projecting in return has very diligently pimped for it's fofter parent,' 'till both are arrived to be public grievances; and, indeed, are now almoft grown fcandalous to the nation.
Ever fince the fuperlative art of fund-projection bath been cherifhed in this kingdom, we have had project upon project, and bubble upon bubble, in order to RUN US INTOOEBT, AND MULTIPLY OUR TAXES THE EASTER; whereby the millions upon millions that we have gained by solid commerce and navigation, have been transferred to foreigners for the payment of interest of our national incumbrances, and otherwise squandered among usurers AND MONEY-MONGERS, who HAVEINDOLENTLY SUBsisted on their income from the Exchequer, initead of employing their capital IN TRADE, for the employment of the indigent, for the substantial riches of the state, and the permanent fupport of the public credit. To fuch a pitch of projecting have thefe meafures brought the nation, that in the year 1720, the whole kingdom became projectors and bubble-mongers, our commerce sustianed an universal temporary stagnation, and the public credit was sunk to anebbalmost past recovery. This has already once proved the fatal effect of fund-projects : and as the harpies of thofe times were for a time fucceffful, in this their moft fuperlative fcheme of iniquity, with intent to draw all the treasure of the nation into thofe few hands, who were in the secret; fo tribes of inferior projectors afterwards broached fcheme after feheme, in order to plunder the public of what little the South-Sea blood-fuckers had left them poffeffed of. See our articles Actions, and Bubbles, and South Sea Company.
After the bleffed æra of 1720 , and the dreadful wound which the nation had received from that deteflable South-Sea project, was ikinned over, we had another cardinal project offered to the nation, for the payment of the national debts, and the infollible fupport of the public Credit : this was the eftablihment of a Sinking Fund, in order gradually to link or diminifh the public bebts: and this was to be the SOVEREIGN SPECIFIC to cuie the nation of ail it's maladies; but what has been the end of this project? Why truly, inftead, of this sacred fund being inviolably applied to the gradual payment of our principal money-debt, it has been inade fubfervient to the increafe thereof, from 50 to 80 MIL lions! and from 80 to 140 millions! See the aaticles Interest of Mosey, Credit [Public Credit], Debts, [National Debts ], Funds.
And although it coft the atation feveral mallions of money in
the public accounts, to bring the Irredermabie public debts into a flate of Redemption, in order to amufe the public with a notion of the gradual payment thereof; yet have we not had project after project fince, to render our debts again Irredeemable? Are not thefe retragrade meafures a certain indication and proof, that our funds have hitherto been only tampered with by superficial have JECTS, which have fwelled inftead of leffened the Natiqnal incumbrances? Has the reduction of intereft in the public funds hitherto proved any thing more than a tempora. ry Expedient (which is no better than a time-ferving Project.) to raife a fund to pay Interest-money for MORE AND MORE PUBLIC DEBTS; and the more thefe ria tional incumbrances increafe, will not the whole property of the MONEYED-INTEREST become more and mote precarious? And what may one day be the inevitable confequence of fuch fund-bubbles, fee our article MoneyedInterest
The grand project upon which the credit of our funds feerns to be bottomed at prefent, is that only of the continued re. duction of interest, 'till the principal mo ney-debt shall athength becometo be worth Nothing; and if this projed is our only refource in times of exigency, mult not the property of the public creditors be reduced to an intereft of 2 per cent. and at length to one, and from thence may not this reducing project abfolutely annihilate the whole 140 millions of money now due to the public creditors?
But if this fcheme of reduction, carried to extremity, is to be the nation's whole dependance, mult it not, in the end, defeat itfelf; for what is it that fupports thefe funds, whofe furpluffes conftitute the SINKING FUND, but the SPEND-ing-Money of the nation, which fupports the whole public revenue? And if the Spending-Money, or the Inte rest-Money of the Fund Proprietors is once reduced to litte or nothing, what will become of the Aggregate Fund, the South-Sea Fund, and the General FUND, the furplufages of which conttitute fo great a proportion of the Sinking fund? Does not this confideration alone, demonftrate the truth of what we have endeavoured to thew in many other lights, viz. that the present constitution of the public revenue of thiskingdom, is not founiad on a national basis, and that the Public Credit, and the Commerce of the kingdom, cannot be upheld, and advanced by fuch projectingexpedients ? For really they are no better, the effects thereof having bitherto proved it beyond contradiction, however plaufible and artfully fome people may attempt to thew the contrary, to anfwer fuch temporary purpofes only, as will tend to plunge the nation into greater and greater debts and difficulties, inftead of extricating it from thofe under which it manifeftly labours.
Does not this flate to which the public revenue is now re duced, prove the rectitude of that meafure, That the an. nual Expence ought never to exceed theannual Revenue; and that, confequently, when an increafe of the former becomes neceffary for fecuring or vindicating the honour or rights of a nation, the latter ought to be increafed in proportion, if neceffary, even to the utmoft the people can fpare from their daily fubliftence?
For fuch honeft and honourable projects, that will folidly and permanently fupport and uphold the true intereft, and the honour and glory of the kingdom, fee our articles Artificer, Duties, Manufacturer, Labour, Land, Mercantile College, Musfum, Parliament, [Member of Parliament], Philosophy Experimental, Poor, Royal Society, Revenue, SouthSea Company, Taxes, War.
PROVENCE, in France, is bounded on the north by Dauphine, on the eaft by the Alps, and the river Var parts it from the dominions of the duke of Savoy; on the fouth it bas the Mediterranean Sea, and on the weft it inclofes the ftate of Avignon, and is feparated from Languedoc by the Rhône.
The trade of this province is very confiderable, for almoft all the trade of France to Italy, Spain, and efpecially the Levant, is carried on at Merfeilles; and if we may credit an account publifhed fome time ago, they fend into Italy for above three millions and fifty thoufand livres of merchandize, viz. of cloth and other woollen ftuffs manufactured in Dauphiné, Languedoc, and Province, to the value of two millions of livers; almonds, plumbs, figs, honey, capers, olives, anchovies, oil, brandy, cotton, linen, \&cc. all which articles amount to above a million more.-They take in return, hemp, wheat, rice, fulphur, manma, and filk. Their trade to Spain is more conficerable ftill, fince it amounts to nine millions, one hundred and feventy thoufand livres. The merchandizes are all forts of linens made in France, gold and filver lace, fine filks, manufactured at Avignon, hats, toys, cottons, all forts of drugs, \&c.
They drive alfo a confiderable trade to the Levant, whither they fend above one hundred veffels of more or lefs burden, viz. to Conftantinople, Sinyrna, Candi, Aleppo, Cairo, Alexandria, 8ic. [See the article Levant Trade.]

## PRO

The climate and foil is not the fame over all Provence. In the upper part the air is temperate, and the country abounds in paptures and cattle, and produces corn, apples, pears, and very little wine, but what there is of it, is very good. In Lower Provence the air is exceffive hot, and would be more fo along the fea-coaft, were it not for the wind that blows generally from ten in the morning 'till nine at night. The northwefterly wind alfo cools this part of the country, and fometimes dries the ground prodigioully. This part of the country does not produce half the quantity of corn neceffary for the ufe of the inhabitants, and it's dry and fandy ground is covered with pomegranates, orange, lemon, and olive-trees, cyprefs-trees, palm-trees, fig-trees, and feveral others peculiar to the country. There is here a great deal of winc, but it is ftiong, heady, and fweet. The fifh they take in the Mediterranean, is not by a great deal fo good as that of the ocean.
It is believed that there are in this country, efpecially in an eftate belonging to the marquis de Lue, mines of gold, filver, copper, and lead : and, notwithftanding the exceflive heat of this country, there are here many woods, which afford a great quantity of timber for fhipping and other ufes. In the wood of the county of Sait, there are feveral glatshoufes.
There are no confiderable rivers in this province; thofe of fome note are the Durance, the Sorgue, the Largens, the Lore, the Verdon, the Hubaye, the Baune or Weaume, and the Var.
Provence is ufually divided into Upper, Middle, and Lower. We fhall, however, enlarge only on the chief places of commerce in this county
Aix, the metropolis of Provence. There is here a parliament, which judges, in the laft refort, all the caufes of the province; a court of aids and finances, a court or chamber of accounts a generality, an office of treafurers of France, and a court of the mint. The other confiderable places in this diocefe, are St Maximine, Brignole, and Barjols.
Riez, fituated on the rivulet Auveftre, about 9 leagues from Aix to the north-welt, in a pleafant country, which abounds in excellent wines, and moft forts of fruit.
Senee', lituated in a cold and barren country amongft mountains.
Colmars, in the Alps, on the river Verdun, on the banders of the county of Nice. They make here a great quantity of coarfe cloth, which they fell to the inhabitants of the mountains of Provence and Predmont.
Castexiane, fituated in a fruitful and agreeable vale
Arles, fituated on the eaftern bank of the river Rhône, over which, it has a timber bridge. The city was formerly the capital of the kingdom of Burgundy, and is at prefent a fair and fpacious city, dignified with a metropolitan fee, and an academy of men of letters, known by the name of The Royal Academy of Sciences and Languages.
Marseilles, one of the richeff, moft populous, and moft ancient cities of France; was founded, they fay, 500 years before Chrilt, by a colony of merchants from Phocis in Ionia. They flourifhed in the time of Julius Cæfar, when they lived under a republican government, and had a famous academy, much frequented by the young gentemen of France, and even of Rome. But as they followed Pompey's party, againft Cæfar, they were fubdued by the latter. Having thus loft their power, they applied themfelves to get riches, and even gave themfelves up to pleafure, to fuch a degree, that the manners of the Marfeillians became a common proverb, to exprefs all kind of luxury and diffolutenefs, as we learn from Athenæus. However, they bad acquired much reputation in former times, on account of their learning and courteoufnefs, according to the teftimony of Cicero: they now excel chiefly in the knowlege of maritime affairs, for the capital gallies of France are laid up here, and it is the ufual rendezvous of all the Levantine flips, and the whole Turky trade of France. See Levant Trade, with regard to the regulations made thereof in France, as the fame refpect this city.
The city is fituated on a little hill, and bas a very capacious and rafe harbour on the coalts of the Mediterranean Sea, at the diftance of about feven leagues from Aix to the fouth, aud fourteen from Arles to the fouth-eaft. The port, which is defended on one fide by a fortrefs, and the abbey of St Victor, is flanked on the other with a wall above 1300 paces long, it's mouth being fhut up with a chain, lying at a certain diftance, on three pillars of ftone, leaving a fpace open for the paffage only of one large veffel. This harbour is very long, and runs far into the land, taking in almoft the whole length of the city, but is not very broad, nor deep enough for the largeft veffels. The city itfelf enjoys at prefent great privileges, and is one of the fineft in France, fince it has been enlarged by Lewis XIV, fo that it's citadels, new freets, public places, ftately edifices, magnificent churches, monafteries, colleges, feminaries, hofpitals, courts of judicature, havens, arfenal, gallies, \&c. are well worth a ftıanger's particular obrervation.
Toulon is extremely well fituated, being open to the fouth, Vol. II.

## PR U

and Cheltered on the north by very high mountains, which render it's port one of the largeft and fafeft in the world: The city is pretty large, but very dirty almoft every where: it is diltant about ten leagues eaft from Marfeilles, twentyfour from Nice to the fouth-weft, and thirty from the borders of Dauphiné to the fouth, and about 125 from Paris. It is a ftrong city, adorned with feveral churches, monafferics, and other public edifices. King Henry IV. fortified it with frong wails, and built two large moles, each whereof is 700 paces long, inclofing almoft the whole port; near them is allo erected an arfenal, furnilhed with all forts of naval ftores, whence the largelt thips of the royal feet of France are ufually fitted out; and for their fecurity, the fortifications bave been very much increafed by Lewis XIV. On two fides of the city, viz. north-eaft and fouth-eaft, at a very fmall diftance, lie very fteep and inacceffible bills: that of St Anne's, on the north-eaft, perfectly commands the town, and finks with a declivity on that fide, but on the country fide it is a perpendicular rock. On the fea-fide it is extremely well defended by batteries of cannon flanking all the avenues. In the mouth of the haven lies a ftockade or boom, between which and a little neck of land, there is a pafs of good deep water; but that is fecured by a great tower, whereon are mounted 30 guns, which carry 24 pound balls. This tower our fleet, under Sir Cloudefly Shovel, endeavoured to gain, and had in effect done it, if an unlucky thot had not blown up the magazine of gunpowder in fort St Laurence.
The port is one of the fineft in Europe: you enter firft into a large and very fafe road, defended by feveral batteries and forts. At one of the extremities of this road lies the port, the entrance of which is fo narrow, that the flips cannot enter it, but one by one, and it is defended by feveral batteries well mounted with gans.
The diocefe of Toulon is of a very fmall extent, comprehending in all but 25 parifhes. One of the princlpal places in this bifhopric, is the city of
Hiéres, which was formerly a confiderable place, being a reaport town; but the harbour is at prefent filled up, and the fea retired above 2000 paces from this place. The foil here is very good and fruitful, and produces excellent fruit. This place gives the name to the inland of Hieres.
Frejus, or Frejuis. There is bere a fmall harbout, at the mouth of the river Argents, from which this city is a league diftant ; it is 14 leagues from Toulon to the north-eaft, 10 from Antibes to the north-weft, and 20 from Aix tothe eaft.
PR USSI A. This country is divided into Pruffia Royal and Ducal; extends from 52,50, to the 56th degree of north latitude, and from 16,50, to 23,54 degrees of eaft longitude. It is bounded by the Baltic Sea on the north, by Li thuania and Samogitia on the eaft, by Poland Proper and Mafovia on the fouth, and Pomerania on the weft. It is about 1250 miles in length, and in breadth above 140 in the weft part, and in the eaft part more than 170 ; though fome extend it 30 miles more, both in length and breadth. It contain's a valt number of fine trading towns, befides many populous villages equal to fome cities, has the molt inland navigation of any country in Europe of it's bignefs, except the Netherlands, and is faid to be the richeff foil, and the moft plentiful in produce.
It abounds with cattle, wild beafts, and fruits of all forts, and is faid to be watered with above 2030 rivers and lakes, which fupply the inhabitants with all kinds of filh. It has a confiderable trade by many convenient ports, towards the Baltic, as well as by the Veiffel, which falls into the Baltic at Dantzic, after having divided itfelf into feveral branches, and made the three iflands called the Werder: fo that the inhabitants are richer, and live better than in any other province of Poland. It's woods furnifh plenty of venifon, and it's fea coafts a great quantity of amber, which is tranfported ali over Europe. It flows on the fea like oil, and after being expofed to the air, grows hard. The people take it up with hofe-nets, faftened to long poles, when the tide flows, and fometimes catch pieces as big as one's fift.
A great deal of glafs is made in this country, of the athes of wood, and largeft fort of pebbles: thefe they boil twelve hours, before they will vitrify. When they would have their glafs clearer than ordinary, they mix a certain earth with the athes, of the colour and hardnefis of tartar; which renders the glafs of different colours, according to the quantity of this earth which is mixed with it. See Guass.
Though the eaftern part of this country, which was all along called Ducal, to difinguifh it from the Royal, or Polifh Pruffia, is now alfo termed Royal, fince his prefent Pruffian Majefty's grandfather firft took on him the title of king of Pruffia, and was recognized as fuch by the reft of the powers of Europe; we fball, neverthelefs, treat of it according to the antient divifion of it, by geographers, into the Royal and Ducal.
The Royal, or Polish Prusia, which is the weft part, and fubject to the king of Poland, has Ducal Pruffia on the eaft, Brandentuigh and Pomerania on the weft, Poland on the fouth, and the Baltic on the north, and is 130 miles from 7 G
ealt
eaft to weft, and no, where broadelf, from fouth to north. It is divided into the fout palatinates of Pomerellia, or Polifh Pomerania, Culin, Marienburg, and Pomerania, and the caftellans of Elbing and Dantzic.
The palatinate of Pomerellia, or Polish Pomerania, has Brandenburg Pomerania on the weft, the river Veiffel on the eaft, the Baltic on the north, and Great Poland on the fouth. DANTzic ftands on a branch of the Velffel, about four miles above where it falls into the Baltic Sea, 24 miles north-weft of Marienburg, 35 welf from Elbing, 84 north from Thorn, 175 eaft from Stetin, and north from Gnefna, 154 northweft from Warfaw, and 256 north from Cracow. It is a free imperial city, and one of the Hans-Towns. [See the article HANs-Towns.] In the gth century it was reckoned the chief plate in the world for fiffing up amber.
This city is now the chief flaple of Polahd for import and export, the greateft emporium of the Baltic Sea, and perhaps one of the greatelt granaties in Europe; it being fuch a famous mart, that valt flete of hips come hither every year from Holland to fetch corn, there being little elfe ured, either in the province of Holland or Zealand. In fhort, if we only except London and Amfterdam, it may be faid to equal, if not to excel, any other city in thofe parts of Europe. The chief export of the place is in corn brought from Poland: it is computed that 30,000 tons, or 365,000 lafts of whear are thipped from hence one year with another. The citizens have the fole privilege of buying up the corn, as foon as it enters the harbour. The magiftrates fet a price upon it, but that the country people, who are the fellers, may not be impored upan, and delayed, the citizens are obliged to buy up the whole quantity which the boats bring in, let it be what it will.
Though this city takes off a great quantity of the woollen manufactures of Great-Britain, yet the Dutch fending fo many thips for corn to Dantzic, which muft return empty if they have no goods to carry, the fieight chereby colting them nothing, have the chief trade of courfe. Alfo all the heavy goods of Great-Britain, fuch as tobacco, fugar, rice, \&c. are fupplied much cheaper by the Dutch; fo that, in a word, the Englith trade to this city is much lets profitable than formerly; and yet the Englifh goods are imported to Dantzic, and fent up into Poland, as much, and perhaps, more, than ever. Dantzic is the chief market to which the Dutch, and alto the Scots fend their pickled herrings; which are fo gaod a merchandize in Poland, thar, it is faid, the Dutch fell at Dantzic, Elbing, and Koningfberg, 14000 tons or lafts of hremings every year, befides the great quantities which Scotland alto tend thither.
The Dutch alfo fend juniper fpirits hither, together with falt, fulphur, whale-fins, and train-oil; and would fend more of the latter, were it not for the great quantities of oil which the Dantzickers raife from the fmaller fort of furgeon, and other firh, and from linfeed, rape-feed, \&ce. Befides corn, of which there is not fuch quantity exported any where as here, the Dantzickers export pot-afhes, furgeon, Polinh linen, fall cloth, and great quantities of fpruce canvas, which is ufed for fails for fmall thipping in England, and even in Spain and Italy. See the article Canvas.
The Dutci, who bring herrings hither, befides their EaftIndia groods, fetch great quantities of Polifh fheeps-wool from hence, which is the beft in all the northern world, the Englifh and Irifh only excepted, and which they employ in therr cloth manufacture. The French alfo bring fome of it away, and would bring more, if they did not find means to get it upon eafy terms from England and Ireland. The Polinh wool is alfo exported to Germany and Sweden.
The Dantzickers have a wine of that fort they call tockay, but it is no other than the Polifh wines of the mountains of Cracow and Podolia.
Some of the beft Eaft-country plank, as we call it, or oaken plank for building fhips, is brought from this city, as well as Koningfberg and Stetin, and comes down the Viftula and Oder, out of the Great Poland. The Dutch cargoes, befides thofe already mentioned, generally confift of Englifh woollen manufactures, and the fugar and tobacco of the Englifh colonies, with the French filks, wines, and brandy. The harbour is not deep, fo that large fhips can fcarce come up to the city.
They have no men of war, but abundance of merchant-fhips, of 300 tons, and 30 or 40 guns a-piece. They have 200 foldiers in pay, can eafily maintain 12,000, and have fometimes, had an army of 60,000 men.
There is an inland fea, or bay here, called the Frifchaff, which lies parallel with the Baltic coaft for 60 miles in length, but is of an uneven breadth, being from 5 to 10 miles over. It Begins at the territory of Danzzic, where is a very large inlet from the Dantzic branch of the Viltula, aud which makes the port of Elbing, juft oppofite to the mouth of the river Elbing, ftanding on another entrance of it, a little farther eaf. This bay is famous for fturgeon, a vaft quantity of which is taken here, cured at Koningfberg and Dantaic, and fent to all the trading ports of Europe, efpecially Eng. land and Holland.

Culm, the fecond palatinate of Royal Prufia, lies on the eaft fide of the Veiffel, betwixt that iver, Great Poland, and Ducal Pruffia.
The city of this name is 23 miles north of Thorn, 60 fouth of Dantzic, and 43 north-weft of Uladiflaus, It is pleafantly fituated on a hill, at the foot of which runs the Veiffel, and has fillt the name of a Hanfe-Town, but has loft it's trade.
Thorn, 24 miles fouth of Culm, 72 from Marienburgh, 84 from Dantzic, 20 north-eaft from Uladillaus, 60 north from Lencieia, and 93 north-weft from Warfaw. It is a Hanfe. Town, divided by the Veiffel into two parts: it is the fineft and beft built in all Royal Pruffia, the ftreets being much broader, and the houfes fatelier, than at Dantzic. Cluverius fays it was a famous mart long before Dantzic.
Marienbugh, the third palatinate of Polifh Pruffia, on the eaft fide of the Veiffel, and north of Thorn. It is bounded on the north partly by the Baltic and the Frifchaff, and on the weft by the palatinate of Pomerellia.. It is a champain level country, like Holland, as fruitful as that province is, and as populous as any part of it, Amiterdam excepted.
Marienburge fands on the Nogat, a branch of the Veiffel, 18 miles fouth-welt of Elbing, 25 fouth-eaft of Danzic, and near $7^{2}$ north of Thorn. The adjacent foil is fruiful and well cultivated, as is the neighbouring ifland of the fame name, formed by the river.
Elbing, on a river of the fame name, that rifes out of the lake Draufen, and falls here into the Fricchaff, is four or five miles from the Veiffel, 18 miles to the north-eaft of Marienburgh, 35 eaft of Dantzic, 95 north of Uladilaus, and 133 north-weft of Warfaw. It is the metropolis of the palatinate, the chief town of Hockerland, and the only port, except Dantzic, in all Polih Pruffia. It is a fair, neat, rich, frong, well-built, and populous city, in a delightful fituation, and a place of great trade, the inhabitants being wholly addicted to bufinefs and commerce. It's principal trade is in fturgeon, butter, cheefe, mead, and corn.
Warmia, the fourth palatinate of this country, which joins to that of Marienburgh, and lies north-eaft from Elbing, being furrounded in a manner by the Ducal Pruffia and the Frifchaff.
The chief town of this palatinate is Braunsberg, or Braunslaw, on the river Paflar, near the bay of Frifchaff, 25 mileg north-eaft of Elbing, and 50 eaft of Dantzic. It is a populous place, much frequented and efteemed, and is noted for a good trade.
The Ducal Prussia has Polifh Pruffia on the weft; Lithuania on the eaft; Samogitia, and the bay of Courland, on the north; and the palatinate of Warfaw on the fouth. It is about 130 miles from north to fouth, where longeft, and 120 from eaft to weft, where broadeft ; fo that it is much larger than Polifh Prufia, but not fo fruitful, nor confiderable for trade and towns. It is divided into the three following circles, or provinces.
The province of Smalzand; the capital of which, and indeed of the whole kingdom of Pruffia, is
Koningsberg, at the mouth of the river Pregel, where it falls into the Frifchaff, 55 miles north-eaft fiom Elbing, 84 from Dantzic, and 153 from Warfaw. It is a Hanle-Town, large, well built, and divided into three parts by the river; one part, called Lebenicht, is defended by a ftrong saftle, that commands the harbour, and makes it a great emporium of trade, which is chiefly in yellow amber, found on the coaft, honey and wax, corn, naval flores, furgean, trainoil, linen-yarn, cordage, and feveral other things, of fuch univerfal ufe, that this, like Dantzic, is always full of fhips, from moft parts of the trading world, even from Spain and Portugal. In fhort, it is a rich city, and a place of vaft bufinefs, the exportation here being the fame as is is upon all this coaft from Stralfund on the weft, to Narva on the eaft.
Pilaw, a very fafe port on the Baltic, at the mouth of the Frifchaff, $3^{\circ}$ miles weft of Koningiberg, is noted for Aur-geon-filhing.

Of the Exchanges of Dantzic and Koningsarzg.
Ufance of Dantzic for Germany is as for Koningferg, at 15 days fight; for Amfterdam, at 40 days after date, or a monet after fight; and at Koningflerg 41 days. In both thefe places there are allowed io days of grace after the expiration of the time mentioned in the bill of exchange.
They keep their accounts in rixdollars, gros, and fenings; or in florins, gros, and ferings. The rixdollar $=3$ florins, or 90 gros, the forin $=30$ gros, the gros $=18$ fenings.

## Dantzic and Koningsberg

| Gives | To receive |  |
| :---: | :---: | :---: |
| 72 rixdollars, more or kers, | in France, | 300 crowns d'pr fol |
| 270 gros Podand,-idem | in Holland, | $x$ livere gros bana |
| 00 rixdollazs | Brefliaw, | 3 rixdollars, more |
| 84 gros.Poland, mor | at Frankfort, | 1 rixdoilar current. |

| 100 rixdollars | at Leipfic, | xot rixdollars, mare or left, |
| 56 gros Poland more of lefs, | at Nuremberg, | Ifloris currear money. |

## PR U

Remariss on the article Prussia before the laf war.
The Prufian monarch has great forces, large revenues, a genius capable of conducting both, and a moderation that will reftrain him from attempts fuperior to chefe. He knows perfectly well, that the grandeur of the foveraign muft be effablifhed upon the welfare of the fubject, and this has excited him to hew the fame regard for the happinefs of his people, as for the extenfion of his own power; or rather has induced him to make the latter always tubiervient to the former. He is known to have an inclination to become a maritime power, or which is the fame thing in other werds, to enable his fubjese te encreafe their wealth by their induftry, through the channels of foreign trade.
Now though there are many, and, amonglt them, fome flatefmen, who treat this as a chimera, yet we are told the dired contrary, and are inclined to think that this monarch, and his fucceffors, will aetually carry that point; and we think fo, becaule there is no great improbability in fuppofing that they may be, fome time or other, mafters of a fea-coaft four or five hundred miles in extent. It would require more time and room than we have at prefent to beflow, to endeavour the explanation of this, fo as to bring it within the reach of every capacity : but whoever will confult the maps, confider the prefent titate of things, and the valt improvements in the power of an abfolute monarch to make ${ }_{2}$. who knows what he is doing, and what is to be done, in carrying a favourite point, which is at the fame time, his people's point, as well as his own: I fay, whoever will redect upon thefe things, will nor confider what wa have advanced as a vifionary delufion.
His views might certainly have been altered, his meafures changed, and his defigns otherwife directed than they have been. But then this did not depend intirely upon him, there muft bave been a concurrence in other powers to have brought this about; for, to manage a wife prince, true to his awn incerefts, be muft be fhewn, that thofe wha defire to have him for a friend and ally, have no intention to refitrain, no inclination to defeat, the meafures be takes for that purpofe, while they are not deftructive or dangerous ta themelves.
To manifof a difpofition contrary to this, is fufficient to give another biafs to his councils; and, when we fee a prince of the king of Pruffia's turn continue, as it were, always armed at an inmenfe expence, we muft conclude that he has fome great enterprize in view, which whenever time fhall difclofe, it will alfo difcover that he took proper meafures for carrying that point, whatever it is, which thofe armaments have been intended to compars.
The fituation of his prefent Majelty's territaries is fach, as obliges him to have a conftant eye to the affairs of the North, where no power was ever predominant, but his predeceffors fuffered for it, and their dominions and eftates. With refpect to the dukes of Courland, they have been, generally rpeaking, clofeiy allied to the houfe of Brandenburgh by mariage, which, as it Chews the antient connection of their interefts, difcovers aifo the reafon why this prince is ftill fo attentive to the choice which the Courlanders may make of a new duke.
The province of Samogitia in Poland, with the duchy of Courland, divide the Ducal Pruffia from the territories of the Czarina; and, therefore, in the prefent fate of things, it is but natural that the king of Pruffia hould defire to fee the hands of the Polanders itrengthened, and the inhabitants of Courland fet entirely free; becaufe he might then flatter himfelf, that, "in cafe at any time hereafter the troubles of Germany thould revive, his territories would be fafe from any fudden invafion by the Ruffians, with which hẹ was threasened but a few years ago, when his concerns were in a very crutical pofture.
It is alfo very likely, that he would be glad to annex what the Swedes Aill retain in Pomerania, to the reft of that country which is a)ready in his poffeffion, not from any jealoufy of the Swedes, or from a defire of aggrandizing himfelf at the expence of his neighbours and allies, but on the fcore of
conventience, and the better connection of his effates. Wie may from thence infer, that he will never feek to procure this in any other than an amicable way, and with the confent of the Swedes, in confideration of fome kind of equivalent or other. It may be, this acquiftion is ffill at a great diftance: and it may be, alfo, that the meafures which this great monarch has concerted in reference to the affairs of the North, will bring this about fooner than is generally imagined. But be that as it will, there is no queftion that, whenever it is effected, the pawer of Pruffia will be very much augmented thereby, and the liberties of the Empire will then fland in need of no guardian without the limits of Germany.
While there defigns attrat the thoughts, and employ the hands of this active prince, he will certainly maintain a good correfpondence with all thofe powers that are neighbours ta him, in refpect to the reft of his dominions, which will leave the inhabitants of the United Provinces at full liberty to redrefs their own grievances in their own manner, and to recover the antient ftrength and vigour of their government, in confequence of reftoring that form under which it was firf conftituted, and for a fong feries of years happily flourifhed. But whenever thofe ftruggles for power which have embarraffed and diftracted the potentates of the North, Chall be by negociation or otherwife compofed, we have very little room to doubr that his Majefty of Pruffia will again turn his views towards the countries of Cleves and Guelders, and the principality of East Friessand, where he has the very important and commodious port of Embden, to facilitate the chemes he may form in favour of the commerce of his, fubjects, to which he feems to apply himfelf with equal induftry and firit, as that he has no reafon to fufpect bis neighbours may force him fuddenly into a war, while his councils are wholly taken up in cultivating the arts of peace. and traffic.
He will by that time have ferved bimfelf to the utmoft, of whatever affiftance France may have found it her intereft to give them, for more than that fhe will never give; and his, lenfe of this will engage him not to perfift any longer in the profecution of meafures aeceptable to the court of Verfailles, than they are conducive to the extemfion or eftablifhment of his power and influence. He will then fee that indepency, and being at the head of the Protestant interest in Germany, is fufficient to gratify his utmoft ambition, and to raife him to the higheft point of authority, by making him courted and refpected by all his neighbours, and, as occafions offer, the umpire of all their differences.
Thefe are, indeed but fuppofitions, but then they are built upon folid and rational foundations; whereas thofe who fancy that he will, fome time or other, be fwallowed up by a confederacy of powerful neighbours, or defpoiled of a great part of his serritaries, are not able to offer either facts or arguments to coutfel their opinion, fince hitherto we have never feen him attempt beyond his ftrength; nor has it appeared in all bis military regulations, frefh eftablifhments, new difcipline, $\& \mathrm{c}$. that the power maft concerned, or which tbink herfelf maft concerned to traverfe the defigns of Pruffia, has been able to do it with any great effeet, even in conjunction with a very ufeful ally, who, after being qnce facrificed, will moft certainly take care to prevent being involved again in the like quarrel.

Remarks on our articie Prussia, fince the laft war and peace.
Befides hiṣ Pruffian majefty giving all encquragement to trade, ufeful arts, and feiences, we have recent accounts that his max jefty propoles to fender the Duchy of Ciqves, and the other places he pofleffes in it's neighbourbood, the flourilhing receptacles of induftrious perfons of all nations; in ordep to which, all the fortifications, except thofe of Wesel, are to ba entirely demolifbed, no troops are to be quartered in them, the TAXES REDUCED, all the high roads improyed, as well as repaired, feveral new sanals made, and every encourage, ment given, that may invite manufacturers to fettle in thof spuntrics.

## The Business of the Customs continued, from the end of Lbttre $\mathbf{O}$.

## With refpect to the Plantations in general.

PLantations, Britifh, in Afia, Africa, or America. No goods to be imported into, or exported from thence, in any pther but mups of the built of Great-Britain, Ireland, or the faid plantations, wholly owned by the people thereof, and whereof' the mafter, or at leaft three-fourths 'of the mariners, are of the faid places (except fhips taken as prize, and legally condemned, navigated by the maner, and threefourths of the mariners Britim, or of the faid plantations, and owned by Britith) upon forfeiture of the thip and goods,
one-thitd to bis majefty; one-third to the governor, one-third one-third to bis majelty; one-third to the governor,
to the feizer and informer, 12 Car. II. cap. 18. §. 1. and 7 and 8 Will. III. cap. 22. §. 2, 3 .
-- Admirals and other commanders of gips of war, are to feize as prize all ihips offonding, and to deliver them to the court of Admiralty, $\$ 2$ Car. II. cap. 18. §. I.

-     - Ships not to be deemed or pafs as of the built of Great-Britain, Ireland, Guernfey, Jerfey, or the Britifh plantations, fo as to be qualified to trade, 'rill regiftered by the owners, and proof of the built and property be made upon oath of one or more of rhem, before the colle Aor and comproller of the port of Great-Britain or Ireland, to which they then be

## Of the Business of the Customs, continued.

long, or before the gnvernor and principal officers of the revenue in the plantations, Guernfey or Jerfey, if the fhip belongs to thofe places, 7 and 8 W ill. III. cap. 22. §.17. Such oath to be regiftered by the perfons who adminiftered it, and attefted under their hands ${ }_{i}$ and feals, and then delivered to the mafter, and a duplicate thereof immediately tranfmitted to the commiffioners of the Cuftoms, 7 and 8 Will. MI. cap. 22. §. 18.
-For want of fuch procf, fhips trading thither are liable to forteiture, as if they were foreign thips, 7 and 8 Will. III. cap. 22. § 18 .

But prize fhips legally condemned mult be feecially regiftered, mentioning the capture and condemnation, inftead of the time and place of building; with proof upon oath, that the entire property is Britifh, 7 and 8 Will. III. cap. 22. §. 19.
-_ The name of a fhip changed after regiffering, or the property transferred to another port, fuch fhip to be regiftered de novo, and the former certificate thereof to be cancelled; and if the property be altered in the fame port by the fale of any fhare, it mult be acknowleged by indorfement on the certificate of the regifter before two witnefies; 7 and 8 Will . III. cap. 22. 5. 21.

Britifh, in Afia, Africa, or America - Ships lading and unlading any goods there, and the mafter and their lading are fubject to the fame rules, vifitations, fearchers, penalties, and forfeitures, as in Great-Britain (except under the regulations in the fequel) 7 and 8 Will. III. cap. 22. §. 6 .

Sugar, tobacco, cotton, wool, indigo, ginger, fuftick or other dying wood, rice (except under the feblequent regulations) melafles, hemp, copper-ore, beaver-fkins or other furs, pitch, tar, turpentine, mafts, yards and bowfprits of the growth, production and manufacture of any of the Britim plantations in America, Afia, or Africa, may not be carried from thence, unlefs to fome other Britifh plantations, or to the kingdom of Great-Britain only, to be there landed, upon forfeiture of the faid goods, or their value, with the hip and furniture, 12 Car. II. cap. 18. §. 18.22 and 23 Car. II. cap. 26. §. 10, 11 . 25 Car. II. cap. 7. §. 3. and 3 and 4 Ann. cap. 5. §. 12. and cap. 10. §.7. and 12 Ann. cap. 9. §. 1. and 8 Geo. I. cap. 15. §. 25. and cap. 18. §. 22. and II Geo. I. cap. 29. §. 4 . and 2 Geo. II. cap. 28. §.6. and cap. 35. §. 17. and 3 Gep. II. cap. 28. §. of the Britifh plan upon any preterce whatoever, any goods without being firf landed in Great-Britain, and the duties thereof there paid, they are forfeited with the Chip, three fourths without compofition to his majefty, and one fourth to the fuer ; unlefs ftranded or driven in by leaknefs, 8 xc . in which cafe, the goods muft be delivered into the cuftody of the chief officer of the port, there to remain 'till re fhipped for Great-Britain, for which good fecurity muft be taken, 7 and 8 . Will. III. cap. 28. §. 14, 15 .
N.B. Now to extend only to fugars, tobacco, cotton-wool, indigo, ginger, fpeckle-wood, or Jamaica-wood, fuftick or other dying wood, rice, melaffes, beaver-fkins, and other furs, copper-ore, pitch, tar, turpentine, mafts, yards, and bowfrits of the growth product, or manufacture of the faid plantations. All other goods of the growth, product, and manufacture of any of the faid plantations, may be imported from thence into Ireland (except hops, which are to continue under the regulations of 9 Ann. cap. 12. and I Geo. I. cap. 12.) provided it be in Britith fhipping, whereof the mafter and at leaft three fourths of the mariners are Britifh, 4 Geo. II. cap. 15. §. 1, 2. and 5 Geo. II. cap. 9. §. I.

But rice may be Ohipped in Carolina, or Georgia in America, by Britifh fubjects, on board any fhip built in Great-Britain, or belonging to Britifh fubjects refiding in Great Bitain, and legally navigated, that has cleared outwards, in any port of Great-Britain, for Carolina or Georgia ; and may be carried directly to any part of Europe, lying fouthward of Cape Finisterre, without being firft carried to any other Britifh plantations, or to Great-Britain, provided the maiter before clearing takes out a licence, under the hands of the commiffioners of the cuftoms, or any three of them, for the loading and carrying of the rice accordingly; which licence muft be granted upon a certificate of the collector and comptroller of the port, that bond has been given, that none of the other enumerated goods fhall be taken on board, at any Britifh plantation, unlefs for the flip's ufe, and that the fhip fhall proceed directly with the rice according to the licence, and there land it, and then proceed to Great-Britain, before he returns to any Britifh plantation, 3 Geo. II. cap. 28. §. 1, 2, 6. and 27 Geo. II. cap. 18. §. 3 .

-     - The mafter, within four months after arrival, not producing a cettificate of the regular difcharge of fuch rice, under the hand and feal of the Britilh conful, or of two known Britifh merchants, the bond muft be put in fuit, 3 Geo. II. cap. 18. §. $1,2,6$. and 27 Geo. II. cap. 18. §.3.
———— Before rice may be fhipped in Carolina or Georgia, the licence and certificate of bond being given, muft be produced to the collector; and before the mafter's departure, he muft make oath in writing, whether he intends to load any rice, and to what place bound, 3 Geo. II, cap. 28. §. 3. and 27 Geo. II. cap. 18. §. 3.

Before rice may be fhipped in Carolina or Georgia, the exporter mult make entry thereof with the collector, comp troller, and naval-officer, and take out a cocket, wheteon he muft indorfe, before fhipping, the true quantity intended to be thipped, mentioning the inalks, numbers, and contents of each cafk, and delivef the fame to the fearcher, 3 Geo. II. cap. 28. §. 4. and 27 Geo. II. cap- 18. §. 3.

If upon weighing and examining of the rice by the fearcher, either before or after the fhipping, the quantity be found to exceed the indorfement, or the rice be taden before entry, \&c: it is forfeited, with treble the value, betides the veffel, one third whereof to the king, one third to the governor, and one third to the informer, 3 Geo. II. cap. 28. §. 4. and 27 Geo. II. cap. 18. §. 3.

Before the Mip's departure, the mafler is to receive back the licence, with the marks, numberś, and contents of each cafk, indorfed thereon by the collector, comprroiler, and naval-officer, who are to make two copies of fuch hicence and indorfement; which are to be attelted by the malter, and left with the officers, 3 Geo. II. cap. 28. §. 4. and 27.Geo. II. cap. 18. §. 3 .

The mafter, on his return to Great-Britain, muft produce the licence fo indorfed, to the officer of the port where bond was given, and likewife a certuficate of the conful or-of two Britifh merchants, teflifying the due landing of the rice, and that they verily believe that no other enumerated goods have, been there landed 3 Geo. II. cap. 28. §.4. and 27 Geo. II. cap. 18. §. 3.

Officers in Carolina or Georgia muft tranfmit one of the copies of the indoriment, to the commiffioners of the Cuftoms ; and upon receipt thereof, or of the indorfed licence, and the half fubfidy for the rice fhipped in Carolina or Georgia, muit be demanded of the perfon who gave the bond; and in cafe of hon-payment within thirty days, the bond muit be put in fuit, 3 Geo. II. cap. 28. §.5. and 27 Geo. II. cap. 18. §. 3 .

Britifh, in Afia, Africa, or America.-For every Thip bound to the faid plantations, failing from Great-Britain or Ireland, fufficient bond muft be there given, with one furety, to the chief officer of the cuftoms, to the value of 10001 .' if under 'too tons, and to 20001. if above that burthen, that if any of the aforefaid enumerated goods are taken on board, they fhall, by the faid fhip, be brought to fome port in Great-Britain, and there landed: and for all fhips coming to the faid plantations from any other place, 'before they begin to load any of the faid enumerated goods, the like bond muft be given to the governor, that fuch goods thall be carried to fome orther Britifh plantation, or to Great-Britain: the condition of fuch bond to be, to produce a certificate, within eighteen months, of the legal difcharge of the goods; and the furety in fuch bond named muft be of known refidence and ability, 12 Car. II. cap. ${ }^{18}$. §. 19. and 22 and 23 Car. II. cap. 26. 5. II. and 7 and 8 Will. III. cap. 22. §. 13 .

-- Such oftences and forfeitures may be profecuted within two years after the offence, in any court of admiralty, or record, in his majefty's plantations where the offence was committed;

Of the Business of the $C$ ustoms, continued.
committed; and the forfeiture is to be divided, one third to his majefty, which (the expences of profecution being firft paid thereout) is to be applied for the fupport of the government of the colony where it thall be recovered) one third to the governor, and one third to the informer, or profecutor, 6 Gea. II. cap. 13. §. 3, II, 12.
_-_In all fucb profecutions for illegal landing the faid goods, the onus probandi is to lie on the claimer, or owner thereof, 6 Geo. II. cap. 13. §.8.
-- Britifh, in Afra, Africa, or America. Any of his majefty's fubjects in any veffel built in Great Britain, and belonging to his majefty's fubjects, of which the major part refide in Great Britain, and the refidue either in Great Britair, or in fome of his, majelty's fugar colopies in America, or in any veffel belonging to his majefty's fubjects refiding in Great Britain, and navigated according to law, that fhall clear out wards from Great Britain to any of the faid colonies, may thip fugars of the growth, produce, or manufacture of the faid colonies, to carry to any foreign part of Europe, provided a licence be firft taken out for that purpofe, under the hands of three of the commiffioners of the cuftoms, fubject to the retgulations, and on the conditions following, viz. 12 Geo. II, cap. 30. §.2. and 14 Geo, II. cap. 57. §. 7.

The mafter or owner of the veffel muft give notice in writing to the cuftomer, or collector and comptroller of the port where the veffel Jies, of his intention to proceed to the faid colonies to lade fugars, for fome other part of Europe than Great Britain, and enter into bond, with one or more fufficient [ecurities, in the fum of 1000 l. if the fhip be of lefs burthen than 100 tons, and 20001. if the be of that, or a greater burthen, on condition that, if a licence be granted, the Thip fhall proceed to the faid colonies; that he fhall deliver the licence to the collector, comptroller, and naval-officer there, if he intends to make ufe of the liberty granted by it, which he thall declare in writing to them, before he takes any goods on board; and that no tobacco, molaffes, ginger, cotton, wool, indigo, fuftick, or other dying wood; tar, pitch, torpentine, hemp, maft, yards, bowfprits, copper-ore, beaver-1kins, or other furs of the growth, production, or manufacture of any of the Britifh plantations in America, fhall be taken on board, unlef's for neceffary provifions in the voyage; that, before the veffel proceeds to any foreign part, fhe fhall touch at fome port in Great Britain, and that the mafter fhall deliver to the cuftomer, or collector, and comptroller, a true manifeft, attefted upon oath, of the whole lading, with the marks, numbers, package, and contents, and produce the licence, with a certificate of the marks, numbers, package, and contents, and forts of fugar on board, that the veffel fhall return to Great Britain, within eight months after delivering the lading in any foreign part, and before fhe returns to any of the plantations in Ainerica; and that, if the takes any goods on board before her return to Great Britain, they fhall be entered and landed as other fhips are obliged to do by the laws' of the cuftoms. Then a licence is to be granted for that voyage only, to load and carry fugars of the growth and production of his majefty's fugar colonies in America, to any foreign part, according to the purport and intention of this act; provided the mafter makes oath as prefribed 12 Geo. II. cap. 30. §.2,3. and 24 Geo. II. cap. 57 . §. 7.
licenfed by Sugars, or other goods put on board any veffel , pep, being the property of any other perion fome of his majelty's fubjects, and fuch as thall be laden on their proper rifque and account, to be carried to foreign parts, are forfeited, 12 Geo. II. cap. 30. §.4. and 12 Geo. II. cap. 57 . §. 7.

Before any fugars are taken on board, the mafter is to deliver to the collector of the port where the veffel is to take in her lading, the licence, with a certificate of bond, having been given in Great Britain; and to declare in writing, whether be intends to load fugars purfuant to the licence, otherwife the licence is invalid, 12 Geo. II, cap. 30 . §. 5 . and 24 Geo. II. cap. 57. §.7.

The exporter of the fugars, or other goods not cnumerated, before they are put on board, is to make an entry of them in writing with the collector, comptroller, and navalofficer, expreffing the name of the fhip and mafter, and where the lies, and the place where they are to be laden, or firt water-born, muft bo fuch only, where an officer is appointed to attend; or fuch as is mentioned in the warrant to be taken out for that purpofe from the collector and comptroller, whereon is to be indorfed by the exporter the marks, numbers, and contents, forts, and proper denominations of the fugars, 12 Geo. II. cap. 30. §. 5. and 24 Geo. II. cap. 57. §. 7 .

The warrant fo indorfed is to be delivered to the officer appointed to examine and fhip the fame; and the fugars are to be fhipped in the prefence of the officer, or at the place mentioned in the warrant, that the officer may attend, 12 Geo. II. cap. 30. §. 5. and 24 Geo. II. cap. 57. §. 7.

- if - The officer is to examine the fame before fhipped, and if the number of cafks is greater than is indorfed on the warrant, or if there be found any other fugar than what is indorfed, or any goods before enumerated; or if any enumerated goods, except fugar, have been put on board, or brought, or put into any lighter or other vellel in order to be put on board
before entry, \&c. contrary to the directions of this act, the faid fugars, or other goods, are forfcited, together with the lighter or veffel, employed in fhipping or attempting to fhip the faid enumerated goods, and the thip or veffel on which they are laden; and the owner to forfeir double the value, to be recovered in the court of vice-admiralty, or any court of record in the plantations, at the election of the informer or profecutor ; one-third to his majefty, one-third to the governor of the colony, and one-third to the informer or profecutor, 12 Geo. II. cap. 30. §. 5. and 24 Geo. II. cap. 57. §. 7.

The mafter of the veffel before he departs, is to receive the faid licence from the collector, comptrotter is to naval-officer, with a certificate under their feals of offee and figned by them, containing an account of the marks, numbers, contents, and forts of each cafk of fugar fo \&hipped. Two copies are to be taken of the faid licence and certificare, and attefted under the hand of the mafter of the veffel before he receives back his licence, and to be left with the collector, comptroller, and naval-officer, who are to tranfmit one of them to the commiffioners of the cuftoms in Great Britaim, 12 Geo. II. cap. 30. §. 5. and 24 Geo. II. cap. 57. §. 7.

The mafter of the veffel muft proceed direatly to Great Britain, without putting into any other place, except by ftrefs of weather (unlefs he is bound to the fouth of CAPE FINISTERRE), and upon his return, is to deliver his licence, with the certificate, to the commiffioners of the cuftoms, or the collector and comptroller of the port," where he arrives, and allo a manifett, attefted upon oath, of the marks, and numbers, with the tale, and forts of cafks, of all his lading, and make an entry of the quantity and forts of att the fugars, which were laden and then remaining on board, and declare upon oath to what foreign part he is bound (the entry to be paffed by the collector and comptroller without receiving any. cuftom or dury for the fugars, mentioning in their accounts that it was pafled by virtue of this act). Then the mafter to proceed, taking with him his licences and a certificate under the feals of office, from the collector and comptroller, that he had touched at fuch a port, and in all refpects complied with the directions of this aet, 12 Geo. II. cap. 30. §. 5. and 24 Geo. II. cap. 57. §.7.

If any fuch verfel proceeds to foreign parts without touching at fome port in Great Britain (except as before) and complying with the directions of this act, and having the fame certified as above; or if any goods before enumerated, are found on board, or carried to foreign parts, the liberty granted by this lirence is void, and the veffel, mafter, and all others concerned, are liable to the fame penalties and forfeitures, as if this act had not been made, 12 Geo. II. cap. 30. §. 5. and 24 Geo. IL. cap. 57. §. 7.

If upon information upon oath there is realon to fufpect, that any enumerated goods, behides fugars, are on board, any officer of the cuftoms, or perfon employed by them, may enter on board and unlade the veffel, as far as they fhall judge neceflary, to enable them to examine any part of her, and the goods on board, and detain her as long as is neceffary, and open cabbins, lockers, and any concealment, and feize all goods found on board not mentioned in the mafter's manifet, which are forfeited, 12 Geo. II. cap. 30. §.6. and 24 Geo. 11 . cap. 57. §. 7 .

If no other goods are found on board, the office or une the charge of damage done by landing, unioading, or unpacking, but not for demurrage, or on any other account. But if other goods are found on board (except necef-
fary provifions for the voyage), the malter is to be at all charge, 12 Geo. II. cap. 30. §.6. and 24 Geo. II. cap. 57 . §. 7.
———If the owners are defirous to enter and pry the duty, and land any goods out of fuch veffel, they may do it; the mafter firf making report of his whole lading, as required by law before this act, 12 Geo. II. cap. 30 . §.7. and 24 Geo. II. cap. 57. §. 7.
after landing his mafter, upon his return to Great Britain, commiffioners, or the collector, or comptroller of the port where he arrives, the licence, with a certificate, from the conful, or two known Britifh merchants of good credit, of the place where they are landed, of the landing thereof, with the number of cafks of fugar there landed, the marks, numbers, and contents of each cafk, with the name of the fhup, and mafter, and that no tobacco, or other goods before enumerated, except fugars, have been landed out of her, 12 Geo. II. cap. 30. §. 9, and 24 Geo. II. cap. 57. §. 7.

Aer of a veffel, who has taken out, or America. If a ma upon his compis arrival in the fugar colonies, deliver it to the collector, tomptroller, and naval-officer, with the certificate of bond having been given in Great Britain; and before he lades any goods, declare in writing upon oath, that the fugars he intends to load are to be carried to fome place fouthward of CAPE Finisterre, he may, in cafe he has complied with the directions of this act, proceed thither directly, without touching at Great Britain, taking with him the licence, and oath indorfed thereon, together with an account of the marks, num bers, package, contents, and forts of fugars taken on board,

## Of the BUSINESS of the $C$ USToms, continued.

and may there land the fame, 12 Geo. II. cap. $30 . \S .8$. and 24 Geo. II. cap. 57. §. 7.

In fuch cafe the mafter, withir eight months after landing his fugars, and before he goes again to the plantations, is to return to Great Britain, and deliver his licence as before diretted, with the oath indorfed thereon, and an account of the lading, together with a certificate from the conful, or two known Britifh merchants of good credit, of the place where the fugats were landed, of the Janding thereof, with the number of canks of fugar landed, and the mark, number, and contents of each cafk, with the name of the thip, and maderis and that they verily believe no tobacco, or other goods before enumerated, have been there landed out of her; and the mafter to make oath of the truth of the certificate, and that none of the goods before enumerated, except fugars, were taken on board at the colonies, or landed at the place mentioned in the certificate. The mafter alfo is to make an entry with the colleetor, and comptroller of all the futars taken on board, and landed as above, on forfeiture of 100 l . which entry is to be palfed by them without receiving any cufom, or duty for it, mentioning in there accounts that it was pafled by virtue of this aci, 12 Geo. II, cap. $30.8 .8,9$. and 24 Geo. II. cap. 57. §. 7.
forming the Brition, harged, and dequifivered abovementioned, the bond is to be difcharged, and delivered up, 12 Geo. II. cap. 30. §.9. and 24 Geor II. cap. 57. §. 7.

If any fuch thips, aftear unloading her fugars, takes on board ather goods before her retum, all remaining on board at her arrival in Great Britain, are to be entered and landed before har departure from thence, 12 Geo. Id. cap. 80. §. 9. and 24 Geo. H. cap. 57. §.7.
-This aft not to excufe hipa being regiftered acgording to 7 and 8 Will, III, cap. 22. 12 Gea. II. cap. 30. 6. 12. and 24 Geo . II. eap. 57. §. 7.
$\ldots$ The mafter, or owner of fuch veffel, may not advance to the foamen, or mariners, while in parts beyond the feas, any mpney or effeets, on account of wages, more than ane puoiety of their wages due from their departure, to their roturn to Great Britain, on forfeiture of double the money to advanced, 12 Geo. II. cap. 30 . §. 12. and 24 Geo. IL. cap. 57. \%. \%.
7. 1. Granting a falfe certificate, or counterfeiting, orazing, or altering any licence, aath, or certificate, made purfuant to this adt, the penalty is 5001 . forfeit, and the lieence, ath, or certificates, rendered invalid, 12 Geo. II. cap. 30. 5. 15. and 24 Geo. II. cap. 57. §. 7
. This act not to extend to granting a liberty to garry any fugars from the futgar colonies to. Ireland, 12 Geo.II. cap. 30. 8. 16. and 24 Gco. II. cap. 57 . §. 7.

No Thip, required to be regiftered by 7 and 8 Will. III. cap. 22. may be permitted to trade, or deemied quakified for that purpofe, within the intent of the faid act, until the mafter make aath, before the governor, of collector of the cuftoms of the plantation where be arrives, as prefcribed by act of parliament, 15 and 16 Geo. II. cap. 31. §; 1.

Any thip loading, or unloading, any goods in the plantations, before fuch proof, is forfeited, and may be profeputed, recovered, and divided in like manner, as if he had tot been regiftered, 15 and 16 Gea. II. cap. 3 r. §. 2.
-_- Britih in Afia, Africa, or America. Any \&hip duly qualified to trade to, from, and in his majeft's's plantations in America, being there, and the certificate of the ragifier loft or milaid, the mafter is to make oath before the governor, or collector of the cuftoms where fhe is, as peficribed by act of parliament, 15 and 16 Geo. II. cap. 31. §. 3 .
———And to give 500 . fecurity if the frip be 100 tons burthen, or under, and lo in proportion, if of a greater burthen, with condition, that the thip hat been duly regittered, and that the gertificate of the regifter, if found, fhall be delivered un to the commiffioners of the cuftoms to be cancelled, and no illegal ufe has been, or chall be made thereof; and that it has nor, nor thall be fraudulently difpofed of; and that the Chip does wholly belong to bis majefty's Britifh fubjects,
and that no foreigner has any Chare, property, or intereft therein. And then the governor, and collector of the cuftoms are to give the mafter a certificate under their hands and feals, of his having given fuch bond, and made fuch oath; and thereupon the chip is to have liberty to trade for that voyage only. The officer, who takes the bond and oath, is to tranfmit an account thereof to the commiffioners of the cuftoms, 15 and 16. Geo. II, cap. 3I. \$. 3.

Britilh, in Afia, in Africa, or America. The certificate of the regifter being loft, the flip may be regiftered de novo, upon the mafter and one of the owners making proof upon oath (before the commiffioners of the cuftoms, if any of the owners refide in Great Britain, Ireland, Guernfey, or Jerfey, or before the governor, and collector of the cuftoms refiding in the plantations' in America, if the was regiftered there, and none of the owners refide as above), of the lofs, and likewife of the name, burthen, built, property, and other particulars, required by $\%$ and 8 Will, 111. cap. 22. before the fame perfons, and in the fame mañer, as required upon original regiffets, and giving 5001 . fecurity, if the veffel be of the burthen of 100 tons, and in proportion for thips of greater burthen, to the collector of the port to which fhe belongs, that the certificato has not been, nor had be, fradulently difpoped of, or ufed contrary to law; and that when found, it hall be delivered to the commifioners of the cuftoms to be cancelied; and a certificate of the regifter is to be delivered to the owner by the proper officer, as diretted by the faid act of 7 and 8 Wili. III, mentioning the name by which he was former regifereg, and that this certificate is granted in purfuance of this ach x inftead of the former certificate, which appearis, by fuch proof as this act requires, to be loft, 15 and 16 Geo. II, gap. 3r. \$. 4.

A duplicate of the certificate is to be tranifmitted, by the officer who granted it, to the commiffioners of the cuftoms, 15 and 16 Geo. II. cap. 31. §. 4.

- All bonds, commonfy called plantation bonds, taken in Great Britain (in purfuance of 7 and 8 Will. III. cap. 22. or any other law), whereby the goods therein enumerated are to be brought to Grear Britain, are to be with condition, that within eighteen months from the date (the danger of the feas excepted), a eertificate thall be produced from the collector and cornptroller of the port where the goods are delivered, that they have been there landed and difcharged ; otherwife the bond to be forfeited, 15 and 16 Geo . II. cap. 3I. \$. 5.

But not to extend to bonds given to hips which lade rice at Carolina, or Geergia, purfuant ta 3 Geo. II. eap. 28. or which lade fugats in any of the fugar colonies in America, purfuant to 12 Gioo, II, cap. 30.15 and 16 Geo. II. gap. 3F. §. 5 .

- Britilh, in Afia, Africa, or America. --- No marines or perfon ferving on board any privateer or trading veffel, emploged in anty of the Britifh fugar colonies in America, or being on Ghore there, or at fea in any of thole parts, Thatl be liable to be impreffed by any officer belonging to a man of war (unlefs fuch mariner thot have deferted from fuch fhip of war) under the penalty of 50 I. ig Geo. II. cap. 30. §. r.
-- Every mafter of a trading veffel or privateer in thofe parts, before he receives any mariners into his fervice, is to make deligent enquiry whether fuch mariner bath deferted from any of his majefty's chips of war; any mafter receiving a mariner, who hath deferted, without reafonable endeavourment to difcover the fame, to forfeit 501.29 Geo. II. cap. 30 . §. 2.

Every mafter of fuch trading veffel or privateer before departure from any port in the faid fugar colonies, is to deliver, to the chief officer of the cuftoms an exact lift of all his men, containing names, ages, and defcription of perfons: on neglect thereof; the mafter to forfeit $\mathbf{1} 01$. for each man fo omitted; the officer of the cuftoms to return to the faid mafter an attefted copy of fuch lift : on the death or alteration of any feaman, fach lift to be immediately altered accordingly, and delivered to the naval-officer or chief officer of the cuftoms in any port where the fhip may arrive. All fuch liift to be produced and fhewn to the captains and other officers of his majeffy's navy, 29 Geo. II. cap. 30. §. 3, 4.

## QU A

UACK, a bold and confident pretender to the practice of the art of medicine.

AShortantidoteagainstigeneral Quackery.
Every one of common fenfe will allow, that he who is beft acquainted with the ftructure and ufe of any machine, will be beft able to repair it's diforders; and that he who ignorantly goes about to rectify any diforder therein, will make but a contemptible work, in comparifon with one who has made it the bulinefs of his life to be well acquainted with all the parts, and various ufes of it's motions and fprings: and the more exquifite this machine is, the greater degree of fkill will be required for the rectifying it's diforders. This is plain to the meaneft apprehenfion. Who, in his right fenfes, would fend for a bricklayer to mend a clock ?
I. The human body, may be properly confidered, as a moft perfect and noble machine, whofe parts are extremely well configurated, whofe fymmetry is moft beautiful, and whofe actions refulting from thefe admirable compages are reciprocally carried on by folids and fluids, of which the whole is conftituted. And as many of it's motions are eafily demonftrated by the confequences of it's ftructure, fo it's difeafes, are only the irregular motions or diforders of this complicated machine: nor is the cafe the leaft altered, by our having a principle within us, not fubject in itfelf to the laws of motion. II. It is, therefore, incumbent on every one, who would attain the due knowlege of the art of healing, that he make himfelf very well acquainted with this admirable piece of mechanifm. That knowing well the part, the natural actions, and fecretions of the human body, he may be enabled to judge, when and how thefe natural actions are perverted . all the fymptoms of difeafes, being the neceffary confequences of the alteration of the animal ceconomy; and without the knowlege of the fecretion, we cannot underftand the nature of difeafes, that principle being the great fpring of all the animal functions.
III. It is a maxim univerfally received among phyficians, That medicine fhould begin where philofophy ends. It is, undoubtedly, a neceffary qualification in a phyfician to be knowing in philofophy; and the natural actions and fecretions of the human body, is that part of philofophy, which is more efpecially conducive to the knowlege of the practice of phyfic, and therefore ought carefully to be ftudied by every phyfician. And he is a true phyfician, who moreover attends, as much as may be, to all poffible confequences; who does not heal one difeafe, by procuring a worfe, but reftores fuch a life as a man can enjoy.
The human fpirits and blood, are the principal feats of health as well as difeafe. As to thofe parts of the body defigned for ftrength and motion, they indeed fall not improperly under a furgeon's fkill. But the humours, fpirits, and blood, which are the feats of life, thefe and the animal fecretions are peculiarly under the confideration of phyficians; but are not yet fo perfectly underftood, even by the moft learned, as we could winh ; and until they are, there will be one fundamental deficiency in phyfic.
IV. Experience is doubtlefs of great ufe in promoting the art of curing difeafes, if directed by a knowlege in the parts of the human body and the animal fecretions; forafmuch as it is only by a juft reafoning on experience, that we can come at the full knowlege of any phznomenon of nature. So that experience, or the knowlege of the hiftories of difeafes, added to that of the animal ceconomy, is what can only make a phytician ; aud, wherever the hiftory of a difeafe is exactly known, if the right method of curing it cannot be deduced, it muft be, becaufe the knowlege of the parts of the human body, of their ufe, and of the animal fecretion, are not fufficiently underfood: for the fkill of phyficians in curing difeafes, whofe hiftories are exactly known, is, for the moft part, propotional to their knowlege of the animal œconomy: for in order to find out the feat and nature of a diftemper, and from thence to deduce a right method of cure, it will be abfolutely neeeffary to reafon on thofe hiftories; which we

## Q U A

cannot do as we ought, if we are ignorant of the fructure, ufe, and diforders of the machine we are about to rectify. V. Defcriptions and diagnoftic figns of difeafes, are the proper buffinefs of obfervation and experience ; but indications of cure, arife from reafoning upon thofe obfervations. Diagnoftics are properly a collection of particular fymptoms only, but indications are thofe conclufions, which our knowlege of the parts of the body and their ufe, enables us to make on thefe obfervations and defcriptions. So that the hiftories of difeafes, and the knowlege of the parts of the body and their ufe, muft always go hand in hand, in order to the obtaining the due knowlege of the practice of phyfic. He therefore, who is fufficiently knowing in philofophy and the animal ceconomy, and makes a proper ufe of this knowlege, by reafoning on real facts, grounded on repeated experience and obfervation; may juftly be faid to ufe his philofophy aright; and may then reafonably hope for fuecefs, in finding out the genuine indications of cure, in which the practice of phyfic chiefly confifts. And without this caution, our reafonings will certainly be to very little purpofe; for what is not deduced from genuine appearances, is mere hypothefis.
VI. The great Hippocrates has this affertion, That nature cures difeafes. The truth of it phyficians of this day may experience, if they will carefully keep up to his excellent directions and method; it being his only aim to relieve nature when oppreffed, in the very way and manner he obferved her endeavouring to expel difeafes. And it was by a conftant diligence of this kind, joined to his fuperlative fagacity, that he arrived to that high degree of perfection in the knowlege of phyfic. Hence he perceived, that nature herfelf judges difeares; and, indeed, does all, being properly affifted; nay, and fometimes without any affiftance.
VII. Hippocrates alfo informs us, and experience cannot but confirm it, that thofe people who have fevers, and are left to themfelves, and take no medicines, if they do recover, get rid of their fevers by fweating, a loofenefs, an bæmorrhage, diabetes, or the like. Hence Hippocrates, and the ancient practitioners in phyfic, took their firft intimation to provoke fweat and the other evacuations. And from their repeated obfervations and fucceffes, they have formed a moft rational method of cure. This affords a very ftrong confirmation of the neceffity of a careful and diligent obfervance of the tendencies of nature in all her diforders, and the method the takes to get rid of difeafes, when left to herfelf; and alfo a very good caution, not to be over hafty, or too bufy in the adminitration of remedies, left we fhould be found to ruffe and difturb, rather than affift nature, with the untimely vfe or multitude of medicines. The ne quid nimis in the prattice of phyfic, is a matter of no fmall confequence : he therefore is moft likely to prove the beft, moft prudent, and rational phyfician, who moft diligently obferves, and confantly follows, the motions and dictates of nature herfelf.
VIII. The many accurate and charming defcriptions of diftempers, delivered down to us by Hippocrates, in his Hiftories of Difeales, wherein the phoenomena of each ditemper, even in it's minuteft circumftances, are obferved, prefent us with an exquifite delineation of nature : and, if duly attended, will always be found of the greateft fervice for advancing the progrefs in the art of healing. Becaufe, from his diagnoftics in particular, though not excluding others of the Ancients, nor fuch among the Moderns, who have clofely copied after his manner, we readily difcover the nature of the difeafe. And as, whenever we arrive at the exact hiftory of any diftemper, we may, at all times, by the right application of the method of inveftigating difeafes, moft likely difcover the immediate caufe; fo may we likewife, on thofe principles, eafily come at the nature of the difeafe; when, having that given, it will be no d.fficult matter to find out remedies to cure, in all curable cafes, and to adminiter relief, even in thare which are incurable.
IX. This unwearied diligence in obfervation on nature, in the fagacious Hippocrates, and others of the Ancients, might probably be heightened in them, from the fcantinefs of their Materia

Materia Medica, and the exceeding feverity of the then known remedies, however much to our benefit; fince the excellent defcriptions of difeafes they had given us, cannot only never be exceeded, but will always remain invariably true, while human nature continues what fhe is. And had thofe of later ages, which have been fo happily provided with a more copious and falutary Materia Medica, and which, it mult be allowed, have been greatly improved in the knowlege of the animal oconomy: had thefe conftantly perfelege of the animal ceconomy: had the vered in the ufe of Hippocrates's great diligence and manner
of obfervation, they might, doubtefs, long ago, have brought the practice of phyfic to a confiderable degree of perfection, though they had not been bleffed with his extraordinary fkill: for that, indeed, is a peculiar happinefs, and the lot of very few; in which particular, we may, perhaps, fay of the phyfivian, as is commonly done of the poet, Nafcitur, non fit. X. Should we of this age, flufhed with our fuperior knowJege in the animal ceconomy, and the variety of our Materia Medica, neglect to make ufe of that prudence and diligence, which are neceffary in attending the motions of nature, and inftead of endeavouring to affift her on thefe principles, when oppreffed, become too precipitate, in the adminilfration of medicines; the confequence will inevitably be, that we fhall only oblcure the difeafe, by multiplying, rather than taking off, the fymptoms; and this to the perfonal confufion of phyficians; the manifeft injury of their patients, and the great difrepute of the profeffion. Whereas, would we confult the true and proper ufe of the many happy improvements of our own age, it cannot be done more effec: tually, than by keeping clofe to that mof k ulful leader Hippocrates, together with the other ancient practitioners in phyfic, in their manner of obferving, and in their method of healing; founded upon the knowlege of the conjunct caufe of diftempers, from whence alone, the curative indications are to be taken. And by a careful perfeverance in thefe methods, we may reafonably hope for the greateft fuccefs; and may, perhaps, in a few ages, arrive at the higheft perfection in the practice of phyfic, that human nature is capable of attaining.
XI. In order to cure any difeafe, it is neceffary to have a thorough knowlege of the difeafe itfelf, and of the remedy peculiarly adapted to it; it being impoffible to cure a difeafe according to art, if the nature of the difeafe be hid from the artift. And for want of this knowlege, the care and pains of many phyficians have proved ineffectual. Thefe phyficians, making little other ufe of the diagnoftic fymptoms than the mere naming the diftemper only, have injudicioufly taken their indications of cure from fecondary and cafual fymptoms: whereas the true nature of a difeafe is ever beft found out, from the diagnoftic figns or marks alone; and from thence alfo, the true indications of cure muft always be drawn, in order to the beft and moft effectual method of treating the difeafe. And as thefe indications wholly arife from our reafoning upon the obfervations we make of the appearance of nature; therefore, the greater our knowlege of the parts of the body and their ufe is, the better we fhall be emabled to find out the nature of the difeafe. For it is this knowlege which mult enable us, by reafoning upon the caufes, figns, and fymptoms of difeafes, to find out their nature, and to deduce true and juft indications of cure.
XII. Thus far in general. But now more exprefsly, to come at the true method of inveftigating and finding out the nature of all difeafes incident to the human body, and from thence proceed to the moft effectual methods of treating and curing them, the following particulars are abfolutely requifite, viz. that we be well acquainted with,

1. The next and ever concomitant caufe of the difeafe.
2. The next and ever concomi
3. The feat and part affected.
4. The ways and paffages through which the evil takes it's courfe.
5. The infeparable figns of the diftemper.
6. The fymptoms which commonly accompany the difeafe. And
7. That the fymptoms of the difeafe are rightly diftinguifhed. If the phyfician errs not in thefe effential points, he may be judged to be in the right way of arriving to an happy cure of the difeafe.
XIII. It is very neceffary at all times, carefully to diftinguifh between the difeafe itfelf, and the fymprom. An inadvertence in this article, has been the ftumbling-ftone of fome, even learned men, in all ages. Since it is to be imputed to the want of this diftinction, as a principal (if not the only) obftacle, that phyficians have been fo much at a lofs for the true caufe of the difeafe, and have therefore fo often taken the fymptom for the difeafe itfelf: not rightly diftinguifhing the next and immediate conjunct caufe, from it's fymptoms or accident; which may not be occafioned by the next and always accompanying caufe of the difeafe, but by fome other fymptom; and what is fo far from being the mark of the difeafe, that it is a fymptom of a fymptom only. XIV. In the common malady of the tooth-ach, for example, when it does not proceed from a caries or rottennefs, the geruine effence of thig difeafe is, the violent diftention or firetching of the periofteum, by fome fort of humour ; by which VOL. II.
means this membrane, being forced out of it's natural form and fituation, excites a moft exquifite pain; which pain is not the difeafe, but the true mark of the difeafe; and the humour occafioning this pain, the caufe of the difeafe. The inflammation, fever, fwelled face, \&c. which may fucceed, are none of them the true marks, but proceed from the pain, which is the true diagnoftic, fign, or mark of the difeafe, each of the above-mentioned being the fymptom of a fymptom only.
XV. The true marks or figns of a difeafe are fuch, as are prefent from the beginning, and, as it were, born with the diforder; they grow up therewith to it's height, abate alfo and vanifh with it. Thefe are the only fure marks or figns, Other figns or fymptoms which do not immediately follow the difeafe, nor any proper effects of it, and which do not always appear in the difeafe, are therefore deceitful figns, and not to be trufted to ; though fuch as have inadvertently milied fome fagacious men.
Thefe deceitful figns are not to be reckoned among the proper fymptoms of the difeafe, being only fuch as proceed from fome proper fymptom of the difeafe; and are, indeed, fymptoms of fymptoms only. For the true and proper diagnoftic marks or figns of the difeafe, muft always begin, grow up, decline, and vanifh with the difeafe itfelf; and from fuch marks only, we muft ever draw our indications of cure.
XVI. As to the fymptoms of any difeafe, the firft bufinefs is to diftinguith the fymptoms in general from the difeafe itfelf, and then to make a diftinction between the fymptoms themfelves: that is, the fymptoms which arife and vanifh with the difeafe, are to be diftinguifhed from thofe which are bred, not from the difeafe itfelf, but from the fymptoms of the difeafe: and the fymptoms as we before obferved, which immediately accompany the difeafe, and are born and die with it, are the only fure marks or figns of the difeafe.
XVII. To illuftrate this by our former familiar inftance of the tooth-ach : here the pain is the chief and moft grievous fymptom, but is neither the difeafe itfelf, nor the caufe of the difeafe; nor yet is it a fimple fymptom only, forafmuch as it is the caufe of other fymptoms which fucceed; as the fever, inflammation, fwelled face, \&xc. efpecially when the pain is violent. Thefe feveral accidents now mentioned, are caufed only by the raging pain of the tooth-ach (the true mark of the difeafe) and are fymptoms of a fymptom only. And farther, thefe accidents of fever, inflammation, fwelled face, \&c. are neither in whole nor in part the caufe of the tooth-ach; neither are they infeparable companions of the tooth-ach; for the tooth-ach may be, and often is, where thefe never appear: as to the fwelled face in particular", that neither begins nor ends with the difeafe, nor does it always accompany it; nor is it of the fame nature with the humour occafioning that violent pain, but is merely a fymptom of the tooth-ach, being raifed by the pain, and bred by confent of parts from an afflux of humours.
XVIII. Thus we fee plainly the method of finding out the nature and caufes of a difeafe, it's feat and part affected, it's diagnoftic and cafual fymptoms, and the neceffity of diftinguifhing thefe latter, not only from the difeafe itfelf, but alfo from one another: all which will make way to judge the better of a fir remedy to cure the difeafe, for we cannot reafonably hope for' a cure, before the difeafe be thoroughly underfood. And in this manner we mult come at the nature, caufe, and cure, of all difeafes.
XIX. From this method alfo of finding out the difternper, is difcovered, at the fame time, the only way of making a right and true prognoftic, which is no more than a declaration of a phyfician's expectation in curing a fick perfon. And this expectation can no otherwife be truly framed, than from the nature of the difeafe, the quantity and intenfenefs of it, the natural ftrength of the fick, and the power of medicines conjunetly. The knowlege, therefore, of prognoftics is not otherwife to be acquired, than by rightly inveftigating the diagnoftic marks of a difeafe, whereby it's nature is difcovered, with that of the quantity of the difeafe, and the ftrength of the patient, at the fame time: and as by this method, we are alfo led into the nature and power of medicines themfelves; fo here again, the very medicine reflects light, and, in fome meafure, confirms the knowlege of the difeafe: as Hippocrates well obferves - Medicina indicat morbum.
XX. Tbis then is the method, by which the nature of all XX. This then is the method, by which the nature of all
difeafes, to which human bodies are or may be liable, is difcovered. And fhould ever any altogether new and unheardof difeafe, at any time appear amongf mankind, this will be found the fure way of coming at it's nature, by only thus carefully recollecting, examining, and diftinguifhing it's fymptoms. This will of confequence direct to the moft proper method of curing, the knowlege of a difeafe being the firft flep towards it's cure.
"All the difficulty of philofophy,' rays the great Sir Iraac Newton, 'feems to conliff in this, from the phenomena ' of motions to inveftigate the forces of nature; and then, - from thefe forces, to demonftrate the other phænomena.' Agreeable to which, we obferve, that the fymptoms of any difeafe being given, it's nature may readily be difcovered.
XXI. The method of curing difeafes, by drawing indications from the evident and conjunct caufes, has always met with approbation, as from the beft, fo from the body of the moft learned phyficians in general. And as to the knowlege of thefe caufes, it is allowed, that can only be attained by a clofe and affiduous obfervation of all the appearances in the reveral ftages of the diftemper. Whoever, therefore, has ob tained an exact knowlege of the hiftories of difeafes, if he has alfo due regard to the diagnoltics, as by the method directed, may readily inveftigate their nature.
Natural philofophy and the hiftory of difeafes, as we obferved above, muft always contribute their joint-affiftance in improving the art of bealing; it not being poffible to make any ule of the latter, without a degree of knowlege in the former: and the greater our knowlege is of the parts of the human body, of their ufe, and of the animal fecretions, the better the nature of difeafes will be known.
XXII. We faid before, that the fymptoms of any difeafe being given, it's nature may be difcovered.
Now the fymptoms of every difeafe are no other than the effects of fome caufe, or caufes, which pervert and overturn the natural actions of one or more parts; for which reafon, by explaining thefe fymptoms, we become apprized of the perverted action, or difcover the difeafe: for nothing can be the caufe of a difeale; that does not produce the fymptoms, in which the nature of the difeafe conilits.
XXIII. Wherefore, the fymptoms of any difeale being given, it's nature may thence be difcovered; and the nature of a difeafe being affigned, we have alfo the methods of curing it. Farther, having the nature and caufes of any difeafe, we thall be able to determine how far the difeafe is curable or incurable; the probabilities of curing any diftemper, and the methods and medicines proper to be ufed in attempting it.
XXIV. The Ancients, as before obferved, have moft accurately defcribed the diagnoftic figns and marks of difeafes, together with their moft natural and fimple appearances. Whoever, therefore, is thoroughly acquainted with the hiftories, as deivered down to us by them, and is well verfed in the fructure and nature of the fluids and folids of the human body, may, from their diagnoftic figns, be able to difcover the nature and feat of the difeafe, and the productive caufe of it. By the fame means alfo, he will have it in his power to fhew in what manner the fymptoms, attending the difeafe, flow from it's nature, thus found out from it's fymptoms; and likewife be capable of perceiving how thefe fymptoms are cured, by changing the diftempered condition of the parts affected
XXV. But, in this examination of the nature of the difeafe rom it's fymptoms, we muft be moft careful, that every cafual and foreign fymptom be feparated from thofe which are conftant and permanent, in the manner the method more at large directs ; it being cafy, by obferving the rule there laid down, to diftinguifh the conftant and infeparable fymptoms from thofe, which are merely cafual and fecondary.
XXVI. The principal fymptoms are, for the moft part, eafy to be explained. The falfe fymptoms are moft commonly found among the fecondary fort, and are the fymptoms of fymptoms only; for which reafon they ought to be rejected from the number of fymptoms properly belonging to the difeare.
XXVII. Indications of cure muft be drawn from the nature of the difeafe, and not from their precarious fuppofed caufes, nor from their adventitious and cafual fymptoms: and there muft run an uninterrupted chain, from the diagnoftic figns of the difeafe, through it's nature and caufes, 'till it ends in a rational method of cure.
XXVIII. Thus we fee, that in order to cure any difeafe, the natural and practical way, is firt to collect the moft conftant fymptoms and effects of the difeafe. But in doing this, we muft always remember, that our utmof diligence will be neceffary, rightly to diftinguith the fymptoms: that in our collecting the genuine diagnoftic figns of any difeafe, we never fuffer the fecondary figns or fymptoms of fymptoms, to creep into the number of the genuine diagnoftic figns; for if we do, we fhall certainly render our enquiries into the true nature of the difeafe, almoft fruitlefs and impracticable whereas, by frielly obferving this caution, we thall readily difcover the difeafe and it's fymptoms, together with the caufes of both. And if we can come at the nature of the difeafe we are about to cure, there remains no difficulty as to the way of curing, be the appearances of the fymptoms never fo complicated.
XXIX. The direct method of cure being thus obvious, the probabilities of fuccefs muft be, as the nature of the diftemper we come to cure, and the efficacy of the medicines we adminifter, refpectively. And if we already difcover by reafon and practice, the peculiar ways in which the medicines made ufe of will act, we fhall be thereby inftructed, when medicines are moft properly adminiftered, and why they muft be continued or laid afide, which is the fum and fubftance of phyfic.
The application of thefe fentiments to the public benefit.
XXX. In confequence of what has been urged by the moft
learned phyficians, it muft appear to every man of common fenfe, to be a fad miftake, that has at prefent feized on many people, to imagine, That, if they are but well furnihed with books of recipes, or are poffeffed of a powerful medicine, they have every qualification fit for commencing Doctor; becaufe in thefe books and thefe medicines, as they thin; agreeable to the common faying, they are fure to find a faive for every fore.. But, a as! there bare empirical books, recive and medicines, the peft of the prefent age, will greatly de ceive them. They are by no means to be confided in bur, on the contrary, are to be looked upon as very injurious, forafmuch as they only furnifh all forts of people with great opportunities of deftroying each others health.
XXXI. And fhould any perfon pretend to fet up to practife phyfic on this deceitful foundation, he would foon find hime felf miferably milled, to the manifeft injury of himfelf, as well as of his patients. For it is moft certain, that every medicine, be it never fo good, muft always be adminitred in the moft proper dofe, and at the moft proper times of the difeafe, to make it of any advantage to the patient. This knowlege can no otherwife be come at, than in the arduous and diligent manner of ftudying above-mentioned, joined with the method of inveftigating the nature of difeafes. Nor is this the fole advantage which follows on the doctrine of inveftigation, fince it not only leads us into the true nature of the difeafe, and the certain method of cure, but alfor at the fame time, into the very nature and power of medicines themelves, if rightly attended to and applied. For the virtue of any medicine, is no other than it's power of eradicating the immediate caule of the difeafe; which effect is difcovered, from knowing, firft the nature of the difeale, and the different powers of medicine, are but the degrees of the fame virtue thus difcovesed : from whence we have confequently the direct and indirect actions of medieines, with their pofitive and comparative powers. And were it poffible, even to find out an univerfal remedy for all diftempers, it muft fill be fubject to the true dofing and timing: the accurate knowlege of which can no otherwife be obtained, than by the manner and method here laid down. And this, indeed, is the only true Arcanum in the practice of phyfic. All your Panaceas, Nostrums, Specifics, and the like, without this perfect knowlege of adminiftering them in the moft proper dofe, and at the moft proper times of the difeafe, will, for the moft part, prove very milchievous. And, indeed, thefe remedies can only, by the greateft hazard and chance imaginable, ever prove of good effect, in any difeafe of confequence. It is true, that in many cafes, let the medicine given be ever fo improper in itfelf, or ever fo unfeafonably adminiftered, the ftrength of nature may fometimes get the better of both, and the patient by that means luckily efcape: but this is by no means curing, nor can nature's fuccefsful effort be any excufe for ignorance and quackery.
XXXII. From what has been advanced, it is natural to conclude, that it is no eary matter to become a fkilful phyfician. Much reading, much thought and pains, will really be required: many things are neceffary to be learnt, much diligence in enquiry, and much affiduity in obfervation, are to be ufed, before any one can be duly qualified (either with peace of mind to himfelf, or relief to his patients) to undertake a truft, in which the lives of his fellow-creatures are fo nearly concerned.
XXXIII. If this be a juft fate of the cafe, what thall we fay of thofe perfons, who boldly take upon them the practice of phyic, without the leaft previous knowlege of the requifites abfolutely neceffary for the regular difcharge of this important office! Certainly, it can be no other than the higheft prefumption, for thofe to expect fuccefs, or hope for a bleffing on their endeavours, who are altogether ignorant of the province in which they engage. Would fuch perfons but ferioully confider the great confequence of phyfic, in the practical part of it, where life itfelf is fo immediately at flake, if they had any compafion for their fellow-creatures, they would not thus rafhly venture to adminifter medicines, before they bad acquired the proper and neceffary qualifications. But at prefent, by melancholy experience, it is too well known, that this nation fwarms with remorfelefs and cruel deftroyers, who daily delude and impore on weak and credulous people, with their never failing remedies, for every body, every cafe, and at all times, alike; to the infinite damage of the Public Healith. And were the fame art and induftry ufed to difcover the real mifchief done by this practiçe, as are ufed to publifh an accidental fuccefs, the ballance, on the whole, would appear formidable. But who can expect, that the crafty thould bewray and ruin their own craft? Thefe, indeed, are wife in their generation: but, that the fuffering patients fhould zealouly fupport thefe deceivers, to cover their own folly, is a flrange infatuation; yet fo it is. No wonder, therefore, that a few accidental cures fhould be fo much noifed abroad, when the deceivers and the deceived join in the cry to propagate the fatal delufion.
XXXIV. In order to qualify the phyfician to collea the fymptoms of difeafes from his patients, in a judicious and uieful manner, it will be abfolutely necerfary, befides an aciu-
rate aequaintance with the Atructure of the human body, that he be alfo well read in the hiftories of difeafes, delivered down to us by the Antients: for the great difficulty of collecting figns and fymptoms from the fick patients; fuch, we mean, as fhall direct to the nature of the difcafe; arifes not barely, either from want of perfonal fagacity, or ignorance in the animal ceconomy; but more efpecially, from being but fuperficially acquainted with the learning of the Antients in the particulars above: and, it is greatly to be feared, whenever the phyfician fails in diftinguilhing one difeafe from another, and the difeafe itfelf from their fymptoms in their patients; it is from their not being fufficiently acquainted with that molt perfect knowlege, which refults from the admirable defcriptions of antient phyficians.
XXXV. This method, therefore, of inveftigating the nature of difeafes, taken from the belt and moft antient phyficians, and leading to the moft fucceffful ways of curing all curable difeafes, and relieving the incurable, being the moft natural and certain rule of attaining the above-mentioned extenfive knowlege; we think it may not improperly be efteemed the very mafter-key to the judicious, and moft fucceffful praEtice of the art of phyfic. And, if thoroughly underftood, and properly applied, together with the knowlege of the great improvements made in our own times, with regard to the animal reconomy and Materia Medica, it will fafely conduct the phyfician from the threlhold of medicine, to it's confummation; and that with much greater expedition and fuccefs, than any other hitherto known method. As what has been fuggefted on this argument will be of uncommon fervice to the beginner, fo likewife will it continue to be the moft ufeful and neceflary companion we can affociate withal, through the whole courfe of medicinal praetice, by a right application in all the difeafes, and the varieties of them, which may at any time be met with in authors, or obferved from experience, whereby practitioners may moft likely come at the caure and cure of difeafes.
XXXVI. But here it may be objeCted ; why all this painstaking; why all this great diligence in enquiry, and great affiduity in obfervation; when the generality of mankind are fo weak as to prefer every bold pretender, before the regular phyfician? 'This, indeed, at firft view, feems very difcouraging, and fomewhat aftonifhing too! But then, let us confider, whether the phyficians be not blameable as well as the people, that QuAcKery is at prefent fo much in falhion ; for, if the phyfician neglects the neceffary qualifications, and fails of fuccefs among his patients, for want of proper knowlege and obfervation, which can only be acquired by the conftant and diligent pains-taking abovementioned; is it to be wondered at, that his patients Ahould feek elfewhere for affiftance, and thereby become a prey to every pretender and noftrum-monger? Whereas, when due care is taken that the phyfician be properly qualified, a reafonable fuccefs will, for the moft part, attend his practice; and, in that cafe, the patient would be much lefs liable to fall into the hands of impoftors and quacks. But alas! at prefent it is our great misfortune, through want of proper regulations, to have in this nation many more Doctors than Phyficians; and which is, indeed, one main reafon of the great increafe of suackery amongft us; for, was the practice of thofe who called themfelves doctors, attended with any reafonable fuccefs, their patients would not fo readily apply to quacks and pretenders, in preference to the accomplifhed phyfician: in all times, indeed, there has not been wanting a fatal fondnefs, more or lefs, amone weak and ignorant perfons, in favour of noftrums and infallibility; but that diforder in thefe prefent times is fo increafed, that it calls loudly for the utmoft care and compafion of our legillature.
XXXVII. Many medicines given as noftrums, and advertifed as infalible, we very well know, are taken from the prefcriptions of eminent and learned Physicians; which the quacks, thofe deftroyers of health, in fome meafure difguife, and then call them after their own names, in order to deceive the people into an opinion of their fkill, and to intitle themfelves to patente and rewards. But who fees not, that there remedies, excollent, and of great efficacy in the cure of difeafes, if judiciounly adminiftered ; may yet prove (by a promilcuous and unfkilful ufe) of the very utmoft hurt and damage to mankind? Thus are the inftruments of health wickedly wrefted out of the phyfician's hands: and what was contrived and defigned by them for the public good, by this great abufe, becomes a public mifchief, and a falutary remedy is turned into a poifon, by the random ufe and improper application of it. Now if medicine has ever been, or can be brought to be of real ufe to mankind, it is moft likely to become fo, when in the hands of difcreet and learned phyficians; and a very little reflection, cannot but convince every man of common fenfe and humanity, that to fuffer an unikilful and promifcuous ufe of medicines, muft needs be of dangerous confequences to the public, and productive of great evil. But againft this great evil, the pruJent phyfician has no other remedy, than the duly qualifying himfelf and others, to the beft of his power, for that important office, the practice of phyfic ; and it is only from the wifdom of the leginature, that an effectual redrefs of $\mathrm{f}_{0}$
pernicious a diforder, as the quackery now reigning among the weaker fort of people, muft be expected; if fuch a one can be found out. Nor can it be doubted, that the weakeft among the people have a juft right to all that protection and prefervation, which the guardians of their lives and properties can equitably procure them : and would the leginature, at the fame time, be pleafed not to fuffer any perfon to adminifter medicines, until they had given proper teftimonials of their qualifications for that important office, the benefit of his majefty's fubjects, from fuch a regulation, would be unfpeakable.

## Remarky.

QUACKERY having in our days become a branch of traffici in this nation, of as pernicious and dangerous a tendency to the lives of his Majefty's fubjects as a general plague; we have thought proper to take notice of it, hoping that fome effectual remedy may one day be taken by the parliament, to prevent a deftructive trade, that frikes at the root of all others.
QUARANTINE, i. c. forty, a denying entrance into a healthful place for 40 days, to thofe perfons that are fuppoted to come from any infected place.

## The Laws of England relating thereto.

An act to oblige thips more effectually to perform their quarantine; and for the better preventing the plague being brought from foreign parts into Great Britain or Ireland, or the infes of Guernfey, Jerfey, Alderney, Sark, or Man.
Whereas it is neceffary that fome provifion be made by parliament, for obliging fhips and perfons coming from places infected with, or frequently fubject to, the plague, to perform quarantine in fuch manner as hath been, or fhall be, ordered by his Majefty, his heirs, or fucceffors; and for punifhing offenders therein, in a more expeditious manner, than can be done by the ordinary methods of law ; be it enacted, by the king's moft excellent Majefty, by and with the advice and confent of the lords fpiritual and temporal, and commons, in parliament affembled, and by the authority of the fame, That all fhips and veffels arriving, and all perfons, goods, and merchandizes whatfoever, coming, or imported into any port or place within Great Britain or Ireland, or the ifles of Guernfey, Jerfey, Alderney, Sark, or Man, from any place from whence his Majefty, his heirs, or fucceffors, by and with the advice of his or their privy council, fhall judge it probable that the infection may be brought, fhall be obliged to make their quarantine in fuch place and places, for fuch time, and in fuch manner, as hath been, or fhall, from time to time, be directed by his Majefty, his heirs, or fucceffors, by his or their order or orders, made in his or their privy council, and notified by proclamation, or publifhed in the London Gazette; and that until fuch thips, veffels, perfons, goods, and merchandizes, thall have refpectively performed, and be difcharged from fuch quarantine, no fuch perfon, goods, or merchandizes, or any of them, fhall be brought on fhore, os be put on board any other fhip or veffel, in any place within his Majefty's dominions, unlefs in fuch manner, and in fuch cafes, and by fuch licence, as thall be directed or permitted by fuch order or orders made by his Majefty, \&xc. in council as aforefaid; and that all fuch fhips and veffels, and the perfons or goods imported in, or being put on board the fame, and all hips, vefiels, boats, and perfons, receiving any goods or perfons out of the fame, fhall be fubject to fuch orders, sules, and directions, concerning quarantine, and the prevention of infection, as have been, or thall be made by his Majefty, sce. in council, and notified by proclamation, or publifhed in the London Gazette as aforefaid.
And it is hereby further enacted by the authority aforefaid, That if the plague thall appear on board any fhip, being to the northward of Cape Finifterre, the mafter, commander, or other perfon having charge thereof, fhall immediately proceed to the harbour of New Grimfoy in the inlands of Scilly, where being arrived, he fhall make known his cafe to fome officer of the cuftoms there, who fhall immediately acquaint fome cuftom-houfe officer of fome near port of England thereof; and the faid cuftom-houfe officer fhall, with all poffible fpeed, fend up the intelligence thereof to one of his Majefty's Principal Secretaries of State, that fuch meafures may be taken for the comfort and fupport of the crew of fuch fhip to infeeted, and fuch precautions ufed to prevent the fpreading of the infection, as the cafe fhall require; and the faid fhip fhall remain at the faid inlands of Scilly, 'till his Majefty's pleafure be known ; nor thall any of her crew go on thore; but in cafe the faid mafter, commander, or other perfon having charge of the faid Chip fo infected, fhall not be able to make the faid illands of Scilly, or thall be forced by ftrefs of weather, or otherwife, to go up either of the channels, he Chall not prefume to enter with fuch fhip into any port, but hall remain in fome open road, 'till he receives orders from his Majefty, or his privy council, and fhall take care to prevent any of his thip's company from going out of his thip, and to avoid all intercourfe with other ihups or per-

## QU A

Yons; and the faid mafter, or any other perfon on board fuch thip as aforefaid, who fhall be difobedient herein, fhall be adjudged guilty of felony, and thall fuffer death as in cafes of felony, withour benefir of clergy; and every fuch offence fo made felony, thall, and may be enquired of, heard, and determined, in the county where the offence fhall be committed, or elfe in the county where the offender fhall be apprehended.
And to the end that it may be better known whether any Ship or vefiel be actually infeded with the plague, or whether fuch thip or veffel, or the mariners or cargo coming and imported in the fame, are liable to any orders touching quarantine; be it further enacted by the authority aforefaid, That when any country or place is, or fhall be, infected with the plague; or when any order or orders is, are, or thall be made by his Majefty, his heirs, or fucceffors, concerning quarantine, and the prevention of infection, as aforefaid, as often as any thip or veffel fhall attempt to enter into any port or place in Great Britain or Ireland, or of the ines of Guernfey, Jerfey, Alderney, Sark, or Man, the principal officer of his Majefty's cuftoms in fuch port or place, or fuch perfon as Shall be authorized to fee quasantine duly performed, fhall go off, or caufe fome other perfon, to be by him appointed for that purpore, to go off to fuch hip or veffel ; and fuch officer, or other perfon authorized to fee quarantine performed, as aforefaid, or the perfon fo by him appointed for that purpofe, Shall, at a convenient diftance from fuch thip or veffel, demand of the commander, mafter, or other. perfon having chayge of fuch thip or veffel; and fuch commander, mafter, or other perfon having charge of fuch thip or veffel, Thall, upon fuch demand, give a true account of the following particulars: that is to fay, the name of fuch hip or veffel: the name of the commander, or perfon having charge thereof; at what place or places the cargo was taken on board; what place or places the fhip or veffel touched at in her voyage; whether fuch places, or any, and which of them were infected with the plague; how long fuch fhip or veffel bad been in her paffage; how many perfons were on board when the faid hip or veffel fet fail; whether any, and what perfons, during that voyage on board fuch fhip or veffel, had been, or thall be then infected with the plague; how many died in the voyage, and of what diftemper ; what Chips or velfels he, or any of his Chip's company, with his privity, went on board, or had any of their company come on board his thip or veffel in the voyage; and to what place fuch hips or veffels belonged; and alfo the true contents of his lading, to the beft of his knowlege : and in cafe it thall appear upon fuch examination, or otherwife, that any perfon then on board fuch fhip or veffel thall at the time of fuch examination be actually infected with the plague, or that fuch thip is obliged to perform quarentine, in fuch cafe it fhall and may be lawful to and for the officers of any of his Majefty's hips of war, or any of his Majelty's forts or garrifons, and all other his Majefty's officers whom it may concern, upon notice thereof given to them, or any of them refpectively, and to and for any otber perfon or perfons whom they thall call to their aid and affiftance, and they are hereby required to oblige fuch thip or veffel to go and repair to fuch places as has been, or fhall be appointed for performance of quarantine, and to ufe all neceffary means for that purpofe, be it by firing of guns upon fuch thip or veffel, or any other kind of force or violence whatfoever; and in cafe any fuch hip or veffel thall come from any place vifited with the plague, or have any perfon on board actually infected, and the commander, mafter, or other perfon having charge of fuch thip or veffel, thall conceal the fame, fuch commander, mafter, or other perfon having charge of fuch thip or veffel, fhall be adjudged guilty of felony, and Chall fuffer death as in cafes of felony, without benefit of clergy; and in cafe fuch commander, maffer, or other perfon having charge of fuch fhip or veffel, Thall upon fuch demand made, as aforefaid, not make a tue difcovery in any other of the particulars aforefaid, fuch commander, mafler, or other perfon having charge of fuch fhip or veffel, for every fuch offence hall forfeit the fum of 2001. one moiety thereof to the king, and the other to him or them who fhall fue for the fame, by action of debt, bill, plaint, or information, in any of his Majefty's courts of record at Weftmintter, Edinburgh, Dublin, or in the proper courts, of the inles of Guernicy, Jerfey, Alderney, Sark, or Man, refpectively.
And be it further enacted, That every mafter, commander, or other perfon having charge of any thip or veffel, which fhall be ordered to perform quarantine as aforefaid, thall, after his arrival at the place appointed for the performance of his quarantine, deliver on demand to the chief officer appointed to fee quarantine duly performed there, fuch bill of health, and manifeft, as be fhall have received from any Britifh conful during his voyage, together with his log-book and journal, under penalty of forfeiting 5001 . one moiety thereof to the king, the other moiety to him or them who fhall fue for the fame, by action of debt, bill, plaint, or information, in any of his Majefty's courts of record at Weftminfter, Ediaburgh, Dublin, or in the proper courts of the infes of Guernley, Jerley, Alderney, Sark, or Man, refpectively.

And be it further enacted, That if any commander, mafter, or other perfon having charge of any thip or veffel liable o perform quarantine, having notice thereof, fhall bimfelf quit, or thall knowingly permit or fuffer any feamen or paf fenger coming in fuch fhip or veffel, to quit fach hip or veffel, by going on fhore, or by going on board any other thip, boat, or veffel, before fuch quarantine thall be fully performed, unlefs in fuch cafes, and by fuch proper licence, as thall be directed or permitted by fuch order or orders made, or to be made, concerning quarantine, and the prevention of infection, as aforefaid; or in cafe any commander, mafter; or other perfon having charge of fuch fhip or veffel, fhall not, within convenient time, after due notice given for that purpofe by the proper officer, caufe fuch thip or veffel, and the lading thereof, to be conveyed into the place or places appointed for fuch hip, veffel, and lading, to perform quarantine refpectively; then, and in every fuch cafe, every fuch commander, mafter, or other perfon having charge of fuch Mip or veffel, for every fuch offence fhall forfeit 500 l . one moiety thereof to the king, his heirs, and fucceffors, and the other moiety to him or them who will fue for the fame ; and alfo if any perfon hall fo quit fuch thip or veffel, by going on thore, or by going on board any other thip or veffel, contrary to the true meaning of this act, it fhall and may be lawful for all perfons whatfoever, by any kind of force and violence, to compel. fuch perfon to return on board fuch fhip or veffel; and every fuch perfon fo quitting fuch hip or veffel Chall, for every fuch offence, fuffer imprifonment for the fpace of fix months, and thall alfo forfeit the fum of 2001. one moiety to the king, his heirs, and fucceffors, the other moiety to him or them that will fue for the fame; the fame refpective penalties and forfeitures to be secovered by action of debt, bill, plaint, or information, in any of his Majefty's courts of record at Weftminfter, Edinburgh, Dublin, or in the proper courts of the ifles of Guernfey, Jerfey; Alderney, Sark, or Man, refpectively.
And be it further enacted, That, whenever his Majefty, bis heirs, and fucceffors, by and with the advice and confent of parliament, fhall direct houfes or lazarets to be provided for the receiving and entertaining of perfons obliged to perform quarantine, or for the depofiting, opening, and airing of goods and merchandizes liable to perform quarantine as aforefaid, it fhall and may be lawful to erect the fame, either in any wafte ground or commons, or where fuch wafte ground or commons are not fufficient, in the feveral grounds of any perfon or perfons whatfoever, not being a houfe, park, garden, orchard, yard, or planted walk, or avenue to a houfe, paying fuch rate, rent, or confideration for the fame, to the perfon interefted therein refpectively, according to their feveral interefts in the fame, as thall be agreed on between the perfons fo interefted, their guardians or truftees, and any two perfons to be appointed for that purpofe by his Majefty, his heirs, or fucceffors, under his or their fign manual; and in cafe of any difference concerning fuch rate, rent, or confideration, between the perfons fo interefted, their guardians, or truftees, and fuch perfons fo to be appointed by his Majefly, his heirs, or fucceffors, as aforefaid; then, and in fuch cafes, the faid perfons fo to be appointed by his Majefty, his heirs, and fucceffors, may, and are hereby authorized, thirty clear days before any general quarter feffions of the peace to be holden for the refpective counties or divifions where fuch grounds fhall refpectively lie, as aforefaid, to give, or caufe to be given, to the occupier or occupiers of lach feveral grounds, or to be left at their laft places of abode refpectively, a notice in writing, deferibing the quantity of ground fo directed by his Majefty, his heirs, and fucceffors, by and with the advice and confent of parliament, for the purpofes aforefaid, and purporting that the rent or confideration of fuch ground will be adjufted and fettled by a jury of the faid feffions; and the juftices at their faid feffions, upon proof to them made that fuch notices have been given, fhall, and are hereby authorized and required to charge the jury which Chall attend at the faid feffions, or fome other jury of twelve honeft and fubitantial men (to be then and there impannelled and returned by the fheriff of the county, without fee or reward) and caufe to be fworn, well and truly on their oath, to affefs the value of the ground comprized in the faid notices, and the rent or confideration to be given for the fame to the refpective owner or owners thereof, according to their refpective interefts therein; which oath the faid juftices are hereby required to adminifter to the faid jury, and to which faid jury the faid perfons to be appointed by his Majenty, his heirs, and fucceffors, and the parties interefted in fuch ground, fhall have their lawful challenges; and the faid jury being fo fworn and charged as aforefaid, after proper evidence on oath given to them, fhall by their verdica affefs the rent or conf deration to be given for fuch ground to the refpective owner or owners thereof, according to their refpective interefts therein; which verdict of the faid jury, and judgment of the faid juftices thereupon, fhall be conclufive and finally bind all parties; and that from and after fuch verdict and judgment, his Majefty, his beirs, and fucceffors, fhall and may hold and enjoy fuch ground, for and during all fuch time and terms as his Majefty, his heirs, and fuccellors, thall judge neceflary for
the purpofes aforefaid, paying for the fame fuch rate, rent, or 'other confideration, as hall be agreed upon, or affefled and adjudged, as aforefaid.
And be it further enasted, by the authority aforefaid, That the proper officers authorized to put in execution fuch orders made, or to be made, as aforefaid, hall, and they are hereby empowered and required to caufe and compel all perfons obliged to perform quarantine, as aforefaid, and all goods and merchandizes comprized within any fuch orders made, or to be made, as aforefaid, refpectively to repair, or be conveved to fome of the faid houfes, or lazarets, or to fuch other places as thall be provided for the reception of fuch perfons, goods, or merchandizes, or for the opening and airing of fuch goods and merchandizes, according to fuch order or orders made, or to be made, as aforefaid.
And be it further enacted, That if any perfon obliged to perform quarantine, as aforefaid, 亻hall wilfully refufe or negleat to repair, within convenient time after due notice for that purpofe given to him, her, or them, by the proper officer, to the houfe, lazaret, or other place duly appointed for him, her, or them, or, having been placed in fuch houfe or lazaret, or other place, fhall efcape, or attempt to efcape out of the fame, before quarantine be fully performed, it fhall and may be lawful to and for the watchmen, and other perfons appointed to fee quarantine performed, by fuch force as the cafe thall require, to compel every fuch perfon fo refufing or ncglefting as aforefaid, and every fuch perfon fo efcaping, or attempting to efcape, as aforefaid, to repair or return into fuch houfe, lazaret, or other place fo appointed for him or her, as aforefaid; and every fuch perfon fo refufing or neglecting to repair, within convenient time after fuch notice, as aforefaid, into fuch houfe, lazaret, or other place appointed for him or her, as aforefaid; and alfo every perfon actually efcaping, as aforefaid, fhall be adjudged guilty of felony, and Shall fuffer death as a felon, without benefit of clergy.
And whereas difobedience, or refractory behaviour in perfons under quarantine, may be attended with great danger and inconvenience, be it further enacted, by the authority aforefaid, That all perfons liable to perform quarantine, whether in Chips, lazarets, or elfewhere, thall be fubject, during the faid quarantine, to fuch orders as they thall receive from the proper officers authorized to fee it duly performed; and the faid officers are hereby impowered and required to inforce all neceffary obedience to their faid orders, and may, in cafe of neceffity, call in others to their affiftance, and'all perfons fo called are hereby required to affift accordingly.
And be it further enacted, That if any perfon, not infected with the plague, nor liable to perform quarantine, fhall enter any houfe, lazaret, or other place fo appointed, as aforefaid, whilft any perfon or perfons infected with the plague, or being under quarantine, fhall be therein, and fhall return, or attempt to return from thence, unlefs in fuch cafes, and by fuch licence as fhall be directed, or permitted by fuch order or orders, made or to be made, as aforefaid, it thall, and may be lawful to and for the watchmen, or other perfons appointed to guard or fecure fuch houfe, lazaret, or other place fo appointed as aforefaid, by fuch force as the cafe fhall require, to compel fuch perfon fo returning, or attempting to return, to repair into fuch houfe, lazaret, or other place fo appointed as aforefaid, there to continue and perform quarantine ; and, in cafe fuch perfon fhall actually efcape out of fuch boufe, lazaret, or other place, where he or the fhall be So placed for performance of quarantine, before he or the thall have fully performed the fame, he or the fhall be adjudged guilty of felony, and thall fuffer death as a felon, without benefit of clergy.
And it is hereby further enacted, That if any officer or officers of his Majefty's cuftoms, or any other officer or officers, perfon or perfons whatfoever, to whom it doth or fhall appertain to execute any order or orders made, or to be made, concerning quarantine, or the prevention of infection, and notified as aforefaid, or to fee the fame put in execution, thall be guilty of any wilful breach or neglect of his or their duty in that behalf, every fuch officer and perfon fo offending, thall forfeit his office or employment in the cuftoms, or any other office or employment, and fhall become from thenceforth incapable to hold or enjoy the fame, or to take a new grant thereof, and forfeit the fum of one hundred pounds, one moiety thereof to the king, his heirs, and fucceffors, and the other moiety to him or them who fhall or will fue for the fame, by action of debt, bill, plaint, or information, in any of his Majefty's courts of record at Weftminfter, Edinburgh, Dublin, or in the proper courts of the ifles of Guernfey, Jerfey, Alderney, Sark, or Man, refpectively, and if any fuch officer or perfon thall embezzle, or thall knowingly and willingly damage any goods performing quarantine under bis direction, he fhall be liable to pay treble damages, and full cofts of fuit.
And whereas certain fpecies of goods and merchandizes are more efpecially liable to retain inf. ction, and may be brought fom places infected into other countries, and from thence imported into his Majefty's dominions in Mips not obliged to perform quarantine, be it enacted by the authority aforefaid,
Vol. II

That all fuch goods and merchandizes as are of thall be particularly feecified for that purpofe, in any order or orders made or to be made concerning quarantine, and the prevention of infection, as aforefaid, which thall be imported into any of his Majefty's dominions from any foreign country or place, in any thip or veffel whatfoever, fhall be fubjeed and liable to fuch order or ordess made or to be made, concerning quarantine, and the prevention of infection as aforefaid.
And it is hereby further enacted, That, after quaratine fhall have been duly performed by any fhip or veffel, perfon or perfons, obliged to perform quarantine, according to fuch order or orders made as aforefaid, and the act, and upon proof to be made upon the oaths of the mafter, or other perfon having charge of fuch thip or veffel, and of two of the perfons belonging to fuch fhip or veffel, or upon proof to be made by the oaths of two or more credible witneffes, before the cuftomer, comptroller, or collector of the port where fuch quarantine fhall be performed, or the next port thereunto, or before any of their deputies, or any juftice of the peace living near to fuch port, or where fuch quarantine fhall have been performed, within any of the faid ifles of Guernfey, Jerfey, Alderney, Sark, or Man, before any two jurats or magiftrates of any of the faid ifles refpectively (which perfons are hereby authorifed and required to adminifter fuch oath) that fuch fhip or veffel, and all and every fuch perfon and perfons refpectively, have duly performed quarantine as aforefaid; and that the fhip or veffel, and all and every fuch perfon and perfons, are free from infection; and after producing a certificate to that purpofe, figned by the chief officer who fuperintended the quarantine of the faid fhip: then, and in the faid refpective cafes, fuch cuftomer, comptroller, or collector, or any of their deputies, together with the faid juftice of the peace, or fuch jurats or magiftrates as aforefaid refpectively, are hereby required to give a certificate thereof; and thereupon fuch thip or veffel, and all and every fuch perfon and perfons, to having performed quarantine, fhall be liable to no further reffraint or detention upon the fame account for which fuch thip or veffel, perfon or perfons, thall have performed quarantine as aforeflaid.
And it is hereby further enacted, That the officer before whom fuch oath thall be made, and by whom fuch certificate thall be given, thall, for fuch refpective oath and certificate, demand or take no fee or reward whatfoever
Provided neverthelefs, and it is hereby enacted, That all goods, wares, and merchandizes, liable to quarantine, as aforefaid, fhall be opened and aired in fuch place or places, and for fuch time, and in fuch manner, as hall be directed by his Majefty, by fuch order or orders to be made as aforefaid; and after fuch orders thall have been duly complied with, and a certificate thereof given by the chief officer appointed to fuperintend the quarantine and airing of fuch goods, wares, and merchandizes, and proof fhall be made thereof, by the oaths of two or more credible witneffes, before the cuftomer, comptroller, or collector of the port lying next to fuch place or places where fuch goods, wares, or merchandizes, fhall have been opened and aired as aforefaid, or any of their deputies, or any jultice of the peace living near the fame, or before any two jurats, or magiftrates of the faid ifles of Guernfey, Jerfey, Alderney, Sark, or Man, refpectively (who are bereby authorized and required to adminifter fuch oath) upon certificate and return of fuch proof by fuch cuftomer, comptroller, or collector, or any of their deputies, or fuch two jurats, or magiftrates, as aforefaid (who are hereby refpectively required to make fuch certificate and return to the commiffioners appointed for the management of the cuftoms of Great Britain or Ireland, or to the governor or commander in chief, being upon the place, in the ifles of Guernfey, Jerfey, Alderney, Sark, or Man, refpectively) fuch goods, wares, and merchandizes, fhall be forthwith difcharged from any reftraint or detention upon the fame account, by order of the faid commiffioners, or any two of them, or of the faid governor or commander in chief of any of the faid inles as aforefard, refpectively; for every of which oath, certificate, and order, no fee or reward whatfoever Mall be demanded or taken.
Provided always, and be it enacted, That if any officer, or other perfon, fhall demand or take any fee or reward whatfoever for any fuch oath, order, or certificate, to be adminiftered or made in putfuance of this act, every perfon fo offending thall forfeit the furn of one hundred pounds, one moiety whereof to his Majefty, and the other to him or them who fhall fue for the fame, by action of debt, bill, plaint, or information, in any of his Majefty's courts of record at Weftminfter, Edinburgh, Dublin, or in the proper courts of Guernfey, Jerfey, Alderney, Sark, or Man, refpectively; in which cafe treble colts fhall be allowed to either party, as in other cafes.
And be it further enacted, \&c. That if any officer, or other perfon appointed to fee quarantine duly performed, or any perfon placed or appointed as a watchman upon any houfe, lazaret, thip, or other place for performance of quarantine, n purfuance of this act, fhall defert from their duty, when employed on the fame bufincfs of quarantine, or fhall know 7 K
ingly
ingly and willingly permit or fuffer any perfon, fhip, goods, or merchandizes, to depart or be conveyed out of fuch houfe, lazaret, hip, or other place refpectively appointed for performance of quarantine, unlefs in fuch cafes, and by fuch licence, as are of thall be directed or permitted, by fome order or orders made, or to be made, as aforefaid; or if any perfon, directed as aforefaid to give a certificate of a Chip's having duly performed her quarantine, or airing, hall knowingly give a falfe certificate, then, and in every of the faid cafes, every fuch officer and perfons fo offending, faall fuffer death, as in cales of felony, without benefic of clergy.
And be it further enacted, \&c. That if any perfon or perfons fhall knowingly or wilfully conceal from the officers of quarantine, or fhall clandeftinely convey any letters, goods, wanes, or merchawdize, from any frip under quarantine, or liable to perform quarantine, by any fuch order to be made as aficrefaid, or from any lazarct, or other places where goods hall be performing quarantine, every'fuch perfon fo offending, Thall fuffer death, as in cafes of felony, without benefit. of clergy.
And whereas it is notorious that, notwithflanding the many goad laws made to prevent the clandeftine importation' of cuftomable and probibited goods and merchandizes, a pernicious trade of that kind is ftill carried on, for the moft part in open boats or veffels, of fmall burthen, which privately, and in the night, put into creeks and fecret places on the coaft, thereby efcaping the obfervation of the officers of the cuftoms, which practices may prove highly detrimental to the fafety of thefe kingdoms during a time of infection; for prevention thereof, be it enacked, by the authority aforefaid, That, when any part of Great Britain, Ireland, or the illands of Guernfey, Jerfey, Alderney, Sark, or Man, or France, Spain, Portugal, or the Low Countries, thall be infected with the plague, it Shall and may be lawful to and for his Majefty, \&ce, by his or their proclamation, to prohibit and reftrain all fmall boats and veffels, under the burthen of 20 tons, from failing or paffing out of any port or place of Great Bricain or Ireland, or the intes of Guernfey, Jerfoy, Alderney, Sark, or Man, or any of them, until fecurity be firft given by the mafter of every fuch boat or veffel refpectively, to the fatisfaction of the principal officers of the cuftoms, or the chief magiftrate of the port or place from whence fuch boat or veffel fhall fail, by bond taken to the king, his heirs or fucceffors, with fufficient fureties, in the peralty of 300 I . with condition, that if fuch boat or veffel fhall not go to, or touch at, any country, port, or place, to be mentioned for that purpofe in fuch proclamation, and if the mafter, or other perion havihg chafge of fuch boat or veffel, and all and every mariner and mariners, paffenger and paffengers, going in fuch boat or veffel, thall, during the time aforefaid, not go on board any other Ship or veffel at fea; and if fuch matter, or otber perfon, having charge of fuch boat or veffel, fhall not permit or fuffer any perfon or perfons to come on board fuch boat or veffel at fea, from any other fhip or vefiel, and fhall not, during the time aforefaid, receive any goods and merchandizes whatfoever out of any other thip or veffel, then fuch bond thall be void, or to fuch effect ; for the making of which bond, no fee or seward whatfocver flall be taken; and in cafe any boat or veffel for which fuch fecurity thall be required by fuch proclamation, fhall fet fail, or pafs out of any port or place of Grea Britain or Ireland, or the illands of Guernfey, Jerfey, Alderney, Sark, and Man, or any of them refpectively, before fuch fecurity be given as aforefaid, every fuch boat or veffel, fo failing, or paffing out of any port or place, contrary to the true intent and meaning of this act, together with her tackle, apparel, and furniture, fhall be forfeited to the king, sic. and fhall and may be feized, fued for, and recovered in bis Ma jefty's court of Exchequer at Weftminfter, Edinburgh, or Dublin, or in the proper courts of the ines of Guerniey, Jerfey, Alderney, Sark, or Man, refpectively, to the ufe of his Majefty, \&c. and the mafter of, and every mariner failing in any fuch boat or veffel, being thereof lawfully convicted, upon his or their appearance or default, upon the oath or oaths of one or mote credible witnefs or witneffes, by one or more juftice or juftices of the peace, where fuch offender thall be found (which oath fuch juftice or juftices of the peace are hereby impowered and required to adminitter) fhall forfeit the fum of 201 . one moiety thereof to the informer, and the other moiety to the poor of the parifh where fuch of fender thall be found, the fame to be levied by diftrefs and fale of the offender's goods, by warrant under the hand and feal, or the hands and feals of fuch juftice or juftices before whom fuch offender fhall be convitted, as aforefaid; and, for want of fufficient diftrefs, every fuch offender thall, by fuch juftice or juftices, be committed to prifon, there to remain without bail or mainprize, for the face of three months and, in cafe any fuch offender thall be found in any of the faid inles of Guernfey, Jerfey, Alderney, Sark, or Man, and Ghall be lawfully convicted of fuch offence, in any action or fuit to be founded on this act, in the proper court of any of the faid inles where he fhall be fo found, fuch offender thal forfeit the fum of 201 . one moiety thereof to the informer, and the other moiety to the poor of the parifh or place where fuch offender thall be found; and, in default of paying fuch
peralty, fhall fuffer imprifonment, without bail or mainprize for the fpace of three months.
And, to the end that all perfons may know how to demean themfelves in the premifes, be it further enated, by the authority a forefaid, That whey and as often as his Majefty, bis beirs or fucceffors, thall make any order or orders concerning quarantine, and the prevention of infection, and notify the fame by proclanation, or caufe the fame to be publifhed in the London Gazette, as aforefaid, fuch proclamation, or order or onders in council, as aforefaid, flatl be pablickly read upon the next Sunday on which divine fervice Shall be performed after the receipt of the fame, and the firf Sunday in every month afterwards (during the time fuch orders thall continue in force) immediately after the prayers, in all parifh churches, and other places fet apart for divine worlhip, within fuch counties and places as fhall be fpecified for that purpofe in fuch proclamation or orders refpectively. And be is further enacted, by the authority aforefaid, That if any action or fuit Chall be commenced againt any perfon or perfons, for any thing done in purfuance of this act, the defendant or defendants in fuch action or fuit, may plead the general ilfue, and give this act, and the feccial matter in evidence, at any trial to be had thereupon, and that the fame was done in purfuance, and by the authority of the faid act; and if it thall appear fo to have been done, then the jury fall find for the defendant or defendants; and if the plaintiff hall be nonfuited, or difcontinue his action, after the defendant or defendants fhall have appeared, or if judgment hall have been given, upon any verdict or demurrer, againft the plaintiff, the defendant or defendants thall and may recover treble coifts, and have the like remedy for the fame, as the defendant or defendants hath or have in other cafes by law.
Provided always, and it is hereby enacted, That no attainder of felony, by virtue of this act, fhall extend to work any corruption of blood, or forfeiture of any goods, chattels, lands, tenements, or heredieaments.
And it is hereby further enaeted, by the authority aforefaid, That this act, and the feveral claufes and provifions therein contained, Chall commence and take effect from and after the ift day of March, 1754.
QU A RRY, a fubterranean place, from whence are dug freeftones marble, flate, lime-ftone, \&c. proper for building. In the digging of quarries of free-ftone, they firf apen a hole in the manner of a well, but confiderably bigger in diameter, and the rubbinh is drawn out with a windlafs, in bafkets.
As the bole increafes, and their common ladder becomes too fhort, they apply a larger for the purpofe. - When they have got through the rubbifh, and are arrived at the firf ffratum: they apply their windlafs and bafkets to difcharge the flones, as faft as they dig through them.

* Strata, in Natural Hitory, are the feveral beds, or layérs, of different matters, whereof the body of the earth is compofed. It has been fuppofed by fome, that the ftrata lie in the earth according to the laws of gravitation ; but experience hath proved the contrary, it having been obferve by Dr Leigh, in his Natural Hittory of Lancafhire, (peak ng of the coal-pits, that the frata there are firt a bed of marle, then frec ftone, next iron-fone, then coal, or channel mire, then fome other frata, then coal again, \&c, -
And Mr Haukfbee was ordered by the Royal Sociery to And Mr Haukffee was ordered by the Royal Sociery to
try the ftrata of a coal-pit, which he did to the depth of try the ftrata of a coal-pit, which he did to the depth of
30 ftrata : the thicknefs and fpecific gravity of each where30 frata: the thicknefs and fpecific gravity of each where-
of, he gives us in the Philofophical Tranfactions; and from of, he gives as in the Philofophical Tranfactions; and from
the whole makes this inference, that it evidently appears the gravities of the feveral itrata are in no manner of otder, but purely cafual, as if mixed by chance.
They ufually find feven of thefe different ftrata of fones, of different heights, and ferving for different purpofes, though the number, as well as order wherein they follow, is various.
As to the extracting of the fone from the bed wherein it lies, they find that common ftones, particularly the fofter kinds, as they lie, have two grains, a cleaving grain, running parellel with the horizon, and a breaking grain, perpendicular thereto.-After clearing the earth from off it, they obferve by the grain where the ftone will cleave, and there drive in a number of wedges, 'till they bave thus cleft it from the reft of the rock.
This done, they procsed to break it: in order to which, applying the rules at both ends, 10 or 12 inches apart, according to the ufes for which the fone is intended, they frike a line, and by this cut a little channel with their fone-ax, and in the channel fet five or fix wedges (fuppofing the fone three or four feet) driving them in very carefully, with gentle blows, and ftill keeping them equally forward.-Having thus broke the ftone in length (which they are able to do to half an inch of any fize) applying a fquare to the ftraight fide, they frike a line, and proceed as before, to break it in breadths.
This method of drawing is found greatly preferable to that of breaking the ftones at random; but this cleaving grain beirg generally wanting in the harder fones, to break up thefe, they have great heavy fone axes, wherewith they work down a deep channel into the flone, and into this channel, at top, lay two iron bars, driving their iron wedges between thofe bars.

Some in drawing of fone, efpecially the yery hard kind, make ufe of gun-powder with goodd effect, in the nature of blafting in Minerology. In order to which, making a fmall perforation pretty deep into the body of the rock, to as to have that thickpefy of rock over it judged proper to be blown up at once; at the further end of the perforation they difpofe a convenient quantity of gun-powder, filling up all the reft with rubbift, Arongly rammed in, excep. a little fpace for the trair.- By this mesans the rock is blown in feveral pieses, moft of them not too unweildy for a workman to manage. For free-ftome, that dug in the peninfula of Portland, and thence called Portland fone, is much uled in buildings, being fofter and whiter than Purbec fone, and is commonly railed out of the quarries in bigger blecks than that.
Some alfo call Ryyegate, or fire-fone, frec-ftone. Mr Boyle coferves, that a conapetent knowlege of the nature of the fap, or juice, found in ftones ufed in builaing, is of the laft impoitance; the fame fone, dug out of the fame quarry at one featon, being found to moulder away in a few winters, which dug out at another feafon, will brave the weather for many ages: and thexe are others, which, though dug at the proper feafon, yet make but ruinous buildings, if ufed at an improper feafon,
The fame author addes, that, as there are fome fort of fones which will decay in a few years, there are others will not have attained their full hardnefs in 30 or 40 years, or even much mare.
In regard to quarries of marble, there are a great variety of forts of this kind of ftone, and thefe are ufually denominated either from their colour, their country, thoir grain, their degree of hardnefs, their weight, or their defeets: fome are of one fimple eolour, as white or black; others ftreaked, or variegated with ftains, clouds, waves, weins, \&ce, but all opake, excepting the white, which, when cut into thin flices, becopmes tranfarent.
Apcient marbles are thofe whole quarries are judged to be loft, or inacceffible, and whereof we have only fome famples remain-ing,-Modern marbles are thafe whofe quarries are fill open, and out of which blocks continue to be dug. -m African marble is either of a reddihh brown, Ateaked with veins of white, or of a carnation, with weins of green.--Englifh white marble is veined with red. $m$-Derbyfhire marble is diverfified with colours of brown, red, yellow,' \&c.-Marble of Auvergne in France is of a pala red, mingled with violet, green, and yel-low.-mMarble of Brabancon, in Hainault, is black, veined with white. -Marble of Breffe, in Italy, is yellow, with fpots of white,-Brocatella marble is mingled with little fhades of I (abella yellow, pale, and grey; it comes from Tortofa, in Spain, where it is dug out of an ancient quarry: there is alfo another kind of ancient brocatella, dug near Adrian-ople.-Marble of Currara, on the coafts of Genoa, is very white, and the fitteft of all others for works of fculpture.Marble of Champagne refembles the brocatella, being mixed with blue, in round fains like partridges eyes.-Cipollino, or Cipollin marble, is of a fea-green colour, mixed with large waves, or clouds of white or pale green.-Scamozzi takes this to be the fame with that whieh the Anciegts called Auguftum \& Tiberium marmor, becaufe difoovered in Egypt in the timess of Auguftus and Tiberius.-marble of Dinan, near Liege, is of a pure black, very beautiful, and very common,-Marbla of Guachenet, near Dinap, is of a reddifh brown, with white fpots and veins, -Marble of Languedoc, is of a vivid red, with large white veins, or fains, and is very common; there is fome, whofe whire borders pretty much upon the blue, but this is of lefs value.-Lumachelle marble is fo called, becaufe mingled with fpats brown, black, and white, wreathed fomewhat like periwinkle-thells : this is ancient, and it's quarry is loft.-Marble of Margoffa, in the Milaneze, has a white ground, with brownih veins, refembling the colour of iron rutt: this is very common, and extremely hard.-Marble of Lavé, in Maine, has a black ground, with little narrow veins of white; there is another kind of it red, with veins of a dirty white.-Marble of Na mur is black, like that of Dinan, but lefs beautiful, as inclining a little to the blue, and traverfed with little ftreaks of grey: this is very common, and is frequently ufed in pav-ing.-Parian marble is antique, and much celebrated in authors; it is of a beautiful white: the greateft part of the Gre cian flatues were made of it: Varro calls it lychnites, becaufe the workmen dug it out of the quarry by lamp-light.-MIarble of Porta Santa, at Rome called Sama, is ningied with large clouds and veins of red, yellow, and grey.-.Portor marble has a black ground, with clouds and veins of yellow: it is dug out of the foot of the Alps, towards Carrara.-Marble of Rance, in Hainault, is of a dircy red, mixed with blue and white clouds and veins: this is pretty common, but is different in degree of beauty.--Marble of Savoy is a deep red, mixed with other colours, each piece whereof feems cemented on to the reft.-Marble of Sicily is a brownifh red, ftained with oblong fquares of white and Irabella, like ftriped taffety : the ancient has very vivid colours, and the modern comes pretty near it.-Marble of Signam, in the Pyrenees, is ordinaily of a greenifh brown, with red fains, though this is fomewhat various in it's colours.-Marble of Thev,
near Namur in Liege, is a pure black, foft, and eafy to work, and receives a more beautiful polifh than thole of Namur and Dinan.-Marble Bigio Nero, or black-grey, is an-tique.-White veined marble has large veins, with grey and blue flains, on a white ground: it comes from Carrara.White marble; that dug out of the Pyrenees, on the fide of Bayonne, is inferior to that of Carrara, it's grain being coarfer, and fhining like a kind of falt; it is fomething like the ancient white Greek marble, whereof their flatues were made, but is not fo bard or beautiful.-Ancient black and white marble is now very rate, it's quarsies being intirely loft ; it is divided between a pure white and a bright black, in lamine.--Blue Turquin marble is mixed with a dirty kind of 'white, and comes from the coaft of Genoa.-Marble Fior di Perfica, comes from Italy, confifts of red and white ftains, fomewhat yellowifh.-Yellow marble is a kind of yellow Ifabetla, without veins; it is antique, and now very rare.Black antique marble is of a pure black, without ftains, and fofter than the modern black: there was fome of it brought from Greece, called mamor luculleum, buț nat fo much prized as that from Ethiopia. - There are divers other forts, needlefs to enumerate.-. Porphyry alfo is a precious kind of marble, of a brownifh red colour, often interfperfed with ftains, brought formerly from. Egypt, and exceeding all other kiads of ftone in hardnefs; yet Dr Huntingdon affures us, tha these is no quarry or rock of fucb fone in all the lower parts of Egypt, fo far as the Nile overlows being perfect foil.

## Remarks.

There are three different ways of petrification that we are acquainted with, which being eafily obfervable and conceivable by us, may affift us in making a pretty exact difcovery bow all others are performed.
Of the firft kind is the flalactites, or the cylindrical congelation which is formed in the fhape of an icicle, in the perpendicular fiflures of vaults and caverns, out of the fparry, fandy, and otber matter that is drained out of the ftrata, by the water paffing through them into thofe fiffures *, and thefe do gradually increafe, in proportion as they are covered with fref coats of the fame matter.

* See Woodward on Fofils, page 18 。

Of the fecond fort of petrification are thofe crufts of fone which the water of certain fprings leaves fticking to the pipes it paffes through, as is obfervable in thofe which convey the water from Bongis and Arcueil to Paris. Now it is very plain that this petrified matter, of what nature foever it be, is impelled by the water towards the fides of the pipe : the reafon of it's incruftating in irregular lumps, or clods, one upon another, is the irregular action of the water upori this fony matter, which it cafts fideways from the center of it's courfe ${ }_{\text {d }}$ to force itfelf a free paffage.
Of the third kind of petrification that we are thoroughly acquainted with, are thofe pieces of wood, bhells, and other 'fybftances, which are foypd petrified ynder-ground, or in certain fountains, foll retaining their natural figure and lineaments. Now the manner in which thefe three different pes trifications are performed, we will fuppofe to be thus: the firft by thin leaves or teguments, the fecond by little lumps, the third by inferfation.
We bave no acquaintance with any other elements than thofe of water, falt, oily juices, fand, loam, and clay. The water itfelf is no ingredient in the compofition of fones, but is only that which brings together and mixes the materials of which they are compofed. The natural formation of ftones is performed nearly in the fame manner with the artificial ftructure of houfes; in which the water ferves to unite and fix the materials, after which they harden, and confolidate as the water diffipates. Our walls are compofed of hard maffes of matter and cement; the cement of itfelf would never form a durable firm wall; and the maffes; whether of brick or ftone, laid one upon another, without any mortar between them, would eafily be fhaken down, whereas the interpofition of the cement produces thele two effects; firf, by filling up the interfices between the mafles, it keeps them fixed in their places; and fecondly, by infinuating itfelf into the pores of thofe maffee, it incorporates with them, fo as to conftitute, when thoroughly dry, one intire compatted body. So likewife our three different ways of petrification are performed by little maffes, and a very fine cement: the maffeg to be joined together are the fand, the clay, and the loam; the frongeft cement are the falts, and the different forts of bitumen : fometimes the falt and clay ferve as a cement to the fand, fometimes either the clay or loam does of itele! conftitute the mals, and, from the different quantities and proportions of thefe matters, differently mixed together, refults an almoft infinite variety of productions; but then it is the water that performs all the feveral offices of collecting, conveying, and alfociating all the difereat particles of matter, which afterwards condenfe into aegregates of a hard durable nature.

## QUA

Under the firf kind of petrification may be ranged the talcs, nates, the amianthus, and plater.
Cryftal is nothing elife but an aggregate of fand, either of a pyramidal or triangular figure, which the water incruftates fucceffively upon one another, by a cement of falt and very fine loamy earth: and this appears the more probable, for that, when cryftal is refolved by fire into it's conftituent parts, we can difcover nothing but a calcined fand together with a little earth and falt. Nor is it at all to be wondered at, that fuch a beautiful tranfparent mafs thould be formed out of fand, feeing the particles of the fand itfelf, when viewed through a microfcope, appear like fo many pellucid cryftals: the reafon of their not being bright and clear in their natural ftate, like the diamond, is becaufe of the earth that is mixed with them. See the article Stone.
QUARTATION, a peculiar method of feparating gold from filver.
Make a mixed mafs of gold and filver, and melt it along with three or four times it's own weight of pure filver; bear the whole lump, when cold, into a thin plate; put it into a glafs of proof aqua fortis, and fet the fame in warm fand, whereby the filver will foon, diffolve, and the gold fall in a black powder to the bottom.
Pour off carefully the folution of filver, and ufe a fomewhat fronger heat than before, in order to diffolve any remains of filver in the gold powder. Then the aqua fortis [fee the article Aqua Fortis] being again decanted, wah the gold well, in feveral parcels of fair water. And put the goldpowder into a little fay-cup [fee the article Ass Ay] and place it under the muffle in the tefting-furnace, 'till it becomes yellow. You may otherwife melt it with borax, which will bring it to it's true colour and form. Weight the gold, to determine the proportion it bears to the filver. Laftly, Precipitate the filver out of the aqua fortis, by furpending a cop-per-plate therein; ther wah the calx, and reduce it to it's metalline form, in the fame manner.

Observation.
The reafon for adding three or four times the quantity of filver, in proportion to the mixed mafs is, for fear the mafs Chould contain too much gold to be fit for the operation; or to fread the gold contained in the mafs, and diffure it fo thinly, that it may not defend the filver, as it otherwife would do, from the action of the aqua fortis. And upon account of this addition it feems to be, that the operation is called Quartation.
This method of reparating gold and filver was unknown to the Ancients, who therefore feparated filver from gold by calcination, and fo loft all the filver that was mixed with the

## QU I

gold." And, indeed, the method by quartation is expenfive and laborious, fo as not to be very advantageounly practifed in the large way of bufinefs; though the whole has been divided into fuch a number of hands, as to make the feveral parts come cheap : fome operators being wholly employed in making the aqua fortis; others in purifying it, or bringing it to proof; ochers in laminating the filver, and diffolving it; others in feparating and reducing the calx of the gold; others in precipitating the filver with copper ; and others again in feparating the copper from the aqua fortis. And hence the whole operation has been found to anfwer the trouble, fo long as they can recover about a drachm of gold from a pound of filver.
But there are certain ingenious workmen, who have the method of feparating gold from filver to much greater profit, without the ufe of aqua fortis, or aqua regia, and barely by a dextrous application or management of the FIRE, at leall without any colfly additions. This method is kept is a fecret, but may, perhaps, be no other, than that publifhed by $M$. Homberg; which confifts in fluxing the mixed mafs of gold and filver with equal parts of rough nitre and decrepitated falt, placed at the bottom of the melting-pot; whereby the operation in the large way, may be finifhed in a quarter of an hour; the gold thus falling to the bottom, and leaving the filver fufpended in the falts.
Another way of effecting this feparation may depend upon a dextrous ufe of common fulphur, which has the power of making filver melt away from a metalline mixture almolt as eafy as lead.
But, to obtain either gold or filver in abfolute purity, is no eafy talk:- For the common ufes, indeed, the methods above delivered may ferve; but for the more curious chemical and philofophical purpofes, better ways than are commonly known and practifed fhould be difcovered.
To refine gold by melting and tefting it with antimony, or glafs of antimony, is generally, and even by the metallurgical chemifts, thought a perfect way; but M. Homberg has fhewn, that even this criterion, as alfo quartation, cupelling with lead, fluxing with borax, \&rc. may fail, in cafe the gold be mixed with emery, or poffibly fome other things. When gold is eager, as the workmen call it, that is, brittle, they hold it as a fecret to melt it with mercury fublimate. But, perhaps, no gold can be proved to be perfectly pure, 'till it has gone through all the trials hitherto known; or even fome of a more curious nature, particularly melting with crude antimony, and afterwards cupelling the regulus with lead ; and, at laft, fufing it with borax. Which procefs we recommend to thofe who require gold in ablolute purity for any ftandard, or curious operation.
QUICKSILVER, fee Mercury.

## Of the Business of the Customs, continued.

## With regard to the QUAKERS.

QUAKERS. Their affirmation and declaration, allowed by the 7 and 8 Will. III. cap. 34. and 13 and I4 Will. III. cap. 4. to be accepted inftead of an oath, in all cafes where by law an oath is required, i Geo. I. cap. 6. §. I, and 2. The affirmation or declaration to be in thefe words,

I, A. B. do folemnly, fincerely, and truly declare and affirm, That, \&c. 8 Geo. I. cap. 6. §. 2. Such folemn affirmation or declaration is to be adjudged to be of the fame force and effect in all cafes, as if an oath had been taken in the ufual form. Convicted of a wilful, falfe, and corrupt affirmation or declaration, are to fuffer as for wilful and corrupt perjury, 7 and 8 Will. III. cap. 34. §. 3 .

Quarantine. See that article at large.

## R.

## R AI

## R A I

RADNORSHIRE, in Wales, is bounded on the ealt with Shrophire and Herefordihire, with Brecknockhire and Cardiganhhire on the fouth and weit, and with Montgomeryflaire on the north. It is, according to fome, about 29 miles in length and 18 in breadth, and has an area of 385 fquare miles. Others make it go miles in circumference, containing 3 ro,000 acres, four market-towns, fix hundreds, fifty-two parihes, and about 3000 houfes, with r9,000 inhabitants, thirteen tivers, five caltles, and three forefts, all in the diocefes of Hereford and St Dayid's.
The air is fharp and piercing. The eaft and fouth parts are well cultivated, and pretty fruitful in corn ; but the foil elfewhere, efpecially in the north and weft parts, is fo rocky and mountainous, that it is only fit to feed cattle and fieep; though it is well ftored with woods, and watered with rivulets, and in fome places ftanding lakés.
The chief commodities are cheefe and horfes. The river Wye, which divides it from Breeknock fhire, croffes the weft angle of the county, and in its rapid courfe through the tocks, forms leveral cataracts, and receives the Ithon, weverly, and other flreams: It is parted from Shrophire by the tiver Ternd, but the river trhich it has peculiar to itfelf, is the Ithon, into which run the Dulas, the Clowdock, and the Cameran. It tifes attiong the hills in the north fide of , the fhire, and forming its courfe fouthward, falls into the river Wye, a little below Dyffart, on the Llanhadem : it winds about fo mort, that it runs near fix miles in a mile and a half dittance from that town. In thefe rivers' are plenty of falmon and other fifh: It feris two members to parliament, one for the county, and onefor the chief to wn, viz.
New RadNOR, a very ancient borough by prefcription; from . Whence the county takes its name.
Preateing or Prestaign, or St Anprew's, Aands on the river Lug, in a rich and pleafant valley, near its entrance into Herefordfhire, and is the place where the affizes and the county gaol are kept, on which account it is pretty populous, and well frequented. Here is a very good mariket for grain, efpecially barley, of which they make good ftore of malt.
KNIGHTON, the only town of note in the bundred of its own name. It iftands in a valley on the river Teme, over which it has a bridge. It is a well built borough, of good trade and refort, and its market is well ferved with cattle, corn, iron ware, hops, falt, linnen and woollen cloth, and other commodities.
RAISINS making a confiderable article in traffic, we muft not omit it.
They are the fruit of the vine, fuffered to remain on the tree 'till perfectly ripened, and then dried, either in the fun, or by the additional heat of an oven. Grapes of every kind preferved in this manger are called raifins, and are digtinguifted into feveral kinds, according to, the fecies of grape. What we have at prefent differ, as they are better or worfe dried, and are all called raifins under different appellations, except the fmall kind, which are called currants.
The difterence between raifins dried in the fun, and thofe dried in ovens, is confiderable and obvious. The former are fweet and pheafant, the others have a whitifhers and a latent acidity with the fweetnefs, that renders ihem much lefs agreeable. The raifins of the fun, of what we call jar yaifins, from their being imported in earthen jars, are of the former kind, all dried by the fun's heat onlys.
The fineft and beft raifins, are thofe called in fome places Damalcus and Jube railins; thefe are the fruit of the vitis Danaicena, and are diftinguifhable from the others by their largenefs and figure; they are flat and wrinkled on the furface, foft and juicy within, near an inch long, and femipellucid when held againft a good light: they have a fweet, agreeable, and vinous tafte, and when frefh and growing on the bunch, are of the fize and thape of the large olive.
The common raifins are the fruit of feveral fpectes of grape, which are better or worle, according as they have tean more or lefs carefully cured.
VOL. II.

The common way of drying grapes for raifins at prefent, is to tie two or three bunches of them firmly together, while yes on the vine, and dip them into a hot lixivium of woodafhes with a little oil oliye in it. This difpofes them to fhrink and wrinkle, and after this they are left on the vine thee or four days, feparated on fticks in an horizontal fituation, and then dried in the fun at leifure, after cut from the tree.
The currants are the fruit of a vine differing from the common kinds, in the imallnefs of its grapes, and in the largenefs of its leaves, which alfo have fewer and flighter divifions than thefe of any other kind. They are gathered in when ripe, and fpread thin upon a floor trill tolerably dried; they are then put up in parcels where their own weight and remaining humidity form them into cakes, that are hardly to be broken without fome inftrument. They are not produced now in the place where they originally were, but in the inlands of Zañt and Cephalonia, where the vines that produce them are cultivated in great abundance, and to confiderable advantage. :They are packed up in calks and trod firmly down; and if the air be kept out, will remain good a long time in them:
Al the kinds of raifins bave much the fame virtues, they are nutritive and balfamic, but they are vety fubjed to fermentation with juices of any kind; and hence, when eaten immoderately, they often bring on cholics. They are aliowed to bë attenuant, and are given in cales where the humours are too thick and vifcid, and they are faid to be very good in nephritic complaints; they are, however, too faniliar in our foods, to be much regarded at prefent as a medicine. They are an ingredient, indeed, in our pectoral decoctins, and in fome other medicines of that intertion ; in which cafes, as alfo in all others where aftringency is not required of them, they fhould have the fones carefully taken out. They are ufed in fome compofitions, rather with an intent of taking off the naufeous tafte of other ingredients; than of doing any extraordinary fervice themfelves.

Of wine made with raifins.

## EXPERTMENTI.

Take a quarter of a hundred of whole or unbruifed Malaga raifins, and put ta them feven gallons of cold fring-water, in a wooden veffel or caik, which fet loofely covered ii a warm place, that the contents may ferment for fome weeks. The water you will find foaked through the kins of the raifins, and their internal fweet or faccharine fubhance diffolved, and will become impregnated therewith as a menftruum; the liquor will manifeft an inward ftruggle and commotion of its particles, throwing up numerous, imall pubbles to the furface, with a confiderable hifing noife : and after the fermentation is finilhed, the liquor will become an actual new wine; as will appear by the tafte, fmell, and effects, and depofit a large quantity of grols, earthy fediment, called lees, at the bottom, different from the bulks, or kins, and fones of the raifins.

The application of this experment.
This experiment is univerfal, and thews the general manner of making wines, and indeed all other fpirituous potable liquors, by fermentation. For, with a flight change of circumfances, it is applicable to the brewing of beer from mead or metheglin, and hydromel from honey [fee the articlé BEEs]; cyder and perry, from apples and pears refpectively ; artificial or made wines, as they are vulgarly called, from cherrics, goofeberries, currants, elder-berries, black-berries, plums, oranges, or other fruit : allo from the rappings of certain oranges, or other truit: allo from the tapping of and more
trees, as the birch, the maple, the fycamore, \&c, and trees, as the birch, the maple, the fycamore, \&c. and more
eminently from the juice of the fugar-cane, treacle, or direct fugar and water: [fee the articles SUGAR and W inf.] For any of thefe vegetable juices, being duly fermented and judicioully prepared, afford as teal and perfect wine, accord. ing to their feveral natures, as the richeft grapes of the beit wine countries.

O BSER-

## OBSERVATION.

To bring any of thefe juices into a found wine, the rule is, to evaporate them, if they are naturally too thin, 'till they become of equal richnefs with the juice of the grape in wine countries, and good wine years. This may be commodioully done, by means of the common water-poife *, which fhews the flrength or richnefs of folutions to the eye. And in general, any vegetable juice or folution, is accounted fufficiently rich for making a ftrong wine, when it will fupport a new-laid egg on its furface.

* A water poife is an inftrument made of ivory, glafs, \&c. hollow-bellied, fo as to float, higher or lower, in liquids, according as the fpecific gravity thereof is more or lefs: which inftrument being graduated or divided by lines on the flem, readily thews to the eye, the difference betwixt the fpecific gravities of any liquids propofed, though not with the utmonf accuracy.
The wines made in England, lie under a difrepute; the reafon whereof feems chiefly owing, (I.) To the inartificial manner wherein they are ufually prepared; and (2.) To a certain rumour fpread about them, as if they were unwholfome, crude, indigeftible, too lufcious, too tart or griping, and apt to occafion the head-ach, \&c.
Thofe who have never been in wine-countries, nor otherwife made themfelves acquainted with the nature and common preparation of wines, proceed in their judgment of them according to report and popular notion. Thus, for inftance, red-port wines, to pleafe the common palate, muft be bright, deep coloured, rough, rich, and racy, two or three years old, \&xc. and when this, or any other notion comes once to be eftablifhed as the criterion of wine, the cooper is thence directed how to hit the general tafte, and make a faleable commodity.
Upon the fame foundation philofophical chemiftry [fee the article Philosophical Chemistry], inftructs us to imitate the wine-cooper, and from almoft any fweet and tart vegetable juice, to make faleable wines; even canaries, mountains, fherries, or ports: all which, by the way, are ufually mixed liquors, though the bafis of them all is the juice of the grape.
This juice of the grape being chemically examined, proves to be no more than a large proportion of real fugar diffolved in water, with an addition only of a certain favour in the juice of the grape, according to the nature of the vine. Whence we may lay it down as an axiom, and the refult of a careful enquiry, that a faccharine fubftance is the bafis of wines. For fugar is not peculiar to the fugar-cane, but obtainable, as we bave obferved, alfo from grapes; and accordingly, we often find large grains thereof in dried raifins; particularly thofe of Malaga, that have laid for fome time, and fweat together, whereby they run into candy, a faccharine efflorefcence, and actual grains of fugar. So again, it is cuftomary in France to evaporate the juice of the grape, 'till it becomes coagulable in the cold, and in this ftate to ufe it as a moift fugar, under the name of refiné. The fame thing is to be underftood as practicable in malt or wort, and the fweet juices of all vegetables that afford a wine by fermentation. See the articles Brewing, Distillation, Elfosaccharum, Sugar, Wine.
Hence we may derive a fet of rules, for boiling down, or otherwife procuring the effential matter of wines in a fmall bulk, and preferving it found and ferviceable for many years, in order to the making of all kinds of wines, vinegars, and brandies, even in countries where no vines grow. This difcovery likewife affords great light into the true nature and ufes of vinous and acetous fermentation.
And fo much for the ufe of the preceding experiment, with regard to trade and ceconomy ; its philofophical ufes are no lefs confiderable [fee our article Philosophy Experimental]. And firft, it thews that the proper fermenting matter of every fermentable fubject is but fmall, compared with the quantity of wine it affords. Thus, for example, four pounds of raifins may be diluted and fermented with eight pounds of water, into what is accounted a tolerably ftrong wine. Yet even raifins themfelves contain a large proportion of water, befides their direct faccharine fubftance, which is reducible to a dry form, as we find in fugar.
And whoever would thoroughly enquire into the nature, the ufes, and means of improving vinous and acetous fermentation, cannot, perhaps, do better, than to chufe fugar for his fubject; a chemical analyfis whereof, will fhew the principles neceflarily required in this operation; which appear to be an acid falt, an oil, and earth fo united together, as to be capable of diffolving perfectly in water.
This experiment alfo fhews the caufe of vegetable matters running into a fermenting ftate, as railins do by the addition of water. Nor do all fermentible bodies require ferments, to begin their motion of fermentation. Raifins we fee require none, much lefs does the frefh exprefled juice of the grape, or other vegetable juices, in the fummer-feafon, or in a warm air. But all fweet vegetable juices, that have felt much of the fire, as treacle or wort high boiled, rob of malt,
rob of alder, or the like, ufually require a confiderable proportion of a vinous ferment, to make them work. And, in general, ferments are no more than matters already in the act of fermentation, or that forn run into this frate: of the firft kind are the flowers of wine, yeaft, fermenting beer, or fermenting wine, \&cc.-Of the fecond kind are the new expreffed vegetable juices of fummer-fruits, \&c.
Water, we find, is abfolutely neceffary to begin and procure fermentative motion in vegetable fubfances: for raifins or fugar being kept dry, will never ferment. And this holds univerfally, of all the fubjects of vinous and acetous fermentation. Whence water is an inftrument that muft be necef arily employed in thefe kinds of fermentation, whether naural or artificial.
As the water, which naturally and in large quantities perfires from the furface of vegetables, efpecially in hot climates, does not go off pure, but carries along with it a confiderable proportion of fermentable matter into the atmofphere; there may be an actually vinou's fermentation, begun and carried on in certain parts of that region, efpecially where the winds are ftill, or the air ftagnant. At Schiedam in Holland, a larger quantity of inflammable fpirit is faid to be obtained from malt, than in any other place where there are fewer malt-diftillers. This is probably owing to the air of that place being impregnated with the fermenting vapours, that continually exhale from their numerous fermenting bakes and fitlls. The fame is found to hold proportionably of wine fermented in large vaults or cellars, where many calks of wine are at once; or fomewhat fucceffively fet to work. Wherefore thould feem, that artificial wines fec to work in large quantities, is the beft way to produce them of a good quality, and with greater expedition.
Warmth, with the free admiffion of the external air, is neceffary to expedite the action of fermentation; for if our raifins and water were to ftand either in a very cold place, or be kept entirely from the acrefs of the commonatmappherical air, either no fermentation, or a very frall and flow one would enfue, as has been experienced.
The lees remaining at the bottom of the cafk in our prefent experiment, are, if ufed freh, a true kind of ferment, and will fet any lefs fermentable fubject at work, and determine its fermentation for the vinous kind. They contain a large proportion of effential oil, and fome tartar. Hence we fee, that vinous fermentation confifts, (I.) In an inteftine fruggle, or commotion of the fluid; and (2) In a feparation of a groffer part, which did not appear in that form before.

## EXPERIMENTII.

Take the fkins of the raifins, and the fediment left behind, after a wine is made in the manner of the preceding experiment, and pour three or four times their own quantity of boiling water upon them, fo as to make a thin aqueous mixture. Then fet the containing cafk, loofely covered, in a warmer place than was ufed for the wine, and you will, in few weeks time, find the liquor become a clear and found vinegar; which being drawn from off its rediments, and preferved in another cafk, well ftopped down, will long continue perfect, and fit for ufe.

## OBSERVATIONS.

(I.) This experiment thews us a cheap and ready way of making vinegar from refufe materials; fuch as the hufks of grapes, decayed raifins, the lees of wine, grounds of ale, beer, 8 cc . which are frequently thrown away as ufelefs. Thus in many wine countries; the marc, rape, or dry preffings of the grapes are thrown in heaps, and fuffered to putrefy unregarded, though capable of affording as good vinegar as the wine itfelf. In fome places, they bury copper-plates in there hufks, in order to make verdigreafe, but this practice feems chiefly confined to the fouthern parts of France. Our prefent experiment fhews us how to convert them to another ufe, and the direction extends to all the matters that have once undergone, or are fit to undergo, a vinous fermentation, for that all fuch matters will afford vinegar. From the fame principle, all our fummer fruits in England, even blackberries, all the refufe walhings of a fugar-houfe, cyderpreffings, or the like, will make vinegar by means of water, the open air, and warmth. Sce the article Vinegar.
(2.) The whole procefs, whereby this change is effected, deferves to be attentively confidered. And firt, the liquor to be thus changed, being kept warmer than in vinous fermentation, it in a few days begins to grow turbid, and without throwing up bubbles, or making any confiderable tumult, as happens in vinous fermentation, depofits a copious fediment. The effect of this feparation begins to appear firft on the furface of the liquor, which gathers a white fkin, that daily increafes in thicknefs, 'till at length it becomes like leather; and now, if continued longer in this ftate, the ikin turns blue or green, and would at laft grow folid and putrefv: therefore, in keeping down this fkin as it grows, and thrut ing it gently down to the bottom of the velfel, confints much of the art of vinegar-making, efpecially from malt.
(3.) It is to be particularly obferved, that if the wine of our firft experiment were not bunged down when arrived at its vinous ftate, but fuffered fill to remain open and expofed to a warm air, it would fpontaneoully become vinegar; and the fooner, if a fomewhat greater degree of heat than ferved for the making of wine, were employed. Whence we might have ufed the wine of our firft experiment for this purpofe, as well as have added water to the hufks and fediment, or lees; but we chofe the latter way, to fhew that even fuch refufe matters will afford vinegar; and again, to intimate how far the art of vinegar-making may be ftill improved, both in England, where they brew a wort from malt for it, and in fome wine countries, where they frequently make their beft wines into vinegars.
(4.) What we would chiefly remark for the prefent is, that acetous fermentation requires a ftronger heat than the vinous; and that wines having once finifhed their fermentation, as wines, do not naturally ftop there, but unlefs prevented by the care of the operator, proceed directly to vinegars ; where again they make no ftop, but unlefs prevented here alfo, fpontaneoufly go on to vapidity, ropinefs, mouldinefs, and putrefaction. From which larger oblervation we would deduce this axiom, that, to fpeak philofophically, The intention or tendency of nature, is to proceed from the very beginning of vinous fermentation, directly, in one continued feries, to putrefaction, and thence again to a new generation: which appears to be the grand Circle, wherein all natural Things are moved, and all the physical, or rather chemical, Phanomena of the Globe produced.
(5.) Hence we fee, by the interpofition of the fagacity of man, how this general procefs of the uniform law of nature may be ftopped at different times, with different views, fo as to procure to ourfelves wines, vinegars, and, as will appear hereafter in the Experiments VI. and VII. particularly falts and oils.
(6.) Another corollary, deducible from the larger obfervation above laid down, is, that the word Fermentation has been ufually applied to fignify only a fmall part of this grand operation of nature: thus one limits the word to the production of wines; another, to the production of wines and vinegars; and fome would diftinguifh it from putrefaction: whereas either the term Fermentation, or fome other, fhould be made general, and denote the Genus, or Universal Fermentation, whereof vinification, acetification, and putrefaction, are only Species. At leaft, we fhould thus attempt to follow and exprefs nature in the Facts that are obferved, and not proceed, in an arbitrary, narrow, or inadequate manner, to impofe words, and drefs out nature according to particular hypothefes and conceits. But the obfervation itfelf, whereon this doctrine is founded, being of moment to the right underftanding of the whole affair of fermentation and putrefaction, upon which the advancement of many parts of Practical Commercial Philosophy doth depend; we fhall proceed to illuftrate and confirm the latt part of it by an experiment, as the two former parts have been already by Experiments I. and II.

## EXPERIMENT III.

That wines and vinegars, or all fermented vegetable juices, have a natural tendency to putrefaction.
(I.) Take a gallon of thick muddy vinegar, praduced after the manner of the fecond experiment ; letting it ftand open, in a hotter place than was required to make it vinegar, it will become, in a few days, a vapid, naufeous, and putrefied liquor, throwing up a large quantity of a dry powdery fubflance to the top, and depofiting a lefs quantity of a groffer matter at the bottom; foon after which, the body of the liquor will become clear again.
(2.) We might fhorten the prefent experiment, or fave the trouble of making either a wine or a vinegar to fhew it: for, if a quantity of Must * were fet in an open veffel, in a hot fervice-room, where the air had free accefs, the work would foon be performed, and the putrefied liquor be produced almoft at once, without ftopping at the fate either of wine or vinegar, according to the larger oblervation delivered above.

* Must is the unfermented jaice of the grape, or any other liquid fermentable fubfance, before it enters the act of fermentation ; and Stum is Must çarified by flanding and racking, and then put up into matched calks, that is, calks impregnated with the fume of burning brimftone, fo as to be preferved found in an intermediate flate.

OBSERVATIONS.
(i.) This latter experiment has a confiderable philofophical ufe; and, (1.) It gives us the phyfical reafon why wines and vinegars, unlefs made exceeding ftrong, will not keep, but corrupt and putrefy in hot countries: for the heat being there fo great, as to keep the lighter feculent parts of thofe liquors furpended for fome time in the body of the liquor, corruption (which proceeds frons a tumultuary motion of all the different parts of a compound body together) neceffarily enfues *.

* See §. (t.) of the laft experiment, and hereafter Experiments VI. and VII.
(2.) Hence we learn alfo the phyfical reafon why wines and vinegars require to be racked from their lees, in order to preferve them found, or keep them from running into putrefaction, to which we find they are ftrongly inclined, the tendency of nature being ever conftant in urging them to that frate; and the cafe appears to be much the fame in animal, and even in mineral fubftances, as we thall fee hereafter.
(3.) This experiment, therefore, furnifhes us with a rule for preferving vegetable liquors from the laft fage of fermentation, that is, putrefaction, or corruption; viz. by firft clarifying, and afterwards fecuring and defending them from the open air, and too much heat. Thus, for example, we can preferve the natural juices of quinces, oranges, lemuns, piants, 8 c . found and uncorrupt, by firft clearing them of their groffer parts by the filter, or, in fome cafes, by boiling and common fraining, then putting them up in common glaffes, pouring oil on the top, and fetting them in a cool place. In the fame manner we find fome of the more delicate and curious wines are long preferved found and fprightly: for, the grcffer feculencies being firft removed, the oil poured on the top prevents the external air from entering, and, by keeping the glaffes from the fun, or day, too much heat does not come at them.
(4.) It is alfo remarkable, what a large quantity of folid earthy matter is naturally contained in allfermentable liquors. Thus, though a pellucid folution of the fineft fugar in water were expofed to vinous fermentation, it foon grows turbid, throws an earthy fkin to the top, and depofits much terreftrial matter at the bottom, in the form of lees. If the wine be now drawn off clear, and expofed to acetous fermentation, here again it throws off much terreftrial matter, both in the form of a fkin at top, and lees at the bottom. Thirdly, If tranfparent vinegar be expofed to putrefactive fermentation, here again it feparates a confiderable quantity of earth, both at the bottom and top; which thews that the feparation of a grofs matter is effential to thefe feveral kinds of fermentation, and that a copious earth may lie concealed in fermentable juices and tranfparent fluids, 'till it finds an occafion of manifefting itfelf to the fenfes.
(5.) The change wrought upon vegetable fubjects by vinous and acetous fermentation, will appear by comparing Must, or a bare folution of raifins in water, with the wine and vinegar which the fame Must, or raifins in water, afford, in vinification and acetification; and in this light they may be compared by the direct ufe of the fenfes: but the internal and effential differences will better appear by a chernical analyfis, or diftillation.
(6.). Mus $\mathbf{T}$, or a folution of raifins and water only, which makes a kind of muft, correfponding to the natural juice of the grape, is a fweet, clammy, and fome what odorous fluid, which, when committed to diftillation, affords not the leaft infammable fpirit; but, after having paffed through the ftate of vinous fermentation, it acquires feveral properties it had not before. For example: it is more tranfparent and thin, lofes of its fweetnefs, has fome degree of acidity and roughnefs, proves more odorous, and affords a large proportion of Inflammable Spirit ; as appears by the following

## EXPERIMENTIV.

That vinous fermentation produces an inflammable firit. Take three gallons of new wine, procured from raifins and water, in the manner of the firt experiment, and commit it to the alembic or ftill; which being made to work gently, 'till the liquor that comes over being thrown upon the hot ftillhead will no longer take fire, by applying the flame of a candle to the rifing vapour ; you will thus obtain a confiderable proportion of brandy, and a weaker firit. See the article Brandy.

OBSERVATIONS.
(I.) This experiment fhews the common method of making (I.) This experiment inews the common method of making brandies in wine countries, or a finit, from malt, melafies,
cyder, \&c. in others; for the fineft French and Rhenifh brandies, the rums and the arracs of the Indies, are obtained in the manner of this plain experiment, all of them being ufually diftilled a fecond time over, and made up, as they call it, with water, or the weak aqueous liquor of the fecond running, as in the prefent experiment, to a certain ftrength, or fuppofed ftandard, termed faleable-proof.
(2.) The philofophical ufe of the experiment is to thew, that an inflammable fpirit is produced, by the action of vinous fermentation, from a vegetable fubject and water, wherein no figns of any fuch firit before appeared: infomuch, that this may be juftly efteemed the criterion, or infeparable effe\&t of vinous fermentation.
(3.) This firit being rediftilled, to deprive it totally of its aqueous parts, is the fpirit of wine, or alcohol; and this method is the only one that is known of procuring it : for no fubjects but thofe of the vegetable kingdom are found to afford it, and that only by means of a previous vinous fermentation.
(4.) It thould likewife be obferved, that this alcohol is one of the moft effential parts of wine, fo that, when abfent, the wine lofes its nature, as we fee by the remains of the prefent
experiment:
experiment: and, when properly ufed, it is a certain remedy for moft difeafes incident to wines, as kecping them found, and free from corruption: whence we have another rule for preferving vegetable and animal fubftances from putrefaction; for this liquor proves a kind of balfam to them all, and is accordingly ufed, with fuccefs, for preferving even animal fubftances, as we fee in anatomical preparations, \&c.

EXPERIMENTV.
That acetous fermentation abolinhes the inflammable fpirit produced by vinous fermentation.
Put a quart of fharp vinegarinto a glafs retort; diftil in a fandheat, with degrees of fire [fee Distillation] into a glafs receiver, and you will not find the leaft inflammable fpirit come over; there will arife only an acid aqueous liquor, commonly called diftilled vinegar, which, inftead of burning, quenches fire.

## OBSERVATIONS.

(r.) Hence it appears, that acetous fermentation has a very different effect from the vinous, and that the inflammable fpirit produced in the former is either concealed, altered, exhaled, deftroyed, or fome way abolifhed, in the latter. A part of this firit is unqueftionably exhaled by the heat employed in acetification, yet part alfo remains behind, under a different modification, fo as to be recovered by art, in an inflammable form, as we find by diftilling the fugar of lead, which is only lead diffolved in fpirit of vinegar. See the aricle I.EAD, Vol. II. page 23.
(2.) This experiment affords a criterion of acetous fermentation, as before we had of the vinous: for if an acid uninflammable liquor comes firf by diftillation over from a vegetable fubject, after fermentation, this will determine that fermentation to have been of the acetous kind.
(3.) Thus, therefore, we are plainly led to allow of two very different kinds of fermentation, in the fame vegetablefubject; and we conceive that fome other feecies may be found, upon due enquiry.

EXPERIMENTVI.
Take a large quantity of frelh and green cabbage leaves, prefs them hard down with weights in an open tub, bored full of holes on the fides, and fet in a warm place. By ftanding in this fate for fome days, the leaves will conceive a heat in the middle, which will fpread to the more external parts, 'till, at length, nearly the whole will be converted into a pappy putrefied fubftance, whofe confiftence will not well fuffer it to feparate into a thicker and a thinner part.

## OBSERVATIONS.

(I.) This experiment is general, and fucceeds alike in all tender, juicy, vegetable fubftances, fo that both the acid and alkaline tribe of plants, the fweet and the bitter, the aftringent and emollient, $8 x c$. refolve into this fame pappy putrefied fubftance: we obferve it alfo in hay that is ftacked wet, in horfelitter thrown in heaps, in the grape-burks, or apple-pumice, after preffing for wine or cyder; and the larger the heap, and the greater the weight the matter it fuftains, the greater the heat, provided the accefs of the air be not prevented. (2.) Hence we fee the way employed by nature for changing all vegetable into animal fubftances, or of reducing the matters of both kingdoms to a fimilarity, fo that the one may be ufed for feveral purpofes, inftead of the other. Thus nature annually makes large quantities of compoft from the refure weeds, leaves, trafh of fields, woods, and gardens; [fee the article Manure] for this vegetable matter thus putrefying, and becoming foft and pulpy, is eafily diluted by the falling rains, and thence difperfed over the face of a field, and carried into the pores of the earth. Thus the chemift, from fuch putrefied vegetable fubjects, may, by diftillation, procure volatile falts and volatile fpirits, hardly to be diftinguifhed from thofe of hart's-horn, \&c. at leaft, the volatile falt and fpirit fo obtained, might ferve for the making of fal-armoniac, along with fea-falt: for it appears, that the matter of the fixed falt in vegetables is by this operation truly volatilized [fee the article Vegetables]; whence not a grain of fixed falt can be procured from the largeft quantity of this putrefied matter, provided the operation were compleatly performed. (3.) This experiment has various ufes, not only in trades, but ia Natural Philofophy and Medicine. And firft, it fhews an artificial, as well as natural method of converting any, or all of the different fubjects of the vegetable tribe into the fame undiftinguifhable fubftance, thus totally deftroying all the fpecific differences which before difcriminated that great variety. The fame obfervation reaches alfo to animal bodies, as we Thall fee prefently.
(4.) The principle of fermentation leads to an extenfive enquiry into many things of nature, from whence important hints may be derived, for the advancement of ufeful philofophy; whenetore fince we are upon that fubject, we thall here juft take notice only of another experiment, as having an affraity with fome things that we fhall have occafion to refer to,
as being no way repughant to the firit of our fuiject, which is far more extenfive than many have been wont coimadine.

## EXPERIMENTVII

If any large animal body, as that of a horfe or a dog, for example, be expofed, in a dead ftate, to the open air and the fummer's fun, it, in a few days, begins to fwell, purge and emit a naufeous ftench : at length the form of the carcafs is deftroyed by the commotion, and refolved into a putrid, fctid, ftercoraceous matter, a large part, in the mean time flying off into the air, fo as to leave but a fmall proportion of a mucilaginous pappy fubftance, which foon grows dry, or turns to a kind of earth. But if a quantity of this matter were to be collected before it grows dry, and diffilled, it is faid to afford the burning phofphorus, as putrefied urine, and many other things, are known to do.

## OBSERVATIONS.

(r.) This experiment will be found univerfal, and holds equally in relation to all animal natures. And this putrefied animal matter appears to be in itfelf a kind of poifon, infecting the air wherein it fpreads, fo as to occafion peftilential dif eafes near the places where great battles have been fought: whence this feems to be another particular Species of fermentation, and from whence, perhaps, may be derived many more ufeful difcoveries into the worksof nature, than feem yet ever to have been duly attended to.
(2.) Whence it fhould feem that there is a proper fpecies of fermentation peculiar to the animal fubjects, as these is one peculiar to the vegetables; and if fo, we fhould not lay down vegetable fermentation as the teft and flandard of fermentation in general, and judge of allother kinds according as they approach to, or récede from, this ftandard. But, perhaps, were the enquiry into fermentation profecuted in its full latitude, and not arbitrarily confined to any fingle fecies, many natural and artificial operations would prove to be actual fermentations, and exhibit fuch phanomena as few imagine

EXPERIMENTV'III.
That there may be a kind of fermentation in mineral and metallic bodies.
Take an ounce of lead, and as much bifmuth, and melt therm together in an iron ladle; then heating two ounces of quickfilver in another ladle, mix the three metallie matters together, as an amalgama; which, when cotd, will appear perfectly uniform, or homogeneous, and cotally pafs through the pores of leather, in a running form. This mixture being fuffered to cool, and ftand quiet for fome hours, a grofs matter will feparate from it by degrees, and float upon the reft, which will be left fo thin and fluid, as to pafs through leather, and leave the grofs metallic matter behind.

OBSERVATIONS.
(I.) Fence it fhould feem, that even metallic matters may have their peculiar fermentation, as well as vegetable and animal fubjects: for, when this experiment comes to be carefully confidered, it appears to have all the requifites of fermentation. For here is, (I.) A fluid form. (2.) An uniform matter. (3.) An inteftine motion; and, (4.) An actual feparation of a groffer matter, leaving a thinner behind. All which particulars we have found to hold in the feveral fpecies of fermentation above confidered.
(3.) There are many more inftances of an apparent fermentation in mineral bodies, one or two whereof it may be proper to mention. Thus, if an aqueous folution of the common green vitriol be, in fummer-time, expofed to the air, and kept fupplied with frefh water, as the former exhales, the groffer metallic part of the vitriol will fubfide, and the reft gradually dhoot upwards all round the veffel, in form of an unctuous crufty matter, 'till the whole body of the vitriol is thus fucceffively altered; fo as that the part fhot into the crufty unctuous form will never become vitriol again, nor corrode any frefh metal; and, in all other refpects, it appears a different thing from vitriol. Hence feem to proceed the complaints of the makers of vitriol, that in rainy, windy, and cloudy weather, their vitriol fones, which lie open to the air, will not fometimes yield a folid cryftalline vitriol, but only an unctuous matter. This may, therefore, appear to be a fermentation in all its forms, as being attended with a fpontaneousinteffine motion, a fontaneous feparation of confituent parts, and a remarkable alteration of the fubject.
It alfo makes to the prefent purpofe, that folid and hard pyrites, [fee PYRites] or vitriol-ftones, being expofed to the air, and moiftened with water, will, like a vegetable fubject *, grow hot, fume, and even take fire, and afterwards afford vitriol, a thing very different from the flones themfelves [fee Vitriol]: fo that, upon the whole, we may conclude, that, in a proper fenfe, there is an actual fermentation exerthat, in a proper fenfe, there is an actual fermenation in the
cifed, not only in the vegetable and animal, but alfo mineral kingdom. From what has been obferved, may be deduced the following principles:

* Sce above, Experiment VI.

＊See Experiment I．
7．That the matiers called ferments are of ufe in beginning， jegulating，axid determining the ppacies of fermearation＊． Thus frefh yeaft determines the fermentation of wheat－Alour， to make our common bread，which would prove of anọther Kind，with the flowers or lees of vinegar：and thas fpecific or determinate ferments have their correfpondent effects．If fugar，honey，manna，treacle，or new wirre，be added to vinegar，themfelves are foon changed into vinegar，without flopping to make wine，becaufe the acetous ferment，or vinegar，over－rules them．And fo vinegar is fooneft made in a calk that has before contained the fame liquor．And if the beft wine were put into a cafk that had beld qutrefied vinegar，the wine would not now make vinegar，but imme－ diately run into cortuption：fo great over－ruling a power have fipecific ferments；the ufe whereof is therefore evident， and may aftord confiderable rules in chomiftry，pratical philofophy，and commercial arts．

## ＊See Experiment I

8．That the degrees of fermentation differ with thre degrees of heat ethployed＊．Thus we have feen that vinous fermen－ seion requires a lefs degree of heat than the acetous，the acetous a lefs than the putrefactive，which latter may even confift with a degree of ignition $\uparrow$ ．
－See Experiments I，II，III，IV，and VI．

+ See Experititient VI．
9．That a paiticular kind of fermentation thay Betarried on in the living bodles of animals and vegetables，which are largely fupplied with the requifite inftruments of fermenta－ tion，viz．water，air，and heat；and，in fact，both vege tables and aftimals appear to have an inteftine motion in all their circulating Auids，which continually depofit a groffer matter in the canals and parts they move through．Whence，
VOL．II．
by our defnition of ferfinentation，this natural act may be accounted a fpecies of fermentadion，producing a change in the nutrimental matter of vegetables and animals，and con． verting it into their own futh hante．
io．That when vegetables or animals die，there foon begins a．different Rind of fermentation in all their parts，tending not now to the repair，but to the intire deftruction，of their or ganical veffels，the confufed mixture of their falid parts and juices，and a volatilization of their whele fubftance ${ }^{\prime \prime}$ ．
－Sec Experiments $V$ and VI，
11．That dry or folid bodies cannot，in that ftate，undergo a proper fermentation：for though they may，in that fate， be feparated into mininufe particles，yet they cannot range themfelves together in any new order，nor depolit a groffer part，without being agitated by fome fluid，or for fome time fufpended thereith．And hence，in over－heated mines，the ore is thus ánalytically deftroyed，and cannot range itfelf into a metalifné，or any other regular order again，for want of the requifite moifture or fluidity；whence the－matter appears like a heap of rotten earth，or what the miners call dead metal．＊ of which we bive a remarkable intance in the over－heated or fired thilxture of futphur and iron filings．
＊See Experimeñt VIII．
12．And that，in imitation of nature，by a therough know－ ledge of the natural agents that produce thefe grand effects， arc likewife may produce extraordinary changes in brodies． RASBERRY，a welli－known fruit，of a delicate flavour．

## Of Rasberry Wimb

For the method of māking，fee the article Raisins．

## Of the ufefulnefs of this wine

Ofall ditir made wines，thofe of Arawberries and rafberries ate mioft delicious to the tafte；they lightly and pleafantly himulte the nerves of the mooth and nole with a moft agree－ able fond and taffe，which proceeds from a mixture of their effintiall dalk and frine vil，for the principles of both thofe ber－ thes aife very hoar the faine，only falberries contain more fine oidy and the other more phlegm ；therefore we flall brishy centidef theirir qualities promificuoufly．
Thèfe windeb are vety proper and reviving in fyncopes，faint－ iñ the Herves；their mature and attenuated oil，and effential fatt，beting－by fermentation reduced to a fubtile fpirit，pierce the intertutees of the veffels，＇raife the fipitits，afford fpeedy fupply of fome nervous juice，which invigorates their fprings． fir feoffutie diforders，the ufe of thefe purify and fweeten the Blood，dllute ot obtund its falts，give the fibres a better ten－ fron to pronnote a due mixture of the juices．
In nephritic pains，they fweetly flinulate the fecretory duets of the renil glands，lightly prick the membranes of the fmall retial bafons，whereby they being excited and invigorated， Hake off their ftagriating，attracting，and cobering load，and free the parts ftom pain；the philegm of the wine，at the fame＇tinde，has no fmall fhare in diluting and attenuating the Athe di fand int the kidtreys
In rawnefs；weaknefs，and indigeftion of the fiomach，the能解eable fitiflation of thefe wines gives its coats a better tén－ forn，elevates their fpring，and fortifies it．Their flight a－ ftifigency，topether with their foreetly warming firit，make them proper in loofneffes，and too great difcharge of the mentes．They are more cooling and moiftening than other vint，thiefefore are they preferable in thirft．As they are cordiall atid coofltrg，they and water mixed make a good re－ viving draught in ardent fevers；as they cool and moiffen， they are very proper for warm weather，young people，bilious coinflitutions，in too tharp a ftate of the blood，or where the animal juices are tóo much agitated．They bave no bad effects，except they be drank to excefs，which is rarely the cafe in drinking of made wines；but here we would be un－ derftood as fpeaking only of friall wines of this fort：
RATEEN，or RATTEN，in commèrce，a thick woolien ftuff，quilled，wove on a looni with four treddles like ferges and other fuffs that have the whàle or quilling．－There are fome prepared like cloths，others left fimply in the hair，and others where the hair or thap is frized．
REFINING，the art of puitifying a thing，or of rendering it finer and purer．
Refining is chiefly applied in fpeaking to the art of rendering the more precious mietals fo pure，as to anfwer the purpofes of traffic and gain made by the refiner．－In relation to the refining metals，we fhall lpeak firft to that of gold．－See the articles Gold and Assay，Metals and Metal lurgy，Mineralogy and Orés．
The refining of gold is chiefly performed three ways；either with antimony［fee the article Antimony，Vol．I．］with fublimate［fee the article Mercury］or with aqua fortis ［fee the article AQua Foritis］．
Refining of gold with antimiony－To this intent they ufe a wind－furnace，and crucibles of fizes fuitable to the quantity 8 B
of gold to be refined, oblerving that the gold and antimony together do not above balf fill it, when in fufion.
The gold being melted, the antimony in powder is then gradually thrown in. The proportion of the antimony to gold, is about a pound to eight ounces, if the gold be between 22 and 16 carats fine: if it be under 16 carats fine [fee CARAT], they ufe about a pound and a quarter to eight ounces of gold of fuch a degree of finenefs: the coarfer the gold, the greater the quantity of antimony is requifite. See Antimony.
So foon as the antimony and gold are in the crucible, the crucible is covered with an earthen cover that will fand the fire without cracking.-Then the furnace is properly charged with charcoal, and the matter continues in fufion 'ill the crucible is left quite bare: then the cover being taken off, and the crucible left to cool in the furnace, it is taken out and broke to get out the calot, which is a mafs of fine gold remaining at the bottom, with the fxces of the antimony, the filver and copper alloy, and fometimes fmall particles of gold over it.
Though the gold thus prepared, by a due degree and continuance of fufion be very fine, yet it is brittle or eager, as workmen term it ; and its perfect toughnefs and malleability muft be reltored by fufion, with faltpetre and borax. See Saltpetre and Borax.
For this operation, the refiner prepares coppels or tefts, made of the earth of crucibles that have long fuftained the fire, ground to a powder, and made up for the purpofe; for thefe will not imbibe fo much as thofe made of fern and boneathes mixed, which are ufed by fome.
Such tefts being fufficiently nealed, as the workmen call it, in the refining furnace, they put the brittle gold therein, and cover it with charcoal.-As foon as the gold is in fufion, as it will foon be by means of the adhefive antimony, they blow it with bellows to evaporate the antimony, in the manner they do for the refinement of lead for its filver. [See the article Lead.] After which they add a competent quantity of faltpetre and borax-in powder, which imbibe the remaining impurities, and fix the gold on the teft: and, to render it quite pure, it is melted afrefh in a crucible, with an addition of faltepetre and borax; and as foon as it ceafes to fume, the mafs is caft into ingots, which upon trial is found to be above 23 carats fine gold. See Gold.
As to the particles of gold, which may have been left behind with the alloy in the froces of the antimony, they difentangle and purify them, with the fame meltings and ingredients as have been ufed in the former operations.- And when they are affured by the affay [fee AssA Y] of the hare of gold that matter contains, they refine it to feparate the copper, and afterwards make the depart.
With regard to the gold that may adhere to the coppels, tefts, or crucibles, wherein it has been melted, it is got out by pulverizing them and wafhing them in the manner as they manage their fweeps, which is as follows.
To make one of thefe waihes, the refiners not only pound at proper times their coppels, tefts, and pots, but alfo collect together the afhes of their furnaces, the fweepings of their workboufes, and the very bricks whereof their furnaces are built, little partieles of gold, \&c. being found to ftick to them, by the crackling natural to thofe metals, when in their laft degree of fufion and purification.
Thefe matters being well ground and mixed together, are put in large wooden bowls, wherein they are feveral times waihed, and in feveral waters, which run off by inclination into troughs underneath, carrying with them the earths, and the infenfible particles of the metals, leaving only behind the larger and more confiderable ones, which are vifible to the eye, and taken out with the hand without much trquble. To get out the finer particles gone off with the earth, they ufe quickfilver and a walhing-mill. The mill confifts of a large wooden trough, at bottom of which are two metalline parts, ferving as grind-ftones; the lower being convex, and the upper, which is in form of a crofs, concave.
At top is a winch, placed borizontally, which turns the upper piece round ; and at bottom a bung, to let out the water and earth, when fufficiently ground. To have a general wafh, the tub is filled with common water; into which they caft 30 or 40 pounds of quickfilver, and two or three gallons of the matter remaining from the lotion.-Then turning the winch, they give motion to the upper grind-ftone; which griading the matter and the quickfilver violently together, the particles of gold and filver become the more eafily amaigamated there* with: this work they continue fome hours, when opening the bung, the water and earth run out, and a frefh quantity is put in. See the article Amalgamation.
The earths are ufually thus paffed through the mill three times, and the fame quantity of mercury ufually ferves all the three times. - When there iṣ nothing left in the mill but the mercury, united with the gold or filver which it has amalgamated, they take it out, and wathing it in divers waters, they put is in a ticken-bag, and lay it in a prefs to fqueeze out the water and the loofe quickfilver: the remaining quickfilver they evaporate by fire, in a retort or an alem-
bic. The metal which remains is refined with lead, or parted with aqua fortis.

Of the Refining of Gold by aqua regia. [See the article Aqua Regia.]
Ercher, from confidering that aqua regia does not diffolve filver, is of opinion that gold may be refined to the greateft perfection, by being diffolved in that menftruum. What led him to be of this opinion, was doubtlefs the common perfuafion, that all the kinds of aqua fortis, howfoever prepared, did ftill leave fome filver along with the gold; as antimony on the other hand, when ufed in the refining of gold, commonly fteals away, as is fuppofed, a fmall quantity thereof. And as fomething of moment feems to be concealed in this affair, it deferves to be carefully examined.
The leading or fundamental queftions of the enquiry are thefe. (r.) Does the aqua fortis in reality leave any filver yet mixed with the gold? (2.) Would it not prove too expenfive, thus to refine gold with aqua regia? (3.) In what fenfe can antimony be faid to fteal away gold?
The firft queftion is refolved in the affirmative, by Fafchius *, in treating of the fediment of depart waters; where he fays, that if gold by quartation be mixed with. filver [fee the article Quartation], and again feparated from it by aqua fortis, it will conftantly be found to have increafed its weight. fortis, it will conftant! $y$ be found to have increaled its weight.
Which increafe he attributes to the filver adhering to the gold: but it ftill remains for experiment to decide, whether this additional weight be truly owing to the filver, or whether it be an increafe of real gold $\dagger$.

* See Probier Buchlein, page 64. Ed. 1678.
$\dagger$ It is an old tradition, that the red colour which firit of nitre manifefts in its diftillation, proceeds from the fulphar of nitre ; and Becher endeavours to exhibit this fulphureous fubitance to the eye (a), where he treats of the foul of nitre. And this fubftance Becher frill further attempts to render profitable, and to demonflrate its metallic increment; where he recommends the digeftion of a folution of filver, made with fpirit of nitre, from whence a fmall portion of the contained filver will daily be depofited, in form of a black calx, or almol golden fubtance'(b). But as a particularly prepared (piric of nitre is required for this purpofe, ticularly prepared ipiris of nitre is required for this purpole,
and alfo a particular purification thereof, it is. proper to confult the feveral places of the author, where thefe things confult the feveral places of the author, where there things
are mentioned (c), and what Farchius fays in his Treatife are mentioned (c), and what Fakchius lays in
of Afraying.
(a) Phyfic:
(b) See Miner. Arenar. page 877.

With regard to the fecond queftion, it is to be oblerved, that fuch a method of refining gold by aqua regia, is fcarce practicable in the larger work, on account of the great charge that would attend it. Nor is fo rigorous a proof of gold at any time required, as not to admit of the leaft particle of filver. But in the fmall work, or the bufinefs of affaying, it cannot be admitted for two reafons, viz. (i.) Becaufe fo much of the gold is eafily diffipated by the aqua regia, or fo much of the fubftance of this menftruum remains fixed to the calx, even after ignition, as may caufe errors in both cafes. (2.) Becaufe aqua regia, on account of the great tharpnefs and violence wherewith it grofsly diffolves the gold, at the fame time tears away more particles of the filver, than the aqua fortis leaves among the gold. A proper experiment or proof, might, however, after this manner, be made with great care, in order to determine whether the above-mentioned increafe of weight proceeds from the aqua fortis, or not.
The folution of the third queftion is principally to be derived from an examination of the fufed antimony upon its cooling, becaufe it is eafy for antimony, in its frothy ebulliticn, to eear away a few grains of the fubftance of the gold, whilit detained in thin fufion, and lodge them in the form of bubbles.

## Refining of Gold by means of fublimate.

The procefs is begun like that with antimony, i. e. in the fame furnace, with the fame coal, the fame fire, and the fame crucibles.- The gold being melted, they caff in the fublimate unpulverized, and only broken in pieces.- To 8 ounces of gold to be refined, they put from an ounce to two ounces if the gold be 22 carats, 3 ounces if 20 carats, and 4 or 6 ounces if it be only 18 or 20 carats fine. In which latter cafe, they part the fublimate into two, putting half at a time with the gold into a new crucible, which, when the operation is over, leaves the gold from 18 to 23 carats, according to its finenefs before.-After this, they raife it farther by the fire, as follows:
The broken fublimate being put into the crucible with the melted gold, the crucible is immediately covered up, to fmother the mineral : which done, the furnace is filled with charcoal, and the bead put on.-A quarter of an hour afterwards they take off the head, lay the crucible bare, and blow off all the afhes, and other impurities that may be floating on the liquid gold, with a pair of bellows, whofe nozzle is crooked.

## REG

This they repsat'again and again, 'till all the impurities of the gold being carried off, by virtue of the fublimate, it be found of a bright glittering colour: after which, the goid is caft from the crucible into an ingot.
The method of refining by fublimate, is both more complete, and indeed cheaper than that by antimony or aqua regia but theyare all dangerous, by renfon of their fulphureous and arenical exhalations.

Rifining of Silver.
There are two ways of refining filver, the one with lead, the other with faltpetre. Thie beft and cheapeft is that with lead; but both the one and the other of thefe methods are tedious and troublefome, when performed on large quantivies. Thia occafioned $M$. Homberg to endeavour to fhorten the operation, which he effected with good fuccefs.-Wis method is, to calcine the filver with half its weight of common fulphur, and after melting the whole together, to caft a quantity of fteel filings upon it at feveral times: upon this the fulphur quits the filver, and joins itfelf to the iron, and both are converted into fcoria, which fwim on the filver, and the metal itfelf is found pure as the bottom of the crucible.
The allay of filver is alfo made by the coppel or Imall teft, in the fame manner as in the refining by jead. See Lbad. When gold and filver are mixed together, fee the article Quartation for their feparation and refining.
Aqua fortis, or the firit of nitre, is the menftruum for filver. See Aqua Fortis and Silver.

EXAMPLE.
Take two drachms, we'll fuppofe of the finelt filver reduced into. filinge, and pour upon it twice its weight of proof aqua fortis, then fet the containing glafs in a foft heat under a chimney, 'till the folution is perfectly made.
Note, the aqua fortis for the folution of filver fhould be made proof, that is, it hould be capable of diffolving half a grain, or a grain of filver immediately, without growing in the lealt turbid; as it would do, if it contained any faa-falt, in which cafe is is a kind of aqua regia. See thofe articles. Refining with faltpetre is performed in a wind furnace, The filver to be refined being granulated into the fize of peale, by puuring it, when melted, in a circular motion, pretty brikly, into a tub of common water, and it is heated over again in a boiler,-After this they put it in a crucible, and along with it, to every eight ounces of metal, two of faltpetre.-The crucible being now covered with a lid of earth that will fand the fire, in the form of a dome, well luted, which lid mult have an aperture in the middle.The crucible being fecurely placed in the furnace, and covered with charcoal, the operator gradually gives the matter the full force of fire, in order to put the metal into a ftate of fulion. This is fucceffively repeated, at the interval of about a quarter of an hour.- After the third fire, the furnace is uncovered, and the crucible cools; at length it is broke to get out the filver, which is found collected to the bottom, and proves with ikilful management to be fine filver; and the top is mixed with the freces of the faltpetre and the alloy of the filver, and generally with particles of fine filver.
The bottom being feparated from the impurities, is melted in a crucible, and into the diffolution is thrown charcoal-duft, and the whole brifkly worked together. Then the crucible being covered agail,, and the furnace charged with coal; a fecond fire is given it.-This done, the impurities are blown from the top of the metal, till it appear as clear as a lookingglafs, and then about an ounce of borax in pieces is gradually thrown upon it.-Laftly, the crucible being covered up again, they give it the laft fire; after which it is caft into ingots, which are found with dexterous management; $x$ i pennyweighte and about 16 grains fine. - To recover the filver that may be left in the fcoria, they give the fame repeated lotion in reen water, as we have defcribed before, in relation to the refining of gold.

## OBSERVATION.

If the filver, employed in the folution with aqua fortis, as before defcribed, werc abfolutely pure, the liquar will be pellucid: but if any alloy or copper remain mixed therewith, the folution will have a bluifh or greenilh caft. If a folution of perfectly pure filver be diluted with fair water, it will ftill remain pellucid, withous letting any thing precipitate. But if any faline matter be contained in tho-water, the whole will now turn thick or milky
The folution of fine filver has an intolerable bitter tafte, though by the eye it be not diftinguihable from fair water. Whence we have an eminent inftance how metals may lie concealed from the fight, or remain lodged in unfufpected liquors, and thence be introduced invifibly into other fubRances, Whence the greater caution is to be uled, with all pretenders to the melioration and tranimutation of metals, This folution of filver is the foundation of feveral medicinal and chemical preparations, as the vitriol of filver, the lunar cauftic, the filver pill, \&c.

The filver is recoverable from this folution, barely by fur pending copper-plates therein; for'copper being more eafily diffolved by aqua fortis than filver, the filver is therefore precipitated to the bottom, in the form of a powder ; and being waiked and melted, comes into a metalline lump again. And this alro is to be underfood of the folution of gold.
The methods of obtaining filver in purity are various, and differ according to the metal wherewith the filver is mixed or allayed. If copper be the allay, the beft and cheapeft way to purify the filver is, to calcine it with balf its weight of common fulphur, according to the method before preferibed by M. Homberg
Thus much for the refining of the fuperior metals, which is the bufunefs of him who is called the Refiner.
Refining of copper is performed by repeated fufions, with well-adapted fluxes. See the articles Copper and Flux.
Refining of tin is managed much after the fame manner as that of copper. See Tin.
Refining of iron begins likewife with the fufion of it into caft iron from the ore. See Iron.
Steel is only iron refined to a greater degree by heating it, with fome other ingredients, which clore up the pores and foften its grain.
Refining of lead. See Lead.
Rbfining of fugar. See Sugar.
Refining of faltpetre. Sce Saltpetre.

## REGISTER SHIPs of Spain.

Of the regifter or entries, loading and delivery of the flota's, and fhips trading to the Weft-Indies, and of goods run and feizures, in relation to the commerce of Spain.
(I.) As it was requifite for the fupport of navigation, nccording to the Spanỉh polity, that there fhould be builders of 'hipa, and others to take the dimenfons, and gauge the on to know their content, either to man them for war, or load them for merchants; and as it was convenient to preferibe rules for the freight, and to know the bulk of the commodicies, to it is necefliary, that the loading may be according to the laws and ordinances, that there be regifters or entries, with refpect to thefe particulars, The law of Spain gives this definition of the regifter, that it is a written, memorandum of what pafles every year ; butas to what concerns this book, it is fo to be underitood; that the regifter or entry is a memorial of what is put aboard every fleet, as fhall be made out. Thefe regifters, or entries, are carefully preferved in the office of the contador or comptroller of the India-Houfe [fee IN-DIA.-House of Spain]; and it is to be obferved, that every particular man's entry goes under the fame name, as well as the total that is made of all the goods aboard a chip.
(2.) There are two forts of regifters or entries ufed in the trade to the Spanifh Indies; the one is of all that is carried out of Spain to thofe provinces and inands; the other of all the filver, gold, pearls, emeralds, and other commodities, brought from thence. The difference between them is, that thofe brought from the Indies are autheatic copief, of the original inftruments made there by the manlers of plate, or of mips, before the proper notarics, ipecifying the commodity, quantity, quality, and freight it is to pay; and perfon or perfons to whom to be delivered. But thofe made at Seville and at Cadiz,' when part of the fleet is loaded there, are plain notes, though upon fealed paper, the content of them being to this effect, That N. made entry that he has put aboard fuch a fhip, which is nne of fuch a fleet, commanded by admiral $O$. whereof $P$. is maller, the commodities hereafter fpecified, naming to whom they are configned, where they are to be delivered, upon whofe'account and hazard they go. After this preamble, he underwrites the number of bales, chefts, or any other fort of parcel, and places alfo their marks in the margin, and having paid the duty for convoys, cuftom, and other taxes, payable at the cuftom-houfe, he delivers in this paper to the proper officer of the contador or comptroller of the India-Houfe, without being figned by him that delivers it, or the mafter or owner of the fhip, or any other perfon whatfoever, but only the officers that received the duty; fo that it appears, this inftrument was rather contrived to fecure the payment of the duties, than for any advantage of the parties concerned; for befides thefe the mafters fign bills of lading, upon fight whereof they are to deliver the goods to the ports they are configned for; but, though there were none of thefe bills of lading, the regiters or entries ought to be'a fufficient authority ta demand of the mafters the goods therein contained; for it being requifice for the getting of cockets in the India Houle, that the mafter gives a note under his hand, to anfwer that thofe commodities he gives the fame for, Bhall be duly entered, the entries being compared, when made, with thofe notes, and then tacked to the reff that belong to the fhip; this certifies that the mafter had figned bills of lading [fee Bilus of Lading]; and all the entries together have the authority of the preftident and commiffioners, to the end that there hould be no doubt but they are legal inftruments, to oblige the mafers to deliver what they carry, and the factors to pay the freight. Sce the article FACTOR.

## R E G

## R E G

Of thefe two forts of regifters, one only is in being at prefent, which are thofe of all that is fent from Spain to the In dies, but what is brought from thence is free from this incumbrance ever fince the year 1660 : it is neceflary, however, to thew what the practice was, in order to compare it with the other.
The Spanifh law direets, that all goods hhipped for the Indies be entered in the India-Houfe, upon forfeiture of the goods, the third part to the informer, and the reft to the king: the fame was in practice as to all commodities brought from the Indies.
It being fo difficult a matter to prove the frauds committed in bringing gold or filver that is not entered, or carrying it out of the kingdom, it was therefore ordered, that witneffes of 14 years of age fhould be allowed of in this cafe, and the tranfgreffors to enjoy no privilege they might be entitled to. Afterwards it was added, that the informations of perfons in public employments, that deferve to be credited, fhould be fufficient evidence for the judges upon fuch trial to convict the perfons accufed, and fubject them to the ordinary or extraordinary penalties, according to the evidence and circumfances relating thereto.
The captain or other officer that brought over any commodity not entered, was to lofe his employment for four years and if it were any mean perfon that brought goods concealed, to be condemned to the gallies for four years. 'The owner of commodities not entered forfeited them, and his own goods; if a mean perfon, he was condemned to the gallies for ten years, and if of any quality, banilhed the Indies, and excluded that trade for ever. Officers and commanders that are concerned therein forfeit their employments; but he that informs, if he be the owner, to be free; if any other, befides impunity, to be intitled to one third part of the value. The mafter, mate, boatlwain, or purfer, that brings any thing unregiftered, to be fent to the gallies for ten years, forfeit all goods, and be excluded for ever failing to the Indies; but this is not to be underfood of fuch commodities as may ferve for ballaft, and lie in the bottom of the hold, which may be put on board with leave from the admiral, vice-admiral, chief pilot, and mafter, all together. As for the form of making the entries, it is ordered, that the bulk be fpecified, whether it be bale, cheft, or any other parcel, as alfo the cuftom it paid proportionably to the faid bulk. Nor may the entry be made at St Lucar, or any other place but at Seville, upon forfeiture of the goods. Gold and filver, and all other commodities, are forbid to be entered under any name but the right owners, upon penalty of forfeiting the whole, and four times its value, and being looked upon as a robber of the public. It was alfo ordained, that the merchants, before the general regifter or entry was made, thould give in particulars of their loading to the comptroller, time enough for them to go aboard the fleets, upon forfeiture of the goods; thefe particulars to be figned, fpecifying the thip, and to whom the goods are connigned, and that the comptroller receive and place them to the general entry. That regifters or entries be perfect and correct, the comptroller of the India-Houfe [fee India-House of Spain], or fuch perfon as fhall have the care of the books of licences for oading at Seville or Cadiz, fhall caft up with every merchant what that entry makes, and deliver a copy to the commiffioners, to be rent to the Indies, for the officers there to fee whether the cargo and entry agree. It was enacted alfo, hat the admirals fhould have copies given them of the regifters, or entries, to the end they might feize all goods they found not mentioned in them, which they were to deliver as forfeited, without difpofing thereof, to the king's officers at the port they went to, and to charge them with it, and bring certificates that they had fo done. But this has been out of ufe, it not being practicable for the admiral to fearch nto the hold, and examine what goods were entered, what not. So that now the entries are fent fealed, and there is only a copy of the laft vifit, or fearch open, for the admiral to compare when he makes his at fea. Several laws direct, that only the king's officers break open the regifters or enries, with a prohibition to the governors, admirals, veedores i. e. overfeer, infpector, or comptroller] mafters of fhips, or the court of Panama.
The regifters or entries of gold, filver, or other commodi ties, were to be made in the ports they came from, and if any were taken not entered, though going but to Gallao, to Panama, or from Nombre de Dios to New Spain, it was all forfeited; but afterwards, all that was declared forfeited which was not entered before it came to the Havannah. All the entries of fhips coming from the Indies, are to be made before the king's officers, and the efcrivano or notary, whole bufinefs it is ; and they are charged to be very particular in mentioning the feveral commodities and their fpecies, parcicularly in cocheneal [fec Cocheneal], the value fet upon hat of Mefteca being 41,250 marvadees [fee the article SPAIN], that of Flaicala 37,500 , and the wild at 8000 ; and if any that was fine came as wild, it thould be forfeited. Every fhip was ordered to bring two regifters or entries, that is, its own, and that of another hip, to prevent the confufion that happened when any hip was caft away, or taken
by pirates, that the owners might upon thefe regiters, eithe come upon the infurers [fee the article Assurance], or any part was faved, know whofe it was, yet this ordinance has not been executed. The regifters or entries of mafter of plate, are brought into a cheft with three locks, the ad miral to keep one key, the veedor another, and the mafte the third, to prevent falfification.
The kings of Spain have at all times been pretty favourable to their fubjects in difpenfing with the rigour of the laws in thefe cafes, forgiving the forfeiture of goods, which for want of being duly entered, were already his Majeffy's right, up on the owners making the difcovery themfelves; and feverd times feizures already made have been reftored, only layimp a fmall mulct on the owners. In 1560 , there was a genera pardon for all that was brought that year in the fleet no entered, provided the owners came in and declared it, and for all that came before, though it had been fent to foreign nations, provided it were brought back within the term of four months; but for the future, it was made death and forfeiture of goods, to carry gold, plate, pearls, or precious ftones, out of the kingdom, or bring them unregiffered Yet for feveral years after, there were ftill frefh orders to fufpend the rigour of the law, upon the owners diffovering their goods, 'till in 16I8, this repeated goodnefs not availing, it was ordained, that the laws fhould be feverely put in execution; notwithftanding which, mercy was fill exercifed towards delinquents, either receiving the owner's de clarations, or taking off all by indulto's. See the article Indulto.
To inftance in the cafe of goods run and feizures made, king Philip II. ordered a confiderable parcel of cocheneal and hides to be reftored to the owners, upon paying a fourth part over and above the ufual duties, and the fame in another feizure of plate, he being ufed to fay, That thofe perfons who had goods feized, muft be treated like robbers of their own King Philip III. ordered 176 bars of filver feized, to be reftored, the owner paying 16,000 pieces of eight penalty above the duty; butt for 2578 marks brought over, which had not paid bis fifth in the Indies, that he directed to be confifcated. Another time a feizure of 400,000 ducats of plate being made, he ordered the one half to be reffored, and the other to be forfeited. In 1563 , the follicitor of the India-Houfe fearched a boat, in which was the admiral Peter Menendez his equipage, and took out three bars he brough not entered, for which the faid admiral was brought prifoner from Madrid to the India-Houfe. In 1585,519 pipes of wine, befides a great number of jars of wine, oil, and olives, were taken from aboard the admiral and vice-admiral of the New -Spain fleet. The fame has been done upon other ot cafions. Whofoever makes the feizure of India goods, it belongs to the commiffioners of the India-Houfe to take cognizance of the matter, and condemn them. In 1648 , it was ordered, That when the officers of the India-Houfe made a feizure, they fhould not be obliged to carry it to the India-Houfe, but to fuch forchoufe as they think fit, pay ing the cuftom; and that thofe made by the officers of the cuftom-houfe pay the duty for convoys. Hereupon there was an officer created to take care that nothing be exported without payiirg the faid duty, and to take bond of merchants that they will make entry, and pay the faid duty.
9. There are feveral laws concerning the difpofal of feizures, one, that they be fold by public outery for their full value, which is to be paid in to the king: that the owners be not entrufted with the cuftody of fuch goods : that the king's of ficers be obliged to profecute in cafe the informers thould not : that two-thirds of the forfeiture go to the king, the other between the judge and the informer : that the king's duties be firft deducted out of feizures, before the informer's part : that the king's officers in the Indies acquaint the governors with what fuits there are depending about feizures that all the ports of the Indies follow the fame rule that is obferved at Carthagena: that the feizure be not put into the owners bands, though it be upon fecurity: that the produce of feizures in the Indies be put into the hands of the king's officers, and not of treafurers or truftees: that when information is made of things of great value, and only notice of them given, the informer's thare be retrenched, and what is cut off added to the revenue: that the courts of the Indies do not affume to themfelves the decifion of caufes depending before the king's officers: that in trials of feizures of flaves, or other groods made in the ports of the Indies, the governor and king's officers, act jointly, and not apart, though it be upon pretence of having been firf in the feizure; and that the part of the fine the law allows the judges, be equally divided among them all, upon penalty of forfeiting their employments, and being fubject to other fines, befides the profit of what they have defrauded.
10. Befides, in the common ordinances of the India-Houfe, it is expreffed, That any gold or filver wrought, or in bars or ingots, brought from the Indies, that has not the king mark, be forfeited, and the bringer fined four times the va lue to the king, the third part to be given to the informer, and that the offender be banifhed the kingdom for ever. But as for jewels, pearls, or precious ftones, which canrot be

## R E G

marked, that he be obliged to bring a certificate from the officers in the Indies, that he entered and paid the fifth, fpecifying what they were valued at, their fhape, weight, and marks. Another ordinance directs, That no flaves, men or women, be carried over to the Indies, without the king's licence exhibited before the commiffoners, upon pain of forfeiting fuch flave to the king; and if the flave be of the coaft feiting that he be brought back into Spain, at his expence who carried him over; and he that carries a flave of Moorifh race, be fined 1000 pieces of eight of gold, to be equally divided between the king, the judge, and the informer; or if he be a mean perfon, to receive 100 lafhes. If the commiffioners of the India Houfe, in the execution of their office, difcoof the Indi notentered, the fifth part of the forfeiture fhall be their own. Of what is put aboard after the regifter, or general entry is fealed, three fourth parts are for the king, the other for the informer, or if there be none, for the vifitor; or if the commiffioner of the India-Houre find it, there is no doubt but the fourth part belongs to him.
ir. The laft order concerning the difpofal of feizures directs, that the third part be laid afide for the informer, and the third part of that deducted for the judge, before whom the information is given, fo he be no commiffioner or judge of the India-Houfe; the fame to be done as to the private informers, giving them their due without expofing their names, or making any further delay than fecuring the effects. But this does not cut off the commiffioners of the India-Houfe from their fourth or fifth parts, in the cales before-mentioned. 12. Paffengers are alfo to be regiftered, and their ages and marks fet down, but they may be admitted after the regifter or entry of the merchandize is fealed. If the admiral take up any money of the mafter of plate, his bill thall ftand good to make up the fum entered upon the regifter. The commiffioners of the India-Houfe are directed to difcharge the king's plate that is upon the regifters, as private perfons do theirs. The regifters in the Indies for fips that go from the Canaries, or carry flaves, are to mention how many they carried, and to certify their being vifited: and if the fhip be fold there, he that buys it is obliged to bring back the fame rogifter the fhip carried, and the king's officers to fend a memorandum apart of the men, and an account who it was fold to. The gold and filver fent to Spain from the South Sea, is to be twice regiftered, once in that fea; and the other time at Porto bello, or elfe it is forfeited; and all that is fent from port to port in the Indies, either in the North or South Sea, is to be regiftered under the fame penalty. Among the laws concerning regifters, there is one that declares fhips or merchandize, coming to the Indies by the way of Guinea, forfeited. Anygoods entered upon the regifter, though they cannot be found, are to pay the duties; unlefs it be made appear they were thrown overboard in ftrefs of weather, and of things broken or damaged, only the cuftom is to be received proportionably to their value, when they come to the ports in the Indies; and of fuch goods as are carried from St Domingo to other ports, the remaining part of the cuftom is to be received, which is due, ha the place they go to, more than is paid at St Domingo.
13. All that remains concerning this fubject, is of the loading and unloading of fhips, that nothing be landed without Ieave, and that all be carried to the cuftom, or India-Houfe but this, as has been faid, is taken off all things brought from the Indies by the indulto. That no goods be landed in the river Chagre but only at Panama. One of the king's officers at Panama is to receive the Firmland fleet at Portobello. If the New Spain fleet happens to touch at Ocoa, a port in the illand of Tlifpaniola, one of the king's officers is immediately to repair thither The fhips that put into the river of Tabafco, are forbid landing their goods on its banks, but they are all to be carried from the veffel directly to the warehoufes. It is a general rule, that the fhips which are to return to Spain, be unloaded before thofe that are to remajn in the Indies, and the king's officers are commanded to aifilt in lading the gold and filver aboard the armada's and flota's. To conclude, All that comes from the Indies, configned to private perfons, is to be delivered immediately to the owner, he putting his hand to the regifter; or elfe one of the commiffioners of the India-Houfe, in the prefence of one of the efrriyano's or notaries of the faid India-Houle; and if it were requifite for delivery of any parcel, that the

## R E M

party concerned Mould give fecurity, he being a Aranger in Seville, fuch as be thould give in his own country, with the approbation of the magiffates thould be admitted, becaufe giving it at Seville, they ufed to leave that money in the fureties hands, or fpend a confiderable part of it to find any: REMITTANCE, the traffic or return of money from one place to another, by bills of exchange, orders, or the like. See thearticles Bills of Exchange, and Exchange. A remittance is properly a bill of exchange; fent to a correfpondent, and the contents thereof to be received by him of fome other perion, on whom fuch bill is drawn.
We fay that fuch a merchant has remitted, or made a remittance of fo many thoufand pounds in bank notes to his correfpondent at London. - I will remit you; or make you a remittance of, 1200 crowns, in three bills of exchange, of 400 crowns each, drawn on A. B. banker in your cily, payable at fight, at 20 days after fight, or at ufance, \&c.
By means of remittances by the circulation of bills of exchange, prodigious fums of money are returned, not only from one city to another in a trading nation, without danger, and without carriage, but immenfe funs are thereby perpetually circulating throughout all the European fates:

## REMARK S.

Remittanices of money to diftant parts; by the means of bills of exchange, neceffarily imply a correfpondence at thofe parts, and the authority of drawing upori fome perion, by whom fuch remittance mult be difcharged, to the perfon to whom the bill is made payable.
The nature of draughts and remittances, and the manner whereby fuch kind of negotiations are carried on, cannot be better explained and illuftrated, than by exhibiting the outlines of the accountanthip requifite to tee obferved on fuch occalions, by the parties therein concerned. And äs moneyremittances are either of a domeftic or of a foreign kind, we fhall ftate the cafe familiarly in both lights; with relation to real practical bufinefs.

1. With regard to domeftic remittances, or fuch as are car: ried on through the reveral trading towns anid cities in the fame ftate or empire.
Suppofe C.D. of London, for example, is a trader, and has dealings with other traders of Briftol, Liverpool, and Exeter; and that he hath occafion to remit 200 L . ito his Ẽrrefpondent, E. F. of Briftol-For this purpofe he is prefumed to have fome corferpondent, fuppore G. H. of Bififol, who is indebted to C. D. of London 5001 . in the way of trafficable, or any other concerns;-and that, by virtue thereof he, the faid C. D. hath the liberty to draw upon G. H. to the amount of 500 l . for the difcharge of the faid debts. Now, if G. H. is indebted to C. D. 500 1. G. H. ftahds in his book indebted for the faid fum, to fome proper account, fuitable to the occafion on, which the faid debt was contract-ed.--Upon which he (C. D.) dráws; "in the following manner and form; upon G. H. 200 1, payable to C. D.

London, September I, +5 方 54.
One month after date pay to E.F. or order, the fum of 200 1. and place it per advice to the account of

To Mr G. H. mer- , Sir, Your humble fervant, chant of Briftol.
C. D.

This draught of 2001 . thus made by C. D. bf London, on his correfpondent G. H. of Briftol', payable to E. F. of Briftol, one month after date, is fent inclufed in a letter to E. F. who fends it, on receipt thereof, to G. H. of Briftol, tor acceptance; which if he does not refufe, and duly pays; this draught thus made upon G . H. is a remittance made, at the fame time, to E.F: in difcharge of the 2001. due by C. D. of London, to E. F. of Brifol.

As G. H. food a debtor in the books of C: D. for what he owed him, fo E. F. was a creditor in the accounts of C. D. for what the latter bwed him. Quere, In what manner ought the feveral parties herein concerned fate this tranfaction in their refpective books, according to the true principles of accountanthip, by the Italian method of double entry? We will flate the accounts of C.D. of London, which are fuppofed to ftand thus in his ledger (in regard to this affair) previoully to the commencement thereof:

L E D G E R.

| $\text { ( } \mathrm{t})$ | G. H. of Briftol $\quad-\quad D^{*}$ To eafh, if money lent, \&x." |
| :---: | :---: |
|  | $\dot{\text { CaSh }} \cdots \quad-\quad \mathbf{D}^{\text {r }}$ |
| (2) | To E. F. money borrowed |
|  | E. F. of Briftol $\quad \cdots$ Dr |
| (3) | To G. H. for draught remitted him |

## R E M

## EXPLANATION.

The foregoing is the practical ftate of the cale in the ledger of C. D.

1. The reader will obferve, that G. H. ftands debtor for the 500 l . to Cash, on fuppofition it was money lent, and Cash a creditor for the fame, which exhibits thefe two accounts in their right ftate: if the money had been due on a legacy, G. H. muft have been made debtor to Capital Stock, and Capital Stock creditor by G. H. in which cafe, alio, thofe accounts would appear in their juft light ; but, if the money had been due upon any other occafion, the credit mult have been adapted accordingly. See the ar-

## R E M

ticles Accountantship, Bankimg, Book-Krepine Ledger, Mercantile Accountantship.
2. Upon making the draught on G. H. payable to E.F. E. F. is made debtor to G. H. and G. H. creditor by E. F. which debiting the one, and crediting the other, keeps th accounts of C. D. in an equitable ftate, and fhews how draughts and remittances are adjufted, in conformity to the nature of the tranfaction.
II. Let us now take a view of the accounts of G. H.

As G. H. fands a debtor in the books of C. D. for what he owes him, fo muft C. D. ftand a creditor for the fame in the books of G. H. Thus:

L E D G E R.

(1) $\begin{aligned} & \text { By cafh, money borrowed of him } \\ & \text { By E. F. paid C. D. draught of }- \text { day } C^{r} \\ & \text { By C. D. for draught accepted }\end{aligned}$

1200|-
of Draughts and Remittances, or a Bill-Book, wherein are entered all bills payable and receivable; by the means of which intermediate accounts of Bills ReceivAble, and Bilis Payabie, the perfonal accounts of all with whom you have tranfactions by way of draught or remittances, are adjufted.
III. We fhall now fee how the accounts of E. F. will ftand in regard to this traniaction.
As E. F. in the books of C. D. ftands creditor, by CAsh, for money C. D. borrowed of him ; fo Cash muft fland debtor, and C. D. creditor, in the books of E.F. for the fame. Thus:

L E D G E R.

$$
\left|\begin{array}{ccr}
\text { CASH } & - & - \\
\text { TOC. D. of London, borrowed of him }  \tag{1}\\
\text { C. D. of London } & - & D^{r} \\
\text { To G. H. a draught payable to G. H. of } \\
\text { G. H. } & & - \\
\hline
\end{array}\right|
$$ (2) (3) To cafh, paid C.D's draught, when due, of

But if C. D. of London had no one at Briftol that owed him money, in order to conveniently difcharge his creditor E. F. at that city, E. F. mult either have drawn upon C. D. of London, or C. D. of London muft have paid the money in London, and procured a bill, payable to E. F. in Briftol, and fent him the fame, which would have anfwered the end equally as well.-Or, if it had been convenient for E. F. to have the faid fum paid to his order in Exeter, or ellewhere, and it had fuited C. D. fo to have returned the fame, by a draught upon any correfpondent, in this way likewife the money may be paid to the order of E.F. Hence we find, that the tranfaction of money-concerns, by the means of draughts and remitrances, is infinitely more facilitated than can be by the perpetual fending of fpecie backwards and forwards, at a great hazard and expence: and, with regard to bills of Exchange that are not payable at fight, the robbing of the mail does not, in this refpect, affect them in the manner that it does bank-bills. There is, indeed, frequently hazard run by taking bills that may be protefted, and this proves a great difappointment to the principal parties :' this induces many rather to tranfact their inland affairs by the means of bank bills, than by that of bills of exchange. Nor is the trading intereft only thus accommodated in their draughts and remittances, by the means of paper circulation, but the landed men alfo; and the public revenue itfelf is commodioufly remitted to the exchequer, by virtue thereof: whereby this method of drawing and remitting money, proves of no lefs eafe and advantage to the government, than to the fubjects in general.
There are many bankers, and others who are not profeffedly fo, that make a very handfome income, at $\frac{1}{4}$ per cent, \&c. by accommodating people with bills for their returns of monies.

## EXPLANATION.

Whoever difcerns the reafon of what has been already faid, will need no farther explication in relation to the accounts of E.F, which he will obferve are in conformity with the preceding. The whole of the matter, in a word, lies here: if a merchant of London has owing to him 500 l . by one in Brifol, and he owes 200 l. alfo to one in Briftol, he orders his debtur there to pay the fame to his creditor; which order being executed in the manner before reprefented, is called a Draught made upon his debtor, and a Remitrance to his creditor; and the method of ftating the accouncs by the perfons concerned, hews the effiential points
$\left(\begin{array}{l}\text { (3) } \\ \text { (1) }\end{array} \begin{array}{l}\text { By G. H. paid C. D's draught of } \\ \text { (2) cafh borrowed of him } \\ \text { (2y C. D's draught, payable to G. H. }\end{array}\right.$

of the accountantifip neceffary to be performed by the fevcral parties therein concerned.
Thefe plain principles being well underftood, in relation to the nature of domeftic draughts and remittances, the fame will be eafily applied to thofe in foreign countries, and is foreign monies.

E X A M PLEI.
Suppofe Meff. Cliffords and fons, merchants of Amfterdam, are indebted to Meff. Henry and Peter Muilman, of London, merchants, 5000 guelders, bank money of Amfterdam, and that faid Cliffords and fons remit the fame to faid Muilmans, by a bill of exchange, drawn at ufance, on John Gore, merchant of London, who is indebted to them, exchange at 34:6. Quere, how muft this tranfaction be ftated in the books of the feveral perfons therein concerned, according to the principles of accountantfifip, as practifed by thofe eminent traders?
I. With regard to the accounts of Clifford and Sons of Amsterdam.
If they are indebted to Meff. Muilman a balance of 5000 florins, banco of Amfterdam, Mefl. Muilman will of courfe have credit in their books for that fum ; and, when they remit the fame to faid Muilmans of London, the tranfaction is managed in the following manner: às Cliford and fons owe money in London to fome perfons, to we may prefume, in the courfe of their tranfactions, they may have monies due to them from Mr Gore, in the fame trading city: in which cafe, they make a draught upon their debtor, payable to their creditors, and thereby make the remittance required, and ftate their accounts by way of debtor ares creditor, according to the principles before given in the domeftic tranfaction: taking care to difinguig the different monies of the two countries, and what they may gain or lofe by the exchange. Thefe great remitters always have an open account in their ledger of Draughts and of Remittances, and are extremely accurate in diftinguifhing My Account from His Account, as well as their Company Accounts from their Proper Accounts. See que article Ledger. But if it fo fall out that Clifford and fons of Amfterdam have no Monies due to them in London, and yet are obliged to pay the faid fum to Muilman and Co. within a certain time, the affair may be managed in one or the other of the following ways: either Muilman and Co. may draw upon Clifford and Co. or Clifford and Co. mult purchafe a bill, or bills of 4
exchange,

## R E M

## R E P

exchange, on the Bourfe of Amfterdam, of thofe who may have monies due to them in London, or any other trading city in England; and this bill, or thefe bills of exchange, are fent over by the packet to the faid Muilman and Co. Suppofe fuch bull of exchange be furnifhed to Clifford and Co. by the houfe of PELtz and Sons of Amfterdam, drawn upon Sir Joshua Vaneck, Bart. and Co. merchants of London, payable at ufance, or two ufance, to Meff. Cliffords: in this cafe, Cliffords indorfe the faid bill of exchange, and fend it over to Meff. Muilman, who prefent the bill for acceptance, and receive the contents of Sir Jorhua Vaneck and Co. according to the tenor thereof. If the tranfaction be thus conducted, and if Meff. Clifford immediately pay for the bill furnifhed them by Meff. Peltz, they may make diles of Exehange, or Remittances, debtor to $\mathrm{C}_{\text {Ash }}$ for the money fo paid; and when they hear of Meff. Muilman's receipt of the bill in England, and that it is accepted, they then debit Mess. Muilman to Remittances, for the amount thereof. This method of Atating the accounts in the books of Clifford of Amfterdam, wil keep their account of caih right, as well as their account keep their accoimt of
What is a remittance to Meff. Muilman, is a draught upon Sir Jofhua Vaneck and Co. by Meff. Peltz; and, upon the receipt of money by Peltz and Co. of Cliffords, for the faid draught of Sir Jofhua Vaneck and Co, the faid Peltz debits their account of cafh, and credit Sir Jofhua Vaneck and Co for the faid draught
And Sir Jofhua Vaneck and Co. in order to keep his accounts in conformity with thofe of Peltz and Co. do, upon the acceptance of the draught aforefaid, debit Peltzs and Co. in their proper account, which gave birth to the occafion, and credit Meff. Muilman for their faid remittance; for, upon Sir Johua and Co's acceptance of the bill, they, from that time, become debtor to Meff. Muilman for the fame: but if Sir Johua chufes fo to have his books kept, that his intermediate account of Draughts may manifeft all draught that have been made upon him, ther he debits Peltzs and fon to the account of Draughts, and, when he pays fuch draught, according to the tenor of the bill, he then debits draught, and credits his account of cahh; which is the method that moft great remitters practife.
In the like manner, with regard to the remittance made to Mef. Muilman, he debits the account of Remittances to Meff:' Clifford, and credits Meff. Clifford for the fame, in conformity: and, when Meff. Muilman receive in money che amount of the faid bill, of Sir Jofhua Vaneck, he debits his account of cafh, and credits that of remittances; whereby the accounts of Muilman are kept in conformity with thofe of Cliffords of Amiterdam.
But as our remitters, or merchants of confideration, keep their cafh either with the bank of England, or with bankers of eminence, the bufinefs of receiving or paying bills is made mighty eafy to them; for the bills receivable being depofited either in the bank, or the bankers hands, their runners receive them when due, the merchant having the receipt thereof acknowledged in his bank-book: and, when fuch merchants have bills to pay, they draw upon the Bank or bankers for the fame, which fums are wrote off in their bank-book accordingly.
Upon the whole, the reader will eafily obferve, that any bill of exchange whatfoever is properly a Draught, with regard to the drawer, and to the perfon upon whom the fame is drawn, and who is to pay the contents; and, at the fame time, it is properly a Remittance, with regard to the perfon who buys the bill, and pays the value, as well as to the perfon to whom the bill is fent, or remitted, and who confequently receives the contents.
In relation to the general laws, cuftoms, and ufages, which concern bills of exchange, fee the article Bills of Exchange; and, with refpect to the method of fating accounts of this nature, fee the articles Banking, BookKeeping, Debtor andCreditor, Ledger, and Mercantile Accountantship; under whichfeveral heads will he find very ample inftructions whereby to capacitate him for the ftating of any kind of accounts whatfoever, be they either of a foreign or domeftic concernment.
Further Remarks upon this article of Remittances and Draughts.
As in inland trafficable affairs it may, as we have obferved, frequently fuir the convenience of the parties to remit money in one city, payable to the order of a correfpondent who rethdes in another at a conifiderable diftance in the fame country; fo it often happens, efpecially among the general and more fkilful merchants, that they order a correfpondent of London to draw upon their correfpondent of Paris, who may be debtor to him in Amfterdam, for their account, inftead of drawing upon him of Amfterdam: and fo in diver other places. For if A of Amfterdam be indebted to B of London, and C of Paris be alfo indebted to A of Amfterdam; and if A of Amfterdam orders B of London to draw upon C of Paris, inftead of himfelf of Amfterdam, it may, and often does, not only prove mutually agreeable and convevenient, but fonetimes an additional advantage is the mo-
tive, either to the one, if not both, fo to do; and what the to advantages may be at fuch conjuncture, is judged of by the courfe of exchange between Amfterdam and London, Amfterdam and Paris, and London and Paris; atid the method whereby fuch buineis is tranfacted, by the means of draughts and remittances, with a view to prufit to he made by ile exchange, is called the arbitration of the fortion exchange See the article Arbitration in matters of the foreign exchange; fee alfo the articles England, Hamburge Holland, and the chicf trading cities of Europe, under their refpective provinces.
REPRIZALS, a right, according to the civil law and that of nations, which princes have to retake from their enemies fuch things as they unjufly detain from them, or other things equivalent thereto. - It is ufed alio for a peimiffion given by a prince fometimes to a lubject, upon a full cugui zance of the caufe, authorizing him to retake, from the firf perfon he meets with of the adverfe party, as many effects as make an equivalent to what have been violently forced from him, and for which the oppofite prince has refufed to do him juftice.
Thefe permiffions are alfo called letters of mark, mart, of marque. -Thus we fay, This merchant has ferzed the effict of the Spaniard Don _, by waty of reprizal, becaule the Spaniard has feized his, and no rediefs could be had at the court of Madrid.
Under the articles Marque, [Letters of Marque], Privateers, Prizes, we have given the principal laws relating thereto: as they have fome affinity with the prefent fubject, we fhall here give what may be turther neceffary, according to the laws of Englaids, in particular, to the underftanding what elfe may have a connction with the preceding fubjects.

A copy of letters patent for efpecial reprizals, from the king of Great-Britain (under the great feal of England) aramint the States of Holland, and their fubjects; inrolled in the high court of Chancery, ig May, I5 Car. II
Charles the Second, \&c. Whereas our loving fubjecis, Sir William Courteen, Knt. deceafed, and his partners, anno 1643, by the depredation and hoftile act of one Gailard, commander in chicf of two fhips belonging to the Eaft-India company of the Netherlands, was, between Goa and Ma cao, in the ftreights of Malacea, deprived and moft injurioufly fpoiled of a certain fhip calted the Bona Efperanza, and of her tackle, apparel, and furniture, and all the goods and lading in ber, upon a very hopeful trading voyage to China; which were carried to Batavia, and there all de ffeto, without due procefs of law, conficated. Arid alfo in the fame year, another laden fhip of our faid fubject, called the Henry Bonadventure, being come on ground near the ifland of Mauritius, was there, both fhip and goods, leized upon ly fome of the officers and minifters, and ochers under the command of the faid Ealt-India company, and utterly detained from the right owners. And whereas the faid Sir William Courteen, and his affigns, in his life-time, ufed all poffible endenvous to recover the faid fhips and goodsy and to procure further juftice againft the malefactors, and yet could obtain no reftitution or fatisfaction; whereby they came to be much diftreffed, and utterly undone in their eftate and credit: and thereupon, and upon the moft humble fupplication and ad dreffes of Francis carl of Shrewfbury, and William Courteen, Efq; grandfon and heir of the faid Sir William, deceafed, Sur John Ayton, and Sir William Turner, Kilts. and George Carew, and Charles Whitaker, Elqrs. (on the bet:alf of themfelves, and divers others interefted in the faid two fhips, Bona Efperanza, and Henry Bonadventure, and in the eftates of the faid Sir William Courteen, decedfed) Si. Edward Lit theton, Bart. and Sir Paul Pindar, Knt. that we would take their cafe into our princely confideration: we, out of a juf fenfe we then had, and fitll have, of their unjuft fufering in that bufinefs, both by our own letters, under our fign manual, to the States General of the United Piovinces, and by Sir George Downing, Kint, and Bart. our envoy extraordinary, to whom we gave fpecial command fo to do, required fatisfaction to be m.de, according to the rules of juf tice, and the amity and good correfpondence which we then defired to conferve with them firm and inviclable. And whereas, after feveral addreffes made to the States General by our faid envoy, and nothing granted effectual for the relief of our faid fubjects (whom we take ourlelver, in honour and juftice, concerned to fee fatisfied and repaid) we lately commanded the faid Sir George Downing to intimate, and fignify to the faid States, that we expected their final antwer concerning fatisfaction to be made for the faid mips an goods, by a time then prefixed, and fince elapled, that we might fo govern ourfelves thercupon, that cur afotefaid lub jects might be relieved according to right and juftice; and yet no fatisfaetory anfwer hath beengiven; fo that we cannot but apprehend it to be, not only a fruiters endesvour, but a profituting of our honour and dignity, to make firther application, after fo many denials and fightings. And whereas John Exton, doctor of laws, judge of our hieh admiralty court of Ingland, upon our conmand to certify th us

## R E P

he value of the loffes and damages fuftained by the faid Sir William Courteen, and 'partners, whofe intereft is now vefted in our loving fubjects Sir Edmund Turner, Knt. and George Carew, Eff; and partners, hath, upon full examination and proof thereof, made by witneffes in our high court of admiralty, reported and certified under his hand, that the fame do amount to the fum of One hundred fiftyone thoufand, fix hundred, and twelve pounds.
Now know ye, That for a full reftitution to be made to them for their fhips, goods, and merchandizes, of which the faid Sir William Courteen, Knt. and partners, were fo defpoiled as aforefaid, with all fuch coffs and charges as they fhall be at for the recovery of the fame: we, by the advice of our privy council, bave thought fit, and by thefe prefents do grant licence and authority, under our great feal of England, unto our faid fubjects, Sir Edmund Turner and George Carew, their executors, adminiftrators and affigns, for and on the behalf of themfilves and other perfons interefted, as aforefaid, to equip, victual, furnith, and to fet to fea, from time to time, fuch and fo many fhips and pinnaces as they fhall think fit; provided always, that there be an entry made and recorded in the admiralty courts, of the names of all hips and veffels, and of their burthen and ammunition, and for how long time they are victualled, and alfo the names of the commanders thereof, before the fame or any of them be fet forth to fea; and with the faid lhips and pinnaces by force of arms to fet upon, take, and apprehend any of the fhips, goods, money, and merchandizes belonging to the StatesGeneral, or any of the fubjects inhabiting within any of their dominions or territories, wherefoever the fame hall be found, and not in any port or harbour in England or Ireland, unlefs it be the flips and goods of the parties that did the wrong. And the faid chips, goods, money and merchandizes, being fo taken, and brought into fome part of our realms and dominions, an inventory thereof fhall be taken, by authority of our court of admiralty, by the judge or judges thereof for the time being, upon proofs made before him or them that the faid fhips, goods, wares, merchandizes, or money, did belong to the States General, or any of their fubjects, as aforefaid: that they thall be lawful prize to the faid Sir Edmund Turner and George Carew, their executors, adminiftrators, and affigns, as aforefaid, to retain and keep in their or any of their poffeffions, and to make fale and difyofe thereof in open market, or howfoever elfe, to their and every of their beft advantage and benefit, in as ample manner as at any time heretofore hath been accuftomed by way of reprizal, and to have and enjoy the fame as lawful prize, and as their own proper goods: fo that neither any captain, mafter, nor any of their company, that fhall ferve in perfon, or fhall promote and advance the faid enterprize, in manner and form aforefaid, fhall in any manner or wife be reputed or chatlenged as an offender againft any of our laws. And that it thall be lawful for all manner of perfons, as well our fubjects as any others, to buy the faid fhips, goods, and merchandizes, fo taken and apprehended by the faid captains, mafters, and others, and adjudged as aforefaid, without any damage, lofs, hindrance, trouble, moleftation, or incumbrance to befal the faid buyers, or any of them, in as ample and lawful manner as if the fhips, goods, wares, and merchandizes, had been come and gotten by lawful traffic of mercbants, or of juft prizes in time of war. Provided always, that all fhips, goods, and merchandize, taken by virtue of this our commiffion, fhall be kept in fafety; and no part of them wafted, fpoiled, or diminithed, or the bulk thereof broken, until judgment hath firf paffed as aforefaid, that they are the fhips and merchandize of the States General, or fome of their fubjects, as aforefaid. And if, by colour of this our commiffion, there thall be taken any fhips, goods, or merchandizes, of any of our loving fubjects, or the fubjects of any prince or ftate in good league or amity with' (except the States General, or their fubjects, as aforefaid) and the goods therein laden, fold and embezzled, or diminifhed, or the bulk thereof broken in any place, before they fhall be adjudged to belong to the States General, or fome of their fubjects, as aforefaid, that then this commifion fhall not be of fufficient authority to take the faid fhips, goods, and merchandizes, or to warrant or fave harmlefs fuch as Gall receive, buy, or intermeddle therein; but that both the prizes fo taken, and the faid fhips of war, thall be confifcated to our ufe.
And further we do hereby declare, That it is our will and pleafure that this our commifion fhall remain in full force and power to all intents and purpofes, until the faid Sir Edmund Turner and George Carew, their executors, adminiltrators, and affigns, as aforefaid, fhall, by virtue thereof, have by force of arms apprehended, taken, leized, recovered, and received from the faid States General, or their fubjects, One hundred fifty-one thoufand, fix hundred and twelve pounds, accordng to the appraitement to be made, by appraifers upon oath, nominated and authorized in our laid court of admiralty, of fuch thips, goods, wares, or merchandizes, as thall be taken from the faid States General, or any of their fubjects, by virtue of this commifion, or fhall otherwife receive fatisfaction of the debraforefaid, by compofition to be
made between thofe of the Eaft. India company of the Ne therlands, and the faid Sir Edmund Tuiner and George Carew, their executors, adminiftritors, and affigns, as aforefaid: notwithftanding the prefent difference between us and the faid States General, depensiug upon general reprizes, may be agreed and compofed, and that, in the interim, a good correfpondence may be reneved between us and the faid States General: in which cafe, neverthelefs, it is our will and pleafure, that, in the execution of this our comm:fion, no violence fhall be done to the perfons of the faid fubjects of the faid States General, but only in cafe of refiftance; and that after in cold blood, the fubjects of the States General, if hurt or wounded, fhall be ufed with all convenient offices of humanity and kindnefs, \&c.

A proclamation for revoking the foregoing letters of marque and reprizals, publifhed Auguft $3^{\circ}$, $1 \in 80$.
Whereas George Carew, Efq; had formerly granted to him letters of marque againft the States General of the United Provinces, for fatisfaction of a certain demind whichSir William Courteen and others had againft the Taid States, and to which the faid George Carew was intitled, which 'faid demand has fince, by treaty of peace between his Majefty and the faid States, been totally a bolifhed and extinguithed, and all letters of marque and reprizals by the fame treaty difcharged accordingly: and whereas his majefty has fince recalled and fufpended the faid letters of marque, to the end that no perfon may be milled, under pretence of any letters of marque and reprizal heretofore granted to the Caid George Carew, and thereby incur the danger of the law as pirateś, his Majefty is pleafed, by this his proclamation to declare, that the faid George Carew has now no authority and commifion, by virtue of any fuch letters of marque, ta'equip or fet out any veffel whatfoever; and that all perfons that thall prefume to be aiding to him in fetting forth any fuch fhip, or ferve under him, by colour of any fuch pretended authority, fhall be proceeded againft as pirates, according to the utmolt feverity of the law.
REVENUE, [PUBLIC REVENUE]: REVENUE, in its ordinary acceptation, is the yearly rent, or profits, arifing to a man from his lands, poffeffions, 'sec. The public revenue of this kingdom is the yearly income, or fumss raifed, at prefent, by the authority of king, lords, and commons, for the fupport of the ftate.
The fuccefs of a kingdom, fays a judicious writer, depends upona wife regulation of its Revenues. When taxes are not levied in the manner they ought to be, they are the ruin of the fubject, a moth in the treafury, the univerfal lamentation of a kingdom, and the intereft and joy of foreigners. But a prudent difpofition of them is the foul of a fate, the life of the people, glory to a prince, grief and diftrefs to foreigners, and a perpetual fountain of the richeit bleffings to human life.
As not only the inferelt of trade, but the maintenance of the liberties of thefe kingdoms, will ever confift in keeping princes dependent on the parliament for the money that fhall be exacted from the people; it may be ufeful to give a fhort hiftory how the public money has been levied, from the Conqued to the Revolution in 1688 , and from that æra to the prefent time.

King William I.
Having conquered England, his Will became a law, and he looked upon all the land and treafure of the nation as his own. He diftibuted the greateft part of the Englifh lands among his Normans, and others, who helped him in the conqueft; whereby he fecured their attachment, and effectually depreffed the natives.-He alfo divides the lands into baronies and knights'fees,-He caufes an exact furvey to be taken of all the lands; by which he knew diftinctly every acre of arable, meadow, palture, common, wood, marh, and every other fort, and taxed them all to their value.-He rated, in like manner, all towns, cities, boroughs, and villages.-This furvey is preferved in the Exchequer, in the Doomiday-Book.-He eftablifhed the cuty of Danegeld, on account of pirates, but "exempted the church from the payment of it, yet he caufed all the monafteries to be plundered of their money.-He brings under military fervitude all the bifhoprics and abbies that held baronies-Makes inquiry in every county how many acres were fuficient yearly for one plough, \&c.-Caufes inquifition to be made what affefiment each city, caftle, \&c. paid yearly -Takes 6s. of each plough-land, or hide, throughout the kingdom, and extorts immenfe fums from all people promifcuoufly.

REMARKS.
What all thefe incomes of the Conqueror might amount to is not poffible to be knowin, there being no eftimates extant even of thofe fums which he raifed by way of tax; nor can there be any account of all the other profirs he made by the feveral ways above mentioned. - He thood not in need of parliaments to fupply his wante, who had it in his power to take all that his fubjects poffeffed.-However arbitrary and lawler's this abfolute monarch and conqueror was, yet, it has been faid, that he did not abfolutely abolifh the righats, laws, and
cuitonws

## R E V

## R E V

cuftoms of the Englifh people, but fubmitted himfelf, in fome meafure, to thole contained in the Doomfday-Book. After the Saxons were fettled. in. England, their filver coins were generally all of a fize, and ill-minted, which they called were genes, worth about three-pence of our money, and alfo half-pennies and farthings, and balf-farthings, called fica's. After the Norman conqueft, a pound of gold being divided into 24 carats, and every carat into 4 grains, the old flerling, as it was afterwards called; or right ftandard of gold, confifted of 23 carats and 3 grains and a half of fine gold, and half a grain of allay of copper or filver. Alfo, a pound of filver being divided into 12 ounces, and every ounce into 20 pennyweights, and every pennyweight into 24 grains, a pound weight of old fterling confifted then, as it does at prefent, of Ir ounces 2 pennyweights of fitie filver, and 18 pennyweights of allay.

King Wilifam Rufus,
Son and fucceflor to the Conqueror, faared no mianner of rapine or fimony.-Holds moft of the church-lands in his own hands, and farms them out to the laity. $二$ Extorts 5000 marks from the cathedral of Lincoln.-Exacts ios, a man from 20,000 foot.-Seizes all the effects of the archbifhop and church of Canterbury. - Demands Danegeld of all the barons.-Draws the wealth of the church into his own trealury. - In fhort, he flayed the people with taxes and exections in every fhape; and having oppreffed and ruitied his fubjects, he was fnarched away with a violent death:

## REMARKS.

This prince not only governed as his father had done, iti a defpotic manner, as inheriting all that he did, and, confequently, bad the fame property in all the lands and all his revenues; but he oppreffed both clergy and laity withoutmercy, laying the moft unfeafonable impofitions on their lands, houfes; and effects of every kind, infomuch that no man could call any thing his own ; and in this manner he reigned, or raged, for the face of near 13 years.-At the time of his death, this king held in his own hands the archibifhopric of Canterbury, the bilhoprics of Winchefter and Salitbury, and 12 abbies, which he was wont to fell, or let out to farm, or keep them to himfelf: he had all the viees of his father without his virtues.-Ranulph Flambert, a man of oppreffive principles and mean birth, was his treafurer, and the projector of moft of the unjuftifiable ways practiled by the king to extort money from his fubjects.
The two firft kings after the Conqueft cained only pennies: they agree, as near as can be judged, in weight and goodnefs, with the pennies of the Saxon kings, their immediate predeceffors. It is therefore reafonable to think that king William introduced no new weight into his mints; but that the fame weight ufed there for fome ages after, and called the pound of the Tower of London, was the old pound of the Saxon monies before the Conquef. This pound was lighter than the Troy pound by three quarters of an ounce Troy, and did not very fenfibly differ from 12 ounces of the weight fill ufed in the money affairs of Germany, and there known by the name of the Colonia weight. And whereas the prefent fandard of England, of 11 ounces 2 penayweights fine, to 18 pennyweights of allay, is called, in the oldeft accounts of the Mint extant, the old fandard, or the ftandard of the old fterlings, it is moft probable tuat thefe pennies were of that ftandard, and that the pound of the Tower of fuch ftandard filver was then cut into 240 of thefe pennies: whence the weight of the penny will be found 22 Troy grains and a half; and the intrinfic value of 20 fhillings, or of 240 fuch pennies of full weight, was the fame as the value 58 Shillings and one-penny half-penny of our prefent coined money.
Of the payment of the king's revamue in thofe ancient times. At firft, the tenants of knights fees anfwered to their lords by military fervices; and the tenanes of focage lands and demefnes, in great meafure, by work and provifions $\vdots$ afterwards, the revenue of the crown was anfwered in gold and filver, and fometimes in horfes, dogs, and birds of game, and the like, and fometimes in both together. When a man paid money into the Exchequer, it was faid, in Thefauro liberavit fo much; and the fame phrafe continueth to this day. Thefe payments were made Ad fcalam \&c ad penfum, and in blank filver and numero, by tale. Ad falam was by paying fix-pence over and above each pound, or 20 Shillings, which at firft was thought fufficient to make good the weight; ad penfum was the perfon's making good the deficiencies of weight, though it was more than fix-pence per 20 fhillings. But as the money might be deficient in fineners, as well as weight, a third way of payment was by melting down part of the money paid in, and reducing it to plate of a due finenefs; when the ferm was meited down, it was faid to be dealbated, or blanched. As fuppofe a ferm of a hundred pounds was paid into the Exchequer, afrer the melting, as before obferved, it was faid to be a hundred pounds blank: frequently the twentieth part of one fhilling was accepted in lieu of melting, to fave trouble and charges. The payment VOL, II.
by bumero, or tale, needs no explanation. Parments, or at leaft computations, were made by marks and half marks ounces and half ounces of gold; and in pounds, marks, half marks, hillings, pence, \&c. of filver. The mark of golu was equal to 120 lhillings of filver; the ounce of gold was equivalent to 15 flillines of filver; the pound of filver by tale was 20 fhilitings; the mark I 3 fhillings and four-pence; and the failling confifted of iz pence; and a penny was the twentieth part of an ounce, equal to our three-pence.

## King Henry 1.

Succeeds his brother William in the fulnefs of the fovereign prerogative. The firft impofition he laid was three fbillings on every hide of Mand, to marry his daughters.- Anno Dom. 1104 , be exacled a prodigious fum of money of this kingdom, and the land lay inder grievous, and exorbitant oppreffions, the difcord being revived between him and his brother Robert, earl of Normandy. -He alfo feizes the archbifhopric of Canterbury into his own hands, and left 100,00ol. at his death; befides plate and jewels.-The charter this prince granted the niation upon his acceffion to the crown, is one of the molt remarkable particulars of his reign, dufing which England enjoyed a prodigious plenty of all things : for a himiling; at this time, might be bought as much corn as would ferve 100 men a day; and for a groat, which was allo the price of a heep; as much hay and oats as 20 horfes could eat in the fame time. This was owing to the ficarcity of money.
The coined pennies of this prince, the firf Henry, were like thofe of his father and brother, to which, as the hiftorians very particularly tell us, he added half-peninies alfo.
The mianner of paying in and computing the king's money being fhewn at the end of William Rufus's reign, it may not be amils briefly to hew here how the royal revenue was levied; and the manner of iffiuing it. (r.) As to the levying, the perfon principally intrufted was the fheriff of each county, who, in thofe days, was an officer of great authority; however, theris were feveral other fated collectors and accountants, mamely, the efcheators, the farmers, (or cuftades of fuch towns and burghs as were nof within the (herift's receipt) the cuftodes cambii, ot cuftomers, the keepers of the wardrobe, and, in general; all perfons who held bailiwicks from the king, or received any of his treafure or revenue by impreft, or otherwife, were obliged to reader an account thereof, and, in fucceeding times, the collectors of tallages, difmes, quinzimes, \&rc.
But, in cafe thefe officers could not inforce the king's debtors to make payment, the fheriff was armed with fufficient power to do it: The moft ancient procefs made ufe of was the fummon of the Exchequer, which iffued twice a year into all the counties of England, and was returnable againet the times of holding the Duo fcaccaria, namely, the Scaccarium.Pafchz, or Exchequer of Eafter, and the Scaccarium St Michaelis, or Exchequer of Michaelmas, which were the general terms for the fheriffs and other accountants, to pay in their farms or rents, and other iffues of their bailiwicks. This was the ordinary procefs; but, ypon urgent occafions, the king fometimes iffued fpecial writs to the fheriff, and others concerned in collecting the revenue, commanding them to levy debts, \&c. with all fpeed.
(2.) As to the manner of iffuing the king's money: this was done feveřal ways. Whillt the money remained in the hands of the fheriffs, farmers, or others, it was ufual for the king, his chief juftices, great officers of his court, treafurer, or barons of the Exchequer, to order them by writ to make provifigns and payments out of the money in their hands. This writ was fometimes called the theriff's warrant; for, upon producing it, he had allowance made to him de tanto upon bis account. Sometimes the king's money was iffued by way of preft, or impreft, either out of the receipt of Exchequer, the wardrobe, or other the king's treafuries. Impreft feems to have been of the nature of a concreditum, or accommodatum, and when a man had money impreffed to him, he became accountable to the crown for the fame. In the 5 th year of king Stephien, an account was rendered at the Exchequer of certain monies imprefled to the accquntant, when the emprefs came into England. Mag. Rot. 5 Steph.
According to ancient ufage, the king's treafure was to be iffued, by virtue of a writ or mandate, under the great and privy feal, and directed fometimes to the juftices and barons of the Exchequer, but commonly to the treafurers and chamberlain of the receipt; and the writ was founded upon a bill or certificate frum the Exchequer, or Wardrobe, or other matter of record. But the ufial writ for iffuing of the king's money out of the Exchequer was the Liberate (fo called from that word ufed in it) directed to the treafurer and chamberlain. This writ was of two forts: a liberate for paying a fum hac vice only, and a liberate current, or dormant, for paying in continuance, or more than once. The reader may fee inftances of thefe things in Madox's Hiftory of the Exchequer, ch. 6, 10.

King Stephen
Impores no regular taxes, but raifes all monies by plundering and robbing.-Seizes on all his predecefor's, king Henry', 8 D
treafure.

## R E. V

treafure.-Raifes Danegeld, contrary to his folemn promifes and feizes on the treafures left by the bifhop of Saliibury.

## REMARKS.

The whole time that Stephen held the crown was one continued fcene of blood and devaftation; the government being quite unhinged, and all brought into confufion, the fword decided all controverfies, and taxes in general were raifed by lawlefs oppreffion.
I. Having hewn, in the former reigns, how the money was paid in, and iffued out of the Exchequer, it may not be amifs now to reprefent the particular branches of the royal revenue, namely, 1. The demcins of the crown. 2. Efcheats. 3. Feudal and other profits, arifing out of the demefns and efcheats. 4. The yearly ferms of counties and towns. 5 . Fines and amerciaments. 6. Aids, fcutages, tallages and cuftoms. 7. Cafual profits of divers kinds.
Thefe particulars give great light to feveral parts of the Eng. lifh hiftory. Firft, of the ancient deme!n of the crown, it appears, at the time of the Conquelt, and afterwards, the demefn lands were confiderable for extent and income. Doomf-day-Book fhews what they were in the reign of Edward the Confeffor, and ferves to diftingulfh the king's demefns from his efcheats, and other lands, and from the lands of other men. II. The fecond branch of the revenue arofe by efcheats, undet which term are compreherided not only thofe lands moft properly fo called, bitit thofe alfo which at fundry times after the Conqueft became vefted in the crown, either by devolution, forfeiture, feiêure, or, perhaps, by fome other title.
By the revenue-rolls of the Pipe of the reigns of Stephen and Henry II. (which, next to Doomiday, are the moft ancient rolls of records now extant) and likewife by thofe of the next fucceeding kings, we find the crown then in poffeffion of feveral great honours, baronies, and lands, of that fort which are ufually filed honor, baronia, or terra of fuch a one, with the addition fometimes of Quzeft in manu regis, without expreffing by what itte they became vefted in the crown. Thefe great efcheats were anciently committed ufually by the king to certain perforns in ferm, or cuffody, who anfwered at the Exchequer yearly for the iffues, or ferm thereof. Befides the'e greater fees, the lands of lower perfons, and fometimes of hereditary offices and ferjeantries, with the lands appertaining thereto, became forfeited to the crown.
As the king had the full dominion in all thefe efcheats, after they had been long vefted in the crown, they were hardly to be diftinguifhed from the king's ancient demefri. About the latter end of king Henry the Second's reign, they began to form an efcheatry, which, in fubfequent times, was managed by officers' called at firft cuftodes efcaetria, and afterwards efcators: however fome of the fmaller efcheats were ufually holden by the fheriffs. When efcheats came to the crown, the juftices itinerant took care, within their feveral circuits, to have them feized to the crown, and put in charge to the fheriffs, and other officers, to the king's profit.
III. Some revenues likewife accrued to the crown from vacant bifhoprics, and abbies of royal foundation and patronage: for in ancient times, when fuch bifhop or abbot happened to die, the king ufed to feize the temporalities into his hands, and receive the profits till the vacancy was filled.

## King Henry II.

Lays a tax called efcuage, or fcutage.-Impofes fcutage again, in the 5 th year of his reign, and again in the 7 th inftant. Obliges the Jews to pay a tallage or donum.-Lays twopence in the puund upon all arable lands and wines; as alro upon goods, houfes, and employments, one year.-Lays a penny in the pound for four years after.-Railes an aid for marrying his daughter, of one mark for each knight's fee throughout England.-Lays another fcutage in his 18th year, and another in the $33^{\mathrm{d}}$ year.-Takes of the Jews a fourth part of their chattels, by way of tallage.-Levies a tenth throughout all his dominions.- Levies a tenth of all moveables in his 35th year.-Keeps the bifhopric of Lincoln vacant 17 years, and fix others for a long, time, as well as 12 abbies. - Keeps alfo the archbifhopric of York vacant 10 years, and leaves behind him 900,0001.

## REMARKS.

1. The two firft branches of the royal revenue being fooken of already, namely the demefns of the crown and efcheats, the third branch is the feudal, and other profits arifing from thence, as reliefs; upon the death of his anceftor, every heir that held his lands by barony, or knights. fervice, was obliged to pay a fum of money to the king, on his taking poffeffion of the inheritance. Thefe reliefs were at firf uncertain, till Magna Charta, when an carl paid an hundred pounds, a baron one hundred marks; a knight, for one fee, five pounds.
Hese ic mult be obferved, that fome báronies were much larger than others, and fo of the knights fees. This diffe-

R E V
telice arofe from the refpedive charters of the feuffment; for, if the king enfeoffed a man of foray knights fees, to hold by barony, or ten knights fces, to hold by barony, the tenure was barony in each cale. So, alfo, if the king enfeoffed a man of twenty carues of land, to hold by the fervice of one knight, or forty carues, to hold by the fervice of one knight the feoffee had, in each cafe, one knight's fee. For this reafon, at certain times, a diftinction was made between the reaion, at certain times, a diltinction was made between the
baronies and fees of the old, and thofe of the new feoffment the old being commonly larger than thofe of the new ; notwithftanding this difference, the relief of the barony; or fee, whether it was greater or lefler, was the fame. But when two baronies came to be vefted in one man, he was charged with a relief for each.
IV. Another feudal profit was wardhip and maririage During the nonage of the heirs of the king's tenants in capite, the king could difpofe of the cuifody and marriage of them to whom he pleafed, which raifed him a great revenue A fourth branch of the revenue, was the yeally ferms of the counties. . From the reign of king William I. the king ufed to let out the feveral counties, upon a yearly ferm or rent, or commit them to cuftody. The fermer, or committee, was ufually fliled theriff. Moft, if not all the counties, as appears by the revenue-rolls, were thus lent at ferm in king Stephen's reign. When a county was lett for more than formerly, the improvement was called crementum, the increment ; which was fometimes anfwered in palfrys, bawks, \&c. 2. The yearly ferms of the towns, burghs, and gilds. It is to be remembered, that from the time of the Couqueft, the cities and towns were invefted either in the crown, or the clergy, or the baronage. Some of thefe towns the king was polfefled of, as part of the original inheritance of the croun, whers by antient efcheat, juft as his other lands. When the king was feized of a city or town in demefn, he was loid uf the foil, viz. of all the land within the fite and precinct thereof, of all the burgage-houfes, fbeds, falls, and buildings, herbage, profits of fairs and markets, pleas and perquifites of courts; in a word, of all iffues, piofits, and appurtenances, of the city or town, of any kind, that was not alienated by himfelf or anceftors. For fometimes the crown thought fir to grant fome part, or profit, to a private perfon or monallery.
Such a city or town was commonly ftiled civitas regis, villa regis, burgus regis; and the men homines or burgenfes regis. The yearly profit made by the king of his cities and towns, was paid him feveral ways. The iffues of fome were included in the general ferms of the county where they lay, and were anfwered by the fheriff. Sometimes the king conmitted them to fermers, or cuftodes, diftinct from the fheriffs. In a word, fumetimes the king lett his town to the townfmen, at ferm for years, or in fee-ferm, that is, perpetual ferm for ever: fince feodum, fee, was ufed in England, to fignify a perpetual eftate; it has been ufed to denoce perpetuity in office and in rent. Thus inheritable offices have been rendered offices in fee.
When a town was put to fee-ferm, the tenure was burgage, particular burgage, tenements lying in the town, as well as the town itelff, were faid to be fo holden. In procefs of time, moft of the towns and burghs came to be lett to the refpective townfmen or burgeffes, at fee-ferm.
To the ferms of the towns, may be referred the ferms or yearly payments to the crown, by the gilds and mefteres. The word gild fignifies a company, fociety, brotherbood, by which laft name the religious gilds were called, that were founded for devotion and almideeds, as the fecular gilds were chiefly for trade and almfdeeds. Thefe gilds could not be fet up without the king's warrant. The gilds of goldimiths, bochers, and others, were amerced in London to the crown as adulterine, in the reign of Henry II.
Thers was alfo in former times a fecular gild, called gilda mercatoria, a merchant gild. From thefe gilds, perhaps, fprung the practice of gildating or embodying whole cowns, In time, the feveral gilds of goldfmiths, falters, \&c. were ftiled corporations, or companies. All thefe gilds paid a yearly ferm to the king. As for the mefteres, it is to bc obferved that this word has no relation to the word myltery, as if there was, it is vulgarly faid, fome myftery in every trade. For though myftery has been ufed for many years patt for a craft, or occupation, the true derivation is from the Gallic miftera, meiftera, or meftier, fignifying a trade. Thus we find in Edward III, the miftere of taylors, armourers, and others. The other three remaining branches of the evenue, will be given in the fucceeding reign.
The pennies of, the fecond Henry were the fame in value 3 s the foregoing, and they were alfo of different forms; fuch a regularity in this particular, as afterwards took place, not being yet eftablined in the mints.

King Richard I.
Levies a land-tax, in order for his expedition to the Holy Land. - Raifes money by fining feverely thofe who were con. victed of corruption.-Sells the whole county of Durham to the bilhop for an immenfe fum,-Takes 1000 marks of the fame bifhop, to make him chief jultice.-He rarfes a large
fum of the citizens of London; which was the price of their liberties, which he granted them at that time.-He makes a new Great Seal; and raffes money by ranewing of old grants.-Impofis a tax of a fourth part of the revenues of all grants.-
perfons, both ecclefiaftical and fecular, for one year ; and likewife a fourth part of all their moveables. and 20 s . of every knight's fee, befides all the wools of the Ciftercians, \&c. and abundance of church plate.-He reaffumes all his grants, and levies a tax of 21 . on every hide of land.Raifes 5 s . on every hide of land.-Takes 2 s . on every carucate of land, and raifes $\mathrm{r}, 100,000$ marks by his chief-juftice the archbinhop of Canterbury, in two years.

## REMARKS:

This fum of $1,100,000$ marks is the only pofitive fum we hear of raifed in this king's reign, all the others being no where expreffed. The $1,100,000$ marks, amount to 753,3321 . for the two years, that is, 376,6661 . per ann. a fum then thought very grievous.
The next great branch of the revenue was, V. Fines, oblatas, and amerciartients of many kinds, in civil and criminal cafes, and for the forelts. It is furprifing to fee, how numerous the fines and amerciaments, appearing upon the revenuc-rolls of the antient umes, were. Ais to fines for the profit, it fuffices to obferve, that by the revenue-rollspof Henry II. and Richard I. and king John, an ancient revenue wäs raifed, by trefpafles, defaults, purpreftures, \&c.
As to the fines in civil and criminal cales, they may be reduced to thefe three general heads; fincs for liberties, fines in law proceedings, and fines of a mixed nature: But firft, it may be obferved, after a fine was preferred and accepted, if the party could not have the thing for which he was fined, he was then acquitted of the fine, in fuch like words, Sed non debet inde fummoneri quia non habuit rectum nec habere potuit. However, a fmall fine was fometimes paid for fuch acquital. When the party obtained the thing for which he fined, he was wont to have the king's charter made to him. If the party fining failed in payment of his fine, he could not have his charter for the thing defired.
When a fine was preferred and refufed; if the party offered an addition, it was called crementum finis. x. As for fines of the firft fort, for'grants and confirmations of liberties, franchifes, and exemptions, there are numberlefs inflances on the revenue-rolls. 2. The fines in law proceedings were likewife very numerous, and brought in a very confiderable revenue. The feveral inftances may be reduced to thefe heads: fines to have juftice and right, fines fur writs, pleas, trials, and judgments ; fines for expedition, or (peeding their right; fines for ftopping, or delay of pleas; trials and judgments.
Sometimes the parties litigant preferred the crown a certain portion out of the debrs which they recovered. Moderate fines for having juftice were conftantly paid, as well after the great charter as before. 3. Fines of a mixed nature. `Many were made to hold or quit certain offices or bailiwicks, for divers licences, efpecially to marry, \&cc. Many fines were laid relating to trade or merchandize. Hither refer the fiaes and difmes, paid by merchants upon feveral occafions, of which hereafter. Befides fines for licences, there were others of divers kinds; as for the concord of a duel, for opehing a mine, \&cc.-There were alfo fines for the king's favour, and to remit his difpleafure.- For his protection and aid. -To obtain his mediation in his fubjects affairs.-To have feizin or reftitution of their lands or chattels, and that they might not be diffeized. - That men might be difcharged out of prifon, or bailed to the cuftody of lawful men.-For acquitals in divers cafes.-Concurrent fines were when the parties fined to obtain the fame thing: counter fines, when they fined, the one for a thing, the other againft it.-For refpite of knighthood.
And, as it was ufual to fet amerciaments for not taking knighthood after fummons, fo the king often feized the lands of military tenants for the fame reafon. - The revenue arifing from mifericordia's or amerciaments, which in ancient times are fcarce to be diftinguifhed from fines. It is likely, however, there was fome difference between them. For inftance, it was called an amerciament, after it was reduced to a certain fum, and a mifericordia, both before tnd after wards. When a mifericordia was reduced to a certain fum, it was faid to be admeafured or affecred, e. g. Warnius de quedic debet C. Marcas de mifericordia, fed poftea ammenfuratus fuit per jufticiarum er baronos ad LX marcas. Mag. Rot. 9 Joh. By Magna Charta, earls and barons are not to be amerced, unlefs by their peers, and according to their trefpals. It was frequent for fome perfons to be amerced for the defaults of others.-When general amerciaments were fet upon bundreds, towns, \&c. for murders, or the like, fo much thereof as was charged upon lands, within the faid hundred, \&c. which the king held in demefn, was charged of courfe. Lands holden by the queen, and by feveral barons and lords of feigneuries, were free from common amerciament. Barons of the Lx ehequer were exempt here from fees for their lands and tenants. Eccleliaftical fees were likewife exempt from the
bame, and other perfons by virtue of charters. Divers lerds of fergneuries were, by charter, entitled to bave to their own ufe the amerciaments arifing within their feigneury. However, the lords were to claim the farne at the Exchequer, which is frequently done to this day. See Madox's Hiltory of the Exchequer, \&c:
The next great branch of the revenue was, VI. Aid; fcutages tallages, and cuftoms. In former times the payments to the king were called by the names of danegelt, aid, donum, fcutage, tallage, \&zc. and in fucceeding times, fubfidy, quinzieme, vintifme, \&c. feveral of the former then continuing in ufe.-There were three forts of aids due to the crown of common right, or by reafon of feigneury.-Aid to make the king's eidelf fon a knight, to marry his eldeft daughter, and to ranfom his perfon when taken in war. Thefe aids were rendered by all perfons, who held of the kirg in capite.-All the king's tenants were to pay aid, whether they held of the king immediately, by barony, or knight's fervice, or by ferjeantry, with knight's fervice annexed; 'and by perfons who held of the king immediately, either by rent fervice, focage, or other fervite, that was not military, whether they lived on the lands that were ancient demefn, or on honours and lands efcheated to the king, and on lands of his wardhhips and puichafes. King William I. took 6 s. of each hide through Eugland, king Henry I. $3^{\text {s. as aid pur fille marier. But, }}$ for want of requifite notices concerning thefe aids, nothing diftinctly can be learnt of their produce.
The firft that gives any infight into there matters, is an aid levied by Henty II. for marriage of his daughter Maud, to the duke of Saxony, namely one mark per fee. It was paid by the feveral barons and knights, holding in capite, according to the number of their refpective fees. For the due levying this aid, the barons and tenants in capite were commanded to certify to the king what fees they had, how many of the old, and how many of the new feoffment, and of whom the fame were holden. - Thie fees of the new feoffment were fmall, and paid by 12s. per fee, when thofe of the old paid 20 s . Several ecclefiaftical perfons, befides the aid for their fees rendered a farther fum, under the terms de promifione fuâ. Madox obferves the fame was paid allío by laics, and therefore thinks, when paid by them it was a donum ; and when by ecclefiaftics; donum prelatorum. The vacant bifhoprics and abteys of royal foundation rendered aid, being reckoried among the efcheats. It was alfo paid by the towns and manors, or lands, which the king held in demern, and was affefled by the juftices itinerant, or with their approbation.
King Richard I: levied an aid for the ranfom of his perfon. It was paid by the tenants in capite, under the name of ficutage, at the rate of 20 s . per fee. Another part of this aid was anfwered at the Exchequer, by the name of hidage, or an aid charged on lands holden by othet fervice, than that of the fhield. The carucage paid for the fame ranfom, is alfo called an aid. Henry III. had an aid to make his fun a knight, 40 s . of every knight's fee. This aid was paid by tenants in capite, and to the king's tenants in capite, by fuch as fo held of them, by knight's fervice. When tenants in capite paid aid to the king, he granted that they might receive aid pro rata of their tenants in capite.-The aid to make a fon a knight, or for marrying a daughter, was not demarrdable from lands held either in frankalmoigne or focage. Befides thefe three noted aids, there wete others. In the gin of Stephen an aid was paid to the crown by the burghs and towns. This feems to have been a yearly parment. An aid of the like kind was rendered at this time alfo, as it feems, by the counties, affeffed by the juftices itinerant. Richard' I. took 5 s. out of every carue, or hide of land, through all England. In procefs of time the word aid came to be ufed in a large indefinite fenfe, and there came into ufe a new word, fubfidium, which was rarely ufed in the more ancient time.. A fublidy was granted to Edward II. for his war with Scotland. It is called a donum. The city of London paid 2000 marks. Befides the general aids, or thofe extending through the whole kingdom, there were certain ones impofed upon the deniefns, eftheats, \&c. of particular counties and places, for certain purpofes relating thereto. An aid by way of bidage, was laid on Devon and Cornwall, for the fiege of the inle of William de Marifco. Inferior lords of feigneurics had their tenants, the three notable aids, to make his fon a, knight, marry his eldeft daughter, and to ranfom his perfon. They had alfo of their teriants other occafional aids, as to enable them to pay their relief for feizin, or other fine, and alfo to pay their debts. This was done by the king's letters patent, directed to the tenants. But thefe were only letters of requeft. For it is provided by king John's charter, thas the king fhould not, for the future, grant Jeave to take an aid of his freemen, fave in the three calcs above-mentioned.
As king Richard I. reigned almoft ten years, it can bardly be doubted but he mull have coined fome money in that time, and that it was of the fame fort and value as that of his predeceffors, and of his immediate fucceffor. It is reaionable alfo to think, that the king's Jong abfence out of England, his expedition to the Holy Land, bis captivity, and the large

Tums paid abroad for his ranfom *, together with his wars in France after his releafe, muft have occafioned great fcarcity of money at home, and fmall coinages during all the time of his reign.

* King Rithard's ranfom to the emperor, was fettled at 150,000 marks of filver, after the Colonia weight; and of thefe Ioo, obo, being all he could then get raifed, were carried over by the queen-mother in perfon, and at once paid
down before he could obtain his liberty. An immenfe flum down before he could obtain his liberty. An immene nemm
for that age, amounting to no lefs than ig4,0001. terling of our prefent filver money.

## King Johin

Takes a feventh part of the moveables of all his fubjects.Raifes two marks and a half on every kright's fee.-Seizes en all the temporalities of the clergy.-Tortures the Jews in order to extort money from them.-Takes an efcuage of two marks per fee.-Has an aid from the prelates. - Fines the city of London in 1000 l.-Lays a tallage upon the Jews of Brifol.-And lays new exactions upon the people every year of bis reign, but three.

## REMARKS

Having fooken under the preceding reign, of the revenue arifing from Aids; we proceed to fcutages and tallages. Efcuage, or fcutage, was a fervice arifing out of baronies and knights fees. It denoted the fervice of the ihield, and was rendered for every knight's fee, the fervice of one knight; for every half fee, the fervice of half a knight; and fo in proportion. Baronies were charged after the like maitner, according to the number of knights fees whereby the barony, by its original enfeoffimeht, did confift. This fervice of feutage was performed either perfonally in the king's army, or by pecunary commutation:-Thefe efcuages, pro exercitu, were wont to be paid by the king's tenants in capite, by knights fervice.A man might hold of the king in capite, either by barony or by knights fervice, or by ferjeantry, focage, or fee farm; confequently, it is a miftake made by fome great men, that a baron and a tenant in capite was all one: for though.every baron, properly fo called, was a tenant in capite, yet every tenant in capite (there being fome of half, or quarter, or a tenth part of a knight's fee), was not a baron. The firlt fcutage, fays Alexander de Swereford, was affefled 2 Henry II, for the army of Wales, zo fhillings for each knight's fee, and only upon thofe prelates who were bound to military fervice. The fecond fcutage, fays he, was for the fame, 5 Henry II, but affeffed not only upon the prelates, but others, according to the number of their fees: this fcutage is intitled de dono. He oblerves, that the donum of the prelates makes a fum anfwerable to the number of fees beld of the king in capite, and therefore a real fcutage: this was two marks per fee.-In the 18th of Henry IL, the efcuage of Ireland came to be put in charge. To this feveral are charged under this titie, as the efcuage of knights who did not go into Ireland, nor fend any knights or money.
As efcuage was rendered for fees bolden of the king in capite by knights fervice, ut de corona, fo it was rendered for fees holden of honours, and efcheats, which were in the king's hands, and for fees bolden of the lands purchaled by the king, and for fees holden of the king's wards: for the tenants holding of the king's wardhips and efcheats, were immediate temants of the king, whilft they refted in him. It is to be underftood, that in general, efcuage was paid according to the fum that was affeffed; fuppofe at the rate of one, two, or three marks for each fee. Yet it was fomething doubtful of how many knights fees a man or his anceftors were enfeoffed, confequently, what fum he was to pay for efcuage.-This frequently happened in the cafe of ecclefiatical perions, by reafon of the antiquity of their endowments, fo that the form of their enfeoffment could not be cafily known in fucceeding times, and becaufe it was many times doubtful whether they held fome of their lands by barony and military fervice, or in frank-almoigne.- In the cafe of other perfons, fome honours or baronies confifted of more knights fees than others did, and fome fees were larger than others; infomuch that it was doubtful, whether a man held by barony, or knight's fervice, whether by the fervice of one knight's fee, or of more, or of how many knights fees.- On the other hand, fome knights fees were remarkably fmall; fuch were the fees of the honour of Moreton. As efcuage was paid out of knights fees, fo there were alfo fome ferjeantries paid the fame. Efcuagemoney was in lieu of perfunal fervice: but perfonal fervice was required more frictly, if not folely of the tenants holding by knights fervice in capite ut de corona.
If the barons and knights holding in capite did not go in perfon with the king in his army, they fometimes fent knights in their flead, and fometimes made fine with the king. As the lord who held of the king in capite by knights fervice, paid efcusge for his knight's fee, fo the fervants of fuch lord who held the fame fees by knights fervice, paid efcuage to their lord, according to the quantity of their tenure. The tenant paid efcuage to their lord, to enable him to pay efcuage to the king, or reimburfe him when he paid it.

Having thus given a general idea of efcuage, we dhall brief! tpeak of Danegeld, which was different from either aid, efcuage, or tallage. It was firft fet on foot in the Anglo-Saxon times: however, it concinued many years after the Conqueft. In the reign of Henry 1 , in the year 1114, it was paid throughout the kingdom. In Stephen's reign it was accounted for in every county, as if it were a fettled yearly revenue, which, however, is matter of doubt.-The famous author of the Dia logue concerning the Exchequer, feems to bave thought it a yearly revenue before, but not after the Conquef. It may be traced by the rolls to the reign of Henry II, though it does not appear to be paid in the latter part of his reign, nor in thofe of Richard I. and John.
Tallage and cuftom we fhall defcribe in the fucceeding reígn.
Pennies, half pennies, and farthings, were coined by king John in Ireland, where it fhould feem his principal mint was.

## King Henry Ill.

Levies 15 fcutages, and innumerable other taxes.-Takes a fifteenth of all moveables. - Levies a fcutage of three marks per fee on all baronies, and a fourth of all moveables.- Seizes the treafure of his late chief-juftice Hubert.-Levies a thirteth of all moveables.-Raifes $20 ; 000$ marks of the Jews at one time, and another heavy. ranfom foon afterwards; infomuch that, to omit others, Aaron of York alone paid 4 marks of gold, and 4000 marks of filver. The king received the gold of every Jew, whether man or worman, with his own hand; the filver was received by others.-He allo extorted gifts from she abbots and priors, in fuch manner, that, if what they offered did not pleafe him, he rejected it, and they were obliged to enhance their offering, rather than incur his difpleafure.Anno Dom. 1244, the lords fpiritual and temporal (for no mention is yet found of any commons) granted to the king, for marrying of his eldeft daughter, 20 fhillings fcutage of all that hold of the king in capite.- Extorts by his own authority, from the Londoners, 15,000 marks - Fines all that had incroached upon his forefts.-A gain compels the Londoners to pay 1000 marks tallage, and demands further new years gifts of all the wealthy citizens.-He fines Walter Clifford 1000 marks.-He compels the Londoners again to pay 1000 marks. - The clergy grant the king a tenth of all the church revenues for 13 years, for his journey to the Holy Land.They again grant him 42,000 marks. -He arbitrarily fines the citizens of London,-Impofes tallages on the Jews, the one of 20,000 , another of 60,000 marks, raifes an aid for maintaining his eldeft daughter.-Receives divers fums for their knights fees, of feveral bifhops.-Has a vintifme granted him.-Has an aid to marry his fifter,-Likewife another to make his fon a knight. - Levies a fcutage of two marks upon each knight's fee.-Has two Chillings on every carucate in England.-Levies a tax of the fifteenth of all moveables and chattels.-Levies the fame again the enfuing year.-Again extorts from the Jews a third of all they have.- Compels the Jews again to ranfom themfelves at 20,000 marks.-Talkes a tenth of all the church revenues for three years.-Takes away forcibly the money depofited at Durham..-The Landoners again compelled to purchafe their peace, at the price of 20,000 marks.-A. thirtieth penny levied through all England, for the prince's expedition to the Holy Land.

## REMARKS.

There were two forts of tallage, one paid to the king, the other to a fubordinate lord. That raifed to the king was on his demefns, efcheats, and wardhips, and on the burghe and towns of the realm. When it was paid out of knights fees, it was fcutage; when by towns and burghs, tallage ; when out of lands not of military tenure, it fignified hidage. So that the general word donum fignified, according as it was applied, either aid, fcutage, or tallage.
Tallage was called affiffa, as well as donum, the former fignifying, among other things, an affeffment. Thofe manors were properly talliable to the king which he had of his own hands. Hence tallages are filed, commonly, Tallagies maneriorum \& terrarum regis qua tune erant in manu ejss, Tallagi à dominicorum, and the like. Under the terms Que erant in manu ejus, were comprehended the king's efcheats and wardfhips, the king holding them tanquam in dominico. In fact, the king's efcheats and wardhips were wont to be tallaged, when tallage was affeffed upon his demefns. Sone ferjeantries, alfo, of an inferior kind, and fuch as had noo military fervice annexed to them, were wont to be tallaged with the king's demefns; but the king's ferjeantries were not to be tallaged without a fpecial precept. Thofe who were not the king's immediate tenants were tallageable, not to the king, but to their immediate lord. When a town was tallaged, the fame was raifed upon the men of the town who belonged to the gild, and made merchandize in the town. If the king granted away a demefn manor or town (that was wont to be tallaged) una cum tallagiis hominum, then fuch manor or town became tallageable to the grantee.
To the head of tallage (or to that of aid) may be referred the none, difme, quinzime, vintifme, trentifme; which were fo
called

called from the quantity or proportion of the payment, as their names import. The form of taxes, and levying the ones. \& 8 e. with the oaths taken by the taxers, and the comifions of the collectors, are to be feen upon the revenuerolls. In therecafes, the goods of the chief taxers were to be taxed by the treafurer and barons of the Exchequer, and he robes and fociates of the citizens and burgeffes were not ufually taxed with their other goods and moveables. Tallage was wont to be affeffed upon the men of the demefns and owns, fometimes in grols, in communi; fometimes by poll, percapita, or per firgulos; at other times party one of thole ays, and partly the other. If the affeffors of tallage overrated any man, he ufed to obtain a writ formed upon his cafe, directed to the baron's of the Exchequer, who, by virtue thereof, would relieve him, acconding to equity. Sometimes men were admitted to compound for the tallage impofed on them, by a fine to tbe king. As the king had tallage of his emern-men, forfome fubardinate lords had tallage of theirs. Thefe latter tallages were moft feigneurial. - As the king had divers ways of raifing money upon his demefn-men, fo fiferior lords dealt with their demefn-men after the like manner.
We proceed to the revenue arifing by cuftoms. It was anciently called confuetudo \& cuftuma : the former fignified regal, epifcopal, and other ecclefiaftical dues, or payments, and exactions of many kinds. There was a cuftom or duty paid to the king for wines, called prifa, and recta prifa: the proportion was one doliun before the maft, and a nother behind it. Prife, indeed, fometimes fignified captures taken in war, fométimes for purveyance, impoft, or capture of other kinds. In ancient times, the duty for wines called prifa, was received for the king's ufe by divers officers. Befides the cuftom paid the king for wines, there were other duties payable to him by merchants, or traders, for their merchandizes innported or exported, and for commodities conveyed along the river Thames.? The duties paid by.merchants were anciently called difme, quinzime, \&c. the duty paid for trafficking along the Thames, at leaft one fort of that duty, was called avalagium Thamifier. In the 6th of king John, William de Wroteham, and others, accounted for the quinzime of merchants at the feveral ports of England, except Len.- The quinzime of London was 8361 . \&cc. of Bofton, 7801.8 c . of Len, 651 1. \&c. of Southampton, Tinal. \&c. Avalage was a fort of toll. To thefe may be added, the duties paid to the king's chamberlain of London, for his ufe, the duties arifing at Billingfgate, and by tonnage, \&c. The gth of Henry ItI, Andrew Buckeral and John Travers had Ripa Reginæ, or Queen Hithe, in fcrm, at 401. per annum. In procers of time, the king's cuftoms came to be generally called cuftuma. The 26th of Edward I , there was payable to the king for cuftoms, for every fack of wool exported from Len, half a mark, for every 300 pelles lanutze half a mark, and for every laft of leather one mark. Cuftomers were appointed for Len, and other parts, as Newcaftle, Kingiton upon Hull, Briftol,'London, \&c. If merchants cefrauded the king of his cuftoms, they forfeited their poods uncuftomed.- The Vilth branch of the ropal revenu was the cafual reverue, which accrued to the king feveral ways: of this fort were treafure-trove, waif, wreck, chattels of fugitives and felons, of outlaws, ufurers, recreants, perfons executed, \&x. The king had, in fome cafes, the lands of perfons condemned, for a year and a day after condemnation, If folons died after the fact, and before conviction, his chattels were not, by the common law, forfeited to the-king. By the ancient revenue-rolls it appears, that, in thofe times, many branches of the king's revenue were charged with alms for pious ufes; to which may be added the decime conftitutes There the accountant confantly paid out of the revenue. 'Diyers orders of monks had thefe yearly atms, or decimæ. Several petifions alfo were *wont to be paid to cortain of the king's fervants, when difabled by age or ficknefs, viz. a penny, three halfpence, two pence a day.
When perfons made fine to the king, they paid to the queen, befides, ar duty called aurum reginæ, which her majefty fomotimes refpited, or difcharged the debt, at pleafure: for overy 100 marks paid the king, the queen had one more of gold.
Having thus touched upon the feveral branches of the royal revenue, we fhall conclude this' reign with a fuccinct account of the exchequer of the Jews. The king of England was wont to draw a confiderable revenue from thefe people refiding in this realm, by tallage, and fines relating to law-proceedings, by amerciamehts for mifdemeanors, and by fines, ranfomi, compofitions, which they were forced to pay for the king's protection, for licence to trade, for difcharges, for amprifonment, and the like.' He would tallage the whole body at pleafure, and compel them to anfwer the tallage for one another. The king feemed to be abfolute lord of their eftates and effects; of their perfons, their wives and children. They were a numerous body (being fettled chiffly in the great owns of the realm) and by traffic, ufury, and mortgages, they became very wealthy, both in money and land; but, as they fleeced the fubjects, fo the king fleeced them. The

VOL. II.
place appointed "for the management of the revenue of Judaifm, was a part of the great Exchequer, where they had their records, wherein the writs and proceedings of the Judaifm were entered; and fummonfes were illued out of the exchequer of the Jews for the king's debts, like as out of the great Exchequer. There was allo a wardrobe of the Judaifm, near the exchequer of the Jews. Certain perfons were affigned to be curators of this revenue, who were ufually ftiled cuftodes \& jufticiari Judxorum. The Jewifh charters, as thofe of other men, were called charta and chirographa; Come of which were a kind of releafes, others obligations to the Jews by others. The chirographers were, in ancient times, comimonty Chiriftians and Jews, acting together, though afterwards Chriftians only, and were planted in towns where there was a confiderable number of Jews, as at London, Oxford, \&c. If a charter made to a Jew was loft, or could not be found in the cheft at the Exchequer, it was ufual for the Jew to whom it was made, when he was fatisfied the money was due upon it, to make an acknowlegement in the Exchequer, by way of releafe to the party. The having one part of the Jewifh chirographs depofited in the king's treafury, was chiefly to prevent the falfity of tha Jews, and to enable the king to recover the eftates and credits of the Jews, and to get them into his coffers, whenever they fhould become, as they often did, forfeited, or devoute to the crown.
By the affize of the Judaifm, the Jews might have a moiety of the lands, rents, and chattels of their Chriftian creditors in execution, till they were fatisfied fof the debt due to them. The Jews paid relief for their lands' and for their chatrels. A Jew's wife might have dower, or thirds, out of her hubband's credits and chattels. In the 37 th of Henry III. it was provided, that no Jews hould remain in England without doing the king fome fervice: that there hould be no fchool for Jews in England, except in places where fuch fchools were wont to be in king Johin's reign : that every Jew thould be anfwerable to the rector of his parifh for all parochial dues chargeable on his houfe : that no Chriftian fhould fuckle the child of a Jew, nor any Chriftian man or woman ferve any Jew or Jewefs, nor eat with them, or abide in their houfe : that no Jew fhould have fecret familiarity with a Chriftian woman, nor any Chritian man with a Jewefs: that no Jew or Jewefs fhould eat or buy fih in lent : that cuery Jew fhould wear a badge upon his breaft: that no Tew hould enter into any chüreh or chapel, unles in pafing to and fro : that no Jew fhould hinder another, who was willing to turn Chriftian: and that, no Jew fhould be fuffered to abide in any town without the king's licence, except in fuch where Jews were formerly.wont to refide.- Thefe articles were to be oblerved by the Jews, under pain of forfeiting their goods. Claufe 77 Hen. III. m. 18 .
Though the exchequer of the Jews was, to fome purpofes, diftitit from the great Exchequer, yet both the exchequer of the Jews, and the acts and proceedings of the juffices and chirographers of the Jews, were fubject to the controul of the chief jufticiary, and treafurer and baron of the Exchequer. The debts due from Chriftians to Jews were fubject to fuch orders as the king thought fit to make. Sometimies the king would grant refitite for the payment of fuch debts, and fometimes would difcharge the debts thereof. In general, the king was wont to ufe the Jews with great feverity when refractory, and fhewed them favour when obedient. King-Jobn, in the fecond year of his reign, granted a charter of liberties to the Jews of England and Normandy, which the curious reader may fee in Madox's. Hiftory of the Exchequer, page 74. Henry III, for the fupport of fuch Jews as embraced the Chriftian religion, and were deftitute of livelihood, founded a hoorfe at London, called Domus Conyenorum, and endowed it with a competent revenue.
Although the Jews were permitted to fettle in feveral populous towns, they were not weltome to the inhabitants. In the year 1290 ( 18 Edward I, the growing or renewing revenue of Judaifm, and the exchequer of the Jews, ceafed, the Jews being, about that time, expelled out of England; but, by their expulfion, many efcheats, both of lands and chattels, came into the king's hands

## King Edward I.

Edward, Henry IIId's fon, fucceeding to the crown, impofed the firlt year a tallage per capita, appointing commiffioners to fee it levied. - The next be took a tenth from the clergy, exiling all ufurers, under confication of goods, and corporal imprifonment. - Of the Jews he leyied for tallage 5000 marks, the year fucceeding.-In the fourth year he taxed his fubjects at one fifteenth, and the Jews at $s$ d. per head a tal' lage.-A tallage through Wales he affefed the fixth year, and 40 s . fcutage the next. Communia 7 . Edward 1,405 be took of every knight's fee.-On the Jews he again impofed $\mathbf{2}, 000$ marks for redemption of their ufury.- The next year he fearched all the religious houfes, and took to his ufe the money and plate.-The lords by themfelves, without the commons, affeffed for the king, the reth year, fuch a levy as king Henry III. raifed forgnarriage of his daughter.In the i2th the king charges the clergy with a tenth, for fix

fucceeding years.-The abbies are again fearched in the 22d, and the lands of the priors aliens feized into the king's hands. -The nobility grant him the fifteenth penny.-The Jews are obliged to pay yearly 3 d. poll-money.-A tenth is granted throughout England, for the relief of the Holy Land. He forces Lewellyn, prince of Wales, to buy his peace at 50,0001 . in filver, and 1000 marks a year. - Takes 40 s. upon each fee fcutage. - Quits all claim to Normandy for 30 Parifian livres a year, \&c.-A fifteenth of firitual goods are granted to him by the clergy. - He takes up money by way of loan, for his war againft the Welch.-He takes 50 marks for each knight's fervice.-Has the thirtieth penny granted by the people, upon all moveables, horfes, armour, treafure, and apparel excepted.-Seizes on the treafure granted for relief of the Holy Land.-Takes 40s, fcutage upon every knight'sfee.-Imprifons all the Jews'till they pay him 12,000 . Seizes on all the money depofited in monafteries.- Has an aid granted him for his wars in Gafcony.-Has a tenth of all fpiritual profits granted for one year.-The fifteenth penny granted for expelling the Jews,-A fifteenth of all goods granted for the relief of the Holy Land.-The tenth of all the temporals of religious perfons granted by the pope.The fifteenth of all temporals and firituals granted.-Caufes all the money in monafteries to be brought, to London, \&c. -Seizes into his hands all religious houfes that were fubordinate to foreign chapters.- Compels all the Englifh prelates to pay him half of their fpiritualities and temporalities. The laity grant him a tenth of all their goods.-The bifhop of Bath and Wells obliged to buy his peace, by paying 20001 , -Receives the feventh penny of his boroughs and demefns, for carrying on his wars. - The common fort of the laity grant him the twelfth penny of their eftates, and the bur geffes the feventh penny. - The clergy refufe him any aid, on pretence of an order from the pope to the contrary.He feizes the temporalities of the clergy.-They grant him a tenth of their fpiritualities and temporalities the next year. Has the fifteenth penny granted by the laity, for fealing Magna Charta.-Has the thirtieth penny granted by the clergy and laity.-Has a fubfidy of a twentieth granted to him. -Has a thirtieth granted by the laity, and a twentieth by the clergy.-Banifhes the Jews, and feizes their effects,Receives the ninth penny of the people, the tenth of the clergy of the province of Canterbury, and the fifth of thofe of York, for confirming Magna Charta and Charta Foresta.-Receives divers advantages from certain filver mines found in Devonfhire.

## R E M A R K S.

The reader is to obferve, that the hiftory of the royal revenue under the foregoing reigns is all matter of fact, taken from the revenue-rolls, and other records, and confirmed by Mr Madox, in his Hiftory of the Exchequer, and other good authorities.
The Exchequer was a court greatly concerned in the confervation of the prerogatives, as well as of the revenue of the crown. The authority and dignity of this court was efteemed fo great, that the ads thereof were not to be examined or controuled in any other of the king's ordinary courts of jufice. The Exchequer was a great repofitory of the king's records. Edward I. is fuppofed to be the firft of our kings that perfectly fixed the ftandard of our coin. In the third year of his reign, the matter was thus ordered by Gregory Rockley, then mayor of London, and mint-mafter, That in a pound of money there fhould be II two-pence farthings, pure leaf-filver, and only feventeen pence half-penny farthing allay; and this pound was to weigh 20 fhillings and threepence in account, each ounce two-pence, and every penny 24 grains and a half.
In 28 Edward I. an indented trial-piece, of the goodnefs of old fterling, was lodged in the Exchequer; and every pound weight Troy of fuch filver was to be thorn at 20 hhillings and three-pence; according to which, the value of the filver in the coin was one fhilling and eight-pence farthing an ounce. The king fent for foreign mint-mafters, in the 18 th year of his reign, to inform him of the manner of making and forging money. For the coining this money, the mint-mafters had 30 furnaces in London, eight at Canterbury (befides three the archbifhop had there) 12 at Briftol, 12 at York, and more in other great towns; in all which places the fame hammered money of filver, fupplied by the king's changers, who, according to certain rites prefcribed them, took in the clipped, rounded, and counterfeited monies, to be recoined, and bought gold and filver of the merchants, to be fabricated into new monies ; at the fame time it was ordained, 'Quod - proclametur per totum regnum quod nulla fiat tonfura de ' nova monera fub periculo vite $\&$ membrorum, \& amifi' onis omnum terrarum \& tenementorum, \&c.'
This hammered money continued through all the reigns of fucceeding kings and queens, 'till about the year 1663 . There are no indentures with the mint-mafters, by which one can certainly judge of the proportion of the finenefs and alloy, to be obferved in the fabrication of the monies 'till the reign of Edward III, as will be feen hereafter.

The pennies, half-pennies, and farthings of Edward tie IR are pretty common.-In his 7 th year he made a great refurmation in the money, and feveral new regulations, as we have feen, for the better trying and preferving of his coin. It was now made more uniform than it had been, the names of the feveral monies were omitted, and only the name of the town or city where coined, preferved on the reverfe.In his 28th year, as obferved, an indented trial-piece, of the grodnefs of the old ftandard, was lodged in the Exchequer; and every pound weight of the Tower of fuch filver was then to be fhorn at 20 fhillings and three-pence; whereby the weight of the penny was to be fomewhat lefs than 22 Troy grains and a quarter, and 240 fuch pennies of full weight, making 20 fhillings, or a pound fterling in tale, were to contain as much filver as, in our prefent coin, is of the value of 57 s .5 d . nearly. See a table of Englifh filver coins, by Martin Folkes, Efq; 1745.

## King Edward II.

Has two fubidies granted him.-Impofes two fhillings over and above the ancient cuftom. - Has a tenth granted him by the pope of church revenues for one year. - Has a great fubfidy granted him by the temporality, and 5 d . in the mark of the clergy of the province of Canterbury, and 4 d . of thofe of York.

## REMARKS.

The further account of the bufinefs of the Exchequer may be di/pofed under three general heads: I. Affairs of the revenue. 2. Caufes. 3. Bufinefs of various kinds. Under the firit of thefe may be included fines impofed of divers kinds, and amerciaments. It was the bufinefs of the treafurer and barons to fpeed the levying and getting in the king's, debts, and manage the crown revenue to the beft advantage.- Under the fecond head we take in pleas and caufes. After the feparation of the Common Pleas from the king's court, it was forbidden, by the great charter, and a fubrequent ordinance, to hold common pleas in the Exchequer: yet fome were, and the king gave leave fometimes for particular perfons to bring their fuits there; in which the king granted preference to one perfon, that he fhould be paid, in the adjudication, before other creditors. Under the third head, of bufinefs of various kinds, may be placed conventions and recognitions made in the Exchequer, and the admiffion of officers. . See Madox fur thefe pariiculars.
We come now to the accounts of the Exchequer. As the fheriffs were the moft confiderable accountants to the crown, the method of accounts at the Exchequer may be beft learned from them. The fheriffs generally accounted from Michaelmas to Michaelmas. Edward I. ordered, that the fheriffs fhould be efcheators in their refpective counties; the ftated accounts were rendered regularly in courfe every year. In general, accountants were obliged to come in perfon, to render their accounts; if by attorney, it was by the king's leave, and afterwards by warrant from the treafurer, chancellor, or barons, or one of them. Accounts were rendered upon oath, or by their faith or allergiance. Where one was indebted to the king, and alfo to another perfon, the former was to be preferred in payment. No debtor to the crown could make a will, to difpofe of his chattels to the king's prejudice.- If doubtful whether the deceafed's effects would fatisfy the crown debt, the king feized the chattels.-If the debtor was unable, to fatisfy the debt, the king betook himfelf to thofe who were indebted to his debtor. The heir of the king's debtor was not to be diffrained for the debt, in cafe the chattels of the debtor were fufficient to an/wer it. -The widow of the king's debtor was not to be diftrained by her dower, to anfwer the debt, in cafe the .heir could anfwer it: neither were fureties to be diffrained, fo long as the principal debtor had wherewithal to anfwer the debt.-By ancient ulage the king's debtors, or accountants, were wont to have writs of aid to recover debts of fuch as were indebted to them, to enable them to anfwer the king's debts.
If an acceuntant did not render his accounts, or in due manner, he was punifhed by feizure of land, and amerciament, or committed to the Marfhal or Flect Prifon, or the Tower of London. - When the Chancery was feparated from the Exchequer, and the charters, writs, and precepts of the great feal came to be entered by themfelves in the charter-rolls, patent-rolls, 8 cc . about the beginning of king John's reign, then commenced the method of fending eftreats from the Chancery to the Exchequer. If thefe eftreats were not brought in due time, writs were iffued to the perfons or juftices before whom they lay, to bring them in.
Tallies were of a great and conftant ufe in the Exchequer: the word is French, and fignifies cutting. Thefe tallies were pieces of wood, cut in correfpondency. A ftick, or rod of hazel, or other wood, well feafoned, was cut fquare and uniform at each end; and in the thaft, the fum of money which it bore was cut in notches in the wood, by the tallyoutter, and likewife written upon two fides of it. The tally was cleft in the middle by the deputy chamberlains, thro, the fhaft and the notches: a notch of fuch a largenefs figni-

## R E V

## R E V

Ged Ml. of another largenefs $\mathrm{Cl} . \& \mathrm{c}$. It being thus divided, one part of it was called a tally; the other a counter-tally, or a tally and a foil: however, thefe were in effect one tally, or two parts of one thing: and, if they were genuine, they fitted exactly : their ufe was to prevent fraud: they had a fuperceription for what purpofe given.
Counters were fometimes ufed at the Exchequer, in the way of computation: in which cafe they were laid in rows upon the feveral diftinctures of the chequered cloth, viz. one row for pounds, another for fhillings, \&c.
The principal officer's of the fuperior Exchequer were, the two remembrancers, the engroffers of the great roll, the ufher, the conftable, the marfhal, the auditors, the clerks of the eftreats. See Madox for a defcription of their refpective du-ies.-We fhall conclude with a few inftances only of the allowance made to feveral minifers of the receipt of Exchequer for their liveries and corrodies, and other neceffaries. In 9 Hen. III. the liveries of the minitters of the Exchequer for fourfcore days, from the feaft of St Michael, 'till Monday next after the feaft of St Lucius, were : to three fcribes, cs. to the two knights of the chamberlains, vili marks; to John de Windefore, itiil, to John the fufor, or metter, ii marks and a half; to Simon Druel, ii marks and a half; to the four tellers, iiii /. to the vigil, and for light, $x$ s. for a hutch to lay up the memoranda, vii $d$.'for rods for the tallies, $\mathrm{v} s$. for parchment for the ufe of the chamberlains, and the chiefjuftice's clerk, iiii s. for ink, during the whole year, iii s. for litter for the chamber of the barons, and boufe of receipt, xiid. for neceflaries for the faid chambers, $x x d$. for ten dozen of hutches, xxs. for wax, iis. for leather for the tallies, ix $d$. for a hutch to put the inquifitions in, ii $d$. for the marfhal's hutch, xii $d$. for a fack to put the allowed tallies in, xiiii $d$. for carrying and recarrying the hutches, $v s$. for a tonel to put in the d marks, fent to the king at Oxford by R. bifhop of Chichefter, xii $d$. for locks, bolts, and other fmall expences, itiis. Total, xxiv l. xiiis, viiid. Ex pelle receptre de anno 9 Hen. ILI. Kot. ult. indorfo pen. Thef. \& Camer.
King Edward the IId's pennies, halfpennies, and farthings, were the fame with thofe of the king his father, and are not with certainty to be diftinguifhed from them. The common opinion, which gives thofe pieces with EDW. to the firft Edward, and all thofe with EDWA. or EDWAR. to the fecond, is at moft but a probable conjecture; and fhould it be allowed that all thofe of the firft furt, which are by far the moft plentiful, were really ftruck by the firf king of the name, who certainly coined a great deal more money than his fon, we fhould ffill be at a lofs for arguments to prove, that he did not coin fome of the others alfo: to which I fhall only add, that I have feen fome of thefe pennies of the laft fort, upon which the letters were braced into one another, much like thofe on the pennies of king Henry III. and which therefore feem to bave been minted but little after his time.

## King Edward III.

Impores tallage through all his domains.-The people grant him the fifteenth penny, and the cities, boroughs, and clergy, one tenth. -Has 40 s . of Englih merchants for every fack of wool, and 60s. of ftrangers.-Seizes on all the effects of the merchants of Lombardy, then in London.- The laity grant him one half of their wool.- The lords in parliament grant him the tenth fheaf of corn of their demefns, the tenth fleece of wool, and the tenth lamb for two years.-The commons give him 30,000 facks of wool.-The parliament grant him the ninth of all grain, of wool, and of lambs.They again confirm the faid grant.-The clergy grant him a difme for three years.-Two fifteenths given him, and 40 s . of every knight's fee.-The parliament grants three fifteenths, to be paid in three years.-Has the fubfidy of wool granted for three years. - The fame granted for fix years, at 50 s . the fack.-They grant 26 s . 8 d . for three years on every lack of wool.-They grant 36 s .8 d . for two years on every wool-pack.-They grant 43 s .4 d . for three vears, \&c.-The king feizes the lands of religious aliens.The clergy grant him 50,000 l. and the laity as much.Has two fifteenths granted him.-The parliament again grant the fublidy of wool for three years.-The lords and commons grant him a poll-tax, of 4 d . per head for every one above 15, beggars excepted. -The king borrows great fums of the clergy, and of every county in England.

## R E M ARKS.

By a charter-mint to the abbot of Reading, it feems that there was not any greater piece of money coined, 'till after the i2th year of Edward III. than a penny. The firlt pennies, halfpennies, and farthings, of king Edward 111. were the fame as thofe coined by his grandfather and his father; and we know of no alreration that he made in the coin, 'till his 18 th year, when 22 s .2 d . and his 20 th year, when 22 s .6 d . were ordered to be coined out of the pound Tower of old fterling filver; by which laft regulation the weight of the penny was brought down to 20 Troy grains, and the pound
terling or 240 fuch pence of full weight, contained as much flver as is now coined into 51 s. and 8 d .
In the 27 th year of this king, were firt coined groffes or groats, running for four pence each, with half grolles, and fterlings or pennies, 75 of thofe groffes being coined out of the pound lower: from whence the weight of the groffe appears to have been 72 Troy grains; and the filver contained in 20 s . or in 60 fuch groffes of full weight, was the ame in quantity, as what is now contained in 46 s , and 6 d . of our prefent money.

## King Richard II.

Has two tenths granted him for one year.-Has a mark granted him on every fack of wool for one year.-Has a fubfidy granted him to be laid on the great men of the Jand, that the commons might be fpared.-Has another fubfidy granted him,-and another, which occafions Wat Tyler's rebellion. _Has 2 s. granted him upon every ton of wine.-Has a fubfidy granted him by the merchants.- Has a moiety of one fifteenth granted him by the temporality, and foon after a moiety of a tenth by the clergy.-Has another half of one fifteenth of the laity, and a half of one tenth of the clergy.$\mathrm{H}_{\text {as }}$ one tenth of the clergy, and one fifteenth of the laity.The parliament gives him 40 s , on every fack of wool. -One half of one tenth, and half of one fifteenth, given to defray the charges of an embalfy.-The king would borrow 10001 . of the Londoners, but was refufed.- Again half of one tenth and half of one fifteenth given to defray the charges of an embafiy. - The clergy give the king one tenth conditio-nally.-The clergy again give a tenth, and the laity one fifteenth. - The king obtains half of one tenth of the clergy. -Borrows great fums of the chief of the elergy, and the laity...T Two fifteenths and two tenths giranted him.- A fubfidy of wools and ftaple were granted him.-Another fubfidy granted him.-One fifteenth and a half granted out of ciies', \&c. and a difme and a half within.-The fubfidy of wools and ftaple wares again granted conditionaliy.-One fifteenth and one tenth granted by the lords and commons.The fame granted by the laity. -Two fifteenths granted conditionally.-Half of one tenth, and half of one fifteenth granted.-A fubfidy of wool-1kins, wool-fells, \&c. granted. -Subfidies granted for three years conditionally.-A difme, and half, and one fifteenth and a half, granted conditionally. - A fublidy granted for three years, with half a difme, and half a fifteenth. - The lords and commons grant the king a fubfidy of all traple ware during life, with one difme and a alf, and one fifteenth and a half

## R E M A R K S.

In the 18 th of Richard II. a pound weight of gold of the old fandard was to make by tale 45 nobles, amounting to 15 l. or a proportionable number of half or quarter nobles : and a pound weight of filver of the old fterling, to make by tale 75 groffes or groats, amounting to 25 s . or 150 half groffes, or two pence a-piece, or 300 fterlings at a penny a-piece, or 600 half fterlings : he coined groftes, half groffes, fterlings, and half fterlings, together with farthings alio.

King Henry IV.
Receives an aid of the moiety of all fees, \&c.-Receives fubfidies for kerfies. - The lords and commons grant one difme, and one fifteench, \&c.-A fubfidy of wools, \&c. granted for three years. - Two difmes, and two fifteenths, \&cc. granted conditionally.-One difme and one fifteenth, \&c. granted conditionally.-One difme and half, with one fifeenth, \&ce. granted conditionally.-The fame fubfidies granted again conditionally. - The king receives a tenth of the clergy.-He receives a fubfidy of 20s. on every knight's fee. - Exacts half a mark of every ftipendinry prieft and friar mendicant.-Impofes tonnage and poundage every year of his reign but two.

## REMARKS.

Henry the IVth coined groffes, half groffes, fterlings, and half fterlings, or mailes; the fame as thofe of his predeceffor, as alfo farthings. By an act of parliament in his third year, it was ordered.' 'That one third part of the money of ' filver that fhould be brought to the bullion fhould be made - into halfpennies and farthings:' and by another act in his I $3^{\text {th }}$ year, it was directed, 'That by reafon of the great - fcarcity of money at that time in the realm of England, ' the pound Tower might from the feaft of Eafter then next < following be coined into 30s. by tale.' By which regulation the weight of the groat was brought down to 60 Troy grains, and the pound ferling, confifting of 60 fuch groats, was to contain fo much filver only, as in our prefent coined money is of the value of 38 s . and 9 d .
This new money being of the fame weight as that of the two following reigns, is probably fo blended amongft it, as not to be now difinguifhed: nor are we indeed certain, that we rightly know the coins of Henry V. and Henry VI. from each other.
Henry IV, by the indenture of bis third year, contracted,

## R E V

That a pound weight of gold of the old ftandard was to make by tale 45 nobles, amounting to 15 l. or a proportionable number of half or quarter nobles: and a pound weight of filver of the old fterling, to make by tale 75 groffes, or groats, amounting to 25 s . or 150 half groffes, going for two pence a-piece; or 300 ferlings, going for pence a-piece; or 600 half 1 terfings, or halfpence, called here mailes.

## King Henry V.

Receives tonnage and poundage all his life.-Has a fubfidy granted him.-Has two tenths granted by the clergy.-Has another tenth granted by the clergy, and a fifteenth by the laity.-Has fix times whole tenths and fifteenths.--Has two tenths from the clergy, and one from the laity.-Pawns his jewels, even thofe of the crown.

## REMARKS.

King Henry V, and VI. coined grofles, half groffes, ferlings, mailes, and farthings ; the fame as the laft of king Henry IV. the grofles weighing, as has been before faid, 60 Troy grains each.
In the gth of Henry V. a pound weight of gold of the old ftandard, was to make by tale 50 nobles, or 100 half nobles, or 200 quarter nobles, amounting to 161.13 s . and 14 d . in tale. And a"pound weight of the fame old ftandard, was to make by tale, 90 grofles or groats, or 180 half groats, or 360 fterlings, or 720 mailes, or 1440 farthings, amounting to 30 s .

## King Henry VI.

Receives a fubfidy of faple ware, with tonnage and poundage, \&c.-He again receives tonnage and poundage.-Has one tenth and one fifteenth.-Again, he has one tenth and one fifteenth, and one third part of both.-Has half one tenth, and half of one fifteenth granted.-A fubfidy of Gd. in the pound on all lands and offices.-Alfo one tenth.and one fifteenth and a half.-One tenth and a half of one fifteenth, excepting 20001 . to certain poor towns; and the fame excepting boool. to relieve certain wafted towns.-A fubfidy of wools granted, 33 s .4 d . the fack of denizens, and $53 \mathrm{s}$.4 d . of aliens.-Half of one tenth, and half of one fifteenth of the laity, \&c.-A fubfidy of 12 d . in the pound on all freeholds, copyholds, and offices, under 2000 l, and 2 s . for all above the fum.- One tenth and one fifteenth, with tonnage and poundage, and a fubfidy of wools, \&c. during the king's life,

## REMARKS.

In the firft year of Henry VI. a pound weight of gold of the old Atandard, was coined into 45 rials of ios. or a proportionable number of half rials, and quarters, or farthing rials, at 5 s. and 2 s .6 d . By the fame indenture, inttead of nobles and half nobles, were coined $67 \frac{x}{2}$ to the pound, angels, at 6 s .8 d . or a proportionable number of angelets, at 3 s .4 d . Confequently, the pound Troy was coined into 22l. Ios, by tale, - -By the indenture of the fame firft year of Henry VI. the filver money was of the old ftandard, 112 groats to the pound, makivg in tale $37 \mathrm{s}$.6 d . as a proportionable number of half groats, fterlings, halfpence, and farthings.-They were moft coined at London, but there were other mints at York, Briftol, and Dunwich, Dublin, Canterbury, and at York, with the keys.-By indenture, the 4th of this reign, the value of gold was brought down again to 161.13 s .4 d . and the filver to 30 s . - By another indenture of the laft year of this reign, it was raifed again to 37 s .6 d . and fo continued fot near 50 years.

## King Edward IV.

Refumes the grants of former kings.-Gains an immenfe fum by attainders.-Has an aid of 3700 l , granted out of counties, cities, $8 x \mathrm{c}$.-Has two tenths and two fifteenths from the laity, except $12,000 \mathrm{l}$.-Has another tenth and fifteenth, except 6000 l .-Has a tenth and one fifteenth, and 51,1171 for the pay of archiers, \&c. - Has a tenth and one fifteenth of the laity, except $6000 \mathrm{l},--$ Has a yearly fubfidy upon all Atrangers, granted by parliament.---Has a benevolence of the clergy, and another of his people.

## REMARKS.

By an indenture of the 4th of Edward IV. a pound weight of gold of the old ftandard, was to make by tale 201. 169.8 d and a pound weight of filver old fterling, was to make 37 s. 6 d . By other indentures of the 5 th, 8 th, 3 Ith, 16 th , and 22 d of the fame king, a pound weight of gold of the old ftandard, was to make 45 nobles, going for wo s. a piece, or 90 half nobles, or 180 quarter nobles, or $67 \frac{2}{2}$ of the pieces impreffed with angels, going for 6 s .8 d . each, and confequently was coined into 221 . Ios. by tale; and the filver monies were fhorn at 37 s .6 d . the pound weight Troy.

King Eidard V
Has no taxes raifed in his name.

## REV

King Richard III
Levies but one tax, which was a tenth, granted by the clar:\% of both provinces.

## REMARKS.

That Richiard III. coined mone', ; appears by an indenture, whereby he contracts for the coinage both of gold and filver, of the fame value and denomination with the money of the 5 th of Edward IV.

## King Henry VII

Refumes the grants of moft offices made by Richard III.-.. Affeffes one aid upon land. .--Has the one tenith penny out of goods and lands.--Has three tenths and five fifteenths, beides one tenth and one fifteenth, arifing to $120,0001 . \ldots$ Takes three fubfidies; whereof the laft was not above 36,0001 . and one benevolence; the proportion of cevery alderman being 300 l . and the cintire fum of the city of London 96881.17 s .4 d .---Has twice the tenth of the clergy, and 25,0001 . by way of fubfidy, and of them and the commons two loans, the city of London rated at 6000 l . the other not definite in proportion, but fo affeffed as the commiffioners and the lenders could agree.-Has two tenths and one fifteènth, and a fublidy.--Advances the tonnage to $3 s_{0}$ and the poundage to 12 d.....Has a voluntary gift * of all his fubjects in his 7 th year, and impofes an aid at the pope's re-queft.--Raifes an immenfe fum, by putting the penal $\dagger$ laws in execution.

* The way of free gift, or benevolence, we have feen practifed before, and particularly by king Edward IV; and hough it appears, as it'were, voluntary, yet it always carried with it fome fort of complifion, either through fear of being ill looked upon, and the nore feverely treated'ypon any occafion that flaould offer, or in hopes of finding favour in pretenfion; for fear and hope are the two prevailing inducerments to do thole things, which otherwife we are not inclined to. Many at this time were very generous in fupplying the crown at the expence of others, not out of any affedion, or becaufe they thought it neceffary, but becaule they were, in fome fhape, well paid for oppreling their neighbours.
$\dagger$ Henry VII. being exceffively avaritions, his advifers, Emp. fom and Dudley, prakifed everyart of oppreffion of this kind to fatiate his thirf a'fler money. It appeared that: many penal laws and pecuniary ftatutes, hatilong lain inregarded and difufed, and thought oblolete, though not re. pealed, and ftill in the fame force as they hid ever been. When enquiry came to be made ino the obfervation of fich laws, it appeared that there were very few confiderable perfons but what had fome way tranfgreffed againf then, and confequently were liable to the fines and muleas impoifed by them. When firt this courfe was taken, it went on fmooth enough, fmall penalties being impofed ; which being legal and not tơo'heavy', made littie nofle. Soon ofter the fiveers hereof appearing, thofe offiences were more narrowly looked into, and more grievoully fined; by which means, together with the fale of offices, and difpenfing with the laws, he raifed an immenfe fum to the unfpeakable detriment of his fubjects.

## REMARKS

King Henry VII. coined the fame pieces, and of the rame weight, as thofe of Edward IV. and Richard III. 'He firt placed upon his money the arched or imperial crown, with a globe and crofs on the arch, like that ufed by our princes at this day. This king did'allo, about the r 8ith and igth year of his reign, make' a great alteration in the form of his coin, upon which his head was now reprefented cröwned, but in profile, and with a good refemblance" of his other pictures: whereas the heads of all our former kings had conftantly been drawn in front upon' their money, ever fince the time of king Jobn.
It appears, by an indenture of the gth of Henry ${ }^{\circ}$ VII, that a pound weight of gold of the old ftandard, was coined into as many, and the fame pieces, as in the 5th of Edward IV. The gold coins of Henry VII.' were a fovereign, half fovereign, rial, half rial, and quarter rial, angel, and half-angel. His filver money was groats, balf-groffes, or twopenny pieces, pennies, halfpennies, and farchings.

## King Henry VIII.

Takes, within the compafs of 34 years, three tenthe, four fifteenths, and fix fubfidies of the commons, whereof that anno 4 amounted to 160,0001 . and 'that in anno 7 , to IIO,000l.-Tonnage he had, and poundage once for a year, and afterwards for term of life.-Of the clergy he takes feven tenths, four tenths by one grant, and three by feveral, every of them not lefs than 25,084 l. -Of fublidies, he had one of the province of Canterbury, another of both; the ftipendiary minifters thereto being taxed according to the rates of their wages.-Anno 22, they granted a mojety of all their goods and lands, payable by equal portions in five years, every part arifing to 95,0001 .-Adds 150,0001 . a year to the revenues of the crown by the ruin of pupith monafteries and charities, \&c.-Has divers benevolences and loans from the clergy and commons.-Demands a contribution from his

3

## R E V

## R E V

people, which he calls an annual grant.-He obtains a large sevenue by the diffolution of popilh monafteries, abbies, and the alienation of the church-lands, belonging to that fyftem of ecclefiaftical tyranny and oppreffion; which, 'till this period, made the princes as well as the people too fubfervient to their dominion. This laid the foundation of Proteftantifm, and that liberty, which we at prefent enjoy in this kingdom, and which is the moft invaluable of all terreftrial bleffings, if Britons are but wife enough not to abufe fo glorious a privilege, which myriads of the human fpecies are deprived of, by the wiles and artifices of defigning priefts, who act in concert with the civil tyrants of the earth to enflave mankind, and keep them in ignorance of their true fpiritual as well as their temporal interefts. The favourers of ecclefiaftical dominion have thought this coft the church too dear: but can any price be too great, for what is ineftimable?

## REMARKS.

The firft filver coins of king Henry VIII. were groats and half groats, of the fame weight and form as the laft pieces of thofe denominations coined by the king his father. By indenture of the Ift and 23 d of Henry VIII, a pound weight of gold of the old ftandard, was to be coined into 27 l. by tale; viz. into 24 fovereigns, at $22 \mathrm{s}$.6 d . a-piece, or 48
 81 George nobles at 6 s .8 d a-piece, or 162 forty-penny pieces at $3^{8,} 4 \mathrm{~d}$. a-piece; and a pound weight of gold, of the fineft of 22 carats only, was to be coined into 100 crowns and a half of the double rofe, or 201 half-crowns, making by tale 251.2 s .6 d .; and a pound weight of filver of the old fterling, was coined into 135 groats, or 270 halfgroats, or 540 fterlings (or pence), or 1080 halfpence, or 2160 farthings; fo that every pound weight of fterling filver was coined into 45 s . by tale. - In the $34^{\text {th }}$ of this reign, a pound weight of gold, of 23 carats fine, and one carat allay, was coined into 28 l . 16 s . by tale; by which indenture there were coined fovereigns at 20s. a-piece, half fovereigns at 10 s . angels at 8 s . and quarter angels at 2 s . a-piece; and a pound weight of filver of ro ounces fine, and 2 ounces allay, was coined into 48 s . by tale, viz. into teftoons, which were 12d. a-piece, groats, balf groats, pence, halfpence, and farthings.-In the 36 th of this reign, a pound weight of gold, of 22 carats fine, and 2 carats allay, was coined into 301. by tale, viz. into 30 fovereigns at $20 \mathrm{~s} . \mathrm{a}$-plece, or 60 halffovereigns at 10 s. a-piece, or 120 crowns at 5 s . or 24 o halfcrowns: and the king had 2 carats of fine gold for coinage, which yielded him 50s. Silver was coined by the fame indenture 6 ounces fine and 6 ounces allay, into 48 s . by tale. It was coined into teftoons, groats, half groats, pence, halfpence, and farthings.-In the 37 th of this reign, a pound weight of gold of 20 carats fine and 4 carats allay, was coined into 30 l . by tale, as in the laft ; and the king had $4 \mathrm{ca}-$ rats, which yielded him 51.2 s . And a pound weight of filver, of 4 ounces fine and eight ounces allay, was coined into 48 s . by tale; which raifed the pound weight of fine gold to 36 l . and the pound weight of fine filver to 7 I .4 s .
The gold coins of Henry VIII. are fovereigns, rials, half fovereigns, angels, George nobles, half and quarter angels, 40-penny pieces, crowns, and balf-crowns : and the filver coins, teftoons, groats, half groats, fterlings, halfpence, farthings; to which may be added crown pieces of filver, which were coined by this king.

## King Edward VI.

Has an aid granted by parliament of 12 d . in the pound for three years, on the goods of his natural born fubjeCts, and 2 s . in the pound of ftrangers.-Has 3 d . granted on every ewe, and 2 d . on every wether kept in paftures, alfo 1 d . on every theep on the common. -Has 8 d . in the pound on all woollen cloth for three years.-Has a fubfidy and two fif-teenths.-Has tonnage and poundage for life.-Has fix fifteenths of his lay fubjects, and three fubfidies of both clergy and laity.

## R E M A R K S.

The tonnage and poundage faid above to have been given to this king for life, was thus: of every ton of wine 3 s. Of every ton of fweet wine 3 s. over and above the aforefaid 3 s. that is in all 6 s . Of every aulne of Rhenifh wine 12 d . The poundage was 12 d . in the pound of the value of all goods imported or exported ; and 12 d . in the pound over and above the aforefaid 12 d . to be paid by merchants aliens, for all tin and pewter by them exported : excepting out of this fubfidy all manner of woollen cloth of Englifh make to be exported, and all manner of wool, wool fells, and hides, and backs of leather exported, and all manner of wines, frefh filh, and cattle imported.
The fubfidy from wool was 33 s. 4 d . of every fack of wool, and for every 240 of wool-fells, 33 s. 4 d . and for every laft of hides and backs 31.6 s . 8 d . For every fack of wool exported by ftrangers, 31.6 s . 8 d . and for every 240 of wool-fells, 31.6 s .8 d . and for every laft of hides and backs,
The fubfidy granted by the clergy in the fecond year of this
V O L. II.
king's reigh, was of $6 \mathbf{s}$, in the pound, according to the value of every fpiritual promotion.
The relief granted by the laity in his third year, to continue for the fpace of three years, was, of every perfon worth ten pounds or upwards, in money, goods, cattle, \&c. 12d. in the pound. And of every alien worth 20s. and under iol. I2d. for every pound.
Thus it appears, that this king, though he took as much as he could from churches of what his father had left, yet the kingdom faved nothing by it, the taxes being laid cvery year of his reign, and for his life.
By indentures of the 1 ft and 2d of Edward VI. a pound weight of gold of 20 carats fine and 4 carats allay, was coined into 30 . by tale, out of which the king had a great profit; and a pound of filver, of four ounces fine and eight ounces allay, was coined into 48 s after which rate, every pound of fine filver made in current money 7 l .4 s . and the king's of fine filver made in current money 71.4 s . and the king's
profit on every pound weight was 41.4 s . In the 3 dear of this king, a pound weight of gold 23 carats fine, and two carats allay, was to be coined into 341 . by tale, into fovereigns 20s. a-piece, half fovereigns at 10 s. a piece, crowns at 5 s . and half-crowns at 2 s .6 d . a piece: and a pound weight of filver, fix ounces fine and fix ounces allay, was to be coined into $7^{2 s}$. which were to go for 12d. a-piece by tale; of which the merchant, for every pound weight of fine filver, received 3 l .4 s. and the king above 4 l . gain.-In the $4^{\text {th year of this reign a pound weight of gold of the old }}$ ftandard, of 32 carats and 3 grains and a half fire, was coined into 281.16 s . by tale, viz. into fovereigns at 24 s . a-piece, half fovereigns at 12 s . angels at 8 s . and half angels at 4 s . a.piece. -In the $5^{\text {th }}$ of this reign, a pound weight of filver of 3 ounces fine, and 9 ounces allay, was coined into 72 s . at 12 a-piece; and the merchant received, for every ounce of fine filver which he fhould bring to the mint, ros. of fuch money; by which means, 12 ounces of fine filver was exorbitantly raifed to $14 \mathrm{I} .18 \mathrm{~s} . \leftarrow$ In the 6th of this reign, a pound weight of gold, of the old ftandaid aforefaid, was coined into 3 bl. by tale, viz. 24 fovereigns at 30 s . apiece, 72 angels at 10 s. a-piece, or 144 half angels: and a pound weight of crown gold of 22 carats fine and 2 carats allay, was coined into 331 . by tale, viz. 33 fovereigns at 20 s . a-piece, or 66 half fovereigns at 10 s a-piece, or $13^{2}$ crowns, or 264 half crowns: and a pound weigbt of filver, confifting of II ounces one pennyweight fine, and ig pennyweights allay, was coined into 31 . by tale, viz. 12 crowns, or 24 half-crowns, or 60 fhillings, or 120 fixpences, or 240 three-pences, or 720 pence, or 1440 halfpence, or 2880 farthings.
In king Edward the VIth's journal, Atill preferved in the Cotton library, written with the king's own hand, and printed at large by bifhop Burnet in his Hiftory of the Reformation, is the following paffage. ' 1551 , 6 Sept. Deliberation con-- cerning the coin. Memorandum, that there were diverfe - ftandards, nine ounces fine, a few, eight ounces fine, as - ill as four, becaufe, although that was fine, yet a fhilling - was reckoned for 2 fhillings, 6 ounces, very many 4 ounces, ' many alfo 3 ounces, 130,000 l. now of late.' From which words I collect, that in this reign, befides the monies of four ounces fine, 6 ounces fine, and 3 ounces fine, which are all that are mentioned in the indentures and commiffions that we know of; there were alfo fome others of 8 ounces and 9 ounces fine; and that in the monies of 8 ounces fine in particular, one fhilling was of no more value than another only of four ounces fins, as being of only half the weight, though it was as fine again. Now as the hillings of four ounces fine were, by the table of the weight of 120 grains each, the others of 9 ounces fine and 8 ounces fine, and which were of the fame value, muft have weighed 53 grains and one third, and 60 grains refpectively. If therefore, among the fhllings we have of the firt five years of this reign, there are really fuch found as agree fufficiently with thefe weights, we' may reafonably conclude, that fuch fhillings are of the ftandards above mentioned, and that they are fome of the above pieces to which the king alludes in the above-cited paffage of his journal.
It was found by experience in this reign, that gold and filver bad, by the common confent of all people throughout the civilized parts of the world, acquired certain real and proper values: and that in fuch a nation as this, not deflitute even then of all commerce with ftrangers, it was impoffible that the arbitrary value fet upon pieces of bafe metal could, for any confiderable time, fupply the want of the filver that ufed to be contained in the pieces of the fame denominations.
Whatever names were given to thefe pieces of bafe metal, or by whatever authority their imaginary value was fupported, the people would either not bring their provifions at all to the markets to exchange them for fuch money, or would there fell them at much higher rates than before; as the nominal fums they received for their goods would not now purchafe them the fame conveniencies elfewhere, as the fame nominal fiums of better money had formerly done. It was therefore judged abfolutely neceffary, to reform and amend the coin ; the affair was very ferioully confidered, and the work was undertaken and carried on with fo much diligence

## R E V

## R E V

and vigour, that within a few months a reformation of the money was brought about, truly memorable, and no lefs remarkable than the former abufes of it had been: for the new pieces that were coined before the end of this year, 155 I , were of more than four times the value of thofe of the fame denominations, that had been coined in the former months of the fame.
It is obfervable from the king's journal, that on the 6th of May this year, ' the teftoon was cried down from 12 d , to gd. \&c." And this feems to have been the firff ftep that was taken towards the amendment of the evil : by which I Chould only underftand, that it was that day refolved to make fuch a reduction in the value of prefent money, without either then carrying it into immediate effect, or even fixing the day when that intended reduction fhould firft take place. For we find that it was not 'till the $2 d$ of July following, that 'there was a proclamation figned for fhortening of the 6 fall of the money to that day; in which it hould be proc claimed and devifed, that it thould be in all places of the c realm within one day proclaimed:' and accordingly we read, that there was, on the gth of the fame month, " pro-- clamation made, that a teftoon fhould go at 9 d . and a groat 'at 3 d . in all places of the realm at once.' The fame particular is alfo recorded by Mr Stowe in his Chronicle, who tells us, 6 That on the 9 th of July, the bafe monies coined b in the time of king Henry VIII. and king Edward VI. c were proclaimed, the fhilling to go for 9 d . the groat for - 3 d. which took effect immediately after the proclamat tion made:' which cannot, however, be properly underftood of all the bafe monies of king Henry VIII. but of thofe only of his 37 th year, and which were of the fame value as thofe of the firt four years of king Edward VI.
Although this reduction of the coin was neceffary, and that it proved in the end beneficial, yet were very many great fufferers by it at the time. The people naturally looked upon it as the real lofs of a full fourth part of whatever cafh they had by them ${ }^{*}$; and, indeed, the price of things to be bought, could not immediately follow the new rate of the money. They were alfo greatly apprehenfive of the further changes that might ftill be intended, and of the manner in which they might yet further be affected by fuch changes : inmuch that upon their difcontents it was thought neceflary to have, on the rgth of the fame month of July, ' another pros clamation made for punilhment of them, that would blow c rumours of abafing and enhanfing of the coin, to make 6 things dear withal.

- Bifhop Fleetwood, in his Chronicon Preciofum, p. 57. obferves, that he had then by him, ' an account of that time, - wherein, by the firft proclamation, dated July 9 , a college loft out of 1181.6 s . 11 d .29 l .11 s .8 d . ob. q. And - by the fecond proclamation, dated Auguft 17 , immedi-- ately following, out of 451.3 s , the college lolt 151 . Is. which was a $4^{\text {th }}$ and a 3 d part of every one's cafb in the ' 'pace of two months.'

There was, however, a further reduction of it withina month; for on the 17 th of the following Auguft, ' the reftoon was cried down from 9 d . to 6 d . the groat from 3 d . to 2 d . - the 2 d . to 1 d , the 1 d . to an halfpenny, the halfpenny c to a farthing:' and this fecond reduction is alfo taken notice of by Mr Stowe in his Chronicle, where he fays, that on the fame 17th of Auguft, 'the fhilling which of late c was called down to 9 d . was called down to 6 d . the groat c to 2 d . the half groat to one penny, the penny to one ' halfpenny.'
About this time allo propofals were made to the king and council concerning the new money to be from henceforward coined: and it feems to have been agreed on the 6th of September, that the new pieces fhould be minted of filver ten ounces in the pound weight fine, which it was thought might then be done without any further great lofs, as the teftoons were already reduced to the value of only fix pennies each. For it was judged that a pound weight of teftoons, 6 ounces in the pound fine, added to another pound weight of thofe four ounces fine, would together furnifh a pound of bullion ten ounces fine: and again, that a pound weight of the teftoons of 8 ounces fine, together with two ninth parts of a pound weight of thofe of 9 ounces fine, and which were fewer in number than the others, would, in like manner, without further lofs, furnifh a pound of bullion alfo ten ounces fine. But it was further intended that the new pennies, halfpennies, and farthings, thould ftill be coined of filver, only four ounces in the pound fine: and that, as it was apprehended, there would arife a confiderable profit to the king; that profit would, ferve to pay the extraordinary charges of this recoinage, and to make good the lofs that might arife from the want of a fufficient number of the teftoons of nine ounces fine, as alfo the lofs upon fuch of the coins, particularly upon many of thofe of fix ounces fine, as were fuppofed to have been really made bafer than their appointed ftandards.
We learn alfo from the king's journal, that the lords of the council having had all the feveral forts of the bafe money allayed before them at London, on the 20 th of the fame Sep-
tember, the king himfelf being then at Windfor, they hat found that the deveral forts of teftoons, which were appre hended to have been coined bafer than even the feveral indentures and commiffions allowed, were really better than was expected, and that they had feverally anfwered to thei refpective valuations: and that further, upon taking of the feveral pieces mixed together as they run, they had found that 400 pounds in tale, reckoning the teftoon at fix pennies did truly contain as much filver as was fufficient to coin 400 l in tale of new money, as heavy, or heavier, than the laf and of the goodnefs of $I_{1} I$ ounces fine in the pound weight - Whereupon they reported the fame to the king, on the - 22d, and then it was concluded that the tefloon thould be c. II ounces fine, the proportion of the pieces according to * the gold; fo that 5 s . of filver fhould be worth five of " gold.'

* The lords at London having tried all forts of famping - both of the finenefs of $9,8,6.4$, and 3, proved that - without any lors but fufferable, the coin might be brough to il ounces fine: for whereas it was thoughe before the - the teftoon was, through ill officers and minifters, cor - rupted, it was tried that it had the valaation, joft by - eight fundry kinds of melting; and 4001 . of ferling mo - ney, a teftoon being but $6 d$. made 400 l .11 ounces fine "of money flerling," King's Journal of the 20 th of Sep tember, $155^{1 .}$

On the 24th of the fame month it was 6 agreed, that the - ftamp of the Chilling and the fix-pence fhould be, on one c fide, a king painted to the ihoulder, in parliament robes, c with the chaín of the order. Five fhillings of filver, and c half five fhillings, fhould be a king on horfeback, armed - with a naked fword, held to his breaft. As alfo, that the - fine monies fhould be coined at the mints in the Tower c and in Southwark; and the fmall pieces of a bafer ftandard, ' at Canterbury and York.
On the ift of the next month of October, ${ }^{6}$ The commifion s for the making of five fhillings., thalf five Chillings, groat, s and fix-pences, it ounces fine; and pence, with half ' penceifand farthings, four ounces fine, was followed and " figned. ${ }^{3}$ So far the king: and we further learn from Mr Stowe, that the pieces themfelves were accordingly publifhed and proclaimed on the 3 oth of the fame month. But by the indentures made immediately after with the mafters and workers of the feveral mints, it appears that thefe finer coins were really in oz. I dwt. fine, or only I dwt. worfe than the old ftandard; and that the pound weight Troy of fuch filver was then agreed to be cut into three pounds by tale, in crowns, or pieces of 5 s . half-crowns, fhillings, halifhillings, quarter-fhillings, pennies, half-pennies, and farthings: according to which regulation, the crown-piece was to weigh an ounce Troy, and the fhilling 96 grains: and the pound fterling, confifing of four of thefe crowns, or 20 of thefe fhillings, was to be intrinfically worth about 6 d. more than 20 s . of our prefent coin.
In this indenture, fine filver is valued at 5 s .5 d . the ounce nearly; and whereas, in the gold coin directed by the fame, fine gold is valued at 3 l. the ounce, it follows that what was then thought the true proportion of the value of gold to that of filver, was the proportion of II to 1 . See Gold.

## Queen Mary

Has tonnage and poundage for life.- [The fubfidy of tonnage was thus: of every ton of wine coming, or that fhall or is come into this your realm by way of merchandize, the fum of 3 s. and fo after that rate. And of every ton of fweet wine, as well Malmefy as other, 3 s. over and above the $3^{\text {s. }}$ afore-granted ; and of every aulne of Rhenifh wine, 12 d . The other fubfidy, called poundage, was of all manner of goods and merchandizes of every merchant, denizen, and alien carried out of the realm, or brought into the fame, by way of merchandize, of the value of every 20 s . of the fame goods and merchandizes, 12 d . and of every 20 s . in value of tin, and pewter velfels, carried out of the realm by any and every merchant alien, 12 d . over and above the 12 d . aforefaid.] Out of this act of fubfidy is excepted all woollen cloth made in England, and all wool, wool-fells, and hides and backs of leather, carried out, and all wines, and frefh fifh and beftial, coming into the realm.-At the fame time was granted another fubfidy, of all manner of wool, wool-fells, and leather, carried out of the realm; that is, of every merchant denizen, for every fack of wool, 33 s. 4 d . and for every 240 wool fells, 33 s .4 d , and for every laft of hides and backs, of every merchant denizen, 3 l .4 s .8 d . and alfo of every merchant ftranger, as well as thofe already made denizens, or that fhall be made denizens, for every fack of wool, 3 l .6 s .8 d , and for every 240 wool-fels $31.6 \mathrm{~s}, 8 \mathrm{~d}$. and alfo for every laft of hides and backs, 3 h. 13 s .4 d . - She has alfo a fubfidy of 6 s . in the pound grant. ed by the clergy, in confideration of what the had given up to the church before. The univerfities of Oxford and Cambridge were exempted from this fublidy.-Has 8 d . in the pound granted by the temporalities, with certain excep. tions.-Has a fubfidy of 8 s . in the pound, granted by the

## REV

clergy of the provitice of Canterbury, to be levied in four years, that is, at 2 s. in the pound every year--Has i-fifteenth granted by the temporititiess.-Has a fubidy granted of $2 . \operatorname{si} 8 \mathrm{~d}$. in the pound, on every perfon fpiritual and temporal, worth 5 l. and 5 s. 4 d. of every alien.-She thas likewife. 4 s . in the pound on the landsiand real effects of natives, and 8 s . of aliens. - This bigoted, ctuel, and vindictive queen, attempted to undo all that had been done towards the Reformation.

## REMARKS

By an indenture of the firft of Queen Mary, a pound weight of gold, of the old fandard, was coined into 361 . and a pound weight of filver, ir ounces fine, was toined into 3 l. pound tale. The gold coins of this' queen are, fovereighs, at 30 s . half-fovereigns, at 15 s . angels, at 10 s. and halfangels, at 5 s. a piece.

## Quegn Elizabeth

Haq llkewire the firft fruits and tenths invefted ir the crown. -Has 2 s .8 d" in the pound granted by parliament on moveable goods, ánd 4 s . on land.-Seizes on Reveral religious houfes.-Has tonnage and poundage granted for life.- Has a fubbidy and two fifteenths from the temporality.-Has 6 s . in the pound granted by the clergy.-Has a fublidy and twofifteenths from the temporality.-Has a fubidy of 4 s. in the pound from the clergy.-Has I fubfidy, 1 fifteenth, and 1 . tenth, from the temporality,-Has a fubfidy of 6 s. in the poond from the clergy.-Has two-fifteenths, and I tenth, and a fubfidy, from the temporality. - Has 6 s . in the pound from the fpirituality-Has three-Gifteenths and tenths, and one fubfidy, from the temporality.-Has. 6 s. 8 d . in the pound granted by the clergy.-Has another fubfidy and twofifteenths from the temporality.-Another fubfidy of 6 s . in the pound from the temporality.-Two fubfidies of 6 s . in the pound from the clergy.-Two fubfidies and four-fifteenths from the temporality,-A tax laid on every parifh, for the relief of fick, wounded, and maimed foldiers.-Has two fubfidies of 4 s. in the pound granted by the clergy. - Has three fublidies, fix-fifteenths and tenths from the temporality.Another tax for the relief of foldiers and mariners.-Three fabfidies granted by the clergy. Three fubfidies, and fixfifteerths and tenths, granted by the temporality.-A Arother tax for the relief of the poor.-Four fubfidies of 4 s . in the pound granted by the clergy-Four intire fubfidies, eightfifteenths and tenths, by the temporality.

## REMARKS.

By an indenture of the ad of Elizabeth, a pound weight of gold, of the old ftandard of 23 carats 3 grains and a half fine, was coined into 36 I. by tale : namely, into 24 foyereigns, at 30 s. a piece, or 48 rials, at 15 s . or 72 angels, at 10 s. a piece, or 144 half-angels, at 5 s. a piece. And a pound weight of crown gold, of 22 carats fine, and 2 carats allay, was coined into 331. by tale: namely, 33 fovereigns, at 20 s. a piece, or 60 half-fovereigns, at Ios. a piece," or $13^{2}$ crowns, at 5 s. a piece, or 264 half-crowns. And a pound weight of the old fterling filver, viz. 15 oz. 2 dwts. fine, and 18 dwts. allay, was coined into 3 l . by tale, of half-4hillings, groats, quarter-fhillings, half-groats; three-half-penny pieces, pence, and farthings.-In the 19 th of her reign, a pound weight of gold df the old ftandard was coined into 72 angels, at 10 s. a píece, 144 half-angels at 5 s . a piece, or 288 quarter-angels, amounting in tale to 361. And a pound of old fterling filver into half-1hillings, theepences, three-half-penny, or three-farthing pieces, to make 3l. by tale. - And in the 25 th, into 60 s . or into 3 l. by tale. -In the 26 th, a pound Troy of old. ftandard gold was coined into 48 nobles, at 15 s. a piece, of 24 double-nobles, at zos. a piece, making $3^{61}$. - In the $35^{\text {th }}$ year of this reign, a pound weight of gold, of 22 carats fine and 2 carats allay, was coined into 33 foveteigns, at 20 s . a piece, or 66 half-fovereigns, or 132 crowns, or 264 half-crowns, making 331 , by tale.-In the 43 d, the pound weight of old ftandard gold was coined into 73 angels, at ios, a piece, or 146 half-angels, or 292 quarter-angels, making 36 l . to s. in tale; and the pound weight of gold, of 22 carats fine, and 2 carats allay, into 33 fovereigns and an half, at 20 s. a piece, or 67 half-fovereignis, or 134 crowns, or 268 balfcrowas, making 33 l . ro si in tale; and the pound weight of old Itandard filver into 31.2 s . by tale; viz. into crowns, half-crowns, fhillings, fix-pences, two-pences, pence, and half-pence.
The corruptions which the laft year of Henry Vilil. had brought into the Englifh money, were not quite rooted out 'till queen Elizabeth's reign; but her firt bufinefs was to mark all the beft pieces either with a greyhound, portcullis, lion, harp, rofe, or feur-de-lis. Her gold coins, as appears from the foregoing indentures, were fovereighs, half-fovereigns, or rials, nobles, dóurble-noblés' "angels, hálf-angels, pieces of an angel and a half, and three angels; crowns, and half crowns.
An account of all the monies of gold and filver coined in the time of queen Elizabeth, with the true value thereof in current money.

## REMARKS

Queen Elizabeth is celebrated by our hiftorians for the refroring of the old ftandard of the coin in her filver monies, and no lefs for the abolifhing and recoining of the bafe monies minted in the times of her father and brother ; in which, bowever, the can only be faid, with-truth, to have given the laft finifhing to a work already brought near its perfection: for king Edward, as we have obferved, had feduced the bafe money nearly to the Intrinfic value, and coined down the greateft part of it, into money very little inferior in goodnefs, and not at all inferior in weight; to any that has been minted fince.
We fhall here give an account of this matfer in the words of the old chronicle of Raphatel Hollinfhed, 'with whom Stowe and Camden perfectly agree.

- The queen's majefty, ${ }^{-b y}$ advice of her moft honourab!e - council, meaning to abolith all corrupt, bafe; and copper c. monies thencurrent in the realm of England, coined in the - times and reigns of king Henry VIII. and king Edward VI. - to the great bindrance and decay of the commonweal:ti of - this tealmis and thẹrewith to reftore to all her fubjects fine 4 and pure fterling monies, both of gold and filver, to the

## R E V

- great honour and benefit of the whole realm; publifhed a 6 proclamation on Michaelimas even before noon, that the - teftoon, coined for twelve-pence, fhould now forthwith, - that of the beft fort marked with a port-cullis, be current - for four-pence half-penny; the fecond, marked with the
- grey-hound, for two-pence farthing; the third and worft - fort, not marked as afore, not to be current at all, nor re--- ceived for any value: the groat to be current for two-pence,

6 the former piece of two-pence for a penny, \&c. It was not - long after this, but thather grace reftoring to her fubjects - fine fterling money, called all the faid bafe and corrupt coins

- into her majefty's mint, allowing to them therefore, after
- the rate before mentioned, fo much of the faid fine monies
- as they brought in of the faid bafe monies.

The following proclamation alfo thews what care was taken of the coin in this reign.
A proclamation iffued at Richmond, the 12th of Oetober, 29 Eliz. intitled, A proclamation for reforming the deceits in diminifhing the value of the coins of gold current within the queen's Majefty's dominions, and for remedying the loffes that might grow by receiving thereof, being diminilhed.
The former part of which ran as followeth :

- Forafmuch as great part of our monies of gold of our realm - of England, and fuch gold of foreign countries which now < are current within our faid realm, are, by the finifter and - unlawful doings of wicked perfons, not only carried out of - our realm to foreign parts, and there, by divers means, di6 minifhed of their value, and from thence returned hither, 6 and paid, in lieu of lawful coin, for the commodities of our - countries, and fome other of them embafed, by clipping, - fouthering, or other unlawful practices, of their due fine-- nefs, fo that both the one fort and the other, by the means aforefaid, are brought much inferior to their firft and true - value and goodnefs: but befides that, many falle pieces lie - counterfeited in foreign parts, of the faid coins, whereby - great and intolerable lofs and diminution of the riches of our realm doth daily grow and increafe: wherefore we minding, - as neceffity requireth, the fpeedy remedy of the premiffes, do ftraightly forbid, charge, and command, that no man-
- ner of perfon or perfons within this our realm of England, - from and after the proclamation hereof in any county of ' our realm, do take or receive, or deliver in payment, any - falfe counterfeit pieces of any coin of gold current within - our faid realm, or any piece of the fame coin being fouthered, - or otherwife unlawfully embafed, or lacking of the juft - weight thereof, over the remedies and abatements feverally - exprefled, and to be allowed in that behalf. And if any - fuch piece of coin, lacking of its true weight above the re-- medies and abatements hereafter exprefled: and if any fuch - counterfeit piece as is aforefaid, or any piece of coin of gold - fouthered, or unlawfully embafed, thall be offered in pay-- ment: we will that it thall be lawful to every perfon and per-- fons to whom fuch offer in payment thall be made, not only - to refufe to take the fame in payment, but alfo toftrike a hole, c at his pleafure, in every of the faid pieces fo offered in pay--- ment, which thall be fouthered or unlawfully embafed, or - which hall lack of their juft weight above the remedies - hereafter following, and to cut every of the faid counterfeits - into pieces; rendering thofe fo ftricken through, and the - pieces of the others fo cut in funder, then prefently after6 wards to the owners thereof again. And if any controverfy
- Thall happen to arife betwixt the parties, or any of their - friends or favourers then prefent, in or about fuch ftriking ' through, or in cutting in pieces any of the premiffes, that - then forthwith he that fhall offer any of the faid unlawful - and forbidden monies in payment, and he that hall receive - the fame, hall peaceably repair together to our next juftice ' of the peace, mayor, bailiff, or other chief officer of that ' place, who then without delay, taking one other affiftant - of knowledge unto him, thall judge of the monies in con-- troverfy, and hhall allow of thofe that are allowable, and, - on the contrary, fhall prefently execute that which is here - on the contrary,

The remaining part of the proclamation contains directions for ballances and weights, to be provided by the warden of the Mint, for the ufe of fuch as fhould have occafion to examine the coins before fooken of.

## King James I.

The parliament grants bim tonnage and poundage for life.The tonnage is $3^{\mathrm{s}}$. for every ton of wine imported, and $3^{5}$. more for every ton of fweet wines, as well Malmfey as other, imported by aliens; and 12 d . in the pound of the value of all goods imported or exported, excepting woollen cloths, \&c. as in the former reigns.-Has four fubfidies granted by the clergy of 4 s . in the pound each.-The temporality grant three intire fubfidies, and fix fifteenths and tenths.-Alfo another fubfidy of 6 s . in the pound, granted by the clergy.One intire fubfidy, and one fifteenth and tenth, by the temporality. - Three intire fubfidies granted by the fpirituality, and two by the temporality,--Four intire fubfidies again granted by the firituality. - Three intire fubfidies, and three fifteenths and tenths, by the temporality.-The king borrows
money of forme of the wealthieft citizens of Lonidon, and the cuftoms of a 4 goods imported antll exported were eaifed and let out to farm.- Raifes large fums of monéy by fining feveral in the Star-Chamber.-Levies an aid for making his eldef fon a knight.-Has a benevolence throughout the realm which occafioned a general difcontent. - Raifes further fums, by inftituting the order of batonets.

## REMARKS.

By an indenture of the uft of James I. a pound weight of gold, 22 carats fine and 2 carrats allay, were coined into 441 . ros. by tale;' namely, into 10 s. 20 s . 408 , and 5 l. pieces. And a pound weight of filver, of the old ftandard, into 62 by tale; namely, into crowns, half crowns, thillings, fixpences, groats, 'two-pences, and' pence: which ftandard, both for gold and filver, hath continued ever fince.
The fcarcity of filver, during that reign, was the fubject of much confideration and enquiry' at the time: feveral proclamations were iffued againft the exportation of it, and feveral fchemes were propofed for drawing it into the mint. It was particularly advifed, that the weight of the money fhould be leffened: and this proceeded fo far, that directions were ac tually given to the attorney-general, the 2rft of February 1619, to prepare new indentures of the mint, whereby the pound weight Troy of ftandard filver thould be coined into 66 s . But thefe directions were foon after recalled, and the defigned alteration of the filver coin was ordered to be fuf pended for twelve months, upon a report made to the council, the 25th of the following April, by feveral eminent merchants, whofe advice had been defired in a confultation with the minifters on that occafion. This intended alteration does not appear after this, to have been thought of any more: and, indeed, filver about the fame time began to come again to the mint, in greater plenty than it had done for lome years * before

* It does not appear what was the occafion of this change but the fact was this; that in the four years from the ift of April, 1617 , to the $4^{\text {th }}$ of February, 1620 , there was only
coined at the Tower in filver money to the fum of 10yol. coined at the Tower in filver money to the fum of $10 y 01$.
$15 \mathrm{~s}, 4$ d. and that in the four following years to the 31 of March, 1625 , there was coined the fum of 205,5001 . 16 s 2 d . This laft fum is, however, little more than was coine in the laft year and a half of queen Elizabeth: during whofe whole reign, there was coimed in filver above 100,0001 a year, one year with another.

There was a good quantity of money coined in this reign, of the filver refined from the lead of the mines in the principality of Wales: and all the pieces of this money, of which I have feen the crown, the half-crown, and the ffilling, were feverally diftinguifhed by the reprefentation of the Wellh feathers, placed over the royal arms on their refpective reverfes; as thofe were alfo that were coined of this filver, during the firft twelve years of the following reign before the mint was purpofely fet up for the coinage of the fame $\dagger$.
t The whole quantity of the money coined in the reigno king James the Ift, cannot, as Mr. Lowndes has oblerved in his Effay, be known directly from the books of the mint by reafon that many of the records and papers of that office having been deftroyed or embezzled during the time of the great rebellion, the memorials of all cranfactions there, older than the reftoration of king Charles the IId, are now either loft, or remain in a very imperfect condition. Yet may a tolerable account be collected of this matter, by the affifance of other materials: and I have accordingly drawn alintance of other materials: and I have accordingly duff ciently exact; partly from a papor of archbifhop Williams, ciently exact; partly from a papor of archbinop Williams,
wherein an account is given of the coinage during the wherein an account is given of the coinage during the
firtt 13 years of the king; partly from a certificate deliverfirlt 13 years of the king; partly from a certificate deliver-
ed to the council the 27 th of November, 1618 , in which ed to the council the 27 th of November, 1618 , in which is contained an account of the weight of the gold and al ver coined in the feveral years from his 9 th to his 15 th and partly from fome extracts of the comptroller's accounts of his later years, communicated to me formerly by the late John Conduit, Efq; then mafter and worker of his Majefty's mint. By which feveral particulars it appears, that there was coined from the 3 tit of May, 1603 , to the 31 ft of March, 1625 ,
In angel gold, at the feveral rates of 361. 10s. 40 l . 10 s .44 l. 11 s . and 441.10 s . the pound weight, to the value of
In crown gold, at the feveral rates of 331. 10s. 371.4 s .401 .18 s. $4 \mathrm{~d} . \frac{3}{3}$ and 41 . the pound weight,

feffed of a knight's fee, to take upon them the order of reffed of a knight's fee, to take upon them the order of
knighthood, or to fine for avoiding.-Raifes flap-money knighthood, or to fine for avoiding.-Railes $\operatorname{lnip}$-money clergy; and of the Roman catholics.-Obliges the feveral counties to raife an army againft the Scots.-Makes void all grants of monopolies.-Again railes fhip-money.-Obliges the northern counties to raife a confiderable number of forces. -The parliament grant him a poll-tax, and 300,6001 . to pay the Scots.

## REMARK .

By an indenture, in the 2 d year of king Charles I. a pound weight of gold of the old ftandard, of 23 carats, 23 grains and 2 half fine, and half a grain allay, was coined into 441. 10s. by tale; namely, into rofe-rials at 30 s . a-piece, fpurrials at 15 s. a-piece, and angels at 10 s . a-piece. And a pound weight of crown gold, of 22 carats fine, and 2 carats allay, into 41 l . by tale; namely, into unites at 20s. double crowns at 10 s . or Britifh crowns at 5 s . a-piece. And a pound of filver of the old flandard, of in ounces 2 dwts. fine, and 18 dwts, allay, into 62 s . by tale; namely, into crowns, half-crowns, hillings, half-hillings, two-pences, pence, and half-pence.
The gold coins of this king (as appears by the indenture above) are, rofe-rials, angels, unites, double and Britifh crowns.
By an account which Mr Lowndes has publifhed in his Effay, the filver money coined in the reign of king Charles the Ift, and by which we muft only underitand the filver money regularly coined in the Tower of London, amounted to the fum of $8,77^{6}, 544$. ros. 3 d. But of the gold there alfo coined during the faid time, 1 am not able to give fo exact an account. All I can fay is, that, by a paper I faw in the hands of the late Mr Conduit, the weight of the angel gold coined from the beginning of the king's reign to the 25th of November 1642 , and which was coined into angels only, was that of 284 lb . 50 oz .9 dwts .9 gr . which made in money then current, at the rate of 44 l . Io s. the pound weight, the fum of $\mathbf{r 2}, 6581.5$ s. 9 d. ob. And it appears by the accounts of the pix, that there has been no angel gold coined in England fince that time. It alfo further appeared by the fame paper, that there was coined in crown gold from the king's acceffion to the 31 ft of March 1641, in weight, $68,832 \mathrm{lb}$. 11 oz . 11 dwts 4 gr . and by two other papers purporting to be the accounts of Sir Ralph Freeman and Sir Thomas Aylefbury, from the rft of Auguif 1641, to the 5 th of May 1643, and of Sir Robert Harley, from the 6th of May 1643, to the 3 Ift of March 1646 , that there was coined during that time in crown gold, the weight of 7052 lb . $20 \%$. II dwts. I gr. To which laft weight, if we add proportionably for the four months elapfed between the 3 , 1 t of March and the ift of Auguft r641, and for the 34 months between the end of thefe accounts and the 3oth of January 3648, we cannot very greatly miftake in fuppofing the weight of the crown gold, coined from the ift of April 1641, to the time of the kine's death, to bave been of about $11,826 \mathrm{lb}$. Which added to the former quantity, will make, for the whole weight of the crown gold coined in this reign, about $80,659 \mathrm{lb}$. and which, reduced into money, at the rate of 4 I . to the pound weight, produces of the fame $3,307,019$ l. To which if we add the value before given of the angel gold, and of the filver coined in the fame tume, we fhall find that the whole fum in gold and filver coined in the Tower of London, during the reign of king Charles the Ift, did not in current money amount to lefis than about 12,096,220 l. fterling. Foikes.

The Commonwealth of England, Oliver Cromwele, Protector.

The city of London give their money and plate, even to the fervant-maids bodkins and thimbles, towards carrying on the good old caufe, as fome called it.-An account of the feveral fums of money raif'd by the long parliament, is as foliows, viz.

VOL. If.

A general abfract of money raifed in England by the Lomg Parliament, from Nov, 3, 1640, to Nov. 1659 .

Mt. Walker, no lefs concerned in the ufurpation than thofe he rails at in his Hiftory of Independency, having run through all the rebellion with them, 'till they turned him off, and therefore well acquainted with their methods of raifng money, and the amount thereof, fums up the fame after this manner:
Nor is it a fmall artifice to raife money by fo many feveral and confuled taxes, whereas one or two ways would have done the work: 1. Royal fubfidy of $300,00 c$ 1. 2. Poll-money, 3. The free loans and contributions upon the public faith, amounted to a vaft incredible fum of money, plate, horfes arms, \&c. 4. Irith adventure for the fale of lands, the firft and fecond time. 5. The weekly meal. 6. The city loan after the rate of fifty fubfidics. 7. The affeffment for bringing in the Scots. 8. The five and twentieth part. 9 . The weekly affeffment for my lord general's army. 10. The weekly or monthly affeffment for Sir Thomas Fairfax's army. II. The weekly affeflment for the Scots army. 12. The weekly affeffment for the Britifh army in Ireland. 13. The weekly afm feffiment for my lord of Manchefter's army. 14. Free quarter (at leaft) connived at by the ftate; becaute the foldiers having for a time fubfiftence that way, are the lefs craving for their pay, whereby their arrears growing ftale, will at laft either be fruftrated by a tedious committee of actounts, or forgotten; in the mean time the grand committee of accounts difcount it out of the commander's arrears, whereby the ftate faves it. 15. The king's revenue. 16. Sequeftrations and plunder by committees, which, if well anfwered to the ftate, would have carried on the work, which thus I demonftrate: one half of all the goods and chattels, and (at lealt) one half of all the lands, rents, and revenues of the kingdom have been fequeftered; and who can imagine, that one half of the profits and goods of the land will not maintain any forces, that can be kept and fed in England for the defence thereof? 17, Excife upon all things. This alone, if well managed, would maintain the war: the Low-Countries make it almoft the only fupport. 18. Fortification money, \&c. By thefe feveral ways and taxes, about 40 millions in money and money-worth, have been milked from the people. A vaft treafure, and fo exeeffive, as noching but a long peace could import, and nothing but much fraud and many fullies could diffipate; and we ought not to wonder if it be accounted inter arcana novifimi imperii, to be always making, yet never finilhing an account thereof.
It is here to be obferved, that the 40 millions he here fpeaks of, were only to the year 1647, fo that they had not been above five years raifing and expending them. Nor is it lefs remarkable, that $W$ alker had gone hand in hand in the parliament with the extorters and confumers of all this treafure, being himfelf as deep concerned as any other in the villainy, and yet never faw into it, 'till the Independents thruft him and his party from baving any fhare in the cheat.

R EMARKS.
The parliament, on April 25, 1649 , agreed upon a new fort of coin, whereof there were coined, cruwns, half crowns, thillings, fix-pences, pence and half-pence. In the year 1656,' Oliver Cromwell, who had on the 16th day of December 16.53 , been invefted with the title of Lord Protequr of the Commonwealth of England, Scotand, ard

8 G
I-

## REV

reland, and who was every day acquiring new powers, adventured ta coin money with his own head and fyle. But whether the monies of this fort were, either then or afterwards, ever publifhed, as true, lawfut, and-current monies of England, 1 hiave not been able to learn. All his 20 s . pieces of gold that Ihave feen are of this date, and to are a very few of his filver balf-crowns, one of which is in the valuable collection' of the worthy Robert Bootle, Efq; one of the direfors of the Eafl-India company: but in general the filver coins which we have with the head and ftyle of the protector, do not bear an earlier date than that of the year 1658 . have alfo been informed, by miy very ingenious friend Mr George Vertue, who has examined atl the works of Simion, chief engraver to the mint, with the exactnefs of an artilt; and from whom we may expect an accurate atcount of the fame, when be fhall have leifure to publifh the curiouts colledtions he bas made upon that fubject, that he has obferved half-crowns of this fort, where the laft figure of the date had been altered from a 6 to an 8 upon the die : whichi would lead one to confecture, that thofe dies, though prepared in 1656, were not really ufed before the year 1658, and after the lecond folemn inauguration of the protectur, which was on the 26th of May $1657^{*}$. When it is even probable that the pieces coined, were rather looked upon as proofs, and given away as medals or counters among his friends, than publickly difperfed as common money throughout the kingdom.

* There was, I find, a trial of the pix, on the 3d of December i657, which is faid, in the books of the mint, to have been of the monies coined in the Tower, from the gth day of November 1649, to that time: and that the money then tried confifted of anites, double crowns and crowns, of new flandard gold; and of crowns, half-crowns fhillungs, half-fhillings, two penny pieces, pennies, and halfpennies, of old fterling filver ; all marked with the fun, and agreable to the indenture made with Aaron Guerdien, M. I. malter and worker, the 27 th of July 2649, whereby it appears, that this trial was of monies of the Commonwealth only. The trial was made before the commiffioners of the great feal, and the commiffioners of the treafury, by virtue of a warrant from the lord protector: which warrant I hall here trancribe a copy of, as the fame is inferted in the book from whence I took thefe particulars, and as it was in all probability the only one of the fort.

## Oliver P.

- Whereas amongft other weighty affairs of the Commonwealth, the care of the aflaying and trying of the monies thereof by the ftandard of England, according to the ancient cuftom of the realm, is not the leaft : we judging it neceffary, that the trial and affay of the fard money and coin be forthwith made, do therefore hereby fignify fuch our will and pleafure to be; commanding you forthwith to caufe a trial and affay to be made of the pix now being in the mint within the Tower of London, . by a jury of goldfmiths of our faid city of London, of integrity and experience, to be impannelled and fwom on a day certain, to be by you in that behalf appointed, in the place accuftomed within our palace of Weftminfter: and that the lords commifioners of our treafury, the juftices of the feveral benthes, and barons of the Exchequer, or fome of them, be then there prefent, and counfelling and afifing you in the due execution of this our fervice.

Given at Whitehall this gth day of November, $1657^{\circ}$
To our truffy and well beloved Nathaniel Fiennes and John Lille, lords comraifioners of our great feal of England.

The trial of the pix lafl preceding this, was made on the 9 th of November 1649, before the lord prefident of the council ot Rate, the commifioners of the great feal, and others of the council of fate, and committee of revenues; by virtue of an act of the 7 th of the faid month of November 1649, to try the monies coined from the 15 th day of February 1646. Thefe monies are faid to have been marked with a fcepter, and were therefore all coined before the king's death. This was confequently that fame trial of the pix chat is mentioned from Whitlocke, in the gjth page of thefe papers, and that war ordered to be made at the charge of Sir Robert Harley, when he was put out of his place: and Dr Guerdien's pix was therefore not opened, before the above mentioned 3 d of December 1657 .
What quantity was coindd in all of this money of the Commonwealth, I have never been able to learn. All the papers I have feen relating to that fubject, were only fome extracts Mr Conduit had of Dr Guerdien's accounts, for about four years and a half clapfed between the 16 thi day of May 1649 , when he entered upon his office, and the 3och day of November 1653. By which it 2ppeared, that there was coined at the Tower during that time, in crown gold, the weight of 1768 lb .7 oz .17 dwts. 16 gr. making in tale, at all. the pound weight, the fum of $72,5141.18 \mathrm{~s}$. $8 \mathrm{~d} . \frac{1}{2}$; and in flerling filver, the weight of $123,644 \mathrm{lb}$. 10 oz. 8 dwts, 12 gr. making in tale, at 31 . 25 . the pound weight, the fum of 38,204 l. 15 s. $4 \mathrm{~d} \frac{5}{4}$ : fo that the whole coinage, both in go'd and filver during the faid time, amounted to the value of $455,80 \mathrm{~g}$ I. i 4 s , od. t . Folkes.

The king landing with French forces at Kinfale in Ireland on the 12 th of the following March, the greateft part of that kingdom fubmitted to him, and he made his entry into Dublin on the 24 th of the fame month: He theré by proclamation raifed, for his prefent oiccafions, the value of all the coins both of gold and filver; that were then current in Ireland: but his wants a few months after greatly encreafing, he was reduced to fuch diftrefs; that he was forced to coin oid brafs guns and other utenfils of bafe metal into pieces of money, made alfo current for half-crowns, fhillings, and half-hillings, by proclamation of the 18 th of June 1689.
General Remarks on this article of the Public Revenue, from the Conqueft to the end of the Reign of king James Il. in relation as well to the fate of the Civil and Religious Liberties of the nation, as to its Trade and Commerce.
I. Of liberty, both civil and religious.

Let men make ever fo light reflections on the manner in which this kingdom has been eoverned from the Conqueft to this day, let them but run through the dynafties of, the Englifh kings, and fum up the account of the annals of each reign, and then let any candid and judicious commentator fay whether liberty was ever at any former period of time more amply exercifed and enjoyed, than at the prefent hour.
'Till the Reftoration there was no fuch thing as liberty : that after the Reftoration was nothing, compared to the flrength it gained at the Revolution; and the frength it then acquired; is fo far, in my opinion of things, from being now impaired, that it never flouriked in fuch full vigour as in the reign of his prefent moft gracious Majefty, king George II.
From the Reftoration let any one caft their eye backward to the Conqueft; and they will find whatever changes happened in the government, thofe changes were nothing more than from one tyrant, or one kind of tyranny, to another. With regard to the perfons of tyrants, there vere glorious and inglorious, flothful and active, fucceffful and unfuccefsful tyrants, but there never was a ceflation from one fort or other. With regard to the form of tyranuy, there was only the fame melancholy viciffitude in the manner of opprefling the people, without any fufpenfion of the thing itfelf; fonietimes it was the regal fyranay of the prince, fometimes the arifocratic tyranny of the barons; fometimes (as in the reigns of Harry the IId and queen Mary the Ift) the ecelefiaftical tyranny of the clergy s and fometimes all together, in their different juriddictions.: By which means, between monarchical, oligarchical, or hierarchical oppreffion, there was no change but from this tyrant to that," or from one to many; and fo little appearance of liberty of any kind among the people, that to recur to what I have already faid; I never hear any body harangue with enthufiaftic encomiums on the liberty of Old England, that I am not either afhamed of my anceftors for deferving thofe encomiunis fo little, or of my contemporaries for beftowing them fo ignorantly.
As to the liberty of this country during the domination of the Norman line, every body knows it was none; the right of conqueft, the apprehenfions of the conqueror, and the depreffion of the conquered, made him eager to fecure and fix his title; and the other too much weakened with intefine difputes, not to fubmit to any thing rather than re-expofe themelves to the recent mifchiefs of fruggling: this difpofition of both made tyranny eafy to be exercifed by the mafters, and hard to be refifted by the flaves; their purfis, we have feen, were drained, as allo their numbers thinned, and their Ppirits broken : foreign familie's were called in to lord it over the patives: and whatever was impofed or required, the people were unable to difpute, or afraid to refufe.
From William the Ift to Harry the IId, the crown was worn by three fucceflive kings, who had no other pretence to the crown, than the having a mind to wear it, and finding means to obtain it : during thefe reigns, it was force only prevailed, and the people enjoyed their right, no more than the lawful prince did his.
It is true, that every one of thefe three princes did fucceflively promife the people; in order to make them acquiefce under this ufurpation, that they would re-eftablifh the Saxon form of government, and reftore all thofe privileges and immunities to the people, which were enjoyed before the Conqueft; but as they all three made this promife to facilitate and plan their way to the throne; fo they all three broke it when they were feated and fixed there.
Daring the reign of Henry the IId (the firft king of the Plantageret line) it is true, the crown was lefs powerful, but the people were not more free ; their condition was not better for their king's being worfe; ecclefiaftical dilputes and family quarrels broke and bounded his power, without enlarging his fubjects privileges; and whilf he mourned the lofs of the one, they ftill groaned under the privation of the other.
To him that royal Don Quixote, and warlike enthufiaft, Richard the Ift fucceeded, who exhaufted the treafure of his kingdom, to taife his fame upon earth, and filt the blood of his fubjects, to purchafe glory in heaven.
In the next reign, a fruggle for liberity was again made, but not for the liberty of the people; the ftruggle lay between a king who had a mind to be fole tyrant, and the barons who had long tyrannized in their particular diftricts over their inferiors, and now wanted to tyrannize over their fuperior too. During the long fubfequent reign of Harry the IIId (that is, after the king was of age, and the regency of the earl of Pembroke determined) the conteft was the fame as in the preceding reign; and though by the conduct of the earl of Leicefter, the people afterward feemed to have got fome ground, by chufing reprefentatives who were inflituled with a pretence of taking care of their rights, yet this was but a feeming acquifition, and no real advantage in prefent gained ; for whillt the pretence of this inftitution was only the fecurity of the rights, liberties, and privileges of the people, the true reafon of their inftitution was only like the popular affectation of patriotifm, that prevailed a few years ago in this kingdom: the great abufe of which, has proved fo detrimental to the ftate, that the attempts of others fince, to thew the real firit of patriotifim, have been ftifled, mifreprefented, or ridiculed; for the people having been fo often made the dupes of a party inftead of a patriot firit, it is no wonder they diftruft all pretenfions of that kind, till they have inconteftible conviction of uprightnefs and public fpirit. Of this weak and corrupt minifters may make no liede advantage to fupport their power; for if all attempts to manifelt a real concern for the public weal are to be laughed

## R E V

## R E V

at, no one will have refolution to oppofe the worlt defigns; and therefore the abufe of the firit of liberty will render it of no ufe when we ftand moft in need of it. Thus falfe patriots pave the way to flavery, under pretext of contending tor liberiy.
The long reign of Harry the IIId was a fhifting ferne of various turns, fome in favour of an oppreffive king, others of a turbulent nobility, or one ambitious man; but for the people, whatever fooke of this wheel' was uppermoft, their liberties, like the earth, were always beneath its rèvolutions, and crulbed by its weight.
To Henry III. fucceeded Edward I. a great man, and a great king; but though his people grew more confiderable under him, they became not morefree : the conqueft of Wales, and the progrefs the Englifh arms made in Scotland, increafed the confideration of the Englifh nation; but it reftored no privileges to the people; and, though the national boundaries of the Englifh dominions were ftretched, the limits of Englifh fretdom were ftill unenlarged, the gates of liberty were as clofely fhut, and as ftrongly barred as ever ; and thie only comfort of the people in this reign was, not that the power of the crown was bounded,' but that it was notabufed.
As no body will fay the reign of his weak and unfortunate fon, Edward II. was a reign of liberty, and as I mention no reigh but with regard to that fingle point, I hall pafs it over without any farther comment.
King Edward III, and his fon, who never was king, were both of them great and able men, great in action, and able in council; England too was great under them, but not free; and even its grandeur under thefé prínces, as well as under Harry the Fourth and Fifth, was a dangerous grandeur, which, though it raifed the reputation of this country in prefent, would, if it had gone on a little longer, ended in its ruin : for the only difference ultimately between France being conquered by England, of England conquered by France, muft be, whether an Englifh or a French king fhould rule both; fince, in either cafe, the feat of empire would have been in France, and England, confequently, in either, would have become a province to France, as in two poffeffions under the fame prince, the leffer muft always be a province to the greater. In the beginning of Richard the Second's tyrannical and fimole reign, one tumultuous mob, indeed, under a rafh intoxicated leader, made a fhew of Aruggling for liberty; but the fubfequent part of his reign was confufion and oppreffion, which ended in his depofition, and the eftablifhment of as able a tyrant as ever fat on this throne.
The gentler difpofition of this fagacious ufurper's great and wife fon, Harry the Fifth, the fuccefs of his arms abroad, and the calmer fituation of his fubjects at home, lefs irritated by domeftic oppreffion, and lefs torn by inteftine divifions, made the people more happy, but made them in no one particular more free: for, though the expences of his rapid and extenfive conquefts were defrayed with lefs charge than fuch atchievements ufually are, yet this was entirely owing to the wife frugality of his own occonomy, to the bounds he himfelf fet to his demands, and not the limits the people prefcribed to his difburfements, or to their donations.
In the fubfequent reign began the fatal difputes between the houfes of York and Lancafter, which terminated, after four e:gns, and about 60 years, in the eftablifhment of Harry VII. During all this conteft, the people were fo far from enjoying any freedom, that they never fo much as grapped at it; they fought not for liberty, but for a mafter, and never aimed at Atriking off one chain, but in order to put on another; as if it were material, in chains of equal weight and ftrength, whofe name was engraved on the rivets by which they were fattened.
Harry VII, a prince not wanting underftanding, but wanting many good qualities, biaffed by the utmoft oppreffions, and meaneft cruelties, found a difpofition in his people to bear them patiently; he knew they would fubmit to almoft any thing he would impofe upon them, rather than venture, by new refiftance, to open thofe wounds again which were yet hardly $\mathbb{1}$ inned: and having fenfe enough to difcern this to be their cafe, without benevolence or juftice, he chofe, inftead of making himfelf fafe in their affections, to try how far they would fuffer, and, by a feries of rapacious and cruel acts of njultice, violence, and treachery, made his reigin as uneafy to himfelf as it was oppreffive to his fubjects.
This man, however, by a little dirty cunning fhewn in fqueezing the rich, and deceiving every body that trufted him, got the title of the Englifh Solomon; to have called him the Eng ifh David would have been more appofite, as he died much more like the one, than he lived like the other, by ordering his fon, on his death-bed, to do by the unfortunate earl of Suffolk as David ordered his fon to do by Shimei, when after having promifed to fpare his life, he commanded it, by an unjuft and cruel equivocation, to be taken from him by nother.
In Harry VIII, centered the two different claims of York and Lancafter to the crown; and as he had of courfe an indifputable right, by this union of the two claims, to afcend the throne; 5 he fcemed to think he had an equal privilege co do whatever he thought fit, when he was placed there,
and that the people in general had no more right to object to any violences his caprice and cruelky put him upon actine to king, than any particular perfon had to object to his being fo.
As his father and mother conveyed to him the titles both of the York and Lancafter families, fo he feemed likewife to inherit, through them, all the vices of both thofe houfes; he had all the diffolutenefs and luxury of his mother's family in the early days of his reign, and, in the more advance, part of it, all the rapacioufnefs and cruelty of his father During the reign of this butcher of his wives, this terror the nobility, this dupe abroad, and tyrant at home, there wo in England neither civil nor religious liberty, neither liberty of acting, fpeaking, or thinking; intimidated fervile parlia ments were often the proxies of his tyranny, but never checks to it ; they made and unmade, enaEted and abrogated law backward and forward, juft as his fluctuating difpofition aw lawlefs will (under the appearance of law) dietated and or dained.
In religious matters his conduct was not lefs defultory and ty rannical tban in regard to the fucceffion; refentment to the power of Rome produced fuch medly work in his councils, that notwithftanding a difpofition in the people, through fear, to enibrace any opinion which he had a mind to recommend, and profefs any belief he willied to impofe upon them ; yet his ordinances were often fo contradictory and unintelligible, that many miferable wretches were put to death for faying they believed, and many for faying they difbelieved the fame thing, whilft others were burnt for profeffing, contrary to his will, what they had only profefled becaufe they thought thofe profeffions conformable to it.
During the fhort reign of his fon Edward VI, the pride and weaknefs of the protector Somerfet, and the ambition and wickednefs of Dudley duke of Northumberland, fucceffively harraffed the kingdom with all the calamities attending a people fqueezed by oppreffive taxes, and forced into civil wars: and though the bad conduct of thefe two afpiring men ended in their own mutual ruin, yet the ceffation of their fway gave not to the people any relief from thofe miferies caufed by their authority whillt it lafted.
It is true, we owe, in a great meafure, the benefits we at this day enjoy from the Reformation, to the duke of Somerfet : but that this country fhould owe fuch a benefit originally to one of the wort kings, and, fecondly, to one of the weakeft minifters that ever governed it, is a reflection that maker one wonder at the very beneficial effects fometimes collaterally produced from very unrefpectable caufes, but gives us very little reverence for fuch cafual benefactors.
To Edward VI. fucceeded his fifter Mary, a devout but ex:crable fovereign; for the crel piety of that holy tyrant expofed this kingdom to as many misfortunes, under a bigoted woman, as it ever felt under the wort man; her whole authority was configned to the hands of ecele fiaftical governors, who embrued them every day in the blood of her unhappy fubjects : the ufurpation of the lady Jane Grey, and the fubfequent rebellion of $W$ yat, made, perhaps, fome executions neceflary to fecure queen Mary on the throne; but to thefs many more, very unneceffary, were added, by the inexorable firit of perfecuting Churchmen, who facrificed, like the moft barbarous idolators, whole hetacombs of Proteftant victims to their edible god, and his infallible ambaflador
Chriftians, profefling charity, inflicted on Chriftians all thofe cruelties which the early followers of Chrift complained of receiving at the afflictive hand of the moft hardened infidels.
In a reign then where abfolute power both in Church and State, urged by revenge and enthufiafm, under the makk of loyalty and devotion, perfecuted and condemned the offenders againft an injured queen, and what they called an injured God; in fuch a reign, what privileges and freedom were atlowed to the people, even thofe who are moft unacquainted with the hiftory of thefe times may eafily imagine, from the nature of fuch circumftances.
At the conclufion of this bloody melancholy fcene (which clofed not'till the death of the weak bigot that opened it) carne queen Elizabeth, a woman as different from her fifter and predeceffor in underftanding as in religion; and one whofe great and glorious reign can never be unjuftly extolled, but when it is called a reign where the people enjoyed the leaft dhadow of liberty. Every ftep the took tended to the public welfare, the honour of the nation, and the intereft of the collective body of ber people; but was taken as abrolutely without their confent, as the moft prejudicial meafures of any of her moft arbitrary predeceffors or fucceffors. She often fent for the fpeaker of the Houfe of Conmons, and told him not only what the would and would not fuffer to be done, but allo what he would or would not allow to be faid; told him the wanted money, and would have it, and that Yea or Nay fhould only be uttered when it was propofed to be given; that the Commons underftood not ftate affairs; that thate affairs were not their bufinefs; and that it behoved them only to meddle with what was properly within their province. She, by her lord chancellor, told the feaker, and by the fpeaker told the Commons, that they bad no right to judge

## R E V

of returns in eledions, but that her lord chancellor fhould be the fole judge, and determine in thofe cafes.
She imprifoned members of parliament merely by her own authority, forbid fome bills to be read in the Houfe, others to be debated there, and refufed the royal affent twite to above 30 bills each time, that had paffed both Houfes.
Never were the reins of prerogative held with a ftricter hand, or the yoke of flavery fafter bound upon the people's necks, than at this period of time; and though the people were driven where they ought to have chofen to go, yet they were frill driven ; and the fame power that forced them into foreign glory and domeftic profperity, might, in the hands of a lefs lkilful , or worfe-difpofed driver, have forced them in to the paths of contempt abroad, and deftruction at home; the fame method of government purfued in the fubfequent reign, and the effects of that method, on different maxims and policy, verify this affertion.
All, therefore, that can be faid with regard to the liberty enjoyed in the reign of queen Elizabeth, is, that the who allowed her fubjects none, knew their intereft fo well, and purfued it fo fleadily, that under her they poffefied every good, but that of being able to make the good, they poffeffed, the effects of their own election.
To queen Elizabeth fucceeded the original of that unhappy race of Stuarts, king James I. His reign and his fon's were one continued feries of folly and injuftice ; for thefe princes imagining they had a right to keep up the prerogative at the mark they found it, thought of nothing but their prerogative, and vainly imagined the nation would fubmit to the fame frretch of the prerogative, when exercifed to their infamy and ruin, under which it had acquiefced when employed for their glory and profperity.
In like manner did thefe proud, vain, ambitious, weak kings, endeavour to tread the paths of queen Elizabeth, without either her head to conduct them in fuch paths, or fuch minifters as fhe made ufe of to affilt them.
Ihall enter into no particular detail of the oppreffion and defpotifm of thefe two reigns, the notoriety of the facts makes it needlefs; and with regard to the ftruggle made for liberty, when the people could bear no longer the lawlefs oppreffive conduct of king Charles I, though that ftruggle freed them from his tyranny, it was far from procuring them that freedom for which it commenced: their deliverer became their undoer, and an abfolute ftratocracy was the only exchange they made for an abfolute monarchy. I cannot help here obferving, that when the patriot reformers of thote days, called Levellers, pofted up their declaration at Banbury, three of the four articles of which, according to Whitlocke, that declaration confifted, were thefe :
Firft, Againft the prefent parliament, and their proceedings. Secondly, Againft the council of ftate.
Thirdly, Againt the council of the army.
I muft add too, that this declaration was made juft after thefe Levellers, in modelling the government, had agreed that no excife fhould fubfint above four months after the commencement of the next parliament.
No public officers of falary fhould be capable of being chofen at the next election.
No members of cne reprefentative to be chofen of the next. The next and future parliament to be annual.
Not to depend longer on the uncertain inclination of parliament.
Tythes not to continue longer than the next reprefentative. Every parith to chufe their own minifter, and no parifh to be forced to pay him.
And no one to be exempted from offices on account of religion. How little liberty fuch contenders for liberty pracured for this country, is too well known to need animadverfion; we fhall therefore conclude our remarks on the well-known events of thefe times, by faying; that thofe who pretended at firft only to reduce and bound the power of the Crown, and to curb him who had abufed it, became themfelves, after they had deftroyed the King, fuch intolerable oppreffors of the people, that they ftraightened every chain they pretended to loofe, and doubled every evil they pretended to cure; and thus (according to Rapin) one may with great truth affirm that England was never lefs free than during the long parliament, and the adminiftration of Cromwell; and how profurely the public money was exacted at that time, we have feen.
Such exceffes brought the affairs of this country into the utmolt confufion, and that confufion ended in recalling from long banifhment the Son of that oppreffor whom thefe patriots had depofed.
Upon this reftoration of king Charles II, all the grievances complained of in his father's reign (or at lealt the fource of them, which was arbittrary power) were by miracle only prevented from being again eftablithed in this councry, and even by law.
For had it not been for that great and upright minifter, lord Clarendon, that faithful fervant to an ungrateful Mafter, that true pattiot and real benefactor to an unthankful people, the form of this government had been entirely altered, the Engliih had been, for fome time at leaft, as abfolute flaves as the Turks or the Perfians; for the King had two millions a year fettled upon him, to defray all the expences neceffary V OL. II.

## R E V

for the fupport of his government; parliaments had beefi made ufelers, and confequently laid afide, whilf the reval authority had been the fole legillative, as well as principal executive power in this country
That this oppofition of lord Clarendon to the fervile fchemes of the Tory reftoration men of this æra, was no proof of his love to his Mafter, though it was a great one of his zeal for the public, was the way of reafoning which the enemies of thisgreat man made ufe of to deftroy him, and which prevailea at laft with his unfeeling, blinded, and cruel Mafter, to give him up and difeard him. But, in truth; this conduct of lord Clarendon was as much for the real intereft of theKing. as the people : he thought, and thought rightly, that it was the incereft of the King to have his government eftablifhed on that foot which the bent of the nation would quickly fubmit to, and not fuch as they would be tempted afterwards to refift, from the fame motives that had before pravoked refiftance; he imazined, from the examples of Charles I, Richard IT, Edward II, and Hariy III, who had been ruined by grafping at abfolute power in this country, that it was much more prudent for a king here to content himfelf with 2 bounded authority, which he might make permanent and fecure, than to make his whole authority precarious, by trying to extend it beyond its proper limits. which had in all times made the people fo unealy whenever it was attempted, that rebellion and civil wars had generally been the confequence of fuch weak and impolitic meafures.
When the Ephori were eftablifhed in Sparta, by the confenc of Theoponpus, who then reigned there, his wife anked him; If he fhould not be afhamed to leave the regal authority to his fons in a worfe condition than he found it! To which the anfwered, He fhould leave it in a better, as it would be more fecure, in being more tolerable, and more permanent, from being liable to fewer abufes. Had lord Clarendon been reproached for fuffering any boundary to be put to the power of his mafter, I dare fay he would have returned juft fuch an anfwer.
And that this way of arguing in Iord Clarenidon was falutary for the king, as well as becoming a lover of his country, the effect of different reafonings and meafures in the next reign plainly thewed.
But to return to the account propofed to be given of the flate of liberty, we acknowledge there was, by the upright conduct of lond Clarendon on the Reftoration, for fome time, the dawning appearance of liberty, in fome wife and beneficial laws that were then made; but this dawning was foon overcaft, other meafures were purfued; this witty man and filly king was governed by his ftill more filly brother; and not only the liberty, but the religion of the people, were ftruck at and invaded.
To thefe domeftic grievances was added the infannous management of our foreign affairs; the parliament grew refractory on account of both; and though, for fome time, the duke of York and the parliament got the better alternately, yet, at laft, the duke's fcale prevailed, and the king, for the three laft years of his rcign, governed without calling any parliament at all.
Had king Charles liyed much longer, it is hardly to be doubted, from the circumftances in which we then were, but that the government, by degrees, had funk into the moft abject ftate, and; in all probability, into abfolute flavery. A vicious court, a corrupt king, a profligate nobility, no Houfe of Commons; the growth of Popery, and the decay of firit among the people, were fymptoms that feemed to prefage the end of all fort of freedom being near at hand. But his weak, bigotted, impetuous brother, not contented to let our liberties die gradually of that chronical malady under which he found them languilhing, and by which they mult at laft have expired, grew in hafte for their diffolution, and by endeavouring to precipitate their ruin drew on his own. Nay, had he been fatisfied with the total fubverfion of our civil liberties, even that, perhap , he might have obtained ; to that alfo, poffibly, he might fubfequently have added the fubverfion of our religious rights : but nothing would content this hot injudicious man, but doing both at once; and, by aiming at both, he was prevented from accomplifhing either.
And as fimple people will always do fimple things, and in a fimple manner, fo the recent example of king Charles I. before his eyes proved no warning to deter king James from the like practices: he proceeded to the fame violences, withous dreading the fame fate, and the incautious fon fplit on that very rock by which the father had been fhipwrecked.
For as king Charles I. had certainly carried all the contefted points of his prerogative, had it not been for the injudicious ftep he took with regard to the liturgy in Scotland, which commenced a rebellion there, that foon fpread its contagious nature here: fo king James, bad he fuffered the change be had a mind to make in our religion to be poffponed 'till what he contended for in prerogative had been fetled, $\mathbf{l}$ fear, by degrees, he had been able to compleat his whole fcheme ; but, by endeavouring to execute it all at once, he ruined himflf, and involuntarly faved the conftitution, which he bad otherwife deftroyed.
From king James the IId's banifhment, abdication, depofitom, or whatever people pleafe to call it, we may date the

8 H
b: th

## R E V

birth of real liberty in this kingdom, or at leaft the eftablifhment, if not the commencement, of every valuable privilege we now enjoy. The bill of rights afcertained all thofe difputable points of prerogative-and liberty that had hitherto been infifted on, either by the crown or the people, juft as the power of the one or the other, at different æra's, had prevailed.
For notwithftanding the Great Charter, 'till this explanatory renewal of it, or rather till this fupplemental engrafoment on the Great Charter, the bounds of liberty and prerogative were fo indiftinctly marked out, and fo indeterminately known, that the names of liberty and prerogative were made ufe of both by prince and people, juft as opportunity favoured the arbitrary views of the one, or the licentious difpofition of the other.
No body knew the juft degrees of either; tyranny often wore the plaufible title of the one, and rebellion as often toak the fpecious form of the other, according as occafion offered, and as the temper and circumftances of the times gave-handle and colour to favour the fchemes and pretenfions of one or the other of thefe exceffes.
On the one hand, the prince had called every thing his prerogative that his ambition induced him to wilh was io ; every thing that his refolution made him attempt, or his ftrength enabled him to acquire; "every thing that either the weaknefs of his people was obliged to fubmit to, or their fervility was ready to allow.
On the other hand, whatever encroachments were made by the people on the prerogative, went under the denomination of maintaining their liberties; every point they gained on the crown, ftimulated by their own fpirit and vigour, or encouraged by the indolence and fupinenefs of their prince, was onily called reviving former rights, and afferting ancient privileges: and thus both king and people were ever acting like thofe two parties defcribed by Davila, who, jealous of each other, and mutually fearing encroachments might be made upon them, if they continued quiet, were always guilty of injuftice themfelves, to avoid fuffering it from others; Come faffe fempre neceflario o offendere o effere ofeffo; as if it was always neceflary to injure, or be injured.
The prince and people in this country were, by thefe means, formerly juft in the fame fituation in which Livy defcribes the patricians and plebeians of Rome, who, fays he, inftead of being joint fupports to the commonwealth, thought of nothing but how to impair the ftrength of one another, 'till their mutual jealoufies of each other, and their immoderate defire of preferving their rights, was the caufe that, when either party was prevalent, it employed its whole power to opprefs the other.
The greateff misfortune, therefore, that can happen to a country that is under a mixed government, like ours, is to have the diftricts of the chief parts of that government fo indiftincty known, that thofe who fhould be joint-adminiftrators of the good of the whole, are more concerned about having the power to adminifter it, than about the good iefelf, and are ftriving for the one, when they fhould be promoting the other.
To fuch fort of contention, fays Machiavel, is owing the ruin of moft ftates; Perche fra gli huomine, parte defidenando havere di piu, parte temendo di perdere Pacquiftato, fi viene alle inimicitie, alle contenzione, \& alle guerra, della qual nafce la rouina di quella provincia; becaufe one party defiring to gain, and another fearing to lofe what it has gained, enmities are bred, contention enfues, and then civil war, by which the country is undone.
Upon the whole, it is apparent that, as this nation enjoyed neither civil nor religious liberty 'till the Revolution; to the whole property of the people was either at the mercy of princes or priffts, or both; the public revenue was raifed in an arbitrary and oppreffive manner, and what the civil power could not wreft from the nation, the ecclefiaftical did, as we fhall fee by the following ftate of theRieven ues of the Church before the Reformation was fettled.
As far as we can collect, fays Burnet, the religious houfes in England and Wales are, in all, to the number of 104I; of thefe, only 653 are of known values, while there remain 388 of which we have no eftimate. The only fair method of computing the value of the latter, will be by confidering the proportion they bear to the former in number. Common arithmetic will inform us, that, if 653 houfes were eftimated at $17 \mathrm{I}, 3^{14} 1.18 \mathrm{~s}$. I d. then 388 houfes may reafonably amount to the fum of $101,792 \mathrm{l}$. $0 \mathrm{~s} .2 \mathrm{~d} . \frac{1}{2}$, which added together, make 273,1061 . 18 s. 3 d. $\frac{1}{2}$. Now one penny, in thofe days, was equivalent to a fhilling at prefent, as doth undoubtedly appear from the obfervations that may be made upon the proportion that labourers wages *, the price of wheat $t$, and the fub-

* The wages of an hay-maker, in the reign of Henry the VIIth, was fettled at one penny, and, in the reign of Henry the VIIth, never exceeded thrse half-pence: wher eas twelve-pence now is their loweft daily hire. Vid. fiat.

## R E V

the VIIIth's time, but we may fuppofe it the fance as it wa: in that of his predeceffor and iuccelfor. In the ad year of Henry the VIIth, wheat was fold for three hillinas the uarter; in his feventh year, when a terrible dearth hap pened, it did not rile to above twenty-pence the buihel and in his tenth and fifteenth years, was iold for for thil ings the quarter. In the reign of queen Mary, unlef in ime of famine, wheat was commonly fold for five fhillicess he quarter in London, and for four thillings the qurert in the country. So that we may fairly compute the price of wheat, in Henry the Vilith's time, to have been foin fil ings the quarier; which, multiplied by twel.e, amouns to wo pounds eight hhilungs, which is but a resionsble price for wheat at this day. Vid. Baker's Chron. Vit. Hen. VII. and queen Mary I.
fubfidies * granted in parliament then, bear to thofe of our time. For this reafon, you ought to multiply the abovementioned fum of 273,1061 . 18 s. 3 d. $\frac{\pi}{2}$, by 12 , which will give you the real value at this day, an'l amounts to the fum of $3,277,2821$. 19 s. 6 d . Now although this may appear to be almoft an incredible fum, yet we are not to imatine that it was the only income of thefe religious houfes: for it was only the referved rent of their manors, and the yearly produce of their demefns, without computing fines, herriots, renewals, deodands, \&c. which would have, perhaps, amounted to twice as much. But, to be more exact in our calculations, let us, from this yearly income of the monaftic houfes, deduct a fixth part for demefns, and then the remainder will be merely their referved rents: if, therefore, from $3,277,2821$. 19s. 6 d . you will fubtraet $546,2 \mathrm{I} 3 \mathrm{l}$. 6 s .7 d , there will exactly remain, for their rents, $2,73 \mathrm{i}, 069 \mathrm{l}$. 12 s . II d. Now the referved rent being, in all church tenures, at leaft a fifth part of the eftate, it will follow, that the lands which the monks had out upon lives, in all amounted to the fum of $13,655,345 \mathrm{I} .4$ s. 7 d . and if to this you add their demefns, we may fairly affirm that the whole land which the monks were lords of, came to $14,10 \mathrm{x}, 55^{81}$. II s .2 d . How great a part of our land this muft be, you fiay learn from the following calculation. Theland-tax is paid fo unequally, that when it is nominally four Chillings in the pound, though in the midland counties they are kept up to the rigoar, yet in the north and in the weft, in many dittricts, only one and a half, in others two, but in almoft no place above two and a half is paid. We may therefore fairly affirm, that, when the land-tax is affelfed for four, it brings in but full two fhillings in the pound, or a tenth part of the income of our eftates, reckoning one place with another. The land-tax is fuppofed, one year with another, to bring in two millifit, and this may be accounted, when multiplied by 10 , to be the value of all the lands in. England, which is 20 millions per annum $\dagger$; of which only 14, IOI, 558 I . II s. 2 d . was dependent on our poor and humble clergy; which is, in othet words, that the monks were mafters of above fourteen parts out of twenty of the whole kingdom; and out of the fixparts which were thus kindly left dependent on king, lords, and commons, were the four numerous orders of Mendicants to be maintained, againft whom no gate could be fhut, to whom no provifion could be denied, and from whom ne fecret could be concealed.

* In the roth year of king Henry the VIIth; 120,000I. was granted by parliament for the Scotch wars, whith was looked upon to be fo exorbitanta tax, that 16,000 men rofein rebellon to oppofe its being levied. This aid (which was granted but 38 years before the diffolution of the abbies) were we to multiply it by 12 , would make but a trifing fum, compared with the fubfidies that have been yearly raifed for the late wars. Vid. lord Verulam's Hiftory of Hen. VII. page 163 , 164 .
† Gregory King's calculations, publithed by Dr. D'Avenant, Gregore the whole rents of lands in England to be bat 14 millions; and Sir William Petty's calculations, which were much older, do only compute them at eight millions a yeas. much older, The later ILd and the former in the reign of king WilCharles the IId. and the former in the reign of king William; and the valt difterence betweenthem as the chiefly value of all the lands and houles in England, we naty cingly attribute to our trade, the increafe of which has, in hafia century, much
in this nation.

If this calculation thould appear greater than what our reader can eafily give credit to, we muft advife him to look into Popith countries, where he will difcover that their clergy are to the full as rich in proportion as ever ours were here. A flagrant inftance of which we have from a calculation taken by the Great Duke of Tufcany himfelf, in his own dominion, wherein the priefthood were found to enjoy feventeen parts in twenty of the whole land; which, had it not been for that feafonable ftatute of mortmain, they would foon have porfeafonable itatute of mortmain, , feffed here. See A Summary of all the Rel
England and Wales, \& c . printed in 17 I 7 .

## R E V

Of the State of the Trade of England, from the Conbuest, to the time of the Revolution in the reign of king Winhiam III.
The Englifh nation remained much in the fame fate refpecting trade and navigation,-from the time of William the Conqueror to the accefion of queen Elizabeth to the crown of England, which then confifted chiefly in tranfporting tin, lead, wool, fome leather, iron, and other productions fufficient to parchafe what foreign commodities they wanted. King Edward the IIId was the firft prince from the Conqueft to his time, that we find took any notice of trade; for in the parliament held at Weftminfter, in 1338, the tranfportation of wool out of the kingdom was prohibited; and, for the encouragement of foreign clothworkers and other manufacturers to come and fettle here, a great many"ptivileges wdre granted, and an allowance from the king 'till they were fixed in a competent way of living: and it was enacted, That no fabject Gould wear any foreign cloth for the future. From his reign to the aceeflion of queen Elizabeth, we do not find any one prince, during that fpace of time, had mucki regard for trade, except what was done by Henry the VIIth, which looks rather like policy of ftate for crufhing Perkin Warbeck; for though he removed the mart from Antwerp to Calais, yet two years afrer the prohibition was taken off, and the trade was again opened to Antwerp, as formerrly. About ten years affer a law was made, probibiting the importation of manufactures of fllk wrought by itfelf, or mixed with any other thread, • This, fays the lord Bacon, points at a frue principle, viz. where foreign materials are but fufierfikities, fo-- reign manufactures thould be prohibited, for that will eithèr © banifh the fuperfluity, or gain the manufacture.' In queen Elizabeth's time, many and great adyantages were added to trade. In the year 1579, a 1 urkey * comipany was eftablifhed: the fame year Sir Francis Drake returned to England, after three years woyage round the werld, and many wonderful adventures and difcoveries; he arrived at Plymouth, bringing with him a vaft quantity of gold and filver taken from the Spaniards. In her reign, alfo, a treaty was fettled with the duke of Mufcovy, for a trade to Archangel, in which feveral advantages were granted to the Englifh nation.

- However unneceffary, and even detrimental to the flate, many may judge fome of our trading companies at prefent; yet we fhould be wanting in candour and imipartiality if we thould fuggeft that their primary eftabiinument was uffers and prejudicial to our general trade; for certainly joint fock trading companies were the firft meanis of cuttipg out many of the moff coinfiderable branches of the com inerce we at pre fent enjoy: nowwithtanding which, it may orte day prove as good policy to lay them afide, as it whas fiff to incorporate good Boll, methinks, before companies are abfolutely laid afide and diffolved, they fhould be rendereed as bereficial to ourfelvet as they will admit of for if they re ciediated oupon mational pinciples come mar, perraps behind upon naiofal pertiples ance ans permaps, be inade no leff inftrumental to advance our pretent trade, than the Therefore we fholld be certain before we anitilate com Thercen we hould be cern, bore we anamhate com panies, to reap all the advanage that we promiue ourielve nel of tone tades into the of outing made of cutting them deeper in our own avour in genetal. Se our articles Companies, English apriean Company East. India Company, and all the principal trading companies of Europe, by the Index, and our other reterences.
Sir Walter Raleigh, and others in her reign, difcovered the plantations; and though the firf planters mer with atmon inguperable difficultes, and were often forced to quit what they had already fettled; yet the greatnefs of their fouls furmounted all difficulties, and, though often baffled in their at cempts, they renewed them again with indefarigable zeal and induftry, 'till at laft tobacco and fugar came to be planted, a great many hips built, and, in a fhort time, not önly fup - plied ourfelves with fugar and tobacco from Anerica, but with very large quantities to fend abroad, and fupplied the Baltic, Germany, Holland, Flanders and France, with thofe commodities, which brought in very great riches to us, and; by degrees, beat the Portugueze out of the trade of thofe parts of Europe.
We do not find that ber fucceffor, king James the If, concerned himfelf much in trade; yet in imitation of Herwy the 1Vth of France (who was wonderful affiduous in promoting all forts of manufactures, and, amongit the reff, that of planting mulberry-trees, and raifing filk) made fome eflays rowards fuch a defign here; and he and his courtiers feemed to be very fond of the undertaking, and letters were writ to Virgiaia to promote that manufacture. Some fmall progrefs was made there, and letters pafled between the planters ana gentlemen here; but, as foon as they thought they had engaged the planters to begin upon it, inftead of promoting it heartily and fending fome able and skilful perfons to direet the under taking, they threw all upon the, planters, and that noble defign game to nothing: whereas that in France fucceeded, to the immenfe profit of that kingdom.
King Charles the Ift had too many things upon his hands; to concern himfelf with trade : as he was unacquainted there-
with, he was eafly impofed on; the confequences of whict make us labour under many inconveniencies at this day; one of which was, his giving leave to the French to filh upon the banks of Newfoundland, to fupply an Englifh conven in France in time of Lent. See our article British America.
Cromwell: and the Rump had fome excellent notions of trade; they fettled the act of navigation; beat the Dutch, forced them to a treaty, in which they were to deliver up the illand of Pellarone, and to pay large fums for the violences exercifed upon the Englifh at Amboyna; but, upon the reftoration of King Chat les the IId, the Dutch thought themiflves fecure enough, and fince have never made any fatisfaction. They took Jamaica with vaft expence, which has been repaid fince with intereft. The favour granted by king Charles the Ift to the French, to filh upon the banks. of Newfoundland by length of time, and afterwards by the eafier temper of king Chartes the IId, gave'them an opportunity of claiming a righ to that part they bad feized. It is faid king Jannes II, hhewed great uneafinefs upon that occafion, but nothing was done, in order to obtain fatisfaction. The fhort time fie reigned and his other views for eftablifhing the Popith religiong did not give him time to do any thing for trade.
In a word, from the time of the Conqueft to the Revolution under king William III, the public revenue was, in the general, raifed in an arbitrary and lawlefs manner; and farce any other trade went on, till the reign of queen Elizabeth; than that between the church and the civil power, to the end that the one might the more effectually fleece and plunder the people, and get all the lands of the kingdom into their hands, as we have feen, and the remaining ibare of property-fo fettled upon the crown, that there might be no occafion for parlia ments. Thus was there, in the general, a combination between thè regal and ecclefiaftical power, to become not only abifolute mafters of all the property in the nation, but mafters over the undertandings and confciences of the people, that they might be ruled with à rod of iron, forged by the united tyranny of princes and priefts.

## Remasks in another light

We have tiot room, under this heads to trace the fate of the public revenued down from the Revolution to the prefent time; we thatl, therefore, refer the remainder 'till we come to the article TAXes.
Our reafon for taking notice in every reign of the ftate and the intrinfic value of the coin, is becaufe this matter has fo clofe a connection with the fums of money levied upon the people, that we can make no right judgment either of the fate of trade, or of the public revenue, without them; for the pro per application of thefe facts will occafionally tend to elucidate many difficulties in our reafonimg upon things of this riature. At prefent, I fhall make a few obfervations relative to this point, the application of which may be made, by the judicious reader, as well prior, as fubfequent to the Protestant Revolution
As to the neceflaries of life, it will be admitted that many of them are greatyy advanced in their price fance former times, even fince the days of king Charles the IId, but every body knows, who is not wilfilly blind, that fuch acditional price is, in a great meafure, to be attributed to the modern duties of EXCISE AND CUSTOMS [fee our articles DUTIES, Labour]s but fuch of thofe things which are the direct and immediate produce of land, and which are exempt from thofe duties, it is not true that their price is generally en hanced; and if it were true, the neceflary conlequence of fuch advance would be, that the lands which produce them would yield a better annual rent; and yet this certainly is not generally the cafe, unlefs the lands have rectived. fome improvements.
But if by former times we mean thofe of two hundred or three hundred years ago, every one; who has at all looked into things of this nature, knows, that in the times of Henry the IVth, or about three huadred years ago, a pound of falver money in tale was an actual and effective pound of filver, wanting a few ihillings, and allowing a finall matter for al lay; a folid, or fhilling, or what was fo denominated in accounts, was a twentieth part of a pound, and a penny a twelfth part of a Chilling. From hence, without doubr, was introduced the method of reckoning by pounds, fhilfings, and pence; meaning thereby, fuch quantities of filver: and we continue fill to make our accounts by pounds, fhillings and pence; though it is now merely a fiction, and fubfifts no where but in imagination; for a pound in money, as now called, does certainly contain no more than a third part of the ancient pound, which was a pound in weight as well as in tale. It is known too, equally well, that 15 pounds in filver, whe ther in coin or in bullion, they being both the fame or near it, were equal to one pound weight in gold : and a pound of filver in weight being now cut into 31.2 s . or 62 s . fifteen fuch pounds make now 46 l . 10 s . in filver money in tale; and a pound of gold is now cut into 44 guineas and an half, which makes in gold money in tale 461.14 s. 6 d . each guine reckoned at 1 l . s . So that gold and filver in our days bear reckoned at il. I s. So that gold and filyer in our days bear

## R E V

## R E V

fie fame, or very near the fame proportion to one another, as they did in furmer days.
How the ftate of the filver coin food about 200 years ago, or in the times of Henry the VIIIth, is not fo ea.y to fix without diftinguifhing the times; however, it may be fulficient here to fay in general, that in the beginning of his reign a pound of hiver made 2 l. 5 s . in tale, and at the latter end 7 l .4 s . fogreat was the debatement of the coin then by the mixture of allay: and yet once, in the time of his fon and fucceffor Edward VI. this coin was made much worfe, a pound of filver fine making 141.8 s . in tale:
I cannot forbear obferving here, that many authors, amongit others bifhop Fleetwood, in his Chronicon Preciofum, takes notice of this debafement of the coin, and complains of it as 2 great grievance to the nation, as undoubtedly it was; but afferts, that an advancement of money in the denomination [fee the article CoIn], where the ftandard of which it is made remains the fame, is no prejudice to the public: nay, fome carry it fo far, as to contend it would be of advantage; whereas an advancement and a debafement, moft certainly are an equal mifchief, where made in an equal degree.
If the filver fpecies now in being was all called in and recoined, half of filver and half of allay, the grievance of this is readily feen and admitted; but if a crown-piece were called an angel, and made to go for ten fhillings, and the reft of the filver pieces in proportion, in this, fay they, there is no harm, the change is merely nominal.
As to fales and bargains to be made in future, fuch change in general is merely nominal; becaufe the parties felling or contracting will have regard, not to the denomination folely, but to the real quantity of filver or gold which is known, or fuppofed to be contained in the money in which fuch contracts are prefumed to be paid and performed; and therefore the owners of goods would then expect to have double the quantity of money in pounds, fhillings, and pence, for the fame commodities which they would now fell for the fingle quantity : fo that, in thefe inftances, there would be neither prejudice nor benefit accruing to dather party. But would not the cafe be the fame, and the change be merely nominal, if the money were debafed in an equal proportion? Exactly the very fame, and for the fame reafon: for there would be the like right, the like opportunity, and the like method, of perfons helping themfelves, viz. by taking then a double quantity of money, in monies numbered, inftead of a fingle one which they now take.
But befides thofe tranfactions of buying and felling, and contracts in future, there are other money-matters which are to be regarded, and where this exchange will produce an effect which fhall be more than names and mere words. There are fuch things as old and unalterable rents, annuitics perpetual and certain, debts fubfifting, and contracts in being, both of a public and private nature, where the fums are fixed and determinate, to the value of many millions, perhaps not much Short of a moiety of the value of the eftate of the whole kingdom ; the proprietors of all which neceflarily muft lofe juft as much as the money is nominally advanced, for that they will receive juft fo much in filver lefs, and in goled proportionably; as is equal to the fuppofed increafe in the denomination of the money. With regard therefore to thefe perfons, an increafe in the nominal value of money, and a decreafe in the intrinfic value, fuppofing them to be in one and the fame proportion, will have one and the fame mifchievous effect; that is, the one or the other will fink a moiety of their fubftance. Whether fuch a project as this might not pals in a neighbouring kingdom for a reafonably good way of difcharging Public Debts, I cannot tell; but I believe he who thould advife it, and put it in practice in England, in moft people's opinion, would deferve an Ax or a Halter.
And for the advantages which are furmifed would arife from hence to the public, viz. that fuch a fcheme would make the fecies of filver more plentiful, and prevent its being melted down and exported, they are both of them vain and groundlefs expectations. If the filver coin, fuppofing there are now Six Millions of that pecies in the kingdom, were advanced to double the prefent nominal value, we might, indeed, fay then, that we had Twelve Mililons of that pecies: but this fame filver fecies, when called twelve millons, will operate in trade, or any bufinefs of the nation, uft fo far and no farther, than the fame fpecies now does; which is called only fix millions: for that, after fuch alteration, there can be no money-tranfactions in which filver is made ufe of, let the tranfaction be in a greater or a lefs fum, but we muft neceffarily then make ufe of double the quantity of that money in tale, or the fame quantity in weight, which we now make ufe of, in any cale whatever, excepting that of paying old Debts, and making good previous Contracts. To fay otherwife, or that the fame quanlity of filver in coin, when called twelve millions, would be of more ufe than when called fix millions, has no more fenfe or truith in it, than there would be in faying, if a piece of cloth of 5 yards long were cut into ten pieces, and thofe pieces were called yards, that then it would go farther in making a fuit of cloaths, than it would do if thofe pieces
were called, as they really are, half yards only. Juft in the fame manner, if a pound of filver, which is cut into 62 pieces, and which are now called fhillings, fhould hereaftet be called folids, or by any other new name, and made to pals for two fhillings; yet a pound of filver, whether the 62 pieces of which it is made, are called Chillings; or folids, is one and the fame thing, and of one and the fame value: and an old fhilling witl go as far at the market as a new folid. On this account, and for the fame reafon, any fuch fobeme as this, whether it be by increafing the nominal value of money by giving it a new name, or by decrealing its real value by debafing it, will have no fort of effect tending to the inte refts of trade, or preventing the exportation of our coin, either of gold or filver. Traders and merchants, efpecially thofe who deal inforeign commodities, will not have regard to the pounds, fhillings, and pence in tale, to which fo many pieces of filver or gold coin may amount, but to the pounds, ounce's and grains, which thofe pieces will make in weight at the fcale; and therefore, for a parcel of goods, the fame in quan tity and quality, they will then expect, and in fact will receive, filver or gold in exchange, the lame in quantity and quality which they now do: and confequently, may export filver or gold, with the fame eafe and equal profit, whatever the flate of the coin fhall be: and if they can do it to advantage, I fuppofe they will do it; and, perhaps, there is no unanfwerable reaton why they thould be prohibited.
What was the intereft of money, or of filver and gold of which it confifted, or the price given for it on loan, two or three hundred years ago, I confers I have not been able to difcover, fo as to fix it with any certainty. Thus far, however, we may fafely go, and perhaps that may be fufficient for our purpofe, as to affirm, that about two hundred year ago, it was at leaft as high as 10 per cent, per annum, there being an act of parliament made at the latter end of the reign of Henry the VIIIth, that it fhould not exceed that rate; fo that it is a very $f$ dir conjecture, that it had been before that time higher: and in the time of Henry IV. poffibly as high as 15 per cent. And every body knows, that the intereft or price of it now is no more than 5 per cent. fetting it at the higheft rate it can be legally lett at.
From thefe premifes, I mean from the different ftates of the filver coin, which generally govern that of the gold coin, and from the different rates of intereft in any periods, and in the prefent periods of time, thefe deductions may be made: that when a pound of money in tale was an effective pound of lil ver in weight, and the intereft or price of money was at 10 per cent. if we compare the price of commoditics in England now, with the price of them at thofe times, the price now Thould be in the proportion of 6 to 1 ; and if the price o intereft of money was at 15 percent, and the like comparifon were made, the proportion now thould be as 9 to 1 . Our notion in this matter is, that the price of things at one time will bear that proportion to the price of them at another time, which the effective filver in the nominal pound at on time, bears to the effective filver in the nominal pound at another time, and the intereft or price of fuch pounds on loan at the different given times, computation being made upon both thofe heads.
From hence we infer, if in the times of Henry the VIIth a pound of filver was cut into 40 or 45 s . and now into 60 or 62; that the price of any commudity which then was two, mult now be three pounds, on the account of that difference only; and if the intereft or price of money was then 10 per cent. which is now only 5 , the price on that account muft be farther doubled, and in all be 61. that is, the prefent price muft be three times as much as in that reign. In like manner, if in the times of Henry the VIth; a pound of filver was cut into 30 and now into 62 fhillings; from thence only the price of things now mult be double the price of them then; and if the intereft of maney then was at 15 per cent. as very probably it might, that difference from the interef now will make an addition of a treble price, and the whole be as 6 to one. So in the time of Henry the IVth, when a pound of money in tale was a pound of filver in weight, and the interelt was 15 per cent, which is treble the value and treble the price of each now, we muft rreble the price on each account, and the price now will be as 9 to $I$.
To thow this I will make ufe of a familiar inftance. A farmer or merchant, in the times when a pound of money in tale was an effective pound of filver in weight, and the price of it on loan was so per cent. is polfeffed of a parcel of heep? oxem, wool, corn, or other neceflaries of life, to the value of 1001 . at the market-price, when he fells them, at that rate, will receive rool. in filver in weight as well as in tale, or in gold proportionably. A farmer or merchant in thefe times, therefore, muft have $3 c o l$. in money for a like parcel of goods, or elfe he will not have the fame quantity of filver or gold in weight, though the goods fold are in quantity and quality the fame; that is, the prefent owner muft have three times the price, in money as now told, as the ancient owner had, for the fame things: that this is the fact in the inflance of gold, as a commodity, is evident; for that a pound of gold in Henry the IVth's time was fold for 15 lo or thereabouts, in money in tale, and now it fells for

45 1. and fomething over, in the like money in tale, that is, at three times the price.
To pals on to the difference in the rate of intereft now and formerly. If thefe merchants have not prefent occafion for thefe feveral fums in their way of trade and bufinefs, or are defirous to let them out at intereft; the merchant of old times, on the loan of his 1001 . at the end of the year will receive rol. in filver, in weight as well as in tale, fuppofing intereft to have been at rol. per cent; but the merchant of thefe times for the intereft of his 300 l . will have no more than 15l. in tale, which is equal only to 51 . in weight: there151. in that the one and the other may have equal advantage from the fame parcel of goods, the modern merchant muft felic his goods at 600 . for no lefs fum than that will yield him Iol. of filver in weight for intereft by the end of the year; that is, he muft'fll them at fix times the price: or otherwife thefe two perfons, at the end of fuch year, will not be in equal circumftances, though they were fo at the beginning, when they were poffeffed of their goods.
If thefe merchants fhould inveft their money in lands of inheritance, inftead of putting it out at intereft, the cafe will fill some out the fame. When money is at 10 per cent. the price of eftates in fee-fimple is io years value: fo that ioo I . in old times, would have purchafed an eftate of rol. per ann. and a rent of 101 . per ann. was a rent of fo many pounds weight in filver, or near it, and of gold in proportion.
If a man were now to purchafe an eftate of equal goodnefs, he mult pay for it 300 l. even though intereft were fuppofed to be the fame now as formerly, and there were no advance in the years purchafe; for no rent lefs than 301 . per ann. will produce 10 pounds in filver in weight, or proportionably in gold. And when we take into the account the difference of intereft, it is plain, that the fall of intereft to one half, makes a rife of land in the purchafe to a double price: and therefore, now legal intereft is no more than 51 . per cent. he muft and does pay 600 l . for an eftate of 301 . per ann. that is, for an eftate of equal goodnefs, and which fhall yield an equal quantity of real filver or gold, which might have been bought 300 years ago for 100 l . he muft now pay jult fix times as much.
Or take the matter in this light. The fum of rool. in formet ages, if laid out in lands, or lett out at intereft, would, in a year's time, produce to the owner ten pounds weight of filver, or a proportionable quantity of gold; the fum of 200 l . now, if laid out in lands, or lett out at intereft, would in a year's time produce to the owner Io pounds in money, as now counted: but 10 pounds in money, as formerly counted, had three times as much filver or gold in it, as ten pounds in money, as now counted: therefore, to produce as much filver or gold, within the year as formerly, three times 200 I . or 600 l . as money is now counted, muft be laid out in land, or put out at intereft; that is, fix times the money muft now be employed to produce the fame quantity of filver or gold as was produced formerly by 100 l . only. The confequence of this is, that the neceffaries and conveniencies of life, which are the things out of which money is to arife, when they come to a market, muft now be fold at fix times the price, or fix times the pounds, fhillings, and pence, which they were formerly fold at ; or the very fame things will not anIfer the fame purpofes of life now, which they would have done three hundred years ago.
It will be needlefs to repeat here this reafoning, and fhow that it is applicabie to the cafe, which I have fuppofed poffible, that the intereft of money has been in fome times at 15 per cent. and that the price of goods between thofe times and thefe fhould be in the proportion of 9 to I. It may fuffice to fay in general, that it will bold good in that inftance, and in any other which may be fuppofed; fo that wherever the quantity or real filver in a nominal pound, and the current intereft of money can be known and determined, there the price of things may be known and determined likewife. My notion is here, that the real and intrinfic value of the ablolute neceflaries of life, fuch as food and raiment, were always, and always will be, much one and the fame, except where an accidental plenty or fcarcity makes a temporary vatiation; but if we compute the value of thefe neceflaries by a third thing as a common meafure between them, the price, or nominal value fo meafured, muft vary as fuch meafure itfelf varies. If filver be made that medium, as for many ages it has been in thefe parts of the world; and if in former times a real pound of filver was called a pound,' a twentieth part of a pound was calicd a fhilling, and the twelfth part of a filling a penny; if in times fubfequent the meafure itfelf be varied, and a third part of a pound of filver be denominated a pound, and Chillings and pence in the like proportion, the price or nominal value of the neceflaries of life will and muft vary with it. A quarter of wheat or malt, a pound of beef, or a yard of cloth, are now of the fame real value as heretofore; for they will go as far towards the fupport of human life now as they did 500 or 1000 years ago, and no farther; but their price or nominal value, as meafured by the current coin of the kingdom, mult vary as the coin itfelf varnes; and this we muit admit to be the cafe in filver itfelf, or we mult be forced to fay, that one thind part
of a pound of filver, fuppofing no more than a third part of a pound of filver to be in a prefent nominal pound, is of equal value with a whole pound. For if we confider filver, not as a meafure of traffic only, but as a neceffary or convenience of life, and as a merchandizable commodity, as we certainly may and do; one pound of filver is of the fame value as another, and of the fame value at one time as at another, greater or lefs plenty excepted; but the price or nominal value was formerly one pound only, but now we fee it is three pounds and above in filver, as a meafure: and we may rightly fay, that it ceafes to be one and the fame meafure, when it ceafes to be one and the fame thing in its weight and value.
From hence we plainly difcern one reafon, why money now is not at the fame value as it was two or three hundred years ago, viz. becaufe the filver of which it confifts in any given fum in tale is now only a moiety, or a third part of the quantity, which was formerly in the like fum in tale; and it being a convenience of life and a faleable commodity, the real quantity of filver in the money is the true meafure of its value. But, befides this decreafe in the value of money arifing from the variation in the fpecies, we find another in the intereft, or annual premium for it. This, to be fure, has proceeded from another caufe; and has arifen, as I apprehend, from the great increafe of the moveable and eafily transferrable eftate in the kingdom, which for fome time has been growing upon us, and of late has been fo vaftly enlarged by the Public Fundş, and not from the Increase of gold and filver in the kingdom, either in coin or bullion, ainy otherwife than as they conflitute a part of fuch moveable eftates.
For the further application of thefe principles, fee the article Taxes, and fuch other heads as we fhall from thence refer to.

## RHODIAN LAWS, of Commerce and Navigation.

Of the naval laws and flatutes of the Rhodians.
Rhodes is the capital city of a renowned inland of that name, of about 120 miles in circumference, fituate in that part of the Mediterranean called the Carpathian Sea, overagaint Caria, and near the fouth-weft point of the Leffer Alia, having Cyprus to the eaft, Egypt to the fouth, and Candia to the weft; its longitude being 58 degrees, and latitude 37 degrees and 50 minutes. It was befieged and taken by the Turkifh emperor Solyman in the year 1522, and has ever fince been fubject to the Ottoman empire. Rhodes, amongft other things, is famous for the huge ftatue or image of the fun, which is faid to fhine there at leaft once every day in the year; the weather it feems never being fo cloudy as to deprive the inhabitants of that place, for a whole day together, of the glorious appearance of that luminous body: this ftatue was feventy cubits high, and one of the wonders of the world.
Though the maritime dominion of the Rhodians was once very mighty, yet they did not render themfelves fo famous by their naval ftrength as by their naval laws; to which even the wife and victorious Romans themfelves paid fo great a deference and refpect, that, to the immortal glory of their authors, they were honoured with the fingular approbation of the Roman emperors, as well as of their fenate, and they being delivered to us by Peckius, in his commentaries De Re Nautica (of maritime affairs) in two different fragments, the firft of which, he fays, had obtained the fanction of the emperors Tiberius, Adrian, Antoninus, and feveral others; and the laft is to be found in the inth book of the Digefts of the Roman Laws, where it was inferted by the emperor Juftinian, of which the following is a tranflation.
But, as the cultoms of the Rhodian and Roman navigators were different from ours, we have judged it convenient to illuftrate, with notes and explanations, what might otherwife feem obfcure to thofe that are not pretty well acquainted with the naval polity of the Ancients.

S E C T. I.
Containing the firft fragment of the Naval Laws of the Rhodians, as they were ratified by feveral of the Roman emperors.

## ARTICLE I.

Of the owners of flips.
The wages of the owners fhall be a double portion.

## ILLUSTRATION.

Though now the mafters are not frequently the owners of their hhips, it is probable that they generally were amongit the Rbodians as well as Romans. For the Latia word exercitor correfponds with Naúk $\lambda n_{\xi}(G$, which is the origina! term in the Greek, implies the owner of a hired hip, being a term fynonymous with thofe of navicularius and naviculator; fo that prubably the owner, being likewite the mafter or commander of the thip, was to have befides the hire or freight 8 I

## R H O

## R H O

for the thip itfelf, a double portion for his own wages; that is to fay, twice as much as was allowed the other mariners: but how much that portion was, is not determined, nor is it of any great importance to us to know it, fince the wages we now give our fea-officers and mariners, depend upon events that render that precedent ufelefs to us.

## ARTICLE II.

Of the pilots.
The wages of the pilot fhall be a portion and a half.

## ILLUSTRATION.

The Greek term $\quad$ uveppurnes, which is moft properly anfwered in Latin by the word gubernator (fignifying governor) is neverthelefs explained by a circumlocution, viz. Ille quiclavum tenet (he that fteers the helm, or göverns the ftern of the fhip) by which it appears, That then it was ufual for the pilot not only to direct the fhip's courfe, but fteer her too themfelves, as indeed they are ftill obliged to do amongft us, when the fhip has any dangerous place to pals through, or is fo near any hore that a more than ordinary fkill is requifite to bring her fafe off; but otherwife, fuch of the other mariners as are moft capable of that function, are appointed to do it by turns.

ARTICLE III.

## Of the boatfwain.

The wages of the boatfwain fhall be a portion and a half.

## I L L U S TRATION.

The words both in the Greek and Latin, implying that officer which rules the prow or fore part of the fhip, we thought they could not be more naturally rendered, than by the term of the boat(wain, whofe office is much the fame amongit the Englifh mariners.

ARTICLE IV.
Of the carpenter.
The carpenter's wages thall be a portion and a half.

> ILLUSTRATION.

The word naupegus, which the Latins have derived from the Grecians, being in effect the fame with fabricator navium, or navis artifex, does properly fignify a thip-builder, and is the fame with what the Venetians call, in imitation of the modern Greeks, califatte, which is rendered by the French charpentier, and by us properly called fhipwright, or Ahipcarpenter.

## ARTICLEV.

Of the coxfwain's wages.
The wages of the coxfwain fhall be one portion.

## I LL L U STRATION.

Carabus, by feveral of the Ancients, is taken for a fort of a ftorefhip, attending men of war and other great veffels, fuch as the fe to which we now give the name of tenders. But the officer here termed carabita, being fpoken of as one that remains on board of the principal fhip, it is very probable, that thereby is meant the mariner that has the charge and management of the fhip's boat $;$ which is all the tender that fmall merchant-hips are provided with; whence we judge, that inferior officer muft be the fame, who by the French is called patron de la chaloupe, and by us coxfwain.

## ARTICLEVI.

Of the mariners,
The wages of each mariner thall be one portion. This article needs no illuftration.

ARTICLE VII.
Of the drudge or kitchen boy.
The wages of the kitchen-boy fhall be half a portion.
ILLUSTRATION.
The word here ufed in the original, implying one that takes care of the fire, or lights it, \&c. wanting a proper term in Englinh to correfpond exactly with Пaparxapiat(-), I thought it could not be more aptly rendered, than by the term of a drudge or kitchen-boy, \&c. which is ufual enough in England.

ARTICLE VIII.

## Of the merchant.

The merchant may have two boys in the thip, paying for their paffage.

ILLUSTRATION.
By this article it is provided, that a merchant freighting any thip, and eqbarking himfelf with his goods, as a fupercargo,
may likewife carry along' with him two boys or fervants, he paying a reafonuble allowance for their, paltare.
The fix following articles treating only of paffengers and their privileges, and duty aboard of Chips, atecr tiferting them in order, we thall explain what may feem obicure ia any of them together.

## ARTICLE IX.

A paffenger's place fhall be three cubits in length and one in breadth.

## ARTICLEX.

A paffenger fhall not himfelf fry fifh is the hip, nor fhall the mafter allow him to do it.

ARTICLE XI.
No paffenger fhall cleave wood on fhipboard, and the maftet fhall hinder fuch as attempt it.

## ARTICLEXII.

Paffengers fhall receive water on hipboard by meafure.

## A R TICLE XHI.

A woman paffenger fhall have a place of one cubit atigned her,' and a boy only ore balf of a cubit.

## ARTICLE XIV.

If any paffenger carries money aboard of a fhip, let him depofit it into the bands of the mafter; which if he fails to do, and afterwards pretends to have loft either gold or filver, his oath fhall not be valid againft the mafter, becaufe it was not depofited in his hands.

Illustration of the fix preceding Articles.
Theugh the word'vector (which we bere render paffenger) be by fome taken for thofe that tranfort, as well as for the perfons that are tranfported; and though Porphyrius, in queftionibus Homericis, makes that term fignify marine foldiers, it is plain by the fenfe and connection, that by it is here meant paffengers, or perfons embarking in a ithip to be tranfported from the port where they embark to fome ocher, upon a certain valuable confideration to be paid by them for fuch tranfportation, upon their arrival at the aforemid port.
And as to the place three cubits long and one cubit broad, mentioned in the ninth article, it is probable to be that in which they were to lie; though it mult be confeffed, that the length of three cubits and a half (which is here expresly fpecified, and amounts to no more than four feet and a half of our meafure) does not feem to be fufficient for a man of good fize to lie in, or at leaft, he mult not pretend to ftretch out in his bed. But fince we cannot conceive for what other ufe this room fhould be affigned a paffenger, we are of opinion that it is for a bed; nor will the fhortnefs thereof furprize fuch, as confider the general fmall burthen of the ancient fhips, in comparifon with that of thofe we now ufe; nor are the conveniencies for lodging at this time very great in little doggers, or other fuch ihips of 40,50 , or 60 tons; and yet I believe they are a great deal better than they were in thips of the like o: of greater burthen amongt the Ancients.
With refpect to the injunction contained in the ioth article, by which paffengers are prohibited to fry finh on fhipboard, and the mafter forbid to allow any that liberty, we conccive what might give occafion to that law, was the confideration that pafiengers, not being fuppofed to be very well acquainted with fea affairs, fhould not be allowed to ufe the fire upon any account, which is a good prefervative againft unlucky accidents.
By the Ith article, paffengers are in the fame manner forbid to cleave wood on fhipboard, and the mafter alfo commanded to deny that privilege (as the former) to fuch as would attempt it ; which law has probably been intended for the preventing of any damage that might otherwife occur to the fhip or goods, by the practice of that violent exercife by paffengers, who poffibly might do mifchief without knowing it.
The 12 th article contains a very feafonable regulation for obliging paffengers to content themfelves with a moderate quantity of frelb water, which they mult receive by mealure whilft on Chipboard; for otherwife the frelh water, which at fea is very precious, might be iquandered away to the great fea is very precious, might be iquandered away to the greac
detriment of the paffengers themfelves, as well as of all the detriment of the paffengers themfelves, as w
ibip's company, in cafes of preffing neceflity.
ibip's company, in cafes of preffing neceffity.
By the $13^{\text {th }}$ article it is ordained, That a woman paffenger fhall have a place to lie in, of a cubit in breadth; and though the length be not mientioned, we are reaforably to fuppofe it not to have been intended any lefs than allowed to a man. But as for a boy (by which muft certainly be meant any child, whether male or female) there is only allowed one half of that breadth, a convenient length being naturally fuppofed.

## R H O

## R H O

The 14 th atficle contains a very juit and reafonable fatute, by which paflengers are enjoined to depofit their money in the hands of the mafter of the thip; and withal acquaints them, that if they fail in that, they are not to expect any reparation at his hands, in cafe it be ftolen or otherwife loff.

## ARTICEEXV.

Of a mutual oath to be taken by mafters, mariners, and paffengers.
The mafters, mariners, and paffengers, that fail together, fhall take an evangelical oath.

## I L L USTRATION.

The word evangelical has been added by the Chriffians to this law; for the ancient Rhodians at the time that their fealaws were compiled, were heathens and idolaters. What the nature and intent of this oath was, is not here exprefled. The word in the Greek is, 'Avajáonn(6), which Peckius renders in Latin, jusjurandum irreculabile'; which words imply an oath that is undeniable, or that cannot be refufed, and may likewife fignify, that cannot be gainfaid, retracted, or recalled, fo that it is probable, it was a fort of mutual engagement, or oath of fidelity, which perfons navigating together were obliged to take. But of whatever nature that oath was, it is of no very great importance for us to trouble ourfelves about it.

## ARTICLE XVI.

Of the eflimation of the Rhodian Chips.
The eftimation of a thip (containing a thouland meafures) with all its tackle, fhall be fifty nobles, and fo it thall come into contribution; and the eftimation of an old fhip fhall be thirty nobles, out of which deducting one third, it fhall likewife come into contribution.

## I LLUSTRATION.

This article feems difficult to be underftood, nor thall we depend on our own judgment thereon.
As to the mealure lpoken of, forme take it to have been that which is called both in the Greek and Latin amphora, and was a fquare veffel containing about nine gallons; fo that a flip carrying a thouland of them, muft not have been of a vely great burden. And as for the piece of money, which we have rendered in the Englifh a noble, it is called in the Latin tranlation folidus, and in the annotations upon that aureus, both which I find to come to much the fame thing in Englifh; for though by folidas be now ordinarily meant a fhiling, it was formerly taken, as aureus, for an ancient piece of gold of the value of 6 s .8 d . or thereabouts, and known to us by the name of a noble.
So that upon the whole, it feems probable, That the Rhodian legnators did by this article intend to fix the eftimation of their merchant-fhips in proportion to their burthen, to the end that according to that eftimation they might be taxed, in cafes of contribution for damages at fea, or perhaps in other things, in which fhips might be liable to pay, in foreign and domeftic ports, according to their burthen, fuch as pilotage, anchorage, \&c.

ARTICLES XVII, and XVIII.
Of loans and interefts by fea and land.

## ARTICLE XVII.

The law thus commands that things which are intrufted to feafaring perfons upon furety, and without rifque of the leader, ihall not be put into writing; or if a writing be made, according to the Rhodian law, it fhall not be valid: but fuch things as are given upon credit to perfons that travel by land, though with a furety and without any rifque, fhall be reduced into writing.

## A R T I C L E XVIII

If any perfon taking up money upon ufe, and paying for feveral years the lawtul intereft, there befals him, atter eigho years, any lols or damage by fire, or by the irruption of the Barbarians, or otherwife, the tranfaction concerning the intercft thall be made according to the laws of the Rhodians: but if the former interelts were not paid, the contents of the firit agreement fhall be oblerved according to the inftrument.

ILLUSTRATION.
For the better underftanding of what is above, it is fit to know, That amongft the Romans there was a great difference, not only in the value of the intereft paid for money lent at fea, and fir money tent at land, but likewife in the manner of conditioning and taking fecurity for fuch fums. There wac, it feems, no intereft due for money lent on land, except an iniltrument was produced in due form by the lender, in which all thinges agreed upon between him and the borrower were plain $y$ and exprefsly fipulated; which feems to iaitr, that the intereft at land was various; perhaps accord-
ing to the fecurity given, of the time which the money was to remain in the hands of the borrower, or fome fuch circumftance.
And as to the intereft of money lent to mariners and other fea-faring perfons, it is evident that that was of two forts: the ordinary intereft for money lent to mariners upon fecurity, and without any rifque on the part of the lender, they called fimply foenus or ufura; but the extraordinary intereft agreed to be paid by mariners, together with the principal, upon condition that the lender chould run the hazard of the fea, and that the mariner fhould make reftitution only in cafe he performed happily his voyage, and not otherwife; that was called by the Ancients foenus nauticum, or NAVAL INTEREST, importing that the lender took upon himfelf the bazards of the fea; and that was defervedly allowed to be much more confiderable than the ordinary intereft, for that it was not only lent without fecurity, but likewife in a manner fo infured by the lender; that the borrower was in no danger of fuftaining any lofs. See Bottomry.
The 18th article is a favourable ftatute for fuch as having borrowed money, after punctually paying the intereft during the fpace of eight years, fhould fuffer any lofs; in which cafe the laws of Rhcdes (to which this flatute appeals) allow a certain mitigation of the intereft for the time to come, which is not obfeure enaugh to want any further illuffration.

A R T ICLES XIX, and XX.
Of mafters and mariners.

## ARTICLE XIX.

Mafters fhall not be anfwerable for the contracts of their ma= riners, but they may be detained for their crimes.

## ARTICLEXX.

Mafters fhall be obliged to deliver and reftore whatever they receive, but none can compel them to receive any thing; which they have from the beginning refufed to receive.

## ILLUSTRATION.

As to the 19th article, in which it is faid, that matters may be detained for the faults or crimes of their mariners; but not for their debs; we prefume that the meaning is this, viz That in cafe a mariner commits a crime, the fhip may be ftopped from purfuing ber voyage, having the criminal aboard; and, in a word, that the mafter cannot protect fuch a mariner from juftice: for it is not to be imagined, that a mafter of a hip could be bound to anfwer perfonality for the offence of his mariners, that being againft all reafon and law whatfoever. And as to the matter of debts, it is not reafonable, if people imprudently truft feamen with money or things, that the mafter fhould be obliged, either to pay the money or furrender the debtors; for then his voyage might be obltructed for want of hands to man his fhips; and fo he and the merchants would innocently fuffer for other people's folly; and therefore by this law it is wifely provided, that if money or goods are given to feamen, the givers muft look to their own fecurity themfelves; by which; innumerabie inconveniencies that otherwife might occur, are prevented.
The 2oth article concerns only goods received by, or offered to mafters of fhips upon freight.

## AR-TICLE XXI.

Of money taken up by mafters for the ufe of the fhips, \&c:
When mafters of ihips, that are proprietors of one third of the lading, have taken up money for the voyage, whether for the outward or homeward bound, or both, all tranfactions Shall pafs according to the writings drawn up between the mafter and the lender, and the latter thall put a man on board the fhip to take care of his loan.
Note. This laft article is gnawed out in the copy of the Rhodian fea-laws in the Vatican, and in feveral others it is entirely left out.

The fecond fragment of the Naval Laws of the Rhodians, as extracted our of the rith book of the Digetts of the Roman Laws.

A R T I C LES I, II, III, and IV.
Of Itealing anchors and other things.
ARTICLEI.
If a fhip touching at any port or fhore, be robbed of her anchors, the thief being taken and convicted, the law condemns him to the corture, and to pay double damages.

## ARTICLE H.

If with the confent of the mafter, the feamen of any thip rob another fhip in the port of her anchors, and thence the lofs of the fhip fo robbed enfue, that being duly proved, the mafter who permitted the robber $y$, fhall make good to a farthing, the damage happened to the loft hip, and to thim

## R H O

that were in it . And if any thing elfe of the hip's tackle, fuch as the cables, mip's boat, fails, canvas, or any other thing of that nature be folen, the thief being taken and convicted, fhall reftore double.

ARTICLE IH.
If any mariner, by the command of the mafter, fteal any thing of a merchant, or other paffenger, and be furprized in the fact, the mafter fhall make good the double to the owncrs, and the mariner that committed the fact thall receive a hundred blows of a cudgel. But if the mariner alone be acceflary to the theft, he fhall be grievoufly tortured (efpecially if it was gold that he ftole) and fhall make reftitution to the owner.

## ARTICLE IV IN

If a maiter fteer his courfe through any place obnoxious to pirates, after being informed of the danger therefof by the paffengers, and thereupon they happen to be fpoiled; the mafter thall make good the lofs.: And if the paffengess carry the fhip through a dangerous place, after being acquainted with the danger by the mafter, and any mifchief happen, then they fhall fuftain the damage.
The four preceding articles are in themfelves fo plain, that they need noilluftration.

## ARTICLES V, VI, VII. Of quarrelling, fighting, and ftriking.

## ARTICLEV.

If the mariners quarrel, let it only be in words, and let them not ftrike one another. And if any giving another a blow on the head, wound him, or hurt him, in any other manner, he that gave the blow thall pay the doctor's fees and all other charges, and thall likewife pay his hire for the laft time, and tend the hurt perifon during the cure.

## ARTICLE VI.

If the mariners quarrel, and one of them frike another with a fone or cudgel, and he returns the blow to him from whom he reccived it, that thall be deemed to have been fe ${ }^{\frac{*}{d}}$ defendendo [in his own defence]: and though the perion laft ftruck does thereupon die, it being proved by witneffes that the deceafed did firft ftrike the furvivor, either with a ftone, with a ftick, or with any iron, he that fruck and killed the other, thall be free from all danger, for that the deceafed fuffered himfelf, only what he would have made another fuffer.

## ARTICLEVII.

If any mafter, merchant, or mariner, frike a man with his fift and blind bim, or if by kicking him, he burfts his belly, befides the doAtor's fees, he fhallpay twelve nobles to the perCon for the lofs of the eye, and ten nobles for the caufing of a rupture; and if the perfon fo ftruck die, the aggreffor fhall be punifhed with death.
The three preceding articles are in themfelves fo clear, that they don't want any further explication.

## ARTICLE VIII

Of mafters and mariners running away with ghips. If a mafter to whom a thip is intrufted, with the confent of the mariners, sun away with ber into a foreign country, all their goods, moveable and immoveable, and whatfoever they poffers in any manner, fhall be feized; and being fold, if their price does not equal the value of the fhip, trouble and time, the aforefaid mafter and mariners fhall be hired out, 'till they have made ample fatisfaction for the damage by them caufed.

ILLUSTRATION.
For the better underftanding of this article, it is proper to obferve, that in fome cafes it was cuftomary among the Ancients, to adjudge the perfons of offenders to be difpofed of, or hired out by mafters, 'till by their labour they fhould make fatisfaction for damages by them caufed, which they were not otherwife able to repair ; and fuch it feems was, amongft the Rhodians, the condition of thofe who, running away with fhips into foreign countries, had not effects fufficient to refund the value of the fhips, with damages'and charges; it being by this law provided, That fuch offenders (returning into their dominions, or being apprehended, and brought within the limits of their jurifdiction) fhould be hired to work as fervants or bondfimen, 'till they had made ample fatisfaction for fuch offences.

## AR.TICLE IX.

Of lightening of fhips in a tempeft, \&c.
If a matur confult about lightening of a hip, let him enquire of the paffengers what money they have in the fhip, and a juft calculation being made, the money fhall pay proportionably towards the contribution: and the beds and wearing clothes and inftruments, fhall likewife be taxed. And if an ejection be made, the mafter thall not be rated at more
than one pound, the pilot and boatfwain hallwa pound, and the maxiners three fcruples. And if there be fervants or any other perfons that are not to part from the hip, they hall be taxed at three mina's; but if they be to leave the fhip, at two mina's. And in the fame manner fhall they contribute, if they are robbed of money or other things belonging to the mariners in general, by pirates. And if there intervene fome private articles of partnerfhip conceming profits, a juft computation being made of the fhip and every thing in it, the partners fhall bear their proportion of the contribution to be paid for damages.
$0 \mathrm{~N}_{\mathrm{B},}$
This article is the mof important of the whole frapments, and treats of lightening of thips in time of a form, \&c. and of the manner in which that is to be done, Quemay eafily imagine, that when a thip is in diftrefs and in danger of finking, the law of nature will oblige the per fons that are in her to ufe all polfible meaus for their own prefervation land hips being frequently loaden fo full, in hopes of fair weather, that in cafe of a form, they are not well able to live at fea, without being difburthened of a part of their lading; it is in that cafe allowable for the mafter and company to throw overboard as much of the lading as is requifite for enabling the Thip to bear out againt the tempeft. Nor does that only happen when fhips are overbint thened. for frequently they may by ftormy weather be reduced to fuch a pafs, that though their lading be not extravagant, it may be neceffary to part with fome of it, in order to preferve the reft; and in that cafe, if the owner of the goods be in the fhip, it is pofitively required, firft to confult him; and in his abfence, the confent of the company is a fufficient warrant for the maffer to difburthen the fhip: but the merchant or his fupercargo, or any other perfon" being prefent for him, it is requifite that fuch an ejection fhould not be undertaken without his confent. And thence it became cuftomary, not only amongt the Rhodians and Romans, but generally amongt all other mavigators, that the owner of the goods being prefent, fhould, with bis own hand, begin to difburthen a diffreffed fhip, by throwa ing fomething overboard himfelf; after which the feamen and others were to follow bis example, and throw over as much of the lading as' might put the fhip into a condition to refift the form.
And becaufe it feldom happens that the whole lading of a fhip belongs to one merchant, it is very juftly provided, that the perfon whofe goods are caft overboard thall not be the only lofer, but that the owners of fuch goods as have been faved, fhall contribute towards the lofs of thofe that were thrown overboard. So that even filver, gold, and precious fane (though thefe cannot be well fuppofed to endanger a fhip by their burthen) muft pay praportionathy with other goods: and that not according to their bulk, but their value: nor is the owner of the fhip at all exempted from paying his proportion, according to the value of the hhip, becaufe. the throwing over of the goods contributes to the common fecurity of the fhip, and all that is in it $\because$ and as every one is obliged to bear his proportion of the lofs, all endeaveur to be as careful as poffible to throw over the goods that are leaft valuable ; for otherwife it might happen, that, the mafter and mariners, out of fite and revenge, might occaforn confiderable damage to merchants, againft whom they might have fome private pique and refentment.
Nor are in fome cafes the clothes, beds, and perfonal neceffaries, nor even the perfons of the mafters, merchants, paffepgers, and mariners themelves, free from contributing towaids the damage fuftained by fuch ejections.
When it happens that goods have been thus thrown overboard to lighten a fhip, the contribution is made in this manner. In'the firft place an account is given only of the prime colt of the goods that are loft, and then eftimation being made of them that are preferved, not according to what they coff, but according to the price they'll probably yield at the port whither the fhip is bound; they are all charged in proportion to their value, and muft pay accordingly. os
And in the fame manner it is ordained, to make an equal contribution for damages fuftained by rovers and pirates; the good defign of which law is to excite every individual mariner, and other perfon in the hip to his duty, to which the confideration and apprehenfion of his own particular rifk, will not a little contribute.
This article concludes with a very reafonable claufe, obliging all perfons, though not on fhipboard themfelves, concerned by partnerthip in any part of the contribution to be paid out of the fhip's cargo, to allow their fhare of the contribution to be paid out of the goods that are preferved, towards the price of thofe that are loft ; which certainly is very juft, fince it is not thofe who are entitled to any fhare of the profit, fhould decline to bear the proportion of the lofs, except by fome feparate agreement the contrary be provided.

## ARTICLE X

Of thipwreck and other damages.
If.by the negligence of matter and mariners, any damage or fhipwreck happen, they fhall be anfwerable for it: And like

## R H O

wife, if by the fault of the merchant the fhip and cargo petim, he fhall fultain the lofs. But if a fhipwreck happen merely by misfortune, without any failure on either fide, what can be faved of the flip and lading, fhall be prized and brought to a contribution.
This article is too plain to need any explication.

## ARTICLE XI.

Of old and unfound fhips.
Let not merchants nor paffengers put heavy and precious goods in an old hhip: if they do, and the fhip fetting fail, the goods be fooiled or damnified, they muft blame themfelves. But when merchants bire fhips, let them diligently enquire of others who have formerly failed in them, whether they be well provided with all neceflary inftruments, tackle, good fails, yards, canvas, anchors, ropes, convenient rudders, good boats, and able, ikilful, and fufficient matiners, and whether the fhip's fides be found: and, in fine, to comprehend all in one word, let them enquire about the fhip's fufficiency in every thing, and accordingly venture their goods. This article requires no illuftration.

ARTICLE XII.
Of a depofitum or truft by fea and land.
If a perfon depofit any thing either in a fhip or houfe, though in the hands of a known and reputable man, let it be done in the prefence of three witneffes. But if the matter be of confequence, let a writing be drawn up upon is. And if the perfon in whofe cuftody it is left, pretend that it is loft, he muft fhow the place where the houfe has been broke, or make iv appear how the theft was committed, and make oath, that he is no way acceflary to it. Which if he cannot do, he muft make good the thing depofited as he feceived it.

## ILLUSTRATION.

By this good law, the R hodians endeavoured to obviate the abufes, which the avarice and difhonefly of men had, by reafon of the deficiency of former ftatutes, found means to introduce into trade. And as here a fufficient remedy is appointed againft the unjult denials and pretences, which in fuch cafes were ordinarily made ufe of, fo by the fubfoquent article, for avoiding all occafions of confurion and lofs by the mariners, \&c. perfons carrying money aboard of Chips are enjoined to depofit the fame in the hands of the mafters, who in that cafe are to be refponfible for it, and not otherwife.

## ARTICLE XIII.

Of money, \&c. ftolen at fea.
If a paffenger embarking in a thip carry money, or any other thing along with him, let him depofit it in the hands of the mafter. And if (that not being done) he alleges, that he has loft either guld or filver, no notice fhall be taken of what he fays, further than this, that the mafter, mariners, and other palfiengers in the fhip, fall be interrogated upon oath about it.

I LI, USTRATION.
This is much the fame with the $13^{\text {th }}$ article of the preceding fection, only with this difference, that whereas in the former, no injunction is laid to put the mafter or mariners, \&c. of any fhip upon their oath in cafes of this nature, that deficiency is here fupplied, and all perfons navigating in a fhip, where any money or other valuable effects are miffing, are obliged to declare upon oath, whether they know any thing concerning them.

## ARTICLE XIV.

Of depofitaries denying the receipt of what was left in their hands, and their punifhment.
If a depolitary denying upon oath, or by writing, the receipt of what was entrufted to him, be afterwards convicted by witnefles, or if the thing depofited be found in his cuftody, he fhall teftore twofold, and, befides that, thall be punilhed as one guilty of wilful perjury.
This needs no explication.

## ARTICLEXV.

If merchants or paffengers having other men's fervants aboard a Mhip under their charge, or if the mafter, being entrufted with captives, toveh at any city, port, or coaft, and there any perfon or perfons going amore, the fhip happening; whilft they are at land, to be purfued by robbers or pirates, and making the ordinary fignal puts to fea, fo that both the fhip and the merchants and pafiengers goods are preferved, all the goods and effects of thoie that were left ahhore fhall be reftored to them. And if any of them afterwards commence a fuit againft the mafter, for having left them ahhore in a place infefted with robbers, they fhall recover nothing, becaufe the matter and mariners were obliged to fly from the pirates. But if a merchant or mafter leave another man's fervant, who was under his charge in any place, he fhall make reftitution to his mafter.

V O L. II.

## R H O

## ILLUSTRATION.

For the better underftanding of the fenfe of this article, is feems neceffary to obferve, that as in moft other things, fo in war, the cuftoms of the Ancients did very much differ from thefe of the prefent age; and that efpecially with re gard to prifoners taken in war, who for the moft part were made flaves; that is to fay, remained in perpetual captivity And though amongf the more civilized nations, fome regard was had to their quality and ftation, thofe of the common fort were fold and difpofed of, as are now the negroes, which we purchafe in Guinea, and carry to the plantations in A merica. And in this fenfe is to be underftood the captives and fervants here fpoken of, and fuppofed to be committed to the care of malters, merchants, or paffengers, who by this law lie under an obligation of looking fo narrowly after them, that if by any accident they fhould happen to be left afhore, the perfons under whofe conduct they were left, fhould be anfwerable for them, and liable to make reftitution either of the perfons or value to the owners.

## ARTICLE XVí.

Of money lent for navali intereft, $\& x c_{\text {, }}$
If mafters or merchants borrow money for their voyages, the goods, freight, hips, and money being free, they fhall not make uie of furetyinip, except there be fomie apparent danger, either of the fea, or of pirates. And for moley fo lent, the borrowers hall pay Naval Interest.

ILLUSTRATION.
By this law, merchants and mariners borrowing money to be laid out in their traffic by fea, feem to be enjoined to pay natal intereft for it, which (as already obferved) was much more confiderable than that which was paid for money borrowed upon fecurity at land, becaufe the hazard was much greater: for, amongt the Rhodians, when money was lent upon naval intereft, the rifk was to the lender, who, in confideration of that, had a very confiderable fhare of the profits arifing from it: fo that, upon the main, it was the lenders that traded with their own money, by the intermiffion of fuch feafaring perfons as thought fit to follow that way of living, and who undoubtediy made a great profit for themfelves with the money fo borrowed, befides the fhare they were obliged to give the lenders for the ufe of their money, and for the dangers to which it was expofed.

## ARTICLE XVIb;

Of money lent in partnerfhip.
If money is lent to a feafaring perfon by one in partnerffip with him, for the ufe of the partnerfhip, and articles be draw n , either for one voyage, or for any longer time that the partnerfhip is to laft, if the perfon receiving the money doth not return it in the time agreed upon to the owner, and it afterwards happens to be loft, either by fire, robbery, or fhipwreck, the lender fhall bear no fhare in the lofs, but \$hall receive bis own in fafety. But if before the expiration of the time appointed for the partnerfhip, there happens any lofs or damage at fea, the lofs (as well as the gain) fhall be divided between them both, according to the agreement made.
This needs no illuftration.
ARTICLE XVIIt.
Of perfons borrowing money upon fecurity, and afterwards going abroad.
If any perfon borrowing money for a certain term, does afterward go into a foreign country, the time agreed upon being expired, the loan hall be paid according to the law of furerythips. But if there be no way of getting fatisfaction, and the money ftill remains in the hands of the borrower, he fhall pay Nayal Interest for all the time that he was abfent.

## ILLUSTRATION.

Some account has already been given of the difference that there was amongft the Rhodians, between the intereft paid for money borrowed at land, and to be employed there, and that which was borrowed by fea-faring people, to be laid out in goods, and tranfported to foreign countries in the way of trade. We have likewife taken notice that, in the latter cafe, the lenders were allowed to receive much greater profits than in the former, becaufe their rifk was greater Now the intent of this article is, only to command the like intereft to be paid for money borrowed by a perfon, who afterwards retires to a foreign country, during the time that he remains there; becaufe the legiflators thought it juft to give the lenders fome extraordinary allowance for the difappointment they met with, and the rifk they might run upon fuch occafions.

## ARTICLE XIX

Of freighting of fhips, and giving earnelt.
If any perfon hiring a fbip, and giving earneft, fays afterwards that he has no occafion for her, he ihall lofe his ear-

## R H O

## R H O

neft; but if the mafter recede from the agreement, he fhall' give the merchant double the earneft.
This article needs no explication.

## ARTICLE XX. Of charter-parties.

In biring of fhips, the charter-parties [fee Charter-ParTy] thall not be valid, except they be fealed; and the penalties may be inferted, with the confent of the parties. But if there be no charter-party, and either the mafter or freighter go from their word, as fuppole the merchant fhould not give the money agreed to, he muft pay half the freight to the maiter; or, if the latter break his word, he fhall pay to the merchant the half of the freight ; but if the malter pretend intirely to recede from the bargain, he fhall pay to the mafter the whole freight; which penalty fhall be exacted as a punifhment for breach of promife.
This does not want any illuftration.
ARTICLEXXI.
Of matters or owners of Mips in partnerfhip together.
If twe mafters of ihips verbally enter into partnerfhip, acknowledging that they have done fo in former times, and have mutually obferved the conditions thereof, and always paid the duty of each lading; in cafe any accident happens to either of the two fhips, whether being in ballaft or laden, that which is fafe fhall fuftain one fourth-part of the damage, though their partnerfhip be commenced without any written inftrument. But where there are articles in writing, they Thall be firm and valid, and the things which are faved thall be liable to a contribution with thofe that are loft

## ARTICLE XXII.

Of merchants freighting a whole fhip.
If a merchant freighting a fhip agrees to lade it intirely himfelf, the mafter thall carry nothing in it but water, provifions, ropes, \&c. and other the thip's neceflary tackle; however, if the mafter will put in other goods in the fhip, he may, it fhe can carry them. But if the merchant, in prefence of three witneffes, proteft againft it, and thereupon there happens at fea to be an ejection, the mafter fhall fuffer the damage; but, if the merchant do not forbid it, they fhall contribute towards the aforefaid damage.

## ARTICLE XXIII.

## Of the validity of charter-parties.

If there is a charter party in being between the merchant and the. mafter, it fhall be valid; and, though the merchant does not compleatly lade the thip, he fhall pay the freight, according to the contents of that inftrument.
'This wants no illuftration.

## ARTICLE XXIV.

## Of lets and impediments in voyages,

If the mafter having received half of the freight, and fetting fail, the merchant will return, notwithftanding the charterparty, he forfeits the fum he bas paid for that impediment. Bur if the malter breaks the articles, he fhall forfeit the value of the whole freight to the ufe of the merchant.

## I L L U S TRATION.

That the reader may not confound this article with the 2oth of this fragment, which likewife treats of the penalties impofed upon fuch as having freighted fhips, do afterward recede from their contracts, which are different from thofe mentioned in this article; we fhall put him in mind, that there the breach of verbal bargains and agreements about freighting of fhips, is fpoken of; whereas the penalties here mentioned are for the breach of charter-parties, which are written inftruments, folemnly figned and fealed; and, befides thar, it is more properly the impediments that may happen during the voyage that are here treated of. [See the article Charter-Party.]

## ARTICLE XXV. Of demurrage, \&c.

If a thip be detained by the merchant ten days longer than the time appointed by the charter-party to remain in any port, he fhall find the company in victuals and drink; and, if ten days more pafs, the merchant fhall pay the freight, and quit the flaip, except he be willing to add a reafonable fum to that before agreed to; upon payment of which he may fail, as he fees convenient.

ARTICLE XXVI.
Of mafters or mariners lying afhore, or being negligent. If the mafter or any of the mariners lying afhore, the fhip happens, during their abfence, to perifh, whether by night or by day, the mafter or mariners fo lying afhore fhall
fuftain the damage, and thofe who remain in' the fhip hall be free; and whatever damage befals a fhip by any one's negligence, thall be refunded to tho owner by the perfons by whofe fault it happened.
This needs no illuftration.
A R T I C L E XXVII.
Of hipwrecks hadppening by the fault of the mafter or mariners.
If a fhip puts to fea with merchants or partners goods, and there happens to be difabled, or to perifh by the tault of the mafter or mariners, the goods that are faved flall be fecured in a certain place, free from any danger. But if it is proved by witneffes that the flipwreck was occafioned by the tempeit, as well what remain's of the fhip, as of the goods, fhall be brought to a contribution; and the mafter thall retain half the value of the freight. And if any perfon denying, in fuch a cafe, his partnerfhip in a voyage, be convicted thereof by three witneffes, he fhall pay his proportion of the lofs, and likewife undergo the punilhment of that denial.

## ILLUSTRATION.

By this law we fee, that further provifion is made for determining fuch differences as might probably arife betweea the parties concerned, in cafe of hip-wreck: it being pofitively ordained, that, in cafe fuch a difafter fhould in any manner happen by the fault of the mariners, then the lading (if faved) fhould be preferved for the merchant, free from ali contribution towards the damage of the thip; leaving the other matters, concerning that which the goods may have fuftained, to be decided according to the other preceding ftatutes relating to fuch aftairs. This article concludes with a very juft and equitable regulation, concerning perfons who having only verbally taken an intereft in any fhip, or in its lading, in cafe of fuch a difafter, ihould pretend to deny themfelves to be concerned therein, in order to avoid the paying of a flare of the lofs proportionable to what they would have claimed in the profit; of which being duly convicted, they were to pay a double fhare of the lofs, and be further punithed for their fraudulent denial, as the law required.

ARTICLES XXVHI, and XXIX.
Of the flaying of fhips in ports, and fripwreck; or other damage happening thereupon.*

## A R T I C L E XXVIII.

If a fhip be detained by a merchant or partner, fo that the cannot fail from her port upon the day appointed, and that thip happens afterwards to be taken by pirates, or to periih by fire or fhipwreck, he that was the caufe of her being detained fhall pay the damage.

## ARTICLE XXIX.

If a merchant in the port where the charter-party is made, does not, at the day appointed, lade the fhip, and the afterwards fuffers any damage by pirates, fire, or fhipwreck, the merchant fhall pay all the damage; but if before the day appointed any fuch accident happens, they thall both concibute.
Thefe two articles need no illuflration.
ARTICLES XXX, and XXXI.
Of hips that are loft, and the merchant's money faved.

## A.RTICLE XXX.

If a merchant lade a fhip, and, carrying money with him, any accident happens to the ihip, fo that the being broken to pieces, the guods are loft, what can be faved of the thip or goods thall be liable to a contribution; But the merchant paying the tenths, fhall keep his money: and, if be efcaped alone, without laying hold of any implement of the chip, he thall only pay balf freight, according to the charty-party; but if he made ufe of any tool belonging to the fhip, in aving of himfelf, he fhall pay a fifth of the money preferved.

## ARTICLE XXXI.

If a merchant lades a flip, and any accident happens, whatever is preferved on either fide fhall be liable to a contribution. If there be money faved, it Gall pay a fifth; and the mafter and mariners fhall ufe their utmoft endeavous to fave it.
This needs no illuftration.
ARTICLE XXXII.
Of a fhip going to fea for a freight, or in partnerfhip, and there fuffering fhipwreck.
If a thip, being laden by a merchant, puts to fea, either for a freight, or in partnerfhip, and fome misfortunes befal her, the merchant fhall not difpute the paying of half freight; and what is faved of the goods fhall, together with the ihp,

## R H O

## R H O

te liable to a contribution. But if the nerchant, or partner, has advanced any money beforehand, all things fhall pais according to the form of the written agreement made between them.
This article needs no explication.
ARTICLE XXXIII.

## Of accidents befalling a hip after the is unladed.

If a mafter unlade the goods at the appointed port, and afterwards any accident befals che fhip, the merchant hall pay him the whole freight; and the goods unladed, together with the flip, fhall be fecure from the paffengers. But if any thing remains in the fhip, it fhall be liable to a contribution with the ihip.

## ILLUSTRATION.

What is here meant by the unladed goods and 负ip's being fafe from the paffengers, feems a litcle obfcure: perhaps, in fuch cafes, the paffengers were not allowed any reparation of the damage they might fuftain in the clothes and perfonal neceffaries they might have on chip-board; becaufe they being only there accidentally, and baving no intereft in the voyage, it was not, probably, thought juft, that the goods of a merchant who hired the flhip, and paid the freight, frould bear chant proportion of.the lofs fuftained by a paffenger, by whom he was to expect no profit. Without this interpretation, we do not fee how the laft fentence of this article can be made confiftent with the words immediately preceding.

## A R TI-CLE XXXIV.

Of grods fpoiled in the hold, by leakage or water, \&c.
If a hip häs linen or cloths aboard, the mafter fhall provide good canvas, left the goods fhould be damnified by the flowing in of the water in the time of a ftorm. If the purnp or fink too much fills the fhip, the mafter fhall forthwith acquaint fuch as have goods on board, that they may be viewed; and if the feamen not informing the mafter thereof, the goods be fpoiled, the mafter, together with the mariners, fhall refund the damage : but if it appeir that the matter and mariners declared that the fink was too full, and that the goods thould be laid abroad, and thofe that laded them neglect it, the mafter and mariners fhall be no ways liable to the damage.

## I L L U S TRATION.

This article contains a very commendable regulation for obliging the mafters and matiners of fhips to be careful of the lading, and to have continually an eye upon the hold, to fee that it be clear of water, and that every ching remain in a fecure fituation. Nor is there any thing more juif, than that the damage occafioned by the negligence and careleffiefs of martets and mariners', fhould be repaired by them, firtee otherwife fome of them would be fo indifferent in regard to merchants goods, that they would fcarce be at the pains to ftow them in places of the hold convenient for them : and, on the other hand, it is no lefs reafonable that, if the mafters and mariners acquit themfelves of their duty, in acquainting the owners of the goods of the danger that they are in, and they notwithftanding refufe to let them be removed, the owners themfelves fhould -fit down with the lofs, which they would not prevent. However thefe are cafes which very feldom happen among us.

## A R TICLE XXXV

Of a thip lightening her burthen in dittrefs.
If a 免ip either having loft her maft by accident, or, it being cut, throws over any of her ladithg in that diffref, all the mariners, merchants, and goods, a nid what is preferved of the flip, fiall be liable to a contribution.
This needs no illultration.
ARTICLE XXXVI.
Of hips running aboard of one another.
If any thip under fail, in the day-time, run aboard of another lying at anchor in an harbour, or that has flackened her fall, all the lofs and damage fhall fall upon the maiter andipaffengers, and goods of the fhip under fail, which thall be liable to a contribution. If it be in the night-time, the lh:p that lackens her fails fhall put out a light, or, wanting that, fhall endeavour to avoid the danger, by thouting and crying; buth which being neglected, and the thip perifh, it is her own fault; and that being duly proved, no reparation Mall be made by the other. But if thofe that have the management of the fails be neglivent, and the commander of the watch be alleep, the flip which has its fuls ipread fall be deemed to be the author of that misfortune, a a fhall retund the dimage dune to the lhip the runs aboard of.

ILLUSTRATION.
That fome particulars of this article feem to be a little fevere, mult indeed be acknowledged: for thuygh it be higlily reaton-
able, that if a fhip under fail runs aboard of another, which not being in that difpolition, cannot avoid the danger with which the is threaterred, it is very hard that the goods of the merchant fhould pay for the fault of the feamen, in which he can have no hand; and yet more unaccountable, that an innocent paffenger (who perbaps is an utter franger to all thof matters) fhould fuffer for the malice, ignorance, or neglect of an obftinate crew. However it feems that hereby the Rhodian legiflators intended to ftir up all perfons whatfoever, by the powerful motives of their own private intereft, to do heir utmoft endeavour to prevent ail forts of unhappy accidents; and, indeed, it hould be the principal care of all eafaring perfons to avoid tach dangerous rencounters: but, as it is not poffible for a thip that is either ling at anchor, or has her fails in fuch a pofture that ithe cahnot of a fudden change her courfe, to prevent fuch meetings, the fhip that has her fails in a good difpofition, and may fleer another way, is obnoxious to the lat for all the daimage that may befal another of whom the runs aboard; than which, nothing is more reafonable. If the damage is occafioned by the omiffion of thofe that receive it, they muft e'en take it for their pains; for if, in a dark night, a fhip lying at anchor in any road, puts out no light and keeps no wath, another faling that way may very innocently run aboard of her, without being aware of the danger; and therefore due care flould-be taken to keep a regular watch there, as well as at fea, and likewife to put out lights, by which it may be difcovered from afar, and thereby freed from fuch unbappy accident:

## ARTICLE XXXVII.

Of a fhip being loft, and the lading' faved.
If any accident befal a hip, by which the parifing, thic goods of the merchants and paffengers are notwithfanding preferved, the goods preferved thall pay then fifteenths, but the merchants and paffengers fhall not pay the manter for the fhip.

## ARTICLE. XXXXVIII.

Of fhips laden with corn, and furprized with a florm.
If a fhip laden with corn be furprized with a $t$ mpeft, the mafter thall take care to give good canvis, and the feamen to keep the pump clear; which if they negleat, and the corn is thereby wet, the mariners alonk fhall bear the dathage: but if the corn be damnified by the form, without any fault on their part, the damage fiall be borne by the mafter and mariners, together with the merchant; and the mafters and mariners fhall have a hundredth part of what is preferved. And when the thip is to be lightened at fea, the merchant fhall firft throw fomething overboard, and then the mariners mult follow his example: but, if any of them afterwards fteal any thing, they fall reftore it double, and lofe all manner of benefit.

## A R T ICLE XXXIX.

Of laded fhips being carried out of their course and loff.
If a thip fetting fail, laden with corn, winc, or oil, be carried by the mafter (without the merchant's confeni) toany fhore or place out of her courfe, and there happens to be thipwrecked, the goods and lading being fived, the inerchiant (hall fuffer nothing by the fhip's misfortune, becaufe he was not for touching at that place. But if (the flip being under fail) the merchant tells the mafter that he mudt of neceffity touch at any place that is not mentioned in the charfer party, and there the fhip happens to perifl, the lading being faved, the merchant fhall make good that thip to the owner: but, if the ching was undertaken by their mutual confent, they fhall contribute for the damage.
Thefe articles nieed no illuftration.
ARTICLE XL.
Of the fhipwreck of hips, out of which precious goods are faved.
